> Wow. When I was 7 I didn't know there was a world outside my town.

So the universe created itself? How could it create itself? It would have to have existed in order to do anything like create. So it would have to have existed… *before it began to exist.* That's a contradiction, and so it cannot be true. It would be great if the mother had read books or sought out people who had thought about logic and science, so that they could advise her child about self-contradictory statements as well as the Big Bang cosmology. But she never did the work. We should be teaching people to do the work in church, not to just be spectators and then pick and choose what feels good. Nobody picks and chooses what feels good when it comes to chemistry lab or the stock market. In church, we need to show that religion is no different from anything else in life that can be studied. Truth is the main thing.

She continues:

> Oh sure, my mother thinks raising a child without religion is dangerous. "I understand you don't think she needs God now, Carolyn. But you gotta give her religion so it's there for her when she needs it later." When the shit hits the fan, when everything falls apart. When you realize there is no one but God you can trust.

See, here is where she needs someone to point out that it's not God's job to help you through crises. It's not his job to make you happy. It's not God's job to make sure that your selfish pursuit of pleasure ends well. It's not God's job to keep you free from suffering and evil. This is where it would have been great if she had taken some of her time to read the Bible, and real theology books. It would have been better if she had sought out real scholars instead of relying on her mother for theology. But again, that's her decision, to believe the people who tell her that religion is a crutch, instead of seeking truth and then bending her will to fit what is true.

**Don't be that gal**

One last point. You might be wondering where the father is, since it is the father's responsibility to teach the children about spiritual and moral things in Christianity. That's what Christian women should be taught to look for in a man, along with protecting and providing abilities. That's what the church would be telling them to look for if the church was not thoroughly compromised by feminism and egalitarianism. In the case of the woman who wrote the article, she has separated from the father of her child. She says so in the article.

Did she pick a man who was good at theology, apologetics and moral issues? Well, we don't know. But judging from her politics and her profession, I would say that she did not. If there is one thing that liberal feminists absolutely detest in men, it's exclusive truth claims about religion and exclusive moral judgments. They tend to choose men who know nothing at all about God as he really is and morality as it really is. They want to avoid men

who will try to lead them on moral and spiritual issues. Unfortunately, though, a man who does not know what he believes and why he believes about religion and morality cannot persuade anyone. And a man who cannot persuade cannot lead.

What happens to children when such women choose men who cannot lead on moral and spiritual issues? Men like that have no reason to stick around in a marriage, because they have no plan and no purpose for the marriage other than pleasure. A religious and moral man sticks around in a marriage because he has a plan and a purpose that is above his own feelings and needs. He is motivated to teach the children and to lead the wife, because he has definite spiritual and moral convictions, and he is able to persuade others to buy into them using evidence and arguments. Smart women choose men like this when they are looking for someone to fulfill the father role. Women need to know the duties of the married man, and choose the right man for the job.

# Gay activists pressure DC Comics to fire pro-marriage author Orson Scott Card

**Wintery Knight** · 14 March 2013 · Archived copy · Original

From Life Site News.

Excerpt: (links removed)

> After pro-homosexual activists promoted an online petition demanding the firing of award-winning speculative fiction writer Orson Scott Card from an upcoming Superman comic anthology, DC Comics confirmed that Card's portion of the project has been shelved indefinitely.
>
> Card, who is Mormon, sits on the board of the National Organization for Marriage (NOM) and has been outspoken about his opposition to redefining marriage to include same-sex couples.
>
> […]In another commentary for Sunstone Magazine, he wrote, "[G]ay activism as a movement is no longer looking for civil rights, which by and large homosexuals already have. Rather they are seeking to enforce acceptance of their sexual liaisons as having equal validity with heterosexual marriages, to the point of having legal rights as spouses, the right to adopt children, and the right to insist that their behavior be taught to children in public schools as a completely acceptable 'alternative lifestyle.'"
>
> "It does not take a homophobe to recognize how destructive such a program will be in a society already reeling from the terrible consequences of 'no-fault' divorce, social tolerance of extramarital promiscuity, and failing to protect our adolescents until they can channel their sexual passions in a socially productive way," Card continued. "Having already lost control of the car, we now find the gay activists screaming at us to speed up as we drive headlong toward the cliff."
>
> Homosexual activists said his views should have disqualified him from being hired in the first place. While his Superman short story was not expected to touch on gay issues, activists argued that to give him a paycheck for his work was tantamount to funding NOM directly.
>
> The petition demanding his firing said, "To DC Comics: By hiring Orson Scott Card despite his anti-gay efforts you are giving him a new platform and supporting his hate. Make sure your brand stands for equality and drop Orson Scott Card now."
>
> DC's decision to shelve Card's portion of the project came after illustrator Chris Sprouse backed out of doing the art for Card's short story under heavy pressure from gay advocates and the media. "The media surrounding this story reached the point where it took away from the actual work, and that's something I wasn't comfortable with," Sprouse said.

It's very important to see which side of the same-sex marriage debate features the real bigots and the real bullies.

# Hope: California set to offer college credit for online courses

**Wintery Knight** · 14 March 2013 · Archived copy · Original

There are forces in motion that could turn the tide against the secular left, and one of them is online education.

Excerpt:

> A bill in California's Legislature would force public colleges to award students credit for taking some outside online courses. It looks likely to pass, and its implications for higher education are vast.
>
> A successful monopoly has an impregnable wall around some much-desired good, such as education, and controls the only door.
>
> The higher education establishment in America has always operated this way. But cracks are starting to appear in its wall. A significant one opened this week.
>
> On Wednesday, a bill was introduced in California's state Senate to require public colleges to give students credit for online courses from outside providers.
>
> If students can't take an introductory or remedial class in the traditional way, they can turn to offerings from businesses such as Coursera, Udacity and StraighterLine, or the nonprofit EdX, a joint project of Harvard and MIT.
>
> The bill looks likely to pass in some form.
>
> […]For the first time, colleges would have to offer credit for courses outside the academic establishment. As StraighterLine founder Burck Smith told the New York Times, "This would be a big change, acknowledging that colleges aren't the only ones who can offer college courses."
>
> Up to now, online teaching could offer plenty of knowledge but not the credits leading to degrees.
>
> Colleges could refuse to recognize the courses, and most did. That balance of power would shift if Steinberg's bill becomes law.
>
> That would be the start of real competition.
>
> If online courses can teach more students just as well and cost the public less, the professors behind the walls will have to change their hidebound ways or lose more business to outsiders.
>
> Either way, the public would be well served.

The faster we can disrupt the current higher education monopoly and focus students back on getting marketable skills at a reasonable price, the better off we'll be. The financial crisis actually helps with this, because young people now have to be more serious about what they are choosing to study and how much they are paying to study. We have a chance here to turn the tide. It's good news!

# Did the divinity of Jesus emerge slowly after many years of embellishments?

**Wintery Knight** · 14 March 2013 · Archived copy · Original

How early is the doctrine of the divinity of Jesus?

When I answer this question, I only want to use the earliest, most reliable sources – so I can defend them *on historical grounds* using the standard rules of historiography.

The 4 sources that I would use are as follows:

- The early creed in 1 Corinthians 15:3-8, and 1 Corinthians 1
- A passage in Philippians 2
- Two passages from Mark, the earliest gospel
- A passage from Q, which is an early source of Matthew and Luke

So let's see the passages.

**1 Corinthians**

I've written before about the early creed in 1 Corinthians 15:3-8, which skeptical scholars date to 1-3 years after the death of Jesus, for a variety of reasons I covered in the previous post. Here's the creed which definitely makes Jesus out to be more than an ordinary man. Ordinary men don't get resurrection bodies after they die.

Here's the passage: (1 Cor 15:3-8)

[3]For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

[4]that he was buried, that he was raised on the third day according to the Scriptures,

[5]and that he appeared to Peter, and then to the Twelve.

[6]After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep.

[7]Then he appeared to James, then to all the apostles,

[8]and last of all he appeared to me also, as to one abnormally born.

Additionally, 1 Corinthians 1:21-25 talks about Jesus being "the power of God and the wisdom of God". Paul is identifying Jesus with the divine.

[21]For since in the wisdom of God the world through its wisdom did not know him, God was pleased through the foolishness of what was preached to save those who believe.

[22]Jews demand miraculous signs and Greeks look for wisdom,

[23]but we preach Christ crucified: a stumbling block to Jews and foolishness to Gentiles,

[24]but to those whom God has called, both Jews and Greeks, Christ the power of God and the wisdom of God.

[25]For the foolishness of God is wiser than man's wisdom, and the weakness of God is stronger than man's strength.

But it gets even stronger! You all probably already know that the most important passages in the Old Testament for Jews is the famous "Shema", which is found in Deuteronomy 6:4-9. The Shema is a strong statement of Jewish monotheism.

Here's the passage:

[4] Hear, O Israel: The LORD our God, the LORD is one.

[5] Love the LORD your God with all your heart and with all your soul and with all your strength.

[6] These commandments that I give you today are to be upon your hearts.

[7] Impress them on your children. Talk about them when you sit at home and when you walk along the road, when you lie down and when you get up.

[8] Tie them as symbols on your hands and bind them on your foreheads.

[9] Write them on the doorframes of your houses and on your gates.

So how does Paul fit Jesus in with this strong statement of Jewish monotheism?

Paul alludes to the Shema in 1 Corinthians 8:4-6.

[4]So then, about eating food sacrificed to idols: We know that an idol is nothing at all in the world and that there is no God but one.

[5]For even if there are so-called gods, whether in heaven or on earth (as indeed there are many "gods" and many "lords"),

[6]yet for us there is but one God, the Father, from whom all things came and for whom we live; and there is but one Lord, Jesus Christ, through whom all things came and through whom we live.

Holy mackerel! How did that get in there? Paul is splitting the roles of God in the the Shema and identifying Jesus in one of the divine roles! Jesus is not an ordinary man. That passage "through whom all things came" foreshadows John identifying Jesus as "the Word of God", which "became flesh and dwelt among us". Holy snark – did you guys know that was all in here so early?

The date for 1 Corinthians is 55 AD. It should be noted that skeptical scholars like James Crossley accept these passages, and you can check it out in the debate audio yourself.

**Philippians**

Check out Philippians 2:5-11.

[5]Your attitude should be the same as that of Christ Jesus:

[6]Who, being in very nature God, did not consider equality with God something to be grasped,

[7]but made himself nothing, taking the very nature of a servant, being made in human likeness.

[8]And being found in appearance as a man, he humbled himself and became obedient to death— even death on a cross!

[9]Therefore God exalted him to the highest place and gave him the name that is above every name,

[10]that at the name of Jesus every knee should bow, in heaven and on earth and under the earth,

[11]and every tongue confess that Jesus Christ is Lord, to the glory of God the Father.

The date for Philippians is 60-61 AD. Still within the lifetime of the eyewitnesses, and written by an eyewitness who was in contact with the other eyewitnesses, like Peter and James, whom Paul spoke with numerous times on his journeys to Jerusalem.

**Mark's gospel**

Mark's gospel is the earliest and atheists like James Crossley date it to less than 40 AD, which is 10 years after the

death of Jesus at most. When you read the gospel of Mark, you are getting the earliest and best information available about the historical Jesus, along with Paul's epistles. So what does Mark say about Jesus? Is Jesus just a man, or is he something more?

Check out Mark 12:1-9:

[1]He then began to speak to them in parables: "A man planted a vineyard. He put a wall around it, dug a pit for the winepress and built a watchtower. Then he rented the vineyard to some farmers and went away on a journey.

[2]At harvest time he sent a servant to the tenants to collect from them some of the fruit of the vineyard.

[3]But they seized him, beat him and sent him away empty-handed.

[4]Then he sent another servant to them; they struck this man on the head and treated him shamefully.

[5]He sent still another, and that one they killed. He sent many others; some of them they beat, others they killed.

[6]"He had one left to send, a son, whom he loved. He sent him last of all, saying, 'They will respect my son.'

[7]"But the tenants said to one another, 'This is the heir. Come, let's kill him, and the inheritance will be ours.'

[8]So they took him and killed him, and threw him out of the vineyard.

[9]"What then will the owner of the vineyard do? He will come and kill those tenants and give the vineyard to others.

And Mark 13:32, talking about the date of the final judgment.

[32]"No one knows about that day or hour, not even the angels in heaven, nor the Son, but only the Father.

And again, this passage is establishing a hierarchy such that Jesus is being exalted above all men and the angels, too. And the passage is embarrassing to the early church, because it makes Jesus look ignorant of something, so they would not have made this passage up. Jesus is not an ordinary man, he is *above* the angels – God's *unique* Son.

**The "Q" source for Matthew and Luke**

Here's Matthew 11:27, which is echoed in Luke 10:22:

[27]"All things have been committed to me by my Father. No one knows the Son except the Father, and no one knows the Father except the Son and those to whom the Son chooses to reveal him.

[22]"All things have been committed to me by my Father. No one knows who the Son is except the Father, and no one knows who the Father is except the Son and those to whom the Son chooses to reveal him."

Since this passage is in both of Matthew and Luke, but not in Mark, scholars believe that it is in the earlier "Q" source used by both Matthew and Luke. Q predates both Matthew and Luke, and so it is also fairly early (maybe 67-68), although not as early as Mark and Paul. Bill Craig writes that this passage is also embarrassing because it says that *no one* knows Jesus.

**Learn more**

You can learn more about the early belief in the divinity of Jesus by listening to a lecture by William Lane Craig and reading the related paper, and by listening to the debate between Richard Bauckham and James Crossley on that topic. The first link contains other scholarly debates on Jesus.

# New study: formation of life-permitting elements carbon and oxygen is fine-tuned

**Wintery Knight** · 15 March 2013 · Archived copy · Original

First, let's review the structure of the fine-tuning argument.

The argument goes like this:

1. The fine-tuning of the universe to support life is either due to law, chance or design
2. It is not due to law or chance
3. Therefore, the fine-tuning is due to design

Here are the facts on the fine-tuning:

- Life has certain minimal requirements; long-term stable source of energy, a large number of different chemical elements, an element that can serve as a hub for joining together other elements into compounds, a universal solvent, etc.
- In order to meet these minimal requirements, the physical constants, (such as the gravitational constant), and the ratios between physical constants, need to be withing a narrow range of values in order to support the minimal requirements for life of any kind.
- Slight changes to any of the physical constants, or to the ratios between the constants, will result in a universe inhospitable to life.
- The range of possible values spans 70 orders of magnitude.
- The constants are *selected* by whoever creates the universe. They are not determined by physical laws. And the extreme probabilities involved required put the fine-tuning beyond the reach of chance.
- Although each individual selection of constants and ratios is as unlikely as any other selection, the vast majority of these possibilities do not support the minimal requirements of life of any kind. (In the same way as any hand of 5 cards that is dealt is as likely as any other, but you are overwhelmingly likely NOT to get a royal flush. In our case, a royal flush is a life-permitting universe).

Carbon is that element that can serve as a hub, and oxygen is also a vital element, since it is a component of water, which is required for life. So both carbon (the hub of large molecules) and oxygen (a building block of water) are required for complex life of any imaginable kind.

Now for the new study.

Reader Jen who blogs at Victory Rolls and V8s sent me this amazing article on Science Daily about a new peer-reviewed study that supports the fine-tuning argument.

Here's an excerpt:

> Life as we know it is based upon the elements of carbon and oxygen. Now a team of physicists, including one from North Carolina State University, is looking at the conditions necessary to the formation of those two elements in the universe. They've found that when it comes to supporting life, the universe leaves very little margin for error.
>
> Both carbon and oxygen are produced when helium burns inside of giant red stars. Carbon-12, an essential element we're all made of, can only form when three alpha particles, or helium-4 nuclei, combine in a very specific way. The key to formation is an excited state of carbon-12 known as the Hoyle state, and it has a very specific energy — measured at 379 keV (or 379,000 electron volts) above the energy of three alpha particles. Oxygen is produced by the combination of another alpha particle and carbon.

> NC State physicist Dean Lee and German colleagues Evgeny Epelbaum, Hermann Krebs, Timo Laehde and Ulf-G. Meissner had previously confirmed the existence and structure of the Hoyle state with a numerical lattice that allowed the researchers to simulate how protons and neutrons interact. These protons and neutrons are made up of elementary particles called quarks. The light quark mass is one of the fundamental parameters of nature, and this mass affects particles' energies.
>
> **In new lattice calculations done at the Juelich Supercomputer Centre the physicists found that just a slight variation in the light quark mass will change the energy of the Hoyle state, and this in turn would affect the production of carbon and oxygen in such a way that life as we know it wouldn't exist.**
>
> […]The researchers' findings appear in *Physical Review Letters*.

So that's the latest research that supports the fine-tuning argument. But how effective is this argument really? Is it only admitted by theists, or do atheists accept the fine-tuning as well?

**Is the fine-tuning real?**

Yes, it's real and it is conceded by the top-rank of atheist physicists. Let me give you a citation from the best one of all, Martin Rees. Martin Rees is an atheist and a qualified astronomer. He wrote a book called "Just Six Numbers: The Deep Forces That Shape The Universe", (Basic Books: 2001). In it, he discusses 6 numbers that need to be fine-tuned in order to have a life-permitting universe.

Rees writes here:

> These six numbers constitute a 'recipe' for a universe. Moreover, the outcome is sensitive to their values: if any one of them were to be 'untuned', there would be no stars and no life. Is this tuning just a brute fact, a coincidence? Or is it the providence of a benign Creator?

There are some atheists who deny the fine-tuning, but these atheists are in firm opposition to the progress of science. The more science has progressed, the more constants, ratios and quantities we have discovered that need to be fine-tuned. Science is going in a theistic direction. Next, let's see how atheists try to account for the fine-tuning, on atheism.

**Atheistic responses to the fine-tuning argument**

There are two common responses among atheists to this argument.

The first is to speculate that there are actually an infinite number of other universes that are not fine-tuned, (i.e. – the gambler's fallacy). All these other universes don't support life. We just happen to be in the one universe is fine-tuned for life. The problem is that there *is no way of directly observing these other universes and no independent evidence that they exist.*

Here is an excerpt from an article in Discover magazine, (which is hostile to theism and Christianity).

> Short of invoking a benevolent creator, many physicists see only one possible explanation: Our universe may be but one of perhaps infinitely many universes in an inconceivably vast multiverse. Most of those universes are barren, but some, like ours, have conditions suitable for life.
>
> The idea is controversial. Critics say it doesn't even qualify as a scientific theory because the existence of other universes cannot be proved or disproved. Advocates argue that, like it or not, the multiverse may well be the only viable nonreligious explanation for what is often called the "fine-tuning problem"—the baffling observation that the laws of the universe seem custom-tailored to favor the emergence of life.

The second response by atheists is that the human observers that exist today, 14 billion years after the universe was created out of nothing, actually caused the fine-tuning. This solution would mean that although humans did not exist

at the time the of the big bang, they are going to be able to reach back in time at some point in the future and manually fine-tune the universe.

Here is an excerpt from and article in the New Scientist, (which is hostile to theism and Christianity).

> …maybe we should approach cosmic fine-tuning not as a problem but as a clue. Perhaps it is evidence that we somehow endow the universe with certain features by the mere act of observation… observers are creating the universe and its entire history right now. If we in some sense create the universe, it is not surprising that the universe is well suited to us.

So, there are two choices for atheists. Either an infinite number of unobservable universes that are not fine-tuned, or humans go back in time at some future point and fine-tune the beginning of the universe, billions of years in the past.

**Why the fine-tuning argument matters**

We need to make a decision *today* about how we are going to live. The evidence available *today* supports the fine-tuning of the universe by a supernatural mind with immense power. The progress of science has strengthened this theory against determined opposition from rival naturalistic theories.

Those are the facts, and we must all choose what to do with them.

**Further study**

Here is a paper by Walter L. Bradley that contains many more examples of the fine-tuning, and explanations for *what happens* when you change the constants, quantities and rations even slightly.

# New Tasmania bill undermines conscience rights for pro-life medical workers

**Wintery Knight** · 15 March 2013 · Archived copy · Original

Map of Australia

The inimitable Dr. Lydia McGrew has a must-read blog post up about it at "What's Wrong With The World?" (H/T Jay from Life Training Institute)

Here's a snip:

> This first part directly attacks the conscience of doctors opposed to abortion by requiring them, on penalty of a fine, to refer the patient to a doctor who will do the deed. See my further discussion of referrals, here.
>
> But there's more: The Tasmania law also says that *counselors* who are opposed to abortion and from whom a pregnant woman has sought advice must refer the woman to a different counselor who is known to be not thus opposed!

> Here is how the law defines "counselor":

> *counsellor* means a person who provides a service that involves counselling whether or not for fee or reward;

> Smith is, plausibly enough, of the opinion that this would apply to those who work even as volunteers for Crisis Pregnancy Centers and hence would "obliterate pro-life crisis pregnancy counseling."
>
> Even insofar as the law applies to professional counselors, those with counseling licenses who are working with a pregnant woman officially in their professional capacity, this is disturbing enough. It is yet another attempt to undermine the helping professions by forcing those in them to offer material cooperation with lifestyle decisions (including, in this case, murderous ones) preferred by the leftists.
>
> But as the law applies to volunteers as well, we've entered wholly new territory. Volunteer pregnancy counselors are essentially just private people devoting themselves to trying to help pregnant women in their spare time. It is difficult to see any principled distinction between regulating what such an entirely non-professional person says to a woman in a private conversation and regulating what the woman's aunt, mother, or friend says to her in a private conversation. The law is explicit that such a referral must take place "if a woman seeks pregnancy options advice from a counsellor and the counsellor has conscientious objections to

> terminations." So if a woman deliberately seeks out and goes to a center calling itself "Alternatives Crisis Pregnancy Center" and offering explicitly in its advertising to help a woman to find alternatives to abortion, the counselors there would be obligated by this law, on pain of a fine, to round off their personal conversation with her by offering her a referral to a pro-abortion counselor! This despite the fact that the whole raison d'etre of the center is to try to save babies from abortion.

This law reminds me of a a post I saw a while back on Well Spent Journey, which is a blog written by a future physician. He was concerned about conscience rights and wrote about it just before the last election.

He writes:

> This issue is sometimes overlooked, but it goes hand-in-hand with abortion. As a future physician, it affects me personally.
>
> […]Only a month after taking office, President Obama announced that he would be rescinding HHS regulations protecting the conscience rights of healthcare workers:
>
> *"[Specific publicly-funded entities may not] discriminate in the employment, promotion, or termination of employment of any physician or other health care personnel because he performed or assisted in the performance of a lawful sterilization procedure or abortion, because he refused to perform or assist in the performance of such a procedure or abortion on the grounds that his performance or assistance in the performance of the procedure or abortion would be contrary to his religious beliefs or moral convictions, or because of his religious beliefs or moral convictions respecting sterilization procedures or abortions…"*
>
> In April 2009, these rules were officially eliminated. Then, in 2011, the administration approved the now-infamous HHS contraception mandate, requiring employer-provided insurance plans to cover birth control and early-term abortion drugs…regardless of the provider's religious objections. (As an aside, I highly recommend R.J. Snell's article,"The Contraception Mandate and Secular Discourse".)
>
> Other recent attacks have centered around the Weldon Amendment (2004), which prohibits federally funded agencies from discriminating against health care providers who refuse to provide, pay for, provide coverage for, or refer for abortions.
>
> Additionally, a 2009 online survey of 2,865 faith-based healthcare professionals found that:
>
> - 39% of faith-based healthcare professionals have "experienced pressure from or discrimination by faculty or administrators based on [their] moral, ethical, or religious beliefs."
> - 20% of faith-based medical students say they are "not pursuing a career in Obstetrics or Gynecology" because of perceived discrimination and coercion in that field.
> - 12% of faith-based healthcare professionals have "been pressured to perform a procedure to which [they] had moral, ethical, or religious objections."
> - 91% of faith-based physicians agreed with the statement, "I would rather stop practicing medicine altogether than be forced to violate my conscience."
>
> So aside from the clear injustice of legalized abortion, my interest in this election is based on a desire to learn and practice medicine without being pressured to violate my moral convictions. Not to belittle the importance of other social, economic, and foreign policy issues, but these will be my overriding concerns in the ballot box.

Make no mistake, Christians should in no way shape or form support big government, because this is the kind of law that big government passes. If we are concerned about the poor, it's better for us to solve the problem of poverty ourselves rather than grow government so that they can have the power to impose their will on us like this. This is something that all Christians need to realize, and vote accordingly.

# Clay Jones and his truth S.E.R.U.M.M. inoculates you against moral relativism

**Wintery Knight** · 15 March 2013 · Archived copy · Original

Map of Canada with cities

Moral relativism is the idea that when it comes to right and wrong, no point of view is any more correct than any other. Morality is not independent of what humans think, so that it applies to all of us equally. Moral relativism says that every person or society invents their own standard of morality. Each standard is arbitrary and varies by time or place arbitrarily. There is no viewpoint that is better than any other – they are all equal.

How do you get around that? Well Justin Wishart of the Faith Beyond Belief team in Calgary, Alberta has posted a list of helpful points that he got from Dr. Clay Jones of Biola University.

Here's the introduction from Justin:

> I had the pleasure of driving Professor Clay Jones to Airdrie Koinonia Christian School to present a talk to grade 11 and 12 students. Jones is a Professor of Apologetics at one of the top Christian universities, BIOLA. He started with a succinct history lesson, explaining how most students do not accept there are objective moral truths – that morality is relative. This is called moral relativism, which Jones summed up as, "you have your truth, I have my truth, your truth is no better than my truth and my truth is no better than your truth, and there is no moral truth with a capital T".
>
> Even though this sounds so open-minded and tolerant to our modern ears, Jones insists it isn't. He presented the students with an acronym that spells "S.E.R.U.M.M." which shows that moral relativism is absurd and even dangerous.

Here is the acronym in brief:

- **S= Self-Refuting**
- **E= Evil-Enabling**
- **R= Racist Befriending**
- **U= Utterly Hypocritical**
- **M= Morally Stagnating**

- **M= Mind Closing**

Let's take a look at the first one only:

> Moral relativists will often say things like, "you can't push your morality on others!" But, this is obviously absurd, for, the moral relativist is saying "you shouldn't" do something which is the definition of pushing your morality on others. He is doing the very thing that he says you cannot do. Even more fundamental, moral relativism is a distinct moral system that the moral relativist obviously thinks is right. But, moral relativism by definition says that there is no correct moral system, which means that moral relativism is wrong. In other words, to say that moral relativism is right is to say that moral relativism is wrong. It refutes itself.

You can click through for the rest of the list. They have other good things to read on their blog, as well.

# Gay activist introduces bill to ban speech critical of homosexuality in schools

**Wintery Knight** · 16 March 2013 · Archived copy · Original

Central United States
Not just public schools, but private schools, including Christian schools.

Take a look at this story from Life Site News.

Excerpt: (links removed)

> Homosexual activists in Minnesota are pushing for a broad "Safe and Supportive Schools Act" that would outlaw speech that could interfere with a student's ability "to participate in a safe and supportive learning environment." The bill is being promoted as the strongest "anti-bullying" law in the nation, but critics say it could have a chilling effect on free speech, especially in religious schools that teach Christian beliefs on sexuality.
>
> "We agree … that school bullying is a serious issue that needs to be ameliorated," said Pete Noll, education director of the Minnesota Catholic Conference, testifying before the state legislature. "All children are entitled to a safe, secure learning environment." But he disagreed that the "Safe and Supportive Schools Act" should apply to religious schools.
>
> The bill, as written, would apply not only to public schools, but also to private schools that receive resources of any kind from the state. As Noll reminded the legislature last Tuesday, although Catholic and other religious schools are forbidden to receive state funding, many of their students receive textbooks, testing and other services from the state. He said he worried this might be used as justification to freeze speech in private religious schools.
>
> "Combating bullying should never be a pretext to impose an agenda of groups of people, or to undermine the rights of parents to bestow their religious or moral values on their children," the Catholic conference wrote in a statement.
>
> The bill was introduced by state senator Scott Dibble, an open homosexual who "married" his partner in California before the passage of Proposition 8 (their marriage is not recognized by the state of Minnesota). He

> announced the bill's introduction in a guest post for the homosexual "Human Rights Campaign" website and thanked the group for their support. He also credited gay activist group Outfront Minnesota for its role in the development of the bill, saying that the group "leads this work" and is "poised to push for a positive vote."
>
> A similar bill was introduced during the 2009 legislative session and passed both the House and Senate by overwhelming margins, but it was vetoed by then-Governor Tim Pawlenty. If it passes this year, Governor Mark Dayton, who helped to write the bill, is expected to sign.

How would legalizing same-sex marriage affect you? Is it just about tolerance, or will you be forced to celebrate and affirm a lifestyle that you disagree with? Think about it now while you still have the freedom to do something about it, and vote accordingly.

# Pro-life conservative shouted down by pro-abortion thugs at University of Waterloo

**Wintery Knight** · 16 March 2013 · Archived copy · Original

*WARNING: Video contains very vulgar pro-abortion language.*

From the National Post. (H/T Blazing Cat Fur)

Full text:

> The University of Waterloo is investigating after an anti-abortion Conservative MP was blocked from delivering a lecture Wednesday night by protesters led by a man dressed as a giant vagina.
>
> Ethan Jackson, 21, an art student at nearby Wilfrid Laurier University, said he calls his pink costume Vulveta, and that Stephen Woodworth's talk about the universality of human rights came from an oppressive western discourse that ignores the rights of indigenous people.
>
> "That kind of speech, that kind of facts, are not acceptable," he said. "We decided to go by the route of using satire instead of intimidation…. We decided to make Stephen Woodworth feel as uncomfortable as he makes us feel."
>
> Ellen Rethore, associate vice-president of communications and public affairs, said the disruptive behaviour was "unacceptable," and that a joint inquiry of the school's secretariat, police, and student success office was underway.
>
> "Our goal is to ensure an environment of tolerance and uphold the right of individuals to advance their views openly," she said.
>
> Mr. Woodworth — who gave a third of his talk before a woman in a red dress commandeered the podium to award him a trophy as "Kitchener-Waterloo's Nastiest Misogynist" — said it is "a mark of extremism to take disrespect of others as a virtue."
>
> "I couldn't outshout the shouters. I'm not there to engage in a shouting match," he said.
>
> After the talk was cancelled and the protesters left, Mr. Woodworth said he was able to stay and have a discussion with a few people.
>
> He was speaking about the section of Canada's Criminal Code that, in the context of defining homicide, says a child "becomes a human being within the meaning of this Act when it has completely proceeded, in a living state, from the body of its mother."
>
> His legislative effort to have Parliament study the definition of "human being" failed in a House of Commons vote last year, despite support from eight cabinet ministers, including Status of Women Minister Rona Ambrose and Immigration Minister Jason Kenney. It cannot be revived in this Parliament.

Listen to the hate and intolerance from those brainwashed leftists in that video. This is why it's important to have an alias when writing online, because these students are brainwashed by public education to hate those who are different from them, and they are only too happy to use violence and intimidation against anyone who disagrees with them. Many of these students are probably growing up in broken homes where they are never exposed to fathers and the relationship between husband and wife. Fatherlessness is a serious social problem.

Fascism is and always has been a phenomena of the political left. Mussolini was a socialist, Hitler was a socialist, Stalin was a socialist, Mao was a socialist, and so on. To be a socialist is to on the same continuum that leads to totalitarianism and fascism. People on the left do not believe in natural rights like freedom of speech and the right to life. They are nihilists, and anything is permitted on nihilism. If they are willing to kill innocent children in order to escape the consequences of recreational sex, they could do anything. Abortion is the rock-bottom of immorality.

# Supreme Court of Canada rules that politically incorrect speech is a criminal offense

**Wintery Knight** · 17 March 2013 · Archived copy · Original

Political map of Canada

Canada is hostile to free speech, as shown in the recent Supreme Court decision.

Excerpt:

> Canada's top court has released a unanimous decision today that critics say has struck a monumental blow against freedom of speech, opinion, and religion across the country. The court ordered the defendant, a Christian pro-family activist with a reputation for intense activism, not only to pay a fine, but also to pay court costs which could amount to hundreds of thousands of dollars.
>
> […]In *Saskatchewan (Human Rights Commission) v. Whatcott*, the Supreme Court decided that born-again Christian William Whatcott was guilty of hate speech for distributing flyers to neighborhoods in Saskatoon and Regina in 2001 and 2002. While the flyers used vehement language against homosexual practices and the homosexual agenda, they did not directly attack homosexual persons.
>
> […]The Court focused on Whatcott's main argument, namely that he loves homosexuals with a brotherly Christian love, and it is only their sexual activity that he denounces.
>
> But the Supreme Court found that with regards to hate speech, the distinction between 'sin and sinner' no longer applies.
>
> "I agree that sexual orientation and sexual behaviour can be differentiated for certain purposes," the Court stated. "However, in instances where hate speech is directed toward behaviour in an effort to mask the true target, the vulnerable group, this distinction should not serve to avoid s. 14(1)(b) [the hate-crime clause of the Code]."
>
> "Courts have recognized a strong connection between sexual orientation and sexual conduct and where the conduct targeted by speech is a crucial aspect of the identity of a vulnerable group, attacks on this conduct stand as proxy for attacks on the group itself," the Court stated.
>
> The Court ordered Whatcott to pay the Human Rights Commission's legal fees and to pay $7,500 in

> compensation to two homosexuals who were offended by his flyers.
>
> Gwen Landolt, national vice-president of REAL Women of Canada, called the ruling “very depressing” and “bad news”.
>
> […]“On the one hand they’re saying, ‘Oh, no, no, no, we’re not really infringing on freedom of religion and freedom of speech and freedom of opinion’, but in fact, what they say is not what they’ve done,” she said in an interview with LifeSiteNews.com.

Next time we have an election, can we vote in favor of free speech? I don’t agree with anything Whatcott did – form or content. The man is a fool. But I can easily see how this ruling could be used to silence reasonable speech that disagrees with homosexuality and gay marriage on secular grounds. The motivation of these judges is to silence speech critical of the gay agenda, and we should all be concerned about that. They pick these kooks like Whatcott to attack because they won’t get any opposition from normal people. But later you’ll find out that these legal precedents will furnish the foundation for eliminating free speech altogether. It’s happened before.

Apparently, there is some effort to repeal section 13 in Canada, which is the part that criminalizes speech deemed offensive by the political left. That might affect future rulings of the Supreme Court if it is made clear that the right to free speech is absolute.

# Eurozone bailout of Cyprus includes seizing portion of individual savings accounts

**Wintery Knight** · 17 March 2013 · Archived copy · Original

How well is socialism working in Cyprus? The Financial Times explains what happened. (H/T ECM)

Excerpt:

> International lenders agreed to a €10bn bailout of Cyprus early on Saturday morning after 10 hours of fraught negotiations, which included convincing Nicosia to seize €5.8bn from Cypriot bank deposits to help pay for the rescue, a first for any eurozone bailout.
>
> However an emergency parliamentary session on Sunday to discuss the levy on bank savings was postponed until Monday, according to the Cyprus News Agency. Earlier, Cyprus president Nicos Anastasiades postponed an informal meeting of lawmakers also scheduled for Sunday morning.
>
> The cash from Cypriot account holders will come in the form of a one-time 9.9 per cent levy on all deposits over €100,000 that will be slashed from their savings before banks reopen Tuesday, a day after a Cypriot holiday. An additional 6.75 per cent levy will be imposed on deposits below that level.
>
> Cypriot finance minister Michalis Sarris said his government had already moved to ensure deposit holders could not make large withdrawals electronically before Tuesday's open; Jörg Asmussen, a member of the European Central Bank executive board, said a portion of deposits equivalent to the levies would likely be frozen immediately.
>
> […]Mr Asmussen justified the measure by saying it broadened the number of people who will shoulder the burden of the bailout. **Without the measures, he said, much of it would fall on Cypriot taxpayers; by going after all large deposit holders – many of whom are Russian or British – outsiders would help fund the rescue.**
>
> […]While Jeroen Dijsselbloem, the Dutch finance minister who chairs the group of eurozone finance ministers that hashed out the deal in all-night talks, declined to categorically rule out hitting depositors in future bank bailouts, he insisted that it was not being currently considered for any other country.

Got that? Even Russian and British depositors are having their funds confiscated, and all electronic transfers have been frozen to stop them from getting their money out. My prediction is that anyone with any money in these poor-performing socialist countries will be pulling it out in the next few days. Property rights are not respected by European socialists – that's the clear message to people who earn and save their money.

# New study: smoking marijuana raises risk of having a stroke

**Wintery Knight** · 18 March 2013 · Archived copy · Original

Fox News reports:

Excerpt:

> Recent research from Duke University in Durham, N.C., found teenagers who smoked marijuana habitually during their adolescence showed a decrease in their general intellectual ability as they progressed into adulthood.
>
> But now, there is an even more chilling possible side effect of cannabis use – an increased risk of stroke.
>
> According to a new study from the University of Auckland in New Zealand, marijuana may double the risk of ischemic stroke and transient ischemic attack (TIA) in young adults – even those who had no risk factors that often contribute to an attack.
>
> The study's lead author, Dr. P. Alan Barber, a professor of clinical neurology at the University of Auckland, said he was interested in studying the link between stroke and marijuana after a curious incident of stroke occurred in one of his younger patients.
>
> "I look after people with strokes," Barber told FoxNews.com, "and we had a patient come in with stroke; they were young, but they didn't have high blood pressure or high cholesterol, and they were reasonably fit and well. They were clean from a risk factor point of view, but they had a stroke while smoking marijuana. So we looked at the literature and saw sporadic stroke reports among marijuana users."
>
> Conducting the first case-controlled study of its kind, Barber and his colleagues studied 160 ischemic stroke/TIA patients between the ages of 18 to 55 (an average age of 45), who had their urine samples screened when they entered the hospital. As a comparison, the researchers examined urine samples of 160 control subjects who had been admitted to the hospital for other medical reasons.
>
> Of the 160 stroke patients, 16 percent tested positive for marijuana use within the past couple of days, compared to only 8.1 percent of the control patients. According to Barber, the stroke patients were very well matched to the controls, with no differences in age, mechanisms for stroke or other vascular risk factors.

This is in addition to the study from last year that found that smoking marijuana can permanently damage intelligence.

From the UK Telegraph.

Excerpt:

> Teenagers who regularly smoke cannabis are putting themselves at risk of permanently damaging their intelligence, according to a landmark study.
>
> Researchers found persistent users of the drug, who started smoking it at school, had lower IQ scores as adults.
>
> They were also significantly more likely to have attention and memory problems in later life, than their peers who abstained.
>
> Furthermore, those who started as teenagers and used it heavily, but quit as adults, did not regain their full mental powers, found academics at King's College London and Duke University in the US.
>
> They looked at data from over 1,000 people from Dunedin in New Zealand, who have been followed through their lives since being born in 1972 or 1973.
>
> […]Professor Terrie Moffitt, of KCL's Institute of Psychiatry, who contributed to the study, published in the journal *Proceedings of the National Academy of Sciences*, said "persistent users" who started as teenagers

> suffered a drop of eight IQ points at the age of 38, compared to when they were 13.

In addition to looking at studies, it's important to look at countries that have legalized marijuana, so that we can see the results.

Other countries have tried permissive drug policies have been tried and they have *failed*.

Excerpt:

> Amsterdam authorities say they are to halve the number of brothels and marijuana shops in the city's "red light" district and surrounding area

> The city announced plans to clean up the area a year ago and since then 109 sex "windows", from which prostitutes attract customers, have been closed. The new measures aim to reduce the number of windows to 243 from 482 last year, a city spokesman said.
>
> Amsterdam also wants to close half of the 76 cannabis shops in the city centre.
>
> "Money laundering, extortion and human trafficking are things you do not see on the surface but they are hurting people and the city. We want to fight this," deputy mayor of Amsterdam Lodewijk Asscher told Reuters.

The Family Research Council explains how permissive drug policies don't actually work.

Excerpt:

> History provides evidence that legalization of drugs in foreign nations has not been successful. For example, opium was legalized in China earlier this century. That decision resulted in 90 million addicts and it took a half-century to repair the damage.[59]
>
> Egypt allowed unrestricted trade of cocaine and heroin in the 1920s. An epidemic of addiction resulted. Even in Iran and Thailand, countries where drugs are readily available, the prevalence of addiction continues to soar.[60]
>
> Modern-day Netherlands is often cited as a country which has successfully legalized drugs. Marijuana is sold over the counter and police seldom arrest cocaine and heroin users. But official tolerance has led to significant increases in addiction. Amsterdam's officials blame the significant rise in crime on the liberal drug policy. The city's 7,000 addicts are blamed for 80 percent of all property crime and Amsterdam's rate of burglary is now twice that of Newark, New Jersey.[61] Drug problems have forced the city to increase the size of the police force and the city fathers are now rethinking the drug policy.[62]
>
> Dr. K. F. Gunning, president of the Dutch National Committee on Drug Prevention, cites some revealing statistics about drug abuse and crime. Cannabis use among students increased 250 percent from 1984 to 1992. During the same period, shootings rose 40 percent, car thefts increased 62 percent, and hold-ups rose 69 percent.[63]
>
> Sweden legalized doctor prescriptions of amphetamines in 1965. During the first year of legalization, the number of intravenous"speed" addicts rose 88.5 percent. A study of men arrested during the legalization period showed a high correlation between intravenous use and a variety of crimes.[64]
>
> Dr. Nils Bejorot, director of the Swedish Carnegie Institute and professor of social medicine at the Karolinska Institute in Stockholm, believes the solution to the growing drug problem is consistent social and legal harassment of both users and dealers.[65]
>
> Great Britain experimented with controlled distribution of heroin between 1959 and 1968. According to the

> British Medical Journal, the number of heroin addicts doubled every sixteen months and the increase in addicts was accompanied by an increase in criminal activity as well.[66] And British authorities found that heroin addicts have a very good chance of dying prematurely. On the crime front, Scotland Yard had to increase its narcotics squad 100 percent to combat the crime caused by the “legal” addicts.[67]
>
> The Swiss opened a “legalized drug” area in Zurich seven years ago and local addicts were given drugs, clean needles, and emergency medical care. Unfortunately, the liberal policy backfired and the number of addicts surged to 3,500; violence surged, too. “Needle Park,” as it came to be known, was a place of open warfare among rival gangs, and even police faced gunfire. Their cars were attacked and overturned. In February 1995, officials ended the experiment, conceding that it had evolved into a grotesque spectacle.[68]

Why does legalizing drugs increase crime? Because drugs are addictive and they cost money to obtain, even if they are legal. Addiction reduces the ability to hold down a job, which is a legal way of getting money. Therefore, addicts will resort to crime in order to get the money to buy their drugs.

# William Lane Craig on the relationship between science and religion

**Wintery Knight** · 18 March 2013 · Archived copy · Original

Chris Shannon shared this article from Reasonable Faith on Facebook. The faster we get used to this material, the better off Christianity will fare in the marketplace of ideas.

Here's the introduction:

> What has happened, however, in the second half of this century is that historians and philosophers of science have come to realize that this supposed history of warfare is a myth. As Thaxton and Pearcey point out in their recent book *The Soul of Science,* for over 300 years between the rise of modern science in the 1500's and the late 1800s the relationship between science and religion can best be described as an *alliance.* Up until the late 19th century, scientists were typically Christian believers who saw no conflict between their science and their faith—people like Kepler, Boyle, Maxwell, Faraday, Kelvin, and others. The idea of a warfare between science and religion is a relatively recent invention of the late 19th century, carefully nurtured by secular thinkers who had as their aim the undermining of the cultural dominance of Christianity in the West and its replacement by naturalism—the view that nothing outside nature is real and the only way to discover truth is through science. They were remarkably successful in pushing through their agenda. But philosophers of science during the second half of the 20th century have come to realize that the idea of a warfare between science and theology is a gross oversimplification. White's book is now regarded as something of a bad joke, a one-sided and distorted piece of propaganda.
>
> Now some people acknowledge that science and religion should not be regarded as foes, but nonetheless they do not think that they should be considered friends either. They say that science and religion are mutually irrelevant, that they represent two non-over-lapping domains. Sometimes you hear slogans like "Science deals with facts and religion deals with faith." But this is a gross caricature of both science and religion. As science probes the universe, she encounters problems and questions which are philosophical in character and therefore cannot be resolved scientifically, but which can be illuminated by a theological perspective. By the same token, it is simply false that religion makes no factual claims about the world. The world religions make various and conflicting claims about the origin and nature of the universe and humanity, and they cannot *all* be true. Science and religion are thus like two circles which intersect or partially overlap. It is in the area of intersection that the dialogue takes place.

Here are his six ways that science and religion overlap:

1. *Religion furnishes the conceptual framework in which science can flourish.*
2. *Science can both falsify and verify claims of religion.*
3. *Science encounters metaphysical problems which religion can help to solve.*
4. *Religion can help to adjudicate between scientific theories.*
5. *Religion can augment the explanatory power of science.*
6. *Science can establish a premise in an argument for a conclusion having religious significance.*

Part 2 was my favorite part. Here's part of it:

> When religions make claims about the natural world, they intersect the domain of science and are, in effect, making predictions which scientific investigation can either verify or falsify. Let me give some examples of each.
>
> […]Another interesting example of science's falsifying a religious view is the claim of several Eastern religions

> like Taoism and certain forms of Hinduism that the world is divine and therefore eternal. The discovery during this century of the expansion of the universe reveals that far from being eternal, all matter and energy, even physical space and time themselves, came into existence at a point in the finite past before which nothing existed. As Stephen Hawking says in his 1996 book *The Nature of Space and Time*, "almost everyone now believes that the universe, and time itself, had a beginning at the big bang."3 But if the universe came into being at the Big Bang, then it is temporally finite and contingent in its existence and therefore neither eternal nor divine, as pantheistic religions had claimed.
>
> On the other hand, science can also verify religious claims. For example, one of the principal doctrines of the Judaeo-Christian faith is that God created the universe out of nothing a finite time ago. The Bible begins with the words, "In the beginning God created the heavens and the Earth" (Gen. 1.1). The Bible thus teaches that the universe had a beginning. This teaching was repudiated by both ancient Greek philosophy and modern atheism, including dialectical materialism. Then in 1929 with the discovery of the expansion of the universe, this doctrine was dramatically verified. Physicists John Barrow and Frank Tipler, speaking of the beginning of the universe, explain, "At this singularity, space and time came into existence; literally nothing existed before the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo* (out of nothing)."4 Against all expectation, science thus verified this religious prediction. Robert Jastrow, head of NASA's Goddard Institute for Space Studies, envisions it this way:
>
> [The scientist] has scaled the mountains of ignorance; he is about to conquer the highest peak; as he pulls himself over the final rock, he is greeted by a band of theologians who have been sitting there for centuries.5

This is a popular-level article, and I recommend it. It really speaks to what I see as the biggest problem that I find among my co-workers who call themselves theists. There is a strange view of faith out there that says that faith is about life enhancement. God's job is to provide us with a happy life, via mystical coincidences. God's job is to make us happy – to make our plans work out and to protect us from suffering in this life. On this view, God is part of a subjective experience. When people who have this view talk about God, they talk about him as a kind of rabbit's foot or lucky charm. They are not trying to know if God exists objectively, or to know his character objectively. They are trying to run their own lives, and they want to believe that the there is a mysterious force in the universe that orders everything to make them happy. And perhaps they sing praise hymns in church to reward this mystical God. Praise hymns make them happy, so it must make him happy, too. There are Christians in my office who have this postmodern view of God as cosmic safety blanket, and they do not see it as incompatible with other views like pluralism, universalism, pro-abortion, pro-gay-marriage, pro-socialism, and so on. This subjectivist view of religion is, of course, nowhere in the Bible.

Enter science. Scientific evidence (and its partner, historical evidence) is the antidote to this subjective, life-enhancement version of Christianity. Scientific evidence establishes premises in arguments for God's existence. These arguments make the existence of God knowable apart from private experiences, personal preferences, mysticism and singing praise songs. If God really exists, then he is not just a projection of our own minds that serves our needs for comfort. God is not a crutch that we pull out by force of our own will – he is out there and he is real. Historical evidence, and the theology that is based on it, is also important, because it establishes the character of God objectively. Now instead of pushing our views onto God, and making him serve us, we can get to know him and serve him. Instead of having God arrange things mystically to serve our needs, we can use our wills to achieve the things that matter to him, while working within the rules of engagement that he has set out.

Science helps us know that God is real regardless of our personal preferences, our communities, our feelings, our desires and all that subjective stuff. And if God is real, then we find out what he is like by looking outward, not by looking inward, and not by agreeing with the people around us. Not everyone who claims to be a Christian is happy about the idea of God being real and knowable, because it threatens their autonomy to invent their own God. That's why it's important to know the science to correct even Christians, who have somehow adopted this postmodern, personal-preference view of religion.

# China to end one-child policy that killed 336 million unborn children?

**Wintery Knight** · 19 March 2013 · Archived copy · Original

The UK Telegraph has bad news and good news.

First the bad news:

> More than half a billion birth control procedures, including at least 336 million abortions, have been performed in the name of the one-child policy, China's Health ministry revealed yesterday.
>
> The figure illustrates the enormous impact that the one-child policy has had on China in the four decades since it began.
>
> Official statistics showed that in addition to the terminations, Chinese doctors have sterilised 196 million men and women since 1971.
>
> […]There are more than 13 million abortions a year, or 1,500 an hour, in China, according to government researchers, who blame the high figure on a lack of sex education.

> Fewer than ten per cent of sexually active couples regularly use condoms, according to the state-run Science and Technology Research Institute. By comparison, there are roughly 11 million abortions each year in India.

And now the good news:

> China's demographics have been dramatically skewed by strict family planning. Last year, the working age population shrank for the first time in 50 years, a serious threat in an economy built on a huge pool of cheap labour.
>
> The incoming Chinese leadership has already moved to dismantle the Family Planning Commission, which has enforced the one-child policy, sometimes brutally.
>
> […]Wang Feng, a population expert and director of the Brookings-Tsinghua Center for Public Policy in Beijing, told the Wall Street Journal that the government had begun the process of bringing the policy to an end.

That's incremental progress that I can support. But there are an awful lot of people who are going to face God on Judgment Day and have to answer for what they did. Not just the doctors, but the people who made the policies in the first place.

UPDATE: My friend Lydia is telling me to be skeptical of this report, because China has made similar statements before about this policy and nothing has changed.

# Brookings Institute: three simple rules to avoid poverty

**Wintery Knight** · 19 March 2013 · Archived copy · Original

An editorial from the left-leaning Washington Post, by scholar from the left-leanings Brookings Institute.

Take a look at this:

> Policy aimed at promoting economic opportunity for poor children must be framed within three stark realities. First, many poor children come from families that do not give them the kind of support that middle-class children get from their families. Second, as a result, these children enter kindergarten far behind their more advantaged peers and, on average, never catch up and even fall further behind. Third, in addition to the education deficit, poor children are more likely to make bad decisions that lead them to drop out of school, become teen parents, join gangs and break the law.
>
> In addition to the thousands of local and national programs that aim to help young people avoid these life-altering problems, we should figure out more ways to convince young people that their decisions will greatly influence whether they avoid poverty and enter the middle class. Let politicians, schoolteachers and administrators, community leaders, ministers and parents drill into children the message that in a free society, they enter adulthood with three major responsibilities: at least finish high school, get a full-time job and wait until age 21 to get married and have children.

> Our research shows that of American adults who followed these three simple rules, only about 2 percent are in poverty and nearly 75 percent have joined the middle class (defined as earning around $55,000 or more per year). There are surely influences other than these principles at play, but following them guides a young adult away from poverty and toward the middle class.

The most interesting part of the editorial was where the left-wing pro-abortion group Planned Parenthood complained that telling people the likely consequences of their own actions was either “racist” or “judgmental”:

> The recent attacks by Planned Parenthood on Michael Bloomberg, New York City’s mayor, for launching a campaign designed to inform teenagers of the consequences of teen pregnancy provides a good example of how many in our society face the effects of nonmarital births on teen mothers and their children. In one of the campaign posters, a baby with tears rolling down his face says: “I’m twice as likely not to graduate high school because you had me as a teen.” Another shows a girl saying to her mom: “Chances are he won’t stay with you. What happens to me?” Planned Parenthood criticized the ads, displayed in the subway and bus shelters, for ignoring racial and economic factors that contribute to teen pregnancy. Other critics say the ads stigmatize teen parents and their children.

This is what George W. Bush called “the soft bigotry of low expectations”. Planned Parenthood thinks that trying to get women to think in terms of cause and effect is pointless. They are too stupid to do anything but have sex with brutes and then murder their children. Over and over. That’s Planned Parenthood’s view of women. They won’t lift a finger to help women towards marriage, and the prosperity and security it would bring them and their children.

The simple fact is that Planned Parenthood makes a lot of money off of killing babies, and they don’t want the killing to stop.

# William Lane Craig debates Arif Ahmed: Does God Exist?

**Wintery Knight** · 19 March 2013 · Archived copy · Original

I thought that I would summarize a debate that occurred at Cambridge University between Dr. William Lane Craig and Dr. Arif Ahmed. Everyone knows Dr. Craig, but I should say that Arif Ahmed is a Senior Lecturer in the Faculty of Philosophy at Cambridge University.

The full MP3 is available here.

Below, I've summarized the two opening speeches from each debater. I put snarky clarifications in italics.

Here is Dr. Craig's opening speech: (1:24)

**Craig's case for God.**

1) The origin of the universe (3:10)
– an eternal universe is not compatible with mathematics
– the impossibility of an actual infinite in nature (cites David Hilbert)
– an eternal universe is not compatible with science
– the big bang theory requires space and time to come into being out of nothing (cites PCW Davies)
– even radical alternative theories require an absolute beginning (cites Stephen Hawking)
– atheists must believe that the origin of space and time came from nothing and by nothing (cites Anthony Kenny)

Argument:
P1.1) Whatever begins to exist requires a cause
P1.2) The universe begin to exist
C1.3) Therefore, the universe requires a cause

What can the cause be:
– it must be eternal, because it caused time to exist
– it must be non-physical, because it caused space to begin to exist

Why must the cause of the universe be a person instead of a force?
Only minds can exist non-physically
– the only non-physical entities we know of are abstract objects and minds
– but abstract objects can't cause physical effects
– therefore, the cause universe is a personal mind

Only minds can cause effects in time without antecedent conditions
– causally prior to the universe's beginning, there were no antecedent conditions
– the only entity capable of acting freely, not based on antecedent conditions, are free agents
– therefore, the cause of the universe is a free agent

2) The fine-tuning of the initial conditions of the universe (9:15)
– the fine-tuning of the universe is supported by science
– the constants and quantities given in the big bang can take any of a range of values
– the actual values are within a extremely narrow range that supports the requirements of life
– he gives the example of the fine-tuning of the gravitational constant
– he gives the example of the fine-tuning of the weak force

Argument:
P2.1) The fine-tuning is either due to law, chance or design
P2.2) It is not due to law, because the numbers are independent of the law
P2.3) It cannot be due to chance, the life-permitting band is tiny compared to the possible values

C2.4) Therefore, the fine-tuning is due to design

3) Objective moral values are plausibly grounded in God (12:41)
– objective moral values are values that exist and are binding regardless of what individuals think
– objective moral values cannot be rationally grounded on an atheistic worldview (cites Michael Ruse)
– atheists can recognize moral values and act on them, but they cannot explain their origin and existence
– atheists can only appeal to personal or cultural preferences to say what is right and wrong
– the existence of objective moral is undeniable

Argument:
P3.1) If God does not exist, then objective moral values do not exist
P3.2) Objective moral values do exist
C3.3) Therefore, God exists

4) The resurrection of Jesus implies that God exists (16:04)
– if the resurrection of Jesus happened, then it would be a miracle, implying that God exists
– three facts are recognized by the majority of scholars
– the tomb was found empty after his death (cites Jacob Kramer)
– individuals and groups saw Jesus after his death (cites Gerd Ludemann)
– the belief in the resurrection of Jesus was totally unexpected (cites N.T. Wright)
– naturalistic explanations of these facts have been rejected by the consensus of scholars

Argument:
P4.1) The 3 minimal facts are established
P4.2) The hypothesis that God raised Jesus from the dead is the best explanation for these facts
P4.3) The hypothesis that God raised Jesus from the dead entails that God exists
C4.4) Therefore, God exists

5) God can be known directly by personal experience (20:02)
– God can be experienced just like you experience a relationship with human persons

**Dr. Ahmed's first opening speech: (22:10)**

Rebuttal to Craig's case for God.

0) Craig is wrong about faith and reason (25:20)
– Craig's book Reasonable Faith, he makes a number of statements about faith and reason
– He writes that Christianity is not accountable to reason if reason goes against Christianity
– He writes that the truth of Christianity is knowable without rational arguments
– He writes that even if there are no reasons to believe, and many reasons to disbelieve, humans are still obligated to believe
– Question for Craig: is Christianity reasonable or isn't it? Do reasons matter or don't they?

1) Response to Craig's first argument: the origin of the universe (28:27)
– what mathematicians say about the contradictory nature of subtraction and division for actual infinities is wrong
– what cosmologists and physicists say about the beginning of time is wrong, every event follows another one, there is no first event
– even if the universe is 15 billion years old, the act of Creation requires time and there was no time prior to the supposed beginning of the universe for God to act in
– the cause of the universe need not be a personal agent
– all minds are made of matter so a mind cannot be the cause of the universe,
– it is impossible for a person to act outside of time
– why did God wait 15 billion years before creating humans and relating to them?

2) Response to Craig's second argument: the fine-tuning of the creation (32:38)
– where do these probabilities that Craig is using come from?

3) Response to Craig's third argument: the moral argument (34:07)
– I have personal preferences about what counts as right and wrong, and they are superior to God's preferences
– moral intuitions are not a good way of discovering objective moral values, so therefore objective moral values don't exist

4) Response to Craig's fourth argument: the resurrection (36:00)
– the number of eyewitnesses is not enough, because groups number of eyewitnesses can be fooled by illusions, as in David Copperfield illusions
– the Gospels contradict themselves, e.g. – the story of Matthew's earthquake and walking dead isn't in Mark – so that's a contradiction, so the Gospels are not reliable sources for Craig's 3 minimal facts

5) Response to Craig's fourth argument: personal experience (37:30)
– there are many different religious experiences because there are many different religions, which means that no one religion can be right

Ahmed's case against God.

1) Absence of evidence is evidence of absence (39:00)
– if there is are no reasons to believe in God, then this is evidence that he doesn't exist

2) The inductive argument from evil (40:04)
– some evil is gratuitous – events cause people to suffer, and has no benefit that I can see, which argues against the existence of a good God
– God would not have allowed people to suffer, because he has no overriding purpose that would justify his permission of human suffering

3) Belief in God makes people evil (41:52)
– all genuinely religious people are very immoral, *when measured against my subjective standard of morality*

**Further study**

In case you are wondering about his inductive argument from evil, please read this summary on the problems of evil and suffering, which is taken from my list of arguments for and against Christian theism. Keep in my mind that I am a software engineer with two degrees in computer science… not philosophy!

Craig mentions a paper by the late William P. Alston of Syracuse University in his rebuttal to the inductive problem of evil. The paper lists six limitations on human cognitive capacities that make it difficult for humans to *know* that some instance of apparently gratuitous evil really is gratuitious – that God has no morally sufficient reason for permitting this specific instance of evil. Since Ahmed is making the claim that some evil is gratuitous, he bears the burden of proof.

# Federal government spends $2.7 million to study lesbians who drink too much

**Wintery Knight** · 20 March 2013 · Archived copy · Original

From CNS News.

Excerpt:

> The National Institutes of Health (NIH) has awarded $2.7 million to study why lesbians are at a higher "risk for hazardous drinking."
>
> The University of Illinois has received grants since 2009 for its project, "Cumulative Stress and Hazardous Drinking in a Community of Adult Lesbians," which aims to develop "culturally sensitive" strategies to prevent lesbians from being drunks.
>
> "Studies using both probability and nonprobability samples provide ample evidence of lesbians' vulnerability to hazardous drinking," the grant's description reads. "However, very little is known about the factors that increase lesbians' risk for hazardous drinking."
>
> "We propose to build on and extend our study of sexual identity and drinking… to model effects of cumulative stress on hazardous drinking among lesbians."
>
> […]The grant states that there are "chronic stressors unique to sexual minorities, creating cumulative stress that may be compounded in lesbians of color."
>
> The study is being led by Tonda Hughes, professor at the Department of Health Systems Science at the University of Illinois, an "internationally recognized expert in the area of alcohol use among lesbians," according tothe University.
>
> […]The University of Illinois is not alone in receiving federal funds to study "sexual minorities" and their propensity to drink. The University of Washington has been awarded $1,154,445 since 2010 for its project "High Risk Drinking in Emerging Adult at-Risk Women," which seeks to find out why young lesbians and bisexuals face an "elevated" chance for hazardous drinking.
>
> Old Dominion University in 2012 received $446,056 for its study titled "Minority Stress, Alcohol Use, and Intimate Partner Violence Among Lesbians."

Last time, we saw that the federal government was spending $1.5 million on studying why so many lesbians are overweight. Never believe the government knows more about how to spend the money they take from you than you do. It's your money. They are wasting it. Instead of cutting wasteful spending like this, they release illegal immigrants with criminal convictions. You should never vote for bigger government. If you want to help people, use your own money.

# Pew Research study: MSNBC has the least news coverage and the most opinion

**Wintery Knight** · 20 March 2013 · Archived copy · Original

From Forbes magazine. (H/T Jared)

Excerpt:

> If you're like most cable news viewers, you probably think the channel you favor has a monopoly on the facts and the other ones are nothing more than a bunch of ranting. In fact, which cable network is the most opinionated is not a matter of opinion. It's MSNBC.
>
> A full 85% of the Comcast-owned network's coverage can be classified as opinion or commentary rather than straight news, according to the authors of the Pew Research Center's annual State of the News Media report.
>
> CNN and Fox News Channel, meanwhile, fall much closer to a 50/50 distribution, with Fox News skewing somewhat more heavily toward opinion.
>
> Not coincidentally, MSNBC also spends by far the least producing its news: some $240 million in 2012, according to an estimate by SNL Kagan. CNN spent $682 million, while Fox led the pack with an outlay of $820 million.

I think that Fox, at least, has both sides on when they cover opinion.

Below, please find some other academic studies of media bais. If you are going to link this article in a discussion forum, please link directly to the studies, not to me. I see my posts on media bias being linked a lot in forums, and people dismiss them because I am a Christian. So just link to the studies directly and you'll be good.

**Peer-reviewed academic studies of media bias**

Let's take a look at peer-reviewed academic studies of media bias, and see if they confirm or falsify what Pew Research found.

Here's a UCLA study on media bias.

Excerpt:

> Of the 20 major media outlets studied, 18 scored left of center, with CBS' "Evening News," The New York Times and the Los Angeles Times ranking second, third and fourth most liberal behind the news pages of The Wall Street Journal.
>
> Only Fox News' "Special Report With Brit Hume" and The Washington Times scored right of the average U.S. voter.
>
> The most centrist outlet proved to be the "NewsHour With Jim Lehrer." CNN's "NewsNight With Aaron Brown" and ABC's "Good Morning America" were a close second and third.
>
> "Our estimates for these outlets, we feel, give particular credibility to our efforts, as three of the four moderators for the 2004 presidential and vice-presidential debates came from these three news outlets — Jim Lehrer, Charlie Gibson and Gwen Ifill," Groseclose said. "If these newscasters weren't centrist, staffers for one of the campaign teams would have objected and insisted on other moderators."
>
> The fourth most centrist outlet was "Special Report With Brit Hume" on Fox News, which often is cited by liberals as an egregious example of a right-wing outlet. While this news program proved to be right of center, the study found ABC's "World News Tonight" and NBC's "Nightly News" to be left of center. All three outlets were approximately equidistant from the center, the report found.

> "If viewers spent an equal amount of time watching Fox's 'Special Report' as ABC's 'World News' and NBC's 'Nightly News,' then they would receive a nearly perfectly balanced version of the news," said Milyo, an associate professor of economics and public affairs at the University of Missouri at Columbia."

Here's a Harvard University study on media bias.

Excerpt:

> The programming studied on Fox News offered a somewhat more positive picture… of Republicans and more negative one of Democrats compared with other media outlets. Fox News stories about a Republican candidate were most likely to be neutral (47%), with the remainder more positive than negative (32% vs. 21% negative). The bulk of that positive coverage went to Giuliani (44% positive), while McCain still suffered from unflattering coverage (20% positive vs. 35% negative).
>
> When it came to Democratic candidates, the picture was more negative. Again, neutral stories had a slight edge (39%), followed by 37% negative and 24% positive. And, in marked contrast from the rest of the media, coverage of Obama was twice as negative as positive: 32% negative vs. 16% positive and 52% neutral.
>
> But any sense here that the news channel was uniformly positive about Republicans or negative about Democrats is not manifest in the data."

From the Washington Examiner, a study of the political contributions made by the mainstream media.

Excerpt:

> Senior executives, on-air personalities, producers, reporters, editors, writers and other self-identifying employees of ABC, CBS and NBC contributed more than $1 million to Democratic candidates and campaign committees in 2008, according to an analysis by *The Examiner* of data compiled by the Center for Responsive Politics.
>
> The Democratic total of $1,020,816 was given by 1,160 employees of the three major broadcast television networks, with an average contribution of $880.
>
> By contrast, only 193 of the employees contributed to Republican candidates and campaign committees, for a total of $142,863. The average Republican contribution was $744.
>
> […]The data on contributions by broadcast network employees was compiled by CRP at the request of *The Examiner* and included all 2008 contributions by individuals who identified their employer as one of the three networks or subsidiaries. The data does not include contributions by employees of the three networks who did not identify their employer.
>
> The CRP is the organization behind OpenSecrets.org, the web site that for more than a decade has put campaign finance data within reach of anybody with an Internet connection.
>
> President Obama received 710 such contributions worth a total of $461,898, for an average contribution of $651 from the network employees. Republican presidential nominee Sen. John McCain received only 39 contributions totaling $26,926, for an average donation of $709.

And more from a study done by the radically leftist MSNBC.

Excerpt:

> MSNBC.com identified 143 journalists who made political contributions from 2004 through the start of the 2008 campaign, according to the public records of the Federal Election Commission. Most of the newsroom checkbooks leaned to the left: 125 journalists gave to Democrats and liberal causes. Only 16 gave to Republicans. Two gave to both parties.

> The donors include CNN's Guy Raz, now covering the Pentagon for NPR, who gave to Kerry the same month he was embedded with U.S. troops in Iraq; New Yorker war correspondent George Packer; a producer for Bill O'Reilly at Fox; MSNBC TV host Joe Scarborough; political writers at Vanity Fair; the editor of The Wall Street Journal's weekend edition; local TV anchors in Washington, Minneapolis, Memphis and Wichita; the ethics columnist at The New York Times; and even MTV's former presidential campaign correspondent.

Those are the facts.

**So what?**

Now consider this column from Brent Bozell, which explains the difference media bias makes to political intelligence.

Excerpt:

> **A 2008 survey by the Pew Research Center asked media consumers three questions: which party was in control of Congress (Democrats), who was the secretary of state (Condi Rice) and who was the prime minister of Britain (Gordon Brown).**
>
> **Let's document how the viewers of "Hannity &Colmes" were better informed than Stewart's "Daily Show" gigglers on basic political facts. Hannity viewers beat Stewart's on the Democratic majority (84 percent to 65 percent correct answers), Condi Rice (a dramatic 73 percent to 48 percent gap) and Gordon Brown (49 percent to 36). Overall, as a percentage getting all three questions right, Hannity won 42-30.**

Just keep that in mind when you are watching the mainstream media news shows. A very good site to bookmark and read is Newsbusters, which documents mainstream media bias daily. I even have an RSS feed of their latest stories on the front page on this blog.

# UK offers more money to working women and single mothers, nothing for stay-at-home moms

**Wintery Knight** · 20 March 2013 · Archived copy · Original

Dina sent me this UK Daily Mail article about the "Conservative Party" of the UK.

Excerpt:

> Mothers who stay at home to look after their children do not need as much financial help as those who work, according to the Treasury.
>
> The insulting claim was inadvertently published yesterday as part of a briefing on the Government's new childcare plans.
>
> It fuelled accusations that the scheme will deliberately discriminate against traditional single-earner families in an attempt to force more mothers back to work.
>
> Critics described the new policy as a 'slap in the face for two million stay-at-home mothers'.
>
> The Treasury briefing, designed to help press officers 'rebut' criticism, stated: 'Working families who are struggling with their childcare costs, or families where parents want to go to work but can't afford to are in greater need of state support for child care than families where one parent chooses to stay at home and look after their children full-time.'
>
> **David Cameron and Nick Clegg yesterday confirmed that working couples who each earn less than £150,000 will qualify for child care tax breaks worth up to £1,200 a year per child from 2015.**
>
> **That means they could have a joint income of nearly £300,000 and still qualify.**
>
> **They will receive 20 per cent – equivalent to the basic rate of tax – of their yearly childcare costs, up to a total of £6,000 per child. This will save a typical working family with two children under 12 up to £2,400 a year.**
>
> **Single parents who are employed and earn less than £150,000 will also be eligible.**
>
> **But, in a move that will anger Tory traditionalists, the Government confirmed that families in which only one parent works will not receive a penny.**

David Cameron is also pushing gay marriage really hard, in spite of public opinion. I'm not even sure why he calls himself a conservative.

# The psychological profile of atheists

**Wintery Knight** · 21 March 2013 · Archived copy · Original

Triablogue has a fascinating quote posted from "The Cambridge Companion to Atheism". (H/T J. Warner Wallace)

Take a look:

> Findings regarding those who come from religious homes and then give up religion show that they have had more distant relations with their parents (Hunsberger 1980, 1983; Hunsberger and Brown 1984). Caplovitz and Sherrow (1977) found that the quality of relations with parents was a crucial variable, as well as a commitment to intellectualism. Hunsberger and Brown (1984) found that lesser emphasis placed on religion in home, especially by the mother, and self-reported intellectual orientation had a positive impact on rejecting the family's religiosity as a young adult. Dudley (1987) found that alienation from religion in Seventh-Day Adventist adolescents was correlated (0.72) with the quality of their relationship with their parents and other authority figures. Alienation was tied to authoritarianism and harshness on the part of the parents. But parents may also have a more consonant effect on their children's religiosity. Sherkat (1991), analyzing large-scale U.S. surveys in 1988, found that parents' religious exogamy and lapses in practice led to their children's apostasy. Thus, children may be following in their parents' footsteps or acting out their parents' unexpressed wishes.
>
> Attachment theory (Kirkpatrick 2005) assumes that interpersonal styles in adults, the ways of dealing with attachment, separation, and loss in close personal relationships, stem directly from the mental models of oneself and others that were developed during infancy and childhood. Attachment styles can be characterized as secure, avoidant, or anxious/ambivalent. Secure adults find it relatively easy to get close to others. Avoidant adults are somewhat uncomfortable being close to others. Anxious/ambivalent adults find that others are reluctant to get as close as they would like. Kirkpatrick (2005) reports that in a study of 400adults in the United States, those having an avoidant attachment style were most likely to identify themselves as either atheist or agnostic.
>
> Does losing a parent early in life lead one to atheism? Vetter and Green (1932–33) surveyed 350 members of the American Association for the Advancement of Atheism, 325 of whom were men. Among those who became atheists before age twenty, half lost one or both parents before that age. A large number in the group reported unhappy childhood and adolescence experiences. (The twenty-five women reported "traumatic experiences" with male ministers. We can only wonder about those today.) Vitz (1999) presents biographical information from the lives of more than fifty prominent atheists and theists as evidence for his theory that atheism is a reaction to losing one's father.

This is why Christians need to do more than quote the Bible to people. We need to be concerned with politics. We need to support policies that promote and strengthen marriage and parenting. We need to oppose policies that undermine the stability of the marriage commitment. Not only should Christians be informed and outspoken about same-sex marriage, but we should also be informed and outspoken on other laws that weaken marriage, such as no-fault divorce laws. Not everything we need to know is in the Bible. The Bible does say that divorce is wrong, and homosexuality is wrong, but we need to look outside the Bible at research in order to influence the society as a whole. Most of the people who need influencing in public policy discussions will not accept Bible verses alone – they need arguments and evidence.

If we really care about bringing people to Christ, then we need to understand that public policy plays a role. Christians need to stop being pious about being apolitical.

# What causes homosexuality?

**Wintery Knight** · 21 March 2013 · Archived copy · Original

Here's a post from NARTH by Julie Hamilton, Ph.D, that explains what most people already know about the causes of homosexuality.

Excerpt:

> While environmental factors may include experiences of sexual abuse or other traumatic events, a common contributor to same-sex attractions is a disruption in the development of gender identity. Gender identity refers to a person's view of his or her own gender; that is, his or her sense of masculinity or femininity. Gender identity is formed through the relationships that a child has with the same-sex parent and same-sex peers.
>
> The process of gender identification begins approximately between age two and a half and four. For boys, it is during this phase that they begin to move from their primary attachment with the mother to seeking out a deeper attachment with the father. For males, the relationship between a boy and his father is the initial source of developing a secure gender identity. It is through the father-son relationship that a boy discovers what he needs to know about being male, including who he is as a boy, how boys walk, how they talk, how they act, and so forth. As the father spends time with the son, shows interest in the son, and gives the son affirmation and affection, the father imparts to the son a sense of masculinity. The boy begins to develop a sense of his own gender by understanding himself in relation to his father.
>
> When the child reaches the age of five, he begins to face another task, that is, to begin to attach to same-sex peers. At this age, he starts school and begins to look to the other boys to answer the same questions that his dad has been answering. He looks to the other boys to discover how they walk, how they talk, how they play, and how he measures up in relation to them. He seeks to be included, accepted, and acknowledged. Through the relationships he forms with other boys, he continues to gain a sense of masculinity, discovering more about others boys and therefore more about himself as a boy.
>
> […]The female development of homosexuality is a bit more complex. As with the male development, there are a number of factors that can contribute. For some women who end up with same-sex attractions, the development is similar to the male development previously described. For others, negative perceptions regarding femininity may lead to an internal detachment from their own femininity. For example, if a girl watches her father abuse her mother, the girl might conclude that to be feminine is to be weak. At an early age she might make an unconscious decision to detach from her female identity. She might detach from her own gender in an effort to protect herself from the perceived harmful effects of being female.
>
> Sexual abuse is another factor that can contribute to a homosexual orientation. In these cases men are seen as unsafe, and lesbianism becomes a way of protecting against further hurt from a male. For some there might be a disconnection from the mother, and lesbianism becomes a search for motherly love. For others, same-sex attractions may not initially be present, but may later develop as a result of entering into a non-sexual friendship which becomes emotionally dependent. An emotionally dependent relationship is one in which two people seek to have their needs met by one another. It is a relationship in which healthy boundaries are not in place. The absence of appropriate emotional boundaries can then lead to a violation of physical boundaries.

I think this is very sad because it turns out that it's really the parents who make the decisions that will push someone towards or away from homosexuality. It would be better for everyone, homosexuality aside, if people who have children think twice about the needs of those children. Maybe the adults need to be a little more informed and accommodating about what children need? And maybe we need to do a better job of picking spouses based on their ability to provide for the needs of children?

Speaking as a Christian, I know why I want to have children, and I would be very interested in bonding with them

and developing them. And people can see that in me because of the way that I mentor and support so many younger Christians in their studies and plans. We need to get better at caring for young people and just spending time with them instead of always doing our own thing and handing them off to strangers. It's wrong to have children and not give them the attention and time they need to grow up.

You may also be interested in this post by Dr. Trayce Hansen on the identical twin studies that show that homosexuality is not determined by genetics, although that certainly is a factor. I also recommend the book "A Parent's Guide to Preventing Homosexuality" by Dr. Joseph Nicolosi for more background on these issues.

# The divinity of Jesus according to the early church

**Wintery Knight** · 21 March 2013 · Archived copy · Original

Cold-Case Christianity by J. Warner Wallace

Earlier, I wrote a post about the evidence for the divinity of Jesus in the earliest New Testament documents. And now I've found a wonderful follow-up to that post from J. Warner Wallace, author of "Cold-Case Christianity", the book I am currently reading. I am on chapter 14.

He lists quotations from all of these early church fathers about the divinity of Jesus:

- Barnabas, companion of Paul (c. 70-130AD)
- Ignatius, Bishop of the Church at Antioch (c. 110AD)
- Clement of Rome, Bishop of the Church at Rome (c. 120AD)
- Irenaeus, Bishop of the Church at Lyons, Modern Day France (c. 180AD)
- Clement of Alexandria, Renowned Christian Teacher in Egypt (c. 195AD)
- Hippolytus, Leading Presbyter at the Church in Rome (c. 205AD)
- Tertullian, Passionate Christian Apologist in Carthage, North Africa (c. 207AD)
- Origen, Famous Pupil of Clement of Alexandria (c. 225AD)

This post is actually very similar to material in chapter 13 of Wallace's book. Have you read it yet?

One of the most thorough reviews that I've seen of the book was on Luke Nix's blog, in case you want to take a closer look.

# Assistant to Kermit Gosnell admits to killing ten born-alive babies

**Wintery Knight** · 22 March 2013 · Archived copy · Original

*WARNING: this story is really horrific. Reader discretion is advised.*

CNS News points out that Gosnell joked with his staff about later-term abortions.

Excerpt:

> Dr. Kermit Gosnell, an abortionist now on trial in Philadelphia charged with seven counts of first-degree murder–he allegedly cut the spinal cords of late-term aborted babies who were born alive–apparently used to joke about the large size of some the infants he aborted and in one case, according to what a co-worker told the grand jury, said, "This baby is big enough to walk around with me or walk me to the bus stop."
>
> Gosnell, 72, who ran a multi-million dollar abortion business in West Philadelphia, was arrested on Jan. 19, 2011, and his trial started Monday, Mar. 18, 2013. The first-degree murder counts refer to seven late-term aborted babies who were born alive and then killed, their spinal cords cut with scissors.
>
> Gosnell is also charged with the third-degree murder of a pregnant woman, Karnamaya Mongar, 41, who died after being given a pain killer at Gosnell's office. He also faces several counts of conspiracy and violation of Pennsylvania's law against post-24-week abortions.
>
> In testimony on Monday, Adrienne Moton, who used to work for Gosnell at the Women's Medical Society in West Philadelphia, said she recalled one baby – "Baby Boy A" – who was aborted in July 2008. Baby A was so large, Moton took a photo of the child with her cell phone before Gosnell took the baby out of the room.
>
> "I just saw a big baby boy. He had that color, that color that a baby has," Moton said in court. "I just felt he could have had a chance. … He could have been born any day."

Moten described how she helped to kill at least 10 born-alive babies by cutting their spinal cords.

More on the story from Life Site News.

Excerpt:

> The grand jury report includes the account of another of Gosnell's employees, Kareema Cross, describing the moment of Baby A's birth:
>
> After the baby was expelled, Cross noticed that he was breathing, though not for long. After about 10 to 20 seconds, while the mother was asleep, "the doctor just slit the neck," said Cross. Gosnell put the boy's body in a shoebox. Cross described the baby as so big that his feet and arms hung out over the sides of the container. Cross said that she saw the baby move after his neck was cut, and after the doctor placed it in the shoebox. Gosnell told her, "it's the baby's reflexes. It's not really moving."
>
> A neonatologist who testified on behalf of the grand jury said that Gosnell's explanation for the baby's movements was false, and that in all likelihood Gosnell failed immediately to kill the baby, and that his "few moments of life were spent in excruciating pain."
>
> The neonatologist also estimated the baby's age as around 32 weeks gestation.
>
> […]Gosnell's lawyer is arguing that the prosecution can't prove that any of the seven babies he stands accused of murdering were born alive. He told the courtroom yesterday that the prosecution of his client is a racist-inspired "lynching."

Gosnell is calling the charges against him an "elitist, racist prosecution".

# Does science support mothers who leave their young children to go to work?

**Wintery Knight** · 22 March 2013 · Archived copy · Original

Dina is very concerned about the UK's leftist coalition government's attempt to punish women who stay at home with their young children. (H/T Dina)

Excerpt:

> Under plans unveiled in the Budget on Wednesday, families will only benefit from the generous new deal, which will come into force in 2015, if 'all parents' have a job. If one parent works but the other stays at home looking after their young children, they will get nothing.
>
> It is the second time in just a few months that the Government has triggered controversy with its changes to the tax and benefit systems, which appear to penalise stay-at-home mothers.
>
> As a result of the recent child benefit changes, a couple can both earn £50,000 and keep their child benefit, worth £1,752 a year for two children.
>
> But a couple where one parent earns £60,000 and the other earns nothing – but have a far lower joint income – do not get a penny.
>
> Again, this week's initiative favours those couples where both parents go out to work. It will even benefit parents who each earn a salary of £149,999.

Note that this plan is being put forward by socialist Liberal Democrat Party, as well as the "Conservative" Party.

Dina thinks that the science is pretty clear that children suffer if their mothers leave them at a young age. Take a look at the video above, and then the brain scan below.

Brain scans of 3-year old children: normal vs neglected

Here's the article that goes with the brain scan from the UK Daily Mail.

Excerpt:

> Both of these images are brain scans of a two three-year-old children, but the brain on the left is considerably larger, has fewer spots and less dark areas, compared to the one on the right.
>
> According to neurologists this sizeable difference has one primary cause – the way each child was treated by their mothers.
>
> The child with the larger and more fully developed brain was looked after by its mother – she was constantly responsive to her baby, reported The Sunday Telegraph.
>
> But the child with the shrunken brain was the victim of severe neglect and abuse.
>
> According to research reported by the newspaper, the brain on the right worryingly lacks some of the most fundamental areas present in the image on the left.
>
> The consequences of these deficits are pronounced – the child on the left with the larger brain will be more intelligent and more likely to develop the social ability to empathise with others.
>
> But in contrast, the child with the shrunken brain will be more likely to become addicted to drugs and involved in violent crimes, much more likely to be unemployed and to be dependent on state benefits.
>
> The child is also more likely to develop mental and other serious health problems.
>
> Professor Allan Schore, of UCLA, told The Sunday Telegraph that if a baby is not treated properly in the first two years of life, it can have a fundamental impact on development.
>
> He pointed out that the genes for several aspects of brain function, including intelligence, cannot function.
>
> […]The study correlates with research released earlier this year that found that children who are given love and affection from their mothers early in life are smarter with a better ability to learn.
>
> The study by child psychiatrists and neuroscientists at Washington University School of Medicine in St. Louis, found school-aged children whose mothers nurtured them early in life have brains with a larger hippocampus, a key structure important to learning, memory and response to stress.
>
> The research was the first to show that changes in this critical region of children's brain anatomy are linked to a mother's nurturing, Neurosciencenews.com reports.
>
> The research is published online in the Proceedings of the National Academy of Sciences Early Edition.
>
> Lead author Joan L. Luby, MD, professor of child psychiatry, said the study reinforces how important nurturing parents are to a child's development.

This is why I argue that feminism, which is the ideology that demands that women work outside the home in order to be "equal" to men, is harmful to children. If we really cared about children, then we need to not be subsidizing the child abuse schemes of Liberal Democrats like Nick Clegg. We need to be clear that gender feminism (third-wave feminism) is an anti-child ideology and it should be opposed. The science is settled on this issue. Feminism harms innocent young children. And feminism isn't just opposed to the rights of born children. They oppose the right to life of unborn children, too.

# Florida Atlantic University student suspended for refusing to stomp on Jesus

**Wintery Knight** · 23 March 2013 · Archived copy · Original

Fox News reports.

Excerpt:

> A Florida Atlantic University student said he was punished after he refused a professor's directive to stomp on a piece of paper with the word "Jesus" written on it. The university, meanwhile, is defending the assignment as a lesson in debate.
>
> "I'm not going to be sitting in a class having my religious rights desecrated," student Ryan Rotela told **television station WPEC**. "I truly see this as I'm being punished."
>
> Rotela, who is a devout Mormon, said the instructor in his Intercultural Communications class told the students to write the name "Jesus" on a sheet of paper. Then, they were told to put the paper on the floor.
>
> "He had us all stand up and he said 'Stomp on it,'" Rotela said. "I picked up the paper from the floor and put it right back on the table.
>
> The young college student told the instructor, **Deandre Poole**, that the assignment was insulting and offensive.
>
> "I said to the professor, 'With all due respect to your authority as a professor, I do not believe what you told us to do was appropriate,'" **Rotela said.** 'I believe it was unprofessional and I was deeply offended by what you told me to do.'"
>
> Rotela took his concerns to Poole's supervisor – where he was promptly suspended from the class.
>
> Poole did not return calls seeking comment.
>
> According to his university profile, he has a PhD from Howard University and is authoring a book titled, "Obamamania: The Rise of a Mythical Hero."
>
> A university spokesperson told they could not comment about Rotela's case due to student privacy laws.
>
> However, the university is defending the instructor's assignment to stomp on the name of Jesus.
>
> "As with any academic lesson, the exercise was meant to encourage students to view issues from many perspectives, in direct relation with the course objectives," said Noemi Marin, the university's director of the school of communication and multimedia studies.
>
> "While at times the topics discussed may be sensitive, a university environment is a venue for such dialogue and debate," Marin added.

Yes, the university is a place for dialog and debate, which is why they suspend you if you disagree with their leftist mythology.

The troubling thing is that the suspended students had to pay money to have leftist religion shoved down his throat. He even paid to be suspended for refusing to participate in their anti-religious bigotry. If you're going to go to college, try to study something quantitative and testable, like engineering or computer science. The non-quantitative part of university is absolutely dominated by secular leftists like this bully Poole. It's not a debate they are looking for, it's compliance. There is *no* critical thinking among these leftists. They are so close-minded that they attack anyone who disagrees with them. They can't even listen to a different point of view. It's best to just study something that you can get paid for, especially if your goal is to get married and support a family. Don't take classes in things like "International Communication" – that's where you find the unqualified and unskilled people teaching their leftist ideology.

# CDC: risk of HIV 150 times greater for gay men than for heterosexual men

**Wintery Knight** · 24 March 2013 · Archived copy · Original

MercatorNet reports on the latest HIV-related numbers from the United States government's Center for Disease Control.

Excerpt:

> Recent statistics from the Centers for Disease Control and Prevention (CDC) on HIV infection in the United States reveal some disturbing trends concerning gay males or, in CDC terminology, "men who have sex with men" (MSM). In recent data the CDC estimated that 61 percent of the 48,079 HIV infections diagnosed in 2010 occurred through male to male sexual contact.(1) According to the CDC data, sexual contact and injection drug use are the predominant means by which HIV is transmitted.
>
> The CDC data on HIV diagnoses came from forty-six states and five U.S. dependent areas. Some 29,194 new HIV diagnoses in 2010 were linked to male homosexual contact where no injection drug use took place. There were approximately 4550 HIV male diagnoses linked to heterosexual contact. Injection drug use was involved in 5481 cases. Women contracting the HIV virus through heterosexual contact accounted for approximately 8,800 cases. Another 47 HIV cases came from sources other than the four listed. Included in the other 47 cases were blood transfusions and prenatal exposure.(2) When CDC statistics are analyzed using the estimate of the MSM population at 4 percent of the American male population and assuming the other 96 percent who do not have sex with men are heterosexual, the risk of HIV infection from sexual contact for MSM was approximately 150 times greater than the heterosexual male population in 2010.(3)
>
> To put the HIV risk for MSM into perspective a comparison with the health risks of smoking can be made. Smoking tobacco is a causative factor of many types of cancer, the most common being lung cancer. According to the CDC the risk of lung cancer for men who smoke is 23 times greater than for men who do not smoke. For women who smoke the risk is 13 times greater than for women who do not. Those who smoke are also 2 to 4 times more likely to suffer coronary heart disease and 2 to 4 times more likely to suffer a stroke.(4)
>
> […]Similar to smoking, homosexual behavior has other unhealthy side effects. The CDC stated that the rate of primary and secondary syphilis among MSM is "more than 46 times that of other men and more than 71 times that of women."(8) Studies have shown that MSM are at higher risk of alcohol and drug abuse, anxiety, major depression, and thoughts of suicide.(9)

The footnotes in the MercatorNet article either go directly back to the CDC web site, or in some cases to peer-reviewed published research.

CDC numbers were also recently reported in the Washington Times.

Excerpt:

> Teens and young adults now account for more than a quarter of the new cases of HIV identified in the United States annually, and a clear majority of those cases involve young gay or bisexual men, the federal government said in a major new survey Tuesday.
>
> Of the nearly 48,000 new HIV cases identified in the United States in 2010, the latest year for which complete data are available, more than 12,000 involved teens and young adults, the Centers for Disease Control (CDC) found in its latest report.
>
> About 72 percent of these new HIV cases in younger adults occurred in young men who are gay or bisexual, according to the CDC report.

> […]According to the CDC figures, black youths accounted for the largest share of new HIV cases, with Hispanic youths and white youths accounting for about 20 percent each.
>
> About 1.1 million people are estimated to be living with HIV in the United States. Some 47,129 new HIV cases were identified in 2010.
>
> The CDC's new report, "Vital Signs: HIV Infection, Testing, Risk Behaviors Among Youths, United States," estimated that youths aged 13 to 24 accounted for 12,200, or 26 percent, of new HIV infections in 2010.
>
> Of these new cases, 7,000 were among black youths, 2,390 were among Hispanics, and 2,380 were among whites.
>
> About 8,800 cases were attributed to male-to-male sexual contact.
>
> HIV/AIDS is incurable, and an estimated 17,774 people with AIDS died in 2009. Some 619,000 persons have died of AIDS in the United States since the epidemic began in the early 1980s, according to the CDC.

If you really love a person, you don't hide the risks of certain activities from them. You tell them the truth about the risks, so that they have all the information they need when making decisions. I wouldn't let any of my friends smoke cigarettes without getting a stern warning, supported by evidence. Somehow, we've redefined love to mean approving of whatever people want to do, regardless of risks. Why is that a good thing? Telling people the truth about what they doing are should never be viewed as "intolerant".

# Florida Atlantic University professor Deandre Poole is a Democrat Party official

**Wintery Knight** · 24 March 2013 · Archived copy · Original

Chris S. posted this article from Biz Pac Review about the recent stomping of Jesus at Florida Atlantic University.

Excerpt:

> A South Florida college professor's bizarre classroom antics have made waves for their shocking display of religious intolerance. But they were even more instructive in educating the rest of us on the alarming thought process of yet another Palm Beach County Democratic leader.
>
> Florida Atlantic University professor Deandre Poole instructed his intercultural communications class earlier this month to write the name "Jesus" on a piece of paper, then drop it on the floor and stomp on it.
>
> One student, a devout Mormon, was so so disturbed by the exercise that he complained to school officials, saying Poole had offended his religious convictions. The school responded by suspending the student from the class.
>
> While the incident has made the news, the media has failed to report a key component of Poole's resume: He is vice-chairman of the Palm Beach County Democratic Party. His recent actions add fire to an already-disturbing pattern of hate coming out of the local party.
>
> Mark Siegel, the former chairman of the county Democratic Party, was forced to resign in September under a barrage of criticism over an anti-Christian tirade at the Democratic National Convention in Charlotte, N.C.
>
> Siegel, who is Jewish, told an interviewer at the convention that pro-Israel Christians want to see Jews "slaughtered."
>
> "Oh no, the Christians just want us to be there so we can all be slaughtered and converted and bring on the second coming of Jesus Christ," he said at the time.
>
> Just two months earlier, in a series of emails, Evelyn Garcia, a Democratic Executive Committee member from Palm Beach County and one of the local party's Democratic National Committee representatives, accused Israel of "crimes against humanity" and running "mass concentration prison camps."
>
> Garcia also quit her post in the wake of the public response to her comments.

His biography doesn't say what area his PhD was in, but judging from this story I'm guessing that it must be in Marxist Studies.

# Global warming in the UK: coldest March in 50 years, Winter extending into Spring

**Wintery Knight** · 25 March 2013 · Archived copy · Original

From the UK Daily Mail. (H/T Doug Ross)

Excerpt:

> Today is officially the first day of spring – but it will bring little respite to freezing Britain as snow continues to fall, closing schools and causing chaos on the roads.
>
> The country is on track to suffer its coldest March in more than 50 years as conservationists warned that the prolonged winter weather was damaging wildlife.
>
> The unrelenting cold weather is showing no signs of slowing this week as snow continues to fall across the North.
>
> Today is the vernal equinox, traditionally regarded as the end of winter and the day that spring arrives, but the news could come as a surprise to Britons affected by the snow and cold.
>
> More light snow will settle throughout the day in the north-east of England and eastern Scotland, adding to large amounts of up to 10cm which hit the regions yesterday.
>
> Higher ground will see up to another 5cm, while lower areas could see around 2cm – along with parts of Northern Ireland and Wales.
>
> […]**The Central England Temperature – covering an area bounded by Lancashire, Bristol and London – shows temperatures have been 2.8C lower than normal for the month.**
>
> **The last time March was so cold was in 1962, when the average temperature was 2.4C (36F) – or 4.1C below the norm.**

Meanwhile, in the midwestern United States, we get snow storms in the Spring:

> Winter's late-season grip on the nation continued into the first full week of spring with a powerful snowstorm moving east, leaving major highways closed, flights canceled and heavy accumulation in the Midwest.
>
> The largest snowfall totals of 10 inches or more fell across Kansas and over St. Louis, Mo., before the storm began churning up the Ohio River Valley toward the East Coast on Sunday.
>
> In the mid-Missouri town of Columbia, TV station KOMU was briefly evacuated Sunday morning because of high winds and a heavy buildup of snow on the broadcast tower next to the building.
>
> Two distinct patterns of heavy snow were following one another across the nation's midsection, engulfing areas of Illinois, Indiana and Ohio. The storm was forecast to bring heavy snow to portions of the Midwest. About 6 to 10 inches were forecast from Missouri to Ohio on Sunday. Winter storm warnings were issued for much of central Missouri, Illinois, Indiana and Ohio.
>
> […]Forecasters Sunday said travel across the Mid-Atlantic will be disrupted with slush and snow accumulating along the I-95 corridor from Philadelphia to Washington, D.C. With temperatures expected to hover around freezing Monday, it was difficult for officials to be certain how quickly snow would melt.
>
> […]In the west, Highway I-70 was shut down from Denver — where 100 flights were canceled — into Kansas Saturday as truckers pulled off treacherous roadways and hotels quickly filled up.
>
> Forecasters were predicting a few inches in and around the nation's capital and further to the north in New York City. Heavier accumulation was expected in areas in between, such as Baltimore and Philadelphia.

Do you know what we need to stop this global warming? A nice carbon tax. And thankfully, Obama is working hard on that.

# William Lane Craig on historical reliability of the gospels

**Wintery Knight** · 25 March 2013 · Archived copy · Original

From Reasonable Faith, a challenge from a non-Christian who watched the Craig-Ehrman debate. (PDF of the transcript here at Apologetics 315)

Here are his questions:

> 1) What outside sources (outside of the canon) are there that support Jesus' death, burial, and resurrection in bodily form, and ascension into heaven?
>
> 2) The message of Jesus was spread by word of mouth until the gospels were written. How do we know legend wasn't developed? Such as Jesus being buried by Joseph of Arimathea.
>
> 3) What about other pagan miracle workers such as Honi the Circle-Drawer, Hanina be Dosa, and Apollonius of Tyana (p 27). Doesn't the fact that these pagan people doing miracles similar to Jesus discredit Jesus as a miracle worker?
>
> 4) What about the seeming contradictions in the different gospel accounts? Please give me a different answer then "These are only secondary details and does not lie at the heart of the matter." If we go to a University that declares the Bible is inerrant, then shouldn't we be able to explain these?
>
> I quote from Mr. Ehrman in his debate vs Craig on p. 11:
>
> "What day did Jesus die on and what time of day? Did he die on the day before the Passover meal was eaten, as John explicitly says, or did he die after it was eaten, as Mark explicitly says? Did he die at noon, as in John, or at 9 a.m., as in Mark? Did Jesus carry his cross the entire way himself or did Simon of Cyrene carry his cross? It depends which Gospel you read. Did both robbers mock Jesus on the cross or did only one of them mock him and the other come to his defense? It depends which Gospel you read. Did the curtain in the temple rip in half before Jesus died or after he died? It depends which Gospel you read. Or take the accounts of the resurrection. Who went to the tomb on the third day? Was it Mary alone or was it Mary with other women? If it was Mary with other women, how many other women were there, which ones were they, and what were their names? Was the stone rolled away before they got there or not? What did they see in the tomb? Did they see a man, did they see two men, or did they see an angel? It depends which account you read. What were they told to tell the disciples? Were the disciples supposed to stay in Jerusalem and see Jesus there or were they to go to Galilee and see Jesus there? Did the women tell anyone or not? It depends which Gospel you read. Did the disciples never leave Jerusalem or did they immediately leave Jerusalem and go to Galilee? All of these depend on which account you read."

Now check this out – Dr. Craig *quoting Ehrman* to respond to a challenge raised by Ehrman:

4. *What about the seeming contradictions in the different gospel accounts?*

Here's your straight answer, Grant: *they don't matter*. I could accept that all of these apparent discrepancies are irresolvable, and it wouldn't affect my historical argument one wit. Don't believe me? Then let's let Bart Ehrman speak for himself. Does he think that the seeming contradictions he lists undermine the historical credibility of the facts upon which my argument is based? No! He says,

The resurrection of Jesus lies at the heart of Christian faith. Unfortunately, it also is a tradition about Jesus that historians have difficulty dealing with. As I said, there are a couple of things that we can say for certain about Jesus after his death. We can say with relative certainty, for example, that he was buried. . . .

Some scholars have argued that it's more plausible that in fact Jesus was placed in a common burial plot, which sometimes happened, or was, as many other crucified people, simply left to be eaten by scavenging animals (which also happened commonly for crucified persons in the Roman Empire). But the accounts are fairly unanimous in

saying (the earliest accounts we have are unanimous in saying) that Jesus was in fact buried by this fellow, Joseph of Arimathea, and so it's relatively reliable that that's what happened.

We also have solid traditions to indicate that women found this tomb empty three days later. This is attested in all of our gospel sources, early and late, and so it appears to be a historical datum. As so I think we can say that after Jesus' death, with some (probably with some) certainty, that he was buried, possibly by this fellow, Joseph of Arimathea, and that three days later he appeared not to have been in his tomb ("From Jesus to Constantine: A History of Early Christianity," Lecture 4: "Oral and Written Traditions about Jesus" [The Teaching Company, 2003]).

The same goes double—well, many times more than double—for Jesus' crucifixion. This event is widely recognized as the most solidly established fact about the historical Jesus, denied only by kooks and Muslim true believers. Yet Ehrman's first five discrepancies are all connected, not with the burial and empty tomb narratives, but with the crucifixion accounts! So are you going to deny that Jesus of Nazareth was crucified under Roman authority at the time of the Jewish Passover feast in AD 30 because of these differences in the narratives? If so, Grant, then you will have not only intellectually marginalized yourself but also shown that you are not a sincere seeker after truth.

Do you see now, Grant, why I refused to be drawn into a dispute about how many angels there were at the tomb? Insofar as the historicity of the empty tomb is concerned, it just doesn't matter.

This article also contains a bit of broad, educational material on how to do history:

> In addition to these general considerations, scholars have enunciated certain "criteria of authenticity" to help detect historically reliable information about Jesus even in a document which may not be generally reliable. What the criteria really amount to are statements about the effect of certain types of evidence upon the probability of various sayings or events narrated in the sources. For some saying or event S, evidence of a certain type E, and our background information B, the criteria would state that, all things being equal, Pr (S|E&B) > Pr (S|B). In other words, all else being equal, the probability of some event or saying is greater given, for example, its early, independent attestation than it would have been without it.
>
> What are some of the factors that might serve the role of E in increasing the probability of some saying or event S? The following are some of the most important:
>
> 1. *Historical congruence*: S fits in with known historical facts concerning the context in which S is said to have occurred.
> 2. *Independent, early attestation*: S appears in multiple sources which are near to the time at which S is alleged to have occurred and which depend neither upon each other nor upon a common source.
> 3. *Embarrassment*: S is awkward or counter-productive for the persons who serve as the source of information for S.
> 4. *Dissimilarity*: S is unlike antecedent Jewish thought-forms and/or unlike subsequent Christian thought-forms.
> 5. *Semitisms*: traces in the narrative of Aramaic or Hebraic linguistic forms.
> 6. *Coherence*: S is consistent with already established facts about Jesus.
>
> Notice that these criteria do not presuppose the general reliability of the Gospels. Rather they focus on a particular saying or event and give evidence for thinking that specific element of Jesus' life to be historical, regardless of the general reliability of the document in which the particular saying or event is reported. These same criteria are thus applicable to reports of Jesus found in the apocryphal Gospels, or rabbinical writings, or even the Qur'an. Of course, if the Gospels can be shown to be generally reliable documents, so much the better! But the criteria do not depend on any such presupposition. They serve to help spot historical kernels even in the midst of historical chaff. Thus we need not concern ourselves with defending the Gospels' general reliability or every claim attributed to Jesus in the Gospels (much less their inerrancy!).

Click here for the rest. It is very important that Christians be able to use the Bible as a historical source with non-Christian challengers who do not accept the Bible as inerrant, nor even as generally reliable. The best way to learn is by seeing how Christian scholars make the case in debates and discussions.

# Mike Licona debates Bart Ehrman on the Unbelievable radio show

**Wintery Knight** · 25 March 2013 · Archived copy · Original

From the Unbelievable radio show.

Details:

> Bart Ehrman is well known as a US New Testament Scholar who lost his Christian faith and now questions many core precepts of Christianity, including the Resurrection of Jesus. When Mike Licona had doubts he devoted himself to investigating the evidence and became convinced that Jesus resurrection is the only rational explanation for the facts.
>
> They debate key historical facts about the resurrection – are the letters of Paul that report the resurrection and the Gospel accounts trustworthy or theologised and changed with time? What about apparent contradictions between the Gospels? Does the consensus of scholars count as evidence, or is there a Christian bias? Can a miracle count as an explanation for historical data?

The MP3 file is here.

**Snarky summary of the radio debate:** (items with * are my made-up paraphrases/clarifications)

Ehrman:
– Bart's new book is about forgeries in the ancient world
– some books were falsely attributed to prominent Christian figures
– there are mistakes in the Bible
– there are mistakes in the resurrection narratives
– the defeat of inerrancy led to his conversion to liberal Christianity
– the problem of evil and suffering caused him to become a non-Christian

Licona:
– there are minimal facts that are agreed to by a broad spectrum of scholars
– the minimal facts are accepted because they pass standard historical criteria
– Fact 1: Jesus died by crucifixion
– Fact 2: Individuals and groups had visions of Jesus after his death
– Fact 3: Paul, a skeptic and an enemy, had an appearance of Jesus that converted him
– these facts are agreed to atheist scholars, liberal scholars, etc.
– virtually 100% of scholars agree with these three facts
– there is no naturalistic explanation of these three facts
– therefore, the best explanation of these three facts is that God raised Jesus from the dead

Ehrman:
– all historians would accept these three facts, except for maybe the group appearances
– the death of Jesus is irrelevant to the resurrection
– the second and third point can be collapsed together
– so really there is only one fact

Moderator:
– the crucifixion is relevant because Muslims don't admit that fact
– the crucifixion important because it establishes a resurrection, not a resuscitation

Ehrman:
– well, if the point is that he died, then yes, this does require a resurrection

Licona:
– the crucifixion refutes Muslims who deny that Jesus died
– the crucifixion refutes the apparent death theory (swoon theory)
– the death is required for a bodily resurrection
– it's important to know what facts most scholars, regardless of worldview, agree on
– it's important to emphasize that Licona is working from historical bedrock facts
– the resurrection is the best explanation for the historical bedrock facts

Ehrman:
– you are trying to list 3 things, but really it is just one thing – the appearances
– and not ALL scholars agree that the group visions occurred

Licona:
– name one prominent scholar who denies the group appearances

Ehrman:
– the radically leftist atheist nutcase John Dominic Crossan denies the group appearances
* Crossan is so far on the left that I look like a nutcase for even citing him
* Crossan believes in the Secret Gospel of Mark, which is a hoax – but I still cite Crossan
* Crossan believes that the synoptics are LATER than gnostic forged gospels – but I still cite Crossan
* Crossan presupposes atheism, so he cannot admit to miracle stories as a pre-supposition – but I still cite Crossan
* Crossan pre-supposes religious pluralism, so he cannot allow any exclusive claims Christians make – but I still cite Crossan
* Crossan is a good historian, it's just that he is so far to the left that no one – NO ONE – agrees with his all of crazy theories
* I think it is a good idea to cite historians who pre-suppose atheism and political correctness before they sit down to do history

Licona:
– let me explain why most scholars accept the individual and group post-mortem appearances
– the best source for the appearances is the early creed recorded by Paul in 1 Cor 15:3-8
– Paul himself had an appearance of Jesus after Jesus' death
– Paul received this material from a source very soon after the appearances – within 1-3 years
– we know that Paul met with Jesus disciples multiple times prior to writing
– Paul probably received it from Peter and James, who were themselves eyewitnesses

Moderator:
– this early dating presumably rules out legend

Licona:
– well legends CAN start quickly
– it does show that Paul was an eyewitness
– it does show that Paul was in contact with reliable eyewitnesses

Ehrman:
– 1 Corinthians is written around 55 AD, twenty-five years after Jesus died
– it is not implausible that Paul got the creed from the disciples, who were eyewitnesses
– but you don't need a long time for legends to emerge, so that is a possibility

Licona:
– only about 3% of people could read and write back them
– instead, people had enormous capacity for memorization
– the Pharisees were particularly good at memorization

– Jews were very serious about passing along traditions accurately
– Paul, a prominent Pharisee, would have been capable of passing on early creeds accurately
– Paul, in 1 Cor 7, shows that he is willing to separate his opinions from authentic tradition
– Paul had an opportunity in 1 Cor 7 to put words into Jesus' mouth, but he wouldn't do it

Ehrman:
– cultural anthropologists show that things do get changed in some oral cultures
– in these oral cultures, it is assumed that the story teller will change the story
– only in written cultures are they careful to avoid changing the story
– in the New Testament, you can compare the same story in two different gospels, there are differences

Licona:
– Ehrman is right that the gospel writers pick and choose things from the oral tradition that they want to include in their gospels
– different oral tradition transmission schemes have more or less embellishment
– african tribes embellish more, rabbinic teaching embellishes less
* Jesus' followers would have viewed him as a rabbi, and been careful about adding to his teachings
– Paul, an eyewitness, probably received the creed in 1 Cor 15 from other eyewitnesses
– Paul speaks about going twice to Jerusalem in Galatians
– he is meeting with Peter and James to check his facts

Ehrman:
– when you look at Mark and John, there are lots of differences in the narrative

Licona:
– I agree that the gospels have differences, but the oral tradition is likely fixed

Ehrman:
– but Mark and John have different sayings
– why doesn't Mark have the same explicit high Christology that John has?

Licona:
– first, John is trying to weave the oral tradition into a compelling story
– and second, when you look in Mark, the high Christology is there in the Son of Man sayings
– the apocalyptic Son of Man is in Mark, and everywhere in the New Testament

Ehrman:
– the "apocalyptic Son of Man" isn't in John

Licona:
– what about in John 9 with the man who was born blind

Ehrman:
– where is the apocalyptic part?

Licona:
– the healed man worships Jesus because he is the Son of Man
– that links to the apocalypic passages in the Old Testament

Moderator:
– what about the differences between the gospels?

Ehrman:
* well, now is the time for me to set up an inerrantist straw man and then knock it down!
* who was at the empty tomb: one angel or two angels? we don't know, so the whole Bible is false!
* I used to be an inerrantist, so one minor difference is enough for me to dump the whole Bible

* I'll kill you, you stupid straw man! I hate you, Moody Bible Institute! You lied to me!

Licona:
– many of these problems can be solved by realizing that the gospel writers compress time
– the stories don't have to list ALL the characters in every scene
– you don't have to force the Bible to meet some sort of wooden chronology
– the main thing is that the events happened, not that the descriptions match word for word across sources

Ehrman:
– you can't infer a miracle from history, David Hume says so
* extraordinary claims require extraordinary evidence, David Hume says so
* no I don't know what begging the question is, I'm not a philosopher
* no I don't remember when Bill Craig kicked my ass on this Hume objection in our debate
– the New Testament gospels contradict each other at every point, they are not reliable at all!
* they cannot even agree what Jesus' name is! There are 1 trillion variants of Jesus' name!
* "one angel vs two angels" proves that the gospels contradict each other at every point
* my expansive list of FOUR theologically insignificant variants proves that the gospels contradict each other at every point

Licona:
– um, the gospels agree on the central narrative and disagree on the peripherals
– and they agree on the minimal facts I presented, even if they disagree about the number of angels

Ehrman:
* they have to agree on everything and be inerrant! The Moody Straw Man Bible Institute says so!
* I really really really need to have the number of angels be the same, or Jesus didn't die on the cross

Licona:
– but you don't deny any of the three minimal facts I presented (crucifixion, appearances, Paul)

Ehrman:
– well, I don't know if the group appearances occurred – maybe they did
– i think Jesus died on the cross, and I think that people said they saw him alive afterward

Licona:
– if you deny the minimal facts, then you are outside the majority of scholars

Ehrman:
– the majority of scholars who agree to the minimal facts you presented are Christians
* Gerd Ludemann is an atheist Christian
* James Crossley is an atheist Christian
* Hector Avalos is an atheist Christian
* the majority of the atheist scholars are all Christians!
– VIRTUALLY EVERYBODY IN THE SOCIETY OF BIBLICAL LITERATURE IS A CHRISTIAN!!! (Yes, he said that)

Licona:
– you really think so?

Ehrman
– you name one non-Christian in the SBL

Licona:
– (incredulous) um, John Dominic Crossan is an atheist

Ehrman:

– but he CLAIMS TO BE A CHRISTIAN so that means HE IS A CHRISTIAN
* all you have to do to be a Christian is claim to be one
* you can even deny the existence of God and the divinity of Christ and still be one, you bigot!

Licona:
– would Jesus or the apostles recognize a Christian as being someone who doubts God's existence

Ehrman:
– my view is that Jesus and the apostles would not recognize evangelical Christians as Christians
* a non-theist can be a Christian just by claiming to be one, but evangelical Christians are not Christians even if they claim to be Christians
– Christians can't record accurate history about the resurrection because they are biased

Licona:
– on your view, if a person is a Christian then he can't write about the evidence for the resurrection
– so then similarly, you would not allow Jews to write about the historicity of the Holocaust
– because you think that if people have an interest in what they are recording then they can't be objective
– but you have to consider the evidence we have, taking the biases of the sources into account

Ehrman:
– but the only people who believe in the resurrection are Christians!

Licona:
– well, people can consider the evidence for the resurrection as non-Christians
– and then if they accept it they can become Christians

Moderator:
– what about your bias? you don't believe in God – doesn't that pre-supposition affect how you do history?

Ehrman:
– well, I presuppose naturalism, so I can't admit to anything in history that implicates supernatural causes
* no I have never heard of the arguments for the Big Bang, fine-tuning, origin of life, Cambrian explosion, irreducible complexity, limits on mutations creating information, habitability and so on – I never heard about that stuff from my atheist university professors and even if I had I would have been expelled for talking about it because that would make people feel bad about their sinning

Licona:
– so it's not bias you are concerned about, it's that you don't want history to contradict your untested religion of naturalism?
– why not just do the history without pre-suppositions to gather the minimal facts and then see what the best explanation is?

Ehrman:
* well God is out of bounds as an explanation because I could not have got my PhD if I mentioned God
* I really needed my smart atheist professors to like me and give me good grades so God is RIGHT OUT
* ideas like a real God and moral laws and Hell makes my atheist professors uncomfortable and that means low grades for me
* I'm not really interested in butting heads with professors – it's easier to just agree with them and move on to selling books to the gullible
* My books are much more sensational than Dan Brown books, so please buy lots of them!

Licona:
– what if the historical evidence is good enough to show that Jesus rose from the dead?

Ehrman:

– well I would not call someone rising from the dead a miracle – I would call it weird
* I also think that the Big Bang is “weird” but that doesn’t prove that God created the universe out of nothing
* if it’s a miracle then I’m going to have to not sin, and maybe even go to Hell, and we can’t have that

Licona:
– well, you accept the three minimal facts
– what if we try all the naturalistic explanations for those three facts and there are problems with all of them?
– what if the resurrection is the best explanation for the three minimal facts?

Ehrman:
– but I want to arbitrarily rule God put because I want to pre-suppose naturalism
– there is not historical reason I have to rule put supernatural explanations a priori

Licona:
– I think you are struggling with the theological implications of a historical conclusion

Ehrman:
– well when you do theology, you have to avoid grounding your theology on science or history
– theology has to be completely made up or it’s not good theology

Licona:
– I think you are letting your dislike of the implications of the resurrection determine your historical conclusions
– you have to use historical methods to gather the minimal facts that every scholar accepts, regardless of worldview
– then you weigh ALL the hypotheses, natural and supernatural, that could account for these minimal facts
– then you choose the hypothesis that best explains the minimal facts

# Democrat diplomacy: John Kerry pleads with Iraq to interdict Iranian arms shipments

**Wintery Knight** · 26 March 2013 · Archived copy · Original

Map of the Middle East

The Wall Street Journal explains how well Democrat diplomacy worked in the Middle East. (H/T Dennis Prager)

Excerpt:

> The strategic cost of President Obama's election-driven total withdrawal from Iraq is now becoming clearer. On Sunday Secretary of State John Kerry was reduced to pleading with Iraqi officials to search Iranian flights that fly over Iraq on their way to arming Bashar Assad's Syrian government.
>
> With private entreaties doing no good, Mr. Kerry took his complaints public on Sunday on a visit to Baghdad, telling reporters that Iraq's failure even to search Iran's overflights leaves the American people "wondering how it is a partner." Too bad Mr. Obama didn't think about that in 2011 when he could have struck a deal to station 10,000 or so U.S. troops in Iraq for the long haul, which would have sealed the kind of partnership Mr. Kerry now wants.
>
> Mr. Kerry's predecessor, Hillary Clinton, thought she had secured a Baghdad pledge last year to search Iran's flights, but U.S. officials say Iraq has searched only two of what have become almost daily trips to Damascus. Mr. Kerry implies that this is an Iraq betrayal, but with the U.S. seen as wanting to withdraw from the region and Iran able to stir up plenty of political trouble inside Iraq, Prime Minister Nouri al-Maliki has little incentive to take a risk for U.S. interests.
>
> Mr. Obama is also discovering that there are strategic costs to doing so little in two years to topple Iran's proxy government in Syria. Refugees are flooding into Jordan, threatening the stability of that U.S. ally, and no one seems sure who has control over Syria's chemical weapons. Mr. Obama claims "the tide of war is receding," but the main result of his abdications is that the U.S. has less influence to stop war from spreading.

We withdrew our forces from the key area of the Middle East, Iraq, which is located between Iran and its puppet state, Syria. Without a military force in the area, we have *no influence* and *nothing* to bargain with. We can't even support covert operations. We have lost all credibility in the Middle East by appearing weak. That's what happens when you put Democrats in control of foreign policy. They think that people will listen to them because they are so nice – redistributing wealth and silencing those mean moral people. They have such compassion. But in the real

world, countries understand that pacifists are weak. Iraq knows that they have more to fear from Iran than the United States, so they side with Iran. Our weakness has caused our allies in Afghanistan and Iraq to side with the stronger force in the Middle East, our enemy Iran.

# UK survey finds that men and women expect to have sex after a few dates

**Wintery Knight** · 26 March 2013 · Archived copy · Original

Dina sent me this depressing article from the UK Daily Mail.

Excerpt:

> Men now expect to sleep with a new partner on their third date – but women typically won't consider it until the fifth, according to an intriguing new study on dating in the 21st century.
>
> On the first date men are most likely to pay for dinner and drinks, with most couples tending to split the bill from the second date onwards.
>
> But by the third date men expect sex and are willing to splash their cash to hurry the romance along.
>
> […]Both sexes are now spending small fortunes in a bid to prepare themselves for a date that could end in sex, the study found.
>
> Men typically spend £46.79 on grooming, while women spend £5 less at £41.79.
>
> Women prepare for a first night of passion by waxing their legs (58 per cent), buying new lingerie (32 per cent), and waxing their bikini line (17 per cent).
>
> Men are most likely to buy new underwear (28 per cent), groom their pubic hair (27 per cent), and buy new bed linen (15 per cent).
>
> The money is being spent wisely, as men say their biggest turn-offs are a hairy upper lip, dirty sheets, and hairy legs.
>
> And women are turned off by dirty sheets, untidy nails, and an untidy bedroom.

I've posted before about how having a large number of premarital sex partners causes marriages to fail. This finding is true for men who have many partners, and especially true for women. The fun that people have before they are married gets paid for later when they cannot hold the relationship together. Premarital promiscuity teaches you nothing about how to be faithful and self-sacrificial in a marriage. It trains you to think that sex is not something to save for a commitment, but something to be done in order to have "fun". When people have premarital sex, they are treating sex as a recreational activity. They are not willing to commit to loving and taking care of the person they are having sex with for life, so that the other person will not be harmed if the relationship fails. We shouldn't be having fun with a person in ways we're we will be deeply connected to them and then just pull away from them and leave them alone. If that happens to a person enough, it ruins their ability to be trusting and vulnerable. It's hard to repair the damage once it's been done.

I think that if we are going to be serious about marriage, then we need to think seriously about rolling back our support for this sort of promiscuity, as well as laws that promote break-ups like no-fault divorce. Instead of encouraging people to think that sex before marriage is normal, we should be encouraging them to look at the data that shows that waiting a long time (or even better, waiting until marriage) before having sex is the right thing to do.

And for Christians, let me just reiterate that premarital sex and adultery are both forbidden. You cannot be a Christian and be having sex outside of marriage. The Bible is very very clear about that. Although people like to think that Christianity is compatible with sex outside of marriage, it's not. We need to be careful about watering down Christianity in order to avoid the need to bow the knee to God's authority in sexual areas.

# Gay conservative explains his opposition to same-sex marriage

**Wintery Knight** · 26 March 2013 · Archived copy · Original

From the Public Discourse, a different perspective on gay marriage.

Excerpt:

> The notion of same-sex marriage is implausible, yet political correctness has made stating the obvious a risky business. Genderless marriage is not marriage at all. It is something else entirely.
>
> Opposition to same-sex marriage is characterized in the media, at best, as clinging to "old-fashioned" religious beliefs and traditions, and at worst, as homophobia and hatred.
>
> I've always been careful to avoid using religion or appeals to tradition as I've approached this topic. And with good reason: Neither religion nor tradition has played a significant role in forming my stance. But reason and experience certainly have.
>
> […]Unfortunately, a few years later my marriage ended—a pain known too easily by too many. At this point, the divorce allowed me to explore my homosexuality for the first time in my life.
>
> At first, I felt liberated. I dated some great guys, and was in a couple of long-term relationships. Over several years, intellectual honesty led me to some unexpected conclusions: (1) Creating a family with another man is not completely equal to creating a family with a woman, and (2) denying children parents of both genders at home is an objective evil. Kids need and yearn for both.
>
> It took some doing, but after ten years of divorce, we began to pull our family back together. We have been under one roof for over two years now. Our kids are happier and better off in so many ways. My ex-wife, our kids, and I recently celebrated Thanksgiving and Christmas together and agreed these were the best holidays ever.
>
> Because of my predilections, we deny our own sexual impulses. Has this led to depressing, claustrophobic repression? No. We enjoy each other's company immensely. It has actually led to psychological health and a flourishing of our family. Did we do this for the sake of tradition? For the sake of religion? No. We did it because reason led us to resist selfish impulses and to seek the best for our children.
>
> And wonderfully, she and I continue to regard each other as "soul mates" now, more than ever.
>
> Over the last couple of years, I've found our decision to rebuild our family ratified time after time. One day as I turned to climb the stairs I saw my sixteen-year-old son walk past his mom as she sat reading in the living room. As he did, he paused and stooped down to kiss her and give her a hug, and then continued on. With two dads in the house, this little moment of warmth and tenderness would never have occurred. My varsity-track-and-football-playing son and I can give each other a bear hug or a pat on the back, but the kiss thing is never going to happen. To be fully formed, children need to be free to generously receive from and express affection to parents of both genders. Genderless marriages deny this fullness.
>
> There are perhaps a hundred different things, small and large, that are negotiated between parents and kids every week. Moms and dads interact differently with their children. To give kids two moms or two dads is to withhold from them someone whom they desperately need and deserve in order to be whole and happy. It is to permanently etch "deprivation" on their hearts.

I think that children also need to see moms and dads cooperating with each other and caring for each other in a relationship that is not driven by selfishness or lust (e.g. – premarital hooking up) but is driven by self-sacrificial love from within a lifelong commitment. Kids need to see the two people who made them in their homes and to know that something more than "love" is holding their parents together to care for them.

Anyone can see that a child needs to have two people who are their parents who will model for them male/female

love and give them male and female guidance. It's wrong to deprive children of the safety of a home where both of their parents are present and taking care of them. Gay marriage is not the *only* threat to this ideal. It's not even the *largest* threat (divorce and single motherhood by choice are worse threats, in my view). But we have to dig in our heels and protect marriage somewhere, so let's start here and then work on rolling back no-fault divorce and single motherhood by choice.

UPDATE:

My attention has been drawn to this article by the same author, Douglas Mainwaring, in which he says some very disturbing things, seeming actually to endorse homosexual parenting and societal approval for homosexual "families," including children, which runs counter to what he appears to be saying in the article I have linked here. Many of the things he says above about parenting and gender are very good, but conservatives should know for future reference that Mainwaring is actually not consistent nor truly conservative on these issues.

# Is the economic recovery real or illusory?

**Wintery Knight** · 27 March 2013 · Archived copy · Original

The Obama administration has poured about $6 trillion of *borrowed money* into this economy over the last four years. Has this resulted in a growing economy, or is the economy slowing down?

Take a look at this must-read editorial in the Wall Street Journal.

Excerpt:

> The Great Recession is an apt name for America's current stagnation, but the present phase might also be called the Grand Illusion—because the happy talk and statistics that go with it, especially regarding jobs, give a rosier picture than the facts justify.
>
> The country isn't really advancing. By comparison with earlier recessions, it is going backward. Despite the most stimulative fiscal policy in American history and a trillion-dollar expansion to the money supply, the economy over the last three years has been declining. After 2.4% annual growth rates in gross domestic product in 2010 and 2011, the economy slowed to 1.5% growth in 2012. Cumulative growth for the past 12 quarters was just 6.3%, the slowest of all 11 recessions since World War II.
>
> […]February's headline unemployment rate was portrayed as 7.7%, down from 7.9% in January. The dip was accompanied by huzzahs in the news media claiming the improvement to be "outstanding" and "amazing." But if you account for the people who are excluded from that number—such as "discouraged workers" no longer looking for a job, involuntary part-time workers and others who are "marginally attached" to the labor force—then the real unemployment rate is somewhere between 14% and 15%.
>
> […]The number of Americans unemployed for six months or longer went up by 89,000 in February to a total of 4.8 million. The average duration of unemployment rose to 36.9 weeks, up from 35.3 weeks in January. The labor-force participation rate, which measures the percentage of working-age people in the workforce, also dropped to 63.5%, the lowest in 30 years. The average workweek is a low 34.5 hours thanks to employers shortening workers' hours or asking employees to take unpaid leave.

When we borrow massive amounts of money and spend it today, we should expect to see some sort of return for all of that spending. But it turns out that when government does the spending instead of private citizens and private industry, then much of the money is wasted on nonsense that doesn't create jobs and grow the economy. The numbers we have today put this point beyond dispute.

The Obama administration has been failing skilled immigrants for the past four years, as well:

> When employers can't expand or develop new lines because of the shortage of certain skills, the employment opportunities for the less skilled are also restricted. To help with this shortage, the administration's proposals for job-training programs do deserve support. The stress should be on vocational training, postsecondary education and every program that will broaden access to computer science and strengthen science, technology, engineering and math in high schools and at the university level.
>
> But the payoffs from these programs are in the future, and it is vital today to increase the number of annual visas and grants of permanent residency status for foreigners skilled in science and technology. The current situation is preposterous: The brightest and best brains from all over the globe are attracted to American universities, but once they get their degrees America sends them packing. Keeping these foreigners out means they will compete against us in the industries that are growing here and around the world.

This administration prides itself on being "pro-immigration" but they actually favor giving citizenship and voting privileges to millions of people who *do not* have marketable skills, who *cannot* speak English, and who *disrespect the*

*law* by coming here illegally. The administration wants those people to become citizens because those people will vote Democrat. Meanwhile, skilled immigrants with advanced degrees in math, science, engineering and technology can just clear out of the country. They can learn here and work here temporarily, but eventually they have to go home. There are no green cards or naturalizations for skilled immigrants – they have skills, and they may be tempted to do nasty things like vote Republican. Democrats don't want any of those independent, hard-working immigrants in this country. They are too hard to control and too hard to lie to.

# Ryan T. Anderson explains how gay marriage undermines natural marriage norms

**Wintery Knight** · 27 March 2013 · Archived copy · Original

From the Heritage Foundation. (H/T Tom)

Excerpt:

> Weakening marital norms and severing the connection of marriage with responsible procreation are the admitted goals of many prominent advocates of redefining marriage. E. J. Graff celebrates the fact that redefining marriage would change the "institution's message" so that it would "ever after stand for sexual choice, for cutting the link between sex and diapers." Enacting same-sex marriage, she argues, "does more than just fit; it announces that marriage has changed shape."[3]
>
> Andrew Sullivan says that marriage has become "primarily a way in which two adults affirm their emotional commitment to one another."[4]
>
> **The Norm of Monogamy.** New York University Professor Judith Stacey has expressed hope that redefining marriage would give marriage "varied, creative and adaptive contours," leading some to "question the dyadic limitations of Western marriage and seek…small group marriages."[5] In their statement "Beyond Same-Sex Marriage," more than 300 "LGBT and allied" scholars and advocates call for legal recognition of sexual relationships involving more than two partners.[6]
>
> University of Calgary Professor Elizabeth Brake thinks that justice requires using legal recognition to "denormalize[] heterosexual monogamy as a way of life" and "rectif[y] past discrimination against homosexuals, bisexuals, polygamists, and care networks." She supports "minimal marriage" in which "individuals can have legal marital relationships with more than one person, reciprocally or asymmetrically, themselves determining the sex and number of parties, the type of relationship involved, and which rights and responsibilities to exchange with each."[7]
>
> In 2009, *Newsweek* reported that the United States already had over 500,000 polyamorous households.[8] The author concluded:
>
> [P]erhaps the practice is more natural than we think: a response to the challenges of monogamous relationships, whose shortcomings…are clear.… [C]an one person really satisfy every need? Polyamorists think the answer is obvious—and that it's only a matter of time before the monogamous world sees there's more than one way to live and love.[9]
>
> A 2012 article in *New York Magazine* introduced Americans to "throuple," a new term akin to a "couple," but with three people whose "throuplehood is more or less a permanent domestic arrangement. The three men work together, raise dogs together, sleep together, miss one another…and, in general, exemplify a modern, adult relationship. Except that there are three of them."[10]
>
> **The Norm of Exclusivity.** Andrew Sullivan, who has extolled the "spirituality" of "anonymous sex," also thinks that the "openness" of same-sex unions could enhance the bonds of husbands and wives:
>
> [A]mong gay male relationships, the openness of the contract makes it more likely to survive than many heterosexual bonds.… [T]here is more likely to be greater understanding of the need for extramarital outlets between two men than between a man and a woman.… [S]omething of the gay relationship's necessary honesty, its flexibility, and its equality could undoubtedly help strengthen and inform many heterosexual bonds.[11]
>
> "Openness" and "flexibility" are Sullivan's euphemisms for sexual infidelity. Similarly, in a *New York Times Magazine* profile, gay activist Dan Savage encourages spouses to adopt "a more flexible attitude" about allowing each other to seek sex outside their marriage.[12] *The New York Times* recently reported on a study

> finding that exclusivity was not the norm among gay partners: "'With straight people, it's called affairs or cheating,' said Colleen Hoff, the study's principal investigator, 'but with gay people it does not have such negative connotations.'"[13]
>
> **Leading Advocates of Redefining Marriage Celebrate That It Will Weaken Marriage**
>
> Some advocates of redefining marriage embrace the goal of weakening the institution of marriage *in these very terms*. "[Former President George W.] Bush is correct," says Victoria Brownworth, "when he states that allowing same-sex couples to marry will weaken the institution of marriage…. It most certainly will do so, and that will make marriage a far better concept than it previously has been."[14]Professor Ellen Willis celebrates the fact that "conferring the legitimacy of marriage on homosexual relations will introduce an implicit revolt against the institution into its very heart."[15]
>
> Michelangelo Signorile urges same-sex couples to "demand the right to marry not as a way of adhering to society's moral codes but rather to debunk a myth and radically alter an archaic institution."[16]Same-sex couples should, he says, "fight for same-sex marriage and its benefits and then, once granted, redefine the institution of marriage completely, because the most subversive action lesbians and gay men can undertake…is to transform the notion of 'family' entirely."[17]
>
> It is no surprise that there is already evidence of this occurring. A federal judge in Utah allowed a legal challenge to anti-bigamy laws.[18] A bill that would allow a child to have three legal parents passed both houses of the California state legislature in 2012 before it was vetoed by the governor, who claimed he wanted "to take more time to consider all of the implications of this change."[19]

It's very important to understand that the typical gay relationship between males is not going to conform to the lifelong, exclusive commitment that heterosexual marriage involves. You can read about the numbers right here on this paper from the Family Research Council, which collects together evidence from secular sources, such as the U.S. Census and peer-reviewed research.

Take a look:

> Research indicates that the average male homosexual has hundreds of sex partners in his lifetime:
>
> · The Dutch study of partnered homosexuals, which was published in the journal *AIDS*, found that men with a steady partner had an average of eight sexual partners per year.[12]
>
> · Bell and Weinberg, in their classic study of male and female homosexuality, found that 43 percent of white male homosexuals had sex with 500 or more partners, with 28 percent having one thousand or more sex partners.[13]
>
> · In their study of the sexual profiles of 2,583 older homosexuals published in the *Journal of Sex Research*, Paul Van de Ven et al. found that "the modal range for number of sexual partners ever [of homosexuals] was 101-500." In addition, 10.2 percent to 15.7 percent had between 501 and 1,000 partners. A further 10.2 percent to 15.7 percent reported having had more than one thousand lifetime sexual partners.[14]
>
> · A survey conducted by the homosexual magazine *Genre* found that 24 percent of the respondents said they had had more than one hundred sexual partners in their lifetime. The magazine noted that several respondents suggested including a category of those who had more than one thousand sexual partners.[15]
>
> […]Even in those homosexual relationships in which the partners consider themselves to be in a committed relationship, the meaning of "committed" or "monogamous" typically means something radically different than in heterosexual marriage.
>
> · A Canadian study of homosexual men who had been in committed relationships lasting longer than one year found that only 25 percent of those interviewed reported being monogamous." According to study author Barry Adam, "Gay culture allows men to explore different…forms of relationships besides the monogamy coveted by heterosexuals."[16]

> · The *Handbook of Family Diversity* reported a study in which “many self-described ‘monogamous’ couples reported an average of three to five partners in the past year. Blasband and Peplau (1985) observed a similar pattern.”[17]
>
> · In *The Male Couple*, authors David P. McWhirter and Andrew M. Mattison reported that, in a study of 156 males in homosexual relationships lasting from one to thirty-seven years:
>
> Only seven couples have a totally exclusive sexual relationship, and these men all have been together for less than five years. Stated another way, all couples with a relationship lasting more than five years have incorporated some provision for outside sexual activity in their relationships.[18]

Are we ready to call that marriage? Isn’t it bad enough that we already have undermined the permanence and stability of marriage with no-fault divorce laws and giving benefits to common-law couples? Don’t you think that these factors will undermine stability, the same way that infidelity undermines heterosexual relationships?

But marriage is a particular thing. It’s permanent. It’s exclusive. It’s not based on feelings and desires. The purpose of marriage is to recognize and encourage people to constrain and bound their sexual activity for the benefit of society. We want to encourage parents to bond together permanently and exclusively, so that the bond is stable. We should be encouraging people to be chaste before marriage, to make good decisions about who to marry, to reward marriages that last, and to make it harder to get out of a marriage. Especially one with children.

# Ryan T. Anderson explains marriage to Piers Morgan and Suze Orman

**Wintery Knight** · 28 March 2013 · Archived copy · Original

Here are the two clips.

Part 1 of 2:

Part 2 of 2:

Here's a description of what happened from the Heritage Foundation.

Excerpt:

> Anderson, co-author of the book "What Is Marriage" and Heritage's William E. Simon Fellow in Religion and a Free Society, opened the show by explaining his view of marriage:
>
> I think marriage exists to bring a man and woman together as husband and wife, to be mother and father to any children their union produces. And the Supreme Court, in the cases they're hearing today and tomorrow, should really not cut short the democratic debate that we're having. Citizens all across the country are discussing what marriage is and why it matters. And what we want to see the court do is uphold our constitutional authority to have that debate.
>
> After peppering Anderson with several hostile questions on marriage — all of which he answered with composure — Morgan turned to his guest Orman to deliver an emotionally charged tirade in which she called Anderson "uneducated."
>
> […]"What are you really feeling right now?" Morgan asked Orman. "Because this is the debate laid bare. This is a guy sitting a few feet away from you who says, 'Nope, I don't want people like you to have the same right to get married as people like him.'"
>
> Orman, a lesbian who lives with her partner Kathy Travis, responded:
>
> > I feel compassion for you. And I'll tell you why. Because I know you believe very strongly what you believe, but I also know that you're very uneducated in how it really works.
> >
> > I believe from the bottom of my heart that if you really understood why the government does need to get involved, why it does need to be legal on a federal level, if you really understood that, there's no way that you would sit there and say what you are saying right now.
>
> Anderson's response:
>
> > Why do you assume that I'm ignorant? You say I just don't know. I don't assume anything badly about you. I just think we disagree. President Obama himself has said there are people of good will and sound mind on both sides of this issue. I agree with the President.
> >
> > I'm not going to call you names and I'm not going to say you're ignorant or don't understand. But up until the year 2000, no political community on the face of earth had ever defined marriage as anything other than a male-female relationship. I think there are good reasons for that.
>
> […]Morgan, a British journalist recently schooled by Breitbart's Ben Shapiro on gun control, ended the interview by cuting off the discussion and declaring, "The idea that you want to stop people like Elton [John] and David [Furnish] or Suze and K.T. from getting married in America in the modern era, I just find a bit offensive these days. It's not fair, it's not tolerant, it's not American."

Why is it that people on the left cannot bear to stay calm and listen to anyone who disagrees with them? Is it because they deliberately surround themselves with people who agree with them about everything? Maybe they just need to be more open-minded and tolerant of views they don't agree with? I think that they should seek out more diversity of thought and critical thinking in their circle of friends. That would make it easier for them to listen to people who disagree, instead of trying to shame them, coerce them and silence them.

# Four ways that the progress of science conflicts with naturalistic speculations

**Wintery Knight** · 28 March 2013 · Archived copy · Original

When people ask me whether the progress of science is more compatible with theism or atheism, I offer the follow four basic pieces of scientific evidence that are more compatible with theism than atheism.

Here are the three pieces of evidence best explains by a Creator/Designer:

1. the kalam argument from the origin of the universe
2. the cosmic fine-tuning (habitability) argument
3. the biological information in the first replicator (origin of life)
4. the sudden origin of all of the different body plans in the fossil record (Cambrian explosion)

And I point to specific examples of recent discoveries that confirm those four arguments. Here are just a few of them:

1. An explanation of 3 of the 6 experimental evidences for the Big Bang cosmology (From an article from Caltech)
2. Examples of cosmic fine-tuning (there at least 40 examples of cosmic fine-tuning), (From the New Scientist)
3. Evidence that functional protein sequences are beyond the reach of chance, (from Doug Axe's JMB article)
4. Evidence showing that Ediacaran fauna are not precursors to the Cambrian fossils, (from the journal Nature)

Atheists will typically reply to the recent scientific discoveries that overtured their speculations like this:

1. Maybe the Big Bang cosmology will be overturned by the Big Crunch/Bounce so that the universe is eternal and has no cause
2. Maybe there is a multiverse: an infinite number of unobservable, untestable universes which makes our finely-tuned one more probable
3. Maybe the origin of life could be the result of chance and natural processes
4. Maybe we will find a seamless chain of fossils that explain how the Cambrian explosion occurred slowly, over a long period time

Ever heard any of these responses?

Below I list some resources to help you to respond to the four responses of atheists to the experimental data.

**1) The Big Crunch/Bounce has been disproved theoretically and experimentally.**

Theoretically:

> Nature 302, 505 – 506 (07 April 1983); doi:10.1038/302505a0
>
> The impossibility of a bouncing universe
>
> ALAN H. GUTH* & MARC SHER†
>
> *Center for Theoretical Physics, Laboratory for Nuclear Science and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139, USA
>
> †Department of Physics, University of California, Irvine, California 92717, USA
>
> Petrosian1 has recently discussed the possibility that the restoration of symmetry at grand unification in a closed contracting Robertson–Walker universe could slow down and halt the contraction, causing the universe to bounce. He then went on to discuss the possibility that our universe has undergone a series of such bounces.

> We disagree with this analysis. One of us (M.S.) has already shown2 that if a contracting universe is dominated by radiation, then a bounce is impossible. We will show here two further results: (1) entropy considerations imply that the quantity S (defined in ref. 1 and below), which must decrease by ~1075 to allow the present Universe to bounce, can in fact decrease by no more than a factor of ~2; (2) if the true vacuum state has zero energy density, then a universe which is contracting in its low temperature phase can never complete a phase transition soon enough to cause a bounce.

Experimentally:

> The universe is not only expanding, but that expansion appears to be speeding up. And as if that discovery alone weren't strange enough, it implies that most of the energy in the cosmos is contained in empty space — a concept that Albert Einstein considered but discarded as his "biggest blunder." The new findings have been recognized as 1998's top scientific breakthrough by Science magazine.
>
> […]The flood of findings about the universe's expansion rate is the result of about 10 years of study, said Saul Perlmutter, team leader of the Supernova Cosmology Project at Lawrence Berkeley National Laboratory.
>
> Perlmutter and others found such a yardstick in a particular kind of exploding star known as a Type 1A supernova. Over the course of several years, the astronomers developed a model to predict how bright such a supernova would appear at any given distance. Astronomers recorded dozens of Type 1A supernovae and anxiously matched them up with redshifts to find out how much the universe's expansion was slowing down.
>
> To their surprise, the redshift readings indicated that the expansion rate for distant supernovae was lower than the expansion rate for closer supernovae, Perlmutter said. On the largest scale imaginable, the universe's galaxies appear to be flying away from each other faster and faster as time goes on.
>
> "What we have found is that there is a 'dark force' that permeates the universe and that has overcome the force of gravity," said Nicholas Suntzeff of the Cerro Tololo Inter-American Observatory, who is the co-founder of another group called the High-z Supernova Search Team. "This result is so strange and unexpected that it perhaps is only believable because two independent international groups have found the same effect in their data."

There has only been one creation of the universe, and the universe will never reverse its expansion, so that it could oscillate eternally. That view is popular, perhaps in part because many people watched videos of Carl Sagan speculating about it in public school classrooms, but all it was was idle naturalistic speculation, (Sagan was a naturalist, and held out hope that science would vindicate naturalism), and has been contradicted by good experimental science. You should be familiar with the 3 evidences for the Big Bang (redshift, light element abundances (helium/hydrogen) and the cosmic microwave background radiation. There are others, (radioactive element abundances, second law of thermodynamics, stellar lifecycle), but those are the big three. Point out how the experimental evidence for the Big Bang has piled up, making the problem even worse for the eternal-universe naturalists. Leave no doubt.

**2) The multiverse has not been tested experimentally, it's pure speculation.**

Speculation:

> Multiverse thinking or the belief in the existence of parallel universes is more philosophy or science fiction than science. "Cosmology must seem odd to scientists in other fields".
>
> George Ellis, a well-known mathematician and cosmologist, who for instance has written a book with Stephen Hawking, is sceptical of the idea that our universe is just another universe among many others.
>
> A few weeks ago, Ellis, professor emeritus of applied mathematics at the University of Cape Town, reviewed Brian Greene's book The Hidden Reality: Parallel Universes and the Deep Laws of the Cosmos (Knopf/Allen

> Lane, 2011) in the journal Nature. He is not at all convinced that the multiverse hypothesis is credible: ”Greene is not presenting aspects of a known reality; he is telling of unproven theoretical possibilities.”
>
> According to professor Ellis, there is no evidence of multiverses, they cannot be tested and they are not science.
>
> Ellis is not the only multiverse sceptic in this universe. A few months ago, science writer John Horgan wrote a column in Scientific American, expressing his doubt in multiverses.

When you get into a debate, you must never ever let the other side get away with asserting something they have no evidence for. Call them on it – point out that they have no evidence, and then hammer them with evidence for your point. Pile up cases of fine-tuning on top of each other and continuously point out that they have no experimental evidence for their speculations. Point out that more evidence we get, the more cases of fine-tuning we find, and the tougher the problem gets for naturalists. Leave no doubt.

**3) Naturalistic theories for the origin of life have two problems: can’t make the amino acids in an oxydized atmosphere and can’t make protein and DNA sequences by chance in the time available.**

Building blocks:

> The oxidation state of Hadean magmas and implications for early Earth’s atmosphere
>
> Dustin Trail, E. Bruce Watson & Nicholas D. Tailby
>
> Nature 480, 79–82 (01 December 2011) doi:10.1038/nature10655
>
> […]These results suggest that outgassing of Earth’s interior later than ~200?Myr into the history of Solar System formation would not have resulted in a reducing atmosphere.

Functional protein sequences:

> J Mol Biol. 2004 Aug 27;341(5):1295-315.
>
> Estimating the prevalence of protein sequences adopting functional enzyme folds.
>
> Axe DD.
>
> The Babraham Institute, Structural Biology Unit, Babraham Research Campus, Cambridge CB2 4AT, UK. doug.axe@bbsrc.ac.uk
>
> Proteins employ a wide variety of folds to perform their biological functions. How are these folds first acquired? An important step toward answering this is to obtain an estimate of the overall prevalence of sequences adopting functional folds.
>
> […]Starting with a weakly functional sequence carrying this signature, clusters of ten side-chains within the fold are replaced randomly, within the boundaries of the signature, and tested for function. The prevalence of low-level function in four such experiments indicates that roughly one in 10(64) signature-consistent sequences forms a working domain. Combined with the estimated prevalence of plausible hydropathic patterns (for any fold) and of relevant folds for particular functions, this implies the overall prevalence of sequences performing a specific function by any domain-sized fold may be as low as 1 in 10(77), adding to the body of evidence that functional folds require highly extraordinary sequences.

So atheists are in double jeopardy here. They don’t have a way to build the Scrabble letters needed for life, and they don’t have a way to form the Scrabble letters into words and sentences. Point out that the more research we do, the tougher the problem gets to solve for naturalists, and the more it looks like an effect of intelligence. Write out the calculations for them. Leave no doubt.

**4) The best candidate to explain the sudden origin of the Cambrian era fossils was the Ediacaran fauna,**

**but those are now recognized as not being precursors to the Cambrian fossils.**

Science Daily reports on a paper from the peer-reviewed journal Science:

> Evidence of the single-celled ancestors of animals, dating from the interval in Earth's history just before multicellular animals appeared, has been discovered in 570 million-year-old rocks from South China by researchers from the University of Bristol, the Swedish Museum of Natural History, the Paul Scherrer Institut and the Chinese Academy of Geological Sciences.
>
> […]This X-ray microscopy revealed that the fossils had features that multicellular embryos do not, and this led the researchers to the conclusion that the fossils were neither animals nor embryos but rather the reproductive spore bodies of single-celled ancestors of animals.
>
> Professor Philip Donoghue said: "We were very surprised by our results — we've been convinced for so long that these fossils represented the embryos of the earliest animals — much of what has been written about the fossils for the last ten years is flat wrong. Our colleagues are not going to like the result."
>
> Professor Stefan Bengtson said: "These fossils force us to rethink our ideas of how animals learned to make large bodies out of cells."

The trend is that there is no evolutionary explanation for the body plans that emerged in the Cambrian era. If you want to make the claim that "evolution did it", then you have to produce the data *today*. Not speculations about the future. The data we have today says no to naturalism. The only way to affirm naturalistic explanations for the evidence we have is *by faith*. We need to minimize our leaps of faith, though, and go with the simplest and most reasonable explanation – an intelligence is the best explanation responsible for rapid generation of biological information.

**Conclusion**

I do think it's important for Christians to focus more on scientific apologetics and to focus their academic careers in scientific fields. So often I look at Christian blogs, and I see way too much G. K. Chesterton, Francis Chan and other untestable, ineffective jibber-jabber. We need to bring the *hard* science, and stop making excuses about not being able to understand it because it's too hard. It's not too hard. Everyone can understand "Who Made God?" by Edgar Andrews – start with that! Then get Lee Strobel's "The Case for a Creator". That's more than enough for the average Christian on science apologetics. We all have to do our best to learn what works. You don't want to be anti-science like atheists are. I recommend reading Uncommon Descent and Evolution News every day for a start.

# Can gay marriage supporters prove that it won't harm society in the long run?

**Wintery Knight** · 28 March 2013 · Archived copy · Original

Check out this article by George Mason University professor Nelson Lund, which addresses that very question. (H/T Robert G.)

Excerpt:

> The Supreme Court is hearing two cases this week that represent a challenge to one of the oldest and most fundamental institutions of our civilization. In *Hollingsworth v. Perry* and *United States v. Windsor,* the court is being asked to rule that constitutional equal protection requires the government to open marriage to same-sex couples.
>
> The claimed right to same-sex marriage is not in the Constitution or in the court's precedents, so the court must decide whether to impose a new law making marriage into a new and different institution. The justices are unlikely to take so momentous a step unless they are persuaded that granting this new right to same-sex couples will not harm children or ultimately undermine the health of our society.
>
> A significant number of organizations representing social and behavioral scientists have filed briefs promising the court that there is nothing to worry about. These assurances have no scientific foundation. Same-sex marriage is brand new, and child rearing by same-sex couples remains rare. Even if both phenomena were far more common, large amounts of data collected over decades would be required before any responsible researcher could make meaningful scientific estimates of the long-term effects of redefining marriage.
>
> […]The prominent National Longitudinal Lesbian Family Study, for instance, relied on a sample recruited entirely at lesbian events, in women's bookstores and through lesbian newspapers. Other studies relied on samples as small as 18 or 33 or 44 cases. The effect of parenting by male homosexual couples remains in the realm of anecdotes. Most research has relied on reports by parents about their children's well-being while the children were still under the care of those parents. Even a social scientist should be able to recognize that parents' evaluations of their own success as parents might be a little skewed.
>
> In 2012, sociologist Loren Marks conducted a detailed re-analysis of 59 studies of parenting by gays and lesbians that were cited by the American Psychological Association in a 2005 publication. Mr. Marks, who teaches at Louisiana State University, concluded that the association drew inferences that were not empirically warranted.
>
> There has been only one study using a large randomized sample, objective measures of well-being, and reports of grown children rather than their parents. This research, by Mark Regnerus, a sociologist at the University of Texas Austin, found that children raised in a household where a parent was involved in a same-sex romantic relationship were at a significant disadvantage with respect to a number of indicators of well being—such as depression, educational attainment and criminal behavior—compared with children of intact biological families.
>
> One might expect this work at least to raise a caution flag, but it has been vociferously attacked on methodological grounds by the same organizations that tout the value of politically congenial research that suffers from more severe methodological shortcomings. This is what one expects from activists, not scientists.

In order for us to be comfortable with adopting same-sex marriage, we need to know that there is evidence showing that there will be no long-term harm to society. Gay marriage advocates are the ones who are demanding a change in the law, so can they prove to us why the change won't do more harm than good? Have they done a good job of shouldering the burden of proof? I don't think so. And that means that we should be careful with changing the definition of marriage. We've already seen how much damage to children that no-fault divorce, (the last change to

the definition of marriage), did to society. We have evidence that same-sex marriage would also harm society. We know that some policies are not good for society, and the side that wants the change bears the burden of proof.

# N.T. Wright lectures on the resurrection of Jesus: did Jesus rise from the dead?

**Wintery Knight** · 28 March 2013 · Archived copy · Original

Here's a lecture from N.T. Wright, whose multi-volume case for the historicity of the bodily resurrection of Jesus seems to be getting a lot of respect from the other side, (although I strongly disagree with his economic and political views, which are naive at best). Wright has taught at Cambridge University, Oxford University, Duke University, McGill University, and lectured on dozens of prestigious campuses around the world. He's published 40 books.

Here's the video:

For those who cannot see the video, here is a written version of the lecture that Wright gave on the resurrection. And please note that I do not endorse anything that N.T. Wright says on any topic outside of history. History is his field of expertise, and I think he has no authority outside of the field of history.

**N.T. Wright's historical case for the bodily resurrection of Jesus**

Wright basically argues that the resurrection cannot have been a myth invented by the early Christian community, because the idea of the Messiah dying and being bodily resurrected to eternal life was completely unexpected in Jewish theology, and therefore would not have been fabricated.

In Judaism, when people die, they stay dead. At the most, they might re-appear as apparitions, or be resuscitated to life for a while, but then die again later. *There was no concept of the bodily resurrection to eternal life of a single person, especially of the Messiah, prior to the general resurrection of all the righteous dead on judgment day.*

Wright's case for the resurrection has 3 parts:

- The Jewish theological beliefs of the early Christian community underwent 7 mutations that are *inexplicable*apart from the bodily resurrection of Jesus
- The empty tomb
- The post-mortem appearances of Jesus to individuals and groups, friends and foes

Here's the outline of Wright's case:

> …the foundation of my argument for what happened at Easter is the reflection that this Jewish hope has undergone remarkable modifications or mutations within early Christianity, which can be plotted consistently right across the first two centuries. And these mutations are so striking, in an area of human experience where societies tend to be very conservative, that they force the historian… to ask, Why did they occur?
>
> The mutations occur within a strictly Jewish context. The early Christians held firmly, like most of their Jewish contemporaries, to a two-step belief about the future: first, death and whatever lies immediately beyond; second, a new bodily existence in a newly remade world. 'Resurrection' is not a fancy word for 'life after death'; it denotes life after 'life after death'.

And here are the 7 mutations:

1. Christian theology of the afterlife mutates from multiples views (Judaism) to a single view: resurrection (Christianity). When you die, your soul goes off to wait in Sheol. On judgment day, the righteous dead get new resurrection bodies, identical to Jesus' resurrection body.
2. The relative importance of the doctrine of resurrection changes from being peripheral (Judaism) to central (Christianity).
3. The idea of what the resurrection would be like goes from multiple views (Judaism) to a single view: an

incorruptible, spiritually-oriented body composed of the material of the previous corruptible body (Christianity).

4. The timing of the resurrection changes from judgment day (Judaism) to a split between the resurrection of the Messiah *right now* and the resurrection of the rest of the righteous *on judgment day* (Christianity).
5. There is a new view of eschatology as collaboration with God to transform the world.
6. There is a new *metaphorical* concept of resurrection, referred to as being "born-again".
7. There is a new association of the concept of resurrection to the Messiah. (The Messiah was not even supposed to die, and he certainly wasn't supposed to rise again from the dead in a resurrected body!)

There are also other historical puzzles that are solved by postulating a bodily resurrection of Jesus.

1. Jewish people thought that the Messiah was not supposed to die. Although there were lots of (warrior) Messiahs running around at the time, whenever they got killed, their followers would abandon them. Why didn't Jesus' followers abandon him when he died?
2. If the early Christian church wanted to communicate that Jesus was special, despite his shameful death on the cross, they would have made up a story using the existing Jewish concept of *exaltation*. Applying the concept of bodily resurrection to a dead Messiah would be a radical departure from Jewish theology, when an invented exaltation was already available to do the job.
3. The early church became extremely reckless about sickness and death, taking care of people with communicable diseases and testifying about their faith in the face of torture and execution. Why did they scorn sickness and death?
4. The gospels, especially Mark, do not contain any embellishments and "theology historicized". If they were made-up, there would have been events that had some connection to theological concepts. But the narratives are instead bare-bones: "Guy dies public death. People encounter same guy alive later." Plain vanilla narrative.
5. The story of the women who were the first witnesses to the empty tomb cannot have been invented, because the testimony of women was inadmissible under almost all circumstances at that time. If the story were invented, they would have invented male discoverers of the tomb. Female discovers would have hampered conversion efforts.
6. There are almost no legendary embellishments in the gospels, while there are plenty in the later gnostic forgeries. No crowds of singing angels, no talking crosses, and no booming voices from the clouds.
7. There is no mention of the future hope of the general resurrection, which I guess they thought was imminent anyway.

To conclude, Wright makes the argument that the best explanation of all of these changes in theology and practice is that God raised Jesus (bodily) from the dead. There is simply no way that this community would have made up the single resurrection of the Messiah – who wasn't even supposed to die – and then put themselves on the line for that belief.

And remember, the belief in a resurrected Jesus was something that the earliest witnesses could really assess, because they were the ones who saw him killed and then walking around again after his death. They were able to confirm or deny their belief in the resurrection of Jesus based on their own *personal experiences* with the object of those beliefs.

# Gay marriage debate: Michael Brown debates Eric Smaw on same-sex marriage

**Wintery Knight** · 28 March 2013 · Archived copy · Original

About the debate:

> On April 21, 2011 at 7:30pm at UCF's Health and Public Affairs Building (Room 119), Rollins College professor, Dr. Eric Smaw and author and seminary professor Dr. Michael L. Brown will debate the question "Should same sex marriage be legalized in America?" The event will be held at 4000 Central Florida Blvd and is open to the public. After the formal portion of the debate, Brown and Smaw will field questions from the audience.

About the speakers:

> **Dr. Smaw** will be responding in the affirmative. He earned his Ph.D. in Philosophy of Law from the University of Kentucky in 2005. His areas of expertise are philosophy of law, international law, human rights, ethics, and modern philosophy. He has published articles on human rights, terrorism, and cosmopolitanism. His most recent publication is "Swaying in the Balance: Civil Liberties, National Security, and Justice in Times of Emergency".
>
> **Dr. Brown** will be responding in the negative. He earned his Ph.D. in Near Eastern Languages and Literatures from New York University and is a nationally known evangelical lecturer and radio host. He is the author of numerous scholarly articles and twenty books, including the recently published study "A Queer Thing Happened to America", which is quickly being recognized as the definitive work on the history and effects of gay activism on American culture.

Here are the first two parts:

Part 1 of 10:

Part 2 of 10:

The rest of the segments are here.

**Summaries of the opening speeches**

Summary of Dr. Brown's opening speech:

There is no compelling reasons by the state should change the definition of marriage

The reason the state conveys benefits for marriage is because marriage is beneficial for the state

Traditional marriage is recognized by the state for several reasons:
– it domesticates men
– it protects women
– it provides a stable, nurturing environment for children

Marriage has three public purposes:
– to bind men and women together for RESPONSIBLE procreation
– to get the benefit
– to provide children with two parents who are bonded to them biologically
– to create the next generation of people to keep the society going

Normally, opposite sex couples create children

Homosexual couples can NEVER create children together

Men and women are differences that are complementary

Monogamy is the norm for opposite sex couples.

For gay men, open relationships / cheating is the norm.
This is because women have a tempering effect on sexuality.

There is no evidence that recognizing same-sex civil unions and marriages have changed this trend.

Same-sex marriage guarantees that children will either not have a father or a mother
So which of the sexes is dispensable when raising children?

For example, consider Dawn Stefanowicz, who grew up with a gay father and no mother
She never got a chance to see a man model love and protect a women within a marriage
That makes an enormous difference in a woman's life – in the way she relates to men

Even with scientific advancements, every baby has a mother and a father

If we change the definition of marriage so that it is based on consent, then why limit it to just two people
If marriage is not the union of male and female, then why have only TWO people
In Canada, you have civil liberties lawyers arguing for for polygamy
In the United States, Professor David Epstein was in a consensual relationship with his daughter
Should incestuous relationships also be celebrated as marriage? Why not?
Should polyamorous relationships also be celebrated as marriage? Why not?

Sexual orientation is not the same as race
Men are women are different in significant ways, but different races are not
You need separate bathrooms for men and women, but not for people of different races

Summary of Dr. Smaw's opening speech: (He ended his speech after only 10 minutes)

You can redefine marriage so that it no longer based on the public purposes he mentioned (controlling procreation, fusing complementary male and female natures, providing children with mothers and fathers who are biologically linked to them, providing children with a comparatively stable development environment that offers comparatively less instability, promiscuity and domestic violence rates compared to cohabitation, etc.), but is instead based on consent and feelings, and that redefinition of marriage won't open marriage up to polygamy, polyamory, etc.

If you like feminism, then you should allow same-sex marriage

If you like abortion rights, then you should allow same-sex marriage

Homosexuals participate in society by working at various jobs, so they are participating in society

Homosexuals should be given the same tax breaks as married people because they work at various jobs for money

Working at a job for money achieves the same public purpose as procreating and staying together to raise children in a stable environment

You can listen to the rest for the rebuttals, and cross-examination. Oh yes – there was cross-examination! It starts two thirds of the way through Part 5, if you want to jump to it. And sparks were flying! There is also Q&A from the audience of students.

This is such a great debate – I love to hear two passionate guys disagreeing about something. I love to hear both sides of the issues. There is always something to learn by listening to the other side. It makes me more effective and more tolerant when I stand up to defend my side of the argument.

By the way, my own secular case against same-sex marriage is right here, if you want to see how I would debate this

issue. Also check out the recent studies on the effects of gay parenting on children.

# Ryan T. Anderson debates gay marriage with S.E. Cupp on the Blaze

**Wintery Knight** · 29 March 2013 · Archived copy · Original

Here's the video:

And here's the description from the Heritage Foundation:

> Anderson, co-author of the book "What Is Marriage" and Heritage's William E. Simon Fellow in Religion and a Free Society, faced skeptical questions from S.E. Cupp, Buck Sexton, and Amy Holmes. Yet, as he's done in interviews all week, Anderson articulated compelling reasons against redefining marriage. Of particular note was a debate between Anderson and Cupp about the federal government's role in marriage and the why children benefit from both a mother and father.
>
> The full segment runs about 12 minutes. In addition to Cupp, Sexton and Holmes, other panelists included Will Cain and Ben Domenech.

You can get his new book on marriage here. No one is better at defending marriage! You can see him debating on CNN with Piers Morgan and Suze Orman, as well.

# Must-read: comprehensive survey of all the research on gay marriage

**Wintery Knight** · 29 March 2013 · Archived copy · Original

Ari and Mathetes sent me this amazing evaluation of all of the research on same-sex marriage.

Excerpt: (links removed)

The most detailed effort yet to open the hood and see what is actually inside these studies was performed by Loren Marks of the LSU School of Human Ecology, who published a paper in *Social Science Research* in 2012 examining the 59 published studies behind the APA's breezy assertion of a scientific consensus. (Marks did not examine the other 8 studies cited by the APA, which were "unpublished dissertations.") Marks opened his paper by comparing the research on same-sex families to the by-now bulletproof research showing the advantages of traditional married parents over "cohabiting, divorced, step, and single-parent families," noting that those studies used "large, representative samples" such as "four nationally representative longitudinal studies with more than 20,000 total participants." By contrast, Marks found:

> -"[M]ore than three-fourths (77%) of the studies cited by the APA brief are based on small, nonrepresentative, convenience samples of fewer than 100 participants. Many of the non-representative samples contain far fewer than 100 participants, including one study with five participants"

> -The samples were "racially homogenous," none of them focusing on African-American, Hispanic or Asian-American families. Of course, social science studies of the family commonly find large racial disparities – picking an all-white sample is an extremely easy way to bias your results.
>
> -More broadly, he cited a "continuing tendency of same-sex parenting researchers to select privileged lesbian samples…'Much of the research [still] involved small samples that are predominantly White, well-educated [and] middle-class.'"
>
> -"[C]omparison studies on children of gay fathers are almost non-existent in the 2005 Brief."
>
> -"[I]n selecting *heterosexual* comparison groups for their studies, many same-sex parenting researchers have not used marriage-based, intact families as heterosexual representatives, but have instead used single mothers…[one pair of researchers] used 90.9 percent single-father samples in two other studies."
>
> -The APA, while ignoring these flaws in the studies it relied on, excluded one of the largest studies available, which had found significant differences in educational outcomes on the theory that assessments by teachers (i.e., tests and progress reports) were "subjective assessments." Note the contrast between this and the APA's eager acceptance of self-reporting by parents.
>
> -Most of the studies ignored "societal concerns of intergenerational poverty, collegiate education and/or labor force contribution, serious criminality, incarceration, early childbearing, drug/alcohol abuse, or suicide that are frequently the foci of national studies on children, adolescents, and young adults," and again the APA simply ignored one "book-length empirical study" that had used a more diverse sample and had concluded that "If we perceive deviance in a general sense, to include excessive drinking, drug use, truancy, sexual deviance, and criminal offenses, and if we rely on the statements made by adult children (over 18 years of age)…[then] children of homosexual parents report deviance in higher proportions than children of (married or cohabiting) heterosexual couples."
>
> -"[V]irtually none of the peer-reviewed, same-sex parenting comparison studies" looked at adults raised in same-sex parent homes, but only at children and adolescents, thus excluding from consideration social and emotional problems that are commonly observed only in adulthood. Research on children of divorce, for example, has found a number of problems that do not surface until adulthood.

> Nobody who has not already made their mind up would find research of this nature conclusive of anything.

And regarding the new Regnerus large-scale study of gay parenting: (links removed)

> One recent study that attempted to fix the problems Marks identified was published in the same edition of the same journal by University of Texas professor Mark Regnerus. Regnerus' study had – as he freely admitted – limitations of its own, discussed below. But the reaction to Regnerus' work – in contrast to how the badly flawed studies examined by Marks were swallowed uncritically – vividly illustrates why credible, unbiased research on this topic is so hard to come by.
>
> Regnerus set out to do a truly randomly selected study over a large population sample, and to remove the problem of biased parental reporting by interviewing adults about their childhood experiences. His sample covered 15,000 respondents, and despite the subsequent firestorm, no problem was ever identified with his methods or the data he gathered. Unlike most of the prior research, the respondents with a "gay father" or "lesbian mother" (more on which below) were, respectively, 48% and 43% black or Hispanic. His findings were dramatic across numerous types of outcomes, detailing greatly elevated incidence of parental rape, parental pedophilia and suicidal tendencies; as he explained his findings,
>
> Even after including controls for age, race, gender, and things like being bullied as a youth, or the gay-friendliness of the state in which they live, such respondents were more apt to report being unemployed, less healthy, more depressed, more likely to have cheated on a spouse or partner, smoke more pot, had trouble with the law, report more male and female sex partners, more sexual victimization, and were more likely to reflect negatively on their childhood family life, among other things.[…]Anyone familiar with how liberals respond to scientific findings they don't like can predict what happened next: immediately upon the publication of his study, Regnerus was subjected to a campaign of vilification aimed at discrediting his work, destroying his professional reputation and deterring any other scholar from pursuing a similar line of inquiry. The University of Texas convened an audit of his study to deal with the pressure campaign, and the editor of the journal hired a prominent, vocal critic of Regnerus to audit the peer-review process that led to its publication. Andrew Ferguson and Matthew Franck detail the blow-by-blow of this campaign to destroy Regnerus.
>
> And by and large, Regnerus passed the audits. The UT audit found "no falsification of data, plagiarism or other serious ethical breaches constituting scientific misconduct."The journal audit grudgingly concluded the journal editor acted correctly, despite a lot of sniping by its hostile author at Regnerus and the peer reviewers. But the liberal blogs and newspapers continued to act as if Regnerus had been unmasked as a charlatan.
>
> Twenty-seven scholars (including Marks) signed a joint letter defending Regnerus' sample selection:
>
>> [T]he demographics of his sample of young-adult children of same-sex parents – in terms of race and ethnicity – come close to resembling the demographics of children from same-sex families in another large, random, and representative study of gay and lesbian families by sociologist Michael Rosenfeld that has been well received in the media and in the academy…We are disappointed that many media outlets have not done their due diligence in investigating the scientific validity of prior studies, and acknowledging the superiority of Regnerus's sample to most previous research….We are also disappointed that many of our academic colleagues who have critiqued Regnerus have not publicly acknowledged the methodological limitations of previous research on same-sex parenting.
>>
>> …Regnerus has been chided for comparing young adults from gay and lesbian families that experienced high levels of family instability to young adults from stable heterosexual married families. This is not an ideal comparison. (Indeed, Regnerus himself acknowledges this point in his article, and calls for additional research on a representative sample of planned gay and lesbian families; such families may be more stable but **are very difficult to locate in the population at large**.) But what his critics fail to appreciate is that Regnerus chose his categories on the basis of young adults' characterizations of their own families growing up, and the young adults whose parents had same-sex romantic relationships also happened to

> have high levels of instability in their families of origin. This instability may well be an artifact of the social stigma and marginalization that often faced gay and lesbian couples during the time (extending back to the 1970s, in some cases) that many of these young adults came of age. It is also worth noting that **Regnerus's findings related to instability are consistent with recent studies of gay and lesbian couples based on large, random, representative samples from countries such as Great Britain, the Netherlands, and Sweden, which find similarly high patterns of instability among same-sex couples. Even Judith Stacey, a prominent critic of Regnerus's study, elsewhere acknowledges that studies suggest that lesbian "relationships may prove less durable" than heterosexual marriages.** Thus, Regnerus should not be faulted for drawing a random, representative sample of young-adult children of parents who have had same-sex romantic relationships and also happened to have experienced high levels of family instability growing up.
>
> (Emphasis mine; footnotes omitted).
>
> The vehemence of the attacks on Regnerus, by people who were happy to tout far less reliable studies, ought to be a gigantic red flag to anyone tempted to view the social science in this area as the work of disinterested professionals who care only to find the truth. And any tour of the work of Marks, Regnerus and their critics should disabuse anyone of the notion that we have ironclad-for-all-time scientific proof of equal outcomes that should be cast permanently into Constitutional law. Given the many common-sense reasons, grounded in experience, to think that both fatherhood and motherhood have unique value, the overwhelming scientific evidence that traditional marriage is superior to all the *other* family structures that have been studied, the relative recency and rarity of same-sex parent households and the current state of the science, the most logical answer is that both Congress and the voters of the State of California could rationally conclude that a family with a mother and a father is preferable to a family with two mothers and no father or two fathers and no mother.

I really urge all of my readers to click through and read this entire essay, and then please tweet or share it or send it to all your friends. We do NOT want a repeat of what happened when the liberal left rammed through no-fault-divorce, which was the first redefinition of marriage. We can't afford another round of this. We already have a 42% out of wedlock birth rate, and it's going up.

We've had the normalization of premarital sex put through by leftist public schools, taxpayer-funded contraception pushed through by the leftist Obama administration, and no-fault divorce pushed through by leftist feminists and leftist trial lawyers. We can't keep taking shots at the institution of marriage. Marriage was designed from the start to protect and provide for innocent, vulnerable children. We are doing harm to children every time that we privilege the desires of adults over the needs of children. I find it disgusting that the people who are so influential at destroying marriage today are often the same ones who benefited from intact families and two loving parents yesterday.

# New study: Obamacare will raise cost of medical claims by 32%

**Wintery Knight** · 30 March 2013 · Archived copy · Original

From Yahoo News. (H/T Ted Cruz)

Excerpt:

> Insurance companies will have to pay out an average of 32 percent more for medical claims on individual health policies under President Barack Obama's overhaul, the nation's leading group of financial risk analysts has estimated.
>
> That's likely to increase premiums for at least some Americans buying individual plans.
>
> The report by the Society of Actuaries could turn into a big headache for the Obama administration at a time when many parts of the country remain skeptical about the Affordable Care Act.
>
> While some states will see medical claims costs per person decline, the report concluded the overwhelming majority will see double-digit increases in their individual health insurance markets, where people purchase coverage directly from insurers.
>
> The disparities are striking. By 2017, the estimated increase would be 62 percent for California, about 80 percent for Ohio, more than 20 percent for Florida and 67 percent for Maryland. Much of the reason for the higher claims costs is that sicker people are expected to join the pool, the report said.
>
> […]Obama has promised that the new law will bring costs down. That seems a stretch now. While the nation has been enjoying a lull in health care inflation the past few years, even some former administration advisers say a new round of cost-curbing legislation will be needed.

Yes. The government will have to cut costs by rationing care, based on political expediency. Obamacare was nothing but a government takeover of health care, designed to allow the government to buy votes by redistributing wealth via health care. That was the goal.

# What does the concept of resurrection mean to Jewish theologians?

**Wintery Knight** · 30 March 2013 · Archived copy · Original

Here's a helpful post from Eric Chabot talks about this and other interesting topics related to the resurrection.

Excerpt:

> **Where do we see resurrection in the Hebrew Bible?**
>
> As just stated, belief in a resurrection of persons from the dead are seen in eight passages: (Job 19:26; Ps. 17:15; 49:15; 73:24; Is. 26:19; 53:10; Dn. 12:2;12:13). The resurrection terminology is seen in two places (Ezek. 37:1-14; Hos. 6:2) to show a national and spiritual restoration brought about by the return from the exile. As far as the nature of the future bodily resurrection, it may involve a corpse or the receipt of a material body comparable to the present physical body (Job 19:26; Is. 26:19), or it may be a matter of transformation (Dn. 12:2-3 and perhaps 12:13); or glorification after reanimation, in the case of the righteous.
>
> As far as the function of the resurrection, it may be personal vindication (Is. 26:16; 53:10-12). Resurrection may also have a function in relation to reward or punishment (Dn. 12:2; 12:13), an assumption to heaven and enriched fellowship with God (Ps. 49:15; 73:24,26), or preface to the beatific vision of God (Ps. 17:15 and possibly Job 19:26). (1)
>
> The Greek word for resurrection is "anatasis" which means "a raising up" or "rising." There are resuscitations in the Tanakh such as the example of Elijah and Elisha raising a person from death (1 Kings 17-23; 2 Kings 4:34-35). While these figures may have been raised in a resurrection sense, they were not raised immortal in the same way Jesus was.
>
> **Extra-Biblical Passages on Resurrection**
>
> There are also extra-biblical passages that speak about the resurrection (Enoch 92:2; 4 Ezra 7:32; Enoch 91:10; 2 Maccabees 7:9; 14; 28-29). Even the The Messiah Apocalypse, which is dated between 100 and 80 B.C.E mentions resurrection: "He [God] frees the captives, makes the blind see, and makes the bent over stand straight…for he will heal the sick, revive the dead, and give good news to the humble and the poor he will satisfy, the abandoned he will lead, and the hungry he will make rich." (2)
>
> In the Rabbinical literature there are explicit teachings on the resurrection. It says in the Mishnah 10.1, it says, "All Israelites have a share in the world to come; … and these are they that have no share in the world to come: he that says that there is no resurrection of the dead prescribed in the Law." Moses Maimonides, a Jewish rabbi and a medieval Jewish philosopher who has forever influenced the Jewish and non-Jewish world said:
>
> " The resurrection of the dead is one of the cardinal principles established by Moses our teacher. A person who does not believe this principle has no real religion, certainly not Judaism. However, resurrection is for the righteous. This is the earning of the statement in Breshit Rabbah, which declares: "the creative power of rain is both for the righteous and the wicked, but the resurrection of the dead is only for the righteous." Our sages taught the wicked are called dead even when they are still alive; the righteous are alive even when they are dead" (Bab. Talmud Brakhot 18 b).
>
> 3 points are made here: 1. Resurrection is a cardinal principle taught in the Torah which all Jews must believe 2. It is for the righteous alone 3. All men must die and their bodies decompose. (3)

It's important to understand that the concept of resurrection had a meaning before Christianity ever started. And it's interesting to ask why the early Christians applied the notion of resurrection to Jesus. What is the best explanation for their decision to do such a strange thing? Why not just give up on him and deny that he was the Messiah when he was killed by the Romans?

# William Lane Craig presents the evidence for the resurrection of Jesus

**Wintery Knight** · 31 March 2013 · Archived copy · Original

It's Resurrection Day, so that means it's time for a William Lane Craig lecture:

Christ is risen, and it's a historical fact. And if you like the lecture, you can see these ideas defended in a formal academic debate right here.

# William Lane Craig debates James Crossley on the resurrection of Jesus

**Wintery Knight** · 31 March 2013 · Archived copy · Original

This is my favorite debate on the resurrection.

You can watch the debate here:

The MP3 file can be obtained from Apologetics 315.

There is not much snark in this summary, because Crossley is a solid scholar, and very fair with the evidence.

SUMMARY

**William Lane Craig's opening speech**

Two contentions:

- There are four minimal facts that are accepted by most historians
- The best explanation of the four minimal facts is that God raised Jesus from the dead

Contention 1 of 2:

Fact 1: The burial

- The burial is multiply attested
  - The burial is based on the early source material that Mark used for his gospel
  - Scholars date this Markan source to within 10 years of the crucifixion
  - The burial is also in the early passage in 1 Cor 15:3-8
  - So you have 5 sources, some of which are very early
- The burial is credited to a member of the Sanhedrin
  - the burial is probable because shows an enemy of the church doing right
  - this makes it unlikely to to be an invention

Fact 2: The empty tomb

- The burial story supports the empty tomb
  - the site of Jesus' grave was known
  - the disciples could not proclaim a resurrection if the body were still in it
  - the antagonists to the early Christians could have produced the body
- The empty tomb is multiple attested
  - it's mentioned explicitly in Mark
  - it's in the separate sources used by Matthew and John
  - it's in the early sermons documented in Acts
  - it's implied by 1 Cor 15:3-8, because resurrection requires that the body is missing
- The empty tomb was discovered by women
  - the testimony of women of women was not normally allowed in courts of law
  - if this story was being made up, they would have chosen male disciples
- The empty tomb discover lacks legendary embellishment
  - there is no theological or apologetical reflection on the meaning of the tomb

- The early Jewish response implies that the tomb was empty
  - the response was that the disciples stole the body
  - that requires that the tomb was found empty

Fact 3: The appearances to individuals and groups, some of the them hostile

- The list of appearances is in 1 Cor 15:3-8
  - this material is extremely early, withing 1-3 years after the cross
  - James, the brother of Jesus, was not a believer when he got his appearance
  - Paul was hostile to the early church when he got his appearance
- Specific appearances are multiply attested
  - Peter: attested by Luke and Paul
  - The twelve: attested by Luke, John and Paul
  - The women: attested by Matthew and John

Fact 4: The early belief in the resurrection emerged in a hostile environment

- There was no background belief in a dying Messiah
- There was no background belief in a single person resurrecting before the general resurrection of all of the righteous at the end of the age
- The disciples were willing to die for their belief in the resurrection of Jesus
- The resurrection is the best explanation for the transformation of the disciples from frightened to reckless of death

Contention 2 of 2:

- The resurrection is the best explanation because it passes C.B. McCullough's six tests for historical explanations
- None of the naturalistic explanations accounts for the minimal facts as well as the resurrection

**James Crossley's opening speech**

Appeals to the majority of scholars doesn't prove anything

- the majority of people in the west are Christians so of course there are a majority of scholars that support the resurrection
- there are Christian schools where denial of the resurrection can result in termination

The best early sources (1 Cor 15:3-8 and Mark) are not that good

1 Cor 15:3-8 doesn't support the empty tomb

- verse 4 probably does imply a bodily resurrection
- the passage does have eyewitnesses to appearances of Jesus
- but there are no eyewitnesses to the empty tomb in this source
- appearances occur in other cultures in different times and places
- Jesus viewed himself as a martyr
- his followers may have had hallucinations

Mark 16:1-8

- Mark is dated to the late 30s and early 40s
- The women who discover the tomb tell no one about the empty tomb

The gospels show signs of having things added to them

- Jewish story telling practices allowed the teller to make things up to enhance their hero
- one example of this would be the story of the earthquake and the people coming out of their graves
- that story isn't in Mark, nor any external sources like Josephus
- if there really was a mass resurrection, where are these people today?
- so this passage in Matthew clearly shows that at least some parts of the New Testament could involve
- what about the contradiction between the women tell NO ONE and yet other people show up at the empty tomb
- the story about Jesus commissioning the early church to evangelize Gentiles was probably added
- there are also discrepancies in the timing of events and appearances
- why are there explicit statements of high Christology in John, but not in the earlier sources?

**William Lane Craig's first rebuttal**

Crossley's response to the burial: he accepts it

Crossley's response to the empty tomb: he thinks it was made up

- rabbinical stories are not comparable to the gospel accounts
- the rabbinical stories are just anecdotal creative story-telling
- the gospels are ancient biographies – the genre is completely different
- the rabbinic miracle stories are recorded much later than the gospels
- the rabbi's legal and moral ideas were written down right away
- the miracle stories were written down a century or two later
- in contrast, the miracle stories about Jesus are in the earliest sources, like Mark
- the rabbinical stories are intended as entertainment, not history
- the gospels are intended as biography
- just because there are some legendary/apocalyptic elements in Matthew, it doesn't undermine things like the crucfixion that are historically accurate

Crossley's response to the evidence for the empty tomb:

- no response to the burial
- the empty tomb cannot be made up, it was implied by Paul early on
- the women wouldn't have said nothing forever – they eventually talked after they arrived to where the disciples were
- no response to the lack of embellishment
- no response to the early Jewish polemic

Crossley's response to the appearances

- he agrees that the first followers of Jesus had experiences where they thought Jesus was still alive

Crossley's response to the early belief in the bodily resurrection:

- no response about how this belief in a resurrection could have emerged in the absence of background belief in the death of the Messiah and the resurrection of one man before the general resurrection of all the righteous at the end of the age

What about Crossley's hallucination theory?

- Crossley says that the followers of Jesus had visions, and they interpreted these visions against the story of the Maccabean martyrs who looked forward to their own resurrections
- but the hallucination hypothesis doesn't account for the empty tomb
- and the Maccabean martyrs were not expecting the resurrection of one man, and certainly not the Messiah – so that story doesn't provide the right background belief for a hallucination of a single resurrected person prior to the end of the age
- if the appearances were non-physical, the disciples would not have applied the word resurrection – it would just have been a vision
- the visions could easily be reconciled with the idea that somehow God was pleased with Jesus and that he had some glorified/vindicated non-corporeal existence – but not resurrection
- not only that, the hallucination hypothesis doesn't even explain the visions, because there were visions to groups, to skeptics and to enemies in several places

What about the argument that only Christians accept the resurrection?

- it's an ad hominem attack that avoids the arguments

**James Crossley's first rebuttal**

Regarding the burial:

- I could be persuaded of that the burial account is accurate

Regarding the non-expectation of a suffering/dying Messiah:

- Jesus thought he was going to die
- this thinking he was going to die overturned all previous Messianic expectations that the Messiah wouldn't suffer or die
- the early Jews could easily reconcile the idea of a suffering, dead man killed by the Romans with the power of the all-powerful Messiah who supposed to reign forever
- no actually bodily resurrection would have to happen to get them to continue to identify an executed corpse with the role of Messiah

Regarding the belief in the bodily resurrection:

- it would be natural for Jews, who believed in a general resurrection of all the rigtheous dead at the end of the age, to interpret a non-physical vision of one man after he died as a bodily resurrection, even though no Jew had ever considered the resurrection of one man before the general resurrection before Jesus

Regarding the testimony of the women:

- Just because women were not able to testify in courts of law (unless there were no male witnesses), the early church might still invent a story where the women are the first witnesses
- first, the disciples had fled the scene, so only the women were left
- and it would have been a good idea for the early church to invent women as the first witnesses – the fact that they could not testify in court makes them ideal witnesses and very persuasive
- also, it's a good idea to invent women as witnesses, because the Romans had a rule that said that they never killed women, so they wouldn't have killed these women – Romans only ever kill men
- in any case, the first witness to the empty tomb is angel, so as long as people could talk to the angel as being the first witness, that's the best story to invent

Regarding the consensus of Christian scholars:

- I am not saying that Craig's facts are wrong, just that appealing to consensus is not legitimate
- he has to appeal to the evidence, not the consensus

Regarding my naturalistic bias:

- I don't know or care if naturalism is true, let's look at the evidence

Regarding the genre of the gospels:

- the creative story-telling is common in all genres, it's not a genre in itself
- stuff about Roman emperors also has creative story-telling

Regarding the legendary nature of the empty tomb in Mark:

- First, Christians interpreted the visions as a bodily resurrection
- Second, they invented the story of the empty tomb to go with that interpretation
- Third, they died for their invention

**William Lane Craig's second rebuttal**

The burial:

- Bill's case doesn't need to know the specifics of the burial, only that the location was known
- the location is important because it supports the empty tomb
- to proclaim a resurrection, the tomb would have to be empty
- a tomb with a known location is easier to check

The empty tomb:

- creative story telling was common in Judaism: retelling OT stories (midrash), romances/novels, rabbinical anecdotes
- but the gospels are none of these genres – the gospels are ancient biographies
- Craig also gave five arguments as to why the tomb was empty
- the burial story supports the empty tomb
- there is multiple *independent* attestation, then it cannot be a creative fiction invented in Mark alone
- the witnesses were in Jerusalem, so they were in a position to know
- regarding the women, even though Jesus respected the women, their testimony would not be convincing to *others*, so why invent a story where they are the witnesses
- the male disciples did not flee the scene, for example, Peter was there to deny Jesus three times
- if the story is made up, who cares what the male disciples did, just invent them on the scene anyway
- the angel is not authoritative, because the angel cannot be questioned, but the women can be questioned
- there was no response on the lack of embellishment
- there was no response to the earliest Jewish response implying that the tomb was empty

The appearances:

- we agree on the appearances

The early belief in the resurrection:

- he says that Jesus predicted his own death
- yes, but that would only cause people to think that he was a martyr, not that he was the messiah – something else

is needed for them to keep their believe that he was the Messiah even after he died, because the Messiah wasn't supposed to die
- and of course, there was no expectation of a single person rising from the dead before the general resurrection, and certainly not the Messiah

The consensus of scholars:

- Jewish scholars like Geza Vermes and Pinchas Lapide accept these minimal facts like the empty tomb, it's not just Christian scholars

Against Crossley's hallucination hypothesis:

- it doesn't explain the empty the tomb
- it doesn't explain the early belief in the resurrection
- hallucinations would only lead to the idea that God had exalted/glorified Jesus, not that he was bodily raised from the dead
- the hallucination theory cannot accommodate all of the different kinds of appearances; individual, group, skeptic, enemy, etc.

The pre-supposition of naturalism:

- if Crossley is not committed to naturalism, then he should be open to the minimal facts and to the best explanation of those facts
- the hallucination hypothesis has too many problems
- the resurrection hypothesis explains everything, and well

**James Crossley's second rebuttal**

Religious pluralism:

- well, there are lots of other religious books
- those other religious books have late sources, and are filled with legends and myths, and no eyewitness testimony
- so why should we trust 1 Cor 15 and the early source for Mark and the other early eyewitness testimony in the New Testament?
- if other religious books can be rejected for historical reasons, then surely the New Testament can be rejected for historical reasons

Genre:

- the genre of ancient biography *can* incorporate and commonly incorporates invented legendaryt story-telling
- this is common in Roman, Greek and Jewish literature and everyone accepts that

Empty tomb: multiple attestation

- ok, so maybe the empty tomb is multiply attested, but that just gets back to a belief, not to a fact
- multiple attestation is not the only criteria, and Craig needs to use the other criteria to make his case stronger

Empty tomb: invented

- if there is a belief in the resurrection caused by the visions, then the empty tomb would have to be invented
- why aren't there more reliable stories of people visiting the empty tomb in more sources?

Empty tomb: role of the women

- there are women who have an important role in the Bible, like Judith and Esther
- Mark's passage may have used women who then kept silent in order to explain why no one knew where the empty tomb was
- if the fleeing of the men is plausible to explain the women, then why not use that? why appeal to the supernatural?
- we should prefer any explanation that is naturalistic even if it is not as good as the supernatural explanation at explaining everything

Empty tomb: embellishment

- well there is an angel there, that's an embellishment
- anyway, when you say there is no embellishment, what are you comparing it to that makes you say that?

Appearances: anthropology

- I've read anthropology literature that has some cases where people have hallucinations as groups

Appearances: theology

- the hallucinations would not be interpreted against the background theological beliefs that ruled out the resurrection of one man before then general resurrection of all the righteous dead
- these hallucinations could have been so compelling that they made the earliest Christians, and skeptics like James, and enemies like the Pharisee Paul abandon all of their previous background beliefs, proclaim the new doctrine of a crucified and resurrected Messiah which no one had ever expected, and then gone on to die for that belief
- the hallucinations could have changed all of their theology and reversed all of their beliefs about the what the word resurrection meant

**William Lane Craig's conclusion**

Supernaturalism:

- None of the four facts are supernatural, they are natural, and ascertained by historians using normal historical methods
- the supernatural part only comes in after we decide on the facts when we are deciding which explanation is the best
- a tomb being found empty is not a miraculous fact

Genre:

- the gospels are not analagous to these rabbinical stories, the purpose and dating is different

Empty tomb:

- what multiple attestation shows is that it was not made-up by Mark
- and the argument was augmented with other criteria, like the criterion of embarrassment and the criterion of dissimilarity
- Judith and Esther are very rare exceptions, normally women were not viewed as reliable witnesses
- if the story was invented, whatever purpose the inventors had would have been better served by inventing male witnesses
- Craig grants that the angel may be an embellishment for the sake of argument, but there are no other embellishments

- the real embellishments occur in forged gnostic gospels in the second and third centuries, where there are theological motifs added to the bare fact of the empty tomb (e.g. – the talking cross in the Gospel of Peter)
- he had no response to the earliest jewish response which implied an empty tomb

Belief in the resurrection:

- there was no way for Jewish people to interpret an appearance as a bodily resurrection before the end of the world, they did not expect that
- they could have imagined exaltation, but not a bodily resurrection

**James Crossley's conclusion**

Supernatural explanation:

- as long as there is any other other possible naturalistic explanation, we should prefer that, no matter how unlikely

Creative stories:

- some of these creative stories appear within the lifetimes of the people connected to the events (none mentioned)

Embellishment:

- you should compare to earlier stories when looking for embellishments, not later
- and we don't have any earlier sources, so we just don't know the extent of the embellishment

Jewish response:

- they probably just heard about the empty tomb, and didn't check on it, then invented the stole-the-body explanation without ever checking to see if the tomb was empty or not

# Should government get out of the marriage business?

**Wintery Knight** · 31 March 2013 · Archived copy · Original

Dina sent me three articles by Jennifer Roback Morse, post on The Public Discourse. The articles answer the charge from social liberals and libertarians that we should "get the government out of marriage".

Here's the first article which talks about how government will still be involved in marriage, even if we get rid of the traditional definition of marriage, because of the need for dispute resolution in private marriage contracts. She uses no-fault divorce as an example showing how it was sold as a way to get government out of the divorce business. But by making divorce easier by making it require no reason, it increased the number of disputes and the need for more government to resolve these disputes.

Here's the second article which talks about how the government will have to expand to resolve conflicts over decisions about who counts as a parent and who gets parental rights. With traditional marriage, identifying who the parents are is easy. But with private marriage contracts where the parties are not the biological parents, there is a need for the state to step in and assign parental rights.

Here's the third article which talks about how marriage is necessary in order to defend the needs and rights of the child at a time when they cannot enter into contracts and be parties to legal disputes.

The third article was my favorite, so here is an excerpt from it:

> The fact of childhood dependence raises a whole series of questions. How do we get from a position of helpless dependence and complete self-centeredness, to a position of independence and respect for others? Are our views of the child somehow related to the foundations of a free society? And, to ask a question that may sound like heresy to libertarian ears: Do the needs of children place legitimate demands and limitations on the behavior of adults?
>
> I came to the conclusion that a free society needs adults who can control themselves, and who have consciences. A free society needs people who can use their freedom, without bothering other people too much. We need to respect the rights of others, keep our promises, and restrain ourselves from taking advantage of others.
>
> We learn to do these things inside the family, by being in a relationship with our parents. We can see this by looking at attachment- disordered children and failure-to-thrive children from orphanages and foster care. These children have their material needs met, for food, clothing, and medical care. But they are not held, or loved, or looked at. They simply do not develop properly, without mothers and fathers taking personal care of them. Some of them never develop consciences. But a child without a conscience becomes a real problem: this is exactly the type of child who does whatever he can get away with. A free society can't handle very many people like that, and still function.
>
> In other words I asked, "Do the needs of society place constraints on how we treat children?" But even this analysis still views the child from society's perspective. It is about time we look at it from the child's point of view, and ask a different kind of question. *What is owed to the child*?
>
> **Children are entitled to a relationship with both of their parents. They are entitled to know who they are and where they came from. Therefore children have a legitimate interest in the stability of their parents' union, since that is ordinarily how kids have relationships with both parents. If Mom and Dad are quarreling, or if they live on opposite sides of the country, the child's connection with one or both of them is seriously impaired.**
>
> **But children cannot defend their rights themselves. Nor is it adequate to intervene after the fact, after harm already has been done. Children's relational and identity rights must be protected proactively.**
>
> **Marriage is society's institutional structure for protecting these legitimate rights and interests of**

> **children.**

I recommend taking a look at all three articles and becoming familiar with the arguments in case you have to explain why marriage matters and why we should not change it. I think it is important to read these articles and to be clear that to be a libertarian doctrine does not protect the right of a child to have a relationship with both his or her parents.  Nor does libertarianism promote the idea that parents ought to stick together for their children.

The purpose of marriage is to make adults make careful commitments, and restrain their desires and feelings, so that children will have a stable environment with their biological parents. We do make exceptions, but we should not celebrate exceptions and we should not subsidize exceptions. It's not fair to children to have to grow up without a mother or father just so that they adults can make poor, emotional decisions and have fun.

# Good news: school choice victory in Indiana, pro-life victory in North Dakota

**Wintery Knight** · 1 April 2013 · Archived copy · Original

The Heritage Foundation reports.

Excerpt:

> It's hard to overstate what an outstanding victory for school choice Indiana's Supreme Court issued yesterday.
>
> Indiana's highest court ruled unanimously in *Meredith v. Pence* that the Choice Scholarship Program (CSP), which provides vouchers to low-income and middle-income families in the Hoosier State, is constitutional. The suit, brought by the teachers unions, sought to end the country's largest and most inclusive school voucher program.
>
> Thankfully for the families currently participating in the CSP—and for the 600,000 children who are now eligible to receive scholarships to attend a private school that meets their unique learning needs—the court sided 5–0 with educational freedom. As the Institute for Justice's Bert Gall notes that
>
> the unions' legal claims focused on two types of constitutional provisions that are common in most other state constitutions: 1) provisions requiring that states provide a "general and uniform" system of public education; and 2) provisions forbidding state support of religion.
>
> With regard to requiring a uniform system of public education, Gall goes on to write that the court "showed that the duty to provide a 'general and uniform' system of public schools is not violated when a state provides educational options above and beyond the system."
>
> As for the provision prohibiting state support of religion, the court noted that
>
> any benefit to program-eligible schools, religious or non-religious, derives from the private, independent choice of the parents of program-eligible students, not the decree of the state, and is thus ancillary and incidental to the benefit conferred on these families.
>
> The Indiana ruling not only ends the challenge to the voucher program in the state, it is also an important victory for school choice and, as Gall put it, "solidifie[s] the growing body of case law supporting school choice and expose[s] the flaws in the teachers' unions' favorite legal claims."

That's good news for fiscal conservatives, but there was also good news for social conservatives last week – in North Dakota.

Excerpt:

> If abortion proponents condemned 2011 as "the year of abortion restrictions… mark[ing] a sea change for abortion rights," and 2012 as "an unmitigated disaster for abortion rights," I can't imagine what they will say about 2013.
>
> In 2011 there were a record 92 pro-life laws enacted in the states, followed by the second highest number, 43, in in 2012. This year has already seen at least 14 pro-life bills become law, according toMailee Smith, Staff Counsel for Americans United for Life, so we are on track for another banner year.
>
> But in 2013 we are not only seeing a high volume of typical pro-life legislative fare, we are seeing passage of pro-life legislation on steroids, the likes of which has never been observed in 40 years of legalized abortions throughout the U.S.
>
> Yesterday, North Dakota adopted the "heartbeat" ban, which outlaws abortion once a baby's heart tones can be detected, as early as six weeks. At the same time ND Governor Jack Dalrymple signed the first ever ban

> against eugenic abortions for fetal abnormalities or gender.
>
> Bumped from the top spot, held only three weeks, was Arkansas, which on March 6 passed what was then an unprecedented ban on abortions after 12 weeks.
>
> Just a week prior, Arkansas became the 10th* state to pass a ban on abortions after 20 weeks.
>
> Then there's the Personhood Amendment. On March 22 North Dakota became the first state to legislatively authorize a ballot initiative that would establish the right to life from the moment of conception.

All the more reason for sensible Americans to continue their mass emigration from leftist blue states to conservative red states.

# Child's complaints of sexual abuse by gay couple were ignored by social workers

**Wintery Knight** · 1 April 2013 · Archived copy · Original

This story was reported in the UK Telegraph. (H/T Dina)

Excerpt:

> Social services insisted on returning Andy Cannon to live with the couple, even though staff at Wakefield council had received up to six allegations of physical and sexual abuse over a number of years.
>
> Mr Cannon, now 23, said he believed social workers would have removed him from his abusers had they not been gay.
>
> He said: "If my adoptive dad was in a heterosexual relationship then my complaints would have been listened to earlier.
>
> "It seems the council didn't want to be seen as victimising gay people – they'd rather look 'politically correct' and let them get away with it to avoid any repercussions."
>
> In a damning report now obtained by Mr Cannon's legal team Wakefield social services officials were accused of "folly and gross misjudgement" and of putting the victim at "significant risk" of harm after missing six opportunities to save Mr Cannon from his abusers.
>
> The 160-page internal report by Patrick Ayre, a former child protection manager, said social services records of his history were "fragmentary" and even censored to keep certain details secret.
>
> Mr Ayre wrote: "That any consideration at all was being given to returning the claimant to his father's care must be regarded as surprising, in view of the concerns which should have been felt both about the possibility of violence and about the allegations made about sexual advances from Mr Scarfe."
>
> During his ordeal Mr Cannon was repeatedly plied with Ecstasy and cannabis before being molested by David Cannon and John Scarfe.
>
> His complaints to care workers were ignored and at one stage he was wrongly diagnosed as having mental disorders.
>
> Both men were eventually arrested and charged after Mr Cannon was readmitted to into council care following a domestic incident, at which point he managed to persuade a Forster carer he was being abused.
>
> Cannon, 54, and 31-year old Scarfe were each jailed for 30 months in 2006, for inciting sexual activity with a child.
>
> […]"The council should have been there to prevent this from happening but they would rather just sweep it under the carpet. Of course I was happy when I was finally listened to and dad and John were sent to prison – but their conviction was a walk in the park compared to what happened to me.
>
> "I have overdosed so many times in the past and I have tried to kill myself at least six occasions after what happened. I had a breakdown about four years ago and still have days thinking that my girlfriend would have a better life without me.
>
> "I was my dad's sex toy and there were many times that I thought he was going to kill me. Most people when they grow up want a nice house, highflying job and holidays abroad each year – but all I live for are my kids and my girlfriend."
>
> Cannon was allowed to adopt Andy in December 1997, when the youngster was aged eight. This came despite the fact he had earlier been convicted and put on probation for 12 months for assaulting the boy's mother, Elaine Moss, possessing cannabis and handling a stolen computer.

> Miss Moss had also claimed Cannon had been abusing her son.
>
> A social worker failed to bring the allegations to the attention of the family court and instead called Cannon a "very caring parent who considered his children's need".
>
> Further allegations of sexual impropriety were made against Cannon by Andy and his mother after he started dating a gay man in 2002 and again when he began a relationship with Scarfe.

Associated Press reported before about a homosexual Penn State coach who sexually abused boys.

Excerpt:

> An explosive sex abuse scandal and allegations of a cover-up rocked Happy Valley after former Penn State defensive coordinator Jerry Sandusky, once considered Joe Paterno's heir apparent, was charged with sexually assaulting eight boys over 15 years. Among the allegations was that a graduate assistant saw Sandusky assault a boy in the shower at the team's practice center in 2002.
>
> […]Sandusky, 67, was arrested Saturday and released on $100,000 bail after being arraigned on 40 criminal counts. Curley, 57, and Schultz, 62, were expected to turn themselves in on Monday in Harrisburg.
>
> The allegations against Sandusky, who started The Second Mile in 1977, range from sexual advances to touching to oral and anal sex. The young men testified before a state grand jury that they were in their early teens when some of the abuse occurred; there is evidence even younger children may have been victimized. Sandusky's attorney Joe Amendola said his client has been aware of the accusations for about three years and has maintained his innocence.
>
> […]A preliminary hearing scheduled for Wednesday would likely be delayed, Amendola said. Sandusky is charged with multiple counts of involuntary deviate sexual intercourse, corruption of minors, endangering the welfare of a child, indecent assault and unlawful contact with a minor, as well as single counts of aggravated indecent assault and attempted indecent assault.
>
> […]The grand jury said eight boys were targets of sexual advances or assaults by Sandusky. None was named, and in at least one case, the jury said the child's identity remains unknown to authorities.
>
> One accuser, now 27, testified that Sandusky initiated contact with a "soap battle" in the shower that led to multiple instances of involuntary sexual intercourse and indecent assault at Sandusky's hands, the grand jury report said.
>
> He said he traveled to charity functions and Penn State games with Sandusky, even being listed as a member of the Sandusky family party for the 1998 Outback Bowl and 1999 Alamo Bowl. But when the boy resisted his advances, Sandusky threatened to send him home from the Alamo Bowl, the report said.
>
> Sandusky also gave him clothes, shoes, a snowboard, golf clubs, hockey gear and football jerseys, and even guaranteed that he could walk on to the football team, the grand jury said, and the boy also appeared with Sandusky in a photo in Sports Illustrated. He testified that Sandusky once gave him $50 to buy marijuana, drove him to purchase it and then drove him home as the boy smoked the drug.
>
> The first case to come to light was a boy who met Sandusky when he was 11 or 12, the grand jury said. The boy received expensive gifts and trips to sports events from Sandusky, and physical contact began during his overnight stays at Sandusky's home, jurors said. Eventually, the boy's mother reported the allegations of sexual assault to his high school, and Sandusky was banned from the child's school district in Clinton County in 2009. That triggered the state investigation that culminated in charges Saturday.
>
> But the report also alleges much earlier instances of abuse and details failed efforts to stop it by some who became aware of what was happening.
>
> Another child, known only as a boy about 11 to 13, was seen by a janitor pinned against a wall while Sandusky performed oral sex on him in fall 2000, the grand jury said.

> And in 2002, Kelly said, a graduate assistant saw Sandusky sexually assault a naked boy, estimated to be about 10 years old, in a team locker room shower. The grad student and his father reported what he saw to Paterno, who immediately told Curley, prosecutors said.

Again, reports about the gay coach's activities were ignored by authorities. Why?

And here's another similar story, this time from Scotland where the head of a gay youth organization was running a child sex ring.

Excerpt:

> Eight men in a Scottish paedophile ring have been found guilty of a series of "horrific" sex offences against children and babies.
>
> […]Two of the men – convicted sex offender Neil Strachan and gay rights campaigner James Rennie – were convicted of sex attacks on children.
>
> Strachan, 41, and Rennie, 38, both from Edinburgh, were also found guilty of conspiring to abuse youngsters, as were three other members of the gang.
>
> […]The jury found Rennie, the former chief of LGBT Youth Scotland, an organisation dedicated to helping young gay people, guilty of molesting a young boy over more than four years.
>
> The child was just three months old when the abuse began.

I think that we need to be more careful about the needs of children when making decisions about public policy.

# Thomas Sowell: could a Cyprus-style confiscation of private savings happen here?

**Wintery Knight** · 1 April 2013 · Archived copy · Original

Thomas Sowell, an economist for the people

Surprise! It already is happening here. Thomas Sowell explains in the American Spectator.

Excerpt:

> One of the big differences between the United States and Cyprus is that the U.S. government can simply print more money to get out of a financial crisis. But Cyprus cannot print more euros, which are controlled by international institutions.But could similar policies be imposed in other countries, including the United States?
>
> Does that mean that Americans' money is safe in banks? Yes and no.
>
> The U.S. government is very unlikely to just seize money wholesale from people's bank accounts, as is being done in Cyprus. But does that mean that your life savings are safe?
>
> No. There are more sophisticated ways for governments to take what you have put aside for yourself and use it for whatever the politicians feel like using it for. If they do it slowly but steadily, they can take a big chunk of what you have sacrificed for years to save, before you are even aware, much less alarmed.
>
> That is in fact already happening. When officials of the Federal Reserve System speak in vague and lofty terms about "quantitative easing," what they are talking about is creating more money out of thin air, as the Federal Reserve is authorized to do — and has been doing in recent years, to the tune of tens of billions of dollars a month.
>
> When the federal government spends far beyond the tax revenues it has, it gets the extra money by selling bonds. The Federal Reserve has become the biggest buyer of these bonds, since it costs them nothing to create more money.
>
> This new money buys just as much as the money you sacrificed to save for years. More money in circulation, without a corresponding increase in output, means rising prices. Although the numbers in your bank book may remain the same, part of the purchasing power of your money is transferred to the government. Is that really different from what Cyprus has done?

I noticed that Brian Lilley had an article about whether Cyprus-style confiscations could happen in Canada. The short answer: yes – for amounts above $100,000 Canadian.

# Video: Planned Parenthood defends infanticide / post-birth abortion

**Wintery Knight** · 2 April 2013 · Archived copy · Original

The Weekly Standard reports.

Excerpt:

> Florida legislators considering a bill to require abortionists to provide medical care to an infant who survives an abortion were shocked during a committee hearing this week when a Planned Parenthood official endorsed a right to post-birth abortion.
>
> Alisa LaPolt Snow, the lobbyist representing the Florida Alliance of Planned Parenthood Affiliates, testified that her organization believes the decision to kill an infant who survives a failed abortion should be left up to the woman seeking an abortion and her abortion doctor.
>
> "So, um, it is just really hard for me to even ask you this question because I'm almost in disbelief," said Rep. Jim Boyd. "If a baby is born on a table as a result of a botched abortion, what would Planned Parenthood want to have happen to that child that is struggling for life?"
>
> "We believe that any decision that's made should be left up to the woman, her family, and the physician," said Planned Parenthood lobbyist Snow.
>
> Rep. Daniel Davis then asked Snow, "What happens in a situation where a baby is alive, breathing on a table, moving. What do your physicians do at that point?"
>
> "I do not have that information," Snow replied. "I am not a physician, I am not an abortion provider. So I do not have that information."
>
> Rep. Jose Oliva followed up, asking the Planned Parenthood official, "You stated that a baby born alive on a table as a result of a botched abortion that that decision should be left to the doctor and the family. Is that what you're saying?"
>
> Again, Snow replied, "That decision should be between the patient and the health care provider."

What I find the most disturbing is that Planned Parenthood receives taxpayer money, thanks to their supporters in the Democrat party.

# Americans finding out the true costs of Obamacare

**Wintery Knight** · 2 April 2013 · Archived copy · Original

The Daily Caller has a sobering article about the true costs of Obamacare.

Excerpt:

> Millions of Americans are receiving double-digit premium hikes. For many people under 30, their health insurance premiums are going up much more — by as much as 189 percent. What happened to candidate Barack Obama's 2008 promise that every family's health care costs would go down by $2,500 by the end of his first term? (Costs actually went up by $3,000.)
>
> The Congressional Budget Office projects Obamacare will cost tens of billions more over the next decade than the agency projected just three years ago. Those increases were not budgeted for, and will add to massive deficits.
>
> So much for the promise that the law "will not add one dime to the deficit."
>
> Millions of workers at places like Wendy's and Olive Garden are now being preemptively reclassified as part-time, and an estimated 7 million to 20 million employees face the loss of workplace health benefits altogether.
>
> So much for the oft-heard promise that "If you like your health care plan, you can keep your health care plan."
>
> […]Seniors were assured that the new system wouldn't affect their benefits, despite Obamacare's $716 billion in ten-year cuts to Medicare (to help pay for the new entitlement).
>
> That promise was broken recently, when the Medicare agency issued surprise regulations cutting Medicare even more deeply than Congress had directed — cuts that target a popular and very successful part of Medicare, one that actually features consumer choice and competition, namely, Medicare Advantage (MA).
>
> Seniors who opt into MA enjoy greater care coordination, disease management for chronic conditions, and on-call nurses available by phone. Those extra services — which in some cases mean the difference between life and death — are now slated for the chopping-block.
>
> Rosemarie Battaglia will be among the millions of victims of these new regulations, which beginning April 1 will effectively shave MA plan payments by about 2 percentage points. On top of prior cuts enacted in Obamacare, that spells an 8 percent cut next year — a level higher than the profit margins for these plans.
>
> Actuarial experts at the American Action Forum predict the cuts will cause between 2 and 5 million seniors to lose their MA benefits, and that MA recipients face health care cost increases averaging $2,235 a year.

When a President makes promises about economic policy, we shouldn't believe him unless we have reasons to believe that he understands business and economics. We had no reason to believe that Obama understood economics. And, when given the reins of the economy, he's proven that. Instead of electing people who sound nice in speeches, we should be electing people who have shown that they know how to solve the problems we're facing in the economy. A track record of success at creating jobs, reducing the costs of health care, improving health care quality and choice, etc. should have counted for more than rhetoric. We chose the rhetoric and now we're getting the screws.

# New Rasmussen poll: 13% drop in belief in the resurrection since last Easter

**Wintery Knight** · 2 April 2013 · Archived copy · Original

From CNS News.

Excerpt:

> A study released by the Rasmussen Reports polling firm on Good Friday found that 64% of Americans believe that Jesus Christ rose from the dead.
>
> While Americans who believe in the resurrection remain in the majority, that number is down significantly when compared to a Rasmussen Poll that asked the same question, released a year ago.
>
> On April 7th, 2012 Rasmussen released a poll finding that 77% of Americans believed the resurrection of Christ to be historical fact.
>
> The difference between the two polls shows a 13 percentage point drop in the number of Americans who believe that Christ rose from the dead, since last Easter.
>
> Additionally, this year's poll found that 19% of Americans reject the central tenant of the Christian faith and do not believe that Christ was resurrected.  That's compared to only 7% who said they didn't believe that Christ rose from the dead a year ago.  A staggering 12 percentage point jump.

I've been posting some resurrection-related material lately, trying to get people to focus more on the evidence for the resurrection. But I can't change what pastors teach their flocks on Sundays. If I had my way, pastors would be using materials like J. Warner Wallace's "Cold-Case Christianity" to train people to make the case for the historical resurrection of Jesus. But it seems to me that most pastors are more interested in providing their flocks with praise hymns, worship and subjective experiences. None of that can demonstrate that the resurrection really happened. We need pastors who emphasize teaching real knowledge of objective truths linked to the real world.

# Thomas Sowell: Guns can be used defensively to save lives

**Wintery Knight** · 3 April 2013 · Archived copy · Original

Economist Thomas Sowell

Thomas Sowell's latest column is up at National Review. If you've ever read any of Dr. John Lott's books, you'll know that his central argument is that allowing law-abiding citizens to own and carry firearms has a net positive effect, when compared with restricting or banning gun ownership. How could that be? What good effect could there be to allowing people to own guns? Well, that's what Tom Sowell – a former pistol marksmanship instructor – is going to explain to us in his article.

Excerpt:

> We all know that guns can cost lives because the media repeat this message endlessly, as if we could not figure it out for ourselves. But even someone who reads newspapers regularly and watches numerous television newscasts may never learn that guns also save lives — much less see any hard facts comparing how many lives are lost and how many are saved.
>
> But that trade-off is the real issue — not the Second Amendment or the National Rifle Association, which so many in the media obsess about. If guns cost more lives than they save, we can always repeal the Second Amendment. But if guns save more lives than they cost, we need to know that, instead of spending time demonizing the National Rifle Association.
>
> The defensive use of guns is usually either not discussed at all in the media or else is depicted as if it means bullets flying in all directions, like the gunfight at the O.K. Corral. But most defensive uses of guns do not involve actually pulling the trigger.
>
> If someone comes at you with a knife and you point a gun at him, he is very unlikely to keep coming and far more likely to head in the other direction, perhaps in some haste, if he has a brain in his head. Only if he is an idiot are you likely to have to pull the trigger — and if an idiot with a knife is coming after you, you had better have a trigger to pull.
>
> Surveys of American gun owners have found that 4 to 6 percent reported using a gun in self-defense within the previous five years. That is not a very high percentage but, in a country with 300 million people, that works out to hundreds of thousands of defensive uses of guns per year.

> Yet we almost never hear about these hundreds of thousands of defensive uses of guns from the media, which will report the killing of a dozen people endlessly around the clock. The murder of a dozen innocent people is unquestionably a human tragedy. But that is no excuse for reacting blindly by preventing hundreds of thousands of other people from defending themselves against meeting the same fate.
>
> Although most defensive uses of guns do not involve actually shooting, nevertheless, the total number of criminals killed by armed private citizens runs into the thousands per year. A gun can also come in handy if a pit bull or some other dangerous animal is after you or your child.

This is an important article that expresses the central argument for allowing law-abiding citizens to protect themselves and their families from criminals.

It's worth noting that both Thomas Sowell and John Lott are economists, and economists use quantitative methods to evaluate policies. It would be great if everyone who talked about policies like gun legislation argued from logic and evidence, like economists do. We need to ask what effects and incentives are created for all groups of people when policies are adopted. And that's what economists do.

# Philip E. Johnson lectures on science, evolution and religion

**Wintery Knight** · 3 April 2013 · Archived copy · Original

I found this fun lecture by the grandfather of the big-tent intelligent design movement, Berkeley law professor Philip E. Johnson.

I'll bet you guys have all heard of him, but you've never heard him speak, right? Well, I was a young man, I used to listen to Phil's lectures and his debates with Eugenie Scott quite a bit. This is one of my favorite lectures. Very easy to understand, and boilerplate for anything else in the origins debate. This is a great lecture – funny, engaging and useful. You will definitely listen to this lecture several times if you listen to it once.

The MP3 is here. (91 minutes, 62 megabytes)

**The Inherit the Wind stereotype**

- Many people get their understanding of origins by watching movies like "Inherit the Wind" (or reading science fiction)
- The actual events of the Scopes trial are nothing like what the movie portrays
- The law forbidding the teaching of evolution was symbolic, not meant to be enforced
- The actual Scopes trial was a publicity stunt to attract attention to Dayton, TN to bring business to the town
- The ACLU advertised for a teacher who would be willing to be sued
- They found a substitute physical education teacher who would be willing to "break" the law
- The movie is nothing like the actual events the movie is a morality play
- The religious people are evil and stupid and ignorant and bigoted
- The scientists and lawyers are all intelligent, romantic, and honest seekers of the truth
- The religious people think that the Bible trumps science and science is not as reliable as the Bible
- The movie argues that the reason why there is ANY dissent to evolution is because of Biblical fundamentalism
- The movie presents the idea that there are no scientific problems with evolution
- The movie says that ONLY Biblical fundamentalists who believe in 6 day, 24-hour creation doubt evolution
- The movie says that Biblical fundamentalism are close-minded, and not open to scientific truth
- The movie says that people who read the Bible as making factual claims are misinterpreting the Bible
- The movie says that smart people read the Bible for comfort and feelings and arbitrary values, not for truth

**Guided evolution and methodological naturalism**

- What scientists mean by evolution is that fully naturalistic, unguided, materialistic mechanisms caused the diversity of life
- Scientists do not allow that God had any real objective effect on how life was created
- Scientists think that nature did all the creating, and any mention of God is unnecessary opinion – God didn't DO ANYTHING
- Scientists operate with one overriding rule – you can only explain the physical world with physical and material causes
- Scientists DO NOT allow that God could have done anything detectable by the sciences
- Scientists WILL NOT consider the idea that natural, material processes might be INSUFFICIENT for explaining everything in nature
- You cannot even ask the question about whether natural laws, matter and chance can explain something in nature

- Intelligent causes can NEVER be the explanation for anything in nature, and you can't even test experimentally to check that
- Scientists ASSUME that everything can be explained with natural laws, matter and chance – no questioning of natural causes is allowed
- Where no natural explanation of a natural phenomenon is available, scientists SPECULATE about undiscovered natural explanations
- The assumption of naturalistic sufficiency is called "methodological naturalism"
- To question the assumptions that natural is all there is, and that nature has to do its own creating, makes you an "enemy of science"
- But Johnson says that *naturalists* are the enemies of science, because they are like the Biblical fundamentalists
- Naturalists have a presumption that prevents them from being willing to follow the evidence where it is leading
- Experiments are not even needed, because the presumption of naturalism overrides any experimental finding that falsifies the sufficiency of natural causes to explain some natural phenomenon

**What can natural selection and mutation actually do?**

- what evolution has actually been observed to do is explain changing populations of moths and finches
- finches with smaller or larger beaks are observed to have differential survival rates when there are droughts or floods
- no new body plan or new organ type has been observed to emerge from these environmental pressures
- the only kind of evolution that has been observed is evolution *within types* – no new genetic instructions are created
- in textbooks, only confirming examples are presented – but what is required is a broad pattern of gradual development of species
- if you look at the fossil record, what you see in most cases is variation within types based on changing environments
- the real question is: can natural law and chance *be observed* to be doing any creating of body plans and organ types?

**What kind of effect requires an intelligent cause?**

- the thing to be explained in the history of life is the functional information sequences
- you need to have a sequence of symbols or characters that is sufficiently long
- your long sequence of characters has to be sequenced in the right order to have biological function
- the only thing that can create long sequences of functional information is an intelligent cause
- intelligent design people accept micro-evolution – changes within types – because that's been observed
- the real thing to be explained is the first living cell's functional information, and the creation of new functional information

**Critical response**

The next 15 minutes of the lecture contain a critical response from a philosophy professor who thinks that there have been no developments in design arguments since Aquinas and Paley. He basically confirms the stereotypes that Johnson outlined in the first part of the lecture. I recommend listening to this to see what opposition to intelligent design really looks like. It's not concerned with answering scientific questions – they want to talk about God, the Bible and Noah's ark. It's our job to get people like this critic to focus on the science.

Here's my snarky rendition of what he said:

1) Don't take the Bible literally, even if the genre is literal.

- all opposition to evolution is based on an ignorant, fundamentalist, literal reading of the Bible
- the Bible really doesn't communicate anything about the way the world really is
- the Bible is just meant to suggest certain opinions and experiences which you may find fetching, or not, depending on your feelings and community
- if Christians would just interpret the Bible as myths and opinions on par with other personal preferences, then evolution is no threat to religious belief

2) As long as you treat the design argument as divorced from evidence, it's not very effective

- the latest and best version of the design argument is the old Paley argument which involves no experimental data, so I'll critique that
- this 200-year old argument which doesn't rely on science has serious problems, and unnamed Christians agree with me!
- Christians should NOT try to prove God's existence using evidence from the natural world (as Romans 1 says), and in fact it's "Pelagianism" to even try
- Christians should divorce their faith from logic and evidence even though the Bible presents faith as being rooted in reason and evidence
- Christians should not tie their faith to the science of today, because science is always changing and the theism-friendly evidence of today might be overturned tomorrow
- It's a good idea for me to critique the arguments of 1000-year old people who did not know anything about the cosmic fine-tuning argument – that's fair!
- I find it very useful to tell people that the argument from design is false without mentioning any design arguments from DNA or cosmic fine-tuning
- We need to assume that the natural world is explainable using only natural causes before we look at any evidence
- We should assume that natural causes create all life, and then rule out all experimental evidence for intelligent causes that we have today
- As long as you accept that God is a personal opinion that has nothing to do with reality, then you can do science
- The non-Christian process theologian Teilhard de Chardin accepts evolution, and therefore so should you
- Remember when theists said God caused thunder because he was bowling in the clouds and then we found out he didn't? Yeah well – maybe tomorrow we'll find out that functional sequences of amino acids and proteins have natural causes! What would you do then?

3) What the Bible really says is that you should be a political liberal

**Q&A time**

The lecture concludes with 13 minutes of questions.

# William Lane Craig and atheist Daniel Dennett discuss cosmology and fine-tuning

**Wintery Knight** · 3 April 2013 · Archived copy · Original

This audio records a part of the Greer-Heard debate in 2007, between prominent atheist Daniel Dennett and lame theistic evolutionist Alister McGrath. Craig was one of the respondents, and this was the best part of the event. It is a little bit advanced, but I have found that if you listen to things like this over and over with your friends and family, and then try to explain it to non-Christians, you'll get it.

By the way, this is mostly original material from Craig, dated 2007, and he delivers the speech perfectly, so it's entertaining to listen to.

Craig presents three arguments for a Creator and Designer of the universe:

- the contingency argument
- the kalam cosmological argument
- the teleological argument

He also discusses Dennett's published responses to these arguments.

**Dennett's response to Craig's paper**

Here is my snarky paraphrase of Dennett's reponse: (this is very snarky, because Dennett was just awful)

- Craig's three arguments are bulletproof, the premises are plausible, and grounded by the best cutting edge science we know today.
- I cannot find anything wrong with his arguments right now, but maybe later when I go home it will come to me what's wrong with them.
- But atheism is true even if all the evidence is against it today. I know it's true by my blind faith.
- The world is so mysterious, and all the science of today will be overturned tomorrow so that atheism will be rational again. I have blind faith that this new evidence will be discovered any minute.
- Just because the cause of the beginning of time is eternal and the cause of the beginning of space is non-physical, the cause doesn't have to be God.
- "Maybe the cause of the universe is the idea of an apple, or the square root of 7". (HE LITERALLY SAID THAT!)
- The principle of triangulation might have brought the entire physical universe into being out of nothing.
- I don't understand anything about non-physical causation, even though I cannot even speak meaningful sentences unless I have a non-physical mind that is causing my body to emit the meaningful sentences in a non-determined manner.
- Alexander Vilenkin is much smarter than Craig and if he were here he would beat him up good with phantom arguments.
- Alan Guth is much smarter than Craig and if he were here he would beat him up good with phantom arguments.
- This science stuff is so complicated to me – so Craig can't be right about it even though he's published about it and debated it all with the best atheists on the planet.
- If God is outside of time, then this is just deism, not theism. (This part is correct, but Craig believes that God enters into time at the moment of creation – so that it is not a deistic God)
- If deism is true, then I can still be an atheist, because a Creator and Designer of the universe is compatible with atheism.
- I'm pretty sure that Craig doesn't have any good arguments that can argue for Christianity – certainly not an

> historical argument for the resurrection of Jesus based on minimal facts, that he's defended against the most prominent historians on the planet in public debates and in prestigous books and research journals.

I was in the second row at the Baylor Conference on intelligent design when Guth debated Craig on the origin of the universe. Guth admitted afterwards that the universe did require a cause.

I do not recommend purchasing the whole 2007 debate, because McGrath is a squish. You're better off with the 2005 and 2008 sets. The 2006 one is OK, but not great. I don't have the 2009 one yet, but it looks good.

# New housing bubble: Obama proposes lowering mortgage-lending requirements

**Wintery Knight** · 4 April 2013 · Archived copy · Original

I must have blogged a million times about how the Democrats caused the recession by forcing banks to make bad loans to people who couldn't pay them back. Although the Republicans got blamed for the crisis, they were the ones who tried to regulate Fannie Mae and Freddie Mac, but they were shut down by Democrats. Well, guess what? The Democrats didn't learn their lesson the first time, and they want to start another housing bubble, just like the first one that gave us the recession.

Take a look at this article in the leftist Washington Post. (H/T ECM)

Excerpt:

> The Obama administration is engaged in a broad push to make more home loans available to people with weaker credit, an effort that officials say will help power the economic recovery but that skeptics say could open the door to the risky lending that caused the housing crash in the first place.
>
> […][A]dministration officials say they are working to get banks to lend to a wider range of borrowers by taking advantage of taxpayer-backed programs — including those offered by the Federal Housing Administration — that insure home loans against default.
>
> Housing officials are urging the Justice Department to provide assurances to banks, which have become increasingly cautious, that they will not face legal or financial recriminations if they make loans to riskier borrowers who meet government standards but later default.
>
> Officials are also encouraging lenders to use more subjective judgment in determining whether to offer a loan and are seeking to make it easier for people who owe more than their properties are worth to refinance at today's low interest rates, among other steps.
>
> Obama pledged in his State of the Union address to do more to make sure more Americans can enjoy the benefits of the housing recovery, but critics say encouraging banks to lend as broadly as the administration hopes will sow the seeds of another housing disaster and endanger taxpayer dollars.
>
> "If that were to come to pass, that would open the floodgates to highly excessive risk and would send us right back on the same path we were just trying to recover from," said Ed Pinto, a resident fellow at the American Enterprise Institute and former top executive at mortgage giant Fannie Mae.

And if that was not enough,the Democrats also have another bubble being inflated. They nationalized the student loan industry, and now taxpayers are going to have to bail out those risky unpaid student loans as well.

Excerpt:

> America's now-nationalized student loan industry just reached a value of $1 trillion, according to Citigroup, growing at a 20 percent-per-year pace. Since President Obama nationalized the industry (a tacked-on provision of the Obamacare bill), tuition has gone up 25 percent and the three-year default rate is at a record 13.4 percent.
>
> […]With many young people unable to pay their loans (average graduating debt is about $29,000), Citigroup and others are speculating that this industry might be ripe for a bailout.
>
> To pay off all the current defaults, Citigroup says it would cost taxpayers $74 billion. However, this number doesn't include those who will default in the coming years, and, when the government rewards the defaulters, it will encourage more borrowers not to pay their debts.
>
> And liberals in Congress have proposed forgiving all student loans via "The Student Loan Forgiveness Act

> 2012," costing taxpayers $1 trillion.
>
> Adding another $1 trillion dollars to the national debt isn't exactly "forgiveness" for young people—it's prolonging the payoff. In fact, student loan bailouts are a catch-22 for young people because they're going to be held accountable for paying off the national debt and interest payments.

At least the young people who voted for Obama are going to be the ones to get the bill for his socialist economic policies.

# Pro-life group at Johns Hopkins University denied official club status

**Wintery Knight** · 4 April 2013 · Archived copy · Original

Life Training Institute tweeted this article from the Washington Times.

Excerpt:

> The Student Government Association at Johns Hopkins University has denied a pro-life group official club status at the Baltimore school for fear the group will make students feel uncomfortable.
>
> "They were denied status because the students on the student council felt being pro-life violates their harassment policy," Kristan Hawkins, president of Students for Life of America, told Fox News.
>
> The SGA at Johns Hopkins voted March 12 to deny the group, called Voice for Life, the right to become an official student club. The vote was affirmed on March 24 by the SGA's Senate, Fox News reports.
>
> According to emails obtained by Fox News, members of the SGA compared the pro-life students to white supremacists, which Ms. Hawkins said was deeply offensive to the group's black members.
>
> "To compare pro-lifers with white supremacists — it's unreal," she told Fox News.
>
> Another SGA member said that allowing pro-life demonstrations made her feel "personally violated, targeted and attacked at a place where we previously felt safe and free to live our lives."
>
> An SGA senator said: "**We have the right to protect our students from things that are uncomfortable.** Why should people have to defend their beliefs on their way to class?"
>
> Voice for Life is searching for an attorney to help them fight the ban. SGA representatives did not return calls seeking comment, Fox News reports.

Now the secular leftists who run the universities like to think of themselves as tolerant, open-minded and diverse. But, actually, they are so intolerant that they cannot even bear to listen to any view other than their own view. What we need on university campuses is an Academic Bill of Rights that guarantees basic liberties to students and faculty who do not toe the leftist line. That would be real diversity, and it would encourage real critical thinking. The university feels that it is fine to make pro-life students uncomfortable, with the many pro-abortion groups on campus. But making pro-abortion students uncomfortable is unthinkable.

# William Lane Craig debates Victor Stenger: Does God Exist?

**Wintery Knight** · 4 April 2013 · Archived copy · Original

Here are the details of the debate that I got from Cloud of Witnesses:

> The OSU [Oregon State University] Socratic Club will sponsor a public dialogue entitled, "Two Philosophers Debate the Existence of God," on Monday, March 1, at 7 p.m. in the LaSells Stewart Center on the OSU campus. William Lane Craig will argue for the Christian view that a personal God exists and Victor J. Stenger the atheist position that there is no God.

In this debate, Victor Stenger does affirm his belief that the universe could be eternal in his second rebuttal (1:02:30), thus denying the standard Big Bang cosmology. He also denies the law of conservation of energy and asserts that something can come from nothing in his concluding speech (1:33:50). He also caused the audience to start laughing when he said that Jesus was not moral and supported slavery. There is almost no snark in this summary. Instead, I quoted Dr. Stenger *verbatim* in many places. I still think that it is very entertaining even without the snarky paraphrasing.

The debate includes 30 minutes of Q&A with the students.

Here is the MP3 file for the audio.

Here's the video of the debate:

**Dr. Craig's opening speech:**

- The ontological argument
- The contingency argument
- The cosmological argument
- The moral argument
- The resurrection of Jesus (3-fact version)
- Religious experience

**Dr. Stenger's opening speech:**

- There is no scientific evidence for God's existence in the textbooks
- There is no scientific evidence for God acting in the universe
- God doesn't talk to people and tell them things they couldn't possibly know
- The Bible says that the Earth is flat, etc.
- There is no scientific evidence that God answers prayers
- God doesn't exist because people who believe in him are ignorant
- Human life is not optimally designed and appears to be the result of a blind, ad hoc evolutionary process
- The beginning of the universe is not ordered (low entropy) but random and chaotic
- It's theoretically possible that quantum tunneling explains the origin of the universe
- The laws of physics are not objectively real, they are "our inventions"
- Regarding the beginning of the universe, the explanation is that something came from nothing*
- Nothing* isn't really nothing, it is "the total chaos that we project existed just before the big bang"
- If something has no structure, then "it is as much nothing as nothing can be"
- Consciousness is explainable solely on the basis of material processes
- There are well-informed, rational non-believers in the world and God would not allow that

**Dr. Craig's first rebuttal:**

Stenger's argument that there is no objective evidence for God's existence:

- First, it is not required that God rely only on objective evidence in order to draw people to himself (Alvin Plantinga)
- Second, God is not required to provide evidence to everyone, only to the people who he knows would respond to him
- Third, Craig gave lots of objective evidence, from science, history and philosophy
- Stenger asks for certain evidence (answered prayers, prophecy, etc.), but Craig presented the evidence we have

Stenger's argument that the balance of energy is zero so "nothing" exists:

- if you have the same amount of assets and liabilities, it doesn't mean that nothing exists – your assets and liabilities exist
- Christopher Isham says that there needs to be a cause to create the positive and negative energy even if they balance
- the quantum gravity model contradicts observations
- the vacuum is not the same as nothing, it contains energy and matter
- the BVG theorem proves that *any* universe that is expanding must have a beginning

Stenger's argument that mental operations can be reduced to physical operations:

- mental properties are not reducible to physical properties
- epiphenomenalism: is incompatible with self-identity over time
- epiphenomenalism: is incompatible with thoughts about other things
- epiphenomenalism: is incompatible with free will
- substance dualism (mind/body dualism) is a better explanation for our mental experience
- God is a soul without a body

**Dr. Stenger's first rebuttal:**
Craig's cosmological argument:

- Craig's premise is "everything has a cause", but quantum mechanics has causeless events
- There are speculative theories about how something could have come into being uncaused out of nothing
- "I don't know of a single working cosmologist today who believes there was a singularity prior to the Big Bang"
- "If there wasn't a singularity then there's no basis for arguing that time began at that point"
- "There's no reason from cosmology that we know of that the universe can't be eternal"
- "When I talk about an eternal universe, I mean a universe that has no beginning or end"
- The Hartle-Hawking model doesn't have a beginning
- "There was no violation of energy conservation by having a universe coming from nothing"
- "The universe *could have* come from a previous universe for example or even just from a region of chaos"
- The paper by Vilenkin is counteracted by other papers (he doesn't specify which ones)

Craig's moral argument:

- Dr. Craig is arguing from ignorance
- But morality can be decided by humanity just like governments pass laws, and that's objective
- Dr. Craig has too little respect for the human intellect

- I don't need to tell me that slavery is wrong
- The Bible supports slavery
- Atheists can behave as good as theists
- Morality just evolved naturally as an aid to survival

Craig's resurrection argument:

- No Roman historians wrote about the execution of Jesus but none of them did
- The empty tomb is doubtful because it is only mentioned in the gospels, not by Paul
- John Dominic Crossan says there was no empty tomb
- Christianity only survived because the Roman empire thought that they were useful

**Dr. Craig's second rebuttal:**

Craig's cosmological argument:

- There is no reason to prefer an indeterministic interpretation of quantum mechanics
- Dr. Stenger himself wrote that deterministic interpretations of quantum mechanics are possible
- The vacuum in quantum mechanics is not nothing
- The quantum vacuum he proposes cannot be eternal
- The cosmological argument does not require a singularity
- The Hartle-Hawking model is from 1983
- Hawking says that there is a beginning of space and time *after* that model
- The Hartle-Hawking model *does still have a beginning of time* – the model is not eternal
- The BVG theorem that requires a beginning for expanding universes is widely accepted among cosmologists

Craig's moral argument:

- Stenger redefined objective to mean that most people agree with it – but that's not what objective means
- Objective means right and wrong whether anyone accepts it or not
- Richard Dawkins himself says that on atheism there is "no evil and no good" – why is he wrong?
- Even Dr. Stenger says that morality is the same as passing laws – it's arbitrary and varies by time and place
- But on his view, right and wrong are the same as deciding which side of the road to drive on
- But somethings really are right and some things are really wrong

Craig's resurrection argument:

- Josephus is a Roman historian and he wrote about Jesus, for example
- There were four biographies of Jesus are the best sources for his life
- The scholars that Stenger mentioned are on the radical fringe

**Dr. Stenger's second rebuttal:**

Knowledge and the burden of proof:

- Dr. Craig has to bear the burden of proof, not me – because his claim is more "extravagant"
- "I don't have to prove that a God was not necessary to create the universe"
- "I don't have to prove that a God did not design the universe and life"
- "I don't have to prove that the universe did not have a beginning"
- "I don't have to prove that God did not provide us with our moral sense"

- There are a lot of books written about how morality evolved naturally
- “I don’t have to prove that the events surrounding the supposed resurrection of Jesus did not take place”
- Bart Ehrman says that the gospels are generally unreliable (Note: Ehrman accepts all 3 of Craig’s minimal facts)
- Just because people are willing to die for a cause, does not make their leader God, e.g. – the Emperor of Japan

Aesthetic concerns about the universe:

- I don’t like dark matter and I wouldn’t have made the universe with dark matter
- I don’t like the doctrine of penal substitution
- I don’t like the doctrine of original sin
- I don’t like the heat death of the universe

**Dr. Craig’s conclusion:**

The case for atheism:

- Dr. Stenger had two arguments and he has to support his premises
- Dr. Craig addressed his two arguments and each premise and Dr. Stenger never came back on it

The contingency argument:

- Dr. Stenger has dropped the refutation of this argument

The cosmological argument:

- The theoretical vacuum he proposes cannot be eternal

The moral argument:

- He asserts that things are wrong, but there is no grounding for that to be objective on atheism

The resurrection of Jesus:

- There are surveys of scholars on the empty tomb and 75% of them agree with it
- Bart Ehrman agrees with all 3 of the minimal facts that Dr. Craig presented
- Ehrman’s objection to the resurrection is not historical: he’s an atheist – he thinks miracles are impossible

Religious experience:

- No response from Dr. Stenger

**Dr. Stenger’s conclusion**

The cosmological argument:

- “I argued that we have very good physical reasons to understand how something can come from nothing”
- “There is a natural tendency in the universe… to go from.. simpler thing to the more complicated thing”
- The transition from a vapor to a liquid to ice shows how something could come from nothing
- “It cannot be proven that the universe had a beginning”

The moral argument:

- Objective morality, which is independent of what people think, could be developed based on what people think
- “Jesus himself was not a tremendously moral person… he had no particular regard for the poor… he certainly supported slavery… he was for the subjugation of women” (audience laughter)

The resurrection argument:

- Bart Ehrman says that the majority of the gospels are unreliable

Religious experience:

- I don't see any evidence that there is anything more to religious experience than just stuff in their heads

God's purpose of the world should be to make people feel happy:

- God could have made people feel happier
- God could have made people not die
- God could could have made the universe smaller: it's too big
- God could have made it possible for humans to live anywhere "even in space"

# A Harvard University student explains how evidence changed her mind about God

**Wintery Knight** · 5 April 2013 · Archived copy · Original

Here's a must-read article about the effectiveness of apologetics on college campuses in Christianity Today. (H/T Sanjay M.)

Excerpt:

> I don't know when I first became a skeptic. It must have been around age 4, when my mother found me arguing with another child at a birthday party: "But how do you know what the Bible says is true?" By age 11, my atheism was so widely known in my middle school that a Christian boy threatened to come to my house and "shoot all the atheists." My Christian friends in high school avoided talking to me about religion because they anticipated that I would tear down their poorly constructed arguments. And I did.
>
> As I set off in 2008 to begin my freshman year studying government at Harvard (whose motto is *Veritas*, "Truth"), I could never have expected the change that awaited me.
>
> It was a brisk November when I met John Joseph Porter. Our conversations initially revolved around conservative politics, but soon gravitated toward religion. He wrote an essay for the *Ichthus*, Harvard's Christian journal, defending God's existence. I critiqued it. On campus, we'd argue into the wee hours; when apart, we'd take our arguments to e-mail. Never before had I met a Christian who could respond to my most basic philosophical questions: How does one understand the Bible's contradictions? Could an omnipotent God make a stone he could not lift? What about the Euthyphro dilemma: Is something good because God declared it so, or does God merely identify the good? To someone like me, with no Christian background, resorting to an answer like "It takes faith" could only be intellectual cowardice. Joseph didn't do that.
>
> And he did something else: He prodded me on how inconsistent I was as an atheist who nonetheless believed in right and wrong as objective, universal categories. Defenseless, I decided to take a seminar on meta-ethics. After all, atheists had been developing ethical systems for 200-some years. In what I now see as providential, my atheist professor assigned a paper by C. S. Lewis that resolved the Euthyphro dilemma, declaring, "God is not merely good, but goodness; goodness is not merely divine, but God."
>
> Joseph also pushed me on the origins of the universe. I had always believed in the Big Bang. But I was blissfully unaware that the man who first proposed it, Georges Lemaître, was a Catholic priest. And I'd happily ignored the rabbit trail of a problem of what *caused* the Big Bang, and what *caused* that cause, and so on.
>
> By Valentine's Day, I began to believe in God. There was no intellectual shame in being a deist, after all, as I joined the respectable ranks of Thomas Jefferson and other Founding Fathers.
>
> I wouldn't stay a deist for long. A Catholic friend gave me J. Budziszewski's book Ask Me Anything, which included the Christian teaching that "love is a commitment of the will to the true good of the other person." This theme—of love as sacrifice for true good—struck me. The Cross no longer seemed a grotesque symbol of divine sadism, but a remarkable act of love. And Christianity began to look less strangely mythical and more cosmically beautiful.

Now, I'm going to get into a lot of trouble for saying this, but I think that if you are a Christian and you are in a secular university, then you really need to have put in the effort to study the areas of science, history and philosophy that are relevant to the Christian faith. This is regardless of your personal abilities or field of study. We must all make an effort regardless of how comfortable we are with things that are hard for us to learn.

Granted, most atheists are not interested in truth, because they tend to jettison truth whenever it conflicts with their personal autonomy – their desire to seek pleasure apart from moral constraints. But there is another kind of atheist.

This kind of atheist is honest, open-minded, and they just have never encountered any good reasons or evidence to think that God exists and that Jesus is anything other than a man. There are a lot of atheists like that who are just waiting to hear some decent evidence. Our job is to prepare for them and then engage them, if they are willing to be engaged.

I think that definition of love she cited – self-sacrifice for the true good of another person – is important. I don't think that ordinary Christians like you or me spends time on apologetics because we "like" it. I know lots of Christians who are in tough, expensive academic programs trying to get the skills they need to defend truth in areas that matter. They do this because they know that there are people out there who are interested in truth, and who are willing to re-prioritize their lives if the truth is made clear to them. We need to be willing to serve God by doing hard things that work.

# William Lane Craig lectures on failure in the Christian life

**Wintery Knight** · 5 April 2013 · Archived copy · Original

I found this audio on Brian Auten's Apologetics 315 web site.

Here is the MP3 file.

And here is my summary.

Intro:

- the topic of failure is not one that is often discussed by Christians
- failure #1: failure in the Christian life which is the result of sin
- failure #2: when a Christian is defeated while trying to serve God
- the consequences for failure #1 can be worse for the Christian
- the consequences for failure #2 can be worse for the world as whole
- how is it possible for a person to fail when they are obeying God? (#2)
- how can it be that God can call someone to a task then let them fail?
- failure is not persecution – persecution is normal for Christians
- failure is not trials – testing is normal for Christians to grow

Bill's failure:

- Bill had submitted all the coursework for his second doctoral degree
- but he had to pass a comprehensive oral examination
- he failed to pass the comprehensive exam
- Bill and Jan and his supporters had all prayed for him to pass
- how could God allow this to happen?

Solution to the problem:

- God's will for us may be that we fail at the things we try in life
- there are things that God may teach us through failure
- Bill learned that human relationships are more important than careers
- we need to realize that "success" in life is not worldly success
- true success is getting to know God well during your life
- and failure may be the best way to get to know God well
- it may even be possible to fail to know God while achieving a lot
- the real measure of a man is loving God and loving your fellow man

Practical:

- give thanks to God regardless of your circumstances
- try to learn from your failure
- never give up

The ending of Bill's story:

- Bill spent an entire year preparing for a re-take of his exam
- Bill was awarded his second doctorate "magna cum laude" (with great distinction)

- Bill learned that American students are not well prepared for exams
- the year of studying remedied his inadequate American education
- in retrospect, he is thankful for the failure – he learned more

If you like this, you should pick up Craig's book "Hard Questions, Real Answers", which has a chapter on this problem. And here is a similar lecture that Dr. Craig gave at his home church in Atlanta on the same topic. I'm not posting this because I've had a catastrophic failure or anything. But I think in this economy, I am seeing a lot of my plans dashed and I am being forced to circle the wagons a little and take fewer risks. I am being forced to aim for smaller goals, and plan for future difficulties. It does bother me that I can't comfortably take risks to achieve the best goals that I want to achieve. But I have to play the hand I'm dealt, and do what looks doable right now. Some of my friends are having the same problem of having to recalculate what is probable and what is possible.

# Gary Habermas: five reasons to believe Jesus rose from the dead

**Wintery Knight** · 5 April 2013 · Archived copy · Original

Greg West, who runs The Poached Egg, found this article by Dr. Gary Habermas in the left-wing Washington Post, of all places.

Habermas tries to make his case based on the "minimal facts" about Jesus that virtually all historians will admit to, regardless of where they line up theologically.

Here are his five minimal facts:

> (1) Most scholars agree that Jesus' tomb was discovered empty shortly afterwards. With almost two dozen reasons favoring this report alone, what best explains this? Other hypotheses do not account for all the data.
>
> (2) Many eyewitnesses assert that they saw the risen Jesus, both individually and in groups. Even apart from the Gospels, we can establish this totally from just two passages in Paul's "undisputed writings":
>
> - Paul told the Corinthians that he had received the Gospel resurrection report from others (1 Corinthians 15:1-8).
> - The consensus critical view is that Paul probably obtained this material in Jerusalem, when he visited the eyewitness apostles Peter and James, the brother of Jesus (Galatians 1:18-24).
> - Paul returned to Jerusalem 14 years later and specifically checked out the nature of the Gospel message, again with eyewitnesses Peter, James, and now John (Galatians 2:1-10).
> - All the apostles agreed that Jesus appeared to them after his death (1 Corinthians 15:11).

> (3) Further, critical scholars also agree that Paul received this material from the other apostles at an exceptionally early date-only about five years after the crucifixion. But since the others knew the reports before Paul did, we are right back to the events themselves. Even the best-known critical scholar today, non-Christian specialist Bart Ehrman, dates several Christian traditions as early as just a year or two after the crucifixion!
>
> (4) But why should we believe that these eyewitnesses were being honest? We have first century sources that the three apostles mentioned above were all martyred: Paul, Peter, and James the brother of Jesus. Of course, people die for all sorts of ideas, but only for what they are convinced is true. But unlike others, the apostles were in a position to know whether or not they had seen Jesus Christ alive after his death. By being willing to die, scholars agree that they were convinced that Jesus had indeed appeared to them. At the very least, this addresses their honesty and conviction.
>
> 5) Of these eyewitnesses, Paul was a persecutor of the early Christians, and James was an unbeliever. Skeptical scholars accept this in both cases. But why did they become believers? Again, they were certainly in a position to know whether the risen Jesus had appeared to them.

This might be a good one to forward along to your skeptical friends, because of where it was published. It's probably review for most Christians, but to someone who is new to historical Jesus studies, this might be a good conversation starter. What are the "undisputed" parts of the Bible, and which are the facts virtually everyone admits to? How did historians decide which books and which facts were more verifiable by historians, and which were not? Are the minimal facts enough to warrant the belief that Jesus rose from the dead?

# 200,000 fewer people are employed, labor force participation reaches 1979 level

**Wintery Knight** · 6 April 2013 · Archived copy · Original

Labor Force Participation 2013 March

CNS News writes about some of the numbers from the latest jobs report.

Excerpt:

> A record 89,967,000 Americans were not in the labor force in March, according to the Bureau of Labor Statistics. That is an increase of 663,000 from the 89,304,000 Americans who were not in the labor force in February.
>
> Since President Barack Obama was first inaugurated in January 2009, 9,460,000 people have dropped out of the labor force.
>
> The BLS counts a person as not in the civilian labor force if they are at least 16 years old, are not in the military or an institution such as a prison, mental hospital or nursing home, and have not actively looked for a job in the last four weeks. The department counts a person as in the civilian labor force if they are at least 16, are not in the military or an institution such as a prison, mental hospital or nursing home, and either do have a job or have actively looked for one in the last four weeks.
>
> The number of people that BLS considers "in the labor force" affects the unemployment rate–which is the percentage of people "in the labor force" who are unable to find a job during the month. If someone previously considered "not in the labor force" were to go out and search for a job and not find one, they would have to be counted as in the labor force for that period–and thus would increase the unemployment rate.
>
> To the degree that Americans choose to simply drop out of the labor force rather than search unsuccessful for a job they decrease the unemployment rate.
>
> In keeping with the increase in the number of people not in the labor force, the labor force participation rate decreased from 63.5 percent in February to 63.3 percent in March. The labor force participation rate is the

> percentage of Americans in the civilian population over age 16 who did not have a job or seek a job during the month.

One of Obama's favorite constituencies also has a lot to think about with this report. The labor union voters, who thought that socialism would provide them with "good paying jobs". Well, socialism did provide someone with good-paying jobs. When union workers voted for anti-business radical, there were lots of good paying jobs created by American companies – just not in America. That's what attacking business achieved, it made them expand elsewhere or close up entirely. Obama's union supporters need to think about whether they can make a living on gay marriage alone.

And that's not all:

> The number of American workers collecting federal disability payments climbed to yet another record of 8,853,614 in March, up from 8,840,427 in February, according to newly released data from the Social Security Administration.
>
> […]March was the 194th straight month that the number of American workers collecting federal disability payments increased. The last time the number of Americans collecting disability decreased was in January 1997. That month the number of workers taking disability dropped by 249 people—from 4,385,623 in December 1996 to 4,385,374 in January 1997.
>
> As the overall number of Americans collecting disability has increased, the ratio of full-time workers to disability beneficiaries has decreased.

But there is some good news in the new report:

> Figures released by the Bureau of Labor Statistics (BLS) on Friday show that 315,000 women dropped out of the labor force in March.
>
> According to BLS, the number of women not in the labor force grew to 49 million in March, up from 48.7 million in February, continuing a trend of women leaving the labor force in every month of 2013.

This is good news because one of Obama's biggest constituents is unmarried women, with or without children. These are the people who are most likely to vote for a President like they might vote for a contestant on Dancing with the Stars or American Idol. The people who switched their votes because Al Gore kissed his wife as a staged event. The Sandra Fluke wing of the Democrat party. The good news is that now they have something to think about before the next election besides free contraception.

# J. Warner Wallace: I am not a Christian because it works for me

**Wintery Knight** · 6 April 2013 · Archived copy · Original

*UPDATE: Linked by Captain Capitalism, who, although non-religious, thinks that real Christians ought to walk the walk.*

Here's a must-read post from Cold-Case Christianity author J. Warner Wallace.

Excerpt:

> Life on this side of my decision hasn't always been easy. It's been nearly seventeen years since I first trusted Jesus as Lord and Savior. I still struggle to submit my prideful will to what God would call me to do. Christianity is not easy. It doesn't always "work" for me. There are times when I think it would be easier to do it the old way; easier to cut a corner or take a short cut. There are many times when doing the right thing means doing the most difficult thing possible. There are also times when it seems like non-Christians have it easier, or seem to be "winning". It's in times like these that I have to remind myself that I'm not a Christian because it serves my own selfish purposes. I'm not a Christian because it "works" for me. I had a life prior to Christianity that seemed to be working just fine, and my life as a Christian hasn't always been easy.
>
> I'm a Christian because it is true. I'm a Christian because I want to live in a way that reflects the truth. I'm a Christian because my high regard for the truth leaves me no alternative.

I think this is important. There are people who I know who claim to be Christian, but they are clearly believing that God is a mystical force who arranges everything in their lives in order to make them happy. They are not Christians because it's true, but because of things like comfort and community. But people ought to become Christians because they think it's true. Truth doesn't necessarily make you happy, though. Truth can impose intellectual obligations and moral obligations on you. Seeing God as he really is doesn't help us to "win" at life, as the culture defines winning.

Winning in Christianity doesn't mean making lots of money, or being famous, or winning human competitions, or being approved of by lots of people. Winning for a Christian might involve things like building relationships with people and leading them to know that God exists and who Jesus is. That has no cash value, and it's not going to make you famous. Actually, it will probably cost you money and time, and make you unpopular with a lot of people.

The Bible doesn't promise that people who become Christians will be happier. Actually, it promises that Christians will suffer for doing the right things. Their autonomy will suffer, as they sacrifice their own interests and happiness in order to make God happy, by serving his interests. Christianity isn't something you add on to your before-God life in order to achieve your before-God goals. When you become a Christian, you get a new set of goals, based on God's character and his design for you. And although you might be very successful in the world as part of serving God, there is no guarantee of that. Christianity is not life enhancement.

# Socialism in France: economy contracts by largest amount in four years

**Wintery Knight** · 7 April 2013 · Archived copy · Original

Here's the BBC with some bad news for Europe.

Excerpt:

> Germany's economy slowed to "near stagnation" last month, while France's recorded its biggest contraction for four years, according to a closely watched survey.
>
> The Markit composite purchasing managers' index (PMI), which measures both the manufacturing and services sectors, declined to 50.6 in Germany last month, from 53.3 in February.
>
> Any figure above 50 indicates growth.
>
> France's reading fell to 41.9 points, its worst since March 2009.
>
> For the eurozone as a whole, the index fell to 46.5 from 47.9 in February.
>
> Chris Williamson, chief economist at Markit, said the latest data painted a gloomy picture.
>
> "The [eurozone] recession is deepening once again as businesses report that they have become increasingly worried about the region's debt crisis and political instability," he said.
>
> "The unresolved election in Italy was commonly cited as a key factor clouding the economic outlook in March, and the botched bail-out of Cyprus could well filter through to a further worsening of business sentiment across the region in April."
>
> Mr Williamson added that the weak showing from Germany "suggests that the only source of bright light in an otherwise gloomy region has once again begun to fade".
>
> Germany's index reading was the worst in the country for three months.

The French socialist government has also been rocked by a scandal:

> It is hard to think of a worse scandal for the Socialist government in France. As "President Normal" and "Mr Fair", François Hollande's whole being and essence was to crack down on tax evasion and financial corruption, making the wealthy pay their share in dragging France out of its economic woes. Riding his scooter, living in his modest flat and taking a salary cut, Hollande had promised that, unlike Nicolas Sarkozy before him, his presidency would be "exemplary", squeaky clean, and totally just.
>
> But now Jerome Cahuzac, the trusted tax tsar and budget minister who had vigorously led Hollande's crusade against fraudsters and tax-dodging millionaires, has made a shock confession of his own monumental fraud. With investigators and journalists closing in on the truth, he admitted hiding €600,000 (£509,000) from the taxman in a secret foreign account for 20 years. Not only that; Cahuzac had spent the past four months repeatedly lying on TV and to parliament, where he insisted from the government benches: "I do not have, I have never had, an account abroad, not now, not ever."

Last year, France decided to elect a socialist prime minister named Francois Hollande, and then the people of France voted to give him a socialist majority in Parliament. And now we are seeing the results of that decision. Hollande's priorities are things like a 75% income tax rate, hiring 60,000 new unionized teachers, lowering the retirement age back to 60, and massive spending on government-owned housing. It doesn't look like his plan is working to grow the French economy.

# Defense Department brands evangelical Christians and Catholics as “extremists”

**Wintery Knight** · 7 April 2013 · Archived copy · Original

Anti-Christian bias at the Defense Department

The Washington Times reports on the latest Obama administration department to marginalize religious Americans. (H/T Lydia)

Excerpt:

> The Defense Department came under fire Thursday for a U.S. Army Reserve presentation that classified Catholics and Evangelical Protestants as “extremist” religious groups alongside al Qaeda and theKu Klux Klan.
>
> The presentation detailed a number of extremist threats within the U.S. military, including white supremacist groups, street gangs, and religious sects.
>
> The presentation identified seventeen religious organizations in a slide titled “religious extremism.” They include al Qaeda, Hamas, the Filipino separatist group Abu Sayyaf, and the Ku Klux Klan, which the slide identifies as a Christian organization.
>
> “Religious extremism is not limited to any single religion, ethnic group, or region of the world,” the slide explains, in language that closely resembles the text of a Wikipedia page on “extremism.”
>
> While outfits such as al Qaeda and the KKK are explicitly violent, the presentation also lists Catholicism and evangelical Protestantism as extremist groups.

I noted the careful way that the article refuses to say whether the presenter was a man or a woman. I have an opinion on that.

This isn’t the first time that characterizations of the right like this have been seen in the government, either.

Take a look at this article about FBI training from Life News.

Excerpt:

> Documents LifeNews.com obtained today reveal the Obama administration partnered with leading pro-abortion organizations to host an FBI training seminar in August with the main focus of declaring as “violent” the free speech activities of pro-life Americans.
>
> On August 25, 2010, the FBI and the United States Department of Justice co-sponsored a training seminar with Planned Parenthood, the National Abortion Federation and the Feminist Majority Foundation.

> When information about the seminar, which took place at FBI headquarters in Portland, Oregon, reached pro-life advocates, they asked officials for permission to attend and were granted access to the seminar and the training materials.
>
> FBI and Obama administration officials provided participants with an 84-page document entitled "Resource Guide: Violence Against Reproductive Health Care Providers" that contained print copies of Power Point presentations prepared by the Justice Department and an analysis of alleged pro-life "violence" prepared by the pro-abortion groups.
>
> The so-called violence perpetrated by pro-life advocates mostly contained examples of constitutionally-protected free speech, including activities such as praying, providing women outside abortion centers with alternatives information, and peaceful protesting or picketing.

That material was prepared by the Obama administration Department of Justice.

And most significant of all, the report by the Department of Homeland Security.

Excerpt:

> Homeland Security Secretary Janet Napolitano said Wednesday that she was briefed before the release of a controversial intelligence assessment and that she stands by the report, which lists returning veterans among terrorist risks to the U.S.
>
> […]The Times reported Tuesday that the department's Office of Intelligence and Analysis (I&A) issued April 7 the nine-page document titled "Rightwing Extremism: Current Economic and Political Climate Fueling Resurgence in Radicalization and Recruitment." Outcry from veterans groups, Republican lawmakers and conservative activists followed, but the reaction spread Wednesday to Democratic lawmakers and liberal-leaning groups.
>
> […]"Rightwing extremism," the report said in a footnote on Page 2, goes beyond religious and racial hate groups and extends to "those that are mainly antigovernment, rejecting federal authority in favor of state or local authority, or rejecting government authority entirely."
>
> "It may include groups and individuals that are dedicated to a single issue, such as opposition to abortion or immigration," said the report, which also listed gun owners and veterans of the Iraq and Afghanistan wars as potential risks.

I am not surprised by this, because there really is no interaction with thoughtful, scholarly Christians throughout the K-12 process in public schools. You have a bunch of unionized education majors teaching children for 13 years. Then those children go off to college, often to non-quantitative departments that indoctrinate rather than teach practical skills. And then they graduate and get unionized jobs in the government – not the private sector. When would they ever be exposed to thoughtful conservative scholarship? Never. And that's what causes this intolerance – it's lack of critical thinking and lack of viewpoint diversity. They don't know any thoughtful Christians, and they don't care to correct their views by looking for them.

# New testimony from another ex-employee of the Kermit Gosnell abortion clinic

**Wintery Knight** · 8 April 2013 · Archived copy · Original

Dina sent me the latest on this story, from the UK Daily Mail.

Excerpt:

> A medical school graduate has given a graphic account of working at a Philadelphia abortion clinic and how he routinely saw babies born alive and then killed with scissors
>
> Stephen Massof, 50, of Pittsburgh, was giving evidence at the trial of his former boss Kermit Gosnell on Thursday.
>
> Gosnell, 72, is accused of killing seven live babies at the Philadelphia Women's Medical Society clinic and a woman who was administered too much anesthesia.
>
> […]Massof, who is awaiting sentencing after pleading guilty to the murder of two newborns at the clinic, revealed Thursday that he witnessed an abortion at 26 weeks – two weeks beyond the 24-week limit in the state.
>
> He also claimed he saw about 100 babies born alive and then 'snipped' with surgical scissors in the back of the neck, to ensure their 'demise'.
>
> He also spoke of the gruesome scenes at the clinic which was allegedly found dirty and rundown with rusting surgical instruments.
>
> 'It would rain fetuses. Fetuses and blood all over the place. It is literally a beheading. It is separating the brain from the body,' he told NBC.
>
> He also alleges the clinic's ultrasound machine was manipulated to make fetuses appear smaller and therefore younger.
>
> […]Prosecutors allege Gosnell took more than $1 million a year at the clinic where women were charged up to $3,000 for an abortion.

David Freddoso has a column in the Washington Examiner on the media coverage of the Gosnell trial, which has been very different from the media's coverage of the Sandy Hook shooting.

Excerpt:

> Whatever one's position on gun control, the appropriately heavy coverage of the Sandy Hook massacre at least served a public purpose by starting a discussion about mass shootings.
>
> At its most thoughtful, the debate considered what measures might have prevented the massacre and which could be squared with Americans' constitutional rights.
>
> At its worst, the debate suffered from media cheerleading for panic gun control legislation — as in, "pass something, anything!" — including but not limited to such left-leaning figures as CNN's Piers Morgan.
>
> In stark contrast, television coverage of Gosnell's trial has been "hard to find," as the Wall Street Journal's Peggy Noonan put it very charitably last Sunday on "Meet the Press."
>
> In fact, not counting Noonan's allusion, Gosnell's case has not been mentioned even once on any of the three major networks in the last month (his trial began March 18).
>
> It has received only seven mentions on cable television since it began, one on CNN and six on Fox News. In print, Gosnell's case has been largely ignored outside of local media outlets in Pennsylvania and Delaware.

> It's not as though there isn't an obvious connection between the Gosnell case and public policy. Legislators in some states (including Pennsylvania and now Alabama) have acted since Gosnell's arrest to crack down on the next abortion quack.
>
> The media have collectively and perhaps deliberately failed to draw the obvious connection between the two stories.

I think that the differences in the levels of coverage is useful to show that media bias is not always done by biased reporting. It can also be just the decision of what to report on. You can read my previous post on the peer-reviewed studies that document left-wing media bias.

# Craig Blomberg on the historical reliability of the New Testament

**Wintery Knight** · 8 April 2013 · Archived copy · Original

In J. Warner Wallace's Cold-Case Christianity, chapter 5, he leverages the work of two experts on the New Testament. He cites Dan Wallace on textual transmission, and Craig Blomberg on textual criticism. Let's take a look at an article written by Craig Blomberg which presents 10 reasons why the gospels are reliable. (H/T Chris S.)

Here are points 4 and 5:

> Fourth, ancient Jews and Greeks meticulously cultivated the art of memorization, committing complex oral traditions to memory. Even before the Gospels or any other written sources about Jesus were compiled, Jesus' followers were carefully passing on accounts of His teachings and mighty works by word of mouth. This kept the historical events alive until the time they were written down.
>
> Fifth, the ancient memorization and transference of sacred tradition allowed for some freedoms in retelling the stories. Guardians of the tradition could abbreviate, paraphrase, prioritize, and provide commentary on the subject matter as long as they were true to the gist or meaning of the accounts they passed on. This goes a long way to explaining both the similarities and the differences among the four Gospels. All four authors were true to the gist of Jesus' life, yet they exercised reasonable freedom to shape the accounts in ways they saw fit.

Take a look if you want a quick overview of reasons why we should give the gospels the benefit of the doubt unless they prove faulty in one or more areas.

# How Margaret Thatcher, the Iron Lady, saved Britain

**Wintery Knight** · 9 April 2013 · Archived copy · Original

Here's an article from the UK Daily Mail with some more details about her.

> Margaret Thatcher stood almost alone in driving through the tough policies now credited with saving the economy, secret papers reveal.
>
> The Tory Premier had to take on her predecessor Harold Macmillan, Bank of England governor Gordon Richardson and even her own Chancellor Geoffrey Howe to push through the policies which pulled Britain back from the brink of economic chaos.
>
> Documents released by the National Archives under the 30-year rule show the pressure Mrs Thatcher faced from the Establishment behind the scenes – and the extent to which she was isolated.
>
> In 1980, the year after becoming Britain's first female Prime Minister, Margaret Thatcher embarked on a controversial programme to revive the moribund economy through deep public spending cuts and strict control of the money supply, intended to stamp out inflation.
>
> He warned that while her programme of cuts might give a 'sense of exhilaration' to her supporters, the country was heading for industrial collapse and 'dangerous' levels of unemployment.
>
> Macmillan, then 86, sent the letter following a meeting with the Prime Minister at Chequers in August 1980.
>
> He criticised her for abandoning 'consensus politics' to pursue radical reforms and 'divisive politics', which he said went against the 'essence of Tory democracy'.
>
> It was Macmillan who coined the phrase 'you've never had it so good' in 1957 during the long post-war economic boom.
>
> His brand of consensus politics is now credited with contributing to the economic malaise that brought Britain to its knees in the late 1970s.
>
> Years later, in her memoirs, Mrs Thatcher poured scorn on consensus politics, writing: 'What great cause would have been fought and won under the banner "I stand for consensus"?.'
>
> […]In 1981, 365 economists wrote to The Times urging Mrs Thatcher to change course and limit the damage caused by the recession.
>
> But she was unmoved, and her tough stance succeeded in reducing inflation from 27 per cent to four per cent in four years, putting Britain on the road to recovery.
>
> Mrs Thatcher's economic views were heavily influenced by the right-wing Cabinet minister Sir Keith Joseph, with whom she set up the free market think tank the Centre for Policy Studies in 1974.
>
> Both drew on the work of the influential American economist Milton Friedman whose monetary theories challenged the post-war consensus on economic thinking.

I recommend reading the whole article for some more articles where Lady Thatcher had to stand against everyone and hold onto her convictions in the teeth of the majority.

Here's an article from Forbes magazine that summarizes her effort to turn Britain around.

Excerpt:

> It's hard to appreciate today how desperate Britain's condition was before Thatcher took office. Its economy was a laughing stock, the perennial sick man of Europe. Strikes were endemic and union bosses effectively governed the country. Her Conservative Party had long ago made its peace with the welfare state and the ethos of high spending and high taxes. While the previous Tory Prime Minister, Edward Heath, wanted to revive

Britain, he hadn't a clue how to do it. In a make-or-break showdown with the coal miner's union, Heath called a special election under the banner "Who Governs Britain?" Heath lost and unions' dominance in Britain seemed secure.

Great leaders have an astute sense of taking advantage of circumstances. Even though Heath had lost two elections, none of the senior party officials would challenge him. At the time, Thatcher was not regarded as one of the party's major figures. But she was the only Tory who firmly believed in free markets and in Britain's ability to become again a proud nation based on the principles of liberty. She was a devotee of Friedrich von Hayek and Milton Friedman and of the idea of paring back big government and giving free enterprise room to flourish. Astonishingly she beat Heath in a leadership fight in 1975 and led the Tories to victory in 1979.

Immediately she began slashing income tax rates and reining in galloping spending and fighting inflation. She also exhibited that critical sense of timing. When she took office, she was faced with a potential strike of nurses whose union was demanding huge pay increases. Thatcher compromised in a way that some thought she didn't have the backbone to turn Britain around. Instead she was exhibiting a great politician's sense of knowing when to pick a fight. Thatcher eventually pushed through major labor union reforms and made it clear she would not tolerate any union riots or violence. Shortly after Thatcher won reelection, the coal miners union, which had destroyed Heath, decided to take her on. But unlike Heath Thatcher was fully prepared. The big showdown ensued and Thatcher beat the coal miner's union resoundingly. It never recovered from that defeat.

Thatcher knew the deadweight on the economy of excessive taxation. She cut the top income tax rate from 98% to 40%. She cut the corporate income tax rate from 52% to 35%.

One of Thatcher's greatest innovations was the systematic selling off of the government's business assets, dubbed privatization. After World War II Britain nationalized enormous swaths of the economy which actions subsequent Conservative governments left largely untouched. Thatcher sold government companies off and her example has been followed by countless nations around the world.

In the area of privatizations, she did two remarkable things. She sold off much of Britain's public housing. An enormous number of Britons, far more than in the U.S., lived in these government-owned buildings. Thatcher pushed the sale of these apartments to occupants at low prices and on very advantageous terms. The purpose was to begin to shift the mentality of people and their dependence on government. Her other smart move was in the privatization of government-owned companies: offering a significant number of shares to workers at very low prices. Union leaders hated privatization but their opposition was undermined as their members realized that they could do very well buying cheap shares in these newly-privatized entities. Here again she was changing peoples' thinking: pro-big government workers now saw themselves as share owners, taking on more of a capitalist mentality.

Before Thatcher, many social observers thought that Britain had an ingrained, unchangeable, anti-commercial culture that would forever stand in the way of the country becoming an economic success. Yet within a decade of her taking office, Britain had the most vibrant, large economy in Europe, one even more dynamic, innovative than that of Germany's. London became a magnet for entrepreneurs from France, Sweden and elsewhere.

One unchangeable characteristic of a great leader is courage and that means taking career-breaking risks. Thatcher demonstrated her mettle in the Falkland Islands crisis. When the Argentinean military dictatorship seized Britain's Falkland Islands, most military experts felt the Sceptred Isle simply did not possess the military means to take them back. Defying almost the entire political establishment which was haunted by both Britain's current weakness and the memory of the Suez Canal debacle in 1956, Thatcher declared that the seizure would not stand and that Britain would go to war to take the Islands back. Thankfully she received critical help from the U.S. thanks to in large part the unrelenting efforts of Defense Secretary Caspar Weinberger (who years later became Publisher and Chairman of Forbes). To the surprise of experts, Britain's military expedition succeeded. The Argentinean military dictatorship fell and democracy was restored in that

> country. For Britain the Falklands war was a huge boost to a demoralized nation. To the world it meant that once again tyranny would be resisted.

I recommend reading that whole article. It's hard not to smile at a woman who clearly loved her country and worked to save it from poverty.

**Why good men love Maggie**

And now I must offend everyone. See, I have a theory about women. I think that women generally tend to be more beholden to the opinions and fashions of the crowd than men are. It's not absolute, but it's maybe two-thirds to one-third, in my experience. I think that it is generally hard for them to hold to their convictions in the face of peer pressure. That's why so few young, unmarried women are conservative after graduating from college. As soon as they reach college, they are swayed towards liberal views by their need to feel good about themselves and their need to be liked by others. Their views at home were not rooted in real knowledge, they were just fitting in with their families and churches and saying whatever words they were expected to say. And then they go off to college and learn other words to say from another community that uses praise and blame to replace their former convictions with new convictions.

But Maggie Thatcher wasn't like that. And here's why:

> John Ranelagh writes of Margaret Thatcher's remark at a Conservative Party policy meeting in the late 1970's, "Another colleague had also prepared a paper arguing that the middle way was the pragmatic path for the Conservative party to take .. Before he had finished speaking to his paper, the new Party Leader [Margaret Thatcher] reached into her briefcase and took out a book. It was Friedrich von Hayek's *The Constitution of Liberty*. Interrupting [the speaker], she held the book up for all of us to see. 'This', she said sternly, 'is what we believe', and banged Hayek down on the table." (John Ranelagh, *Thatcher's People: An Insider's Account of the Politics, the Power, and the Personalities*. London: Harper Collins, 1991.)

Policies like unilateral disarmament, wealth redistribution and redefining marriage *sound good* to many women – especially in college, and especially when only one side is presented and the other side is demonized. The only way to resist ideas that *feel good* and ideas that *get you peer-approval* is to have formed your own views through independent study. Lady Thatcher's economic policies were formed through a study of real economists like Nobel-prize-winning economist F.A. Hayek and Nobel-prize-winning economist Milton Friedman. The reason why she was able to hold to her principles is because she knew what she was talking about, and her opponents did not. She didn't care about feeling good. She didn't care about what other people thought of her. She knew was right, and that was enough to sustain her in trying times. She had the knowledge, and her opponents couldn't change her core convictions by trying to shame her. It didn't work.

# Is it still safe to defend marriage using your real name?

**Wintery Knight** · 9 April 2013 · Archived copy · Original

A Facebook friend is in hot water from his left-leaning classmates for a short essay that he wrote defending marriage. It was published in his college newspaper. In it, he makes a case that society has an interest in promoting marriage because the state has an interest in the development of children.

He writes (in part):

> Marriage is a comprehensive union with a special link to children. It is a private union with a public purpose.
>
> Private in that comprehensive union exemplifies the love of the spouses. Public in that their comprehensive union is intrinsically directed toward a purpose beyond the love of the spouses: children.
>
> The state regulates marriage because it has an interest in children. Marriage produces and cultivates the development of future citizens within a family unit held together by norms of fidelity, monogamy, exclusivity, and permanence. The state incentivizes marriage both because it recognizes child-rearing to be a difficult task and because it wants to encourage men and women to form family units. Not all marriages have children; some are infertile. Nevertheless, all marriages between men and women are still capable of engaging in the kind of unitive act that is intrinsically directed toward children.

The essay is a 500-word version of a longer essay that he posted before.

**Scary comments**

I wanted to bring this up because if you read some of the comments on his post, you will find that most of them seem to be unable to even understand the case that he was trying to make in his small, short 500-word version of the longer essay. Yet, even though these people could not understand what he was saying, they nevertheless went ahead and insulted him personally, over and over and over again.

Take a look at some of these comments, and ask yourself – are they trying to engage with his arguments? Are they bringing new research to bear on the problem? Or are they just offering personal attacks and emotional outbursts?

Look:

> The argument in the letter has been debunked time and time again. Ultimately, it implies gay couples aren't human. At the very least, it implies that gay people aren't already parents, which is false. I'm absolutely disgusted at your discretion in publishing this trash. You have stooped to an unbelievable low this time. As a side note, I'm embarrassed for [the academic department you belong to].

If it's been debunked so many times, then we can't he explain what's wrong with it instead of becoming insulting?

Here's another from that same person, right after the first one:

> You don't like gay people. How original. As a side note, I did offer arguments against the ridiculous fallacies in logic that you presented. But it's not like you're here to have a discussion. I'm sure you've made up your mind re: profile pictures and such.

Um, he never did post any arguments. He just posted about his feelings "disgusted" "embarassed". That's not an argument.

And here's the same person again:

> Your article is an insult to anyone who's LGBT– yes, even your "friends." It's an affront to humanity. See Perry

> v. Schwarzenegger for an obliteration of your argument. I can't even bother when the facts are all there in Supreme Court records for your easy consumption.

And the funny thing is – people keep clicking like on his comments. Why is that? Why do they think that he has said anything of value?

**My advice**

And here is the point I want to make about this. I do not recommend to people, and especially to students, that you write about social issues under your real name. I also recommend that even if you use an alias, that you do not make it widely known what your real name is to people who you meet casually online. You do not want to be in a situation where someone can just do a web search for your name before a job interview or a school admission. People who are on the left on these issues are not exposed to other points of view, so they do not tolerate other points of view. Often, they are coming from a position where they already have made lifestyle choices (I mean straight people, too) where they cannot allow themselves to consider the possibility that they would have to regulate their sexuality for the good of children or society.

# Real unemployment rate for youth is 22.9%

**Wintery Knight** · 10 April 2013 · Archived copy · Original

I found an article  from the Wall Street Journal via Lonely Conservative in Captain Capitalism's latest round-up .

Excerpt:

> When the recession began in December, 2007, 59.2% of the under-25 population was in the labor force, meaning they were either working or looking for work. Today, that figure has fallen to 54.5%. That may not sound like a big drop, but it makes a huge difference. If the so-called participation rate had remained unchanged, there would be 1.8 million more young people in the labor force today than there actually are. Counting those people as unemployed, rather than out of the labor force, would push the unemployment rate up to 22.9%. That's only a hair better than the 23.9% youth unemployment rate in the euro zone, and has shown only very modest improvement during the recovery.
>
> The decline in the participation rate among the young can't all be attributed to the recession. Labor force participation among young people peaked at just under 70% in 1989, and has trended downward ever since, primarily due to rising rates of college attendance.
>
> The decline accelerated during the recession, as many young people sought refuge in college or other forms of education or training. In a normal cycle, that might have worked out well, leaving a generation of highly educated workers ready to re-enter the job market when the economy recovered. Instead, they have been graduating into a labor market that remains deeply challenged, especially for those without much work experience. To make matters worse, many graduates are carrying hefty debt burdens, and those who can find work are often being forced to low-skill jobs.

But are these young people victims? Or are they doing this to themselves?

Young UK socialists rejoice over Maggie Thatcher's death

I was looking over the Captain's blog and I found a post where he argues that young people are not victims.

He writes:

> However, before we all jump on the baby boomer generation (and don't worry, history will be INCREDIBLY harsh on them) we have to look at our own generational selves in the mirror.  Specifically, whether we deserve all these programs or not.
>
> Of course, the question is moot and academic.  I don't think there will be any money to be paid out in the first

> place, but let's just say there was. Do our generations really deserve all the unicorns, puppies, hope, and change the government says we're entitled to? I say no and here is the reason why.
>
> Gen X and Gen Y are doing the EXACT same thing as their baby boomer predecessors did. They are spending more money than they make. They expect other people to take care of themselves. They are entitled WAY more than the baby boomers ever were. And (most importantly) THEY VOTED IN DROVES FOR BARACK OBAMA and thus THE MORTGAGING OF THEIR OWN FUTURES.
>
> Much as I loathe the baby boomers, the successive generations, mine included, are worse. Despite BLATANT and OBVIOUS financial problems our generations faced, we lacked the adult maturity (let alone simple 2nd grade mathematics) to turn this country around. And while the baby boomers have been voting more and more conservative, it is the younger generations through galactic stupidity, ignorance and selfishness that merely nailed a couple more nails in the US-coffin and thus our own futures.
>
> Like I said, I doubt there will even be any money for Gen Y, Gen X and any future generations to make good on all those socialist entitlement goodies we promised ourselves. But before we start blaming previous generation's for our current problems, we should start blaming ourselves for making our future problems worse.

We should be careful about pitying young people who are struggling to find work, and who won't get a dime from social programs like Social Security and Medicare. They are voting to punish employers with taxes and regulations. Most of them don't know or care about what they are doing – they don't connect their vote to their unemployed status. They think that education means jobs, and that they can vote in order to feel good and be liked, and still find work. They think that if they pay into these entitlement programs, then the money will be there. They trust Obama and they vote for him. They are not victims.

# Massachusetts man facing multiple charges for shooting a bear on his property

**Wintery Knight** · 10 April 2013 · Archived copy · Original

From the libertarian Reason magazine (with links to news media stories).

Excerpt:

> Richard Ahlstrand, of Auburn, Massachusetts, faces criminal charges after encountering a bear in his back yard and shooting the damned thing to avoid being mauled or eaten. Specifically, as noted at Reason 24/7, he's charged with "illegally killing a bear, illegally baiting a bear, illegal possession of a firearm and failure to secure a firearm." All of these charges, once translated from Massachusetts to American, seem to stack up to outrage that Ahlstrand didn't make his yard completely inhospitable to animals that are rarely seen in the area, and then investigated a suspicious noise with a weapon in hand rather than cower under the bed. Worst of all, he actually defended himself when he encountered danger.
>
> […]In both the *Telegram* and CBS articles, "authorities" are quoted as saying they don't think the bear was a threat to people. I suppose it's possible that the black bears in Massachusetts are a kinder, gentler breed than the one that mauled a man near Payson, Arizona, last June. Or the one that tore up a woman in the same area in May. And then there was the bear that did a job on a woman near Pinetop …

When I see stories like this, the first thing that I think is that my role as a protector has been criminalized by the state. Suppose that I owned property and had a family and a bear wandered onto my property and threatened my family. The environmentally-friendly authorities think that I should let the bear eat my family, or at least sit still and hope that he doesn't. Is it reasonable to have a family if you can't protect them? What kind of incentive are these tree-hugging leftists offering men to get married when men know perfectly well that the state prefers them to watch their family be mauled by a bear rather allow that man to shoot that bear?

# John Hawkins: 7 reasons why marriage is falling apart in America

**Wintery Knight** · 10 April 2013 · Archived copy · Original

John Hawkins, who blogs at Right Wing News, has a new post up at Clash Daily in which he lists 7 reasons why marriage is in decline.

Here are his reasons:

1. The Sexual Revolution
2. The Inability Of Many Poor Men To Support A Family
3. A "Marrying Up" Gap
4. No Fault Divorce
5. Increased Economic Options For Women
6. Marriage has become a much less attractive option for men
7. Children have become more of an economic hindrance than a help

And here is one in detail:

> **6. Marriage has become a much less attractive option for men:** There was a time when the man was expected to provide for his wife and kids and in return, he was treated as the king of the castle. Now, men are often treated more like partners than kings. Moreover, if there's a divorce, men know they may not be treated fairly by the court system. Almost every man knows a guy who has had access to his child used as a bargaining chip, who has to pay Draconian child support payments or who has otherwise been generally treated unfairly because of his gender, not the merits. No man wants to end up as the guy paying a huge chunk of his income to a woman who broke his heart while he wonders if he'll be allowed to have access to his own child.

As far as I can tell, the response to men's lack of incentives to get married has been to legislate and spend even more to help *women*. In fact, I'm not even sure if most people understand what Mr. Hawkins outlined about male needs. Do women realize that one of the major reasons why men might like to get married is because then they would have a little team to protect, provide for and lead? Men don't like it when government steps in and steals half their earnings, teaches their children bad ideas, and prevents them from protecting their family by disarming them. Maybe women can get men to be more interested in marriage if they think about why men would want to get married, and then make marriage more like what men want. That might involve rolling back feminism and socialism, and it might involve women changing who they are. There are two people in a relationship, and both of them have needs.

# Could you convince people that chocolate chip cookies are the best cookies?

**Wintery Knight** · 11 April 2013 · Archived copy · Original

Here's an insightful post from J. Warner Wallace, author of Cold-Case Christianity.

Excerpt:

> Why do we hesitate to share the Gospel with non-believers? I think it's because we treat the gospel as a cookie rather than a cure.
>
> I asked the Christian students if they would be willing to follow me into the streets of Huntsville to try to convince people that chocolate chip cookies are the best cookies in the world. The school cafeteria at SHU makes excellent chocolate chip cookies, so we could have taken some with us to convince the local populace. Unsurprisingly, none of the students were excited about going. When asked, they quickly admitted that it seemed pointless to try to convince people of something as subjective as a personal opinion about cookies. They recognized that cookie preference is a matter of subjective opinion, rather than objective truth, and none of them were willing to go out of their way to argue for an opinion. I then asked them if they would be willing to follow me into a region of Huntsville that was suffering from a Tuberculosis outbreak to convince those infected with TB to take the one known cure, Isoniazid. All of them found this to be a worthy effort and said they would be willing to help for a cause such as this. They recognized the difference between the cookie and the cure. Cookies are a matter of subjective opinion, but cures are a matter of objective truth. If the people suffering with TB didn't know about the cure, they would die. Personal opinions about Isoniazid are irrelevant. Some TB sufferers might, for example, prefer to take Ibuprofen. But the objective truth about TB and Isoniazid overshadows any opinion someone might hold about their favorite treatment. Cures are like that. When we are objectively convinced that a particular treatment is the exclusive cure for what is ailing us, we ignore our preferences and act quickly to save ourselves and share the truth with others.
>
> There is a relationship between our categorization of Christian claims and our desire to share them with the world around us. Some of us hesitate to share the Gospel because (whether we care to admit it or not) we've come to see religious truth as a matter of subjective opinion rather than objective truth. We treat the Gospel more as a cookie than a cure.

I don't think I could convince someone who liked oatmeal and raisin cookies that chocolate chip cookies were better. They would just say that they had their preference and I had my preference and there was no reason for them to switch. But I'll bet that I could convince a person to save for their retirement instead of wasting their money on partying. And I'll bet that I could convince a person to study computer science in college instead of studying art history. Know why? Because I know about these things, and I could appeal to objective facts to make a case for them. Those facts pack a punch whether or not the person has a preference for what I am recommending or not. And we need to treat Christianity the same way. Move the whole question beyond personal preferences to evidence. That's how you can be persuasive – *on any topic.*

# Finally: liberal USA Today reports on Kermit Gosnell infanticide case

**Wintery Knight** · 11 April 2013 · Archived copy · Original

Liberal columnist Kirsten Powers writes about the Kermit Gosnell case in liberal USA Today. (H/T Ian L., Mary, Stuart S.)

Full text:

> Infant beheadings. Severed baby feet in jars. A child screaming after it was delivered alive during an abortion procedure. Haven't heard about these sickening accusations?
>
> It's not your fault. Since the murder trial of Pennsylvania abortion doctor Kermit Gosnell began March 18, there has been precious little coverage of the case that should be on every news show and front page. The revolting revelations of Gosnell's former staff, who have been testifying to what they witnessed and did during late-term abortions, should shock anyone with a heart.
>
> NBC-10 Philadelphia reported that, Stephen Massof, a former Gosnell worker, "described how he snipped the spinal cords of babies, calling it, 'literally a beheading. It is separating the brain from the body." One former worker, Adrienne Moton, testified that Gosnell taught her his "snipping" technique to use on infants born alive.
>
> Massof, who, like other witnesses, has himself pleaded guilty to serious crimes, testified "It would rain fetuses. Fetuses and blood all over the place." Here is the headline the Associated Press put on a story about his testimony that he saw 100 babies born and then snipped: "Staffer describes chaos at PA abortion clinic."
>
> "Chaos" isn't really the story here. Butchering babies that were already born and were older than the state's 24-week limit for abortions is the story. There is a reason the late Democratic senator Daniel Patrick Moynihan called this procedure infanticide.
>
> Planned Parenthood recently claimed that the possibility of infants surviving late-term abortions was "highly unusual." The Gosnell case suggests otherwise.
>
> Regardless of such quibbles, about whether Gosnell was killing the infants one second after they left the womb instead of partially inside or completely inside the womb — as in a routine late-term abortion — is merely a matter of geography. That one is murder and the other is a legal procedure is morally irreconcilable.
>
> A Lexis-Nexis search shows none of the news shows on the three major national television networks has mentioned the Gosnell trial in the last three months. The exception is when Wall Street Journal columnist Peggy Noonan hijacked a segment on Meet the Press meant to foment outrage over an anti-abortion rights law in some backward red state.
>
> The Washington Post has not published original reporting on this during the trial and The New York Times saw fit to run one original story on A-17 on the trial's first day. They've been silent ever since, despite headline-worthy testimony.
>
> Let me state the obvious. This should be front page news. When Rush Limbaugh attacked Sandra Fluke, there was non-stop media hysteria. The venerable NBC Nightly News' Brian Williams intoned, "A firestorm of outrage from women after a crude tirade from Rush Limbaugh," as he teased a segment on the brouhaha. Yet, accusations of babies having their heads severed — a major human rights story if there ever was one — doesn't make the cut.
>
> You don't have to oppose abortion rights to find late-term abortion abhorrent or to find the Gosnell trial eminently newsworthy. This is not about being "pro-choice" or "pro-life." It's about basic human rights.
>
> The deafening silence of too much of the media, once a force for justice in America, is a disgrace.

Whenever I see things like this (the media's silence about some atrocity committed by the secular left) it reminds me why I have a strong belief in a literal eternal Hell. When you cover up the harming of innocents in order to protect something selfish like the irresponsible use of sex, that's pure evil. We do not kill other innocent people just so that we can protect our "right" to get drunk and hook up. And we certainly should not subsidize it, nor celebrate it, as Barack Obama and the Democrat Party do. That is wrong.

# Three reasons to read “Darwin’s Doubt”, the sequel to Signature in the Cell

**Wintery Knight** · 11 April 2013 · Archived copy · Original

“Darwin’s Doubt” by Stephen C. Meyer

If someone asked me to name the best intermediate to advanced book on intelligent design, I would name Stephen C. Meyer’s “Signature in the Cell“. This book even got a lot of positive comments from non-ID people, including the famous atheist philosopher Thomas Nagel. So, it’s no surprise then that I am recommending that everyone pre-order Darwin’s Doubt, which is Stephen C. Meyer’s sequel to “Signature in the Cell“.

And Casey Luskin has penned four reasons why you should pre-order it:

> 1. Arguments for intelligent design in the Cambrian explosion have certainly been made before. But Darwin’s Doubt will be by far the most in-depth and mature development of those arguments to date, addressing in detail many ideas and rebuttals and theories advanced by evolutionary scientists, and showing why the theory of intelligent design best explains the explosion of biodiversity in the Cambrian animals.
>
> 2. When published, Darwin’s Doubt will be the single most up-to-date rebuttal to neo-Darwinian theory from the ID-paradigm. In this regard, one exciting element of Darwin’s Doubt is that Meyer reviews much of the peer-reviewed research that’s been published by the ID research community over the last few years, and highlights how ID proponents are doing relevant research answering key questions that show Darwinian evolution isn’t up to the task of generating new functional information.
>
> 3. As many ENV readers already know, we now live in a “post-Darwinian” world, where more and more evolutionary biologists are realizing that neo-Darwinism is failing, so they scramble to propose new materialistic evolutionary models to replace the modern synthesis. (These models include, or have included, self-organization, evo-devo, punc eq, neo-Lamarckism, natural genetic engineering, neutral evolution, and others.) In this regard, Darwin’s Doubt does something that’s never been done before: it surveys the landscape of these “post-neo-Darwinian evolutionary models,” and shows why they too fail as explanations for the origin of animal body plans and biological complexity.

I've pre-ordered mine!

If you think this book might be too difficult for you, then I recommend an introductory book like The Politically Incorrect Guide to Darwinism and Intelligent Design.

# Obama's budget proposal would increase taxpayer funding of abortion

**Wintery Knight** · 12 April 2013 · Archived copy · Original

The Heritage Foundation explains.

Excerpt:

> President Obama's fiscal year (FY) 2014 budget released yesterday persists in entangling taxpayer dollars in the abortion industry.
>
> Obama's budget includes $327 million for Title X family planning programs, a more than $30 million increase over last year's request. Title X is one of a number of sources of government funding to Planned Parenthood, which performs roughly one out of every four abortions in the United States and was recently accused of tacitly supporting infanticide.
>
> In 2011 alone, Planned Parenthood received over $542 million in total taxpayer funding while performing a record 333,964 abortions. According to analysis by the Susan B. Anthony List, Planned Parenthood has performed almost 1 million abortions in the past three reporting years alone.
>
> Even though the organization boasts the title of the nation's largest abortion provider, Planned Parenthood has ridden the waves of taxpayer funding to millions of dollars in annual surpluses. During its last reporting year, like many before it, Planned Parenthood saw a very comfortable income, reporting excess revenues exceeding $87 million and net assets of more than $1.2 billion.

How does Planned Parenthood feel about infanticide? Let's see:

> If the organization's single-minded provision of abortion services isn't enough to question the continual stream of federal tax dollars, recent disturbing admissions by a local Florida Planned Parenthood affiliate should at least raise scrutiny of the organization's federal funding.
>
> A few weeks ago, a local Planned Parenthood representative testified against a Florida bill that would require abortion doctors to provide emergency care for infants born after a failed abortion attempt. "If a baby is born on a table as a result of a botched abortion," asked one Florida legislator during the hearing, "what would Planned Parenthood want to have happen to that child that is struggling for life?"
>
> Instead of expressing the need to provide potentially life-saving medical care to the child, Planned Parenthood official Alisa LaPolt Snow simply responded, "We believe that any decision that's made should be left up to the woman, her family, and the physician."
>
> The Obama Administration also continues to export taxpayer funding of abortion, requesting $37 million for the United Nations Family Population Fund (UNFPA). Despite continued assertions that UNFPA has been involved in China's coercive one-child policy, the U.S. government persists in sending tens of millions of taxpayer dollars to an organization complicit in forced abortions and involuntary sterilizations.

Previously, I wrote about how Obama voted for infanticide several times and he opposed the ban on partial birth abortions.

Excerpt:

> BAIPA [The Born Alive Infant Protection Act] (both the federal and Illinois state versions) on the other hand, was introduced to insure that babies who survive attempted abortions are provided the same medical care and sustenance as any other infant born alive. BAIPA was introduced after evidence was presented that babies born alive after unsuccessful abortions were simply discarded in utility closets without food, care, or medical

> treatment until they died.
>
> As both Andy and I pointed out last night (and numerous times before), state senator Obama fought against the Illinois version of BAIPA that was identical in all material respects to the federal version. During the 2008 presidential campaign, Obama claimed that he voted against the Illinois BAIPA because it failed to contain a "neutrality clause" making it clear that the bill did not affect the right to an *abortion*. This is false. Documents obtained by National Right to Life show that the Illinois BAIPA did, in fact, contain a neutrality clause identical to the federal version.
>
> As noted yesterday, not one U.S. senator voted against BAIPA. Even NARAL didn't oppose it. At the time of the vote, CNN reported that NARAL's spokesman said the following:
>
> We, in fact, did not oppose the bill. There is a clear legal difference between a fetus *in utero* versus a child that's born.***And when a child is born, they deserve every protection that the country can provide.*** (Emphasis added).
>
> The logical import of Obama's vote against BAIPA is that he disagrees, i.e., once a baby has been targeted for abortion it thereafter has no inherent right to the food, comfort, and medical care provided to other babies born alive. Indeed, during Illinois state senate deliberations on BAIPA, Obama stated that one of his objections was that the bill was "designed to***burden the original decision*** of the woman and the physician to induce labor and perform an abortion." Apparently, once the decision to abort has been made, a child is doomed even if born alive.

When it comes to abortion, there is no one more radical than Barack Obama.

# Washington Post writer explains why she refuses to report on Gosnell case

**Wintery Knight** · 12 April 2013 · Archived copy · Original

*If you tweet this post, please use the Twitter hash tag #Gosnell. Thanks!*

Mollie over at Get Religion blog questioned a Washington Post reporter about why she isn't writing about the Kermit Gosnell abortion / infanticide case.

Here's the relevant snippet: (links removed)

> Inspired by Kirsten Powers' *USA Today* column yesterday, I decided to start asking journalists about their personal involvement in the Gosnell cover-up.
>
> […]I decided, since tmatt has me reading the *Washington Post* every day, to look at how the paper's health policy reporter was covering Gosnell. I have critiqued many of her stories on the Susan G. Komen Foundation (she wrote quite a bit about that) and the Sandra Fluke controversy (she wrote quite a bit about that) and the Todd Akin controversy (you know where this is going). In fact, a site search for that reporter — who is named Sarah Kliff — and stories Akin and Fluke and Komen — yields more than 80 hits. Guess how many stories she's done on this abortionist's mass murder trial.
>
> Did you guess zero? You'd be right.
>
> So I asked her about it. Here's her response:
>
> Hi Molly – I cover policy for the Washington Post, not local crime, hence why I wrote about all the policy issues you mention.
>
> Yes. She really, really, really said that. As Robert VerBruggen dryly responded:
>
> Makes sense. Similarly, national gun-policy people do not cover local crime in places like Aurora or Newtown.
>
> So when a private foundation privately decides to stop giving money to the country's largest abortion provider, that is somehow a policy issue deserving of three dozen breathless hits. When a yahoo political candidate says something stupid about rape, that is a policy issue of such import that we got another three dozen hits about it from this reporter. It was so important that journalists found it fitting to ask every pro-lifer in their path to discuss it. And when someone says something mean to a birth control activist, that's good for months of puffy profiles.
>
> But gosh darn it, can you think of any policy implications to this, uh, "local crime" story? And that's all it is. Just like a bunch of other local stories the *Washington Post*also refuses to cover — local crimes such as the killing of Trayvon Martin and the killing of Matthew Shepard and the killing of students at an elementary school in Connecticut. Did the *Washington Post* even think of covering those local crime stories? No! Oh wait, they did? Like, all the time? Hmm. That's weird. But did they cover them in terms of policy implications? Asking politicians for their views and such? Oh they did that, too? Hmm. So weird. Oh, and Sarah Kliff herself wrote one of those stories? Well, gosh, I'm so confused.
>
> And what policies could possibly be under discussion with this Gosnell trial? Other than, you know, abortion clinic hiring practices? And enforcement of sanitary conditions? And laws on abortion practices that extend to killing live infants by beheading them? And the killing of their mothers? And state or federal oversight of clinics with records of botched abortions? And pain medication practices? And how to handle the racist practices of some clinics? And how big of a problem this is (don't tell anyone but another clinic nearby to Gosnell was shut down this week over similar sanitation concerns)? And disposal of babies' bodies? And discussion of whether it's cool to snip baby's spines after they're born? And how often are abortion clinics inspected anyway? What are the results of inspections? When emergency rooms take in victims of botched abortions, do they report that? How did this clinic go 17 years without an inspection? Gosh, I just can't think of

> a single health policy angle here. Can you?

By the way, Neil Simpson tried to do a search on MSNBC for "Kermit Gosnell" and he got no results. I did a search for "Gosnell" and got no results, too. This is why mainstream media is dying. No one believes that they can tell the truth about anything. They're just working for the Democrat Party, not doing journalism.

# Do Kermit Gosnell and Barack Obama have the same views on abortion?

**Wintery Knight** · 12 April 2013 · Archived copy · Original

First, let's look at this re-cap of the Gosnell story in the Atlantic. This story features a full re-cap of facts, and then concludes with a discussion of media bias.

Take a look at the facts of the case:

> On February 18, 2010, the FBI raided the "Women's Medical Society," entering its offices about 8:30 p.m. Agents expected to find evidence that it was illegally selling prescription drugs. On entering, they quickly realized something else was amiss. In the grand jury report's telling, "There was blood on the floor. A stench of urine filled the air. A flea-infested cat was wandering through the facility, and there were cat feces on the stairs. Semi-conscious women scheduled for abortions were moaning in the waiting room or the recovery room, where they sat on dirty recliners covered with blood-stained blankets. All the women had been sedated by unlicensed staff." Authorities had also learned about the patient that died at the facility several months prior.
>
> Public health officials inspected the surgery rooms. "Instruments were not sterile," the grand jury states. "Equipment was rusty and outdated. Oxygen equipment was covered with dust, and had not been inspected. The same corroded suction tubing used for abortions was the only tubing available for oral airways if assistance for breathing was needed. There was no functioning resuscitation or even monitoring equipment, except for a single blood pressure cuff." Upon further inspection, "the search team discovered fetal remains haphazardly stored throughout the clinic – in bags, milk jugs, orange juice cartons, and even in cat-food containers."
>
> And "Gosnell admitted to Detective Wood that at least 10 to 20 percent of the fetuses were probably older than 24 weeks in gestation – even though Pennsylvania law prohibits abortions after 24 weeks. In some instances, surgical incisions had been made at the base of the fetal skulls." Gosnell's medical license was quickly suspended. 18 days later, The Department of Health filed papers to start the process of closing the clinic. The district attorney submitted the case to the grand jury on May 4, 2010. Testimony was taken from 58 witnesses. Evidence was examined.
>
> In Pennsylvania, most doctors won't perform abortions after the 20th week, many for health reasons, others for moral reasons. Abortions after 24 weeks are illegal. Until 2009, Gosnell reportedly performed mostly first and second trimester abortions. But his clinic had come to develop a bad reputation, and could attract only women who couldn't get an abortion elsewhere, former employees have said. "Steven Massof estimated that in 40 percent of the second-trimester abortions performed by Gosnell, the fetuses were beyond 24 weeks gestational age," the grand jury states. "Latosha Lewis testified that Gosnell performed procedures over 24 weeks 'too much to count,' and ones up to 26 weeks 'very often.' …in the last few years, she testified, Gosnell increasingly saw out-of-state referrals, which were all second-trimester, or beyond. By these estimates, Gosnell performed at least four or five illegal abortions every week."

Now let's recall what Obama's position is on born-alive abortion:

> There wasn't any question about what was happening. The abortions were going wrong. The babies weren't cooperating. They wouldn't die as planned. Or, as Illinois state senator Barack Obama so touchingly put it, **there was "movement or some indication that, in fact, they're not just coming out limp and dead."**
>
> No, Senator. They wouldn't go along with the program. They wouldn't just come out limp and dead.
>
> They were coming out alive. Born alive. Babies. Vulnerable human beings Obama, in his detached pomposity,

> might otherwise include among "the least of my brothers." But of course, an abortion extremist can't very well be invoking Saint Matthew, can he? So, for Obama, the shunning of these least of our brothers and sisters – millions of them – is somehow not among America's greatest moral failings.
>
> But not Barack Obama. As an Illinois state senator, he voted to permit infanticide. And now, running for president, he banks on media adulation to insulate him from his past.
>
> The record, however, doesn't lie.
>
> Infanticide is a bracing word. But in this context, it's the only word that fits. Obama heard the testimony of a nurse, Jill Stanek. She recounted how she'd spent 45 minutes holding a living baby left to die.

And let's review Obama's position on partial-birth abortion:

> Obama's 2008 endorsement of late-term abortion bans also appeared to be in conflict with his support for the Freedom of Choice Act. In 2007, Obama cosponsored the Freedom of Choice Act (FOCA), which would strike down restrictions on abortion at the state and federal level. The bill stated that all abortions must be legal before "viability" for any reason and that abortions must be legal until birth if a woman's health is at risk. FOCA does not contain a definition of "health," therefore "anything an abortionist says is related to 'health' is sufficient," according to Douglas Johnson, legislative director of the National Right to Life Committee. "A state would not be able to adopt any limiting definition (for example, defining 'health' to exclude emotional distress), because that would be to narrow and infringe on the federally guaranteed right which FOCA would establish. The entire purpose of FOCA is to prohibit any narrowing of the federally guaranteed right — for example, by requiring parental notification, or by refusing to fund abortions."

Could it be that the reason that the media is not reporting on this story is because they are trying to protect the President?

# Married gay couple face charges of raping their adopted children

**Wintery Knight** · 13 April 2013 · Archived copy · Original

The NY Daily News reports on the case, and links to CBS News and the Hartford Courant. (H/T Robert Stacy McCain)

Excerpt:

> The case of a same-sex Connecticut couple accused of repeatedly raping and abusing two of their nine adopted boys is headed for trial.
>
> Married couple George Harasz and Douglas Wirth of Glastonbury were supposed to be sentenced Friday in Hartford Superior Court under a plea deal, but instead withdrew from their agreement with prosecutors. The men had already pleaded no contest in January to one felony count each of risk of injury to a minor — a reduction from even more serious charges related to sexual assault.
>
> […]Harasz and Wirth adopted nine children — three sets of male siblings — beginning in 2000, and ran a home-based dog breeding business called The Puppy Guy.
>
> The couple was arrested in November 2011 following a police and state investigation of sex-abuse allegations. The children were removed from the home.
>
> Police said two boys, ages 5 and 15, accused Harasz of sexually assaulting them. Harasz was initially facing first-degree sexual assault and other charges, while Wirth had been charged with third-degree sexual assault of the 15-year-old boy.
>
> Their arrest warrants claimed the couple not only sexually and physically abused the children, but also forced them to sleep in closets.
>
> […]One of the victims who spoke during the court hearing said sexual assault began when he was 6.
>
> "They took turns raping me over and over," he said.

Now, a lot of these rape accusations turn out to be false, so we don't really know if anyone is guilty until the trial concludes. But I've posted before about other trials that did conclude, so that you know that these things are in fact happening. In fact this case is very similar to the case where the Duke University official was offering his 5-year-old adopted son for sex on the Internet.

# Why would a good God allow people to suffer?

**Wintery Knight** · 13 April 2013 · Archived copy · Original

I just wanted to draw your attention to this 4 page essay by Joe Manzari, which is the best darn summary of the state of the art on the problems of evil and suffering I have seen. The problem of evil is an objection to the existence of God based on the presence of evil or suffering in the world. The arguments basically infer that if God is all-good and all-powerful, then there should not *be* any evil or suffering.

There are two kinds of problem of evil.

**The Logical/Deductive Problem of Evil:**

The first kind is called "the deductive problem of evil" or "the logical problem of evil". An example of evil would be Saddam Hussein murdering some journalist who told the truth about him. This version of the problem of evil tries to introduce a logical contradiction between the attributes of God and the presence of evil, like this:

(1) God exists.
(2) God is omnipotent.
(3) God is omniscient.
(4) God is omni-benevolent.
(5) Evil exists.
(6) A good being always eliminates evil as far as it can.
(7) There are no limits to what an omnipotent being can do.

In order to avoid a contradiction, we need to explain how there could still be evil, since the conclusion of this argument is that there should not be any evil!So how are we going to get out of this mess? The solution is to attack premises 6 and 7.

Premise 6 is false because in order to eliminate human evil, you would have to eliminate free will. But eliminating free will is worse than allowing it, because good things like love are impossible without free will.

> It is in response to this proposition that the Free Will Theodicy of G. W. Leibniz applies. God, valuing man's freedom, decided to provide him with a will that was free to choose good over evil, rather than constraining his will, allowing him to choose only good.

Premise 7 is false because there *are* limits on what an omnipotent being can do. God *cannot* perform contradictory things, because contradictory things are impossible. God cannot make a married bachelor. Similarly, God cannot force free creatures to do his will.

> In the same manner that God cannot create a square circle, he cannot make someone freely choose to do something. Thus, if God grants people genuine freedom, then it is impossible for him to determine what they will do. All that God can do is create the circumstances in which a person can make free choices and then stand back and let them make the choices.

One last point. In order to solve the problem of natural evil for this argument, you can point out that free will requires predictable and regular natural laws in order to make free will meaningful. Natural laws mean that individuals can predict what will happen when they act, allowing for moral responsibility. More on that next time.

**Inductive/Probabilistic Problem of Evil**

There is a second version of the problem of evil, though, which is more dangerous than the first. This is the one you see being argued in debates, whereas the first version is not used because it has been defused as seen above. Here is the second one:

(1) If God exists, gratuitous evil does not exist.
(2) Gratuitous evil exists.
(3) Therefore, God does not exist.

This argument tries to argue that while God may have some reason for allowing free will, there are other evils in the world that are not the result of human action that God has *no reason* for permitting. Theists usually like to argue that God has morally-sufficient reasons for allowing some evil in the world, in order for the character of humans to develop through suffering and endurance. But what about gratuitous evil, which doesn't have any point?

Consider the case of a fawn running in the forest, who falls and breaks his leg. Ouch! Then a forest fire starts and the poor fawn suffocates to death in the smoke. Why would God allow this poor small animal suffer like that? And notice that there is no morally sufficient reason for allowing it, because no human knows about this and so no human's character or relationship with God is impacted by it.

The solution to this problem is to deny premise 2. (You can also deny 1 if you want). The problem with premise 2 is that the atheist is claiming to know that some instance of evil really is gratuitous. But since they are making the claim *to know*, they have to be able *to show* that God's permission of that evil achieves nothing. But how do they know 2 is true?

The problem with 2 is that the atheist is not in a position to know that the permission of some evil X really doesn't achieve anything. This is because the atheist cannot look forward into the future, or see into other places, in order to know for certain that there is no morally sufficient reason for allowing God's allowing evil X to occur. But since the atheist argues based on premise 2, he must be able to show that premise 2 is more probable than not.

Manzari's article also argues why apparently gratuitous evil is less problematic for Christians in particular, because of certain Christian doctrines. He lists four doctrines that make the apparently gratuitous evil that we observe more compatible with an all-good, all-powerful God.

1. The chief purpose of life is not happiness, but the knowledge of God.
   Some of the things that we experience may wreck our feelings of contentment, but we need to remember that God may be permitting those troubles in order to remind us not to get too comfortable with life on earth, and to think ahead to the after-life. And remember, even Jesus learned endurance through suffering. His suffering was not pointless and neither is ours.
2. Mankind is in a state of rebellion against God and God's purposes.
   We humans seem to be on a dead run away from God, trying to keep our autonomy by knowing as little about him as possible. Part of knowing God is knowing what he designed us to do – to love him and to love others. And so, the less we know about God, the more we stray from his design for our lives.
3. God's purpose is not restricted to this life but spills over beyond the grave into eternity.
   Sometimes it seems as if our sufferings really are catastrophic, but when you realize that you are offered eternal life without any suffering after you die, the sufferings of this life are a lot less upsetting than they would be if this life was all we had.
4. The knowledge of God is an incommensurable good.
   This one is the biggest for me. Knowing God and knowing his actual character by studying the historical Jesus is a wonderful counterbalance for all the problems and sufferings of this life. A little bit of historical study reveals that Jesus was not spared the worst kind of suffering in his life, making it is a lot easier for us to bear with whatever God allows us to face.

In section 3, Manzari shows how you can also argue against this version of the problem by supplying evidence for God, such as from the big bang, the fine-tuning, the origin of life, the origin of free will, the origin of the first living organism, the origin of the mind, the sudden emergence of phyla in the fossil record, molecular machines, irreducible complexity, the resurrection miracle, and the objective morality argument.

The argument goes like this:

(1) If God exists, gratuitous evil does not exist.
(2) God exists.
(3) Therefore, gratuitous evil does not exist.

Just support 2 with some evidence, and you win, especially when they can't support their claim to know that gratuitous evil exists.

**The Argument for God from Evil**

In the paper, Manzari actually makes an argument for God from evil. That's right. Far from disproving God, the presence of evil (a departure from the way things out to be), actually affirms God's existence. How?

(1) If God does not exist, then objective moral values do not exist.
(2) Evil exists.
(3) Therefore, objective moral values do exist.
(4) Therefore, God exists.

That's right. If evil exists in any sense such that it is not a personal or cultural preference, then objective morality exists. If objective morality exists, then there is an objective moral lawgiver. Game over. If the atheist backtracks and says that the existence of evil is just his opinion or his cultural preference, then this standard does not apply to God, and you win again. Game over again. More on this argument for God's existence *from evil* here.

So, although the problems of evil look pretty tough, they are actually easy. The toughest part of evil and suffering is the emotional problem. I could tell you stories about what I've been through… but then, that's why the arguments matter. You can hold your position under tremendous fire when you have the arguments and evidence to ground you.

For more on the problem of evil, listen to this lecture by Douglas Geivett, professor of philosophy at Biola University. Then you *must listen* to this debate between William Lane Craig and Walter Sinnott-Armstrong (with summary by me). Another debate transcript is here, with William Lane Craig and Kai Nielsen. Here's a book debate between William Lane Craig and Walter Sinnott-Armstrong, published by Oxford University Press, 2004.

# William Lane Craig: churches should focus on apologetics to attract more men

**Wintery Knight** · 14 April 2013 · Archived copy · Original

I saw that Triablogue quoted this passage from William Lane Craig's April newsletter, which made me very excited and happy.

Here it is:

> One overwhelming impression of these engagements is the way in which the intellectual defense of Christian faith attracts men. Both at Texas A&M and again at Miami every single student who got up to ask a question was a guy! I wondered if the girls are just shy. But then I remembered a lengthy clip Jan and I watched of cast members of Downton Abbey doing a Q&A with an audience in New York. Almost every person who came to the microphone at that event was a woman! It wasn't until late into the evening that a man finally asked a question, which was remarked by all the cast members. Why the difference between that session and the ones I experienced?—simply because the Downton Abbey program is highly relational, which is more appealing to women, whereas my talks were principally intellectually oriented, which is more appealing to men.
>
> Churches have difficulty attracting men, and the church is becoming increasingly feminized. I believe that apologetics is a key to attracting large numbers of men (as well as women) to church and to Christ. By presenting rational arguments and historical evidences for the truth of the Gospel, by appealing to the mind as well as the heart, we can bring a great influx of men into the Kingdom. I'm so pleased that the church in Canada seems to be awakening to this challenge! I'm convinced that we have the opportunity to revolutionize Western Christianity by reclaiming our intellectual heritage.

I could tell you many, many stories of what it was like for me being shut down by churches who were overly sensitive to the desires of women. In college, I and the other male students had *every attempt* to bring in scholars to lecture or debate *shut down* by female leadership. Every single week it was prayer walks, testimonies, hymn sings… over and over. Eventually, the more manly Christians just quit going. Later on, I witnessed apologetics being shut down in the church from the top down and from the bottom up, as well.

I remember one week an excited male friend invited me to his church because his male pastor was giving sermons using Hugh Ross and Gerald Shroeder books. He was trying to tie in the existence of God to cosmology. Well, I showed up the next Sunday to hear, and was disappointed. I could tell that the pastor wanted to go back to that subject, but he never really did. Later on, we found out that a female parishioner had complained that too much science and evidence had ruined her experience of feeling good and being comforted.

I could go on and on and on telling stories like this. To this day, I cannot stand being in a church unless that church has organized things like apologetic training classes, public lectures, public debates or public conferences. But that's the minority of churches. The fact is that churches are attended far more by women than by men, and pastors are catering to women more than men. Not only will apologetics not be mentioned, but elements of feminism will creep into doctrine (egalitarianism) and all political issues will be avoided. Church has become a place to have good feelings, and it is far divorced from anything like evidence or politics which might be viewed as judgmental and divisive.

On Saturday night, ECM (a male deist) and I were talking about the Gosnell scandal, and he was asking me why churches don't mention things like this. And I told him that the feminization of the church means that Christianity can only be cashed out in subjective terms. I told him about the church-attending women I know who are 100% Democrat because it's more "tolerant". And I told him about my difficulties getting the church and campus groups to take up apologetics. Is it any wonder that non-Christian men view Christianity as weak, because we can't even talk about politics and current events in church?

Commenters on Triablogue think that Dr. Craig will draw flak for his comment, but he's not going to draw flak from mature Christians. What he said is correct. Mature Christians are right behind him on this point. Christian men who have tried to act to defend God's reputation in public know that there is something wrong in the churches. And eventually, men just tune out of church because we know that there is nothing there for us. If women want men to come back to church, then they have to change the church away from what it is now.

UPDATE: Lydia read this post and reminded me that pre-suppositionalism is very popular with men and is a kind of fideist approach to Christianity that's nowhere found in the Bible. I totally forgot to mention that. Presuppositionalism, in my experience, is very popular with men. I take a strong view on it, that it's basically fideism, but I have been disagreed with on that by many people. In my mind, the only right way to do apologetics is by addressing presuppositions like naturalism, universalism, pluralism, etc. and using scientific and historical evidence as well. So there is an area where men are working against effective apologetics by embracing an unBiblical approach to apologetics that tries to minimize the use of evidence.

# Christian men, be selective when giving attention to women

**Wintery Knight** · 14 April 2013 · Archived copy · Original

Here is a thought-provoking post from agnostic libertarian economist Captain Capitalism.

Excerpt:

> Of the many lies men will be told from the ages of 12 to…umm….death, one of the more misleading ones (that can trip you up for years unless you learn the deceit behind it) is,
>
> "I don't do X for you! I do it for myself!"
>
> "X" being
>
> dressing up
> make up
> working out
> lingerie
> etc. etc.
>
> […][T]he reason this lie is so tricky is because when a woman says this, it is a half-truth.
>
> While she is NOT dressing up for you, she IS dressing up for somebody else. And that somebody else certainly is NOT her (at least in a direct sense).
>
> Again, we revisit the realm where economics and sexuality meet. Women are (primarily) driven by attention. Attention from who? Attention from anybody.
>
> Oh, go ahead and threaten me with your Adria Richard's hallow threats, I'm sorry dearies, I have nothing left to lose. Besides, this is a fact and is truth. And if you don't like that…well, then maybe you really don't like being treated as an equal and perhaps like every other guy I could continue lying to your face to spare your precious little feelings. But I'm sorry, I'm not a sexist. I believe in the equality of the sexes so you'll APPRECIATE me treating you as a GENUINE equal and never daring to lie to you as that would be degrading.
>
> Anyway, women crave attention. And the primary way (before social media) they can get that is by simply dressing the part. This is why in large part you can be at a bar/club, see a group of girls LITERALLY dressed as ladies of the evening, approach them and get your butt shot down. They REALLY weren't dressing that way for you, just as they technically weren't dressing that way for themselves. They were merely dressing that way to get your attention and the attention of others. And should a supreme specimen of man (professional athlete, celebrity, obvious rich man) approach them, that is also why they dressed that way or went to the gym.
>
> In other words, don't be a fool on either end of this half-lie, half truth. She really isn't doing it for you. And, yes, in a roundabout way she is doing it for herself. But she is ultimately doing it to garner the attention of other people, both men and women.

So this caused me to think a little, because it echoes what Dina explained to me just a few months back, and Mariangela verified it as well. (My knowledge of women is mostly theoretical, so some of these obvious things have escaped me). Anyway, they basically agreed with the Captain's assessment, that many of the things that women do are to get attention. This is fine. The point of this post is not to pick on women, but to warn men. And so here's the warning for Christian men.

Christian Men: Like everything in life, God asserts sovereignty over your choices with women. One of those choices is who you pay attention to, and why. Whenever you pay attention to a woman, you are in some way validating her choices, beliefs and lifestyle. Therefore, you need to be careful to choose women who deserve attention for the right reasons. You need to pass on women who show a lot of skin to people they hardly know. You

need to pass on women who are known to use sex to get attention from men easily, without having to listen to his values. You need to pass on women who won't read things that men care about, like apologetics, economics, etc.

Whenever I get distracted by a woman who is trying to get attention from me without wanting to listen or be led by me, I ask myself questions about her and her motives.

I ask:

- Has this women ever borrowed a lecture or a debate form me?
- Has this woman ever read a book that I asked her to read?
- Does this woman let me talk if I bring up religion or politics?
- Is this woman pro-life, and pro-marriage?
- Is this woman grieved by big government socialism?
- Is this woman pro-child, and anti-feminism?

And so on. Now if you are a woman reading this, you might think "why do you have to do that? Obviously they haven't, so why pay attention to them? I've done all that good stuff, so pay attention to me!". But it's not that simple for a man, not even a virgin like me. About 99% of the time, I don't have to go through this process. But there are some days…. you could call it my time of the month… where suddenly blubbering out how great this woman looks to her seems *rational*. And I don't want to do that. I would rather get on my e-mail or Facebook and encourage a Christian woman who is actually doing the right things. I don't want to be encouraging other women who are trying to cheat their way to attention without letting me express my faith, talk about politics, and so on. If I can't lead you to learn about God so that you can serve God, then you shouldn't get attention from me. One of the most helpful things I ever learned was from a young lady who had a sexual past, who flat out told me that she used sex in order to pacify and control men so that they would continue to give her attention no matter how much of a witch she was to them. That helped me to understand why I have to be selective with who I am going to endorse with my attention.

I think that men need to recognize that just as women who embrace feminism are responsible for wrecking men with all of this hooking-up, high tax rates, gun control, no-fault divorce, etc., that men are wrecking women by rewarding them with attention for the wrong reasons. If you want to fix women, the easiest thing to start with is to favor the good ones – the ones who listen to you, the ones who study hard things, the ones who want to serve God. Avert your eyes from the flirty ones. Don't talk to them. Consciously prefer the best, most moral, most hard-working, women. That's going to communicate the right message to women, and give them an incentive to value the right feminine qualities.

Christian men, if you are single, why not just take a minute now to go to the book store and buy a good apologetics or economics book and some white flowers for the Christian woman you know who does the most good for God? That would be a start. I recommend "Is God Just a Human Invention?" and three white carnations, some baby's breath and some greenery. They are not too expensive and they last a long time. If you get her that book, tell her about Brian Auten's read-along, which just started again. We all have to do the best we can to fix male-female relations. Women, and men. The solution to the problem of women being bad is not for men to be bad, too. It's for men to be selective.

# Support for my view of courting from... Jane Austen?!!

**Wintery Knight** · 14 April 2013 · Archived copy · Original

I get into a lot of trouble because I have this loooong list of questions that I pose to women during courtship in order to evaluate them for marriage, and to let them know how I want them to prepare for my plan for the marriage.  Basically, my view of courting is that it is the time for the man to present his plan to serve God as a married couple, and where he wants to be effective, and how he wants to be effective, and where the woman fits into to his plan. The purpose of the pre-marriage courting is for me to explain all of this, and then the woman has the opportunity to first decide if she wants to help with that plan and then demonstrate that she can help with it. My job after laying out the plan is to make sure that she has all the tools she needs and lots of affection and tenderness, too. I am auditioning for the roles of protector, provider and moral/spiritual leader. And she is auditioning for the roles of helper, motivator and nurturer.

Anyway, all of that is evil, if you ask any non-Christians and Christians today. The ladies in my workplace are always telling me that I am "too strict" and that I need to "lower my standards". What they mean by this is that they resent me taking on the role of leader in the relationship and telling them what marriage to me will be about and what they need to be able to do to help. And they especially resent having to prove that they can do it. Men they've known in the past have been pacified with some earnest words of agreement, and maybe some hugs and kisses. But that doesn't work on me. I want books to be read, and actions to be performed.

For example, I want public speeches defending marriage, presentations on abortion in church, apologetics book clubs, apologetics conference organizing, apologetics lectures and debates in the local university, economics degrees, law school degrees, and pro-family conservative political views. (These are all the things my current favorite lady and her predecessors have done / are doing). In short, if I am coming to the table with lots of evidence that I can do my roles, then I want to see evidence that she  can do her roles. I call this view of courtship the wisdom view, and the popular alternative to it I call the fairy tale view.

The funniest thing is that right now I am working together with a woman who is very very high up in her profession. Manages dozens of people, has her own receptionist, wins lots of awards. Her job is incredibly stressful. But the funniest thing is that she is actually the easiest one of all to lead. And that's because she is a good listener and she reads a ton of books and then independently designs and executes operations designed to move the ball forward on the things that I care about. She thinks my vision for serving God is good, and she knows how to get the job done, without being micromanaged. Here is a close-up of some flowers that I sent her recently to recognize her. She is also the least attention seeking female of the ones I know. She doesn't want public recognition for what she does.

And with that said, let's take a look at a quote about my favorite British author, Jane Austen, courtesy of Reformed Seth's blog:

> [Austen] was committed to the ideal of "intelligent love," according to which the deepest and truest relationship that can exist between human beings is **pedagogic**. This relationship consists in the giving and receiving of knowledge about right conduct, in the formation of one person's character by another, the acceptance of another's guidance in one's growth. The idea of a love based in pedagogy may seem quaint to some modern readers and repellent to others, but unquestionably it plays a decisive part in the power and charm of Jane Austen's art. And if we attempt to explain the power and charm that the genre of the novel exercised in the nineteenth century, we must take full account of its pedagogic intention and of such love as a reader might feel was being directed towards him in the solicitude of the novel for *his* moral well-being, in its concern for the right course of his development.
>
> – Lionel Trilling, *Sincerity and Authenticity* (Cambridge, MA: Harvard University Press, 1971), 82.

There! I'm vindicated by someone who ought to know how these things work. When I was a young man, I read everything I could get my hands on from Jane Austen and the Bronte sisters. It's nice to know that I wasn't misinterpreting what they were telling me, and that I've applied it well. Just because it's not "cool" today, doesn't mean it's not right.

# New NOAA report: 2012 summer drought NOT caused by global warming

**Wintery Knight** · 15 April 2013 · Archived copy · Original

From the leftist Washington Post.

Excerpt:

> Last year's huge drought was a freak of nature that wasn't caused by man-made global warming, a new federal science study finds.
>
> Scientists say the lack of moisture usually pushed up from the Gulf of Mexico was the main reason for the drought in the nation's midsection.
>
> Thursday's report by dozens of scientists from five different federal agencies looked into why forecasters didn't see the drought coming. The researchers concluded that it was so unusual and unpredictable that it couldn't have been forecast.
>
> "This is one of those events that comes along once every couple hundreds of years," said lead author Martin Hoerling, a research meteorologist at the National Oceanic and Atmospheric Administration. "Climate change was not a significant part, if any, of the event."
>
> […]Other scientists have linked recent changes in the jet stream to shrinking Arctic sea ice, but Hoerling and study co-author Richard Seager of Columbia University said those global warming connections are not valid.
>
> Hoerling used computer simulations to see if he could replicate the drought using man-made global warming conditions. He couldn't. So that means it was a random event, he said.

I have an idea. Let's not give away millions of dollars in taxpayer money to crony corporations to solve a problem that doesn't even exist. And let's not tax, regulate or otherwise block energy development here at home. We need the jobs here.

# William Lane Craig asks: are there objective truths about God?

**Wintery Knight** · 15 April 2013 · Archived copy · Original

In a lecture entitled "Are there Objective Truths About God?", philosopher William Lane Craig responds to the nasty reactions you get from postmoderns when you claim that your religion is true, and that other religions are false. See, we think that there are objective truths about God – that there are some propositions that describe the way God is, and that people who don't believe in them are factually mistaken. But some people want to say that every statement about God is subjective – true for each person – so that conflicting claims are fine and no one is wrong, because everyone is just describing their own preferences. Unfortunately, Christianity claims to be true for everyone – (e.g. – God is three persons and one being), so that Christians are committed to defending the idea that there are objective truths about God.

Here's the link to a page containing the lecture audio. (H/T Be Thinking)

The MP3 file is here.

So what questions does Bill answer in the lecture?

**What is a self-refuting statement?**

The main concept in the lecture is self-refutation. A self-refuting sentence is a sentence that, if true, makes itself false or meaningless. For example, suppose someone said to you: "there are no sentences longer than 5 words" then that would be self-refuting since it falsifies itself. Bill argues that objections to the idea that there are objective truths about God are all self-refuting.

**What is truth?**

Craig holds that "truth" is a property of a proposition such that a proposition is true if it corresponds to the external world. For example, if I claim that there is a crocodile in your closet and we find a crocodile in your closet, then my statement was true. If there is no crocodile in your closet then my statement was false. The real objective world out there is what makes propositional claims true or false – these are not claims about an individual's preferences, they are claims about the world. Bill is concerned with truth claims about God that are objective – whether there are propositions about God that are true regardless of what anyone thinks.

**Are there objective truths about God?**

Bill discusses 3 objections to the idea that there are objective truths about God. Each objection seeks to make religion subjective, (true for each person, like food preferences or clothing fashion).

Objection #1:The Challenge of Verificationism

The first challenge is that religious claims cannot be verified using the 5 senses, and therefore religious statements are objectively meaningless.

Consider the statement "Only propositions that can be verified with the 5 senses are meaningful". That statement cannot be verified with the 5 senses. If the statement is true, it makes itself meaningless. It's self-refuting.

Objection #2: The Challenge of Mystical Anti-Realism

The second challenge is that religious claims, and claims about God, are neither true nor false.

Consider the statement "Propositions about God cannot be true or false". Craig asks – why should we accept that? Any reason given would have to assert something about God that is true or false, and those reasons would contradict the original statement. For example, "God is too great to be grasped by human categories of thought" is a proposition about God that the speaker thinks is true, which contradicts the original assertion.

Objection #3: The Challenge of Radical Pluralism

The third challenge is that each person invents an entire reality of their own, and that there is no mind-independent objective world shared by individuals.

Consider the statement "There is no objective reality shared by all individuals". That statement is a statement that applies to all individuals, regardless of what they think. It's self-refuting.

**Conclusion**

Craig ends the lecture by arguing that it is OK for Christians to think that other people's views are false. It does not follow that just because someone thinks other people's views are wrong that they am going to mistreat other people. In fact, in Christianity it is objectively true that it is good for Christians to love their enemies. It is objectively true that all human beings have value, because human beings are made by God. So even if Christians disagree with others, they still treat them well, because they think that there are moral truths that they have to conform to.

**My thoughts**

Sometimes, non-Christians think that it is dangerous to hold beliefs too strongly. But I think what really matters is the content of the belief – some beliefs are false and some are true – you want to believe the true beliefs as strongly as you can, as long as the evidence warrants it. In Christianity, I am absolutely obligated to treat people with whom I disagree with respect and gentleness (1 Pet 3:15-16). The more convinced I am about *that* belief, the *better* my opponents will be treated. A *stronger* belief in Christianity means *more* tolerance for those who disagree.

Why do non-Christians get so offended when Christians claim to be right about there being only one way to be rightly related to God? Well, for many it's because their worldview is a personal preference, and they feel uncomfortable having to defend it rationally and evidentially – which is what Christians do that makes us so different from everyone else. For most people, religion is just their cultural preference – like cooking style, or favorite sport, or clothing style. That's why they respond to your truth claims with name-calling like "you're intolerant" and "you're judgemental" and "you're arrogant". These are just shorthand ways of saying, "I'm offended that you've thought things through more than I have, and that your careful arguments and evidence make the blind faith that I was raised in look bad – so I'll just call you a name rather than do any thinking about what you're saying".

This happens a lot with insecure people who are raised to think that their religion is a racial, national or cultural identity. They haven't thought anything through, or considered any alternatives, and they think that if you tell them they are wrong *on matters of fact* that somehow this amounts to some sort of racism or prejudice. You make factual claims, and they hear discrimination. But that's not how Christians think of religion – we only care if it's true or not – just like we care whether the claims of history or science are true or not. For many non-Christians, religion is not about truth at all but about personal preferences – and they cannot understand why Christians say that they have to go to Hell for having the wrong personal preferences. You have to *tell them* that religion is about truth. Then they understand why you are disagreeing with them and you can have a conversation about what is true.

**For further study**

A debate between a Christian and a postmodern, featuring Christian scholar Peter Williams and a very strange liberal person. This audio really makes it clear why people are opposed to objective truth claims about religion. Williams' opponent is the epitome of postmodern relativist irrational universalism.

# Brian Auten interviews Dr. Angus Menuge on philosophy of mind

**Wintery Knight** · 15 April 2013 · Archived copy · Original

Click here for the interview. It's up at Apologetics 315!

Details:

> Today's interview is with Dr. Angus Menuge, Professor of Philosophy at Concordia University, and author of *Agents Under Fire: Materialism and the Rationality of Science*. He talks about his background and work, the philosophy of mind, what reason (or reasoning) is, what materialism is as a worldview, things excluded from a materialistic worldview, methodological naturalism and materialism, accounting for free will, materialistic accounts of reason, the epistemological argument from reason, the ontological argument from reason, finding the best explanation for reason, problems with methodological naturalism, implications of materialism, practical application of the argument from reason, advice for apologists, the International Academy of Apologetics, and more.

If what Dr. Menuge says in this interview is true, and I think it is, then a person who believes in materialism can neither ground free will nor rationality! So atheism wouldn't really be freethought so much as it would be… un-free… non-thought.

In case people don't want to listen to the podcast, then I've got some things for you to read below.

**The ontological argument from reason**

Dr. Menuge presented a paper at the real Evangelical Philosophical Society conference for students and professors of philosophy, and you can download the paper here in Word format. (here's a PDF version I made)

Here is the introduction to the paper that Dr. Menuge read at the EPS conference:

> The argument from reason is really a family of arguments to show that reasoning is incompatible with naturalism. Here, naturalism is understood as the idea that foundationally, there are only physical objects, properties and relations, and anything else reduces to, supervenes on, or emerges from that. For our purposes, one of the most important claims of naturalism is that all causation is passive, automatic, event causation (an earthquake automatically causes a tidal wave; the tidal wave responds passively): there are no agent causes, where something does not happen automatically but only because the agent exerts his active power by choosing to do it. The most famous version of the argument from reason is *epistemological*: if naturalism were true, we could not be justified in believing it. Today, I want to focus on the *ontological* argument from reason, which asserts that there cannot be reasoning in a naturalistic world, because reasoning requires libertarian free will, and this in turn requires a unified, enduring self with active power.
>
> The two most promising ways out of this argument are: (1) Compatibilism—even in a deterministic, naturalistic world, humans are capable of free acts of reason if their minds are responsive to rational causes; (2) Libertarian Naturalism—a self with libertarian free will emerges from the brain. I argue that neither of these moves works, and so, unless someone has a better idea, the ontological argument from reason stands.

The paper is 11 pages long, and it is helpful for those of you looking for some good discussion of one of the issues in the area of philosophy of mind.

You may also be interested in Alvin Plantinga's epistemological argument from reason, which is related to this argument. It shows that even to have the ability to think, you have to have a certain anthropology and you have to have mental faculties that are designed for reason, not survival.

**Methodological naturalism**

Dr. Menuge also wrote an article entitled "Is methodological materialism good for science?".

Intro:

> Should science by governed by methodological materialism? That is, should scientists assume that only undirected causes can figure in their theories and explanations? If the answer to these questions is yes, then there can be no such thing as teleological science or intelligent design. But is methodological materialism a defensible approach to science, or might it prevent scientists from discovering important truths about the natural world? In my contribution to The Waning of Materialism (Oxford University Press, 2010), edited by Robert Koons and George Bealer, I consider twelve of the most common arguments in favor of methodological materialism and show that none of them is convincing.
>
> Of these arguments, perhaps the most prevalent is the "God of the gaps" charge, according to which invoking something other than a material cause is an argument from ignorance which, like a bad script writer, cites a *deus ex machina* to save our account from difficulty. Not only materialists, but also many Christian thinkers, like Francis Collins, worry that appeal to intelligent design commits the God of the gaps fallacy.
>
> As I argue, however, not only is an inference to an intelligent cause not the same as an inference to the supernatural, it is a mistake to assume that all gap arguments are bad, or that only theists make them. If a gap argument is based solely on ignorance of what might explain some phenomenon, then indeed it is a bad argument. But there are many good gap arguments which are made both by scientific materialists and proponents of intelligent design.

So how do you make an argument like that?

> As Stephen Meyer has argued in his *Signature in the Cell*, intelligent design argues in just the same way, claiming not merely that the material categories of chance and necessity (singly or in combination) are unable to explain the complex specified information in DNA, but also that in our experience, intelligent agents are the only known causes of such information. The argument is based on what we know about causal powers, not on what we do not know about them.
>
> Since the inference is based on known causal powers, we learn that the cause is intelligent, but only further assumptions or data can tell us whether that intelligence is immanent in nature or supernatural. It is a serious mistake to confuse intelligent design with theistic science, and the argument that since some proponents of design believe that the designer is God, that is what they are claiming can be inferred from the data, is a sophomoric intensional fallacy.

If you think this is interesting, then do have a listen to the podcast. Dr. Menuge is not an ordinary academic – he is very direct. He calls materialism "a catastrophe" in the podcast! Not a shrinking violet.

# Pro-infanticide Barack Obama has no comment on Kermit Gosnell trial

**Wintery Knight** · 16 April 2013 · Archived copy · Original

Life News reports.

Excerpt:

> White House spokesman Jay Carney today said President Barack Obama has no comment on the murder trial involving late-term abortion practitioner Kermit Gosnell.
>
> A reporter asked: "There is a murder trial in Pennsylvania, that I know you now is getting a lot of attention — more attention that the media was not getting on it — Kermit Gosnell, this doctor who is accused of having delivering some babies who were literally screaming and then beheading them. He's facing murder charges on that and it hasn't been decided yet obviously, since he's still on trial. Is the president following this at all, does the White House have any reaction to that kind of situation?
>
> "The president is aware of it. The president does not and cannot take a position on an ongoing trial, so I won't as well," Carney said.

Life Site News has an idea about why Obama isn't going to take sides like he did with the Trayvon Martin case.

Excerpt:

> Of course the White House wants to avoid this topic. What a disaster Gosnell is for Obama.
>
> Gosnell first brings to Obama's door the uncomfortable topic of infanticide. Obama is well known to have voted four times against the **Illinois Born Alive Infants Protection Act**as state senator, which sought to protect abortion survivors.
>
> But Obama also opposed two companion bills to BAIPA, one of which brings him zero degrees of separation from Gosnell.

If convicted, we'll know that Gosnell was only acting out what Obama believes. And that's why the media tried to hush this up. They know.

# Report: biofuels raise the cost of gas for little environmental benefit

**Wintery Knight** · 16 April 2013 · Archived copy · Original

From the liberal BBC.

Excerpt:

> A report by Chatham House says the growing reliance on sustainable liquid fuels will also increase food prices.
>
> The author says that biodiesel made from vegetable oil was worse for the climate than fossil fuels.
>
> Under EU law, biofuels are set to make up 5% of the UK's transport fuel from today.
>
> Since 2008, the UK has required fuel suppliers to add a growing proportion of sustainable materials into the petrol and diesel they supply. These biofuels are mainly ethanol distilled from corn and biodiesel made from rapeseed, used cooking oil and tallow.
>
> But research carried out for Chatham House says that reaching the 5% level means that UK motorists will have to pay an extra £460m a year because of the higher cost of fuel at the pump and from filling up more often as biofuels have a lower energy content.
>
> The report say that if the UK is to meet its obligations to EU energy targets the cost to motorists is likely to rise to £1.3bn per annum by 2020.
>
> […]There are also worries that taking EU land out of production to grow rapeseed oil in particular is creating more climate problems than it solves. The more fuel of this type that is put into cars the bigger the deficit created in the edible oils market. This had lead to increased imports of palm oil from Indonesia, often produced on deforested land.
>
> "Once you take into account these indirect effects, biofuels made from vegetable oils actually result worldwide in more emissions than you would get from using diesel in the first place," said Rob Bailey.
>
> "Plus you are asking motorists to pay more for the fuel – it makes no sense, it is a completely irrational strategy."

Meanwhile, closer to home:

> The Obama administration on Monday renewed an interagency agreement that backs the development of biofuels for the aviation industry and reiterated its support for embattled federal renewable fuel targets.
>
> U.S. Agriculture Secretary Tom Vilsack and Transportation Secretary Ray LaHood signed a pact extending a program that has worked with the private sector and rural communities to create an alternative to fossil fuels for aviation.
>
> "We want to re-affirm the importance of this particular industry in this administration," Vilsack told reporters at an industry conference in Washington.
>
> The "Farm to Fly" program aims to support annual production of 1 billion gallons of aviation biofuels by 2018.
>
> The program will focus on evaluating various sources of renewable alternatives to jet fuel, while also developing state and local partnerships with private companies.
>
> Federal support for biofuels has come under increased scrutiny amid complaints from livestock producers and refiners that the federal biofuels mandate has contributed to higher food prices and could threaten gasoline supplies.

This isn't a smart way to improve air quality, and it's not going to help consumers who are already paying a ton of

money for gas.

# Do Christian apologists need to know how to defend chastity and marriage?

**Wintery Knight** · 16 April 2013 · Archived copy · Original

Rod Dreher, not one of my favorite people, writes about it in the American Conservative. (H/T Dalrock)

He writes:

> Though he might not have put it quite that way, the eminent sociologist Philip Rieff would probably have said yes. Rieff's landmark 1966 book *The Triumph Of the Therapeutic* analyzes what he calls the "deconversion" of the West from Christianity. Nearly everyone recognizes that this process has been underway since the Enlightenment, but Rieff showed that it had reached a more advanced stage than most people—least of all Christians—recognized.
>
> Rieff, who died in 2006, was an unbeliever, but he understood that religion is the key to understanding any culture. For Rieff, the essence of any and every culture can be identified by what it forbids. Each imposes a series of moral demands on its members, for the sake of serving communal purposes, and helps them cope with these demands. A culture requires a *cultus*—a sense of sacred order, a cosmology that roots these moral demands within a metaphysical framework.
>
> You don't behave this way and not that way because it's good for you; you do so because this moral vision is encoded in the nature of reality. This is the basis of natural-law theory, which has been at the heart of contemporary secular arguments against same-sex marriage (and which have persuaded no one).
>
> Rieff, writing in the 1960s, identified the sexual revolution—though he did not use that term—as a leading indicator of Christianity's death as a culturally determinative force. In classical Christian culture, he wrote, "the rejection of sexual individualism" was "very near the center of the symbolic that has not held." He meant that renouncing the sexual autonomy and sensuality of pagan culture was at the core of Christian culture—a culture that, crucially, did not merely renounce but redirected the erotic instinct. That the West was rapidly re-paganizing around sensuality and sexual liberation was a powerful sign of Christianity's demise.
>
> […]As philosopher Charles Taylor writes in his magisterial religious and cultural history *A Secular Age*, "The entire ethical stance of moderns supposes and follows on from the death of God (and of course, of the meaningful cosmos)." To be modern is to believe in one's individual desires as the locus of authority and self-definition.
>
> Gradually the West lost the sense that Christianity had much to do with civilizational order, Taylor writes. In the 20th century, casting off restrictive Christian ideals about sexuality became increasingly identified with health. By the 1960s, the conviction that sexual expression was healthy and good—the more of it, the better—and that sexual desire was intrinsic to one's personal identity culminated in the sexual revolution, the animating spirit of which held that freedom and authenticity were to be found not in sexual withholding (the Christian view) but in sexual expression and assertion. That is how the modern American claims his freedom.
>
> To Rieff, ours is a particular kind of "revolutionary epoch" because the revolution cannot by its nature be institutionalized. Because it denies the possibility of communal knowledge of binding truths transcending the individual, the revolution cannot establish a stable social order. As Rieff characterizes it, "The answer to all questions of 'what for' is 'more'."
>
> Our post-Christian culture, then, is an "anti-culture." We are compelled by the logic of modernity and the myth of individual freedom to continue tearing away the last vestiges of the old order, convinced that true happiness and harmony will be ours once all limits have been nullified.
>
> Gay marriage signifies the final triumph of the Sexual Revolution and the dethroning of Christianity because it denies the core concept of Christian anthropology. In classical Christian teaching, the divinely sanctioned

> union of male and female is an icon of the relationship of Christ to His church and ultimately of God to His creation. This is why gay marriage negates Christian cosmology, from which we derive our modern concept of human rights and other fundamental goods of modernity. Whether we can keep them in the post-Christian epoch remains to be seen.
>
> It also remains to be seen whether we can keep Christianity without accepting Christian chastity.

One of the reasons why I write so much about chastity and dating and courting on this blog is to try to convince people that it is necessary to have a rigorous, grounded understanding of the practical execution of chastity and marriage. See, a lot of apologists have tunnel vision. They want to focus on apologetics, especially on philosophy, without talking about sexual morality, politics, current events, and other things that *will affect* whether a person is open to Christianity or not. Like it or not, Christianity has regulations on sexual behavior, and we have to be able and willing to defend those regulations.

I am not opposed to basic Christian apologetics on God's existence and Christ's resurrection, but I recognize that people who are too deeply compromised by unbounded sexual appetites are not going to be open to a genuine Christian re-prioritizing following conversion. I am not saying that we need to stop talking about the problem of evil and the women discovering the empty tomb and the fine-tuning of the cosmological constant. I am saying that we need to add onto all of that good stuff an understanding of public policy and ideology. We need to promote, in the culture, lifestyles and moral rules that are going to make it easier for a person to become a Christian. And that means studying to be persuasive on things like premarital sex, cohabitation, no-fault divorce, same-sex marriage, and so on.

I think a very important thing that Christians need to be able to do is to explain and demonstrate that chastity empowers an individual to love others in a way that is not available to them if they are sexually active with that person before marriage. See the papers below for more.

# In just two years, nine abortion clinics in Michigan have closed

**Wintery Knight** · 17 April 2013 · Archived copy · Original

Good news from Life News.

Excerpt:

> The ninth abortion clinic has closed in the state of Michigan in the last two years — and the sixth abortion business has closed in the state since just seven months ago.
>
> That's the good news the pro-life group Citizens for a Pro-Life Society relayed to LifeNews today in announcing the American Family Planning abortion center, , owned and operated by 73-year-old Korean-born abortion practitioner Noon-Nahm Ann for over 20 years, has permanently closed.
>
> […] "The closing of AFP marks the 6th abortion center to close its doors in Michigan since last September 2012 and the 9th abortion center to close, or be kept from opening in Michigan in the last 18 months! In addition, the retirement of Ann means that 3 major Michigan abortionists have retired this year—namely the notorious Alberto Hodari, as well as Enrique Gerbi."
>
> It may be possible to add a 4th abortionist who appears to have left the abortion practice, Robert Alexander. The group made a call to him four weeks ago and he confirmed that he was no longer doing abortions. At one time Alexander owned four abortion clinics in Michigan but his last clinic was shut down last December 2012 by order of the Muskegon fire marshal due to unsafe and unsanitary conditions.

Michigan is pro-life!

# Feminist lawyer's son falsely charged by university kangaroo court

**Wintery Knight** · 17 April 2013 · Archived copy · Original

From the Wall Street Journal. (H/T Stuart Schneiderman)

It starts like this:

> I am a feminist. I have marched at the barricades, subscribed to Ms. magazine, and knocked on many a door in support of progressive candidates committed to women's rights. Until a month ago, I would have expressed unqualified support for Title IX and for the Violence Against Women Act.
>
> But that was before my son, a senior at a small liberal-arts college in New England, was charged—by an ex-girlfriend—with alleged acts of "nonconsensual sex" that supposedly occurred during the course of their relationship a few years earlier.
>
> What followed was a nightmare—a fall through Alice's looking-glass into a world that I could not possibly have believed existed, least of all behind the ivy-covered walls thought to protect an ostensible dedication to enlightenment and intellectual betterment.
>
> It began with a text of desperation. "CALL ME. URGENT. NOW."
>
> That was how my son informed me that not only had charges been brought against him but that he was ordered to appear to answer these allegations in a matter of days. There was no preliminary inquiry on the part of anyone at the school into these accusations about behavior alleged to have taken place a few years earlier, no consideration of the possibility that jealousy or revenge might be motivating a spurned young ex-lover to lash out. Worst of all, my son would not be afforded a presumption of innocence.
>
> In fact, Title IX, that so-called guarantor of equality between the sexes on college campuses, and as applied by a recent directive from the Department of Education's Office for Civil Rights, has obliterated the presumption of innocence that is so foundational to our traditions of justice. On today's college campuses, neither "beyond a reasonable doubt," nor even the lesser "by clear and convincing evidence" standard of proof is required to establish guilt of sexual misconduct.
>
> These safeguards of due process have, by order of the federal government, been replaced by what is known as "a preponderance of the evidence." What this means, in plain English, is that all my son's accuser needed to establish before a campus tribunal is that the allegations were "more likely than not" to have occurred by a margin of proof that can be as slim as 50.1% to 49.9%.
>
> How does this campus tribunal proceed to evaluate the accusations? Upon what evidence is it able to make a judgment?
>
> The frightening answer is that like the proverbial 800-pound gorilla, the tribunal does pretty much whatever it wants, showing scant regard for fundamental fairness, due process of law, and the well-established rules and procedures that have evolved under the Constitution for citizens' protection. Who knew that American college students are required to surrender the Bill of Rights at the campus gates?
>
> My son was given written notice of the charges against him, in the form of a letter from the campus Title IX officer. But instead of affording him the right to be fully informed, the separately listed allegations were a barrage of vague statements, rendering any defense virtually impossible. The letter lacked even the most basic information about the acts alleged to have happened years before. Nor were the allegations supported by any evidence other than the word of the ex-girlfriend.
>
> The hearing itself was a two-hour ordeal of unabated grilling by the school's committee, during which, my son later reported, he was expressly denied his request to be represented by counsel or even to have an attorney outside the door of the room. The questioning, he said, ran far afield even from the vaguely stated allegations contained in the so-called notice. Questions from the distant past, even about unrelated matters, were flung at

> him with no opportunity for him to give thoughtful answers.
>
> The many pages of written documentation that my son had put together—which were directly on point about his relationship with his accuser during the time period of his alleged wrongful conduct—were dismissed as somehow not relevant. What was relevant, however, according to the committee, was the unsworn testimony of "witnesses" deemed to have observable knowledge about the long-ago relationship between my son and his accuser.
>
> That the recollections of these young people (made under intense peer pressure and with none of the safeguards consistent with fundamental fairness) were relevant—while records of the accuser's email and social media postings were not—made a mockery of the very term. While my son was instructed by the committee not to "discuss this matter" with any potential witnesses, these witnesses against him were not identified to him, nor was he allowed to confront or question either them or his accuser.

This reminds of exactly what Ari wrote about in his novel "Bias Incident".

Dr. Schneiderman adds his comments:

> The process rests on a sad irony. Many years ago feminists decided strong, independent liberated women do not need to be protected by men. Not by their fathers, not by their brothers, not by their husbands.
>
> As a matter of fact, a gentleman who offered a small courteous gestures of respect was routinely denounced by feminists as a gross insult. He was treating a woman as a member of the weaker sex.
>
> If a man opened a door for a woman, he was called a sexist for assuming that the woman could not open the door herself.
>
> The feminist message was clear: modern women can take care of themselves.
>
> Well, not exactly. Since men are predators, prone to abuse and molest strong, independent women, these women need an extra level of protection: they need to have an extra-judicial procedure that can inflict serious punishment on any male who would see fit to ill-treat them.
>
> No one needs to worry that women might abuse the privilege by bringing unfounded charges against certain men. No, it can't happen. Women always tell the truth.
>
> Apparently, the problem of violence against women is so bad that the criminal justice system cannot deal with it. It is so out-of-control that the civil justice system cannot do the job.

That's the real problem: *feminism*.

When you have a group of feminists who set out to destroy the traditional gender roles of men, and who criminalize the traditional virtues of men, then you should NOT be surprised that government has to grow to fill the void. They told women that chastity was out, and chivalry was out. Traditional male roles of protector, provider, and moral/spiritual leader are out. What kind of men do women choose if they want to avoid all of those traditional male virtues? Bad men. And when bad men aren't doing what the feminists want, they resort to big government to coerce and punish them. Every other man looking on to this situation is going to be reinforced not to pursue relationships with women, out of fear that they could be hit with false accusations for upsetting her – even if he hasn't done anything at all!

Eventually, men will just opt out of all contact with women in order to have their freedom to say and do what they feel like. I will look forward to the day when feminists spent the last 40 years of their lives alone in their apartments, talking to their cats. What man in his right mind would want anything to do with these nutcases and their weird ideology?

# William Lane Craig lectures on naturalistic alternatives to the Big Bang

**Wintery Knight** · 17 April 2013 · Archived copy · Original

Here's the lecture, which was given in 2004 at the University of Colorado, Boulder. A very liberal university!

This lecture is suitable for intermediate and advanced Christian apologists.

The description of the video states:

> This is quite simply one of the best lectures William Lane Craig (a philosopher of science) has given. Craig explores the origins of the universe. He argues for a beginning of the universe, while refuting scientific models like the Steady State Theory, the Oscillating Theory, Quantum Vacuum Fluctuation Model, Chaotic Inflationary Theory, Quantum Gravity Theory, String Theory, M-Theory and Cyclic Ekpyrotic Theory.

And here is the description of the lecture from Reasonable Faith:

> A Templeton Foundation lecture at the University of Colorado, Boulder, laying out the case from contemporary cosmology for the beginning of the universe and its theological implications. Includes a lengthy Q & A period which features previous critics and debate opponents of Dr. Craig who were in attendance, including Michael Tooley, Victor Stenger, and Arnold Guminski.

Craig has previously debated Stenger and Tooley previously. And they both asked him questions in the Q&A time of this lecture. Imagine – having laid out your entire case to two people who have debated you before and who know your arguments well. What did they ask Craig, and how did he respond?

This lecture is based on a research paper published in an astrophysics journal, and was delivered to an audience of students and faculty, including atheist physicist Victor Stenger and prominent atheist philosopher Michael Tooley, at the University of Colorado at Boulder.

The whole research paper that the lecture is based on is posted online.

# Chris Sinkinson debates John Hick on exclusivism and pluralism in religion

**Wintery Knight** · 18 April 2013 · Archived copy · Original

Looks like Justin Brierley on the Unbelievable radio show found a pastor with a Ph.D in philosophy, and he can really whip some ass.

The players:

> John Hick is a noted philosopher and theologian who is a proponent of a pluralist view of religion – that there is one light (God) but many lampshades (religious expressions).
>
> Chris Sinkinson is a pastor and Bible tutor who has critiqued Hick's work. He says that pluralism empties Christianity of any content and in its own way disrespects other religions more than his own exclusivist stance.

The MP3 file is here.

Justin does a great job as moderator of this debate. He said what I was thinking of saying a number of times during the debate.

Anyway, here is my snarky summary. I creatively paraphrase some of the things that Hick says to make it more clear. And funny.

—-

Hick:
– had an experience looking at the buildings of other religions
– other religions have buildings, so all religions are equal
– I spent some time in the East, and met nice Eastern people
– since Eastern people are nice that means all religions are equal

Justin:
– isn't Jesus' claim to be the exclusive path to salvation offensive?

Sinkinson:
– all religions that are exclusive and have to deal with religious pluralism
– even John Hick writes polemically in favor of his own view
– even John Hick thinks that religions that are exclusive are false

Justin:
– what about the blind man and the elephant?
– the story seems to say that other people have a partial grasp?
– but the story-teller himself has the privileged view
– so isn't the religious pluralist just as arrogant as exclusivists?

Hick:
– well, it's not arrogant to claim to have the right answer
– Jesus never made the claim to be God incarnate
– Jesus never made the claim to be the exclusive path to God
– historians don't think that John's gospel is reliable because it is late
– the proclamation of exclusivity was added by evangelists much later

Sinkinson:
– the historians who doubt the high Christology are radical skeptics

– the mainstream of historical scholarship accepts a high Christology
– the EARLIEST history about Jesus has the highest Christology

Hick:
– the moderate scholars do think Jesus was divine but that he didn't think he was divine
– the phrase "Son of God" was used to describe any remarkable person
– only later did the early church turn the generic term into "God the Son"

Sinkinson:
– there is reflection on Jesus' identity and developments, but not invention
– Jesus and his followers were in trouble precisely for linking him to deity
– why else would Jesus get into trouble and get crucified?

Hick:
– the Romans crucified him because people were saying he was the Messiah
– but the Messiah was not identified as being divine, but political
– and that's why the Romans crucified him

Justin:
– do you (Sinkinson) think that people in other religions can be saved?

Sinkinson:
– the traditional view is exclusivism
– the other world religions are logically contradictory with Christianity
– you have to respect their differences – they are not the same as Christianity
– exclusivists allow that people can be saved by responding to natural theology
– and there are also other cases where non-Christians are saved, like old testament saints and babies who die in infancy

Hick:
– but people's religions are based on where they are born
– so it's not fair for God to expect people to be saved in one religion only

Sinkinson:
– the plurality of religions grouped by location doesn't make christianity false
– that would be the genetic fallacy – rejecting an idea because of its origin
– the real question to consider is whether it is true
– and even the objection assumes that God is a God of love, who should be fair
– but how do you know that God is loving? that is an exclusive view
– how can the "blob" ultimate of religious pluralism be "loving" and "fair"

Hick:
– the ultimate reality is loving or not loving depending on each person's religion

Sinkinson:
– but some religions and theistic and some are atheistic
– how can those God exist and not exist?

Hick:
– God is beyond everyone's understanding, except mine
– God is beyond all definitions, except mine
– God is beyond all human understanding, except mine
– i'm not contradicting myself, it's a mystery! a mystery!
– as long as you don't look to closely, they're all the same!

– allow me to tell you about God, which no one can do but me

Justin:
– doesn't your religious pluralism mean that Christianity is false?

Hick:
– well, Christianity can't be true, because it disagrees with other religions
– Christianity can't falsify other religions, that would be mean to them
– other religions are just as "profound" as Christianity – and that's what matters – not whether a religion makes true claims
– some religions are older than Christianity, that means they can't be disagreed with
– we can't let Christianity be true, because then some people will feel bad
– if people feel bad, then they don't like me and then I feel bad
– if there's one thing I know about the unknowable ultimate reality, it's that it wants me to be liked by lots of people

Sinkinson:
– your view seems to be agnosticism – that nothing can be known about the "ultimate real"
– if we can't express in words what God is like, then why are you saying what God is like?

Hick:
– the indescribable ultimate is described (falsely, but interestingly) by various tradition

Sinkinson:
– does the "ultimate real" exist?

Hick:
– no

Justin:
– are all the exclusive religions wrong, and only you are right?

Hick:
– all propositions about God in all the religions are false
– the experience of being deluded and having feelings about your delusions is "valid" in all religions
– all religions are equally good ways to believe false things and to have feelings about your false beliefs
– only my propositions about God are true
– everyone who disagrees with me is wrong

Sinkinson:
– so all the propositions of all the religions are wrong
– but all the experiences and feelings are "right"

Hick:
– yes
– all propositions about God are humanly constructed, and so false
– except mine – mine are true!

Sinkinson:
– so everything distinctive about Christianity are literally false?

Hick:
– yes, Christian doctrines are all false
– because if they were true, other religions would be false, and they would feel bad
– and we can't have that, because everyone has to like me
– only things that don't offend people in other religions can be true

Sinkinson:
– so do we have to then treat all religions as non-propositional?

Hick:
– well just don't ask people about the content of their beliefs
– just treat their religion as non-cognitive rituals, feelings and experiences
– don't inquire too deeply into it, because all religions are all nonsense
– i'm very respectful and tolerant of different religions!

Sinkinson:
– but Muslims, for example, think their religion is making truth claims

Hick:
– but there can be tolerance as long as you treat religions as non-propositional nonsense

Sinkinson:
– um, I have a higher respect for religions than you do
– I actually consider that the claims of other religions could be true
– I think that other religions make truth claims and not nonsense claims

Hick:
– well they are all useful because they are all false
– I don't emphasize beliefs, I emphasize living, experiences and feelings
– as long as everyone accepts my view and rejects their religion, we'll all be tolerant

Justin:
– erm, isn't that an exclusive claim?
– you're trying to say that your view of what religion is is right, and everyone else is wrong

Hick:
– I'm not arrogant, I just think that all the religions of the worlds are false
– only my statements about religion are true – everyone else is wrong
– I'm tolerant, and Christians are arrogant

Justin:
– but you think Sinkinson's view is wrong
– why should we accept your view and deny his view?

Hick:
– His view of salvation is false, and mine is true

Sinkinson:
– you use words with set meanings, but you mean completely different things
– when I say salvation, I mean deliverance from sins through Jesus

Hick:
– I get to decide what salvation means for everyone, you intolerant bigot

Sinkinson:
– but that word has a specific meaning that has held true in all of Christian history
– but what you mean by salvation is people having subjective delusions that are not true

Hick:
– I don't like using the word salvation

Sinkinson:
– but you just used it!

– and you think that it is present in different world religions, but it isn't

Hick:
– God is unknowable and indescribable
– God isn't a wrathful God though
– and the Christian description of God is false
– Evangelical Christians are mean
– I had experiences with people of other faiths
– and these experiences taught me that religions that think that the universe is eternal are true
– as long as you reduce religion to behaviors and not truth, then religions are all good at producing behaviors
– if you just treat all religions as clothing fashion and food customs, they are all valid
– the main point of religion is for people to agree on cultural conventions and stick to them
– never mind the propositional statements of religions… who cares about truth? not me!
– but Christianity is definitely false

Sinkinson:
– the Judeo-Christian God is different – he reveals himself to humans
– he is distinct from the other religions
– he is personal, and is loving but also angry at sin

Hick:
– But God isn't a person, and he isn't a non-person
– I can't say what he is – I'll offend someone if I say anything at all!
– except Christians – I can offend them because they are arrogant bigots
– I'm also very spiritual – I meditate on my breathing

Sinkinson:
– you can't assess a religion by the experiences that people have
– people who have weird experiences do all kinds of evil things
– so the real question has to be about truth – is the New Testament reliable?, etc.

# How would redefining marriage affect your marriage?

**Wintery Knight** · 18 April 2013 · Archived copy · Original

An interesting article by Ryan T. Anderson appeared on Ricochet.

First, a bit about the author.

> Ryan T. Anderson researches and writes about justice and moral principles in economic thought, health care and education as the William E. Simon Fellow in Religion and a Free Society at The Heritage Foundation. He also has expertise in bioethics, marriage, religious liberty and natural law theory.
>
> Anderson, who joined Heritage's DeVos Center for Religion and Civil Society in 2012, also is the editor of *Public Discourse*, the online journal of the Witherspoon Institute of Princeton, N.J.
>
> Anderson's recent work focuses on the moral and constitutional questions surrounding same-sex "marriage." He is the co-author with Princeton's Robert P. George and Sherif Girgis of "What Is Marriage? Man and Woman: A Defense" (Encounter Books, December 2012). The three also co-wrote the article "What is Marriage?" in the winter 2011 issue of *Harvard Journal of Law and Public Policy*.
>
> […]Anderson received his bachelor of arts degree from Princeton University, graduating*Phi Beta Kappa* and *magna cum laude.* He is a doctoral candidate in political philosophy at the University of Notre Dame, where he received his master's degree.

The point I wanted to pull out his piece on Ricochet was that gay activists admit that one of the motives for redefining marriage is to destroy central aspects of traditional marriage, such as monogamy, sexual exclusivity and pledged permanence.

He writes:

> Redefining marriage would abandon the norm of male-female sexual complementarity as an essential characteristic of marriage. Making that optional would also make other essential characteristics—like monogamy, exclusivity and permanency—optional, as my co-authors and I argue in our new book, *What Is Marriage? Man and Woman: A Defense*. We also show how it is increasingly confirmed by the rhetoric and arguments of those who would redefine marriage ("revisionists") and by the policies that their more candid leaders increasingly embrace. Indeed, several commentators on Tuesday's post explicitly jettisoned monogamy, sexual exclusivity and pledged permanence as demands of marriage.
>
> Consider the norm of monogamy. In testifying before Congress against the Defense of Marriage Act (DOMA), prominent New York University professor Judith Stacey expressed hope that the revisionist view's triumph would give marriage "varied, creative and adaptive contours . . . [leading some to] question the dyadic limitations of Western marriage and seek . . . small group marriages."
>
> In their statement "Beyond Same-Sex Marriage," more than 300 self-styled LGBT and allied scholars and advocates—including prominent Ivy League professors—call for legally recognizing sexual relationships involving more than two partners. University of Calgary professor Elizabeth Brake argues in her book *Minimizing Marriage* that justice requires using legal recognition to "denormalize the ideal of heterosexual monogamy" and correct for "past discrimination against homosexuals, bisexuals, polygamists and care networks."
>
> And exclusivity? Andrew Sullivan, who has extolled the "spirituality" of "anonymous sex," writes in his book *Virtually Normal* that the "openness" of same-sex relationships could enhance the bonds of husbands and wives:
>
> Same-sex unions often incorporate the virtues of friendship more effectively than traditional marriages; and at times, among gay male relationships, the openness of the contract makes it more likely to survive than many

> heterosexual bonds. . . . [T]here is more likely to be greater understanding of the need for extramarital outlets between two men than between a man and a woman. . . . [S]omething of the gay relationship's necessary honesty, its flexibility, and its equality could undoubtedly help strengthen and inform many heterosexual bonds.
>
> Similarly, in a *New York Times* Magazine profile titled "Married, With Infidelities", Dan Savage encourages spouses to adopt "a more flexible attitude" about allowing each other to seek sex outside their marriage. A piece titled "Monogamish" in *The Advocate*, a gay-interest newsmagazine, supports this point still more candidly:
>
> Anti-equality right-wingers have long insisted that allowing gays to marry will destroy the sanctity of "traditional marriage," and, of course, the logical, liberal party-line response has long been "No, it won't." But what if—for once—the sanctimonious crazies are right? Could the gay male tradition of open relationships actually alter marriage as we know it? And would that be such a bad thing?
>
> As the article's blurb reads: "We often protest when homophobes insist that same-sex marriage will change marriage for straight people too. But in some ways, they're right."
>
> These are the words of leading supporters of same-sex marriage. If you believe in monogamy and exclusivity—and the benefits these bring to orderly procreation and child wellbeing—but would redefine civil marriage, take note.

I wrote before about how feminism debased marriage, and same-sex marriage should be viewed as phase two of the radical feminist enterprise. Surprise! These left-wing groups don't like natural, traditional marriage.

# Sherif Girgis: intellectual diversity in university law schools

**Wintery Knight** · 18 April 2013 · Archived copy · Original

Is there a diversity problem in elite law schools? Sherif Girgis thinks that there is, and in this lecture he makes the case.

(27 minutes of lecture, 6 minutes of Q&A)

I highly recommend watching this video, especially if you are on the left on social issues, and you think everyone on the right is stupid and evil.

# Reuters: scientists struggling to explain 15 years of global cooling

**Wintery Knight** · 19 April 2013 · Archived copy · Original

From the left-leaning Reuters news service.

Excerpt:

> Scientists are struggling to explain a slowdown in climate change that has exposed gaps in their understanding and defies a rise in global greenhouse gas emissions.
>
> Often focused on century-long trends, most climate models failed to predict that the temperature rise would slow, starting around 2000. Scientists are now intent on figuring out the causes and determining whether the respite will be brief or a more lasting phenomenon.
>
> […]"The climate system is not quite so simple as people thought," said Bjorn Lomborg, a Danish statistician and author of "The Skeptical Environmentalist" who estimates that moderate warming will be beneficial for crop growth and human health.
>
> Some experts say their trust in climate science has declined because of the many uncertainties. The UN's Intergovernmental Panel on Climate Change (IPCC) had to correct a 2007 report that exaggerated the pace of melt of the Himalayan glaciers and wrongly said they could all vanish by 2035.
>
> "My own confidence in the data has gone down in the past five years," said Richard Tol, an expert in climate change and professor of economics at the University of Sussex in England.

I think it's important to note that science is not to blame for these failed predictions. What is to blame is government handing money to corrupt charlatans who then produce "scientific research" that proves that bigger government is needed to control capitalism and constrain individual liberty. In effect, government bribed the university charlatans to fake research that would trick the public into voting for more government control of job creators and their employees. The fastest way to solve this would be to get the government out of the higher education business and let science serve the needs of ordinary people instead of corrupt socialists.

# Surprise, liberal media! Boston bombing suspects are Muslim foreigners

**Wintery Knight** · 19 April 2013 · Archived copy · Original

The secular leftist media was really hoping that those responsible for the Boston marathon bombing would be their political opponents. "This time, Republicans for sure!" they said. "If a person is for lower taxes, less government spending, the right to life, and natural marriage, then they are hateful racist violent bigoted crazies!"

The Daily Caller explains:

> The liberal online magazine Salon published an opinion piece Tuesday evening by columnist David Sirota entitled, "Let's hope the Boston Marathon bomber is a white American."
>
> Sirota argued that if the perpetrator of Monday's bombing attack, which left at least three people dead, is identified as a Muslim, then conservative Republicans will use the tragedy to block Obama administration policy goals like immigration reform.
>
> […]Sirota is not the only liberal media commentator to attempt to politicize Monday's tragedy. CNN anchor Wolf Blitzer speculated on a link between Patriots Day and the motive behind the bombings, while NBC News reporter Luke Russert speculated that the 1993 Waco siege, which occurred on Patriots Day, might have inspired a right-wing terrorist in Boston.
>
> New York Times columnist Nicholas Kristof used the tragedy to attack Republican politicians, tweeting Monday, "Explosion is a reminder that ATF needs a director. Shame on Senate Republicans for blocking apptment." Kristof later apologized for the tweet.
>
> Sirota has employed attention-grabbing, race-baiting rhetoric in the past.
>
> Sirota said in December, in the aftermath of the Sandy Hook Elementary School massacre, that a new profiling system should be established to monitor mentally-ill individuals, but that Republicans would not support that effort because it would mean profiling white men.

Now you might think that's racism and bigotry, but it's not, because the mainstream media tells me that racism can never be committed by leftists.

And now let's see what reality has to say about the speculations and wishing of the radical lefttists in the mainstream media.

Reuters / Yahoo News reports:

> Boston bombing suspect Dzhokhar Tsarnaev posted links to Islamic websites and others calling for Chechen independence on what appears to be his page on a Russian language social networking site.
>
> Abusive comments in Russian and English were flooding onto Tsarnaev's page on VK, a Russian-language social media site, on Friday after he was identified as a suspect in the bombing of the Boston marathon.
>
> […]On the site, the younger Tsarnaev identifies himself as a 2011 graduate of Cambridge Rindge and Latin School, a public school in Cambridge, Massachusetts.
>
> […]His "World view" is listed as "Islam" and his "Personal priority" is "career and money".
>
> He has posted links to videos of fighters in the Syrian civil war and to Islamic web pages with titles like "Salamworld, my religion is Islam" and "There is no God but Allah, let that ring out in our hearts".
>
> He also has links to pages calling for independence for Chechnya, a region of Russia that lost its bid for secession after two wars in the 1990s.

It seems to me that the liberal media is trying to have it both ways. They want to agree with Kermit Gosnell on abortion, they want to agree with Floyd Lee Corkins III on gay marriage, they want to agree with Hugo Chavez on economics, and they want to sympathize with Dzhokhar Tsarnaev on foreign policy. Then they want to believe that pro-family, pro-life, pro-child, free market capitalists are all radical terrorists. Sorry mainstream media, but you are the nutters. You are the crazies. You are the radicals.

See the related posts below for more leftist violence. The reality, which the mainstream media doesn't want you to know, is that it is far more likely that violence is caused by the radical left. The radical right is too busy getting married, making babies, starting businesses, waking up to go to work, paying our taxes, helping our neighbors and listening to sermons in church. The radical right doesn't have time for violence, we're trying to live well and we are good at it.

# What is intelligent design? Dr. Stephen C. Meyer explains the theory

**Wintery Knight** · 19 April 2013 · Archived copy · Original

A MUST-SEE lecture based on Dr. Stephen C. Meyer's book "Signature in the Cell".

You can get an MP3 of the lecture here. (30 MB)

I highly recommend watching the lecture, and looking at the slides. The quality of the video and the content is first class. There is some Q&A (9 minutes) at the end of the lecture.

Topics:

- intelligent design is concerned with measuring the information-creating capabilities of natural forces like mutation and selection
- Darwinists think that random mutations and natural selection can explain the origin and diversification of living systems
- Darwinian mechanisms are capable of explaining small-scale adaptive changes within types of organisms
- but there is skepticism, even among naturalists, that Darwinian mechanisms can explain the origin of animal designs
- even if you concede that Darwinism can account for all of the basic animal body plans, there is still the problem of life's origin
- can Darwinian mechanisms explain the origin of the first life? Is there a good naturalistic hypothesis to explain it?
- there are at least two places in the history of life where new information is needed: origin of life, and Cambrian explosion
- overview of the structure of DNA and protein synthesis (he has helpful pictures and he uses the snap lock blocks, too)
- the DNA molecule is composed of a sequence of proteins, and the sequence is carefully selected to have biological function
- meaningful sequences of things like computer code, English sentences, etc. require an adequate cause
- it is very hard to arrive at a meaningful sequence of a non-trivial length by randomly picking symbols/letters
- although any random sequence of letters is improbable, the vast majority of sequences are gibberish/non-compiling code
- similarly, most random sequences of amino acids are lab-proven (Doug Axe's work) to be *non-functional gibberish*
- the research showing this was conducted at Cambridge University and published in the Journal of Molecular Biology
- so, random mutation cannot explain the origin of the first living cell
- however, even natural selection coupled with random mutation cannot explain the first living cell
- there must already be replication in order for mutation and selection to work, so they can't explain the first replicator
- but the origin of life *is* the origin of the first replicator – there is no replication prior to the first replicator
- the information in the first replicator cannot be explained by law, such as by chemical bonding affinities
- the amino acids are attached like magnetic letters on a refrigerator
- the magnetic force sticks the letters ON the fridge, but they don't determine the specific sequence of the letters
- if laws did determine the sequence of letters, then the sequences would be repetitive

- the three materialist explanations – chance alone, chance and law, law alone – are not adequate to explain the effect
- the best explanation is that an intelligent cause is responsible for the biological explanation in the first replicator
- we know that intelligent causes can produce functional sequences of information, e.g. – English, Java code
- the structure and design of DNA matches up nicely with the design patterns used by software engineers (like WK!)

There are some *very good tips* in this lecture so that you will be able to explain intelligent design to others in simple ways, using everyday household items and children's toys to symbolize the amino acids, proteins, sugar phosphate backbones, etc.

**Proteins are constructed from a sequence of amino acids:**

A sequence of amino acids forming a protein

**Proteins sticking onto the double helix structure of DNA:**

Some proteins sticking onto the sugar phosphate backbone

I highly, highly recommend this lecture. You will be delighted and you will learn something.

Here is an article that gives a general overview of how intelligent design challenges. If you want to read something more detailed about the material that he is covering in the lecture above related to the origin of life, there is a pretty good article here.

# New study: pro-gay television shows have shifted public opinion on gay marriage

**Wintery Knight** · 20 April 2013 · Archived copy · Original

Life Site News reports.

Excerpt:

> Ipsos MediaCT, a global market research company, have just released a study…
>
> According to the report, 18 percent of Americans between the ages of 13 and 64 said that television has directly contributed to their increasing support for same-sex "marriage."
>
> That's nearly double the number (10 percent) who reported television had increased their opposition to marriage redefinition.
>
> "Based on this data, I think we can conclude that TV has, at least in part, moved the needle of public opinion to see same-sex marriage in a positive way," Ben Spergel, Senior Vice President and Head of TV Insights at Ipsos MediaCT said in a statement.
>
> "With everything from higher profile portrayals of gay characters, to celebrity support of gay marriage, to last year's groundbreaking endorsement by President Obama, we are seeing a shift in our culture that is being influenced by popular culture," he said.
>
> Last month, liberal writer Andrew O'Hehir wrote an article for *Salon* crediting the American movement toward homosexual acceptance to television shows like "Will and Grace,""Roseanne," "The Real World," "Ellen DeGeneres," "Buffy the Vampire Slayer," "Modern Family," and "Glee."
>
> "From 'Soap' to Ellen DeGeneres to Richard Hatch on 'Survivor' to the macho male couple who won season 4 of 'The Amazing Race,'" O'Hehir wrote, "televisual images of sexual diversity have gradually moved away from victimology and 'gay best friend' stereotypes toward a 'normalizing vision'of LGBT culture."
>
> "While the startling public shift on gay marriage – something few people of my generation, straight or gay, thought they'd ever see — is not solely the product of TV, it represents the ultimate fulfillment of TV's vision of sexual equality," O'Hehir added.
>
> Support for same-sex "marriage" is on the rise in the United States. Recent polls show more than half of Americans support redefining marriage to include homosexual couples, and several states now allow gay nuptials in defiance of federal law.

One reason I don't have a TV in my house is because television is used as a way to change people's minds without making rational arguments or showing evidence. It's easy enough for gay-friendly Hollywood to make TV shows where all the gay characters are funny, hard-working, faithful and moral. But that doesn't reflect what studies tell us about gay relationships. They are non-exclusive, short-lived, have higher rates of violence and abuse, etc.

If gay marriage were to become legal, then marriage would would no longer be permanent, faithful, or child-centered, as this gay activist recently explained.

> It's a no-brainer that (homosexuals) should have the right to marry, but I also think equally that it's a no-brainer that the institution of marriage should not exist. . . . Fighting for gay marriage generally involves lying about what we are going to do with marriage when we get there—because we lie that the institution of marriage is not going to change, and that is a lie.
>
> The institution of marriage is going to change, and it should change. And again, I don't think it should exist. And I don't like taking part in creating fictions about my life. That's sort of not what I had in mind when I came out thirty years ago.

> **I have three kids who have five parents, more or less, and I don't see why they shouldn't have five parents legally. . . . I met my new partner, and she had just had a baby, and that baby's biological father is my brother, and my daughter's biological father is a man who lives in Russia, and my adopted son also considers him his father. So the five parents break down into two groups of three. . . . And really, I would like to live in a legal system that is capable of reflecting that reality, and I don't think that's compatible with the institution of marriage.**

The purpose of gay marriage is to normalize and celebrate any arrangements that makes adults happy, whether or not it provides for the needs of the children. Evidence from large-scale studies shows that gay relationships are not as good for children as natural marriage. But people who watch TV and don't read studies will have their minds changed by TV, and then they will vote. And children not yet born will have to grow up without mothers and fathers because of it.

In a very real sense, stupidity and selfishness are destroying the next generation of children. It's not just the crushing 17 trillion dollar debt being run up by selfish adults for their entitlements. It's not just that our public schools are insulated from reform by powerful politically connected teacher unions. It's not just that we liberalized divorce laws so that women can divorce men when they are not "happy" any more. It's not just that we force employers to ship jobs overseas by raising their corporate taxes and burdening them with nonsense regulations. It's not just that government pays irresponsible women to have babies out of wedlock. It's not just that we abort the next generation of taxpayers because we can't be bothered to get married and make a home for them before having sex. Now, we have to go beyond all that . We have to go even further. Now we have to formalize and normalize the complete supremacy of selfish adults over the needs of children. God help us all.

# Boston bombing suspect Dzhokhar Tsarnaev was a pot-smoker who supported Obama

**Wintery Knight** · 20 April 2013 · Archived copy · Original

The Daily Caller reports.

Excerpt:

> Chris Barry, who attended the University of Massachusetts Dartmouth with Tsarnaev, described him as normal teenager who loved to smoke pot and cigarettes every day.
>
> "He was a pot head, a normal pot head," said Barry in an interview with Politico. "I couldn't even imagine him being mad at someone let alone hurting someone."
>
> Tsarnaev, a Muslim, did not come across as strongly religious, said Barry.
>
> "He never brought it up. It seemed like he could care less," he said.
>
> Tsarneav's Twitter account provided clues about the suspected bomber's political views. On November 6th, he retweeted several statements suggesting a preference for President Obama over Republican candidate Mitt Romney.
>
> He retweeted a statement from President Obama's Organizing for Action account that said: "This happened because of you. Thank you," in reference to Obama's victory.
>
> He also retweeted a statement and a picture making fun of Romney. The Tweet said: "WTF Romney is winning ??" and linked to this image.

Not all left-wing people are crazy, but all crazy people are left-wing.

# Wayne Grudem explains what the Bible says about self-defense

**Wintery Knight** · 21 April 2013 · Archived copy · Original

Reformed Baptist theologian Wayne Grudem speaks on the Bible and the right of self-defense.

About Wayne Grudem:

> Grudem holds a BA from Harvard University, a Master of Divinity from Westminster Theological Seminary, and a PhD from the University of Cambridge. In 2001, Grudem became Research Professor of Bible and Theology at Phoenix Seminary. Prior to that, he had taught for 20 years at Trinity Evangelical Divinity School, where he was chairman of the department of Biblical and Systematic Theology.
>
> Grudem served on the committee overseeing the English Standard Version translation of the Bible, and in 1999 he was the president of the Evangelical Theological Society. He is a co-founder and past president of the Council on Biblical Manhood and Womanhood. He is the author of, among other books, Systematic Theology: An Introduction to Biblical Doctrine, which advocates a Calvinistic soteriology, the verbal plenary inspiration and inerrancy of the Bible, the body-soul dichotomy in the nature of man, and the complementarian (rather than egalitarian) view of gender equality.

The MP3 file is here.

Topics:

- what about turning the other cheek? doesn't that undermine self-defense?
- what does Jesus say about the right to self-defense in the New Testament
- did Jesus' disciples carry swords for protection during his ministry?
- why did Jesus tell his disciples to sell their cloaks and buy swords?
- what about Jesus stopping Peter from using force during Jesus' arrest?
- shouldn't we rely on police instead of our own personal weapons?
- what about brandishing a handgun vs actually trying to shoot someone?
- what are violent crime rates in pro-gun USA and in the anti-gun UK?
- does outlawing guns cause violent crime to increase or decrease?
- do academic studies show that gun control decreases crime?
- do academic studies show that concealed carry laws decreases crime?
- what do academic studies show about defensive handgun usage?
- do many children die from guns in the home compared to other causes?
- doesn't the US Constitution limit the usage of guns to the army and police?
- what did the Founding Fathers believe about lawful ownership of firearms?
- What should be the goal of someone who uses a weapon in self-defense?

This is a good example of applying the Bible to real life. We need more of that!

# Wayne Grudem explains what the Bible says about parents and schools

**Wintery Knight** · 21 April 2013 · Archived copy · Original

This is a must-listen, especially for any single Christian woman who would like to get married and have children. If you want to marry a Christian man, you should listen to this lecture and also the Dr. Morse lecture on marriage *Every Day*. Christian men expect Christian women to know a lot about marriage. About why children need mothers, and why they need fathers, and how the state is always taxing families and then using that money to poke their noses in and teach the children all kinds of bad things.

With that introduction, here is the MP3 file on education policy.

Note: public schools = government-run schools.

Topics:

- Does God care whether we people marry and have children?
- Does God care whether Christian parents raise their children to know him?
- Should government promote bearing children?
- What are some effects of declining birth rates in other countries?
- What are the economic effects of declining birth rates?
- Who has the right to decide how children are trained: government or parents?
- What does the Bible say about parents having to raise children to know him?
- Does the government have the responsibility for training children?
- What do educational bureaucrats think of parents training children?
- What do school boards think of parents training children?
- Should school boards be elected by local, state or federal government?
- Should Christians be opposed to government-run education? (public schools)
- How should schools be viewed by parents? As a replacement or as a helper?
- How are schools viewed by those on the left and in communist countries?
- How can you measure how supporting a government is of parental rights?
- How is parental authority viewed in left-wing EU countries like Germany?
- How is parental authority respected in the United States?
- Should parents have a choice of where their children go to school?
- What is a voucher program? How is it related to parental autonomy?
- How does competition (school choice) in education serve parental needs?
- Why do public school teachers, unions and educrats oppose competitition?
- How well do public schools do in educating children to achieve?
- Does the government-run monopoly of public schools produce results?
- Does paying more and more money to public schools make them perform?
- How do teacher unions feel about having to compete in a voucher system?
- Does the public school monopoly penalize the poorest students?
- Does the public school monopoly penalize children of certain races?
- Does the public school monopoly cause racial predujice?
- What else should parents demand on education policy?

- Is it good for parents when schools refuse to fire underperforming teachers?

This podcast is just amazing! This is what we need to be teaching in church. Church should be the place where you go to learn and reflect about how to tailor your life plan based on what the Bible says. And I think that this whole notion of free market – of choice and competition benefiting the consumer (parents) – applies to everything that government does, especially education and health care.

# What do children learn in “anti-bullying” school programs?

**Wintery Knight** · 22 April 2013 · Archived copy · Original

The answer might surprise you. Take a look at this article that Lydia found.

Excerpt:

> Young girls at a New York middle school were instructed to ask one another for a lesbian kiss and boys were given guidance on how to tell if women are sluts during an anti-bullying presentation on gender identity and sexual orientation, angry parents allege.
>
> The special health class was held last week at **Linden Avenue Middle School in Red Hook, NY**. The students were separated by gender – with students from Bard College leading the workshops.
>
> Parents are especially furious after their young daughters were told that it was perfectly normal for 14-year-old girls to have sex and there was nothing their parents could do to intervene.
>
> The boys and girls were also given a sexual vocabulary primer – that included words like “pansexual” and “genderqueer.”
>
> “I am furious,” said Mandy Coon, whose daughter was in the class. “I am her parent. Where does anyone get the right to tell her that it’s okay for her to have sex?”
>
> Coon told Fox News that her daughter was upset by the classroom lecture and was confused about why she had to ask another girl for a kiss.
>
> “She told me, ‘Mom, we all get teased and picked on enough – now I’m going to be called a lesbian because I had to ask another girl if I could kiss her,’” Coon said.
>
> She said the school told her that the purpose of the lesson was to “teach girls boundaries and how to say no.”
>
> “They also picked two girls to stand in front of the class and pretend they were lesbians on a date,” Coons said.
>
> Paul Finch, the superintendent of the Red Hook Central School District, told the **Poughkeepsie Journal** that the workshop focused on “improving culture, relationships, communication and self-perceptions.”
>
> He told the newspaper those were issues the school was obligated to teach under the state’s Dignity for All Students Act.
>
> The state law requires schools to create a safe and supportive environment free from discrimination, intimidation, taunting, harassment and bullying, the newspaper reported.
>
> Parents said they were not notified about the class or the subject matter.

Now, the public schools are dominated by feminists and Democrats who think that it is a good idea to sexualize children as early as possible as a way of breaking their ability to marry and form stable families that will function independently of the state. The left does not like the traditional family. They would much rather that children are either aborted or raised fatherless. It is very important to the left that children grow up in situations where they take dependency on the state to be normal. It’s much easier to rule over a people that is used to receiving money from the government, and having the government intrude into their lives.

# Republican governors in Kansas and North Dakota sign pro-life bills

**Wintery Knight** · 22 April 2013 · Archived copy · Original

First North Dakota has passed a ban on abortions after 20 weeks.

Excerpt:

> On Tuesday, North Dakota's governor signed a bill into law banning abortions after 20 weeks, when an unborn baby begins to feel pain. This comes just one month after he signed landmark pro-life legislation making it the first state to prohibit both sex-selection abortions and abortions for genetic abnormalities.
>
> […]Senators voted 30-17 to ban abortions after 20 weeks of pregnancy based on scientific information showing unborn children feel pain at least at that point in pregnancy.
>
> The 20-week abortion ban is thought to fit within the current framework of the pro-abortion Supreme Court and stand up in court to a lawsuit from abortion proponents.
>
> […]Alabama, Georgia, Idaho, Indiana, Kansas, Louisiana, Nebraska and Oklahoma have passed such legislation.
>
> […]The science behind the concept of fetal pain is fully established and Dr. Steven Zielinski, an internal medicine physician from Oregon, is one of the leading researchers into it. He first published reports in the 1980s to validate research showing evidence for it.
>
> He has testified before Congress that an unborn child could feel pain at "eight-and-a-half weeks and possibly earlier" and that a baby before birth "under the right circumstances, is capable of crying."
>
> He and his colleagues Dr. Vincent J. Collins and Thomas J. Marzen were the top researchers to point to fetal pain decades ago. Collins, before his death, was Professor of Anesthesiology at Northwestern University and the University of Illinois and author of *Principles of Anesthesiology*, one of the leading medical texts on the control of pain.

See, what I like here is that we have pro-life scientists who are researching this in order to provide us with facts that back policies that the majority of people will support.

That's good news, and here is more good news from Kansas.

Excerpt:

> This morning, Governor Sam Brownback signed HB 2253, the Pro-life Protections Act, into law.
>
> HB 2253 codifies abortion informed consent materials authorized by the state health department, and removes all tax streams that pay for abortion and give tax advantages to abortion businesses.
>
> The informed consent section has an added mandate for the state health department to facilitate medical information access and community support for families facing pre-birth and post-birth diagnoses of Down Syndrome and other conditions.
>
> HB 2253 assures taxpayers are not directly funding abortion or abortion training at the state university, and forbids state discrimination against pro-life citizens and entities. The legislation also includes SB 141, the ban on abortions done solely for the gender of the unborn child.

Naturally, these advances are not going to please people who think that the strong should be able to deprive the weak of basic human rights, but they are in the minority. At least they are in conservative states like North Dakota and Kansas.

# Two Muslim immigrants arrested in Canada for Al-Qaeda-inspired terrorist plot

**Wintery Knight** · 22 April 2013 · Archived copy · Original

Prime Minister Stephen Harper in Afghanistan

The CBC reports on a blockbuster story from Canada. (H/T Blazing Cat Fur)

Excerpt:

> Canadian police say they have arrested two men and thwarted a plot to carry out a major terrorist attack on a Via passenger train in the Greater Toronto Area.
>
> In a press conference that followed an exclusive report by CBC's Greg Weston, police named the two accused as Chiheb Esseghaier, 30, of Montreal, and Raed Jaser, 35, from Toronto. They have been charged with conspiracy to carry out a terrorist attack and "conspiring to murder persons unknown for the benefit of, at the direction of, or in association with a terrorist group."
>
> The two men arrested are not Canadian citizens, police said Monday, but would not provide any details about their nationalities.
>
> The RCMP accused the two men of conspiring to commit an "al-Qaeda-supported" attack.
>
> Police said the two accused were getting "direction and guidance" from al-Qaeda elements in Iran. There was no information to suggest the attacks were state sponsored, police said.
>
> Chief Supt. Jennifer Strachan said the two suspects watched trains and railways in the Greater Toronto Area. There was a specific route targeted, not necessarily a specific train, Strachan said, although she declined to reveal which route was allegedly being targeted.
>
> "We are alleging that these two individuals took steps and conducted activities to initiate a terrorist attack," she told reporters.
>
> The two men are expected to appear at Old City Hall courthouse in Toronto tomorrow.

With Prime Minister Stephen Harper at the helm, the Conservative Party majority gets the job done again!

Too bad Harper is not in charge down here. Democrats think that only married, Bible-believing small business owning Tea Party conservatives who served in the Armed Forces can be domestic terrorists. They think that William Lane Craig is more likely to be a terrorist than KSM. That's what they believe.

I have to share Blazing Cat Fur's headline for this "Canada: Muslims Fear Backlash Over Latest Thwarted Terror

Plot – Linked To Amish Division Of Al Qaeda“. He also points out that the Canadian chapter of CAIR is urging the Canadian government not to pass national security legislation.

Blazing Cat Fur is the place to be for the latest news from Canada. Best Canadian blog.

Yeah, I’m pretty sure that the Canadian media will try to blame this on the Amish, or whatever the Canadian equivalent of the Tea Party is. They can’t bring themselves to believe that they made a mistake by ratcheting up unregulated immigration from Muslim countries in order to move their country to the left. Bringing in skilled immigrants who learn English is one thing, but bringing in radical extremists is something else entirely.

# Video, audio and summary: Jay Richards and Jim Wallis debate Christianity and the common good

**Wintery Knight** · 23 April 2013 · Archived copy · Original

***Note: if you are having trouble liking this page on Facebook or sharing it on Twitter, please click here for an updated one that is shareable. Something went wrong in Facebook and they've marked this post as spam! But the new one is fine for sharing.***

The video recording:

- The organizers of the debate tell me that the video will be posted shortly after the debate, and I will link to it in this very post.

The audio recording:

- Click here to download the low quality MP3 audio recording (32 kbps, 29 MB)
- Click here to download the high quality MP3 audio recording (64 kbps, 58 MB)

**The debaters**

Jay Richards:

> Jay Richards, Ph.D., is a Senior Fellow of the Discovery Institute where he directs the Center on Wealth, Poverty and Morality, and is a Visiting Scholar at the Institute for Faith, Work & Economics. Most recently he is the co-author with James Robison of the best-selling *Indivisible: Restoring Faith, Family, and Freedom Before It's Too Late".*
>
> In addition to writing many academic articles, books, and popular essays on a wide variety of subjects, he recently edited the new award winning anthology, *God & Evolution: Protestants, Catholics and Jews Explore Darwin's Challenge to Faith* . His previous book was *Money, Greed, and God: Why Capitalism Is the Solution and Not the Problem* (HarperOne, May 2009), for which he received a Templeton Enterprise Award in 2010.
>
> […]In recent years, he has been a Contributing Editor of The American at the American Enterprise Institute, a Visiting Fellow at the Heritage Foundation, and a Research Fellow and Director of Acton Media at the Acton Institute. Richards has a B.A. with majors in Political Science and Religion, an M.Div. (Master of Divinity) and a Th.M. (Master of Theology), and a Ph.D. (with honors) in philosophy and theology from Princeton Theological Seminary.

Jim Wallis:

> Jim Wallis (born June 4, 1948) is a Christian writer and political activist. He is best known as the founder and editor of *Sojourners* magazine and as the founder of the Washington, D.C.-based Christian community of the same name. Wallis is well known for his advocacy on issues of peace and social justice. Although Wallis actively eschews political labels, he describes himself as an evangelical and is often associated with the evangelical left and the wider Christian left. He works as a spiritual advisor to President Barack Obama. He is married to the Rev. Joy Carroll, who was one of the first female priests in the Church of England. He is also a leader in the Red-Letter Christian movement.
>
> […]In 2010, Wallis admitted to accepting money for Sojourners from philanthropist George Soros after initially denying having done so. When conservative writer Marvin Olasky pointed this out, and that Soros also financed groups supporting abortion, atheism, and same-sex marriage, in a WORLD magazine column, Wallis said Olasky "lies for a living"; he subsequently apologized to Olasky for the comments. In 2011, Wallis acknowledged that Sojourners had received another $150,000.00 from Soros' Open Society Foundation.

> […]In regard to the 2011 United States budget proposal, Wallis described Congressman Paul Ryan and his congressional allies as "bullies" and "hypocrites."

Wallis just came out this month in favor of gay marriage. He is also a strong supporter of Barack Obama, who is radically pro-abortion, according to Planned Parenthood. Some pro-lifers have argued that Barack Obama has the same views on abortion as Kermit Gosnell, who is currently on trial for murdering born babies.

**The format of the debate**

- 20 minute opening speeches
- 10 minute rebuttals
- 10 minutes of discussion
- Q&A for the remainder

**SUMMARY**

I use italics below to denote my own observations.

**Jim Wallis' opening speech:**

My goal is to spark a national conversation on the "common good".

A story about my son who plays baseball.

The central goal of Christianity is to promote the "common good".

Quotes "Catholic social teaching" which values "human flourishing".

The "common good" is "human flourishing".

*Is the purpose of Christianity is to make sure that everyone has enough material stuff or to preach the gospel?*

When Christians go on mission trips, it's good that they focus on things like human trafficking.

Democrat John Lewis is the "conscience of the U.S. Congress".

*John Lewis gets a 0% rating from the American Conservative Union in 2012.*

*John Lewis gets a 8% rating from the American Conservative Union in 2011.*

*John Lewis gets a 2.29% lifetime rating from the American Conservative Union.*

Nothing is going well in Washington right now except comprehensive immigration reform.

*Does he think that Christianity means giving 12-20 million illegal immigrants a path to citizenship, while skilled engineers cannot even get green cards, even though there is a shortage of them? Does he think that the other people in society who earn more than they receive from the government ought to be taxed more in order to provide more services and benefits to those who earn less than they take from the government?*

**Jay Richards' opening speech:**

Two topics: 1) what is the common good? 2) what should Christians do to promote the common good?

Catholicism defines the "common good" as "Indeed, the common good embraces the sum of those conditions of the social life whereby men, families and associations more adequately and readily may attain their own perfection." (Source)

We have natural ends that we are supposed to be achieving and some places, like South Korea, are better for allowing that to happen.

The common good is broader and prior to any sort of political specification.

It's not the political good or what the state is supposed to do.

It's not about the communal good, as in Soviet Russia, where the communal good was above individual and familial good.

The common good is the social conditions that promote the things that we humans have in common as individuals and members of family.

The common good takes account of who we are as individuals and in associations with other individuals, e.g. – families.

Christians don't have to be doing the same things to promote the common good, e.g. – pastors, entrepreneurs, etc.

The church, as the church, has as its primary goal making disciples of all nations.

But even in that capacity, the church should be interested in more than just conversions and saving souls.

We also have to care about God's created reality including things like physics, education, etc.

How should Christians promote the common good in politics?

Question: when is coercion warranted?

In Romans 13, Paul says that the state does have power to coerce to achieve certain ends, like justice.

Most Christians think that there are some things where the state can use coercion, for example, to prevent/punish murder.

It is OK for the police to use coercive force to maintain public order and the rule of law.

But we need to ask whether other things are legitimate areas for the state to use coercive force.

We should only give the state power to coerce when there is no other way to achieve a goal.

We need to leverage the science of economics in order to know how to achieve the common good.

Jay Richards' main point in the debate
Henry Hazlitt: "The art of economics consists in looking not merely at the immediate but at the longer effects of any act or policy; it consists in tracing the consequences of that policy not merely for one group but for all groups."

For example, what happens if we raise the federal minimum wage to $50. What happens next for all groups? That's what we need to ask in order to know which policies achieve the common good.

When it comes to economics a lot of things have been tried in other places and times.

We can know what works and doesn't work by studying what was tried before and in other places.

Many things are counter-intuitive – things that sound good don't work, things that sound bad do work.

Principle: “We are our brother’s keeper”. Christians have an obligation to care for their neighbors.

We all agree on the goal. But how do we do things that will achieve that goal?

We have to distinguish aspirations from principles and prudential judgment.

Principle: We should provide for the material needs of the poor.

Prudence: Seeing the world as it is, and acting accordingly.

Example policies: which minimum wage is best? None? $10? $20?

We decide based on seeing how different economic policies achieve the goal of helping the poor.

**Jim Wallis’ first rebuttal:**

Jesus commanded us to “care for the poor and help to end poverty”.

*Actually, Jesus thought that acknowledging him and giving him sacrificial worship was more important than giving money to the poor, see Matthew 26:6-13:*

*6 While Jesus was in Bethany in the home of Simon the Leper,*

*7 a woman came to him with an alabaster jar of very expensive perfume, which she poured on his head as he was reclining at the table.*

*8 When the disciples saw this, they were indignant. “Why this waste?” they asked.*

*9 “This perfume could have been sold at a high price and the money given to the poor.”*

*10 Aware of this, Jesus said to them, “Why are you bothering this woman? She has done a beautiful thing to me.*

*11 The poor you will always have with you, but you will not always have me.*

*12 When she poured this perfume on my body, she did it to prepare me for burial.*

*13 Truly I tell you, wherever this gospel is preached throughout the world, what she has done will also be told, in memory of her.”*

*It’s not clear to me whether Jim Wallis thinks that preaching is more important than redistributing wealth to address material inequality.*

I like what Jesus said in a TV series, even though it’s not in the Bible when an actor playing Jesus said to “change the world”.

*Jesus never said to “change the world” in the Bible. Should we be concerned that he is quoting a TV actor playing Jesus instead of Jesus.*

Here is a terrific story about Bill Bright.

I love Catholic social teaching.

Quote: “All are responsible for all”.

I go to the World Economic Forum at Davos, Switzerland every year. I spoke once at 7 AM on the 4th floor.

*It’s a funny place for a Christian to be if they care about the poor – rubbing shoulders with leftist elites. He must have named a dozen high-profile people that he spoke with during the debate, as if he could win the debate by some sort of argument from name-dropping. He mentioned the Davos thing several times!*

The greatest beneficiary of government actions to deal with the economic crisis was Wall Street banks.

*And Wall Street bankers are huge supporters of Barack Obama for exactly that reason.*

I'm going to tell you a story about what a Washington lawyer says to Jesus.

I've had conversations with business leaders where I tell them to integrate moral truths.

I talk about the Good Samaritan parable.

Quote: "Do you love your undocumented neighbor?"

Quote: "Do you love your Muslim neighbor?"

**Jay Richards' first rebuttal:**

Who is responsible for your own children? Who knows the most about them?

Parents should have more discretion over their children because they have more knowledge about their child and what's best for them.

The Good Samaritan doesn't show that government should confiscate wealth through taxation and redistribute it.

The Good Samaritan emphasizes voluntarily charity to help people who are not necessarily your immediate neighbor.

Some of the things we do should be for the good of other people in other countries.

But then we are back to leveraging economics to know what policies are good for those other people in other countries.

The principle of subsidiarity: if a problem can be addressed by a lower level of society (family) then we shouldn't make higher levels (government) address it.

The best place to take care of children is within the family.

Only if the family fails should wider and wider spheres get involved.

Although we want to think of the common good in a global sense, we don't want to lose sight of the fact

The financial crisis: we need to integrate moral truths, but also economic truths.

We don't want to assume policies based on intuitions, we want to check our intuitions using economic principles.

Why did we have a financial crisis in mortgages, but not in commodities futures or technology, etc.?

Greed is a contributing factor in all areas of business.

Something more was going on in the mortgage markets than just greed.

There were specific policies that caused the mortgage lending crisis.

The root cause of the problem were "affordable housing policies" that lowered lending restrictions on low income people.

The policy ended up degrading the underwriting standards on loans.

Government intruded into the market and undermined the normal ways of

People were getting massive loans with no income, no jobs, no assets and no down payment.

The federal government created a market for risk loans by guaranteeing

There was a government imposed quota on mortgage lenders such that 50% of their loans had to be given to high-risk borrowers.

That is what led to the financial crisis. Not the free market, but intrusions into the free market.

These policies were well-meaning and implemented by people from both parties. But they had bad effects.

# Alabama homeschooling family sends 6 kids to college – by age 12!

**Wintery Knight** · 23 April 2013 · Archived copy · Original

From NBC News.

Excerpt:

> At 7, when many kids figure they might be firemen, Seth announced he would be a military archeologist. His mom, Mona Lisa, encouraged that curiosity. "Wow! That kid was into this!" she marvels.
>
> By 12, Seth was hanging out with students nearly twice his age, studying the Middle Ages at Faulkner University, near his home in Montgomery, Alabama. "How's he doing?" I ask assistant professor Grover Plunkett.
>
> "He's got the highest average in the class."
>
> Seth was motivated by his brother Keith's success. Keith is just down the hall, studying finite mathematics, a college senior — at 14.
>
> "It makes you wonder," their friend Wesley Jimmerson says, shaking his head. "Are they advanced, or are we just really behind?"
>
> Sister Hannah was the first of the Harding kids to take college entrance exams — at age 12. "I didn't expect to pass," she says, "so I started crying, because I was thinking, 'Now what?'"
>
> By 22 she was designing spacecraft. She holds master's degrees in math and mechanical engineering.
>
> Ten-year-old Katrinnah Harding hopes to enter college next year. Her brother Heath started at age 11. He's finishing his master's in computer science — at 17.
>
> "If they're going to be working at my kitchen table," Mona Lisa says with a smile, "why not earn college credit for what they're doing?"
>
> **Named after her mother's favorite song, Mona Lisa Harding home-schools her children in the basics, but found that her kids learned more quickly (and got less bored) when they were allowed to study deeply — something they loved.**
>
> **"I don't have any brilliant children," she contends. "I'm not brilliant. My husband's not brilliant. We're just average folks." Who inspired six children to enter college before they became teenagers.**
>
> […]I can understand maybe convincing one or two children to enter college early, but Mona Lisa has more kids than Mother Hubbard: 10.
>
> She shrugs. "By the time you get down to number five, number six, they just think learning seems normal. **We find out what their passions are, what they really like to study, and we accelerate them gradually.**"
>
> But what happens to their childhood?
>
> "We didn't limit their experience," Mona Lisa says. "They're taking college classes, but socially, they are just teenagers." **Who live at home, not in college dorms.**

What's their secret? What I got out of the story is that parents don't have to be smart in order to have smart kids. They just have to take an interest in what the children want to do and then guide them to the next level and the next level and the next level. It's hands-on parenting!

# Does atheism mean “a lack of belief in God”?

**Wintery Knight** · 23 April 2013 · Archived copy · Original

First, let’s see check with the Stanford University Encyclopedia of Philosophy.

Excerpt:

> ‘Atheism’ means the negation of theism, the denial of the existence of God.

Stanford University is one of the top 5 universities in the United States, so that’s a solid definition. To be an atheist is to be a person who makes the claim that, as a matter of FACT, there is no intelligent agent who created the universe. Atheists think that there is no God, and theists think that there is a God. Both claims are objective claims about the way the world is out there, and so both sides must furnish forth arguments and evidence as to how they are able to *know* what they are each claiming.

Philosopher William Lane Craig has some thoughts on atheism, atheists and lacking belief in God in this reply to a questioner.

Question:

> In my discussions with atheists, they are using the term that they “lack belief in God”. They claim that this is different from not believing in God or from saying that God does not exist. I’m not sure how to respond to this. It seems to me that its a silly word-play and is logically the same as saying that you do not believe in God. What would be a good response to this?
> Thank you for your time,
>
> Steven

And here is Dr. Craig’s full response:

> Your atheist friends are right that there is an important logical difference between believing that there is no God and not believing that there is a God. Compare my saying, “I believe that there is no gold on Mars” with my saying “I do not believe that there is gold on Mars.” If I have no opinion on the matter, then I do not believe that there is gold on Mars, and I do not believe that there is no gold on Mars. There’s a difference between saying, “I do not believe (p)” and “I believe (not-p).” Logically where you place the negation makes a world of difference.
>
> But where your atheist friends err is in claiming that atheism involves only not believing that there is a God rather than believing that there is no God.
>
> There’s a history behind this. Certain atheists in the mid-twentieth century were promoting the so-called “presumption of atheism.” At face value, this would appear to be the claim that in the absence of evidence for the existence of God, we should presume that God does not exist. Atheism is a sort of default position, and the theist bears a special burden of proof with regard to his belief that God exists.
>
> So understood, such an alleged presumption is clearly mistaken. **For the assertion that “There is no God” is just as much a claim to knowledge as is the assertion that “There is a God.” Therefore, the former assertion requires justification just as the latter does. It is the agnostic who makes no knowledge claim at all with respect to God’s existence. He confesses that he doesn’t know whether there is a God or whether there is no God.**
>
> But when you look more closely at how protagonists of the presumption of atheism used the term “atheist,” you discover that they were defining the word in a non-standard way, synonymous with “non-theist.” So understood the term would encompass agnostics and traditional atheists, along with those who think the

> question meaningless (verificationists). As Antony Flew confesses,
>
> the word 'atheist' has in the present context *to be construed in an unusual way*. Nowadays it is normally taken to mean someone who explicitly denies the existence . . . of God . . . But here it has to be understood not positively but negatively, with the originally Greek prefix 'a-' being read in this same way in 'atheist' as it customarily is in . . . words as 'amoral' . . . . In this interpretation an atheist becomes not someone who positively asserts the non-existence of God, but someone who is simply not a theist. (*A Companion to Philosophy of Religion,* ed. Philip Quinn and Charles Taliaferro [Oxford: Blackwell, 1997], s.v. "The Presumption of Atheism," by Antony Flew)
>
> **Such a re-definition of the word "atheist" trivializes the claim of the presumption of atheism, for on this definition, atheism ceases to be a view. It is merely a psychological state which is shared by people who hold various views or no view at all. On this re-definition, even babies, who hold no opinion at all on the matter, count as atheists! In fact, our cat Muff counts as an atheist on this definition, since she has (to my knowledge) no belief in God.**
>
> **One would still require justification in order to know either that God exists or that He does not exist, which is the question we're really interested in.**
>
> So why, you might wonder, would atheists be anxious to so trivialize their position? Here I agree with you that a deceptive game is being played by many atheists. If atheism is taken to be a view, namely the view that there is no God, then atheists must shoulder their share of the burden of proof to support this view. But many atheists admit freely that they cannot sustain such a burden of proof. So they try to shirk their epistemic responsibility by re-defining atheism so that it is no longer a view but just a psychological condition which as such makes no assertions. They are really closet agnostics who want to claim the mantle of atheism without shouldering its responsibilities.
>
> This is disingenuous and still leaves us asking, "So is there a God or not?"

So there you have it. We are interested in what both sides *know* and *what reasons and evidence they have to justify their claim to know.* We are interested in talking to people who make claims *about objective reality*, not about themselves, and who then go on to give reasons and evidence to support their claims *about objective reality*. There are atheists out there that do make an objective claim that God does not exist, and then support that claim with arguments and evidence. Those are good atheists, and we should engage in rational conversations with them. But clearly there are some atheists who are not like that. How should we deal with these "subjective atheists"?

**Dealing with subjective atheists**

How should theists respond to people who just want to talk about their psychological state? Well, my advice is to avoid them. They are approaching religion irrationally and non-cognitively – like the person who enters a physics class and says "I lack a belief in the gravitational force!". When you engage in serious discussions with people about God's existence, you only care about what people know and what they can show to be true. We don't care about a person's psychology.

**Dealing with persistent subjective atheists**

What happens when you explain all of that to a subjective atheist who continues to insist that you listen to them repeat over and over "I lack a belief in God, I lack a belief in God"? What if you tell them to make the claim that God does not exist, and then support it with arguments and evidence, but instead they keep leaving comments on your blog telling you again and again about their subjective state of mind: "I lack a belief in cupcakes! I lack a belief in icebergs!" What if they keep e-mailing you and threatening to expose you on Twitter for refusing to listen to them, or denounce you via skywriting: "Wintery Knight won't listen to me! I lack a belief in crickets!". I think at this point you have to give up and stop talking to such a person.

And that's why I moderate and filter comments on this blog. There are uneducated people out there with access to

the Internet who want attention, but I am not obligated to give it to them. And neither are you. We are not obligated to listen to abusive people who don't *know* what they are talking about. I do post comments from objective atheists who make *factual* claims about the objective world, and who support those claims with *arguments and evidence*. I am not obligated to post comments from people who refuse to make objective claims or who refuse to support objective claims with arguments and evidence. And I'm not obligated to engage in discussions with them, either.

UPDATE: I noticed that Reasons for God has a post up about this.

**Positive arguments for Christian theism**

# Live streaming: Jay Richards debates Jim Wallis tonight at 8 PM Eastern time

**Wintery Knight** · 23 April 2013 · Archived copy · Original

***UPDATE: The audio, video and summary of the debate are posted here.***

Looking for something good to watch tonight? How about a debate?

Details:

> Jay Richards (Discovery Institute) and Jim Wallis (Sojourners) will address the question of Christian social engagement through the subject of the Common Good. Each will present a proposal (and response) on the question, "What is the common good? And how should the Church and Christians pursue it?"
>
> The debate will take place **Tuesday April 23 at 7:00 p.m., in the chapel** at Trinity International University. If you cannot make it here, you will be able to watch the event live at stream.tiu.edu.

Note that Trinity International University is in the Central time zone, so the debate will go from 8 PM to 10 PM Eastern.

I asked Dr. Richards about the format of the debate, and he said it will be a formal debate, with 20-minute opening speeches, timed rebuttals, and possibly timed counter-rebuttals. There will also be a time of Q&A with the audience. So this is not going to be a free for all.

Dr. Richards is one of a handful of scholars I really admire. Although Ron Nash got me started on investigating Christianity and economics, it was Jay Richards who pointed me towards F. A. Hayek and Thomas Sowell. He also did quality work inventing a new argument for design in his work with Guillermo Gonzalez in the book "The Privileged Planet". He also took on theistic evolution by editing a collection of essays on that topic, entitled "God and Evolution". So he's studied economics and intelligent design, and written on both. This will not be Richards' first debate – he's debated Christopher Hitchens before (audio, video).

My understanding is that Wallis is an Obama-supporter who just came out in favor of gay marriage. He is a registered Democrat, so that gives you an idea of what he thinks about abortion, as well. It will be interesting to see whether he is able to find in Biblical support for the idea of forced redistribution of wealth by a powerful central government in the Scriptures. I'm betting that he can't. In addition, it's worth pointing out that Jim Wallis has admitted that he takes funding from the prominent atheist and socialist George Soros.

**Debate preparation**

To get you prepared for tonight's debate, why not check out this 51-minute lecture on Christianity and economics by Jay Richards?

For those who can't see the debate, here is an MP3 that covers the same material, hosted by the Acton Institute.

If you like what you see, I recommend the books "Indivisible" and "Money, Greed and God" which both discuss Christianity and economics.

# Video, audio and summary: Jim Wallis debates Jay Richards on Christianity and the common good

**Wintery Knight** · 24 April 2013 · Archived copy · Original

I had to re-post this post again because Facebook decided to mark it as SPAM. This is the same post I put out 4 hours ago.

The video recording:

- The organizers of the debate tell me that the video will be posted shortly after the debate, and I will link to it in this very post.

The audio recording:

- Click here to download the low quality MP3 audio recording (32 kbps, 29 MB)
- Click here to download the high quality MP3 audio recording (64 kbps, 58 MB)

**The debaters**

Jay Richards:

> Jay Richards, Ph.D., is a Senior Fellow of the Discovery Institute where he directs the Center on Wealth, Poverty and Morality, and is a Visiting Scholar at the Institute for Faith, Work & Economics. Most recently he is the co-author with James Robison of the best-selling *Indivisible: Restoring Faith, Family, and Freedom Before It's Too Late".*
>
> In addition to writing many academic articles, books, and popular essays on a wide variety of subjects, he recently edited the new award winning anthology, *God & Evolution: Protestants, Catholics and Jews Explore Darwin's Challenge to Faith* . His previous book was *Money, Greed, and God: Why Capitalism Is the Solution and Not the Problem* (HarperOne, May 2009), for which he received a Templeton Enterprise Award in 2010.
>
> […]In recent years, he has been a Contributing Editor of The American at the American Enterprise Institute, a Visiting Fellow at the Heritage Foundation, and a Research Fellow and Director of Acton Media at the Acton Institute. Richards has a B.A. with majors in Political Science and Religion, an M.Div. (Master of Divinity) and a Th.M. (Master of Theology), and a Ph.D. (with honors) in philosophy and theology from Princeton Theological Seminary.

Jim Wallis:

> Jim Wallis (born June 4, 1948) is a Christian writer and political activist. He is best known as the founder and editor of *Sojourners* magazine and as the founder of the Washington, D.C.-based Christian community of the same name. Wallis is well known for his advocacy on issues of peace and social justice. Although Wallis actively eschews political labels, he describes himself as an evangelical and is often associated with the evangelical left and the wider Christian left. He works as a spiritual advisor to President Barack Obama. He is married to the Rev. Joy Carroll, who was one of the first female priests in the Church of England. He is also a leader in the Red-Letter Christian movement.
>
> […]In 2010, Wallis admitted to accepting money for Sojourners from philanthropist George Soros after initially denying having done so. When conservative writer Marvin Olasky pointed this out, and that Soros also financed groups supporting abortion, atheism, and same-sex marriage, in a WORLD magazine column, Wallis said Olasky "lies for a living"; he subsequently apologized to Olasky for the comments. In 2011, Wallis acknowledged that Sojourners had received another $150,000.00 from Soros' Open Society Foundation.
>
> […]In regard to the 2011 United States budget proposal, Wallis described Congressman Paul Ryan and his

> congressional allies as “bullies” and “hypocrites.”

Wallis just came out this month in favor of gay marriage. He is also a strong supporter of Barack Obama, who is radically pro-abortion. Some pro-lifers have argued that Barack Obama has the same views on abortion as Kermit Gosnell.

**The format of the debate**

- 20 minute opening speeches
- 10 minute rebuttals
- 10 minutes of discussion
- Q&A for the remainder

**SUMMARY**

I use italics below to denote my own observations.

**Jim Wallis’ opening speech:**

My goal is to spark a national conversation on the “common good”.

A story about my son who plays baseball.

The central goal of Christianity is to promote the “common good”.

Quotes “Catholic social teaching” which values “human flourishing”.

The “common good” is “human flourishing”.

*Is the purpose of Christianity is to make sure that everyone has enough material stuff or to preach the gospel?*

When Christians go on mission trips, it’s good that they focus on things like human trafficking.

Democrat John Lewis is the “conscience of the U.S. Congress”.

*John Lewis gets a 0% rating from the American Conservative Union in 2012.*

*John Lewis gets a 8% rating from the American Conservative Union in 2011.*

*John Lewis gets a 2.29% lifetime rating from the American Conservative Union.*

Nothing is going well in Washington right now except comprehensive immigration reform.

*Does he think that Christianity means giving 12-20 million illegal immigrants a path to citizenship, while skilled engineers cannot even get green cards, even though there is a shortage of them? Does he think that the other people in society who earn more than they receive from the government ought to be taxed more in order to provide more services and benefits to those who earn less than they take from the government?*

**Jay Richards’ opening speech:**

Two topics: 1) what is the common good? 2) what should Christians do to promote the common good?

Catholicism defines the “common good” as “Indeed, the common good embraces the sum of those conditions of the social life whereby men, families and associations more adequately and readily may attain their own perfection.”

We have natural ends that we are supposed to be achieving and some places, like South Korea, are better for allowing that to happen.

The common good is broader and prior to any sort of political specification.

It’s not the political good or what the state is supposed to do.

It's not about the communal good, as in Soviet Russia, where the communal good was above individual and familial good.

The common good is the social conditions that promote the things that we humans have in common as individuals and members of family.

The common good takes account of who we are as individuals and in associations with other individuals, e.g. – families.

Christians don't have to be doing the same things to promote the common good, e.g. – pastors, entrepreneurs, etc.

The church, as the church, has as its primary goal making disciples of all nations.

But even in that capacity, the church should be interested in more than just conversions and saving souls.

We also have to care about God's created reality including things like physics, education, etc.

How should Christians promote the common good in politics?

Question: when is coercion warranted?

In Romans 13, Paul says that the state does have power to coerce to achieve certain ends, like justice.

Most Christians think that there are some things where the state can use coercion, for example, to prevent/punish murder.

It is OK for the police to use coercive force to maintain public order and the rule of law.

But we need to ask whether other things are legitimate areas for the state to use coercive force.

We should only give the state power to coerce when there is no other way to achieve a goal.

We need to leverage the science of economics in order to know how to achieve the common good.

Jay Richards' main point in the debate
Henry Hazlitt: "The art of economics consists in looking not merely at the immediate but at the longer effects of any act or policy; it consists in tracing the consequences of that policy not merely for one group but for all groups."

For example, what happens if we raise the federal minimum wage to $50. What happens next for all groups? That's what we need to ask in order to know which policies achieve the common good.

When it comes to economics a lot of things have been tried in other places and times.

We can know what works and doesn't work by studying what was tried before and in other places.

Many things are counter-intuitive – things that sound good don't work, things that sound bad do work.

Principle: "We are our brother's keeper". Christians have an obligation to care for their neighbors.

We all agree on the goal. But how do we do things that will achieve that goal?

We have to distinguish aspirations from principles and prudential judgment.

Principle: We should provide for the material needs of the poor.

Prudence: Seeing the world as it is, and acting accordingly.

Example policies: which minimum wage is best? None? $10? $20?

We decide based on seeing how different economic policies achieve the goal of helping the poor.

**Jim Wallis' first rebuttal:**

Jesus commanded us to "care for the poor and help to end poverty".

*Actually, Jesus thought that acknowledging him and giving him sacrificial worship was more important than giving money to the poor, see Matthew 26:6-13:*

*[6] While Jesus was in Bethany in the home of Simon the Leper,*

*[7] a woman came to him with an alabaster jar of very expensive perfume, which she poured on his head as he was reclining at the table.*

*[8] When the disciples saw this, they were indignant. "Why this waste?" they asked.*

*[9] "This perfume could have been sold at a high price and the money given to the poor."*

*[10] Aware of this, Jesus said to them, "Why are you bothering this woman? She has done a beautiful thing to me.*

*[11] The poor you will always have with you, but you will not always have me.*

*[12] When she poured this perfume on my body, she did it to prepare me for burial.*

*[13] Truly I tell you, wherever this gospel is preached throughout the world, what she has done will also be told, in memory of her."*

*It's not clear to me whether Jim Wallis thinks that preaching is more important than redistributing wealth to address material inequality.*

I like what Jesus said in a TV series, even though it's not in the Bible when an actor playing Jesus said to "change the world".

*Jesus never said to "change the world" in the Bible. Should we be concerned that he is quoting a TV actor playing Jesus instead of Jesus.*

Here is a terrific story about Bill Bright.

I love Catholic social teaching.

Quote: "All are responsible for all".

I go to the World Economic Forum at Davos, Switzerland every year. I spoke once at 7 AM on the 4th floor.

*It's a funny place for a Christian to be if they care about the poor – rubbing shoulders with leftist elites. He must have named a dozen high-profile people that he spoke with during the debate, as if he could win the debate by some sort of argument from name-dropping. He mentioned the Davos thing several times!*

The greatest beneficiary of government actions to deal with the economic crisis was Wall Street banks.

I'm going to tell you a story about what a Washington lawyer says to Jesus.

I've had conversations with business leaders where I tell them to integrate moral truths.

I talk about the Good Samaritan parable.

Quote: “Do you love your undocumented neighbor?”

Quote: “Do you love your Muslim neighbor?”

**Jay Richards’ first rebuttal:**

Who is responsible for your own children? Who knows the most about them?

Parents should have more discretion over their children because they have more knowledge about their child and what’s best for them.

The Good Samaritan doesn’t show that government should confiscate wealth through taxation and redistribute it.

The Good Samaritan emphasizes voluntarily charity to help people who are not necessarily your immediate neighbor.

Some of the things we do should be for the good of other people in other countries.

But then we are back to leveraging economics to know what policies are good for those other people in other countries.

The principle of subsidiarity: if a problem can be addressed by a lower level of society (family) then we shouldn’t make higher levels (government) address it.

The best place to take care of children is within the family.

Only if the family fails should wider and wider spheres get involved.

Although we want to think of the common good in a global sense, we don’t want to lose sight of the fact

The financial crisis: we need to integrate moral truths, but also economic truths.

We don’t want to assume policies based on intuitions, we want to check our intuitions using economic principles.

Why did we have a financial crisis in mortgages, but not in commodities futures or technology, etc.?

Greed is a contributing factor in all areas of business.

Something more was going on in the mortgage markets than just greed.

There were specific policies that caused the mortgage lending crisis.

The root cause of the problem were “affordable housing policies” that lowered lending restrictions on low income people.

The policy ended up degrading the underwriting standards on loans.

Government intruded into the market and undermined the normal ways of

People were getting massive loans with no income, no jobs, no assets and no down payment.

The federal government created a market for risk loans by guaranteeing

There was a government imposed quota on mortgage lenders such that 50% of their loans had to be given to high-risk borrowers.

That is what led to the financial crisis. Not the free market, but intrusions into the free market.

These policies were well-meaning and implemented by people from both parties. But they had bad effects.

# How the UK government penalizes stay-at-home moms and pushes kids into daycare

**Wintery Knight** · 24 April 2013 · Archived copy · Original

Dina sent me this must-read article from the UK Daily Mail.

Excerpt:

> For years, parents like me who believe that the best place for a young child is at home with a loving parent have been ignored or mocked as smothering, over-protective mothers. Go back to work and put your child in nursery where he can socialise, we were told by 'experts' and feminists. Don't feel guilty.
>
> Unfortunately, the politicians listened — and state-subsidised childcare grew as a result. Between 1995 and 2010, mostly under the Labour governments of Tony Blair and Gordon Brown, for children under five years old it grew by 36.4 per cent. It's been an unmonitored social experiment on a huge scale.
>
> […][T]he tragic irony is that the plethora of unruly children ill-fitted to school coming out of our nurseries is a direct result of successive governments' tunnel vision childcare policy.
>
> It's a policy which, through tax advantages and financial incentives, encourages mothers to go out to work, leaving young children in nurseries.
>
> Under Labour, working mothers were championed and childcare was considered best left to state-subsidised nurseries. It was taboo even to suggest that stay-at-home mothers were performing an equally valid role.
>
> The tragedy is that the Coalition seems to be continuing in the same vein.
>
> […]The most comprehensive research studies have shown that daycare nurseries breed bad behaviour.
>
> A study in the U.S., which followed 1,000 children from birth to 15, found that those children who spent long hours in early daycare were more aggressive than those who had been cared for at home.
>
> This is because young children are not designed to socialise in large groups of their peers. It may promote a quasi independence — but of the wrong kind.
>
> It leads to children bullying or being bullied for social survival. 'We let them fight it out,' is how one helper describe her nursery's approach.
>
> […]As a result of writing about childcare and bringing up children, I hear frequently from mothers who are distraught that they have had to return to work, leaving their children in daycare, because the Government has made it financially impossible for them to remain at home.
>
> Not only has it withdrawn child benefit from households where a single breadwinner earns £60,000, while families in which both parents work and pull in a combined income of up to £98,000 will keep every penny, more recently it announced that families with two working parents will get tax breaks worth £2,000 a year.
>
> The message is loud and clear: neither Cameron nor Clegg genuinely value the role of stay-at-home parents.
>
> Their policies are cruel to mothers and to children, and they don't bode well for the mental health or resilience of future generations.
>
> Cameron and Clegg should create, at the very least, a neutral tax system that does not penalise mothers for staying at home.
>
> And they should stop ignoring what all studies, mothers' instincts and millennia of evolution have told us: that the best place for a very young child is with their mother or father.

I have some pretty strong feelings against daycare, unless it's a last resort. I think this article is helpful because a lot of people who vote for Democrats are women who one day hope to marry and be stay-at-home moms. They believe

that socialism is somehow compatible with a strong marriage, a man who provides for the family, and a mother who focuses on the needs of her toddlers as they grow up. But socialism isn't compatible with that, because socialism is wed to feminism. Feminism is the idea that women need to act like men in order to be equal to men. And the way that social engineers on the left achieve that goal is by creating taxes and incentives to push women out of the home. A stay-at-home mom has no value to the government because she isn't paying taxes for the government to spend, too. They want her to work, both for ideological reasons and for financial reasons. People on the left think that society is more "equal" when parents are separated from their children and the children are raised communally by strangers. That's "equal". Some of the women in the UK who are complaining now undoubtedly voted for these policies. Maybe they had no choice since the Conservatives are the least bad option. But we have choices here, and we need to think carefully when we have the opportunity to vote.

# How marital affairs can lead to divorce, which harms children

**Wintery Knight** · 24 April 2013 · Archived copy · Original

Dina tweeted this article from the UK Daily Mail about affairs and the harm they cause.

Excerpt:

> Jean Duncombe, a sociologist who has conducted extensive research on the subject, says: 'I'm puritanical when someone tells me they're having an affair — because of the work we've done on the impact of divorce on the children.
>
> 'If people say to me that the children don't know, I say: "Are you sure?" or "Think about what you're doing to the children" — and I never would have said that 20 years ago.'
>
> For parents who have affairs are not only lying to their partners, they are often deceiving themselves about the impact their infidelity can have on their offspring.
>
> 'The children are too young to understand what's happening,' they reason. 'In any case, it doesn't concern them. And children are resilient.'
>
> All of the evidence points to the contrary. People don't just betray their partners when they shatter family life with a serious affair — the sad truth is that their children grow up believing their parents have been unfaithful to them, too.
>
> There is substantial research on the short and long-term effects of divorce if it isn't handled well.
>
> For children, these include low self-esteem, a sense of being abandoned, poor performance at school, anti-social behaviour and the heartbreak of simply missing the absent parent.
>
> **Separations provoked by an affair tend to be the most acrimonious. Each parent shoves the blame for the split on to the other, sometimes forcing the children to take sides by supporting his or her version of events.**
>
> **By tearing a child's loyalty in two, parents can inflict profound damage. To make matters worse, research has shown that around half of all fathers lose contact with their offspring within two years of the separation.**
>
> An acrimonious divorce, according to research, doesn't simply hurt children at the time; it can also store up problems for their future.
>
> So, even if their parents separated when they were small, they won't necessarily suffer the full effects until they become adults themselves.
>
> It can contribute to their own marital problems — including affairs of their own — or hamper their ability to form lasting relationships.
>
> […] When an affair is discovered, both parents are so anxious, angry and even traumatised that they have limited resources for dealing with more stress from their children, who are likely to be more demanding than usual.
>
> In some families, sons and daughters are sucked into the emotional vortex. In others, they are given little by way of explanation other than: 'Mummy and Daddy aren't getting on very well at the moment.'
>
> Lily says her adult children find it hard to trust and respect their father because he lied to them as children and still denies he had an affair with the woman to whom he's now married.
>
> 'My son went through a very bad time as a teenager, drinking too much and running away,' she says.
>
> 'Both children mind to this day that my ex has never come clean about what really happened.
>
> 'My daughter hasn't settled down with anyone yet — she doesn't trust that it could last.

> ‘My son, who’s married, once asked me if I thought infidelity might be in his genes because of the fact his father was serially unfaithful.
>
> ‘He seriously considered not getting married at all because he didn’t want to risk hurting his girlfriend in the way that he’d been hurt.’

Very interesting read about what it is like to be a child in an environment like that. I think it’s worth it for us to read articles like this so that we take the problem seriously and make plans to avoid it. If we know how hard it is for children to go through something like this, then not only will we be more careful ourselves, but we’ll be more confident when telling other people who ask for our advice on these things. Sometimes, knowing the details of the harm that can be caused helps us to avoid behaviors that lead up to the harm. We have to know the harm, and we have to know the causes of the harm. Affairs cause divorces, and divorces harm children.

So let’s be careful when we choose who to marry. Has this person shown that they can be faithful? Can they control themselves sexually? Are they good at providing for our needs so that we won’t be tempted to have an affair? Are we good at providing for their needs so that they won’t be tempted to have an affair? How serious are they about religion and morality – do they care about moral obligations when they go against their self-interest? How accustomed are they to limiting their own conduct for the good of others, especially children and animals? Those are the questions we should be asking before getting married.

# New study: function found for beta-globin pseudogene that was labeled “junk” during Dover trial

**Wintery Knight** · 24 April 2013 · Archived copy · Original

Casey Luskin tells us about a new study in Evolution News.

Excerpt:

> A new paper in *Genome Biology and Evolution* argues that the famous beta-globin pseudogene is functional. Why is this pseudogene famous?
>
> Well, it’s been Exhibit A — literally, offered as evidence in a court case — for critics of intelligent design who argue that our genome is full of useless, functionless junk, and therefore can’t be a product of design. Near the beginning of his testimony on the very first day of the 2005 Kitzmiller v. Dover trial, Brown University biology professor Kenneth Miller testified to the court that the beta-globin pseudogene is “broken, and it has a series of molecular errors that render the gene non-functional.” (Day 1 AM, p. 79.) He further told the court:
>
> > And the fact that all three of these species have matching mistakes leads us to just one conclusion, and that’s the same conclusion that Charles Darwin predicted almost a century and a half ago, and that is that these three species share a common ancestor. Matching mistakes are evidence of common ancestry. (Day 1 AM, p. 81)
>
> In his 2008 book *Only a Theory*, Miller is even more explicit in asserting that this pseudogene refutes intelligent design. He writes that “A detailed analysis of the beta-globin pseudogene shows a series of mutations have rendered it nonfunctional” (p. 102). In Miller’s view, that takes care of ID:
>
> > The gorilla and chimpanzee pseudogenes have *exactly* the same set of molecular errors [in their beta-globin pseudogene] … There’s no escaping the implication of these matching mistakes, and there’s no point in arguing that six identical mistakes could have turned up independently in three unrelated species. The only sensible interpretation is that the original errors developed at random in a single common ancestor of these three species. In a court of genetic copyright law, any motion that a designer could claim originality for the human genome would be tossed out in a flash. (pp. 102-103)
>
> Now a new paper in *Genome Biology and Evolution*, “Evolutionary Constraints in the β-Globin Cluster: The Signature of Purifying Selection at the δ-Globin (HBD) Locus and Its Role in Developmental Gene Regulation, argues that the beta-globin pseudogene is not broken, but in fact performs an important function in regulating gene expression.

Remember, Darwinists are still reeling from the ENCODE study that found that the non-coding DNA that they said was *100% junk* was actually *80% functional*. The trouble is that they are always letting their philosophy of naturalism get in the way of their science. They assume that nature is all there is. They assumed that everything is not designed. Then they are quick to say that things that aren’t junk are junk, in order to confirm their assumption. Problems occur later when good science comes along and proves their philosophical assumption of naturalism wrong. Do they then give up the philosophical assumption? Heck no – that’s their religion! But they ought to give it up if they were honest, and stick with the science instead. Too much bad religion among the Darwinists – that’s the problem.

# Chad Meister: can atheists rationally ground morality?

**Wintery Knight** · 25 April 2013 · Archived copy · Original

Philosopher Chad Meister takes a look at the attempts of some prominent atheists to make rational sense of morality within their worldviews.

Here is the abstract:

> Atheists often argue that they can make moral claims and live good moral lives without believing in God. Many theists agree, but the real issue is whether atheism can provide a justification for morality. A number of leading atheists currently writing on this issue are opposed to moral relativism, given its obvious and horrific ramifications, and have attempted to provide a justification for a nonrelative morality. Three such attempts are discussed in this article: Walter Sinnott-Armstrong's position that objective morality simply "is"; Richard Dawkins's position that morality is based on the selfish gene; and Michael Ruse and Edward Wilson's position that morality is an evolutionary illusion. Each of these positions, it turns out, is problematic. Sinnott-Armstrong affirms an objective morality, but affirming something and justifying it are two very different matters. Dawkins spells out his selfish gene approach by including four fundamental criteria, but his approach has virtually nothing to do with morality—with real right and wrong, good and evil. Finally, Ruse and Wilson disagree with Dawkins and maintain that belief in morality is just an adaptation put in place by evolution to further our reproductive ends. On their view, morality is simply an illusion foisted on us by our genes to get us to cooperate and to advance the species. But have they considered the ramifications of such a view? Each of these positions fails to provide the justification necessary for a universal, objective morality—the kind of morality in which good and evil are clearly understood and delineated.
>
> […]We can get to the heart of the atheist's dilemma with a graphic but true example. Some years ago serial killer Ted Bundy, who confessed to over thirty murders, was interviewed about his gruesome activities. Consider the frightening words to his victim as he describes them:
>
> *Then I learned that all moral judgments are "value judgments," that all value judgments are subjective, and that none can be proved to be either "right" or "wrong"….I discovered that to become truly free, truly unfettered, I had to become truly uninhibited. And I quickly discovered that the greatest obstacle to my freedom, the greatest block and limitation to it, consists in the insupportable "value judgment" that I was bound to respect the rights of others. I asked myself, who were these "others"? Other human beings, with human rights? Why is it more wrong to kill a human animal than any other animal, a pig or a sheep or a steer? Is your life more to you than a hog's life to a hog? Why should I be willing to sacrifice my pleasure more for the one than for the other? Surely, you would not, in this age of scientific enlightenment, declare that God or nature has marked some pleasures as "moral" or "good" and others as "immoral" or "bad"? In any case, let me assure you, my dear young lady, that there is absolutely no comparison between the pleasure I might take in eating ham and the pleasure I anticipate in raping and murdering you. That is the honest conclusion to which my education has led me—after the most conscientious examination of my spontaneous and uninhibited self.*[5]
>
> While I am in no way accusing atheists in general of being Ted Bundy-like, the question I have for the atheist is simply this: *On what moral grounds can you provide a response to Bundy?* The atheistic options are limited. If morality has nothing to do with God, as atheists suppose, what does it have to do with? One response the atheist could offer is moral relativism, either personal or cultural. The personal moral relativist affirms that morality is an individual matter; you decide for yourself what is morally right and wrong. But on this view, what could one say to Bundy? Not much, other than "I don't like what you believe; it offends me how you brutalize women." For the personal relativist, however, who really cares (other than you) that you are offended by someone else's actions? On this view we each decide our own morality, and when my morality clashes with yours, there is no final arbiter other than perhaps that the stronger of us *forces* the other to agree. But this kind of Nietzschean "might makes right" ethic has horrific consequences, and one need only be reminded of the

> Nazi reign of terror to see it in full bloom. This is one reason why thoughtful atheists, such as Christopher Hitchens, Walter Sinnott-Armstrong, Richard Dawkins, Sam Harris, Daniel Dennett, and others don't go there.[6]
>
> But what about cultural moral relativism—the view that moral claims are the inventions of a given culture? Most thoughtful atheists don't tread here either, and this is one reason why: If right and wrong are cultural inventions, then it would always be wrong for someone within that culture to speak out against them. If culture defines right and wrong, then who are you to challenge it? For example, to speak out against slavery in Great Britain in the seventeenth century would have been morally wrong, for it was culturally acceptable. But surely it was a morally good thing for William Wilberforce and others to strive against the prevailing currents of their time and place to abolish the slave trade. For the cultural moral relativist, all moral reformers—Wilberforce, Martin Luther King, Jr., even Jesus and Gandhi, to name a few—would be in the wrong. But who would agree with this conclusion? Thankfully, most leading atheists agree that moral relativism is doomed.[7]
>
> So what do they affirm? Here are three accounts that recent atheists have defended: (1) objective morality simply "is," (2) morality is based on the selfish gene, and (3) morality is an evolutionary illusion.[8] Let's take a brief look at each of them.

Have you ever heard any of these three categories of objections? If so, click on through and see Chad Meister's responses.

# Five terrorist attacks succeeded under Obama, but none succeeded under Bush after 9/11

**Wintery Knight** · 25 April 2013 · Archived copy · Original

The Weekly Standard reports.

Excerpt:

> Congressman Tom Cotton took to the House floor "to express grave doubts about the Obama Administration's counterterrorism policies and programs".
>
> "I rise today to express grave doubts about the Obama Administration's counterterrorism policies and programs," said the freshman congressman from Arkansas. "Counterterrorism is often shrouded in secrecy, as it should be, so let us judge by the results. In barely four years in office, five jihadists have reached their targets in the United States under Barack Obama: the Boston Marathon bomber, the underwear bomber, the Times Square Bomber, the Fort Hood shooter, and in my own state—the Little Rock recruiting office shooter. In the over seven years after 9/11 under George W. Bush, how many terrorists reached their target in the United States? Zero! We need to ask, 'Why is the Obama Administration failing in its mission to stop terrorism before it reaches its targets in the United States?'

FIVE terrorist attacks linked to Islamic fundamentalism under Obama, but ZERO such attacks once Bush got serious after the 9/11 attack.

This accusation comes on the heels of a new Congressional report that shows that the Obama administration did indeed lie to cover up their failures on the Benghazi debacle.

The Washington Times summarized what's in the report:

> The report says the State Department quickly notified the White House that the attack was taking place in Benghazi, and that within two hours of the start of the attack the department was telling the White House that al Qaeda-linked Ansar al-Sharia was claiming responsibility for it.
>
> "In an 'Ops Alert' issued shortly after the attack began, the State Department Operations Center notified senior Department officials, the White House Situation Room, and others, that the Benghazi compound was under attack and that 'approximately 20 armed people fired shots; explosions have been heard as well,'" said the report.
>
> "Two hours later, the Operations Center issued an alert that al-Qa'ida linked Ansar al-Sharia (AAS) claimed responsibility for the attack and had called for an attack on Embassy Tripoli," said the report. "Neither alert mentioned that there had been a protest at the location of the attacks. Further, Administration documents provided to the Committees show that there was ample evidence that the attack was planned and intentional. The coordinated, complex, and deadly attack on the [CIA's] Annex [down the road from the State Department mission]–that included sophisticated weapons–is perhaps the strongest evidence that the attacks were not spontaneous. "
>
> "The U.S. government knew immediately that the attacks constituted an act of terror," says the report.
>
> **The report says that the Obama administration purged references to al Qaeda from the talking points that U.S. Ambassador to the U.N. Susan Rice used when she appeared on Sept. 16 on five Sunday talks shows to discuss the Benghazi attacks.**
>
> **"After the attacks, the Administration perpetuated a deliberately misleading and incomplete narrative that the violence grew out of a demonstration caused by a YouTube video," says the report. "The Administration consciously decided not to discuss extremist involvement or previous attacks against**

> **Western interests in Benghazi."**
>
> **"To protect the State Department, the Administration deliberately removed references to al Qaeda-linked groups and previous attacks in Benghazi in the talking points used by Ambassador Rice, thereby perpetuating the deliberately misleading and incomplete narrative that the attacks evolved from a demonstration caused by a YouTube video," says the report.**
>
> **The reports criticizes the administration for responding to the attack as a criminal event requiring an FBI investigation rather than as an act of terrorism against the United States requiring a military response.**

Investors Business Daily is flat out saying that Hillary Clinton lied to cover up the Benghazi attack. (H/T Doug Ross)

**The Obama administration ignored warnings from Russia**

A third point to consider is this article from the Boston Globe. (H/T Hot Air)

Excerpt:

> Russian authorities contacted the US government with concerns about Tamerlan Tsarnaev not once but "multiple" times, including an alert it sent after he was first investigated by FBI agents in Boston, raising new questions about whether the FBI should have paid more attention to the suspected Boston Marathon bomber, US senators briefed on the investigation said Tuesday.
>
> The FBI has previously said it interviewed Tsarnaev in early 2011 after it was initially contacted by the -Russians. In their review, completed in summer 2011, the bureau found no evidence that Tsarnaev was a threat. "The FBI requested but did not receive more specific or additional information from" Russia, the agency said last week.
>
> Following a closed briefing of the Senate Intelligence Committee Tuesday, Senator Richard Burr, a North Carolina Republican, said he believed that Russia alerted the United States about Tsarnaev in "multiple contacts," including at least once since October 2011.

So, in view of these three points, why do you think it is that the Obama administration cannot keep us safe from attacks in the way that Bush could? Well, the *first* reason is that Bush was willing to go to war with states that harbored terrorists in order to deter future attacks. Obama pulls out of the places that are known to train and harbor terrorists. Terrorists interpret Obama's retreats as weakness, and that's why terrorist-sponsoring states feel confident about not cracking down within their own borders. Terrorists feared that Bush would do nasty things to them – like sanction strikes by Israel, or invading Syria, or blockading Iran – if they did not crack down on terrorism themselves and give up their WMDs (as Libya did).

The *second* reason is because Democrats can't believe in their heart of hearts that evil could be caused by anyone other than America and conservative Americans. I've written before about how the Obama administration considers their political enemies to be the real terrorists. People who are pro-life, or want smaller government. That's who this administration is focused on. So, we should not be surprised that the real terrorists are slipping by. Heck, we are even supplying terrorists with welfare to fund their attacks on us. Why shouldn't we expect attacks to increase? We elected people who aren't serious about dealing with our real enemies.

# Do women believe that marriage imposes wife-obligations on them regarding sex?

**Wintery Knight** · 25 April 2013 · Archived copy · Original

Dennis Prager features a lot of discussions about male-female relationships on his show, particularly during the male-female hour.

He did a two part series a while back on 1) male sexuality and 2) what women should do about it within a marriage. Basically, he makes the case that in general, if a woman is married to a good man – a good man whom she freely chose – then she should be willing to say yes to his sexual advances more than she says no.

Part 1 is here.

Excerpt:

> It is an axiom of contemporary marital life that if a wife is not in the mood, she need not have sex with her husband. Here are some arguments why a woman who loves her husband might want to rethink this axiom.
>
> First, women need to recognize how a man understands a wife's refusal to have sex with him: A husband knows that his wife loves him first and foremost by her willingness to give her body to him. This is rarely the case for women. Few women know their husband loves them because he gives her his body (the idea sounds almost funny). This is, therefore, usually a revelation to a woman. Many women think men's natures are similar to theirs, and this is so different from a woman's nature, that few women know this about men unless told about it.
>
> This is a major reason many husbands clam up. A man whose wife frequently denies him sex will first be hurt, then sad, then angry, then quiet. And most men will never tell their wives why they have become quiet and distant. They are afraid to tell their wives. They are often made to feel ashamed of their male sexual nature, and they are humiliated (indeed emasculated) by feeling that they are reduced to having to beg for sex.
>
> When first told this about men, women generally react in one or more of five ways…

It's important to restate that Prager is assuming that the woman has done a competent job of choosing a man who is serious about holding his end of the marriage up. I take this to mean that she has chosen a man who protects, provides and leads on moral and spiritual issues.

Prager then explains the 5 ways that women respond to his statement.

Here's one:

> 1. You have to be kidding. That certainly isn't my way of knowing if he loves me. There have to be deeper ways than sex for me to show my husband that I love him.

And this is the common mistake that some women (especially Western women who are often influenced by radical feminism) make because they think that men are just hairy women with no feelings and desires of their own that are distinctly theirs. In the past, *all* women understood how men are different than women, but today almost no younger women do. In fact, many younger women today struggle with the idea that there is anything about men's natures (and children's natures) that they need to learn about. Younger women in the West today often think that they only need to be in touch with their own feelings – and that men and children simply have to get used to the idea that they have no right to make any demands on a woman – she has no moral obligations in a marriage.

Here's another from the list:

> 4. You have it backwards. If he truly loved me, he wouldn't expect sex when I'm not in the mood.

Again, this is the common mistake that many younger Western/feminist women today make in thinking that love is a one-way street – flowing from men and children to the woman. If men and children DON'T do what the woman wants, or if they make demands on her, then they don't "love" her and she is justified in ignoring them. In older generations, women knew that they had moral obligations that existed whether they felt like doing them or not. They especially knew that their free decision to get married to a man would impose obligations on them to supply for the man's distinct male needs. She might not understand those needs. She might be made happy by fulfilling them. But old-fashioned women *knew* what men needed, and they felt obliged to perform their role if the man was perform his roles (protector, provider, moral/spiritual leader). She didn't have to be "happy" to do the roles, just as the man doesn't have to be "happy" about doing his roles. Marriage is about commitment to roles that impose moral obligations on each partner. Marriage is not about happiness, primarily.

I think this whole problem of Western/feminist women not understanding men, of treating men as objects, and of demeaning male feelings and values, is very serious. In my opinion, there is a whole lot of work that needs to be done by Western/feminist women in order to fix this problem. The best place to learn about this is in Dr. Laura's book "The Proper Care and Feeding of Husbands", which is a book that women should have to read and write about in order to begin a relationship with a man, just to prove that they understand the needs of men and the concept of moral obligations. It's like an application form for a serious relationship. Sex is just one thing in a marriage, but a serious man should insist that a woman take him seriously about it. He should also make sure that she has shown, during the courtship, that she is comfortable doing things to help him that don't necessarily make her happy.

It is important for a man to test-drive a woman before marrying her by giving her things to do that are good things (e.g. – reading a book on apologetics or economics or intelligent design) so that he can see that she is willing to do good things whether they make her happy or not. Men seem to be very silly these days about marrying women who have only shown that they like having fun all the time, and never want to learn anything hard. Pre-marital sex, having fun, getting drunk, and going out, etc. are not the right foundation for marriage, which requires mutual self-sacrifice. There is no such thing as a "feminist" marriage – marriage is not about selfishness and playing the victim. Men should understand that many women who are willing to have sex before marriage will cut it out after marriage, because they are not used to doing things that don't make them happy. I think you can even remain chaste and still test a women during courtship for this self-sacrificial quality by asking her to do other things that are still very good for her to do. The important thing is to see if "doing right" is more important to her than "feeling happy".

And just because a woman is a virgin and a Christian, it doesn't make her immune to the danger of feeling justified in withholding sex. I actually had a conversation with a chaste Christian woman once who said that women should not be obligated to do things that they didn't feel like doing in a marriage. So, I asked her if men were obligated to go to work when they didn't feel like going. She said yes, and acted as though I were crazy for asking. I just laughed, because she didn't even see the inconsistency. Men – there is a double standard that many Western/feminist women have, even chaste Christian women can have it. Most young women today just don't understand men, and they don't want to understand them. They just want what they want and in the quickest way possible. Understanding the needs of men and children, or how feminist-inspired laws discourage men from committing to marriage and parenting, are of no interest at all many Western/feminist women.

Part 2 is here.

Excerpt:

> Here are eight reasons for a woman not to allow not being in the mood for sex to determine whether she denies her husband sex.

He then explains the eight reasons.

Here's one of them:

> 7. Many contemporary women have an almost exclusively romantic notion of sex: It should always be mutually desired and equally satisfying or one should not engage in it. Therefore, if a couple engages in sexual relations when he wants it and she does not, the act is "dehumanizing" and "mechanical." Now, ideally, every time a husband and wife have sex, they would equally desire it and equally enjoy it. But, given the different sexual natures of men and women, this cannot always be the case. If it is romance a woman seeks — and she has every reason to seek it — it would help her to realize how much more romantic her husband and her marriage are likely to be if he is not regularly denied sex, even of the non-romantic variety.

This makes the point that many young women today do not really understand that they are, in a sense, capable of changing their husband's conduct by the way they act themselves. I think that younger women seem to think that their role in the relationship is to sort of do nothing and wait for the man to serve them. This actually happened to me with another "Biblical Manhood and Womanhood" Calvinist woman. I sat down with her and tried to explain to her what I did for a living, and she got up and left, claiming she did not need to know how the money was made – nor did she need to support me in earning that money. On another occasion, I was explaining a difficult financial problem I had to solve and she screeched back her chair and said "go ahead and solve it then". This is actually very common. Many, many women can read an entire book on "Biblical Manhood and Womanhood" and come out of it knowing all the obligations and responsibilities of men, and none of the obligations and responsibilities of women. Men, it's your *job* to test for this during courtship, if you expect your woman to help you in making a marriage and children for God's glory.

Let me emphasize the point. Women in the West who are influenced by radical feminism are really totally unaware that their role in the relationship is not to stand back and refuse to do anything, then respond to the man's subsequent unwillingness to perform with nagging and complaining and gossiping to their girlfriends. What is interesting is that often many of these women who are very active in fashionable heroic causes are the least capable of self-denial and self-sacrifice when in a relationship with a man. They can march around with signs defending the unborn and promoting marriage, and still be very comfortable ignoring male needs and disrespecting men. Activism *can be* an expression of narcissism. "Look at me! I'm so great!" The very woman you see on TV being interviewed about abortion, homeschooling and daycare is the same one you need to test during courtship to see if she thinks that YOU are as deserving of concern as an unborn or born child is. One pro-family activist I spoke to about this told me that setting out obligations on her that would make the marriage serve God was "too strict". She admitted that the things I was asking her to learn were good things, but that they were "too strict" for her, even if they were good things.

At the end of the article, Prager makes a general point about women that I think needs to be emphasized over and over and over:

> That solution is for a wife who loves her husband — if she doesn't love him, mood is not the problem — to be guided by her mind, not her mood, in deciding whether to deny her husband sex.

I think that is an excellent question to ask a woman. What does it mean to love a man? One of my favorite questions to ask women who I am courting is "If we were married for a day, legally, and before God, what are some of the things that you would want to do to me and for me?" Usually the response is to turn the question around and make it about them. Then I dazzle them with a string of activities that addresses their needs in specific ways, based on their feelings and past experiences. Men – you definitely want to ask women what she wants to provide for you if you were to get married. How does she see your feelings and past experiences, and what specific things would she like to do to address them with her own two hands? Does she even see marriage as having anything to do with you at all?

# How did the Reagan tax cuts and Bush tax cuts affect unemployment?

**Wintery Knight** · 26 April 2013 · Archived copy · Original

Consider this article by the Cato Institute, a libertarian think tank, which discusses how the Reagan tax cuts affected the unemployment rate.

Excerpt:

> In 1980, President Carter and his supporters in the Congress and news media asked, "how can we afford" presidential candidate Ronald Reagan's proposed tax cuts?
>
> Mr. Reagan's critics claimed the tax cuts would lead to more inflation and higher interest rates, while Mr. Reagan said tax cuts would lead to more economic growth and higher living standards. What happened? Inflation fell from 12.5 percent in 1980 to 3.9 percent in 1984, interest rates fell, and economic growth went from minus 0.2 percent in 1980 to plus 7.3 percent in 1984, and Mr. Reagan was re-elected in a landslide.
>
> […]Despite the fact that federal revenues have varied little (as a percentage of GDP) over the last 40 years, there has been an enormous variation in top tax rates. When Ronald Reagan took office, the top individual tax rate was 70 percent and by 1986 it was down to only 28 percent. All Americans received at least a 30 percent tax rate cut; yet federal tax revenues as a percent of GDP were almost unchanged during the Reagan presidency (from 18.9 percent in 1980 to 18.1 percent in 1988).
>
> What did change, however, was the rate of economic growth, which was more than 50 percent higher for the seven years after the Reagan tax cuts compared with the previous seven years. This increase in economic growth, plus some reductions in tax credits and deductions, almost entirely offset the effect of the rate reductions. Rapid economic growth, unlike government spending programs, proved to be the most effective way to reduce unemployment and poverty, and create opportunity for the disadvantaged.

The conservative Heritage Foundation describes the effects of the Bush tax cuts.

Excerpt:

> President Bush signed the first wave of tax cuts in 2001, cutting rates and providing tax relief for families by, for example, doubling of the child tax credit to $1,000.
>
> At Congress' insistence, the tax relief was initially phased in over many years, so the economy continued to lose jobs. In 2003, realizing its error, Congress made the earlier tax relief effective immediately. Congress also lowered tax rates on capital gains and dividends to encourage business investment, which had been lagging.
>
> It was the then that the economy turned around. Within months of enactment, job growth shot up, eventually creating 8.1 million jobs through 2007. Tax revenues also increased after the Bush tax cuts, due to economic growth.
>
> In 2003, capital gains tax rates were reduced. Rather than expand by 36% as the Congressional Budget Office projected before the tax cut, capital gains revenues more than doubled to $103 billion.
>
> The CBO incorrectly calculated that the post-March 2003 tax cuts would lower 2006 revenues by $75 billion. Revenues for 2006 came in $47 billion above the pre-tax cut baseline.
>
> Here's what else happened after the 2003 tax cuts lowered the rates on income, capital gains and dividend taxes:
>
> - GDP grew at an annual rate of just 1.7% in the six quarters before the 2003 tax cuts. In the six quarters following the tax cuts, the growth rate was 4.1%.
> - The S&P 500 dropped 18% in the six quarters before the 2003 tax cuts but increased by 32% over the next

> six quarters.
>
> - The economy lost 267,000 jobs in the six quarters before the 2003 tax cuts. In the next six quarters, it added 307,000 jobs, followed by 5 million jobs in the next seven quarters.
>
> The timing of the lower tax rates coincides almost exactly with the stark acceleration in the economy. Nor was this experience unique. The famous Clinton economic boom began when Congress passed legislation cutting spending and cutting the capital gains tax rate.

Whenever people with savings take risks to grow their wealth, there will be jobs created.

# The undisputed best book on intelligent design now has a sequel

**Wintery Knight** · 26 April 2013 · Archived copy · Original

The very best book on intelligent design is Dr. Stephen C. Meyer's "Signature in the Cell", which discusses the knotty problem of the origin of life. And now, a new book by Dr. Meyer has been announced to tackle another huge problem: the fossil record.

Here is the description of the new book, entitled "Darwin's Doubt":

> Darwin's *Origin of Species* launched a revolution whose scientific, cultural and spiritual effects are still with us. Now a new revolution is on the horizon. On June 18, the HarperOne imprint of HarperCollins will publish *Darwin's Doubt: The Explosive Origin of Animal Life and the Case for Intelligent Design*, by Stephen C. Meyer.
>
> […]Meyer begins with what Darwin himself regarded as a troubling enigma, a subject of doubt and even some scientific distress. It is a mystery from which subsequent generations of Darwinists have sought to distract the public's attention. Some 530 million years ago, in the event called the Cambrian explosion, there sprang suddenly into existence the majority of animal body plans (phyla) that have existed on Earth. The shallow seas of the Cambrian period abruptly teemed with diverse, exotic animals.
>
> Evolutionary biologists and paleontologists have struggled to explain this epic event. Dr. Meyer takes his readers on a journey through scientific history, starting with the discovery of the Burgess Shale by Charles Walcott in 1909. He shows how failed attempts to give a satisfying Darwinian explanation of the Cambrian explosion have opened the door to increasingly profound questions, posed by evolutionary biologists themselves, leading to a far greater mystery: the origin of the biological information necessary to build the animals of the Cambrian and all the living creatures that have existed on Earth.

# Barack Obama to largest abortion provider Planned Parenthood: God Bless You

**Wintery Knight** · 27 April 2013 · Archived copy · Original

Life Site News reports.

> During his speech to the Planned Parenthood abortion business today, President Barack Obama asked God to bless the number one abortion performer in the United States.
>
> Here is how he ended his speech:
>
> "As long as we've got to fight to make sure women have access to quality, affordable health care, and as long as we've got to fight to protect a woman's right to make her own choices about her own health, I want you to know that you've also got a president who's going to be right there with you, fighting every step of the way," said Obama. "Thank you, Planned Parenthood. God bless you."

Planned Parenthood gets millions of dollars in taxpayer funding, and they then spend a portion of those millions in subsidies on donations to the Democrat Party.

See the related posts to see what Planned Parenthood does that is so "good".

# Stephen C. Meyer on the nationally syndicated Michael Medved show

**Wintery Knight** · 28 April 2013 · Archived copy · Original

The Michael Medved show is a national radio show broadcast out of Seattle, Washington. According to Talkers magazine, he has the fifth largest radio audience. Mr. Medved will now have a segment on origins, evolution and intelligent design every week.

Here is the announcement:

> Does science conflict with religious faith? Does nature offer scientific evidence of design? Should public-school students learn about all sides of contentious scientific issues? Or should teachers spoon-feed them with only the politically approved views? Should scientists be free to pursue the truth, wherever the search takes them? What if it leads to conclusions that are disturbing to a rigidly secular point of view?
>
> Starting this Thursday, April 25, the Michael Medved Show will shine a bright light on these and other fascinating questions that are vital to the future of our nation and our culture.
>
> […]From Darwinian evolution to climate change, science has become a major flashpoint in the culture war. In using science as a political and cultural weapon, aggressive, evangelizing materialists count on our not knowing enough to argue back. That's why, to follow and participate in the greatest debates of our day, you *need to know about the science* behind the controversies.
>
> Each week, leading fellows from Discovery will join Mr. Medved to talk about the intersection of science and culture, how bad science and biased science are corroding the best American values. They'll talk about the assault on human dignity and uniqueness, about attempts to silence dissenting scientists and suppress academic freedom. They will discuss the danger posed by revived Social Darwinism and the new eugenics. And yes, they'll explore the debate over scientific materialism versus intelligent design.
>
> The Michael Medved Show is one of the top ten most listened to radio talk shows in the United States. Syndicated to some 200 radio stations, it reaches an estimated weekly audience of 3-4 million people.

Here is the first segment, courtesy of the Intelligent Design: The Future podcast.

The MP3 file is available for download at the link above.

The description is:

> On this episode of **ID the Future**, hear Dr. Stephen Meyer talk with Michael Medved on the Medved Show's very first "Science and Culture Update."
>
> Each week, leading fellows from Discovery Institute will join Mr. Medved to talk about the intersection of science and culture. Listen in live online or on your local Medved station, or stay tuned for at ID the Future for the weekly podcast.

The podcast is about 15 minutes long, and focuses on work of the atheist philosopher Thomas Nagel, and his views on intelligent design. I highly recommend that you listen to the podcast. It was awesome.

This segment was broadcast in the third hour of the Thursday show, so I am expecting that it will be a regular feature of the third hour. This is cause for rejoicing – a mainstream radio audience is going to have a chance to think about how science and culture interact. Great news!

Now might be a good time to subscribe to the ID: The Future podcast.

# New York Times editorial blames Americans for Boston Muslim terrorist attack

**Wintery Knight** · 28 April 2013 · Archived copy · Original

Mark Steyn takes a look at it in his National Review article. (H/T Doug Ross)

Excerpt:

> Eight-year-old Martin [Richards] was killed; his sister lost a leg; and his mother suffered serious brain injuries. What did the Richards and some 200 other families do to deserve having a great big hole blown in their lives? Well, according to the *New York Times*, they and you bear collective responsibility. Writing on the op-ed page, Marcello Suarez-Orozco, dean of the UCLA Graduate School of Education and Information Studies, and Carola Suarez-Orozco, a professor at the same institution, began their ruminations thus:
>
> "The alleged involvement of two ethnic Chechen brothers in the deadly attack at the Boston Marathon last week should prompt Americans to reflect on whether we do an adequate job assimilating immigrants who arrive in the United States as children or teenagers."
>
> […]How hard would it be for Americans to be less inadequate when it comes to assimilating otherwise well-adjusted immigrant children? Let us turn once again to Mrs. Tsarnaev:
>
> "They are going to kill him. I don't care," she told reporters. "My oldest son is killed, so I don't care. I don't care if my youngest son is going to be killed today. . . . I don't care if I am going to get killed, too . . . and I will say Allahu Akbar!"
>
> You can say it all you want, madam, but everyone knows that "Allahu Akbar" is Arabic for "Nothing to see here." So, once you've cleared the streets of body parts, you inadequate Americans need to redouble your efforts.

It's our fault that this happened. We didn't supply Mrs. Tsarnaev with enough welfare money. We need to spend more on public schools and free health care and food stamps. At least, that's how the left views it. That's how the Obama administration views it. They would never deport people like the Boston bombers, because that would be "intolerant".

Victor Davis Hanson explains how far the United States will go to avoid deporting welfare-collecting criminals:

> Deportation is now politically incorrect, sort of like the T-word "terrorism" which the administration also seeks to avoid.
>
> […]Why were the Tsarnaevs granted asylum in the United States – and why were some of them not later deported? Officially, they came here as refugees. As ethnic Chechens and former residents of Kyrgyzstan, they sought "asylum" here from anti-Muslim persecution – given that Russia had waged a brutal war in Chechnya against Islamic militants.
>
> Yes, the environment of Islamic Russia was and still can be deadly. But if the Tsarnaevs were supposedly in danger there, why did the father, Anzor, after a few years choose to return to Dagestan, Russia, where he now apparently lives in relative safety? Why did one of the alleged Boston bombers, Tamerlan Tsarnaev, return to Russia for six months last year – given that escape from such an unsafe place was the very reason that the United States granted his family asylum in the first place?
>
> […]What, exactly, justifies deportation of immigrants of any status? Failure to find work and become self-supporting? Apparently not. The Tsarnaev family reportedly had been on public assistance. This is not an isolated or unusual instance.
>
> […]Should those residing here illegally at least avoid committing crimes and follow the rules of their adopted

> country? Apparently not – given that Tamerlan Tsarnaev, a skilled boxer, was charged in 2009 with domestic violence against his girlfriend. His mother, Zubeidat, also back in Russia now, was reportedly arrested last year on charges of shoplifting some $1,600 in goods from a Boston-area store.

Meanwhile, skilled immigrants who come to this country and work for decades without getting so much as a speeding ticket can just go back where they came from. We don't want them – we need to deport them. They are "bad" immigrants who need to go back where they came from. We want the welfare-collecting terrorist immigrants, instead. Like Mrs. Tsarnaev. She is a "good" immigrant who needs to be fast-tracked to permanent residency and citizenship.

Meanwhile, the Department of Homeland Security continues to ignore real terrorism and claim that white male gun owners are the real terrorists in their training material. Just like the FBI claims that pro-lifers are the real terrorists in their training material. The Obama administration isn't serious about national security.

# Live Action sting: abortion clinic recommends drowning live baby in toilet

**Wintery Knight** · 29 April 2013 · Archived copy · Original

Life News reports. (H/T Gateway Pundit)

Excerpt:

> In a new undercover, investigative video, a staffer at an abortion clinic in Bronx, New York is shown on film telling a customer to flush the body of a baby born alive following a failed abortion down the toilet.
>
> The video shows how the kinds of gruesome late-term and live-birth abortions done at abortion practitioner Kermit Gosnell's "House of Horrors" abortion clinic are not limited to his abortion facility alone.
>
> […]In the video, the abortion counselor is caught on tape describing, in gruesomely precise terms, how late-term abortions happen.  She details what is done with a baby after the abortion and advises to "flush" the baby down the toilet if he or she is delivered at home before the final stage of the two- or three-day abortion procedure.
>
> *"If it comes out, then it comes out. Flush it. … if anything, you know, put it in a bag or something or somewhere and bring it to us."*

What might Obama say to the abortion worker in this story? Well, he told Planned Parenthood "God Bless You" recently, and they defended the Gosnell view of abortion at a committee hearing.

# J. Warner Wallace: making sense out of the creation from nothing

**Wintery Knight** · 29 April 2013 · Archived copy · Original

An article from “Cold Case Christianity” author J. Warner Wallace.

Excerpt:

> Even as an atheist, I understood the challenge offered by the “Standard Cosmological Model” (theBig Bang Theory) when examined from my naturalistic worldview. This model infers a “cosmological singularity” in which all space, time and matter came into existence at a point in the distant past. In others words, “everything” came from “nothing”. I knew this presented a problem for me as a naturalist; if the universe had a beginning, the “principle of causality” inclined me to believe there must have been a cause. But, what could cause something as vast as the universe? Could it have caused itself to come into existence, or must the first cause of all space, time and matter be non-spatial, atemporal and immaterial? How could “*every*thing” come from “*no*thing”?
>
> One way to navigate this dilemma is simply to redefine the terms we are using. What do we mean when we say “everything” or “nothing”? At first these two terms might seem rather self-explanatory, but it’s important for us to take the time to define the words. By “everything” we mean all space, time and matter. That’s right, space is “something”; empty space is part of “everything” not part of “nothing”. For some of us, that’s an interesting concept that might be hard to grasp, but it’s an important distinction that must be understood. When we say “nothing”, we mean the complete absence of everything; the thorough non-existence of anything at all (including all space time and matter). These two terms, when defined in this way, are consistent with the principles of the Standard Cosmological Model, but demonstrate the dilemma. If everything came from nothing, what caused this to occur? What is the non-spatial, atemporal, immaterial, uncaused, first cause of the universe? A cause of this sort sounds a lot like a supernatural Being, and that’s why I think many naturalists have begun to redefine the terms.

I was just being asked about this by a friend of mine who I sent two copies of Wallace’s book to. (One for non-Christian him, and one for his non-Christian girlfriend, too). He wanted to know what was outside the expansion of space and whether the space would expand forever and what was the space expanding into and would we ever be able to see what was outside of our space. Well, these are all good questions and that’s why Christians need to get used to the standard cosmology. There is nothing at all about that hurts us, but it’s just awful for atheists who think that the universe exists without a cause.

You can click on the link to the article for a  hilarious illustration of how atheists redefine nothing!

# Is Baltimore's plan to use female prison guards in a male prison working?

**Wintery Knight** · 29 April 2013 · Archived copy · Original

The liberal Daily Beast reports. (H/T Ari)

Excerpt:

> The secretary of Maryland's Department of Public Safety and Correctional Services watched this week as the agency he has run for the last six years turned into a national laughingstock after federal officials indicted 13 women who, as guards at the Baltimore City Detention Center, acted like little more than underlings for members of a dangerous prison gang, the Black Guerrilla Family. Four of the correctional officers became reportedly pregnant by the leader of the gang, and two of them had his name tattooed onto their bodies—one on her neck, the other on her wrist.
>
> […]The allegations unsealed in the federal indictment are eye-popping. Many have been quick to make the comparison to *The Wire,* the crime drama that put Baltimore's criminal underworld into the public consciousness, but what appears to have gone on at the Baltimore City Detention Center, a medieval-looking hulk of a jail in the center of town, would strain the credulity of HBO. Female guards smuggled cellphones, marijuana, and prescription drugs to inmates. Gang members ordered hits from inside the jail and dined on salmon and Grey Goose vodka that was smuggled in on their behalf. Corrections officers stood guard for one another so they could have sex with inmates. They warned prisoners of upcoming searches of their cells by unfriendly colleagues. Tavon White, the leader of the Black Guerrilla Family who allegedly impregnated four of the guards and was there waiting for his murder trial to commence, was caught bragging on a wiretap: "This is my jail. You understand that? I'm dead serious. I make every final call in this jail."

Maybe we should be setting some limits on the feminist idea that men and women are interchangeable, and that women have to make up have the workforce of every job that men do. That's the feminist ideal, but I don't think that customers (in this case, the taxpayers) are well-served by it.

If we as citizens keep voting for bigger government, we need to understand that government is thoroughly compromised by left-wing ideologies that are not interested in producing results for us. If you want to get value for money, you go to the private sector and buy something from a private business that is accountable to you on price and quality. We already have lots of private sector run prisons here, and they work better than Baltimore, that's for sure. Even other countries have tried privatized prisons, why not Maryland?

# Tsarnaev family received $100,000 in welfare, food stamps and other benefits

**Wintery Knight** · 30 April 2013 · Archived copy · Original

The Boston Herald reports. (H/T Ari)

Excerpt:

> The Tsarnaev family, including the suspected terrorists and their parents, benefited from more than $100,000 in taxpayer-funded assistance — a bonanza ranging from cash and food stamps to Section 8 housing from 2002 to 2012, the Herald has learned.
>
> "The breadth of the benefits the family was receiving was stunning," said a person with knowledge of documents handed over to a legislative committee today.
>
> The state has handed over more than 500 documents to the 11-member House Post Audit and Oversight Committee, which today met for the first time and plans to call in officials from the Department of Transitional Assistance to testify.
>
> Transitional assistance officials also told the Herald tonight that the agency was conducting its own investigation into whether Tamerlan Tsarnaev's family ever notified the DTA about his extended trip to Russia, and has since expanded its probe to include a full history of the benefits received by the entire Tsarnaev family.

Arthur Brooks has done some work on seeing what makes people happy, and he concluded that "earned success" is much better for an individual than dependency on government, even if the person has the same amount of wealth either way.

Take a look:

It turns out that making everyone equal by handing redistributing wealth from those who work to those who don't doesn't really make everyone equally happy. Maybe if the Tsarnaevs had to work to an their success by serving their fellow man in the private sector, they would not be so miserable. It cannot be good for people to be dependent on the government. It doesn't make them grateful. It doesn't make them good citizens. It doesn't make them care about their neighbors. Capitalism and the dignity of labor do that.

# Feminist Nancy Pelosi pushes national daycare program

**Wintery Knight** · 30 April 2013 · Archived copy · Original

CNS News reports on it.

Excerpt:

> Rep. Nancy Pelosi (D-Calif.) told a gathering in Cleveland that childcare for all should be the next "pillar" of American government and "the president comes close in his budget when he says 'preschool for all' because we have a situation of children learning, parents earning."
>
> […]"What we have to do and not necessarily as, shall we say, as transformative as Social Security and Medicare and the Affordable Care Act for everybody– but I think very important to our country is to have affordable quality childcare for all of America's children. If we are going to unleash all that women have to offer we have to really get to this point."
>
> […]"Now, the president comes close in his budget when he says 'preschool for all' because we have a situation of children learning, parents earning."

With respect to children, the goals are feminism are simple. Force women to act like men. Women have to be encouraged not to marry and then raise their young children. Or, if they do have children, then the children must be taken away so that they keep working and paying taxes to the smart people in government. The one thing that is not permitted by the ideology of feminism is for a man to go to work and for a woman to stay home and attend to her young children. Having a mother stay home with the children is better for them, according to science, but it's not something that feminists like Nancy Pelosi support.

I think another one of the reasons why they don't support it is that they don't like the idea that some women make the choice to get married to a man who can protect and provide, and some don't. They think "how can I make those women equal, so that no one is honored or shamed for choosing wisely?" And the solution is to have the government raise all the children. The woman who chose wisely has a husband who works for $80,000 in income. The government takes half of it and gives it to the single mother who didn't bother to choose a good man. Both sets of children end up in government-run day care, and everyone is equal. Isn't that a good idea? To make it easier for women to not have to care about finding and keeping a good man? Well, people on the left do think it's a good idea.

# Can the worldview of naturalism rationally ground mind, meaning and morality?

**Wintery Knight** · 30 April 2013 · Archived copy · Original

J. Warner Wallace, author of "Cold Case Christianity", explains why it can't.

Here's just one of the three troubles with naturalism:

> **Morality**
>
> If naturalism is true, morality is nothing more than a matter of opinion. All of us, as humans, have simply come to embrace those cultural or personal mores that best promote the survival of the species. There is no transcendent, objective moral truth. Instead, cultures merely embrace the values and moral principles that "work" for them and have resulted in the flourishing of their particular people group. If this is the case, one group of evolved humans has no business trying to tell another evolved group what is truly right or wrong from a moral perspective. After all, each group has successfully arrived at their particular level of development by embracing their own accepted moral standards. Arguments over which moral truths provide for greater human flourishing are simply subjective disagreements; there is no transcendent, objective standard that can adjudicate such disagreements from a naturalistic perspective.

Click the link to read the other two!

It is fun to put naturalists on the defensive. I think that the most odd thing about naturalism is that they think that all moral statements are true or false depending on personal preferences. For example, slavery. Whether to own slaves or not is really the slave owner's choice, on naturalism. Some societies in some places and times allow it, and others don't. Naturalism has nothing at all to say about which view is correct, because there is no design for humans on naturalism – no way we ought to be. Every view is as good as any other, because there is no one to decide.

The justification for moral values and duties is important because the justification is what helps us to do the right thing when it involves self-sacrifice and self-denial. Anybody can be good when it's easy. Being good when it's hard takes rationality, and naturalists don't have that in their worldview. When a naturalists says "I'm a good person without God", you have to understand that they are making that statement as a statement of preference. On their view, there is nothing right or wrong with anything, *as a matter of fact*. They have determined themselves what counts as good, and they are in compliance with their own arbitrary preferences. That's what they mean by "I'm good".

# Benghazi whistle-blower: assets to protect the embassy were available

**Wintery Knight** · 1 May 2013 · Archived copy · Original

Here's a report from one of the whistle-blowers who is shedding light on the Benghazi cover-up.

Excerpt:

> A military special ops member who watched as the deadly attack on the U.S. Consulate in Benghazi unfolded last September told Fox News the U.S. had highly trained forces just a few hours away, and said he and others feel the government betrayed the four men who died in the attack.
>
> Speaking on condition of anonymity, and appearing in a Fox News Channel interview with his face and voice disguised, the special operator contradicted claims by the Obama administration and a State Department review that said there wasn't enough time for U.S. military forces to have intervened in the Sept. 11 attack in which U.S. Ambassador to Libya Chris Stevens, an embassy employee and two former Navy SEALs working as private security contractors were killed.
>
> "I know for a fact that C-110, the EUCOM CIF, was doing a training exercise in … not in the region of North Africa, but in Europe," the operator told Fox News' Adam Housley. "And they had the ability to act and to respond."
>
> The C-110 is a 40-man Special Ops force capable of rapid response and deployment specifically trained for incidents like last year's attack in Benghazi. During the night of the Sept. 11, 2012, attack in Libya, in which U.S. Ambassador Chris Stevens and three other Americans were killed in Libya, the C-110 were training in Croatia, just 3 ½ hours away.
>
> "We had the ability to load out, get on birds and fly there, at a minimum stage," the operator told Fox News. "C-110 had the ability to be there, in my opinion, in a matter of about four hours…four to six hours."
>
> Being so close, C-110s would have been able to respond had there been a second attack, the source added.

Will this testimony come to light at a hearing, or will it be covered up by the Obama administration?

Fox News reports that the Obama administration is threatening whistle-blowers.

Excerpt:

> At least four career officials at the State Department and the Central Intelligence Agency have retained lawyers or are in the process of doing so, as they prepare to provide sensitive information about the Benghazi attacks to Congress, Fox News has learned.
>
> Victoria Toensing, a former Justice Department official and Republican counsel to the Senate Intelligence Committee, is now representing one of the State Department employees. She told Fox News her client and some of the others, who consider themselves whistle-blowers, have been threatened by unnamed Obama administration officials.
>
> "I'm not talking generally, I'm talking specifically about Benghazi – that people have been threatened," Toensing said in an interview Monday. "And not just the State Department. People have been threatened at the CIA."
>
> Toensing declined to name her client. She also refused to say whether the individual was on the ground in Benghazi on the night of Sept. 11, 2012, when terrorist attacks on two U.S. installations in the Libyan city killed four Americans, including U.S. Ambassador to Libya Chris Stevens.
>
> However, Toensing disclosed that her client has pertinent information on all three time periods investigators

> consider relevant to the attacks: the months that led up to the attack, when pleas by the ambassador and his staff for enhanced security in Benghazi were mostly rejected by senior officers at the State Department; the eight-hour time frame in which the attacks unfolded, and the eight-day period that followed the attacks, when Obama administration officials incorrectly described them as the result of a spontaneous protest over a video.
>
> "It's frightening, and they're doing some very despicable threats to people," she said. "Not 'we're going to kill you,' or not 'we're going to prosecute you tomorrow,' but they're taking career people and making them well aware that their careers will be over [if they cooperate with congressional investigators]."

In general, Democrats are not strong on foreign policy, because they blame America for everything and praise our enemies when they attack us. You won't get much security from that attitude. When things go wrong, they will try to cover it up. They will even resort to outright lies in order to avoid the blame they deserve for opening us up to terrorist attacks.

# New EPA report: natural gas production is even cleaner than previously thought

**Wintery Knight** · 1 May 2013 · Archived copy · Original

From the liberal Associated Press. (H/T Hot Air)

Excerpt:

> The Environmental Protection Agency has dramatically lowered its estimate of how much of a potent heat-trapping gas leaks during natural gas production, in a shift with major implications for a debate that has divided environmentalists: Does the recent boom in fracking help or hurt the fight against climate change?
>
> Oil and gas drilling companies had pushed for the change, but there have been differing scientific estimates of the amount of methane that leaks from wells, pipelines and other facilities during production and delivery. Methane is the main component of natural gas.
>
> The new EPA data is “kind of an earthquake” in the debate over drilling, said Michael Shellenberger, the president of the Breakthrough Institute, an environmental group based in Oakland, Calif. “This is great news for anybody concerned about the climate and strong proof that existing technologies can be deployed to reduce methane leaks.”
>
> The scope of the EPA’s revision was vast. In a mid-April report on greenhouse emissions, the agency now says that tighter pollution controls instituted by the industry resulted in an average annual decrease of 41.6 million metric tons of methane emissions from 1990 through 2010, or more than 850 million metric tons overall. That’s about a 20 percent reduction from previous estimates. The agency converts the methane emissions into their equivalent in carbon dioxide, following standard scientific practice.
>
> The EPA revisions came even though natural gas production has grown by nearly 40 percent since 1990. The industry has boomed in recent years, thanks to a stunning expansion of drilling in previously untapped areas because of the use of hydraulic fracturing, or fracking, which injects sand, water and chemicals to break apart rock and free the gas inside.

Wow, when you have the EPA on board with responsible energy development, then you know it’s solid.

See my previous post in which I talked about how the EPA had exonerated fracking in Dimock, Pennsylvania.

# Advice for Christians who discuss their faith with atheists... from an atheist

**Wintery Knight** · 1 May 2013 · Archived copy · Original

I spotted this post by Jeffery Jay Lowder on The Secular Outpost, and I think it's good advice.

> There are times where two people speak the same language, use the same words, and mean *very* different things by the same words. In conversations between Christians and atheists, "faith" is one such word. For many atheists, the word "faith" means, by default, belief *without* evidence or even belief *against* the evidence. In contrast, I doubt many Christians would accept that definition. For example, according to the NIV translation, Hebrews 11:1 states, "Now faith is confidence in what we hope for and assurance about what we do not see."
>
> Victor Reppert, at *Dangerous Idea,* writes this about the word "faith."
>
> Every time you use the word "faith" in a discussion with an atheist, they are going to declare victory. They will presume that you are believing for no reason, and that you are are admitting that the evidence is against you.
>
> I think he is probably right. If Christians want to dialogue with atheists, I think Christians would be well served to speak the 'language' of atheists. The word "faith" simply has too much baggage associated with it; inserting that word into the conversation is likely to become a distraction from whatever point the Christian was probably trying to make. So if you're a Christian talking with atheists, my advice is to temporarily delete the word "faith" from your vocabulary. Find some other way to make your point.

A better word to use is "trust", and here's Christian apologist Greg Koukl of Stand to Reason to make the same point:

Christian apologist Jonathan Morrow had a similar post on Think Christianly. (Mark well the part he put in bold)

Excerpt:

> In today's post I want to share a conversation I had with some of the sharp young men during lunch. It had to do with how we talk about Christianity with our friends, family, and coworkers. Most of the time, well meaning Christians talk about Christianity in the context of religion…not reality. Is that a problem? Yes, and here's why. Religion is understood as a personal and private feeling that is not accessible by everyone else. You can't question, challenge, or investigate it; you must simply be tolerant of it (and by tolerant, I am using the modern misunderstanding of tolerance which believes that all religious views are equally valid simply because a person sincerely believes them). That's why having a conversation about Christianity as a religion is a dead end. It's a non-starter.
>
> That's why I encouraged these students to talk about Christianity in the context of reality where terms like truth, knowledge, reason, and evidence apply. Any claim about reality is either true or false (it can't be both). *If Christianity is not the kind of thing that can be true or false…the battle has already been lost and the Gospel cannot be seriously considered*. We need to talk about Christianity in the same way we talk about having a prescription filled at the pharmacy or receiving instruction from a Doctor.
>
> In today's society, religion is a fuzzy (i.e., socially constructed or psychologically projected) category that makes little difference in everyday life. **But if Christianity is true, then it speaks to ALL of life. It makes a comprehensive claim on reality**. Jesus didn't intend to merely address two hours of our week. As Christians we need to have more conversations about reality and less about religion.

I've even written a post about the concept of faith that is presented in the Bible and the word faith has nothing to do with blind belief in the Bible – it's always based on evidence, so that people can know for certain what the truth is. I highly recommend it for anyone who disagrees with Jeffery,Greg or Jonathan. When you're talking about

Christianity, you're talking about what you know. You're talking about the way the world is, for everyone. When you talk about your belief in God, you should say "trust". You should not say "faith".

# Department of Defense states that it will punish Christians for evangelizing

**Wintery Knight** · 2 May 2013 · Archived copy · Original

ECM posted this story from Breitbart.

Excerpt:

> The Pentagon has released a statement confirming that soldiers could be prosecuted for promoting their faith: "Religious proselytization is not permitted within the Department of Defense…Court martials and non-judicial punishments are decided on a case-by-case basis…".
>
> The statement, released to Fox News, follows a Breitbart News report on Obama administration Pentagon appointees meeting with anti-Christian extremist Mikey Weinstein to develop court-martial procedures to punish Christians in the military who express or share their faith.
>
> (From our earlier report: Weinstein is the head of the Military Religious Freedom Foundation, and says Christians–including chaplains–sharing the gospel of Jesus Christ in the military are guilty of "treason," and of committing an act of "spiritual rape" as serious a crime as "sexual assault." He also asserted that Christians sharing their faith in the military are "enemies of the Constitution.")
>
> Being convicted in a court martial means that a soldier has committed a crime under federal military law. Punishment for a court martial can include imprisonment and being dishonorably discharged from the military.
>
> So President Barack Obama's civilian appointees who lead the Pentagon are confirming that the military will make it a crime–possibly resulting in imprisonment–for those in uniform to share their faith. This would include chaplains—military officers who are ordained clergymen of their faith (mostly Christian pastors or priests, or Jewish rabbis)–whose duty since the founding of the U.S. military under George Washington is to teach their faith and minister to the spiritual needs of troops who come to them for counsel, instruction, or comfort.
>
> This regulation would severely limit expressions of faith in the military, even on a one-to-one basis between close friends. It could also effectively abolish the position of chaplain in the military, as it would not allow chaplains (or any service members, for that matter), to say anything about their faith that others say led them to think they were being encouraged to make faith part of their life. It's difficult to imagine how a member of the clergy could give spiritual counseling without saying anything that might be perceived in that fashion.

Wow. So you can be openly gay in the military but you can't be openly Christian. Thanks Barack Obama.

See, the problem is that the people who pass these laws think that a person can be a Christian without evangelizing. But Christianity is a missionary faith, there is an obligation to evangelize included in the practices of an authentic Christian life. To forbid evangelism is to be intolerant of genuine Christainity. The people who made this law are ordering Christians to override their obligations to Jesus Christ. It's essentially fascism – using the power of secular government to force individuals to deny their freely chosen religion.

Let me illustrate from the Bible exactly what is expected of Christians.

Matthew 10:32-33:

[32]"Whoever acknowledges me before men, I will also acknowledge him before my Father in heaven.

[33]But whoever disowns me before men, I will disown him before my Father in heaven.

Deuteronomy 6:4-9:

[4] Hear, O Israel: The Lord our God, the Lord is one.

[5] Love the Lord your God with all your heart and with all your soul and with all your strength.

[6] These commandments that I give you today are to be on your hearts.

[7] Impress them on your children. Talk about them when you sit at home and when you walk along the road, when you lie down and when you get up.

[8] Tie them as symbols on your hands and bind them on your foreheads.

[9] Write them on the doorframes of your houses and on your gates.

That's what's at stake here. These are just a couple of examples, there are many more.

People on the left should reflect and understand what it is exactly that they are doing by marginalizing Christianity and trying to stop people from believing it by shaming and intimidating Christians, and leading people into sin. If Christianity is true, then actions like that are probably *the absolute worst thing you can do.* It's particularly nasty when you realize that the reason that secular leftists try to suppress Christians from being authentic Christians is because of *their feelings.* Secular leftists *feel* that they have a right to suppress the freedoms of others by force of law. They feel justified in forcing Christians to act like atheists because they *feel* offended.

Let's double-check that with the Bible and make sure. (Note: This is Jesus talking)

Matthew 18:6-14:

[6] "If anyone causes one of these little ones—those who believe in me—to stumble, it would be better for them to have a large millstone hung around their neck and to be drowned in the depths of the sea.

[7] Woe to the world because of the things that cause people to stumble! Such things must come, but woe to the person through whom they come!

[8] If your hand or your foot causes you to stumble, cut it off and throw it away. It is better for you to enter life maimed or crippled than to have two hands or two feet and be thrown into eternal fire.

[9] And if your eye causes you to stumble, gouge it out and throw it away. It is better for you to enter life with one eye than to have two eyes and be thrown into the fire of hell.

[10] "See that you do not despise one of these little ones. For I tell you that their angels in heaven always see the face of my Father in heaven.

[12] "What do you think? If a man owns a hundred sheep, and one of them wanders away, will he not leave the ninety-nine on the hills and go to look for the one that wandered off?

[13] And if he finds it, truly I tell you, he is happier about that one sheep than about the ninety-nine that did not wander off.

[14] In the same way your Father in heaven is not willing that any of these little ones should perish.

Trying to persuade a Christian that they are wrong is fine, but using the power of the state to take away a faithful Christian's job, which discourages them from being Christian, is something else. It is wrong to intimidate someone away from an authentic relationship with God as he really is, *just because of your feelings of discomfort at public expressions of religious faith.* The right of each person to express their religion in public is a basic right, but there is no right not to be offended by someone else's use of liberty to just be themselves. No one is asking for non-Christians to be forced to convert to Christianity or to be forced to celebrate and affirm Christianity by the power of the state. We're just asking to be who we are without losing our jobs.

# ESPN newscaster punished for not affirming the goodness of homosexuality

**Wintery Knight** · 2 May 2013 · Archived copy · Original

Here's a popular post at the American Spectator.

Excerpt:

> As homosexuals come out of the closet, Christians go into it. "Authenticity" is highly prized in society today, provided that what one feels falls safely within the dictates of political correctness. Sports analyst Chris Broussard stepped briefly outside of the Christian closet on Monday and paid the price for it.
>
> "Personally I don't believe that you can live an openly homosexual lifestyle or an openly premarital sex [lifestyle] between heterosexuals. If you're openly living that type of lifestyle, the Bible says you know them by their fruits, it says that's a sin," Broussard said on ESPN. "If you're openly living in unrepentant sin, whatever it may be, not just homosexuality, adultery, fornication, premarital sex between heterosexuals, whatever it may be. I think that's walking in open rebellion to God and to Jesus Christ."
>
> ESPN, not long thereafter, apologized for permitting these remarks to disrupt Monday's canonization: "We regret that a respectful discussion of personal viewpoints became a distraction from today's news. ESPN is fully committed to diversity and welcomes Jason Collins' announcement."
>
> Naturally, a Soviet-style clarification was in order from the guilty party, and Broussard supplied it via Twitter by Monday night: "Today on [ESPN], as part of a larger, wide-ranging discussion on today's news, I offered my personal opinion as it relates to Christianity, a point of view that I have expressed publicly before. I realize that some people disagree with my opinion and I accept and respect that. As has been the case in the past, my beliefs have not and will not impact my ability to report on the NBA. I believe Jason Collins displayed bravery with his announcement today and I have no objection to him or anyone else playing in the NBA."

Broussard did a good job of expressing his opposition to marriage, but any kind of restrictions on sex are no longer welcome in a society that thinks that there are no moral rules when it comes to sex. Obviously, he could have a better job of expressing his opposition with some evidence, but I don't see why he should be censored and forced to apologize.

One other funny thing about the gay NBA player story. He had a girlfriend for 8 years and was going to marry her in 2009. He called it off. She found out that he was gay just a few days before the big announcement was made to the public. I wonder how this sort of thing squares with the popular myth that gay people are born gay?

# What is marriage? Ryan T. Anderson debates Alastair Gamble at Arizona State University

**Wintery Knight** · 2 May 2013 · Archived copy · Original

Details:

> A debate about what marriage is, hosted by the Federalist Society at the Sandra Day O'Connor College of Law, featuring Ryan T. Anderson and Alastair Gamble.

The debate took place at the law school at Arizona State University.

The speakers:

> Ryan T. Anderson researches and writes about marriage and religious liberty as the William E. Simon Fellow in Religion and a Free Society at The Heritage Foundation. He also focuses on justice and moral principles in economic thought, health care and education, and has expertise in bioethics and natural law theory.
>
> Anderson's recent work focuses on the moral and constitutional questions surrounding same-sex "marriage." He is the co-author with Princeton's Robert P. George and Sherif Girgis of "What Is Marriage? Man and Woman: A Defense" (Encounter Books, December 2012). The three also co-wrote the article "What is Marriage?" in the winter 2011 issue of *Harvard Journal of Law and Public Policy*.
>
> Anderson received his bachelor of arts degree from Princeton University, graduating *Phi Beta Kappa* and*magna cum laude.* He is a doctoral candidate in political philosophy at the University of Notre Dame, where he received his master's degree.
>
> Alastair Gamble is an attorney in the firm's Litigation group and focuses his practice on Labor and Employment at both the trial and appellate level.
>
> From 2008 – 2012, Mr. Gamble practiced in Los Angeles, California, where he focused on Labor and Employment and Securities litigation. Before that, he served as a law clerk to Hon. Andrew Hurwitz of the Arizona Supreme Court and as a judicial extern to Hon. Michael Daly Hawkins of the U.S. Court of Appeals for the Ninth Circuit.
>
> Mr. Gamble holds the J.D., Sandra Day O'Connor College of Law at Arizona State University and the B.A., History, Emory University, 2000.

The video is 70 minutes:

The format is 15 minute opening speeches, 5 minute rebuttals, then Q&A.

# Good news! Liberty University offers scholarship to persecuted Eagle Scout

**Wintery Knight** · 3 May 2013 · Archived copy · Original

This is such a heart-warming story that I had to post it!

Fox News reports.

> A North Carolina Eagle Scout who was arrested and faces expulsion for accidentally leaving a shotgun in his pickup truck in the school parking lot has been offered a scholarship to attend Liberty University.
>
> Cole Withrow was just a few weeks from graduating with honors from Princeton High School when he was arrested on Monday and slapped with a felony weapons charge. Withrow had been skeet shooting with friends a day before and had only noticed he had left his shotgun in his truck as he reached to grab his book bag.
>
> When he realized his mistake, he went to the front office and called his mother. An administrator overheard the conversation and called police.
>
> Withrow's story has generated national attention. Hundreds of people have joined a Facebook community to show their support. And many local parents are upset over what many believe is a case of a young man getting severely punished for trying to do the right thing.
>
> "You teach your kids if you're in trouble or if you see you've done something wrong, go ahead and admit it," family friend Kimberly Boykin said. "Be a man and it'll be fixed. In this case, that's what he did and he's being punished for it. That's not the lesson we need to teach our kids."
>
> Jerry Falwell, Jr., the chancellor of Liberty University, had been traveling through North Carolina and saw a local television news account of Withrow's ordeal. He also noticed that the 18-year-old was wearing a "Liberty University" t-shirt.
>
> Falwell told Fox News that he made a few calls and discovered that Withrow's sister is a Liberty graduate.
>
> "I was really impressed with what a meek and humble Christian kid he is," Falwell said. "I thought he would be a perfect fit at Liberty."
>
> So the chancellor made the 18-year-old an offer he couldn't refuse.
>
> "I told him that we would give him whatever scholarships he needed to attend Liberty University," he said.
>
> Falwell said the university is willing to do whatever it takes to make sure the teenager gets a college education.
>
> "The anti-gun zealots seem to be vilifying him for making an honest mistake," he told Fox News. "We want to reward him for trying to do the right thing."
>
> And that means even helping the young man finish his last few weeks of high school. Falwell said they offered to let him finish his high school work through their online academy.

Wow! Isn't that a great way to show the public school tyrants a better way? Be sure and share / tweet this story if you liked it, because it really shows how Christians can step up and do the right thing when the secular left is too brainwashed by political correctness make a right judgment.

# Brian Auten interviews philosopher Robin Collins on the fine-tuning argument

**Wintery Knight** · 3 May 2013 · Archived copy · Original

Here's a must-listen interview from Apologetics 315.

Details:

> Today's interview is with Robin Collins, professor of philosophy at Messiah College. His training is in physics and in philosophy and he is a leading advocate for using the fine-tuning of the universe as a design argument for theism. He talks about his background and training, the fine-tuning argument, the different types of fine-tuning with examples and illustrations (laws, constants and initial conditions), two different ways of presenting the fine-tuning argument, answering common objections to the argument, the uniqueness of life, variations of the multiverse hypothesis, the failure of multiverse theory to explain away fine-tuning, objections to Victor Stenger, upcoming books, simplifying the fine-tuning argument for practical use, common mistakes when presenting the argument, the most common objection (*who designed God?*), and more.

Get the MP3 file from Apologetics 315.

Dr. Collins is extremely cautious and circumspect in his assessment of the fine-tuning argument. He takes the objections to the argument, like the multiverse, seriously and that comes across in the interview. He is familiar with criticisms of the argument and he has engaged with skeptics like Victor Stenger in his published work. I highly recommend it. It is a little more suited to intermediate-level Christians, but not so advanced that it's impossible for non-math beginners to follow the broad thrust of what's being said.

About Robin Collins:

> Robin Collins (PhD, University of Notre Dame, 1993), is professor of philosophy at Messiah College, Grantham, PA specializing in the area of science and religion. He has written over twenty-five articles and book chapters on a wide range of topics, such as the fine-tuning of the cosmos as evidence for the existence of God, evolution and original sin, the Doctrine of Atonement, Asian religions and Christianity, and Bohm's theory of quantum mechanics. Some of his most recent articles/book chapters are "Philosophy of Science and Religion" in The Oxford Handbook of Science and Religion, "Divine Action and Evolution" in The Oxford Handbook of Philosophical Theology (2009) "The Multiverse Hypothesis: A Theistic Perspective," in Universe or Multiverse? (Cambridge University Press), and "God and the Laws of Nature," in Theism or Naturalism: New Philosophical Perspectives (Oxford University Press, forthcoming). He recently received a grant from the John Templeton Foundation to finish a book that presents the case for design based on physics and cosmology, tentatively entitled The Well-Tempered Universe: God, Cosmic Fine-tuning, and the Laws of Nature.

You can read Robin Collins' testimony here.

**The fine-tuning argument**

Here's a short article where Collins gives TWO examples of the fine-tuning. He is very modest in his argument, merely asserting that the fine-tuning is more compatible with theism than it is with atheism.

Excerpt:

> Science is commonly thought to have undercut belief in God. As Nobel Prize winning physicist Steven Weinberg famously remarked, "the more we find out about the universe, the more meaningless it all seems." Yet, the discoveries of modern physics and cosmology in the last 50 years have shown that the structure of the universe is set in an extraordinarily precise way for the existence of life; if its structure were slightly different,

> even by an extraordinarily small degree, life would not be possible. In many people's minds, the most straightforward explanation of this remarkable fine-tuning is some sort of divine purpose behind our universe.

> This fine-tuning falls into three categories: the fine-tuning of the laws of nature, the fine-tuning of the constants of physics, and the fine-tuning of the initial conditions of the universe. "Fine-tuning of the laws of nature" refers to the fact that if the universe did not have precisely the right combination of laws, complex intelligent life would be impossible. If there were no universal attractive force (law of gravity), for example, matter would be dispersed throughout the universe and the energy sources (such as stars) needed for life would not exist. Without the strong nuclear force that binds protons and neutrons together in the nucleus, there would not be any atoms with an atomic number greater than hydrogen, and hence no complex molecules needed for life. And without the Pauli-exclusion principle, all electrons would fall to the lowest orbital of an atom, undercutting the kind of complex chemistry that life requires.

> Some fundamental physical numbers governing the structure of the universe—called the constants of physics—also must fall into an exceedingly narrow range for life to exist. For example, many have estimated that the cosmological constant—a fundamental number that governs the expansion rate of empty space—must be precisely set to one part in $10^{120}$ in order for life to occur; if it were too large, the universe would have expanded too rapidly for galaxies and stars to form, and if it were too small, the universe would have collapsed back on itself. As Stephen Hawking wrote in his book A Brief History of Time, "The remarkable fact is that the values of these numbers [i.e. the constants of physics] seem to have been very finely adjusted to make possible the development of life." Finally, the initial distribution of mass energy at the time of the big bang must have an enormously special configuration for life to occur, which Cambridge University mathematical physicist Roger Penrose has calculated to be on the order of one part in $10^{10^{123}}$. This is an unimaginably small number.

I know what you're thinking: How do we know that non-Christian scientists acknowledge the fine-tuning of gravity in the way that Collins describes?

Well, the New Scientist actually talks about the fine-tuning of the force of gravity. And they're not Christians.

Excerpt:

> The feebleness of gravity is something we should be grateful for. If it were a tiny bit stronger, none of us would be here to scoff at its puny nature.
>
> The moment of the universe's birth created both matter and an expanding space-time in which this matter could exist. While gravity pulled the matter together, the expansion of space drew particles of matter apart – and the further apart they drifted, the weaker their mutual attraction became.
>
> It turns out that the struggle between these two was balanced on a knife-edge. If the expansion of space had overwhelmed the pull of gravity in the newborn universe, stars, galaxies and humans would never have been able to form. If, on the other hand, gravity had been much stronger, stars and galaxies might have formed, but they would have quickly collapsed in on themselves and each other. What's more, the gravitational distortion of space-time would have folded up the universe in a big crunch. Our cosmic history could have been over by now.
>
> **Only the middle ground, where the expansion and the gravitational strength balance to within 1 part in $10^{15}$at 1 second after the big bang, allows life to form.**

Here's a very long paper by Collins on the fine-tuning argument, where he answers several objections to the argument, including the multiverse/many-universe hypothesis.

If you want a longer response to the multiverse argument, but you don't want to shell out big bucks for Collins' chapter in the "Blackwell Companion to Natural Theology", then you can just get James Sinclair's essay in "Contending With Christianity's Critics".

# Neil Simpson on gay NBA player Jason Collins and his 8-year fiance Carolyn Moos

**Wintery Knight** · 3 May 2013 · Archived copy · Original

Read Neil's post here first.

And here's my comment to his post:

> Neil, the story of this woman investing eight years with this man has been on my mind all week. I am not saying she is innocent. She is a fool. And she is responsible for choosing him. But my point would be this: why is everyone CELEBRATING this man? All he did is steal 8 years of her life and then abandoned her for the gay lifestyle, with all that that entails. Why is this good? I am not minimizing her responsibility. She is 100% responsible because she chose him over better marriage-minded men. But why celebrate this guy? What is there to celebrate? I would rather celebrate Neil Simpson and his marriage and family and Christian children if we are going to have to celebrate anything.

So, I wanted to make a comment about women who choose cads like Jason Collins.

What is it that causes these women to think that just because a man is athletic that he has what it takes to protect, provide and lead on moral and spiritual issues? Why pick someone who has fame from shooting a basketball or playing a guitar? What does that have to do with making commitments, being faithful, and teaching children? It's completely irrational. Remember Tiger Woods? He could whack a golf ball really well, but commitment and fidelity were just not his things. Why celebrate him? Why marry him? What does swinging a club in front of a crowd have to do with life-long married love?

**Don't be that gal**

If you are a woman and want to avoid making poor choices like Carolyn Moos, you can reverse engineer my dating questions and use them to detect fakes.

Here's question 8 from the list that I ask women:

**8. Marriage**

*Explain the public purposes of marriage, and then outline three threats to marriage and explain what legislation you would propose to neutralize these threats. What choices should people make before marriage to make sure they will have a stable, loving marriage?*

SAMPLE ANSWER: Some public purposes of marriage are i) to force moral constraints on sexual activity, ii) to produce the next generation of humans, iii) to provide children with a stable, loving environment in which to grow up. Three threats to marriage are i) cohabitation, ii) no-fault divorce – which leads to fatherlessness, and iii) same-sex marriage. There are others, too. For legislation, there are things like tax incentives, shared parenting laws, school choice to de-monopolize politicized public schools, etc. Pre-marriage behaviors are things like chastity, experience with children, having lots of savings, being physically fit, etc. Having a degree in experimental science, math or economics is excellent for a woman. Avoid artsy degrees, especially English.

BONUS POINTS: Name more threats to marriage, explain the effects of fatherlessness on children, explain how divorce courts work, explain how socialism impacts the family through taxation and wealth redistribution, explain what happens to women and children after a divorce.

WHY IT MATTERS: It's important for people who want to get married that they understand that marriage takes time and effort, and it requires both spouses to prepare for marriage, to be diligent at choosing a good spouse, and to understand what spouses and children need in order to stay engaged.

I can assure you that Jason Collins wouldn't survive 5 seconds with a woman who was using my checklist, and it would save her a lot of time. Guess what? There is more to marriage-mindedness than *broad shoulders* and *basketball skillz*. Marriage requires a worldview that grounds self-sacrificial love and objective moral obligations RATIONALLY. The man should be able to present a plan for marriage that shows that some thought has been put into what he is trying to achieve with the marriage and the children, and why he needs you in particular to help.

Good behaviors have to be reasonable to a man, based on his prior efforts to study areas of knowledge that *make them reasonable*. He has to have a worldview that makes the duties of a husband and father – providing, parenting, teaching, fidelity, commitment, etc. – REASONABLE TO HIM. His goodness cannot be just talk. His goodness cannot be rooted in just preferences. It has to be rooted in knowledge derived from reasoning and a careful study of evidence. It takes study to ground the worldview that makes a good marriage. When will women learn?

# 9.5 million people have left the workforce under Obama

**Wintery Knight** · 4 May 2013 · Archived copy · Original

BLS Labor Force Participation April 2013

CNS News explains the real state of the work force in America.

Excerpt:

> 9.5 million Americans have left the workforce during the presidency of Barack Obama, according to the Bureau of Labor Statistics.
>
> In April, the total number of Americans counted as "not in the labor force" declined for the first time since December, but that number was still near a record high at 89,936,000.
>
> Those not in the labor force declined by 31,000, from a record high of 89,967,000 in March. That broke the recent record of 89,304,000 not in the labor force in February of this year.
>
> Since February 2009, the first full month of Obama's presidency, 9,549,000 people have left the labor force. There were 80,387,000 Americans not working that month, compared with 89,936,000 not working or looking today, according to the latest economic release from BLS.
>
> The Bureau of Labor Statistics (BLS) labels people who are unemployed and no longer looking for work as "not in the labor force,"and that includes people who have retired on schedule, taken early retirement, or simply given up looking for work.
>
> In the 50 months since Obama has been in office, the number of people counted as not in the labor force has declined 16 times.

Remember that during that period, we have been adding more people through birth and immigration, and running up our national debt by over SIX TRILLION dollars since Obama took office (total debt is now $17 trillion). When you spend that much money, you should be seeing MORE people employed. And you would be seeing that, if it's being spent on private sector job creation. But it's not. It's being wasted. And the very people who voted for Obama – the young people – are the ones who will have to pay it all back. Without jobs! Is collecting money from government welfare a long-term solution to repaying the debt? That's what we are doing now – putting millions of people on disability and welfare. Is that going to help them to pay back all of Obama's borrowing later?

# Lightning round: Ryan T. Anderson answers several questions about marriage

**Wintery Knight** · 4 May 2013 · Archived copy · Original

John Stonestreet interviews marriage defender Ryan T. Anderson: (Source: The Colson Center)

Questions:

- Don't gay couples have a right to express their love in marriage like everyone else?
- How would legalizing gay marriage hurt your marriage?
- Marriage is already in such bad shape, how could it hurt marriage to allow more people to marry?
- Aren't natural marriage proponents on the "wrong side of history"?

Every word counts in this concise primer on defending marriage. Blink, and you'll miss pure gold.

You can watch Ryan debate gay marriage at Arizona State University right here.

# Smart Faith apologetics conference coming to Phoenix, AZ in June 2013

**Wintery Knight** · 5 May 2013 · Archived copy · Original

Here's the conference page.

Schedule:

> **June 7th – Pre-conference dinner with special guest speaker Greg Koukl, President of Stand to Reason**
> We will enjoy a catered, pre-conference dinner together followed by Greg Koukl talking to us about the importance of contending for the Faith. Seating for this pre-conference event is limited and those who buy a ticket to this event will have free-admittance to the conference on Saturday, June 8th. This event is scheduled to start at 6:30 PM at the conference location. Doors will open at 6 PM.
>
> **June 8th – Conference Schedule**
> 8:00 – 9:00 AM – doors open for walk-up registration
> 9:00 – 10:00 AM – "Truth is not Ice Cream" ~ Greg Koukl
> 10:00 – 10:20 AM – break
> 10:20 – 11:20 AM – "iWitness Biblical Archaeology" ~ Doug Powell
> 11:20 AM – 1:00 PM – Lunch
> 1:00 – 2:00 PM – "The Cold Case Difference Between Artifacts and Evidence" ~ J Warner Wallace
> 2:00 – 2:20 PM – break
> 2:20 – 3:20 PM – Break-out Sessions
>
> - "Pro-Life" ~ Letitia Wong
> - "How Objective Beauty Proves God's Existence" ~ Doug Powell
> - "An Introduction to Christian Apologetics" ~ Dr. Craig Hazen
>
> 3:20 – 3:40 PM – break
> 3:40 – 4:10 PM – Interview with J Warner Wallace on his new book "Cold-Case Christianity"
> 4:10 – 4:30 PM – break
> 4:30 – 5:30 PM – "Christianity and the Challenge of World Religions" ~ Dr. Craig Hazen

If you are in the Phoenix area, this looks like a great conference to attend!

# Stephen C. Meyer discusses Richard Dawkins on the Michael Medved show

**Wintery Knight** · 5 May 2013 · Archived copy · Original

The Michael Medved show is a national radio show broadcast out of Seattle, Washington. According to Talkers magazine, he has the fifth largest radio audience. In the last week of April, Mr. Medved accounced a new segment on origins, evolution and intelligent design that will be heard each week.

Here is the original announcement:

> Does science conflict with religious faith? Does nature offer scientific evidence of design? Should public-school students learn about all sides of contentious scientific issues? Or should teachers spoon-feed them with only the politically approved views? Should scientists be free to pursue the truth, wherever the search takes them? What if it leads to conclusions that are disturbing to a rigidly secular point of view?
>
> Starting this Thursday, April 25, the Michael Medved Show will shine a bright light on these and other fascinating questions that are vital to the future of our nation and our culture.
>
> […]From Darwinian evolution to climate change, science has become a major flashpoint in the culture war. In using science as a political and cultural weapon, aggressive, evangelizing materialists count on our not knowing enough to argue back. That's why, to follow and participate in the greatest debates of our day, you *need to know about the science* behind the controversies.
>
> Each week, leading fellows from Discovery will join Mr. Medved to talk about the intersection of science and culture, how bad science and biased science are corroding the best American values. They'll talk about the assault on human dignity and uniqueness, about attempts to silence dissenting scientists and suppress academic freedom. They will discuss the danger posed by revived Social Darwinism and the new eugenics. And yes, they'll explore the debate over scientific materialism versus intelligent design.
>
> The Michael Medved Show is one of the top ten most listened to radio talk shows in the United States. Syndicated to some 200 radio stations, it reaches an estimated weekly audience of 3-4 million people.

Here is the second segment from this past week, courtesy of the Intelligent Design: The Future podcast.

The MP3 file is available for download at the link above.

The description is:

> On this episode of **ID the Future**, Dr. Stephen Meyer continues his conversation with Michael Medved on the Medved Show's "Science and Culture Update." Listen in as Meyer and Medved discuss a recent prominent criticism of Richard Dawkins and take questions from callers about intelligent design.
>
> Each week, leading fellows from Discovery Institute will join Mr. Medved to talk about the intersection of science and culture. Listen in live online or on your local Medved station, or stay tuned for at ID the Future for the weekly podcast.

In addition to talking about Dawkins, he also discusses the Cambrian explosion and takes calls from angry Darwinists.

Now might be a good time to subscribe to the ID: The Future podcast.

# Official: We knew Benghazi was a terrorist attack "from the get-go"

**Wintery Knight** · 5 May 2013 · Archived copy · Original

From CBS News. This is a news article, not an editorial.

Excerpt:

> "Everybody in the mission" in Benghazi, Libya, thought the attack on a U.S. consulate there last Sept. 11 was an act of terror "from the get-go," according to excerpts of an interview investigators conducted with the No. 2 official in Libya at the time, obtained by CBS News' "Face the Nation."
>
> "I think everybody in the mission thought it was a terrorist attack from the beginning," Greg Hicks, a 22-year foreign service diplomat who was the highest-ranking U.S. official in Libya after the strike, told investigators under authority of the House Oversight and Government Reform Committee. Hicks, the former U.S. Embassy Tripoli deputy chief of mission, was not in Benghazi at the time of the attack, which killed Chris Stevens – then the U.S. ambassador to Libya – and three other Americans.
>
> When he appears this week before the committee, chaired by Rep. Darrell Issa, R-Calif., Hicks is expected to offer testimony at odds with what some American officials were saying in public – and on "Face the Nation" – just five days after the attack. Benghazi whistleblowers have rallied attention to discrepancies among the administration's reaction to the attack, which The Weekly Standard suggests was frayed by ever-evolving talking points that sought to remove references to al Qaeda.
>
> On Sept. 16, U.S. Ambassador to the United Nations Susan Rice hit the media circuit, appearing on all five Sunday talk shows to dispel the notion that the strike was a premeditated terrorist act and to perpetuate the case that it began "spontaneously" out of protests in Egypt. Rice's spot on "Face the Nation" that day was preceded by the new President of Libya Mohammed al-Magariaf, who said his government had "no doubt that this was preplanned, predetermined."
>
> […]Appearing on "Face the Nation" to address Hicks's remarks, chairman Issa agreed Sunday that the "fatal error" in a debacle that marked a "misinformation campaign at best, and a cover-up at worst," was tossing into the lurch the relationship between the United States and Libya.

Read the whole article for a lot more about this critical scandal.

The attack was pre-planned. American personnel on the ground in Libya knew it was a pre-planned attack. The talking points that were put out were false. The purpose of the talking points was to save Obama's re-election campaign by hiding the fact that his weakness emboldened our enemies to commit more terrorist attacks than happened under Bush. Frank Gaffney even suggests that the cover-up was meant to hide the Obama administration's efforts to supply Syrian opposition forces, including Al Qaeda, with heavy weapons. A sort of "Fast and Furious " gun-walking program for Jihadis, instead of Mexican drug cartels.

# Whistle-blower: State Department cut counterterrorism experts out of Benghazi decisions

**Wintery Knight** · 6 May 2013 · Archived copy · Original

Fox News has the latest on another of Benghazi whistle-blowers.

Excerpt:

> On the night of Sept. 11, as the Obama administration scrambled to respond to the Benghazi terror attacks, then-Secretary of State Hillary Clinton and a key aide effectively tried to cut the department's own counterterrorism bureau out of the chain of reporting and decision-making, according to a "whistle-blower" witness from that bureau who will soon testify to the charge before Congress, Fox News has learned.
>
> That witness is Mark I. Thompson, a former Marine and now the deputy coordinator for operations in the agency's counterterrorism bureau. Sources tell Fox News Thompson will level the allegation against Clinton during testimony on Wednesday before the House Oversight and Government Reform Committee, chaired by Rep. Darrell Issa, R-Calif.
>
> Fox News has also learned that another official from the counterterrorism bureau — independently of Thompson — voiced the same complaint about Clinton and Under Secretary for Management Patrick Kennedy to trusted national security colleagues back in October.
>
> […]Sources close to the congressional investigation who have been briefed on what Thompson will testify tell Fox News the veteran counterterrorism official concluded on Sept. 11 that Clinton and Kennedy tried to cut the counterterrorism bureau out of the loop as they and other Obama administration officials weighed how to respond to — and characterize — the Benghazi attacks.
>
> "You should have seen what (Clinton) tried to do to us that night," the second official in State's counterterrorism bureau told colleagues back in October. Those comments would appear to be corroborated by Thompson's forthcoming testimony.
>
> […]**Documents from the State Department, the Central Intelligence Agency and the National Security Council, first published in the May 13 edition of "The Weekly Standard," showed that senior officials from those agencies decided within days of the attacks to delete all references to Al Qaeda's known involvement in them from "talking points" being prepared for those administration officers being sent out to discuss the attacks publicly.**
>
> **Those talking points — and indeed, the statements of all senior Obama administration officials who commented publicly on Benghazi during the early days after the attacks — sought instead to depict the Americans' deaths as the result of a spontaneous protest that went awry. The administration later acknowledged that there had been no such protest, as evidence mounted that Al Qaeda-linked terrorists had participated in the attacks. The latter conclusion had figured prominently in the earliest CIA drafts of the talking points, but was stricken by an ad hoc group of senior officials controlling the drafting process. Among those involved in prodding the deletions, the documents published by "The Weekly Standard" show, was State Department spokeswoman Victoria Nuland, who wrote at one point that the revisions were not sufficient to satisfy "my building's leadership."**
>
> The allegations of the two counterterrorism officials stand to return the former secretary of state to the center of the Benghazi story. Widely regarded as a leading potential candidate for the Democratic presidential nomination in 2016, Clinton has insisted she was not privy to decisions made by underlings about the inadequate security for the U.S. installations in Benghazi that were made in the run-up to the attacks. And she has portrayed her role — once the attacks became known in Washington — as that of a determined fact-finder who worked with colleagues to fashion the best possible response to the crisis.

> […]**The counterterrorism officials, however, concluded that Clinton and Kennedy were immediately wary of the attacks being portrayed as acts of terrorism, and accordingly worked to prevent the counterterrorism bureau from having a role in the department's early decision-making relating to them.**
>
> Also appearing before the oversight committee on Wednesday will be Gregory N. Hicks, the deputy chief of mission at the U.S. Embassy in Libya at the time of the Benghazi terrorist attacks. Like Thompson, Hicks is a career State Department official who considers himself a Benghazi whistle-blower. His attorney, Victoria Toensing, a former chief counsel to the Senate Intelligence Committee, has charged that Hicks, too, has faced threats of reprisal from unnamed superiors at State.

Be sure and check out the previous article on Hicks' testimony. I personally think that this is enough to impeach Obama and rule Hillary Clinton out as a candidate in 2016. But only if people find out about it. I'm not optimistic about the media doing its job on this, though, especially given that CBS News spent 30 minutes on the gay basketball player and still has not mentioned Gosnell. The liberal media is covering up for Obama. They have become Watergate co-conspirators.

# When is it appropriate for Christians to start dating?

**Wintery Knight** · 6 May 2013 · Archived copy · Original

First, read this article from a Crisis Pregnancy Center worker.

Excerpt:

> I have a bone to pick with young, socially conservative Americans, and I know it's something that will get under your skin. Just sit tight, though, and hear me out, because the elephant in our tidy little room is starting to tear things up. It's time we acknowledge his existence, and maybe even call in some animal movers to take him back to the zoo.
>
> I currently live in a small community in the Bible-belt of the country and I have been given some opportunities to mentor young people from my area through different venues. I can count on one hand the kids I know from the local high school whose parents have never been divorced. I've witnessed reactions of genuine surprise and envy from students who hear that my parents are still together. In any given conversation with groups of youth, I can expect to hear continual references to step-parents, step-siblings, and half-siblings. Divorce is a way of life down here – albeit one that has taken its toll in the lives of the young people that will make up the next generation.
>
> However, while I could certainly write extensively on my experience with the negative effects of divorce on children and on society at large, I actually want to address something else entirely. I have concerns about the number one way that our culture chooses to perpetuate the cancer of broken marriages and failed relationships– underage dating.
>
> You can follow them on Facebook – the failed attempts at love, I mean. Somebody is always changing their status from "in a relationship" to "single." Unfortunately, a huge number of these disappointed lovers are too young to be legally married. I wonder sometimes if I am the only one who winces to hear a thirteen-year old speak with cavalier abandon of his or her "ex?" Since when is it considered healthy and acceptable for underage people to be in "relationships?" Just what do parents and educators expect to be the result of the romantic conquests of these middle-school children and young high school students? The results I've witnessed personally are beyond disturbing; they are downright sinister, and have caused me to question whether or not those who claim to champion marital fidelity and family values are paying any attention at all to the standards we are passing to our children.
>
> The trouble with underage dating is that it presents an entirely faulty view of what interaction with the opposite gender should be about. Rather than placing emphasis on building one strong relationship with one person at a stage of life when a marital commitment is feasible, dating encourages young people to pour their energies into consistently seducing other young people at a time when neither of them are capable of making any long-term commitments. Their "relationships" are destined to fail from the get-go because they are founded on unhealthy perceptions of love and not backed by any real necessity to stick it out.
>
> The beauty of marriage, as it was intended to be, is that it teaches two people of opposite genders to learn to work through incompatibilities and give of themselves. In the same way, the great ugliness of dating as it is practiced by our culture and portrayed by our media, is that it teaches two people of opposite genders to be selfish by giving them an easy "out" when things don't go according to their initial feelings. I believe it is fair to say that this form of dating is a training manual for divorce, because it encourages young people to grow accustomed to giving their hearts away and then taking them back.
>
> Sadly, parents who should know better continue to display shocking naïveté regarding the absurd practices of driving their twelve year olds out on a "date," or purchasing provocative clothing for their sixteen-year-olds, or sympathizing with their broken-hearted fourteen-year-olds by assuring them that they'll "find someone better." "They're just having fun," they'll tell us, rolling their eyes at what they consider to be our tightly wound

> principles. I work a volunteer shift at Crisis Pregnancy Clinic where I witness every week the ruined lives and broken dreams that “fun” has left with our youth.

And now here’s my take.

Basically, you can start dating as a prelude to courting when the woman and man are able to demonstrate to the other person that they are ready to fulfill their roles in the marriage.

For example, the woman should be able to show that she has been able to maintain commitments to caring for others through some period of time, maybe with small children or pets. She should be voluntarily entering into relationships and responsibilities with other people where she is giving of herself – like volunteering at a crisis pregnancy center or caring for an ailing or elderly relative. That shows potential suitors that she has the right attitude to relationships – serving others self-sacrificially, and not looking for tingles and amusement. She should be able to show that she is good at making commitments and solving problems by studying hard subjects in school like nursing, economics, biology, chemistry, physics, engineering or computer science. That shows that she is able to do hard things that she doesn’t feel like doing, and apply herself over time until she has a degree. Obviously being conservative politically and being good at apologetics are also important if she intends to raise children.

And for the man, he should be able to show that he is able to do his roles – protector, provider and moral/spiritual leader. He should be able to prove that he is able to mentor and guide other people to learn things and do things that will make them more effective Christians. That’s moral and spiritual leadership. He should have studied a subject that is going to allow him to find work. If he is committed to going to graduate school, then he can study philosophy and law and other “world-changing” subjects, like a William Lane Craig or a Ryan Anderson. Otherwise, he should study things like petroleum engineering, computer science, or other fields that will allow him to be stable and secure. It’s not enough to be a hard worker, you have to be able to pull in the money and save it and still have time left over to care for your wife and lead the children. Again, conservative politics and apologetics are a must.

I think there are other ways for men and women to show that they are ready for marriage, but those are some ways. The key thing is that people shouldn’t be dating until they are able to show that they know the roles that they are expected to fill in marriage as men and women. They should also be looking for the right things in others. They can’t be looking for the shallow things that give them tingles, like looks, athleticism, etc. They can’t be looking for sexual attraction, primarily. Marriage requires specific behaviors from men and women, which are derived from what men and women do in marriage. Before men and women start dating, they have to be able to show that they are working on being able to handle their responsibilities, and they have to show that their selection criteria for the opposite sex are at least partly based on the responsibilities that the opposite sex has in a marriage. Otherwise they are just training to be governed by their tingles and to be selfish and to break up when all that falls apart.

# Ryan T. Anderson's commencement speech at Regent University

**Wintery Knight** · 6 May 2013 · Archived copy · Original

The full text is up at National Review. I wanted to highlight a couple of points.

First, the importance of marriage and family for raising children:

> As a graduate of Regent University you know that the obligations we have to our neighbors are not dependent on race, or sex, or social class. Neither are those duties dependent on age, or size, or stage of development. Or whether someone is wanted or unwanted, planned or unplanned, healthy or sick, "perfect" or disabled.
>
> This starts with you and me. We need to love our children. Graduating class, if you have a daughter with Down syndrome, love her. If your son is conceived "by accident," love him. As my late mentor Fr. Richard John Neuhaus explained, we have the responsibility to see to it that every human being is protected in law and cared for in life.
>
> The best care comes from the family. Some of you may have already started your families. Most of you will start one in the next decade. And as you welcome children into this world you will experience firsthand that the best way to ensure that children are cared for in life by the man and the woman who gave them life is to unite that man and woman as husband and wife in marriage.
>
> We are created male and female. And marriage unites a man and a woman permanently and exclusively as husband and wife to take responsibility for their children as father and mother. That's what marriage is all about. And our marriage policy should respect these truths. So, too, should our churches and our own lives. Graduating class: Live lives of fidelity and service to your spouse and your children.
>
> Your children will be educated in this society. And as mothers and fathers you have the responsibility to care for and educate your children. Government should empower you to fulfill those duties. It shouldn't interfere or indoctrinate. Nor should it use healthcare laws or anti-bullying programs to promote a sexual ideology at odds with the values that responsible parents try to instill in their children.

Second, the free market and the need for job creation:

> Our responsibilities extend beyond our families. One of the best ways to care for our neighbors is by serving them in our professional callings, performing quality work at a fair price. Creating wealth and value for our neighbors. Who among the Class of 2013 will be the next David Green, the founder of Hobby Lobby? Who will be the next Truett Cathy, the founder of Chick-fil-a? Who will improve our lives with new technology or medical devices? Who will create new jobs that pay decent wages? This is your responsibility as future business leaders and entrepreneurs.
>
> We know that the market economy—along with families headed by married couples—has done more to lift people out of poverty and into a flourishing life than any other institution. But it only works if people of good character and upright morals are at the helm. Markets are inert apart from the values that actors bring to them—and you have responsibility for your market action.
>
> Look at leaders like David Green and Truett Cathy. They run their businesses in accordance with their Christian beliefs. There's a simple reason why: They know that they have duties to serve God—and not just on Sundays, but also on the other six days of the week, when they enter the workforce and marketplace. Remember, you can't check your faith or morals at the door.

It's worth a look. The actual speech can be seen here, starting at 41 minutes in.  It goes on for about 19 minutes.

# What caused Melanie Phillips to turn away from the left and embrace conservatism?

**Wintery Knight** · 7 May 2013 · Archived copy · Original

Dina tweeted this article from the UK Daily Mail, by famous moderate conservative Melanie Phillips.

She sets up her article this way:

> [Leftists] reserve a special loathing for me. This is not just because I refuse to be cowed.
>
> It's because I was once one of them, one of the elect, a believer.
>
> I come from the kind of family in which it was simply unthinkable to vote Conservative. For my parents, the Tory Party represented the boss class, while Labour supported the little man — people like us.
>
> My father was haunted all his life by the poverty he endured growing up in the old East End of London in the Twenties and Thirties.
>
> His family of six lived in two rooms; he never had enough to eat. He left school at the age of 13.
>
> As a university-educated young woman with hippie-style hair and an attitude, I, too, generally toed the standard Leftist line in the late Seventies and early Eighties.
>
> Poverty was bad, cuts in public spending were bad, prison was bad, the Tory government was bad.
>
> The state was good, poor people were good, minorities were good, sexual freedom was good.
>
> And pretty soon I had the perfect platform for those views when I went to work as a journalist on The Guardian, the self-styled paper of choice for intellectuals and the supposed voice of progressive conscience.

The UK Guardian is the most liberal newspaper in Britain.

Here's what turned her around:

> The defining issue for me — the one that launched me on a personal trajectory of confrontation with the Left and with my colleagues and friends — was the persistent undermining of the family as an institution.
>
> By the late Eighties, it was glaringly obvious that families were suffering a chronic crisis of identity and self-confidence.
>
> There were more and more divorces and single parents — along with mounting evidence that family disintegration and the subsequent creation of step-families or households with no father figure at all did incalculable damage to children.
>
> 'Too many children lack a consistent mother or father figure,' researchers told me.
>
> Poverty, the Left's habitual excuse, could not be the culprit since middle-class children were also not receiving the parental attention they required.
>
> For me, the traditional family is sacred because it embodies the idea that there is something beyond the selfish individual.
>
> But it was being turned into a mere contract that either side could break more or less at will.
>
> I listened to the evidence of those with no particular ideological fixation or agenda, but who simply spoke of what they saw was happening.
>
> […]From Zelda West-Meads of the marriage guidance counsellors Relate, I learned that, though many single mothers did a heroic job, it was the absence of the father that did such terrible damage to their children. So I described how fathers were vital to the emotional health of children.

> Fatherless families were also at least partly responsible for a national breakdown in authority and rising levels of crime.
>
> My view was backed in 1992 when three influential social scientists with impeccable Left-wing pedigrees produced a damning report.
>
> From their research, they concluded that children in fractured families tend to suffer more ill-health, do less well at school, are more likely to be unemployed, more prone to criminal behaviour and to repeat as adults the same cycle of unstable parenting.
>
> But instead of welcoming this analysis as identifying a real problem, the Left turned on the authors, branding them as evil Right-wingers for being 'against single mothers'.
>
> Their sanity was called into question. 'What do these people want?' one distinguished academic said to me.
>
> 'Do they want unhappy parents to stay together?'
>
> Eventually, he admitted that the authors' research was correct. But he said it was impossible to turn back the clock and wondered why there was so much concern about the rights of the child rather than of the parents.
>
> He turned out to be divorced — revealing a devastating pattern I was to encounter over and over again. Truth was being sacrificed to personal expediency. Evidence would be denied if the consequences were inconvenient.
>
> Self-centred individualism and self-justification ruled, regardless of the damage done to others.

This article is a long read, but a good one. If you like to read things that are maybe a little longer than most articles I post, then I really recommend this one. You won't be disappointed.

Fiscal and foreign policy conservatives will be surprised by how important social issues are when pulling someone away from the left. All conservative ideas are testable with reason – not just fiscal and foreign policy, as some might have you believe. I often hear Christians and conservatives trying to win people over with just one issue, instead of knowing a little bit about everything. Well, let me be clear. If I can get Obama out of office by winning someone over on record low labor force participation, then that means no more taxpayer-funded abortion drugs. If I can get Obama out of office by winning someone over on security and stability in the Middle East, then that means no more spiraling national debt. And if I can get Obama out of office on the defense of traditional marriage, then that means we might get a fence build on our southern border so that Hezbollah cannot just walk right in and try to assassinate the Saudi Ambassador in New York.

It's all related, and we need to be persuasive on every issue, not just one issue.

# Which Bible verse is used most frequently by non-Christians to attack Christianity?

**Wintery Knight** · 7 May 2013 · Archived copy · Original

J. Warner Wallace has posted about it on his Cold Case Christianity blog.

Excerpt:

> As a Christian, I'm often at odds with the culture around me. As our society embraces a growing number of unbiblical behaviors and attitudes, I find myself becoming more and more vocal in my opposition. I'm not alone; many other conservative Christians are also taking a stand for what the Bible teaches, particularly when it comes to moral behavior. Maybe that's why I seem to hear Matthew 7:1 tossed around so frequently by those who want Christians to quiet down:
>
> *"Do not judge so that you will not be judged."*
>
> Whenever we, as Christians, speak out against something in the culture, one of two labels is immediately employed in an effort to silence us: we are either branded "intolerant" or "judgmental". To make matters worse, the second label is often attached to the teaching of Jesus Himself. Are we Christians defying the words of our Master when we speak against the behaviors, attitudes or worldviews affirmed by others? Did Jesus command us to be silently non-judgmental?
>
> This selective use of scripture by the opposition is perhaps the finest example of what we at Stand to Reason are addressing when we caution people to "never read a Bible verse." Matthew 7:1, when read in isolation from the larger context of the Sermon on the Mount, may seem to command a form of silent acceptance and tolerance advocated by the culture, but a closer examination of the verse reveals Jesus' true intent.

Click it to read the response to the challenge.

It sure would be nice if people who think that Jesus' opinion matters would do a better job of looking at what he actually taught. The four gospels are the best records for the life of Jesus. What he did and what he said are known.

# Ryan T. Anderson: the hidden agenda behind gay marriage activism

**Wintery Knight** · 7 May 2013 · Archived copy · Original

Ryan T. Anderson exposes the real agenda behind same-sex marriage advocacy in the New York Daily News.

Excerpt:

> Same-sex marriage will never be widely accepted in America for a simple reason: It's based on a lie. But don't take my word on this; leading LGBT scholars and activists say as much.
>
> Take Masha Gessen, acclaimed author and former Russian director of Radio Liberty. "Fighting for gay marriage generally involves lying about what we are going to do with marriage when we get there — because we lie that the institution of marriage is not going to change," Gessen said last year.
>
> Last month, I was part of a debate at the NYU School of Law at which Judith Stacey, a sociology professor at the university, declared: "Children certainly do not need both a mother and a father."
>
> Stacey went on to suggest that three parents might be better than two. In fact, while asserting she is in favor of same-sex marriage because of "equal justice," Stacey admitted she isn't a fan of marriage. "Why should there be marriage at all?" she asked.
>
> I pointed out that marriage exists, and the government takes an interest in marriage because the sexual union of a man and woman produces children — and children need both a mom and a dad.
>
> […]In congressional testimony against the Defense of Marriage Act, she expressed hope that redefining marriage would give marriage "varied, creative and adaptive contours," including "small group marriages."
>
> Stacey was among more than 300 scholars and advocates who signed a statement, "Beyond Marriage," calling for legal recognition of sexual relationships involving more than two partners. During our NYU debate, she asserted that nothing gives the state an interest in monogamy.
>
> The very day of the debate, Slate posted an article headlined "Legalize Polygamy!" The author, Jillian Keenan, argues: "Just like heterosexual marriage is no better or worse than homosexual marriage, marriage between two consenting adults is not inherently more or less 'correct' than marriage among three (or four, or six) consenting adults."
>
> She concludes: "Legalized polygamy in the United States is the constitutional, feminist and sex-positive choice."
>
> And this is why the marriage redefiners are doomed to fail: Redefinition has no logical stopping point. Its logic leads to the effective elimination of marriage as a legal institution. This will harm women, children and society as a whole.
>
> If we redefine marriage to exclude the norm of men and women complementing each other in (ideally) a lifelong familial bond, Gessen admits, "The institution of marriage is going to change, and it should change . . . I don't think it should exist."

Is the the viewpoint of all gay people? Not at all. Many gay people are conservative and don't want to change the institution of marriage. But it is the view that animates the activists who are pushing to redefine marriage for everyone. And if the activists succeed, it will affect everyone. It will affect children who don't even have a say in the debate today, just like no-fault divorce affected children when that became the law of the land.

# Homosexual man complains to NZ Human Rights Tribunal for being barred from seminary

**Wintery Knight** · 8 May 2013 · Archived copy · Original

Some friends of mine in New Zealand sent me this article.

Excerpt:

> A homosexual man is taking the Anglican Bishop of Auckland to the Human Rights Tribunal after being rejected for training as a priest.
>
> A hearing begins today following a complaint from the man, who says he feels discriminated against because of his sexuality.
>
> It is understood the man – who is in a sexual relationship with his partner – has wanted to enter the church's training programme for priests for years.
>
> But after applying to enter after years of study, he was rejected by the Bishop Ross Bay, who approves entrants.
>
> Bishop Bay told *One News* last night that he was simply following the church's doctrines.
>
> The man was rejected "by reason of the defendant not being chaste in terms of canons of the Anglican Church," the bishop said.
>
> That means that anyone wanting to become ordained needs to be in what the Anglican Church deems to be a chaste relationship – a marriage between a man and a woman or committed to a life of celibacy.
>
> In a statement to the tribunal, the complainant says he "felt totally humiliated that I had spent six years of my life in study, for a process that I was not permitted to enter because I was a gay man and in a relationship".
>
> "My humiliation and disappointment continue to this day."

And this humiliation is so terrible that the government has to step in and drag the church in front of a secular court to pass judgment on Judeo-Christian values.

And here's another story from Mercator:

> Family First New Zealand has received notification that government's Charities Commission intends to deregister the charity. Why? Family First has a traditional view of marriage being one man and one woman. The commission's investigation began just after NZ's gay marriage debate started last year.
>
> The decision means that the organisation will no longer be exempt from income tax and, more importantly for a non-profit, donations to it will no longer be tax-deductible.
>
> "This is a highly politicised decision which is grim evidence that groups that think differently to the prevailing politically correct view will be targeted in an attempt to shut them up," says Bob McCoskrie, National Director of Family First NZ.

New Zealand recently decided to legalize gay marriage, and now we are seeing some of the repercussions. This is exactly what happened in Canada as well, where Christians are regularly dragged in front of Human Rights Tribunals and Human Rights Commissions for refusing to affirm the goodness of homosexuality and gay marriage. There, Christians can be tried by non-Christians for months and even years. They are never found innocent, and can look forward to being censored, forced to apologize, fined, etc. Why? Because once gay marriage is made legal, it becomes a crime to disapprove of homosexuality or disagree with gay marriage.

Legalized gay marriage is not compatible with religious liberty. We as a society have to choose one or the other.

UPDATE: Bill Muehlenberg's commentary on New Zealand, gay marriage and liberty.

# Carson Weitnauer: putting atheism on the defensive

**Wintery Knight** · 8 May 2013 · Archived copy · Original

Here's an article at Reasons for God that explains a few simple questions that you can ask your atheist friends.

He writes:

> Though it has been persistently marketed to us as a worldview that stands for reason and science, the truth is that the atheistic worldview is riddled with contradictions and outlandish claims. And because most secular people haven't studied why atheism is true, an excellent evangelistic strategy for you and your church is to understand these five challenges for atheism.
>
> In my experience, it is only once people realize that their own worldview doesn't work that they become interested in seeking something that does. While some would suggest you just have to wait for people to hit rock bottom, I think a more gracious and effective approach is to humbly challenge their pretense to have a sensible worldview.
>
> By God's grace, studying these five holes in the atheistic worldview can create a powerful opportunity for you and your church to share the wisdom and love of Jesus Christ.
>
> […]Because of their fundamental commitment to impersonal matter and laws, the atheist faces very difficult problems in at least five unique areas:
>
> - Consciousness
> - Free will
> - Purpose
> - Reason, including mathematics and science
> - Objective moral facts, including universal human rights and the reality of evil

Here's my favorite of the 5:

> Leading atheists such as Sam Harris dismiss free will as a matter of course. Or as Tom Clark at Naturalism.org puts it, "Judged from a scientific and logical perspective, the belief that we stand outside the causal web in any respect is an absurdity, the height of human egoism and exceptionalism."
>
> Dr. Angus Menuge, the current President of the Evangelical Philosophical Society, explains the problem: "before we can talk of being responsible for our decisions, we need an account of why those decisions belong to us. But the trouble is, on a naturalistic view, there is no entity that can plausibly own any mental states, there is simply a plurality of parallel, impersonal processes in the brain."
>
> The denial of free will logically leads to the denial of personal responsibility for any of our behaviors or beliefs. But if everything about "you" is determined, then "you" could not have reasonably chosen to believe what you do. If a-rational things and laws determined your neurological structure, "you" literally cannot make any decisions about what you believe or why you believe it.

This article is worth a look if you want to start a discussion with an atheist.

# Is Richard Dawkins really the world's leading thinker?

**Wintery Knight** · 8 May 2013 · Archived copy · Original

Rabbi David Wolpe writes about it on the liberal Huffington Post.

Excerpt:

> *Prospect* magazine just named the 65 leading intellectuals in the world.
>
> First on the list was Richard Dawkins, known for his work in biology and for his polemics against religion. Dawkins on biology is an elegant, lucid and even enchanting explicator of science. Dawkins on religion is historically uninformed, outrageously partisan and morally obtuse. If Dawkins is indeed our best, the life of the mind is in a precarious state.

He breaks his criticisms into 3 sections:

- Historical Ignorance
- Intellectual Narrowness
- Moral Obtuseness

Here's my favorite:

> To write, as Dawkins has, not only that religion is a form of child abuse but indeed may be more damaging than actual sexual abuse, is closer to raving than to reason: "Priestly groping of child bodies is disgusting. But it may be less harmful in the long run than priestly subversion of child minds." Puerile swipes at the religion of a billion people are beneath any intellectual, much less a "leading" one.
>
> That religions, for all their many and frequently noted faults, do great good in the world (the largest aid organization in the USA is World Vision, a Seattle-based Christian group), and are integral to the art, culture and even scientific development of both the east and west is all germane, but not central. Central to the evaluation of an intellectual's integrity is whether they are arguing with the best in the opposing position. Dawkins grabs every depredation of religion as though it were a central tenet and everything noble as though it were an accidental, replaceable byproduct. This is a sophist's strategy, unserious and unworthy.
>
> Thoughtful atheism is an important contribution to the debate. Far more credible is the conclusion of an ideological confederate of Dawkins, editor of *Skeptic* magazine, Michael Shermer: "However for every one of these grand tragedies there are a thousand acts of personal kindness that go unreported. … Religion, like all social institutions of such historical depth and cultural impact, cannot be reduced to an unambiguous good or evil."
>
> Such vapid reductionism would never be undertaken, of course, by anyone with genuine intellectual integrity. The idea that this simplification would be assayed by the world's leading intellectual is a mockery — like the list that enshrines him.

Jonathan M. posed this link to the scientific publications of the greatest thinker in the world. I'm not impressed.

# What we learned from the Benghazi whistle-blowers

**Wintery Knight** · 9 May 2013 · Archived copy · Original

From the PJ Tatler, seven points:

1. **There were multiple stand-down orders, not just one.**
2. **Ambassador Stevens' reason for going to Benghazi has been cleared up.**
3. **Clinton was briefed at 2 am on the night of the attack, was never told that a movie had anything to do with the attack by those on the ground in Libya, yet blamed the movie anyway.**
4. **Whistleblowers were intimidated into silence.**
5. **"The YouTube movie was a non-event in Libya."**
6. **Democrats were uninterested in getting at most of the facts, but were very interested in destroying Mark Thompson.**
7. **House hearings are a poor way to determine who did what and why during and after the attack.**

Here's my favorite one:

> **5. "The YouTube movie was a non-event in Libya."** Hicks directly testified that the YouTube movie, for which a man remains in jail, was not in any way relevant to the attack in Benghazi. Why Obama, Clinton, Rice et al blamed that movie for the attack remains an unanswered question. Hicks said that no American on the ground in Libya that night believed the movie was to blame. He also testified that there was no protest prior to the attack. When the attack began, he was in Tripoli. He texted Stevens, who was in Benghazi, to advise him of the riot in Cairo at the U.S. embassy. In that riot, jihadists had stormed the walls and replaced the American flag with the black flag of Islam. Stevens had not been aware of the Cairo situation at all, but shortly after Hnicks texted him about it, Stevens called and told Hicks that the Benghazi consulate was under attack. He never mentioned a protest.
>
> Hicks also testified that blaming the movie had strongly adverse real-world effects. According to him, it humiliated Libya's president, who had correctly stated that Benghazi was a terrorist attack. Blaming the movie, Hicks said, did "immeasurable damage" to our relations with Libya and delayed the FBI investigation. On Sept. 12, Ambassador Susan Rice told the first of her many untruths, claiming in an email that the FBI investigation into the attack was already underway. It would not actually get underway for 17 days after the attack, by which time the scene of the attack had been compromised and contaminated.
>
> We still do not know who decided to change the original CIA talking points and blame the movie, but the finger is pointing directly at Hillary Clinton. She was briefed by Hicks during the attack, the movie was never mentioned, but in her first public statement on September 12, she blamed the movie. Her subordinate, Ambassador Susan Rice, also blamed the movie the following weekend. The fact that Obama himself blamed the movie repeatedly, though, strongly suggests that he took part in the decision as well.

The Obama administration just flat out lied, because they didn't want the American people to know that their policies of appeasement and moral equivalence make us less safe. Democrats aren't serious about national security and foreign policy. Their goal with national security, as with anything, is to feel good about themselves. And they do that by pretending that our actual enemies are our allies, and that America is to blame for any attacks against us. Benghazi is the direct result of this attitude of apologizing, disarming and bowing to dictators. Weakness invites aggression. Strength deters aggression. That's the way the world works, like it or not.

The Weekly Standard has an excellent podcast summarizing the findings, as well.

UPDATE: Guy Benson lists twelve findings from the Benghazi hearings on Townhall.com.

World Corporate Tax Rates

Here is a news story from Yahoo News that explains the problem and the cause of the problem. (H/T Dad)

Excerpt:

> Large U.S. companies boosted their offshore earnings by 15 percent last year to a record $1.9 trillion, avoiding hefty tax bills by keeping the profits abroad, according to a new report.
>
> The overseas earnings stockpile has climbed by 70 percent over the past five years, said research firm Audit Analytics. Data in its report covers the Russell 3000 index of the largest U.S. corporations.
>
> U.S.-based multinationals do not have to pay U.S. corporate income tax on foreign earnings as long as the earnings do not enter the United States. Accounting rules also let the companies avoid recognizing a tax expense if management intends to keep the earnings indefinitely reinvested overseas.
>
> "It would probably be nice to have this money in our country being used in our economy, but at the moment we see it growing elsewhere," said Don Whalen, general counsel and director of research at Audit Analytics.
>
> Conglomerate General Electric Co (GE.N), had the most indefinitely reinvested overseas earnings, at about $108 billion, while drugmaker Pfizer Inc (PFE.N) was next with $73 billion, according to Audit Analytics.

The simple answer is that Americans believe that corporations need to pay high taxes and operate under burdensome regulations. This eats into their profits, making it harder for them to grow and expand. The plain truth is that it is easier for corporations to expand and hire in countries with lower taxes and fewer regulations. Besides, who wants to be wiped out by a nuisance lawsuit just because someone spills coffee on themselves and then refuses to take responsibility? The smart play is to just opt out completely, and that's what many corporations do – earning higher profits in more business-friendly countries.

# Large numbers of Christians fleeing oppression in Muslim countries

**Wintery Knight** · 9 May 2013 · Archived copy · Original

Fox News put up an editorial about a tragedy that is often neglected by the liberal media.

Excerpt:

> A mass exodus of Christians is currently underway. Millions of Christians are being displaced from one end of the Islamic world to the other.
>
> […]In 2003, Iraq's Christian population was at least one million. Today fewer than 400,000 remain—the result of an anti-Christian campaign that began with the U.S. occupation of Iraq, when countless Christian churches were bombed and countless Christians killed, including by crucifixion and beheading.
>
> The 2010 Baghdad church attack, which saw nearly 60 Christian worshippers slaughtered, is the tip of a decade-long iceberg.
>
> […]In October 2012 the last Christian in the city of Homs—which had a Christian population of some 80,000 before jihadis came—was murdered. One teenage Syrian girl said: "We left because they were trying to kill us… because we were Christians…. Those who were our neighbors turned against us. At the end, when we ran away, we went through balconies. We did not even dare go out on the street in front of our house."
>
> In Egypt, some 100,000 Christian Copts have fled their homeland soon after the "Arab Spring." In September 2012, the Sinai's small Christian community was attacked and evicted by Al Qaeda linked Muslims, Reuters reported. But even before that, the Coptic Orthodox Church lamented the "repeated incidents of displacement of Copts from their homes, whether by force or threat.
>
> […]In Mali, after a 2012 Islamic coup, as many as 200,000 Christians fled. According to reports, "the church in Mali faces being eradicated," especially in the north "where rebels want to establish an independent Islamist state and drive Christians out… there have been house to house searches for Christians who might be in hiding, churches and other Christian property have been looted or destroyed, and people tortured into revealing any Christian relatives." At least one pastor was beheaded.
>
> Even in European Bosnia, Christians are leaving en mass "amid mounting discrimination and Islamization." Only 440,000 Catholics remain in the Balkan nation, half the prewar figure.
>
> Problems cited are typical: "while dozens of mosques were built in the Bosnian capital Sarajevo, no building permissions [permits] were given for Christian churches." "Time is running out as there is a worrisome rise in radicalism," said one authority, who further added that the people of Bosnia-Herzegovina were "persecuted for centuries" after European powers "failed to support them in their struggle against the Ottoman Empire."

The article has even more disturbing statistics.

This violence is not surprising, considering the attitudes of Muslims in Muslim dominated countries.

Consider this article from the liberal Washington post.

Excerpt:

> A majority of Muslims in several countries say that any Muslim who leaves the faith should be executed, with the share who support this nearing two-thirds in Egypt and Pakistan. In Afghanistan, 78 percent say apostates should be killed.
>
> As I wrote yesterday, the issue of apostasy is a complicated one with its roots in Islam's unique foundational history. But the effect is a deeply chilling one for religious freedom, with atheists and converts often

> persecuted.

I was listening to a debate recently featuring Jim Wallis and Jay Richards on Christianity and economics, and I was surprised when Jim Wallis sort of threw out this strange thought at the end of one of his speeches about Islam. Something like “What are Christians doing to love their Muslim neighbor?” I think a very good thing for Christians in the West to do would be to realize that not all religions are the same, and that some are more peaceful than others. Maybe instead of worrying about not offending Muslims all the time, we could instead think about what it is like for Christians to be living in these Muslim countries, and facing horrors like being killed, raped and tortured.

# Casey Luskin and Stephen C. Meyer discuss the Cambrian explosion

**Wintery Knight** · 9 May 2013 · Archived copy · Original

The latest episode of ID the Future is short and sweet – only 7 minutes long.

Details:

> On this episode of **ID the Future**, Casey Luskin sits down with Dr. Stephen C. Meyer, author of *Darwin's Doubt: The Explosive Origin of Animal Life and the Case for Intelligent Design*. Dr. Meyer explains his inspiration for writing *Darwin's Doubt* and discusses the main piece of evidence that Darwin could not explain in his theory.
>
> *Special limited time offer: Save 43% and get 4 free digital books when you pre-order Darwin's Doubt.*

You can grab the MP3 here.

Topics:

- what evidence caused Darwin to doubt his own theory of evolution?
- has the progress of science made the problem more, or less, problematic for naturalists?
- why is the problem of the Cambrian explosion so significant in biology?
- how many animal body plans are there in total?
- how many animal body plans emerged suddenly in the Cambrian explosion?

If you haven't yet read Meyer's first book, "Signature in the Cell", you should probably grab that one. It's the best book on intelligent design that's out right now. It talks about the origin of the first living cell, surveying all naturalistic explanations for it, and concluding that the best explanation – the one most consistent with what we know *now* – is intelligent design.

# ABC News: State Department scrubbed terrorism details from Benghazi talking points

**Wintery Knight** · 10 May 2013 · Archived copy · Original

The mainstream media is slowly discovering the Benghazi scandal, eight months after it happened.

This time, it's ABC News reporting.

Excerpt:

> When it became clear last fall that the CIA's now discredited Benghazi talking points were flawed, the White House said repeatedly the documents were put together almost entirely by the intelligence community, but White House documents reviewed by Congress suggest a different story.
>
> ABC News has obtained 12 different versions of the talking points that show they were extensively edited as they evolved from the drafts first written entirely by the CIA to the final version distributed to Congress and to U.S. Ambassador to the U.N. Susan Rice before she appeared on five talk shows the Sunday after that attack.
>
> Related: Read the Full Benghazi Talking Point Revisions
>
> **White House emails reviewed by ABC News suggest the edits were made with extensive input from the State Department. The edits included requests from the State Department that references to the Al Qaeda-affiliated group Ansar al-Sharia be deleted as well references to CIA warnings about terrorist threats in Benghazi in the months preceding the attack.**
>
> That would appear to directly contradict what White House Press Secretary Jay Carney said about the talking points in November.
>
> […]Summaries of White House and State Department emails – some of which were first published by Stephen Hayes of the Weekly Standard – show that the State Department had extensive input into the editing of the talking points.
>
> State Department spokesman Victoria Nuland raised specific objections to this paragraph drafted by the CIA in its earlier versions of the talking points:
>
> "The Agency has produced numerous pieces on the threat of extremists linked to al-Qa'ida in Benghazi and eastern Libya. These noted that, since April, there have been at least five other attacks against foreign interests in Benghazi by unidentified assailants, including the June attack against the British Ambassador's convoy. We cannot rule out the individuals has previously surveilled the U.S. facilities, also contributing to the efficacy of the attacks."
>
> **In an email to officials at the White House and the intelligence agencies, State Department spokesman Victoria Nuland took issue with including that information because it "could be abused by members [of Congress] to beat up the State Department for not paying attention to warnings, so why would we want to feed that either? Concerned …"**
>
> **The paragraph was entirely deleted.**
>
> Like the final version used by Ambassador Rice on the Sunday shows, the CIA's first drafts said the attack appeared to have been "spontaneously inspired by the protests at the U.S. Embassy in Cairo" but the CIA version went on to say, "That being said, we do know that Islamic extremists with ties to al-Qa'ida participated in the attack." The draft went on to specifically name the al Qaeda-affiliated group named Ansar al-Sharia.
>
> **Once again, Nuland objected to naming the terrorist groups because "we don't want to prejudice the investigation."**

The radically leftist BBC now has a story up as well.

Should Hillary Clinton be President after this revelation? This isn't the first time she's been caught in a lie and had to recant. The woman embellishes her past in order to appear more experienced and competent than she really is. Period. Like a little child tells lies about himself to seem more grown up.

In case you aren't following the story, Guy Benson has a list of 12 revelations from the Benghazi hearings in this article.

Here are the ones I thought were most significant:

1. The Democrats prevented Gregory Hicks from talking to the Congressional investigator.
2. The Democrats demoted Hicks for objecting to the falsified talking points about the Youtube video.
3. Ambassador Susan Rice and Secretary of State Hillary Clinton lied about the Youtube video and protest.
4. American forces were ordered to "stand down" rather than intervene to stop the terrorist attack.
5. Hilary Clinton was aware of the repeated requests for more security in Libya.
6. The ambassador was put in a dangerous situation at the behest of Hilary Clinton.
7. No U.S. Marines were present to defend the Consulate during the attacks.
8. The attack lasted eight hours, so there was ample time for the Obama administration to intervene.
9. Reduced funding because of "austerity" had nothing to do with the lack of security.

I'll just post the first two with video, because I blogged about 3 and 4 already.

Point #1:

> **(1)** Murdered US Ambassador Chris Stevens' second in command, Gregory Hicks, was instructed not to speak with a Congressional investigator by Sec. Hillary Clinton's chief of staff, Cheryl Mills. Hicks said he'd "never" faced a similar demand at any point during his distinguished 22-year diplomatic career. When he refused to comply with this request, the State Department dispatched an attorney to act as a "minder," who insisted on sitting in on all of Hicks' discussions with members of Congress (higher quality video is available here):

Video:

Point #2:

> **(2)** When Hicks began to voice strenuous objections to the administration's inaccurate talking points with State Department higher-ups, the administrationturned hostile. After being lavishly praised by the president and the Secretary of State for his performance under fire, Assistant Secretary of State Beth Jones instantly reversed course and launched into a "blistering critique" of Hicks' leadership. He was subsequently "effectively demoted." Hicks called Rice's talking points "stunning" and "embarrassing."

Video:

This is important, so be sure and read the whole list.

# BBC News covers whistle-blower testimony: “After Benghazi revelations, heads will roll”

**Wintery Knight** · 10 May 2013 · Archived copy · Original

And now the radically secular and leftist BBC News is on board, because of the ABC News story.

Excerpt:

> There’s new evidence, obtained by ABC, that the Obama administration did deliberately purge references to “terrorism” from accounts of the attack on the Benghazi diplomatic mission, which killed four people including the US ambassador to Libya.
>
> Conservatives have long maintained that the administration deliberately suppressed the truth about the attacks.
>
> This is the first hard evidence that the state department did ask for changes to the CIA’s original assessment.
>
> Specifically, they wanted references to previous warnings deleted and this sentence removed: “We do know that Islamic extremists with ties to al-Qa’ida participated in the attack.”
>
> There’s little doubt in my mind that this will haunt Hillary Clinton if she decides to run for president, unless she executes some pretty fancy footwork.
>
> State department spokesperson Victoria Nuland is directly implicated, and the fingerprints of senior White House aides Ben Rhodes and Jay Carney are there as well.

And look at this closely:

> In the interests of full disclosure I have to say I have not in the past been persuaded that allegations of a cover-up were a big deal. It seemed to me a partisan attack based on very little.
>
> I remember listening to reports from the BBC and others at the time that did suggest the attack in Benghazi was a spontaneous reaction to a rather puerile anti-Islamic video.
>
> I understand President Barack Obama’s careful use of the word “terrorism” when it actually means something, rather than as a knee-jerk description of any violence by foreigners against Americans, often in order to justify a “war on terror”.
>
> But the evidence is there in black and white, unless we doubt the documents obtained by ABC, which I don’t.
>
> Mr Obama’s critics are often not very clear what is behind their allegations. I presume they think that the White House wanted to avoid claims the murders were the result of terrorism because this would undermine his claim that al-Qaeda was seriously “degraded”. There’s also a vague sense he’s “soft on terror”.

The purpose of this deception was to make the American people re-elect Democrats who are soft on terrorism, by hiding the fact that Democrats are soft on terrorism. Democrats prefer to think that Tea Party, low-tax, small government, pro-life conservatives are terrorists. Not the radical Muslims who actually do terrorist attacks in the real world. Democrats think they need to be affirmed and defended from criticism.

Frankly, I think that Obama should feel obligated to resign over this self-serving deception. If the media had done their jobs before the election, we wouldn’t have this man as President. As it stands, we’ll just have to vote his America-blaming, terrorist-sympathizing Democrat Party out in 2016.

# Tonight: Stand to Reason's 20th anniversary conference will be live-streamed

**Wintery Knight** · 10 May 2013 · Archived copy · Original

From the Biola Apologetics Events page. Note that all of the times below are Pacific Time zone.

**Description:**

Join us as we celebrate 20 years of Stand to Reason and clear thinking Christianity. The event kicks off Friday night with stimulating apologetics lectures and a celebration! Join us for the full conference on Saturday featuring lectures from the Stand to Reason speakers and friends. Can't make it to Biola? This event will be available via live stream online.

## Conference Schedule:

**Friday Night, May 10 (7:00 – 9:30 pm)**

> *6:15 pm* – Doors Opens
> *7:00 – 8:05 pm* – Lectures from J.P. Moreland, Sean McDowell, Mary Jo Sharp, and Craig Hazen
> *8:05 – 8:25 pm* – Break
> *8:15 – 9:30 pm* – Panel featuring Stand to Reason's Speakers Greg Koukl, Brett Kunkle, Alan Shlemon, and J. Warner Wallace
> *9:30 pm* – Cake & Book Signing in the Courtyard

**Saturday, May 11 (9:00 am – 12:30 pm)**

> *8:00 am* – Registration Opens
> *8:30 am* – Doors Opens
> *9:00 – 9:50 am* – Session 1: "Who's Waiting for Your Kids?"
> Lecture by Stand to Reason's Brett Kunkle
> *9:50 – 10:00 am* – Break
> *10:00 – 10:40 am* – Session 2: "Compromise Is Not an Option"
> Lecture by Stand to Reason's Alan Shlemon
> *10:40 – 10:50 am* – Break
> *10:50 – 11:30 am* – Session 3: "Cold-case Christianity"
> Lecture by Stand to Reason's J. Warner Wallace
> *11:30 – 11:40 am* – Break
> *11:40 am – 12:30 pm* – Session 4: "Still Standing"
> Lecture by Stand to Reason's Greg Koukl

**Conference Location:**

Sutherland Auditorium
Biola University
13800 Biola Avenue
La Mirada, CA 90639
View Map

If you are in the South California area, you can attend in person. Otherwise, you can watch it online.

# IRS apologizes for flagging conservative groups for audits in 2012 election year

**Wintery Knight** · 11 May 2013 · Archived copy · Original

From the Associated Press.

Excerpt:

> The Internal Revenue Service inappropriately flagged conservative political groups for additional reviews during the 2012 election to see if they were violating their tax-exempt status, a top IRS official said Friday.
>
> Organizations were singled out because they included the words “tea party” or “patriot” in their applications for tax-exempt status, said Lois Lerner, who heads the IRS division that oversees tax-exempt groups.
>
> In some cases, groups were asked for their list of donors, which violates IRS policy in most cases, she said.
>
> “That was wrong. That was absolutely incorrect, it was insensitive and it was inappropriate. That’s not how we go about selecting cases for further review,” Lerner said at a conference sponsored by the American Bar Association.
>
> “The IRS would like to apologize for that,” she added.
>
> […]Many conservative groups complained during the election that they were being harassed by the IRS. They accused the agency of frustrating their attempts to become tax exempt by sending them lengthy, intrusive questionnaires.
>
> The forms, which the groups made available at the time, sought information about group members’ political activities, including details of their postings on social networking websites and about family members.

It’s gangster-government all over again. A continuous stream of abuses of government power.

# Stephen C. Meyer and Peter Atkins debate intelligent design

**Wintery Knight** · 12 May 2013 · Archived copy · Original

This dialog occurred in 2010 on the Unbelievable radio show.

I made a rough transcript, so please see below for that.

The MP3 file is here. (60 minutes)

Details:

> The documentary film "Expelled" is presented by US Actor Ben Stein and makes the case that scientists who question Darwinian orthodoxy and support Intelligent Design are being "expelled" from academia.
>
> As the UK edition of the DVD is released we ask "Is freedom of thought at stake or is Intelligent Design out of bounds when it comes to biological science?"
>
> Stephen C Meyer is co founder of the Discovery Institute in the USA and a major proponent of Intelligent Design.
>
> Peter Atkins is Professor of Chemistry at Oxford University and an outspoken atheist.
>
> They both feature in "Expelled" and join Justin to debate the pros and cons of Intelligent Design theory.
>
> Mark Haville who is bringing the film to the UK also joins the discussion.

Meyer's PhD is from Cambridge, and he has a wonderful book called "Signature in the Cell". He explains intelligent design for beginners here in his CNN editorial.

Note: The transcript below is quite snarky and may include paraphrases of Dr. Atkins for the sake of humor.

**My rough transcript of the Meyer-Atkins debate**

Stephen Meyer:
– started researching on ID while doing his PhD at Cambridge
– the question is whether the information-bearing properties in DNA require a designer
– what cause is adequate to explain the digital code that in the simplest living cell
– alternative explanations like self-organization and RNA-first have failed
– so the best explanation for functional sequences of parts is an intelligent designer
– Darwinists have responded to this argument with insults and suppression of dissent

Peter Atkins:
– intelligent design is creationism
– there is no science at all in it
– information can emerge without an intelligent designer
– structures emerge spontaneously, no agent is needed to generate the structure
– information in DNA is also a structure

Stephen Meyer:
– structure and information are two different things
– many structures emerge spontaneously
– structure may be like the vortex that occurs when water goes down a drain

Peter Atkins:
– the vortex is information

Stephen Meyer:

– structures are different from functionally-specified digital information
– in DNA, there is a 4-digit alphabet that is used to create code sequences
– the thing to be explained is where do the functional sequences come from

Peter Atkins:
– information can grow without an agent
– the second law of thermodynamics
– the universe is falling into disorder
– but there are local abatements of chaos that create information
– evolution can cause the amount of information to grow

Stephen Meyer:
– that's just an assertion
– I agree that energy flow through a system can produce spontaneous order
– but spontaneous order is not the same thing as information

Peter Atkins:
– spontaneous order is the same as information

Stephen Meyer:
– it's not order that needs to be explained it's specified complexity

Peter Atkins:
– what do you mean by specified complexity?

Stephen Meyer:
– the chemical bonds that connect to each letter do not determine the letter
– the chemical bonding sites will accept any letter as easily as any other
– any one of the 4 bases (letters) can attach at any place along the backbone

Peter Atkins:
– the selection of which letter comes next is determined by evolution

Stephen Meyer:
– that is just an assertion
– there is no physical process that sequences the letters to have a function

Peter Atkins:
– do you believe in evolution? YES OR NO!

Mark Haville:
– for him to answer the question you have to define the word
– do you mean macro or micro? biological or stellar? directed or undirected?

Peter Atkins:
– undirected molecules to man evolution by natural processes

Stephen Meyer:
– but even Dawkins doesn't believe in evolution then
– you're including the origin of life from non-living matter in evolution
– Dawkins says that there is no known naturalistic explanation for that

Mark Haville:
– you need to define your terms

[They discuss of the movie Expelled and the case of Richard Sternberg]

Stephen Meyer:
– the problem is people don't want to talk about the science
– they denounce dissent as unscientific
– they will not debate about whther natural causes can explain the information
– I want to talk about the science

Peter Atkins:
– ID people raise interesting questions for naturalists to work on
– but you want to tell us what the answer is (intelligence) before we begin
– you start from the idea that an intelligence was involved

Justin Brierley:
– but you start with the idea that natural mechanisms can explain everything!

Stephen Meyer:
– for Dr. Atkins, only explanations based on material processes are valid

Peter Atkins:
– that is correct

Stephen Meyer:
– but we think that the activities of mind can explain some effects
– e.g. – the best explanation of the Rosetta stone is a mind

Peter Atkins:
– but we naturalists think of minds as material as well

Stephen Meyer:
– that's a materialist pre-supposition on your part
– we would have to have a debate about mind and body

Mark Haville:
– I think that the materialist position is socially dangerous
– the problem with naturalism is that it is an ideology
– the ideology pushes absurdities, e.g. – the universe came from nothing uncaused
– and naturalists exert power over others to force them to believe nonsense

Stephen Meyer:
– science progresses as the result of scientists disagreeing
– both sides agree to the facts
– the debate is about the interpretation of those facts
– and one side is being ruled out a priori based on the pre-supposition of materialism

Peter Atkins:
– why do you say that an intelligence is involved in DNA but not general relativity

Stephen Meyer:
– it is always logically possible that intelligence can be invlved in any effect
– the main thing is that explanations based on intelligence should not be ruled out

Peter Atkins:
= well you can't appeal to any non-material process in expaining anything
– those are the rules

Moderator:
– what does intelligent design have to do with religion?

Stephen Meyer:
– creationism is about understanding the istory of life using the Bible
– intelligent design is about using the same method of inquiry as Darwin
– we know that information arises from intelligent causes
– humans create information all the time by using intelligence to sequence parts

Moderator:
– are intelligent design proponents disreputable?

Stephen Meyer:
– what's disreputable is shutting down debate by setting arbitrary rules

Peter Atkins:
– we are both interested in the same questions

Moderator:
– why won't you let Stephen publish his papers then?

Peter Atkins:
– because it breaks the pre-suppositions of naturalism and materialism

Stephen Meyer:
– you're shutting down inquiry by using an arbitrary definition of science

Mark Haville:
– we need to define the word science
– science should be based on what we can observe empirically
– we can observe micro-evolution empirically
– but Darwinism goes beyond what is observable to postulate macro-evolution

Peter Atkins:
– but paleobiology is replete with evidence

Stephen Meyer:
– paleobiology uses a method of inference that I think is valid
– but intelligent design uses the same mode of reasoning which is also valid

Peter Atkins:
= you're intellectually lazy
– we're smart, we're using our brains

Moderator:
– you're saying that appeals to intelligent causes ends science?
– is ID the view that some things are too complex to be explained with naturalism?

Peter Atkins:
– yes, and to teach children that materialism is false is child abuse

Stephen Meyer:
– let's drop the insults and the rhetoric and focus on the arguments
– the ID argument is not based on what we don't know, it's based on what we DO know
– first, we can ask what undirected natural processes can and cannot do
– second, we can ask what we know about intelligent causes from our own experience
– what we do know seems to me to require an intelligent agent as a cause

Peter Atkins:
– GOD! Do you mean God!? Do you mean God!?

Stephen Meyer:
– I personally mean God, but all that the arguments proves is a generic intelligent cause
– and I am using the same method of investigation that Darwin used to get there
– what we know from our experience is that a mind is needed to create information

Peter Atkins:
– NONSENSE! ABSOLUTE NONSENSE!

Stephen Meyer:
– in my book, I list 10 predictions made by ID, so it's not a science-stopper
– furthermore, the enterprise of science began with th goal of understanding God
– consider the earliest scientists, people like James Boyler and Johannes Kepler

Peter Atkins:
– that was 300 years ago, we've moved on

Mark Haville:
– what about Max Planck then?

Stephen Meyer:
– how about James Clark Maxwell?

Mark Haville:
– we need to focus on the facts

Peter Atkins:
– what do you mean by the facts?

Mark Haville:
– well the fact is that Darwinism has no mechanism to produce new information

Peter Atkins:
– well copying errors introduces beneficial mutations

Stephen Meyer:
– let's focus on where we get the first information from the simplest organism
– you can't account for the first organism by appealing to copying errors
– to add functionality to a program, you need new lines codes from an intelligence
– once you have life, you can generate some new information
– but you can't generate macro-evolution either

Peter Atkins:
– if we give you your explanation for teh origin of life, will you give this up

Stephen Meyer:
– of course! I'm a former theistic evolutionist
– but right now the evidence is not there for it
– we have to decide these questions based on what we see with our own eyes today

Peter Atkins:
– but I pre-suppose materialism as the starting point of all explanations
– you're just intellectually lazy to abandon my pre-supposition

Stephen Meyer:
– why is it is less intellectually lazy to insist that materialism is true
– we are making plenty of predictions, and isn't that what science is about?
– consider Junk DNA – you guys said it had no use

– now we know it has a use

Peter Atkins:
– naturalists were open to the idea that junk DNA might have a use before ID

Moderator:
– Dr. Meyer, what about the wall that locks out intelligence as an explanation?

Stephen Meyer:
– if these are interesting questions, then we should allow freedom of inquiry
– that's how science advances

Peter Atkins:
– for all their science-talk really they are just saying God did it
– people who don't agree with me are not using their brains, like I do
– to give up on my pre-supposition of materialism is a denial of humanity

Mark Haville:
– there are important issues that are affected by our view of origins
– everyone who hasn't seen Expelled movie should definitely see it

# John G. West discusses the value of human life on the Michael Medved show

**Wintery Knight** · 12 May 2013 · Archived copy · Original

The Michael Medved show is a national radio show broadcast out of Seattle, Washington. According to Talkers magazine, he has the fifth largest radio audience. He has a regular weekly segment on science and culture featuring scholars from the Discovery Institute.

Here is the third segment from this past week, courtesy of the Intelligent Design: The Future podcast.

The MP3 file is available for download. (37 minutes)

The description is:

> On this episode of **ID the Future**, Dr. John West appears on the Medved Show to discuss the trial of Dr. Gosnell and how it relates to our culture's valuation of human life.
>
> Each week, leading fellows from Discovery Institute will join Mr. Medved to talk about the intersection of science and culture. Listen in live online or on your local Medved station, or stay tuned for at ID the Future for the weekly podcast.

The topics this time are Kermit Gosnell, Peter Singer, infanticide, environmentalism, eugenics, animal rights, overpopulation.

Now might be a good time to subscribe to the ID: The Future podcast.

**Previous entries**

- Episode one: Stephen C. Meyer on Thomas Nagel and intelligent design
- Episode two: Stephen C. Meyer on Richard Dawkins and the Cambrian explosion

# New study: belief in God can significantly improve mental health outcomes

**Wintery Knight** · 12 May 2013 · Archived copy · Original

From Psych Central. (H/T Rob P.)

Excerpt:

> A new study suggests belief in God may significantly improve the outcome of those receiving short-term treatment for psychiatric illness.
>
> Researchers followed patients receiving care from a hospital-based behavioral health program to investigate the relationship between patients' level of belief in God, expectations for treatment and actual treatment outcomes.
>
> In the study, published in the current issue of *Journal of Affective Disorders*, researchers comment that people with a moderate to high level of belief in a higher power do significantly better in short-term psychiatric treatment than those without.
>
> "Belief was associated with not only improved psychological well-being, but decreases in depression and intention to self-harm," says David H. Rosmarin, Ph.D., an instructor in the Department of Psychiatry at Harvard Medical School.
>
> The study looked at 159 patients, recruited over a one-year period. Each participant was asked to gauge their belief in God as well as their expectations for treatment outcome and emotion regulation, each on a five-point scale.
>
> Levels of depression, well-being, and self-harm were assessed at the beginning and end of their treatment program.

Obviously, the issue of God's existence is a matter to be decide based on what is true and false, but this kind of story might help us to get motivated for persuasion.

# How two moms halted the Common Core curriculum in Indiana

**Wintery Knight** · 13 May 2013 · Archived copy · Original

From National Review. (H/T Maggie G., Nancy P.)

Excerpt:

> Indiana has become the first state to retreat from the Common Core standards, as Governor Mike Pence has just signed a bill suspending their implementation.
>
> A great deal has been written and spoken about Common Core, but it is worth rehearsing the outlines again. Common Core is a set of math and English standards developed largely with Gates Foundation money and pushed by the Obama administration and the National Governors Association. The standards define what every schoolchild should learn each year, from first grade through twelfth, and the package includes teacher evaluations tied to federally funded tests designed to ensure that schools teach to Common Core.
>
> Over 40 states hurriedly adopted Common Core, some before the standards were even written, in response to the Obama administration's making more than $4 billion in federal grants conditional on their doing so. Only Texas, Alaska, Virginia, and Nebraska declined. (Minnesota adopted the English but not the math standards.)
>
> […]In Indiana, the story starts with two Indianapolis moms, Heather Crossin and her friend Erin Tuttle.
>
> In September 2011, Heather suddenly noticed a sharp decline in the math homework her eight-year-old daughter was bringing home from Catholic school.
>
> "Instead of many arithmetic problems, the homework would contain only three or four questions, and two of those would be 'explain your answer,'" Heather told me. "Like, 'One bridge is 412 feet long and the other bridge is 206 feet long. Which bridge is longer? How do you know?'"
>
> She found she could not help her daughter answer the latter question: The "right" answer involved heavy quotation from Common Core language. A program designed to encourage thought had ended up encouraging rote memorization not of math but of scripts about math.
>
> […]These standards are designed not to produce well-educated citizens but to prepare students to enter community colleges and lower-level jobs. All students, not just non-college-material students, are going to be taught to this lower standard.
>
> I want to pause and highlight the significance of Heather and Erin's testimony. Heather Crossin and Erin Tuttle did not get involved in opposing Common Core because of anything Michelle Malkin or Glenn Beck said to rile them up, but because of what they saw happening in their own children's *Catholic* school. When experts or politicians said that Common Core would not lead to a surrender of local control over curriculum, Heather and Erin knew better. (Ironically, the leverage in Indiana was Tony Bennett's school-choice program, which made state vouchers available to religious schools, but only if they adopted state tests — which were later quietly switched from ISTEP to the untried Common Core assessments.)
>
> At first Heather thought maybe her ignorance of Common Core was her fault. Maybe, with her kids (as she imagined) safely ensconced in good Catholic schools, she hadn't paid attention.
>
> That's when she and Erin started contacting people — "and we found out something more shocking: *Nobody* had any idea," Heather told me.
>
> A friend of Heather's who is a former reporter for a state newspaper and now a teacher didn't know. Nor did her state senator, Scott Schneider, even though he sat on the state senate's Education Committee. (In Indiana, as in most states, Common Core was adopted by the Board of Education without consulting the legislature.) Nor, evidently, did the state's education reporters — Heather could find literally no press coverage of the key moment when Indiana's Board of Education abandoned its fine state standards and well-regarded state tests in favor of Common Core.

> “They brought in David Coleman, the architect of the standards, to give a presentation, they asked a few questions, there was no debate, no cost analysis, just a sales job, and everybody rubber-stamped it,” Heather said.
>
> So began an 18-month journey in which these two mothers probably changed education history.

There’s definitely an agenda, I think, by people in the government to dumb down the electorate with these educational fads. It’s good to see vigilant mothers who are able to challenge the system and win. I hope that other states will take a look at this and see that Obama’s bribes aren’t worth the costs to our children. We’ve already saddled them with trillions of dollars in debt. We shouldn’t be taking away their ability to earn money, too.

# Obama: editing of talking points to cover-up of Benghazi terrorist attack is a “sideshow”

**Wintery Knight** · 13 May 2013 · Archived copy · Original

From Townhall.

Excerpt:

> Speaking to reporters during a joint press conference with Prime Minister David Cameron Monday, President Obama called the controversy surrounding the editing of Benghazi talking points a “sideshow.”
>
> “The whole issue of talking points, frankly throughout this process has been a sideshow,” Obama said. “There’s no there, there.”
>
> Despite openly blaming a YouTube video in the immediate aftermath of the Benghazi attack, Obama said Monday at the time of the attack his administration wasn’t sure who was responsible for the deaths of four Americans, including U.S Ambassador Chris Stevens.
>
> “Immediately after this event happened we were not clear who exactly carried it out, how it occured or what the motivations were,” Obama said. “Nobody understood exactly what was taking place during the course of those first few days.”
>
> Last Wednesday, Whistleblower and Deputy Chief of Mission at the U.S. Embassy in Libya Gregory Hicks said in sworn testimony that he spoke to former Secretary of State Hillary Clinton at 2 a.m. on the night of the attack and told her, “We are under attack.” He didn’t mention a protest because there wasn’t one. Hicks also said he was shocked when he heard UN Ambassador Susan Rice blame a YouTube video and a spontaneous protest on Sunday talk shows five days after the attack occurred.
>
> ABC News reported late last week that the Benghazi talking points were edited 12 times and that all references to terrorism and al Qaeda were scrubbed. The initial version of unedited talking points were from the CIA and included warnings about terrorism, al Qaeda and a lack of security at the consulate in Benghazi. The best assessment sent from the intelligence community included multiple warnings about the deteriorating security situation in Benghazi. The final talking points with scrubbed references to terrorism and al Qaeda were edited by the State Department after communication and a meeting in the White House.

Just a quick refresher from Mark Steyn about what Benghazi means:

> The L.A. Times, a dying newspaper, had a lame headline, even by its own pathetic and abysmal standards, playing up the partisan element. There isn’t actually a partisan element here. All the players involved in this are Democrats. Chris Stevens is in fact the poster boy for the Obama-Clinton view of the Arab Spring. He’s one of their guys. I mean, as chaps like me look on it, he was in large part deluded about the nature of the Arab Spring, that he was a personally courageous and brave man who was on the front line of the Obama-Clinton narrative about the Arab Spring. And they let him die, and then told lies over his coffin. And Democrats, liberals should ask themselves about that, if they are willing to, that’s, no right wingers, no Republicans, no conservatives are involved in this. They did that to one of their own.
>
> […]…it is now clear that the local militia on who the security of these guys, to whom the security of these guys was entrusted, were actually complicit in the attacks. Elements of the militia participated in the attacks. His body, the dying ambassador was taken to a hospital in the control of one of the radical Islamic groups. He was there in Benghazi on a symbolic day at the personal request of Senator Clinton. In a sense, he not only died for the Obama-Clinton fiction, he was sacrificed to the Obama-Clinton fiction of the Arab Spring. This is absolutely disgraceful. I cannot conceive of how empty and dead you have to be inside to put Ambassador Stevens through that, then leave him to die, and all the nonsense we heard about oh, they couldn’t have got

> there in time? Oh, really? You had, it's like a football match, is it? It's like a football game, you've got an end time, you know they're all going to pack up and go home at 5:00 in the morning or whatever? They didn't know how long it was going to last. They left him to die. They decided to let their guy die in the confusion of the stuff happening in Egypt and Tunisia over the stupid no-account video.

Stuart Schneiderman has an idea about what is motivating the Democrats with their "protesting a video" cover-up.

He writes:

> It might not seem obvious, but the Obama terrorism policy has been run by an idea.
>
> The idea tells us that the fault for Islam terrorism does not lie with the terrorists. It lies with the racism and Islamophobia of the victims. As Jeremiah Wright famously suggested, America was responsible for the terrorist attack on the World Trade Center. It got what was coming to it. Some would call it justice.
>
> To the Obama administration Muslims are rightly outraged at being disrespected by many people in the world. Their outrage is so righteous that they must try to restore their honor by committing terrorist acts.
>
> In order to put an end to terrorism, the administration has chosen to remove all references to Muslim terrorism, whether it involves the massacre perpetrated by Major Nidal Hasan or the attack on the Benghazi consulate. Associating Islam with terrorism is offensive, and, since offensive language is the root of the terrorism problem, eliminating it will eventually eliminate terrorism.
>
> No one should have been surprised when Jonathan Karl of ABC News reported on the extensive bowdlerization of administration talking points about Benghazi.
>
> Unfortunately, the government does not exercise absolute control over the marketplace of ideas. So, despite the best efforts of the Obama administration, a random Islamophobe might well do or say something that offends Muslims to the point that they feel obliged to defend the honor of their religion by killing a few Americans.
>
> In that case, the fault lies with the instigator, not with the perpetrator. As Hillary Clinton famously said to the mother of one of the murdered Navy SEALs, the administration would stop at nothing to punish the person responsible: the filmmaker.
>
> Peggy Noonan described what happens when this theory was put into practice in Benghazi:
>
> Because of that, it [The White House] could not tolerate the idea that the armed assault on the Benghazi consulate was a premeditated act of Islamist terrorism. That would carry a whole world of unhappy political implications, and demand certain actions. And the American presidential election was only eight weeks away. They wanted this problem to go away, or at least to bleed the meaning from it.
>
> Because the White House could not tolerate the idea of Benghazi as a planned and deliberate terrorist assault, it had to be made into something else. So they said it was a spontaneous street demonstration over an anti-Muhammad YouTube video made by a nutty California con man. After all, that had happened earlier in the day, in Cairo. It sounded plausible. And maybe they believed it at first. Maybe they wanted to believe it. But the message was out: Provocative video plus primitive street Arabs equals sparky explosion. Not our fault. Blame the producer! Who was promptly jailed.
>
> If what happened in Benghazi was not a planned and prolonged terrorist assault, if it was merely a street demonstration gone bad, the administration could not take military action to protect Americans there. You take military action in response to a planned and coordinated attack by armed combatants. You don't if it's an essentially meaningless street demonstration that came and went.
>
> By Noonan's analysis, the Obama administration was conducting policy in a fictional world. In its alternative world, what happened in Benghazi was a spontaneous protest provoked by an offensive video. You do not send in commandos to gun down righteous protesters.

> […]If the world does not correspond to your vision, you act as though it does. Your job, if you work for the Obama administration is to change the world by changing the fictional lens through which we see it.
>
> Of course, this looks suspiciously like government by propaganda. Naturally, sophisticated academic thought has offered a theoretical rationalization for it.
>
> Many of the smartest academics in the best universities have convinced themselves that reality is just another fictional world, one that has been constructed by the powerful to exploit the weak.
>
> When put upon to explain why so many people accept that reality is real, they explain that all of these people have been brainwashed by the ruling powers.
>
> When lots of people say it's real, more and more people act as though it's real. Then, it becomes real.
>
> By this theory, what we inaccurately call Islamic terrorism is really just a spontaneous and understandable expression of Muslim outrage. It represents a moral reckoning for insults, injuries and slights dating back to the Crusades. It might be a crime, but it does not reflect on individual Muslims.

It's government by postmodernism. There is no reality independent of our ideology. If you just believe our propaganda about America being to blame for everything that evil people freely do, then there will be world peace. Islamic terrorists just want us to blame ourselves for their killing of us, then they'll stop killing us.

The main goal of the Obama administration is to make sure that the Islamic world is not judged by the actions of Islamic terrorists. That's why terrorist attacks can never be the fault of Islam. It must always be America's fault. We caused the protest with our YouTube videos. Major Nidal Hasan's shooting up Fort Hood was not terrorism… it was "workplace violence". The terrorists are always the victims. This is what you get when you put leftists in charge of national security. There will be more violence against us in the future, because the truth is that weakness emboldens aggressors to attack more. That's not what Obama and his leftist ilk learned in university, but that's what history teaches.

UPDATE: Stephen Hayes of the Weekly Standard has a podcast up on Obama's dismissal of the evolving talking points scandal.

# Have today's young women been taught to select marriage-capable men?

**Wintery Knight** · 13 May 2013 · Archived copy · Original

I'm not going to write a big post on this, but here is Exhibit A from the NY Post.

Excerpt:

> Thousands of American teen girls are crushing on Boston Marathon bomber Dzhokhar "Jahar" Tsarnaev, 19 — and leading a social-media movement to exonerate him.
>
> The swooning teens will not accept allegations that the bushy-haired college kid — whom they refer to by his nickname, "Jahar" — and his brother, Tamerlan, 26, killed three and maimed hundreds by setting off bombs at the April 15 race and killed an MIT police officer during the ensuing manhunt.
>
> While some scrawl the hashtag "#FreeJahar" on their hands with markers, an 18-year-old in Topeka, Kansas, is going to the extreme — she wants the Dzhokhar's words inked on her arm forever.
>
> "Getting one of Jahar's tweets tattooed on me tomorrow. Guess you could say I'm a #FreeJahar supporter," "@keepitbluntedd" tweeted on May 7.
>
> The tatted-up teen, Alisha, told The Post she'd soon put Tsarnaev's April 7 tweet on her upper inside of her arm. It will read, "If you have the knowledge and the inspiration all that's left is to take action."
>
> The waitress insists she believes Tsarnaev is innocent because the evidence against him doesn't add up. She read through all of his tweets.
>
> […]"@FreeJahar97," who identified herself on Twitter as "Gianna," a 16-year-old with "big boobs," likened Tsarnaev to a heartthrob.
>
> "Yes i like Justin Bieber and i like Jahar but that has nothing to do with why i support him. I know hes innocent, he is far too beautiful," she tweeted on April 25.

This is not unexpected, because women were similarly attracted to Osama Bin Laden and Luka Magnotta.

What do we learn from this? Well, I read on Sunshine Mary's blog that women are attracted to LAMPS, which stands for Looks, Athleticism, Money, Power, and Status. You can't really question what women are attracted to, because that's just the way they are. Similarly, men are attracted to things that are not terribly relevant to a successful marriage. It's just a fact that tingles are not a reliable guide for selecting a solid mate, if the goal is really life-long, exclusive, committed married love.

I think that men are probably learning that physical attraction is no guarantee of performance in the wife and mother roles. Men are learning to be more careful because of the penalties for unilateral divorce for men. But somebody needs to be telling women that attraction and tingles do not translate into a lasting, stable, faithful marriage to a marriage-capable man. It translates into Tiger Woods and John Edwards. To really choose a man, you have to think about what roles a man plays in a marriage and then select a man who shows evidence of being able and willing to perform those roles.

What young unmarried women need to hear is that they need to be more careful about marriage as a vocation. Is anyone brave enough to hold them accountable? We have an epidemic of single motherhood, divorce, abortion, etc. Instead of blaming men for everything, let's take a careful look at young women and see what they believe and how they have been influenced by pop culture.

# Department of Justice secretly obtained Associated Press phone records over two months

**Wintery Knight** · 14 May 2013 · Archived copy · Original

Here's the report from the famous news service, Associated Press.

Excerpt:

> The Justice Department secretly obtained two months of telephone records of reporters and editors for The Associated Press in what the news cooperative's top executive called a "massive and unprecedented intrusion" into how news organizations gather the news.
>
> The records obtained by the Justice Department listed outgoing calls for the work and personal phone numbers of individual reporters, for general AP office numbers in New York, Washington and Hartford, Conn., and for the main number for the AP in the House of Representatives press gallery, according to attorneys for the AP. It was not clear if the records also included incoming calls or the duration of the calls.
>
> In all, the government seized the records for more than 20 separate telephone lines assigned to AP and its journalists in April and May of 2012. The exact number of journalists who used the phone lines during that period is unknown, but more than 100 journalists work in the offices where phone records were targeted, on a wide array of stories about government and other matters.
>
> In a letter of protest sent to Attorney General Eric Holder on Monday, AP President and Chief Executive Officer Gary Pruitt said the government sought and obtained information far beyond anything that could be justified by any specific investigation. He demanded the return of the phone records and destruction of all copies.
>
> "There can be no possible justification for such an overbroad collection of the telephone communications of The Associated Press and its reporters. These records potentially reveal communications with confidential sources across all of the newsgathering activities undertaken by the AP during a two-month period, provide a road map to AP's newsgathering operations and disclose information about AP's activities and operations that the government has no conceivable right to know," Pruitt said.

So, the government's been wire tapping journalists? Whatever happened to freedom of the press?

Surprise! The leftists have been exposed as the real fascists! Oh wait, that's just like every other time. To be for big government is *to be a fascist*. There is no such thing as a "fascism" on the right. Conservatives believe in strong families, parental authority, freedom of religion, separation of church and state, small government, an armed populace and free markets. Right-wing conservatism is founded on liberty, private property and the rule of law itself. Big government control is solely a phenomenon of the left. We've been dallying with big government for 5 years under this socialist. Why are we surprised that he uses government to spy on us? It's the left wing thing to do.

# What does the Bible say about the death penalty?

**Wintery Knight** · 14 May 2013 · Archived copy · Original

*Note: This post has a twin post which talks about the evidence against capital punishment from science.*

First, let's take a look at what the Bible says in general about capital punishment, using this lecture featuring eminent theologian Wayne Grudem.

About Wayne Grudem:

> Grudem holds a BA from Harvard University, a Master of Divinity from Westminster Theological Seminary, and a PhD from the University of Cambridge. In 2001, Grudem became Research Professor of Bible and Theology at Phoenix Seminary. Prior to that, he had taught for 20 years at Trinity Evangelical Divinity School, where he was chairman of the department of Biblical and Systematic Theology.
>
> Grudem served on the committee overseeing the English Standard Version translation of the Bible, and in 1999 he was the president of the Evangelical Theological Society. He is a co-founder and past president of the Council on Biblical Manhood and Womanhood. He is the author of, among other books, Systematic Theology: An Introduction to Biblical Doctrine, which advocates a Calvinistic soteriology, the verbal plenary inspiration and inerrancy of the Bible, the body-soul dichotomy in the nature of man, and the complementarian (rather than egalitarian) view of gender equality.

The MP3 file is here.

A PDF sermon outline is here.

Topics:

- what kinds of crimes might require CP?
- what did God say to Noah about CP?
- what does it mean that man is made in the image of God?
- is CP just about taking revenge?
- what does CP say about the value of human life?
- does CP apply to animals, too?
- could the statements supporting CP be understood as symbolic?
- one purpose of CP is to protecting the public
- another purpose of CP is to deter further wrongdoing
- but the Biblical purpose of CP is to achieve justice by retribution
- does the Pope make a good argument against CP?
- what is the role of civil government in achieving retribution?
- do people in Heaven who are sinless desire God to judge sinners?
- should crimes involving property alone be subject to CP?
- is the Mosaic law relevant for deciding which crimes are capital today?
- should violent crimes where no one dies be subject to CP?
- is CP widespread in the world? why or why not?
- what are some objections to CP from the Bible?
- how do you respond to those objections to CP?
- should civil government also turn the other cheek for all crimes?

- what is the “whole life ethic” and is it Biblical?
- what do academic studies show about the deterrence effect of CP?
- how often have innocent people been executed in the USA?
- should there be a higher burden of proof for CP convictions?

You can find more talks by Wayne Grudem here.

**What about the woman caught in adultery?**

Some people like to bring up the woman caught in adultery as proof that Jesus opposed capital punishment. But that passage of the Bible was added much later after the canon was decided.

Daniel B. Wallace is an eminent New Testament scholar who also teaches at Dallas Theological Seminary, an extremely conservative seminary.

About Dr. Wallace:

> Dr. Daniel B. Wallace
>
> - Professor of New Testament Studies
> - B.A., Biola University, 1975; Th.M., Dallas Theological Seminary, 1979; Ph.D., 1995.

> Dr. Wallace influences students across the country through his textbook on intermediate Greek grammar. It is used in more than two-thirds of the nation’s schools that teach that subject. He is the senior New Testament editor of the *NET Bible* and coeditor of the *NET-Nestle Greek-English diglot*. Recently his scholarship has shifted from syntactical and text-critical issues to more specific work in John, Mark, and nascent Christology. However he still works extensively in textual criticism, and has founded The Center for the Study of New Testament Manuscripts, an institute with an initial purpose to preserve Scripture by taking digital photographs of all known Greek New Testament manuscripts. His postdoctoral work includes work on Greek grammar at Tyndale House in Cambridge and textual criticism studies at the Institut für Neutestamentliche Textforschung in Münster.

And Dr. Wallace writes about the passage in John on Bible.org.

Excerpt:

> One hundred and forty years ago, conservative biblical scholar and Dean of Canterbury, Henry Alford, advocated a new translation to replace the King James Bible. One of his reasons was the inferior textual basis of the KJV. Alford argued that “a translator of Holy Scripture must be…ready to sacrifice the choicest text, and the plainest proof of doctrine, if the words are not those of what he is constrained in his conscience to receive as God’s testimony.” He was speaking about the Trinitarian formula found in the KJV rendering of 1 John 5:7–8. Twenty years later, two Cambridge scholars came to the firm conclusion that John 7:53–8:11 also was not part of the original text of scripture. But Westcott and Hort’s view has not had nearly the impact that Alford’s did.
>
> For a long time, biblical scholars have recognized the poor textual credentials of the story of the woman caught in adultery (John 7:53–8:11). The evidence against its authenticity is overwhelming: The earliest manuscripts with substantial portions of John’s Gospel (P66 and P75) lack these verses. They skip from John 7:52 to 8:12. The oldest large codices of the Bible also lack these verses: codex Sinaiticus and Vaticanus, both from the fourth century, are normally considered to be the most important biblical manuscripts of the NT extant today. Neither of them has these verses. Codex Alexandrinus, from the fifth century, lacks several leaves in the

> middle of John. But because of the consistency of the letter size, width of lines, and lines per page, the evidence is conclusive that this manuscript also lacked the *pericope adulterae*. Codex Ephraemi Rescriptus, also from the fifth century, apparently lacked these verses as well (it is similar to Alexandrinus in that some leaves are missing).The earliest extant manuscript to have these verses is codex Bezae, an eccentric text once in the possession of Theodore Beza. He gave this manuscript to the University of Cambridge in 1581 as a gift, telling the school that he was confident that the scholars there would be able to figure out its significance. He washed his hands of the document. Bezae is indeed the most eccentric NT manuscript extant today, yet it is the chief representative of the Western text-type (the text-form that became dominant in Rome and the Latin West).
>
> When P66, P75, Sinaiticus, and Vaticanus agree, their combined testimony is overwhelmingly strong that a particular reading is not authentic. But it is not only the early Greek manuscripts that lack this text. The great majority of Greek manuscripts through the first eight centuries lack this pericope. And except for Bezae (or codex D), virtually all of the most important Greek witnesses through the first eight centuries do not have the verses. Of the three most important early versions of the New Testament (Coptic, Latin, Syriac), two of them lack the story in their earliest and best witnesses. The Latin alone has the story in its best early witnesses.
>
> […]It is an important point to note that although the story of the woman caught in adultery is found in most of our printed Bibles today, the evidence suggests that the majority of Bibles during the first eight centuries of the Christian faith did not contain the story. Externally, most scholars would say that the evidence for it not being an authentic part of John's Gospel is rock solid.But textual criticism is not based on external evidence alone; there is also the internal evidence to consider. This is comprised of two parts: *intrinsic evidence* has to do with what an author is likely to have written; *transcriptional evidence* has to do with how and why a scribe would have changed the text.
>
> Intrinsically, the vocabulary, syntax, and style look far more like Luke than they do John. There is almost nothing in these twelve verses that has a Johannine flavor. And transcriptionally, scribes were almost always prone to add material rather than omit it—especially a big block of text such as this, rich in its description of Jesus' mercy. One of the remarkable things about this passage, in fact, is that it is found in multiple locations. Most manuscripts that have it place it in its now traditional location: between John 7:52 and 8:12. But an entire family of manuscripts has the passage at the end of Luke 21, while another family places it at the end of John's Gospel. Other manuscripts place it at the end of Luke or in various places in John 7.
>
> The *pericope adulterae* has all the earmarks of a pericope that was looking for a home. It took up permanent residence, in the ninth century, in the middle of the fourth gospel.

As this debate between Peter Williams and Bart Ehrman shows, there are only TWO disputed passages in the entire NT that are theologically significant. The long ending of Mark and this adultery passage. A good case can be made for the long ending of Mark, but it's best not to assume it in a debate. The adultery passage is practically impossible to defend as authentic. Dr. Wallace talks about both passages in this Parchment & Pen article. Wallace has also debated Bart Ehrman in the Greer-Heard Forum. What that debate showed is that the New Testament text is actually quite reliable except for those two passages, but it's important to be honest about the two places that are not well supported.

# Dr. George Yancey lectures on anti-Christian bias in academia, and beyond

**Wintery Knight** · 14 May 2013 · Archived copy · Original

My good friend Wes posted this 28-minute lecture.

If you watch 5 minutes, then you'll definitely stay and watch the whole thing. It's fascinating.

Details:

> Join Dr. George Yancey in an in depth discussion of the bias taking place within academia against religion in general, but more specifically Christianity. Within the discussion Dr.Yancey uses brief explanations of his previous book, Compromising Scholarship and many other excerpts of his past research as well as his forthcoming research to give us a new viewpoint on academia and religion.

I found a quick description of Dr. Yancey's work in this New York Times article from July 2011.

It says:

> Republican scholars are more likely than Democrats to end up working outside academia,as documented by Daniel Klein, an economist at George Mason University. Dr. Klein, who calls himself a classical liberal (a k a libertarian), says that the university promotes groupthink because its system of "departmental majoritarianism" empowers the dominant faction to keep hiring like-minded colleagues. And when a faculty committee is looking to hire or award tenure, political ideology seems to make a difference, according to a "collegiality survey" conducted by George Yancey.
>
> Dr. Yancey, a professor of sociology at the University of North Texas, asked more than 400 sociologists which nonacademic factors might influence their willingness to vote for hiring a new colleague. You might expect professors to at least *claim* to be immune to bias in academic hiring decisions.
>
> But as Dr. Yancey reports in his new book, "Compromising Scholarship: Religious and Political Bias in American Higher Education," more than a quarter of the sociologists said they would be swayed favorably toward a Democrat or an A.C.L.U. member and unfavorably toward a Republican. About 40 percent said they would be less inclined to vote for hiring someone who belonged to the National Rifle Association or who was an evangelical. Similar results were obtained in a subsequent survey of professors in other social sciences and the humanities.
>
> Dr. Yancey, who describes himself as a political independent with traditional Christian beliefs and progressive social values, advises nonliberal graduate students to be discreet during job interviews. "The information in this research," he wrote, "indicates that revealing one's political and religious conservatism will, on average, negatively influence about half of the search committee one is attempting to impress."
>
> Dr. Yancey's research was a survey, not a field experiment, so it's impossible to know how many of those academics who confessed to hypothetical bias would let it sway an actual decision. Perhaps they'd try to behave as impartially as the directors of graduate studies in Dr. Gross's experiment.

The lecture is a real eye-opener. It turns out that in academia, you are likely to be viewed the same way as blacks were viewed by slave-owners, and Jews were viewed by Nazis. Stereotypes, ignorance and hatred abound.

We have a lot of work to do to correct these perceptions, and unfortunately nothing that Christians see and hear in church is likely to change this. Until we get serious about prodding our young people to think and achieve, this is what people on the secular left will think of us. Not because they really are smarter, but because we are not capable of pointing out the nonsense on their side of the aisle, e.g. – eternal universes, aliens seeding the Earth with life,

fatherlessness is good for children, and so on. If we don’t study the evidence, then their stupidity will rule the day, and they are the ones who are entrenched in academia.

# IRS gave confidential documents from conservative groups to liberal group ProPublica

**Wintery Knight** · 15 May 2013 · Archived copy · Original

The IRS also held up tax-exemption applications of conservative groups.

Excerpt:

> A newly obtained watchdog report described how the "inappropriate" IRS program that flagged conservative groups for extra scrutiny led to massive delays, with some organizations stuck waiting years to find out about their applications.
>
> The findings were contained in a highly anticipated and highly critical inspector general's report, obtained by Fox News, on a practice that IRS officials first acknowledged on Friday.
>
> The report revealed that the program began as far back as 2010. The Treasury Inspector General for Tax Administration concluded that it was the result of "ineffective management" and "inappropriate criteria" which must be corrected.
>
> Describing the impact of the IRS program, the report said the flawed criteria led to Tea Party and other groups being singled out and subjected to "substantial delays." More than 80 percent of the cases it reviewed were left open more than one year, and some were left in limbo for more than three years.
>
> […]**The internal investigation found that the "inappropriate criteria" — which led to the IRS asking Tea Party and other groups about their donors and making other intrusive requests — was allowed to stay in place for more than 18 months. During that time, conservative groups had their applications put on hold for months, even years.**

What did the IRS do with these applications and donor lists?

Breitbart.com explains what happened next:

> **The progressive-leaning investigative journalism group ProPublica says the Internal Revenue Service (IRS) office that targeted and harassed conservative tax-exempt groups during the 2012 election cycle gave the progressive group nine confidential applications of conservative groups whose tax-exempt status was pending.**
>
> The commendable admission lends further evidence to the lengths the IRS went during an election cycle to silence tea party and limited government voices.
>
> ProPublica says the documents the IRS gave them were "not supposed to be made public":
>
> The same IRS office that deliberately targeted conservative groups applying for tax-exempt status in the run-up to the 2012 election released nine pending confidential applications of conservative groups to ProPublica late last year… In response to a request for the applications for 67 different nonprofits last November, the Cincinnati office of the IRS sent ProPublica applications or documentation for 31 groups. Nine of those applications had not yet been approved—meaning they were not supposed to be made public. (We made six of those public, after redacting their financial information, deeming that they were newsworthy.)
>
> The group says that "no unapproved applications from liberal groups were sent to ProPublica."

The National Organization for Marriage had their donor list leaked by someone in the IRS.

Excerpt:

> **The National Organization for Marriage (NOM) today released documents showing that their**

> **confidential U.S. tax return containing private donor information came directly from the Internal Revenue Service and was provided to NOM's political opponents, the Human Rights Campaign (HRC). Joe Solmonese, president of the HRC, is a national co-chair of President Obama's reelection campaign.**
>
> "The American people are entitled to know how a confidential tax return containing private donor information filed exclusively with the Internal Revenue Service has been given to our political opponents whose leader also happens to be co-chairing President Obama's reelection committee," said NOM President Brian Brown. "It is shocking that a political ally of President Obama's would come to possess and then publicly release a confidential tax return that came directly from the Internal Revenue Service. We demand to know who is responsible for this criminal act and what the Administration is going to do to get to the bottom of it."
>
> On March 30, 2012, the Huffington Post published NOM's confidential 2008 tax return filed with the IRS, which it said came from the Human Rights Campaign. The HRC has said on its own site the documents came from a "whistleblower." However, NOM has determined that the documents came directly from the Internal Revenue Service.

The Human Rights Campaign was one of the groups that denounced the Family Research Council as a "hate group". This is the same Family Research Council that was attacked by a gun-wielding gay activist named Floyd Lee Corkins II. The crime was prosecuted as an act of domestic terrorism, and Corkins was convicted. The Human Rights Campaign has gotten people fired for disagreeing with same-sex marriage.

Remember that everything that the IRS was doing was not paid for with money that they themselves earned themselves by providing useful products and services. The IRS gets money by culling it from profitable private sector businesses and their employees, through compulsory confiscation of earned income. Should we be paying them to do this? Is this good value for the money?

# IRS audited the Billy Graham Evangelistic Association after they ran pro-marriage ads

**Wintery Knight** · 15 May 2013 · Archived copy · Original

Todd Starnes of Fox News Radio reports.

Excerpt:

> The man known as America's pastor was among those targeted by the Internal Revenue Service after the Billy Graham Evangelistic Association ran newspaper advertisements promoting traditional marriage and biblical values, according to a letter his son wrote to President Obama.
>
> "I am bringing this to your attention because I believe that someone in the Administration was targeting and attempting to intimidate us," wrote Franklin Graham in his letter and shared with Fox News. "This is morally wrong and unethical – indeed some would call it 'un-American.'"
>
> Graham is president of the Billy Graham Evangelistic Association as well as the international charity Samaritan's Purse. Both organizations received word of audits on the same day – not long after they ran full –page ads supporting North Carolina's Marriage amendment.
>
> […]The IRS eventually cleared both the Billy Graham Evangelistic Association and Samaritan's Purse, but Graham noted that the audit cost the ministries money.
>
> "Unfortunately, while these audits not only wasted taxpayer money, they wasted money contributed by donors for ministry purposes, as we had to spend precious resources servicing the IRS agents in our offices," Graham wrote.

This is just crass intimidation by a secular state against private religious organizations.

UPDATE: Todd posted an update to the story this morning.

# Police and social workers ignored sex-trafficking, rape and abuse by Muslims

**Wintery Knight** · 15 May 2013 · Archived copy · Original

From the UK Telegraph.

Excerpt:

> The gang recruited its victims from the Oxford area between May 2004 and January last year, deliberately targeting vulnerable girls.

> Some were spotted drinking or playing truant along the city's Cowley Road, while others were chosen because they were living in care homes.
>
> Once under their control the abusers forced the girls to have sex using threats of extreme violence.
>
> Some were gang raped, while others were prostituted to men who would travel from all parts of UK to have sex with them.
>
> If they did not comply they were beaten and burned with cigarettes while one girl was even branded with her abusers' initials.
>
> When one victim fell pregnant at the age of 12 she was forced to undergo a dangerous backstreet abortion.
>
> Another girl was abused with a string of bizarre sex toys to 'prepare' her for one of the gang rapes.
>
> Police were first alerted to the activities of the grooming ring in 2006 when a 14-year-old girl complained that she had been held against her will by two Asian men and forced to take drugs.
>
> Seven months later the same girl was found by officers in an Oxford park complaining that she had been forced to perform a sex act on one of the defendants, Akhtar Dogar.
>
> Dogar was interviewed by police but denied raping the girl and the case was dropped when the girl withdrew her complaint.
>
> The same year another 14-year-old girl informed police she had been forced to have sex with several different men, but again the case was dropped when she became too scared to press charges.
>
> Again in 2006 police were called to a guest house in Oxford after a man staying there dialled 999 to report that he feared a prostitute was being beaten up in an adjoining room.
>
> When police arrived they found a 14-year-old girl cowering in the basement and complaining that had been raped and beaten.
>
> She too eventually withdrew her complaint and the case was dropped.
>
> Social workers also claimed they alerted police to concerns about one of the victims who regularly ran away from her care home and was often seen in the company of older Asian men.
>
> A serious case review was announced while Thames Valley Police and Oxfordshire County Council apologised for their failure to spot the pattern earlier.
>
> […]The case is the latest in a string of high profile trials involving Asian gangs who have convicted of targeting and abusing vulnerable white girls.
>
> Last May eight men of Pakistani origin and one Afghan were convicted of trafficking and raping girls in the Rochdale area.
>
> Five Asian men were also jailed in 2010 after being convicted of grooming girls as young as 12 in the Rotherham area.

> Just last week a gang of Asian men who groomed vulnerable white girls in Shropshire between 2006 and 2009 were jailed for more than 50-years.

More here from the Evening Standard:

> Police and council leaders today apologised for their failings as a gang of paedophiles was convicted at the Old Bailey of serial abuse of schoolgirls while in care.

> The girls, some as young as 11, were drugged, raped, trafficked and used as prostitutes while supposedly in the safe-keeping of the local authority in Oxford.
>
> They had all been targeted because they were vulnerable, drinking and taking drugs.
>
> The exposure of this child sex ring comes less than a year after a similar gang was jailed in Rochdale and an inquiry by a group of MPs found systemic failings in care across the country.
>
> Last month police revealed that new evidence had emerged of abuse by 84 staff at the Bryn Estyn home in North Wales dating back to the 1960s.
>
> **Today five men of Pakistani origin and two from North Africa were convicted of more than 40 charges spanning eight years.** They will be sentenced at a later date by judge Peter Rook QC. Two defendants were cleared.
>
> The charges involved six girls between the ages of 11 and 15 who were abused over nine years in the Cowley area of Oxford.
>
> After the guilty verdicts a fight broke out in the dock with one of the convicted paedophiles punching another who had been cleared.
>
> The men were described by police as “predators who identified the most vulnerable girls in society and corrupted them entirely”. Police missed several chances to catch gang members before they were finally arrested.
>
> The victims were forced to relive the horror in some of the most distressing witness evidence heard at the Old Bailey.
>
> One after the other, the girls broke down as they described how they were groomed, beaten, betrayed and sold into prostitution around the country.
>
> Girl D told how, at the age of 11, she was branded with a heated hairpin by a trafficker and loaned to other abusers for £600 an hour.
>
> Over five years she was repeatedly raped by large groups of men in what she described as “torture sex”.
>
> She was so frightened of her attacker that she refused to give evidence for fear he would hurt her again.
>
> It was only after she was given legal advice that Girl D agreed to tell her story from a videolink from another room in the building.
>
> Another victim, Girl A, complained of her plight to police on two occasions but no one was charged.

What caused police and social workers to avoid rescuing the white girls from the Muslim men? Well, I think if you ask any university-educated liberal, they would explain to you that charging Muslims with crimes in Western societies is “Islamophobia”. This is what people learn in university. You can’t treat Muslims like everyone else, equal under the law, because that’s “Islamophobia”. The Labor Party, which enacted the lax immigration policies of the last decade in the United Kingdom, would tell you that those British pre-teen girls just need to be more sensitive to other cultures and stop being so racist while they are being raped.

**The previous Muslim sex-trafficking gang**

Here are the facts from the previous "grooming" case from the UK Daily Mail.

Excerpt:

> A sex grooming gang targeted white girls because they were not part of their 'community or religion' said a judge as he jailed them for a total of 77 years yesterday.
>
> Detectives are now preparing to make more arrests after they revealed they suspect up to 50 mainly Pakistani-born men took part in the abuse.
>
> But despite the judge's hard-hitting comments, police in Greater Manchester continued to insist that the men's race and religion were not factors in their crimes.
>
> Yesterday senior politicians clashed over the case – with one former Labour MP claiming police and social workers ignored complaints because they were 'petrified of being called racist'.
>
> With experts on paedophilia insisting street grooming by Muslim men was a real problem, Judge Gerald Clinton made it clear he believed religion was a factor.
>
> He jailed the 59-year-old ringleader for 19 years and eight other men for between four and 12 years, telling them they had treated their victims 'as though they were worthless and beyond all respect'.
>
> He added: 'I believe one of the factors which led to that is that they were not of your community or religion.'
>
> But he branded outbursts by some of the men claiming the prosecution was racially-motivated 'nonsense', telling them they found themselves in the dock because of their 'lust and greed'.
>
> The gang raped and abused up to 47 girls – some as young as 13 – after plying them with alcohol and luring them to takeaways in Heywood, near Rochdale.
>
> Detective Inspector Michael Sanderson, of Greater Manchester Police, said none of the convicted men had ever shown 'the slightest bit of remorse'.

The keeping of sex slaves is sanctioned by the Qur'an.

What's interesting about this case is that the police knew about the ring years before, but refused to prosecute:

> A victim of the ring said she was 'let down' by police and the Crown Prosecution Service because the issue of Asian gangs grooming young white girls was 'unheard of' at the time.
>
> The girl, who was 15 when she was targeted by the gang, reported the abuse to police in August 2008 but the CPS decided not to prosecute because they did not believe a jury would find her 'credible'.
>
> After reporting the abuse she suffered for four more months at the hands of the gang and continued to be forced into having sex by her 'friend' – a teenage girl who was acting as a pimp for the men.
>
> She said the problem got 'worse' after telling the police.
>
> 'I felt let down. But I know that they (police) believed me… but… because they said to me at the end that something should have been done but the CPS just would not – what's the word? – prosecute is it?
>
> 'It's like, then, in 2008 it weren't really heard of… Asian men with white girls.
>
> 'It was just unheard of. I've never heard of it. Now it's going on everywhere. You think of Muslim men as religious and family-minded and just nice people. You don't think… I don't know… you just don't think they'd do things like that.'
>
> The girl, now 20, only escaped the gang in December 2008 when she fell pregnant and moved away. She was then made to wait until August 2009 for the CPS to tell her they were not taking the case to trial.

> She called the men who abused her ‘evil’ and said she hopes they pay for their crimes.
>
> ‘They ripped away all my dignity and all my last bit of self-esteem and by the end of it I had no emotion whatsoever because I was used to being used and abused daily,’ she said.
>
> ‘It was just blocked out, it was just like it wasn’t me any more. They just took everything away and I just think hopefully they’ll pay for what they’ve done.’

Under the policies of the UK Labour Party, the police had all been fully trained in multiculturalism and political correctness. Some groups favored by the secular left are above the law and cannot be persecuted, even when they rape little children. We can thank Harriet Harman and her ilk for this. We can even thank her for the immigration policies that created isolated communities that do not respect the laws and values of Western civilization, and Judeo-Christian values in particular.

But that’s not all. Think about what the feminism promoted by the Labour Party achieves. The feminism embraced by the Labour Party under Harriet Harman had one goal. To destroy the institution of marriage and eject fathers from the home. Men were to be replaced with government handouts and welfare payments. Under the rule of the Labour Party, illegitimacy has skyrocketed while marriage has declined. The UK government literally pays women to have children out of wedlock – children who will grow up fatherless. IVF is taxpayer-funded under the NHS.

When women do not have to care about whether a man is a good provider, they can have sex with any man – whichever one they like, based on the unwise standards of the culture. But men who have not been carefully picked by women to be husbands and fathers do not stick around. Who is left,then, to protect the girls who are born without fathers to raise them? No one. This is the end result of feminism’s attempt to destroy the traditional roles that men play in the home: protector, provider and moral/spiritual leader. Government programs, politically correct social workers and welfare checks are not a substitute for a father.

# Obama administration won't prosecute wind farms for killing thousands of endangered birds

**Wintery Knight** · 15 May 2013 · Archived copy · Original

From Fox News. (H/T Melissa)

Excerpt:

> The Obama administration has never fined or prosecuted a wind farm for killing eagles and other protected bird species, shielding the industry from liability and helping keep the scope of the deaths secret, an Associated Press investigation has found.
>
> **More than 573,000 birds are killed by the country's wind farms each year, including 83,000 hunting birds such as hawks, falcons and eagles, according to an estimate published in March in the peer-reviewed Wildlife Society Bulletin.**
>
> Each death is federal crime, a charge that the Obama administration has used to prosecute oil companies when birds drown in their waste pits, and power companies when birds are electrocuted by their power lines. No wind energy company has been prosecuted, even those that repeatedly flout the law.
>
> […]Documents and emails obtained by The Associated Press offer glimpses of the problem: 14 deaths at seven facilities in California, five each in New Mexico and Oregon, one in Washington state and another in Nevada, where an eagle was found with a hole in its neck, exposing the bone.
>
> One of the deadliest places in the country for golden eagles is Wyoming, where federal officials said wind farms had killed more than four dozen golden eagles since 2009, predominantly in the southeastern part of the state. The officials spoke on condition of anonymity because they were not authorized to disclose the figures. Getting precise figures is impossible because many companies aren't required to disclose how many birds they kill. And when they do, experts say, the data can be unreliable.
>
> When companies voluntarily report deaths, the Obama administration in many cases refuses to make the information public, saying it belongs to the energy companies or that revealing it would expose trade secrets or implicate ongoing enforcement investigations.
>
> Nearly all the birds being killed are protected under federal environmental laws, which prosecutors have used to generate tens of millions of dollars in fines and settlements from businesses, including oil and gas companies, over the past five years.
>
> "What it boils down to is this: If you electrocute an eagle, that is bad, but if you chop it to pieces, that is OK," said Tim Eicher, a former U.S. Fish and Wildlife Service enforcement agent based in Cody, Wyo.

Most other people like dogs and cats, but I like birds. I am concerned about birds of prey who are endangered species. I believe in conservation. To me, what this story says is that Obama doesn't really care about the environment. The federal government does have some legitimate functions, like protecting us from threats, maintaining roads and protecting endangered species. But they don't have to be subsidizing wind power, especially when it causes pain and suffering to innocent birds.

# Released e-mails show that State Department edited terrorism out of Benghazi talking points

**Wintery Knight** · 16 May 2013 · Archived copy · Original

Fox News reports on the newly released e-mails.

Excerpt:

> State Department officials repeatedly objected to — and tried to water down — references to Islamic extremist groups and prior security warnings in the administration's initial internal story-line on the Benghazi attack, according to dozens of emails and notes released by the White House late Wednesday.
>
> […]**Individual emails leading up to that assessment show State officials repeatedly objecting to the intelligence community's early version of events.**
>
> **The early versions stated that "Islamic extremists with ties to Al Qaeda" participated in the assault and discussed links to militant group Ansar al Sharia — and referenced prior attacks against western targets in Benghazi, as well as intelligence warnings.**
>
> **State Department spokeswoman Victoria Nuland complained that she had "serious concerns" about "arming members of Congress" to make assertions the administration was not making. "In same vein, why do we want Hill to be fingering Ansar al Sharia, when we aren't doing that ourselves until we have investigation results … and the penultimate point could be abused by Members to beat the State Department for not paying attention to Agency warnings so why do we want to feed that either? Concerned …"**
>
> She also wrote that the line saying the administration knows there were extremists among the demonstrators "will come back to us at podium," voicing concern that some would question how the administration knows that. She said she would "need answers" if that line is used.
>
> In response to her concerns, Assistant Secretary of State David S. Adams voiced agreement. He said the line about prior incidents "will read to members like we had been repeatedly warned."
>
> The emails show Petraeus' deputy Mike Morell involved in circulating revised points. In one email, he too noted the State Department had "deep concerns" about referencing prior "warnings."
>
> A page of hand-written notes showed Morell scratching out mentions of Al Qaeda, the experience of fighters in Libya, Islamic extremists and a warning to the U.S. Embassy in Cairo on the eve of the attacks of calls for a demonstration. Ultimately, all of that was scrubbed from the talking points. The final version said "extremists" participated, without mentioning prior attacks and warnings in the region.

This editing of the talking points is what Barack Obama called "a sideshow". Not worth talking about.

The motivation behind the State Department's editing was pretty clearly to avoid identifying the attackers as Muslim terrorists. The timing of the election was undoubtedly a factor in the decision making. They edited the talking points in order to create the impression for voters that Obama had been effective at reining in terrorism with his weak foreign policy and appeasement. Democrats are weak on foreign policy. They do ignore warnings. They do prefer to blame America for the bad actions of Muslim extremists. This approach does not deter aggression. Rather than admit their mistake and toughen up, the Democrats preferred to cover up the facts. And they won the election.

# Live stream: Dr. Fazale Rana debates Dr. Michael Ruse on evolution vs design

**Wintery Knight** · 16 May 2013 · Archived copy · Original

UPDATE: Video posted:

A debate on origins happening TODAY! (May 16th)

Details here. There is a free live stream!

> The Origin of Life: The Great God Debate
> Fuz Rana vs. Michael Ruse
>
> Michael Ruse and Fuz Rana square off to debate the question "Are natural processes sufficient to explain the origin and the complexity of the cell?" The debate will be moderated by Craig Hazen. Sponsored by The Well Christian Club at UCR, Come Reason Ministries, and Biola University.
>
> May 16, 2013
>
> Thursday Night
> Time: 7:00 pm, PDT
> Cost: $10 ($5 with student ID)
> Parking $5
> Live Stream: FREE
>
> Event Registration Information Here!
>
> Live Stream Information Here!

Location:

> University of California Riverside Campus
> Gymnasium
> 900 University Ave,
> Riverside, CA 92507

Format of the debate:

- Opening Arguments: 20 minutes each
- 1st Cross-Examination: 6 minutes each side
- Rebuttals: 10 minutes each
- 2nd Cross-Examination: 6 minutes each side
- Concluding Arguments: 5 minutes each
- Q &A: 40 minutes (Questions can come from Twitter and SMS)

Dr. Fazale Rana has written a number of books on intelligent design, and is a biochemist by trade. Dr. Ruse is a philosopher.

Dr. Rana will also be doing a lecture on the origin of life tomorrow evening. Details here.

# Texas Lt. Governor demands probe of late-term abortion provider

**Wintery Knight** · 16 May 2013 · Archived copy · Original

From Breitbart.com.

Excerpt:

> The lieutenant governor of Texas, David Dewhurst, demanded an investigation Wednesday of an abortionist whose employees claim he twisted the heads off of babies who were born alive during abortion procedures.
>
> A new video exposé released Tuesday of the Aaron Women's Clinic in Houston, one of three clinics owned by abortionist Douglas Karpen, depicts gruesome details of the practices of an abortionist who is currently facing a criminal investigation for allegedly allowing late-term babies to be born alive then twisting their heads off with his bare hands.
>
> According to LifeNews, three former employees of Karpen's brought forward photos taken on their cell phones at his clinic on Schumacher Lane in Houston. The photos depicted two babies aborted well beyond the legal limit of 24 weeks in Texas. The babies' necks had been cut.
>
> "In a week when serial murderer Kermit Gosnell was found guilty of killing babies, I read with disgust about the allegations of Houston-based abortionist Douglas Karpen performing illegal late-term abortions surrounded by appalling sanitary conditions in his clinic," Dewhurst said. "The Harris County authorities should perform a full-scale investigation and take action against those who broke state law."
>
> In the new video produced by Life Dynamics, a national pro-life organization, the three former employees of abortionist Karpen allege that the Kermit Gosnell "house of horrors" abortion clinic was not the anomaly that the abortion industry says it is.

The article has graphic details of the allegations of the former employees, in their own words. Horrifying stuff.

I found some disturbing images of the aborted babies on another Life News post.

# IRS official who targeted Tea Party groups now a director in Obamacare administration

**Wintery Knight** · 17 May 2013 · Archived copy · Original

ABC News reports.

Excerpt:

> The Internal Revenue Service official in charge of the tax-exempt organizations at the time when the unit targeted tea party groups now runs the IRS office responsible for the health care legislation.
>
> Sarah Hall Ingram served as commissioner of the office responsible for tax-exempt organizations between 2009 and 2012. But Ingram has since left that part of the IRS and is now the director of the IRS' Affordable Care Act office, the IRS confirmed to ABC News today.
>
> Her successor, Joseph Grant, is taking the fall for misdeeds at the scandal-plagued unit between 2010 and 2012. During at least part of that time, Grant served as deputy commissioner of the tax-exempt unit.
>
> Grant announced today that he would retire June 3, despite being appointed as commissioner of the tax-exempt office May 8, a week ago.
>
> As the House voted to fully repeal the Affordable Care Act Thursday evening, House Speaker John Boehner expressed "serious concerns" that the IRS is empowered as the law's chief enforcer.
>
> "Fully repealing ObamaCare will help us build a stronger, healthier economy, and will clear the way for patient-centered reforms that lower health care costs and protect jobs," Boehner, R-Ohio, said.
>
> "Obamacare empowers the agency that just violated the public's trust by secretly targeting conservative groups," Rep. Marlin Stutzman, R-Ind., added. "Even by Washington's standards, that's unacceptable."
>
> Sen. John Cornyn even introduced a bill, the "Keep the IRS Off Your Health Care Act of 2013," which would prohibit the Secretary of the Treasury, or any delegate, including the IRS, from enforcing the Affordable Care Act.
>
> "Now more than ever, we need to prevent the IRS from having any role in Americans' health care," Cornyn, R-Texas, stated. "I do not support Obamacare, and after the events of last week, I cannot support giving the IRS any more responsibility or taxpayer dollars to implement a broken law."
>
> Senate Minority Leader Mitch McConnell also reacted to the revelation late Thursday, stating the news was "stunning, just stunning."

More here from Guy Benson, who linked to this story. He reports that Sarah Hall Ingram received more than $100,000 in taxpayer-funded bonuses while working at the IRS.

# New report on Obamacare claims that premiums will go up 100% to 400%

**Wintery Knight** · 17 May 2013 · Archived copy · Original

From the Washington Examiner.

Excerpt:

> Internal cost estimates from 17 of the nation's largest insurance companies indicate that health insurance premiums will grow an average of 100 percent under Obamacare, and that some will soar more than 400 percent, crushing the administration's goal of affordability.
>
> New regulations, policies, taxes, fees and mandates are the reason for the unexpected "rate shock," according to the House Energy and Commerce Committee, which released a report Monday based on internal documents provided by the insurance companies. The 17 companies include Aetna, Blue Cross Blue Shield and Kaiser Foundation.
>
> The report found that individuals will face "premium increases of nearly 100 percent on average, with potential highs eclipsing 400 percent. Meanwhile, small businesses can expect average premium increases in the small group market of up to 50 percent, with potential highs over 100 percent."
>
> […]It concluded: "Despite promises that the law will lower costs, [Obamacare] will in fact cause the premiums of many Americans to spike substantially. The broken promises are numerous, and the empirical data reveal that many Americans, from recent college graduates to older adults, will not be able to afford the law's higher costs."

In other news, Congresswoman Michele Bachmann led the Republican-controlled House of Representatives to pass a bill to repeal Obamacare. However, the bill is not expected to pass in the Democrat-controlled Senate. Elections matter.

# Amy Hall: Will right and wrong always be obvious?

**Wintery Knight** · 17 May 2013 · Archived copy · Original

Here's a post from Amy Hall of Stand to Reason that will cause you to think.

She writes:

> A person doesn't have to know the Bible in order to know right and wrong, right? Well, yes and no. It all depends on what value system is being fed to that person by society. A society saturated in a Christian understanding of morality will reinforce that understanding, even among its atheists. A society without the background of Christianity behind it will enforce a different understanding of morality. Atheists have the mistaken idea that objective morality is simply obvious to everyone, but the truth is, it's not. All one has to do is look back through history (and in other cultures today) to see that this is so. Our damaged consciences are malleable.
>
> Is murdering your child right or wrong? Ask these mothers in India, where it's commonplace in some areas to let your girl die if you prefer a boy. Ask pre-Christian cultures. This is why I think atheists are being far too hasty when they argue that Christianity is expendable—unnecessary for a good society. If we see atrocious moral crimes in cultures not influenced by Christianity, we have no reason to think our current standards will continue in a culture that rejects Christianity.
>
> […]As I've written before, intrinsic human value has to be taught. A society's view of the human person and its value will affect what that society views as being moral: We are just animals. Imperfect animals aren't worth the trouble. Therefore, there's a case to be made for killing them rather than caring for them. That conclusion reasonably follows from the non-Christian premise. As Christianity fades in influence and a different view of the human person gains acceptance, don't expect that our society will continue to recognize that conclusion to be immoral. At that point, people will still consider themselves to be perfectly moral…but only because they're judging themselves by a different standard of morality.
>
> It's difficult for us to recognize the depth our depravity when "everyone else is doing it." Ask Gosnell's nurses.

I like this post because it connects an apologetic concern to real life. This concern about right and wrong isn't merely theoretical. It's practical.

Think about the abortion really means, in practice. Basically, you have two-grown ups who are engaging in a recreational activity. In the course of that activity, they create a new innocent life that is distinct from their lives. A new human genetic code. This new person is weaker than either of her two parents. And her life imposes certain obligations on them. She needs food, and safety, and care. Like a baby bird who has fallen out of her tree. But when there is no God, there is no purpose to putting your needs second, and someone else's first. You could do it, if it makes you feel happy. But having to take care of a newborn doesn't normally make people who are have risky recreational sex happy. After all, people who have recreational sex instead of procreative sex are looking for *recreation* not *responsibility*.

And so what do these powerful people do to the new life they have created? Do they let this new life impose obligations on them? Do they let this new life lower the amount of happiness they themselves will have? No. They kill it. For the strong to refrain from killing the weak when the weak impose obligations on them, there has to be a design for human nature that makes moral obligations and selflessness rational, instead of merely pleasurable. Because we all know that being saddled with a newborn baby is not fun. There has to be something more going on than the pursuit of pleasure if the baby is going to live.

Similarly with no-fault divorce and gay marriage. First, we enacted no-fault divorce, which weakened the stability of marriage so that many children now grow up fatherless. No one is careful about marriage anymore in order to provide children with what they need. Instead, we just "marry for love" and then dissolve it when it doesn't feel

good anymore. Same-sex marriage is the same thing again. The voluntarily removal of the biological father or mother from a child's life. And why? Because the needs of children don't matter. They're smaller than we are, so we don't care about them.

Is there anything more going on in our society other than the seeking of pleasure? I think that the seeking of "happiness" instead of goodness is now the dominant view. No one wants to be responsible for anyone else. No one wants to be obligated to anyone else. We all seem to want to be free of feeling bad. If we do wrong, we don't want to be judged or reminded about what we did. If we hurt someone else, then we don't want to have to make restitution for what we did. We try to hand our children off to strangers so that we don't have to teach them ourselves. We don't want to learn anything that might make us feel obligated to do the right thing instead of what we feel like doing. Other people are just there to give us pleasure. It's sad.

All of these concepts had meaning in a Judeo-Christian society that encouraged marriage and families. But those days are drifting away. Once upon a time, we had a social consensus that what mattered was doing the right thing – what we were designed to do. And it was OK to not feel good and to not feel happy, if you were doing the right thing. Happiness wasn't the main goal of life. Now things are different.

# Obama administration wins appeal to deport German homeschooling family

**Wintery Knight** · 18 May 2013 · Archived copy · Original

From Breitbart News.

Excerpt:

> The Sixth Circuit Court of Appeals has upheld the Obama administration's denial of asylum granted to the Romeike family, who fled Germany over its strict anti-homeschooling laws.
>
> In a press release Tuesday, Michael Farris, founder and chairman of the Home School Legal Defense Association (HSLDA), said, "We believe the Sixth Circuit is wrong and we will appeal their decision. America has room for this family and we will do everything we can to help them."
>
> The Romeikes fled Germany in 2008 when they were subjected to criminal prosecution for homeschooling, which is largely illegal in their country. In 2010, however, the family was granted asylum by Immigration Judge Lawrence O. Burman, whose decision was overturned by the Board of Immigration Appeals in 2012. A three-judge panel of the Sixth Circuit heard the Romeikes' appeal on April 23rd and issued a unanimous decision against the family.
>
> In its decision, the court said that the Romeikes had not made a sufficient case and that the United States has not opened its doors to every victim of unfair treatment.
>
> While the court acknowledged that the U.S. Constitution recognizes the rights of parents to direct the education and upbringing of their children, it refused to concede that the threats of heavy fines or loss of custody of their children by German authorities if the Romeikes refused to send their children to government schools were enough to classify them as a persecuted group and warrant asylum in the United States.
>
> HSLDA has obtained over 120,000 signatures on a White House petition to stop deportation of the Romeike family.

If you are a Muslim "refugee" from Chechnya, you can collect $100,000 in welfare and then blow up some of the people who worked to pay for that. But a German homeschooling family? They are disgusting evangelical Christians who believe in marriage and family. They have to go back to Germany and have their children taken away from them by the government.

# Doug Axe explains the chances of getting a functional protein by chance

**Wintery Knight** · 18 May 2013 · Archived copy · Original

I've talked about Doug Axe before when I described how to calculate the odds of getting functional proteins by chance.

Let's calculate the odds of building a protein composed of a functional chain of 100 amino acids, by chance. (Think of a meaningful English sentence built with 100 scrabble letters, held together with glue)

Sub-problems:

- BONDING: You need 99 peptide bonds between the 100 amino acids. The odds of getting a peptide bond is 50%. The probability of building a chain of one hundred amino acids in which all linkages involve peptide bonds is roughly (1/2)^99 or 1 chance in 10^30.
- CHIRALITY: You need 100 left-handed amino acids. The odds of getting a left-handed amino acid is 50%. The probability of attaining at random only L–amino acids in a hypothetical peptide chain one hundred amino acids long is (1/2)^100 or again roughly 1 chance in 10^30.
- SEQUENCE: You need to choose the correct amino acid for each of the 100 links. The odds of getting the right one are 1 in 20. Even if you allow for some variation, the odds of getting a functional sequence is (1/20)^100 or 1 in 10^65.

The final probability of getting a functional protein composed of 100 amino acids is 1 in 10^125. Even if you fill the universe with pre-biotic soup, and react amino acids at Planck time (very fast!) for 14 billion years, you are probably not going to get even 1 such protein. And you need at least 100 of them for minimal life functions, plus DNA and RNA.

Research performed by Doug Axe at Cambridge University, and published in the peer-reviewed Journal of Molecular Biology, has shown that the number of functional amino acid sequences is tiny:

> Doug Axe's research likewise studies genes that it turns out show great evidence of design. Axe studied the sensitivities of protein function to mutations. In these "mutational sensitivity" tests, Dr. Axe mutated certain amino acids in various proteins, or studied the differences between similar proteins, to see how mutations or changes affected their ability to function properly. He found that protein function was highly sensitive to mutation, and that proteins are not very tolerant to changes in their amino acid sequences. In other words, when you mutate, tweak, or change these proteins slightly, they stopped working. In one of his papers, he thus concludes that "functional folds require highly extraordinary sequences," and that functional protein folds "may be as low as 1 in 10^77."

The problem of forming DNA by sequencing nucleotides faces similar difficulties. And remember, mutation and selection cannot explain the origin of the *first* sequence, because mutation and selection require replication, which does not exist until that first living cell is *already in place*.

But you can't show that to your friends, you need to send them a video. And I have a video!

**A video of Doug Axe explaining the calculation**

Here's a clip from Illustra Media's new ID DVD "Darwin's Dilemma", which features Doug Axe and Stephen Meyer (both with Ph.Ds from Cambridge University).

I hope you all read Brian Auten's review of Darwin's Dilemma! It was awesome.

**Related DVDs**

Illustra also made two other great DVDs on intelligent design. The first two DVDs “Unlocking the Mystery of Life” and “The Privileged Planet” are must-buys, but you can watch them on youtube if you want, for free.

Here are the 2 playlists:

- Unlocking the Mystery of Life (12 videos in a playlist)
- The Privileged Planet (12 videos in a playlist)

I also recommend Coldwater Media’s “Icons of Evolution”. All three of these are on sale from Amazon.com.

# The IRS abuse of power scandal started from the top

**Wintery Knight** · 19 May 2013 · Archived copy · Original

This Wall Street Journal article argues that the IRS was simply following the overall public tone set by Obama.

Excerpt:

> In April 2012, an Obama campaign website named and slurred eight Romney donors. It tarred Mr. VanderSloot as a "wealthy individual" with a "less-than-reputable record." Other donors were described as having been "on the wrong side of the law."
>
> This was the Obama version of the phone call—put out to every government investigator (and liberal activist) in the land.
>
> Twelve days later, a man working for a political opposition-research firm called an Idaho courthouse for Mr. VanderSloot's divorce records. In June, the IRS informed Mr. VanderSloot and his wife of an audit of two years of their taxes. In July, the Department of Labor informed him of an audit of the guest workers on his Idaho cattle ranch. In September, the IRS informed him of a second audit, of one of his businesses. Mr. VanderSloot, who had never been audited before, was subject to three in the four months after Mr. Obama teed him up for such scrutiny.
>
> The last of these audits was only concluded in recent weeks. Not one resulted in a fine or penalty. But Mr. VanderSloot has been waiting more than 20 months for a sizable refund and estimates his legal bills are $80,000. That figure doesn't account for what the president's vilification has done to his business and reputation.
>
> The Obama call for scrutiny wasn't a mistake; it was the president's strategy—one pursued throughout 2012. The way to limit Romney money was to intimidate donors from giving. Donate, and the president would at best tie you to Big Oil or Wall Street, at worst put your name in bold, and flag you as "less than reputable" to everyone who worked for him: the IRS, the SEC, the Justice Department. The president didn't need a telephone; he had a megaphone.
>
> The same threat was made to conservative groups that might dare play in the election. As early as January 2010, Mr. Obama would, in his state of the union address, cast aspersions on the Supreme Court's *Citizens United* ruling, claiming that it "reversed a century of law to open the floodgates for special interests" (read conservative groups).
>
> The president derided "tea baggers." Vice President Joe Biden compared them to "terrorists." In more than a dozen speeches Mr. Obama raised the specter that these groups represented nefarious interests that were perverting elections. "Nobody knows who's paying for these ads," he warned. "We don't know where this money is coming from," he intoned.
>
> In case the IRS missed his point, he raised the threat of illegality: "All around this country there are groups with harmless-sounding names like Americans for Prosperity, who are running millions of dollars of ads against Democratic candidates . . . And they don't have to say who exactly the Americans for Prosperity are. You don't know if it's a foreign-controlled corporation."
>
> Short of directly asking federal agencies to investigate these groups, this is as close as it gets. Especially as top congressional Democrats were putting in their own versions of phone calls, sending letters to the IRS that accused it of having "failed to address" the "problem" of groups that were "improperly engaged" in campaigns. Because guess who controls that "independent" agency's budget?

The Daily Caller explains Obama's allies in the Senate also called for harsher treatment of conservatives.

Excerpt:

> Long before the Internal Revenue Service revealed it had improperly targeted conservative 501(c)(4) groups, a group of Democratic senators led by New York Sen. Chuck Schumer urged the IRS to do just that.
>
> The IRS's admission last Friday that it had singled out tea party and other groups for extra audits and delays has raised concerns that President Barack Obama's administration quietly attempted to stymy opponents through intimidation. But many prominent Democrats — including Montana Sen.Max Baucus, Americans United for the Separation of Church and State and the New York Times editorial board — had been publicly calling for tighter restrictions on 501(c)(4) groups affiliated with the tea party and conservatives.
>
> Last year, Schumer, along with Democratic Sens. Michael Bennet, Sheldon Whitehouse, Jeff Merkley, Tom Udall, Jeanne Shaheen and Al Franken, penned a letter calling on the agency to cap the amount of the political spending by groups masquerading as "social welfare organizations."

So, the IRS was merely following the lead of the President and his powerful allies in the Senate. It wasn't just a few "low-level employees".

# Stephen C. Meyer and John Lennox discuss human exceptionalism on the Michael Medved show

**Wintery Knight** · 19 May 2013 · Archived copy · Original

The Michael Medved show is a national radio show broadcast out of Seattle, Washington. According to Talkers magazine, he has the fifth largest radio audience. He has a regular weekly segment on science and culture featuring scholars from the Discovery Institute.

Here is the fourth segment from this past week, courtesy of the Intelligent Design: The Future podcast.

The MP3 file is available for download. (38 minutes)

The description is:

> On this episode of **ID the Future**, Stephen Meyer and Oxford professor John Lennox discuss human exceptionalism and the deeper significance of the Gosnell verdict on the Michael Medved Show's Science and Culture Update.
>
> *Each week, leading fellows from Discovery Institute will join Michael Medved to talk about the intersection of science and culture. Listen in live online or on your local Medved station, or stay tuned at ID the Future for the weekly podcast.*

The topics this time are Kermit Gosnell, human exceptionalism and Darwinism.

Now might be a good time to subscribe to the ID: The Future podcast.

**Previous entries**

- Episode one: Stephen C. Meyer on Thomas Nagel and intelligent design
- Episode two: Stephen C. Meyer on Richard Dawkins and the Cambrian explosion
- Episode three: John G. West discusses Darwinism and the value of human life

# Casey Luskin and Stephen C. Meyer discuss information outside the genome

**Wintery Knight** · 19 May 2013 · Archived copy · Original

This episode of ID the Future is 20 minutes long and it's a follow up to a previous podcast I posted.

Details:

> On this episode of **ID the Future**, hear the second part of Casey Luskin's interview with Dr. Stephen C. Meyer, author of the forthcoming book *Darwin's Doubt: The Explosive Origin of Animal Life and the Case for Intelligent Design*. Dr. Meyer discusses how the origin of information in the Cambrian explosion poses a problem for evolutionary biology.
>
> *Special limited time offer: Save 43% and get 4 free digital books when you pre-order Darwin's Doubt.*

You can grab the MP3 here.

Topics:

- Last time, they discussed how the sudden origin of animal body plans requires an infusion of new information
- Also, the sudden origin of animal forms is inexplicable naturalistically, because there are no transitional forms
- New body plans require new genetic information
- The Cambrian explosion involve a sudden increase of body plans, which means a sudden increase of information
- For example, a new body plan requires dozens of new cell types
- Each cell type will be composed of new proteins and enzymes
- Proteins are composed of functional sequences of amino acids – genetic information
- Can the neo-Darwinian mechanisms generate new functional sequences?
- The problem with making functional sequences by chance: Product Rule
- When calculating probabilities of forming a functional sequence, you *multiply* to calculate probabilities
- A bike lock with 4 dials and 10 possibilities has 10 x 10 x 10 x 10 = 10,000 possibilities
- Each sequence is equally likely to get by random guesses
- But it's far more likely that any random attempt will NOT work
- Getting one or two settings right has no value to opening the lock, and will not be saved for later attempts
- There is no credit for partial success: you have to get the whole combination right the first time
- In addition, there are other sources of information other than DNA that are required for new body plans
- For example, there is information in cell membranes, cytoskeletons, etc. which is also needed
- Neo-Darwinism can only work on mutating genes – even in the best case it would just give you new proteins
- Neo-Darwinism cannot add information in non-genome areas, which are required for new animal forms
- The information in these non-genome areas are required to arrange the proteins to make new body pans
- Genetic inofrmation = information in the genome, Epigenetic information = information outside the genome
- This problem of information outside the genome is called "the problem of the origin of form"

So those last few points are, I think, a sneak peek into the contents of the new "Darwin's Doubt" book.

If you haven't yet read Meyer's first book, "Signature in the Cell", you should probably grab that one. It's the best book on intelligent design that's out right now. It talks about the origin of the first living cell, surveying all naturalistic explanations for it, and concluding that the best explanation – the one most consistent with what we

know *now* – is intelligent design.

# New York Times: Democrats knew about IRS scandal 5 months before the 2012 election

**Wintery Knight** · 20 May 2013 · Archived copy · Original

From the radically leftist New York Times.

Excerpt:

> Representative Dave Camp, Republican of Michigan, the usually mild-mannered chairman of the House Ways and Means Committee, set the tone Friday at Congress's first hearing on the targeting of conservative groups by the I.R.S., laying out details, from the alleged threatening of donors to conservative nonprofit groups to the leaking of confidential I.R.S. documents.
>
> […]Republicans raised a long list of issues. Mr. Camp contended, for instance, that a White House official's divulging of a private company's tax status constituted "a clear intimidation tactic." The 2010 incident involved an offhand comment by the White House economist Austan Goolsbee that Koch Industries had not paid corporate income taxes because it pays taxes through the personal income tax code. As it turned out, that was not true, but the assertion was made in a discussion of tax reform ideas, not politics.
>
> The Republicans also criticized the publication of donors to the National Organization for Marriage, a group opposed to same-sex marriage. That donors list surfaced mysteriously in March 2012 from a whistle-blower whose identity is still unknown. The whistle-blower apparently obtained it by simply requesting it from the I.R.S.
>
> Linkage to the health care law came through Sarah Hall Ingram, a longtime I.R.S. official who has headed the agency's program to carry out the Affordable Care Act since December 2010. Before that, she led the I.R.S.'s tax-exempt and government-entities division, which contained the political targeting effort.
>
> "This is an audit, and it's helpful," Representative Tim Griffin, Republican of Arkansas, said of the investigation of I.R.S. targeting by the Treasury inspector general for tax administration, "but it's the tip of the iceberg."
>
> But the inspector general made clear that effort did not reach the attention of high-level I.R.S. officials until 2011 at the earliest.
>
> The inspector general gave Republicans some fodder Friday when he divulged that he informed the Treasury's general counsel he was auditing the I.R.S.'s screening of politically active groups seeking tax exemptions on June 4, 2012. He told Deputy Treasury Secretary Neal Wolin "shortly after," he said. That meant Obama administration officials were aware of the matter during the presidential campaign year.

Is it really reasonable to believe that Obama didn't know about this? I think a far more likely scenario is that he did know about it, and that his administration covered it up – just like they covered up Fast and Furious and Benghazi. Why think that this IRS scandal would be any different?

# Obama administration spied on Fox News reporter's e-mails and phone calls

**Wintery Knight** · 20 May 2013 · Archived copy · Original

Twitchy has everything linked here. And UPDATE: THREE Fox News reporters, including MEGYN KELLY were targeted.

Here's a quick snapshot of what happened from radically left-wing UK Guardian, of all places: (links removed)

> Fox News chief Washington correspondent James Rosen had his emails read by the Obama DOJ, which accused him of being a co-conspirator in a criminal leak case.

> It is now well known that the Obama justice department has prosecuted more government leakers under the 1917 Espionage Act *than all prior administrations combined* – in fact, *double* the number of all such prior prosecutions. But as last week's controversy over the DOJ's pursuit of the phone records of AP reporters illustrated, this obsessive fixation in defense of secrecy also targets, and severely damages, journalists specifically and the newsgathering process in general.
>
> New revelations emerged yesterday in the Washington Post that are perhaps the most extreme yet when it comes to the DOJ's attacks on press freedoms. It involves the prosecution of State Department adviser Stephen Kim, a naturalized citizen from South Korea who was indicted in 2009 for allegedly telling Fox News' chief Washington correspondent, James Rosen, that US intelligence believed North Korea would respond to additional UN sanctions with more nuclear tests – something Rosen then reported. Kim did not obtain unauthorized access to classified information, nor steal documents, nor sell secrets, nor pass them to an enemy of the US. Instead, the DOJ alleges that he merely communicated this innocuous information to a journalist – something done every day in Washington – and, for that, this arms expert and long-time government employee faces more than a decade in prison for "espionage".
>
> The focus of the Post's report yesterday is that the DOJ's surveillance of Rosen, the reporter, extended far beyond even what they did to AP reporters. The FBI tracked Rosen's movements in and out of the State Department, traced the timing of his calls, and – most amazingly – obtained a search warrant to read two days worth of his emails, as well as all of his emails with Kim. In this case, said the Post, "investigators did more than obtain telephone records of a working journalist suspected of receiving the secret material." It added that "court documents in the Kim case reveal how deeply investigators explored the private communications of a working journalist".
>
> But what makes this revelation particularly disturbing is that the DOJ, in order to get this search warrant, insisted that not only Kim, but also Rosen – the journalist – committed serious crimes. The DOJ specifically argued that by encouraging his source to disclose classified information – something investigative journalists do every day – Rosen himself broke the law. Describing an affidavit from FBI agent Reginald Reyes filed by the DOJ, the Post reports [emphasis added]:
>
> "Reyes wrote that there was evidence *Rosen had broken the law, 'at the very least, either as an aider, abettor and/or co-conspirator'*. That fact distinguishes his case from the probe of the AP, in which the news organization is not the likely target. Using italics for emphasis, Reyes explained how Rosen allegedly used a 'covert communications plan' and quoted from an e-mail exchange between Rosen and Kim that seems to describe a secret system for passing along information. . . . However, it remains an open question whether it's ever illegal, given the First Amendment's protection of press freedom, for a reporter to solicit information. No reporter, including Rosen, has been prosecuted for doing so."
>
> Under US law, it is not illegal to publish classified information. That fact, along with the First Amendment's guarantee of press freedoms, is what has prevented the US government from ever prosecuting journalists for

> reporting on what the US government does in secret. This newfound theory of the Obama DOJ – that a journalist can be guilty of crimes for "soliciting" the disclosure of classified information – is a means for circumventing those safeguards and criminalizing the act of investigative journalism itself. These latest revelations show that this is not just a theory but one put into practice, as the Obama DOJ submitted court documents accusing a journalist of committing crimes by doing this.

I find it amusing that the journalists on the left are just now realizing that the most left-wing President we have ever had is just like all the other left-wing leaders. He's a fascist. Fascism is solely a phenomenon of the left. What fascism means is "big government". To be on the right is to be for smaller government, free trade, and more liberty for families and individuals. That's why fascism is only enacted by parties on the political left. Free-market capitalism means limited government.

# Is the gay lifestyle the same as the heterosexual lifestyle?

**Wintery Knight** · 20 May 2013 · Archived copy · Original

I am going to post this disturbing article from the radically left-wing New York Times about the latest new disease affecting the gay community in New York. (H/T ECM)

Here's an excerpt:

> At around 4 on a Saturday morning, a time when most of the gay bars in New York have closed and locked their doors, a steady stream of young and middle-aged men, almost all shirtless and some stripped down to their boxer briefs, have found their way down a dark stairwell and into a maze of basement rooms, where the décor can best be described as fallout-shelter chic.
>
> They have come to Paddles, an after-hours sex club in Chelsea, not yet ready to end their evening. They prowl the long cinder-block hallway, exchanging knowing glances. A husky, bearded man in his 40s lounges on a corrugated black rubber bench, admiring a chorus line of smooth-chested 20-somethings, their flesh glowing under a pink neon sign and black lights. A man in a metal-studded black leather chest harness strides toward a back room, the hookup room, where a circle of men, skin glistening with sweat, hover around a swing, watching.
>
> Then, in walks a skinny man in a black baseball cap, with soulful eyes and a nose that juts forward like the prow of a ship. He stops at a folding table set up between two video screens showing continuous reels of gay pornography. He strips off his black leather jacket, flexing toned biceps in a black muscle shirt. He sets up a red hazardous-waste bin as nonchalantly as if it were a plastic juice jug from Costco, arranges some Band-Aids and a bowl of lollipops next to it, and pulls out a syringe.
>
> This is Demetre Daskalakis, a doctor and gay activist who has come to spread the message that a new health threat has emerged among the city's gay population and that he is there to stop it.
>
> "Have you been vaccinated?" he asks, smiling, his voice warm, as the half-naked men walk by.
>
> A new, casually transmittable infection — a unique strain of bacterial meningitis — has cast a pall over the gay night life and dating scene, with men wondering whether this is AIDS, circa 1981, all over again. Seven men have died in New York City, about a third of diagnosed cases, since 2010. And in the last few months, the contagion seemed to be accelerating. It has targeted gay and bisexual men, and nobody knows exactly why.
>
> The city's best hope to curb the outbreak is to vaccinate as many at-risk men as possible, focusing on those most in danger: men who regularly hook up with other men whom they meet at parties, bars, clubs and through apps like Grindr. Dr. Don Weiss, the director of surveillance for the city's Bureau of Communicable Disease, has called it "Russian roulette sex," because "sooner or later, you are going to come across this organism and be exposed."

In case anyone would like to understand the health effects of the gay lifestyle, here is an excellent resource which links to data from mainstream sources.

Here is an excerpt:

> **Hepatitis:** A potentially fatal liver disease that increases the risk of liver cancer.
>
> - Hepatitis A: The *Mortality and Morbidity Weekly Report* published by the CDC reports: "Outbreaks of hepatitis A among men who have sex with men are a recurring problem in many large cities in the industrialized world."[20]
> - Hepatitis B: This is a serious disease caused by a virus that attacks the liver. The virus, which is called hepatitis B virus (HBV), can cause lifelong infection, cirrhosis (scarring) of the liver, liver cancer, liver

> failure, and death. Each year in the United States, more than 200,000 people of all ages contract hepatitis B and close to 5,000 die of sickness caused by AIDS. The CDC reports that MSM are at increased risk for hepatitis B.[21]

And more:

> **HIV/AIDS Among Homosexuals.** The human immunodeficiency virus (HIV) is responsible for causing AIDS, for which there exists no cure.
>
> - Homosexual men are the largest risk category. The CDC reports that homosexuals comprise the single largest exposure category of the more than 600,000 males with AIDS in the United States. As of December 1999, "men who have sex with men" and "men who have sex with men and inject drugs" together accounted for 64 percent of the cumulative total of male AIDS cases.[39]

And more:

> **Homosexuals with STDs Are at an Increased Risk for HIV Infection.** Studies of MSM treated in STD clinics show rates of infection as high as 36 percent in major cities.[46] A CDC study attributed the high infection rate to having high numbers of anonymous sex partners: "[S]yphilis, gonorrhea, and chlamydia apparently have been introduced into a population of MSM who have large numbers of anonymous partners, which can result in rapid and extensive transmission of STDs."[47] The CDC report concluded: "Persons with STDs, including genital ulcer disease and nonulcerative STD, have a twofold to fivefold increased risk for HIV infection."[48]

CDC means the government's Center for Disease Control.

The article that I linked above has nearly 80 footnotes to respected sources of evidence. It's very important to know the facts when discussing this issue so that we tell people the truth and then let them make good decisions. At the very least we should be telling them what we tell our friends who smoke: "it's not good for your health".

# Obama met with anti-Tea Party IRS Union boss one day before the IRS persecutions began

**Wintery Knight** · 21 May 2013 · Archived copy · Original

Newsbusters reports on this incredible scoop by the American Spectator.

Excerpt:

> Jeffrey Lord at the American Spectator has reviewed the White House logs looking for a relationship between meetings listed there and the timeline found in the Inspector General's report on the targeting of Tea Party and conservative groups issued last Tuesday. Lord's work represents yet another example of alternative media scooping a lazy or negligent establishment press.
>
> What Lord has found (single-page print version) is that President Barack Obama met with the President of the National Treasury Employees Union Colleen Kelley, on March 31, 2010. The NTEU is "the 150,000 member union that represents IRS employees along with 30 other separate government agencies." The Inspector General's report, blandly titled "Inappropriate Criteria Were Used to Identify Tax-Exempt Applications for Review," indicates that the IRS, in Lord's words, "set to work in earnest targeting the Tea Party and conservative groups around America" the very next day. Lord's work is a mandatory read-the-whole-thing item. Excerpts follow the jump (bolds are mine throughout this post):
>
> **Obama and the IRS: The Smoking Gun?***President met with anti-Tea Party IRS union chief the day before agency targeted Tea Party.*
>
> … According to the White House Visitors Log … the president of the anti-Tea Party National Treasury Employees Union, Colleen Kelley, visited the White House at 12:30pm that Wednesday noon time of March 31st.
>
> … **The very next day after her White House meeting with the President, according to the Treasury Department's Inspector General's Report, IRS employees — the same employees who belong to the NTEU — set to work in earnest targeting the Tea Party and conservative groups around America.** The IG report wrote it up this way:
>
> *April 1-2, 2010: The new Acting Manager, Technical Unit, suggested the need for a Sensitive Case Report on the Tea Party cases. The Determinations Unit Program Manager Agreed.*
>
> In short: the very day after the president of the quite publicly anti-Tea Party labor union — the union for IRS employees — met with President Obama, the manager of the IRS "Determinations Unit Program agreed" to open a "Sensitive Case report on the Tea party cases."
>
> … **The IG report contained a timeline prepared by examining internal IRS e-mails. The IG report did not examine White House Visitor Logs, e-mails, or phone records relating to the relationship between the IRS union, the IRS, and the White House.**
>
> … (the) 12:30 Wednesday, March 31, 2010 meeting between President Obama and the IRS union's Kelley was not unusual.
>
> On yet another occasion, Kelley's presence at the White House was followed shortly afterwards by the President issuing Executive Order 13522. **A presidential directive that gave the anti-Tea Party NTEU — the IRS union — a greater role in the day-to-day operation of the IRS than it had already — which was considerable.**
>
> … Six days following Kelley's attendance at the White House Christmas party with labor activists like herself, the President issued Executive Order 13522 (text found here, with an explanation here). The Executive Order, titled: "Creating Labor-Management Forums To Improve Delivery of Government Services" applied across the federal government and included the IRS. The directive was designed to:

> ***Allow employees and unions to have pre-decisional involvement in all workplace matters….***
>
> However else this December 2009 Executive Order can be described, **the directive was a serious grant of authority within the IRS to the powerful anti-Tea Party union.**
>
> Lord raises compelling "What did the President know and when did he know it?" questions. Read the whole thing for the matters he raises.

Read the full article here on the American Spectator.

# A closer look at one of the conservatives persecuted by the fascist IRS

**Wintery Knight** · 21 May 2013 · Archived copy · Original

From National Review, a true story of the IRS persecuting a conservative group. (H/T ECM)

Excerpt:

> Catherine Engelbrecht's tale has all the markings of a classic conspiracy theory: She says she thinks that because of her peaceful political activity, she and her family was targeted for scrutiny by hostile federal agencies.
>
> Yet as news emerges that the Internal Revenue Service wielded its power to obstruct conservative groups, Catherine's story becomes credible — and chilling. It also raises questions about whether other federal agencies have used their executive powers to target those deemed political enemies.
>
> […]In July 2010, Catherine filed with the IRS seeking tax-exempt status for her organizations. Shortly after, the troubles began.
>
> That winter, the Federal Bureau of Investigation came knocking with questions about a person who had attended a King Street Patriots event once. Based on sign-in sheets, the organization discovered that the individual in question had attended an event, but "it was a come-and-go thing,"? and they had no further information on hand about him. Nevertheless, the FBI also made inquiries about the person to the office manager, who was a volunteer.
>
> The King Street Patriots weren't the only ones under scrutiny. On January 11, the IRS visited the Engelbrechts' shop and conducted an on-site audit of both their business and their personal returns, Catherine says.
>
> "What struck us as odd about that,"? she adds,"is the lengths to which the auditor went to try to "" it seemed like "" to try to find some error….She wanted to go out and see [our] farm, she wanted to count the cattle, she wanted to look at the fence line. It was a very curious three days. She was as kind as she could be, and she was doing her job…[but] it was strange."?
>
> Bryan adds: "It was kind of funny to us. I mean, we weren't laughing that much, but we knew we were squeaky clean. Our CPA's a good guy. And who says God doesn't have a sense of humor: I got a little bit of a refund."?
>
> Two months later, the IRS initiated the first round of questions for True the Vote. Catherine painstakingly answered them, knowing that nonprofit status would help with the organization's credibility, donors, and grant applications. In October, the IRS requested additional information. And whenever Catherine followed up with IRS agents about the status of True the Vote's application, "there was always a delay that our application was going to be up next, and it was just around the corner,"? she says,
>
> As this was occurring, the FBI continued to phone King Street Patriots. In May 2011, agents phoned wondering "how they were doing."? The FBI made further inquiries in June, November, and December asking whether there was anything to report.
>
> The situation escalated in 2012. That February, True the Vote received a third request for information from the IRS, which also sent its first questionnaire to King Street Patriots. Catherine says the IRS had "hundreds of questions "" hundreds and hundreds of questions."? The IRS requested every Facebook post and Tweet she had ever written. She received questions about her family, whether she'd ever run for political office, and which organizations she had spoken to.
>
> "It's no great secret that the IRS is considered to be one of the more serious [federal agencies],"? Catherine says. "When you get a call from the IRS, you don't take it lightly. So when you're asked questions that seem to imply a sense of disapproval, it has a very chilling effect."?
>
> On the same day they received the questions from the IRS, Catherine says, the Bureau of Alcohol, Tobacco,

> Firearms and Explosives (ATF) launched an unscheduled audit of their machine shop, forcing the Engelbrechts to drop everything planned for that day. Though the Engelbrechts have a Class 7 license, which allows them to make component parts for guns, they do not manufacture firearms. Catherine said that while the ATF had a right to conduct the audit, "it was odd that they did it completely unannounced, and they took five, six hours….It was so extensive. It just felt kind of weird."
>
> That was in February. In July, the Occupational Safety and Health Administration paid a visit to Engelbrecht Manufacturing while Bryan, Catherine, and their children were out of town. The OSHA inspector talked with the managerial staff and employees, inspecting the premises minutely. But Bryan says the agent found only "little Mickey Mouse stuff, like, "~You have safety glasses on, but not the right kind; the forklift has a seatbelt, but not the right kind.'" Yet Catherine and Bryan said the OSHA inspector complimented them on their tightly run shop and said she didn't know why she had been sent to examine it.
>
> Not long after, the tab arrived. OSHA was imposing $25,000 in fines on Engelbrecht Manufacturing. They eventually worked it down to $17,500, and Bryan says they may have tried to contest the fines to drive them even lower, but "we didn't want to make any more waves, because we don't know [how much further] OSHA could reach."
>
> "Bottom line is, it hurt," he says. Fifteen thousand dollars is "not an insignificant amount to this company. It might be to other companies, but we're still considered small, and it came at a time when business was slow, so instead of giving an employee a raise or potentially hiring another employee, I'm writing a check to our government."
>
> A few months later, True the Vote became the subject of congressional scrutiny. In September, Senator Barbara Boxer (D., Calif.) wrote to Thomas Perez, then the assistant attorney general of the civil rights division at the Department of Justice (who has now been nominated for labor secretary). "As you know, an organization called "~True the Vote,' which is an offshoot of the Tea Party, is leading a voter suppression campaign in many states," Boxer wrote, adding that "this type of intimidation must stop. I don't believe this is "~True the Vote.' I believe it's "~Stop the Vote.'"
>
> And in October, Representative Elijah Cummings (D., Md.), the ranking minority member of the House Committee on Oversight and Government Reform, attacked True the Vote in a letter. He wrote that "some have suggested that your true goal is not voter integrity, but voter suppression against thousands of legitimate voters who traditionally vote for Democratic candidates." He added that: "If these efforts are intentional, politically motivated, and widespread across multiple states, they could amount to a criminal conspiracy to deny legitimate voters their constitutional rights." He also decried True the Vote on MSNBC and CNN.
>
> Catherine now says that she "absolutely" thinks that because she worked against voter fraud, the Left was irked and decided to target her.
>
> The next month, in November 2012, the Texas Commission on Environmental Quality, the state's environmental agency, showed up for an unscheduled audit at Engelbrecht Manufacturing. Catherine says the inspector told her the agency had received a complaint but couldn't provide any more details. After the inspection, the agency notified the Engelbrechts that they needed to pay for an additional mechanical permit, which cost about $2,000 per year.
>
> Since then, the IRS has sent two further rounds of questions to Catherine for her organizations. And last month, the ATF conducted a second unscheduled audit at Engelbrecht Manufacturing.
>
> Catherine says she still hasn't received IRS approval for her nonprofits, though she filed nearly three years ago. And "the way all of these personal instances interweave with what was going on on the nonprofit side…it amounts to something. You can't help but think that statistically, this has to be coordinated on some level."

And that's what the Obama administration has been up to behind closed doors over the last few years.

# J.W. Wartick's summary of the debate between Michael Ruse and Fazale Rana

**Wintery Knight** · 21 May 2013 · Archived copy · Original

Details of the debate:

> The Origin of Life: The Great God Debate
> Fuz Rana vs. Michael Ruse
>
> Michael Ruse and Fuz Rana square off to debate the question "Are natural processes sufficient to explain the origin and the complexity of the cell?" The debate will be moderated by Craig Hazen. Sponsored by The Well Christian Club at UCR, Come Reason Ministries, and Biola University.
>
> Format of the debate:
>
> - Opening Arguments: 20 minutes each
> - 1st Cross-Examination: 6 minutes each side
> - Rebuttals: 10 minutes each
> - 2nd Cross-Examination: 6 minutes each side
> - Concluding Arguments: 5 minutes each
> - Q &A: 40 minutes (Questions can come from Twitter and SMS)

Here on J.W. Wartick's blog, I found a summary of the debate (video above).

Excerpt:

> **Michael Ruse Opening**
>
> Michael Ruse was careful to note that he is not keen on saying design is not possible. Rather, his claim is that naturalism is the most plausible explanation for the origins of life.
>
> Ruse's argued that design is implausible. Specifically, he noted that if design is the hypothesis put forward, there are any number of ways that one might consider that hypothesis. Is the designer a natural being within the universe or a supernatural being like God? Is there only one designer, or was there a group of designers (and he notes that a group of designers seems more plausible because automobiles require many designers to bring them about)? Finally, he raised the issue of bad design choices. He asked why, if there were a "hands-on" designer, would that designer not grant immunity to HIV and the like.
>
> Ruse also argued that one can fall into the fallacy of selective attention- if one focuses upon only one example in isolation, then one might come to a conclusion that certain laws/theories may not be correct. But placing these same problems in context shows that they can be explained against "the background of our knowledge."
>
> Finally, Ruse ended with a number of examples for how problems which were seemingly insoluble were explained by naturalistic means. He also argued that one of the popular arguments for design, the flagellum, has so many different varieties (and is sometimes found to be a vestigial organ), and so cannot be shown to be designed.
>
> **Fazale Rana Opening**
>
> The problems which must be accounted for within an origins of life model are numerous. One must account for self-replication, the emergence of metabolism, the formation of protocells, the synthesis of prebiotic materials, the formation of life's building blocks, and more.
>
> Rana then turned to some primary models used by researchers to explain origin of life (hereafter OOL). First, there was the replicator-first model, which was problematic because in order for a molecule to be a self-

> replicator, it must be a homopolymer. But the complexity of the chemical environment on early earth rendered the generation of a homopolymer on the early earth essentially impossible. Next, the metabolism-first model runs into problem due to the chemical networks which have to be in place for metabolism. But the mineral surfaces proposed for the catalytic systems for these proto-metabolic systems cannot serve as such; Leslie Orgel held that this would have to be a “near miracle” and Rana argues that it is virtually impossible. Finally, the membrane-first model requires different steps with exacting conditions such that the model is self-defeating.
>
> Rana argued positively that OOL requires an intelligent agent in order to occur. The reason is because the only way that any of these models can be generated is through the work on OOL in a lab. Thus, they can only be shown to be proof-of-principle and the chemistry breaks down when applied to the early earth. The fact that information is found in the cell is another evidence Rana presented for design. The systems found in enzymes with DNA function as, effectively, Turing machines. Moreover, the way that DNA finds and eliminates mistakes is machine-like as well. The fact that the needed component for success in lab experiments was intelligence hinted, according to Rana, at positive evidence for design.
>
> Finally, Rana argued that due to the “fundamental intractable problems” with naturalistic models for the OOL and the fact that the conditions needed for the OOL and the processes required to bring it about have only been demonstrated as in-principle possible with intelligent agents manipulating the process.

He’s got a summary of each of the speeches, and it rings true with what I saw when I watched the debate.

# CBS News reporter Sharyl Atkisson has had her computers broken into

**Wintery Knight** · 22 May 2013 · Archived copy · Original

Reported on the leftist Politico web site. (H/T Bad Blue)

Full text:

> Sharyl Attkisson, the Emmy-award winning CBS News investigative reporter, says that her personal and work computers have been compromised and are under investigation.
>
> "I can confirm that an intrusion of my computers has been under some investigation on my end for some months but I'm not prepared to make an allegation against a specific entity today as I've been patient and methodical about this matter," Attkisson told POLITICO on Tuesday. "I need to check with my attorney and CBS to get their recommendations on info we make public."
>
> In an earlier interview with WPHT Philadelphia, Attkisson said that though she did not know the full details of the intrusion, "there could be some relationship between these things and what's happened to James [Rosen]," the Fox News reporter who became the subject of a Justice Dept. investigation after reporting on CIA intelligence about North Korea in 2009.
>
> On Sunday, The Washington Post reported that the Justice Dept. had searched Rosen's personal e-mails and tracked his visits to the State Dept. The court affadavit described Rosen as "at the very least, either as an aider, abettor and/or co-conspirator" of his government source, presumably because he had solicited classified information from that source — an argument that has been heavily criticized by other journalists.
>
> Attkisson told WPHT that irregular activity on her computer was first identified in Feb. 2011, when she was reporting on the Fast and Furious gun-walking scandal and on the Obama administration's green energy spending, which she said "the administration was very sensitive about." Attkisson has also been a persistent investigator of the events surrounding last year's attack in Benghazi, and its aftermath.

Normally reliable leftist Juan Williams is now saying that Obama has "CRIMINALIZED JOURNALISM". (H/T Bad Blue)

Check it out:

> STEVE DOOCY: A new twist in the federal government's probe of American journalists. The Department of Justice wasn't just targeting the Associated Press. Apparently it also went after Fox News reporter, our very own James Rosen. They tracked Rosen's comings and goings and secretly obtained copies of his personal e-mail to build a case against one of his sources. Has the Department of Justice finally crossed a line? Joining us now, Fox News contributor Juan Williams. Good morning.
>
> JUAN WILLIAMS: Good morning.
>
> DOOCY: You know, it's one thing to go after the leaker. It's another to go after the reporter who gets the leaked information.
>
> WILLIAMS: It really is. I think what you've got here is a situation where somehow now journalism has been criminalized, especially in this Rosen case. There is just no justification for somehow making out that the reporter who is trying to cultivate a source by doing so is a coconspirator in terms of a leaks investigation. I have never heard that before, never seen that before. It's never been done before.
>
> GRETCHEN CARLSON: Well, I have a couple of questions for you, Juan. First of all, the judge had to sign off on this in seeing James Rosen as a criminal. That's point one. Who's the judge? Number two is how many other reporters are currently being followed with their comings and goings and their personal e-mail and their

> phone conversations?
>
> **WILLIAMS: Gretchen, I don't know the answer to the first question about who is the judge. Clearly what the prosecutor and justice department did in signing off on the request for the subpoena was to support the idea that because Rosen had encouraged Stephen Kim, the state department official, to confess or to reveal information about the North Korean nuclear program, he was in a sense a coconspirator, and on that basis then they went after James Rosen's correspondence, e-mails, his comings and goings. They tracked his badge as he went in and out of the State Department and also phone records, you know, cell phone records and that kind of treatment of a reporter who is certainly doing journalism. I want to emphasize that; that's the craft we practice. It makes it difficult for journalists to do business. How do you do journalism if you are treated as a criminal for asking for information?**

And more:

> DOOCY: The thing about this is the fact that this administration, this president hates leaks, and now, given what's happening, a lot of people are going to clam up, and they are simply not going to tell the story that needs to get out.
>
> **WILLIAMS: That's the thing. You know, it's one thing to go after legitimate leaks that endanger national security. It's another thing to say somebody reporting a story — and I don't think the story had any grave national security implications — is a criminal. The second thing is to specifically target the reporter and the organization, even though he wasn't charged with any crime, the idea that he is listed as a co-conspirator is chilling to people who would leak and to reporters who pursue stories in Washington.**

Is this a small scandal? Well, people today are typically more interested in things like TV and movies and music. They're not paying attention and they just trust Obama to do the right thing, because that's what they learned in government-run schools: big government good, liberty bad. But for anyone who cares about the Big Picture and the American Experiment, the actions of the Obama administration constitute a serious threat to the core of the Republic.

# IRS fascist Lois Lerner pleads the fifth to avoid transparency and accountability

**Wintery Knight** · 22 May 2013 · Archived copy · Original

The UK Daily Mail reports.

Excerpt:

> The Los Angeles Times reported Tuesday afternoon that Lois Lerner, who heads up the Internal Revenue Service's tax-exempt division, plans to invoke the Fifth Amendment to the U.S. Constitution in a hearing Wednesday before the House Committee on Oversight and Government Affairs.
>
> The Fifth Amendment provides that U.S. citizens may not be compelled to offer testimony if telling the truth would incriminate them.
>
> Lerner's defense lawyer, William W. Taylor III, wrote to the committee on Tuesday that his client would refuse to answer questions related to what she knew about the extra levels of scrutiny applied to conservative nonprofit organizations that applied for tax-exempt status beginning in 2010.
>
> She also will decline to say why she didn't disclose what she knew to Congress, according to the LA Times.
>
> […]The IRS applied special criteria to conservative organizations seeking tax-exempt status, putting them on a 'Be On The Lookout' (BOLO) list, based on the groups' names and political philosophies.
>
> […]Jay Carney, the president's chief spokesman, confirmed Monday that senior White House staff, including White House Counsel Kathy Ruemmler and Chief of Staff Denis McDonough, knew about the IRS's habits as early as April 24, and chose not to tell Obama.
>
> The Inspector General report found that Lerner and other IRS were notified in or before June 2011 that some staff in the agency's Cincinnati, Ohio office were using 'tea party,' 'patriots' and other key words to add applicants to the BOLO list.
>
> Once on that list, the groups were subjected to additional auditing of their financial practices, their membership and their political activities.
>
> Despite knowing about the program, Lerner and other senior IRS staffers withheld the information from Congress despite receiving several requests from House committees whose members heard from constituents that their tea party groups' tax-exempt approvals were taking as long as two years to be resolved.
>
> The House Oversight and Government Affairs Committee was among those that specifically asked the IRS whether it was inspecting tea party groups more closely than other applicants, including those on the political left.

Pleading the 5th is standard operating procedure for gangsters and mobsters who have committed crimes but do not want to be held accountable.

The Weekly Standard reports that she has a history of harassing and bullying Christians and conservatives. (H/T Director Blue)

Excerpt:

> [P]rior to joining the IRS, Lerner's tenure as head of the Enforcement Office at the Federal Election Commission (FEC) was marked by what appears to be politically motivated harassment of conservative groups.
>
> Lerner was appointed head of the FEC's enforcement division in 1986 and stayed in that position until 2001. In the late 1990s, the FEC launched an onerous investigation of the Christian Coalition, ultimately costing the

> organization hundreds of thousands of dollars and countless hours in lost work. The investigation was notable because the FEC alleged that the Christian Coalition was coordinating issue advocacy expenditures with a number of candidates for office. Aside from lacking proof this was happening, it was an open question whether the FEC had the authority to bring these charges.
>
> James Bopp Jr., who was lead counsel for the Christian Coalition at the time, tells THE WEEKLY STANDARD the Christian Coalition investigation was egregious and uncalled for. “We felt we were being singled out, because when you handle a case with 81 depositions you have a pretty good argument you’re getting special treatment. Eighty-one depositions! Eighty-one! From Ralph Reed’s former part-time secretary to George H.W. Bush. It was mind blowing,” he said.
>
> All told the FEC deposed 48 different people—and that doesn’t begin to account for all the FEC’s requests for information. Bopp further detailed the extent of the inquiry in testimony delivered before the congressional Committee on House Administration in 2003:
>
> The FEC conducted a large amount of paper discovery during the administrative investigation and then served four massive discovery requests during the litigation stage that included 127 document requests, 32 interrogatories, and 1,813 requests for admission. Three of the interrogatories required the Coalition to explain each request for admission that it did not admit in full, for a total of 481 additional written answers that had to be provided. The Coalition was required to produce tens of thousands of pages of documents, many of them containing sensitive and proprietary information about finances and donor information. Each of the 49 state affiliates were asked to provide documents and many states were individually subpoenaed. In all, the Coalition searched both its offices and warehouse, where millions of pages of documents are stored, in order to produce over 100,000 pages of documents.
>
> Furthermore, nearly every aspect of the Coalition’s activities has been examined by FEC attorneys from seeking information regarding its donors to information about its legislative lobbying. The Commission, in its never-ending quest to find the non-existent “smoking gun,” even served subpoenas upon the Coalition’s accountants, its fundraising and direct mail vendors, and The Christian Broadcasting Network.
>
> One of the most shocking things about the current IRS scandal is the revelation that the agency asked one religious pro-life group to detail the content of their prayers and asked clearly inappropriate questions about private religious activity. But under Lerner’s watch, inappropriate religious inquiries were a hallmark of the FEC’s interrogation of the Christian Coalition. According to Bopp’s testimony:
>
> FEC attorneys continued their intrusion into religious activities by prying into what occurs at Coalition staff prayer meetings, and even who attends the prayer meetings held at the Coalition. This line of questioning was pursued several times. Deponents were also asked to explain what the positions of “intercessory prayer” and “prayer warrior” entailed, what churches specific people belonged, and the church and its location at which a deponent met Dr. Reed.
>
> One of the most shocking and startling examples of this irrelevant and intrusive questioning by F EC attorneys into private political associations of citizens occurred during the administrative depositions of three pastors from South Carolina. Each pastor, only one of whom had only the slightest connection with the Coalition, was asked not only about their federal, state and local political activities, including party affiliations, but about political activities that, as one FEC attorney described as “personal,” and outside of the jurisdiction of the FECA [Federal Election Campaign Act]. They were also continually asked about the associations and activities of the members of their congregations, and even other pastors.

Too bad that the federal anti-bullying laws don’t apply to secular leftist fascists in government.

# Finally: Discovery Institute develops first intelligent design friendly curriculum

**Wintery Knight** · 22 May 2013 · Archived copy · Original

Reported at Evolution News.

Excerpt:

> Today, Discovery Institute Press released a new intelligent design (ID) curriculum for homeschool and private school educators, *Discovering Intelligent Design*. Co-authored by Gary Kemper, Hallie Kemper, and Casey Luskin, it's the first ID curriculum to comprehensively introduce the case for design in both cosmology and biology. For more information about the curriculum, and to order your copy or copies, visit www.discoveringid.org.

Here's a quick overview of what's in it:

> **ENV: The major theme is introducing intelligent design, but it sounds like the book covers a lot of ground. What are the major topics covered in the curriculum?**
>
> A: There are 20 chapters in the textbook, divided into six sections.
>
> Part I introduces the basic concepts of intelligent design and Darwinian evolution, and terminology important to the debate. It also covers some critical thinking tools useful to investigating human and animal origins.
>
> Part II examines the evidence for ID from cosmology, looking at the Big Bang and the evidence for design from cosmic fine-tuning, and the evidence showing that Earth is a "privileged planet."
>
> Part III explains the evidence for design in biology, starting with the idea of biological information and the origin of life, and also getting into mutations, molecular machines, and the design of animal body plans, including the human body. The capstone chapter of this section responds to "dysteological" arguments against ID, such as the increasingly dubious concept of "junk" DNA.
>
> Part IV explores common descent, and studies the relevant genetic and fossil evidence for a "tree of life," as well as discussing some common "icons" of evolution. The last chapter in this section looks at the genetic, fossil, and behavioral evidence surrounding human origins.
>
> Part V is a short section that lets the reader evaluate the scientific evidence as a whole and decide whether it supports materialism, or intelligent design.
>
> Part VI, the final section, investigates the larger context of the debate about intelligent design, and explains the importance of protecting academic freedom. One of my favorite parts of this section answers common criticisms of intelligent design, and exposes their logical fallacies. The book closes with tips for students and other readers on getting involved personally in the issue.

Looks like a good bridge to the best books for helping students to learn about intelligent design, which is "The Design of Life" by William Dembski and Jonathan Wells.

# The kalam cosmological argument defended in a peer-reviewed science journal

**Wintery Knight** · 22 May 2013 · Archived copy · Original

Here's the peer-reviewed article. It appears in a scientific journal focused on astrophysics.

Here's the abstract:

> Both cosmology and philosophy trace their roots to the wonder felt by the ancient Greeks as they contemplated the universe. The ultimate question remains why the universe exists rather than nothing. This question led Leibniz to postulate the existence of a metaphysically necessary being, which he identified as God. Leibniz's critics, however, disputed this identification, claiming that the space-time universe itself may be the metaphysically necessary being. The discovery during this century that the universe began to exist, however, calls into question the universe's status as metaphysically necessary, since any necessary being must be eternal in its existence. Although various cosmogonic models claiming to avert the beginning of the universe predicted by the standard model have been and continue to be offered, no model involving an eternal universe has proved as plausible as the standard model. Unless we are to assert that the universe simply sprang into being uncaused out of nothing, we are thus led to Leibniz's conclusion. Several objections to inferring a supernatural cause of the origin of the universe are considered and found to be unsound.

The whole article is posted online here.

Here's an excerpt in which Craig explains the Big Bang cosmology:

> The monumental significance of the Friedman-Lemaitre model lay in its historization of the universe. As one commentator has remarked, up to this time the idea of the expansion of the universe "was absolutely beyond comprehension. Throughout all of human history the universe was regarded as fixed and immutable and the idea that it might actually be changing was inconceivable."{8} But if the Friedman-Lemaitre model were correct, the universe could no longer be adequately treated as a static entity existing, in effect, timelessly. Rather the universe has a history, and time will not be matter of indifference for our investigation of the cosmos. In 1929 Edwin Hubble's measurements of the red-shift in the optical spectra of light from distant galaxies,{9} which was taken to indicate a universal recessional motion of the light sources in the line of sight, provided a dramatic verification of the Friedman-Lemaitre model. Incredibly, what Hubble had discovered was the isotropic expansion of the universe predicted by Friedman and Lemaitre. It marked a veritable turning point in the history of science. "Of all the great predictions that science has ever made over the centuries," exclaims John Wheeler, "was there ever one greater than this, to predict, and predict correctly, and predict against all expectation a phenomenon so fantastic as the expansion of the universe?"{10}
>
> As a GTR-based theory, the Friedman-Lemaitre model does not describe the expansion of the material content of the universe into a pre-existing, empty, Newtonian space, but rather the expansion of space itself. This has the astonishing implication that as one reverses the expansion and extrapolates back in time, space-time curvature becomes progressively greater until one finally arrives at a singular state at which space-time curvature becomes infinite. This state therefore constitutes an edge or boundary to space-time itself. P. C. W. Davies comments,
>
> > An initial cosmological singularity . . . forms a past temporal extremity to the universe. We cannot continue physical reasoning, or even the concept of spacetime, through such an extremity. . . . On this view the big bang represents the creation event; the creation not only of all the matter and energy in the universe, but also of spacetime itself.{11}

> The popular expression "Big Bang," originally a derisive term coined by Fred Hoyle to characterize the beginning of the universe predicted by the Friedman-Lemaitre model, is thus potentially misleading, since the expansion cannot be visualized from the outside (there being no "outside," just as there is no "before" with respect to the Big Bang).{12}
>
> The standard Big Bang model thus describes a universe which is not eternal in the past, but which came into being a finite time ago. Moreover,–and this deserves underscoring–the origin it posits is an absolute origin *ex nihilo*. For not only all matter and energy, but space and time themselves come into being at the initial cosmological singularity. As Barrow and Tipler emphasize, "At this singularity, space and time came into existence; literally nothing existed before the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo.*"{13}
>
> […]On such a model the universe originates *ex nihilo* in the sense that at the initial singularity it is true that *There is no earlier space-time point* or it is false that *Something existed prior to the singularity.*
>
> Now such a conclusion is profoundly disturbing for anyone who ponders it. For the question cannot be suppressed: *Why does the universe exist rather than nothing?* In light of the universe's origin *ex nihilo*, one can no longer dismiss this question with a shrug and a slogan, "The universe is just there and that's all." For the universe is not "just there;" rather it *came into being*. The beginning of the universe discloses that the universe is not, as Hume thought, a necessarily existing being but is contingent in its existence. Philosophers analyzing the concept of necessary existence agree that the essential properties of any necessarily existing entity include its being eternal, uncaused, incorruptible, and indestructible{14}–for otherwise it would be capable of non-existence, which is self-contradictory. Thus, if the universe began to exist, its lacks at least one of the essential properties of necessary existence-eternality. Therefore, the reason for its existence cannot be immanent, but must in some mysterious way be ultra-mundane, or transcendent. Otherwise, one must say that the universe simply sprang into being uncaused out of absolutely nothing, which seems absurd. Sir Arthur Eddington, contemplating the beginning of the universe, opined that the expansion of the universe was so preposterous and incredible that "I feel almost an indignation that anyone should believe in it–except myself."{15} He finally felt forced to conclude, "The beginning seems to present insuperable difficulties unless we agree to look on it as frankly supernatural."{16}
>
> I find that most scientists do not reflect philosophically upon the metaphysical implications of their theories. But, in the words of one astrophysical team, "The problem of the origin [of the universe] involves a certain metaphysical aspect which may be either appealing or revolting."{17}

Every theist should able to understand and defend this argument. It is a scientific refutation of materialism, and it is supported by six lines of scientific evidence – all of which emerged as science has progressed.

Scientific evidence:

1. Einstein's theory of general relativity (GTR)
2. the red-shifting of light from distant galaxies
3. the cosmic background radiation (which also disproves the oscillating model of the universe)
4. the second law of thermodynamics applied to star formation theory
5. hydrogen-helium abundance predictions
6. radioactive element abundance predictions

Those are the scientific discoveries that have led us to the beginning of the universe, which support's Dr. Craig's argument.

Several naturalistic/materialistic cosmologies are refuted in Craig's peer-reviewed paper, including the steady-state model, oscillating model, the vacuum fluctuation model, the chaotic inflationary model, and the quantum gravity model. These naturalistic (no God) alternatives all have theoretical or observational difficulties. Atheism is at odds

with modern cosmology – and the progress of science itself.

This is the kind of evidence I expect all my readers to be using when discussing whether God exists. Scientific evidence. When talking to non-Christians, it's best to avoid quoting the Bible, talking about theology, or sharing our personal feelings and experiences. That can come much later when the person is open to it. We first need to show that we understand science, because science is a reliable and respected way of getting knowledge about the universe. Science (experimental, testable, repeatable science) should set limits on what anyone can believe – including non-Christians, who might otherwise not be inclined to listen to Bible verses and theology.

You should definitely print this article out and read it, then send it to your atheistic friends. I have tried this out on atheists, and the response I get is that scientific discoveries will soon emerge that falsifies all of these six scientific discoveries. That sounds more like faith than science to me. Let's make the decisions based on what science is telling us today. Let's not speculate against the science, let's go with the flow of the recent discoveries.

# Islamic terrorists behead unarmed British soldier in London street in broad daylight

**Wintery Knight** · 23 May 2013 · Archived copy · Original

The left-leaning UK Independent reports.

Excerpt:

> Terrorism returned to the streets of Britain yesterday when a soldier was murdered by two suspected Islamists who attempted to behead and disembowel him as he left a barracks, in the first deadly attack since the 2005 London bombings.

> One of the suspected killers, who addressed an onlooker who had a camera, said the pair had carried out the attack "because David Cameron, [the] British government sent troops in Arabic country".
>
> As pedestrians stood close by the armed men, he went on: "We swear by almighty Allah we will never stop fighting you," according to footage obtained by ITV News .
>
> *The Independent* understands the dead soldier – who was wearing a Help for Heroes T-shirt – was a member of the Royal Regiment of Fusiliers, which is currently based overseas. He was ambushed by the men as he left the base in Woolwich, south-east London, who attacked him and then dragged his body into the middle of the road to pose for photographs while standing over him waving a cleaver and a gun, according to witnesses.
>
> […]One witness, identified only as James, said he and his partner saw two black men attack a young man aged about 20 with kitchen knives like he was "a piece of meat".
>
> "They were hacking at this poor guy, literally," he told LBC Radio, adding that a group of brave women tried to shield the soldier from the two men.
>
> "They were hacking at him, chopping him, cutting him. These two guys were crazed. They were just animals. They dragged him from the pavement and dumped his body in the middle of the road and left his body there."

More politically incorrect details here from Sky News. (H/T The Gateway Pundit)

Excerpt:

> Two attackers armed with meat cleavers filmed their deadly assault on a man in London, according to Sky sources.
>
> A man reported to be a serving soldier died and two people have been shot in Woolwich, after what Sky sources understand is being treated as a terrorist attack.
>
> Senior Whitehall sources said the two attackers asked passers-by to film them, and they shouted **"Allahu Akbar" (Allah is great).**
>
> In footage that has emerged, one of the attackers wields a bloodied meat cleaver and says: **"We swear by almighty Allah we will never stop fighting you."**
>
> The black man, dressed in a grey hooded jacket and black woolly hat, apologises to members of the public who witnessed the horrific scenes before making a number of political statements.
>
> In the footage, he is heard to say: "We must fight them as they fight us. An eye for an eye, a tooth for a tooth.
>
> "I apologise that women have had to witness this today, but in our land our women have to see the same. **You people will never be safe.**
>
> "Remove your government, they don't care about you."

> **Witnesses also described seeing the "crazed" Woolwich attackers "hacking" at their victim and posing for pictures before charging at police wielding meat cleavers.**

Here's a still shot of one the murderers at the scene:

Islamic terrorist on camera: how will the liberal media spin this?

If this happened in the United States, I have no doubt that the fools on the secular left would be blaming this on the Tea Party conservatives and evangelical Christians. I have no doubt that the Democrats in the Obama administration will look at the video and the still images of the murderer and come away thinking that a crackdown on evangelical Christians who are pro-life and believe in limited government is needed. In addition to going after Bible-believing Christians, they would probably want to double welfare payments for people who are in the country illegally.

One other point. A lot of very stupid secularists see stories like this and then have the view that there is something wrong with certainty and conviction in religion. There is nothing wrong with certainty and conviction in religion provided that the religion is not Islam. I have a friend who is a Christian who is very firm in her convictions and she carried groceries Wednesday to an atheist who was sick and on crutches. She is very convinced about the truth of her beliefs and acted on them. Being certain of your views and acting on them is fine as long as *the views are rooted in truth.*

# New study: 9 out of 10 children born to co-habiting couples this year will see parents split by the time they are 16

**Wintery Knight** · 23 May 2013 · Archived copy · Original

Dina sent me this article from the UK Daily Mail.

Excerpt:

> Nearly nine out of ten babies born to co-habiting parents this year will have seen their family break up by the time they reach the age of 16, says a study.
>
> Half of all children born this year will not be living with both natural parents when they reach their mid-teens, and almost all those who suffer family breakdown will be the children of unmarried parents, added the report.
>
> The study, based on figures from the national census and large-scale academic surveys, extrapolates from current trends and calculates that just 9 per cent of babies born to cohabiting couples today will still have their parents living together by the time they are 16.
>
> The report adds that the declining popularity of marriage and the rise of co-habitation will damage the lives of increasing numbers of children.
>
> The figures were produced by researcher Harry Benson, of the Marriage Foundation think tank, who said: 'The report provides solid evidence that married parents are more stable than unmarried parents.
>
> 'The contrast between married and unmarried parents who remain intact by the time their children reach their teenage years demonstrates that marital status plays a crucial role in family breakdown.
>
> 'With family breakdown costing an estimated £46 billion a year – more than the entire defence budget – in addition to the immeasurable social damage, it is clearly in the interest of the Government and the taxpayer to work to counter this devastating trend.'

Here in the United States, the cost of family breakdown $112 billion per year, and rising as the illegitimacy rate rises.

# Casey Luskin and Stephen C. Meyer discuss the design inference

**Wintery Knight** · 23 May 2013 · Archived copy · Original

This episode of ID the Future is 17 minutes long. It's the third in a series – here are parts one and two.

Details:

> On this episode of **ID the Future**, Casey Luskin and Stephen Meyer finish up their talk with a discussion of why intelligent design presents the best explanation for the Cambrian explosion.
>
> *Special limited time offer: Save 43% and get 4 free digital books when you pre-order Darwin's Doubt.*

You can grab the MP3 here.

Topics:

- What sort of reasoning did Darwin use in The Origin of Species?
- Can this method of "inference to the best explanation" be applied to the Cambrian explosion
- The importance of appealing to causes that we have experienced ourselves
- Example: explaining from an effect (volcanic ash) to a cause that his adequate (volcanic eruption)
- We have experience of how volcanoes cause the ash, so we should infer based on what we know
- In the case where the effect is information in biology, we see that naturalistic mechanisms are inadequate
- But we know from our own experience that intelligent agents can generate information
- Many people think that science must confine itself to materialistic explanations
- If so, then it is possible miss out on the true explanation by ruling it out before looking at evidence

If you haven't yet read Meyer's first book, "Signature in the Cell", you should probably grab that one. It's the best book on intelligent design that's out right now. It talks about the origin of the first living cell, surveying all naturalistic explanations for it, and concluding that the best explanation – the one most consistent with what we know *now* – is intelligent design.

# Global warming: Scotland hit by blizzards, road closures and 8 inches of snow

**Wintery Knight** · 24 May 2013 · Archived copy · Original

The Scotsman reports:

> The summer solstice is only 28 days away, but in parts of Scotland yesterday, it was like winter had never left, as people awoke to a blanket of snow.

> At a time of year when thoughts should be turning to sunscreen and barbeques, a blast of wintry weather swept in from the Arctic, bringing blizzards and icy temperatures to the North-east. Drifting snow closed two roads, and many more were only passable with care.

The Express reported on the comments of the pro-global warming Met Office:

> A freezing blast from the Arctic today will bring icy gusts, blizzards and temperatures plunging to -5C (23F), forecasters said.
>
> It comes as Met Office figures reveal this spring is likely to be the coldest for 30 years.
>
> The period from March to mid-May show average temperatures have not risen above 6.1C making it the 6th coldest on record.
>
> Forecaster Sarah Holland said: “This year’s particularly cold spring was heavily influenced by an exceptionally cold March which had a mean temperature 3.3 °C below the long-term average. April and May (so far) have been less cold, but have also registered slightly below average mean temperatures.
>
> […]Leon Brown, forecaster for The Weather Channel, said parts of Scotland were expecting up to eight inches of snow today.
>
> Heavy wintery showers in Aberdeenshire brought parts of the region to a standstill this morning and caused chaos on the roads and transport networks.
>
> Mr Brown said the entire county is going to be colder than average for the time of year with the mercury struggling to get into double figures.

This is all the fault of global warming! We have to let government regulate the private sector and control our consumption, or we’ll all burn up in flames for our eco-sins!

# Pro-gay left's new #FreeKate campaign seeks to normalize underage sex

**Wintery Knight** · 24 May 2013 · Archived copy · Original

Robert Stacy McCain writes about it in the American Spectator.

Excerpt:

> In January, Rush Limbaugh warned that there was "an effort under way to normalize pedophilia," and was ridiculed by liberals (including CNN's Soledad O'Brien) for saying so. But now liberals have joined a crusade that, if successful, would effectively legalize sex with 14-year-olds in Florida.
>
> The case involves Kaitlyn Ashley Hunt, an 18-year-old in Sebastian, Florida, who was arrested in February after admitting that she had a lesbian affair with a 14-year high-school freshman. (Click here to read the affidavit in Hunt's arrest.) It is a felony in Florida to have sex with 14-year-olds. Hunt was expelled from Sebastian High School — where she and the younger girl had sex in a restroom stall — and charged with two counts of "felony lewd and lascivious battery on a child." The charges could put Hunt in prison for up to 15 years. Prosecutors have offered Hunt a plea bargain that would spare her jail time, but her supporters have organized an online crusade to have her let off scot-free — in effect, nullifying Florida's law, which sets the age of consent at 16.
>
> Using the slogan "Stop the Hate, Free Kate" (the Twitter hashtag is #FreeKate) this social-media campaign has attracted the support of liberals including Chris Hayes of MSNBC, Daily Kos, Think Progress and the gay-rights group Equality Florida.
>
> […]This is "behavior that is both fairly innocuous and extremely common," the American Civil Liberties Union declared Tuesday in a statement condemning the prosecution of Hunt. The ACLU statement parrots the arguments of all the other "Free Kate" crusaders who emphasize that the sex between Hunt and the 14-year-old was consensual, and who are apparently indifferent (or even openly hostile) to the right of parents to safeguard their minor children against sexual exploitation. The liberal Daily Kos blog goes so far as to proclaim that officials are "prosecuting an 18-year-old for being in love."

This echoes other efforts to facilitate sex with children. The left regularly pushes for lowering the age of consent, as well as introducing sex education to younger and younger children. A common sense interpretation of these efforts leads one to believe that they want to normalize sex with children. Conservatives on the other hand favor strong marriages, more parental authority, and laws that protect children from sex before the children are old enough to understand what is happening to them. That's the difference between the two sides. The left wants to indoctrinate children in school and sexualize them at an early age for the benefit of adults. The right wants to protect them and preserve their childhood and their bond to parents.

UPDATE: Letitia sent me this article about an entire movement trying to decriminalize sex with children.

UPDATE: Lydia sent me this article about how Planned Parenthood teaches sex classes to children.

# Atheist Inquisition led by Jerry Coyne seeks to censor pro-ID physicist at Ball State University

**Wintery Knight** · 24 May 2013 · Archived copy · Original

Evolution News reports.

Excerpt:

> There is a very disturbing affair going on at Ball State University that everyone needs to know about. The public university in Muncie, Indiana, has been under pressure from a rabid national atheist group and from atheist activist Jerry Coyne to discipline an assistant physics professor for teaching about intelligent design. Coyne and the Freedom from Religion Foundation (FFRF) claim it's a legal, constitutional matter, no less: teaching about ID violates the First Amendment! "It's religion taught as science in a public university, and it's not only wrong but illegal," writes Coyne. "This will now go to the lawyers."
>
> Ball State has announced it will indeed scrutinize the situation. FFRF staff attorney Andrew L. Seidel complained in a legally vacuous letter to Ball State president Jo Ann Gora. Amazingly, the university responded with this ominous public statement:
>
> The university received a complaint from a third party late yesterday afternoon about content in a specific course offered at Ball State. We take academic rigor and academic integrity very seriously. Having just received these concerns, it is impossible to comment on them at this point. We will explore in depth the issues and concerns raised and take the appropriate actions through our established processes and procedures.
>
> Being the subject of such controversy, with your employer issuing public statements about how higher ups will be "explor[ing] concerns" about your "academic rigor" and "integrity," is obviously the last thing an academic in Eric Hedin's shoes wants. It's enough to make the blood drain from your face.

Click here to sign the petition to defend academic freedom at Ball State University.

# Weekly Standard podcast on Sebelius vs Hobby Lobby

**Wintery Knight** · 25 May 2013 · Archived copy · Original

The Weekly Standard has a great podcast that covers fiscal, social and foreign policy issues from a conservative perspective.

Excerpt:

> THE WEEKLY STANDARD podcast with the Becket Fund's Adele Keim on the *Hobby Lobby* v. *Sebelius* case.
>
> This podcast can be downloaded here. Subscribe to THE WEEKLY STANDARD's iTunes podcast feed here.
>
> THE WEEKLY STANDARD would like to thank The Becket Fund for Religious Liberty and Adele Keim for joining us.

Fox News has a report.

Excerpt:

> In the most prominent challenge of its kind, Hobby Lobby Stores Inc. asked a federal appeals court Thursday for an exemption from part of the federal health care law that requires it to offer employees health coverage that includes access to the morning-after pill.
>
> The Oklahoma City-based arts-and-crafts chain argued that businesses — not just the currently exempted religious groups — should be allowed to seek exception from that section of the health law if it violates their religious beliefs.
>
> The arguments Thursday centered on the Green family, founders of Hobby Lobby Stores Inc. and a sister company, Christian booksellers Mardel Inc. An eight-judge panel peppered both sides with questions about whether the contraceptives mandate is an undue burden on the Greens' religious belief.
>
> The Greens contend that emergency contraception is tantamount to abortion because it can prevent a fertilized egg from implanting in the womb. They also object to providing coverage for certain kinds of intrauterine devices.
>
> Hobby Lobby's lawyer argued that the Greens shouldn't face fines for not complying with mandatory contraceptive coverage simply because their business makes a profit. The stores are a "profit-making company, yes, but also a ministry," Kyle Duncan argued.
>
> Duncan cited the Citizens United campaign-finance decision that said corporations have constitutional protections.
>
> "We don't say, well, a corporation can't exercise a right because it's in corporate form," Duncan said.
>
> "Is religion the kind of right can only be exercised by a natural person? Well, the question nearly answers itself. … It's not a purely personal right."

In other news, voters support the repeal of Obamacare by a 22-point margin, which is increasing as more and more of the law is actually implemented. Too bad we did not vote to defeat Obama by a 22-point margin last November.

# Woman opens fire on gang of thugs trying to get into her home

**Wintery Knight** · 26 May 2013 · Archived copy · Original

The Pearcey Report linked to this news story from The Blaze.

Excerpt: (links removed)

> A group of thugs figured it would be easy to overpower one Kansas City woman. After all, her husband had just left to run an errand, leaving her all alone in the home.
>
> They couldn't have been more wrong.
>
> The woman, later identified as Shirley Roberts, 52, immediately retrieved her gun after she heard someone jiggle the knob of the front door. She also witnessed two additional men heading to the back door.
>
> Looking through the blinds, Roberts saw the men putting on gloves and preparing to force their way into her home. So she trained her firearm on the men and opened fire.
>
> The criminals, scared silly, reportedly took off running. However, they also fired shots toward the house they attempted to break into.
>
> Robert's husband, Oscar Roberts, later said he and his wife have been going to the gun range to prepare for just that type of situation. "You've got to protect yourself," he told KMBC-TV.
>
> "I told her she'd done the right thing. We practiced that. She's shook up, though. That's the only thing about it, she's very shook up," Oscar added.
>
> The practice at the shooting range seemingly paid off as police later arrested three men who went to the Research Medical Center, one of which was treated for a gunshot wound to the chest.
>
> Police said the shooting seems to be justifiable self-defense.
>
> "If you're in fear for your life, most definitely we want you to protect yourself. We don't want any harm to come to anyone," Sgt. Marisa Barnes of the Kansas City Police Department told KMBC-TV.

So, a few points about this.

First, a leftist has no help to offer this woman. She can call the police if she has time and then wait 20 minutes for them to arrive. Leftists are more concerned with the safety and well-being of criminals than they are with allowing law-abiding property owners to deter criminals with weapons. It's very important to see that leftists have nothing to offer this woman except to say "be raped and killed".

Second, I think it was a good thing for the husband that he trained his wife to use firearms. I have tried to get two women I courted in a row to go to the range with me, and both said no. I hope that more women will reconsider about that, because it sure is great for husbands to know that their wives are able to defend themselves.

Third, it's a great thing that the police aren't giving her any trouble about self-defense. In the UK, which is very feminized and socialist, this woman would have been challenged by the police if she had so much as brandished a kitchen knife at her attackers. If she actually owned a firearm, she would be arrested. And if she fired at them, she would be sent to prison.

# Jay Richards and Stephen C. Meyer discuss scientific consensus on the Michael Medved show

**Wintery Knight** · 26 May 2013 · Archived copy · Original

The Michael Medved show is a national radio show broadcast out of Seattle, Washington. According to Talkers magazine, he has the fifth largest radio audience. He has a regular weekly segment on science and culture featuring scholars from the Discovery Institute.

Here is the fifth segment from this past week, courtesy of the Intelligent Design: The Future podcast.

The MP3 file is available for download. (35 minutes)

The description is:

> On this episode of **ID the Future**, Jay Richards and Stephen Meyer join Michael Medved for a discussion of the phrase "scientific consensus" and how it is used in debates over controversial issues such as Darwinian evolution and climate change.
>
> *Each week, leading fellows from Discovery Institute will join Michael Medved to talk about the intersection of science and culture. Listen in live online or on your local Medved station, or stay tuned at ID the Future for the weekly podcast.*

Topics:

- Does global warming cause more tornadoes?
- Are we having more tornadoes now?
- Is science decoded NY consensus?
- Why would someone appeal to consensus
- If a person defends their view by using sweeping rhetoric and insults is that am indicator of strength
- Is there more extreme weather than before now?
- When did the last warming begin?
- Are we in a waking or cooling cycle now?
- How are scientists who dissent from the consensus treated?
- How much CO2 is needed in the atmosphere in order to create warming?

I subscribe to the ID the Future podcast, and I really recommend that you do as well!

**Previous entries**

- Episode one: Stephen C. Meyer on Thomas Nagel and intelligent design
- Episode two: Stephen C. Meyer on Richard Dawkins and the Cambrian explosion
- Episode three: John G. West discusses Darwinism and the value of human life
- Episode four: Stephen C. Meyer and John Lennox discuss human exceptionalism

# Is it always rational to be moral?

**Wintery Knight** · 26 May 2013 · Archived copy · Original

Tough Questions Answered explains how that question is answered on theism and on atheism. (H/T J. Warner Wallace tweet)

Excerpt:

> If you are a dictator, and you have complete control over your nation, and you have good reason to believe you will remain in control, why should you not take whatever you want from whomever you want in order to bring yourself pleasure? Why would it be rational for you to be moral?
>
> In certain cases of truth telling or repaying a debt or keeping a promise, and in those rarer cases where the performance of a duty risks death or injury, why do the moral thing? In an atheistic world, there may be instances where doing the moral thing does not advance my goals and desires for my life. In other words, doing the moral thing may not be the rational thing for me to do.

TQA then quotes from "*Good God: The The Theistic Foundations of Morality*" by David Baggett and Jerry Walls:

> It wouldn't make sense if the world required us to do what isn't in our ultimate self-interest. We think this was Kant's insight when he suggested that the moral enterprise needs, in a deep and radical way, the postulate of a God who can, and will, make happiness correspond to virtue. Morality fails to make sense when that correspondence fails.
>
> […]It's the atheistic world in particular, however, that introduces the failure of this correspondence. Reality itself must be committed to morality in some deep way for morality to make sense. Morality really must be a very deep feature and fixture of reality in order for its demands to retain their authoritative force. In an atheistic world there just doesn't seem likely to be the sort of ontological foundation to morality that renders it always rational to both believe in and do what's morally binding. The picture is very different for a theistic world of a certain sort.

One of the most obvious questions to ask atheists these days is whether it is OK to kill a special needs child. Atheists like Richard Dawkins and Peter Singer are already on record as saying that it is a good thing. It will be tough for an atheist to take any other position, because that is rational within their atheistic worldview. This is a clear case where the life of the strong person will be made less pleasurable if the stronger adult has to deal with the needs of the weaker child. On atheism, there is no such thing as a human right. The universe is an accident. Therefore, atheists will find it rational to kill anything and anyone who diminishes their happiness, so long as they can escape the consequences of being judged by others when they do.

On theism, though, it is rational to pursue morality, because the universe was made by a moral Creator, and his moral values are built into the design for us. Working to comply with that design is done within the context of that relationship with the Creator. A relationship which survives our deaths. Christian theists have even more reason to prefer self-sacrificial love, since the example of the life of the founder of Christianity exemplifies that self-sacrificial love. Caring for others even when it doesn't make you happy is the core of Christian doctrine and theology, and that's in fact what the church has done since the beginning.

# Why celebrate Memorial Day? Why is Memorial Day important?

**Wintery Knight** · 27 May 2013 · Archived copy · Original

Arlington National Cemetary

What is Memorial Day? It's the day that we remember all those brave men and women who have sacrificed to protect our liberties and our lives so that we could be safe from harm.

This video may help you to understand.

From Hot Air, a quote from Ronald Reagan.

> Memorial Day is an occasion of special importance to all Americans, because it is a day sacred to the memory of all those Americans who made the supreme sacrifice for the liberties we enjoy. We will never forget or fail to honor these heroes to whom we owe so much. We honor them best when we resolve to cherish and defend the liberties for which they gave their lives. Let us resolve to do all in our power to assure the survival and the success of liberty so that our children and their children for generations to come can live in an America in which freedom's light continues to shine.
>
> The Congress, in establishing Memorial Day, called for it to be a day of tribute to America's fallen, and also a day of national prayer for lasting peace. This Nation has always sought true peace. We seek it still. Our goal is peace in which the highest aspirations of our people, and people everywhere, are secure: peace with freedom, with justice, and with opportunity for human development. This is the permanent peace for which we pray, not only for ourselves but for all generations.
>
> The defense of peace, like the defense of liberty, requires more than lip service. It requires vigilance, military strength, and the willingness to take risks and to make sacrifices. The surest guarantor of both peace and liberty is our unflinching resolve to defend that which has been purchased for us by our fallen heroes.
>
> On Memorial Day, let us pray for peace — not only for ourselves, but for all those who seek freedom and justice.

And check some of my Medal of Honor posts:

# Swedish riots continue as police disperse vigilantes and ignore rioters

**Wintery Knight** · 27 May 2013 · Archived copy · Original

Stuart Schneiderman wrote the best article I saw about the London terrorist attack and the Swedish riots.

Excerpt:

> In another post Hinderaker described the scene in Stockholm. There the police have taken a laissez-faire attitude toward Muslim rioters. They are too afraid to do anything, so they stand by and let it happen.
>
> One wonders whether Swedes are quite as tolerant of laissez-faire capitalism.
>
> Be that as it may, Hinderaker quotes the account offered by the Swedish publication, Fria Tider:
>
> *Since last Sunday, May 19, rioters have taken to the streets of Stockholm's suburbs every night, torching cars, schools, stores, office buildings and residential complexes. Yesterday, a police station in Rågsved, a suburb four kilometers south of Stockholm, was attacked and set on fire.*
>
> *But while the Stockholm riots keep spreading and intensifying, Swedish police have adopted a tactic of non-interference. "Our ambition is really to do as little as possible," Stockholm Chief of Police Mats Löfving* ***explained*** *to the Swedish newspaper Expressen on Tuesday.*
>
> *"We go to the crime scenes, but when we get there we stand and wait," elaborated Lars Byström, the media relations officer of the Stockholm Police Department. "If we see a burning car, we let it burn if there is no risk of the fire spreading to other cars or buildings nearby. By doing so we minimize the risk of having rocks thrown at us."*
>
> Why would they not riot? If no one has the courage to stop them, then their actions must be righteous.
>
> But, don't think that the Swedish police are not doing anything. When a meter maid comes across an illegally parked incinerated vehicle, she gives it a parking ticket.
>
> Fria Tider described the scene:
>
> *Swedish parking laws, however, continue to be rigidly enforced despite the increasingly chaotic situation. Early Wednesday, while documenting the destruction after a night of rioting in the Stockholm suburb of Alby, a reporter from Fria Tider observed a parking enforcement officer writing a ticket for a burnt-out Ford.*
>
> *When questioned, the officer explained that the ticket was issued because the vehicle lacked a tag showing its time of arrival. The fact that the vehicle had been effectively destroyed – its windshield smashed and the interior heavily damaged by fire – was irrelevant according to the meter maid, who asked Fria Tider's photographer to destroy the photos he had taken. Her employer, the parking company P-service, refused to comment when Fria Tider contacted them on Wednesday afternoon.*
>
> At least the meter maids are doing their jobs.
>
> […]Seeing the threat posed by vigilantes the Swedish police are springing into action. Fria Tider has the story:
>
> *In the Stockholm suburb of Tumba the police decided to abandon their earlier non-intervention policy as* ***a large group of police officers rounded up and dispersed a group of vigilantes trying to fend off rioters.***
>
> ***The decision to round up vigilantes while, according to Stockholm Chief of Police Mats Löfving, "doing as little as possible" to stop rioters, met with a wave of protests in various social media and on the Internet.***
>
> Swedish police fighting Swedish citizens for doing what the police refuse to do. Surely, the Muslim population is watching and laughing.

Secularism and leftism is not strength, it's weakness. It's postmodernism, moral relativism and dependency. It's

subsidizing your own executioners because you have lost the will to live. I would argue that Sweden is even more advanced in cultural decline than the UK. But we are rapidly catching them up.

# Is public school a viable option for Christian parents?

**Wintery Knight** · 27 May 2013 · Archived copy · Original

A couple of quick anecdotes from Yahoo News first, then we'll see the numbers.

Excerpt:

> Take the case of Petrona Smith. She says in a lawsuit that she was fired from teaching at Bronx PS 211 in March 2012 after a seventh-grader reported that she'd used the "N" word, according to The New York Post.
>
> 'Negro.'
>
> Smith doesn't deny using the word. But she argues that everyone uses it, when speaking Spanish. She was teaching the Spanish words for different colors, and the color "black" in Spanish is "negro." She also taught the junior high school students, in this bilingual school, that the Spanish term for black people is "moreno." And by the way, Smith, who is from the West Indies, is black.

And more:

> The Akron Public Schools Board of Education voted in January to pursue the firing of Melissa Cairns. She was a math teacher at Buchtel Community Learning Center.
>
> The school district said that Ms. Cairns posted a photo on her personal Facebook page which showed 8 or 9 out of her 16 students with duct tape across their mouths. The caption read: "Finally found a way to get them to be quiet!!!" The district says a colleague of Cairns' notified a supervisor of the photo.
>
> […]This past week, Cairns was officially fired because "She showed a lack of good judgment. Her conduct was unbecoming of a teacher," Akron Public Schools spokesman Mark Williamson told Newsnet5.
>
> He went on to explain it wasn't the use of the duct tape, but the posting of the photo of children on Facebook that showed poor judgement.

As you know, you can't fire public school teachers for incompetence or sexual abuse of children.

Excerpt:

> He worked just one year as a full-time teacher in New York. But he has collected nearly $1 million for 13 years for doing almost nothing.
>
> Aryeh Eller, 46, a former music teacher at Hillcrest HS in Queens, is the longest-sitting "rubber room" teacher in the city. He was yanked from the classroom in 1999 and confessed to repeated sexual harassment of female students, according to a 2000 investigative report.
>
> […]Since his 1999 suspension, he has collected $943,000, plus health and pension benefits — and the total will hit $1 million this year.

Now let's see if this focus on political correctness instead of results is working for taxpayers and students.

The Wall Street Journal:

> Over the last four decades, public education spending has increased rapidly in the United States. According to the Department of Education, public schools spent, on average, $12,922 per pupil in 2008, the most recent year for which data are available. Adjusting for inflation, that's more than double the $6,402 per student that public schools spent in 1975.
>
> Despite that doubling of funds, just about every measure of educational outcomes has remained stagnant since

> 1975, though some have finally begun to inch upward over the last few years. Student scores on the National Assessment of Educational Progress (NAEP)—the only consistently observed measure of student math and reading achievement over the period—have remained relatively flat since the mid-1970s. High school graduation rates haven't budged much over the last 40 years, either.

You can find more data to flesh out those claims linked at the Heritage Foundation think tank.

To remove any doubt, just take a look at the libertarian Cato Institute's graph on public school spending vs scholastic achievement. We are are wasting money indoctrinating kids in political correctness. The extra money that we are spending on education isn't going into making students smarter or more productive.

# Guillermo Gonzalez lectures at UC Davis on the requirements for complex life

**Wintery Knight** · 27 May 2013 · Archived copy · Original

The 5 video clips that make up the full lecture.

The playlist for all 5 clips is here.

**About the speaker**

> Guillermo Gonzalez is an Associate Professor of Physics at Grove City College. He received his Ph.D. in Astronomy in 1993 from the University of Washington. He has done post-doctoral work at the University of Texas, Austin and at the University of Washington and has received fellowships, grants and awards from such institutions as NASA, the University of Washington, the Templeton Foundation, Sigma Xi (scientific research society) and the National Science Foundation.

Learn more about the speaker here.

**The lecture**

Here's part 1 of 5:

And the rest are here:

- Part 2 of 5
- Part 3 of 5
- Part 4 of 5
- Part 5 of 5

**Topics:**

- What is the Copernican Principle?
- Is the Earth's suitability for hosting life rare in the universe?
- Does the Earth have to be the center of the universe to be special?
- How similar to the Earth does a planet have to be to support life?
- What is the definition of life?
- What are the three minimal requirements for life of any kind?
- Requirement 1: A molecule that can store information (carbon)
- Requirement 2: A medium in which chemicals can interact (liquid water)
- Requirement 3: A diverse set of chemical elements
- What is the best environment for life to exist?
- Our place in the solar system: the circumstellar habitable zone
- Our place in the galaxy: the galactic habitable zones
- Our time in the universe's history: the cosmic habitable age
- Other habitability requirements (e.g. – metal-rich star, massive moon, etc.)
- The orchestration needed to create a habitable planet
- How different factors depend on one another through time
- How tweaking one factor can adversely affect other factors
- How many possible places are there in the universe where life could emerge?

- Given these probabilistic resources, should we expect that there is life elsewhere?
- How to calculate probabilities using the “Product Rule”
- Can we infer that there is a Designer just because life is rare? Or do we need more?

The corelation between habitability and measurability.

- Are the habitable places in the universe also the best places to do science?
- Do the factors that make Earth habitable also make it good for doing science?
- Some places and times in the history of the universe are more habitable than others
- Those exact places and times also allow us to make scientific discoveries
- Observing solar eclipses and structure of our star, the Sun
- Observing stars and galaxies
- Observing the cosmic microwave background radiation
- Observing the acceleration of the universe caused by dark matter and energy
- Observing the abundances of light elements like helium of hydrogen
- These observations support the big bang and fine-tuning arguments for God’s existence
- It is exactly like placing observatories on the tops of mountains
- There are observers existing in the best places to observe things
- This is EXACTLY how the universe has been *designed for making scientific discoveries*

This lecture was delivered by Guillermo Gonzalez in 2007 at the University of California at Davis.

# Can recreational sex turn a selfish, irresponsible man into a marriage-minded provider?

**Wintery Knight** · 28 May 2013 · Archived copy · Original

An article from the American Thinker answers the question that vexes many men. As you read this excerpt below, ask yourself if it is a man or a woman writing this.

First of all, liberal women seem to be having an awful lot of sex these days. They are losing their virginity early, and working their way through as many "alpha males" as possible, but all the while they insist that a stream of recreational-sex relationships is somehow a path to lifelong married love. Can you turn a man who wants nothing more than recreational sex into the perfect husband, simply by invoking the magical power of sex?

Liberal women think that you can:

> On the one hand, liberal women believe wholeheartedly in the idiotic social construct they call, "sexual liberation." They pride themselves on losing their virginity, as though that "accomplishment" had ever been above the challenge-scale of an alley cat in heat.
>
> These liberal women I've known, having given away their female V-card over and over and over again, all the while scour their host of intimate "trial runs" searching for that mythical, Hollywood-construct, Mr. Right. This Mr. Right guy, for whom they are searching, is known to them up front as even more sexually-liberated than they, but this little factoid seems not to register in their liberated little heads as they frantically search for the equally mythical family home with the white picket fence, which somehow never gets hit by any of life's roving tornadoes. One can almost hear them say in unison, "And they all lived happily ever after."

I think it's one of the deepest mysteries of the world why women think that a man who has lots and lots of recreational sex is somehow marriage material. When I think of men who are qualified for marriage, I think of men who have studied hard subjects, gotten marketable skills, worked and worked, saved and saved, and shown that they can be faithful in marriage by exhibiting self-control in the courtship. But liberal women think that all of this reasoning is junk, and you must just jump right into sex to see if the relationship will "work out" or to find out what you "like". Recreational sex, they insist, is a superior way of finding a husband. Discussing who will do what in an actual marriage and what the actual marriage is for is apparently *ineffective*.

More:

> Evidently, the liberal woman is capable of the most severe form of psychological denial known to humankind. Certain that one of the men with whom she has copulated without strings will suddenly morph into a faithfully monogamous creature the minute she can convince one of them to say "I do" in front of a few witnesses, the liberal woman marches blindly down the aisle towards near-certain, adulterous doom. Yet, no amount of honest reason can dissuade liberal women from this self-destructive, moral myopia.
>
> What other term but "morally schizoid" could possibly describe this blatantly contradictory tendency among liberal women?
>
> Having spent their youth casually throwing their own sexual morality to the winds of fairytale "liberation," these liberal women still steadfastly cling to the faithfully monogamous ideal for that sometime-later moment when they actually do desire all the traditional things — the husband, the kids, the white picket fence — those pesky female-nature embedded longings, which coincidentally ensure the continuation of the human race.
>
> But these liberal women somehow — in perfect schizoid manner — convince themselves that once married, they will be the gratuitous beneficiaries of the monogamous respect they still desire, but have never once demanded or deserved. Intuitively, women know that strict monogamy provides the only real security for themselves and their own offspring. Yet, they continue themselves to spurn the demands of monogamy until

> the very last minute, believing that fidelity springs forth naturally in miraculous profusion among all "married" humans. Such pure poppycock can only be explained as a mental disorder.

I think women need to ask themselves questions honestly and rationally:

- can recreational sex make an unemployed man get a job?
- can recreational sex make a violent man be courteous and respectful?
- can recreational sex make an atheist turn into a Christian?
- can recreational sex make a male slut stay faithful?
- can recreational sex make wastefulness turn into frugality?
- can recreational sex make laziness turn into diligence?
- can recreational sex make irresponsibility turn into commitment?

Marriages last because both partners have prepared themselves for self-sacrifice, rational discussions, problem solving and cooperation.

Previously, I provided the male perspective on liberal women's poor decision-making about men and marriage. Read the article from the American Thinker (*written by a woman*), then read mine.

# What is more important? True beliefs about God or doing good actions?

**Wintery Knight** · 28 May 2013 · Archived copy · Original

What does the Bible teach about the relative importance of actions and beliefs? Which should we settle first?

J.Warner Wallace explains:

> I just came home from a week in the great state of Utah. Our missions team of high school students had the opportunity to talk with many LDS and Christian believers about the nature of salvation. Many of our conversations centered on the relationship between faith and works. Christianity is unique in its characterization of salvation as the free gift of God:
>
> ***Ephesians 2:8-9***
> *For it is by grace you have been saved, through faith – and this not from yourselves, it is the gift of God – not by works, so that no one can boast.*
>
> This concept of grace is missing in Mormonism (as it has been classically described by LDS prophets and Mormon scripture). In fact, many of the Mormon believers we talked with described Christians as people who consistently take advantage of "cheap grace". One member of the LDS church told us, "Christians say a prayer, get 'saved' and then run out and live like hell. They don't think it's important to obey the commandments." At times, in an effort to emphasis the *free* nature of salvation, many Christians minimize the importance of good works in the Christian life. We sometimes neglect to tell our LDS friends that a grateful life, surrendered in response to what Christ has done for us, does actually result in a life of good works. The passage in Ephesians provides us with an important equation that can help us make this distinction. If you divide this verse in the middle, you'll find faith and salvation on one side of the verse and works on the other:
>
> *For it is by grace you have been saved, through faith | not by works, so that no one can boast.*
>
> This verse in Ephesians provides us with a simple equation that can help us remember a life transformed by the saving grace of God produces good works, even though good works are *not* what save us:
>
> *The Christian equation:*
> ***Salvation + Faith = Works***
>
> *The Non-Christian equation:*
> ***Faith + Works = Salvation***
>
> The question is not *whether* someone performs good works, but *why* someone performs good works. Both Christian and non-Christian believers have a place for good works in their respective equations. Works are not missing from the Christian calculation. But for us, good works are the result of our gratitude for (and recognition of) what God has done. When we realize that our own efforts are utterly impotent, we begin to understand the gift that God has given us. When we understand what God has done for us, we can't help but be humbled and grateful. A grateful life, ever reflective of the depth of God's kindness, results in a surrendered response. We can't help but want to live differently.

I think it's pretty important to get it clear that in Biblical Christianity, the focus is on getting the beliefs correct first. I actually think that the heavy burden of a works-based faith is a big reason why people are turned off about religion in general. It would really be much better for us all if we figured out who God is first and then made adjustments to live in light of that, instead of leaving the theology aside and just trying to join an organization and do what people tell us to do. Let's meet God in truth first, then act accordingly once that relationship is settled.

# New book by Dr. Helen Reynolds explains men's changing motivations

**Wintery Knight** · 28 May 2013 · Archived copy · Original

Captain Capitalism reviews a new book.

Excerpt:

> Dr. Helen of PJ Media fame is in a very small, but elite league. She is one of the few professionals (PhD in psychology) to address and bring to light the sexual-sociological backlash men and women are having to feminism. The only other person I've known to do this is Dr. Roy Baumeister with his book "Is There Anything Good About Men." However, while Dr. Baumeister's book focuses on society's current view or opinion of men, Dr. Helen's new book "Men on Strike" addresses the consequences of having a myopic and solipsistic societal view of the sexes. And the consequences aren't good.
>
> As the title would suggest, men are going on strike. They are striking from their traditional roles as breadwinners, innovators, hard workers, protectors, etc. But worse they are abandoning their roles as husbands and fathers. Not out of a lack of desire, but worse – they are being forced out of these roles as society has made both roles too risky to forfeit their precious and finite lives for.
>
> Naturally there is a backlash.
>
> Women want men to "man up" and marry them. Women want men give them children. But, particularly ironic, while women SAY they want men to be effeminate, sensitive, caring, listeners, their behaviors show their preferences for strong, thuggish bad boys have never changed. This confusion (and risk) to men has sent them fleeing, and blinded by feminism, modern day women can't figure out why. They are stumped as to why they're 42, single, with some other man's child, a masters degree in creative writing and NOT getting approached every day. They simply cannot connect the dots.
>
> Dr. Helen explores this reaction of men and tries to connect the dots for women. Her language is polite, diplomatic and correct. but this is a herculean task to ask of her because she is trying to undo the brainwashing women (and men) have received for 40 years. It is a harsh pill to swallow, too harsh for the progressively deteriorating and childish men and women who populate America today, and her blog receives more criticism than inquiry and acceptance. Regardless she tries and has a professional psychological background to back it up lending the book authority.

Here's the description from Amazon:

> American society has become anti-male. Men are sensing the backlash and are consciously and unconsciously going "on strike." They are dropping out of college, leaving the workforce and avoiding marriage and fatherhood at alarming rates. The trend is so pronounced that a number of books have been written about this "man-child" phenomenon, concluding that men have taken a vacation from responsibility simply because they can. But why *should* men participate in a system that seems to be increasingly stacked against them?
>
> As *Men on Strike* demonstrates, men aren't dropping out because they are stuck in arrested development. They are instead acting *rationally* in response to the lack of incentives society offers them to be responsible fathers, husbands and providers. In addition, men are going on strike, either consciously or unconsciously, because they do not want to be injured by the myriad of laws, attitudes and hostility against them for the crime of happening to be male in the twenty-first century. Men are starting to fight back against the backlash. *Men on Strike* explains their battle cry.

I took a quick look at the book, because I was concerned that it might not be good coming from a libertarian

perspective. But it's been endorsed by fusionist conservatives like myself.

John Hawkins of Right Wing News:

> **This review is from: Men on Strike: Why Men Are Boycotting Marriage, Fatherhood, and the American Dream – and Why It Matters (Hardcover)**
> I can't say enough good things about Helen Smith's extraordinary new book. In our over-feminized society where at times, it can seem like traditional, heterosexual men are under attack from all sides, Dr. Helen's book presents a very different perspective. In fact, it reminds me a bit of Warren Farrell's "Why Men Are the Way They Are," but it's more aggressively pro-male while Farrell's book is more a straight-up antidote to male bashing feminism. Whether you're a man looking for a book that covers men's rights or a woman who wants to get a better idea of how most men react to the angry, left-wing feminist view of the world, this book comes highly recommended.

The paperback is available now, the Kindle book will be out later in June. I usually buy the Kindle book for books like this, but I'll be getting the other book that the Captain linked in hardcover, because it is Oxford University Press and will be a good conversation starter in my office.

I think that one of the most troubling things about the contemporary church is that pastors don't dare to read books like this to really find out what men are thinking. When you look at what pastors say about men – conservative pastors who claim to be pro-marriage – you will find there views that are hastening the demise of marriage and encouraging the sorts of conditions in which unborn children will be killed and born children will be raised fatherless. It is almost a guarantee that if you meet a pastor, then you are meeting someone who is working against social conservatism even as they praise it, because they have completely discounted how feminism and socialism have impacted men in every area. What is needed is an appraisal of the incentives facing men, and that's exactly what pastors are unwilling to do. But this book sounds like it would be the antidote to that.

# IRS chief visited White House a reported 118 times from 2010 to 2011

**Wintery Knight** · 29 May 2013 · Archived copy · Original

The Weekly Standard reports.

Excerpt:

> The *Washington Examiner* reports that the IRS chief visited the White House more than once a week under President Obama, after having visited less than once a *year* under President Bush. The IRS chief came to the White House a reported 118 times from 2010 to 2011 under Obama, compared to only once from 2003 to 2007 under Bush — **a 236-fold increase per day**. Under Bush, a White House appearance from the taxman came as frequently as the opening of the Olympic Games; under Obama it came more frequently than *Sports Illustrated*.
>
> Aside from perhaps being there to discuss targeting efforts, the only plausible reason for the IRS chief to have visited the Obama White House so regularly was to discuss the IRS's significant expansion in power and scope under Obamacare.

But Obama only learned about how the IRS was implementing his own anti-conservative rhetoric by watching the news, just like you or I.

# William Lane Craig's case for the resurrection of Jesus

**Wintery Knight** · 29 May 2013 · Archived copy · Original

Dr. Craig's famous minimal facts case for the resurrection has been posted at the Christian Apologetics Alliance. He presents 4 facts admitted by the majority of New Testament historians, and then he supplies multiple pieces of evidence for each fact.

Here are the four facts:

- FACT #1: *After his crucifixion, Jesus was buried in a tomb by Joseph of Arimathea.*
- FACT #2: *On the Sunday following the crucifixion, Jesus' tomb was found empty by a group of his women followers.*
- FACT #3: *On multiple occasions and under various circumstances, different individuals and groups of people experienced appearances of Jesus alive from the dead.*
- FACT #4: *The original disciples believed that Jesus was risen from the dead despite their having every predisposition to the contrary.*

Here's the detail on fact #3, the post-mortem appearances.

> FACT #3: *On multiple occasions and under various circumstances, different individuals and groups of people experienced appearances of Jesus alive from the dead.*
>
> This is a fact which is almost universally acknowledged among New Testament scholars, for the following reasons:
>
> 1. The list of eyewitnesses to Jesus' resurrection appearances which is quoted by Paul in I Cor. 15. 5-7 guarantees that such appearances occurred. These included appearances to Peter (Cephas), the Twelve, the 500 brethren, and James.
>
> 2. The appearance traditions in the gospels provide multiple, independent attestation of these appearances. This is one of the most important marks of historicity. The appearance to Peter is independently attested by Luke, and the appearance to the Twelve by Luke and John. We also have independent witness to Galilean appearances in Mark, Matthew, and John, as well as to the women in Matthew and John.
>
> 3. Certain appearances have earmarks of historicity. For example, we have good evidence from the gospels that neither James nor any of Jesus' younger brothers believed in him during his lifetime. There is no reason to think that the early church would generate fictitious stories concerning the unbelief of Jesus' family had they been faithful followers all along. But it is indisputable that James and his brothers did become active Christian believers following Jesus' death. James was considered an apostle and eventually rose to the position of leadership of the Jerusalem church. According to the first century Jewish historian Josephus, James was martyred for his faith in Christ in the late AD 60s. Now most of us have brothers. What would it take to convince you that your brother is the Lord, such that you would be ready to die for that belief? Can there be any doubt that this remarkable transformation in Jesus' younger brother took place because, in Paul's words, "then he appeared to James"?
>
> Even Gert Ludemann, the leading German critic of the resurrection, himself admits, "It may be taken as historically certain that Peter and the disciples had experiences after Jesus' death in which Jesus appeared to them as the risen Christ."3

Yes, Gerd Ludemann is actually an atheist new Testament historian, and he has even debated Dr. Craig on the resurrection – not once, but *twice*. That's the kind of evidence Dr. Craig uses in his case. Not just what your pastor will give you, but what atheists will give you. We need to learn to debate like that.

# Study explains why college women abandon courtship for hook-ups

**Wintery Knight** · 29 May 2013 · Archived copy · Original

This study is from the Institute for American Values. It was done by Elizabeth Marquardt.

The PDF of study is here.

If you download the 88 page PDF, the first few pages are an executive summary.

I'd been exposed to this research before when I read Dr. Miriam Grossmann's book "Unprotected". (Boundless review here) I just got Dr. Miriam Grossmann's new book "You're Teaching My Child What?" and I also got Elizabeth Marquardt's new book "Between Two Worlds: The Inner Lives of Children of Divorce". I don't think either of them is conservative, but I like their research anyway.

There are a couple of things that really struck me about this IAV study on hooking-up.

First, this one from p. 15:

> A notable feature of hook ups is that they almost always occur when both participants are drinking or drunk.
>
> A Rutgers University student observed, "You always hear people say, oh my gosh, I was so drunk, I hooked up with so and so…" Perhaps not surprisingly, many noted that being drunk helped to loosen one's inhibitions and make it easier to hook up. A number of students noted that being drunk could later serve as your excuse for the hook up. A Yale University student said, "Some people like hook up because they're drunk or use being drunk as an excuse to hook up." A New York University student observed, "[Alcohol is] just part of an excuse, so that you can say, oh, well, I was drinking."
>
> A Rutgers University student commented, "If you're drinking a lot it's easier to hook up with someone… [and] drugs, it's kind of like a bonding thing… and then if you hook up with them and you don't want to speak to them again, you can always blame it on the drinking or the drugs."
>
> Other women observed that being drunk gives a woman license to act sexually interested in public in ways that would not be tolerated if she were sober. For instance, a University of Michigan student said, "Girls are actually allowed to be a lot more sexual when they are drunk…"
>
> A University of Chicago junior observed, "One of my best friends… sometimes that's her goal when we go out. Like she wants to get drunk so I guess she doesn't have to feel guilty about [hooking up]."
>
> Some reported that drinking had led them to do things they later regretted. A University of Virginia student said, "My last random hook up was last October and it was bad. I was drunk and I just regretted it very much."

And this one from p. 30 on the effects of hooking-up on their future commitments:

> A few women did see an unambiguous connection between present relationships and future marriage.
>
> […]Many women either saw little or no connection between present and future relationships, or their understanding of this connection was curiously flat. A student at New York University said, "[The present and the future are] connected because I will still have the same values and principles that I have now, but I just won't be single anymore."A number of women said that the present and the future are connected because whatever heartache or confusion they experience now gives them lessons for the future.
>
> A University of Michigan student said, "Early relationships prepare you for marriage because it's like, oh, what type of person do I want to be with? Oh, I've had these bad experiences. Or, I've learned from this relationship that I should do this and I shouldn't do this."
>
> A sophomore at Howard University said that "I am kind of learning from a lot of the mistakes that I have

> made." At a further extreme, some women saw their future marriage as the reason to experiment widely in the present. A Rutgers University student said,"I think hooking up with different people and seeing what you like and don't like is a good idea. Because eventually you're going to have to… marry someone and I'd just like to know that I experienced everything."
>
> Although it is admirable to take risks and learn from one's mistakes, these women would probably find it difficult to explain how having your heart broken a few or even many times in your early years — or trying to separate sex from feeling, as in hooking up — is good preparation for a trusting and happy marriage later on.

And on p. 42, we learn what women think marriage is and isn't for:

> For instance, in the on-campus interviews one student complained, "[With] marriage…you have to debate everything… Why do you need a piece of paper to bond a person to you? …But I know if I don't get married I'll probably feel like… [a] lonely old woman… If anything, I'd get married [because of] that."
>
> This student went on to say that she would be satisfied to live with a man, but added that, if the man was committed to her, he would offer to marry her, and that this was the kind of commitment that she wanted. A student at the University of Washington said,"I don't want to get married right after I graduate from college. I just think that would stunt my growth in every way that there is. I would like to be in a very steady, committed relationship with a guy."

And on p. 44, we learn that they like co-habitation, which increases the risk of divorce by about 50% (but they don't know *that*):

> In the national survey, 58 percent of the respondents agreed that "It is a good idea to live with someone before deciding to marry him." This belief often coexists with a strong desire to marry, because it was embraced by 49 percent of the respondents who strongly agreed that marriage was a very important goal for them.
>
> […]Women we interviewed on campus reflected a similar range of attitudes about cohabitation. Some women thought that cohabitation was a good way to test whether one could spend a lifetime with a potential partner. In such cases, women often cited fears of divorce as the reason for trying cohabitation first. A senior at the University of Washington said, "I kind of don't really see marriages work ever, so I want to make sure that everything's all right before [we get married]. I don't see how people can get married without living together because I know like I have a best friend and I live with her and we want to kill each other, like, every few months."
>
> Other women felt that, in an age of divorce, cohabitation was a preferable alternative to marriage. A student at New York University said, "You see so [many] people getting divorces… I just don't see the necessity [of marriage]." She went on to say, "I think that I don't have to be married to [the] person that I'm with…. You know like… Goldie Hawn [and Kurt Russell]? They're not married."

But let's get back to the drinking and the hook-up sex…

Once a woman abandons femininity for feminism, then sex is all that she can use to get noticed by a man. Men are like hiring managers, and courting is like a job interview for the job of marriage and mothering. If a woman tries to get the job by having sex with the interviewer, he isn't going to hire her since sex has nothing to do with the job. There are children involved, you know – he has to think of them when he makes the hiring decision. But women have been taught to think bad things about men (they're rapists) and marriage (it's slavery) by feminists – so they don't even try to understand men, or to respect men, or prepare their character for being a wife and mother. Feminists just don't understand that hard work is needed to understand men and prepare for marriage.

In a previous post, I explained how feminists wanted to get women to drink like men, have sex like men, and to abolish courtship and marriage. Under the influence of feminism and Hollywood celebrities, women began to

choose men to have sex with without any consideration of morality, religion, marriage, etc. They thought that sex was an easy way to trick a man into committing to them without having to treat him like a real person, or to take the demands of marriage and parenting seriously. (They have been taught to value education and careers over husbands and children, you understand). This results in a cycle of binge-drinking, one-night-stands, cheating, co-habitating, breaking-up, stalking, aborting, etc., until the woman's ability to trust and love anyone but herself is completely destroyed. And yet these college women somehow believe this is "adventurous", that it makes them feel "sexy", and that the experience of being selfish and seeing the worst kind of men acting in the worst possible ways, point blank, somehow prepares them for marriage and motherhood.

Often, a young unmarried woman's biological father was NOT selected by her mother based on his ability to make commitments and moral judgments. Many feminists prefer men who do not judge women morally, nor impose his religion on her. But those very things that young unmarried women today seem to dislike most about men, because they fear rejection on moral and religious grounds, are exactly the things that make men good husbands and fathers. They don't want to be judged or led spiritually, so they choose immoral, non-religious men. Men who are not firm on morality and religion cannot be counted on to act morally and self-sacrificially. And when they fail, and the marriages break up, the children grow up fatherless and may develop negative views of men.

Every young unmarried woman who chooses a bad man, and then has a bad experience with him is pushing away marriage with both hands. The more she destroys her ability to trust, love and care for others, the less she is able to be happy and effective in a marriage.

# One-third of recent college graduates say they should have skipped college and gone to work

**Wintery Knight** · 30 May 2013 · Archived copy · Original

From Forbes magazine, a word of caution to young people, especially to young men who intend to marry and have children.

Excerpt:

> Here's an indication of how burdensome student loans have become: About one-third of millennials say they would have been better off working, instead of going to college and paying tuition.
>
> That's according to a new Wells Fargo study which surveyed 1,414 millennials between the ages of 22 and 32. More than half of them financed their education through student loans, and many say the if they had $10,000 the "first thing" they'd do is pay down their student loan or credit card debt.
>
> That's no surprise when you consider student borrowing topped the $100 billion threshold for the first time in 2010, and total outstanding loans exceeded $1 trillion for the first time in 2011. Student loan debt now exceeds credit card debt in the U.S. which stands at about $798 billion.
>
> Delinquencies are also on the rise. The number of borrowers who are at least 90 days late on student loan payments has jumped from 8.5% in 2011 to 11.7% today, according to a study by the New York Federal Reserve.
> The problem sometimes is that not all college educations are worth their cost since they can't guarantee a high-paying job to help pay off that student debt. A report from the National Association of Consumer Bankruptcy Attorneys says the rising student debt problem can have a bad impact on the economy. Even in the best of economic times when jobs are plentiful, young people with considerable debt burdens end up delaying life-cycle events such as buying a car, purchasing a home, getting married and having children.

There's nothing wrong with a good education in a trade school or community college.

The actual number for outstanding student loan debt is about $600 billion, and it's gone up a lot under Obama.

Excerpt:

> The outstanding balance for all of the direct student loans the federal government has issued topped $600 billion in April, according to newly released data from the U.S. Treasury.
>
> The total balance hit $600.457 billion by the end of April, says the Treasury, up from $592.142 billion at the end of March.
>
> The Federal Direct Student Loan Program already has built-in debt forgiveness plans for people who end up earning low incomes or for those who entered lines of work preferred by the government.
>
> In January 2009, when Obama was inaugurated, the balance was $119.803 billion and has since increased more than fivefold.
>
> The $480.654 billion increase since January 2009 in what is owed to the Treasury in direct student loans represents a climb of about 250 percent in just over four years.
>
> **Before Obama's first term, federally guaranteed student loans were made both by the government directly and by private lenders using their own capital through what was called the Federal Family Education Loan program. Language inserted into the the Obamacare law signed in March 2010, however, abolished the latter type of federally guaranteed student loan, giving the U.S. Treasury a monopoly over those loans.**

> **As the Congressional Research Service has described it, this Obamacare provision made the U.S. Treasury the exclusive "banker" for federally guaranteed student loans. Thus, U.S. taxpayers essentially own these loans.**

The troubling thing is that since the schools have spent all the time teaching children about global warming and the proper use of contraceptives, it's unlikely that they will be able to find real jobs in order to pay off their loans. They aren't learning how to manage money in school, and parents aren't taking the responsibility to teach kids about money at home. The sad thing is that they have been taught by their teachers to keep voting for more politicization of education and more government spending on fashionable causes. But at least they feel superior about it. For now.

# New study: private religious schools outperform public schools and public charter schools

**Wintery Knight** · 30 May 2013 · Archived copy · Original

Reported by The Public Discourse.

Excerpt:

> I recently conducted a meta-analysis of more than ninety studies on education, and the results suggest that perhaps it is time for America's leadership and the general public to take a second look at religious private schools. At the risk of immodesty, let me be frank. The study is hugely important because it is the first published meta-analysis to compare the three primary types of American schools: religious private schools, traditional public schools, and charter schools.
>
> A meta-analysis statistically combines all the relevant existing studies on a given subject in order to determine the aggregated results of the research. This meta-analysis yielded results that surprised many by indicating that students from public charter schools did no better than their peers in traditional public schools. In contrast, youth from religious private schools performed better academically than their counterparts in both public charter schools and traditional public schools, even when the results were adjusted to account for socioeconomic status, selectivity, race, and various other factors.
>
> […]Examining results from all ninety studies, I found that the average academic outcome for religious school students was .28 of a standard deviation unit higher than for traditional public school (TPS) students, while the average for charter school students was only .01 of a standard deviation unit higher. If one converts these numbers to percentiles, the average academic outcome was 11 percentage points higher than that of TPS pupils, while charter school attendees scored about the same as their TPS counterparts.
>
> Translated into more tangible numbers, students who attend private religious schools attain educational levels that average about twelve months ahead of those attending regular public schools. Even when the meta-analysis employed sophisticated controls, which included measures for socioeconomic status, selectivity, gender, and race, youth who attended faith-based schools achieved at levels seven months ahead of both TPS and public charter school students.
>
> One of the most intriguing results of the study is that the racial and socioeconomic achievement gaps are roughly 25 percent narrower in religious private schools than in public schools. This finding is particularly interesting when one considers that over the years the government has spent hundreds of billions of dollars to bridge the gaps, with only limited success. Higher expectations for students, and school leaders' insistence that pupils take demanding courses, could help to explain these circumstances in faith-based schools.
>
> The meta-analysis focused primarily on scholastic performance, but it also examined student behavior. The results indicated that youth from faith-based schools maintained even a larger edge in behavior than they did in school academics. That is, pupils from religious private schools exhibited fewer behavioral problems, even when socioeconomic status, selectivity, race, and gender were also controlled for. This translates into fewer gangs, lower levels of drug abuse, and greater racial harmony than one typically finds in public schools.
>
> Many people, even this researcher, expected public charter school students to perform somewhere in between the levels achieved by students attending faith-based schools and those attending traditional public schools, given that they were trying to mimic certain aspects of private religious schools.
>
> To the extent that neither traditional public schools nor charter schools are succeeding on a broad scale, it appears that the best hope for American education is religious private schools. Not only are they considerably more economically efficient, but their students also achieve better academic and behavioral results.

I think that it is noteworthy that Democrats opposes allowing parents – especially poor parents – to have a choice of

what school their children will attend. The Obama administration even de-funded a voucher program that served poor-minority students. Teacher unions are one of the strongest pro-Democrat special interests. If the Democrat Party has to choose between poor, minority students and their powerful allies in the teach unions, the choice is not a hard one. They choose the teacher unions.

# Summary and audio: William Lane Craig debates Alex Rosenberg: Does God Exist?

**Wintery Knight** · 30 May 2013 · Archived copy · Original

Below, please find my summary of the Craig-Rosenberg debate, which occurred on February 1st, 2013 at Purdue University.

Brian Auten has posted the MP3 audio of the debate at Apologetics 315. J.W. Wartick has a review of the debate here. Tom Gilson has a review of the debate here. Here's another review of the debate from Carson Witnauer.

**The debaters**

William Lane Craig:

> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology in La Mirada, California.
>
> Dr. Craig pursued his undergraduate studies at Wheaton College (B.A. 1971) and graduate studies at Trinity Evangelical Divinity School (M.A. 1974; M.A. 1975), the University of Birmingham (England) (Ph.D. 1977), and the University of Munich (Germany) (D.Theol. 1984). From 1980-86 he taught Philosophy of Religion at Trinity… In 1987 they moved to Brussels, Belgium, where Dr. Craig pursued research at the University of Louvain until assuming his position at Talbot in 1994.
>
> He has authored or edited over thirty books, including *The Kalam Cosmological Argument*; *Assessing the New Testament Evidence for the Historicity of the Resurrection of Jesus*; *Divine Foreknowledge and Human Freedom*; *Theism, Atheism and Big Bang Cosmology*; and *God, Time and Eternity*, as well as over a hundred articles in professional journals of philosophy and theology, including *The Journal of Philosophy*, *New Testament Studies*, *Journal for the Study of the New Testament*, *American Philosophical Quarterly*, *Philosophical Studies*, *Philosophy*, and *British Journal for Philosophy of Science*.
>
> Craig's CV is here.
>
> Craig's list of publications is here.

Alex Rosenberg:

> I joined the Duke faculty in 2000. Previously I was professor of philosophy at Dalhouse University in Canada, Syracuse University, University of California, Riverside and at the University of Georgia, in the US. I have also been a visiting professor and/or fellow of the Center for Philosophy of Science at the University of Minnesota, as well as the University of California, Santa Cruz, Oxford University (Balliol College) and the Research School of Social Science of the Australian National University. Here at Duke, I am co-director of the Center for Philosophy of Biology, along with Robert Brandon, Dan McShea and Fred Nijhout.
>
> In addition I am the director of the AB Duke Scholarship Program and its associated summer Duke in Oxford Program at New College. Along with Professor Martha Reeves of the Sociology Department I co-direct Duke's summer program on Globalization in Geneva. Check the links below for more information on these programs.
>
> My interests focus on problems in metaphysics, mainly surrounding causality, the philosophy of social sciences, especially economics, and most of all, the philosophy of biology, in particular the relationship between molecular, functional and evolutionary biology.

Below is the summary from tonight (February 1st, 2013).

If you like the summary below, please friend me on Facebook and/or follow me on Twitter.

**Summary of the debate**

**Dr. Craig's opening speech:**

The topic: What are the arguments that make belief in God reasonable or unreasonable?
First speech: arguments for reasonableness of belief in God
Second speech: respond to arguments against reasonableness of belief in God

Eight arguments:

1. Contingency argument: God – a transcendent, personal being – is the explanation of why a contingent universe exists.
2. Cosmological argument: God is the cause of the beginning of the universe, which is attested by physics and cosmology.
3. Applicability of mathematics to nature: God is the best explanation for the applicability of mathematics to nature.
4. Fine-tuning argument: God is the best explanation of the fine-tuning of the universe to permit life.
5. Intentionality of conscious states: God is the best explanation of the intentionality of our mental states.
6. The moral argument: God is the best explanation for the existence of objective moral values and duties.
7. The resurrection of Jesus: God is the best explanation for the core of historical facts accepted by most ancient historians across the ideological spectrum.
8. Religious experience: God is the best explanation of our immediate experience and knowledge of his existence.

**Dr. Rosenberg's opening speech**

First argument: The fallacy of ad hominem

- I don't know whether to laugh or to cry
- Dr. Craig has said all of that before in other debates
- You didn't need to come out on this cold night
- Craig's arguments have all been refuted
- Dr. Craig just doesn't listen
- Dr. Craig is not interested in getting at the truth
- Dr. Craig is just interested in scoring debate points
- The adversarial system is the wrong approach to decide truth
- Dr. Craig is very confident about his take of physics

Second argument: The fallacy of arguing from authority

- 95% of members of the NAS are atheists
- Therefore Dr. Craig cannot use science

Third argument: Effects don't require causes

- I am going to pretend that Craig said that "every effect requires a cause"
- Quantum mechanics shows that some effects occur without causes
- A particle of uranium (which is not nothing, it is something) decays without a cause
- This uncaused effect is the same as the universe coming into being out of nothing uncaused
- Therefore the principle of sufficient reason is false

Fourth argument: Silicon-based life and the multiverse

- If these constants had been different, maybe we would have other kinds of intelligent life, like silicon-based life
- Carbon-based life is not the only kind of life, maybe you can have other kinds of life, none of which have been observed
- There could be different kinds of life in other areas of the universe that we can't see
- There are things we can't see that disprove the current physics that we can see
- Quantum foam is evidence that a multiverse exists
- The multiverse would solve the problem of fine-tuning

Fifth argument: The Euthyphro dilemma

- The moral argument is refuted by Euthyphro dilemma
- Dr. Craig is such a moron that he has never heard of the Euthyphro dilemma ever before
- This is found in the first and simplest of Plato's dialogs
- Why is Dr. Craig so stupid that he has not read this simple dialog ever before?
- Evolution explains why humans evolve arbitrary customs and conventions that vary by time and place
- Alternative moral theories: utilitarianism, social contract, etc. that don't require God

Sixth argument: Mormonism undermines Dr. Craig's three minimal facts about Jesus

- Why is Dr. Craig so stupid and ignorant to persist in pushing such an ignorant, stupid argument?
- Mormonism is a silly religion that is not historically well founded
- Therefore, Jesus was not buried
- Islam is a silly religion that is not historically grounded
- Therefore, the tomb was not found empty
- Scientology is a silly religion that is not historically grounded
- Therefore, the eyewitnesses didn't have post-mortem appearances
- Eyewitness testimony is unreliable in some cases
- Therefore, eyewitness testimony was unreliable in this case
- Apparitions of Mary are bizarre
- Therefore, the majority of historians are wrong to think that the disciples saw post-mortem appearances

Seventh argument: Deductive problem of evil

- Evil and suffering are logically incompatible with an all good, all powerful God

Eight argument: God is not just to allow evil and suffering

- God cannot make the evils of this life right in the afterlife

**Dr. Craig's first rebuttal**

Dr. Rosenberg sketched the deductive argument from evil.

Dr. Rosenberg presupposes naturalism. Naturalism is a false theory of knowledge:

1. It's too restrictive: There are truths that cannot be proved by natural science.
2. It's self-refuting: no scientific proof for naturalism exists.

That's why epistemological naturalism is considered false by most philosophers of science.

But more importantly than that: Epistemological naturalism does not imply metaphysical naturalism. (E.g. – W. Quine)

Dr. Rosenberg has to present arguments in favor of (metaphysical) naturalism, not just assume that (metaphysical) naturalism is true.

Dr. Craig presented eight arguments against metaphysical naturalism taken from Rosenberg's own book:

1. The argument from the intentionality (aboutness) of mental states implies non-physical minds (dualism), which is incompatible with naturalism
2. The existence of meaning in language is incompatible with naturalism, Rosenberg even says that all the sentences in his own book are meaningless
3. The existence of truth is incompatible with naturalism
4. The argument from moral praise and blame is incompatible with naturalism
5. Libertarian freedom (free will) is incompatible with naturalism
6. Purpose is incompatible with naturalism
7. The enduring concept of self is incompatible with naturalism
8. The experience of first-person subjectivity ("I") is incompatible with naturalism

Metaphysical naturalism is false: it is irrational and it contradicts our experience of ourselves.

And epistemological naturalism is compatible with theism.

Rebutting Dr. Rosenberg's responses:

1. Contingency: no response

2. Cosmological: he mis-states the first premise to say every effect… when it is whatever begins to exist…, the origin of the universe was not from a vacuum, virtual particles come from a vacuum not nothing, there are interpretations of QM that are compatible with determinism. Rosenberg has to believe that the entire universe popped into being from non-being.

3. Mathematics: no response

4. Fine-tuning: the multiverse is refuted by empirical observations of the universe. Without fine-tuning, it's not that we still have silicon to make life out of. It's that we lose basic minimal things like chemical diversity, matter, stars, planets, etc. No life of any kind, not just no carbon-based life.

5. Intentionality: no response.

6. Moral argument: the answer to the dilemma is that you split the dilemma: God is the standard of good, and the commands flow from his unchanging moral nature. The commands are not arbitrary, and the standard is not external to God. Dr. Rosenberg is a nihilist and he cannot ground good and evil on his nihilistic view.

7. Resurrection: The Gospels are early eyewitness testimony. Mormonism and Islam have nothing to do with the minimal set of historical facts about Jesus agreed to by the majority of ancient historians across the ideological spectrum, general statements against eyewitnesses do not refute the specific eyewitness testimony in this case.

8. Religious experience: No response.

**Dr. Rosenberg's first rebuttal**

I wrote a book and you should buy it, because it got me invited to this debate. Let me repeat the title a few times for you. Please buy it.

Dr. Craig is right, there are multiple interpretations of QM, not just the one I presented, including deterministic ones.

All the disturbing implications of naturalism that Dr. Craig stated follow from metaphysical naturalism, and metaphysical naturalism is true. (Note: he equates science with metaphysical naturalism)

Science proves that metaphysical naturalism is true, but I won't say what specific scientific tests prove my

philosophical assumption of metaphysical naturalism.

I'll pretend that the Big Bang (science) doesn't disprove naturalism, like Dr. Craig said. Again. (covers ears) La la la, there is no Big Bang.

We didn't come here to debate epistemological naturalism and metaphysical naturalism.

Let me explain the problem of intentionality since I'm so smart and no one knows what it means.

There are many answers to this problem of intentionality.

My answer is that most scientists are naturalists, therefore naturalism is true, regardless of the argument from intentionality of mental states.

That's how I would respond to one of the eight problems with naturalism that Dr. Craig raised. I won't answer the other seven problems.

It is an argument from ignorance to argue that the applicability of mathematics to the universe requires a designer, because there are non-Euclidean geometries. Craig's argument, which he gets from people like respected physicists like Eugene Wigner, is bizarre. It is bizarre, therefore I refute Eugene Wigner and all the other scholars who make that argument. It is bizarre! Bizarre!

Deductive problem of evil: there is no response to this argument, certainly not Alvin Plantinga's free will defense. The deductive argument from evil has not been entirely abandoned at all! It's not like arch-atheist J.L. Mackie himself admits that the deductive problem of evil doesn't lead to a logical inconsistency between evil and God.

Dr. Craig has to tell me why God allows evil or God doesn't exist.

It is offensive that Dr. Craig cannot tell me why God allows every evil and suffering that occurs.

He literally said this: "I will become a Christian if Dr. Craig can tell me why God allowed EVERY EVIL THAT OCCURRED IN THE LAST 3.5 BILLION YEARS"

**Dr. Craig's second rebuttal**

We are not in a position to know why God allows specific instances of evil and suffering.

God cannot force people to freely do anything – freedom is not compatible with determinism. Freedom is a good, but freedom opens up the possibility of moral evil. You cannot have the good of free will without allowing people to choose to do morally evil things.

God can permit evil and suffering in order to bring more people into a relationship with him.

The atheist has to show that God could allow less evil and achieve more knowledge of God in order to say there is too much evil.

The purpose of life is not happiness, but knowledge of God.

Dr. Craig quotes agnostic Paul Draper (Purdue) and Peter Van Inwagen (Notre Dame) to state that the deductive problem of evil is dead because of free will and morally sufficient reasons for permitting evil.

1. Contingency: no response.

2. Cosmological: QM does not apply, because the universe came from nothing, not a vacuum, and QM only works in a vacuum.

3. Mathematics: He mentions alternatives like non-Euclidean geometry, but we have to explain the structure of THIS universe.

4. Fine-tuning: ???

5. Intentional states: intentional mental states proves that minds exist, which fits with theism better than it fits with

atheism.

6. Moral argument: You need God to ground morality, and Dr. Rosenberg believes in morality. He needs God to ground objective moral values and duties.

7. Historical argument: He has to respond to the minimal facts supported by the consensus of ancient historians across the ideological spectrum.

8. The problems of naturalism: He says that you can't have science without naturalism, but you can have science with EPISTEMOLOGICAL NATURALISM, and theists accept science and methodological naturalism. We don't accept METAPHYSCIAL NATURALISM because of the eight problems Craig presented, like intentionality, first-person, persistence of self, etc. You can believe in both science and theism, by embracing epistemological naturalism, while rejecting methaphysical naturalism.

**Dr. Rosenberg's second rebuttal**

Dr. Craig hasn't answered many of my points, I won't say which ones though.

Debates don't work as a way of deciding what's true, so we should overturn the entire criminal justice system.

The principle of sufficient reason is false because it is disconfirmed by quantum mechanics. And quantum mechanics (vacuum and virtual particles that exist for a short time) is similar to the origin of the universe (nothing and entire universe and 14 billion years).

We know that alpha particles come into being without cause all the time from a quantum vacuum for a tiny sub-second duration before going out of existence, so we can say that the entire physical universe came into being for 14 billion years from absolute nothing which is not a quantum vacuum.

Peter Van Inwagen is the best metaphysician working today, and he says that my deductive argument from evil is not decisive, it's not a successful argument. (Why is he undermining his own problem of evil argument????!)

Dr. Craig invoked Plantinga's free will defense to the deductive POE. Freedom allows us to do evil. God could have given us free will without evil and suffering. I won't show how, but I'll just assert it, because debates are such a bad forum for supplying evidence for my speculative assertions.

If you answer the question 3 + 5 as being 8, then you don't have free will – you are biologically determined if you answer 8, because everyone answers 8, and that means everyone is biologically determined with no free will.

Why can't God give us free will and then prevent us from making a free choice?

No scholars date the gospels earlier than 60-70 AD, especially not atheists like James Crossley who dates Mark to 40 AD. Therefore Jesus' burial isn't historical, like the majority of scholars across the broad spectrum of scholarship agree it is.

The original New Testament documents were written in Aramaic.

All New Testament scholars are orthodox Christians, like atheist Robert Funk for example.

**Dr. Craig's concluding speech**

In order to sustain the deductive argument from evil, Dr. Rosenberg must show that God could create a world of free creatures with less evil.

Principle of Sufficient Reason: not using the general principle of sufficient reason, but a more modest version of this states that contingent things should have an explanation for their existence. And we know that the universe is a contingent.

The New Testament was not written in Aramaic, they were written in Greek. Dr. Rosenberg is wrong there too.

(Dr. Craig spends the rest of his concluding speech giving his testimony and urging people to investigate the New

testament).

**Dr. Rosenberg's concluding speech**

Some long-dead French guy named Laplace said that he has no need of that (God) hypothesis. He did not know about any of Dr. Craig's arguments made in this debate tonight when he said that, though.

There is no need to explain how the universe began or how the universe is finely-tuned if you just assume metaphysical naturalism on faith.

The Easter Bunny, therefore atheism.

Most scientists are atheists, therefore atheism.

You can do a lot of science without God, just don't look at the origin of the universe, the fine-tuning of the universe, or the other parts of science that Craig mentioned, as well as the origin of life, the Cambrian explosion, the habitability argument, and so on.

You can be a Christian, but good Christians should not use arguments and evidence.

Good Christians should be irrational and ignorant. Bad Christians look for arguments and evidence from science and history.

Good Christians should embrace the absurd. Bad Christians want to search for truth and use logic and evidence.

# Another failed prediction for global warming: fewer extreme weather events

**Wintery Knight** · 31 May 2013 · Archived copy · Original

From Forbes magazine, the latest data falsifying global warming.

Tornados:

> New data from the National Oceanic and Atmospheric Administration show the past 12 months set a record for the fewest tornadoes in recorded history. Not only did Mother Nature just set a record for lack of tornado activity, she absolutely shattered the previous record for fewest tornadoes in a 12-month period. During the past 12 months, merely 197 tornadoes struck the United States. Prior to this past year, the fewest tornadoes striking the United States during a 12-month period occurred from June 1991 through July 1992, when 247 tornadoes occurred.
>
> The new tornado record is particularly noteworthy because of recent advances in tornado detection technology. The National Oceanic and Atmospheric Administration (NOAA) is able to detect more tornadoes in recent years than in prior decades due to technological advances. Even with such enhanced tornado detection capability, the past 12 months shattered all prior records for recorded tornadoes.

Hurricanes:

> Hurricane inactivity is also setting all-time records. The United States is undergoing its longest stretch in recorded history without a major hurricane strike, with each passing day extending the unprecedented lack of severe hurricanes, according to National Oceanic and Atmospheric Administration data.
>
> It has been more than 2,750 days since a major hurricane struck the United States. This easily smashes the prior record of less than 2,300 days between major hurricane strikes.

Droughts and wildfires:

> Pretty much all other extreme weather events are becoming less frequent and less severe, also. Soil moisture is in long-term improvement at nearly all sites in the Global Soil Moisture Data Bank. Droughts are less frequent and less severe than in prior, colder centuries. The number of wildfires is in long-term decline despite a recent change in wildfire policy that no longer actively suppresses wildfires. Just about any way you measure it, extreme weather events are becoming quite rare.

So will the Democrats stop pushing for more socialism using pseudo-science? Well, the new Energy Secretary has declared that the debate over global warming is over. There' nothing to debate! Just like there's nothing to debate about Benghazi scandal, the IRS scandal, the phone-tapping scandal.

# Convicted criminal commits burglary, murder and rape hours after early release from jail

**Wintery Knight** · 31 May 2013 · Archived copy · Original

Here's a sad, graphic news story from the NY Daily News that should make us all pause and reconsider whether the left-wing compassion crowd is right about giving lighter sentences to criminals. (H/T Dennis Prager)

Excerpt:

> A 24-year-old man charged with killing an elderly couple and raping their 2-year-old great-grandchild had been released early from prison just hours before the attacks, state officials said on Tuesday.
>
> Jerry Active was arrested on Saturday by police and has been charged in the murders of Sorn Sreap, 71, and her husband, Touch Chea, 73, and the rape of the toddler they were babysitting that night. Active is also charged with raping Sreap.
>
> The elderly victims' bodies had signs of blunt-force trauma, but autopsies will determine the cause of death, the Anchorage Police Department said in a statement.
>
> […]Active, who had pleaded guilty to breaking into a Dillingham, Alaska, home in 2009 and sexually assaulting a child and other residents, was released from prison on probation on Saturday morning after serving part of a seven-year sentence, said Kaci Schroeder, a spokeswoman for the Alaska Department of Corrections.

Do me, cases like this make it very clear that we need to be tougher on criminals. This would never have happened if this guy had been given the death penalty instead of early release for "good behavior". What would the compassion crowd say to evidence like this? My guess is that they would say that the victims of the crime need to be more tolerant of criminals and not be so judgmental and vindictive. After all, the victims probably caused the attack and the attacker is the real victim. That's how people on the left think.

# The Gospel Coalition interviews Stephen C. Meyer on the Cambrian explosion

**Wintery Knight** · 31 May 2013 · Archived copy · Original

A great introduction to the Cambrian explosion on The Gospel Coalition, of all places!

Here's one question and answer that emphasizes that the progress of science is making the problem posed by the Cambrian fossils *worse* for Darwinists.

> **Have the last century of fossil discoveries resolved or aggravated Darwin's doubt?**
>
> Fossil discoveries since Darwin's time have only made the Cambrian explosion problem worse for his theory.
>
> Darwin believed that the fossil record was woefully incomplete, and he predicted that the problem of abrupt appearance of animals in the Cambrian would be alleviated by future discoveries.
>
> But the opposite happened. Scientists have combed the Precambrian strata for the alleged precursors to the Cambrian animals, and they haven't found the direct evolutionary ancestors that Darwinian theory predicts. Instead, they have made new discoveries which confirmed that the Cambrian explosion was real event—and a worldwide one—and that the animal phyla really did appear abruptly.
>
> The first major Cambrian-era fossil discovery after Darwin's time took place over a hundred years ago now, in 1909, when Charles Doolittle Walcott (then the head of the Smithsonian Institution) discovered the Burgess Shale Cambrian deposit in the Canadian Rockies. This deposit showed many diverse soft and hard-bodied organisms which were preserved in exquisite detail. They all appeared in the Cambrian, with no clear evolutionary ancestors.
>
> The question remained, however, whether the Burgess Shale Cambrian animals were a lucky isolated event, or evidence of a worldwide pattern. Over the next decades, additional discoveries of Cambrian animals were made in other parts of the world, including Russia, Greenland, and Australia.
>
> But the most spectacular find of all took place in 1984, with the discovery of Cambrian fossils in Chengjiang, China. This deposit confirmed that the Cambrian explosion was a worldwide event, with many of the same creatures found in Canada being present in beautiful detail.
>
> So as more and more fossils have been discovered, we've found the same pattern over and over around the world: diverse types of animals appear abruptly in the Cambrian, without clear evolutionary precursors. This has accentuated the "dilemma" that Darwin faced.

So the progress of science is making the problem worse for Darwinists. The more discoveries we make, the tougher the problem becomes for them, and the more the effect looks like the result of intelligent action. Kudos to the Gospel Coalition for posting on science, too.

I've already ordered my copy of Darwin's Doubt at the reduced price. Have you? And don't forget that Dr. Meyer's first book, the ground-breaking Signature in the Cell, can also be obtained. That was the best book on intelligent design out there, but people who have read Darwin's Doubt are telling me that it will be far better!

# Harvard geneticist has positive words for intelligent design in biology

**Wintery Knight** · 1 June 2013 · Archived copy · Original

Evolution News writes about one of the people who has endorsed "Darwin's Doubt", the new book by Stephen C. Meyer about the Cambrian era fossils and intelligent design.

Excerpt:

> Harvard geneticist George Church has said some fascinating things on the theme of intelligent design. He's particularly interested, if I'm summarizing correctly, in the idea of biology as engineering. So is Discovery Institute's Stephen Meyer. Which is why, having read some of his published remarks, we sent Dr. Church an advance copy of *Darwin's Doubt* asking that he look in particular at the middle section of the book, "How to Build an Animal," which deals precisely with the massive engineering problems facing Darwinian evolutionary theory.
>
> We were grateful to get back this gracious comment, which appears on the dust jacket.
>
> **Stephen Meyer's new book *Darwin's Doubt* represents an opportunity for bridge-building, rather than dismissive polarization — bridges across cultural divides in great need of professional, respectful dialog — and bridges to span evolutionary gaps.**
>
> While very gratifying to have his warm wishes, it's not shocking that Dr. Church would share them with us. Back in 2008 he participated in a recorded seminar, "Life: What a Concept!," with Freeman Dyson, Robert Shapiro, J. Craig Venter, and others. He said:
>
> As a scientific discipline, many people have casually dismissed Intelligent Design without carefully defining what they mean by intelligence or what they mean by design. Science and math have long histories of proving things, and not just accepting intuition — Fermat's last theorem was not proven until it was proven. And I think we're in a similar space with intelligent design.
>
> Again:
>
> The ribosome, both looking at the past and at the future, is a very significant structure — it's the most complicated thing that is present in all organisms.Craig does comparative genomics, and you find that almost the only thing that's in common across all organisms is the ribosome. And it's recognizable; it's highly conserved. So the question is, how did that thing come to be? And if I were to be an intelligent design defender, that's what I would focus on; how did the ribosome come to be?
>
> Is he an advocate of intelligent design like Stephen Meyer? No. Is he a very interesting, independent thinker, who has made some suggestive comments relevant to ID, about which one would like to have the opportunity to question him much further? Yes.

Dr. Church is not an advocate of intelligent design. But what's striking is that unlike most people who don't support ID, he thinks that they should be allowed to ask questions and should be allowed to make their case. And what's more, if they make a good case, like Dr. Meyer does, then he thinks that people on the other side should consider that case respectfully. I wish more biologists would consider other views like that. Dr. Church is in the minority.

# Calgary boy disciplined by school for protecting classmate from knife attack

**Wintery Knight** · 1 June 2013 · Archived copy · Original

The UK Daily Mail reports.

Excerpt:

> A schoolboy who bravely tackled a knife-wielding pupil who was threatening a classmate was punished because such heroic actions are strictly banned.
>
> Briar MacLean, 13, stepped in after he spotted an argument was quickly beginning to escalate between two boys at Sir John A. Macdonald school in Alberta, Canada.
>
> Suddenly one of the boys pulled out a knife and began to threaten the other turning an scuffle into a potentially deadly situation.
>
> The heroic teenager charged and tackled the knife-brandishing youngster into a wall sending both attacker and knife falling to the floor.
>
> But for his bravery the pupil received not a commendation but a stern telling off from staff for ignoring school rules.
>
> According to the Calgary Board of Education, Briar should have left the scene to find a teacher – abandoning the unarmed student.
>
> Instead instincts kicked in and he chose to act – meaning there were no cuts, no stab wounds, and no need to call an ambulance.
>
> Briar said: 'He pulled out his flip knife so I came in and pushed him into the wall.
>
> 'It was just to help the other kid so he wouldn't get hurt.'
>
> Briar's reward for his bravery was a day in the school office, removed from the other students, and a stern lecture about not playing the hero.

Here in the United States, we had a similar event.

Excerpt:

> A kindergartner who brought a cowboy-style cap gun onto his Calvert County school bus was suspended for 10 days after showing a friend the orange-tipped toy, which he had tucked inside his backpack on his way to school, according to his family and a lawyer.
>
> The child was questioned for more than two hours before his mother was called, she said, adding that he uncharacteristically wet his pants during the episode. The boy is 5 — "all bugs and frogs and cowboys," his mother said.
>
> […]If the punishment stands, it would become part of the boy's permanent school record and keep him out of classes the rest of the school year, the family said. He would miss his end-of-year kindergarten program at Dowell Elementary School in Lusby.
>
> […]The case comes at a time of heightened sensitivity about guns in schools across the country. Locally, children in first and second grade have been disciplined for pointing their fingers like guns and for chewing a Pop-Tart-like pastry into the shape of a gun. In Pennsylvania, a 5-year-old was suspended for talking about shooting a Hello Kitty bubble gun that blows soap bubbles.

I definitely don't recommend sending children to public schools – especially.

# Natural marriage defenders defeat redefinition of marriage in Illinois

**Wintery Knight** · 2 June 2013 · Archived copy · Original

The National Organization for Marriage has the story.

Excerpt:

> The National Organization for Marriage (NOM) today celebrated the failure of legislation to come to a vote late this evening in Illinois seeking to redefine marriage, thus preserving marriage in the state as the union of one man and one woman. The bill's House sponsor, Rep. Greg Harris, announced this evening that he did not have the votes to pass the measure and would not bring the legislation to a vote. Assuming this is the case, the bill is thus dead until the fall when the Legislature reconvenes for a veto session.
>
> "This effort to redefine marriage in Illinois was one of the most fiercely contested legislative battles in the country this year," said Brian Brown, NOM's president. "This is a great victory for our allies and supporters, as well as Illinois families who have worked tirelessly with us to preserve marriage in Illinois. We are gratified that our collective hard work has paid off in this stunning victory."
>
> Illinois is a heavily Democratic state and has been widely considered by the gay marriage lobby as virtually certain to redefine marriage. Backers of the legislation have frequently claimed, falsely, that they had the votes in hand to pass the legislation (SB 10). President Obama had urged his former colleagues to vote to redefine marriage, and it was a top priority of both Chicago Mayor Rahm Emanuel and Governor Pat Quinn. It even was supported by a former Republican Chairman who was forced to resign from his post for advocating a position contrary to Republican principles.
>
> "So much for the inevitability of gay marriage," said Brian Brown. "With a coalition that included strong support from the African American community as well as so many others throughout the state, we did what nobody in the intelligentsia thought was possible. This is a huge victory at a pivotal time, and totally undercuts the lie that somehow same-sex marriage is inevitable."
>
> NOM spent well over $125,000 on grassroots activities to defeat the bill, but praised others in the coalition for securing the victory.

Good news for those of us who support the idea that natural marriage is the best arrangement for protecting the needs of children and the interests of society as a whole. Illinois is one of the bluest states in the country, but it's nice to see that NOM was able to pull together enough people to get this legislation defeated.

# Dan Barker debates Casey Luskin on academic freedom on the Michael Medved show

**Wintery Knight** · 2 June 2013 · Archived copy · Original

The Michael Medved show is a national radio show broadcast out of Seattle, Washington. According to Talkers magazine, he has the fifth largest radio audience. He has a regular weekly segment on science and culture featuring scholars from the Discovery Institute.

Here is the sixth segment from this past week, courtesy of the Intelligent Design: The Future podcast.

The MP3 file is available for download. (38 minutes)

The description is:

> On this episode of **ID the Future**, the CSC's Casey Luskin and atheist Dan Barker of the Freedom From Religion Foundation debate academic freedom and free speech on the Medved Show. This debate was inspired by the ongoing case of Professor Eric Hedin, a physicist at Ball State University who is being threatened by the Freedom From Religion Foundation for favorably portraying intelligent design in the classroom.
>
> ***Please lend your voice to defend Professor Eric Hedin and academic freedom. Sign the petition at www.academicfreedompetition.com.***
>
> *Each week, leading fellows from Discovery Institute will join Michael Medved to talk about the intersection of science and culture. Listen in live online or on your local Medved station, or stay tuned at ID the Future for the weekly podcast.*

Topics: (note that I am paraphrasing Dan Barker for the sake of humor, and he will probably sue me, since that is his entire contribution to the search for truth in this debate)

- Michael Medved: untenured Ball State University professor Eric Hedin is under fire for teaching both sides of intelligent design in a college course
- Dan Barker: this complaint against professor Hedin came to our attention from Jerry Coyne not from students of Professor Hedin
- Dan Barker: professors are not allowed to question the presuppositions atheism, materialism, naturalism in the physics classroom
- Dan Barker: this is a science course and you cannot question the religion of naturalism in class or else it's teaching religion
- Dan Barker: we need to use the power of the courts to stifle any dissent from of my religion (naturalism)
- Dan Barker: the classroom of a university is not the proper place for students to inquire about both sides of scientific disputes
- Dan Barker: even if students are paying their money and choosing this course of their own free will, they can't be allowed to hear both sides
- Casey Luskin: this course is not a science course, it is open to non-science students
- Casey Luskin: the course evaluations from students of all majors is overwhelmingly positive
- Casey Luskin: the course features people on both sides
- Casey Luskin: the course features brilliant scholars like Lennox and Penrose, both from Oxford University
- Casey Luskin: the course features opponents of intelligent design like Francis Collins and Karl Gilberson
- Casey Luskin: the course features non-Christians like Lee Spetner, Paul Davies, Roger Penrose and Gerald Schroeder

- Dan Barker: (taking over the host) you cannot study scientists like Francis Collins who mapped the human genome, that is “creationism”
- Michael Medved: academic freedom allows professors to put a slant on what they are teaching
- Dan Barker: if the professor’s slant is against my religion of naturalism, then I have to put them in jail and inquisition them
- Dan Barker: you cannot teach science like the Big Bang and fine-tuning  as if it is science because it contradicts naturalism
- Casey Luskin: Even radical atheist PZ Myers says that professors have the right to academic freedom
- Dan Barker: I’ll burn that creationist at the stake, too! And smash his filthy microscopes and telescopes!
- Michael Medved: Casey, would you use state power to fire a professor who disagreed with you because you were offended?
- Casey Luskin: no, I had to take tons of courses from professors who had a slant against my views and I learned a lot from different views
- Dan Barker: you will address me as the Holy Father, please! Every professor who disagrees with my religion must burn!
- Casey Luskin: Barker has no idea what is going on in the class, he never attended it
- Casey Luskin: The atheists students who took his class gave him high ratings and said he graded fairly
- Dan Barker: I don’t have to look through the telescope to know the Earth is flat – Hedin is a traitor! Off with his head!
- Dan Barker: Creationist PZ Myers is wrong, and I’ll burn him at the stake for creationist heresy against my Holy Church!
- Dan Barker: Oxford professors like John Lennox are creationists because his Big Bang religion is grounded on experimental data like the cosmic background radiation, the hydrogen/helium abundances and the redshifting of light from distant galaxies
- Dan Barker: I have a degree in Religion and I write hymns, which makes me smarter than John Lennox since he is a “creationist”
- Dan Barker: I haven’t published any scientific research myself, but I have written some atheist praise hymns, so I am qualified to burn the heretics!
- Michael Medved: The course is taught by someone with a PhD in Physics, and the syllabus says that it investigates science and religion
- Michael Medved: Why is it wrong to investigate the science that questions philosophical assumptions like naturalism and materialism?
- Casey Luskin: The syllabus features amazing readings from all the latest science relevant to that question from both sides
- Michael Medved: What will Ball State U do to the professor?
- Casey Luskin: So far no action from Ball State U, but people need to sign the petition to protect the professor
- Michael Medved: Isn’t academic freedom being applied inconsistently here?
- Casey Luskin: Yes and science is supposed to move forward by disagreement and debate
- Casey Luskin: How confident can intelligent design censors really be if their contribution to the debate is coercion and intimidation?
- Michael Luskin: Is Dan Barker right to say that Oxford professor John Lennox is a “creationist”?
- Casey Luskin: Creationism starts with the Bible, but intelligent design starts with scientific data

And there is a period of questions from the callers. This episode features a debate, so it is not to be missed.

You can see more about Dan Barker's educational background:

> Dan became a teenage evangelist at age 15. At 16 he was choir librarian for faith-healer Kathryn Kuhlman's Los Angeles appearances. He received a degree in Religion from Azusa Pacific University and was ordained to the ministry by the Standard Community Church, California, in 1975.
>
> […]Dan preached for 19 years. He maintained an ongoing touring musical ministry, including eight years of full-time, cross-country evangelism. An accomplished pianist, record producer, arranger and songwriter, he worked with Christian music companies such as Manna Music and Word Music. For a few years, Dan wrote and produced the annual "Mini Musicale" for Gospel Light Publications' Vacation Bible School curriculum.

I'm not sure if Dan Barker has the right background for disputing whether intelligent design belongs in a classroom or not. Remember, the bulk of his life was spent writing and singing feel-g0od, happy-clappy songs. In his debates with Christians, it's quite clear that he is totally unequipped to assess scientific evidence from the Big Bang, the fine-tuning, the origin of life, the Cambrian explosion, or habitability. It's just not his thing, and I don't think that musicians have what it takes to understand those arguments enough to feel comfortable using the courts to suppress people with actual PhDs in science.

You can read more about my opinion about how Dan Barker arrived at his atheism through a mistaken view of the Christian life.

I subscribe to the ID the Future podcast, and I really recommend that you do as well!

- Episode two: Stephen C. Meyer on Richard Dawkins and the Cambrian explosion
- Episode three: John G. West discusses Darwinism and the value of human life
- Episode four: Stephen C. Meyer and John Lennox discuss human exceptionalism
- Episode five: Jay Richards and Stephen C. Meyer discuss scientific consensus

# Cincinnati IRS employee: Washington told us to target the Tea Party

**Wintery Knight** · 2 June 2013 · Archived copy · Original

Breitbart has the transcript of the testimony.

Excerpt:

> House Oversight and Government Reform Committee Chairman Darrell Issa (R-CA) revealed new testimony from IRS employees on CNN's *State of The Union* on Sunday. According to transcribed excerpts released by the Committee, a Cincinnati IRS employee made it clear they were told by Washington, D.C. personnel to give extra scrutiny to Tea Party groups:
>
> *Q: In early 2010, was there a time when you became aware of applications that referenced Tea Party or other conservative groups?*
>
> *A: In March of 2010, I was made aware.*
>
> ******
>
> *Q: Okay. Now, was there a point around this time period when [your supervisor] asked you to do a search for similar applications?*
>
> *A: Yes.*
>
> *Q: To the best of your recollection, when was this request made?*
>
> *A: Sometime in early March of 2010.*

And more:

> *Q: Did anyone else ever make a request that you send any cases to Washington?*
>
> *A: [Different IRS employee] wanted to have two cases that she couldn't — Washington, D.C. wanted them, but she couldn't find the paper. So she requested me, through an email, to find these cases for her and to send them to Washington, D.C.*
>
> *Q: When was this, what time frame?*
>
> *A: I don't recall the time frame, maybe May of 2010.*
>
> ******
>
> *Q: But just to be clear, she told you the specific names of these applicants.*
>
> *A: Yes.*
>
> *Q: And she told you that Washington, D.C. had requested these two specific applications be sent to D.C.*
>
> *A: Yes, or parts of them.*
>
> ******
>
> *Q: Okay. So she asked you to send particular parts of these applications.*
>
> *A: Mm-hmm.*
>
> *Q: And that was unusual. Did you say that?*
>
> *A: Yes.*
>
> *Q: And she indicated that Washington had requested these specific parts of these specific applications; is that right?*

> *A: Correct.*
>
> ******
>
> *Q: So what do you think about this, that allegation has been made, I think as you have seen in lots of press reports, that there were two rogue agents in Cincinnati that are sort of responsible for all of the issues that we have been talking about today. What do you think about those allegations?*
>
> *[…]*
>
> *A: It's impossible. As an agent we are controlled by many, many people. We have to submit many, many reports. So the chance of two agents being rogue and doing things like that could never happen.*
>
> ******
>
> *Q: And you've heard, I'm sure, news reports about individuals here in Washington saying this is a problem that was originated in and contained in the Cincinnati office, and that it was the Cincinnati office that was at fault. What is your reaction to those types of stories?*
>
> *[…]*
>
> *A: Well, it's hard to answer the question because in my mind I still hear people saying we were low-level employees, so we were lower than dirt, according to people in D.C. So, take it for what it is. They were basically throwing us underneath the bus.*
>
> ******
>
> *Q: So is it your perspective that ultimately the responsible parties for the decisions that were reported by the IG are not in the Cincinnati office?*
>
> *A: I don't know how to answer that question. I mean, from an agent standpoint, we didn't do anything wrong. We followed directions based on other people telling us what to do.*
>
> *Q: And you ultimately followed directions from Washington; is that correct?*
>
> *A: If direction had come down from Washington, yes.*
>
> *Q: But with respect to the particular scrutiny that was given to Tea Party applications, those directions emanated from Washington; is that right?*
>
> *A: I believe so.*

And more from a more senior IRS employee:

> *Q: But you specifically recall that the BOLO terms included "Tea Party?"*
>
> *A: Yes, I do.*
>
> *Q: And it was your understanding — was it your understanding that the purpose of the BOLO was to identify Tea Party groups?*
>
> *A: That is correct.*
>
> *Q: Was it your understanding that the purpose of the BOLO was to identify conservative groups?*
>
> *A: Yes, it was.*
>
> *Q: Was it your understanding that the purpose of the BOLO was to identify Republican groups?*
>
> *A: Yes, it was.*
>
> ******
>
> *Q: Earlier I believe you informed us that the primary reason for applying for another job in July [2010] was because of the micromanagement from [Washington, DC, IRS Attorney], is that correct?*
>
> *A: Right. It was the whole Tea Party. It was the whole picture. I mean, it was the micromanagement. The fact*

> *that the subject area was extremely sensitive and it was something that I didn't want to be associated with.*
>
> *Q: Why didn't you want to be associated with it?*
>
> *A: For what happened now. I mean, rogue agent? Even though I was taking all my direction from EO Technical [Washington, D.C], I didn't want my name in the paper for being this rogue agent for a project I had no control over.*
>
> *Q: Did you think there was something inappropriate about what was happening in 2010?*
>
> *A: Yes. The inappropriateness was not processing these applications fairly and timely.*
>
> ******
>
> *Q: You have stated you had concerns with the fairness and the timeliness of the application process. Did you have concerns with just the fact that these cases were grouped together and you were the only one handling them?*
>
> *A: I was the only one handling the Tea Party's, that is correct.*
>
> *Q: Did that specifically cause you concern?*
>
> *A: Yes, it did. And I was the only person handling them.*
>
> *Q: Were you concerned that you didn't have the capacity to process all of the applications in a timely manner?*
>
> *A: That is correct. And it is just — I mean, like you brought up, the micromanagement, the fact that the topic was just weirdly handled was a huge concern to me.*
>
> ******

The chain goes from the local IRS offices to the Washington office to the White House, where the IRS director was practically living in the oval office with the community organizer.

# Implications of Georgia Tech's new $7,000-per-year Masters degree in computer science

**Wintery Knight** · 3 June 2013 · Archived copy · Original

The Wall Street Journal reports on something that is of interest to all Christians.

Excerpt:

> Anyone who cares about America's shortage of computer-science experts should cheer the recent news out of Georgia Tech. The Atlanta university is making major waves in business and higher education with its May 14 announcement that the college will offer the first online master's degree in computer science—and that the degree can be had for a quarter of the cost of a typical on-campus degree. Many other universities are experimenting with open online courses, or MOOCs, but Georgia Tech's move raises the bar significantly by offering full credit in a graduate program.
>
> It comes just in time. A shortfall of computer-science graduates is a constant refrain in Silicon Valley, and by 2020 some one million high-tech job openings will remain unfilled, according to the Commerce Department.
>
> That's why Georgia Tech's online degree, powered by Udacity, is such a game-changer. For the same $7,000 a year that New York City spends per student on school buses, you can now get a master's from one of the most well-respected programs in the country. Moore's Law says these fees should drop to $1,000 by 2020—a boon for students and for the economy.

Wouldn't it be great if we could fire the majority of college professors and just keep the ones who are actually good at teaching students? Online education puts the focus back on teaching students – not on doing research, which may not be very useful for finding a job in any case. I had to do a lot of research for my Masters degree in computer science, and I applied little of what I researched to real life. The course work was far more useful to me in my career, and that's why I went to university.

More:

> MOOCs will inevitably come to K-12 education too. Everyone knows great public school teachers. But we also all know the tenured type who has been mailing it in for years. Parents spend sleepless nights trying to rearrange schedules to get out of Mr. Bleh's fourth-period math class. Online education is about taking the "best in class" teachers and scaling them to thousands or millions of students rather than 25-30 at a time.
>
> The union-dominated teaching corps can be expected to be just as hostile as college professors to moving K-12 to MOOCs. But a certain financial incentive will exist nonetheless. I noted this in a talk recently at an education conference where the audience was filled with people who create education software and services.
>
> I began by pointing out that in 2011 only 7.9% of 11th graders in Chicago public schools tested "college ready." That's failure, and it's worse when you realize how much money is wasted on these abysmal results. Chicago's 23,290 teachers—who make an average salary of $74,839, triple U.S. per capita income and 50% more than median U.S. household income—cost Chicago taxpayers $1.75 billion out of the city's $5.11 billion budget.
>
> Why not forget the teachers and issue all 404,151 students an iPad or Android tablet? At a cost of $161 million, that's less than 10% of the expense of paying teachers' salaries. Add online software, tutors and a $2,000 graduation bonus, and you still don't come close to the cost of teachers. You can't possibly do worse than a 7.9% college readiness level.
>
> When I made this proposal, only slightly facetiously, in a roomful of self-described education entrepreneurs, it was if I'd said that Dewey had plagiarized his decimal system. I was upbraided for not understanding the plight of teachers. The plight of students, as is too often the case in discussions of education, didn't seem to rate the

> same concern.

Online education is one of the forces that gives me hope for the future. The faster we take money away from leftists in the academy, the better things will be. Right now, a whole lot of people are buying useless degrees for far too much money. It's even worse when you consider university administrators and other educational bureaucrats, who have inflated salaries and contribute nothing to a student's real capabilities. The humanities are dominated by secular leftists, and should be totally overthrown by online competitors who will be more responsive to customers than left-wing tenured radicals.

# Study shows that female-breadwinner marriages are less happy and less stable

**Wintery Knight** · 3 June 2013 · Archived copy · Original

Stuart Schneiderman writes about a new study about marriages where the woman earns more money than the man.

Excerpt:

> The study performed by his colleagues shows that when women earn more than their husbands it is bad for their marriages.
>
> Theoretically, Thaler says, married couples should be happy to see more money flowing into the family coffers. They should not care who is bringing home the bacon or the filet mignon. In the real world, couples do care:
>
> *Instead, there is a sharp drop in the number of male-female couples at exactly the point where the woman starts to earn more than half of household income.*
> You can blame this on social norms and outmoded gender identity expectations. What if social norms reflect a behavioral constant that cannot be eradicated with just a little nudge.
>
> […][T]he data suggest that when women earn more than men the rate of marriage declines:
>
> *This may be one of many reasons that the share of young adults in marriages decreased 30 to 50 percent across various racial and ethnic groups from 1970 to 2008. Clearly, a choice to marry later in life explains part of this decline, but Ms. Bertrand and her co-authors estimate that the trend in the percentage of women making more than men explains almost one-fourth of the marriage rate's decline in the 40 years ended in 2010.*
> Of course, couples find ways to adapt to a woman's greater earning potential. Thaler explains:
>
> *What happens when a man marries a woman who has the education and skills to earn more than him? The couple can avoid violating the "man earns more" social norm if the woman works part time or leaves the labor force altogether. The authors found evidence of both choices. But what if the woman stays in the labor force and does earn more than her spouse? How does this affect the marriage? The findings here are striking. In such couples, surveys show, both wife and husband generally report being less happy about the marriage.*
> Female breadwinner marriages are also more likely to lead to divorce:
>
> *Given these findings, it isn't surprising that when a wife earns more than her husband, the risk of divorce rises, too. To study this, the authors used a survey conducted in two waves, 1987-88 and 1992-93. (There were no more recent data available for this particular test.) Then they investigated the likelihood of a divorce in the five-year interval. For this sample, some 12 percent of all couples were divorced during this period — a sobering fact about the stability of marriages in general. But the divorce rate rose by half, to about 18 percent, for couples in which the wife earned more than the husband.*
> Similarly, a British study showed that in female breadwinner marriages, the male is more likely to have been prescribed Viagra while the female is more likely to have been prescribed anti-anxiety and anti-insomnia medication.

**Housework is a factor, too**

Here's an AFP story about a recent study from Spain.

Excerpt:

> The road to hell is paved with good intentions, as they say: the more housework married men do, the less sex they have, according to a new study published Wednesday.
>
> **Husbands who spend more time doing traditionally female chores — such as cooking, cleaning, and shopping — reported having less sex than those who do more masculine tasks, said the study in the**

> **American Sociological Review.**
>
> "Our findings suggest the importance of socialized gender roles for sexual frequency in heterosexual marriage," said lead author Sabino Kornrich, of the Center for Advanced Studies at the Juan March Institute in Madrid.
>
> "Couples in which men participate more in housework typically done by women report having sex less frequently. Similarly, couples in which men participate more in traditionally masculine tasks — such as yard work, paying bills, and auto maintenance — report higher sexual frequency."
>
> His study, "Egalitarianism, Housework, and Sexual Frequency in Marriage," looks at straight married couples in the United States, and was based on data from the National Survey of Families and Households.
>
> […]"The results suggest the existence of a gendered set of sexual scripts, in which the traditional performance and display of gender is important for creation of sexual desire and performance of sexual activity," Kornrich said.

Prior to that study, there was this Norwegian study about housework and divorce risk.

Excerpt:

> Couples who share housework duties run a higher risk of divorce than couples where the woman does most of the chores, a Norwegian study sure to get tongues wagging has shown.
>
> The divorce rate among couples who shared housework equally was around 50 per cent higher than among those where the woman did most of the work.
>
> "The more a man does in the home, the higher the divorce rate," Thomas Hansen, co-author of the study entitled Equality in the Home, said.
>
> […]"Maybe it's sometimes seen as a good thing to have very clear roles with lots of clarity … where one person is not stepping on the other's toes," Mr Hansen suggested.
>
> "There could be less quarrels, since you can easily get into squabbles if both have the same roles and one has the feeling that the other is not pulling his or her own weight," he added.

These are things to think about. We have to let the way the world really is guide our decisions. Feminism might sound nice, but it's not real world. In the real world, men are hard wired to want that provider/protector role. Do you want to have a happy marriage that lasts? Then learn about male roles from men, and not from a false ideology. Men need to be treated like men and they need to be encouraged to be male, and recognized for acting out male roles. Men are not woman, and forcing them take female roles is no good for anyone. Discriminating against men in school so that they underperform at male roles later on doesn't work for anyone.

# J. Warner Wallace: important differences between Christianity and Mormonism

**Wintery Knight** · 3 June 2013 · Archived copy · Original

Here's a podcast featuring J. Warner Wallace that I listened to twice on a recent road trip. This is an after action report from Wallace's recent missions trip to Utah to evangelize Mormons.

The MP3 file is here. (74 minutes)

Topics:

- Mormons disagree with Christians about the nature of God, Jesus and salvation
- The differences are so dramatic that the two religions are completely different views
- Mormons try to portray themselves as a denomination of Christianity
- The Utah missions trip: how Christians were trained to engage with Mormons
- Mormonism is a works-based religion – you earn your way to eternal life by doing works
- In Christianity, eternal life is a free gift from God to anyone who accepts Jesus as their leader and redeemer
- Mormons believe that doctrines can change from generation to generation (progressive revelation)
- Mormons commonly make the case for a works-based theology by appealing to Jesus' Sermon on the Mount
- Mormons believe that you have to be perfect in order to get "exalted" eternal life
- Christians are perfect because Jesus has paid the price of our rebellion against God
- Christians: Jesus' sacrifice pays for anything evil that we have done and could do
- Christians are made perfect because Jesus' perfection is applied to them
- Christians are not practically perfect, but they are perfect by accepting that the sacrifice of Jesus on the cross
- God credits righteousness to Christians because Jesus has already died to pay off the punishment for their sins
- The good works that Christians do are a voluntary response to this free gift of salvation
- The good works do not secure a Christian's salvation, they are the natural outworking of accepting the gift of salvation
- The Mormon view of the afterlife is different from the Christian view
- The best Mormon afterlife ("exaltation") requires continued righteousness to the end of one's natural life
- This is not compatible with Christian teaching about salvation being by grace and not by doing good works (Gal 3:10-14)
- Mormons can never know whether they are saved or not until the day they die
- Christians can be sure of their salvation from the moment they accept Jesus as their leader and redeemer
- The Bible is clear that we can know whether we are saved or not (John 5:9-14)
- It is inconsistent for Mormons to claim to be Christians and then try to convert Christians to Mormonism
- The reason why Mormons go door to door is because they think Christians are wrong
- The Mormon view of Jesus is nothing like the Christian view of Christ (from the Bible)
- Mormonism is polytheistic, whereas Christianity is monotheistic
- Mormon "gods" are just beings who have a human nature who were "exalted" for doing good works
- When debating Mormons, they will try to argue that Mormonism is true because it results in good works
- The Biblical standard for a good prophet is to see whether his prophecies come true
- The Mormon view is that Joseph Smith is reliable because he did good works
- But good works are not a good way to test truth claims – a person could be "good" and still say false things

- A good question to ask Mormons: is the Book of Mormon ancient? It claims to be ancient, but is it?
- They may try to answer this question by appealing to fideism: praying for confirmation by burning bosom
- But this is not a question that can be assessed by subjective feelings (just pray about it)
- This is a question that needs to be assessed by historians using historical evidence
- There is no historical or archaeological support for the claims in the Book of Mormon
- In contrast, we have direct eyewitness testimony about the life of Jesus in the New Testament
- We have fragments of NT manuscripts dating back to first century so we know that the New Testament is ancient

Previously, I posted my refutation of Mormonism which used two evidential arguments. And J.W. Wartick has posted two philosophical arguments against Mormonism as well.

# Ezra Klein on the costs of Obamacare: then and now

**Wintery Knight** · 4 June 2013 · Archived copy · Original

Consider this article from Forbes about Obamacare and how it was presented by Ezra Klein, a well-known journalist from the left-leaning Washington Post. (H/T Bernie M.)

Excerpt:

> The key thing to remember is that back when Obamacare was being debated in Congress, Democrats claimed that it was right-wing nonsense that premiums would go up under Obamacare. "What we know for sure," Obamacare architect Jonathan Gruber told Ezra Klein in 2009, "is that [the bill] will lower the cost of buying non-group health insurance." *For sure*.
>
> In 2009, was Ezra saying that it's ok that premiums will double for the average person, because a minority of people will pre-existing conditions will benefit? No.
>
> Earlier that year, AHIP, the private insurer trade group, commissioned a report from Price Waterhouse Coopers to analyze the impact of Obamacare on health insurance premiums in the individual market. That report, which I reviewed here and elsewhere, found that the version of Obamacare then being considered by the Senate Finance Committee would increase premiums by 14 to 32 percent, depending on the year you looked at. In retrospect, the PwC report was a bit optimistic.
>
> But Ezra described the PwC analysis as "the insurance industry's deceptive report," comparing it to sham research put out by the tobacco industry and Big Oil. Ezra did concede at the time that "buying better insurance will cost somewhat more," because insurers would no longer be able "to sell a deceptive and insufficient product."
>
> But high-deductible, catastrophic insurance isn't cheaper because it's dishonest. It's cheaper because it's more efficiently designed. And it's precisely that sort of efficiently-designed insurance that Obamacare abolishes.

I blogged about that study from Price Waterhouse Coopers before, too. In fact, I fully explained why specific provisions of Obamacare would *necessarily* raise health insurance premiums.

Before the 2012 election, I linked to an article from Investors Business Daily, which confirmed that premiums had indeed risen since the passage of Obamacare.

Excerpt:

> During his first run for president, Barack Obama made one very specific promise to voters: He would cut health insurance premiums for families by $2,500, and do so in his first term.
>
> But it turns out that family premiums have increased by more than $3,000 since Obama's vow, according to the latest annual Kaiser Family Foundation employee health benefits survey.
>
> Premiums for employer-provided family coverage rose $3,065 — 24% — from 2008 to 2012, the Kaiser survey found. Even if you start counting in 2009, premiums have climbed $2,370.
>
> What's more, premiums climbed faster in Obama's four years than they did in the previous four under President Bush, the survey data show.

Despite these *facts*, the American people went along with the mainstream media and re-elected Obama for a second term in 2012, blocking any repeal of Obamacare.

I think that the American people need to realize that most journalists cannot be counted on to handle research and evidence accurately. Most of them probably never even completed a high school math or science course. They studied journalism. Journalism is not computer science. Journalism is not petroleum engineering. Journalism is not

nursing. Journalism is an area where students are graded based on their ability to parrot what their leftist professors tell them to believe. At best, left-wing journalists are not competent. At worst, they are outright liars. Study after study on media bias has confirmed that left-wing journalists cannot be trusted to report the news fairly. That is not my opinion, that's a fact.

Unfortunately for us, our failure to fix our little Obama mistake in the 2012 election is going to cost us all dearly – especially young people.

# Can you trust big government to take care of your health?

**Wintery Knight** · 4 June 2013 · Archived copy · Original

Let's take a look at another story about socialized medicine from the UK, from the UK Daily Mail.

Excerpt:

> The picture Sarah Fleming took of her husband Stewart is one that will haunt her for ever.
>
> Taken on her mobile phone, it shows him sitting in a hospital cubicle, a hand clutching his stomach, his face a vivid reflection of the agony he was in, as he waited to be seen by doctors.
>
> Tragically, that picture is a heartrending reminder of the circumstances leading up to the railway signalman's death. It is also a vivid illustration of the turmoil unfolding in overstretched hospital emergency departments.
>
> For the father-of-two, 37, from Rainham, in Kent, had to endure a six–hour wait to see a doctor in A&E at Gillingham's Medway Maritime Hospital. He had a letter from his GP asking him to be admitted immediately.
>
> He had been to see his GP that day because the antibiotics he had been taking for flu-like systems had failed to work. He was referred straight to hospital. But when he arrived, on December 15, 2008, the hospital was facing an unusually busy period. Staff sickness, a cold weather snap and an increase in GP referrals meant the hospital was under pressure.
>
> He was admitted at 5.30pm, but was not seen until 11.15pm. By then, the mystery virus Stewart had contracted was attacking his heart, kidneys and liver. Despite being transferred to London's Harefield Hospital, where he was placed into a drug-induced coma, he died on December 27.

And another from the same article:

> She was a frail woman who deserved to be treated with dignity and kindness. Instead, Ethel Martin, 91, died after developing deep vein thrombosis having spent 16 hours on a trolley at Manchester Royal Infirmary.
>
> The great-grandmother was admitted to hospital on April 17, 2006, complaining of feeling breathless. Her family were with her when she was put in a curtained-off bay in the overstretched A&E department — the hospital saw 365 patients in A&E that day — at about 5pm.
>
> They returned home in the early hours, assuming she would be cared for, but were shocked when they came back the next day at 9am and found her in the same position. She hadn't slept because the trolley was so uncomfortable.
>
> After Mrs Martin, of Chorlton, Greater Manchester, was found a bed, her condition deteriorated and she was diagnosed with DVT. She was treated with blood-thinning drugs but died on May 1, following a cardiac arrest.
>
> At an inquest into her death, pathologist Dr Richard Fitzmaurice said lying on her trolley could have contributed to her death. 'Immobility is a recognised factor in the build-up of deep vein thrombosis.'
>
> A coroner recorded a verdict of misadventure, on the grounds Mrs Martin's death was the unintended consequence of medical treatment.

Mr. Stewart probably paid into the NHS his entire life before he needed care, and was denied it. That's wow socialized medicine works. You pay into it. The government takes your money and buys votes from young people, by providing contraception, breast implants, HIV drugs, abortions, IVF and sex changes. When you get old, and need care, then you get in line behind people who have never paid a dime into the system. By that time, you'll have no money of your own to get treatment from a private hospital. In Canada, you would have to leave the country and pay out of pocket for immediate care. That's what the left thinks is such a great idea.

# Was Hitler a Christian? Is Nazism similar to Christianity?

**Wintery Knight** · 4 June 2013 · Archived copy · Original

One of the strangest things I have heard from atheists is the assertion that Christianity is somehow connected to the fascism, such as the fascism that existed under Adolf Hitler. Two posts by Jewish author Jonah Goldberg from National Review supply us with the facts to set the record straight.

Let's start with the first post.

Here are some of the points:

**1) Hitler wanted Christianity removed from the public square**

> Like the engineers of that proverbial railway bridge, the Nazis worked relentlessly to replace the nuts and bolts of traditional Christianity with a new political religion. The shrewdest way to accomplish this was to co-opt Christianity via the Gleichschaltung while at the same time shrinking traditional religion's role in civil society.

**2) Hitler banned the giving of donations to churches**

> Hitler banned religious charity, crippling the churches' role as a counterweight to the state. Clergy were put on government salary, hence subjected to state authority. "The parsons will be made to dig their own graves," Hitler cackled. "They will betray their God to us. They will betray anything for the sake of their miserable little jobs and incomes."

**3) Hitler replaced Christian celebrations with celebrations of the state**

> Following the Jacobin example, the Nazis replaced the traditional Christian calendar. The new year began on January 30 with the Day of the Seizure of Power. Each November the streets of central Munich were dedicated to a Nazi Passion play depicting Hitler's Beer Hall Putsch. The martyrdom of Horst Wessel and his "old fighters" replaced Jesus and the apostles. Plays and official histories were rewritten to glorify pagan Aryans bravely fighting against Christianizing foreign armies. Anticipating some feminist pseudo history, witches became martyrs to the bloodthirsty oppression of Christianity.

**4) Hitler favored the complete elimination of Christianity**

> When some Protestant bishops visited the Fuhrer to register complaints, Hitler's rage got the better of him. "Christianity will disappear from Germany just as it has done in Russia . . . The Germanrace has existed without Christianity for thousands of years . . . and will continue after Christianity has disappeared . . . We must get used to the teachings of blood and race."

**5) Hitler favored the removal of mandatory prayers in schools**

> In 1935 mandatory prayer in school was abolished…

**6) Hitler favored the banning of Christmas carols and nativity plays**

> …and in 1938 carols and Nativity plays were banned entirely.

**7) Hitler abolished religious instruction for children**

> By 1941 religious instruction for children fourteen years and up had been abolished altogether….

And now the second post.

**8) Hitler opposed the ideas of universal truth and objective moral absolutes**

> …Just as the Nazi attack on Christianity was part of a larger war on the idea of universal truth, whole postmodern cosmologies have been created to prove that traditional religious morality is a scam, that there are no fixed truths or "natural" categories, and that all knowledge is socially constructed.

Practically everything this man believed was 100% anti-Christian. But he fits in fine on the secular left.

**Conclusion**

Adolf Hitler was a man influenced by two big ideas: evolution and socialism. His party was the national SOCIALIST party. He favored a strong role for the state in interfering with the free market. He was in favor of regulating the family so that the state could have a bigger influence on children. And he favored the idea of survival of the fittest. His ideas are 100% incompatible with Christianity and with capitalism as well. Christians value individual rights and freedoms, small government and the autonomy of the family against the state. The differences are clear and significant.

# MUST-SEE: Founder of Tea Party group testifies in Congress about IRS fascism

**Wintery Knight** · 5 June 2013 · Archived copy · Original

Fox News reports on the testimony of Becky Gerritson.

Excerpt:

> Becky Gerritson, President of Wetumpka Tea Party in Alabama, gave emotional and powerful testimony this morning during a hearing on how the IRS allegedly targeted her organization.
>
> Gerritson spoke of demands asked of her 'tiny group' by the agency, including detailed contents of every speech ever given by someone involved in the Tea Party branch, copies of any communication sent to any member of a legislative body, including her own representatives, and the list goes on.
>
> Gerritson fought back tears as she pointed her finger at the members of Congress sitting before her, saying of her group, "[we] had no party affiliation … It didn't matter … the only notion expressed was that our representative government had failed us."
>
> "In Wetumpka, we are patriotic Americans; we peacefully assemble; we petition our government; we exercise our right to free speech. We don't understand why the government tried to stop us. I'm not here as a serf or a vassal. I'm not begging my lord for mercy. I'm a born-free American woman, wife, mother, and citizen, and I'm telling my government that you've forgotten your place."
>
> She called the IRS' demands a "willful act of intimidation to discourage a point of view" and "un-American."
>
> Gerritson again became choked up as she concluded her statement, saying, "I'm not interested in scoring political points. I want to preserve and protect the America that I grew up in. The America that people crossed oceans and risked their lives to become a part of, and I'm terrified it's slipping away. Thank you very much."

And more: here's law professor John Eastman at the IRS hearings telling the truth:

It's very sad for me to see that so many American people could vote for a regime that is essentially Stalinist in nature. We fought wars against tyrannical regimes, and now we've changed – now we vote them into power. We are too busy entertaining ourselves instead of informing ourselves enough to make the right decisions about our future.

# Christian valedictorian tears up censor-approved speech and recites the Lord's Prayer

**Wintery Knight** · 5 June 2013 · Archived copy · Original

From WXII 12 local news, a story from South Carolina.

Full text:

> A school district under pressure to keep prayer out of meetings and gatherings got an unexpected delivery from one high school valedictorian
>
> Saturday, at Clemson's Littlejohn Coliseum, Liberty High Valedictorian Roy Costner IV took his speech to the podium, and in front of the crowd, tore it up.
>
> John Eby, Pickens County School District spokesman, said, "They write their speeches. They send them to someone on staff to have them approved."
>
> But Costner clearly had something else in mind.
>
> After speaking for a few minutes, he thanked his parents for leading him to the Lord at a young age, and then he said, "I think most of you will understand when I say, 'Our Father, who art in heaven…" as he began to recite the Lord's Prayer.
>
> Much of the crowd broke into tentative applause that then grew into cheers that nearly drown out Costner's voice as he continued the prayer.
>
> Brian Hoover, who is from Liberty and attended the graduation, said, "You couldn't even hear him doing the prayer anymore because everybody was clapping and cheering."
>
> Costner finished, pointing his finger in the air for emphasis, saying, "For Thine is the kingdom, the power and the glory, forever and ever. Amen," followed by more cheers and applause.
>
> Hoover said, "From the ACLU sending FOIA requests to every district in the state this year after the Chesterfield County case, then the Freedom From Religion Foundation sent us a complaint about religion at board meetings and some other issues as well. That is why the reaction to the prayer at graduation was loud."
>
> The district says there will be no repercussions because of the prayer.
>
> Costner was out of town on Monday, but he said he added the prayer to the speech because God is the biggest part of his life.
>
> **According to a school publication, "Costner plans to head to Clemson University in the fall to pursue a Bachelor of Science degree in computer science. He said he hopes to work as a computer programmer overseas, but has dreams of saving up enough to come back and start a chain of restaurants in the U.S. He said computer programming was an interest he picked up outside of school as he developed a local news website, "Liberty Speaks."**
>
> In the publication Costner is quoted as saying: "I have big ideas for mobile applications, and even for starting a new social network, but I don't have the knowledge to pull it off yet."

It warms my heart to see a good, brave Christian man take up computer science, where he should be able to find work in spite of the politically correct censors he might find on campus.

Here's the verse that should scare anyone about what exactly it is that Jesus expects from his followers:

Matthew 10:32-39:

32 So everyone who acknowledges me before men, I also will acknowledge before my Father who is in heaven,

33 butwhoever denies me before men, I also will deny before my Father who is in heaven.

34 “Do not think that I have come to bring peace to the earth. I have not come to bring peace, but a sword.

35 For I have come to set a man against his father, and a daughter against her mother, and a daughter-in-law against her mother-in-law.

36 And a person’s enemies will be those of his own household.

37 Whoever loves father or mother more than me is not worthy of me, and whoever loves son or daughter more than me is not worthy of me.

38 And whoever does not take his cross and follow me is not worthy of me.

39 Whoever finds his life will lose it, and whoever loses his life for my sake will find it.

That’s why he did what he did. He had to do it to honor God instead of pleasing godless men.

In other news, the ACLU, which opposes free speech that secular leftists find offensive, is also in favor of sex-selection abortions and race-selection abortions. I wonder which is more offensive? Free speech or killing a baby because it is the wrong sex or the wrong race? That’s what the ACLU stands for: sexism and racism and fascism.

# IRS: cheapest Obamacare plan will be $20,000 per year per family [CORRECTED]

**Wintery Knight** · 5 June 2013 · Archived copy · Original

***UPDATE: The $20,000 figure is wrong. Here is the correction from Investors Business Daily: (H/T Sonya M. via Scott S.)***

> ***The most current information from the Congressional Budget Office and the Joint Committee on Taxation put the cost of a family policy purchased through an employer in 2016 at $20,000 vs. $15,745 last year.***
>
> ***In 2016, average premiums for a family of four buying a silver-level plan through ObamaCare's exchange are expected to be $15,400 — before subsidies. The lowest-cost bronze plan, which is far less comprehensive than typical employer policies, would cost about 85% of a silver plan, or $13,000.***

CNS News with some sobering news about health care.

Excerpt:

> In a final regulation issued Wednesday, the Internal Revenue Service (IRS) assumed that under Obamacare the cheapest health insurance plan available in 2016 for a family will cost $20,000 for the year.
>
> Under Obamacare, Americans will be required to buy health insurance or pay a penalty to the IRS.
>
> The IRS's assumption that the cheapest plan for a family will cost $20,000 per year is found in examples the IRS gives to help people understand how to calculate the penalty they will need to pay the government if they do not buy a mandated health plan.
>
> The examples point to families of four and families of five, both of which the IRS expects in its assumptions to pay a minimum of $20,000 per year for a bronze plan.
>
> "The annual national average bronze plan premium for a family of 5 (2 adults, 3 children) is $20,000," the regulation says.
>
> Bronze will be the lowest tier health-insurance plan available under Obamacare–after Silver, Gold, and Platinum. Under the law, the penalty for not buying health insurance is supposed to be capped at either the annual average Bronze premium, 2.5 percent of taxable income, or $2,085.00 per family in 2016.
>
> In the new final rules published Wednesday, IRS set in law the rules for implementing the penalty Americans must pay if they fail to obey Obamacare's mandate to buy insurance.

You might be thinking that you will be OK because you have health care through your employer, but there are lots of problems with that. First, your premiums are going up already because your insurer has to cover more people. Second, Obamacare is designed to drive out and eliminate private health insurers. Third, you may not have your job much longer because of the taxes, spending and regulations that harm your employer's ability to stay afloat.

# Does science cause people to disbelieve in God? A look at the research of Dr. Elaine Ecklund

**Wintery Knight** · 5 June 2013 · Archived copy · Original

Dr. Elaine Ecklund explains her research about scientists and their beliefs in this paper.

Excerpt:

> Scholars talk a great deal about research done in the 1960's that revealed differences in religious beliefs among members of different disciplines (especially comparisons between natural and social scientists). My findings, however, do not reveal vast discrepancies in religious belief and practice among disciplines and fields. The true difference lies between academics in these scientific disciplines and members of the general public. With little doubt, scientists at major research universities are less religious—at least according to traditional forms of religion—than members of the general public.
>
> During public lectures about the study, the question inevitably asked first is: Do the professors you studied believe in God? When asked their beliefs about God, nearly 34 percent of academic scientists answer "I do not believe in God" and about 30 percent answer "I do not know if there is a God and there is no way to find out," the classic agnostic response. This means that over 60 percent of professors in these natural and social science disciplines describe themselves as either atheist or religiously agnostic. In comparison, among those in the general U.S. population, about 3 percent claim to be atheists and about 5 percent are religiously agnostic. When it comes to affiliation with particular religions, scientists are also vastly different from members of the broader society. About 52 percent of scientists see themselves as having no religious affiliation when compared to only 14 percent of the general population. Scientists who are not religious justify their inattention to religion through language that stresses the irrelevance of science to religion. Those not raised in religious homes, the case for the majority of scientists without religious affiliation, also emphasize their lack of experience with religion.
>
> […]**What are we to make of this lack of traditional religion? Is knowledge of science somehow in conflict with being religious? Childhood religious background, not exposure to scientific education, seems to be the most powerful predictor of future irreligion. Those scientists raised in almost any faith tradition are more likely to currently be religious than those raised without any tradition. In addition, scientists who describe religion as important in their families as children are much more likely to practice faith currently. When compared to the general population, a larger proportion of scientists are raised in non-religious homes. When one considers that many more scientists come from non-religious homes or homes that were nominally religious, the distinctions between the general population and the scientific community make more sense. A large part of the difference between scientists and the general population may be due more to religious upbringing, rather than scientific training or university pressure to be irreligious, although these other possibilities should be further explored.**

I heard about this research in the latest episode of the Reasonable Faith podcast. You can listen to it to hear Dr. Craig's comments.

I think this research raises an important question that we need to ask scientists who don't believe in God. That question is: "which particular pieces of scientific evidence led you to doubt God's existence?" And then we should have done our scientific homework about the Big Bang, the fine-tuning, the origin of life, the Cambrian explosion, the habitability arguments from astrobiology, and so on, to be able to make a positive case for God's existence from science. Christians ought to be more excited about science, because we have nothing to fear – and everything to gain – from knowing a lot more about science than we know now.

You can see Ecklund's book about her research here on the Oxford University Press web site. You can also buy the book here from Amazon.com.

UPDATE: Commenter Eugene has found a related lecture from Cambridge University featuring Dr. Ecklund.

# Ronald Reagan's 40th anniversary D-Day speech: the boys of Pointe du Hoc

**Wintery Knight** · 6 June 2013 · Archived copy · Original

June 6, 1944 D-Day Normandy Invasion Map

It's June 6th, today, and it's the anniversary of D-Day: the Allied invasion of northern France – the beginning of the end of World War 2. One of the most pivotal events of that day was the assault on German gun emplacements by members of the Army Rangers at a fortified position called "Pointe du Hoc".

President Ronald Reagan recognized the soldiers who attacked Pointe du Hoc back in 1984:

You can read the full transcript of that speech here.

Ronald Reagan also made the case for gratitude and vigilance:

Here's the hymn that starts to play at the end:

**The Boys of Pointe du Hoc**

Here's a summary of the Pointe du Hoc mission:

> [Lt. Col. James Earl] Rudder took part in the D-Day landings as Commanding Officer of the United States Army's 2nd Ranger Battalion. His U.S. Army Rangers stormed the beach at Pointe du Hoc and, under constant enemy fire, scaled 100-foot (30 meter) cliffs to reach and destroy German gun batteries. The battalion's casualty rate for this perilous mission was greater than 50 percent. Rudder himself was wounded twice during the course of the fighting. In spite of this, they dug in and fought off German counter-attacks for two days until relieved. He and his men helped to successfully establish a beachhead for the Allied forces.

You can watch a three-clip documentary on it, too: part 1, part 2, part 3.

You can read the complete story about their successful effort to destroy the 6 155mm German guns here on Military History Online. Although initially, the Rangers did not find the guns where they had expected them, they did find them further back behind the cliffs and destroyed them there, removing a threat to the forces that would be landing later.

**What does D-Day mean to Christians in particular?**

A female Christian friend asked me what she should be thinking about when I sent her one of the videos above, and so I wrote her this to explain why I sent her the video:

> To make you close your eyes and think in a more practical way about what it means for someone to sacrifice their lives to save you, of course. What it means to look up cliffs at machine guns, barbed wire and mortars raining death on you and to take a rope in your hands and to climb up a sheer cliff, under heavy fire, in order to

> save generations yet unborn and freedom itself.
>
> To think about a concrete example helps us to be able to appreciate what Christ did for us in giving his life for us so that we could be free of sin, as well.
>
> This is the insight that drives my entire interest in war and military history, in fact.
>
> What does this mean: “Greater love has no man than this, that a man lay down his life for his friends.”
>
> The more you know about D-Day, the more fearful what Jesus did appears, and the more you can be grateful.
>
> Bullets and shrapnel are scary… and so are nails and lashes. Why on Earth would anyone endure either for me? And what should my response be to it?
>
> I think it is helpful to explain Christianity to those who are not yet Christian, and for Christians to fully appreciate what Christianity is all about.
>
> We were in peril. And now we have been saved. But at a cost.

I think that it’s important for Christians to look to history, art, poetry and music to help them to reflect and comprehend the sacrifice that Christ made for us in dying on the cross to protect us from peril. What must the cross have looked like to Jesus? It must have been something like what the Omaha beach looked like to the Americans landing in Normandy. Jesus saw whips, thorns and nails, and the heroes of Normandy saw 88 mm AT guns, 81 mm mortars and MG42 machine guns. How should you feel about people who face death on your behalf? Think about it.

# Benghazi liar Susan Rice to be appointed National Security Adviser by grateful Obama

**Wintery Knight** · 6 June 2013 · Archived copy · Original

Katie Pavlich of Townhall explains how Obama rewards those who lie to the American people on his behalf, just before an election.

Excerpt:

> President Obama won't condemn Attorney General Eric Holder for spying on reporters and now, he's tapped Benghazi YouTube video liar Susan Rice to serve as a top security adviser.
>
> President Barack Obama plans to appoint Susan Rice as his national security adviser, replacing Tom Donilon, who is resigning, in a major shift to the White House's foreign policy team.
>
> Obama plans to make the appointment, first reported by the New York Times, later on Wednesday. He will also fill Rice's current position, the U.S. ambassador to the United Nations.
>
> It's no surprise Rice is getting a promotion. After all, she served as a good foot soldier for the Obama administration when she went in five Sunday talk shows five days after the attack and lied about a YouTube video.
>
> We know a YouTube video was never part of the equation the night of the attack. Acting Libyan Ambassador and whistleblower Greg Hicks called former Secretary of State Hillary Clinton at 2 a.m. from Libya and said, "We were under attack." Hicks told Congress under oath that a YouTube video was a "non-event" in Libya. A lack of security was one of the main reasons why the U.S. consulate in Benghazi was attacked on 9/11. Many security requests were sent to the State Department and Clinton but were repeatedly denied.

I noticed that the Weekly Standard's Bill Kristol did a podcast on the pick, and he was very concerned.

Description:

> THE WEEKLY STANDARD podcast with editor William Kristol on Susan Rice's promotion, the nomination of Samantha Power to be the next ambassador to the United Nations, and Congress's investigation into the Internal Revenue Service scandal.

Here is the MP3 file of the podcast.

How serious could this administration be about national security when appointments like this are made?

# Obama's deputy campaign manager Stephanie Cutter met with IRS chief at the White House

**Wintery Knight** · 6 June 2013 · Archived copy · Original

Jake Tapper of the left-leaning CNN reports.

Excerpt: (links removed)

> Comments made by former White House adviser and Obama deputy campaign manager Stephanie Cutter on CNN's "The Lead" last week about meetings at the White House attended by both her and the then-director of the Internal Revenue Service, Doug Shulman, have prompted some conservatives to question her role in those meetings.
>
> The White House has acknowledged that IRS officials seem to have inappropriately focused on conservative groups when vetting whether the groups qualified for special tax exempt status. White House visitor logs suggest that Shulman was cleared to attend meetings in the White House or Eisenhower Executive Office Building 157 times, which has prompted questions from Republican officials as to whether the targeting of conservative groups was ever discussed. More than 50 of Douglas Shulman's scheduled visits are described as "health care meetings" or "health care reform meetings," according to the visitor logs.
>
> On "The Lead's" political roundtable discussion about Shulman's visits on Friday, Cutter – now a CNN contributor – said that "many of those meetings were for health care implementation. I was in them with him. So there is nothing nefarious going on."
>
> […]Many conservative outlets have seized upon Cutter's presence in the meetings as reason for suspicion. "The president's deputy campaign manager attended the 'nonpolitical' ObamaCare implementation meetings with the former IRS commissioner at the White House," wrote an Investor's Business Daily editorial. "She wasn't there to discuss the Easter Egg Roll."
>
> Wrote Carol Platt Liebau at Townhall.com, "as everyone knows, Stephanie Cutter's expertise is not primarily in the policy area; it is in the realm of politics: Political strategy and communications. She has been described by the Daily Beast as a partisan 'pit bull.' Her job isn't the nuts and bolts of governing. She is a political fixer. That's why she was a Deputy Campaign manager for the President's re-election."

Here's what Carol Platt Liebau said in that Townhall article.

Excerpt: (links removed)

> An interesting fact emerges from a look at a transcript of last Friday's edition of "The Lead With Jake Tapper" — Stephanie Cutter was in on the White House meetings that IRS Commissioner Douglas Shulman attended.
>
> Cutter insists that Shulman was simply meeting about implementation of ObamaCare — and in fairness, one of her responsibilities was managing communications strategy for the unpopular law. But as everyone knows, Stephanie Cutter's expertise is not primarily in the policy area; it is in the realm of politics: Political strategy and communications. She has been described by theDaily Beast as a partisan "pit bull." Her job isn't the nuts and bolts of governing. She is a political fixer. That's why she was a Deputy Campaign manager for the President's re-election.
>
> Given that's the case, it's far from clear why she would have been in meetings with Doug Shulman at all. The whole point of the IRS' supposed "independence" is to insulate the agency from the influence and machinations of people *exactly like* Stephanie Cutter.
>
> So whether or not the stated purpose of the meetings was about ObamaCare — unless Shulman's politics are

> very different from the lefty leanings of his wife — it isn't hard to imagine Shulman and Cutter exchanging some congruent views. That's particularly true given that foremost in political discussion at the time was the Citizens United case (holding it unconstitutional for the government to restrict speech by corporations, associations and unions), which had recently been handed down by the Supreme Court — and which scared President Obama to death. Is it really a stretch to think that Cutter and Shulman might have commiserated, bemoaned the supposed threat to democracy, and wished that something could be done, oh so subtly? . . . Consider the following timeline:
>
> - May 2009 – Cutter moves to White House from Treasury Department
> - January 2010 – Citizens United is handed down; Democrats are hysterical
> - March 2010 – IRS begins targeting Tea Party and other conservative groups
> - April 2010 – Cutter assigned to sell health care reform; if meetings with Shulman didn't occur before, presumably they did so afterwards.
>
> Indeed, this time line and Cutter's presence in the IRS meetings makes it more likely than ever that subtle political influence was wielded. Did anyone explicitly order Shulman to target conservatives? Probably not . . . because given the extent and type of contact he had with White House politicos, no explicit directive was needed.
>
> It seems likely that everyone understood each other just fine, and the IRS operated accordingly.

Do you think it's possible that the Obama campaign worked with the IRS to delay and deny applications from conservative groups in order to influence the 2012 election? Why would the deputy campaign manager need to be in meetings with the head of the IRS at the White House?

# Apologetics 315: Top ten reading plan for complete beginners to Christian apologetics

**Wintery Knight** · 6 June 2013 · Archived copy · Original

Here are the items from the Apologetics 315 training plan for complete beginners:

> 1. ***The Case for Christ*** by Lee Strobel
> All of Lee Strobel's books are required reading for two reasons. First, they are good introductions to the subject and provide a good overview of the material from some of the best scholars in their fields. Second, the writing style is very accessible, taking you alongside a journalist in his investigation of the evidence for Christianity. In this particular title, Strobel focuses on the life and identity of Jesus.
>
> 2. ***The Case for a Creator*** by Lee Strobel
> This book is just as readable as *The Case for Christ*, but this one delves into the evidence for the Creator. Another thing that makes this good reading for the beginner is this: whatever areas you find particularly interesting can be pursued further by reading the sources interviewed in the book.
>
> 3. ***The Case for Faith*** by Lee Strobel
> In *The Case for Faith,* Strobel moves from making a positive case for Christ and a Creator to defending Christianity from some common criticisms and objections. This one deals with the hard faith questions such as the problem of pain and suffering and issues of doubt. Again, all three of the Lee Strobel books are a great starting point for the beginner.
>
> 4. ***Holman QuickSource Guide to Christian Apologetics*** by Doug Powell
> Now it's time for something different. This odd-shaped and colorful book (with more graphics than words) will introduce you to the wide landscape of apologetics by outlining, diagramming, and illustrating all of the key arguments for the existence of God, the reliability of the Bible, the beliefs of other world views, and common objections. This is very helpful in providing visual categories for the content you are taking in. If certain things you have read up till this point have been overly academic, then this book will give you a sort of pictorial overview. This is also useful as a "primer" on the key topics and helpful to establish a bird's eye view. Illustrations of the ideas are also great for sharing with others what you have learned.
>
> 5. ***Love Your God With All Your Mind*** by J.P. Moreland
> Ok, so you have taken in some of the key content and ideas that Strobel presents in the "Case for" series. But what does intellectual engagement look like? What does it look like to "love God with all your mind"? In this book you'll be challenged to live a vibrant life of intellectual engagement with your faith. This is a classic book that every apologist should read, and that's why it finds itself firmly in the foundational books recommended here.
>
> 6. ***Tactics: A Game Plan for Discussing Your Christian Convictions*** by Greg Koukl
> Information without application results in stagnation when it comes to apologetics. That's why it's time for a good dose of *Tactics*, which will train you not only to *use* apologetic content in everyday life, but it will also *train* you to be a better, more critical thinker. This is another "must read" book, and mastering its contents early in your apologetic studies will put feet to your faith.
>
> 7. ***The Case for the Resurrection of Jesus*** by Mike Licona & Gary Habermas
> The resurrection of Jesus is central to Christianity. This book equips you to understand and defend the resurrection from an historical perspective. Not only does the book have useful diagrams, summaries, and an accessible style, but it also comes with a CD-ROM with interactive software for teaching you the material. This is an essential book for the apologist.
>
> 8. ***Is God Just a Human Invention? And Seventeen Other Questions Raised by the New Atheists*** by Sean McDowell and Jonathan Morrow

> Now it's time to look at some of the most common objections that have come against Christianity since the rise of the new atheism. There's no better book at dealing with these in a concise yet dense way, while providing additional reading suggestions and introducing some of the key apologists that deal with these questions. If you really want to master this material, consider taking part in the Read Along project for this book.
>
> 9. ***I Don't Have Enough Faith to Be An Atheist*** by Geisler & Turek
> Geisler and Turek have authored a great apologetics book that also takes a step-by-step approach to showing that Christianity is true—and it's filled with *lots* of information. This gives the growing beginner a ton of good content, while strengthening the framework of a cumulative case for Christianity. This book will help to grow your overall general apologetic knowledge as well.
>
> 10. ***On Guard*** by William Lane Craig
> Finally, it's time to dig deeper into some of the more philosophically rigorous arguments with William Lane Craig. *On Guard* is, in essence, a shorter, more concise and accessible distillation of his weightier apologetics book *Reasonable Faith*. *On Guard* has illustrations, argument maps, and sidebars which aim to make the material easier to grasp and engage with. This book will introduce the newer apologist to Craig's time-tested arguments for the existence of God and the resurrection of Jesus. While it is still not light reading, this will serve the reader well before moving on to more advanced material. Highly recommended.

I love to give away books to people who want to learn apologetics (if I trust them not to give away my identity) and just last week I gave two people numbers 2, 4 and 8 last week. But all of these books are must reads. The ordering is good too! The only books I might add to this list is J. Warner Wallace's "Cold Case Christianity", which is a nice book for beginners on how to defend the gospels as historical sources. I would put that one in at #9  drop his #9 completely. His #8 "Is God Just a Human Invention?" is my favorite basic apologetics book for beginners, because it covers everything just a little bit in only one book. If I had to pick one out of that list, I'd pick that one.

# Good News: The Bible is number one on the bestseller list in Norway

**Wintery Knight** · 7 June 2013 · Archived copy · Original

From the Washington Times.

Excerpt:

> Bibles have been flying off the book shelves in Norway, a country hailed more for its adherence to secular politics and culture than spiritual development. And while religious leaders aren't quite calling the strong biblical book sales proof positive of a spiritual awakening, they are seeing it as a sign of the nation's more public embrace of God and a continuing quiet growth in biblical teachings.
>
> A new Norwegian-language version of the Bible has become the country's No. 1 best-seller, The Associated Press reported. And its popularity has been evidenced for some time. The Blaze reported that the version has been in the top 15 best-seller list for 54 of the past 56 weeks.
>
> As The Guardian noted, Bible sales in Norway have topped the charts for longer the pop star Justin Bieber's autobiography or the hugely popular "Fifty Shades of Grey."
>
> Meanwhile, Norwegians are taking their faith to the stage, too. A six-hour play called "Bibelen," which means "The Bible" in Norwegian, has been drawing thousands. In a three-month span, more than 16,000 people saw the production, The Blaze reported.
>
> Leaders of the Lutheran Church of Norway say it's not quite an awakening. After all, they say, only 1 percent of the country's 5 million residents attend church. And others, such as biblical scholars, say the furor is over nothing — that Norwegians are traditionally quiet followers of the faith who don't necessarily need to go to church as part of their belief system. But the sales are significant, nonetheless. If nothing else, they show the mindset of the nation.
>
> "Thoughts and images from the Bible still have an impact on how we experience reality," said Karl Ove Knausgaard, one of the Norwegian authors who helped translate the popular Bible version, in the AP report.

Norway actually was one of the more conservative countries in Europe, and one of the last to have the big decline of the family that we see in the other Scandinavian countries.

# Mark Regnerus: will same-sex marriage hurt the institution of marriage?

**Wintery Knight** · 7 June 2013 · Archived copy · Original

From the Public Discourse.

Introduction:

> Lots of changes in marriage have, and will continue to, come about. What should we expect next? That's the question Liza Mundy pursues in her cover story in this month's *Atlantic Monthly*. "The Gay Guide to Wedded Bliss" explores the ways in which same-sex marriages may very well school those of us who have already entered—or someday will enter—the hallowed and embattled institution. Mundy is confident that such unions "could help haul matrimony more fully into the 21st century," and that real influence is possible. This is in stark contrast to the politically tailored message that same-sex marriage will change nothing.
>
> "What if same-sex marriage does change marriage, but primarily for the better," she wonders aloud. How would this work? By giving us "another image of what marriage can be," she asserts. What sort of image? According to Mundy, it's the cardinal virtue of equality, or egalitarianism. Sameness and fairness.
>
> Before we prematurely declare this image worth mirroring, consider for a few moments the side effects Mundy identifies on the way to the egalitarian utopia she praises. Three in particular stand out.

He continues by going over the three issues, but this one is the one that everyone needs to know:

> Mundy first explores the instability—or "dynamism," if you're an optimist—of lesbian relationships. Don't want a divorce, Mundy asks? "Don't marry a woman," she warns. University of British Columbia economist Marina Adshade concurs. The author of a new book—*Dollars and Sex*—on the fascinating economics of relationships, Adshade notes the dismal science around breaking up in Britain, where "62% of civil union dissolutions (i.e., divorces) in the UK are between women despite the fact that lesbian relationships only represent 44 percent of civil partnerships in that country." The greater instability, she reasons, is simply about gender differences in relationship preferences, and nothing more. I tend to agree.
>
> The elevated breakup rate among lesbian couples has been an open secret for a long while. Even NYU sociologist Judith Stacey—no fan of marriage in general—noted it back in 2000 in small, nonrandom studies of upper-middle-class, educated white lesbian parents, demographic factors historically associated with stability rather than dissolution. Stacey and her colleague Tim Biblarz attributed the instability to, among other things, the participants' "high standards of equality." In Mundy's words, "women are just picky, and when you have two women, you have double the pickiness."
>
> Writing in *Slate* last year, June Thomas highlights this predilection toward shorter, intense relationships, and wonders whether the marital shoe actually fits:
>
> I've noticed that my visceral anti-marriage animus is particularly strong when I hear twentysomething lesbians talking about their wives and fiancees. Are they really going to mate for life, like swans in sensible shoes? That seems attractive at 35, but at 25 it's positively Amish. Worst of all, it threatens the continued evolution of a talent perfected over the millennia as our relationships have gone unrecognized by church and state: a gift for breaking up. Lesbians tend to bond intensely and often.
>
> The pattern is evident in the Netherlands as well as Norway and Sweden, where Mundy notes that the risk of breakups for female partnerships more than doubles that found in male unions. The actual study she cites estimates that in Sweden 30 percent of female marriages are likely to end in divorce within six years of formation, compared with 20 percent for male marriages and 13 percent for heterosexual ones. The study's authors suggested that lesbian couples may be more "sociodemographically homogamous" than other couples,

> a fancy term for “too similar,” and speculate that this may be conducive to a high level of dynamism, but perhaps not to the kind of inertia that has long been a hallmark of marital stability.
>
> Using nationally representative data on American relationships, Stanford demographer Michael Rosenfeld reported at the 2012 annual meeting of the American Sociological Association that lesbian couples report higher relationship satisfaction *alongside* higher break-up rates. The greater comparative instability among lesbian couples persists even after a lengthy series of control variables is included, including the presence of children.

Did you know that lesbian relationships are far more unstable than straight relationships? Children raised in such relationships would already be raised without a father, and without being able to observe the interaction of a man and a woman in marriage. But they are not likely to have even the stability of having their mother and the other woman raising the child. Lest you think that the birth mother would get custody, be aware that judges are assigning parental rights to the non-maternal woman in these cases. Is that fair to the child?

# Study of young atheists suggests strategies for evangelism

**Wintery Knight** · 7 June 2013 · Archived copy · Original

This is posted in the left-leaning Atlantic, of all places. (H/T J. Warner Wallace)

Excerpt:

> Slowly, a composite sketch of American college-aged atheists began to emerge and it would challenge all that we thought we knew about this demographic. Here is what we learned:
>
> **They had attended church**
>
> Most of our participants had not chosen their worldview from ideologically neutral positions at all, but *in reaction* to Christianity. Not Islam. Not Buddhism. Christianity.
>
> **The mission and message of their churches was vague**
>
> These students heard plenty of messages encouraging "social justice," community involvement, and "being good," but they seldom saw the relationship between that message, Jesus Christ, and the Bible. Listen to Stephanie, a student at Northwestern: "The connection between Jesus and a person's life was not clear." This is an incisive critique. She seems to have intuitively understood that the church does not exist simply to address social ills, but to proclaim the teachings of its founder, Jesus Christ, and their relevance to the world. Since Stephanie did not see that connection, she saw little incentive to stay. We would hear this again.
>
> **They felt their churches offered superficial answers to life's difficult questions**
>
> When our participants were asked what they found unconvincing about the Christian faith, they spoke of evolution vs. creation, sexuality, the reliability of the biblical text, Jesus as the only way, etc. Some had gone to church hoping to find answers to these questions. Others hoped to find answers to questions of personal significance, purpose, and ethics. Serious-minded, they often concluded that church services were largely shallow, harmless, and ultimately irrelevant. As Ben, an engineering major at the University of Texas, so bluntly put it: "I really started to get bored with church."
>
> **They expressed their respect for those ministers who took the Bible seriously**
>
> Following our 2010 debate in Billings, Montana, I asked Christopher Hitchens why he didn't try to savage me on stage the way he had so many others. His reply was immediate and emphatic: "Because you believe it." Without fail, our former church-attending students expressed similar feelings for those Christians who unashamedly embraced biblical teaching. Michael, a political science major at Dartmouth, told us that he is drawn to Christians like that, adding: "I really can't consider a Christian a good, moral person if he isn't trying to convert me." As surprising as it may seem, this sentiment is not as unusual as you might think. It finds resonance in the well-publicized comments of Penn Jillette, the atheist illusionist and comedian: "I don't respect people who don't proselytize. I don't respect that at all. If you believe that there's a heaven and hell and people could be going to hell or not getting eternal life or whatever, and you think that it's not really worth telling them this because it would make it socially awkward…. How much do you have to hate somebody to believe that everlasting life is possible and not tell them that?" Comments like these should cause every Christian to examine his conscience to see if he truly believes that Jesus is, as he claimed, "the way, the truth, and the life."
>
> **Ages 14-17 were decisive**
>
> One participant told us that she considered herself to be an atheist by the age of eight while another said that it was during his sophomore year of college that he de-converted, but these were the outliers. For most, the high school years were the time when they embraced unbelief.
>
> **The decision to embrace unbelief was often an emotional one**

> With few exceptions, students would begin by telling us that they had become atheists for exclusively rational reasons. But as we listened it became clear that, for most, this was a deeply emotional transition as well. This phenomenon was most powerfully exhibited in Meredith. She explained in detail how her study of anthropology had led her to atheism. When the conversation turned to her family, however, she spoke of an emotionally abusive father:
>
> “It was when he died that I became an atheist,” she said.
>
> I could see no obvious connection between her father’s death and her unbelief. Was it because she loved her abusive father — abused children often do love their parents — and she was angry with God for his death? “No,” Meredith explained. “I was terrified by the thought that he could still be alive somewhere.”
>
> Rebecca, now a student at Clark University in Boston, bore similar childhood scars. When the state intervened and removed her from her home (her mother had attempted suicide), Rebecca prayed that God would let her return to her family. “He didn’t answer,” she said. “So I figured he must not be real.” After a moment’s reflection, she appended her remarks: “Either that, or maybe he is [real] and he’s just trying to teach me something.”
>
> **The internet factored heavily into their conversion to atheism**
>
> When our participants were asked to cite key influences in their conversion to atheism–people, books, seminars, etc. — we expected to hear frequent references to the names of the “New Atheists.” We did not. Not once. Instead, we heard vague references to videos they had watched on YouTube or website forums.

Reading this, it makes me think that the church should be making sure that young people between 12 and 20 in the church are regularly engaged by Christians who have been trained in apologetics. That’s what we should do if we want to get serious about building people up to have a lasting faith rooted in reason and evidence.

# Soldier told not to read Levin, Limbaugh or Hannity while in uniform

**Wintery Knight** · 8 June 2013 · Archived copy · Original

Todd Starnes of Fox News reports.

Excerpt:

> Master Sgt. Nathan Sommers, a 25-year Army veteran and conservative Christian based at Fort Myer in Washington, believes his outspoken opposition to gay marriage prompted higher-ups to take a closer look at his beliefs. The recipient of an Army Commendation Medal and a soloist at the funeral of former First Lady Betty Ford, Sommers said his core beliefs are enough to mark a soldier for persecution in today's military.
>
> […]Army documents obtained by Fox News indicate Sommers was told that his actions bordered on being disrespectful to President Obama and the "slightest inference of disrespect towards superiors can have a demoralizing effect on the unit."
>
> "You should strive to express your opinion while being aware of the overall ramifications of your statements," the Army noted.
>
> […]During the summer months, Sommers came under fire for reading the works of Mark Levin, Sean Hannity and David Limbaugh.
>
> Sommers was reading Limbaugh's **"The Great Destroyer"**backstage at a U.S. Army Band concert at the U.S. Capitol. A superior officer told him that he was causing "unit disruption" and was offending other soldiers.
>
> "I wasn't reading aloud," he said. "I was just reading privately to myself. I was told they were frowning on that and they warned me that I should not be reading literature like that backstage because it was offensive."
>
> In another episode, he had been caught backstage reading a copy of Levin's **"Ameritopia: The Unmaking of America."**
>
> Sommers said he was told to refrain from reading the book "while in uniform or within sight of anyone from the band."
>
> "This is the first time since (my superior officer) indicated I had offended others with my choice of reading material, that I was officially counseled about it," he said. "The statement took my breath away. I was speechless."
>
> […]It's a long-standing tradition within the U.S. Army Band for promoted soldiers to host a party for their fellow troops. So the soldier decided to have Chick-fil-A cater the meal.
>
> "My family likes Chick-fil-A and we like what they stand for," he said. "I can make a statement and at least express a religious point of view at my promotion party – theoretically without any fear of reprisal."
>
> The soldier also tweeted about the party: "In honor of DADT repeal, and Obama/Holder's refusal to enforce DOMA act, I'm serving Chick-fil-A at my MSG promo reception for Army today."
>
> He also tweeted to radio host Mark Levin: "@Marklevinshow 'luv ya, Mark! Fellow Virginian & MSG, Army. Being promoted today, serving Chick-fil-A @ reception in honor of DADT repeal."
>
> Both tweets were cited in an official military document.
>
> "As a Soldier you must be cognizant of the fact that your statements can be perceived by the general public and other service members to be of a nature bordering on disrespect to the President of the United States," the document stated.
>
> Sommers said he paid for the party with personal money, not government funds.
>
> "I had no idea a Chick-fil-A sandwich would get me in trouble," he said.

> He was later summoned by a superior officer, who the soldier said is openly gay, and was told that unidentified individuals were offended by the tweets and some considered them to be racist.
>
> Sommers was reprimanded, threatened with judicial action and given a bad efficiency report. An investigation was also launched.

I keep telling people that the more that gay rights is pushed, the less religious liberty we will have. I find it striking that in a country that prides itself on being religious and moral, that we are so quick to throw out our religious liberty with both hands in order to be nice. Why do we care so much that our God-given liberties cause others to feel offended? Shouldn't we be informed enough about what is really going on with all these attempts to promote homosexuality to see what it really means for those of us who are religious and moral? The issue is that the gay activists think that their feelings of being offended are justification for silencing and coercing others – taking away our liberties. Let's see that clearly and then vote accordingly.

Meanwhile, here's another story of secularist fascism from the Air Force.

# Pastors vs the Bible: should men be shamed into marrying?

**Wintery Knight** · 8 June 2013 · Archived copy · Original

Recently, a book was recommended by Ligonier Ministries that tried to shame men into marrying. Here is a review of that book on Amazon.com – currently rated the "most helpful" review, because it quotes the book and cites the page number, so you know this person actually read the book.

Some quotes from the book, which is written by a pastor:

> "it is imperative for your well being that you be married, to move beyond the "not good" status of single adulthood" (pg59).
>
> "And the first step for many of us in becoming the men God wants us to be is to become married, so that we will leave behind our selfish ways and begin fulfilling our masculine calling through our relationship with our wives." (pg64)
>
> "It does not work very well when a man remains unmarried" (pg57)
>
> "to realize how vitally important it is (in the vast majority of cases) that you become married" (pg59).
>
> "Today, when God looks on single males and says, Not good, He undoubtedly has in mind a long list of truly unfit helpers, among them the pornography, video games, sports obsessions, and empty pizza boxes that are intrinsic to so many young adult male lives, even among Christians" (pg60).
>
> "The best thing a young Christian man can do… is to marry a godly woman" (pg59)
>
> "If you have shied away from marriage, let me urge you to reconsider and (perhaps) to commit to the necessary growing up" (pg59).
>
> "God says the same thing about single adult men today. He looks into their apartments and refrigerators and sighs, Not good" (pg57)
>
> "But it is especially good to have to rise up in masculine virtue and strength for the sake of my wife, leaving behind a self-focus that was, at best, only intended for a temporary season of singleness" (pg64)
>
> "If you are single, what is keeping you from marriage? Pray for God to enable you to take a wife and for God to provide you with a wife." (pg158)

Keep in mind that Paul was single. Was he able to obey and serve God while being single? According to this pastor, Paul was a self-centered failure who needed to grow up, man up and get married so he could serve God instead of being an irresponsible, messy, immature loser. Paul needed a godly wife to civilize him, but he failed in life because he stayed single and immature. This view is probably the majority view in churches today, and it probably explains why men can't be bothered with church. According to most pastors, women are already fully qualified to become wives, it's only that the lazy, useless men like Paul are not mature enough to abandon their video games and pizza boxes and get civilized by their saintly wives.

But what does the Bible actually say about men and marriage?

Let's look at this exegesis of the Bible from Unmasking Feminism.

Excerpt:

> And then there is this: 1 Corinthians 7:25-27 and 32-38
>
> *Now concerningthe betrothed,I have no command from the Lord, but I give my judgment as one who by the Lord's mercy is trustworthy. 26* ***I think that in view of the present distress it is good for a person to remain as he is. 27 Are you bound to a wife? Do not seek to be free. Are you free from a wife? Do not seek a wife.***

> Some Christians will say the "present distress" cited is not the same distress as our modern times and therefore we can reject this, but yet the bible is suppose to true at all times and all situations. There is and will always be a constant undertone of distress in our fallen world. If there wasn't, this would be Eden. The distress we are in now, which is clear to any red-pill thinker, is obviously the burden of feminism, liberalism, socialism, *et al* and the strains it has be put on our society. Under those strains, is it wise to seek a wife? Yes, if you have passions that will prevent you from being celibate, but if you can manage that, under the present distress, is there a point in taking a wife? See "Note" below for more on celibacy. Because there is no going back–these are hardcore, legitimate verses that men need to consider when pondering marriage.
>
> 32 I want you to be free from anxieties. The unmarried man is anxious about the things of the Lord, how to please the Lord. 33 **But the married man is anxious about worldly things, how to please his wife,34 and his interests are divided.** And the unmarried or betrothed woman is anxious about the things of the Lord, how to be holy in body and spirit. But the married woman is anxious about worldly things, how to please her husband. 35 I say this for your own benefit, not to lay any restraint upon you, but to promote good order and to secure your undivided devotion to the Lord.
>
> Again, if you have your passions under control, a life free of the worldly distraction (known as learning/managing/pleasing your wife) is the better, anxiety free route, to living a life that pleases the Lord. As it is said, "no man can have two masters". Either a Christian man is single and devoted to the causes of the Lord or married and devoted to the causes of Lord and wife. A distraction for sure, but necessary if his passion burns. He will just have to learn how to keep his wife from becoming a second master.
>
> 36 If anyone thinks that he is not behaving properly toward his betrothed, if his passions are strong, and it has to be, let him do as he wishes: let them marry—it is no sin. 37 But whoever is firmly established in his heart, being under no necessity but having his desire under control, and has determined this in his heart, to keep her as his betrothed, he will do well. 38 **So then he who marries his betrothed does well, and he who refrains from marriage will do even better.**
>
> Those who refrain from marriage with their passions under control will do better. They will be more focused and dedicated on the Lord. That is very clear and Christian men need to hear that in order to weigh marriage properly. There is nothing wrong with marriage, just that it can be burdening. There is nothing wrong with being single, just that you can't have sex, but as you will see in my "note" below that marriage may entail no sex anyway.
>
> I say all this not to be a downer and to sway men from marriage, but so they can make an informed decision. Wives are not always sunshine and lollipops. The modern Christian message is to just man-up and marry any Christian looking woman and instantly your life will be transformed into this Garden of Eden haven. Don't be fooled. There will be no heaven on earth. A wife can be a blessing if she is a good wife, one that does not place undue burden and strain on her husband. One that does not cause anxieties. But, and its a big BUT, there is no guarantee that marriage for the sake of marriage will make a woman a good wife or that any given wife will not be wearing sheep's clothing. Its a gamble and tolerance for risk should be considered. A single, celibate life is for those averse to risk. If you can manage yourself, its smooth sailing and a life with minimal anxieties. That is all you have to control.

1 Corinthians 7 is the chapter that many a pastor cannot afford to take seriously. He cannot accept the plain meaning of the text as it is written. If he did, he would offend many people in the church who believe that the primary purpose of men is to please women, not God. In church, a man has no right to evaluate a women for marriage and then decide for himself whether a prospective marriage is worthwhile for God or not. He has no right to ask a woman questions or lead her in order to see whether she can perform what he needs her to perform in order to make the marriage serve God. Many pastors believe that a man exists to serve a woman, and not to serve God.

When these feminist pastors cannot find support in the Bible to make the case for their "blame men" view, then

they resort to shaming men without the Bible. “Man Up” they bellow to single guys – as if marrying a woman were something that could be accomplished by spending more time in the weight room. Or that flexing muscles protects a man from the threat of no-fault divorce. “Single guys: don’t overlook the single moms” as one particularly foolish pastor recently advised. It’s very important to understand that many women who attend church today do not look to the Bible as an authority on morality. Many are also not prepared. Men have to be encouraged to select a woman who is ready for marriage, not be forced to rush into marriage with just any women.

According to polls, women are more likely to support gay marriage than men, for example, which shows that many women don’t really understand the need that a child has for a mother and a father. So that needs to be checked. And women are less likely to know how to defend their faith than men, as well. So that needs to be checked. Some Christian women are attacking the Bible’s teaching on fornication, saying that they should be allowed to have premarital sex if they are “in love”. So that needs to be checked, too. Instead of holding them accountable for being wrong on these issues, many pastors just urge men to “man up” and marry women, as is. But not all women are worth marrying, and so it may be better for a man to stay single if he can’t find a good one.

The best thing for a Christian man to do with a woman is to ask her questions to see exactly how she has applied the Bible to her own life, and whether she has taken on obligations and duties in order to serve God that were not easy or pleasing for her. It’s not enough to ask simple questions and await easy answers, you need to see that she has done the work to move from opinions to convictions. If she hasn’t done the work, then it’s better to stay single (and chaste). As 2 Timothy 2:4 says, “No one serving as a soldier gets entangled in civilian affairs, but rather tries to please his commanding officer.”

# Report: growth in homeschooling is outpacing new public school enrollments

**Wintery Knight** · 9 June 2013 · Archived copy · Original

From Breitbart.com. (H/T ECM)

Excerpt:

> A recent report in *Education News* states that, since 1999, the number of children who are homeschooled has increased by 75%. Though homeschooled children represent only 4% of all school-age children nationwide, the number of children whose parents choose to educate them at home rather than a traditional academic setting is growing seven times faster than the number of children enrolling in grades K-12 every year.
>
> As homeschooling has become increasingly popular, common myths that have long been associated with the practice of homeschooling have been debunked.
>
> Any concerns about the quality of education children receive by their parents can be put to rest by the consistently high placement of homeschooled students on standardized assessment exams. Data demonstrates that those who are independently educated generally score between the 65th and 89th percentile on these measures, while those in traditional academic settings average at around the 50th percentile. In addition, achievement gaps between sexes, income levels, or ethnicity—all of which have plagued public schools around the country—do not exist in homeschooling environments.
>
> According to the report:
>
> Recent studies laud homeschoolers' academic success, noting their significantly higher ACT-Composite scores as high schoolers and higher grade point averages as college students. Yet surprisingly, the average expenditure for the education of a homeschooled child, per year, is $500 to $600, compared to an average expenditure of $10,000 per child, per year, for public school students.
>
> The high achievement level of homeschoolers is readily recognized by recruiters from some of the best colleges in the nation. Home-educated children matriculate in colleges and attain a four-year degree at much higher rates than their counterparts from both public and private schools. Schools such as Massachusetts Institute of Technology, Harvard, Stanford, and Duke Universities all actively recruit homeschoolers.

The post also cites another study that puts to rest the "socialization" nonsense objection to homeschooling.

# Zack Kopplin debates Casey Luskin on the Louisiana Science Education Act on the Michael Medved show

**Wintery Knight** · 9 June 2013 · Archived copy · Original

The Michael Medved show is a national radio show broadcast out of Seattle, Washington. According to Talkers magazine, he has the fifth largest radio audience. He has a regular weekly segment on science and culture featuring scholars from the Discovery Institute.

Here is the seventh segment from this past week, courtesy of the Intelligent Design: The Future podcast.

The MP3 file is available for download. (38 minutes)

The description is:

> On this episode of **ID the Future**, the Medved Show hosts the CSC's Casey Luskin and student Zack Kopplin, a leading activist in the effort to repeal the Louisiana Science Education Act. Luskin and Kopplin debate the implications of the Louisiana law for science education standards and whether or not the law promotes the teaching of creationism.
>
> *Each week, leading fellows from Discovery Institute will join Michael Medved to talk about the intersection of science and culture. Listen in live online or on your local Medved station, or stay tuned at ID the Future for the weekly podcast.*

Topics: (I tried harder to get Kopplin's statements right than with Dan Barker last week, because Kopplin isn't as much a jerk as Barker)

- Medved: Should teachers be forced to teach creationism in public schools?
- Luskin: The Discovery Institute has never advocated that creationism be taught in public schools
- Medved: Does the Louisiana law mandate that creationism be taught in public schools
- Kopplin: Yes, the bill does because Bobby Jindal said that the bill teaches creationism
- Luskin: (Reads the actual text of the law) the law EXPLICITLY STATES that teaching creationism is forbidden
- Luskin: Governor Jindal is misinfored about the law, but if you look at the law it says NO CREATIONISM
- Kopplin: I don't care about what the law actually says, I'll just repeat that Bobby Jindal thinks it's creationism
- Kopplin: Thirty years ago, there was an attempt to mandate creationism, therefore this law is doing the same thing
- Medved: Are there any complaints that creationism is being taught in any schools after this law has been passed
- Kopplin: No, I don't know of any, but that's not because there are none! Maybe there are some that I haven't heard about yet
- Medved: If you are taught something that you think is stupid, then is that automatically a violation of your rights?
- Kopplin: Because you cannot allow the progress of science to call the religion of naturalism into question
- Luskin: About that Jindal quote – he was talking about what he wanted to pass, not the law that actually passed
- Luskin: (reads the text of the law again) The law explicitly says that teachign creationism in the classroom is prohibited
- Luskin: Intelligent design is not creationism. Creationism starts with the Bible. Intelligent Design starts with science
- Luskin: The law only supports teaching both sides of things that are already in the curriculum
- Luskin: ID is not already in the curriculum, therefore, the law does not allow it to be discussed

- Medved: Take Stephen C. Meyer's book on the origin of life, could that be used in the classroom?
- Kopplin: I am not very familiar with Meyer's book, but if it is critical of Darwinism and naturalism, then it should not be taught. I don't need to read it before I can censor it
- Luskin: Meyer's book advocates for ID, so it should not be taught in science classrooms
- Luskin: non-ID science papers that are critical of Darwinism should be allowed in science classroom so students get both sides
- Medved: Consider this brand new Oxford University Press book that is critical of Darwinian mechanisms, authored by Masatoshi Nei who is at Penn State University professor (written up on Evolution News)
- Medved: Should this research critical of Darwinism be allowed in science classrooms?
- Kopplin: I don't know if this book should be allowed in science classrooms
- Kopplin: I already know without reading anything though that there will never be evidence that supports intelligent design
- Kopplin: There is no evidence against Darwinism and there is no controversy and there is no disagreement among scientists
- Luskin: There are hundreds of papers in mainstream science peer-reviewed publications critical of Darwinism
- Luskin: (lists a stack of papers critical of core tenets of Darwinian theory from respect science journals in the last few years)
- Luskin: Masatoshi Nei recently posted a comment critical of the usefulness of the mutation-selection mechanism
- Luskin: The real issue is whether students are allowed to hear mainstream scientific criticisms of Darwinism in the science classroom
- Medved: Is it OK for a teacher to admit that on a specific issue in science, that there is no credible naturalistic explanation?
- Kopplin: I am a history major, so I don't want to comment on whether it is OK to admit that naturalism doesn't explain everything
- Luskin: A Harvard chemist says that the origin of life is an open issue in this peer-reviewed journal article
- Luskin: Teachers should be allowed to say that there is no accepted naturalistic explanation for the origin of life
- Luskin: teachers should NOT be teaching religion, or creationism, or even intelligent design in science classrooms
- Luskin: but teachers should be allowed to say what the Harvard chemist said in that peer-reviewed article in the science classroom
- Kopplin: there was a creationist woman who sat next to the Discovery Institute person when the law was being debated
- Kopplin: so based on that there is a scary hidden creationist agenda behind the law which is not reflected in the actual text law
- Luskin: Um, that woman has no connection to the Discovery Institute
- Luskin: seating arrangement at the hearings were pre-determined, not selected by those in attendance
- Luskin: what about people who are pushing Darwinism, who are anti-religious atheists and humanists? should they be disqualified?
- Luskin: we should not discredit the arguments of either side based on speculations about their motives – what counts is the evidence
- Kopplin: but I have a letter signed by lots of Nobel-prize winning scientists that opposes the Lousiana science education law
- Luskin: but that letter never actually quotes from the law, it is critiquing views that have nothing to do with the

actual law
- Medved: Summarize your views
- Kopplin: Criticism of Darwinism and naturalism using mainstream scientific evidence SHOULD NOT be allowed in the science classroom
- Liskin: Criticism of Darwinism and naturalism using mainstream scientific evidence SHOULD be allowed in the science classroom

And there is a period of questions from the callers.

This episode features a debate, so it is not to be missed. it is *always a good idea to hear both sides.* Unfortunately, ID people are the only ones who think that both sides should be heard.

I subscribe to the ID the Future podcast, and I really recommend that you do as well!

# Gallup polls show that men are more pro-life and more pro-marriage than women

**Wintery Knight** · 9 June 2013 · Archived copy · Original

*Note: in this post, I will be addressing the views of young, unmarried women, who tend to be more liberal than married women. Married women are not being targeted in this post, because their views tend to be more pro-life and pro-marriage.*

First, abortion. The latest Gallup poll shows that men are far more pro-life than women. Men are strongly pro-life by a margin of 8 points, 50-42. Women are more pro-abortion by a margin of 1 point, 47-46.

Second, marriage. Polls show that men are far more pro-marriage than women.

Excerpt:

> A new national poll points towards a gender gap over same-sex marriage.
>
> According to new numbers released Monday morning from Gallup, 50% of Americans say same-sex marriages should be legal. But break it down by gender, and 56% of women say same-sex couples should be legally allowed to marry, but only 42% of men feel the same way.

In addition, exit polls from the 2008 and 2012 elections revealed that about 70-80 percent of young, unmarried women voted for Obama, whose views on abortion are somewhere to the left of Kermit Gosnell. And Obama supports gay marriage. Men are more likely to vote conservative than young, unmarried women, especially married men.

Now some of you may find this data about men being good very surprising. According to many people these days, all young men do is look at porn, order in pizza and leave the boxes scattered around, play video games, binge drink, live in their parents' basement, underperform at school, and fail to find jobs so they can man up and marry these pro-abortion, pro-gay marriage women. None of this bad performance is caused by institutionalized feminism, or the effects of feminism on the family. It's all just bad, bad men being bad – so were are told. But somehow, despite reports that all men are losers, they seem to have better views on abortion and marriage than women.

**What does it mean?**

Think about what it means that a young, unmarried woman is pro-abortion.

Being pro-abortion means that a men and women should be allowed to have recreational sex before marriage, and then if a baby is conceived, then they should be able to terminate that unwanted pregnancy, and send taxpayers the bill. Pro-life doctors and nurses who don't want to perform the procedure must be forced to do it, lest the selfish grown-ups feel offended. Pro-life organizations who don't want to offer abortion-inducing drugs as part of their medical insurance must be forced to provide it, lest the selfish grown-ups feel offended. Pro-life taxpayers who don't want to pay for the recreational sex risks of others must be forced to pay for them, lest the selfish grown-ups feel offended.

Now suppose a man is considering marriage to a young, unmarried woman. It's likely that she supports abortion, given what polls show and what exit polls show. Now if a woman thinks that it is OK to kill an innocent unborn child in order to avoid being burdened with that child's needs, even though she consented to the recreational sex that produced that child, then should the man marry her? I think that a man should not marry such a woman. After all, if a woman is willing to kill a baby in order to protect her happiness, then she will certainly divorce her husband to do the same. Husbands are much less innocent than babies.

Now think about what it means that a young, unmarried woman is pro-gay marriage.

Being pro-gay marriage means that two men and two women should be able to adopt children away from one or both of their biological parents and raise them. Churches who don't want to perform the wedding ceremonies must be forced to perform the wedding ceremonies, lest the selfish grown-ups feel offended. Christian companies that don't want to treat gay couples as married must be forced to treat gay couples as married, lest the selfish grown-ups feel offended. Christian taxpayers who don't want to pay for the next generation of children to be indoctrinated to believe that marriage can be between two men or two women must be forced to pay for government to indoctrinate children to believe in redefined marriage, lest the selfish grown-ups feel offended.

Now suppose a man is considering marriage to a young, unmarried woman. It's likely that she supports gay marriage, given what the polls show and what exit polls show. Now if a woman thinks that it's OK to deprive a child of a mother or of a father and expose children to a notion of marriage that deprives them of stability, sexual faithfulness and permanence, then should the man marry her? I think that a man should not marry such a woman. After all, if a woman is willing to deprive a child of a mother or a father and of the interaction between a man and a woman cooperating in marriage, then she will certainly be willing to deprive any children she has with him of his presence, since she already believes that fathers are expendable and that the selfishness of adults trumps the needs of children.

**The way forward**

What can we do to fix young, unmarried women so that they are more pro-life and more pro-marriage, like men already are? Well, men are pro-life and pro-marriage because we read pro-life and pro-marriage books and because we watch debates on abortion and marriage. Men like to focus on things like logical arguments and scientific research. Men like to see pictures of the different development stages of unborn babies and read research papers about how same-sex marriage harms children and how welfare policies encourage women to have babies out of wedlock. Men are not inclined to decide moral views based on feelings, peer opinions and popular culture. In order to make young, unmarried women more pro-life and more pro-marriage, we should try to introduce them to more books and debates and scientific evidence, so that their views will change based on what is true, not based on feelings and peer pressure and cultural trends.

# Niall Ferguson argues that government is making it harder to run a business

**Wintery Knight** · 10 June 2013 · Archived copy · Original

In the Wall Street Journal.

Excerpt:

> Seven years of data suggest that most of the world's countries are successfully making it easier to do business: The total number of days it takes to carry out the seven procedures has come down, in some cases very substantially. In only around 20 countries has the total duration of dealing with "red tape" gone up. The sixth-worst case is none other than the U.S., where the total number of days has increased by 18% to 433. Other members of the bottom 10, using this metric, are Zimbabwe, Burundi and Yemen (though their absolute numbers are of course much higher).
>
> Why is it getting harder to do business in America? Part of the answer is excessively complex legislation. A prime example is the 848-page Wall Street Reform and Consumer Protection Act of July 2010 (otherwise known as the Dodd-Frank Act), which, among other things, required that regulators create 243 rules, conduct 67 studies and issue 22 periodic reports. Comparable in its complexity is the Patient Protection and Affordable Care Act (906 pages), which is also in the process of spawning thousands of pages of regulation. You don't have to be opposed to tighter financial regulation or universal health care to recognize that something is wrong with laws so elaborate that almost no one affected has the time or the will to read them.
>
> […]Each year, the World Economic Forum publishes its Global Competitiveness Index. Since it introduced its current methodology in 2004, the U.S. score has declined by 6%. (In the same period China's score has improved by 12%.) An important component of the index is provided by 22 different measures of institutional quality, based on the WEF's Executive Opinion Survey. Typical questions are "How would you characterize corporate governance by investors and boards of directors in your country?" and "In your country, how common is diversion of public funds to companies, individuals, or groups due to corruption?" The startling thing about this exercise is how poorly the U.S. fares.
>
> In only one category out of 22 is the U.S. ranked in the global top 20 (the strength of investor protection). In seven categories it does not even make the top 50. For example, the WEF ranks the U.S. 87th in terms of the costs imposed on business by "organized crime (mafia-oriented racketeering, extortion)." In every single category, Hong Kong does better.
>
> At the same time, the U.S. has seen a marked deterioration in its World Governance Indicators. In terms of "voice and accountability," "government effectiveness," "regulatory quality" and especially "control of corruption," the U.S. scores have all gone down since the WGI project began in the mid-1990s. It would be tempting to say that America is turning Latin, were it not for the fact that a number of Latin American countries have been improving their governance scores over the same period.
>
> Whatever the root causes of the deterioration of American institutions, smart people are starting to notice it. Last year Michael Porter of Harvard Business School published a report based on a large-scale survey of HBS alumni. Among the questions he asked was where the U.S. was "falling behind" relative to other countries. The top three lagging indicators named were: the effectiveness of the political system, the K-12 education system and the complexity of the tax code. Regulation came sixth, efficiency of the legal framework eighth.
>
> Asked to name "the most problematic factors for doing business" in the U.S., respondents to the WEF's most recent Executive Opinion Survey put "inefficient government bureaucracy" at the top, followed by tax rates and tax regulations.

The troubling thing to me is that the private sector has to make a profit in order to fund government, and I don't see

that the private sector will be able to producing the profits needed to fund our government's lavish spending. Nothing that I see about the next generation causes me to believe that they understand economics enough to vote to improve the business climate. They seem to be very much anti-business. One wonders where they expect to find jobs.

# Greg Koukl debates Michael Shermer on God, atheism, meaning and morality

**Wintery Knight** · 10 June 2013 · Archived copy · Original

The full transcript of a debate between Michael Shermer, editor of Skeptic magazine, and Greg Koukl, president of Stand to Reason. This debate occurred on Hugh Hewitt's radio show, and was moderated by Hugh Hewitt.

**HH = Hugh Hewitt**
**GK = Greg Koukl**
**MS = Michael Shermer**

Here is a 32-page PDF with the full debate transcript.

And here's an excerpt:

**GK:** Right. Actually, the big question here, Hugh, is whether it's possible to be good without God. Now I'm not talking about whether it's possible to be good without a belief in God. I certainly think that's possible, but be good without God. And the answer to that question hinges entirely on precisely what you mean by good. And so I was going to give an illustration. So a man drags a young girl into the alley, he sexually abuses her, strangles here, and tosses her into the dustbin. Is that act wrong? Now I think everybody listening is going to admit it is wrong. But here is the real question. What do we mean when we say that that act of rape and abuse and murder is wrong? Are we describing the action itself, the object? Are we saying that the object, the rape, the murder, has a quality of being wrong, and therefore, wherever that rape goes, the wrongness follows it, just like your height, 6' 2", or whatever it is, is an objective quality of you. Wherever you go, your height follows you in the same way. Does the wrongness follow the rape? Well, if it's a quality of the rape, if it's an objective quality of the rape, then it does. And it doesn't matter what people think about it, or what cultures decides, or what your evolutionary conditioning is. The rape is still wrong. The other alternative is that you're not talking about the rape. You're talking about yourself. You're talking about your genetic conditioning. You're talking about your culture's decision about that kind of thing. And if that's the case, then the truth of the wrongness of the rape is simply in the individual or the subject. And this is why philosophers distinguish between ethical objectivism and ethical subjectivism. Now there's lots of different subjectivisms in ethics. But simply put, if you're an ethical subjectivist, you're a relativist. And actual ethics don't exist. Ethics are an illusion. If you conclude that ethics are an illusion, there's lots of different ways to explain it. Michael's written a really great book, I think, called The Science Of Good And Evil. I've read most of it, and it's well written, and it's very compelling. But it's a description about how the illusion of ethics has taken place. If you want to go that route, you're welcome to go that route. But what you can't do is you can't then talk about morality as if it's objective when your explanations are subjective. So this is a problem that I think all atheists, including Michael, have to solve. Are ethics objective or relative? And if they're relative, then how can we make moral judgments that are meaningful on other people?

**HH:** Michael Shermer?

**MS:** Wow, let's just get right into it. Well, I don't think it's quite so black and white. That is to say I think there are provisional moral truths that exist whether there's a God or not. In other words, it's wrong, morally, absolutely morally wrong to rape and murder. And that would be true whether there was a God or not. In other words, if…is God saying that it's wrong because it's really wrong, and He's instructing us in his Holy Scripture that it's wrong? Or is it only wrong because He said so? And if it turned out there wasn't a God, would that make it okay? And my answer is no, it really is wrong, whether God says it's wrong or not. That is to say I think it really exists, a real, moral standard like that. Why? Well, because first, you could ask the person who is being affected, we should always ask the moral recipient of the act, how do you feel about being raped or murdered or stolen from or lied to. And the moral actor will tell you, it doesn't matter whether, if I could use a current example, I haven't any idea if Tiger Woods and his wife are religious or not. But you can just ask his wife whether it was morally right or wrong,

and she'll tell you. It doesn't matter whether there's a God or not. It's wrong. And so that's the first principle. Just ask. Ask the moral recipient of whether it's right or wrong. But I think Greg's after something deeper, that is to say is there something even deeper still behind the moral actor's feelings about how they're treated. And the answer is yes, I think so. We're a social species. We don't live in isolation. We live as members of a group. And as such, there's no possible way our group could survive, be cohesive, be a unit of any kind of solidarity against other groups, or against a harsh environment. If there were too much violations of social norms, that is if there were constant lying and cheating and raping and murdering, there's no way a social group could hang together. And as such, as we all know, we're very tribal. We're tribal against other groups, but within our groups, we're very pro-social, altruistic, cooperative. We have a good and evil in our nature. So to this extent, I find myself interesting often in agreement with my conservative friends on most of the things they consider morally, moral truths. That is, we share the same moral values, even though I come at it from a different perspective.

**HH:** Greg?

**GK:** Yeah, I'm actually not after something deeper here, Michael. At least to start out the discussion, I'm trying to be as simple and clear and precise as possible, because it's very easy to weave together a bunch of things that sound persuasive, but turn out to be different things. Like for example, Darwinian evolution, which is a materialistic process, and here I mean the blind watchmaker thesis, the neo-Darwinian synthesis, natural selection working on mutations, and a kind of a cultural evolution that Michael has just referred to as we work together as a group to survive as a group. Those are two entirely different things. One is materialistic, Darwinian, the other one is intelligent design, quite frankly, where the group gets together and makes some determinations to encourage some behavior and discourage others. What I'm trying to do is to be able to answer the question that came up initially, is God necessary for morality, which Michael denies. It's to say well, what is it that morality, that we're trying to describe? It is either objective, and therefore an immaterial obligation that applies to certain behaviors, or it is subjective. The things that Michael described were variously subjective, evolutionary elements, subjective cultural elements, but then he affirmed that we all have good and evil in our nature, or an awareness of that. I agree with that entirely. We all are aware of those things. That's why even if we don't believe in God, we can still know morality and follow it. The question is what accounts for real, genuine objective morality?

**HH:** One minute to the break, Michael Shermer.

**MS:** I'm not arguing for cultural evolution. I'm actually arguing as part of our, what you described as materialistic, natural selection, Darwinian evolution, that it's not enough to just pretend or fake being a good group member. You actually have to believe it, feel it, and live it. So what I'm arguing is that natural selected certain moral sentiments, as Adam Smith called them, moral feelings, an actual empathy, Adam Smith talked about, we actually empathize with somebody else, we can put ourselves into their shoes and feel their pain, I'm arguing that's very real. It's every bit as real a part of our evolutionary heritage as our eyes and our hands.

– – – –

**HH:** Michael Shermer, when we went to break, you were saying that evolutionary biology has produced a real morality.

**MS:** Yeah, I think really, Adam Smith had it right in his very first book, The Theory Of Moral Sentiments, long before Darwin, that we actually have in our biological nature, our human nature, the capacity to feel other people's pain. He called it empathy, we think of it often either as empathy or sympathy. That is, we really do connect to other people. A lot of good research on this now, brain scans, you can show somebody a little video of somebody they know, or have feelings for, getting pricked with a pin, and the same areas of their brain light up, the pain receptors, as in the person getting the pin prick. In other words, we have an evolved tendency to really be deeply, emotionally connected to our fellow group members. And that's why I say groups like World Vision, where you want to adopt a child, it doesn't help to show a picture of 10,000 starving African kids. What does affect us is one child, a picture of one child with a little biography. That's how you get people to adopt a child to donate. The reason for that is because essentially they're tricking the brain, our brains into making that stranger an honorary family

member, an honorary within group member, which is why I argue that free trade is one of the best ways of defusing normal tribal tensions between people. It makes them honorary friends, honorary members. Well, what's going on there is we're tricking the brain into sort of this evolutionary rule of thumb – be nice to people that are like you and that are related to you, and that you know, and that are fellow group members, and don't do what our natural tendency is, is to be tribal and xenophobic against those other guys. And free trade is one of the best things you can do for that. So I'm arguing that's actually tapping something deep within us.

**HH:** Greg Koukl?

**GK:** Yeah, basically, I agree with Mike completely here. We do have this tendency, and it seems to be universal among humankind. The question is, what is that tendency, actually? And what is the best way to explain it? And I see like a handful of significant problems with using evolution to explain morality. The first one is that evolution is a materialistic process. And here, I'm going back to an original point, and I don't want people to lose it. There is no way that you can take molecules, and reorganize them in any fashion, over any length of time, and have pop out of the mixture an objective moral principle that's immaterial, and that applies to human beings. All you're going to get is a reorganization of the molecules. And what they can produce, and this is what Mike has done in his book, and he mentioned just s few moments ago, they can produce sentiments. They can produce feelings. They can produce behavior. But this leads us to the second problem of using evolution to explain morality, is that morality is more than sentiments, feelings and behavior. Morality entails things like motive and intention. I mean, you could have a guy walk into a garage, walk out with a hose, and is that wrong? Well, it depends. Is it his hose or somebody else's hose? Did he intend to take the other person's hose? Is he borrowing the hose? So we can see here are elements that are part of the moral thing that needs to be explained, that are immaterial, and therefore the Darwinian explanation can't even in principle go there. It can't do that job. But here's the worst problem. Regardless of what our sentiments happen to be regarding moral actions, we can feel good or feel bad or whatever, the problem is that morality is prescriptive, not merely descriptive. That is it tells us not just what we did, but what we ought to have done in the past, and what we ought to do in the future. That is not something that any Darwinian mechanism can describe, because nothing about my biology can inveigh upon me to act a certain way for moral reasons in the future. It doesn't tell me why I should be good tomorrow. This is a huge difference between these two views, the descriptive and the prescriptive. Prescriptive is part of morality, and can't even, in principle, be explained by an evolutionary materialistic system.

**HH:** Michael Shermer, I'll give you a start on that. We have about 45 seconds to the break, so you may want to…we'll come back after the break and pick up. But what's your start to that?

**MS:** Well, the start would be that again, let's not think of evolution just as nature red and tooth and claw, and it's nasty, brutish and short, but that in fact, we have this whole other social evolution. And I'm not talking about cultural evolution where we consciously make decisions, but subconsciously, because it's in part of our nature to actually, seriously, deeply feel for other people and their actions, and the consequences of our actions, so that we actually have a sense of right and wrong that we're born with, but then culture taps into and tweaks, one way or the other.

– – – –

**HH:** Michael Shermer, when we went to break, Greg had made the argument that the Darwinian model simply cannot explain immaterial concepts like morality, that there's just no way you can rearrange the molecules to get there. You're saying well, yes you can.

**MS:** Yeah, I think so, because if we think of morality as another suite of emotions that are involved with other people's behaviors, the consequences of our actions, how we feel about them, how people feel about us when we do these things, that's as every bit as important a biological part of our nature as anything else we talk about. So let's take a real simple emotion. When you're hungry, nobody does any calculations about the caloric input/output ratios of eating an apple versus an ice cream, although now it's posted on the walls for us to see. But we just feel hungry, and we feel hungry for certain kinds of foods. The feeling of hunger is a proxy for something else. Evolution's done

the calculating for us. You need food, so we're going to, your hypothalamus is going to secrete these certain chemicals that causes your stomach to rumble and so on. When you're attracted to somebody else, a member of the opposite sex, nobody does the calculation by, let's say, a man finds a woman attractive who has a .67 hip to waist ratio, and an hourglass figure, although that is pretty much universal. Nobody walks about with calipers taking measurements of who they're going to want to date or ask out. You just look around, and you just go wow, I really find this woman attractive. It's a feeling you have, okay? So those are kind of simple emotions, but sliding up the scale, the moral emotions are really no different. When I lie to somebody, I've violated a social norm, and they respond in a very angry, hostile way. So those emotions that we both share, guilt, shame, anger, disgust, involved a social relationship that whether it was a norm violation, those are the kinds of emotions that are just like hunger and sexual attraction that are built into us by nature, by evolution. Or, if you wish, this is how God created the moral sentiments, just like He created everything else in the universe, through a process of nature. I think that's equally reasonable to argue. So I don't see that it has to be an atheistic viewpoint versus a theistic viewpoint to get to our moral sentiments. Why couldn't God have used evolution to create the moral sentiments as I've described them?

**GK:** Yeah, well, you don't actually believe that, I know, Mike, so this is kind of like adding God to the soup, you know, if it makes people feel better. But the basic argument is that evolution all by itself can do the trick. And I think if your listeners are listening carefully, what they're going to hear is Mike has just described, and if I'm being unfair to your assessment here, let me know, Mike, that moral feelings are simply that. They are sophisticated emotions that do some work for us for survival, and even on a group level. Now there's a name for this. It's called emotivism. A.J. Ayer, the famous atheist, offered this description of morality. It's a relativistic scheme of morality. Morality doesn't actually exist, Ayer argued. There is no objective right or wrong. Rape isn't wrong itself. What happens is, we have feelings about it, and we express it in moral language, but rape isn't really wrong. So your listeners are going to have to ask themselves the questions. When they just survey their own moral senses, and we all have access to this, do we want to believe that scientists have figured out that really what we're doing is feeling sophisticated, complicated emotions, and that the emotions are in us, and we are not seeing anything about the action? Or does it seem like rape is wrong? Look, when I say rape is wrong, I'm talking about the rape. When I say liver is awful, I'm talking about me. I'm talking about my own tastes and preferences. It's interesting, as Michael has given his explanation, though, that he's doing, and I don't know if you are aware of this, Michael, but you're doing the very thing that I kind of warned against. You give a description of the foundations of morality that turn out to be relativistic, but then there's a smuggling of a more objectivistic morality in the back door, like when Michael says you don't have to do what your nature tells you to do, in other words, what you've been programmed by evolution to do. You can kind of rise above that. Well, now we're talking about a morality that isn't dictated by evolution, but a morality that we can employ through our acts of will, to rise above this kind of brutish evolutionary morality. And that sounds suspiciously like the very thing that I'm talking about here.

**MS:** But I don't mean, there's nothing to rise above by itself. Yes, we have to say rise above our tribal instincts to be xenophobic when we meet somebody who's a stranger, who's different from us. We all struggle against that, particularly in a black and white America, where there's always been this underlying tension. Indeed, so culture helps us do that – education, travel, diversity of exposure to different people. That makes you a little more tolerant. Okay, but I'm not talking about that. What I'm talking about is tapping into the good part of our nature, the fact that in addition to that xenophobic tribalism we have, we also have this other side that almost never gets discussed in evolutionary…even in evolutionary circles, you'll still hear evolutionary biologists talking about, in a way that Huxley did, and Herbert Spencer did in Darwin's own time, that we have to somehow struggle mightily against our genes to overcome that nasty tendency we have to want to rape, kill, pillage and destroy. Well no, actually, we have this whole other side that's just as genetically programmed into our nature. And the point of culture – education, politics, economics and so on, is to tap into the better angels of our nature as Lincoln said.

**GK:** Okay, here's the question I have for you, Michael, then. You've identified that really, we have good and we have bad. That's part of, under your terms, that's part of our genetic nature, and we can choose to tap into what you call the good side. Why ever should we do such a thing if there is not a higher standard that directs our action to the better side, your words, than the bad side, your words, if really, ultimately, they are both the result of a genetic

evolution, and from outside terms, neither is better than the other. Why should we do that, Michael?

**MS:** Yeah, well I don't see how entering God into the equation changes that problem at all.

**GK:** Well, that's the next step. What I'm trying to show is that the should comes from the outside, and if we can demonstrate that, then we can ask…

# William Lane Craig debates Austin Dacey: Does God Exist?

**Wintery Knight** · 10 June 2013 · Archived copy · Original

Here is the video and summary of a debate between Christian theist William Lane Craig and Austin Dacey at Purdue University in 2004 about the existence of God.

**The debaters:**

- William Lane Craig
- Austin Dacey

**The video:** (2 hours)

The video shows the speakers and powerpoint slides of their arguments. Austin Dacey is one of the top atheist debaters, and I would put him second to Peter Millican alone, with Walter Sinnott-Armstrong in third place. This is the debate to show people who are new to apologetics. The debate with Peter Millican is better for advanced students, and that's no surprise since he teaches at Oxford University and is familiar with all of Dr. Craig's work. The Craig-Dacey debate is the one that I give to my co-workers.

By the way, you can get the DVDs and CDs for the first Craig-Dacey debate and the second Craig-Dacey debate and the second Craig-Sinnott-Armstrong debate. The Peter Millican debate is not available on DVD, but the link above (Peter Millican) has the video and my summary.

Dr. Dacey's 5 arguments below are all good arguments that you find in the academic literature. He is also an effective and engaging speaker, This is a great debate to watch!

SUMMARY of the opening speeches:

**Dr. Craig's opening statement:**

Dr. Craig will present six reasons why God exists:

1. (Contingency argument) God is the best explanation of why something exists rather than nothing
2. (Cosmological argument) God's existence is implied by the origin of the universe
3. (Fine-tuning argument) The fine-tuning of the universe for intelligent life points to a designer of the cosmos
4. (Moral argument) God is the best explanation for the existence of objective moral values and objective moral duties
5. (Miracles argument) The historical facts surrounding the life, death and resurrection of Jesus
6. (Religious experience) God's existence is directly knowable even apart from arguments

**Dr. Dacey's opening argument:**

There are two ways to disprove God's existence, by showing that the concept of God is self-contradictory, or by showing that certain facts about ourselves and the world are incompatible with what we would expect to be true if God did exist. Dr. Dacey will focus on the second kind of argument.

1. The hiddenness of God
2. The success of science in explaining nature without needing a supernatural agency
3. The dependence of mind on physical processes in the brain
4. Naturalistic evolution
5. The existence of gratuitous / pointless evil and suffering

**One final point:**

One thing that I have to point out is that Dr. Dacey quotes Brian Greene during the debate to counter Dr. Craig's cosmological argument. Dr. Craig could not respond because he can't see the context of the quote. However, Dr. Craig had a rematch with Dr. Dacey where was able to read the context of the quote and defuse Dr. Dacey's objection. This is what he wrote in his August 2005 newsletter after the re-match:

> The following week, I was off an another three-day trip, this time to California State University at Fresno. As part of a week of campus outreach the Veritas Forum scheduled a debate on the existence of God between me and Austin Dacey, whom I had debated last spring at Purdue University. In preparation for the rematch I adopted two strategies: (1) Since Dacey had come to the Purdue debate with prepared speeches, I decided to throw him for a loop by offering a different set of arguments for God, so that his canned objections wouldn't apply. I chose to focus on the cosmological argument, giving four separate arguments for the beginning of the universe, and on the evidence for Jesus' resurrection. (2) I reviewed our previous debate carefully, preparing critiques of his five atheistic arguments. In the process I found that he had seriously misunderstood or misrepresented a statement by a scientist on the Big Bang; so I brought along the book itself in case Dacey quoted this source again. I figured he might change his arguments just as I was doing; but I wanted to be ready in case he used his old arguments again.
>
> […]The auditorium was packed that night for the debate, and I later learned that there were overflow rooms, too. To my surprise Dr. Dacey gave the very same case he had presented at Purdue; so he really got clobbered on those arguments. Because he wasn't prepared for my new arguments, he didn't even respond to two of my arguments for the beginning of the universe, though he did a credible job responding to the others. I was pleased when he attacked the Big Bang by quoting the same scientist as before, because I then held up the book, specified the page number, and proceeded to quote the context to show what the scientist really meant.

Dr. Craig is always prepared!

# Phone call recording of IRS agent reveals anti-Christian, anti free speech bias

**Wintery Knight** · 11 June 2013 · Archived copy · Original

From Alliance Defending Freedom.

Excerpt:

> Alliance Defending Freedom made public Monday audio of a phone conversation that the Internal Revenue Service placed to a non-profit organization that provides support to women in abusive pregnancy situations. In the recorded phone conversation, an IRS agent lectures the president of the organization about forcing its religion and beliefs on others and inaccurately explains that the group must remain neutral on issues such as abortion.
>
> Alliance Defending Freedom represents the group, which did not receive its tax-exempt status until last week, nearly two and a half years after applying for it.
>
> "The IRS is a tax collector; it shouldn't be allowed to be the speech and belief police," said Senior Legal Counsel Erik Stanley. "The current scandal isn't new but has merely exposed the abuse of power that characterizes this agency and threatens our fundamental freedoms."
>
> The IRS grants tax exemptions to religious, educational, and/or charitable organizations. In January 2011, Pro-Life Revolution, which operates from Texas under all three purposes, filed an application for tax-exempt status with the IRS.
>
> Four months later, the IRS sent a letter requesting "more information" and an explanation of how the organization's activities are educational or charitable even though IRS rules specify that an organization need only operate for "one or more" of the three exempt purposes. President of Pro-Life Revolution Ania Joseph nonetheless replied and answered the IRS's questions.
>
> In March 2012, Joseph received a call from IRS Exempt Organization Specialist Sherry Wan, who told her that, in order to obtain a tax exemption, "You cannot force your religion or force your beliefs on somebody else…. You have to know your boundaries. You have to know your limits. You have to respect other people's beliefs."

The really horrible thing about this secular leftist fascism is that it is all taxpayer-funded. The victim of this inquisition is paying for the inquisition. Not even the Roman Catholic church did that.

# Lee Strobel: why does God allow tragedy and suffering?

**Wintery Knight** · 11 June 2013 · Archived copy · Original

I found MP3 audio, video and a full transcript of Lee Strobel's sermon on suffering at Apologetics 315.

Strobel has 5 points in his sermon:

- God is not the creator of evil and suffering.
- Though suffering isn't good, God can use it to accomplish good.
- The day is coming when suffering will cease and God will judge evil.
- Our suffering will pale in comparison to what God has in store for his followers.
- We decide whether to turn bitter or turn to God for peace and courage.

Here's one of them:

> Though suffering isn't good, God can use it to accomplish good. He does this by fulfilling His promise inRomans 8:28: "And we know that in all things God works for the good of those who love him, who have been called according to his purpose."
>
> Notice that the verse doesn't say God causes evil and suffering, just that he promises to cause good to emerge. And notice that the verse doesn't say we all will see immediately or even in this life how God has caused good to emerge from a bad circumstance. Remember, we only see things dimly in this world. And notice that God doesn't make this promise to everyone. He makes the solemn pledge that he will take the bad circumstances that befall us and cause good to emerge if we're committed to following Him.
>
> The Old Testament gives us a great example in the story of Joseph, who went through terrible suffering, being sold into slavery by his brothers, unfairly accused of a crime and falsely imprisoned. Finally, after a dozen years, he was put in a role of great authority where he could save the lives of his family and many others. This is what he said to his brothers in Genesis 50:20: "You intended to harm me, but God intended it for good to accomplish what is now being done, the saving of many lives." And if you're committed to God, He promises that He can and will take whatever pain you're experiencing and draw something good from it.
>
> You might say, "No, he can't in my circumstance. The harm was too great, the damage was too extreme, the depth of my suffering has been too much. No, in my case there's no way God can cause any good to emerge."
>
> But if you doubt God's promise, listen to what a wise man said to me when I was researching my book The Case for Faith: God took the very worst thing that has ever happened in the history of the universe — deicide, or the death of God on the cross — and turned it into the very best thing that has happened in history of universe: the opening up of heaven to all who follow Him. So if God can take the very worst circumstance imaginable and turn it into the very best situation possible, can he not take the negative circumstances of your life and create something good from them?
>
> He can and He will. God can use our suffering to draw us to Himself, to mold and sharpen our character, to influence others for Him – He can draw something good from our pain in a myriad of ways…if we trust and follow Him.

Click through for links to the audio and video, as well as a PDF of the full transcript.

I wrote a post on the problem of evil recently which surveys more academic responses to the problem of evil.

# Mike Licona lectures on new insights into the resurrection of Jesus

**Wintery Knight** · 11 June 2013 · Archived copy · Original

Here's a quick overview of Michael Licona's latest book on the resurrection, entitled "The Resurrection of Jesus".

60 minutes of lecture, 20 minutes of Q&A.

Summary:

- Dr. Licona's background and education
- The definition of history and philosophy of history
- Postmodern approaches to history
- Historical bedrock: facts that are historically demonstrable
- Historical criterion 1: Explanatory scope
- Historical criterion 2: Explanatory power
- Historical criterion 3: Plausibility
- Historical criterion 4: Ad Hoc / Speculation / non-evidenced assumptions
- Inference to the best explanation
- Investigating miracle claims: is it possible? How?
- Objection of James D.G. Dunn
- Objection of Bart Ehrman
- New Testament sources: Gospels and Paul's letters
- The Gnostic gospels: are they good sources?
- The minimal facts
- The hallucination hypothesis
- The best explanation

While watching this lecture, it struck what good preparation it was for understanding debates. And I have a new Mike Licona debate to post next week, too.

If you're interested in Mike's minimal facts case for the resurrection, here's a video on that:

Lee Strobel and Mike discuss the minimal facts approach to the resurrection, as well as the views of skeptical scholar Bart Ehrman, whom Mike has debated several times.

You can donate to Mike Licona's ministry here: Risen Jesus. I do recommend his ministry.

If you are looking for a good book to read on this topic, the best introductory book on the resurrection is "The Case for the Resurrection of Jesus" and the best comprehensive book is "The Resurrection of Jesus".

# Obama administration approves Plan B morning after pill for young girls

**Wintery Knight** · 12 June 2013 · Archived copy · Original

The Family Research Council reports on a very disappointing story.

Excerpt:

> If there's one thing the Obama administration has mastered, it's walking out on their responsibilities in court. Yesterday, the Justice Department sent its Plan B appeal to the same dust heap as its DOMA defense, telling reporters that it would give up its legal campaign after a couple of recent setbacks. The administration's policy, which for two years had been the only thing standing between little girls and a powerful birth control drug, is now a thing of the past, as Health and Human Services (HHS) officially bows out of the battle so many parents willed it to keep fighting. The sudden surrender by Secretary Kathleen Sebelius means that the controversial and potent morning-after pill will be available to anyone — of any age — without a prescription.
>
> Before Monday, the administration took a lot of heat for pitting itself against the President's closest allies — radical feminists and abortion groups who object to even the slightest restrictions on "contraception." In a letter to U.S. District Judge Edward Korman, who authored the scathing ruling against Sebelius's policy, the government's attorneys promised to step aside and allow unlimited sales. As soon as the manufacturers submit a new drug application, the FDA promises to fast-track the pills to drugstore shelves.
>
> Initially, the DOJ had asked Korman to suspend his ruling until an appeals court could weigh in — which it did last week. And although the judges' decision was an obstacle, there were plenty of legal options to overcome it. Instead, the President dropped the case — along with the facade of concern.
>
> Judge Korman, like President Obama, has two children. Yet neither man seems overly concerned that the drug they're both endorsing has never been tested on pre-teen and adolescent girls. Judge Korman called HHS's policy "scientifically unjustified," when in fact, the only thing that's scientifically unjustified is the effect of these high doses of hormones on young girls. The FDA hasn't conducted a single study on Plan B's risks to girls under 17 — but as far as liberals are concerned, nothing should hinder access to anything related to sex, including personal safety.

There was one reaction to this story that I wanted to quote here:

> Janice Crouse, also of CWFA, responded: "Once again, those who yell the loudest about caring about the nation's children and youth applaud a decision to place our kids in a special interest experiment. Plan B, popularly called the 'morning-after pill' is a much-higher-dosage version of the regular birth control pill (which used to require a doctor's prescription and continued doctor's supervision). It is irresponsible to advocate over-the-counter use of these high-potency drugs, which would make them available to anyone – including those predators who exploit young girls. Mark my words, it will not be long before we see girls and women forced to purchase Plan B for their abuser to keep them and others enslaved. This is a pimp, predator, and pedophile's dream – unlimited access to Plan B."
>
> She added: "This is a political decision, made by those who stand to profit financially from an action that puts ideology ahead of the nation's girls and young women. Where is the scientific data and solid reasoning behind a decision that endangers minors?"
>
> Kristan Hawkins of Students for Life of America also weighed in on the decision.
>
> She told LifeNews: "President Obama is waging a War on Girls by allowing young children to get Plan B without a physician or parent's care or knowledge. The morning after pill is a megadose of the birth-control pill, which has been categorized by the World Health Organization as a Group I carcinogen. That's the highest

> possible ranking – cigarettes are also in Group I. So why are drugstores required to put cigarettes behind the counter and ask for a photo id to stop minors from purchasing them, but President Obama is now ordering the morning after pill be sold over the counter, next to candy bars and packs of gum? This is not reproductive justice, this is child abuse."

Just to be clear, according to the drug manufacturer, Plan B does cause abortions in some situations by preventing the implantation of a fertilized egg.

# New York Times: no global warming in the last 15 years, despite CO2 increase

**Wintery Knight** · 12 June 2013 · Archived copy · Original

From the radically leftist New York Times, of all places.

Excerpt:

> As unlikely as this may sound, we have lucked out in recent years when it comes to global warming.
>
> The rise in the surface temperature of earth has been markedly slower over the last 15 years than in the 20 years before that. And that lull in warming has occurred even as greenhouse gases have accumulated in the atmosphere at a record pace.
>
> The slowdown is a bit of a mystery to climate scientists. True, the basic theory that predicts a warming of the planet in response to human emissions does not suggest that warming should be smooth and continuous. To the contrary, in a climate system still dominated by natural variability, there is every reason to think the warming will proceed in fits and starts.
>
> But given how much is riding on the scientific forecast, the practitioners of climate science would like to understand exactly what is going on. They admit that they do not, even though some potential mechanisms of the slowdown have been suggested. The situation highlights important gaps in our knowledge of the climate system, some of which cannot be closed until we get better measurements from high in space and from deep in the ocean.

Here was a similar recent story from left-leaning Reuters news service.

Excerpt:

> Scientists are struggling to explain a slowdown in climate change that has exposed gaps in their understanding and defies a rise in global greenhouse gas emissions.
>
> Often focused on century-long trends, most climate models failed to predict that the temperature rise would slow, starting around 2000. Scientists are now intent on figuring out the causes and determining whether the respite will be brief or a more lasting phenomenon.
>
> […]"The climate system is not quite so simple as people thought," said Bjorn Lomborg, a Danish statistician and author of "The Skeptical Environmentalist" who estimates that moderate warming will be beneficial for crop growth and human health.
>
> Some experts say their trust in climate science has declined because of the many uncertainties. The UN's Intergovernmental Panel on Climate Change (IPCC) had to correct a 2007 report that exaggerated the pace of melt of the Himalayan glaciers and wrongly said they could all vanish by 2035.
>
> "My own confidence in the data has gone down in the past five years," said Richard Tol, an expert in climate change and professor of economics at the University of Sussex in England.

Global warming is not now and has never been a scientific hypothesis. Global warming is the corruption of science in order to serve political ends. What is really happening is that big government is paying scientists to produce "research" which advocates for bigger government. In effect, government bribed the university professors to fake research that could be used to trick the public into voting for more government control of the private sector. The fastest way to solve this would be to get the government out of the higher education business and let science serve the needs of ordinary people instead of corrupt bureaucrats.

# Greg Koukl explains how to be a consistent moral relativist

**Wintery Knight** · 12 June 2013 · Archived copy · Original

The absolute easiest way to get into a good apologetics conversation with someone is to ask them what makes something right or wrong on their view.

Just ask the person you want to engage two questions:

1. Is it it wrong to treat people badly just because of their skin color?
2. What makes it wrong?

Now, as I see it, there are only 3 possible answers to this question.

1. I personally prefer not to do that – it is wrong *for me.*
2. Our culture has evolved a set of customs that apply for us in this time and place, and that set of customs says that members of the society ought not to do that. It is wrong *for us, here and now.*
3. Humans are designed to act in a certain way, and part of that design is that we ought not to do that. Acting in line with our design allows us to flourish, (Aristotle's *eudaimonia*).

Response #1, is called "moral relativism". Response #2 is called "cultural relativism". Response #3 is my view: moral realism. I believe in a hierarchy of moral absolutes that exist objectively, because they are part of God's design for us and the universe.

I wanted to go over a paper by Greg Koukl from Stand to Reason, in which he critiques moral relativism. His paper is called "Seven Things You Can't Do as a Moral Relativist". First, let's see the list of seven things.

1. You can't make moral judgments about other people's moral choices
2. You can't complain about God allowing evil and suffering
3. You can't blame people or praise people for their moral choices
4. You can't claim that any situation is unfair or unjust
5. You can't improve your morality
6. You can't have meaningful discussions about morality
7. You can't promote the obligation to be tolerant

You'll have to read the paper to see how he argues for these, but I wanted to say a brief word about number 1.

> **Rule #1: Relativists Can't Accuse Others of Wrong-Doing**
>
> Relativism makes it impossible to criticize the behavior of others, because relativism ultimately denies that there is such a thing as wrong- doing. In other words, if you believe that morality is a matter of personal definition, then you can't ever again judge the actions of others. Relativists can't even object on moral grounds to racism. After all, what sense can be made of the judgment "apartheid is wrong" when spoken by someone who doesn't believe in right and wrong? What justification is there to intervene? Certainly not human rights, for there are no such things as rights. Relativism is the ultimate pro-choice position because it accepts every personal choice—even the choice to be racist.

In moral relativism, what you ought to do is totally up to you. Morality is just like a lunch buffet – you pick what you like based on your personal preferences.

I remember one particular discussion I had with a non-Christian co-worker. Both she and her live-in boyfriend were moral relativists. They were fighting because she was angry about his not having (or wanting) a job, and he was angry because when he asked her for space, she immediately ran out and cheated on him.

What's interesting is that both of these people chose the other in order to escape being judged themselves. I think this happens a lot in relationships today. Both people don't want to be judged by the other person, but they both want to the other person to treat them well and to honor moral obligations. Isn't that interesting? I don't think that you can have something like marriage work when neither person takes moral obligations to the other person seriously.

# 72-year-old grandmother uses gun to defend her home from intruder

**Wintery Knight** · 13 June 2013 · Archived copy · Original

This is a really well-written news article by Fox News.

Full text:

> A 72-year-old Southern California grandmother who shot at — and narrowly missed — a man trying to break into her home said Tuesday she was shocked at the attention her action was getting but does not regret defending herself and her husband, an 85-year-old World War II veteran who uses a wheelchair.
>
> Jan Cooper, of Anaheim, fired one shot from her .357-magnum Smith & Wesson revolver around 12:30 a.m. Sunday as a man attempted to break into her home. During a 911 call of the incident, Cooper can be heard begging with the dispatcher to send deputies and warns that she has a gun at the ready as her Rottweiler barks furiously in the background.
>
> Minutes later, a breathless Cooper says the man has come to the back porch and is trying to get in the house through a sliding door. Through the vertical blinds, Cooper saw his silhouette just inches away through the glass as he began to slide open the door.
>
> “I’m firing!” Cooper shouts to the dispatcher as a loud band goes off.
>
> Cooper then curses at the suspect, shouting at him to “back up.”
>
> “You’d better get the police here. I don’t know whether I hit him or not. I’m not sure. He’s standing at my door, my back door. He’s in my yard,” she said.
>
> The suspect, 31-year-old Brandon Alexander Perez, was not hit and was arrested a short while later by responding deputies, who heard the gunshot, said Jim Amormino, spokesman for the Orange County Sheriff’s Department.
>
> Perez has pleaded not guilty to a burglary charge and has a court date later this month. The Associated Press was unable to leave an after-hours message for his attorney.
>
> Perez had a rap sheet that included other burglary and narcotics charges and was on parole and staying at a halfway house not far from the Coopers’ address, Amormino said.
>
> Cooper’s gun, which she has owned for about 20 years, was legally purchased and properly registered, he said.
>
> “Even though that dog was barking, he still was desperate to get in. So who knows what may have happened if she didn’t fire that round,” Amormino said.
>
> On Tuesday, Cooper was soft-spoken and composed, with her gray hair pulled back neatly in a hairband and her husband at her side during a news conference at a sheriff’s substation.
>
> Cooper said she is amazed by the anger in her voice — and the curse word she let fly — after she fired the shot.
>
> “I am a Christian woman and I’m very proud of it and I don’t curse but after I shot, rage took hold and I just blasted away,” she said. “And, in fact, afterwards my husband said, `I’ve never heard you talk like that!”‘
>
> The stunned intruder apologized to Cooper after she fired, she recalled, telling her, “I’m sorry, ma’am. I’m leaving. Please don’t shoot.”
>
> The grandmother of a 15-year-old grandson said she doesn’t regret firing her weapon, although she has considered how she would have reacted if she had hit or killed the man. Deputies have told her that, based on his height and the bullet hole, the shot that she fired through a narrow gap in the sliding door passed within inches of his left cheek.

> "I don't mean to shoot anybody," said Cooper, a self-described tomboy who has also tried archery and knife-throwing and has owned guns since her teens. "But whatever's necessary to literally stop them — he was not going to come into my home."
>
> **Her husband, Bob Cooper, chuckled when asked if his wife had learned her aggression from him and his military service. Cooper worked gathering intelligence in Italy and France in the build-up to D-Day and spent years going to the shooting range with his wife after the war, he said.**
>
> **"I'm not surprised at all, not one bit," he said. "I know her capabilities and what she can do if she has to."**

This is a great story because it really explains what it is like to have a crazy criminal trying to break into your house, and the police are basically incapable of helping you. It's you and the criminal, and that's why Americans believe in legal firearm ownership for law-abiding citizens.

I really liked this article and the way it was written. Please consider forwarding it on to your friends who may not understand what being a victim of a crime is really like. And husbands, teach your wives how to use firearms. The life you save may be your own!

# New study: health benefits of marriage are unique to opposite-sex unions

**Wintery Knight** · 13 June 2013 · Archived copy · Original

This is from the blog of the National Organization for Marriage.

Excerpt:

> A new study in the Journal of Epidemiology followed 6.5 million Danish persons for nearly 30 years (for a total of 112.5 million person-years) looking at how living arrangements (being single, cohabiting, married, widowed or in a same-sex union) affected their health outcomes.
>
> From the official abstract:
>
> "[Hazard Ratios] for overall mortality changed markedly over time, most notably for persons in same-sex marriage. In 2000–2011, opposite-sex married persons (reference, HR = 1) had consistently lower mortality than persons in other marital status categories in women (HRs 1.37–1.89) and men (HRs 1.37–1.66). Mortality was particularly high for same-sex married women (HR = 1.89), notably from suicide (HR = 6.40) and cancer (HR = 1.62), whereas rates for same-sex married men (HR = 1.38) were equal to or lower than those for unmarried, divorced and widowed men. Prior marriages (whether opposite-sex or same-sex) were associated with increased mortality in both women and men (HR = 1.16–1.45 per additional prior marriage)."

So, what do we learn? We learn that just slapping the label "marriage" onto gay couples doesn't give them the same health benefits as natural marriage.

# How to respond to postmodernism, relativism, subjectivism, pluralism and skepticism

**Wintery Knight** · 13 June 2013 · Archived copy · Original

Four articles from Paul Copan over at the UK site "BeThinking". Each article responds to a different slogan that you might hear if you're dealing with non-Christians on the street.

**"That's just your interpretation!"**

Some of his possible responses:

- Gently ask, 'Do you mean that your interpretation should be preferred over mine? If so, I'd like to know why you have chosen your interpretation over mine. You must have a good reason.'
- Remind your friend that you are willing to give reasons for your position and that you are not simply taking a particular viewpoint arbitrarily.
- Try to discern if people toss out this slogan because they don't like your interpretation. Remind them that there are many truths we have to accept even if we don't like them.
- 'There are no facts, only interpretations' is a statement that is presented as a fact. If it is just an interpretation, then there is no reason to take it seriously.

More responses are here.

**"You Christians are intolerant!"**

Some of his possible responses:

- If you say that the Christian view is bad because it is exclusive, then you are also at that exact moment doing the very thing that you are saying is bad. You have to be exclusive to say that something is bad, since you exclude it from being good by calling it bad.
- There is a difference, a clear difference between tolerance and truth. They are often confused. We should hold to what we believe with integrity but also support the rights of others to disagree with our viewpoint.
- Sincerely believing something doesn't make it true. You can be sincere, but sincerely wrong. If I get onto a plane and sincerely believe that it won't crash then it does, then my sincerity is quite hopeless. It won't change the facts. Our beliefs, regardless of how deeply they are held, have no effect on reality.

More responses are here.

**"That's true for you, but not for me!"**

Some of his possible responses:

- If my belief is only true for *me*, then why isn't your belief only true for you? Aren't you saying you want me to believe the same thing you do?
- You say that no belief is true for everyone, but you want everyone to believe what you do.
- You're making universal claims that relativism is *true* and absolutism is *false*. You can't in the same breath say, 'Nothing is universally true' *and* 'My view is universally true.' Relativism falsifies itself. It claims there is *one* position that is true – *relativism!*

More responses are here.

**"If you were born in India, you'd be a Hindu!"**

Some of his possible responses:

- Just because there are many different religious answers and systems doesn't automatically mean pluralism is correct.
- If we are culturally conditioned regarding our religious beliefs, then why should the religious pluralist think his view is *less* arbitrary or conditioned than the exclusivist's?
- If the Christian needs to justify Christianity's claims, the pluralist's views need just as much substantiation.

More responses are here.

And a bonus: "How do you know you're not wrong?".

Being a Christian is fun because you get to think about things at the same deep level that you think about anything else in life. Christianity isn't about rituals, community and feelings. It's about truth.

In case you want to see this in action with yours truly, check this out.

# J. Warner Wallace: who is responsible for explaining Christianity to your child?

**Wintery Knight** · 14 June 2013 · Archived copy · Original

Here is a must-read post from J. Warner Wallace, author of "Cold Case Christianity".

Excerpt:

> It's tempting to assign our responsibility as parents to others, especially when it comes to issues that require some expertise we don't already possess. When my daughter was struggling with geometry, my first inclination was to hire a tutor, even though my architecture degree forced me through several layers of calculus and I was proficient at geometry at one time myself. Instead of hiring someone, my son and I worked through each question with my daughter. I took the time to relearn the material so I could teach it to her. It was a pain, but it was worth it. I love my daughter and I know my daughter's learning style, her concerns and her personality. I can tell when she's "getting it" and when she's just pretending to get it. For this reason, I knew I was the best person to help her, and although it required some work on my part, it was the right decision.
>
> Spiritual instruction is really no different. It's tempting to assign this form of instruction to a youth pastor or ministry. Spiritual questions are often difficult to answer and questions related to secular philosophy, historical veracity and arguments for the existence of God can seem insurmountable. When the challenges arise, it's easy to look to someone else for an answer. At times like these, most of us find ourselves saying, "Let me get you a book," or "I'll try to find someone you can talk to." But, that's not what our kids need from us when they first begin questioning. They came to *us* with their questions and they need *us* to provide them with the answers. We're the ones who love our kids enough to understand their shape and the nature of their personalities. We ought to know how best to respond to their questions as well. When your son or daughter begins questioning his or her faith, *you're* the person who needs to become the best Christian Case Maker they know. This is especially true if your kids have questions when they are very young.

I've noticed some parents at my church who seem to focus the bulk of their efforts in this life on their own enterprises. They aren't quite sure what to do with their own children. They don't know why they had them, except in order to be made happy by them. If they are concerned with religion at all, they depend on other people to teach their children about it. If parents can't explain things to their children, then children will come to believe that Christianity is something that people affirm without reasons and evidence. In addition, parents who know why they believe what they believe will find it much easier to live out authentic Christian lives. And that has a huge impact on a child.

UPDATE: I was dressing for work this morning and checking for new podcasts and found that there is a podcast for this blog post. It's really good, I listened to the whole thing while in the gym, and I highly recommend it, even if you don't have children yourself.

# If we redefine marriage, then what will the schools teach our children about it?

**Wintery Knight** · 14 June 2013 · Archived copy · Original

Here's a good article in the Public Discourse.

Excerpt:

> We need to be careful not to project our adult understandings onto children. They will develop identities based on the culture around them, not on the culture we grew up in. In the past, boys knew that if they married when they grew up, they would marry a woman; and girls knew that if they married when they grew up, they would marry a man. Children understood that marriage brought men and women together to form families because every aspect of our culture conveyed that message. There was nothing automatic about it. Change the culture, and you change the outcome.
>
> What will our culture teach children now? How will parents answer children's questions? If Billy says, "Do you think I might marry Timmy when I grow up?" what is the answer? "We'll have to wait and see what your sexual orientation is and what Timmy's sexual orientation is"? Or "If you get married, it will probably be to a girl"? Instead of a clear foundation for building their self-understanding, the children will receive nebulous answers.
>
> The educational system will be an authoritative source of insecurity for children. Planned Parenthood, the Sexuality Information and Education Council of the United States (SIECUS), Advocates for Youth, Answer, and Future of Sex Education (FoSE) are powerful national organizations bonded together to promote not just sex education but also "gender education" to our young. These groups have produced the *National Sexuality Education Standards* "to address the inconsistent implementation of sexuality education nationwide."
>
> Under these standards, children ages eight to ten will be taught to "define sexual orientation as romantic attraction to an individual of the same gender or of a different gender."
>
> Children ages ten to twelve will be taught, among other things, to
>
> 1. Differentiate between gender identity, gender expression, and sexual orientation.
> 2. Analyze external influences that have an impact on one's attitudes about gender, sexual orientation, and gender identity.
> 3. Access accurate information about gender identity, gender expression, and sexual orientation.
> 4. Communicate respectfully with and about people of all gender identities, gender expressions, and sexual orientations.
>
> Throughout these and other guidelines published by national sex and gender education groups, there is an emphasis on teaching young children three identities, underscoring a distinction between each person's biological sex, gender identity, and sexual orientation. This "three identity" approach may help some students, but it will damage the vast majority of them.
>
> In fact, the "three identities" approach will confuse us all. For example, Massachusetts has a new transgender directive about the use of bathrooms and locker rooms. Suppose someone has a male body, a female gender, and a lesbian sexual orientation. Does that person use the girl's locker room or the boy's? This is not said in jest or with a trace of sarcasm. The issues are too important and the people involved are too important. Helping children who have gender questions navigate the world is laudable, but we need to do it in a way that demonstrates a caring and a love for *all* of the children.
>
> These gender standards or a version thereof are coming to a community near you. The goal of the "gender education" groups is to wrest control of education from local communities and parents and move the curriculum to a more centralized authority.

How will this work out in the future? Well, it's already being pushed by left-wing activists, legislators and lawyers:

> Last month, a bill was filed in Congress (H.R. 1652) entitled the Student Non-Discrimination Act (SNDA). It has the backing of the American Association of University Women; the American Federation of Teachers; the American Civil Liberties Union; the Gay, Lesbian & Straight Education Network; the NAACP; the National Association of School Psychologists; the National Association of Secondary School Principals; the National Council of La Raza; the National Education Association; and the National Women's Law Center.
>
> SNDA would bring the Massachusetts gender model to all public schools across the country, prohibiting discrimination against any student on the basis of actual or perceived sexual orientation or gender identity. The bill authorizes lawsuits and permits federal authorities to intercede if necessary.
>
> The same effort is underway in many states that still allow local communities and parents a voice in sex and gender education. Even Massachusetts allows for a certain amount of local control but a bill is pending to eliminate local community influence and impose statewide standards.
>
> If local control cannot be taken by legislation or administrative directives, litigation will be employed. For example, the ACLU recently sued an elementary school in Utah because it removed a book about a lesbian couple from the school's library shelves and made the book available by request only. The school settled the lawsuit and put the book back on display.
>
> The drive to control sex and gender education in local school systems is and will continue to be relentless. The forces behind this movement are smart, powerful, and well-funded, often with millions of taxpayer dollars.

I wonder if people who support redefining marriage really have thought through the consequences of their position. They may think "this isn't going to affect me at all", and then one day wake up to find a big surprise, courtesy of the public school system.

# Man of Steel movie opens today, and here's a review by Focus on the Family

**Wintery Knight** · 14 June 2013 · Archived copy · Original

A review of the new "Man of Steel" movie, that opens today. (H/T ECM) This might be an excellent movie to take Dad to on Father's Day – see below for the reasons.

Excerpt:

> Clark is an extraordinary man of character who comes by his heroism tendencies honestly. His Kryptonian parents, Jor-El and Lara Lor-Van, put their lives at risk to save their infant son and stand up to the evil schemes of General Zod. And by way of hologram, Jor-El encourages his adult son to stand strong for the people of Earth, saying, "You can embody the best of both worlds."
>
> His earthly mom and dad also give him some direct examples: During an unexpected tornado, Jonathan Kent puts his own life at risk to save others, clearly showing his son the meaning of self-sacrifice. He talks repeatedly to his boy about the importance of good choices and solid character. And when a preadolescent Clark is having something of a breakdown thanks to the onset of his supersenses, Martha Kent talks him through it. "The world is too big, Mom," Clark cries from inside a locked closet at school. "Then make it small," Martha coaches him lovingly. "Focus on my voice."
>
> So when Clark finds out about his otherworldly origins, he cries out to his father, "Can't I just keep pretending that I'm your son?" To which Jonathan immediately embraces the boy and retorts with a breaking voice, "You *are* my son."
>
> Those kinds of parental moments of love and instruction are obviously reflected in Clark's subsequent choices, large and small. Even when he's in the heat of thunderous battle, he takes the time and puts in the extra effort to deflect harm from an innocent or break a wounded soldier's fall. And it's these kinds of others-focused actions that eventually motivate human soldiers and civilians alike to unquestioningly accept Clark (aka Superman) as one of their own—belying the Kents' fears of his probable rejection.

And not just character, but spiritual issues:

> [T]his *Man of Steel* movie is one of the most spiritually symbolic and Messianic-image-packed treatments ever made about this character. Here, Clark Kent even comes to understand—at the age of 33, no less—his responsibility to step up, face off with and destroy an ultimate evil that threatens all mankind.
>
> But that's at the end. At the climax. All through this film dialogue and images hint at connections between Superman and Jesus. Several people, from Jor-El to Jonathan to Zod's female second, Faora-Ul, talk to Clark about his ability (or lack of ability) to save the people on his adopted planet. Superman levitates with his arms spread in a cross-like form on several occasions. When he goes to his church to ask a priest for advice, the camera's eye frames a stained-glass representation of Christ over the young Clark's shoulder. The priest tells him, "Sometimes you have to take a leap of faith first. The trust part comes later."
>
> After Clark rescues a bus full of children, a kid's mother states, "This was an act of God!" Clark asks his dad, "Did God do this to me?" When Lara worries about her infant son's safety on Earth, Jor-El assures her, "He'll be a god to them." Bad guy Kryptonians tell Superman that they will win because "evolution always wins."

And their conclusion:

> "It's the most realistic movie I've made," director Zack Snyder (who helmed *Watchmen, 300* and *Dawn of the Dead*) told the *L.A. Times*. "There's no tongue in anyone's cheek. I'm not apologizing for Superman in any way.

> I'm saying, 'Superman is a thing that must be taken seriously and embraced and understood.'"
>
> Indeed, his version of the now 75-year-old superhero story *is* straightforward and earnest. It's an honest-to-goodness sci-fi opera that reflects both the classic roots and the modern comic book sensibilities of its well-known superhero legend.
>
> […][W]e come to what Snyder calls Superman's "inherent goodness." The director says, "If you really think about it, you still want him to be right and to make the right choices and to do the right thing. I think that we all hope for that in ourselves, and I think that's what always has made him a very interesting character. He's a Christ-like figure. There's no two ways about it."
>
> **And Snyder leaves that inherent goodness and Christ-likeness in his film for all to see.** (Through the cascades of sci-fi dust and debris, of course.)

Evolution News even commented on the evolution issue:

> No, I haven't seen *Man of Steel* yet since it just opened today but I do want to. Among other points of interest: the bad guys, pursuing Kal-El a/k/a Clark Kent to Earth, are animated in the film's telling by an eerily Darwinian philosophy.
>
> In one clip, chief bad guy General Zod confronts Superman's birth father Jor-El and calls on him to join in a campaign against the "degenerative bloodlines that led us to this state." Later, in a duel with planet Krypton's assassin sent to wipe him out, Superman gets knocked around, which prompts the villainess to observe that he is weak: "The fact that you possess a sense of morality, and we do not, gives us an evolutionary advantage. And if history has proven anything, it is that evolution always wins." (See the MTV clip above.)
>
> The only problem with her analysis is that evolution, in the presumed Darwinian sense here, "always wins" by discarding things that don't give an "evolutionary advantage." That would seem to include the exquisitely tuned conscience with which human beings are gifted — what advantage does *that* confer? — the existence of which, as we know well, poses one of many enigmas that a Darwinian view is helpless in explaining.

I think that it would be a good idea to go into the theaters and see this movie at least once to signal Hollywood about what people really want to see. Obviously, it would be great if we could go into theaters and see William Lane Craig debates and Thomas Sowell lectures, but when something good and wholesome comes out of Hollywood, we should go and see it so that we at least send a message to the movie makers who are influencing the culture. When an organization like Focus on the Family clears a movie, then surely it's safe to go see it.

If you don't feel like going out to see a movie this weekend, here's a list of older "character" movies that I also recommend:

- Rules of Engagement (Samuel L. Jackson)
- Bella
- The Lives of Others
- United 93
- Taken (Liam Neeson)
- Cinderella Man
- The Blind Side
- Cyrano de Bergerac (Gerard Depardieu)
- Amazing Grace (Ioan Gruffudd)
- We Were Soldiers
- Stand and Deliver
- Blackhawk Down

- The Pursuit of Happyness
- High Noon (Gary Cooper)
- The Way Back
- The Incredibles

If I like Superman enough, I might even add it to my list of favorites.

# Greg Ganssle explains the problem of evil in three videos

**Wintery Knight** · 15 June 2013 · Archived copy · Original

I found these three videos on Apologetics 315. They are each about 5 minutes long.

Here's the first one:

Description:

> Part 1 of a trilogy. Greg lays out a classic argument that God does not exist, called 'The Problem of Evil'. He distinguishes two versions of that argument, which are sometimes called 'the deductive' and 'the evidential' version. He goes into some details on the deductive version.

And the second one:

Description:

> Part 2 of a trilogy. Here, Greg gives a response to the deductive version of the Problem of Evil on behalf of someone who believes that God exists. In thinking about this response, we need to think about whether God can make contradictions true, and whether God can have good reasons for allowing bad things to happen.

And the third one:

Description:

> Part 3 of a trilogy. Greg considers the evidential version of the Problem of Evil, and gives a response on behalf of someone who believes that God exists. This involves considering whether God might have a good reason to allow bad things to happen.

Recently, I was chastised by a suitor to one of my former proteges for not teaching her about what the word "theodicy" means, so I'm just going to fix that right now. Theodicy is
"the branch of theology concerned with defending the attributes of God against objections resulting from physical and moral evil".

See the links below for more.

# Texas Governor Rick Perry signs bill to legalize saying “Merry Christmas” and “Happy Hanukkah”

**Wintery Knight** · 15 June 2013 · Archived copy · Original

CNS News reports.

Excerpt:

> By law, it is now okay to say “Merry Christmas” or “Happy Hanukkah” in Texas public schools.
>
> Gov. Rick Perry signed House Bill 308 on Thursday, allowing public school students and staff to use traditional holiday greetings and display religious scenes and symbols on school property.
>
> “I’m proud we are standing up for religious freedom in our state,” Gov. Perry said.
>
> “Freedom of religion doesn’t mean freedom from religion, and people of faith often feel like they can’t express that faith publicly. HB 308 works to address that by ensuring that people of all faiths are free to use traditional holiday greetings, and display religious scenes and symbols, even on school property. It ensures freedom of expression where, for many students, teachers and administrators, it’s most important.”
>
> The bill states: “A school district may educate students about the history of traditional winter celebrations, and allow students and district staff to offer traditional greetings regarding the celebrations, including: (1) “Merry Christmas”; (2) “Happy Hanukkah”; and (3) “happy holidays.”
>
> The bill specifically says that schools may display scenes or symbols associated with religious holidays — as long as the display includes scenes or symbols of more than one religion or at least one secular scene or symbol.
>
> Displays “may not include a message that encourages adherence to a particular religious belief,” the bill says.
>
> Supporters of the bill argue that allowing teachers to display various holiday symbols associated with certain religions makes it possible for them to educate students about the history and roots of different religions.

Gosh, how will the militant fascists at American Atheists and Freedom From Religion Foundation deal with this? Militant atheism’s “good works” consist of threatening, jailing and execute people who have different beliefs than they do. That’s true atheist worship, right there. It’s about feeling good by taking away the basic human rights of other people who make you feel bad. Now that Texas has put limits on the practice of militant atheist religion (i.e. – Stalinism), the militant atheists might have to move to a country like North Korea. There, they will be happy because imprisoning and murdering Christians for acting like Christians in public is legal. If militant atheism stands for anything, morally speaking, it stands for tyranny and totalitarianism.

# Why do we celebrate Fathers Day? Why is fatherhood important?

**Wintery Knight** · 16 June 2013 · Archived copy · Original

Father's Day is the day that children and wives are supposed to honor fathers by giving them respect for being providers, protectors and moral/spiritual leaders. One of the best ways to motivate this duty is by studying research to find out the difference that fathers make.

Some statistics on the importance of biological fathers from Fathers.com.

Excerpt:

> Some fathering advocates would say that almost every social ill faced by America's children is related to fatherlessness. Six are noted here. As supported by the data below, children from fatherless homes are more likely to be poor, become involved in drug and alcohol abuse, drop out of school, and suffer from health and emotional problems. Boys are more likely to become involved in crime, and girls are more likely to become pregnant as teens.

For a summary, I'll just list one fact from each of the six categories they listed.

> **1. Poverty**
>
> Fact:
>
> – Children in father-absent homes are five times more likely to be poor. In 2002, 7.8% of children in married-couple families were living in poverty, compared to 38.4% of children in female-householder families.
>
> Source: U.S. Census Bureau, Children's Living Arrangements and Characteristics: March 2002, P20-547, Table C8. Washington, D.C.: GPO 2003.
>
> **2. Drug and Alcohol Abuse**
>
> Fact:
>
> – The U.S. Department of Health and Human Services states, "Fatherless children are at a dramatically greater risk of drug and alcohol abuse."
>
> Source: U.S. Department of Health and Human Services. National Center for Health Statistics. Survey on Child Health. Washington, DC, 1993.
>
> **3. Physical and Emotional Health**
>
> Fact:
>
> – Unmarried mothers are less likely to obtain prenatal care and more likely to have a low birthweight baby. Researchers find that these negative effects persist even when they take into account factors, such as parental education, that often distinguish single-parent from two-parent families.
>
> Source: U.S. Department of Health and Human Services. Public Health Service. Center for Disease Control and Prevention. National Center for Health Statistics. Report to Congress on Out-of-Wedlock Childbearing. Hyattsville, MD (Sept. 1995): 12.
>
> – Children in single-parent families are two to three times as likely as children in two-parent families to have emotional and behavioral problems.Source: Stanton, U.S. Department of Health and Human Services. National Center for Health Statistics."National Health Interview Survey." Hyattsville, MD, 1988.
>
> **4. Educational Achievement**
>
> Fact:

> – After taking into account race, socioeconomic status, sex, age, and ability, high school students from single-parent households were 1.7 times more likely to drop out than were their corresponding counterparts living with both biological parents.Source: McNeal, Ralph B. Jr."Extracurricular Activities and High School Dropouts." *Sociology of Education* 68(1995): 62-81.
>
> **5. Crime**
>
> Fact:
>
> – Children in single parent families are more likely to be in trouble with the law than their peers who grow up with two parents.
>
> Source: U.S. Department of Health and Human Services. National Center for Health Statistics. National Health Interview Survey. Hyattsville, MD, 1988.
>
> **6. Sexual Activity and Teen Pregnancy**
>
> Fact:
>
> – A white teenage girl from an advantaged background is five times more likely to become a teen mother if she grows up in a single-mother household than if she grows up in a household with both biological parents.Source: Whitehead, Barbara Dafoe. "Facing the Challenges of Fragmented Families." *The Philanthropy Roundtable* 9.1 (1995): 21.

Now take a look at this Wall Street Journal article that explains some of the ways that fathers have beneficial effects on children.

Excerpt:

> As an estimated 70.1 million fathers prepare to celebrate Father's Day in the U.S., recent research shows that their distinct style of parenting is particularly worth recognition: The way dads tend to interact has long-term benefits for kids, independent of those linked to good mothering.
>
> […]The benefits of involved fathering are known: improved cognitive skills, fewer behavioral problems among school-age children, less delinquency among teenage boys and fewer psychological problems in young women, based on an analysis of 16 long-term studies of father involvement, published in 2008 in the scholarly journal Acta Paediatrica.
>
> Some of dads' behavior may spring from their roles as family breadwinners. Although mothers play a significant role in the workforce, men are still the primary breadwinners in more than three-fourths of married-couple households.
>
> And 48% of working fathers spend less than six hours a day with their children, compared with 31% of working mothers, according to a recent poll of 459 working adults by Workplace Options, a provider of employee-assistance and work-life programs in Raleigh, N.C.
>
> As a result, fathers may be less familiar with their children's nonverbal cues. Such dads tend to challenge children more to express themselves in words, helping foster the better cognitive skills researchers have found in 2-year-olds with involved fathers.
>
> Parenting patterns may be rooted in neurological differences. Under stress, research shows, men's brains are wired to respond to challenges physically, leaping into action. Women are more likely to withdraw or shut down.
>
> Because fathers have had to learn to manage their own impulses to strike out or react physically to frustration, they may be better equipped than mothers to help children manage their own urges to behave badly, Dr. Pruett says.
>
> Indeed, fathers typically aren't as upset as mothers by kids' tantrums or bad behavior, based on a 2009 survey

> of 1,615 parents by Zero to Three, a nonprofit child-development research and policy organization. Only half as many fathers as mothers say their children's temper tantrums are one of their biggest challenges.

Fathers matter, so women need to choose men who will be good fathers. And that means having an idea of what fathers do, and knowing how to evaluate a man to see if he can do what fathers do. There's more to fathers than handsomeness and fun!

# Marsha Blackburn will lead floor debate on House bill that bans abortions after 20 weeks

**Wintery Knight** · 16 June 2013 · Archived copy · Original

Representative Marsha Blackburn
From the Weekly Standard.

Excerpt:

> Rep. Marsha Blackburn, a Republican from Tennessee, told THE WEEKLY STANDARD Friday afternoon that she will manage the floor debate on a bill that would prohibit most abortions during the final four months of pregnancy. The bill has been revised to include exceptions for when the pregnancy is the result of rape or incest. The bill already included an exception for when a physical health condition puts the life of the mother at risk.
>
> "I think the reason that leadership asked me to handle the bill is the amount of pro-life work that I've done throughout my years in Congress," said Blackburn, a co-sponsor of the bill.
>
> […]Blackburn said on Friday that Nancy Pelosi's recent comments on late-term abortion were "absolutely abhorrent." At a press conference, Pelosi was unable to explain the difference between the killings of Kermit Gosnell and late-term abortions and called the issue "sacred ground."

> "The war on women is these crimes committed by Kermit Gosnell and some of these abortion clinics," Blackburn told me.
>
> "I think the American people are with us on this," Blackburn said. "Sixty percent of all Americans say abortion should not be allowed in the second trimester and over 80 percent say they shouldn't be allowed in the third-trimester."
>
> The bill will be amended through a self-executing rule to include an exception for abortions later than 22 weeks of pregnancy (20 weeks after conception) in the case of rape or incest. Unlike the Democratic amendment for an exception in the case of rape that was voted down on Wednesday, there will be a reporting requirement in the bill.
>
> Though the bill's authors originally found such an exception unnecessary, given how late in pregnancy the

> restriction would begin, Democrats would have had an opportunity to force the issue to the forefront through a motion to re-commit.
>
> The bill's supporters believe the reporting requirement is necessary so the exception will not turn into a loophole.

My second favorite Congresswoman is Marsha Blackburn. And she's going to be my most favorite as soon as Michele Bachmann retires at the end of her current term. I'm glad we have Marsha Blackburn to advocate for conservative policies.

# John Hawkins of Right Wing News interviews Dr. Helen Smith about Men On Strike

**Wintery Knight** · 16 June 2013 · Archived copy · Original

I thought this interview posted on Right Wing News was a very appropriate thing to post on Fathers Day. The whole thing is worth reading, because it's stuff that is never discussed much by the people who complain that men aren't marrying as they used to, under the new *changed* standard of what marriage is. Well, marriage has changed, and it's not as attractive to men as it used to be.

Here's a snip from the interview:

> **If a man came to you and he said, "Listen, I think marriage is great. There's no downside to it." What would you say to him? Not telling him not to do it, but maybe saying, "Have you thought about the other side of this?" What are some of the negatives for men in marriage that are making men less likely to marry?**
>
> Well, the first negatives are the legal ones. If man does get divorced, he's much more likely to pay alimony. For example, about 97 percent of alimony is paid by men, only about 3 percent by women. Men tend to lose with their children more often. Only about 10 percent of men get custody of their children if there's a divorce. In marriage, …if a man finds out a couple of years down the line that the child isn't his, the state, in certain states — not most states — a man can be forced to pay for that child even though that child is not his. At the same time, if he wants a vasectomy — now this one is hard because it's actually not on the books — but if a married man goes to a doctor and wants a vasectomy, most doctors in this country will not perform a vasectomy unless that man gets his wife to sign off.
>
> …If he wants to leave the marriage, a woman can just point her finger and tell her lawyer that a man committed child abuse, domestic abuse — and a lot of times it's just taken as a given. If a woman wants a restraining order against a man in a marriage, men most often are taken to jail when, you know, the woman calls the police. However, studies actually show that violence in domestic relations is almost 50% from men and 50% from women. If a woman gets angry for any reason, she can simply accuse a man and men are just assumed guilty in our society.
>
> The other thing is psychological reasons. Men's self-esteem suffers more than women when they don't see their friends as often and that's because women tend to congregate a little more. When men lose contact with those friends, their mental and, you know, their psychological health can suffer from that. Men are also generally given the worst part of the house once kids come along. The man is kind of put downstairs to the basement, whether he wants to be there or not. Now sure, a lot of men might enjoy the basement, but they shouldn't be forced down there.
>
> In my work over the years, I've actually seen men who hang around outside or they'll say, "I don't mind being outside in the garage," but the minute they get a divorce they're right back in that house and wanting the full use of it.
>
> So, I do think that there are a lot of issues that men want to consider when they think about marriage because in our society if you make a mistake and if you're a man, there's a lot more at stake. If you're a woman and you make a mistake, yes, it can be bad, but the state is with you. You probably are going to get your children; you probably are going to get some child support; it's more than likely you're not going to be kicked out of your house. There's even more support for you. There are a lot of organizations to help women; there are almost none to help men.

You know, one way to tell if a woman you like is interested in marriage is to read her an interview like this and then ask her for her feelings. If she is dismissive of the feelings of men, and the changing incentives that men face in

this world, then you should really reconsider marriage to her.

By the way, if you'd like a quick re-cap about how feminism has changed marriage, here are a few of the main bullet points that describe what marriage used to mean:

1. Being the legally and socially recognized head of the household
2. An expectation of regular sex except in rare cases
3. Legal rights to children
4. Lifetime commitment
5. The presumption of premarital chastity from the wife
6. Spritual leadership role that is not undermined by forces outside the home
7. Moral leadership role that is not undermined by forces outside the home
8. The right to work to earn money and spend it as you see fit

There are more, but those are a few. And you can see, with a little reflection, how different laws and policies have degraded the old definition of marriage and put in place a new feminized definition that takes away the woman's responsibility to choose a man wisely, to be responsible and self-controlled, to do her part to be accountable to her husband's leadership, and to avoid choices that destroy the marriage.

Here are some specific things that undermined the 8 points above:

1. Governmental meddling in the household and imposing values on children in public schools
2. The normalization of sex-withholding as a way of undermining male leadership
3. Uneven custody laws and false accusations during custody hearings
4. No-fault divorce, which encourages women to initiate divorces in order to get the marital home, alimony and child support
5. Sex education, taxpayer-funded contraceptives, taxpayer-funded abortion, single mother welfare
6. Public schools teaching things that dogmatically that undermine religion, like Darwinian evolution
7. Public schools teaching things that dogmatically that undermine morality, like sex education
8. High tax rates, massive welfare spending which has resulted in inflationary monetary policy

Note: I am chaste and most of this stuff hasn't really impacted me personally as much as it affects men who have married and had children. I am just being analytical about the way the world is for men.

Very often, women are blissfully unaware of how their own voting undermines men's willingness and ability to get married and to stay married. Instead of recognizing the motivations and needs and goals of men and changing themselves, they often just resort to insults and blaming. And of course there is a non-stop chorus of male voices who affirm this – even conservatives and Christian leaders do it. The man-up crowd often tells men flat out to lower their standards and let the woman rule regardless of her ability to listen to men, care about men's goals or care about men's feelings.

# DOL study finds that after correcting for choices, women are paid 95% of what men are paid

**Wintery Knight** · 16 June 2013 · Archived copy · Original

The Heritage Foundation has a post up about it.

Excerpt:

> When a questioner at Tuesday's presidential debate stated that women make only 72 cents for every dollar that men make, both President Obama and Governor Mitt Romney agreed. Not so fast. This figure is highly misleading.
>
> The statistic comes from a Census Bureau report (see figure 2 here) comparing the median earnings of men and women in full-time jobs. However, many factors affect pay—e.g., occupational choice, education, experience, and hours of work. Doctors make more than store clerks, no matter their gender. Employees who work longer hours tend to make more, too.
>
> The Census report ignores all such factors. So it can say nothing about whether men and women with the same level of job performance make the same amount.
>
> Women are more likely than men to work in industries with more flexible schedules. Women are also more likely to spend time outside the labor force to care for children. These choices have benefits, but they also reduce pay—for both men and women. When economists control for such factors, they find the gender gap largely disappears.
>
> A 2009 study commissioned by the Department of Labor found that after controlling for occupation, experience, and other choices, women earn 95 percent as much as men do. In 2005, June O'Neil, the former director of the Congressional Budget Office, found that "There is no gender gap in wages among men and women with similar family roles." Different choices—not discrimination—account for different employment and wage outcomes.
>
> For the same reason, the recession has hit men harder than it has women. Since the recession, net employment for men has fallen by over 3 million jobs. Female employment has fallen by less than half that amount. Put another way, the male unemployment rate is currently 0.5 percentage points higher than the female unemployment rate.

Hans Bader from the Competitive Enterprise Institute explains more.

Excerpt: (links removed)

> As *The Washington Post*'s Glenn Kessler notes, government data shows women work fewer hours than men, which explains much of the apparent pay gap: "since women in general work fewer hours than men in a year, the statistics used by the White House may be less reliable for examining the key focus of the legislation — wage discrimination." I discuss some other unfounded claims made in support of the Paycheck Fairness Act at this link.
>
> As Steve Tobak noted at CBS News,
>
> Men are far more likely to choose careers that are more dangerous, so they naturally pay more. Top 10 most dangerous jobs (from the U.S. Bureau of Labor Statistics): Fishers, loggers, aircraft pilots, farmers and ranchers, roofers, iron and steel workers, refuse and recyclable material collectors, industrial machinery installation and repair, truck drivers, construction laborers. They're all male-dominated jobs. . .Men are far more likely to take work in uncomfortable, isolated and undesirable locations that pay more. Men work longer hours than women do. The average fulltime working man works six hours per week or 15 percent longer than

> the average fulltime working woman.

A popular article by Carrie Lukas in the Wall Street Journal agrees.

Excerpt:

> The Department of Labor's Time Use survey shows that full-time working women spend an average of 8.01 hours per day on the job, compared to 8.75 hours for full-time working men. One would expect that someone who works 9% more would also earn more. This one fact alone accounts for more than a third of the wage gap.
>
> […]Recent studies have shown that the wage gap shrinks—or even reverses—when relevant factors are taken into account and comparisons are made between men and women in similar circumstances. In a 2010 study of single, childless urban workers between the ages of 22 and 30, the research firm Reach Advisors found that women earned an average of 8% more than their male counterparts. Given that women are outpacing men in educational attainment, and that our economy is increasingly geared toward knowledge-based jobs, it makes sense that women's earnings are going up compared to men's.

Moreover, if there is a pay gap, it certainly is not in our major cities, as the leftist New York Times explains.

Excerpt:

> Young women in New York and several of the nation's other largest cities who work full time have forged ahead of men in wages, according to an analysis of recent census data.
>
> The shift has occurred in New York since 2000 and even earlier in Los Angeles, Dallas and a few other cities.
>
> Economists consider it striking because the wage gap between men and women nationally has narrowed more slowly and has even widened in recent years among one part of that group: college-educated women in their 20s. But in New York, young college-educated women's wages as a percentage of men's rose slightly between 2000 and 2005.
>
> […][The study] shows that women of all educational levels from 21 to 30 living in New York City and working full time made 117 percent of men's wages, and even more in Dallas, 120 percent. Nationwide, that group of women made much less: 89 percent of the average full-time pay for men.
>
> Just why young women at all educational levels in New York and other big cities have fared better than their peers elsewhere is a matter of some debate. But a major reason, experts say, is that women have been graduating from college in larger numbers than men, and that many of those women seem to be gravitating toward major urban areas.

When women make different choices about education and labor that are more like what men choose, they earn just as much or more than men.

# UK: Half a million new STI infections in 2012

**Wintery Knight** · 17 June 2013 · Archived copy · Original

From the left-leaning UK Independent.

Excerpt:

> Sexually transmitted infections (STIs) are soaring among young people, with chlamydia the most virulent, health officials have warned.

> Nearly half a million people were diagnosed with STIs last year, with those aged under-25 experiencing the highest rates of infection, according to new figures released today.
>
> Health experts have warned that the rise in STIs shows too many young people are still putting themselves at risk by failing to practice safe-sex.
>
> Last year there were 448,422 diagnoses, which was a rise of five per cent from 2011, said Public Health England (PHE).
>
> Almost half of all infections were chlamydia, amounting to 46 per cent of total STI diagnoses.
>
> The number of new gonorrhoea diagnoses increased by 21 per cent, which is a particular cause for concern among health officials as the global threat of antibiotic resistance grows.
>
> People aged under-25 accounted for 64 per cent of all chlamydia and 54 per cent of genital warts diagnoses in 2012.

The UK has some of the most aggressive and early sex education of any Western country. But all of this effort to educate young people hasn't reduced the amount of sexual activity at all. When young people learn about the mechanics of sex, and are taught that recreational sex is normal and healthy, then they have more of it. Young people aren't able to assess risks like adults can. They think that nothing will happen to them. No amount of sex education can cure youthful recklessness.

# Gay man who captured, chained up and repeatedly raped boy gets 11 year sentence

**Wintery Knight** · 17 June 2013 · Archived copy · Original

From Sun News Canada.

Excerpt:

> David James Leblanc, 48, was sentenced to 11 years in prison Friday after he previously pleaded guilty to charges including kidnapping, forcible confinement and sexual assault. He also pleaded guilty to charges in an earlier case involving the sexual assault of two young boys.
>
> The teen's mother said her son was prescribed anti-HIV drugs and anxiety medication after he was chained and raped by two men in a cabin in Upper Chelsea, a rural area about 125 km west of Halifax.
>
> "If there's anything good that can come from this sickening crime against my son it would be to have David James Leblanc declared a dangerous offender," the mother said in her victim impact statement.
>
> "He has been filled with such an overwhelming amount of despair and hopelessness and to have your 16-year-old child tell you through tears and sobs that he doesn't want to live anymore."
>
> While she spoke, Leblanc rolled his eyes, sighed and shook his head.
>
> […]In September, Leblanc promised the teen a painting job.
>
> The boy said Leblanc conned him into getting into a van in Halifax, and drove him to a cabin in Upper Chelsea, where he met Leblanc's partner, Wayne Alan Cunningham.
>
> Leblanc gave him alcohol and offered him money to see his penis, and the boy said he was marched into a bedroom, chained to the floor and sexually assaulted.
>
> Over the next 10 days, the teen said he was sometimes chained standing with his arms above his head and other times locked to the bed while Cunningham and Leblanc took turns raping him.

It seems to me that the responsibility of the criminal court system is to protect the public from predators. How much does an 11-year sentence for kidnapping, forcible confinement and sexual assault deter future crimes like this one? Something tells me that if the victim had been a woman, and the perpetrator a straight white male, then that would have drawn a much longer sentence.

# Douglas Groothuis lectures on the kalam cosmological argument

**Wintery Knight** · 17 June 2013 · Archived copy · Original

I watched the lecture above and it was excellent and comprehensive. He even talked about J.P. Moreland, Alan Padgett and other scholars. There were some things I had heard before, and some things that were new. He covered a lot of books that I had to read when I was sorting all of this stuff out, too.

Here's the description from the video:

> Doug Groothuis gives a lecture on the Kalam Cosmological Argument. What's interesting about this lecture is that Groothuis did not accept the Kalam Cosmological Argument at first but was later convinced by it.
>
> Notes:
>
> http://www.relyonchrist.com/Lecture/13.htm
> http://www.relyonchrist.com/Lecture/14.htm
>
> Kalam Cosmological Argument
>
> (Moreland, Scaling the Secular City; see also William Lane Craig, Reasonable Faith [Crossway, 1994]; Paul Copan and William Lane Craig, Creation from Nothing [Baker, 2004]; William Lane Craig and Walter Sinnott-Armstrong, God: A Debate Between a Christian and an Atheist [Oxford, 2004])
>
> Preliminary: concepts of (a) the actual infinite and (b) the potential infinite
>
> 1. The universe had a beginning
> 2. The impossibility of the actual infinite (distinguish from potential infinite)
> 3. The impossibility of traversing an actual infinite (even if it exists); forming an actual infinite through successive addition, piece by piece…
> 4. Scientific confirmation from Big Bang cosmology (absolute origination). See also John Jefferson Davis, "Genesis 1:1 and Big Bang Cosmology," in The Frontiers of Science and Faith (InterVarsity, 2002), 11 — 36; and Robert Jastrow, God and the Astronomers (revised ed., 1992).
> 5. Scientific confirmation from second law of thermodynamics.
> 6. Astronomer Fred Hoyle (who once advanced the steady state cosmology) argues against the universe being infinitely old in virtue of its hydrogen consumption. The argument can be stated as a modus tolens deduction (denying the consequent).
> 7. Can everything come from nothing without a cause? The "pop theory" (biting the metaphysical bullet)
> 8. Philosophical critique of everything from nothing…
> 9. God and time (see Greg Gansell, editor, God and Time: Four Views [InterVarsity, 2001])
> 10. Argument against an impersonal cause
> 11. Argument against God needing a cause (Bertrand Russell)
> 12. Quentin Smith's acceptance of Big Bang cosmology and denial of God's existence.
> 13. Unitary: Ockham's razor
> 14. Incorrigible, inextinguishable (having existed, God cannot fail to exist)
> 15. Personal, volitional ("personal explanation"—R. Swinburne)
> 16. Omnipotent: nothing is a greater expenditure of power than exnihilating the entire cosmos. This is rational to hold, given the argument.
> 17. Supplies the necessary conditions for impeccable and omnipotent goodness: (1) – (4). Need (5) moral argument and (6) the Incarnation for the final necessary condition, which, with (1) – (4), make for necessary and sufficient conditions.

What I liked about this lecture is that it kept my attention all the way through. It was very fun to listen to, because he considers a ton of alternative views and explains his view, which doesn't agree with Bill Craig all the way. There

is a 17 minute Q&A period at the end.

# Obama warns that he will veto Republican bill that would ban third trimester abortions

**Wintery Knight** · 18 June 2013 · Archived copy · Original

Here's a story from the Weekly Standard that makes clear where the President stands on abortion.

Excerpt:

> Last week, Jay Carney ducked a question on President Obama's position on a bill banning elective abortions during the final four months of pregnancy. The White House issued a statement Monday saying that the president would veto the bill:
>
> The Administration strongly opposes H.R. 1797, which would unacceptably restrict women's health and reproductive rights and is an assault on a woman's right to choose. Women should be able to make their own choices about their bodies and their health care, and Government should not inject itself into decisions best made between a woman and her doctor.
>
> Forty years ago, the Supreme Court affirmed a woman's constitutional right to privacy, including the right to choose. This bill is a direct challenge to *Roe v. Wade* and shows contempt for women's health and rights, the role doctors play in their patients' health care decisions, and the Constitution. The Administration is continuing its efforts to reduce unintended pregnancies, expand access to contraception, support maternal and child health, and minimize the need for abortion. At the same time, the Administration is committed to the protection of women's health and reproductive freedom and to supporting women and families in the choices they make.
>
> If the President were presented with this legislation, his senior advisors would recommend that he veto this bill.

> H.R. 1797 prohibits most abortions that take place later than 22 weeks into pregnancy (20 weeks after conception), the point at which some babies can survive long-term if born. The bill contains exceptions for when the pregnancy is the result of rape, incest, or when a physical health condition puts the life of the mother at risk.

In addition to that, Obama supports abortions where the baby is born alive (infanticide):

> When Obama opposed a bill to stop infanticide as a member of the Illinois legislature, he said he did so because it reportedly contained language that would have contravened the Roe v. Wade decision. However, documents uncovered during the 2008 election show Obama has misrepresented his position.
>
> Obama, as a member of the Illinois Senate, opposed a state version of the federal Born-Alive Infants Protection Act, a measure that would make sure babies who survive abortions are given proper medical care.
>
> It also protected babies who were "aborted" through a purposeful premature birth and left to die afterwards.
>
> On the federal level, pro-abortion groups withdrew their opposition to the bill after a section was added making sure it did not affect the status of legal abortions in the United States. Ultimately, the bill was approved on a unanimous voice vote with even leading pro-abortion lawmakers like Hillary Clinton and John Kerry backing it.

And finally, Obama very likely supports sex-selection abortions.

Excerpt:

> President Barack Obama appears to oppose the ban on sex-selection abortions that the House of Representatives debated yesterday and will be voting on today.
>
> ABC News White House correspondent Jake Tapper posted a new report indicating President Obama opposes the bill to prohibit performing or coercing abortions to eliminate unborn babies of an undesired sex. Tapper raised the question at Wednesday's White House press briefing, but did not receive a respond to his question about Obama's position.
>
> […]White House deputy press secretary Jamie Smith told him in a statement: "The Administration opposes gender discrimination in all forms, but the end result of this legislation would be to subject doctors to criminal prosecution if they fail to determine the motivations behind a very personal and private decision. The government should not intrude in medical decisions or private family matters in this way."
>
> National Right to Life legislative director Douglas Johnson was upset to learn Obama opposes the common-sense bill, telling LifeNews: "It is appalling, but not surprising, that President Obama now stands with the pro-abortion political committees and his Hollywood donors, rather than with the coerced women, and their unborn daughters, who are victimized in sex-selection abortions."

The Democrat Party also supports sex-selection abortions. Their view is that the mere fact that an unborn child is female is sufficient reason to kill that child. Is that pro-women? What could be more discriminatory and anti-women than that?

In case you didn't know, Barack Obama is the most pro-abortion President that we've ever had, a fact that you can verify by skimming over his pro-abortion record. The man has essentially the same view of abortion as Kermit Gosnell. This is a person who does not have moderate, common-sense views on moral issues. If he ever acted on his radical, extremist views, like Gosnell did, then he would be thrown in jail, like Gosnell was. Instead, a bunch of people who *claim* to believe in God voted this man into office, twice. How is that even possible?

# Thinking Christian reviews “Darwin’s Doubt”, a new book by Stephen C. Meyer

**Wintery Knight** · 18 June 2013 · Archived copy · Original

Darwin’s Doubt: The Explosive Origin of Animal Life and the Case for Intelligent Design

***NOTE: you can tune in to the Dennis Prager radio show at 2 PM Eastern today in order to hear Dr. Meyer discuss the new book.***

I found a book review of the new book on intelligent design by Dr. Stephen C. Meyer. This book is concerned with the fossil record, and it is the sequel to the highly acclaimed “Signature in the Cell“, which dealt with the origin of biological information in the first living cell.

Excerpt:

> The title of the book refers to the difficulty [Charles Darwin] had in explaining the “Cambrian Explosion,” the vast proliferation of new animal body plans (new “phyla” or major animal groupings) that appears in fossils in the Cambrian strata, deposited some 530 million years ago. These animals appear suddenly in the fossil record, without any plausible predecessor such as Darwin’s theory predicted. Darwin wrote,
>
> The difficulty of understand the absence of vast piles of fossiliferous strata, which on my theory were no doubt somewhere accumulated before the Silurian [i.e., Cambrian] epoch, is very great. I allude to the manner in which numbers of species of the same group suddenly appear in the lowest known fossiliferous rocks.
>
> Darwin saw this accurately as a challenge to his theory. It remains one still. The animals appear too quickly in the record to be explained through his gradualistic theory.
>
> And it remains a challenge from the perspective of mainstream science. Various theories have been proposed in explanation of the suddenness with which these new phyla came on the scene. Perhaps selective fossilization caused their predecessors to disappear from paleontologists’ view. Mainstream science casts serious doubt on that view. Statistical paleontology renders it deeply improbable. The soft-body hypothesis appears unlikely to succeed, since the evidence shows soft-bodied organisms have been frequently fossilized.

> Or maybe the Cambrian animals' precursors really are there in the record, in the form of exotic Ediacaran fossils. But these organisms are not clearly animals of any sort, and what they *are* is so in confusion that they could hardly be considered evidence for anything. Further,
>
> As *Nature* recently noted, if the Ediacaran fauna "were animals, they bore little or no resemblance to any other creatures, either fossil or extant." … This absence of clear affinities has led an increasing number of paleontologists to reject an ancestor/dependent relationship between the Ediacaran and Cambrian fauna.
>
> Scientists have proposed genetic histories for these phyla, but as Meyer pointedly puts it, these scenarios all "assume a gene." And a lot more besides. That is to say, they beg the question of evolution's explanatory adequacy by assuming that it must be true. From there they suggest pathways according to which genes "must have" evolved. But there's no evidence of it in the record.

Now the exciting thing is that at the time of writing (Monday night), the book is *number one* on Barnes and Noble:

Darwin's Doubt #1 at Barnes and Noble

Darwin's Doubt: The Explosive Origin...
by Stephen C. Meyer

Release Date: June 18, 2013

Hardcover

$20.23

Darwin's Doubt #10 at Amazon.com

Now is this a book for the layman? Well, I've met the guy who wrote the book review above face-to-face, and his background is not in biology. I think if he can struggle through it, then I could do it too. And so could you. I think that both of Dr. Meyer's books are must-read books for anyone interested in knowing how well the presumption of naturalism succeeds when confronted with the latest scientific evidence. These are the books you need to buy and read if you are serious about integrating science and religion. The thing to realize is that naturalists and atheists and materialists have no answer to these books. None. Do you like winning? Then spend the money and time on the books that are *unstoppable* in a debate.

# Simon Brace on the nature of spiritual warfare and a plea to the Church

**Wintery Knight** · 18 June 2013 · Archived copy · Original

This passionate, challenging lecture has been getting shared a lot on Facebook, so I thought that I would do a summary of it. (H/T M. Flannagan)

First, you can grab the MP3 file here.

Note that this talk is given by a very conservative evangelical Christian who is speaking to Christians. So this is not intended for a non-Christian audience. However, non-Christians are free to tune in if you want to hear a really passionate, fire-breathing conservative evangelical go non-linear over the superficial turn that the evangelical church has taken. If you are familiar with J.P. Moreland's view that spiritual warfare is really about disputing speculations and falsehoods using logic and evidence, then you'll know the meaning of the term "spiritual warfare" he has in mind. When he says spiritual warfare, he means apologetics: knowledge and preparation.

I would really caution you not to listen to this if you are not passionate about defending God's honor. It will overwhelm and upset you. Having said that, this lecture reflects my convictions about the churches need to drop anti-intellectualism and take up apologetics. And not pre-suppositional apologetics, which I think is ineffective, but *evidential* apologetics. Evidential apologetics is effective, which is why everyone in the Bible used it.

About the speaker:

> **Simon Brace** is the Director of Evangelism of Southern Evangelical Seminary. Simon was born in Zimbabwe and grew up in South Africa. Simon has a construction background and has lived in a number of countries and travelled extensively. He has a MA in Apologetics and BA in Religious Studies and is currently working on an MA in Philosophy at SES. Simon leads TEAM which is the missions program of SES on local, national, and international trips. In addition, Simon has worked with Ratio Christi at SES, and has an extensive knowledge of Ratio Christi's history and operation. Simon currently resides in North Carolina with his wife Nel and children, Eva and Olivia.

I liked the second part of the lecture more than the first part, so there is less summarizing of the first part.

Topics:

- What does the New Testament say about spiritual warfare in Ephesians?
- Christian slogans about spiritual warfare sound pious, but they are mistaken
- Today, Christianity is focused on piety and zeal, not on study and knowledge
- The result is that Christianity in the West is in a state of erosion and decline
- What we are doing about spiritual warfare is not working to stop the decline
- Preaching, publishing, programs, retreats, etc. are not very useful for spiritual warfare
- Enthusiasm and passion without knowledge  are not very useful for spiritual warfare
- The Church has a theoretical understanding of spiritual warfare, but no real capability
- Doesn't work: trying to make Christianity seem popular and cool
- Doesn't work: making Christian music and art that non-Christians will like
- Doesn't work: pastors trying to be relevant by having cool clothes and cool haircuts
- Doesn't work: fundamentalists getting angry about peripheral issues
- Doesn't work: not read things apart from the Bible and sound foolish when speaking in the public square
- Doesn't work: church leaders think that careful exegesis and expository preaching is a good answer to skeptics

- What works: we need to train people who are prepared and willing to defend the truth of the Christian faith
- Evangelicalism has a deep suspicion of reading things outside the Bible, so they are unable to refute anything
- Evangelicals are hyper-spiritualized and hysterical, focusing on demons, prophecy and end-times, etc.
- Evangelicals have a pagan view of using their minds to alter reality, which is irrational and superstitious
- Evangelicals like conservative celebrity preachers who do *nothing* to correct anti-intellectualism in the church
- Evangelicals are focused on their personal relationships with Jesus instead of their whole worldview
- Evangelicals focus too much on homeschooling and not enough on how to impact the secular universities
- Church programs for youth are about "strumming guitars and eating pizza once a week", not apologetics
- Evangelicals have an over-inflated view of the effectiveness of their (non-intellectual) evangelism methods
- The primary focus and primary responsibility in spiritual warfare is not dealing with supernatural evil
- The real focus and responsibility in spiritual warfare is specified in 2 Cor 10:3-5
- What we ought to be doing is defeating speculations (false ideas), using logical arguments and evidence
- Defending the faith is not memorizing Bible verses and throwing them out randomly
- Defending the faith is not just preaching the gospel
- Demolishing an argument requires understanding arguments: premises, conclusions, the laws of logic
- We should exchange our pious Bible memorizing skills and the like for a class in critical thinking
- The New Testament requires that elders be capable of *refuting* those who oppose sound doctrine (Titus 1:9)
- It is not enough to preach a good sermon, elders have to be able to defend the Christian faith as well
- People who run conservative seminaries do not mandate that M.Div graduates study apologetics
- Famous pastors like Driscoll, Begg, etc. need to teach other pastors to emphasize apologetics in church
- People in church won't engage the culture unless they have reasons and evidence to believe Christianity is true
- We need a balance of both piety and intellectual engagement
- We need to make our evangelism rooted in the intellect in order to have an influence at the university
- Mission organizations also have a responsibility to defend the faith and not merely preach (1 Peter 3:15)

And here is his closing quote from C.S. Lewis:

> To be ignorant and simple now not to be able to meet the enemies on their own ground would be to throw down our weapons and to betray our uneducated brethren who have, under God, no defense but us against the intellectual attacks of the heathen. Good philosophy must exist, if for no other reason, because bad philosophy needs to be answered.

I was really humbled by this, because I sort of knew that the church was anti-intellectual, but I didn't really reflect on how everyone else in society thinks that we are anti-intellectual. It's troubling. The quickest way to make Biblical Christianity respectable again is to hit the books and defeat all comers in intellectual disputations. Are we ready to make the sacrifices to do that?

UPDATE: A friend of mine who blogs at Think Apologetics has written a post on this same issue of anti-intellectualism in the church.

# House Republicans pass legislation to ban post-viability abortions

**Wintery Knight** · 19 June 2013 · Archived copy · Original

The Weekly Standard reports on some good news: House Republicans have passed a bill that bans abortions after 20 weeks.

Excerpt:

> The House of Representatives voted 228 to 196 on Tuesday evening to pass a bill that prohibits most abortions later than 22 weeks in pregnancy (20 weeks after conception), the point by which some infants can survive long-term if born and the point by which medical science indicates they can feel pain. The bill contains exceptions for late-term abortions in the cases of rape, incest, or when a physical health condition puts the life of the mother at risk.
>
> It was mostly a party-line vote, with six Democrats voting for the bill and six Republicans voting against it. The White House issued a veto threat against the bill on Monday night. Though the bill stands no chance of becoming law so long as President Obama is in the White House, advocates see it as an important first step to reining in late-term abortions.
>
> The vote comes in response to the trial of Philadelphia doctor Kermit Gosnell, who was convicted of murder for severing the spines of three infants moments after they were born.

Here's another Democrat trying to explain why infanticide is OK with them:

Life News had some interesting comments about the bill:

> Rep. Chris Smith, the head of the pro-life caucus in the House, spoke eloquently from the House floor.
>
> "The brutality of severing the spines of defenseless babies—euphemistically called "snipping" by Gosnell—has finally peeled away the benign façade of the billion dollar abortion industry" he said.
>
> "Like Gosnell, abortionists all over America decapitate, dismember and chemically poison babies to death each and every day. That's what they do. Americans are connecting the dots and asking whether what Gosnell did is really any different than what other abortionists do. A D&E abortion—a common method after 14 weeks—is a gruesome, pain-filled act that literally rips and tears to pieces the body parts of a child," he added. "The Pain-Capable Unborn Child Protection Act is a modest but necessary attempt to at least protect babies who are 20 weeks old—and pain-capable—from having to suffer and die from abortion."
>
> One leading expert in the field of fetal pain, Dr. Kanwaljeet S. Anand at the University of Tennessee, stated in his expert report commissioned by the U.S. Department of Justice, "It is my opinion that the human fetus possesses the ability to experience pain from 20 weeks of gestation, if not earlier, and the pain perceived by a fetus is possibly more intense than that perceived by term newborns or older children."
>
> "Surgeons entering the womb to perform corrective procedures on unborn children have seen those babies flinch, jerk and recoil from sharp objects and incisions. Ultrasound technology shows unborn babies at 20 weeks post-fertilization and earlier react physically to outside stimuli such as sound, light and touch," Smith continued. "Surgeons routinely administer anesthesia to unborn children in the womb before performing lifesaving surgeries, and this has been associated with a decrease in the baby's stress hormone levels during the medical procedure."

Although President Obama, who is a radical on abortion, has promised to veto the bill, I believe that this vote had value. First, it shows that Republicans are solidly for protecting the lives of unborn children. Second, we learned that the Democrat position on abortion in the House of Representatives is virtually identical to that of Kermit Gosnell. And when this goes up for a vote in the Senate, we'll find out how many of them take the Kermit Gosnell

position on abortion. Finally, we learned what people who voted for Democrats believe about abortion. It is absolutely certain that if you meet a person who votes for Democrats in any election, that they support aborting children after 20 weeks when they can feel pain. That is the Democrat position, and now we all know it *for certain*.

# Heather McDonald: the real risks of the Senate immigration amnesty bill

**Wintery Knight** · 19 June 2013 · Archived copy · Original

Here's a post from the moderate Manhattan Institute about the Senate immigration bill. (H/T Doug Ross)

No border enforcement:

> Mickey Kaus has demolished the Senate bill's central claim: that it makes border security a precondition for the granting of permanent-resident status. In fact, the enforcement goals consist of empty promises; nothing actually hangs on their achievement or requires that they ever be met. Immigrant advocate Frank Sharry candidly echoed Kaus's analysis in the *Wall Street Journal*: "The triggers [for obtaining green cards] are based on developing plans and spending money, not on reaching that effectiveness, which is really quite clever."

Amnesty almost immediately:

> But the legislation's most critical amnesty comes right away, before even the pretense of beefed-up security. Illegal aliens will get their illegal status removed six months after the bill is passed upon payment of $500. The formerly illegal aliens will be allowed to remain in the country legally, under so-called "probationary status," for ten years (while those who wish to enter the country legally wait patiently in their home countries for permission to enter).

Criminals are eligible for amnesty:

> Not one amnesty proposal has ever required a clean criminal record to qualify. The current bill allows aliens with two misdemeanor convictions to legalize. Given the incessant pressures on district attorneys to accept a plea in exchange for downgrading the crime charged and to ignore most arrests entirely, it takes considerable effort to rack up two misdemeanor convictions—whether by dealing drugs, assaulting fellow gangbangers, stealing, or tagging. The bill's authors apparently think that staying on the right side of the law is an insuperable burden and that having a criminal record is an ordinary part of being an American.

Permanent Democrat majority:

> The political effects of the proposed amnesty won't benefit the GOP, whatever the party's hopes might be. Hispanics will not shift their vote to Republicans in the next presidential election unless Republicans promote the same big-government programs, such as Obamacare, that attract Hispanics to the Democratic Party in the first place.

Hurts the poorest Americans:

> Harvard economist George Borjas has recently estimated that low-skilled American workers already suffer wage losses of $402 billion a year because of immigrant labor, a sum that does not include the costs to taxpayers of welfare paid to low-skill immigrant workers and their children. Amnesty proponents should explain how providing legal status to millions of illegal aliens will affect the job prospects of the poorest Americans.

Massive burden to taxpayers:

> Reconfiguring immigration priorities is crucial, because many children of unskilled immigrants

> are assimilating into the underclass. They are also placing enormous burdens on the nation's schools. California governor Jerry Brown proposes to redirect state taxpayer dollars from middle-class schools to those with high proportions of "English learners," because Hispanic students lag so far behind whites and Asians. Most of these "English learners" were born and raised in the U.S. but are characterized as non-native speakers because their academic language skills are so low. Nationally, only 18 percent of Hispanic eighth-graders read at or above proficiency levels, according to the 2011 National Assessment of Educational Progress. Because of their low academic achievement (and their high rates of illegitimacy), second- and third-generation Hispanics rely on government welfare programs far more than native-born whites.

I just wanted to be clear with everyone. I am in favor of legal immigration and even *automatic* green cards for skilled workers – especially in Information Technology. Skilled workers who come here legally and work here for 6 years without committing any crimes should get an *automatic* green card. Skilled immigrants pay more in taxes than they take from welfare programs. But this immigration bill does nothing for skilled immigrants. It's targeting unskilled immigrants who have already broken the law by coming here illegally and forcing enormous costs on taxpayers. We already have a $17 trillion debt and it's going up by a trillion every year. We can't afford this amnesty bill.

# Dennis Prager's report from the recent conference on cosmic fine-tuning

**Wintery Knight** · 19 June 2013 · Archived copy · Original

My favorite national radio show host Dennis Prager in the National Review. This is a MUST-READ. (H/T Chris S.)

Full text:

> Last week, in Nice, France, I was privileged to participate along with 30 scholars, mostly scientists and mathematicians, in a conference on the question of whether the universe was designed, or at least fine-tuned, to make life, especially intelligent life. Participants — from Yale, Princeton, Harvard, Berkeley, and Columbia, among other American and European universities — included believers in God, agonistics, and atheists.
>
> It was clear that the scientific consensus was that, at the very least, the universe is exquisitely fine-tuned to allow for the possibility of life. It appears that we live in a "Goldilocks universe," in which both the arrangement of matter at the cosmic beginning and the values of various physical parameters — such as the speed of light, the strength of gravitational attraction, and the expansion rate of the universe — are just right for life. And unless one is frightened of the term, it also appears the universe is *designed* for biogenesis and human life.
>
> Regarding fine-tuning, one could write a book just citing the arguments for it made by some of the most distinguished scientists in the world. Here is just a tiny sample, collated by physicist **Gerald Schroeder**, who holds a Ph.D. from the Massachusetts Institute of Technology, where he later taught physics.
>
> **Michael Turner**, astrophysicist at the University of Chicago and Fermilab: "The precision is as if one could throw a dart across the entire universe and hit a bullseye one millimeter in diameter on the other side."
>
> **Paul Davies**, professor of theoretical physics at Adelaide University: "The really amazing thing is not that life on Earth is balanced on a knife-edge, but that the entire universe is balanced on a knife-edge, and would be total chaos if any of the natural 'constants' were off even slightly.
>
> **Roger Penrose**, the Rouse Ball Professor of Mathematics at the University of Oxford, writes that the likelihood of the universe having usable energy (low entropy) at its creation is "one part out of ten to the power of ten to the power of 123." That is "*a million billion billion billion billion billion billion billion billion billion billion billion billion zeros.*"
>
> **Steven Weinberg**, recipient of the Nobel Prize in Physics, and an anti-religious agnostic, notes that "the existence of life of any kind seems to require a cancellation between different contributions to the vacuum energy, accurate to about 120 decimal places."

Life of any kind. Not just life as we know it, but *life of any conceivable kind*.

So the fine-tuning is real. It's mainstream science.

But then how do militant atheists like Weinberg respond to this scientific data?

> Unless one is a closed-minded atheist (there are open-minded atheists), it is not valid on a purely scientific basis to deny that the universe is improbably fine-tuned to create life, let alone intelligent life.
>
> Additionally, it is atheistic dogma, not science, to dismiss design as unscientific. The argument that science cannot suggest that intelligence comes from intelligence or design from an intelligent designer is simply a tautology. It is dogma masquerading as science.
>
> And now, many atheist scientists have inadvertently provided logical proof of this.
>
> They have put forward the notion of a multiverse — the idea that there are many, perhaps an infinite number

> of, other universes. This idea renders meaningless the fine-tuning and, of course, the design arguments. After all, with an infinite number of universes, a universe with parameters friendly to intelligent life is more likely to arise somewhere by chance.
>
> But there is not a shred of evidence of the existence of these other universes — nor could there be, since contact with another universe is impossible.
>
> Therefore, only one conclusion can be drawn: The fact that atheists have resorted to the multiverse argument constitutes a tacit admission that they have lost the argument about design in this universe. The evidence in this universe for design — or, if you will, the fine-tuning that cannot be explained by chance or by "enough time" — is so compelling that the only way around it is to suggest that our universe is only one of an infinite number of universes.
>
> Honest atheists — scientists and lay people — must now acknowledge that science itself argues overwhelmingly for a Designing Intelligence.

This is the same cosmic fine-tuning argument that is used by William Lane Craig in all of his debates. Are you surprised to learn that the top scientists from across the ideological spectrum agree with the fine-tuning? There is a reason why William Lane Craig can stand up in academic debates and make these arguments with confidence. The Big Bang cosmology and the fine-tuning of the Big Bang are two pieces of evidences for God's existence that are as solid as any piece of science can be. To deny that the universe came into being out of nothing requires a leap of faith. To deny the cosmic fine-tuning also requires a leap of faith.

The simple fact of the matter is that God, in his infinite wisdom, left us this evidence which we have now discovered so that anyone who denies his existence and intelligence is *without excuse*. If atheists were making the decision about whether to believe in God solely based on science, then they would have to agree that the existence of God is beyond a reasonable doubt. We now know that God exists and created the universe for life *for certain*. The only reason to persist in unbelief now is because of non-rational concerns, e.g. – the desire to escape from moral obligations, childhood trauma, weak or absent father, etc.

You can read about some of the specific evidence for the origin of the universe out of nothing in this post, and you can read about some of the specific evidence for fine-tuning in this post.

# Obamacare causing local governments to eliminate jobs and cut back on worker hours

**Wintery Knight** · 20 June 2013 · Archived copy · Original

This is the top article on Investors Business Daily at the time of writing.

Excerpt:

> [W]hile private companies are getting all this unwelcome and hostile attention, local governments across the country have been quietly doing exactly the same thing — cutting part-time hours specifically so they can skirt ObamaCare's costly employer mandate, while complaining about the law in some of the harshest terms anyone has uttered in public.
>
> The result is that part-time government workers — many of them low-income — face pay cuts that can top $3,000 a year, and yet will still be left without employer-provided benefits.
>
> Here is just a small sampling of local news reports about what local government officials are saying about ObamaCare, and the steps they're taking to avoid or minimize its costs.
>
> […]**Dearborn, Mich.**: "If we had to provide health care and other benefits to all of our employees, the burden on the city would be tremendous," said Mayor John O'Reilly, explaining why the city is cutting its more than 700 part-time and seasonal workers down to 28 hours a week. "The city is like any private or public employer having to adjust to changes in the law."
>
> **Indiana**: "What I'm seeing across the state is school districts, unfortunately, having to reduce the hours that they are having some of their folks work, primarily so they don't have to worry about the (ObamaCare) penalties, or they don't have to provide them health insurance, which would be very, very costly," said Dennis Costerison, executive director of the Indiana Association of School Business Officials. Ft. Wayne Community Schools, for example, are cutting yours for nearly three-quarters of its part-time aides.
>
> **Omaha, Neb.**: "The biggest problem is everyone said that ObamaCare is only going to help cut costs. Nothing could be further from the truth," said Mike Kennedy , who serves on the board of Millard Public Schools, just outside the city, and figures ObamaCare will raise its costs by $400,000. A neighboring school district is reducing hours for up to 281 part-time employees to avoid $2.5 million in new costs, which will result in pay cuts of up to $3,300.
>
> **Long Beach, Calif.**: "We are in the same boat as many employers," said Tom Modica, Long Beach's director of government affairs. "We need to maintain the programs and service levels we have now." So the city is going to cut hours for 200 part-time workers so it doesn't have to pay $2 million to provide health benefits.
>
> **Salt Lake City, Utah**: "With new provisions in the Affordable Care Act, there was going to be a significant burden upon Granite School District and our taxpayers to offset the cost of benefits," said spokesman Ben Horsley. He says covering the district's part-time workers would cost about $14 million, and so about 1,000 will have their hours cut to 29 a week.
>
> […]**Virginia**: "The Commonwealth of Virginia is grappling with the same issues that many businesses in the private sector are as they struggle to deal with the costs imposed by the Affordable Care Act," Paul Logan, a spokesman for Gov. McDonnell, said. The state is requiring that about 7,000 part-time government workers put in no more than 29 hours a week.
>
> **Texas**: "The Affordable Care Act has added so much complexity and administrative burden that there is nothing affordable about it," said Jared Pope, who is consulting with Texas municipal governments on ObamaCare. Dallas expects its health costs to climb $2.1 million next year. Plano is cutting hours to avoid $1 million in new costs.
>
> **Kern County, Calif.**: "It will affect multiple departments, a majority of departments," said the county's deputy

> administrative officer Eric Nisbett, explaining that unless the county cut worker hours for 800 employees, ObamaCare would cost it up to $8 million a year.
>
> **Allegheny County, Pa.**: “There’s frustration and anger and sadness and resentment, you know, but you don’t have a voice,” said adjunct English professor Clint Benjamin in the wake of the Community College of Allegheny County’s decision to cut hours for about 400 adjunct faculty and other employees so it wouldn’t have to pay $6 million in ObamaCare-related fees next year.
>
> **Medina, Ohio**: “We feel bad as a city administration and as a council in having to cut hours from 35 to 29,” Medina Mayor Dennis Hanwell said. “We have the budget to pay the people, but we do not have the budget to pay for the health care.” If they hadn’t made that cut, the city faced up to $1 million in new health costs courtesy of ObamaCare.

It’s not just private companies who are cutting back on hours in order to escape being forced to pay for health insurance. I think I can pretty much guarantee that no one on the left thinks about where money comes from when they are giving these speeches about how much they care about everyone and how they will give everyone free money. The truth is that if you have a job, you are paying for people who don’t have jobs so that they can have the same life that you have without having to work. That’s what progressivism means. Equality regardless of wisdom and prudence.

# We should not be ignoring the continued threat of radical Islam

**Wintery Knight** · 20 June 2013 · Archived copy · Original

I was surprised to find a strongly-worded article like this at the Christian web site Breakpoint, of all places.

Excerpt:

> Overnight, following the inauguration of Barack Obama, problematic phrasing such as the "global war on terror" (itself a euphemism) and "Muslim extremism" were expunged from the national lexicon in favor of generic terms such as "man-caused disasters." Explained Homeland Security Secretary Janet Napolitano, "We want to move away from the politics of fear toward a policy of being prepared for all risks that can occur."
>
> […][E]vents on the ground continue to belie the administration's euphemisms, parsings, and happy talk. The grisly murder of a British soldier in broad daylight by two machete- and knife-wielding Muslims in London came within mere days. Yet the Obama administration remains committed to its narrative, which it knows to be untrue, and is more than willing to twist the facts to keep it going. Worse, the administration has done all this at the risk of American lives and security. Let's go down the short list:
>
> Fort Hood shooter Maj. Nidal Hasan faces the death penalty or life without parole if convicted on 13 counts of premeditated murder and 32 counts of attempted premeditated murder in his 2009 rampage. Hasan, who shouted "Allahu Akbar!" ("God is great!") during the attack against his unarmed fellow soldiers, now says he was defending the Taliban. U.S. prosecutors are treating the bloodletting as an incident of "workplace violence," denying victims both Purple Hearts and certain combat-related medical benefits. Hasan, meanwhile, is preparing to defend himself in a court of law.
>
> Boston Marathon bomber Dzhokhar Tsarnaev scribbled a message on the boat in which he was captured that said the Americans killed were collateral damage in U.S. wars in Muslim lands, and that an attack on one Muslim is an attack on all. The FBI, of course, failed to prevent his butchery, which killed three people and wounded 275, even after a warning from Russian intelligence about the Tsarnaev brothers.
>
> Then of course there is Benghazi. Seeking to maintain the pre-election fiction that the drone-happy President Obama had al Qaeda on the run ("The tide of war is receding," the president told the U.N.), the administration ignored months of warnings from Ambassador Chris Stevens and others about inadequate security at the U.S. consulate and the strengthening of Islamist forces in Libya. On September 11, Islamists linked to al Qaeda launched a coordinated assault on the consulate, killing four Americans, including Stevens. (Many more *would* have died if two former Navy SEALs had not disobeyed orders and rescued consulate staff.) Despite repeated calls to Washington for help and a rescue team that was ready to intervene, that night administration officials did *nothing*.
>
> And in the following weeks, they promulgated the lie that the assault was not an attack of Islamist terror but a "spontaneous demonstration" in response to a YouTube video. Adding insult to injury, Barack Obama has just selected the discredited U.N. ambassador, Susan Rice, who repeated the administration lie on numerous Sunday morning talk shows, to be his next national security adviser. Why not, since the bigger lie about the threat we face from radicalized Islam continues?

I was surprised to see so direct an article posted on Breakpoint. It shocked me more than when the Gospel Coalition interviewed old-Earth design theorist Stephen C. Meyer about his new book on the Cambrian explosion. It's just so encouraging to see Christians rolling up their sleeves and applying their worldview to areas like science and foreign policy. The fact is, we do have to care about this issues, because Christian applies to every area of our lives. It's not about feeling comfortable in our own hearts by having a private notion of Christianity that is just for our benefit. We should be letting Christian truth claims seep into every area of our lives, so that we continue to promote the good in every area, for everyone. Naturally, we have to study more in order to know how to achieve the good in

every area. Some areas like economics and foreign policy are complicated, and not much fun for us, if our goal is personal happiness and comfort. But I think that's what were are supposed to be doing – learning the truth about God, and then applying it out there in the real world. It's OK for Christians to study up on these areas and have an informed opinion about them. It's OK to speak out on these issues, too. We need more of that.

# Jason Lisle debates Hugh Ross on the age of the Earth

**Wintery Knight** · 20 June 2013 · Archived copy · Original

I found this radio debate about the age of the Earth on the Apologetics 315 Twitter feed.

Speakers:

Jason Lisle

Dr. Lisle graduated *summa cum laude* from Ohio Wesleyan University where he double-majored in physics and astronomy, and minored in mathematics. He did graduate work at the University of Colorado where he earned a Master's degree and a Ph.D. in Astrophysics. While there, Dr Lisle used the SOHO spacecraft to investigate motions on the surface of the sun as well as solar magnetism and subsurface weather. His thesis was entitled "Probing the Dynamics of Solar Supergranulation and its Interaction with Magnetism." Among other things, he discovered a previously unknown polar alignment of supergranules (solar convection cells), and discovered evidence of solar giant cells. He has also authored a number of papers in both secular and creation literature.

Hugh Ross

At age seventeen he became the youngest person ever to serve as director of observations for Vancouver's Royal Astronomical Society. With the help of a provincial scholarship and a National Research Council (NRC) of Canada fellowship, he completed his undergraduate degree in physics (University of British Columbia) and graduate degrees in astronomy (University of Toronto). The NRC also sent him to the United States for postdoctoral studies. At Caltech he researched quasi-stellar objects, or "quasars," some of the most distant and ancient objects in the universe.

So both have impeccable scientific credentials.

The MP3 file is here. (This is the updated version that Brian Auten fixed to remove the commercials!)

I don't always agree with Frank Pastore, (only 95%), but he knows the topic of the debate back to front, and guides the discussion in an incredibly useful, accurate way. This is a fine debate to listen to! You will learn a lot. And you will have fun learning.

**The Bible and the early church fathers**

Jason Lisle

- we take Genesis literally
- the starting point of YEC is Scripture
- the plain meaning of Scripture is that the earth was made in 6 24-hour days
- science has to be interpreted in a way that fits a plain reading of Genesis 1
- the evidence for an old universe and old Earth must be rejected a priori

Hugh Ross

- we take Genesis literally
- the Hebrew word for day (yom) can mean 24 hours or a long period of time
- there are multiple creation accounts in the Bible
- interpreting yom as long periods of time harmonizes all the accounts
- the Bible says that the seventh day is not even ended
- we believe in a literal Adam and Eve living thousands of years ago

Jason Lisle

- there's only 1 account of creation in the Bible: Genesis
- the normal view in church history is 6 24-hour days
- there are some early church fathers who that the days are long
- the other places where creation is discussed are not real accounts

Hugh Ross

- the early church did not spend a lot of time talking about the age of the Earth
- there is not unanimous agreement about the age of the Earth
- there is no definitive statement on the age of the Earth until Isaac Newton
- Newton strongly favored an old earth, hundreds of years before Darwin
- there are other creation accounts, Job 38-39
- Pslam 104 is a creation account

Jason Lisle

- a Psalm is not written in the genre of historical narrative
- Psalm 104 is not a creation account – it talks about ships, etc
- it's talking about the modern era, not a creation account

**The evidence from science**

Hugh Ross

- both of us believe in an absolute beginning of time, space and matter
- both of us believe that space is expanding now
- stars form as matter coalesces during the expansion of the universe
- star formation requires a universe aged on the order of billions of years

Jason Lisle

- if you pre-suppose my interpretation of Genesis, then the universe is young

Hugh Ross

- the speed of the expansion of the universe proves an old universe
- the light emitted from the oldest stars also proves an old universe

Jason Lisle

- if you pre-suppose my interpretation of Genesis, then the universe is young

**Was the universe made with the appearance of age**

Jason Lisle

- any evidence for an old universe is wrong
- stars didn't form gradually, they were created by God instantly
- stars have the appearance of age, but they're actually young

Hugh Ross

- God doesn't lie in the Bible or in the book of nature
- Scientists can look back in time by looking further out into the universe

- Because light takes a long time to travel to the Earth, we can see the past
- we can see a time when there were no stars yet
- stars formed slowly over time, not instantaneously
- we have photos of the universe before stars and after stars
- we can see a history of the universe by looking closer and further away

**Does nature provide us with knowledge about creation?**

They discuss Psalm 19 now, so here's Psalm 19:1-5:

[1] The heavens declare the glory of God; the skies proclaim the work of his hands.

[2] Day after day they pour forth speech; night after night they display knowledge.

[3] There is no speech or language where their voice is not heard.

[4] Their voice goes out into all the earth, their words to the ends of the world.
In the heavens he has pitched a tent for the sun,

[5] which is like a bridegroom coming forth from his pavilion, like a champion rejoicing to run his course.

Jason Lisle

- nature isn't a book
- nature doesn't provide knowledge about God
- Psalm 19 doesn't say that nature communicates to us
- **verse 3 says "There is no speech nor language"**

Hugh Ross

- **If you read all of verse 3, it says the exact opposite of what you just said it says**
- Verse 1: "The heavens declare the glory of God; the skies proclaim the work of his hands"
- Verse 2: "Day after day they pour forth speech; night after night they display knowledge."
- Verse 3: "There is no speech or language **where their voice is not heard.**"
- Verse 4: "Their voice goes out into all the earth, their words to the ends of the world."

Jason Lisle

- You can't take the Bible literally all the time

**How important is the age of the Earth?**

Hugh Ross

- it's a non-essential because it has nothing to do with salvation or inerrancy
- both sides of the debate affirm the same views of salvation and inerrancy
- professional scientists have multiple lines of evidence saying the universe is old
- the only reason it matters is that young earth creationism is a barrier to faith
- if you have to deny science to be a Christian, then it stops people from being saved
- young earth opposition to science has been used by secularists to marginalize Christianity

Jason Lisle

- there was no death in the Garden of Eden, animal or human, before the Fall
- the Bible says that death was a consequence of Adam's sin

- so there was no death before the Fall, according to the Bible
- old earth people believe in death before the Fall

Consider Romans 5:12:

[12]Therefore, just as sin entered the world through one man, and death through sin, and in this way death came to all men, because all sinned—

Hugh Ross

- Romans 5:12 says that Adam's sin caused death to come **to all men**
- old earth people believe that only animal death existed before the Fall, not human death
- plant and animal death existed before the Fall – Adam and Eve were eating!

Jason Lisle

- I interpret the Bible to say that plants aren't living creatures

**What about dinosaurs, the Flood, and Noah's ark?**

Jason Lisle

- dinosaurs were created on the 6th day
- dinosaurs lived alongside humans and were vegetarians before the Fall
- dinosaurs were on the Ark – they're not that big – just take baby dinosaurs
- it's a global flood

Hugh Ross

- dinosaurs were created on the 5th day
- they were extinct before before humans ever appeared
- nobody in history ever wrote about dinosaurs until 200 years ago
- it's a local flood

# Wall Street Journal explains the death panel of Obamacare

**Wintery Knight** · 21 June 2013 · Archived copy · Original

Guess what! Sarah Palin was right, as the Wall Street Journal explains.

Excerpt:

> Signs of ObamaCare's failings mount daily, including soaring insurance costs, looming provider shortages and inadequate insurance exchanges. Yet the law's most disturbing feature may be the Independent Payment Advisory Board. The IPAB, sometimes called a "death panel," threatens both the Medicare program and the Constitution's separation of powers. At a time when many Americans have been unsettled by abuses at the Internal Revenue Service and Justice Department, the introduction of a powerful and largely unaccountable board into health care merits special scrutiny.
>
> For a vivid illustration of the extent to which life-and-death medical decisions have already been usurped by government bureaucrats, consider the recent refusal by Health and Human Services Secretary Kathleen Sebelius to waive the rules barring access by 10-year old Sarah Murnaghan to the adult lung-transplant list. A judge ultimately intervened and Sarah received a lifesaving transplant June 12. But the grip of the bureaucracy will clamp much harder once the Independent Payment Advisory Board gets going in the next two years.
>
> The board, which will control more than a half-trillion dollars of federal spending annually, is directed to "develop detailed and specific proposals related to the Medicare program," including proposals cutting Medicare spending below a statutorily prescribed level. In addition, the board is encouraged to make rules "related to" Medicare.

The decisions of the IPAB are absolute, and very hard to overturn:

> The ObamaCare law also stipulates that there "shall be no administrative or judicial review" of the board's decisions. Its members will be nearly untouchable, too. They will be presidentially nominated and Senate-confirmed, but after that they can only be fired for "neglect of duty or malfeasance in office."
>
> Once the board acts, its decisions can be overruled only by Congress, and only through unprecedented and constitutionally dubious legislative procedures—featuring restricted debate, short deadlines for actions by congressional committees and other steps of the process, and supermajoritarian voting requirements. The law allows Congress to kill the otherwise inextirpable board only by a three-fifths supermajority, and only by a vote that takes place in 2017 between Jan. 1 and Aug. 15. If the board fails to implement cuts, all of its powers are to be exercised by HHS Secretary Sebelius or her successor.
>
> The IPAB's godlike powers are not accidental. Its goal, conspicuously proclaimed by the Obama administration, is to control Medicare spending in ways that are insulated from the political process.

That's what people were voting for when they voted for Obama in 2008 and 2012. Conservatives tried to warn them about the death panels in Obamacare, but no one listened. No one listened when we told them abotu the rising health insurance premiums, or the worker hour cuts that would result. Well, guess who was right?

# Human Rights Campaign refuses to reveal name of IRS leaker

**Wintery Knight** · 21 June 2013 · Archived copy · Original

CNS News reports.

Excerpt:

> The Human Rights Campaign, a homosexual advocacy group, will not say who provided it with a confidential list of donors to the National Organization for Marriage, although NOM's chairman believes someone at the Internal Revenue Service leaked the information. The IRS also is silent on the question.
>
> Providing such donor information is a felony, John C. Eastman, chairman of the board for the National Organization for Marriage, told CNSNews.com. The Justice Department deferred the matter to the Treasury Department, but Eastman said the probe by the Treasury Inspector General for Tax Administration seems to have stalled.
>
> Nevertheless, Eastman told CNSNews.com, "We're going to keep pressing until we get criminal indictments brought against the people responsible."
>
> NOM, which advocates traditional marriage, and HRC are on opposite sides in the national political battle over same-sex marriage.
>
> The willful disclosure of donor information carries a penalty of up to five years in prison and a $5,000 fine.
>
> Human Rights Campaign spokesman Charlie Joughin did not respond to numerous phone and e-mail inquiries from CNSNews.com on Monday, Tuesday and Wednesday asking who provided the list that was posted on the HRC website in March 2012. The HRC advocates for same-sex marriage and other homosexual issues.
>
> […]The willful disclosure of NOM's confidential tax information would violate 26 U.S.C. Section 6103, which states, "Returns and return information shall be confidential." It also says: "no officer or employee of the United States," "no officer or employee of any State, any local law enforcement agency," "any local child support enforcement agency, or any local agency administering a program," "no other person (or officer or employee thereof) who has or had access to returns or return information," "shall disclose any return or return information obtained by him in any manner in connection with his service as such an officer or an employee or otherwise or under the provisions of this section."

What a misnamed organization – the "Human Rights" Campaign. They are covering up for a felon because of their hatred and intolerance of those who support natural marriage.

# William Lane Craig reviews new Dawkins/Krauss movie "The Unbelievers" in The Blaze

**Wintery Knight** · 21 June 2013 · Archived copy · Original

Dr. William Lane Craig

On The Blaze, a major political news site, Dr. William Lane Craig reviews a new atheist movie entitled "The Unbelievers" starring Lawrence Krauss and Richard Dawkins.

Excerpt:

> Richard Dawkins and Lawrence Krauss are two of the most important figures in the New Atheist movement. So one would naturally have high expectations that their new documentary, *The Unbelievers*, would present a vigorous, powerful attack upon the rationality of religious belief, featuring interviews with impressive scientists laying out the case against God. Instead, the film turns out to be merely a travelogue of Dawkins and Krauss' "magical mystery tour" of speaking engagements before their enthusiastic fans. Rather than thought provoking, the film is shallow, boring, and narcissistic.
>
> […]Featuring sound bites from celebrities and film stars in support of their cause fits Dawkins and Krauss' purpose more than substantive interviews with qualified but largely unknown academics. The film's purpose is not to present a case but primarily to rally the troops.
>
> But there is a more fundamental reason for the absence of argument against religious belief. Dawkins and Krauss proceed on the unspoken assumption that science and religion are fundamentally mutually exclusive. Therefore, all one needs to do in order to discredit religion is to extol and celebrate the greatness of science. Science and religion are like two ends of a teeter-totter: if the one end goes up, the other automatically declines. Thus, Krauss asks Dawkins which he would rather do: explain science or destroy religion? It is assumed that these are two ways to the same end. Dawkins, of course, chooses to extol science. "I'm in love with science, and I want to tell the world." His implicit assumption is that one cannot love both God and science.
>
> There is no argument given for the mutual exclusivity of science and religion; rather it is the unquestioned presupposition of the film. This is ironic because one of the repeated emphases of the film is the necessity of critical thinking. No view is off limits to examination; we must insist on permission to question everything. Yet Dawkins and Krauss are strangely oblivious to their own unexamined assumptions. Why think that science, restricted as it is to the exploration of the physical world, is incompatible with the existence of God? Alas, we are not told.
>
> […]Indeed, given their ignorance of the literature, one cannot help but wonder if Dawkins and Krauss are not, in fact, incapable of engaging in substantive conversation on these matters. Hence, their open endorsement of ridicule as "a useful tool for illuminating reality." Dawkins' philosophical gaucherie is on display when

> complains that his dialogue with the Archbishop of Canterbury was “ruined” by the chairman (Sir Anthony Kenny, himself an agnostic), who “is a philosopher and so thought it his duty to clarify things,” which led, says Dawkins, to “skewing.”  Similarly, Dawkins breezily dismisses “Why?” questions as “silly.”

So what do we make of Dr. Craig holding Dawkins and Krauss accountable? Well. it’s one thing to treat Peter Millican and Walter Sinnott-Armstrong nicely. But Krauss and Dawkins really need to be spanked for their own good, at this point. What else do you do with ignorant children who run around insulting grown-ups?

What I find ironic is that there are 7 areas of science where theism has gained decisive support in the last 50 years:

1. The Big Bang cosmology
2. The cosmic fine-tuning
3. The origin of life
4. The origin of phyla in the Cambrian explosion
5. Galactic habitability
6. Stellar habitability
7. Irreducible complexity

Each of these poses a threat to naturalism, and a few of them are lethal to naturalism on their own. Atheists have been reduced to holding onto speculations to get around them. You know the sort: nothing creating something, unobservable multiverses explain fine-tuning, unseen aliens seeded the Earth with life, undiscovered pre-Cambrian fossil record, and so on. It’s a bad time to be an atheist. Science has refuted atheism over and over again!

**William Lane Craig podcasts about “The Unbelievers”**

There are 3 of these podcasts so far in the series:

1. What was the point of the film?
2. Is science opposed to religion?
3. Unscientific assertions in the film

# Obama administration says that it “strongly” opposes religious liberty in the military

**Wintery Knight** · 22 June 2013 · Archived copy · Original

From Alliance Defending Freedom. (H/T Tom G.)

Excerpt:

> In the past few weeks, the Obama administration has shown exactly what it believes the First Amendment protects: very little. First the Justice Department subpoenaed phone records and personal emails from journalists, then the IRS told an organization that provides support to pregnant women in abusive situations that they could not “disagree” with other groups if they wanted non-profit status.
>
> So maybe we shouldn’t be surprised that the Obama administration once again wants to ignore the First Amendment, this time “strongly” opposing a proposed amendment to the National Defense Authorization Act that would protect service members’ actions and speech that reflects “the conscience, moral, principles, or religious beliefs of the member.” When an Air Force officer can’t display a Bible on his desk because it might make others uncomfortable, it’s clear that free exercise of religion is under attack.
>
> The military isn’t the only place where this administration wants to trample on the religious freedom of every day citizens. There are over 30 documented direct attacks by the Obama administration on religious liberty. As just one example, the administration has continually refused to allow businesses with conscientious objections to opt out of Obamacare, forcing businesses into court to protect their right not to pay for abortions and abortion-causing drugs.
>
> Because opposition to religion is real, we need explicit protections of our religious freedom. This amendment to the National Defense Authorization Act is an important safeguard for service members. Since members of the military have volunteered to defend the United States and its constitution, isn’t it only right that our nation gives them the freedom the constitution promised? Like all Americans, service members should be free to live out their faith. It is concerning and disappointing that the Obama administration doesn’t agree.

I think it’s worth explaining again why religious people should oppose expanding the scope and power government beyond the limits set by the Constitution. The federal government is secular, and when it has power outside of the areas specified by the Constitution, then secularism invades those areas as well. Therefore, religious people should be careful when people talk about how the government has to solve this problem and that problem, and needs more money to spend to solve them. Religious people should not be in favor of growing government, raising taxes, and so on. If problems need solving, then families, churches and communities should be the first resort. Local government, and state government should be next, and federal government should be the last resort. Christians should be for limited government.

# IRS sent $46 million in “tax refunds” to 23,994 illegal aliens, all living at the same address

**Wintery Knight** · 22 June 2013 · Archived copy · Original

From CNS News.

Excerpt:

> The Internal Revenue Service sent 23,994 tax refunds worth a combined $46,378,040 to “unauthorized” alien workers who all used the same address in Atlanta, Ga., in 2011, according to the Treasury Inspector General for Tax Administration (TIGTA).
>
> That was not the only Atlanta address theoretically occupied by thousands of “unauthorized” alien workers receiving millions in federal tax refunds in 2011. In fact, according to a TIGTA audit report published last year, four of the top ten addresses to which the IRS sent thousands of tax refunds to “unauthorized” aliens were in Atlanta.
>
> The IRS sent 11,284 refunds worth a combined $2,164,976 to unauthorized alien workers at a second Atlanta address; 3,608 worth $2,691,448 to a third; and 2,386 worth $1,232,943 to a fourth.
>
> Other locations on the IG’s Top Ten list for singular addresses that were theoretically used simultaneously by thousands of unauthorized alien workers, included an address in Oxnard, Calif, where the IRS sent 2,507 refunds worth $10,395,874; an address in Raleigh, North Carolina, where the IRS sent 2,408 refunds worth $7,284,212; an address in Phoenix, Ariz., where the IRS sent 2,047 refunds worth $5,558,608; an address in Palm Beach Gardens, Fla., where the IRS sent 1,972 refunds worth $2,256,302; an address in San Jose, Calif., where the IRS sent 1,942 refunds worth $5,091,027; and an address in Arvin, Calif., where the IRS sent 1,846 refunds worth $3,298,877.
>
> **Since 1996, the IRS has issued what it calls Individual Taxpayer Identification Numbers (ITINs) to two classes of persons: 1) non-resident aliens who have a tax liability in the United States, and 2) aliens living in the United States who are “not authorized to work in the United States.”**
>
> **The IRS has long known it was giving these numbers to illegal aliens, and thus facilitating their ability to work illegally in the United States. For example, the Treasury Inspector General’s Semiannual Report to Congress published on Oct. 29, 1999—nearly fourteen years ago—specifically drew attention to this problem.**
>
> […]In addition to the 23,994 tax refunds worth a combined $46,378,040 that the IRS sent to a single address in Atlanta, the IG also discovered that the IRS had assigned 15,796 ITINs to unauthorized aliens who presumably resided at a single Atlanta address.
>
> The IRS, according to TIGTA, also assigned ITINs to 15,028 unauthorized aliens presumably living at a single address in Dallas, Texas, and 10,356 to unauthorized aliens presumably living at a single address in Atlantic City, N.J.
>
> Perhaps the most remarkable act of the IRS was this: It assigned 6,411 ITINs to unauthorized aliens presumably using a single address in Morganton, North Carolina. According to the 2010 Census, there were only 16,681 people in Morganton. So, for the IRS to have been correct in issuing 6,411 ITINS to unauthorized aliens at a single address Morganton it would have meant that 38 percent of the town’s total population were unauthorized alien workers using a single address.
>
> TIGTA said there were 154 addresses around the country that appeared on 1,000 or more ITIN applications made to the IRS.

And now they are trying to pass an amnesty bill which they tell us contains no corruption, waste or fraud at all. How

stupid do they think that we are? If they were serious about their desire to clean up the immigration system and encourage immigration of responsible, law-abiding skilled immigrants, then they would be building a fence now and cleaning up the messes that already exist. It's important to understand that illegal immigrants break the law and cheat the system – and the rest of us have to pay for it. We pay for their schools, their health care, their car accidents, their crimes and so on. Politicians who turn a blind eye to this want to appear to be generous, spending other people's money and calling it "compassion". But this money doesn't come from politicians, it comes from taxpayers like you and I. I don't know about you, but I had my own plans for the money I earn, and it didn't involve paying for corrupt politicians to feel good about their "generosity".

# Frank Turek responds to Obama's speech opposing Christian schools

**Wintery Knight** · 22 June 2013 · Archived copy · Original

Frank Turek's latest radio show podcast discusses Obama's assertion that Christian schools are divisive.

Let's start with a news story from the Daily Caller, and then we'll review the podcast.

Excerpt:

> President Barack Obama suggested that religiously-affiliated and denominational schools are at the root of The Troubles, the ethnic, religious and nationalist conflict that seems to perpetually afflict Northern Ireland.
>
> Obama made the chastising remarks in front of about 2,000 mostly young people at Belfast's Waterfront Hall on Monday, the Scottish Catholic Observer reported.
>
> "If towns remain divided — if Catholics have their schools and buildings and Protestants have theirs, if we can't see ourselves in one another and fear or resentment are allowed to harden — that too encourages division and discourages cooperation," Obama lectured.
>
> […]Monday's statement is not the first time Obama has suggested that religion is a dangerous crutch.
>
> In 2008, when he was running for president, Obama criticized unsophisticated Americans in "small towns in Pennsylvania" and the Midwest for their attachment to Christian religion and firearms.
>
> "So it's not surprising then that they get bitter, they cling to guns or religion or antipathy to people who aren't like them, or anti-immigrant sentiment, or anti-trade sentiment as a way to explain their frustrations," Obama famously declared, according to The Huffington Post.

I'm sure that he has no problem with Maddrassas and secular-leftist public schools, though.

Anyway, on to the podcast, and let's see what Frank Turek makes of it.

The MP3 file is here.

Topics:

- Obama's point: he thinks that religious schools encourage division rather than cooperation
- The point is NOT that he wants to shut down Christian education
- His point is, though, that teaching religion in schools is a source of segregation and division
- Obama toured Muslim countries, but he didn't say a word about Muslim schools being divisive
- In Ireland, the violence is not in accordance with Christianity
- We should not judge a religion by actions that are inconsistent with that religion
- George Washington: "Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports. In vain would that man claim the tribute of patriotism, who should labor to subvert these great pillars of human happiness, these firmest props of the duties of men and citizens. The mere politician, equally with the pious man, ought to respect and to cherish them. A volume could not trace all their connections with private and public felicity. Let it simply be asked: Where is the security for property, for reputation, for life, if the sense of religious obligation desert the oaths which are the instruments of investigation in courts of justice ? And let us with caution indulge the supposition that morality can be maintained without religion. Whatever may be conceded to the influence of refined education on minds of peculiar structure, reason and experience both forbid us to expect that national morality can prevail in exclusion of religious principle."
- You can see how morality has degraded, for example in public schools, as society has become more secular

- Our human rights and freedoms are in fact rooted in a Creator, and government should recognize that
- Instead of being critical of religion, Obama should have emphasized the unity of Christian denominations like Thomas Jefferson
- In order to be right with God, the essential thing is to believe that Jesus' death is an atonement for human sinfulness
- We should not lose sight of what we have in common with other denominations and how important those common points are
- Augustine: "In essentials, unity; in non-essentials, liberty; in all things, charity."
- The most important question for humans to ask "Does God Exist?", because it determines whether there is meaning and purpose
- The question cannot even be asked or debated in public (government-run) schools
- Problem: how can our education system be sound if we do not and cannot investigate life's most important question?
- The answer to the question "Does God exist?" is assumed to be NO in our public / government-run school system
- Why do parents who are forced to pay thousands of dollars for public schools go on and spend thousands more on private school?
- It's because everyone knows that it's worth the money to send children to private schools, they learn more there
- The President's comment: denominational schools cause divisions, is itself divisive
- Jesus himself says that Christianity will involve some appropriate divisiveness: e.g. – Matthew 10:34-38
- See 1 Corinthians 5, Obama himself would be expelled from the church for claiming to be Christian while excusing sexual immorality

Then there is a period of people calling in and discussing the topic with Dr. Turek.

# How to marry a Christian man: a checklist for women to prepare for marriage

**Wintery Knight** · 23 June 2013 · Archived copy · Original

Have you ever been in a job interview where the people hiring you just asked you for your opinions instead about your knowledge and experience? Imagine that. I'm a software engineer so in interviews, I get asked software engineering questions about what I know and what I've done. Employers never ask me "do you believe in testing your code?" and "do you like continuous integration?" and "how do you feel about design patterns?". They always ask me about what I know, and what I've done with what I know. They ask me what I've studied and what skills I've put into practice previously. And they call my past employers and make certain that what I've told them is true.

Why do they do this? Well, employers do this because they have a specific goal in mind for me – roles that they expect me to fill with specific duties that they need me to help them with. In exchange, they offer me a salary. It would be a very strange thing if they offered me a salary just for having opinions about things that I didn't know and had never put into practice.

My work consists of creating software for a client. I am used to asking the client about his or her needs are, and helping them to be specific about their needs. I work with the client in order to design a piece of software that will meet their needs. In software engineering, the customer's needs come first, and the whole process is designed to produce functional code that satisfies the customer. I have a lot of fun working together with people on software and it can be very fulfilling, but the feelings I have about my job don't matter as much as what I produce for my client. Often, it can mean a lot of self-sacrificial work that is very hard on me. But since the client has paid the bill, I make those sacrifices in order to achieve the client's goals.

Now consider marriage. In marriage the client of the marriage enterprise is God. His goals are that each of the grown-ups and any children they produce will know him and make him known to others. He expects that the marriage will last a long time and be faithful and loyal. He expects that the marriage will conform to his specifications, not to the specifications on any other ideology – like feminism. He has requirements that are different than any engineer's desire to be happy. The happiness of the engineers is not God's primary goal. The happiness that the engineer has comes from achieving the goals of the client. And each engineer does his or her best to make sure other engineers stay focused on those goals and feel good about working for the client. The success of the marriage does not depend primarily on making anyone in the marriage happy, because it is not God's plan for us to be "happy" in a worldly way. Our model is Jesus, and his example of obedience to God was self-sacrificial love for others, even at the point of suffering and dying for others.

So, when I am considering marriage to a woman, I want to make sure that she understands that the marriage will serve God and to assess how much knowledge and experience she has with the sorts of things that a God-serving marriage will involve. In particular, I am focused on making sure that she knows whether God exists. I want to see whether she has acted on that knowledge in a self-sacrificial, competent way in the past. I want to make sure that she is able to do hard things and bear with evil and suffering while remaining committed to serving God. I want to make sure that she believes in doing her job no matter how hard it gets. I want to see whether she has reasons to believe that morality is real and whether she grounds her convictions about morality in evidence as well as in the Bible. I want to see how much she has been influenced by the society's descent into postmodernism and moral relativism. I also want her to understand the mechanics of marriage: what are her duties? what are my needs? how do we build faith in children that will last? why do people divorce? why do people cheat? what laws and policies make it easier to do a marriage and to raise Christian children?

So in view of all of that, I've written a list of questions below that are the ones I use to discuss marriage with a woman. My goal here is not to see that she already knows about all of these things. My goal is to know whether she sees marriage as a project to serve God, and whether she takes her obligations to serve God seriously and put her happiness second. Very often, the response I get is to these questions is rebellion and refusal to learn or answer. But

people generally agree that these questions do what they are intended to do – they check to make sure that God's goals will be the focus of the marriage. Women who think that the marriage is there to make them happy will not be interested in learning how to answer these questions and then trying to put what they've learned into practice.

**QUESTIONS**

**1. Cosmology**

*What scientific evidence would you point to to show that God created the universe OR that God fine-tuned the universe, or parts of the universe, for intelligent life?*

SAMPLE ANSWER: The big bang theory, the fine-tuning argument, galactic habitability, stellar habitability, or terrestrial habitability.

BONUS POINTS: referencing hard evidence like light element abundances, cosmic microwave background radiation, or specific instances of fine-tuning.

WHY IT MATTERS: She can't be a Christian unless she *knows* God exists, and that can't just be based on feelings and community. An awareness of the scientific evidence shows a seriousness about spiritual things – that her belief is rooted in objective reality, not in subjective feelings, culture, community, etc. It's not "her truth", it's "the truth". If she doesn't know why she believes, then she can't be relied upon to make decisions as a Christian, especially in stressful situations. There is always going to be a conflict between doing what one feels like and doing what is consistent with reality. Having scientific facts helps a person to do what they ought to do.

**2. Intelligent Design**

*Explain the concept of intelligent design and explain how it applies to the i) origin of life OR ii) to the fossil record.*

SAMPLE ANSWER: Explain the concept of specified complexity and Dembski's explanatory filter, then explain how it applies to (i) amino acid sequencing or the double helix, OR (ii) to the sudden origin of animal phyla in the Cambrian explosion.

BONUS POINTS: Ideally, for the origin of life question, she's going to mention things like UV radiation, chirality, cross-reactions and peptide bonds, then calculate the approximate probabilities for generating a protein by chance. For the Cambrian explosion, she should graph out the introduction of phyla over time, and explain the Ediacaran fauna and why they are not precursors to the Cambrian fauna. Bonus points for bashing theistic evolution, or talking about the early earth environment and the problems with forming amino acids.

WHY IT MATTERS: Darwinian evolution is bad science because it is really just philosophy (naturalism) masquerading as science. You can't marry anyone who pre-supposes a materialist view of metaphysics like naturalists do, and then allows that philosophical assumption to overrule the scientific evidence. You don't want to be paired up with someone who lets their prejudices overturn data.

**3. The problems of evil and suffering**

*Assuming that Christianity is true, why do you think that God would allow suffering and evil in the world? Distinguish between human evil and natural evil in your answer. Also explain what role you think God's permission of evil and suffering has in maturing Christians.*

SAMPLE ANSWER: Define the deductive and inductive problems of evil, explains several different responses to them, such as free will, character formation, natural law, the ripple effect, etc. Mention the burden of proof for claims that certain evils are gratuitous, i.e. – noseeums.

BONUS POINTS: explaining how evil relates to Christian theology and God's purposes for humans being knowledge of him and not just happiness, talking about Jesus' own suffering and the meaning and purpose of it. More bonus points for pointing out how atheists cannot even complain about evil without assuming objective morality, which requires a moral lawgiver.

WHY IT MATTERS: Lots of nasty things can happen in a marriage. Children can get sick or die, jobs can be lost, and so on. It helps when you are dealing with a person who expects it and will not jettison their responsibilities and belief in Christ in order to pursue happiness unencumbered. The main thing is that the woman thinks that the purpose of life is to know God, and that suffering and evil play a role in gaining knowledge of God. You definitely do not want to marry someone who thinks that the purpose of life is happiness, and that God is some big bearded grandfather in the sky who just wants to hand out goodies to people and make sure they are having a good time regardless of what they choose to do.

**4. The moral argument**

*What is the is-ought fallacy? What is the difference between moral objectivism and moral relativism? Give one reason why moral relativism is false. Give one reason why an atheist cannot rationally ground prescriptive morality. Explain why objective morality relates to God's existence.*

SAMPLE ANSWER: Explain the is-ought fallacy. Explain objective and subjective morality. Discuss the reformer's dilemma and how it refutes relativism. Explain that atheism requires materialism, and materialism denies free will – so moral choices are impossible. Outline the moral argument.

BONUS POINTS: Give more than one reason where only one was asked for, refute attempts to assert objective morality on atheism, explain how moral obligations are related to God's design for humans.

WHY IT MATTERS: You can't marry a person who thinks that the moral law is not a brake on their desire to be happy. There are going to be times in the marriage when self-sacrifice is required by the moral law – either for you, for God, or for the children. It will not be easy to be moral then, so you are looking for someone who thinks that morality is real, and not subject to their feelings and whims. It might be worth asking the person when she has had to do the right thing when it was against her self-interest, like those valedictorians who name Jesus in their speeches and then get censored.

**5. The resurrection of Jesus**

*Assume you are talking to a non-Christian. Explain how you would make a case for the bodily resurrection of Jesus on historical grounds. This person does not accept the Bible as inspired and/or inerrant.*

SAMPLE ANSWER: Explain the criteria for establishing minimal facts / historical bedrock, list a set of minimal facts, explain why they pass the criteria, propose at least two naturalistic alternatives to the resurrection, and disprove them. MUST mention 1 Corinthians 15:3-7 in order to pass.

BONUS POINTS: listing atheist scholars who support each minimal fact, discussing N.T. Wright's work on the Jewish concept of resurrection, referencing Richard Bauckham's work on the gospels as eyewitness testimony, mentioning the pre-suppositions (naturalism, relativism) of liberal scholars like Crossan and Borg.

WHY IT MATTERS: The resurrection is the cornerstone of Christian belief. A person cannot encounter skeptics and not be able to defend the resurrection on historical grounds to them. The resurrection matters to how people act: they act completely differently depending on whether they believe that this life is all there is, or that this life is just a precursor to eternal life with God. You want someone who takes the long-term perspective.

**6. World religions**

*Name two major world religions and argue against them using either the laws of logic, scientific evidence or historical evidence. Explain the concept of middle knowledge, and why it is relevant to the problem of religious pluralism.*

SAMPLE ANSWER: Refute Theravada Buddhism with the big bang, or refute Islam with the crucifixion of Jesus, etc. MUST mention specific beliefs of that religion that are testable, and not just argue that they reject Christianity and are therefore false. Explain how middle knowledge reconciles free will and divine sovereignty, and that it also helps to solve the problem of people who have never heard the gospel.

BONUS POINTS: Using evidence that is universally accepted by people outside of that religion. Using scientific

evidence. Referencing Acts 17:27 or other Bible passages when explaining middle knowledge. Mentioning objections to middle knowledge, such as the grounding objection.

WHY IT MATTERS: Many younger Christians today believe that Christianity is moralistic therapeutic deism. They think that the purpose of religion is to have good feelings and to be nice to other people and to make other people feel good. It's all about feelings. You need to make sure that she knows how to make people feel bad and is comfortable doing it, with evidence. Middle knowledge also grounds the person's willingness to see people as being responsible for their acceptance or rejection of Christ. Instead of taking a hands-off fatalistic approach to salvation, someone who accepts middle knowledge is going to take persuasion seriously and expend effort to try to change the people around them.

**7. Abortion**

*How would you establish that the unborn are fully human and deserve protection? Explain three pro-abortion arguments and then show why they are false. Name three incremental pro-life policies that you would introduce if you were a legislator.*

SAMPLE ANSWER: Use the SLED test and the law of biogenesis. Talk about the DNA signature of the unborn being distinct from the mother. Explain and refute the back-alley abortions argument, the it's the woman's body argument, the Judith Jarvis Thompson violinist argument, etc. Legislation would be parental notification, banning funding for abortion providers, mandatory sonograms, etc.

BONUS POINTS: Refute more pro-abortion arguments, reference specific legislation that is in-flight or was recently signed into law. Experiences protesting abortion or debating abortion with pro-abortionists. Experience counseling a post-abortive or crisis pregnancy woman. Mentioning biological details of foetus development.

WHY IT MATTERS: Basically, because people who think that sex is for recreation, and that it is ok to kill children to avoid any limits on the pursuit of happiness are not qualified for marriage. You can't enter into an intimate commitment with someone who is willing to commit murder in order to get out of the consequences of their own selfish pursuit of pleasure. That is not going to work in a marriage – you need someone who makes good decisions, avoids harming others, is chaste and self-controlled, and takes responsibility for her actions when they go awry.

**8. Marriage**

*Explain the public purposes of marriage, and then outline three threats to marriage and explain what legislation you would propose to neutralize these threats. What choices should people make before marriage to make sure they will have a stable, loving marriage?*

SAMPLE ANSWER: Some public purposes of marriage are i) to force moral constraints on sexual activity, ii) to produce the next generation of humans, iii) to provide children with a stable, loving environment in which to grow up. Three threats to marriage are i) cohabitation, ii) no-fault divorce – which leads to fatherlessness, and iii) same-sex marriage. There are others, too. For legislation, there are things like tax incentives, shared parenting laws, school choice to de-monopolize politicized public schools, etc. Pre-marriage behaviors are things like chastity, experience with children, having lots of savings, being physically fit, etc. Having a degree in experimental science, math or economics is excellent for a woman. Avoid artsy degrees, especially English.

BONUS POINTS: Name more threats to marriage, explain the effects of fatherlessness on children, explain how divorce courts work, explain how socialism impacts the family through taxation and wealth redistribution, explain what happens to women and children after a divorce.

WHY IT MATTERS: It's important for people who want to get married that they understand that marriage takes time and effort, and it requires both spouses to prepare for marriage, to be diligent at choosing a good spouse, and to understand what spouses and children need in order to stay engaged.

**9. Children**

*Explain a person you admire and then tell me what you would do as a mother in order to produce that person from one of your children. What are some policies and laws that you would change to make your job easier?*

SAMPLE ANSWER: Jay Richards. Jay Richards is one of the most well-rounded Christian scholars operating today. He has knowledge of multiple areas, including economics and science. To make a Jay Richards, you need to be very careful about his education – which could mean homeschooling and saving money for later university tuition, as well as exposing him to apologetics and debates at an earlier age. He would need to have the dedicated attention of his mother for the first two years of his life, at least. Some laws that would help would be lower taxes, school choice, and academic freedom laws.

BONUS POINTS: Explaining how different things like day care, public schools, divorce, etc. harm children. Explaining how mother and fathers contribute to the child's moral, cognitive, spiritual, etc. development at different times. Explain how the child is harmed if both parents are not present and engaged to play these roles.

WHY IT MATTERS: Marriage is an enormous sacrifice for a man. Not only is there the risk of divorce, but wives and children are very expensive. A man can serve God fine as a bachelor. He has to have compelling reasons why getting married would serve God more than staying single. Producing influential children seems to be one of the major reasons for a man to get married, and he needs to see evidence that his wife is on board with that.

**10. Husbands**

*Explain the roles of a man in a marriage, and tell me some of the things you would do in order to help your man to achieve those roles. What groups would oppose your husband from fulfilling those roles, and what have you done in your life to prepare yourself to help your husband in his roles? What are some of the most important things that a man needs from a woman, and what specific things should a wife do to provide them?*

SAMPLE ANSWER: Men are supposed to be protectors, providers and moral/spiritual leaders. In order to help men to be protectors, women have to give them time to study to discern truth from lie, and support their ability to be physically strong, and to own firearms. It is also a good idea for women to have a positive view of good men who use force to restrain evil, as with the American military. Women should support the use of force against radical Islam and terrorists, as well. In order to help men to be providers, women have to advocate for fiscal conservatism in the public square. That would mean advocating for lower taxes, less government spending and smaller government. It would also mean being frugal in the home and helping the man to move ahead at work. If the children are up and out of the house, it could mean going back to work or starting a business to help make ends meet – or monitoring investments. For a man to be a moral and spiritual leader, a woman has to be supporting of him making moral judgments in the home, disciplining the children, holding her accountable for moral errors, and for making exclusive truth claims when it comes to spiritual things. She should not censor him when he gets into debates about spiritual things, even if other people who disagree feel bad – so long as he is not being a jerk. Her goal is not to be popular or liked, but to support her husband in his roles. The most important thing a man needs is respect, and that means treating him as important and significant, being grateful for his contributions, soliciting his opinion on things, being mindful of his male nature, which is more visual and sexual.

BONUS POINTS: Having read "The Proper Care and Feeding of Husbands", "Men and Marriage", "Love and Economics" and "Taken Into Custody". More bonus points for having written about what she learned about men and marriage from books like that. The goal here is for her to have a real awareness and sympathy for what men are facing as husbands and fathers, and to have an idea of what women can do to support them in their roles.

WHY IT MATTERS: As a man, you have certain needs – the biggest need is for respect. If you are thinking of marrying a woman who cannot define respect, and doesn't know how to give you respect, then you are going to be in for a world of hurt. The more she views marriage as a joint project with specific goals and external challenges, the more understanding and support you will get. No one wants to fly a plane with someone who doesn't know how to fly a plane, fix a plane or navigate a plane. The more she knows about men and marriage, the better it will go for you – and the children.

**Parting thoughts**

This list is not exhaustive, it's just to give you an idea of the kinds of things you should be looking for. A lot of it is the attitude. You are looking for a woman who does not shift blame onto you, who takes responsibility when she is wrong, who argues using logic and evidence, who loses arguments gracefully, and wins arguments gracefully, and who loves you and cares for you even if you are fighting. If the woman is resentful and doesn't want to learn anything to deepen her faith, then drop her and find someone who will learn – it will be much better for you to partner with someone lovable and helpful, instead of a selfish lazy feminist.

If I were making a list for women, I would emphasize different things more centered around the specific roles that men play in the marriage – asking for his resume, work history, savings, investments, past relationships with women, parenting ability, self-defense ability, mentoring ability, and especially on moral issues and Christian truth claims.The most important thing that a woman needs is love, and the man should be ready to speak about love at length, and explain how he is going to provide her with love during the courtship and during the marriage. Women need to know that they are significant and desired by the man.

# Stephen C. Meyer discusses his new book “Darwin’s Doubt” on the Michael Medved show

**Wintery Knight** · 23 June 2013 · Archived copy · Original

The Michael Medved show is a national radio show broadcast out of Seattle, Washington. According to Talkers magazine, he has the fifth largest radio audience. He has a regular weekly segment on science and culture featuring scholars from the Discovery Institute.

Here is the segment from this past week, courtesy of the Intelligent Design: The Future podcast.

The MP3 file is available for download. (38 minutes)

The description is:

> On this episode of **ID the Future**, the Michael Medved Show welcomes Dr. Stephen Meyer to talk about his new bestselling book, *Darwin’s Doubt: The Explosive Origin of Animal Life and the Case for Intelligent Design*. Listen in as Meyer and Medved discuss the mysteries of the Cambrian explosion and why this phenomenon continues to stump Darwinian evolutionists.
>
> *Each week, leading fellows from Discovery Institute will join Michael Medved to talk about the intersection of science and culture. Listen in live online or on your local Medved station, or stay tuned at ID the Future for the weekly podcast.*

Topics:

- Darwinism offers a materialistic account of where humans and animals came from, but is that all human beings are?
- Darwin was the first to have doubt about his theory of evolution because of the sudden origin if many different animal forms in the Cambrian era
- The book is about the sudden origin of these animal forms and more generally about how much information is needed to make an animal genome
- An animal is not just the form or the organs it is also the information to make new proteins and the instructions to make proteins are in the DNA
- At least 20 new phyla appear suddenly in the Cambrian fossils and the question is what is capable of creating all of that new information
- Mathematicians and computer scientists are especially likely to doubt evolution as a way of making new features because they know that random changes to the code base of an application are more likely to break things and degrade performance
- Naturalists have tried to explain the Cambrian explosion as being a case of the transitional fossils being not yet discovered
- The consensus of science at this time is that there is no known naturalistic explanation for the sudden origin of these animal types
- Caller: how abrupt are we talking about for the introduction of these new animal forms?
- Meyer: We can calculate the amount of time that is needed to generate change, and the period of time that is needed to generate new forms of life exceeds the time available
- Caller: is it possible that meteors, asteroids and comets could transport biological components to the Earth to shorten the development time?
- Meyer: that’s related to my first book on the origin of the first living cell “Signature in the Cell”, and that life-from-space hypothesis would only get you building blocks, but not the bio-molecules that have the building

blocks sequences – it's the difference between a pile of Scrabble letters and a Shakespearean play – it's the arranging of the components that is the problem

- Medved: The book has a lot of endorsements from scientists who are working at good universities and institutions
- Meyer: the strange thing about exploring the limits of evolution is that you can cite mainstream papers to criticize the Darwinian mechanisms, and then the proponents of Darwinism just assert that no criticism of Darwinian evolution is allowed
- Caller Greg: are you saying that all the phyla came in during the Cambrian explosion?
- Meyer: No, of the 26 phyla that we see in the fossil record, 20 come in during the Cambrian explosion
- Caller Greg: But there are some sponges that existed before the Cambrian explosion, so maybe all the Cambrian phyla came from sponges?
- Meyer: There are 3 phyla present in the pre-Cambrian but they are not ancestral to the 20 Cambrian phyla, the sponges are very simple – 6-10 cell types, arthropods have 60-90 cell types – you can't go from sponges to compound eyes in just 5-10 million years
- Meyer: even the sponges in the pre-Cambrian appear abrutly at the end of the pre-Cambrian
- Caller Greg: but there are complex worms in the Pre-Cambrian as well, and maybe those are ancestral to the 20 new phyla that appear suddenly in the Cambrian explosion
- Caller Greg: what you're saying is that we scientists don't understand what happened so an intelligence did it
- Meyer: No, what I am saying is that the Cambrian explosion involves massive amounts of new biological information, and none of the naturalistic Darwinian mechanisms can create that much new information in that short of the time
- Caller Greg: it's magic!
- Meyer: there are two points in the development of life forms where intelligence is needed: the origin of life and the Cambrian explosion, and this is because of the new information that is being added
- Caller Greg: new information is added by Hox Gene duplication
- Caller: don't we have to look a bit more at epistemology when discussing these issues?
- Meyer: Yes, we have to highlight that many people reject intelligent design because of a pre-supposition of naturalism that prevents them from seeing that intelligence explains anything regardless of the evidence
- Caller: well if you define evolution as change over time, then evolution happened, and who cares about the details like the origin of life and Cambrian explosion?
- Meyer: well there are many definitions of evolution: 1) change over time, 2) universal common ancestry, 3) undirected random process can explain the origin of life and the explosion of new animal forms in the fossil record
- Meyer: I accept 1) and I am skeptical of 2) and 3)

You can read more about caller Greg and Hox gene duplication at Evolution News.

I subscribe to the ID the Future podcast, and I really recommend that you do as well!

# W. Bradford Wilcox: the importance and impact of a good father

**Wintery Knight** · 23 June 2013 · Archived copy · Original

A pro-father article by W. Bradford Wilcox, from the left-leaning Atlantic.

He lists four ways that fathers make a distinctive contribution to child development.

- Distinctive play style
- Encouraging risk
- Protection from threats
- Disciplining style

Here's the detail on the last one:

> **Dad's discipline:** Although mothers typically discipline their children more often than do fathers, dads' disciplinary style is distinctive. In surveying the research on gender and parenthood for our book, Palkovitz observes that fathers tend to be firmer with their children, compared to mothers. Based on their extensive clinical experience, and a longitudinal study of 17 stay-at-home fathers, Kyle Pruett and psychologist Marsha Kline Pruett agree. In *Partnership Parenting* they write, "Fathers tend to be more willing than mothers to confront their children and enforce discipline, leaving their children with the impression that they in fact *have* more authority." By contrast, mothers are more likely to reason with their children, to be flexible in disciplinary situations, and to rely on their emotional ties to a child to encourage her to behave. In their view, mothers and fathers working together as co-parents offer a diverse yet balanced approach to discipline.

Then he lists out some reasons why good dads matter:

- Lower delinquency
- Lower teen pregnancy
- Lower depression

A very good article with lots of citations.

# Colorado man faces fine and/or jail for refusing to bake for gay couple

**Wintery Knight** · 24 June 2013 · Archived copy · Original

The Heritage Foundation reports on the latest episode of the conflict between gay activism and religious liberty.

Full text:

> A same-sex couple in Denver has filed a discrimination complaint against baker Jack Phillips for refusing to provide his services to help celebrate their wedding.
>
> Phillips declined on the grounds that participating in such a ceremony violates his religious beliefs about marriage. Similar cases have involved a Washington florist and a New Mexico photographer.
>
> Even though the Colorado celebration was for a marriage actually performed in Massachusetts, and Colorado does not recognize same-sex marriage under its laws, the baker stands accused of violating Colorado's nondiscrimination law. Heritage's Tom Messner has written how situations such as those in Colorado are triggered:
>
> Conflicts between same-sex marriage and religious freedom will often involve some type of previously adopted nondiscrimination law or policy, and nondiscrimination laws can impose burdens on religious freedom even in jurisdictions that do not legally recognize homosexual unions as marriages.
>
> Colorado is proving the point. Same-sex marriage is not formally recognized in the state, but nondiscrimination law can, even in states without same-sex marriage, produce conflicts with religious freedom.
>
> **In this case, the attorney general of Colorado issued a formal complaint at the behest of the ACLU. The case is expected to go before Colorado's Civil Rights Commission. The complaint urges Phillips to "cease and desist" his activity. Phillips could face fines of $500 and up to a year in jail.**
>
> For Phillips, the issue at stake is whether law will force him to use his creative services in a way that violates his faith.
>
> Phillips told a reporter he serves non-wedding cakes to all customers—regardless of sexual orientation. It's the same-sex marriage to which he objects.
>
> Phillips's attorney believes that actions against him are yet another example of recent trends that restrict conscience.
>
> "At its heart, this is a case about conscience," said Nicolle Martin, his attorney. "It would force him to choose between his conscience and a paycheck. I just think that's an intolerable choice."
>
> Phillips refuses to compromise and remains determined to stand up for his religious views. "If it came to that point, we would close down the bakery before we would compromise our beliefs, so that may be what it comes to," Phillips told KCNC-TV.

There was a pretty good article on this issue a few days ago on the Public Discourse, and it's worth reading and sharing with people who think that gay marriage won't affect them. The truth is that gay marriage is not compatible with religious liberty, and gay activists are willing to use the state to push their views onto anyone who refuses to celebrate and affirm their lifestyle.

# Mary Eberstadt: why Christians should promote policies that strengthen marriage

**Wintery Knight** · 24 June 2013 · Archived copy · Original

Here's an interesting post about a new book by Mary Eberstadt. The post is written by historian Benjamin Wiker.

Excerpt:

> As the West has become increasingly secularized, the loss of faith has coincided with the destruction of the natural family. The sexual revolution, higher and higher rates of divorce, cohabitation, same-sex marriage—all have combined to make life-long man-woman marital unions an increasing rarity.
>
> Clearly, the rejection of God has led to a rejection, or radical redefinition, of the family.
>
> But in her *How the West Really Lost God*, Mary Eberstadt bids her readers to look at things from the other end as well. The "decline of the natural family" in the West is not only the effect of the loss of faith, but the cause as well: "the ongoing deterioration of the natural family has both accompanied and accelerated the deterioration in the West of Christian belief."
>
> Briefly put, "family decline…helps to power religious decline."
>
> One affects the other because the two go together, argues Eberstadt, like the spiral ladder of the double helix. The fortunes of family and faith correlate, and causation goes both ways. Across the board, regardless of social status or income, the religious tend to have more children than the secular-minded. And the more children a couple has, the more likely they are to go to church.
>
> But that means, of course, that those who are most secular are least likely to have children, and those who are unmarried and/or have no children are least likely to be religious.
>
> That correlation explains the precipitous decline in the birth rate for the most secularized countries of Europe, but allows us to see it in a new light. It is not just that secularization has led to plummeting birth rates in Europe. *Europe's demographic collapse is actually speeding up its secularization*.
>
> This is not a correlation that exists only in recent history. The French Revolution gave the West the first self-consciously secular government at the end of the 1700s, and one of its first revolutionary acts was to liberalize its marriage laws. But what people may not realize, was that France was the first country in Europe to experience a decline in fertility rates within marriage, and an increase in cohabitation and illegitimacy, decades *before* the French Revolution. In the early 1700s, over a half century before the Revolution, illegitimacy was only at 1%, but by the storming of the Bastille, which ushered in the Revolution, France's illegitimacy rate had climbed to 20% overall, with a 30% rate in the boiling pot of Paris. The French Revolution's successful attack on Christianity, and the consequent secularization of France, was, in part, the result of the prior erosion of the family.
>
> We see the same pattern in the UK, argues Eberstadt. "In Britain…the decline in births started a century later [than in France] at the very height of Victorian England,…Bit by bit…the same family trends already established in France—fewer births, more divorces, more out-of-wedlock births—also began reshaping the world of Britain. By our own time, over half of all children in Britain are born to unmarried people, and the fertility rate stands at 1.91 children per woman." Not surprisingly, Britain's churches are, like those of France, largely empty.
>
> In the Scandinavian countries, like Sweden, where marriage rates are lowest, and divorce, cohabitation, and single-family households, and out-of-wedlock births are the highest, we find the greatest degree of secularization.
>
> The obvious lesson we must draw, says Eberstadt, is "Vibrant families and vibrant religion go hand in hand."
>
> America is no exception. On the positive side, the baby boom after World War II brought with it a kind of

> “boom” in religious practice in the US.
>
> But the negative side of the correlation between family and faith is now more evident. Eberstadt quotes the findings of sociologist W. Bradford Wilcox, “The recent history of American religion illuminates what amounts to a sociological law: The fortunes of American religion rise with the fortunes of the intact, married family.”

Now here’s the part that I think is interesting. When you walk into a church, you will find very little, if any, education about the kinds of policies that cause marriages to actually not happen or actually break up. The trouble is that most pastors are so focused on reading the Bible, and only the Bible, that they have no idea what sorts of policies and incentives cause people to not marry or to not stay married. In order to know that, they would have to be reading outside the Bible, in the scientific literature, and then communicating that knowledge to their flocks to get them to make better decisions and to vote more intelligently.

I think that we need to read more widely in order to know how to reach our goals (promoting marriage, in this case) in a practical way. What can we say to people to show them how to get to marriage? What decisions should they be making now, in order to be ready for marriage later? What policies should we be supporting to nudge people towards marriage? What policies should we be against that make it easier for people to dispense with marriage?

# William Lane Craig debates Peter Atkins: Does God Exist?

**Wintery Knight** · 24 June 2013 · Archived copy · Original

Apologetics 315 posted the video of a debate from the Reasonable Faith speaking tour in the UK:

This is a must-see debate. It was extremely fun to watch.

Details:

> On Wednesday 26th October 2011 William Lane Craig debated Peter Atkins on the topic: *Does God Exist?* This debate took place at the University of Manchester as part of the UK Reasonable Faith Tour with William Lane Craig. The debate was chaired by Christopher Whitehead, Head of Chemistry School at the University. Post-debate discussion was moderated by Peter S Williams, Philosopher in Residence at the Damaris Trust, UK.

Dr. William Lane Craig:

> **William Lane Craig** (born August 23, 1949) is an American analytic philosopher, philosophical theologian, and Christian apologist. He is known for his work on the philosophy of time and the philosophy of religion, specifically the existence of God and the defense of Christian theism. He has authored or edited over 30 books including *The Kalam Cosmological Argument* (1979), *Theism, Atheism and Big Bang Cosmology*(co-authored with Quentin Smith, 1993), *Time and Eternity: Exploring God's Relationship to Time* (2001), and *Einstein, Relativity and Absolute Simultaneity* (co-edited with Quentin Smith, 2007).
>
> Craig received a Bachelor of Arts degree in communications from Wheaton College, Illinois, in 1971 and two summa cum laudemaster's degrees from Trinity Evangelical Divinity School in Deerfield, Illinois, in 1975, in philosophy of religion and ecclesiastical history. He earned a Ph.D. in philosophy under John Hick at the University of Birmingham, England in 1977 and a Th.D. underWolfhart Pannenberg at the University of Munich in 1984.

Dr. Peter Atkins:

> **Peter William Atkins** (born 10 August 1940) is a British chemist and former Professor of Chemistry at the University of Oxford and a Fellow of Lincoln College. He is a prolific writer of popular chemistry textbooks, including *Physical Chemistry*, *Inorganic Chemistry*, and *Molecular Quantum Mechanics*. Atkins is also the author of a number of science books for the general public, including *Atkins' Molecules* and *Galileo's Finger: The Ten Great Ideas of Science*.
>
> Atkins studied chemistry at the University of Leicester, obtaining a bachelor's degree in chemistry, and – in 1964 – a PhD for research into electron spin resonance spectroscopy, and other aspects of theoretical chemistry. Atkins then took a postdoctoral position at the UCLA as aHarkness Fellow of the Commonwealth fund. He returned to Oxford in 1965 as fellow and tutor of Lincoln College, and lecturer in physical chemistry (later, professor of physical chemistry).

You can get the audio of the debate here, along with links to their previous debate from 1998. This debate is accessible and understandable to novice-level Christians.

I am happy when debates like this come out. I have friends who are Christians who doubt the importance of apologetics in evangelism, because they don't think that apologists can prove anything or win arguments. I have friends who are skeptical of using arguments that assume a 14-billion year old universe, because they think that the Big Bang is compatible with atheism (!). I have friends who think that philosophical arguments have no persuasive

force. I have friends who think that nothing can be proven from history, beyond a reasonable doubt. I have co-workers who ask me whether anyone wins these debates. I think that this debate answers all of those questions.

This debate clearly shows why Christians should not shy away from studying science, philosophy and history. We will not discover anything that harms Christian theism by thinking logically and by looking at the evidence. To the contrary, it is the atheist who makes war on the progress of science, and who is forced to resist the clear experimental evidence, and to resort to baseless speculations and blind faith. If you want to see a good debate with an intelligent atheist, I recommend watching the debate between William Lane Craig and Peter Millican instead. But if you want to see a really, really overwhelming defeat for atheism, watch this debate. It is very clear at the end of this debate why Richard Dawkins refused to debate William Lane Craig at Oxford.

SUMMARY OF THE OPENING SPEECHES

I only had time to summarize the first two speeches. Keep in mind that Dr. Craig always shines in his rebuttals, and this debate is no different. So you'll want to watch those rebuttals. Dr. Atkins *literally* says in this debate in his first rebuttal "There was nothing here originally. There is nothing here now. But it is an interesting form of nothing which seems to be something." And the audience laughs nervously. This debate is like that. You will see a clear winner and clear loser in this debate. This fight is decided by knockout.

**William Lane Craig opening speech:**

1. the origin of the universe
2. the moral argument
3. the resurrection of Jesus

**Peter Atkins opening speech:**

1. Dr. Craig is stupid, lazy and evil:
– Dr. Craig's arguments are old: from the 11th century! Old arguments can't be true
– Dr. Craig is just asserting that "God did it" because he is lazy
– Dr. Craig feels pressured to agree with the theistic majority
– Dr. Craig needs a psychological crutch to comfort him
– Dr. Craig is fearful of death
– Dr. Craig is just wishing for an eternal life of bliss
– Dr. Craig is driven by his heart, and not by his head

2. Origin of the universe:
– Maybe the universe is eternal and has no beginning – we don't know
– Maybe mommy universes can give birth to daughter universes
– It is naive to think that a cause is needed to cause the creation of the universe from nothing
– Science is just about to show how it is possible that something appears out of nothing without cause
– Some scientists have already begun to speculate about about how something can come into being out of nothing
– Maybe nothing is not really nothing, but it is actually something
– It would be admitting defeat to say that God created the universe out of nothing

3. Fine-Tuning:
– It could be the case that the fundamental constants are not variable
– It could be the case that the fine-tuning of the cosmic constants is a happy accident
– It could be the case that there are billions of billions of unobservable universes that are not fine tuned
– It could be the case that the cosmic constants in these billions and billions of unobservable universes are all random so that some are fine-tuned
– Anyone who infers that an intelligence is the best explanation of a finely-tuned set of life-permitting cosmic constants is lazy

4. Purpose:
– Philosophers and theologians are stupid
– I don't think that there is purpose in the universe
– I think that the universe is more grand if there is no purpose, so there is no purpose

5. Miracles:
– I don't think that miracles happen
– The resurrection is a fabrication
– It could be the case that Jesus didn't exist
– It could be the case that Jesus wasn't really crucified
– It could be the case that Jesus didn't  really die after being crucified
– It could be the case that the disciples stole his body
– It could be the case that the women went to the wrong hole in the ground
– the gospels are political propaganda written long after the events they are reporting on

6. Theodicy:
– God has no morally sufficient reason for allowing humans to perform actions that result in suffering
– God has no morally sufficient reason for allowing nature to cause suffering

7. Morality:
–  customs and conventions emerges arbitrarily in different times and places based on an awareness of the consequences of actions, as well as various anecdotes and experiences
–  these customs and conventions are decided based on the goal for survival, in much the same way as politeness and manners emerge for decorum and to avoid offense
– it is childish to presume that there is an umpire God who decides moral values and duties

8. Religious believers are stupid, lazy and evil:
– the notion of God has arisen because people are stupid and want to be comforted
– there are no arguments or evidences for belief in God
– people who believe in God do not think, but instead take refuge in incomprehensible nonsense

# New study: IRS targeting of Tea Party conservatives had significant effect on 2012 election

**Wintery Knight** · 25 June 2013 · Archived copy · Original

From the American Enterprise Institute.

Excerpt:

> In a new research paper, Andreas Madestam (from Stockholm University), Daniel Shoag and David Yanagizawa-Drott (both from the Harvard Kennedy School), and I set out to find out how much impact the Tea Party had on voter turnout in the 2010 election. We compared areas with high levels of Tea Party activity to otherwise similar areas with low levels of Tea Party activity, using data from the Census Bureau, the FEC, news reports, and a variety of other sources. We found that the effect was huge: the movement brought the Republican Party some 3 million-6 million additional votes in House races. That is an astonishing boost, given that all Republican House candidates combined received fewer than 45 million votes. It demonstrates conclusively how important the party's newly energized base was to its landslide victory in those elections, and how worried Democratic strategists must have been about the conservative movement's momentum.
>
> The Tea Party movement's huge success was not the result of a few days of work by an elected official or two, but involved activists all over the country who spent the year and a half leading up to the midterm elections volunteering, organizing, donating, and rallying. Much of these grassroots activities were centered around 501(c)4s, which according to our research were an important component of the Tea Party movement and its rise.
>
> The bottom line is that the Tea Party movement, when properly activated, can generate a huge number of votes-more votes in 2010, in fact, than the vote advantage Obama held over Romney in 2012. The data show that had the Tea Party groups continued to grow at the pace seen in 2009 and 2010, and had their effect on the 2012 vote been similar to that seen in 2010, they would have brought the Republican Party as many as 5 – 8.5 million votes compared to Obama's victory margin of 5 million.

How far was Barack Obama willing to go to win the 2012 election?

# William Lane Craig lectures on Bart Ehrman and the historical Jesus

**Wintery Knight** · 25 June 2013 · Archived copy · Original

Here's a lecture by Dr. Craig on Bart Ehrman's approach to the historical Jesus.

Clip 1 of 6:

Clip 2 of 6:

Clip 3 of 6:

Clip 4 of 6:

Clip 5 of 6:

Clip 6 of 6:

And then there is the debate between William Lane Craig and Bart Ehrman, (transcript here), where you get to see it all in action in front of real students at a real university!

I also see that Brian Auten posted something here, but I don't know whether it is the audio from this lecture or something else entirely.

All my Christian readers – I hope you guys can all make a case for the resurrection that stands up. Bill's case stands up – in the university, against the toughest opponents. Will you stand up for Jesus, too?

# Evangelicals for Biblical Immigration opposes Gang of Eight amnesty bill

**Wintery Knight** · 26 June 2013 · Archived copy · Original

Breitbart News reports on a new evangelical group that opposes the Senate's amnesty bill.

Excerpt:

> On Friday, Evangelicals for Biblical Immigration, an informal group of well-respected evangelical Christians announced its opposition to the Gang of Eight immigration bill. The group, recently organized by Kelly Monroe Kullberg, founder of the Veritas Forum and co-author and editor of *Finding God at Harvard*, featured a letter written to members of Congress by Kullberg outlining the Biblical principles on which opposition to the bill is based on its website and Facebook page.
>
> The Gang of 8 bill, Kullberg writes in her letter, "is flawed to the point of being unworkable. Please, scrap it and start over." She writes that "as a citizen in the Heartland, I have a simple request of the Senate: Please stop. Please, no more surprises. Rather, rebuild our trust."
>
> "There seems to be great confusion about what the bill means and how it will be implemented," she argues. "Rushing to a vote, once again, is not wise."
>
> Evangelicals for Biblical Immigration's opposition to the Gang of Eight bill comes just two weeks after a George Soros-backed group, the Evangelical Immigration Table, launched a $250,000 media campaign in support of the bill's passage.
>
> But Kullberg wants the Senate to know that American citizens "are not willing to 'pass the bill so that [we] can find out what is in it.' We The People never were willing to act so immorally, so foolishly, and certainly not now," she writes. "This is no time for another mystery bill that will forever change the nation we love and have the duty to steward."
>
> "Our future," Kullberg argues, "should not be shaped by those who break laws but by those who keep laws. Let's learn to care for both the citizen and the foreigner, and do this wisely with no surprises. Another 'Obamacare' will break our back as a nation."

You can read a letter that Kelly wrote about the immigration bill.

It's nice to see a group of authentic evangelicals stepping up to make clear what the Bible says about immigration.

But what about the fake Soros-funded "Evangelical Immigration Table" group?

Breitbart News explains more about them:

> Lynne Hybels… has become a national voice for the front group for the George Soros funded National Immigration Forum, a leading advocate for the crony capitalist laden Schumer-Rubio "Gang of Eight" immigration bill.
>
> Ms. Hybels was not only featured at a Thursday press conference at which the front group, Evangelical Immigration Table, announced the launch of a $250,000 ad campaign designed to pressure members of Congress to vote in favor of the "Gang of Eight" bill, she provides the narrative voice on one of the national radio advertisements included in the campaign. You can hear her make the case for her understanding of immigration reform here  Note that Ms. Hybels also states the disclaimer at the end of the ad "paid for by the Evangelical Immigration Table. "
>
> However, Breitbart News reported on Sunday that the Evangelical Immigration Table does not exist as a legal entity.  On Monday, Breitbart News reported that "Evangelicals Mislead on Funding of Immigration

> Ads." Though the ads that are now airing in 13 states contain a disclaimer that they are paid for by the Evangelical Immigration Table, however, the ads were actually paid for by the Soros-funded National Immigration Forum.

Lynne Hybels blogs at the leftist Sojourners blog. Sojourners is the group run by Jim Wallis, that also accepts massive donations from the atheist George Soros. Her husband Bill Hybels introduced Barack Obama at a speech. Lynne Hybels has previously worked for the pro-infanticide, pro-gay-marriage Barack Obama as a member of his outreach team to faith-based community groups. The Soros-backed pro-amnesty group also has connections to Marxist Jim Wallis, who backed the pro-infanticide, pro-gay-marriage Obama in the  Presidential election. George Soros, of course, is a self-proclaimed atheist, and he supports abortion and gay marriage, just like Obama and his supporters.

# J. Warner Wallace: what causes Christians to be fearful of explaining their faith?

**Wintery Knight** · 26 June 2013 · Archived copy · Original

Here's the blog post from the Please Convince Me blog.

Excerpt:

> I'm presently training a group of high school students at the Unleashed Camp here in Southern California held on the campus of Vanguard University. This camp prepares young people to share and defend their faith, and students spend every afternoon putting what they learn into practice as they share the Gospel with people in the local community. Yesterday was the first day of the camp, and there were many students there who had never participated in evangelism of this nature. I could sense some nervousness in the room. So, I began by asking what caused them to be fearful about sharing the Gospel. – See more at: http://coldcasechristianity.com/2013/the-source-of-our-fear-when-it-comes-to-evangelism/#sthash.D4VY1U0C.dpuf
>
> […]They were afraid about how they might look or what might happen to them. Would they experience something awkward or embarrassing? Would they become uncomfortable? Would they experience some pain? Most of our fear of evangelism is centered on our own desire to be comfortable, and there's nothing more uncomfortable than being embarrassed or humiliated by our peers. For these young people, it's bad enough that they might look foolish to strangers, but there's also the very real possibility that they'll look foolish to their fellow students!

Wallace quotes a couple of verses, but there are some more that I think are appropriate:

"In all this, they are surprised that you do not run with them into the same excesses of dissipation, and they malign you…"
(1 Pet 4:4)

"But even if you should suffer for the sake of righteousness, you are blessed. And do not fear their intimidation, and do not be troubled…"
(1 Pet 3:14)

And a longer one:

1 This, then, is how you ought to regard us: as servants of Christ and as those entrusted with the mysteries God has revealed.

2 Now it is required that those who have been given a trust must prove faithful.

3 I care very little if I am judged by you or by any human court; indeed, I do not even judge myself.

4 My conscience is clear, but that does not make me innocent. It is the Lord who judges me.

5 Therefore judge nothing before the appointed time; wait until the Lord comes. He will bring to light what is hidden in darkness and will expose the motives of the heart. At that time each will receive their praise from God.

(1 Cor 4:1-5)

Or this one:

12 Dear friends, do not be surprised at the fiery ordeal that has come on you to test you, as though something strange were happening to you.

13 But rejoice inasmuch as you participate in the sufferings of Christ, so that you may be overjoyed when his glory

is revealed.

14 If you are insulted because of the name of Christ, you are blessed, for the Spirit of glory and of God rests on you.

(1 Cor 4:12-14)

Or this one:

[16] Shadrach, Meshach and Abednego replied to him, “King Nebuchadnezzar, we do not need to defend ourselves before you in this matter.

[17] If we are thrown into the blazing furnace, the God we serve is able to deliver us from it, and he will deliver us from Your Majesty’s hand.

[18] But even if he does not, we want you to know, Your Majesty, that we will not serve your gods or worship the image of gold you have set up.”

(Dan 3:16-18)

Or this one:

26 “So do not be afraid of them, for there is nothing concealed that will not be disclosed, or hidden that will not be made known.

27 What I tell you in the dark, speak in the daylight; what is whispered in your ear, proclaim from the roofs.

28 Do not be afraid of those who kill the body but cannot kill the soul. Rather, be afraid of the One who can destroy both soul and body in hell.

29 Are not two sparrows sold for a penny? Yet not one of them will fall to the ground outside your Father’s care.

30 And even the very hairs of your head are all numbered.

31 So don’t be afraid; you are worth more than many sparrows.

32 “Whoever acknowledges me before others, I will also acknowledge before my Father in heaven.

33 But whoever disowns me before others, I will disown before my Father in heaven.

34 “Do not suppose that I have come to bring peace to the earth. I did not come to bring peace, but a sword.

35 For I have come to turn

“‘a man against his father,
a daughter against her mother,
a daughter-in-law against her mother-in-law—
36 a man’s enemies will be the members of his own household.’

37 “Anyone who loves their father or mother more than me is not worthy of me; anyone who loves their son or daughter more than me is not worthy of me. 38 Whoever does not take up their cross and follow me is not worthy of me.39 Whoever finds their life will lose it, and whoever loses their life for my sake will find it.

(Matt 10:26-39)

That last one is one of my favorite passages, because my family on both sides isn’t Christian. They’re Hindu and Muslim. I am the first evangelical Protestant in my household. I didn’t grow up in the church, although I was a Christian at a young age. But I never got the idea from church that Christianity was about serving my needs and making me have happy feelings and comfort. When I think of Christianity and fear of not being liked by other people, I think of three simple words: BUT IF NOT. I never thought of Christianity as something that would make my family or community like me. I don’t care if people like me.

I think that there is a real problem with young people today, where they are looking to their peers for approval in a way that I never did when I was growing up. But then again, we were immigrants and I have brown skin, and didn't really fit in with the cool people. When I was growing up, I just worked as much as I could to earn extra money and tried to do well in school. I spent all my free time programming computers and playing sports, role-playing games and tabletop wargames. What did I care what people thought of me? They were not good people anyway. These days, it's really different. Young people want to be liked.

By the way, please subscribe to the Please Convince Me podcast. I think that right now, it's my favorite podcast. Tough-minded, practical Christianity from a guy from a non-Christian background, who has real life experience outside of the Christian bubble. If you are sick of church, try this podcast. You will not be disappointed.

# Does the church do a good job of equipping Christians to talk to non-Christians?

**Wintery Knight** · 26 June 2013 · Archived copy · Original

Most churches these days are not doing a good job of helping Christians to understand how to explain and defend Christianity to non-Christians. They tend to be focused on providing comfort and entertainment, which is why so much of the focus is on compassion, singing and being "nice". Logical arguments are out. Scientific evidence is out. Historical evidence is out. There is a terrible fear of disagreeing with anyone. Everyone is focused on being "nice" and being "liked" by non-Christians. Instead of teaching people what Christians think is true, we teach people how to recycle cans and how to color pictures of Jesus.

Church is typically a mishmash of mysticism, piety and emotivism. Pastors in particular are often opposed to connecting anything the Bible says to evidence outside the Bible, whether it be research or experiments or philosophical arguments. Even the very best preaching pastors just assert things and then expect people to accept it because "the Bible says so". It's almost as if it dirties up Christianity to test it against what we know from other disciplines like cosmology and ancient history. People who are regarded as Christian leaders seem to never get around to explaining why anyone should accept the Bible as true.Accepting the Bible is just left up to your feelings, or maybe whether you think the pastor is "nice". That's it.

Now how well does this simple, blind-faith be-nice approach work on a real non-Christian?

Mary sent me this article from the New Statesman that explains how it works.

Excerpt:

> It's 7.30pm on a Tuesday evening and I'm at a small church in East London. A man called Adam* hands me a name label, pours me a plastic cup of squash and says dinner won't be long. I pull up a seat and introduce myself to ten strangers. It's all rather awkward.
>
> The reason I'm at church isn't because I'm religious (I'm not) or because my fridge is empty (it is). It's because I've signed up to Alpha, a weekly course run by churches all over the world in order to spread the Christian message. Although I'm an atheist, I don't have a problem with people who subscribe to religion. I am, however, wary of brainwashing, I think most religious beliefs are kind of stupid and I strongly suspect that organised religion is a horrible thing.
>
> […]Adam, the course leader, is wearing a Superdry shirt. After dinner, he explains that it's customary to sing. Rebecca plays the acoustic guitar and Adam mans the PowerPoint presentation, which would have got an A* if it was a piece of ICT GCSE coursework because the lyrics make noises when they appear on the screen.

Now, why on Earth would you make a non-Christian sing?? That makes no sense. If they don't accept Christianity, why would they sing about it?

More:

> After singing comes talking. Specifically, Adam talking. Over the next six weeks, his talks will cover: "Is there more to life than this?"; "Who is Jesus and why did he die?"; "How can we have faith?"; "How can we read the Bible?"; "Why and how do I pray"; and "What about the Church?". After each talk, we'll break off into groups and discuss what we've learnt.
>
> The first couple of sessions are similar. They involve Adam handing out copies of the Bible and saying things like, "So let's assume Jesus does exist and came to Earth to save us…" I'm genuinely the only person who is annoyed that Adam makes no attempt to prove Jesus's existence.

The first questions to address are thing like “Does God Exist?” and “Did Jesus Rise From the Dead?” and “Why Should People Think the Bible is Historically Reliable?”. But those questions cannot be asked by Christians, because they are totally unaware, thanks to years and years of avoiding apologetics, that those questions come *before* praise hymns and Bible study and prayer. Christians are so unaware that they don’t even realize how to discuss Christianity with a non-Christian, using authorities like logic, science and history, which non-Christians accept.

More:

> Adam’s big points in the first two weeks are that we should love Jesus because he loves us in spite of our tendency to sin and that we should try to emulate his behaviour, because it’s nice to have a role model.
>
> Discussion time isn’t fruitful. Natalie asks me how I’m able to distinguish between moral and immoral behaviour if I don’t base my actions on Jesus’ example. I explain that I work out what makes my peers happy and try to do those things. Everyone laughs, which I find confusing because I’m not joking. I agree that having a role model can be helpful, but ask how they know Jesus is the best one. Anna and Will, who are married, tell me that it’s because the Bible said so. But how do they know the Bible is right? “No offence, Tabatha,” replies Louise, “but the Bible is quite far-fetched. I don’t get why someone would have made that stuff up if it weren’t true.” It sounds like I’m lying, but I’m not.
>
> […]This week, Adam’s main point is that Christianity isn’t about rules. Fine, but there’s still no attempt to prove God’s existence.

What is going on here? It’s that Christians are basically no different than cultists. We think that it’s our jobs to just tell people things without ever proving anything with science or history. We don’t know how to construct logical arguments. All we do is say what we believe and then hope that the person listening will accept it because “the Bible says so” or maybe because it makes the person feel like a nice person to accept it.

More:

> Then we talk about which bits of the Bible we should take literally. Louise tells me I’ll work it out if I read the Bible. I tell her I’ve read it. She says I will never develop a full understanding because I’m not God so I can’t understand everything. This is becoming a recurring theme. These people have answers to some problems, but as soon as they hit a brick wall they settle for not understanding God and refuse to think through alternatives.

Wow, how do Christians handle questions that they don’t know the answer to? By going and finding the answer? NO! We think that it’s not our job to find answers to this skeptic’s questions, it’s the skeptic’s job to find answers. We hand the work to the skeptic to do, instead of doing the work for them. Finding answers is work, and if Christianity is about anything, it’s apparently about avoiding work. That’s what we learn in church, anyway.

More:

> This week, Leslie, a priest from the church, speaks about evolution, which has to be our most interesting topic to date. “How do I know evolution isn’t true?” he begins, continuing: “Because God revealed himself to me through scripture.” This annoys me: these people keep saying really obscure things and not explaining them. Leslie explains that scripture is “God-breathed,” so when you read the Bible, God is speaking directly to you. I’m not an idiot but I have absolutely no conception of what that means.

This is pretty much the answer you’re going to get from most pastors and church people, even in a time where we have amazing arguments coming out of the intelligent design community about the origin of life and the Cambrian explosion. And even without talking about evolution, we could be talking about the Big Bang cosmology and the cosmic fine-tuning. But those things can’t be talked about because they are just too “real” and we want to keep

religion in the realm of try-it-and-see-if-you-like-it bromides.

More:

> Leslie goes on to offer practical Bible-reading advice: you should read it for 15 minutes a day and ask God questions by verbalising your thoughts. By this stage, I'm annoyed. I want to know why we should read the Bible, how they know it's true, what God sounds like and how He chooses which prayers to listen to. Instead, Leslie says things like, "If we pray, we become trees. Trees grow fruit, so we will live fruitful lives." This kind of obscure, metaphorical chat is driving me mad.
>
> […]In discussion time, it becomes clear that although these people are interested in religion, they're uncritical of it. It's really starting to bother me that this institution encourages blind faith at the expense of scientific enquiry.

Again, Christians are incapable of understanding that they have to prove claims using arguments and evidence. They just want to state their beliefs, like cultists do when they knock on your door. What exactly is the difference between us and the cults if it's not that we are able to make a case for our views based on evidence, not feelings?

More:

> Adam tells a story about his wedding ring. It's a more elaborate version of this: Adam went to Costa. He left his wedding ring behind. He realised what he'd done. He said a quick prayer. He went back to Costa. He found his ring. He reckons God answered his prayer.
>
> […]Louise claims that God once answered her prayer to get her to the airport on time. Alasdair thinks God stopped a wave breaking on him when he went surfing as a teenager. Robin tells us that God warned him to wear a helmet when he snowboards.
>
> […]"Anyone feel unconvinced by the power of prayer?" Natalie asks. "YES," I feel like shouting. "YOU'RE IDIOTS. ALL OF THOSE THINGS WERE PROBABLY COINCIDENCES THAT YOU'RE READING TOO MUCH INTO."

Sigh. Well I hope that this is helpful so that everyone understands what non-Christians really need from us. I think we need to focus on studying apologetics, so that we can answer questions. Instead of focusing on telling people weird things, we should just focus on the basics: God's existence, the minimal facts case for the resurrection, intelligent design in nature, the moral argument, the problems of evil and suffering. The basics. And stop trying to talk about our own lives or our own weird experiences, because you can't prove anything by telling stories or mystical experiences or pious feelings. We really need to stop treating religion as something different from practical things. We don't hire employees or pick stocks or buy medicine on the basis of how we feel about them. We study things carefully, we look at evidence, we use reason. Truth is the point of religion, not feelings, and when we focus on feelings when talking to non-Christians, we look like idiots. And rightly so.

# Supreme Court overrules elected legislators and imposes new definition of marriage

**Wintery Knight** · 27 June 2013 · Archived copy · Original

Here's an article from National Review by professor Hadley Arkes to make sense of the SCOTUS decision on same-sex marriage.

Excerpt:

> These decisions, handed down by the Court today, affect to be limited in their reach, but they are even worse than they appear, and they cannot be cabined. They lay down the predicates for litigation that will clearly unfold now, and with short steps sure to come, virtually all of the barriers to same-sex marriage in this country can be swept away. Even constitutional amendments, passed by so many of the states, can be overridden now. The engine put in place to power this drive is supplied by Justice Kennedy's "hate speech," offering itself as the opinion of the Court in *U.S. v. Windsor*. Kennedy wrote for the Court in striking down Section 3 of the Defense of Marriage Act (DOMA), the part of the act that recognized as "marriage," in federal law, only the union of a man and woman. In Kennedy's translation, the Defense of Marriage Act showed its animus in its very title: The defense of marriage was simply another way of disparaging and "denigrating" gays and lesbians, and denying dignity to their "relationships." As Justice Scalia noted so tellingly in his dissent, Kennedy could characterize then as bigots the 85 senators who voted for the Act, along with the president (Clinton) who signed it. Every plausible account of marriage as a relation of a man and woman can then be swept away, as so much cover for malice and blind hatred.
>
> As Scalia suggested, that opinion can now become the predicate for challenges to the laws on marriage in all of the States. A couple of the same sex need merely go into a federal court and invoke Justice Kennedy's opinion in the DOMA case (*U.S. v. Windsor*): The Supreme Court has declared now that a law that refuses to recognize same-sex marriage is animated by a passion to demean and denigrate. Any such law cannot find a rational ground of justification. As Kennedy had famously said in *Romer v. Evans*, those kinds of laws can be explained only in terms of an irrational "animus."
>
> That may be enough to have the laws and the constitutional provision overruled. But it gets even better if the state has a Democratic governor: For he may declare now that he will not enforce the constitutional amendment, for he thinks it runs counter to the federal Constitution. And by the holding today in the case on Proposition 8 in California (*Hollingsworth v. Perry*), the backers of the constitutional amendment will have no standing in court to contest the judgment. Constitutional amendments are meant to secure provisions that will not be undone by the shift in season from one election to another. But with the combination of these two cases today, any liberal governor can virtually undo a constitutional amendment on marriage in his state.

Here is another reaction from the Family Research Council.

Here's a good article by Ryan T. Anderson, explaining how the redefinition of marriage really means the end of marriage. It also means the end of religious liberty. Make no mistake, this decision will force Christians to conduct same-sex wedding ceremonies on their property, whether they like it or not. That's what is already happening in countries that legalized gay marriage.

I for one am surprised that so many people who call themselves Christian could have voted for a political party that has now ended marriage as we know it. I think that most people who vote for the Democrat party are motivated by the desire for their neighbor's money – they voted for the party that gives them the most goodies. They decided to sacrifice the needs of children in order to keep the money from the welfare state flowing. I hope that this SCOTUS decision helps those who voted Democrat to understand that their true positions on issues like abortion and gay marriage. I am especially concerned with people who claim to believe in God and even claim to be Christians.

When it came time to be counted, you voted for abortion and gay marriage. Your vote ensured that tiny little children would feel lost in the world, making it easier for them separated from their biological mother or their biological father. That's assuming that the selfish grown-ups even allow them to be born at all.

I think the greatest condemnation will be reserved for the pious celebrity pastors who took great pride in not educating members of their churches about what gay marriage would really do. They were so proud about not having any reasons outside of the Bible to oppose same-sex marriage. They made sure that opposition to gay marriage, like opposition to abortion and Darwinism, would be dismissed as so much religious bigotry in the public square by non-Christians. Those fideistic pastors paved the way for gay marriage, by sheltering their flock from the arguments and evidence that would have been persuasive to non-Christians. I hope that when they are forced to perform gay marriages in their churches, that they'll finally understand why research papers, studies and academic debates are more important than singing songs in church.

UPDATE: I have been advised by Sean G. that Proposition 8 is still the law in California after this ruling. This Breitbart article explains:

> As of today, there is no appellate opinion (meaning an opinion issued by a court of appeals) against Prop 8. The Supreme Court refused to issue one, and threw out the only other one (the Ninth Circuit's). There is only a trial court opinion. So every agency in California is legally bound to regard Prop 8 as binding law.
>
> Since no one who wants to defend Prop 8 has standing to appeal rulings on it to the Ninth Circuit, there will never be such an opinion in the federal court system. So the only way to get an appellate opinion would be in the California state court system. So someone would have to file a lawsuit regarding Prop 8, and then appeal it to a California court of appeals and then maybe to the California Supreme Court. Only when one of those courts hold Prop 8 unconstitutional can the public officials in that state regard it as stricken from the books.
>
> That litigation could take years. And in the meantime, supporters of traditional marriage can continue making the case for marriage.

So the outcome for Prop 8 is not as bad as the outcome for DOMA.

# New poll: 26% of Obama supporters think Tea Party is top terrorist threat

**Wintery Knight** · 27 June 2013 · Archived copy · Original

Nile Gardiner writes about it in the UK Telegraph.

Excerpt:

> Rasmussen has just published an extraordinary poll which highlights the deep-seated prejudice against the Tea Party among both US government workers and supporters of President Obama. According to the poll:
>
> Half of all voters consider radical Muslims the bigger terrorist threat facing the nation, but supporters of President Obama consider the Tea Party to be as big a danger.
>
> A new Rasmussen Reports national telephone survey finds that 51% of Likely U.S. Voters consider radical Muslims to be the bigger threat to the United States today. Thirteen percent (13%) view the Tea Party that way, and another 13% consider other political and religious extremists to be the larger danger. Six percent (6%) point to local militia groups. Two percent (2%) see the Occupy Wall Street movement as the bigger terrorist threat.
>
> **However, among those who approve of the president's job performance, just 29% see radical Muslims as the bigger threat. Twenty-six percent (26%) say it's the Tea Party that concerns them most. Among those who Strongly Approve of the president, more fear the Tea Party than radical Muslims.**
>
> As for those who disapprove of Obama's performance, 75% consider radical Muslims to be the bigger terrorist threat. Just one percent (1%) name the Tea Party.
>
> … Conservatives overwhelmingly see radical Muslims as the greater terror threat. Liberals are fairly evenly divided between radical Muslims and the Tea Party.
>
> Twenty percent (20%) of government workers see the Tea Party as the nation's bigger terror threat. Twelve percent (12%) of private sector workers hold that view.
>
> […]The extraordinary success of the Tea Party has led to it being demonised by the Left, culminating in an unprecedented campaign by the IRS against it, which has prompted a resurgence in public support for the movement – up 14 points since January, to 44 percent among likely US voters. Today's Rasmussen poll illustrates the sheer depth of animosity towards the Tea Party within sections of the federal government and among President Obama's strongest supporters (the two are usually interchangeable).
>
> Some liberals have become so blinded by their hatred that they ludicrously see grassroots conservative groups defending the American Constitution as more dangerous than Islamist militants seeking to destroy the United States. Anyone opposed to their cause is a threat. This is irrational and deeply disturbing in a free society that has always cherished the cause of political freedom and open debate. It amply demonstrates just how extreme the American Left has become, and how out of touch it is with reality.

For a liberal in government, the problem is not adding a trillion plus to the national debt every year. That's fine, and nothing to be concerned about. The trouble is that some people oppose running up these trillion dollar deficits – that's terrorism. The Democrats believe that they are doing a good thing by using government to target Tea Party conservatives, because you would have to be a terrorist in order to oppose adding $8 trillion to the national debt. It's not just the IRS that targeted the Tea Party, either. It's the Department of Homeland Security, as well. Democrats aren't serious about national security.

# Christianity and the doctrines of exclusivism, inclusivism and pluralism

**Wintery Knight** · 27 June 2013 · Archived copy · Original

Are you familiar with the differences between *exclusivism, inclusivism* and *pluralism?* This article from Leadership University explains all three of them.

Here's exclusivism:

> The following is a succinct explanation of the central characters and ideas behind each position. The exclusivist position has been the dominant position of the church as a whole through much of its history until the Enlightenment. Major representatives include Karl Barth, Emil Brunner, Hendrick Kraemer, D.A. Carson, William Lane Craig, and R. Douglas Geivett.
>
> Key to this position is the understanding of God's general and special revelations. God is manifested through creation (general revelation), but Man has responded by freely going against this revelation and, thus, stands guilty before a holy God. However, God has demonstrated a reconciliatory mercy through His word and deed, fulfilled completely in Jesus Christ. The historical person of Jesus, then, is the unique, final, decisive, and normative self-revelation of God to Man (special revelation). Exclusivists believe that Jesus Christ is the sole criterion by which all religions, including Christianity, should be understood and evaluated. Calvin Shenk explains:
>
> > Christ did not come just to make a contribution to the religious storehouse of knowledge. The revelation which he brought is the ultimate standard. Since in Christ alone is salvation and truth, many religious paths do not adequately reflect the way of God and do not lead to truth and life. Jesus is not, therefore, just the greatest lord among other lords. There is no other lord besides him.
>
> Specific texts often employed by exclusivists include Acts 4:12; John 14:6; 1 Corinthians 3:11; and 1 Timothy 2:5-6.

And inclusivism:

> Inclusivism is a blanket term to characterize a sort of "middle way" between exclusivism and pluralism. Most prominent within mainline Protestantism and post-Vatican II Catholicism, its notable proponents (in one formor another) include Karl Rahner, Raimundo Panikkar and Stanley Samartha, and Hans Kung. Evangelical theologians such as Clark Pinnock, Norman Anderson, and John Sanders have also identified themselves with this position. Herein, the agnosticism associated with the latter option above is replaced with outright optimism. Christian salvation is not confined to the historical or geographic extent special revelation has spread, rather it must be available to all cultures, irrespective of age or geography.Salvation is still posited wholly in Christ and his salvific work. Specific knowledge of this work, however, is not necessary for the effect (i.e., salvation) to apply to those within a different religious culture who have responded to the general revelation available. Once again, Shenk explains:
>
> > Inclusivists want to avoid monopolizing the gospel of redemption. They acknowledge the possibility of salvation outside of Christian faith or outside the walls of the visible church, but the agent of such salvation is Christ, and the revelation in Jesus is definitive and normative for assessing that salvation. Jesus Christ is believed to be the center, and other ways are evaluated by how they relate to him. Other religions are not just a preparation for Christ, but Christ is actually present in them.
>
> The fundamental differences between exclusivism and inclusivism… are the nature and the content of "saving

> faith." The former emphasizes explicit faith while the latter points to an implicit faith.

And pluralism:

> Finally, there is the pluralist position. This is undoubtedly the most difficult of the three to define in any general sense. The spectrum of pluralistic thought is as wide as it is long. The focusof this particular study will examine the contributions of its key figures: Paul Knitter, John Hick, and Wilfred Cantwell Smith. Just as in the previous positions, the interpretative range within just these three individuals varies. It is fitting, however, to focus primarily on them since they are the most vocal and influential figures espousing pluralism today.
>
> Hick and Knitter argue the case for pluralism on the following grounds: (1) ethically, it is the only way to promote justice in an intolerant world; (2) in terms of the "ineffability of religious experience," so no religion can claim an absolutist stance; and (3) through the understanding that historical and cultural contexts must be the filter for any absolute religious claim. Hick has argued that all world religions attempt to relate to the unknowable Ultimate Reality (or, the Real), but because of their various cultural and historical contexts these attempts are all naturally different. Hence the various conceptions of the Real and the salvation(s) sought. The common soteriological goal, toward which all religions strive, though, is rooted in the desire to transcend self-centeredness and, in turn, encounter a new (unexplainable) experience with the Real. But, he emphatically emphasizes the fact that there is "no public evidence that any one religion is soteriologically unique or superior to others and thus has closer access to Ultimate Reality."
>
> Therefore, with pluralism, Christ is no more definitive or normative than any religious figure or concept. Or, as Andrew Kirk explains, "Rather than confessing that Jesus Christ is the one Lord over all, this view asserts that the one Lord who has manifested himself in other names is also known as Jesus." By "crossing the Rubicon," as Hick and Knitter illustrate, Christians are encouraged to abandon any claim of Christian uniqueness and the possibility of absolute revelation, accepting the fact that the Christian faith is one among many options.

Now maybe you didn't know this, but Roman Catholics seem to have taken a turn away from exclusivism and towards inclusivism in the last century.

So, I thought I would post a rebuttal to the Roman Catholic embrace of inclusivism from one of my favorite Christian apologists, Greg Koukl.

Excerpt:

> There are some issues of Christianity that are intra-Nicene, intramural discussions between believers, in which I think a charitable person can easily see how another Christian can hold a different view because there are things that are difficult to understand in Scripture. For instance, though I'm Reformed in my soteriology, my understanding of salvation–I'm a Calvinist–I am sympathetic to an Arminian perspective because I can see how they, in lines of reasoning from the New Testament and verses themselves from the New Testament, can come to their view. So, though I would disagree, and I think they're mistaken, I understand how they can see it.But there are other positions that I cannot understand because there is no New Testament evidence in favor of it, and, to the contrary, almost to a word, as the New Testament touches the issue, it says quite the opposite.
>
> Earlier this week, I was honored, flattered, and, frankly, humbled to have a very unique opportunity on Monday to address an audience of about 150 Jewish people that were in the midst of Jewish High Holy Day services–morning services, evening services–at kind of a pause time in the afternoon, in which my host and I and another guest had a discussion about Jews and Christians. The three of us were on the panel: my host, Dennis Prager, a man I have a tremendous admiration and affection for, and Greg Coiro, a Roman Catholic priest and a professional friend. I've known both of these men over 20 years and have been in many discussions, both in private and public on the air with Dennis and Greg Coiro.
>
> It was in this opportunity that, in a sense, the ancient quarrel of sorts, theologically, was revisited, that I've had

> in the past many years ago when we were talking about this in interfaith dialogues. This difference of opinion is a historically new development in Roman Catholicism that stunned me when I first encountered it in the early days of being on Religion on the Line in the late eighties, a radio panel Dennis Prager hosted for many years. The priests on the panel uniformly held the conviction, informed by Vatican II, that Jews don't have to believe in Jesus in order to receive the benefits of Jesus' salvation. This is a view called "inclusivism." It's not the same as pluralism, but in my view, it seems to have the same impact: "Yes, Jesus is necessary for salvation, but you don't have to believe in Jesus to benefit from Jesus."
>
> Now, at this afternoon panel recently, the very first question that came up was whether trust in Jesus is necessary for salvation. "Greg, do you believe that? Do Protestants believe that?" I answered, "Yes, I believe that. And no, not all Protestants believe that. But let me try to explain it to you in a way that doesn't sound so stark. Let me try to give it some perspective." I explained that it wasn't as if God was up there looking down at a bunch of religious clubs and prefers some over others. He used to prefer the Jewish club and now He prefers the Christian club. It may sound that way to many when this doctrine of Christianity is put forward: Jesus is the only way of salvation; you must believe in Jesus in order to benefit from what Jesus did.

Talk about Daniel in the lions' den. Anyway, click through and read the whole article to get an idea of how to make your stand for exclusivism in difficult places.

For a general article defending the Christian doctrine of exclusivism, check out this article by William Lane Craig. One of my favorites, from way way back to when I was an undergraduate.

And, if you would like to listen to a debate on pluralism, then here is a debate featuring pluralist John Hick.

# Treasury Dept. IG: IRS targeted 292 Tea Party groups but only 6 progressive groups

**Wintery Knight** · 28 June 2013 · Archived copy · Original

Tim M. sent me this article from the Washington Examiner.

Excerpt:

> Refuting Democratic suggestions that progressive groups were also swept up in the IRS probe of the tax status of Tea Party organizations, the Treasury Department's inspector general has revealed that just six progressive groups were targeted compared to 292 conservative groups.
>
> In a letter to congressional Democrats, the inspector general also said that 100 percent of Tea Party groups seeking special tax status were put under IRS review, while only 30 percent of the progressive groups felt the same pressure.
>
> The Wednesday letter to the top Democrat on the House Ways and Means Committee punched a huge hole in Democratic claims that progressive groups were targeted as much as the Tea Party groups from May 2010-May 2012, the height of the Tea Party movement.
>
> The letter from the Treasury Department Inspector General for Tax Administration revealed that there just weren't many progressive groups who even sought special tax exempt status. A total of 20 sought it, and six were probed. All 292 Tea Party groups, meanwhile, were part of the IRS witchhunt.
>
> "At this point, the evidence shows us that conservative groups were not only flagged, but targeted and abused by the IRS," said Sarah Swinehart spokeswoman for the Ways and Means Committee.

This article was useful to me because one of my co-workers tried to tell me that progressives were targeted just as much as conservatives by the IRS. So I showed him this article. If you know any leftists who need correction, be sure and send the article along to them, too.

# New CDC study on gun violence that Obama requested undermines gun control

**Wintery Knight** · 28 June 2013 · Archived copy · Original

Here's an article about the CDC study from the leftist Slate magazine. (H/T ECM)

First – Obama ordered this study, and it was performed by an agency under his control – the Centers for Disease Control and Prevention.

The article says:

> Earlier this year, President Obama ordered the Centers for Disease Control and Prevention to assess the existing research on gun violence and recommend future studies. That report, prepared by the Institute of Medicine and the National Research Council, is now complete. Its findings won't entirely please the Obama administration or the NRA, but all of us should consider them.

The article explains 10 findings of the report.

Here are a few of them:

> **2. Most indices of crime and gun violence are getting better, not worse.** "Overall crime rates have declined in the past decade, and violent crimes, including homicides specifically, have declined in the past 5 years," the report notes. "Between 2005 and 2010, the percentage of firearm-related violent victimizations remained generally stable." Meanwhile, "firearm-related death rates for youth ages 15 to 19 declined from 1994 to 2009." Accidents are down, too: "Unintentional firearm-related deaths have steadily declined during the past century. The number of unintentional deaths due to firearm-related incidents accounted for less than 1 percent of all unintentional fatalities in 2010."
>
> **5. Mass shootings aren't the problem.** "The number of public mass shootings of the type that occurred at Sandy Hook Elementary School accounted for a very small fraction of all firearm-related deaths," says the report. "Since 1983 there have been 78 events in which 4 or more individuals were killed by a single perpetrator in 1 day in the United States, resulting in 547 victims and 476 injured persons." Compare that with the 335,000 gun deaths between 2000 and 2010 alone.
>
> **7. Guns are used for self-defense often and effectively.** "Almost all national survey estimates indicate that defensive gun uses by victims are at least as common as offensive uses by criminals, with estimates of annual uses ranging from about 500,000 to more than 3 million per year … in the context of about 300,000 violent crimes involving firearms in 2008," says the report. The three million figure is probably high, "based on an extrapolation from a small number of responses taken from more than 19 national surveys." But a much lower estimate of 108,000 also seems fishy, "because respondents were not asked specifically about defensive gun use." Furthermore, "Studies that directly assessed the effect of actual defensive uses of guns (i.e., incidents in which a gun was 'used' by the crime victim in the sense of attacking or threatening an offender) have found consistently lower injury rates among gun-using crime victims compared with victims who used other self-protective strategies."
>
> **10. It isn't true that most gun acquisitions by criminals can be blamed on a few bad dealers.** The report concedes that in 1998, "1,020 of 83,272 federally licensed retailers (1.2 percent) accounted for 57.4 percent of all guns traced by the ATF." However, "Gun sales are also relatively concentrated; approximately 15 percent of retailers request 80 percent of background checks on gun buyers conducted by the National Instant Criminal Background Check System." Researchers have found that "the share of crime gun traces attributed to these few dealers only slightly exceeded their share of handgun sales, which are almost equally concentrated among a few dealers." Volume, not laxity, drives the number of ill-fated sales.

The findings of the CDC study are not aligned with either side of the gun control debate, but considering the source (an agency of the Obama administration), I expect them to be even more liberal than the real state of affairs.

A better place to look for the truth about guns is in the academic literature. Here are two books I really like for that.

- More Guns, Less Crime by Dr. John R. Lott (University of Chicago Press, 3rd ed.)
- Guns and Violence by Dr. Joyce Lee Malcolm (Harvard University Press)

Both of those books make the case that permitting law-abiding citizens to own firearms for self-defense reduces rates of gun violence.

# Canada repeals Section 13 law that criminalized politically incorrect speech

**Wintery Knight** · 28 June 2013 · Archived copy · Original

Canada Political Map

Sun News reports on some good news up north.

Excerpt:

> An Alberta MP has succeeded in his bid to repeal a section of the Canadian Human Rights Act long seen by free-speech advocates as a tool to squelch dissenting opinions.
>
> Conservative MP Brian Storseth saw the Senate give third and final reading late Wednesday to his Bill C-304 which repeals Section 13 of the Human Rights Act, an act that had been used to, among other things, attack the writings of Sun News Network's Ezra Levant and Maclean's columnist Mark Steyn.
>
> Section 13 ostensibly banned hate speech on the Internet and left it up to the quasi-judicial human rights commission to determine what qualified as "hate speech." But, unlike a court, there was no presumption of innocence of those accused of hate speech by the commission. Instead, those accused had to prove their innocence.
>
> With elimination of Section 13, producing and disseminating hate speech continues to be a Criminal Code violation but police and the courts will adjudicate rather than human rights tribunals.
>
> Storseth drafted his bill in 2011 and enjoyed support from the highest levels in cabinet.
>
> "Our government believes Section 13 is not an appropriate or effective means for combating hate propaganda," Justice Minister Rob Nicholson said in late 2011. "We believe the Criminal Code is the best vehicle to prosecute these crimes."
>
> Last summer, Storseth's bill cleared the House of Commons in a free vote and, now that it's through the Senate, it will get royal assent and Section 13 should soon disappear.

Brian Lilley comments: (H/T Blazing Cat Fur)

> To put it bluntly, the means you can't take someone through the federal human rights apparatus over hurt feelings via a blog post or a Facebook comment.
>
> Now the bill is passed and will become law but like many acts of Parliament it will not come into force for a

> year.
>
> Still after a long hard battle to restore free speech in Canada, this is a victory.

Canada just became a little more free. Congratulations to Stephen Harper and the Conservative Party of Canada for undoing a harmful policy enacted by the radical left.

# Wind power turbine kills white-throated needletail

**Wintery Knight** · 29 June 2013 · Archived copy · Original

White-throated Needletail

My friend Barbara G. sent me this UK Telegraph story about rare birds, because she knows that I love birds.

Excerpt:

> Around 40 people were watching the White-throated Needletail, the world's fastest flying bird, on the Isles of Harris when the tragedy happened.

> Sightings of the bird have only been recorded eight times in the UK in nearly 170 years, most recently in 1991, prompting around 80 ornithologists to visit the island in the hope of catching a glimpse.
>
> John Marchant, a project coordinator for the British Trust for Ornithology, visited the island on a specially-arranged trip with a group of other birdwatchers and witnessed the death.
>
> The 62-year-old bird enthusiast said he travelled from Norfolk when he heard about the arrival of the bird, which had brown, blue and black bird plumage.
>
> "We were absolutely over the moon and thrilled to see the bird. We watched it for nearly two hours. While we were watching it suddenly it was a bit close to the turbine and then the blades hit it," he said.
>
> […]During the 1991 sighting, a single bird was spotted four times in Kent, Staffordshire, Derbyshire and finally Shetland.
>
> The White-throated Needletail, also known as the Needle-tailed Swift or Spine-tailed Swift, is known to fly up at speeds of up to 69mph, although there are unconfirmed reports of them reaching 105mph.
>
> The birds have very short legs, which they use only for clinging to vertical surfaces, and they build their nests in rock crevices in cliffs or hollow trees. They spend most of their lives in the air, living on the insects they catch in their beaks.
>
> They breed in rocky hills in central Asia and southern Siberia but migrate south to the Indian Subcontinent, southeast Asia and Australia.

> The SNP administration at Holyrood is pressing ahead with a rapid expansion in the number of wind farms after setting a target to generate the equivalent of all Scotland's electricity from renewable sources by 2020.

The SNP is the socialist Scottish National Party. They are basically secular communists, so they love subsidizing green energy – and killing rare birds.

Here's a related story closer to home, from Fox News. (H/T Melissa)

Excerpt:

> The Obama administration has never fined or prosecuted a wind farm for killing eagles and other protected bird species, shielding the industry from liability and helping keep the scope of the deaths secret, an Associated Press investigation has found.
>
> **More than 573,000 birds are killed by the country's wind farms each year, including 83,000 hunting birds such as hawks, falcons and eagles, according to an estimate published in March in the peer-reviewed Wildlife Society Bulletin.**
>
> Each death is federal crime, a charge that the Obama administration has used to prosecute oil companies when birds drown in their waste pits, and power companies when birds are electrocuted by their power lines. No wind energy company has been prosecuted, even those that repeatedly flout the law.
>
> […]Documents and emails obtained by The Associated Press offer glimpses of the problem: 14 deaths at seven facilities in California, five each in New Mexico and Oregon, one in Washington state and another in Nevada, where an eagle was found with a hole in its neck, exposing the bone.
>
> One of the deadliest places in the country for golden eagles is Wyoming, where federal officials said wind farms had killed more than four dozen golden eagles since 2009, predominantly in the southeastern part of the state. The officials spoke on condition of anonymity because they were not authorized to disclose the figures. Getting precise figures is impossible because many companies aren't required to disclose how many birds they kill. And when they do, experts say, the data can be unreliable.
>
> When companies voluntarily report deaths, the Obama administration in many cases refuses to make the information public, saying it belongs to the energy companies or that revealing it would expose trade secrets or implicate ongoing enforcement investigations.
>
> Nearly all the birds being killed are protected under federal environmental laws, which prosecutors have used to generate tens of millions of dollars in fines and settlements from businesses, including oil and gas companies, over the past five years.
>
> "What it boils down to is this: If you electrocute an eagle, that is bad, but if you chop it to pieces, that is OK," said Tim Eicher, a former U.S. Fish and Wildlife Service enforcement agent based in Cody, Wyo.

Most other people like dogs and cats, but I like birds. I am concerned about birds of prey who are endangered species. I believe in conservation. To me, what this story says is that Obama doesn't really care about the environment. The federal government does have some legitimate functions, like protecting us from threats, maintaining roads and protecting endangered species. But they don't have to be subsidizing wind power, especially when it causes pain and suffering to innocent birds.

# How do *you* define morality? Three options and a challenge

**Wintery Knight** · 29 June 2013 · Archived copy · Original

I saw that Brian Auten tweeted this thought-provoking post from Come Reason Ministries.

He starts with this:

> In my posts on natural marriage and the recent Supreme Court decision on DOMA, I had made the claim that the Supreme Court cannot define morality. There are many people in the world who will claim that simply because an action is legal it is thus moral; I argue that the former does not necessarily imply the latter. But others have been confused on how I can make such a claim. So, I'd like to back up a bit and talk about just what I mean when I speak of morals and morality.
>
> The study of morality—what it is, how we come to know it, and its distinctions—is a field of study known as ethics. There are several ethical theories on just what morality is, but I will focus on the three main ways people define moral principles: the emotive definition of morality, the subjective definition of morality, and objective definition of morality.[1]Within the objective view, there are two more subsets: morality stemming from the nature of man and morality that transcends man's nature.

It lists 3 views of morality:

1. THE EMOTIVE DEFINITION OF MORALITY
2. THE SUBJECTIVE DEFINITION OF MORALITY
3. THE OBJECTIVE DEFINITION OF MORALITY

And then he explains each one.

I think that it is tremendously difficult to make sense of morality unless morality is objective. In my set of marriage questions for women, I wrote about how important the idea of objective morality is for marriage:

**4. The moral argument**

*What is the is-ought fallacy? What is the difference between moral objectivism and moral relativism? Give one reason why moral relativism is false. Give one reason why an atheist cannot rationally ground prescriptive morality. Explain why objective morality relates to God's existence.*

SAMPLE ANSWER: Explain the is-ought fallacy. Explain objective and subjective morality. Discuss the reformer's dilemma and how it refutes relativism. Explain that atheism requires materialism, and materialism denies free will – so moral choices are impossible. Outline the moral argument.

BONUS POINTS: Give more than one reason where only one was asked for, refute attempts to assert objective morality on atheism, explain how moral obligations are related to God's design for humans.

WHY IT MATTERS: You can't marry a person who thinks that the moral law is not a brake on their desire to be happy. There are going to be times in the marriage when self-sacrifice is required by the moral law – either for you, for God, or for the children. It will not be easy to be moral then, so you are looking for someone who thinks that morality is real, and not subject to their feelings and whims. It might be worth asking the person when she has had to do the right thing when it was against her self-interest, like those valedictorians who name Jesus in their speeches and then get censored.

It's scary that people have let behind the notion of morality as a real, objective thing. What I see emerging from that is that the weakest people in society (unborn and born children) will suffer from the selfish decisions of the adults. I've been warning about that for a while now.

# Report: Los Angeles students being trained by schools to promote Obamacare

**Wintery Knight** · 30 June 2013 · Archived copy · Original

Investors Business Daily reports on it.

Excerpt:

> With great excitement, the Los Angeles Unified School District has designed a nearly $1 million program to train teenagers to promote the glories of ObamaCare to parents, relatives and friends at home.
>
> The state's health insurance exchange, Covered California, is handing $990,000 to LA schools, along with federal grants totaling 36-million more U.S. taxpayer dollars to districts around the most populous state.
>
> The goal is to train millions of student messengers statewide to sell the idea of government-subsidized health insurance to parents and relatives at home and to get more people enrolled in ObamaCare.
>
> Taxpayer-paid public school staff will also be used to phone students' homes urging enrollment under Obama's Affordable Care Act. And they will be used to consume precious class instructional time to teach the students all about the healthcare program that the Democrat Congress did not read before passing in 2010.
>
> […]A spokeswoman for the LA school district proudly said the student ObamaCare scheme was actually a pilot program to see how well teenagers serve as messengers of government-sponsored information.
>
> The goal, she said, is to determine "whether young people can be trained as messengers to deliver" a broad array of school and government-sponsored messages to family and friends. Now, there's a student indoctrination idea that sounds like some country other than the United States.
>
> If they prove proficient at influencing their own families to believe material sent home from schools, she said, the teens will be used to deliver numerous other official messages to adults in their home and neighborhoods.

One thing that the Los Angeles schools could do is tell everyone how well the British "public option" health care system works.

Here's an article from the UK Daily Mail that the schools could use to make the case for Obamacare. (H/T ECM)

Excerpt:

> As many as 1,165 people starved to death in NHS hospitals over the past four years fuelling claims nurses are too busy to feed their patients.
>
> The Department of Health branded the figures 'unacceptable' and said the number ofunannounced inspections by the care watchdog will increase.
>
> According to figures released by the Office for National Statistics following a Freedom of Information request, for every patient who dies from malnutrition, four more have dehydration mentioned on their death certificate.
>
> Critics say nurses are too busy to feed patients and often food and drink are placed out of reach of vulnerable people.
>
> In 2011, 43 patients starved to death and 291 died in a state of severe malnutrition, while the number of patients discharged from hospitalsuffering from malnutrition doubled to 5,558.

See? It works! Just think of it as post-birth abortion.

# Who killed marriage? A look at the history of gay marriage activism

**Wintery Knight** · 30 June 2013 · Archived copy · Original

From National Review, a reminder from Ed Whelan on which political party pushed for the redefinition of marriage.

Excerpt:

> In 1996, defenders of marriage respond to judicial mischief against marriage by drafting and proposing the Defense of Marriage Act. DOMA wins overwhelming majorities in both Houses of Congress—85 to 14 in the Senate and 342 to 67 in the House. Among its supporters are many strong advocates of gay rights, including President Clinton, who signs DOMA into law, and then-senator Joe Biden.
>
> This modest measure merely reaffirms and makes crystal clear what Congress had always meant by the term *marriage* in provisions of federal law: a male-female union. DOMA doesn't intrude at all on a state's authority to regulate marriage under state law. It doesn't nullify or prohibit any marriages, or in any other respect preempt the operation of state law. On the contrary, it leaves the states free to define, or redefine, marriage as they please.
>
> **Initial litigation attacks against DOMA fail. But then President Obama is elected. First, the Obama administration, with the complicity of then-Solicitor General Elena Kagan, actively sabotages its purported defense of DOMA. Then, on the flimsiest of pretexts, it completely abandons its duty to defend DOMA and aggressively attacks DOMA. (See Part IV of my House testimony on the "First" proposition and the remainder of it on the latter.) The Supreme Court ends up invalidating DOMA in an opinion by Justice Kennedy that, in the course of breaking new ground, smears supporters of DOMA as mean-spirited bigots. To top off the farce, Kagan provides the decisive fifth vote.**
>
> The battle for marriage in California displays a similar pattern. In 2000, California voters adopt Proposition 22 to affirm that marriage in California remains what it has always been—the union of a man and a woman. In May 2008, the state supreme court, in a novel opinion and by a 4-3 vote, strikes down Proposition 22 as supposedly violative of the state constitution. Marriage supporters respond with Prop 8, which the voters of California adopt in November 2008. Intense and vicious bullying of supporters of Prop 8 ensues.
>
> Proponents of same-sex marriage then run to their favorite federal courthouse to challenge Prop 8 on federal constitutional grounds. They draw as the judge in the case Vaughn Walker, who proceeds to engage in what is probably the most egregious course of misconduct ever by a federal district judge (and who discloses only after his retirement from the bench that he is in a long-term same-sex relationship and thus was ruling on his own right to marry his same-sex partner). The Ninth Circuit ruling on appeal, which also holds Prop. 8 to be unconstitutional, is written by notorious liberal activist Stephen Reinhardt. Judge Reinhardt's wife, Ramona Ripston, directed an ACLU affiliate that filed briefs in support of the Prop. 8 challengers in the same case and publicly rejoiced over Judge Walker's ruling. Yet Judge Reinhardt somehow refuses to disqualify himself from deciding the appeal.
>
> As reprehensible is the unprecedented refusal of California officials to defend Prop 8—a refusal that ultimately leads five members of the Supreme Court (including Kagan, the decisive vote once again) to rule that the Court has no jurisdiction over the case.

So Obama's selection of Elena Kagan to the Supreme Court, a known opponent of marriage, was decisive. She was confirmed to the court in 2010, so you might expect all the church-attending people who supported Obama to not vote for him again in 2012. I wrote about her pro-abortion views and pro-gay-agenda views in 2010, so we all had the opportunity to realize what Obama believed by nominating Kagan. But something tells me that the church people who voted for Obama in 2008 just went ahead and voted for him a second time in 2012. Because they were

not interested in his record at all. They were moved by shallowness and appearances.

One thing that I would like to say to people who attend church, but who voted for gay marriage activists. The Bibles in the pews are there for a reason. If you formulate your decision on how to vote without it, then that is not authentic Christianity. You should not vote without reading evidence from research (e.g. – scientific research like the Regnerus study) to confirm the Bible and apply the Bible. I don't think that God is pleased with people who disregard his Word and the evidence that confirms it. You are not here to be influenced by Hollywood or by public schools. You are here to know God and to puzzle these moral questions out using evidence.

# Stephen Baskerville: five myths about no-fault divorce

**Wintery Knight** · 30 June 2013 · Archived copy · Original

From the Catholic News Agency.

Introduction:

> Almost four decades after the "no-fault" divorce revolution began in California, misconceptions abound. Even the many books about divorce, including myriad self-help manuals, are full of inaccurate and misleading information. No public debate preceded the introduction of no-fault divorce laws in the 1970s, and no debate has taken place since.
>
> Yet divorce-on-demand is exacting a devastating toll on our children, our social order, our economy, and even our constitutional rights. A recent study estimates the financial cost of divorce to taxpayers at $112 billion annually. Recent demands to legitimize same-sex marriage almost certainly follow from the divorce revolution, since gay activists readily acknowledge that they only desire to marry under the loosened terms that have resulted from the new divorce laws. Divorce also contributes to a dangerous increase in the power of the state over private life.

Here are the five myths about no-fault divorce:

- No-fault divorce permitted divorce by mutual consent, thus making divorce less acrimonious
- We cannot force people to remain married and should not try
- No-fault divorce has led men to abandon their wives and children
- When couples cannot agree or cooperate about matters like how the children should be raised, a judge must decide according to "the best interest of the child"
- Divorce must be made easy because of domestic violence

And the details about number three:

> Myth 3: No-fault divorce has led men to abandon their wives and children.
>
> Fact: This does happen (wives more often than children), but it is greatly exaggerated. The vast majority of no-fault divorces — especially those involving children — are filed by wives. In fact, as Judy Parejko, author of Stolen Vows, has shown, the no-fault revolution was engineered largely by feminist lawyers, with the cooperation of the bar associations, as part of the sexual revolution. Overwhelmingly, it has served to separate large numbers of children from their fathers. Sometimes the genders are reversed, so that fathers take children from mothers. But either way, the main effect of no-fault is to make children weapons and pawns to gain power through the courts, not the "abandonment" of them by either parent.

Al Mohler wrote about the history of no-fault divorce a while back, and I think it's worth reviewing why we have this lousy law.

> The story behind America's love affair with no-fault divorce is a sad and instructive tale. As Baskerville documents, no-fault divorce laws emerged in the United States during the 1970s and quickly spread across the nation. Even though only nine states had no-fault divorce laws in 1977, by 1995, every state had legalized no-fault divorce.
>
> Behind all this is an ideological revolution driven by feminism and facilitated by this society's embrace of autonomous individualism. Baskerville argues that divorce "became the most devastating weapon in the arsenal of feminism, because it creates millions of gender battles on the most personal level." As far back as 1947, the

> National Association of Women Lawyers [NAWL] was pushing for what we now know as no-fault divorce. More recently, NAWL claims credit for the divorce revolution, describing it as "the greatest project NAWL has ever undertaken."
>
> The feminists and NAWL were not working alone, of course. Baskerville explains that the American Bar Association "persuaded the National Conference of Commissioners on Uniform State Laws [NCCUSL] to produce the Uniform Marriage and Divorce Act." Eventually, this led to a revolution in law and convulsions in society at large. This legal revolution effectively drove a stake into the heart of marriage itself, with inevitable consequences. In effect, no-fault divorce has become the catalyst for one of the most destructive cultural shifts in human history. Now, no-fault divorce is championed by many governments in the name of human rights, and America's divorce revolution is spreading around the world under the banner of "liberation."

And note that Democrats oppose any effort to reform laws that make it easy to break up marriages:

> A basic dishonesty on the question of divorce pervades our political culture. Baskerville cites Michigan governor Jennifer Granholm as referring to divorce as a couple's "private decision." Granholm's comments came as she vetoed a bill intended to reform divorce law in her state. The danger and dishonesty of referring to divorce as a couple's "private decision" is evident in the fact that this supposedly private decision imposes a reality, not only on the couple, but also on children and the larger society. Indeed, the "private decision" is really not made by a couple at all–but only by any spouse demanding a divorce.

So, no-fault was pushed by two groups: feminists and trial lawyers. Christians rolled over for it because we thought we fell for the myths that no-fault divorce was "compassionate". That was a mistake, and one we need to roll back. (By the way, that's not a bad post by Al Mohler. I pick on him for having his head stuck in the Bible, but it looks like he has a comprehensive view of marriage)

The reason I am writing about this is because of a post by Dr. Jerry Walls (H/T First Things) where he said that people who are opposed to gay marriage tend to say nothing at all against premarital sex and no-fault divorce. Well, I am against gay marriage and I am also personally a virgin and I would repeal premarital sex promotion in the schools and no-fault divorce in the courts if I could. And in fact regular readers know that I am always blogging about the damage caused by divorce and the damage caused by premarital sex, usually with study after study to support my views. I don't just say "the Bible says" and expect that to transform a culture that is largely indifferent or even hostile to what the Bible says.

I think that Christians need to become experts on everything from the fine-tuning of the cosmological constant to no-fault divorce to the Laffer curve to undesigned coincidences in the New Testament sources to WMD development and proliferation in rogue nations like North Korea and Iran. The more people regard Christians as intelligent, informed and circumspect, the more people will be curious about the gospel. We have to know everything about everything and we have to be concerned about every conflict between Christian convictions and what's happening in the world. Studying the way the world works is one way of serving God and defending his honor with people who want to dismiss him, and dismiss their obligations to him.

# Gay man gets 40-year sentence for molesting boy he adopted from Russia

**Wintery Knight** · 1 July 2013 · Archived copy · Original

***Warning: The following story may be disturbing and offensive to some readers. Reader discretion is advised.***

UPDATE: The Australian Broadcasting Corporation published an article praising the gay adoption by Mark Newton in 2010. I have posted the full text in this post and saved off a PDF. The article has since been pulled.

The Sydney Morning Herald reports on the latest example of gay adoption gone awry – this time from Australia. (H/T Mysterious S.)

Excerpt:

> Standing before an American court convicted of the most heinous of child sex crimes, the double lives of Australian citizen Mark J. Newton and his long-term boyfriend Peter Truong were laid bare.
>
> […]Moments later Newton was sentenced to 40 years in prison for sexually abusing the boy he and Truong, 36 from Queensland, had "adopted" after paying a Russian woman $8000 to be their surrogate in 2005.
>
> Police believe the pair had adopted the boy "for the sole purpose of exploitation". The abuse began just days after his birth and over six years the couple travelled the world, offering him up for sex with at least eight men, recording the abuse and uploading the footage to an international syndicate known as the Boy Lovers Network.
>
> […]Evidence before the court revealed the abuse began before the couple returned to Australia. One video is said to show Newton performing a sex act on the boy when he was less than two weeks old.
>
> Judge Barker said the pair brainwashed the child to believe the sexual abuse was normal. Newton was also said to have trained the boy to deny any inappropriate behaviour if he was ever questioned by authorities.
>
> Newton and Truong came to the attention of police in August 2011 after their connections to three men arrested over the possession of child exploitation material came to light. The couple had visited the three men in the US, New Zealand and Germany with their son.
>
> […]Newton and Truong claimed they were being targeted because they were homosexual.

This story comes on the heels of the new Labour Party leader Kevin Rudd's promise to legalize gay marriage.

# French mayor faces jail time for refusing to conduct gay couple's wedding

**Wintery Knight** · 1 July 2013 · Archived copy · Original

From the NY Daily News.

Excerpt:

> Jean-Michel Colo stirred up controversy by becoming the first French official to formally refuse to officiate at the wedding of a gay couple, Jean-Michel Martin and Guy Martineau-Espel. The Arcangues mayor's actions defied a landmark French law allowing same-sex unions.
>
> Two men are suing the mayor of a French village for refusing to marry them, in the first reported legal action over same-sex marriage since it was legalized in May amid strong, sometimes violent opposition.
>
> Guy Martineau-Espel and Jean-Michel Martin, both in their 50s, filed a legal complaint against the mayor for refusing to marry them at the town hall of Arcangues, a village in southwestern France where the couple has lived for a decade.
>
> "We will fight this battle to the finish," Martineau-Espel told Reuters.
>
> France adopted legislation in May that allows gay and lesbian couples to marry and adopt children, following in the footsteps of 13 other countries.
>
> But the move divided opinion in France and came at a political price for the already unpopular government of President Francois Hollande.
>
> Opponents of the law, led by Catholics and conservatives, staged mass street protests, some of which ended in violence, and the debate was also blamed for a spate of homophobic attacks in the mainly Catholic country.
>
> Weddings in France are conducted by mayors or their deputies at town halls, of which there are about 36,000.
>
> The couple in Arcangues applied to marry in May but the right-wing mayor, Jean-Michel Colo, turned them down.
>
> Colo was summoned earlier this week by a government official and told to apply the law. He asked for more time to consider his options, prompting the couple to take action.
>
> A refusal to comply with the gay marriage law could mean Colo faced up to five years in jail and a fine of up to 75,000 euros ($98,000).
>
> "Even if in the end we manage to get married, we will stay the course with our legal complaint," said Martineau-Espel.

This is pretty standard for countries that legalize gay marriage. You can just look at these examples from Canada, for confirmation that this is what happens after a country legalizes gay marriage. And they *all* promise that religious liberty will be protected before it's passed, too. It's even happening in Massachusetts.

Do you believe Obama when he says that our religious liberty will be protected even if marriage is redefined to include gay marriage, polygamy and polyamory? I think you can believe Obama as much about that as you can believe him about being able to keep your health care plan or about the Benghazi attack being caused by a Youtube video. The man's a pathological liar, and that's been proven over and over again.

# “Two Dads are Better Than One”: pro-gay adoption ABC profile of convicted pedophile

**Wintery Knight** · 1 July 2013 · Archived copy · Original

Earlier, I blogged about how Mark Newton had been convicted for pedophilia and received a 40-year prison sentence. This was reported earlier by the Sydney Morning Herald.

Since then, I was notified about a pro-gay-adoption article from the Australian Broadcasting Corporation, in which the pedophile and his partner were profiled.

The article has been pulled from the ABC web site, but I found it in Google cache, and made a PDF of it.

Full text:

> Headline: Two dads are better than one
> Date: 14 July, 2010 5:04PM AEST
> Author: Ginger Gorman
>
> A shiny child’s bike lies on its side on the front lawn of an immaculate garden.
>
> Around the back gay dads Pete and Mark chase their son’s pet chickens around, trying to catch them.
>
> Drake, 5, exclaims that the little birds are too fast for him.
>
> It’s a happy, relaxed family scene. But it wasn’t an easy road to get there. After many hurdles Drake was born by surrogacy in Russia.
>
> “We decided that we would have a child, that it was time for us to have a family. We wanted to experience the joys of fatherhood and we started our surrogacy over in the United States back in 2002,” Pete said.
>
> At the time, Pete and Mark were living and working in the US.
>
> “Surrogacy rules and laws are much easier in the United States,” Mark said.
>
> While not everybody was comfortable with the idea of surrogacy, Mark said the couple felt their options were limited.
>
> “We knew that there were certainly plenty of women willing to do it so if it OK with them, then I guess it was OK with us,” he said.
>
> Mark and Pete used the internet to find prospective mothers for the child they longed to have. Apart from the woman’s health, Pete said one of the big concerns was how genuine the candidates were.
>
> “We have heard about a lot of scams and certain people who represent themselves as so-called surrogate mothers who are really out there just to make money,” he said.
>
> Pete said the couple also wanted to make sure that any woman they employed as a surrogate fully understood the commitment she was making.
>
> There was also the issue of whether the mother would actually give up her baby, Mark added.
>
> After many failed attempts in the US, the cost was becoming prohibitive. The pair decided to try Russia as cheaper alternative.
>
> That decision presented its own problems. Language was the main one. The couple took on a private Russian tutor and Pete gave up his job in Australia to oversee the process.
>
> “We were very dedicated to making this work….we decided that at some point we didn’t have a budget. Our budget was anything that we had earned, anything that we had saved, anything that we could borrow to make this happen,” Pete said.
>
> In the end Pete said they found a woman who they ‘clicked with personality-wise’.

> “She was very quiet. She didn’t have a lot of demands or conditions that some of the other woman that we had met had. She seemed like somebody we could work with,” he said.
>
> At the first attempt, Drake was conceived via artificial insemination using Mark’s sperm.
>
> When asked why it was Mark’s sperm and not Pete’s, Mark laughed.
>
> “A flip of the coin I think,” he said.
>
> During the pregnancy the couple stayed in limited contact with the mother via a translator. Mostly they were in touch just when there were practical things to care of such as visiting a doctor or getting an ultrasound.
>
> “We made it clear to her that we wanted her to take vitamins, that we wanted her to eat well. We provided the money to do that and we just had to hope that she would do it,” Mark said.
>
> Neither man was at Drake’s birth because they felt it was important to protect the mother’s privacy.
>
> When their son was five days old, Mark and Pete were handed their child. To their surprise, Drake’s mother gave them the baby and walked away.
>
> “I think she had resigned herself to this much earlier on and was trying not to let emotions get in the way,” Mark said.
>
> In fact, it wasn’t the mother who got in the way of Drake coming back to Australia with his two Dads. What followed was two and a half years of bureaucracy before the child received permanent Australian residency and another year before he got citizenship.
>
> On arrival in Australia customs quizzed Mark and Pete for hours. Police were also sent around to their house on a Sunday morning to investigate.
>
> “When people see two guys together, you know it’s like, ‘Where’s his mother?’ We’ve had a lot of people ask that,” Pete said.
>
> “I think that even if one of us was a woman, we wouldn’t have had the same suspicions and problems that we went through.”
>
> Thinking back to the police visit, Pete said the police seemed to want reassurance that the situation was ‘right’.
>
> They checked if the couple had equipment to raise a child like a bed, clothes and bottles.
>
> Mark said he’s sure that they were under suspicion of paedophilia. But despite the difficulties, he said the couple would do it again with no hesitation.
>
> “We’re a family just like any other family,” he said with pride.

ABC has since pulled the article from their web site, to cover up what they did. The caption from the image in the article is: “Proud dads Pete (left) and Mark (right), had their son Drake by surrogacy in Russia. (Ginger Gorman – ABC)”. And you can still download the MP3 file from the article here, although I took a copy here. You can hear the proud dads talking with the ABC journalist in the MP3 file.

You can also find an article from a campus newspaper written by Mark Newton in which he advocates for gay marriage. I saved it as a PDF here. The article is from a campus newspaper called the Daily 49er from California State University, Long Beach.

UPDATE: Ace journalist Robert S. McCain is trying to dig into the story, but the ABC journalist who wrote the story has blocked him.

UPDATE: This post has been linked by the American Spectator and the Australian Daily Telegraph, as well as many other blogs. (See the trackbacks)

# Darwin's Doubt will debut at #7 on the New York Times Hardcover Nonfiction Bestseller List

**Wintery Knight** · 2 July 2013 · Archived copy · Original

Amazing news from Evolution News about the new book on the Cambrian explosion by Dr. Stephen C. Meyer.

Excerpt:

> Judging the success of an idea in reaching and convincing a large audience is a tricky business. In putting your case to the public in books and articles, are you making progress, just holding steady, or losing ground to competitors? What you want is a solid, unambiguous metric. Hmm, as a measure of success in getting a particular argument before a large chunk of the thoughtful, book-reading public, how does a spot on the *New York Times* bestseller list sound?
>
> That would do nicely. And in fact it is just what we are very pleased to report. As careful readers will already have discerned from the headline, Stephen Meyer's new book, *Darwin's Doubt: The Explosive Origin of Animal Life and the Case for Intelligent Design*, will debut this coming Sunday in the #7 place on the *New York Times* hardback nonfiction list. See it here.
>
> […]You'll also see the book opening at #10 on the Publishers Weekly bestseller list. Find it here.
>
> […]We attribute these indications of really impressive progress to the scientific, philosophical and yes, cultural and even spiritual importance of Dr. Meyer's book, the unprecedented rigor and scope of his argument, combined with a lucidly accessible style that bestselling novelist Dean Koontz has praised, saying that Meyer "writes beautifully" and "marshals complex information as well as any writer I've read."
>
> It doesn't hurt either that this broadly interdisciplinary book has won accolades from scientists representing a variety of relevant fields, including Harvard geneticist George Church, Mt. Holyoke paleontologist Mark McMenamin, State University of New York biologist Scott Turner, Max Planck Institute for Plant Breeding Research biologist Wolf-Ekkehard Lönnig, and others, scientists whose own works are published by sources like Harvard University Press and Columbia University Press.
>
> Excitement from the media has also played a role in getting out the word. Dr. Meyer has been on the Michael Medved Show several times, on the Dennis Prager Show, the Dennis Miller Show, and many other national and local talk-radio programs. Not trivial either is the decision by Barnes & Noble to feature the book with in-store displays in 300 of its bookstores across the country, likely due in part to the strong sales record of Meyer's first book, *Signature in the Cell*.

The summary from the New York Times bestseller list web page is spot-on: "The theory of intelligent design best explains the appearance of animals in the fossil record without apparent ancestors." That's what the book is about, for certain.

Wow. It's not every day that I link to the New York Times! But this isn't surprising, considering that Dr. Meyer's new book is picking up a lot of endorsements from mainstream scientists. Here's the most recent one, by Dr. Mark C. Biedebach of California State University, Long Beach.

Recall that Dr. Stephen C. Meyer's first book was one of the best books of 2009 according to the Times Literary Supplement.

Excerpt:

> Stephen C. Meyer's Signature in the Cell: DNA and the evidence for Intelligent Design (HarperCollins) is a detailed account of the problem of how life came into existence from lifeless matter – something that had to happen before the process of biological evolution could begin. The controversy over Intelligent Design has so

> far focused mainly on whether the evolution of life since its beginnings can be explained entirely by natural selection and other non-purposive causes. Meyer takes up the prior question of how the immensely complex and exquisitely functional chemical structure of DNA, which cannot be explained by natural selection because it makes natural selection possible, could have originated without an intentional cause. He examines the history and present state of research on non-purposive chemical explanations of the origin of life, and argues that the available evidence offers no prospect of a credible naturalistic alternative to the hypothesis of an intentional cause. Meyer is a Christian, but atheists, and theists who believe God never intervenes in the natural world, will be instructed by his careful presentation of this fiendishly difficult problem.

The person who nominated his first book to that list was non other than atheist philosopher Thomas Nagel. If you haven't read the first book, get them both and read them both. These are the scientific issues that everyone who is considering theism versus naturalism should be reading about.

# The Chronicle of Higher Education profiles Dr. William Lane Craig

**Wintery Knight** · 2 July 2013 · Archived copy · Original

Probably the greatest defender of Christianity of all time has been profiled in the Chronicle of Higher Education by Nathan Schneider.

The article is titled "The New Theist", which is an allusion to "The New Atheism". The subscript is "How William Lane Craig became Christian philosophy's boldest apostle".

What I like about this article is that I learned new things about Dr. Craig's big plan:

> Along the narrow basement hallway that was home to the Biola philosophy master's program when I sat in on Craig's class in 2011, there was a map of the United States on the wall. On it were labels with the names of universities you've heard of—Notre Dame, Cornell, Rutgers—and some you probably haven't. The labels were fastened by pins in three colors. Blue signified alumni enrolled in doctoral programs. Red meant programs where alums had been accepted, and yellow meant where they held full-time teaching jobs. There were several more pins in the Atlantic Ocean: Oxford, King's College, Vrije Universiteit Amsterdam.
>
> This is a not-unusual sight in the hallway of any placement-minded graduate program. But at Biola—a name derived from "Bible Institute of Los Angeles"—the map had particular significance.
>
> "My goal is for Christian theism as a worldview to be articulated cogently and persuasively in the academy," says Scott Rae, an ethicist who co-founded the master's program in the early 1990s. The purpose of the program was not simply to train evangelical Christian students for evangelical Christian schools, but to send those students off to doctoral programs, and eventually professorships, at leading secular universities. "We figured if we ended up with 30 or 40 students, and maybe we sent 20 of them to Ph.D.'s before we retired, that'd be awesome," Rae added. "The thing just snowballed."
>
> The program's other founder, J.P. Moreland, was already in high demand as an author and speaker on apologetics, in addition to being a philosopher of mind. Rae and Moreland invited William Lane Craig to join their team, though he comes to the campus only for brief, intensive courses in the fall and winter. Before long they were attracting more than 100 master's students at a time (including women, generally, in only single digits); as many as 150 have continued on to further graduate work. Despite having only a handful of faculty, perhaps no philosophy master's program in the English-speaking world enrolls so many students and, even if by that measure alone, few can claim to be so influential in shaping the next generation of analytic philosophers.
>
> Still, many in the profession aren't even aware of it. The Philosophical Gourmet Report, which ranks philosophy departments by the reputation of their faculty members, doesn't mention Biola on its Web page about master's programs. "No one has ever called to my attention that Biola's M.A. program should be included," says Brian Leiter, of the University of Chicago, who edits the report.
>
> Among philosophers—Christian or otherwise—who have worked with the Biola program's alums, the impressions tend to be positive. According to Laurence Bonjour, a philosopher at the University of Washington who has supervised the Ph.D. work of program graduates, "Biola students, especially those interested in epistemology, are often very well trained."
>
> "But," he is careful to add, "I doubt if the Christian aspect of the program has much to do with that."
>
> For the program's architects, however, the "Christian aspect" is everything. "What makes this program different from other philosophy programs is the distinctively Christian setting," says Rae. Students take courses in the Bible and theology as well as in logic, ethics, and metaphysics. On their application forms, they're asked to sign Biola's century-old, page-long doctrinal statement and note any points of disagreement; on the campus, alcohol, tobacco, and gambling are prohibited. Craig begins each day's lecture in his classes with a personal reflection on integrating the life of scholarship with the life of a Christian—covering such topics as marriage,

> prayer, and regular exercise. Everyone basically agrees on where, in the end, all the flights of argument and inquiry need to land.
>
> Gail Neal, a retired administrative coordinator for the program, says she always noticed a culture of mutual support and encouragement, rather than competition, among the students. “Their whole purpose is to help people know Christ and to make a difference in the world for him, and to bring people into his kingdom,” she told me. “They just empty themselves of themselves, like Christ did for us.”
>
> In a now-decade-old lecture, “Advice to Christian Apologists,” Craig outlined his view of the university as “the single most important institution shaping Western culture.” He argued that it’s a lot easier for people throughout the society to accept Christ as their savior if Christianity appears reasonable in higher education, if the academic conversation takes it seriously, and if there are Christian professors to serve as role models. The Biola master’s program is thus a strategic intervention designed to resound everywhere.
>
> “In order to change the university, we must do scholarly apologetics,” he reasoned. “In order to do scholarly apologetics, we must earn doctorates. It’s that simple.”

And a bit more about how students respond to apologetics:

> Most outsiders are familiar with the caricatures of evangelical anti-intellectualism, from the Scopes “Monkey Trial” in 1925 to televangelists and the faux-folksiness of George W. Bush. So are evangelicals themselves. Almost 20 years ago, the evangelical historian (and historian of evangelicals) Mark Noll warned, at book length, about The Scandal of the Evangelical Mind. This, as much as secularism itself, is an ill that Craig and others at Biola have set out to cure.
>
> “Biblical Christianity retreated into the intellectual closet of Fundamentalism,” he writes in the introduction to Reasonable Faith.”Satan deceives us into voluntarily laying aside our best weapons of logic and evidence, thereby ensuring unawares modernism’s triumph over us.”
>
> Craig Hazen, who directs the apologetics department at Biola, calls the problem “blind-leaping.” He told me, “The idea that we’re blind-leaping into faith is actually reinforced by evangelical churches all the time.”
>
> With close ties to the philosophy master’s program, the apologetics program teaches a couple of hundred students at a time how to defend their faith with reasons. There are master’s and certificate tracks, and about half the students take courses online from around the world. The program also organizes high-profile events, such as Craig’s 2009 debate with Christopher Hitchens, and seminars at churches around the country. Part of the purpose of these is recruiting students, and part of it is advocacy; Hazen and his team have to convince fellow Christians that reason is not merely a dead end for faith, and that a grown-up faith in modern society requires grown-up reasons.
>
> “Frankly, I find it hard to understand how people today can risk parenthood without having studied apologetics,” Craig has written. “We’ve got to train our kids for war.”
>
> The students in Craig’s classes at Biola, it’s true, bear a kind of battle scar. A common story among them goes something like this: When they were teenage boys, growing up in evangelical households, their childhood faith began to buckle. Their classes in school and their classmates and the Internet posed questions they didn’t know how to answer. Their parents and pastors couldn’t help; they only recommended more prayer and faith, more blind-leaping. It didn’t work.
>
> Then someone would lend them a book by William Lane Craig or J.P. Moreland, or send them a link to a debate on YouTube. All of a sudden, their questions were being taken seriously. They could chew on the latest science and philosophy while still going to church with their friends and families. They went to Biola to study philosophy or apologetics because they knew it would be a safe place to ask any question they needed to, with whatever rigor and detail they craved. Afterward they take the answers they get there back to their friends and to the Internet, and the entrepreneurs among them start apologetics ministries of their own.

> They’re born again: rebaptized in philosophy.

Go read the whole thing! And share it! The article is balanced, and that’s what I would expect from a mainstream article. There’s a lot more to the article that I couldn’t excerpt here, so read it all!

Now for my comment: we really need to get to the point where people look to Christian scholars like Dr. Craig as the best representatives of Christianity. The scholars are doing the real work in a time when Christianity is being challenged in the culture. The real heroes of the faith are the scholars. Not the end-time fiction writers. Not the blind-faith preachers. Not the Christian music rock stars. Not the Hollywood celebrities. And especially not the Christian athletes.

Christianity is and has always been a *knowledge* tradition, and we should be familiar with and appreciative of our *scholars*, first and foremost. We should be especially appreciative of our philosophers, scientists and historians who deal in logic and evidence every day. These are the real heroes of the faith, in my opinion. We should be paying more attention to them and their work, and reading their books and learning how to apply the knowledge in our daily lives.

One of the things that I try to do in my role in the Kingdom is to try to support Christian college students in philosophy, science and history programs with guidance and awards for good grades. Every semester, I get e-mails from a group of people who report their grades and future plans to me, and then I reward them with items from their list of desired books. My favorite Christian student just completed a Bachelor and Masters degree in a scientific area and is now applying for PhD programs. Another Christian student I am supporting did NINE courses last semester, including TWO graduate courses. I have been sending him academic books to help him in his research twice a year since 2011. He is also planning to go on to a PhD program in philosophy and law.

I want everyone reading this post and ask yourself a question – what are you doing to help support the development the next William Lane Craig? He was an undergraduate student once, you know. And then he was a graduate student. Are we doing our best to support the Christians who are willing to pay the price to infiltrate into the secular university and bring back the PhDs we need? I am doing my part, and I want you to do your part, too. Think about it!

One thing that you can do to impact young people is to visit the Biola University apologetics web store and purchase some of the debates featuring Dr. William Lane Craig on DVD, and try to show them in your church. I recommend the first Craig-Dacey debate at Indiana U, the re-match Craig-Stenger debate at Oregon State U, the Craig-Crossley debate, and the Craig-Ehrman debate. This will help to encourage more of our young people, especially young men, to study hard things in university and go on to get their PhDs. Parents – you really need to be exposing your kids to Christian heroes, because they are the ones who will have an influence in the future. Don’t neglect this precious resource!

# Jay Richards discusses academic freedom on the Michael Medved show

**Wintery Knight** · 2 July 2013 · Archived copy · Original

The Michael Medved show is a national radio show broadcast out of Seattle, Washington. According to Talkers magazine, he has the fifth largest radio audience. He has a regular weekly segment on science and culture featuring scholars from the Discovery Institute.

Here is the segment from this past week, courtesy of the Intelligent Design: The Future podcast.

The MP3 file is available for download. (33 minutes)

The description is:

> On this episode of **ID the Future**, Dr. Jay Richards appears on the Michael Medved Show to discuss the meaning of academic freedom and the importance of teaching both sides of debated issues. Listen in as Richards and Medved look at intimidation in academia and the current efforts to censor Professor Eric Hedin at Ball State University.
>
> URGENT: Please consider signing our petition to defend the academic freedom of Professor Eric Hedin. To sign, visit www.academicfreedompetition.com.
>
> *Each week, leading fellows from Discovery Institute will join Michael Medved to talk about the intersection of science and culture. Listen in live online or on your local Medved station, or stay tuned at ID the Future for the weekly podcast.*

Topics:

- Medved: Why is a group of activists trying to challenge the hiring of Guillermo Gonzalez at Ball State University?
- Richards: When Guillermo was at Iowa State University, he was the best or second-best published assistant professor
- Richards: A rabid atheist professor of religion blocked his tenure because of his views on intelligent design
- Richards: Guillermo never mentioned intelligent design in class
- Richards: Militant Darwinian fundamentalist Jerry Coyne is trying to block Ball State from hiring Guillermo
- Medved: Eric Hedin, another professor at Ball State, is facing persecution for teaching both sides of evolution
- Medved: Tell us about the book “The Privileged Planet” that got him into trouble
- Richards: The book is about how the progress of science shows that habitable planets have to be fine-tuned
- Richards: The book argues that there is a correlation between habitability and the ability to make scientific discoveries
- Medved: Your book “Money Greed and God” talks about materialism has impacted economics as well
- Richards: It’s problematic to assume materialism when studying economics and neglect human creativity
- Medved: Why don’t intelligent design people just focus on religion, instead of trying to get into the science classroom?
- Richards: Darwin himself was trying to argue against design, so the evidence for design is part of the debate
- Caller1: There are many galaxies, solar systems and planets in the universe, so the odds are good of getting life by chance
- Richards: There are 10 to the 22 stars in the visible so we have an idea of the probabilistic resources available
- Richards: There are a lot of things that you need to get right in order to support life – the odds are less than 10

to the 22

- Caller1: Why can't just teach about astrophysics and astrobiology in a religion or history class?
- Richards: Because the evidence for design is found in things like bacterial flagellums and the origin of life
- Richards: Since evidence for design is scientific, it makes no sense to talk about it in a history or religion class
- Caller2: Intelligent design argues that we are too complicated, but then the Designer must be even more complicated
- Richards: Consider a situation where a murder has been committed, but the murder suspect has fled the country
- Richards: Are we not allowed to infer that an agent murdered the victim if we can't produce the murderer?
- Caller2: But inferring that an intelligence is the cause of some effect means that you stop asking questions
- Medved: Why is it so hard for you to accept
- Caller2: I'm an atheist and I like the Big Bang theory, and it explains where matter came from
- Medved: The Big Bang theory explains the origin of space and time from nothing: that's not atheism, that's theism
- Caller3: Intelligent design theory is nothing but a fear of randomness in the universe
- Richards: The arguments for intelligent design are based on discoveries abut the origin of life or the Cambrian explosion
- Richards: The real question is whether materialistic mechanisms and random chance can explain the evidence
- Caller4: Explain your idea that habitability is corelated with the ability to make discoveries
- Richards: Example: in order to have perfect solar eclipses, the masses of the Sun, moon and planet have to be fine-tuned
- Richards: Example: life-permitting atmosphere is also a transparent atmosphere, so we can see past it to make discoveries
- Richards: Example: galactic habitable zone is also the best place to do astronomy and make discoveries

By the way, there was a troubling update about the Darwish Inquisition against Eric Hedin – it looks like the panel of investigators is stacked with close-minded naturalists.

I subscribe to the ID the Future podcast, and I really recommend that you do as well!

# Amazing: California teachers challenge forced payment of union dues

**Wintery Knight** · 3 July 2013 · Archived copy · Original

Dad sent me this article from the Washington Free Beacon. It's good news!

Excerpt:

> A group of California teachers is preparing for a Supreme Court battle to overturn forced union dues in a groundbreaking lawsuits filed in June.
>
> For nearly three decades, the Supreme Court has allowed closed-shop unionism, in which public employees must pay dues to labor groups handling collective bargaining negotiations.
>
> The Supreme Court established Beck Rights in 1988 allowing workers to opt out of union dues for political activities, while continuing to pay for union negotiating expenses. The teachers are hoping to take that battle one step further by putting an end to all coercive union dues.
>
> Ten California schoolteachers are challenging California's policy of forcing all public employees to pay union dues for collective bargaining. The Center for Individual Rights (CIR) is aiding their suit. The CIR views the issue through the lens of the Constitution, rather than as a contest of labor policy.
>
> "Our efforts are not anti-union; we are trying to solidify the First Amendment rights of public employees to freely assemble," CIR president Terry Pell said.
>
> The plaintiffs filed a preliminary injunction on Tuesday asking the court to waive the teachers' union dues during the ongoing trial. Pell is certain the motion will fail, which is all the better for the plaintiffs because it will "fast-track" the litigation to the 9th Circuit Court of Appeals and eventually the Supreme Court.
>
> "This is a piece of strategic litigation—we're trying to get the issue of compulsory union dues to the Supreme Court as quickly as possible," he said. "We know that lower courts can't overrule Supreme Court precedent, but this will expedite us through the system."
>
> The Roberts court opened the door to ending coercive unionism last year when it ruled 5-4 that Service Employees International Union improperly charged non-union members for political activities. Justice Samuel Alito, writing for the majority in *Knox v. Service Employees International Union*, said the forced dues on non-union members were "indefensible"

One of the biggest problems with California is the *stranglehold* that public sector unions have on the state. This would be a good first step to getting the state to turn around. Even liberals stop paying dues when it's not mandatory, because they want to keep their own money just like anyone does.

# 1 Corinthians 15: the earliest source for the basic facts about the life of Jesus

**Wintery Knight** · 3 July 2013 · Archived copy · Original

First, the creed – which is found in 1 Corinthians 15:3-8:

[3]For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

[4]that he was buried, that he was raised on the third day according to the Scriptures,

[5]and that he appeared to Peter, and then to the Twelve.

[6]After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep.

[7]Then he appeared to James, then to all the apostles,

[8]and last of all he appeared to me also, as to one abnormally born.

Almost all historians accept this creed as dating back to within 5 years of the death of Jesus. But why?

Here's a great article from Eric Chabot, director of Ratio Christi Apologetics Alliance, The Ohio State University to explain why.

Excerpt:

> The late Orthodox Jewish scholar Pinchas Lapide was so impressed by the creed of 1 Cor. 15, that he concluded that this "formula of faith may be considered as a statement of eyewitnesses." (5)
>
> Paul's usage of the rabbinic terminology "passed on" and "received" is seen in the creed of 1 Cor. 15:3-8:
>
> "For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures, that he was buried, that he was raised on the third day according to the Scriptures, and that he appeared to Peter, and then to the Twelve. After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep. Then he appeared to James, then to all the apostles, and last of all he appeared to me also, as to one abnormally born."
>
> There is an interesting parallel to Paul's statement in 1 Cor. 15:3-8 in the works of Josephus. Josephus says the following about the Pharisees.
>
> "I want to explain here that the Pharisees passed on to the people certain ordinances from a succession of fathers, which are not written down in the law of Moses. For this reason the party of the Sadducees dismisses these ordinances, averaging that one need only recognize the written ordinances, whereas those from the tradition of the fathers need not be observed." (6)
>
> As Richard Bauckham notes, "the important point for our purposes is that Josephus uses the language of "passing on" tradition for the transmission from one teacher to another and also for the transmission from the Pharisees to the people."(7)
>
> Bauckham notes in his book Jesus and the Eyewitnesses: The Gospels as Eyewitness Testimony that the Greek word for "eyewitness" (autoptai), does not have forensic meaning, and in that sense the English word "eyewitnesses" with its suggestion of a metaphor from the law courts, is a little misleading. The autoptai are simply firsthand observers of those events. Bauckham has followed the work of Samuel Byrskog in arguing that while the Gospels though in some ways are a very distinctive form of historiography, they share broadly in the attitude to eyewitness testimony that was common among historians in the Greco-Roman period. These historians valued above all reports of firsthand experience of the events they recounted.

> Best of all was for the historian to have been himself a participant in the events (direct autopsy). Failing that (and no historian was present at all the events he need to recount, not least because some would be simultaneous), they sought informants who could speak from firsthand knowledge and whom they could interview (indirect autopsy).” In other words, Byrskog defines “autopsy,” as a visual means of gathering data about a certain object and can include means that are either direct (being an eyewitness) or indirect (access to eyewitnesses).
>
> Byrskog also claims that such autopsy is arguably used by Paul (1 Cor.9:1; 15:5–8; Gal. 1:16), Luke (Acts 1:21–22; 10:39–41) and John (19:35; 21:24; 1 John 1:1–4).
>
> While the word “received” (a rabbinical term) can also be used in the New Testament of receiving a message or body of instruction or doctrine (1 Cor.11:23; 15:1, 3; Gal. 1:9, 12 [2x], Col 2:6; 1 Thess 2:13; 4:1; 2 Thess 3:6), it also means means “to receive from another.” This entails that Paul received this information from someone else at an even earlier date. 1 Corinthians is dated 50-55 A.D. Since Jesus was crucified in 30-33 A.D. the letter is only 20-25 years after the death of Jesus. But the actual creed here in 1 Cor. 15 was received by Paul much earlier than 55 A.D.
>
> […]Even the co-founder Jesus Seminar member John Dominic Crossan, writes:
>
> “Paul wrote to the Corinthians from Ephesus in the early 50s C.E. But he says in 1 Corinthians 15:3 that “I handed on to you as of first importance which I in turn received.” The most likely source and time for his reception of that tradition would have been Jerusalem in the early 30s when, according to Galatians 1:18, he “went up to Jerusalem to visit Cephas [Peter] and stayed with him fifteen days” (11).
>
> This comment by Crossan makes sense because within the creed Paul calls Peter by his Aramic name, Cephas. Hence, if this tradition originated in the Aramaic language, the two locations that people spoke Aramaic were Galilee and Judea. (12) The Greek term “historeo” is translated as “to visit” or “to interview.” (13) Hence, Paul’s purpose of the trip was probably designed to affirm the resurrection story with Peter who had been an actual eyewitness to the resurrected Christ (1 Cor. 15:5).

I know what you’re thinking. You’re thinking “Hey WK, isn’t John Dominic Crossan that wacky liberal atheist who is on the far-left fringe of historical Jesus scholarship? So wacky, that he actually thought that Secret Gospel of Mark was *real*, instead of just being a hoax?” Yes, that’s the nutty John Dominic Crossan I mean. The very one.

Here’s a bit more about this early creed from Gary Habermas.

Quote:

> (1) Contemporary critical scholars agree that the apostle Paul is the primary witness to the early resurrection experiences. A former opponent (1 Cor. 15:9; Gal. 1:13-14; Phil. 3:4-7), Paul states that the risen Jesus appeared personally to him (1 Cor. 9:1; 15:8; Gal. 1:16). The scholarly consensus here is attested by atheist Michael Martin, who avers: “However, we have only one contemporary eyewitness account of a postresurrection appearance of Jesus, namely Paul’s.”[3]
>
> (2) In addition to Paul’s own experience, few conclusions are more widely recognized than that, in 1 Corinthians 15:3ff., Paul records an ancient oral tradition(s). This pre-Pauline report summarizes the early Gospel content, that Christ died for human sin, was buried, rose from the dead, and then appeared to many witnesses, both individuals and groups.
>
> Paul is clear that this material was not his own but that he had passed on to others what he had received earlier, as the center of his message (15:3). There are many textual indications that the material pre-dates Paul. Most directly, the apostle employs paredoka and parelabon, the equivalent Greek terms for delivering and receiving rabbinic tradition (cf. 1 Cor. 11:23). Indirect indications of a traditional text(s) include the sentence structure and verbal parallelism, diction, and the triple sequence of kai hoti Further, several non-Pauline words, the proper names of Cephas (cf. Lk. 24:34) and James, and the possibility of an Aramaic original are all

> significant. Fuller attests to the unanimity of scholarship here: “It is almost universally agreed today that Paul is here citing tradition.”[4] Critical scholars agree that Paul received the material well before this book was written.[5]
>
> The most popular view is that Paul received this material during his trip to Jerusalem just three years after his conversion, to visit Peter and James, the brother of Jesus (Gal. 1:18-19), both of whose names appear in the appearance list (1 Cor. 15:5; 7). An important hint here is Paul’s use of the verb historesai (1:18), a term that indicates the investigation of a topic.[6] The immediate context both before and after reveals this subject matter: Paul was inquiring concerning the nature of the Gospel proclamation (Gal. 1:11-2:10), of which Jesus’ resurrection was the center (1 Cor. 15:3-4, 14, 17; Gal. 1:11, 16).
>
> Critical scholars generally agree that this pre-Pauline creed(s) may be the earliest in the New Testament. Ulrich Wilckens asserts that it “indubitably goes back to the oldest phase of all in the history of primitive Christianity.”[7] Joachim Jeremias agrees that it is, “the earliest tradition of all.”[8] Perhaps a bit too optimistically, Walter Kasper even thinks that it was possibly even “in use by the end of 30 AD . . . .”[9]
>
> Indicating the wide approval on this subject, even more skeptical scholars frequently agree. Gerd Ludemann maintains that “the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus. . . . not later than three years. . . . the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE. . . .”[10] Similarly, Michael Goulder thinks that it “goes back at least to what Paul was taught when he was converted, a couple of years after the crucifixion.”[11] Thomas Sheehan agrees that this tradition “probably goes back to at least 32-34 C.E., that is, to within two to four years of the crucifixion.”[12] Others clearly consent.[13]
>
> Overall, my recent overview of critical sources mentioned above indicates that those who provide a date generally opt for Paul’s reception of this report relatively soon after Jesus’ death, by the early to mid-30s A.D.[14] This provides an additional source that appears just a half step removed from eyewitness testimony.
>
> (3) Paul was so careful to assure the content of his Gospel message, that he made a second trip to Jerusalem (Gal. 2:1-10) specifically to be absolutely sure that he had not been mistaken (2:2). The first time he met with Peter and James (Gal. 1:18-20). On this occasion, the same two men were there, plus the apostle John (2:9). Paul was clearly doing his research by seeking out the chief apostles. As Martin Hengel notes, “Evidently the tradition of I Cor. 15.3 had been subjected to many tests” by Paul.[15]
>
> These four apostles were the chief authorities in the early church, and each is represented in the list of those who had seen the resurrected Jesus (1 Cor. 15:5-7). So their confirmation of Paul’s Gospel preaching (Gal. 2:9), especially given the apostolic concern to insure doctrinal truth in the early church, is certainly significant. On Paul’s word, we are again just a short distance from a firsthand report.
>
> (4) Not only do we have Paul’s account that the other major apostles confirmed his Gospel message, but he provides the reverse testimony, too. After listing Jesus’ resurrection appearances, Paul tells us he also knew what the other apostles were preaching regarding Jesus’ appearances, and it was the same as his own teaching on this subject (1 Cor. 15:11). As one, they proclaimed that Jesus was raised from the dead (15:12, 15). So Paul narrates both the more indirect confirmation of his Gospel message by the apostolic leaders, plus his firsthand, direct approval of their resurrection message.

That’s how solid this early creed is – even atheists like Crossan and Ludemann accept it as historically reliable. It’s historical bedrock, as Michael Licona likes to say. This is the stuff that *everyone* accepts – across the ideological spectrum!

# Walter Bradley: three scientific phenomena that point to a designed universe

**Wintery Knight** · 3 July 2013 · Archived copy · Original

Dr. Walter L. Bradley

Dr. Walter L. Bradley (C.V. here) is the Distinguished Professor of Engineering at Baylor.

Here's a bio:

> Walter Bradley (B.S., Ph.D. University of Texas at Austin) is Distinguished Professor of Engineering at Baylor. He comes to Baylor from Texas A&M University where he helped develop a nationally recognized program in polymeric composite materials. At Texas A&M, he served as director of the Polymer Technology Center for 10 years and as Department Head of Mechanical Engineering, a department of 67 professors that was ranked as high as 12th nationally during his tenure. Bradley has authored over 150 refereed research publications including book chapters, articles in archival journals such as the Journal of Material Science, Journal of Reinforced Plastics and Composites, Mechanics of Time-Dependent Materials, Journal of Composites Technology and Research, Composite Science and Technology, Journal of Metals, Polymer Engineering and Science, and Journal of Materials Science, and refereed conference proceedings.
>
> Dr. Bradley has secured over $5.0 million in research funding from NSF grants (15 yrs.), AFOSR (10 years), NASA grants (10 years), and DOE (3 years). He has also received research grants or contracts from many Fortune 500 companies, including Alcoa, Dow Chemical, DuPont, 3M, Shell, Exxon, Boeing, and Phillips.
>
> He co-authored The Mystery of Life Origin: Reassessing Current Theories and has written 10 book chapters dealing with various faith science issues, a topic on which he speaks widely.
>
> He has received 5 research awards at Texas A&M University and 1 national research award. He has also received two teaching awards. He is an Elected Fellow of the American Society for Materials and the American Scientific Affiliation (ASA), the largest organization of Christians in Science and Technology in the world. He is President elect of the ASA and will serve his term in 2008.

You can read more about his recent research in this article from Science Daily.

Below, I analyze a lecture entitled "Is There Scientific Evidence for an Intelligent Designer?". Dr. Bradley explains how the progress of science has made the idea of a Creator and Designer of the universe more acceptable than ever before.

The MP3 file is here.

**Evidence #1: The design of the universe**

1. The correspondence of natural phenomena to mathematical law

- All observations of physical phenomena in the universe, such as throwing a ball up in the air, are described by a few simple, elegant mathematical equations.

2. The fine-tuning of physical constants and rations between constants in order to provide a life-permitting universe

- Life has certain minimal requirements; long-term stable source of energy, a large number of different chemical elements, an element that can serve as a hub for joining together other elements into compounds, etc.
- In order to meet these minimal requirements, the physical constants, (such as the gravitational constant), and the ratios between physical constants, need to be withing a narrow range of values in order to support the minimal requirements for life of any kind.
- Slight changes to any of the physical constants, or to the rations between the constants, will result in a universe inhospitable to life.
- The range of possible ranges over 70 orders of magnitude.
- Although each individual selection of constants and ratios is as unlikely as any other selection, the vast majority of these possibilities do not support the minimal requirements of life of any kind. (In the same way as any hand of 5 cards that is dealt is as likely as any other, but you are overwhelmingly likely NOT to get a royal flush. In our case, a royal flush is a life-permitting universe).

Examples of finely-tuned constants and ratios: (there are more examples in the lecture)

a) The strong force: (the force that binds nucleons (= protons and neutrons) together in nucleus, by means of meson exchange)

- if the strong force constant were 2% stronger, there would be no stable hydrogen, no long-lived stars, no hydrogen containing compounds. This is because the single proton in hydrogen would want to stick to something else so badly that there would be no hydrogen left!
- if the strong force constant were 5% weaker, there would be no stable stars, few (if any) elements besides hydrogen. This is because you would be able to build up the nuclei of the heavier elements, which contain more than 1 proton.
- So, whether you adjust the strong force up or down, you lose stars than can serve as long-term sources of stable energy, or you lose chemical diversity, which is necessary to make beings that can perform the minimal requirements of living beings. (see below)

b) The conversion of beryllium to carbon, and carbon to oxygen

- Life requires carbon in order to serve as the hub for complex molecules, but it also requires oxygen in order to create water.
- Carbon is like the hub wheel in a tinker toy set: you can bind other elements together to more complicated molecules (e.g. – “carbon-based life), but the bonds are not so tight that they can’t be broken down again later to make something else.
- The carbon resonance level is determined by two constants: the strong force and electromagnetic force.
- If you mess with these forces even slightly, you either lose the carbon or the oxygen.

3. Fine-tuning to allow a habitable planet

- A number of factors must be fine-tuned in order to have a planet that supports life
- Initial estimates predicted abundant life in the universe, but revised estimates now predict that life is almost certainly unique in the galaxy, and probably unique in the universe.
- Even though there are lots of stars in the universe, the odds are against *any* of them supporting complex life.
- Here are just a few of the minimal requirements for habitability: must be a single star solar system, in order to support stable planetary orbits, the planet must be the right distance from the sun in order to have liquid water at the surface, the planet must sufficient mass in order to retain an atmosphere, etc.

The best non-theistic response to this argument is to postulate a multiverse, but that is very speculative and there is

no experimental evidence that supports it.

**Evidence #2: The origin of the universe**

1. The progress of science has shown that the entire physical universe came into being out of nothing (= “the big bang”). It also shows that the cause of this creation event is non-physical and non-temporal. The cause is *supernatural*.

- Atheism prefers an eternal universe, to get around the problem of a Creator having to create the universe.
- Discovery #1: Observations of galaxies moving away from one another confirms that the universe expanded from a single point.
- Discovery #2: Measurements of the cosmic background radiation confirms that the universe exploding into being.
- Discovery #3: Predictions of elemental abundances prove that the universe is not eternal.
- Discovery #4:The atheism-friendly steady-state model and oscillating model were both falsified by the evidence.
- And there were other discoveries as well, mentioned in the lecture.

The best non-theistic response to this argument is to postulate a hyper-universe outside of ours, but that is very speculative and there is no experimental evidence that supports it.

**Evidence #3: The origin of life**

1. The progress of science has shown that the simplest living organism contains huge amounts of biological information, similar to the Java code I write all day at work. This is a problem for atheists, because the sequence of instructions in a living system has to come together all at once, it cannot have evolved by mutation and selection – because there was no replication in place prior to the formation of that first living system!

- Living systems must support certain minimum life functions: processing energy, storing information, and replicating.
- There needs to be a certain amount of complexity in the living system that can perform these minimum functions.
- But on atheism, the living system needs to be simple enough to form by accident in a pre-biotic soup, and in a reasonable amount of time.
- The minimal functionality in a living system is a achieved by DNA, RNA and enzymes. DNA and RNA are composed of sequences of proteins, which are in turn composed of sequences of amino acids.

Consider the problems of building a chain of 100 amino acids

- The amino acids must be left-handed only, but left and right kinds are equally abundant in nature. How do you sort out the right-handed ones?
- The amino acids must be bound together using peptide bonds. How do you prevent other types of bonds?
- Each link of the amino acid chain needs to be carefully chosen such that the completed chain with fold up into a protein. How do you choose the correct amino acid for each link from the pool of 20 different kinds found in living systems?
- In every case, a human or other intelligence could solve these problems by doing what intelligent agents do best: *making choices.*
- But who is there to make the choices on atheism?

The best current non-theistic response to this is to speculate that aliens may have seeded the Earth with life at some point in the past.

The problem of the origin of life is not a problem of chemistry, it is a problem of engineering. Every part of car

functionality can be understood and described using the laws of physics and chemistry. But an intelligence is still needed in order to assemble the components into a system that has the minimal requirements for a functioning vehicle.

# Happy Independence Day 2013!

**Wintery Knight** · 4 July 2013 · Archived copy · Original

The Stars and Stripes

**The Declaration of Independence**

Here's the complete text of the Declaration of Independence here.

The best book to read about the Revolutionary War is David McCullough's "1776", which I highly recommend. The audio book version is awesome.

**George Washington and the American Revolution**

Washington Crossing the Delaware

To really understand the founding of the United States, you should read about the story of Washington crossing the Delaware. At this point in the Revolutionary War, the British commanders had achieved a stunning series of victories against the Americans. They had even sent word home to the King that the war was over, and that the Americans would be forced to surrender. But Washington did not give up. He attacked the British forces and took them by surprise – and he won the Battle of Trenton! That was the turning point of the war. There almost *never was* a United States of America – that's how close the revolution came to failing.

**Ronald Reagan vision of America**

Ronald Reagan

Here is a portion of Ronald Reagan's farewell speech:

Excerpt:

> I've spoken of the shining city all my political life, but I don't know if I ever quite communicated what I saw when I said it. But in my mind it was a tall proud city built on rocks stronger than oceans, wind-swept, God-blessed, and teeming with people of all kinds living in harmony and peace, a city with free ports that hummed with commerce and creativity, and if there had to be city walls, the walls had doors and the doors were open to anyone with the will and the heart to get here. That's how I saw it, and see it still.
>
> And how stand the city on this winter night? More prosperous, more secure, and happier than it was eight years ago. But more than that; after two hundred years, two centuries, she still stands strong and true on the granite ridge, and her glow has held steady no matter what storm. And she's still a beacon, still a magnet for all who must have freedom, for all the pilgrims from all the lost places who are hurtling through the darkness, toward home.

This is no ordinary nation.

**Songs of America**

Whenever I drive on long trips, I always practice singing "The Star-Spangled Banner" and "America the Beautiful".

Even if you are not an American, you can be an honorary American, just for today, if you sing the songs below. God knows that there are other people in the world that love freedom and look to the United States as the model.

If we fall now, then you other freedom-loving people abroad must be ready to pick up the torch!

United States Air Force

**The Star Spangled Banner**

Lyrics:

"Oh, say can you see by the dawn's early light
What so proudly we hailed at the twilight's last gleaming?
Whose broad stripes and bright stars thru the perilous fight,
O'er the ramparts we watched were so gallantly streaming?
And the rocket's red glare, the bombs bursting in air,
Gave proof through the night that our flag was still there.
Oh, say does that star-spangled banner yet wave
O'er the land of the free and the home of the brave?

On the shore, dimly seen through the mists of the deep,
Where the foe's haughty host in dread silence reposes,
What is that which the breeze, o'er the towering steep,
As it fitfully blows, half conceals, half discloses?
Now it catches the gleam of the morning's first beam,
In full glory reflected now shines in the stream:
'Tis the star-spangled banner! Oh long may it wave
O'er the land of the free and the home of the brave!

And where is that band who so vauntingly swore
That the havoc of war and the battle's confusion,
A home and a country should leave us no more!
Their blood has washed out their foul footsteps' pollution.
No refuge could save the hireling and slave
From the terror of flight, or the gloom of the grave:
And the star-spangled banner in triumph doth wave
O'er the land of the free and the home of the brave!

Oh! thus be it ever, when freemen shall stand
Between their loved home and the war's desolation!
Blest with victory and peace, may the heav'n rescued land
Praise the Power that hath made and preserved us a nation.
Then conquer we must, when our cause it is just,
And this be our motto: "In God is our trust."
And the star-spangled banner in triumph shall wave
O'er the land of the free and the home of the brave!"

**America the Beautiful**

Lyrics:

"O beautiful for spacious skies,
For amber waves of grain,
For purple mountain majesties
Above the fruited plain!
America! America!
God shed his grace on thee
And crown thy good with brotherhood
From sea to shining sea!

O beautiful for pilgrim feet

Whose stern impassioned stress
A thoroughfare of freedom beat
Across the wilderness!
America! America!
God mend thine every flaw,
Confirm thy soul in self-control,
Thy liberty in law!

O beautiful for heroes proved
In liberating strife.
Who more than self their country loved
And mercy more than life!
America! America!
May God thy gold refine
Till all success be nobleness
And every gain divine!

O beautiful for patriot dream
That sees beyond the years
Thine alabaster cities gleam
Undimmed by human tears!
America! America!
God shed his grace on thee
And crown thy good with brotherhood
From sea to shining sea!

O beautiful for halcyon skies,
For amber waves of grain,
For purple mountain majesties
Above the enameled plain!
America! America!
God shed his grace on thee
Till souls wax fair as earth and air
And music-hearted sea!

O beautiful for pilgrims feet,
Whose stem impassioned stress
A thoroughfare for freedom beat
Across the wilderness!
America! America!
God shed his grace on thee
Till paths be wrought through
wilds of thought
By pilgrim foot and knee!

O beautiful for glory-tale
Of liberating strife
When once and twice,
for man’s avail
Men lavished precious life!
America! America!
God shed his grace on thee

Till selfish gain no longer stain
The banner of the free!

O beautiful for patriot dream
That sees beyond the years
Thine alabaster cities gleam
Undimmed by human tears!
America! America!
God shed his grace on thee
Till nobler men keep once again
Thy whiter jubilee!”

Here is my favorite version of America the Beautiful, sung by Ray Charles. This is the same version you hear on the Mark Levin show on Friday. Perfection.

Remember to be grateful for the Founding Fathers, and other patriots, who risked everything for liberty in the Revolutionary war. Be grateful to those men and women still fighting abroad to keep those freedoms safe from evil. And most of all, be grateful to God that America is still the beacon of liberty.

Happy Independence Day!

# Dinesh D'Souza: What's so great about America?

**Wintery Knight** · 4 July 2013 · Archived copy · Original

Dinesh D'Souza

Here is the essay, which provides an immigrant's perspective on America (Dinesh is the son of East Indian immigrants).

Excerpt:

> Is America worthy of a reflective patriotism that doesn't mindlessly assert, "My country, right or wrong," but rather examines the criticisms of America and finds them wanting? As an immigrant who has chosen to become an American citizen, I believe that it is. Having studied the criticisms of America with care, my conclusion is that the critics have a narrow and distorted understanding of America. They exaggerate American faults, and they ignore what is good and even great about America.
>
> The immigrant is in a good position to evaluate American society because he is able to apply a comparative perspective. Having grown up in a different society-in my case, Mumbai, India-I am able to identify aspects of America that are invisible to people who have always lived here. As a "person of color," I am competent to address such questions as what it is like to be a nonwhite person in America, what this country owes its minority citizens, and whether immigrants can expect to be granted full membership in this society. While I take seriously the issues raised by the critics of America, I have also developed an understanding of what makes America great, and I have seen the greatness of America reflected in my life. Unlike many of America's homegrown dissidents, I am also acutely conscious of the daily blessings that I enjoy in America.
>
> Here, then, is my list of what makes America great.

He focuses on the following areas:

- America's Good Life
- Equality
- The Pursuit of Happiness
- The Ethics of Work
- Religious Liberty

- Ideals and Interests
- America's Virtue

Read the whole thing. It's long it's similar to his book of the same name, but up to date.

# Abortion supporters chant “Hail Satan!” as pro-lifers sing “Amazing Grace”

**Wintery Knight** · 5 July 2013 · Archived copy · Original

Everybody seemed to be posting about this story on Facebook, so I might as well blog about it, for those who haven’t seen it. (H/T Chris S.)

Excerpt:

> For several hours between Tuesday and Wednesday, the phrase “Hail Satan” trended on Twitter as word spread that abortion supporters had chanted it at pro-life Christians singing “Amazing Grace” amid mounting tensions over the pending passage of strict abortion laws in the Texas Capitol.
>
> This week, Texas Governor Rick Perry convened a second special session in the Texas Senate after Democratic activism botched the passage of legislation that would have banned abortions in that state after 20 weeks.
>
> The legislation would also require that abortions be performed at ambulatory surgical centers and mandate that doctors obtain admitting privileges at a hospital within 30 miles of their practice. Opponents of the proposal argue that the proposal would virtually shut down abortion clinics in that state and pro-life supporters have no problem with that.
>
> “The world has seen images of pro-abortion activists screaming, cheering,” Republican Gov. Rick Perry noted, in an earlier report in which he vowed that the process would not be derailed a second time. “Going forward, we have to match their intensity, but do it with grace and civility.”
>
> […]On Tuesday, the pro-abortion supporters went from riotous to sacrilegious when they chanted “Hail Satan” repeatedly in a bid to silence Christian pro-lifers who were singing “Amazing Grace” in support of abortion restrictions in the state.
>
> The extremely unorthodox chant from the abortion supporters triggered a trend of “Hail Satan” on Twitter and many dismissed it as terrible public relations for the pro-abortion movement.
>
> “When your supporters go around yelling ‘hail satan’ you’re likely not gonna have fabulous #’s” tweeted investigative journalist Kerry Picket pointing to poll numbers showing Gov. Perry at a big advantage in a potential face-off with political upstart Wendy Davis.
>
> Other critics of the use of the “Hail Satan” chant like public relations expert Mark Demoss implied it was excessive.
>
> “Do supporters of late-term abortion in TX help their cause by chanting ‘Hail Satan’ (really) over top of pro-lifers singing Amazing Grace?” asked Demoss in a tweet on Wednesday.
>
> “‘Hail Satan!’ was actually the compromise chant. The hot-heads wanted ‘We Know It’s Murder And We Don’t Care!’” tweeted conservative columnist Jonah Goldberg.

Hmmmn. So, I think it’s pretty clear which side of the debate are the good guys, now.

# Charles Krauthammer explains why Obama isn't going to be able to fix global warming

**Wintery Knight** · 5 July 2013 · Archived copy · Original

In the liberal Washington Post.

Excerpt:

> Global temperatures have been flat for 16 years — a curious time to unveil a grand, hugely costly, socially disruptive anti-warming program.
>
> […]For the sake of argument, nonetheless, let's concede that global warming is precisely what Obama thinks it is. Then answer this: What in God's name is his massive new regulatory and spending program — which begins with a war on coal and ends with billions in more subsidies for new Solyndras — going to do about it?
>
> The United States has already radically cut carbon dioxide emissions — more than any country on earth since 2006, according to the International Energy Agency. Emissions today are back down to 1992 levels.
>
> And yet, at the same time, global emissions have gone up. That's because — surprise! — we don't control the energy use of the other 96 percent of humankind.
>
> At the heart of Obama's program are EPA regulations that will make it impossible to open any new coal plant and will systematically shut down existing plants. "Politically, the White House is hesitant to say they're having a war on coal," explained one of Obama's climate advisers. "On the other hand, a war on coal is exactly what's needed."
>
> Net effect: tens of thousands of jobs killed, entire states impoverished. This at a time of chronically and crushingly high unemployment, slow growth, jittery markets and deep economic uncertainty.
>
> But that's not the worst of it. This massive self-sacrifice might be worthwhile if it did actually stop global warming and save the planet. What makes the whole idea nuts is that it won't. This massive self-inflicted economic wound will have no effect on climate change.
>
> The have-nots are rapidly industrializing. As we speak, China and India together are opening one new coal plant *every week*. We can kill U.S. coal and devastate coal country all we want, but the industrializing Third World will more than make up for it. The net effect of the Obama plan will simply be dismantling the U.S. coal industry for shipping abroad.
>
> To think we will get these countries to cooperate is sheer fantasy. We've been negotiating climate treaties for 20 years and gotten exactly nowhere. China, India and the other rising and modernizing countries point out that the West had a 150-year industrial head start that made it rich. They are still poor. And now, just as they are beginning to get rich, we're telling them to stop dead in their tracks?
>
> Fat chance. Obama imagines he's going to cajole China into a greenhouse-gas emissions reduction that will slow its economy, increase energy costs, derail industrialization and risk enormous social unrest. This from a president who couldn't even get China to turn over one Edward Snowden to U.S. custody.

Now previously I wrote about how there hasn't been any global warming in the last 16 years. I linked to the New York Times saying that, and to Reuters saying that. So everyone who isn't a flat-Earther agrees that there has been no global warming in 16 years – those are the facts. This is just Obama's attempt to change the subject now that everyone knows how badly he's been screwing up on foreign policy and with the economy.

# Two Christian preachers brutally beaten at Seattle Gay Pride Festival

**Wintery Knight** · 5 July 2013 · Archived copy · Original

*Warning: the video above has extremely coarse language and violence.*

Fox News reports.

Excerpt:

> Two street preachers were brutally beaten — punched and kicked — by a crowd at a gay pride festival in Seattle and the entire melee was captured on video.
>
> The preachers were holding signs reading "Repent or Else" and "Jesus Saves From Sin." The video shows a group of people initially screaming and threatening the men during Pridefest at the Seattle Space Needle.
>
> Television station KOMO reported that some of the attackers belonged to a group called NOH8
>
> A group of women tried to steal their signs but were unsuccessful. The video then shows a group of men grabbing onto one of the preacher's signs and dragging him to the ground. At some point he was punched in the back of the head a number of times while others can be seen kicking the man.
>
> Another preacher was sucker punched in the back of the head.
>
> Police arrested two suspects – one of whom has a long rap sheet.

Now the first thing to say, obviously, is that the two Christians are going about their opposition to homosexuality in a wrong way. I don't think that it is a Biblical approach to expect non-Christians to accept Christian morality because of what Paul writes in 1 Corinthians 5:9-12. If you want to disagree about homosexuality or same-sex marriage with a non-Christian, then you'll have to go outside the Bible and use evidence that is compelling to a non-Christian. And that's what I always do in my blog posts because my audience is non-Christians. So that's the first thing that needs to be said. There is a right way to argue against homosexuality with non-Christians, and these Christians were not doing it. The right way to discuss homosexuality is by using data found in books like "Homosexuality and the Politics of Truth" and "A Parent's Guide to Preventing Homosexuality". And the right context for presenting this data is probably in written work or in the context of a relationship with the other person. Not holding up signs with flames on it to strangers.

**My sexual orientation**

Now the point I want to make about this is that I have a sexual orientation, too. My sexual orientation is pre-marital virginity, pre-marital chastity and lifelong faithful married love (if I get married). Now I don't need to have a parade or get all kinds of government recognition and financial benefits in order to make me feel good about what I'm doing. In fact, even if someone puts down my virginity and chastity, I wouldn't really care. In fact, the number one place where my sexual orientation is looked down on is in the church. In church, there is a whole group of people who are enamored of compassion and they are opposed to having any boundaries on sex at all, regardless of the harm it causes with things like abortion, divorce, fatherlessness and so on. Their idea is that people should be able to have sex if they are in love, and that they shouldn't be "shamed" or "judged" for doing so. However, I don't attack them and violently beat them up just because they disagree with me on my sexual orientation. I just let them say what they are going to say and mind my own business. I don't need anyone to tell me that what I am doing is right. I have reasons and evidence showing me that my view is right, like the peer-reviewed papers that show that premarital sex causes lower quality and stability in marriage. I know what I'm doing, and disagreement doesn't bother me.

Anti-chastity people could even hold up signs in front of my house saying "Repent of your chastity, evil virgin, or

burn in Hell!" and it still wouldn't bother me. And that's because I know that what I believe causes no harm to anyone. It doesn't impose social costs on others because I need special drugs or health care for my chastity. It doesn't cause me to make other people sick. It doesn't break up marriages so I can go off with someone else. It doesn't leave children fatherless or motherless. It doesn't expose born or unborn children to harm from strangers. It doesn't require public schools to teach young people how great my virginity and chastity is. It doesn't require new school lessons telling everyone the contributions that virgins have made in history. It doesn't require the Supreme Court to force people to affirm chastity. It doesn't require anyone to be fired because they disagree with me on premarital sex. It doesn't require other people to have their freedom of speech or freedom of religion limited so that I can avoid feeling "offended" by what they say and do.

So in conclusion then, I don't respond with anger, vandalism, coercion or violence when people disagree with me about being a virgin and embracing chastity before marriage.

# Governor of Wisconsin Scott Walker signs pro-life ultrasound bill

**Wintery Knight** · 6 July 2013 · Archived copy · Original

Scheming unborn baby planning to move to Wisconsin

Dad sent me this encouraging article from Fox News.

Excerpt:

> Gov. Scott Walker quietly signed a contentious Republican bill Friday that would require women seeking abortions to undergo an ultrasound and ban doctors who lack admitting privileges at nearby hospitals from performing the procedures.
>
> Opponents contend legislators shouldn't force women to undergo any medical procedure and the bill will force at least two abortion clinics where providers lack admitting privileges to shut their doors.
>
> The Republican-controlled Legislature passed the bill in mid-June.
>
> […]Under the bill, any woman seeking an abortion would have to get an ultrasound. The technician would have to point out the fetus' visible organs and external features to the woman. Abortion providers would have to have admitting privileges at a hospital within 30 miles to perform the procedures.
>
> Republican supporters argue the ultrasound requirement is designed to help the woman bond with the fetus and convince her to save it. The admitting privileges mandate is meant to ensure an abortion provider can follow up with a patient at the hospital if an emergency arises, they say.
>
> The bill is part of national GOP push to curtail abortions. North Dakota's governor, Republican Jack Dalrymple, signed a law this spring that outlaws abortions as early as six weeks into a pregnancy, making North Dakota the most restrictive state in the nation to get an abortion. The state's lone abortion clinic has filed a federal lawsuit seeking to block the law.
>
> Republicans in Arkansas this spring passed a law that bans most abortions after 12 weeks. The American Civil Liberties Union of Arkansas and the Center for Reproductive Rights. A federal judge has temporarily blocked that law. A trial has been tentatively scheduled for next year.

> Republicans in Alabama passed a law similar to the Wisconsin bill in April requiring abortion providers to have admitting privileges at a local hospital. The ACLU and Planned Parenthood filed a lawsuit contending the law would shut down three of the state's five clinics because doctors at the clinics haven't been able to get admitting privileges at nearby hospitals. A federal judge temporarily blocked the law in June.
>
> The Wisconsin bill sparked a fierce debate in both the state Senate and Assembly as minority Democrats tried to push back. Republican leaders in the Senate abruptly halted a floor debate in that house. Senate President Mike Ellis, R-Neenah, flew into a rage as Democrats protested, pounding his gavel so hard he broke the base. Assembly Democrats, for their part, did a slow burn, complaining about the bill for hours. Republicans still rolled the bill through both houses.

How many times did you read the word "Republican" in that article? That's why pro-lifers need to work to get more Republicans elected. They aren't just concerned about economics – they are concerned about moral issues, too. By the way, Scott Walker is one of my three favorite governors right now. The others are Bobby Jindal and John Kasich. Recall that Scott Walker is the one who pushed through reforms to protect taxpayers from the costs of ballooning public sector union pensions. He is a social conservative and a fiscal conservative, too.

# William Lane Craig lectures on radical skepticism and the historical Jesus

**Wintery Knight** · 6 July 2013 · Archived copy · Original

Brian Auten at Apologetics 315 posted a lecture by William Lane Craig on the historical Jesus.

In his post, Brian doesn't really say much about where or when the lecture was recorded. But I can tell you! This lecture has a special meaning for me because when I was just learning about apologetics, this was one of the first lectures I ordered. The lecture was delivered in 1996 at Southeastern Baptist Theological Seminary as part of the distinguished Carver-Barnes Lecture Series. The title was "Re-Discovering the Historical Jesus". Hearing this again (I lent mine away and never got it back) was a real treat for me.

The MP3 file is here.

And here is a summary I made so you can follow along as you listen.

**Lecture 1: the pre-suppositions of the Jesus Seminar**
– the origins of the radically skeptical "Jesus Seminar" group
– what does the Jesus Seminar believe about Jesus?
– what is a pre-supposition?
– how do pre-suppositions affect the study of history?
– the Jesus Seminar's pre-supposition of naturalism (atheism)
– the Jesus Seminar's pre-supposition that the NT gospels are late
– the Jesus Seminar's pre-supposition of political correctness
– does the Jesus Seminar represent the consensus of NT scholars?

**Lecture 2A: are the NT gospels historically reliable?**
– should the gospels be assumed to be reliable or unreliable
– argument #1: insufficient time from events to written record
– argument #2: gospels contain very little legendary material
– argument #3: Jewish culture was good at oral transmission
– argument #4: eyewitness correction and apostolic supervision
– argument #5: the gospels are reliable where they can be tested
– #1: legendary elements only appear 1-2 generations after events
– but gospels were written within the lifetimes of the eyewitnesses
– sources for the gospels are even earlier, e.g. – 1 Cor 15:3-8
– on the other hand, the apocryphal gospels do contain legends
– #5: gospels are confirmed by history and archaeology were possible
– Luke includes details showing that he traveled with eyewitness Paul

**Lecture 2B: the self-understanding of Jesus**
– how early and reliable is believe in Jesus' divinity
– it would be hard to get monotheistic Jews to think Jesus was divine
– the only way this belief could have emerged is if Jesus taught it
– parable of the wicked tennants and vineyard – Jesus' self-understanding
– passage about no one knowing the father except the son, etc.
– passage about not knowing the date of his second coming
– the healings and exorcisms are well-attested and skeptics grant them

**Lecture 2C: the trial and crucifixion of Jesus**

– crucifixion is well-attested inside and outside the New Testament
– even the Jesus Seminar considers this an indisputable fact about Jesus
– Jesus was crucified for blasphemy – i.e. claiming to be divine

**Lecture 2D: the minimal facts case for the resurrection**
– minimal fact #1: the burial in a known location
– minimal fact #2: the empty tomb
– minimal fact #3: the appearances to individuals and groups
– minimal fact #4: the early belief that Jesus was resurrected
– the majority of scholars, including skeptics, accept the minimal facts
– naturalistic explanations are not able to account for these facts

There is a very noisy weird person in the audience who keeps shouting his approval. This lecture is almost identical to a lecture that Craig gave for Stand to Reason's Masters Series, on the pre-suppositions of the Jesus Seminar. There is no Q&A in this lecture, but there is Q&A in the STR version.

# New study: children of divorce are more likely to be violent, take drugs and have underage sex

**Wintery Knight** · 7 July 2013 · Archived copy · Original

Dina tweeted this post from the UK Daily Mail. Let's take a look at the findings, and then I'll comment on it below.

Excerpt:

> Children who encounter family break-up are far more likely to be violent, unhappy and feel unfulfilled throughout their lives, according to an NHS study.
>
> Researchers found that the turmoil endured by youngsters has a crucial influence on nearly every facet of their later life.
>
> A cross-section of 1,500 people were asked if they had faced a range of 11 circumstances, known as adverse childhood experiences (ACEs), covering abuse, family break-up, being raised with domestic violence and drink or drug addiction.
>
> Coupled with details of their current lives, the research revealed the legacy of broken homes appears to weigh more heavily than any other factor, as among the worst affected group – those with four or more ACEs – two thirds had seen their parents go their separate ways, compared with an average of 24 per cent.
>
> The chances of suffering a difficult childhood leapt for those born after 1971, when the law changed to make divorce easier. This generation was found to be significantly more likely to smoke, drink heavily, take drugs, fight, be mentally ill and have sex underage.
>
> Norman Wells of the Family Education Trust, a campaign group which researches the causes and consequences of family breakdown, said: 'Casting aside traditional patterns of family life carries a high price tag in terms of the health, education and employment prospects of the next generation.
>
> 'The relaxation of divorce laws – along with the increasing proportion of births outside marriage – has resulted in a growing number of children lacking the benefit of being raised by both their natural parents in a stable unit.'
>
> The report – a joint venture between Liverpool John Moores University and the NHS – found that 47 per cent of those questioned had been on the end of at least one bad childhood experience, and that adult life became tougher with each one added.
>
> It revealed that those with four or more ACEs were – compared to someone with none – twice as likely to have had sex underage, eat next to no fruit and vegetables, have no qualifications, break a bone or have an extended stay in hospital.

So the first thing to note about this article is that it is good because it identifies a factor that causes divorce to be more frequent. That factor is no-fault divorce laws. These laws are supported by egalitarian feminists and by trial lawyer associations – both liberal constituencies. So, the article is indirectly identifying a solution to the problem. Roll back no-fault divorce laws, and you'll have fewer divorces. People will think more carefully about who they marry. People will think more carefully about preparing for marriage.

So who opposes the repeal of no-fault divorce laws? Well… the same people who passed no-fault divorce laws in the first place – feminists and trial lawyers. So it's very important that we understand that the solution to the epidemic of divorce is not to turn to men and blame men. The solution is to repeal no-fault divorce laws that make it easy and profitable for one party in a marriage (the woman, in 70% of cases) to initiate unilateral divorce. If the problem is divorce, then the solution is making divorce unprofitable from the spouses. We should also stop giving assistance to single women who have children, because that is another incentive to women to dispense with their husbands as providers and leaders in the home. Let's face it. Single mother welfare is an incentive for women to

kick men out of the home. They are paid if they do it, and not paid if they don't. So again, the solution to divorce is not "man up", it's stop paying women who divorce their husbands. Leave it to private charities and churches to help those women.

# If we pay women to have children before marrying, will they do it more?

**Wintery Knight** · 7 July 2013 · Archived copy · Original

Dina tweeted another article from the UK Daily Mail about the problem of paying women to have children before marriage.

Excerpt:

> Talking about her future, a young woman neighbour told me: 'Everyone is going to be a single mother in the end — you just have to find the right donor.'
>
> Her view was shared by many of those who lived in the various council estates where I grew up. Single parenthood was the normal method of rearing children.
>
> While my own father left our home when I was young, my mother, who has lived in Britain since emigrating from Jamaica with my grandparents, has been devoted to her children.
>
> Although my father was a good dad and maintained contact, lots of my friends were not so fortunate. Few had any involvement with their fathers.
>
> In many of these homes, the State was almost invariably the main breadwinner, with the families in receipt of welfare cheques.
>
> With the State providing unceasing financial support, there was little thought given to the costs and responsibilities of having children.
>
> […]The welfare state was meant to be a symbol of civilised society, giving support to the genuinely poor and vulnerable. Today, though, it too often acts as a gigantic engine of social breakdown. Costing more than £220 billion a year, it simply incentivises personal irresponsibility and family collapse.
>
> Far from rescuing people from disadvantage, it traps many claimants and their children in the destructive cycle of welfare dependency, where values such as ambition and commitment are lost. It should come as no surprise that in the parts of the country where welfare dependency and joblessness are most prevalent, fatherhood is the exception rather than the rule.
>
> A report published last month by the independent think-tank, the Centre for Social Justice, showed that the number of lone-parent families is increasing by 20,000 every year, with the total expected to reach two million by 2015. Incredibly, in some areas of the country, such as Riverside in Liverpool or Ladywood in Birmingham, more than 70 per cent of households with dependent children are headed by lone parents.
>
> Children who grow up in these places rarely come across a male role model.
>
> Today, around half of British births take place outside wedlock, while just over a quarter of all families are headed by lone parents.
>
> Despite a wealth of evidence that absent fathers put children at a disadvantage, I find it deeply depressing that the political class is terrified of taking any action to shore up family life.
>
> Leftist political parties in the UK put in place a system in which women were encouraged to have children out of wedlock because they would receive taxpayer money – money taken from high-earning married men – in order to have children before getting married.

There's actually a reason why the government pays women to have children before marriage. It's because of an ideology called radical feminism. Radical feminism supports single motherhood by choice, because radical feminists are opposed to traditional marriage. In a traditional marriage, the man typically works to provide money to support the family, and he derives from that provider role the authority to lead the family on moral and spiritual

issues. Women typically focus more on raising and educating the children and supporting the husband/father by doing home-related tasks. These traditional rules are suited to men and women respectively, but they are opposed by feminists because they are “unequal” – just because they are different. And that’s why radical feminists want to undermine marriage. What better way to undermine marriage than by paying women to replace the male role in marriage with government?

Now how should we fix this? Is the solution to tell men to “man up”? No. That is a slogan, not a solution – it does not address the root cause of the problem of fatherlessness. One positive change is to remove the welfare that makes it easier for women to have children out of wedlock without needing to choose a man who is proven to be able to perform the provider role. Today, we have a massive problem where women are not even looking to men to provide for them. Traditional male roles are out. Bad boys are in. Many women grow up fatherless and have no idea what a man actually does in a marriage. When selecting men for relationships, their most important criteria is physical appearance – not providing, protecting, moral leading or spiritual leading.

I’ve even noticed a trend lately where women are even claiming that good-looking terrorists like Tsarnaev and murderers like Hernandez are innocent of the crimes they actually committed, just because these men are “too good looking to be guilty”. This is a whole other level of wrong, but it’s not surprising with women who have been taught that men have no special roles that they are supposed to be performing. The faster we cut off the money for women who prefer bad-boys to provider-men, the better off children will be.

# The Talk Origins speciation FAQ and the problem of citation-bluffing

**Wintery Knight** · 7 July 2013 · Archived copy · Original

The thing to be explained by Darwinism (in addition to the origin of life) is how can you get new, different body plans and organ types by the mechanisms of mutation and selection. Everyone admits that you can get cases where animal A mutates in a small way so that it can no longer breed with animal B. That is speciation of a sort, because the animals can no longer breed. But the real question is whether we can generate species *with different body plans* using these naturalistic Darwinian mechanisms of mutation and selection.

Here are two podcasts featuring Casey Luskin that discuss how much morphological change has really been observed according to research.

Here is the MP3 file from part one. (14 minutes)

Details:

> On this episode of **ID The Future**, Casey Luskin discusses *Talk Origins*, a resource often used by supporters of Darwinian evolution to refute arguments made by proponents of intelligent design. After taking a closer look, Luskin found FAQs on *Talk Origins* guilty of citation bluffing, overstated claims, and other misleading tactics. In particular, the *Talk Origins* FAQ on speciation claims to provide evidence of "observed instances" of new species. On further review, this turns out to be far from the case. Tune in to Luskin as he explains why.

Here is the MP3 file from part two. (21 minutes)

Details:

> On this episode of **ID The Future**, Casey Luskin continues his discussion about *Talk Origins*, a resource often used by supporters of Darwinian evolution to refute arguments made by proponents of intelligent design. After taking a closer look, Luskin found FAQs on*Talk Origins* guilty of citation bluffing, overstated claims, and other misleading tactics. In particular, the *Talk Origins* FAQ on speciation claims to provide evidence of "observed instances" of new species. On further review, this turns out to be far from the case. Tune in to Luskin as he explains why in this conclusion to a two-part series.

Basically, he takes a look at the details of cases of "speciation" claimed in the Talk Origins FAQ, and finds that the changes are minor changes, and not changes in morphology. This is not the change that we are looking for to support the hypothesis of macro-evolution. In order to become Darwinists, we need to observe change driven by mutations that leads to changes in body plans. And the mutations have to be heritable.

Highly recommended. You've got to love the directness of Casey Luskin explaining what needs to be proved and what has been proved. By the way, here is a more detailed written assessment of speciation claims of the Darwinists.

# Is it better to form beliefs based on evidence or based on consensus?

**Wintery Knight** · 8 July 2013 · Archived copy · Original

Stuart Schneiderman linked to this Wall Street Journal by Matt Ridley.

Take a look at this:

> Last week a friend chided me for not agreeing with the scientific consensus that climate change is likely to be dangerous. I responded that, according to polls, the "consensus" about climate change only extends to the propositions that it has been happening and is partly man-made, both of which I readily agree with. Forecasts show huge uncertainty.
>
> Besides, science does not respect consensus. There was once widespread agreement about phlogiston (a nonexistent element said to be a crucial part of combustion), eugenics, the impossibility of continental drift, the idea that genes were made of protein (not DNA) and stomach ulcers were caused by stress, and so forth—all of which proved false. Science, Richard Feyman once said, is "the belief in the ignorance of experts."
>
> My friend objected that I seemed to follow the herd on matters like the reality of evolution and the safety of genetically modified crops, so why not on climate change? Ah, said I, but I don't. I agree with the majority view on evolution, not because it is a majority view but because I have looked at evidence. It's the data that convince me, not the existence of a consensus.
>
> My friend said that I could not possibly have had time to check all the evidence for and against evolution, so I must be taking others' words for it. No, I said, I take on trust others' word that their facts are correct, but I judge their interpretations myself, with no thought as to how popular they are. (Much as I admire Charles Darwin, I get fidgety when his fans start implying he is infallible. If I want infallibility, I will join the Catholic Church.)
>
> And that is where the problem lies with climate change. A decade ago, I was persuaded by two pieces of data to drop my skepticism and accept that dangerous climate change was likely. The first, based on the Vostok ice core, was a graph showing carbon dioxide and temperature varying in lock step over the last half million years. The second, the famous "hockey stick" graph, showed recent temperatures shooting up faster and higher than at any time in the past millennium.
>
> Within a few years, however, I discovered that the first of these graphs told the opposite story from what I had inferred. In the ice cores, it is now clear that temperature drives changes in the level of carbon dioxide, not vice versa.
>
> As for the "hockey stick" graph, it was effectively critiqued by Steven McIntyre, a Canadian businessman with a mathematical interest in climatology. He showed that the graph depended heavily on unreliable data, especially samples of tree rings from bristlecone pine trees, the growth patterns of which were often not responding to temperature at all. It also depended on a type of statistical filter that overweighted any samples showing sharp rises in the 20th century.
>
> I followed the story after that and was not persuaded by those defending the various hockey-stick graphs. They brought in a lake-sediment sample from Finland, which had to be turned upside down to show a temperature spike in the 20th century; they added a sample of larch trees from Siberia that turned out to be affected by one tree that had grown faster in recent decades, perhaps because its neighbor had died. Just last week, the Siberian larch data were finally corrected by the University of East Anglia to remove all signs of hockey-stick upticks, quietly conceding that Mr. McIntyre was right about that, too.
>
> So, yes, it is the evidence that persuades me whether a theory is right or wrong, and no, I could not care less

> what the “consensus” says.

I think that one of the most troubling things about college students today is that they are so much under the influence of their professors that they regularly just parrot whatever their professors say in order to pass their classes. They can’t afford to ask questions and disagree – they’ve already paid their money, and their job is to agree with the professors in order to pass. This is especially true with secular leftist professors who are often woefully incapable of respecting views other than their own. The ivory tower is not the best place for having one’s views tested by reality, as Thomas Sowell has argued. This is especially true outside of the fields of engineering, math, science and technology. So, young people tend to come out of university parroting the view of their professors, who often don’t know how the real world works at all. The right thing to do to fix this problem is for universities to promote a diversity of views. But that’s not likely to happen in universities that are dominated by progressives. Non-progressive views are not just wrong, but evil. Rather than be viewed as evil by professors and peers for the crime of thinking critically, most students prefer to stick with the consensus views, whether they are defensible or not.

# J. Warner Wallace: is the idea that you should only evangelize your friends Biblical?

**Wintery Knight** · 8 July 2013 · Archived copy · Original

A recent post from the Please Convince Me blog analyzed whether it is normal for Christians to only evangelize their friends.

Excerpt:

> We typically only share our faith with people we know, so it's shouldn't surprise us that these are the people who come to know something about our faith! But does it have to be this way, and more importantly, is this approach consistent with what the New Testament teaches?
>
> In order to answer this question, we needn't go further than the words of Jesus. During His earthly ministry, Jesus commissioned seventy-two of His followers to travel from town to town, announcing, "The Kingdom of God has come near" (Luke 10:9). Were these disciples told to engage only people they already knew? Hardly. In fact, Jesus warned these budding evangelists that they would be in unknown, often dangerous territory; He told the group they would be "lambs in the midst of wolves" (Luke 10:3). Later, after the Resurrection, Jesus commissioned His apostles with a more sweeping directive: "You shall be My witnesses both in Jerusalem, and in all Judea and Samaria, and even to the remotest part of the earth" (Acts 1:8). It's clear that the expansive geographic parameters described by Jesus would require the apostles to move quickly beyond the limits of their friends and acquaintances.
>
> And that's exactly what the apostles proceeded to do. Paul repeatedly entered unfamiliar synagogues to announce the Good News to Jews who were strangers to Paul (i.e. Acts 13:13-42 and Acts 18:4-5), and he frequently evangelized "on the streets" from town to town to Jewish and Gentile groups he did not know (i.e. Acts 13:44-52 and Acts 17:16-21). In fact, there are very few examples of friendship evangelism on the pages of Scripture.
>
> I gently reminded the students that they needed to see strict friendship evangelism for what it truly is: a natural, fallen, human response to the fear of discomfort and worldly judgment. Most of us are more concerned with how we will be perceived (and the discomfort we might feel) than our godly responsibility to share the Gospel. Jesus has a message for us: Get over it. Get comfortable with discomfort. The more we talk about Jesus and reflect His nature and mission, the more likely the world will hate us (John 15:18-16:14). The more we stand up for the truth, the more likely the world will put us in a tough spot (Matthew 10:17-23). And the more we are ostracized by the fallen world around us, the more joy we ought to feel to have been given the opportunity to stand up for something more than our own immediate personal comfort (Luke 6:22-23).

See, I think the problem is that Christians, when they evangelize, are not equipped to do anything more than talk about their personal experiences and preferences when it comes to evangelism. The problem is that asserting that your experience/preference is better than someone else's experience/preference is uncomfortable. Especially if their preference makes them happy and makes them act nicely. That's why evangelizing people is so intimidating for us – because we're never telling people about facts that are true or false out there in the real world. It's not controversial to tell someone that their belief about the world out there is wrong. That's why I prefer to talk about public, testable data – like whether the universe began, or how to make a protein, or where the Cambrian animals came from. That's just like discussing anything else.

The publication of the new Darwin's Doubt book that was on the New York Times non-fiction bestseller list is a good example of something to talk about safely. Although I might intimidated about trying to talk about feelings, sinfulness and religious experiences with people, I don't mind talking about science with people. It's much easier to talk about facts and evidence that about my personal experiences. People understand that and they aren't

intimidated by it, because they feel that they can disagree with factual claims and participate in the discussion.

For example, if I am talking to a Hindu, I'll show him the papers that argue against the oscillating universe model which is part of the Hindu religion. I don't even have to mention Hinduism, Christianity or religion. And then he has to come back to me on that factual claim. But it's a lot easier for me to tell him he's wrong about facts than to tell him he's wrong about religious preference claims. Think about it – you disagree with strangers and acquaintances all the time about facts, and you're not scared of that. I tell people they're wrong about computer science stuff every day. Why is it any different to tell them that they're wrong about facts that happen to be related to the claims of different religions? It's the same thing! That's why it's so important to speak about facts with strangers. It's normal. It's not weird. It's easy to say "You need to get your facts straight, because not knowing the facts is causing you to commit to the wrong religion". That's doable. Even with strangers.

# Pastor's Matt's book of the year – and the rest of his astonishing reading list

**Wintery Knight** · 8 July 2013 · Archived copy · Original

Previously, I have been pretty critical of pastors being unwilling to connect the Bible to evidence outside the Bible. I have always maintained that the secret to getting people to act like Christians and evangelize effectively was that we needed to train Christians to understand how to relate what the Bible says to the way the world really works outside church doors. Whether it be the existence of God, the resurrection of Jesus, social issues, fiscal issues and foreign policy issues, my view has always been that pastors by and large were just not taking seriously their obligation to train their flocks to engage with non-Christians. I guess that I expected that most pastors would be more like Wayne Grudem, who is really good at connecting the Bible to knowledge outside the Bible. But in my experience, most pastors aren't like that.

Look, I don't even think it's possible – in a secularized, postmodern, relativistic, naturalistic society like ours – to impact the world for Christ unless our faith is connected to knowledge from the real world. Christians today say that they believe the Bible, but can they really live it out if it's just private preferences, and not objective knowledge? Many beliefs that conflict with Christianity are accepted by most people today as being beyond dispute. In order to evangelize today, I think that we have to support our beliefs with knowledge. And that means building a worldview from the ground up, with each block the result of a careful study of some area of knowledge. We have to put as much effort into our faith as we do into our education, our careers, our investments, our fitness and nutrition, etc. That's the only way to be an authentic Christian in such a hostile environment.

OK, so with that said, let's take a look at Pastor Matt's exciting post.

He writes:

> Hi, my name is Matt and I'm a book addict. It is a sickness that leads people to such reckless behavior as reading on a couch for hours during sunny days, spending free time wondering the racks at Barnes & Noble and boring the heck out of people at parties when soft-hearted fools make the mistake of inviting a well-known "bibliophile." BUT my sickness may be your blessing because raging geeks like me can help you spend your money and time a little bit more wisely.
>
> My favorite book of the year so far is Cold-Case Christianity: A Homicide Detective Investigates the Claims of the Gospels by Detective J. Warner Wallace (David C. Cook 2013). Detective Wallace presents apologetics, the necessary but often dry discipline of defending the Christian faith, in a fresh and compelling manner. He approaches the Gospels as a cold-case detective and illustrates his points with fascinating stories from his years working as an investigator. It is a fun, well-written and helpful work that will embolden Christians to share their faith with others for decades to come. You MUST pick-up a copy of this book.

So far so good. But this is where things get really weird. You see, Pastor Matt is *really* addicted to reading. He has read SIXTY-SEVEN books so far this year, and he has a bunch more in progress.

Now just check out a few of these books and ask yourself – what would the world be like if every pastor was like Pastor Matt?

Behold, the awesomeness of his book list:

> 1. **Tactics: A Game Plan for Discussing Your Christian Convictions** by Greg Koukl (Zondervan 2009). A lot of budding apologists fill their head with knowledge but lack tact in conversing with non-believers–Koukl's book can help. A must read.
>
> 2. **Icons of Evolution** by Jonathan Wells (Regnery 2002). What unsupported claims do Darwinists hold to?

Wells, a trained evolutionary biologists, points them out in this wonderful book.

4. **On Guard: Defending Your Faith with Reason and Precision** by William Lane Craig (David C. Cook 2010). A good apologetics resource although I think Craig struggles to explain in lay terms his response to scientific objections to the faith.

6. **True for You, but Not For Me: Answering Objections to the Christian Faith** by Paul Copan (Bethany 2009). A good but short guide to various objections. Recommended.

7. **How Do You Know You're Not Wrong? Responding to Objections that Leave Christians Speechless** by Paul Copan (Baker 2005). A good guide with more meat to it than *True For You, But Not For Me*. Recommended.

9-11. **The Case for Christ** (Zondervan 1998), **The Case for Faith** (Zondervan 2006) and **The Case for a Creator** (Zondervan 2004). The Strobel's trilogy serves as a wonderful introduction to apologetics. Strobel is a former journalist who interviews experts on matters of faith and reports them with crisp prose. Highly recommended.

12. **The Privileged Planet: How Our Place in the Cosmos is Designed for Discovery** by Guillermo Gonzalez and Jay Richards (Regnery 2004). A wonderful book on the fine-tuning of the universe. Highly recommended.

13. **Seven Days that Divide the World** by John Lennox (Zondervan 2011). A great little book, which serves as a fine introduction to old earth creationism. Recommended.

15. **The Reason for God** by Tim Keller (Dutton 2009). This is the 3rd time I have read through this work and it stands up as THE post-modern apologetic. A must read.

16. **Darwin on Trial: Deluxe Edition** by Phillip Johnson (IVP 2010). The best analysis and refutation of Darwinisn. A must read.

18. **Good God: The Theistic Foundations of Morality** by David Baggett and Jerry Walls (Oxford 2011). A well argued but dense work for the moral argument for the existence of God. Highly recommended for those with a background in philosophy.

19. **How We Got the Bible** by Neil Lightfoot (Baker 2003). A readable history of how Bibles went from scrolls written by hand in Hebrew, Aramaic and Greek to the plethora of translations we have today. Recommended.

21. **The New International Encyclopedia of Bible Difficulties** by Gleason Archer, Jr. (Zondervan, 1982). A helpful book dealing alleged discrepancies but a bit dated.

22. **The Big Book of Difficulties** by Norman Geisler and Thomas Howe (Baker, 1992). Not as handy as Archer's book but still well worth consulting.

23. **The Return of Sherlock Holmes** by Sir Arthur Conan Doyle (Newness, 1905). My son and I finished the Adventures of Sherlock Holmes last year and had a blast working through the sequel.

28. **Is God A Moral Monster?** by Paul Copan (Baker 2011). A wonderful survey of the Old Testament with clear, concise answers. Highly recommended.

30. **The Case for the Resurrection of Jesus** by Gary Habermas and Michael Licona (Kregel 2004). A very good overview of the arguments for the historicity of the resurrection. Recommended.

34. **Reasonable Faith** by William Lane Craig (Crossway 2008). I have read through this book at least three times and am blessed every time. Highly recommended.

35. **The Myth of Junk DNA** by Jonathan Wells (Discovery Institute 2011). Dr. Wells debunks a common objection to intelligent design. Short but effective.

36. **Darwin's Black Box** by Michael Behe (Free Press, 2006 ed.). A classic that is often ridiculed by materialists but yet to be refuted!

> 37. **Signature in the Cell** by Stephen C. Meyer (HarperOne 2010 edition). Another classic but a long and difficult read.
>
> 42. **Christian Apologetics: A Comprehensive Case for Biblical Faith** by Douglas Groothuis (IVP 2011). THE text-book for apologetics. Don't let the size of the book intimidate, it is readable yet truly comprehensive. Amazing.
>
> 43. **Holman QuickSource Guide to Christian Apologetics** by Doug Powell (Holman 2006). The entries are short but still handy. Recommended.
>
> 44. **A Man for All Seasons** by Robert Bolt (Vintage 1990 Edition). A classic ode to following your conscience. Highly recommended.
>
> 45. **The Resurrection of Jesus: A Dialogue between N.T. Wright and John Dominic Crossan** by Robert Stewart, ed. (Fortress Press 2005). An interesting but frustrating dialogue between two great New Testament scholars.
>
> 46. **Holman Quick Source Guide to Understanding Creation** by Mark Whorton and Hill Roberts (Holman 2008). The Holman Guides are always good to keep close even if they aren't as extensive as say the Baker Encyclopedia of Apologetics.
>
> 48. **Will the Real Jesus Please Stand Up? A Debate Between William Lane Craig and John Dominic Crossan** Edited by Paul Copan (Baker Academic 1999). A fine read but how one can peruse this and not be dazed and confused by Crossan's positions is beyond me.
>
> 50. **The Marketing of Evil** by David Kupelian (WND 2005). How did liberals win the PR war in re: to so-called "same-sex marriage" and the butchering of unborn children? Kupelian does a good job of outlining it.
>
> 51. **Letters to a Young Progressive** by Mike S. Adams (Regnery 2013). Professor Adams has long been one of my favorite columnists and this book is a must read. I highly recommend it.
>
> 52. **A Conservative History of the American Left** by Daniel J. Flynn (Crown 2008). One of the few books in the last few years that I have read multiple times. A must read.
>
> 54. **The Ascent of Money: A Financial History of the World** by Niall Ferguson (Penguin 2009). A wonderful and readable economic history that is a must for any and all wanna be policy wonks and political junkies.
>
> 55. **God & Man at Yale** by William F. Buckley (Regnery 1986 ed.) A stunning indictment of Buckley's alma mater, which envisioned the takeover of academia by the secular left. A must.
>
> 56. **Reagan's War: The Epic Story of His Forty-Year Struggle and Final Triumph Over Communism** by Peter Schweizer (Anchor 2004). A compelling overview of one man's determination to destroy the evil of Soviet communism.
>
> I am currently re-reading **The Apologetics Study Bible** (B&H 2007), **A Patriot's History of the United States** by Larry Schweikart and Michael Allen (Sentinel 2007), **Intellectuals and Society** (revised and expanded) by Thomas Sowell (Basic 2012), **The Last Command** by Timothy Zahn (Spectra 1994) **Darwin's Doubt** by Stephen C. Meyer (HarperOne 2013) and **Ameritopia: The Unmaking of America** by Mark Levin (Threshold 2012). So far, I recommend them all.

This man is the James Bond of church! Where the heck did he come from? Where do they even make pastors like this? I've been in the church and in campus groups for the last 20 years, and I haven't met a single church leader who read books like this.

I really don't know what to say about this list. I am just so blown away. Can anyone tell me why it is that there is only one Pastor Matt? What's wrong with all the other pastors, or is it just that I haven't heard about any of the good ones in my travels? Is your pastor like this? Does he mention ideas from these books in his preaching?

By the way, you can friend Matt on Facebook and follow him on Twitter. Recommended!

UPDATE: He's written a new post explaining how he is able to read so many books.

# New study: men and women have different goals and expectations when cohabitating

**Wintery Knight** · 9 July 2013 · Archived copy · Original

Carson Weitnauer shared this fascinating article from the Atlantic, authored by marriage researcher W. Bradford Wilcox. The article discusses the variances between cohabitating men and women regarding goals and expectations.

Excerpt:

> According to a new paper from RAND by sociologists Michael Pollard and Kathleen Mullan Harris, cohabiting young adults have significantly lower levels of commitment than their married peers. This aversion to commitment is particularly prevalent among young men who live with their partners.
>
> Pollard and Harris found that the majority of cohabiting young men do not endorse the maximum indicator of relationship permanence: 52 percent of cohabiting men between ages 18 and 26 are not "almost certain" that their relationship is permanent. Moreover, a large minority (41 percent) of men report that they are not "completely committed" to their live-in girlfriends. By contrast, only 39 percent of cohabiting women in the same age group are not "almost certain" their relationship will go the distance, and only 26 percent say they are not "completely committed". Not surprisingly, the figures above and below also indicate that married women *and* men are much less likely to exhibit the low levels of commitment characteristic of many cohabiting relationships today.
>
> […]The only thing worse than being in a relationship for years with an uncommitted person, it would seem, is marrying one. Research by psychologists Scott Stanley and Galena Rhoades, spotlighted in a *New York Times* op-ed last year, suggests that cohabiting couples are in for trouble when they "slide" into cohabitation and then marriage rather than "decide" to take the same steps. Their work indicates that many couples begin living together without clear expectations, common values, or a shared commitment to one another. And after a time, some of these couples get married, in part because friends, family, and they themselves think it's the logical next step. But without common values and a shared sense of commitment, the couples who slide into cohabitation and marriage, instead of purposely deciding to deepen their commitment to one another, are more likely to divorce.
>
> Stanley and Rhoades illustrate this point by pointing to the research on cohabitation, engagement, and divorce. Women who cohabit prior to engagement are about 40 percent more likely to divorce, compared to those who do not cohabit. By contrast, couples who cohabit after an engagement do not face a higher divorce risk. Those who cohabit only after engagement or marriage also report higher marital quality, not just lower odds of divorce. Stanley and Rhoades think that "sliders" are more likely than "deciders" to cohabit prior to an engagement, and to have trouble in their marriage if they go on to tie the knot. On the other hand, couples who deliberately choose to move in together after a public engagement or wedding are more likely to enjoy the shared commitment that will enable their relationship to last.
>
> So, given the low levels of commitment and the gender mismatch in expectations often found among today's cohabiting couples, young men and especially women who aspire to a strong and stable marriage should take caution when considering moving in together.

You can click through the article to see the graphs he is talking about in the excerpt. Highly recommended. It turns out that women cannot just pick a good-looking guy and drift into a commitment by stringing together good days and good experiences. Ladies, let's be clear. A man who will have recreational premarital sex with you before marriage is not looking for marriage, but recreation. Marriage is a commitment to work hard, be disciplined, be self-sacrificial and to compromise with another person – all in close quarters. When choosing a mate, you need to look for someone who is good at commitments. Not someone who is good at fun.

The ability to have fun with a man is not a good predictor of marital success because fun is unrelated to the things that a man really does in a marriage: protect, provide, and lead on moral and spiritual issues. Similarly, the ability to impress your friends with a man's appearance or entertainment value does not make a commitment work. What makes a commitment work… is a man who demonstrates that he is good at making plans and achieving goals through discipline and hard work. Marriage requires making plans and achieving goals more than it requires having fun. Recreational premarital sex is about having fun – not making plans and achieving goals. Instead of talking about the next good time with a man, maybe women need to learn to talk about the mechanics of marriage with a man. And talk about the man's roles in a marraige with a man. And then they need to learn to avoid men who don't have plans and who aren't ready to perform those roles. There are plenty of men who are not "bad boys" who do have plans and who are ready to perform traditional male roles.

A final point. I have noticed today that women tend to avoid men who have strong, exclusive views on moral questions and spiritual questions. The minute a man expresses a moral point of view or a theological argument, women tend to want to avoid him. Sometimes they fear rejection from men with definite convictions. Sometimes they resent male leadership. And there are other reasons to avoid strong men. The problem is that a man who has definite moral views is exactly the kind of man who is likely to be trustworthy and predictable in the marriage. And a man who has definite spiritual views is exactly the kind of man who is going to have some sort of overarching plan for the marriage (AND PARENTING) beyond mere pleasure. You wouldn't choose someone who was guided by hedonism to be your stock broker or your medical doctor, because doing a hard job requires self-sacrifice and discipline. The same rule applies to choosing husbands. Husbands have duties that are typically best performed by moral, spiritual men.

# New CDC report finds soaring rates of HIV among men who have sex with men

**Wintery Knight** · 9 July 2013 · Archived copy · Original

Life Site News reports on a new report from the Centers for Disease Control.

Excerpt:

> A fact sheet released at the end of June by the US Centers for Disease Control (CDC) warns that HIV rates, already at epidemic proportions, are continuing to climb steadily among men who have sex with men (MSM).
>
> "Gay and bisexual men remain at the epicenter of the HIV/AIDS epidemic," says Jonathan Mermin, the director of the CDC's division of HIV/AIDS prevention.
>
> The CDC notes that while homosexual men make up only a very small percentage of the male population (4%), MSM account for over three-quarters of all new HIV infections, and nearly two-thirds (63 percent) of all new infections in 2010 (29,800).
>
> "Men who have sex with men remain the group most heavily affected by HIV in the United States," the fact sheet states.
>
> US News reports that if HIV infections among men who have sex with men (MSM) continue to rise at the current rates, more than half of college-aged homosexual men will have HIV by the age of 50.
>
> When broken down by age group, the CDC reported that new infections among the youngest MSM, aged 13-24, increased from 7,200 infections in 2008 to 8,800 in 2010, which translates into a 22 percent increase in that time span.
>
> Young black MSM continue to have the highest infection rate, according to the CDC, accounting for more than half (55 percent) of new infections among young MSM.
>
> "CDC's new estimates show that African Americans, more than any other racial/ethnic group, continue to bear the greatest burden of HIV in the United States," the report states. "While blacks represent approximately 14 percent of the total U.S. population, they accounted for almost half (44 percent) of all new HIV infections in 2010 (20,900). HIV incidence among blacks was almost eight times higher than that of whites – 68.9 v. 8.7 per 100,000 of the population."
>
> However, the total number of infections is highest amongst Whites: "White MSM continue to represent the largest number of new HIV infections among MSM (11,200), followed closely by black MSM (10,600) and Hispanic MSM (6,700)."

Previously, I've argued that promoting the gay lifestyle would not be good for society for two reasons. First, because it would increase the number of children who would grow up without a mother or without a father. And second, because it would negatively impacting religious liberty. But an additional concern is how men having sex with men introduces health risks to the gay men themselves, and health costs that must be paid by society, especially as we move towards socialized medicine.

Shouldn't we act with more common sense and maybe treat the gay lifestyle the same way we treat cigarette smoking? Let's tell people the medical facts, make people face the costs of their own sexual decisions (to encourage them to make better decisions) and then leave them free to do what they want to do without affirming risky decisions. It's not a good idea for us to celebrate risky behaviors as normal. It doesn't help gay men, and it doesn't help society. It's possible to disagree with people without meaning them harm. When I see someone in the middle of the road about to be hit by a bus, I don't think that it's loving to keep quiet, for fear of offending them by pointing out a threat. Let's point out the threat and then let them decide. That's not hateful.

# J.W. Wartick explains why Christians should not embrace a materialist conception of humanity

**Wintery Knight** · 9 July 2013 · Archived copy · Original

From the blog Always Have a Reason, a case against the idea that Christians can embrace a materialist conception of humanity.

**Problem 1: a concept of the self that persists through the passage of time:**

He writes:

> How do we maintain identity through time? Here, the problem must be answered by all materialists, not just Christian materialists.
>
> The problem is, of course, that our bodies don't maintain physical identity. We are continually replacing the physical parts of our body over time. Now, I am hesitant to make the oft-repeated claim that our entire bodies are replaced every so many years, as I have been unable to find any research confirming it. However, it simply is the case that large portions of our body *are* replaced. Given this fact, how do we maintain identity? What is it that keeps us the same person over time?
>
> Another major problem is this: to which part of our body are we identical? Or, to put it another way, which parts of our body do we need to keep in order to be the same person? Here we can appeal to a thought experiment. A mad scientist has us captured and he wants to see how long we can maintain identity. Slowly, he replaces each part of our body with a new one with the exact same DNA, structure, etc. As he replaces these parts, he discards the old ones and destroys them. He starts with the legs. Then he moves to the midsection, replacing one organ at a time. Then the heart, the arms, the ears, the eyes. When he gets to the brain, he goes through and replaces only single neurons at a time.
>
> The question is pretty obvious: When do we stop being the same person? The materialist simply has to admit that we are our bodies (for what else could we be?). But given that fact, to which part are we identical? The brain? If so, at one point in the experiment do we cease to exist? 51% of our brain is gone? 70%? All but one neuron? So is our identity grounded in that one neuron? If so, which one? Or is it just grounded in having *any* one neuron as the same? If so, how?

**Problem 2: materialism cannot make sense of the bodily resurrection:**

He writes:

> Central to the Christian hope is the hope for a future resurrection. The question which must be asked is this: Is this hope grounded in reality?
>
> Suppose materialism were true. If that is the case, then humans are identical with their bodies in some fashion. I am intentionally vague here because I admit I'm not convinced as to how identity works within a Christian view of materialism (see above). If this were the case, then when we die and our material body decomposes, it may go on to become all sorts of different things, which themselves later pass away (plants may grow from the nutrients broken down from the body; then those plants may be harvested and eaten by other humans/animals/etc, which then die and are broken down, etc.). In the resurrection, then, God creates our body anew, complete–I assume–with our memories, experiences, etc. built in (perhaps they are simply functions of our brain, which God recreated perfectly, which thus contains our experiences).
>
> Is there actual hope on this scenario?
>
> Suppose the mad scientist were to come and kidnap you. He gleefully announces that he is going to use you for excruciatingly painful experiments which will take place over several years until you die. But, do not worry,

> because once you die, he is going to create a new body which is an exactly perfect copy of you, which will of course have all your experiences (minus this torturous one) and memories in place, and then he is going to give you billions of dollars.* Would you be comforted by this scenario? After all, you're not going to remember the pain and you are going to come out the other end extremely rich!
>
> Well there is a problem: the new body is not you. It is just a copy. For any materialist, this is problematic. We seem to know that identity transcends the body. But let us not delve into that difficulty right now. Instead, we will focus on Christian materialism. Now, it seems to me that this problem is almost the same for the Christian materialist with the Resurrection. After all, we are going to die. But we are told, don't worry, we will be raised bodily by God! But *whose* body is going to be raised? How will God gather the material from our body (and at which time of our body–see above) in order to recreate us? And will not this body purely be a copy, rather than actually us?
>
> There is a real disconnect here. Christian materialism cannot offer us the hope of the resurrection, without which our faith is worthless (1 Corinthians 15). Instead, it offers us the hope for our future *copies*, which will themselves have our memories and experiences, but will not *be us*. Our bodies will die and distribute throughout various portions of the world (even the universe–who knows if an asteroid might hit and distribute the molecules which made up our body elsewhere?). Then God will create us again in some fashion, and that body will live on in the Kingdom. But that body is not us. It will be a new body. This isn't begging the question, it is merely stating a fact. The body that will be raised is not the body I have now. Thus, if I am my body, I am not raised.

And I would add to that additional problems with generic materialism, like first-person consciousness, freedom of the will, rationality, and so on. It's just not a sound view.

I remember attending a philosophy of religion conference at Wheaton College a long time back, where the main speaker was Christian materialist Peter Van Inwagen. Both of these objections were raised against him, and neither objection was adequately responded to, in my opinion. In contrast, the orthodox view (body and soul dualism) holds up very well. The biggest problem with the dualist view (my view) is how do the body and soul/mind interact. But I think that problem is much smaller than the problems that J.W. raised above.

# National Review and Weekly Standard agree: kill the immigration bill

**Wintery Knight** · 10 July 2013 · Archived copy · Original

Bill Kristol (Weekly Standard) and Rich Lowry (National Review) write about immigration reform in National Review.

Excerpt:

> We are conservatives who have differed in the past on immigration reform, with Kristol favorably disposed toward it and Lowry skeptical. But the Gang of Eight has brought us into full agreement: Their bill, passed out of the Senate, is a comprehensive mistake. House Republicans should kill it without reservation.
>
> […]The bill's first fatal deficiency is that it doesn't solve the illegal-immigration problem. The enforcement provisions are riddled with exceptions, loopholes, and waivers. Every indication is that they are for show and will be disregarded, just as prior notional requirements to build a fence or an entry/exit visa system have been – and just as President Obama has recently announced he's ignoring aspects of Obamacare that are inconvenient to enforce on schedule. Why won't he waive a requirement for the use of E-Verify just as he's unilaterally delayed the employer mandate? The fact that the legalization of illegal immigrants comes first makes it all the more likely that enforcement provisions will be ignored the same way they were after passage of the 1986 amnesty.
>
> Marco Rubio says he doesn't want to have to come back ten years from now and deal with the same illegal-immigration problem. But that's exactly what the CBO says will happen under his own bill. According to the CBO analysis of the bill, it will reduce illegal immigration by as little as a third or by half at most. By one estimate, this means there will be about 7.5 million illegal immigrants here in ten years. And this is under the implausible assumption that the Obama administration would administer the law as written.
>
> **The bill's changes in legal immigration are just as ill considered. Everyone professes to agree that our system should be tilted toward high-skilled immigration, but the Gang of Eight bill unleashes a flood of additional low-skilled immigration. The last thing low-skilled native and immigrant workers already here should have to deal with is wage-depressing competition from newly arriving workers. Nor is the new immigration under the bill a panacea for the long-term fiscal ills of entitlements, as often argued, because those programs are redistributive and most of the immigrants will be low-income workers.**
>
> Finally, there is the sheer size of the bill and the hasty manner in which it was amended and passed. Conservatives have eloquently and convincingly made the case against bills like this during the Obama years. Such bills reflect a mistaken belief in central planning and in practice become a stew of deals, payoffs, waivers, and special-interest breaks. Why would House Republicans now sign off on this kind of lawmaking? If you think Obamacare and Dodd-Frank are going swimmingly, you'll love the Gang of Eight bill. It's the opposite of conservative reform, which simplifies and limits government, strengthens the rule of law, and empowers citizens.

My position on immigration is simple. Build the fence first. Implement e-verify for employers and harsh penalties for hiring anyone without a work permit. Automatic green cards for *skilled* workers who prove they can work here, pay taxes, obey the law, and not collect federal benefits of any kind, for a period of six years (cumulative). A robust program to allow temporary low-skilled workers to work here *temporarily*, with no path to permanent residency or citizenship. No permanent residency for illegal immigrants. No path to citizenship for illegal immigrants.

# Is environmentalism good for the environment?

**Wintery Knight** · 10 July 2013 · Archived copy · Original

Although I am not a global warming alarmist, I am concerned with conservation. So, all things being equal, I think it's a good idea not to pollute the environment unnecessarily. Now, you might think that environmentalists agree with me on that.

Let's take a look at this article by Bret Stephens from the Wall Street Journal where he writes about how a train that was transporting shale oil was derailed and then exploded. (H/T Dennis Prager)

Excerpt:

> The derailed 72-car train belonged to a subsidiary of Illinois-based multinational Rail World, whose self-declared aim is to "promote rail industry privatization." The train was carrying North Dakota shale oil (likely extracted by fracking) to the massive Irving Oil refinery in the port city of Saint John, to be shipped to the global market. At least five people were killed in the blast (a number that's likely to rise) and 1,000 people were forced to evacuate. Quebec's environment minister reports that some 100,000 liters (26,000 gallons) of crude have spilled into the Chaudière River, meaning it could reach Quebec City and the St. Lawrence River before too long.

Now the question is, why is it that trains are used instead of pipelines, when pipelines are safer than trains?

Let's see why:

> The reason oil is moved on trains from places like North Dakota and Alberta is because there aren't enough pipelines to carry it. The provincial governments of Alberta and New Brunswick are talking about building a pipeline to cover the 3,000-odd mile distance. But last month President Obama put the future of the Keystone XL pipeline again in doubt, telling a Georgetown University audience "our national interest will be served only if this project does not significantly exacerbate the problem of carbon pollution."
>
> […]Like water, business has a way of tracing a course of least resistance. Pipelines are a hyper-regulated industry but rail transport isn't, so that's how we now move oil. As the Wall Street Journal's Tom Fowler reported in March, in 2008 the U.S. rail system moved 9,500 carloads of oil. In 2012, the figure surged to 233,811. During the same period, the total number of spills went from eight to 69. In March, a derailed train spilled 714 barrels of oil in western Minnesota.
>
> Predictable, you would think. And ameliorable: Pipelines account for about half as much spillage as railways on a gallon-per-mile basis. Pipelines also tend not to go straight through exposed population centers like Lac-Mégantic. Nobody suggests that pipelines are perfectly reliable or safe, but what is? To think is to weigh alternatives. The habit of too many environmentalists is to evade them.

Investors Business Daily has more on the benefits of pipelines:

> Railways suffer spills 2.7 times more often than pipelines, according to the Washington-based Association of American Railroads. If that seems self-serving, the State Department, citing a 2012 study from the free-market Manhattan Institute, said trains spill 33 times more oil than pipelines.
>
> […]"The evidence is so overwhelming that railroads are far less safe than pipelines," says Charles Ebinger, director of the Brookings Institution's energy security initiative.

Brookings is a left-leaning think tank, and they agree: pipelines are safer than trains.

It does make sense, I think, for Christians and conservatives to ask ourselves sensible questions about the

environment. How do we make air clean enough? How do we make water clean enough? How do we avoid impacting nature unnecessarily? But I think this story about the train should help us realize that fundamentalist environmentalists are not the best people to be making these sorts of policy decisions. These decisions should be made by rational thinkers, who can consider all sides of an issue and think critically about the needs of everyone concerned. This is not a problem for secular leftist idealists who are more motivated by blind faith than by facts.

# Peter Williams debates Bart Ehrman on his book “Misquoting Jesus”

**Wintery Knight** · 10 July 2013 · Archived copy · Original

The audio for this Unbelievable radio show debate is available from Apologetics 315.

**Details:**

> Bart Ehrman is the US author of the bestselling book “Misquoting Jesus” (In the UK “Whose word is it?”). He calls into question the authority of the New Testament as scribal changes over time have changed the documents.
>
> So can we trust the scripture? Bible scholar Peter Williams believes in the reliability of the New Testament and that Bart’s prognosis is far too pessimistic.

This post is a re-post from 2011. I have been listening to this lecture by Peter J. Williams on “Misquoting Jesus” this week, and it reminded me to re-post this debate.

**Summary of the Williams-Ehrman debate:**

Note: this summary is *snarky*. It’s very very very snarky, and it should really be viewed as childish, immature, crude, snarky, mendacious humor, rather than an accurate summary. I just cannot stand Bart Ehrman, which his sensational Dan Brown style of expressing himself. He just makes me so mad! I hope you can all forgive me for being snarky.

Ehrman:

- I had a mystical experience in childhood and became an evangelical Christian
- I went to Moody Bible Institute, and they told me that the Bible was inerrant
- For a while, I was committed to the view that there are no mistakes in the Bible
- At Princeton, I was taught *and graded* by professors who did not accept inerrancy
- By a strange coincidence, I began to see that the Bible did have errors after all!
- We don’t have the original documents written by the original authors, we only have thousands of copies
- if the words of the Bible are not completely inerrant, then none of it is historical
- if all of the words in the copies of the Bible are not identical, then none of it is historical

Williams:

- I would say the New and Old testaments are the Word of God
- We don’t need to have the original Greek writings in order to believe in the authority of the Bible
- I believe in inerrancy, but doesn’t mean there are no problems
- the doctrine of inerrancy has always referred to the original Greek copies, not the translations

Moderator:

- what are the main points of Misquoting Jesus?

Ehrman:

- we don’t have the originals of any of the books of the New Testament
- we have copies that are much later, sometimes even centuries later!!1!
- the copies we have all differ from one another – they were changed by scribes!!1!

- we have 5000 manuscripts in the original Greek language
- there are hundreds of thousands of differences!!1!
- most of the differences don't matter
- some differences are significant for meaning or doctrine
- errors are propagated because the next scribe inherits the mistake of their source copy
- a large gap between the time of writing and the first extant copy means more errors have crept in

Williams:

- the reason we have so many variants is because the number of manuscripts is large

Angry Jesus or compassionate Jesus in Mark

Ehrman:

- most manuscripts say that Jesus was compassionate when healing a leper, but one says he was angry
- it makes a huge huge huge really really big difference if Jesus is compassionate or angry
- the whole Bible needs to be thrown out because of this one word between different in one manuscript

Williams:

- this variant is important for understanding the passage, but it has no great meaning
- the change is probably just an accident – the two words are very similar visually in Greek
- it's just an accident – it emerged in one manuscript, and it impacted a few more
- the tiny number of manuscripts that have the error are geographically isolated
- I'm pretty sure that WK prefers the angry Jesus anyway – so who cares?

Ehrman:

- no! someone changed it deliberately! it's a conspiracy! you should buy my book! it's a *big deal*!!!!!1!!1!one!!eleventy-one!

The woman caught in adultery in John

Ehrman:

- it is isn't in any of the earliest manuscripts
- this is an apocryphical story that some scribe deliberately inserted into the text
- most people don't even know about this! it's a cover-up! you need to buy my scandalous book!

Williams:

- that's right, it's a late addition by some overzealous scribe
- and it's clearly marked as such in every modern Bible translation
- the only people who don't know about this are people who don't read footnotes in their Bible
- and in any case, this isn't a loss of the original words of the New Testament – it's an addition

Grace of God or apart from God in Hebrews

Ehrman:

- well this is just a one word difference, but it makes a huge huge really really big difference!
- the words are very similar, so it's could be an accident I guess
- but it wasn't! this was a deliberate change! it's a conspiracy! it's a cover-up! scandal!

- buy my book! It's almost as good as Dan Brown!

Moderator:

- hmmmn…. I kind of like "apart from God" – why is this such a big scandal again?

Ehrman:

- you don't care? how can you not care? it has to be inerrant! or the whole thing is false!
- Moody Bible Institute says!

Williams:

- yeah Bart is always saying that every change is deliberate but it's just an accident
- the words are very similar, just a few letters are different, this is clearly an accident
- I have no problem with apart from God, or by the Grace of God
- please move on and stop screaming and running around and knocking things over

Moderator:

- but what if pastors try to use this passage in a sermon?

Williams:

- well, one word doesn't make a big different, the meaning that appears is fine for preaching
- it's only a problem for people who treat the Bible as a magic book with magical incantations
- they get mad because if one word is out of place then the whole thing doesn't work for their spell
- then they try to cast happiness spells but the spells don't work and they experience suffering
- the suffering surprises them since they think that fundamentalism should guarantee them happiness
- then they become apostates and get on TV where they look wide-eyed and talk crazy

Ehrman:

- hey! are you talking about me? a lot of people buy my books! i am a big success!
- it is very important that people don't feel bad about their sinning you know!

Is Misquoting Jesus an attack?

Williams:

- it's rhetorically imbalanced and misleading
- it tries to highlight change and instability and ignore the majority of the text that is stable
- he makes a big deal out of 5 or so verses that are different from the mainstream text
- he says that scribes deliberately changed the scriptures, but he doesn't prove that
- it's just as likely that the differences are just scribal errors made by accident

Ehrman:

- well, maybe the variants aren't a big deal, but what about one angel vs. two angels?
- that's a significant issue! significant enough for me to become an apostate – a *rich* apostate
- if one word is different because of an accident, then the whole Bible cannot be trusted
- it has to be completely inerrant, so a one word difference means the whole thing is unreliable
- we don't even know if Jesus was even named Jesus, because of one angel vs two angels!!!1!

- buy my book! you don't have to read it, just put it on your shelf, then you'll feel better about not having a relationships with God – because who's to say what God really wants from you? Not the Bible!

# Christians celebrate the end of Egypt's Muslim Brotherhood government

**Wintery Knight** · 11 July 2013 · Archived copy · Original

North Africa and Middle East Political Map

CNS News explains how the downfall of Obama's Muslim Brotherhood allies is being greeted with joy by Egypt's Christian community.

Excerpt:

> Father Rafik Greiche, head of the press office of the Egyptian Catholic Bishops' Conference, declared that the ouster of Egyptian President Mohammed Morsi and his Muslim Brotherhood supporters on July 3 was "a joyous day for Christians." "The ousting of Morsi and the political new beginning is a joyous day for us Christians in Egypt and for all Egyptians. We hope that we will not be excluded from the political process that lies before us," he said during a talk last Thursday with the Catholic charity, Aid to the Church in Need (ACN).
>
> […]Fr. Greiche made a point to note that what happened in Egypt was not a coup d'état. Rather, he said, "the army carried out the will of the people. They expressed this unequivocally over the last few days through millions of signatures and massive demonstrations in Cairo and throughout the whole country."
>
> "A number of western media are now presenting it as a coup d'état. But a putsch happens when officers take power and act without the endorsement of the people. But this is exactly what did not happen in Egypt yesterday. Moreover, the army wanted to prevent the bloodshed the Muslim brothers were threatening. This is why they took action."
>
> […]A 2012 State Department report noted increased violence towards Egyptian Christians following the overthrow of President Hosni Mubarak in 2011 and the election of Muslim Brotherhood-backed Morsi a year ago.
>
> "The government generally failed to prevent, investigate, or prosecute crimes against members of religious minorities, including Coptic Christians, which fostered a climate of impunity. In some cases, authorities reacted slowly or with insufficient resolve when mobs attacked Christians and their property," according to the State Department's International Religious Freedom Report.

I think this story beautifully illustrates why Christians should care about politics and foreign policy. The truth is that there are forces in places throughout the world that are hostile to Judeo-Christian values. Good foreign policy that promotes economic freedom and freedom of religion should be the cause of every informed Christian. One of the reasons why the Muslim Brotherhood, a group linked to terrorism, is doing so well is because Egypt's economy is doing so poorly.

Investors Business Daily thinks that the best way to bring freedom to Egypt is by bring prosperity to Egypt – the same way that freedom was brought to Chile in the past.

Take a look:

> Like with Morsi, Chile in 1973 was ruled by a so-called democrat, Salvador Allende, who after barely winning election revealed he didn't intend to govern democratically. A Marxist, Allende moved fast to ram through radical, Cuban-style "reforms" on an unwilling public.
>
> Allende foreshadowed Morsi, demolishing political institutions, trampling the free press, disrespecting minority rights, ignoring the constitution, disregarding the separation of powers, trashing property rights and ruining the economy. Also, Allende was in thrall to a failed and inhuman foreign ideology — communism — just as Morsi was to Islamofascism. In both cases, the only exit was a military coup.
>
> Had Chilean military commander Augusto Pinochet simply handed the country back to "democracy" without changing the root causes of the turmoil and tyranny, the cycle would have had a replay.
>
> But he didn't. He used his military government as an incubator for free-market changes, transforming his country into not just Latin America's best economy, but also Latin America's most durable democracy. Pinochet — who stepped down dutifully after 17 years upon losing a referendum — understood that economic freedom had to precede political freedom. He employed a brilliant group of mostly University of Chicago-educated young Chilean economists, known as the Chicago Boys, to transform the society by cleaning out thousands of weedlike laws choking Chile's economy — on labor, mining, currency, fishing, vineyards, startups and pensions.
>
> They made the central bank independent and instituted hard-core fiscal discipline that has left the country debt-free and pushed its credit rating toward triple A.
>
> Thousands of businesses were freed to open and operate without thickets of regulations — resulting in the spate of Chilean products now seen in America's supermarkets: wine, fruit, fish.
>
> They signed free-trade pacts with 60 countries to expand the reach of their tiny market to a global one — the better to attract foreign investment.
>
> And in what economist Milton Friedman called "the crown jewel" of these reforms, Chile's 30-year-old Labor Minister Jose Pinera offered Chileans a choice of public or private pensions — making each worker a minicapitalist with a stake in the system — and giving the country a vast pool of capital to develop the country.
>
> Right now, frankly, this is what Egypt needs — a free-market economy that enables it citizens to matter.
>
> America now pushes for political freedom before the economic kind. It did this Iraq and now in Egypt, creating weak or failed democracies. In 2011, Secretary of State Hillary Clinton said she was getting calls from Egyptians during the Arab Spring asking how to replicate Chile's reforms — and we've heard nothing since.
>
> But the Chilean example shows that economic freedom is what makes political freedom possible .

Fox News recalls why the Muslim Brotherhood got into power in the first place.

Excerpt:

> Millions protesting in the streets. Another leader deposed. Dozens killed in violent clashes, including at least 51 people slain on Monday. Obama's Mideast policy is in shambles. Nowhere is that more obvious that Egypt, which just held its second revolution in as many years.
>
> Egypt isn't just a problem. It's a full-fledged disaster, hand-delivered to us by President Obama. He sabotaged our ally Hosni Mubarak more than a year ago, then defended that strategy during his reelection campaign.
>
> […]Back in February 2011, Obama first said "change must take place" and about a week later outright called for Mubarak to go. Given the U.S.'s financial influence on Egypt, that effectively destroyed a key ally.

> […]When asked during the presidential debates in October if he regretted abandoning Mubarak, Obama was clear: “I don’t because I think that America has to stand with democracy.” He then listed several areas that he expected the new government to push including taking “responsibility for protecting religious minorities,” recognizing “the rights of women,” abiding “by their treaty with Israel,” and “developing their own economy.”
>
> With the exception of Israel, Morsi and the Muslim Brotherhood failed at the rest and now Obama is standing by them. Christians have been attacked, women raped and terrorized, and the Egyptian economy is a disaster. Fuel shortages are common and half the population is living on less than $2 a day.
>
> The Muslim Brotherhood has shown itself to be radical and dangerous. One of the last straws for the Egyptians was apparently when Morsi called for a holy war in Syria in support of the Sunni Muslims against the Shia Muslim leadership.
>
> The Brotherhood even released a bizarre, anti-Semitic statement about Morsi’s replacement, saying, “A Jew in Egypt’s seat of power.”
>
> Now that same military Obama trusted last time around has rejected Morsi’s anti-American, radical Islamist government. The Obama response? He has ordered a review of the funding we send to Egypt. He even supported keeping the Brotherhood in the government.

What Christians should have done in 2008 and 2012 is voted against Obama, because apologizing to Muslim dictators and Communist dictators is not going to spread the prosperity and liberty we need in order to have world peace. Christians need to think hard about the role that foreign policy plays in a Christian worldview. I think this is especially important for Christian women, who in my experience struggle to understand how foreign policy works. We need to think about the way the world works in order to achieve good. Achieving good is not the same thing as being liked or feeling good. We want to achieve good, and that takes knowledge of how the world really works.

# FOIA documents reveal that Holder DOJ facilitated anti-Zimmerman protests

**Wintery Knight** · 11 July 2013 · Archived copy · Original

From the Washington Times. (H/T ECM)

Excerpt:

> The legal watchdog Judicial Watch announced today that it has obtained documents revealing the Community Relations Service (CRS), a unit of the Department of Justice, was deployed to Sanford, Fla., following the death of Trayvon Martin to help organize rallies against George Zimmerman.
>
> […]According to the report, employees of the DOJ's CRS are required by law to "conduct their activities in confidence. Though the agency claims to use "impartial mediation practices and conflict resolution procedures," press reports suggest that the unit deployed to Sanford took an active role in mobilizing against Mr. Zimmerman.
>
> "These documents detail the extraordinary intervention by the Justice Department in the pressure campaign leading to the prosecution of George Zimmerman," said Judicial Watch President Tom Fitton. "My guess is that most Americans would rightly object to taxpayers paying government employees to help organize racially-charged demonstrations."

Fox News had some more on the story.

Excerpt:

> Judicial Watch, in claiming the agency crossed a line by aiding the anti-Zimmerman events, points to an April 2012 article in the Orlando Sentinel.
>
> That article detailed the role the CRS unit played during the protests. In one case, the Sentinel said they helped "set up a meeting between the local NAACP and elected officials that led to the temporary resignation of police Chief Bill Lee."
>
> In another, the article said they arranged an escort for college students for a 40-mile march to "demand justice."

Is that the proper role of government? They are going after a private individual with taxpayer money. That is nothing but tyranny.

# Scientists trying to mimic the design of hummingbirds with nanorobots

**Wintery Knight** · 11 July 2013 · Archived copy · Original

From Evolution News.

Excerpt:

> In the Illustra documentary *Flight*, Dr. Thomas Emell of the University of Florida asks us to consider the speed of the synapses firing during the birds' wingbeats (more than 100 times a second) and heartbeats (1,250 times a minute). Now, we see that each wingbeat, taking place in less than 10 milliseconds, involves even more control: tuning the wing shape at each position to optimize lift.
>
> Masateru Maeda, a PhD student at Chiba University in Japan, captured the footage.
>
> The ultimate aim of his measurements of the movements of the wings is **to copy their function in the design of flying robots.**
>
> If something works, it's "not happening by accident," Discovery Institute Fellow Paul Nelson reminds us in the Illustra film. He describes how the unique shape of the shoulder bone allows the wing to invert on the reverse stroke, creating lift on both strokes. Now, Maeda has found that hovering also requires the hummingbirds to be able to sense their wings' shapes and respond accordingly.
>
> Mr Maeda said that the **birds must have a very acute sense of their wings' shape** in order to **remain so still** in the air.
>
> "If the wing shape isn't **optimised**," he explained, "it will fail to produce **lift** and the bird will start to sink.
>
> "So **it must be able to sense this and correct the shape of its wings**."
>
> What this implies is that the wing shape (involving control of the flight feathers' ability to slide as they flap), is under instantaneous control of the hummingbirds' central nervous system. The speed of signals from brain to flight muscles now becomes even more astonishing.
>
> In the documentary, viewers see a robotic hummingbird called the Nano Air Vehicle able to hover in mid-air. Its wings, however, perform simple back-and-forth movements while its stiff body floats upright in a fixed position. It has no internal guidance system, no heart or brain, and no fine control of wing shape. Without the human operator and his joystick, it would crash into the nearest wall. No wonder Nelson says that, despite its being a "sensational piece of engineering," it is still "light years behind the bird that inspired its creation."

What the Evolution News article didn't mention is that even if the scientists and engineers can mimic the flying capability of hummingbirds by intelligently designing robots, they are missing out on a valuable aspect of what makes a humminbird a hummingbird. Can you guess what it is?

Take a look at this video:

Isn't that amazing? Now, everyone knows that I am huge admirer of birds, and I have had birds as pets for most of my life. I know what these amazing little creatures can do firsthand. Not only can they fly, but they can build relationships with human beings – trusting them not to hurt them. No robot hummingbird can do that. Hummingbirds are exquisitely designed, and their design cries out for an explanation.

# Wal-Mart cancels plans to build three stores after D.C. leftists raise minimum wage 50%

**Wintery Knight** · 12 July 2013 · Archived copy · Original

From Fox Business, a story that shows how completely clueless left-wing politicians are about economics.

Excerpt:

> Wal-Mart Stores (WMT) no longer plans to build three stores in the nation's capitol, after the city's council voted to force large retailers to pay starting wages that are 50% higher than the minimum wage there.
>
> The world's largest retailer also said it will consider its options related to three other Washington, D.C., stores that are still under construction.
>
> The bill, called the Large Retailer Accountability Act of 2013, was approved by an 8-to-5 vote, even though Walmart had warned that the company would leave the district.
>
> "Nothing has changed from our perspective: we will not pursue Skyland, Capitol Gateway, and New York Avenue and will start to review the financial and legal implications on the three stores already under construction," Walmart spokesman Steven Restivo said, referring to the locations of the planned stores.
>
> "This was a difficult decision for us—and unfortunate news for most D.C. residents—but the Council has forced our hand."
>
> The district's new law requires retailers with sales of more than $1 billion and with stores of at least 75,000 square feet to pay their workers starting salaries of at least $12.50 an hour, compared to the minimum wage of $8.25.
>
> Unionized businesses are exempt from the measure. Large stores that already have a presence in D.C., including Target (TGT) and Macy's (M), have four years to comply.

Now for most of my readers who understand economics, what happened here is going to be pretty obvious. But sometimes people get specialized in other areas and neglect the study of economics. The danger then is that they will be moved to support policies that appeal to their hearts. But it's very important to understand that policies that sound good, like raising wages, often have unexpected negative results.

Here is George Mason University economics professor Walter Williams to explain the problem with increasing the minimum wage, starting with the basics of economics.

Excerpt:

> Are people responsive to changes in price? For example, if the price of cars rose by 25 percent, would people purchase as many cars? Supposing housing prices rose by 25 percent, what would happen to sales? Those are big-ticket items, but what about smaller-priced items? If a supermarket raised its prices by 25 percent, would people purchase as much? It's not rocket science to conclude that when prices rise, people adjust their behavior by purchasing less.
>
> It's almost childish to do so, but I'm going to ask questions about 25 percent price changes in the other way. What responses would people have if the price of cars or housing fell by 25 percent? What would happen to supermarket sales if prices fell by 25 percent? Again, it doesn't require deep thinking to guess that people would purchase more.
>
> This behavior in economics is known as the first fundamental law of demand. It holds that the higher the price of something the less people will take and that the lower the price the more people will take. There are no known exceptions to the law of demand. Any economist who could prove a real-world exception would probably be a candidate for the Nobel Memorial Prize in Economic Sciences and other honors.

> […]University of California, Irvine economist David Neumark has examined more than 100 major academic studies on the minimum wage. […]About 85 percent of the studies "find a negative employment effect on low-skilled workers." A 1976 American Economic Association survey found that 90 percent of its members agreed that increasing the minimum wage raises unemployment among young and unskilled workers. A 1990 survey found that 80 percent of economists agreed with the statement that increases in the minimum wage cause unemployment among the youth and low-skilled. If you're looking for a consensus in most fields of study, examine the introductory and intermediate college textbooks in the field. Economics textbooks that mention the minimum wage say that it increases unemployment for the least skilled worker.

When considering what economic policies to adopt, it is not enough to do what feels good. Liberals and conservatives agree that it is good to help the poor. Liberals think that higher minimum wage rates help the poor, and conservatives think that lower minimum wage rates help the poor. This is not a topic that is up for debate, though, because economists across the idological spectrum *agree* on this one – and for the reasons outlined above and illustrated in the Wal-Mart case.

Take a look at this post from moderate Harvard University economist Greg Mankiw.

He writes:

> I believe it is better to introduce students to economics with topics about which there is more of a professional consensus. In chapter two of the book, I include a table of propositions to which most economists subscribe, based on various polls of the profession. Here is the list, together with the percentage of economists who agree:

1. A ceiling on rents reduces the quantity and quality of housing available. (93%)
2. Tariffs and import quotas usually reduce general economic welfare. (93%)
3. Flexible and floating exchange rates offer an effective international monetary arrangement. (90%)
4. Fiscal policy (e.g., tax cut and/or government expenditure increase) has a significant stimulative impact on a less than fully employed economy. (90%)
5. The United States should not restrict employers from outsourcing work to foreign countries. (90%)
6. The United States should eliminate agricultural subsidies. (85%)
7. Local and state governments should eliminate subsidies to professional sports franchises. (85%)
8. If the federal budget is to be balanced, it should be done over the business cycle rather than yearly. (85%)
9. The gap between Social Security funds and expenditures will become unsustainably large within the next fifty years if current policies remain unchanged. (85%)
10. Cash payments increase the welfare of recipients to a greater degree than do transfers-in-kind of equal cash value. (84%)
11. A large federal budget deficit has an adverse effect on the economy. (83%)
12. **A minimum wage increases unemployment among young and unskilled workers. (79%)**
13. The government should restructure the welfare system along the lines of a "negative income tax." (79%)
14. Effluent taxes and marketable pollution permits represent a better approach to pollution control than imposition of pollution ceilings. (78%)

When you raise the price of anything – including labor – fewer people will buy it. Wal-Mart will still spend the money on new stores and new employees, just not in Washington, D.C. – not with those laws. Notice that number one on his list is the case of rent control, where government good-intentioners try to hold the price of rent *down.* What happens next? Well, it the price goes *down* then everyone wants to buy more of whatever just went on sale. But the people providing what just went on sale stop making it because they can't make a profit. The unexpected consequence is that there is a housing shortage. The quantity of housing decreases, and the quality of

housing decreases. The quality decreases because demand is so high that property owners no longer have to maintain the properties, since demand has skyrocketed. Economics is something that everyone should study, so that we don’t just have good intentions, but also have good results.

# A response to Judith Jarvis Thompson's violinist argument for abortion rights

**Wintery Knight** · 12 July 2013 · Archived copy · Original

Amy posted this on the Stand to Reason blog, and it got a ton of comments.

Excerpt:

> The "Violinist" argument for keeping abortion legal is an illustration created by Judith Jarvis Thompson for the purpose of clarifying our moral intuitions about abortion by considering a parallel situation. The Violinist story goes like this (see the full, original story here): A woman wakes up to find she's been attached without her consent to a famous violinist who needs the help of her kidneys for the next nine months in order to live. If the woman detaches herself from him, he will die.
>
> According to Thompson, since it's clear that the woman ought not be forced by law to remain attached to this man (though he is a person with rights), in the same way, the law ought not force a woman to remain attached to an unborn child who is similarly using her body to live (though he is a person with rights).
>
> In response to this bodily rights argument, Stephen Wagner, Josh Brahm, and Timothy Brahm (along with others—see acknowledgments) have developed a new illustration that more closely parallels the situation of a pregnant woman (including those who are pregnant by rape), which they call "The Cabin in the Blizzard." From Stephen Wagner's paper, "De Facto Guardian and Abortion":
>
> Imagine that a woman named Mary wakes up in a strange cabin. Having gone to sleep in her suburban home the night before, she starts to scream frantically. She goes to the window and sees snow piled high. It appears she is snowed in. On the desk by the window, she finds a note that says,
>
> "You will be here for six weeks.
> You are safe, and your child is, too.
> There is plenty of food and water."
>
> Since she just gave birth a week ago, she instinctively begins tearing through each room of the cabin looking for her infant son. She finds an infant in a second room, but it is not her infant. It is a girl who appears to be about one week old, just like her son. Mary begins to scream.
>
> Pulling herself together, she goes to the kitchen area of the cabin and finds a huge store of food and a ready source of water. The baby begins to cry, and she rightly assesses that the baby is hungry. Mary sees a three-month supply of formula on the counter in the kitchen area.
>
> Now imagine that the police show up at the cabin six weeks later, and Mary emerges from the cabin. After determining she is in good health, albeit a good bit frazzled, one policeman says, "We've been investigating this situation for some time. The Behavioral Psychologists from the nearby University of Lake Wobegon are responsible. We'll bring them to justice. We're so glad you're okay. Is there anyone else in the cabin?"
>
> Mary said quietly, "There was."
>
> "There was?" The police hurry past her to the cabin. They search the cabin and find the infant formula unopened on the counter. They find the infant dead on a bed. The coroner confirms that the infant died from starvation.
>
> We can see that Mary was wrong for not feeding the baby in this situation, regardless of the fact that she did not consent to these demands being placed on her. As Wagner points out, our moral intuition tells us her obligation to feed the child exists even if her only option is to use her own body to breastfeed that child, causing her great discomfort.

Another problem with the violinist argument is that it neglects the fact that the baby is there *as a result of the*

*woman's own decision to have sex without being ready for a baby.* In the violinist example, the woman is a helpless victim of some group of music lovers. But in a real pregnancy, the woman had to have made a decision that resulted in the baby being born, (except in the case of rape).

Triablogue explains it thus:

> Thompson seems to make a distinction between consent to pregnancy and consent to sex (as Beckwith and others point out). But it seems that pregnancy is the designed result of sex, even though it may not be the desired result. It would seem that our sex organs have the purpose of being ordered towards procreation. Applying this to the violinist then: What if I engaged in an activity, say, spelunking, that regularly created rare kidney diseases in violinists? Say that every time I dropped 50 ft into the cave, a violinist was almost sure to develop the disease that only I had the blood type to correct or fix. If I did so, should I not be hooked up to him, voluntarily or not? Say that there was protection, some kind of spelunking helmet. Say that it was not 100% effective. If my helmet ripped, should I be attached to the violinist? Or say I tried to "pull up" before I hit 50 ft. Unfortunately, it felt so good to decend that I pulled up a little too late and my right foot passed the 50 ft mark. Should I be attached to the violinist? I don't see why not. Indeed, say that the statistical evidence was that the first two people that ever spelunked together would eventually cause 6 billion violinists to come down with rare kidney diseases, I dare say the Society of Music Lovers, and almost everyone else for that matter, would call for *abstaining from spelunking* unless you agreed to take care of the violinists until they got better. This seems fatal to Thompson's argument.

It's very helpful illustration for dealing with pro-abortion people who admit that unborn children are human persons, but who still think that women should have a right to terminate their pregnancy.

# Pro-abortion thugs in Texas planned to attack legislators with urine and feces

**Wintery Knight** · 13 July 2013 · Archived copy · Original

The UK Daily Mail reports.

Excerpt:

> The Texas Senate has given its initial approval for sweeping abortion restrictions late on Friday, sending them to Republican Governor Rick Perry to sign into law after weeks of protests and rallies that drew thousands of people to the Capitol and made the state the focus of the national abortion debate.
>
> Republicans used their large majority in the Texas Legislature to pass the Bill nearly three weeks after a filibuster by Democratic Senator Wendy Davis and an outburst by abortion-rights activists in the Senate gallery disrupted a deadline vote on June 25.
>
> As protesters came to the Capitol building in Austin on Friday, bottles of urine and feces, and even tampons were confiscated by state troopers as they tried to prevent anything from disrupting the debate.
>
> […]Those attending the debate were searched, and any item that could potentially be thrown from the gallery, including tampons, were confiscated, according to the Washington Post.
>
> A senator later stopped security officials confiscating tampons, calling the move 'bone headed'.
>
> However, Texas Department of Public Safety officers were reported to have found one jar suspected to contain urine, 18 jars suspected of holding feces and three jars suspected to contain paint.
>
> Four women who tried to chain themselves to a railing in the gallery were also arrested and a ten-minute break had to be called when another woman managed to chain herself to the railing.
>
> The Senate's leader, Lieutenant Governor David Dewhurst told officers to remove a group of protesters who started chanting 'Give choice a chance' as the debate resumed.
>
> Outside the chamber, the crowd grew so loud that troopers were being issued earplugs, as protesters shouted 'Shame! Shame! Shame!' as senators gave their closing statements.

A recent poll found that the bill has the support of the American public.

Excerpt:

> Most Americans would favor sweeping new national restrictions on abortion after the 20th week of pregnancy, according to a new HuffPost/YouGov poll. But the poll also shows many Americans remain conflicted in their views on abortion.
>
> By a margin of 59 percent to 30 percent, respondents to the new poll said they would favor a federal law banning abortion after 20 weeks of pregnancy.

And that's exactly what the Texas law does.

Isn't it amazing that pro-abortion activists would be against such a common-sense bill restricting abortions on viable unborn children? (And chant "Hail, Satan" in order to disrupt legislators!)

# State Attorney Angela Corey fires whistleblower in Trayvon Martin case

**Wintery Knight** · 13 July 2013 · Archived copy · Original

Story from the Florida Times-Union. (H/T Bad Blue)

> State Attorney Angela Corey fired her office's information technology director Friday after he testified last month about being concerned prosecutors did not turn over information to George Zimmerman's defense team in the shooting death of Trayvon Martin.
>
> On the same day attorneys finished their closing arguments in that nationally watched trial, a state attorney investigator went to Ben Kruidbos' home about 7:30 a.m. to hand-deliver a letter stating Kruidbos "can never again be trusted to step foot in this office."
>
> The letter contended Kruibos did a poor job overseeing the information technology department, violated public records law for retaining documents, and noted he was questioned in March when the office was trying to determine who had leaked personnel information obtained through a computer breach.
>
> In an interview Friday, Kruidbos denied the allegations in the letter, which was written by Cheryl Peek, the managing director of the State Attorney's Office.
>
> He said he had acted in good faith about "genuine concerns." He said he had been proud to work at the State Attorney's Office and feared the letter would cripple his chances at finding another job to support his family, including a 4-month-old son.
>
> "I don't have any regrets," he said, "but I am terrified about the future and what that will end up being."
>
> His attorney Wesley White — who resigned from the State Attorney's Office in December and is a critic of Corey — said the firing was aimed at sending a message to office employees "that if they feel like there is wrongdoing," they should not disclose it or seek legal guidance from a private attorney.
>
> "If they do speak to an attorney, then they are dead," he said. "The State Attorney's Office will do whatever is necessary to not only terminate them, but destroy their reputations in the process."
>
> Jackelyn Barnard, spokeswoman for Corey and the State Attorney's Office, did not return phone calls or emails for comment.

This is why I have to move to a very red state. I don't want to deal with a bunch of leftists who don't know right from wrong. I don't want to be prosecuted by people who have no respect for the law, and are just looking to push a political agenda.

# What motivates William Lane Craig and why is he so effective?

**Wintery Knight** · 14 July 2013 · Archived copy · Original

Nathan Schneider, who wrote a balanced profile of Dr. Craig for the Chronicle of Higher Education a few weeks back, has written an even more in-depth profile of Christianity's ablest defender.

Here's the introduction:

> Nobody—or just about nobody, depending on whom you ask—beats William Lane Craig in a debate about the existence of God, or the resurrection of Jesus, or any topic of that sort. During their debate at Notre Dame in April of last year, New Atheist author Sam Harris referred to Craig as "the one Christian apologist who seems to have put the fear of God into many of my fellow atheists."
>
> Over the course of working on my book about how people search for proof of God's existence, I had the chance to spend a generous amount of time with Craig, both in the Atlanta area where he lives and at Biola University, an evangelical school on the outskirts of Los Angeles, where he teaches a few weeks out of the year. For the book, I've gotten to write about ideas like his "kalam cosmological argument," one of the most-cited ideas of its generation in philosophy of religion, which fuses medieval Muslims with modern cosmology. I also tell of his entrepreneurial savvy in turning the Evangelical Philosophical Society into an academic organization that moonlights as a slick-as-a-banana apologetics platform for changing hearts like yours and mine. But none of that quite captures the man's role as a sage and exemplar, in which he renders something like the upbuilding service Oprah provides to home-bound American women, except that his acolytes are the precocious set among conservative, evangelical, young-adult males. He makes me almost wish I were that kind of conservative evangelical myself—which is, to him, the point.
>
> Craig dresses impeccably and professorially, often with a buttoned shirt and a patterned blazer, sweater, or sweater-vest. His dimples hint at a basic innocence that can be startling when it pokes through the frontage of logic. I find in Craig the decency associated with an era I am too young to be nostalgic for, and which I've been taught to imagine was imperialistic, sexist, homophobic, narrow-minded, or otherwise regressive. His rationalizations of certain parts of the Hebrew Bible can sound like he's okay with genocide. Yet none of these accusations quite sticks to him; none is even comprehensible in the cosmic snow-globe within which he expertly thinks his way through life, whose sole and constant storyline is bringing more and more souls to a saving knowledge of the one true Lord and Savior, Jesus Christ.
>
> I live in a different snow-globe from Craig's. Nevertheless, I've gained a lot from the lessons I learned with him, and from his carefully crafted advice, and from his answers to my questions. ("I may not answer, but you can ask!" he once warned.) They've improved my productivity, and my relationship with loved ones, and my physical fitness. It would be selfish if I did not pass some of these lessons on, in synthesized and practicable form, to you.

The article covers 7 points about Dr. Craig:

1. **Do Everything Like It's a Ministry**
2. **Make a Covenant with Your Wife**
3. **Organize the Day**
4. **Turn Weakness into Strength**
5. **Be Prepared**
6. **Remember That Time Is Everything—and Nothing**
7. **Love God and Authority**

And here's one that I found fascinating, being single myself:

> **3. Organize the Day**
>
> There was a time, says Craig, when he began to worry he was losing his knack for philosophy. “Honey,” he remembers telling Jan, “I don’t know what’s the matter with me. I just can’t seem to concentrate anymore. I used to be able to study all day long, and there was no problem, and now I find I just can’t concentrate anymore. My mind wanders, and I’m tired.” He was tempted to despair.
>
> “No, no, don’t be ridiculous!” she told him. “You just need to organize your day.”
>
> As usual, she was right. She put him on a new schedule: starting the workday with the hardest philosophical work in the morning, then lighter material, like his writing for popular audiences, after lunch. He doesn’t look at his email until late afternoon, “when my brain is really fried.” (For fear of being bombarded with mail, he doesn’t even share his email address with his graduate students.) Soon after trying this regime, he regained his philosophical powers completely.
>
> The couple’s life together, at home in the suburbs of Atlanta, is a picture of (a certain kind of) teamwork. Craig wakes up each morning at 5:30, and begins the day with devotional time, reading from the Church Fathers and the New Testament in Greek, and then he prays for the spread of the gospel in some benighted part of the world, with the help of the *Operation World* handbook. Soon, Jan is up. They have coffee together (which he dislikes, but recommends for the health and social benefits), after which he goes down to the weight room for an hour of exercise. By the time he reemerges, she has a hot breakfast ready and waiting—sometimes as elaborate, he says, as ham and eggs and pumpkin waffles with whipped cream and strawberries. (“She’s a fabulous cook.”) He’ll return downstairs for an intensive morning of scholarship, and reemerge for the hot lunch Jan has prepared. Then, he’s back downstairs for the lighter work of the afternoon, culminating in emails, which he responds to in longhand and she has often been the one to type out and send, since his rare neuromuscular disease—more on that in a moment—renders him unable to type. Between meals and typing sessions, Jan plays the stock market. Before long dinner is ready, and they eat, and spend the evening together, watching TV and drinking red wine (which he also dislikes, but also recommends for the health and social benefits).
>
> “She’s not an intellectual herself,” Craig says of his wife, “but she appreciates the value of what I do, and that’s what matters.” One would hope that this is true, because she has typed out all of his papers, books, and both doctoral dissertations. Would that we all had such devoted help, though it may be untenable in the present economic climate for those scholars among us unable to garner five-figure speaking fees. We can at least hold off on our email for a few hours—which I have since done, to enormous benefit.

It’s very interesting to read this because it’s got lots of positive and negative points. On the one hand, he finds Dr. Craig’s conservative beliefs and exclusive positions difficult to accept. On the other hand, he has to admit that Dr. Craig really believes what he says he believes, and he’s very good at persuading others. He’s done his homework. I think the biggest problem that a person has with accepting Christianity is re-orienting the will. Another big problem is being willing to be disapproved of by non-Christians. Even if they can’t beat you, the pressure to compromise and please others makes many people shy away from Christianity.

This new profile of Dr. Craig is getting tons of likes and shares on Facebook, so give it a look. Be sure and share it on Facebook and tweet it, too.

# Suzanne Venker on the decline of men and male roles

**Wintery Knight** · 14 July 2013 · Archived copy · Original

Fox News editorial from a woman who defends men.

Excerpt:

> In November of last year, I wrote an article for Fox News called The War on Men (which I subsequently expanded to an eBook). To keep it pithy, in the piece I focused on one effect of this war: the lack of marriageable men. But there's so much more to it. The truth is, men have become second-class citizens.
>
> The most obvious proof is male bashing in the media. It is rampant and irrefutable. From sit-coms and commercials that portray dad as an idiot to biased news reports about the state of American men, males are pounced on left and right. And that's just the beginning.

She talks about the problems that boys face in feminized schools, and also in university, and then explains some of the reasons why men are shying away from marriage:

> When men become husbands and fathers, things get really bad. In family courts throughout America, men are routinely stripped of their rights and due process. The Violence Against Women Act (VAWA) is easily used against them since its definition of violence is so broad that virtually any conflict between partners can be considered abuse.
>
> "If a woman gets angry for any reason, she can simply accuse a man and men are just assumed guilty in our society," notes Dr. Helen Smith, author of the new book, "Men on Strike." This is particularly heinous since, as Smith adds, violence in domestic relations "is almost 50% from men and 50% from women."
>
> Shocked? If so, that's in part because the media don't believe men can be victims of domestic violence—so they don't report it. They would rather feed off stories that paint women as victims. And in so doing, they've convinced America there's a war on women.
>
> Yet it is males who suffer in our society. From boyhood through adulthood, the White American Male must fight his way through a litany of taunts, assumptions and grievances about his very existence. His oppression is unlike anything American women have faced. Unlike women, however, men don't organize and form groups when they've been persecuted. They just bow out of the game.
>
> America needs to wake up. We have swung the pendulum too far in the other direction—from a man's world to a woman's world.
>
> That's not equality. That's revenge.

It's not just the American White Male who sees these problems. I am an American Brown Male, and I have the same problems.

Is she right that men and women commit domestic violence equally? That's not what we are told in school and in the media, but let's look at the studies and see.

**Studies on domestic violence**

Let's see what's happening with domestic violence rates in the UK.

Excerpt:

> Data from Home Office statistical bulletins and the British Crime Survey show that men made up about 40% of domestic violence victims each year between 2004-05 and 2008-09, the last year for which figures are available. In 2006-07 men made up 43.4% of all those who had suffered partner abuse in the previous year,

> which rose to 45.5% in 2007-08 but fell to 37.7% in 2008-09.
>
> Similar or slightly larger numbers of men were subjected to severe force in an incident with their partner, according to the same documents. The figure stood at 48.6% in 2006-07, 48.3% the next year and 37.5% in 2008-09, Home Office statistics show.
>
> The 2008-09 bulletin states: "More than one in four women (28%) and around one in six men (16%) had experienced domestic abuse since the age of 16. These figures are equivalent to an estimated 4.5 million female victims of domestic abuse and 2.6 million male victims."
>
> In addition, "6% of women and 4% of men reported having experienced domestic abuse in the past year, equivalent to an estimated one million female victims of domestic abuse and 600,000 male victims".

And the numbers from the government of Canada are the same.

Canada numbers:

> An estimated 7% of women and 6% of men in a current or previous spousal relationship encountered spousal violence during the five years up to and including 2004, according to a comprehensive new report on family violence.

So it's pretty even. Women are about as likely to commit violence as men are. And in lesbian relationships, the rate of domestic violence is extremely high, from 17% to 45%, depending on the study. I think in general, women are more violent when there is no man present, because they have more difficulty restraining their emotions and resolving disagreements with rational arguments instead of fist, feet and weapons.

You also see higher rates of violence by mothers against their own children, than with fathers. Mothers are more than twice as likely to abuse children as fathers. Biological fathers are programmed to protect children – it's the stepfathers and live-in boyfriends who harm children. In fact, one of the roles of the father in the marriage is to restrain the woman's outbursts and anger so that the children are not harmed, and to protect them from threats from outside the home, too.

**The negative perception of men deters men from marrying**

I am very conscious of the perception that women have of men these days. Instead of looking to men for leadership, the presumption is that our role is to entertain women. And not to make judgments or claims of knowledge. The worst part is that most women don't know and don't care about how men are perceived today. I think that is the worst problem for me with wanting to get married. I just don't believe that there are any women out there who are really looking for a husband in the traditional sense of the word, and with the traditional male roles. The negative perception of men and the way that women prefer men who are non-judgmental, non-religious and ignorant are two major reasons why I personally am cold about marriage.

# The real story in the Trayvon Martin George Zimmerman trial is media bias

**Wintery Knight** · 14 July 2013 · Archived copy · Original

Here's an excellent article by John Nolte on Breitbart that documents the mainstream media's efforts to make a crisis out of an open-and-shut case of self-defense.

Here are a few of the distortions from the mainstream media: (links removed)

> **March 21, 2012 – CNN Falsely Accuses Zimmerman of Saying "#censoredByWK#"**
>
> Knowing full well the phony racial storm brewing around the Zimmerman case was about to have gasoline thrown on it the next day, CNN went to extraordinary lengths to claim Zimmerman had uttered the racial slur "#censoredByWK#" when he had not.
>
> This has to be watched to be believed.
>
> CNN wouldn't officially retract their defamation until April 5th, long after it was too late.
>
> **March 27, 2012 – NBC News Edits 911 Audio to Make Zimmerman Look Racist**
>
> On the storied *Today Show*, NBC News told America Zimmerman said this on the 911 call:
>
> ZIMMERMAN: This guy looks like he's up to no good. He looks black.
>
> When the truth is that the unedited audio actually went like this:
>
> ZIMMERMAN: This guy looks like he's up to no good, or he's on drugs or something. It's raining and he's just walking around, looking about.
>
> DISPATCHER: Okay. And this guy, is he white, black, or Hispanic?
>
> ZIMMERMAN: He looks black.
>
> After the fraudulent editing was discovered by the New Media (first by Breitbart News), former NBC News president Steve Capus would claim that the edit was "a mistake and not a deliberate act to misrepresent the phone call."
>
> Eventually, several NBC producers would be fired (without being named), and Zimmerman would file a lawsuit against NBC; it remains unresolved.
>
> **March 28, 2012 – ABC News Falsely Claims Zimmerman Wasn't Injured Night of Shooting**
>
> The day after NBC News released its falsified 911 bombshell, ABC News released a phony, hyped-up story of its own. Using grainy surveillance video of Zimmerman at the police station on the night of the shooting, ABC News claimed, "A police surveillance video taken the night that Trayvon Martin was shot dead shows no blood or bruises on George Zimmerman."
>
> Obviously, if true, this would go a long way towards proving Zimmerman was not in fear of his life the night of the shooting and had lied about being beaten up.
>
> The only problem is that the ABC News story was not true — not even close. The network didn't bother to enhance the video before breaking the news. Had they, Zimmerman'sbloody head would have been quite apparent.
>
> It would take four days for ABC to retract its falsehood.

Now just compare the biased coverage of the Zimmerman case with the non-coverage of the Gosnell case, where a black abortionist was murdering unborn and born children left, right and center for years.

As John Lott argued, there should not even have been a trial:

> The case was so weak that the local Sanford District Attorney refused to bring charges against Zimmerman. That is why, on the orders of the governor, an outside District Attorney, Angela Corey, had to be brought in to handle it.
>
> Sanford Police Chief Bill Lee was fired because he also refused to charge Zimmerman with a crime.
>
> Even the lead detective on the case, Christopher Serino, told the jury he believed Zimmerman's version of the events.

If the media was really concerned about violence against blacks, then they would be concerned about black-on-black violence.

Look at this article from the leftist UK Guardian.

Excerpt:

> Startling statistics reveal that between 1980-2008, African-Americans were six times more likely than whites to be victims of gun violence and seven times more likely to kill with guns than whites, according to the Justice Department. African-Americans represent a mere 13% of the US population yet more than 50% of federal prisoners are black. You can claim racial bias in the judicial system, but that doesn't explain all of it.
>
> Why aren't so-called black leaders outraged and marching over the recent shooting rampage in Chicago. During the 4 July holiday weekend, including the Wednesday leading up to it, 62 people were wounded by gun violence in Chicago and 12 others killed. The holiday shooting spree raised Chicago's homicide tally to 200 for the year. Last year about 500 people were killed, and most of those killing and being killed in Chicago are black. According to the Chicago Tribune, "blacks make up about 33% of the city's population, they accounted for nearly 78% of the homicide victims through the first six months of 2012".
>
> With the mainstream media's national attention on the Zimmerman murder trail, I think it's stunning that scant, if any, attention was given to the violence raging in Chicago or other cities across the country. As I've said many times during this case, Americans, especially black Americans, have come to accept blacks killing other blacks as normal.

Why does the mainstream media have nothing to say about that? Why does the black community have nothing to say about that? The real cause of violent crime is fatherlessness, but the left is in favor of promoting and subsidizing fatherlessness, so they're not going to say a word against it. Single mothers are one of the left's main constituencies come election time. It's disgusting that they want to prop up single mothers who make poor choices with men. Not to mention protecting the failed public school system and attacking vouchers that would help black children out of poverty. And not to mention the epidemic of abortion in the black community. Children deserve better than abortion, public schools and fatherlessness. But to help children, we have to start being honest about the causes of their real problems.

By the way, I have to point out that I am not white. I have brown skin. I have darker skin that Barack Obama. But unlike the mainstream media, when I see evil, I call it evil, regardless of people's skin color. The mainstream media is not interested in telling the truth. They are interested in creating divisions based on skin color. They are the real racists. They are the real destroyers.

This was nothing but a circus of media bias. See this related post for academic studies that document left-wing media bias.

# A closer look at the hook-up culture at the University of Pennsylvania

**Wintery Knight** · 15 July 2013 · Archived copy · Original

Stuart Schneiderman linked to a balanced article from the New York Times Magazine which offers scary insights into the hook-up culture at one of our elite universities.

First, feminism is definitely a driver of the hook-up culture, and women are voluntarily choosing it:

> At 11 on a weeknight earlier this year, her work finished, a slim, pretty junior at the University of Pennsylvania did what she often does when she has a little free time. She texted her regular hookup — the guy she is sleeping with but not dating. What was he up to? He texted back: Come over. So she did. They watched a little TV, had sex and went to sleep.
>
> Their relationship, she noted, is not about the meeting of two souls.
>
> "We don't really like each other in person, sober," she said, adding that "we literally can't sit down and have coffee."
>
> Ask her why she hasn't had a relationship at Penn, and she won't complain about the death of courtship or men who won't commit. Instead, she'll talk about "cost-benefit" analyses and the "low risk and low investment costs" of hooking up.
>
> "I positioned myself in college in such a way that I can't have a meaningful romantic relationship, because I'm always busy and the people that I am interested in are always busy, too," she said.
>
> "And I know everyone says, 'Make time, make time,' " said the woman, who spoke on the condition of anonymity but agreed to be identified by her middle initial, which is A. "But there are so many other things going on in my life that I find so important that I just, like, can't make time, and I don't want to make time."
>
> It is by now pretty well understood that traditional dating in college has mostly gone the way of the landline, replaced by "hooking up" — an ambiguous term that can signify anything from making out to oral sex to intercourse — without the emotional entanglement of a relationship.
>
> Until recently, those who studied the rise of hookup culture had generally assumed that it was driven by men, and that women were reluctant participants, more interested in romance than in casual sexual encounters. But there is an increasing realization that young women are propelling it, too.
>
> Hanna Rosin, in her recent book, "The End of Men," argues that hooking up is a functional strategy for today's hard-charging and ambitious young women, allowing them to have enjoyable sex lives while focusing most of their energy on academic and professional goals.

And a bit more about "A":

> For A., college is an endless series of competitions: to get into student clubs, some of which demand multiple rounds of interviews; to be selected for special research projects and the choicest internships; and, in the end, to land the most elite job offers.
>
> As A. explained her schedule, "If I'm sober, I'm working."
>
> In such an overburdened college life, she said, it was rare for her and her friends to find a relationship worth investing time in, **and many people avoided commitment because they assumed that someone better would always come along.**
>
> "We are very aware of cost-benefit issues and trading up and trading down, so no one wants to be too tied to someone that, you know, may not be the person they want to be with in a couple of months," she said.

> Instead, she enjoyed casual sex on her terms — often late at night, after a few drinks, and never at her place, she noted, because then she would have to wash the sheets.
>
> […]"'I've always heard this phrase, 'Oh, marriage is great, or relationships are great — you get to go on this journey of change together,' " she said. "That sounds terrible.
>
> "I don't want to go through those changes with you. I want you to have changed and become enough of your own person so that when you meet me, we can have a stable life and be very happy."
>
> In the meantime, from A.'s perspective, she was in charge of her own sexuality.
>
> "I definitely wouldn't say I've regretted any of my one-night stands," she said.
>
> "I'm a true feminist," she added. "I'm a strong woman. I know what I want."
>
> At the same time, she didn't want the number of people she had slept with printed, and she said it was important to her to keep her sexual life separate from her image as a leader at Penn.
>
> "Ten years from now, no one will remember — I will not remember — who I have slept with," A. said. "But I will remember, like, my transcript, because it's still there. I will remember what I did. I will remember my accomplishments and places my name is hung on campus."

These high-powered feminist students are having sex with strangers because they are "hot", not because they are in love or because the man is marriage-enabled.

I think the key point about this is that these women think that they are actually on a path to marriage by focusing on themselves and their careers. Their alcohol abuse is a path to marriage. Their promiscuity with bad boy men who have no interest in marriage is a path to marriage. Their career and selfishness is a path to marriage. This despite the fact that research clearly shows that the number of sexual partners that a woman has before marrying directly impacts her ability to perform in a relationship. It raises her expectations of who she thinks she is entitled to while diminishing her ability to perform marriage obligations for a marriage-minded man.

Nothing that these women are doing is preparation for actual commitment and support. They can't even converse with men, much less do the duties of a wife. Their ability to choose a man who can perform actual husband/father duties is not being formed by study or courtship. There is no wisdom. There is no self-sacrifice. There is no chastity. There is no support. There is no communication. These women are pro-abortion – that's their view of the rights and dignity of children. They are pro-gay marriage – that's their view of providing for children's relationship needs. These are literally the worst women in the world to marry. Their ignorance of what they must do to be good wives and mothers, and their messed up criteria for choosing men who can be husband and fathers makes them the worst women in the world to marry.

Read this carefully:

> Some women went to college wanting a relationship, but when that seemed unlikely, they embraced hooking up as the best alternative. M., an athletic freshman with long legs and a button nose, arrived at college a virgin and planned to wait to have sex until she had her first boyfriend, something she expected to happen in college. But over the course of the fall, as she saw very few students forming relationships, she began to lose hope about finding a boyfriend and to see her virginity as a hindrance.
>
> "I could be here for four years and not date anyone," she said she realized. "Sometimes you are out, and there's a guy you really are attracted to, and you kind of want to go back home with him, but you kind of have that underlying, 'I can't, because I can't just lose my V-card to some random guy.' "
>
> At a party in the spring semester, she was taking a break from dancing when she ran into a guy she had had a class with in the fall. They started talking, then danced until the party was over. M. went back to his room, where they talked some more and then started making out.
>
> By this time, she said, "I wasn't very drunk — I was close to sober," which made her believe she could make a

> considered decision.
>
> “I’m like, ‘O.K., I could do this now,’ ” she recalled thinking. “ ‘He’s superhot, I like him, he’s nice. But I’m not going to expect anything out of it, either.’ ”
>
> The alternative, she said, was that “I could take the chance that one night I get really drunk and sleep with someone that I don’t want to sleep with, which probably is what would have ended up happening.”
>
> So she had sex with him. In the morning, he walked her home.
>
> “Honestly, all of my friends, they’re super envious, because I came back with the biggest smile on my face,” M. said. As she had expected, she and the guy remained friendly but nothing more. Yet she was still happy with her decision.
>
> “All of my friends are jealous, because I had such a great first experience,” she added. Over spring break, she slept with someone else.
>
> In general, she said, she thought that guys at Penn controlled the hookup culture. But women played a role as well.
>
> “It’s kind of like a spiral,” she said. “The girls adapt a little bit, because they stop expecting that they’re going to get a boyfriend — because if that’s all you’re trying to do, you’re going to be miserable. But at the same time, they want to, like, have contact with guys.” So they hook up and “try not to get attached.”
>
> Now, she said, she and her best friend had changed their romantic goals, from finding boyfriends to finding “hookup buddies,” which she described as “a guy that we don’t actually really like his personality, but we think is really attractive and hot and good in bed.”

I think I would really like everyone reading this to just read that over a few times, and let that sink in. You have a minority of good looking athletic men having sex with most of the women on campus, while the majority of men who opt-out of the hook-up culture and want to court and marry are left wondering where all the women went. And many of those will reinvent themselves as “bad boys” in order to at least get some contact with women, so that there are even fewer chaste, marriage-enabled men.

So, what are we seeing? We are seeing that women think of extra-marital sex as a form of recreation. When I was a student, I completed a Bachelor degree and Masters degree, both in computer science, and this is what I saw women doing. There was no interest in courting or marriage whatsoever, and no concern about preserving chastity or courting effectively with the goal of marriage. They did not want to hear about moral values, moral obligations, theological debates or apologetics. They were all into feeling good and being popular – a popularity facilitated by “hooking up” with good-looking promiscuous athletes.

I really recommend reading some of Dr. Schneiderman’s comments on this article. He is really not happy about it, and he puts the blame squarely on feminists. As do I. Radical feminism is the ideology that gave us abortion, fatherlessness and divorce come from. We should call it what it is: selfish and destructive.

Update: Nancy P. posted a link to this rebuttal to the NYT article on Facebook to talk me down from the ledge.

Quote:

> The article somehow overlooked a recent survey of 3,907 students that found only 1 in 10 people in college said they had had casual sex in college, with men being twice as likely as women to have such an encounter. Or that at a comparable Ivy League school, Harvard University, two-thirds of the class of 2013 said in a survey they had two or fewer sexual partners during college.

That’s good data that does calm me down a little.

# Jim Spiegel: the free will theodicy and the soul-making theodicy

**Wintery Knight** · 15 July 2013 · Archived copy · Original

Here's an interesting post about two of the better known defenses to the problem of evil, from philosopher Jim Spiegel.

Here is his introduction:

> The evidential problem of evil presents the theist with the burden of explaining why an almighty and all-good God would permit evil. Many such reasons, known as theodicies, have been proposed as solutions to this problem. Two of the more promising among these are the free will theodicy and the soul-making theodicy. While each of these approaches has strong proponents, rare are those who advocate the use of bothin response to the problem of evil. In fact, it is often the case that defenders of one are strong critics of the other. Given that theists, and more specifically Christian apologists, share the conviction that the evidential objection from evil fails and that theism is quite reasonable despite the reality of evil, it is curious that there isn't more interest in embracing both of these theodicies as helpful responses to the problem. In what follows I want to offer a comparative analysis of these two theodicies in hopes of both understanding the divide between their proponents and making the case that the two are best used in tandem when dealing with the problem of evil. Towards the latter end I hope to show that these theodicies have more in common than has been traditionally thought and that their differences have more to do with their divergent aims than their relative merits as potential solutions to the problem of evil.

I am not going to be able to summarize his entire case in this post, but I at least wanted everyone to know what the two theodicies were. In the case of the free will theodicy, evil is permitted because without it we could not have free will. And free will is necessary in order to achieve certain higher moral goods.

Dr. Spiegel explains:

> First, this theodicy places the blame for moral evil entirely on human beings. God did nothing wrong in creating us with the capacity to sin, however much he might have anticipated our rebellion. Second, notice the high premium that is placed on self-determination. Proponents of the free will theodicy typically assume that personal autonomy is so valuable that it makes the risk of moral evil worthwhile. But it is not really self-determination itself that is of ultimate value. The ultimate good for which such autonomy is a critical means is genuine loving relationships between persons, whether between humans or between God and humans.

And here is his explanation of the soul-making theodicy:

> Defenders of the soul-making theodicy point out that there are numerous moral virtues that cannot be achieved except by struggling against or in the midst of evil. These "second order" goods include patience, courage, sympathy, forgiveness, mercy, perseverance, overcoming temptation, and much greater versions of faith, hope, love, and friendship. What sense could be made of the trait of courage in a world in which there was no danger and nothing to fear? How could one show sympathy if there were no sorrow or affliction with which to sympathize? How might one forgive where there has been no offense? And how can one be said to "persevere" through perfectly pleasant circumstances? These characteristics-courage, sympathy, forgiveness, perseverance-are not just good traits. They are, among the greatest of all character traits. And, according to Hick and other proponents of the soul-making theodicy, it is worth God's permitting evil in order to realize these goods.

I'm going to confess my ignorance and say that I always used both of these when discussing the problems of evil and suffering. It never occurred to me that they would be in conflict. So I enjoyed reading the rest of the paper where Dr. Spiegel argues that far from being in conflict, the two are actually dependent on each other! The

discussion of the two kinds of theodicies is actually really good for understanding the details of them. I think it's going to be worth for me to read it over a few times and then explain it to someone else, so that I really get it straight. I just have to find a willing victim to listen while I work it through.

# Dennis Prager interviews Stephen C. Meyer about intelligent design

**Wintery Knight** · 15 July 2013 · Archived copy · Original

This episode of the Dennis Prager show is actually from the day that "Darwin's Doubt" came out. Darwin's Doubt is the new book on the sudden origin of animal body plans in the fossil record. Dennis had previously interviewed Dr. Meyer about his first book "Signature in the Cell", which was about the origin of life. I listen to the Dennis Prager show every day, if work permits. It's the only radio show I listen to regularly.

The MP3 file is here. (32 minutes)

Summary:

- What did Darwin have a doubt about? What is the Cambrian explosion?
- The mystery of the missing precursor fossil record for the Cambrian animals
- The mystery of the origin of all of the new body plans that appeared in the Cambrian explosion
- The problem of building a new animal is basically the problem of adding new code
- Mutations generally don't improve the quality of code but intelligent agents do improve it
- Do paleontologists acknowledge these problems? What is their solution to these problems?
- A new book by non-ID paleontologists Douglas and Valentine admits the two problems
- They argue that no known mechanism exists to explain the origin of these animal forms
- What has the reaction to Darwin's Doubt been from paleontologists?
- Stephen J. Gould's punctuated equilibrium theory: the fossil record shows stasis and jumps
- But Gould's theory did not propose a mechanism adequate to explain the stasis and jumps
- Caller Bob: what good is partial function? Why would an organism keep half-an-eye around?
- Meyer: exquisite organs in the Cambrian animals also come into being suddenly
- Is the book understandable by lay people? Could Dennis Prager understand it?
- Critiques of naturalistic attempts to explain the sudden origin of the Cambrian animal forms
- The Cambrian explosion is an explosion of information: where did it come from?
- Illustrating probabilities with combination locks: the product rule
- The search for the combination to the lock is bounded by the time available
- There is not unlimited time to generate this new biological information
- Prager: how can science conclude that a non-material explanation is the best explanation?
- Meyer: Darwin used the method of "inference to the best explanation" in his theory
- the book uses the same method of investigation that Darwin used
- the best explanation for the explosion of new information is an intelligent agent
- we are already familiar with intelligent causes creating information – we do it all the time
- information can be speech, writing, coding, etc., which human intelligence does all the time
- Prager: is the method of inferring an intelligent cause for this Cambrian data "creationism"?
- Meyer: ID is based on scientific evidence
- Meyer: Creationism is an interpretation or deduction from religious authority
- Meyer: ID is agnostic on the age of the Earth, Creationism requires a young Earth
- Caller Marty: life could have been brought here on asteroids
- Meyer: we don't have evidence to assess whether an alien intelligence was responsible

- Meyer: the theistic explanation is better because of the cosmology and fine-tuning arguments

It's very important for Christians to broaden out philosophical and historical arguments with scientific evidence. Most of the people reading this post are familiar with the Big Bang cosmology and the fine-tuning arguments. But the origin of life and the Cambrian explosion are two more areas that we all need to be aware of as much as we can. It probably wouldn't hurt to be familiar with the galactic and stellar habitability arguments made by Guillermo Gonzalez and Jay Richards, too. That's a good half-dozen scientific arguments, which is 6 more than any atheist you meet is likely to have. Why go about unarmed when the scientific data is right there waiting for you? Fill your hands.

Note: if you think that these books might be too difficult for you, then by all means pick up these three intelligent design DVDs for about $18. That will cover the origin of life, the Cambrian explosion and both habitability arguments. You can get a good look at the Big Bang and fine-tuning arguments in this lecture by Dr. William Lane Craig delivered at the University of Colorado (Boulder). If you want to see those two arguments presented in a debate, then get Dr. Craig's debate with atheist Christopher Hitchens on DVD for $11. Everybody reading this post should own those DVDs so you can show them to other people and change minds.

# Three labor union leaders write letter to Democrats attacking Obamacare

**Wintery Knight** · 16 July 2013 · Archived copy · Original

From the Wall Street Journal.

Excerpt:

> The roll out of President Obama's health care reform package was always going to be tricky, with vehement opposition from his political opponents and pushback from employers large and small. But after announcing last week that penalties for companies failing to comply with the law will be delayed by a year, the Affordable Care Act has a new, high profile set of dissenters: Unions.
>
> The leaders of three major U.S. unions, including the highly influential Teamsters, have sent a scathing open letter to Democratic leaders in Congress, warning that unless changes are made, President Obama's health care reform plan will "destroy the foundation of the 40 hour work week that is the backbone of the American middle class."
>
> If that's not bad enough, the Affordable Care Act, if not modified, will "destroy the very health and wellbeing of our members along with millions of other hardworking Americans," the letter says.

Here's one part from the letter than I think is worth posting:

> When you and the President sought our support for the Affordable Care Act (ACA), you pledged that if we liked the health plans we have now, we could keep them. Sadly, that promise is under threat. Right now, unless you and the Obama Administration enact an equitable fix, the ACA will shatter not only our hard-earned health benefits, but destroy the foundation of the 40 hour work week that is the backbone of the American middle class.
>
> [..]First, the law creates an incentive for employers to keep employees' work hours below 30 hours a week. Numerous employers have begun to cut workers' hours to avoid this obligation, and many of them are doing so openly. The impact is two-fold: fewer hours means less pay while also losing our current health benefits.

Of course, when the unions were busy lobbying for the passage of Obamacare, conservative voices were talking about all of these defects in the law, and more besides. But the unions weren't listening. Labor unions just don't understand economics, and that's why people need to be careful about taking their advice on economic issues.

# Teen heroes rescue abducted child in Lancaster, Pennsylvania

**Wintery Knight** · 16 July 2013 · Archived copy · Original

Here's a great hero story from Lancaster Online.

Excerpt:

> [Temar] Boggs, a McCaskey freshman who lives in Gable Park Woods, had been hanging out with a friend at nearby Lancaster Arms apartments and helping move a couch when a man came by asking if they'd seen a missing girl.
>
> They hadn't, Boggs said, so they went to watch TV.
>
> A short time later, his friend went outside and saw lots of police officers and people from the neighborhood looking for the girl.
>
> Police said that the girl had been taken that afternoon from the 100 block of Jennings Drive.
>
> Boggs and about six friends joined the search.
>
> […][Boggs] and another friend, Chris Garcia, rode on area streets — Michelle Drive, St. Phillips Drive, Gable Park Road — looking for her.
>
> That's when a maroon car caught his eye. (He had gotten a bit ahead of Garcia.)
>
> The car was on Gable Park and turned around when it got near the top of a hill toward Millersville Pike, where Boggs said several police officers were gathered with the kind of cart used to carry an injured football player off the field.
>
> The driver, an older white man, then began quickly turning onto and out of side streets connecting to Gable Park, Boggs said.
>
> The neighborhood is something of a maze; many of its streets are cul-de-sacs.
>
> Boggs got close enough to the car to see a little girl inside. Garcia was nearby.
>
> The driver looked at Boggs and Garcia, then stopped the car at Gable Park and Betz Farm Road and pushed the girl out of the car. The driver then drove off, Boggs said.
>
> Boggs said he didn't see where the car went.
>
> "She runs to my arms and said, 'I need to see my mommy,' " Boggs said.
>
> Boggs scooped the girl onto his shoulders and began riding the bike toward home, but then decided that wasn't safe, so he carried her and walked back while Garcia pedaled along, guiding the bike Boggs had been using.
>
> Back at Lancaster Arms, when Boggs and Garcia arrived with the girl, someone summoned a firefighter or law enforcement officer.
>
> Boggs said the girl was reluctant to leave him and go to the official.
>
> "She didn't want to leave me because she thought they were going to do something to her. I said, 'No, it's OK,' " he said.
>
> […]Boggs doesn't see himself as a hero.
>
> "I'm just a normal person who did a thing that anybody else would do," he said.

That's a good positive story of young men being heroic.

# Bro-Choice: understanding the motivations of the pro-choice man-child

**Wintery Knight** · 16 July 2013 · Archived copy · Original

Ben Sherman: man-child

Ask the Bigot first alerted me to a post by a pro-abortion male (not man, male) in which he explains why males such as himself favor abortion.

Now the context of this post is the Texas bill banning abortions after 20 weeks.

Here's the point I want to focus on:

> How #HB2 Hurts Straight Texas Men
>
> Your sex life is at stake
>
> Can you think of anything that kills the vibe faster than a woman fearing a back-alley abortion? Making abortion essentially inaccessible in Texas will add an anxiety to sex that will drastically undercut its joys. **And don't be surprised if casual sex outside of relationships becomes far more difficult to come by.**
> It's clear: if the Legislature basically takes away a Texas woman's right to choose, having sex becomes a much, much riskier proposition for women and men.

Now let's see what AtB thinks of this. She writes:

> Hey Ben. BRO! Sex is not primarily recreational and women's bodies don't exist to serve your every-72-hours-discharge needs. Sex has life-creating properties, and this bill will make it harder for you to separate that reality from your weekend hook-ups.
>
> (An aside. LADIES. You are a fool to chance a lifetime connection with a man-child of this caliber. You and your future children deserve MUCH better. Free love has done so much damage to women and children. Sex without consequences makes us women exactly what we claim we don't want to be. Objectified, disrespected and used.)
>
> Unfortunately for you, Bro, the Texas House approved HB2 this morning. Much to the silent rejoicing of the in-utero babies created in your "relationships with women that may have lasted anywhere from a few minutes to many years," you might now have to act like a real man by living for someone other than yourself. Or perhaps, at least, stop treating women as sperm depositories.
>
> I know that this legislation puts your Peter Pan lifestyle at risk. But look at the bright side. If your sexual expression is limited by this legislation, you could always move to one of the 49 states where unfettered infanticide paves the way for your never-ending, hedonistic sexual "freedom and choice".

So this post by the man-child explains why pro-abortion men are pro-abortion. They basically think that they should be allowed to have recreational sex with a woman without having to deal with the consequences of their own actions. They think that it is OK to kill an innocent child aged 20 weeks or more in order to keep the flow of consequence-free recreational sex flowing. They think it's OK to motivate women to give then free recreational sex by using abortion as a form of birth control. Pro-abortion men think that it's OK to legalize what Kermit Gosnell was doing to women after 20 weeks, so that women continue to give them recreational sex without having to love and serve women in a lifelong commitment. Ben Sherman is the beneficiary of Kermit Gosnell's practice. Kermit Gosnell is Ben's enabler.

Before I go any further, let me say that according to the latest Gallup poll, more men are pro-life than not, and more women are pro-abortion than not. Young unmarried women are especially likely to vote for abortion and gay marriage (about 75% voted for Obama). This man-child Ben Sherman is the exception to the way that men normally are, while women on the other hand are more likely to agree with his conclusions about unborn children. Most young, unmarried women vote the way Ben Sherman votes. Let's get that clear. This man-child is the exception to the way men normally are.

My real concern about the man-child's point of view is this. How is it even possible that a woman would come within 10 feet of a man who said such a thing? It seems to me that women ought to prefer relationships with good men who have a worldview that grounds responsibility over hedonism. Women ought to prefer men who want to take responsibility for the well-being of others over the long term. Women ought to prefer men who want to protect the innocent and the weak. That sort of moral character used to be highly prized by women. Now they just seem to want "nice" – meaning inoffensive and entertaining.

When a man like Ben Sherman says what he said, it really makes me wonder about what women who choose him for sex are thinking about. When a woman pays attention to a man, she endorses his worldview. And vice versa. If women stopped talking to selfish, immoral men like Ben Sherman, then there would be no abortion. The man thinks that babies should die so that he can have a good time with no strings attached. He doesn't want to have to deal with the needs of others, he would rather use them for pleasure and then kill them when they stop pleasing him. Is that attractive in a man? Ben Sherman continues in his views because some women are rewarding him with sex.

Abortion plays right into the hands of men who want to use women merely for sex. Legal abortion = more casual sex for men without the inconvenience of a relationship where they might need to think of the woman as a person instead of a means to sexual pleasure. I am concerned by the trend away from formal courtship towards anonymous hook-up sex. Abortion is definitely one of the reasons why that is happening. If the group of women who give men sex without commitment grows, it will put even more pressure on women who want marriage to do things the right way. It gets harder and harder for marriage-minded women to hold out as sex without commitment leads to sex without any meaningful communication. We need to push back against the trend to treat women as objects, and women have a role to play in that: they can refuse pro-abortion men.

UPDATE: Another reaction here from my pro-life friend Neil Simpson.

# Panama seizes shipment of missile guidance equipment from Cuba bound for North Korea

**Wintery Knight** · 17 July 2013 · Archived copy · Original

RSN-75 Radar for SA-2 SAM
From Investors Business Daily.

Excerpt:

> Cuba, long derided in international policy circles as a basket case and no threat to the U.S., has been caught smuggling weapons of war to North Korea in blatant violation of U.N. sanctions. This is a wake-up call.
>
> Sharp-eyed Panamanian authorities, watching the North Korean freighter Chong Chon Gang since June, received intelligence it might be shipping illegal drugs, something it had been caught doing before.
>
> As the vessel lumbered into the Atlantic side of the Panama Canal from Cuba, Panamanian authorities cornered the 450-foot rust-bucket, battled a maniacally violent crew who slashed ship lines to make it hard to unload the ship, and then watched as the ship's captain tried to kill himself before having a heart attack.
>
> After subduing the crew, the Panamanians found no drugs buried beneath sloppily packed brown sugar, but did find defensive RSN-75 "Fan Song" fire-control radar equipment for SA-2 surface-to-air missiles.
>
> The discovery, and the crew's behavior, were signs of something big the North Koreans didn't want known — weapons smuggling, a violation of both United Nations sanctions prohibiting all sales of weapons to North Korea and Panama's own laws governing the canal.
>
> "You cannot go around shipping undeclared weapons of war through the Panama Canal," declared Panamanian President Ricardo Martinelli, a U.S. ally, who tweeted a photo of the illegal shipment for the world to see.
>
> It's significant that the enabler of this violation of international law was none other than Cuba, which has worked hard to convince the Obama administration to drop all travel and trade sanctions against it — and which is currently negotiating a migration pact with the U.S. It's time to stop that right now, and sanction Cuba further.
>
> The brazen shipment of Russian-made weapons through Panama signaled that little has changed in Cuba — a state sponsor of global terror that has in fact been trying to destroy the U.S. since 1962.
>
> "This is a serious and alarming incident that reminds us that the North Korean regime continues to pursue its nuclear and ballistic programs, and will stop at nothing in that pursuit," said House Foreign Affairs

> Subcommittee Chairwoman Ileana Ros-Lehtinen. “It also illustrates that the Castro tyranny continues to aid and abet America’s enemies and continues to pose a national security threat to the United States so long as the Castro apparatchik holds control over the island.”
>
> It’s also the work of a rogue state. And at just 90 miles away, one that is as chillingly close to our shores as it is warm and friendly to North Korea.
>
> […]Although it’s unknown why North Korea, a major weapons exporter, is importing weapons from Cuba right now, defense analysts speculate that the weapons may be making their way back to Pyongyang for an upgrade and return to Cuba.
>
> That would be worrisome given that North Korea has said it means to strike the U.S. on its own home turf. What better launching pad could it ask for than Cuba?
>
> Two weeks ago, North Korea’s military commander visited Cuba to a red-carpet welcome. The visit raises questions as to what the two discussed — and, given the threat we see now, whether U.S. intelligence was aware of it.

If there is one thing that the United States definitely should not do, it’s dropping sanctions against Cuba.

# Greg Koukl: six things you have to believe to be a Christian

**Wintery Knight** · 17 July 2013 · Archived copy · Original

Here is the article on the Stand to Reason web site describing essential Christian beliefs.

Excerpt:

> The six essential doctrines would be: the Trinity, the deity and humanity of Christ, the bodily resurrection, man's fallenness and guilt, salvation by grace through faith by the substitutionary atonement of Jesus Christ, and belief that Jesus is the Messiah. And you have a seventh doctrine that strikes me as a functional necessity, that is the ultimate authority of Scripture without which none of the other truths can be affirmed or asserted with confidence.
>
> By the way, it's really important that people know these doctrines because many Christians are quite kind-hearted and they end up not being very careful about drawing distinctions between truth and falsity because they don't want to disagree. I understand that. But if you were really kind-hearted then you would be honest and straight-forward with people about the demands of the gospel on their lives. The demand of the gospel is that you believe particular things to be true. It's not just a matter of mere belief, as if these are just some incidental details of theology that you might happen to be mistaken about. And if you just happen to be mistaken, why should you go to hell because of that?
>
> You don't go to hell because you just happen to mistake a doctrine. You go to hell because you have broken God's law. It is very critical to understand that. God only judges guilty people. People get judged by God not because they mess up on their theology but because they are guilty. People who are guilty get condemned. That's it. There is a way to get around that but you've to know a couple of particular things that are true before you can take advantage of the forgiveness God offers. That's where the essential doctrines come in.

I think it's a good thing to go back and refresh ourselves on the basics of the gospel once in a while, and this article does a pretty good job of doing that in a basic, understandable way. I'm posting this for some of the non-Christians I know who ask me questions like this rather than apologetics questions. Sometimes people just want to ask what I believe, and not how I know what I believe. Well, this is what I believe.

# How brief was the period in which the Cambrian phyla suddenly appeared?

**Wintery Knight** · 17 July 2013 · Archived copy · Original

The Cambrian explosion refers to the sudden appearance of new body plans in the fossil record. ID proponents think that the period is between 5-10 million years at the most. Naturalists want to stretch out the period in which the body plans appear to tens of millions of years. The two sides can't both be right. What's the truth?

Evolution News has the answer.

Excerpt:

> To establish the length of the most explosive period of innovation within the Cambrian explosion itself, Meyer cites the work of MIT geochronologist Samuel Bowring and his colleagues as well the work of another group led by Smithsonian paleontologist Douglas Erwin. The Bowring-led study showed that (in their words) "the main period of **exponential diversification**" within the Cambrian lasted "only 5-6 million years" (emphasis added). Meyer explains:

> An analysis by MIT geochronologist Samuel Bowring has shown that the main pulse of Cambrian morphological innovation occurred in a sedimentary sequence spanning no more than 6 million years. Yet during this time representatives of at least sixteen completely novel phyla and about thirty classes first appeared in the rock record. In a more recent paper using a slightly different dating scheme, Douglas Erwin and colleagues similarly show that thirteen new phyla appear in a roughly 6-million-year window. (p. 73)

> […][T]ake a look first at the following figure that Bowring and his colleagues included in their definitive 1993 article, published in the journal Science. They use radiometric methods to date the different stages of the Cambrian period, including the crucial Tommotian and Atdabanian stages in which the greatest number of new animal phyla and classes arise. Note that the so-called Manykaian stage of the Cambrian period lasts about 10-14 million years. Note also that the main pulse of morphological innovation didn't begin during this stage but rather during the Tommotian and Atdabanian — a period that they describe as taking between "5 to 10 million years," and in a more detailed passage as taking about 5-6 million years.

> […]In the figure above, the Tommotian and Atdabanian stages of the Cambrian period together span only about 5 million years, starting at about 530 and ending about 525 million years ago. Bowring's figure also depicts the total number of classes and orders present at any given time during the Cambrian period. The biggest increases in morphological innovation occur during the Tommotian and Atdabanian stages. Indeed, during this period the number of known orders nearly quadruples. Moreover, Bowring and his colleagues also make clear that this period corresponds to the main pulse of Cambrian morphological innovation as measured by the number of new phyla and classes that first appear. They note that, while a few groups of animals do arise in the earliest Manykaian stage of the Cambrian, the most rapid period of "exponential increase of diversification," corresponding to the Tommotian and Atdabanian stages, "lasted only 5 to 6 m.y."

You can see the figure they are reference in the Evolution News article.

Also, check out these clips that explain the Cambrian explosion:

Part 1:

Part 2:

The first clip features James Valentine, a professor of biology at the University of California who just co-authored a new book on the Cambrian explosion and *is not* a proponent of intelligent design.

The consensus among scientists regarding the period of time *in which the new body plans appear* is 5-6 million years. Biologically speaking, that's a blink of an eye. You aren't going that kind of complexity and innovation in such a short period of time any more than you can expect to win the lottery by buying 5-6 million tickets when the odds of winning are 1 in a googol (10 to the 100th power – 1, followed by 100 zeroes). You don't have enough lottery tickets to make winning the lottery likely. Similarly, 5-6 million years is not enough time for naturalistic mechanisms to code brand new body plans from scratch. It would be like trying to research and write a Ph.D thesis during a single lunch hour. It's just not enough time to produce the amount of information that's required.

# DOJ won't prosecute government officials for unauthorized access of tax records

**Wintery Knight** · 18 July 2013 · Archived copy · Original

The Washington Times reports on a story of government tyranny.

Excerpt:

> A government watchdog has found for the first time that confidential tax records of several political candidates and campaign donors were improperly scrutinized by government officials, but the Justice Department has declined to prosecute any of the cases.
>
> Its investigators also are probing two allegations that the Internal Revenue Service "targeted for audit candidates for public office," the Treasury's inspector general for tax administration, J. Russell George, has privately told Sen. Chuck Grassley.
>
> In a written response to a request by Mr. Grassley, the ranking Republican on the Judiciary Committee, Mr. George said a review turned up four cases since 2006 in which unidentified government officials took part in "unauthorized access or disclosure of tax records of political donors or candidates," including one case he described as "willful." In four additional cases, Mr. George said, allegations of improper access ofIRS records were not substantiated by the evidence.
>
> Mr. Grassley has asked Attorney General Eric H. Holder Jr. to explain why the Justice Department chose not to prosecute any of the cases. The Iowa Republican told The Washington Times that the IRS "is required to act with neutrality and professionalism, not political bias."
>
> […]"The Justice Department should answer completely and not hide behind taxpayer confidentiality laws to avoid accountability for its decision not to prosecute a violation of taxpayer confidentiality laws," Mr. Grassley told The Times. "With the IRS on the hot seat over targeting certain political groups, it's particularly troubling to learn about 'willful unauthorized access' of tax records involving individuals who were candidates for office or political donors. The public needs to know whether the decision not to prosecute these violations was politically motivated and whether the individuals responsible were held accountable in any other way."

But do you know who the Department of Justice will prosecute, after he's been found innocent in a trial that should never even have occurred? George Zimmerman. It doesn't matter if he's innocent, he has to be persecuted to make a point. Meanwhile, the real criminals in the IRS get a pass from the real criminals in the Department of Justice.

The latest news from the leftist Washington Post on the IRS scandal is that it is now confirmed that the targeting of conservatives was not the work of a few low-level employees in Cincinnati.

Excerpt:

> The chief counsel's office for the Internal Revenue Service, headed by a political appointee of President Obama, helped develop the agency's problematic guidelines for reviewing "tea party" cases, according to a top IRS attorney.
>
> In interviews with congressional investigators, IRS lawyer Carter Hull said his superiors told him that the chief counsel's office, led by William Wilkins, would need to review some of the first applications the agency screened for additional scrutiny because of potential political activity.
>
> Previous accounts from IRS employees had shown that Washington IRS officials were involved in the controversy, but Hull's comments represent the closest connection to the White House to date.

Oh, but I'm sure that the Obama administration is doing everything possible to bring the criminals (themselves) to

justice. In between smuggling arms to Mexican drug cartels and covering up Benghazi, I mean.

# New report exposes NHS socialized medicine as an unmitigated disaster

**Wintery Knight** · 18 July 2013 · Archived copy · Original

The UK Telegraph reports on the sorry state of socialist Britain. (H/T Dina)

Excerpt:

> Eleven NHS trusts were put into "special measures" after an investigation found thousands of patients died needlessly because of poor care.

> The report blamed poor staffing levels and lack of oversight, and said that staff did not address the needs of patients. It concluded the hospitals investigated were "trapped in mediocrity".
>
> […]The review, ordered by the Prime Minister, began in February following the public inquiry into the scandal at Mid Staffordshire Hospital Foundation Trust, where up to 1,200 people died amid "appalling" failings in care.

> Inspectors visited 21 hospitals, run by 14 NHS trusts, which had the highest recent mortality rates in England. They found that some of the risks to patients were so severe that they were forced to step in immediately.
>
> […]At Buckinghamshire Healthcare NHS Trust, junior doctors described a "frightening" workload which left them responsible for up to 250 patients at weekends. Elderly patients were left on the lavatory with the door open, while others were left on trolleys for hours on end. At one of the trust's community hospitals, nurses were forced to call 999 because there were not enough doctors.
>
> At Blackpool Teaching Hospitals Foundation Trust, patients' families had to feed other patients because nurses were busy while other vulnerable elderly people were left in soiled conditions. At Northern Lincolnshire and Goole NHS Foundation Trust, relatives said they were not only washing and dressing patients but turning them to prevent bed sores. Receptionists were left to take decisions about how quickly patients were seen in A&E, as happened in Mid Staffs.
>
> Sir Bruce said: "For me this is in many ways a difficult day for the NHS — because we are laying bare some truths. On the other hand, the transparency with which this review has been conducted, I hope will be a turning point for the NHS."
>
> Dirt and dust was found to be "ingrained" on the wards at North Cumbria University Hospitals NHS Trust and two operating theatres were shut immediately due to poor hygiene.
>
> Figures showed up to 13,000 excess deaths since 2005 at the 14 trusts investigated, advisers to the review said.
>
> "No statistics are perfect but mortality rates suggest that since 2005 thousands more people may have died that would normally be expected at the 14 trusts reviewed," Mr Hunt told the Commons.
>
> At Basildon and Thurrock University Hospitals NHS Foundation Trust, up to 1,600 people more than expected may have died during the period. Inspectors found patients stayed up to two weeks in temporary areas without shower facilities. Others were left in ambulances "stacked" outside A&E departments, or waiting hours on trolleys.
>
> At East Lancashire Hospitals NHS Trust, high numbers of stillbirths at the maternity unit — eight in March — were never investigated, nor reported to the trust's board. An elderly woman was discharged at 3am and told she had "no choice", inspectors found.
>
> Patients at George Eliot Hospital waited up to 10 days to see a senior doctor. Nurses were not trained to treat

> bedsores, leaving patients in crippling pain. At Sherwood Forest Hospital NHS Foundation Trust, inspectors found significant backlogs of scans and X-rays which had never been examined, and complaints which dated back three years.
>
> At Tameside Hospital NHS Foundation Trust, whose chief executive and medical director resigned this month, wards had no doctors in charge at nights, while patients were shifted from ward to ward.
>
> At United Lincolnshire Hospitals NHS Trust there were 12 “never events” — incidents so serious, such as operations on the wrong part of the body, or surgical instruments left inside a patient, that they should never occur — in three years. Patients felt too frightened to complain in case it led to worse care, the report found.

What happened? How is it that UK citizens and businesses pay over half their incomes to the government, and yet the government cannot even provide basic health care for customers?

**The missing factor**

Let Dr. Walter Williams, professor of economics at George Mason University, explain why the NHS has failed to please their customers:

The NHS is what happens when people repeatedly elect governments that are ignorant of basic economics.

# Miriam Grossman: a brief history of sex education

**Wintery Knight** · 19 July 2013 · Archived copy · Original

Miriam Grossman is a psychiatrist at UCLA who helps the students there. She's written two books on sex and college students, and I've gotten both of them. Here's an article from the Public Discourse authored by her.

First, she explains that sex education today is not about biology, it's about advocacy:

> Now we have *comprehensive sexuality education*. It includes discussion of identity, gender, reproductive rights, and discrimination. Children learn that they're sexual from birth, and that the proper time for sexual activity is when they feel ready. They're taught that they have rights to pleasure, birth control, and abortion.
>
> The terms husband and wife aren't used, the union of man and woman is one of several options, and morality? Well, that's judging, and judging is not allowed.
>
> You won't find much biology in sexuality education, but there's voluminous information on the varieties of sexual expression, the pros and cons of different contraceptives and abortions, and the harms of gender stereotypes.
>
> Gender itself is a complicated matter. A boy might turn into a man, a woman, or something else. A girl might feel she was born in the wrong body, and want her breasts removed. This is all normal, children learn.
>
> There are over two dozen sexually transmitted diseases, and infection with one of these "lovebugs" is considered by some to be a part of growing up. A doctor declares on YouTube, "Expect to have HPV once you become sexually intimate. All of us get it."
>
> And childhood innocence? Forget it! Material created for children makes most *adults* uncomfortable. On websites recommended to students, nothing is taboo—sadomasochism, polyamory, and what were once called "deviant" behaviors . . . they're all good.

Here's how it came to be:

> [I]n 1964 Dr. Mary Calderone founded the Sexuality Information and Education Council of the United States (SIECUS). This is the group behind the sexuality education guidelines published by UNESCO, aggressively promoted to nations all over the world. Calderone created SIECUS with seed money provided by Hugh Hefner.
>
> Like Kinsey, she was on a crusade to change society. Sex education has too much negativity, she insisted, too much focus on unwanted pregnancy and diseases. The real problem, she insisted, following Kinsey, was that society is puritanical and repressed.
>
> There were too many nos in sex ed. The approach of SIECUS, Calderone promised, would be based on yesses. Proper sex ed would teach children that from the day they're born they are sexual beings, and that the expression of their sexuality is positive, natural, and healthy.
>
> She told parents, "Children are sexual and think sexual thoughts and do sexual things . . . parents must accept and honor their child's erotic potential." She also told them, "Professionals who study children have recently affirmed the strong sexuality of the newborn."
>
> What did it mean, exactly, to be open and positive, and to replace the nos of sex education with yesses? What did it mean to "break from traditional views"?
>
> It meant more than premarital and extramarital sex. Much more. Modern sex ed was about breaking boundaries. There were officials within SIECUS who were so radical that they argued publicly for relaxing the taboos against adult/child sexuality, even incest. Wardell Pomeroy, for example, a disciple of Kinsey's who served as president of SIECUS, argued, "It is time to admit that incest need not be a perversion or a symptom of mental illness."

> *TIME* magazine described Pomeroy as part of the "pro-incest lobby." He wrote a book, *Boys & Sex*, for grades six and up. There he argued that "our sexual behavior…is like that of other animals….There is essentially nothing that humans do sexually that is abnormal." Calderone provided a blurb for the book jacket: "As I read your manuscript, I kept saying to myself, 'At last it is being said…'"
>
> Another figure to know is Dr. John Money. In 1955, he introduced the radical concept that maleness and femaleness are feelings, separate from anatomy and chromosomes. He was convinced we are born without gender, then conditioned by society to identify either as male or female.
>
> Money was a prominent psychologist; he's well respected to this day. He described pedophilia as "a love affair between an age-discrepant couple." Money was also part of the incest lobby: "For a child to have a sexual experience with a relative," he wrote, "was not necessarily a problem." Like Kinsey, Money had deep emotional wounds. His identity as a man was troubled, and he molested young boys.
>
> What's so astonishing is that these men, these very disturbed men, using fraudulent data and theories that have been discredited, succeeded in transforming much of society. Today's sexuality education is based on their teachings.
>
> Once I understood who the founders were—Kinsey, Calderone, Pomeroy, Money, and others—I understood how we got to today's "comprehensive sexuality education." I knew how we had reached today's madness.
>
> It came from disturbed individuals with dangerous ideas—radical activists who wanted to create a society that would not only accept their pathology, but celebrate it!
>
> These men were pedophiles. It was in their interest to see children as miniature adults who enjoyed sexual contact, and had the right to consent to it, without other adults, or the law, interfering.
>
> Why would they value childhood innocence? They didn't believe that children were innocent to begin with. They also thought that restricting sex to husband and wife was unnatural and destructive. They weren't fighting disease, they were fighting ancient taboos; they were fighting biblical morality.
>
> The bottom line: sex ed began as a social movement, and it remains a social movement. Its goal is for students to be open to just about any form of sexual expression. Sex ed is not about preventing disease, it's about sexual freedom, or better—sexual license. It's about changing society, one child at a time.

I think that a lot of young people today are growing up in a household that is very different than what I grew up with. I grew up in a household where I had two parents biologically related to me who were married before they had me and are still married. People knew back then that the marital bond was stronger when two people had guarded their chastity prior to marrying one another. That stable marriage that I grew up with was an asset to my development. But thanks to sex education, which normalized recreational sex outside of marriage, children today are far less likely to have the kind of childhood that I had.

If you are growing up without a father, you should thank sex education. If you are growing up without a mother, you should thank sex education. If you were abused by a relative or your mothers boyfriend (or girlfriend), you should thank sex education. If you grew up fatherless and sought a boyfriend to have sex with before you could even vote, then thank sex education. If the premarital sex that your parents had caused them to divorce, thank sex education. If you are growing up in any household that is not a happily married long-lasting married household, thank sex education.

One last point. The fiscal conservative in me is appalled that this advocacy is all being taught in public schools with taxpayer money. You and I are paying these people to indoctrinate children in views that puts their safety, health and emotional well-being at risk. You and I are paying to have their sexually transmitted diseases treated. You and I are paying for their contraceptives and abortions. You and I are paying for the costs of teenage pregnancies and increases crime from fatherless boys. Thank sex education for all of these social ills.

# Rasmussen poll finds that men are more pro-life than women

**Wintery Knight** · 19 July 2013 · Archived copy · Original

Life News reports on a new poll that confirms the results from the previous Gallup poll, which showed that men are more likely to be pro-life than women.

Take a look:

> A new Rasmussen poll out today shows the support for the pro-abortion side is at its lowest level in three years, while support for the pro-life position is at its highest.
>
> Rasmussen asked: "Generally speaking, on the issue of abortion, do you consider yourself pro-choice or pro-life?"
>
> The Rasmussen Reports national telephone survey finds that 46% of Likely U.S. Voters now consider themselves pro-choice, the lowest finding in three years of regular surveying. Forty-three percent (43%) say they are pro-life, matching the highest finding to date. Eleven percent (11%) are undecided.
>
> And now the part that is very interesting:
>
> Fifty percent (50%) of women consider themselves pro-choice, compared to 42% of men. Forty-six percent (46%) of men and 41% of women are pro-life.
>
> Men are also more likely than women to say it is too easy to get an abortion in the United States and that there should be a waiting period. Women are more likely to think it's too hard to get an abortion. Men are also more likely to feel abortion is morally wrong most of the time.

So, men are pro-life by a margin of 46-42. This is similar to the Gallup poll released in May 2013, that showed that men were pro-life by a margin of 50-42. I think that the first instinct of a man is to protect and provide for the unborn child. Men tend to want to take responsibility for their own decisions. And they are OK with giving up happiness and pleasure in order to sacrifice for the child. Men are more moved to protect things that are weak and vulnerable, even if it means that they will be less free to pursue their own pleasures. That's how men really are, although that's often not what women believe about men, and it's not what is portrayed in the media about men.

In contrast, women are more likely to be pro-abortion, by a huge margin of 50-41. This is similar to the results from the Gallup poll of May 2013, which showed that women were more likely to be pro-abortion by a margin of 47-46. The split is even large when you notice that women are overwhelmingly more likely to vote for the unrestricted abortion policies of the Democrat party. Exit polls from the last two federal elections have shown that unmarried women in particular vote for Democrats 67% of the time. That number is even higher when you look at young, unmarried women.

**Not just unborn children, but born children**

Previously, I also documented how polls show that men are far more pro-marriage than women.

Excerpt:

> A new national poll points towards a gender gap over same-sex marriage.
>
> According to new numbers released Monday morning from Gallup, 50% of Americans say same-sex marriages should be legal. But break it down by gender, and 56% of women say same-sex couples should be legally allowed to marry, but only 42% of men feel the same way.

So what do we learn from this? We learn that despite massive systemic challenges in the education system and the workplace, that men have nevertheless not given up on the needs of unborn and born children.

I notice that there is a trend among Christian women to try to blame men for abortion and gay marriage, and to try to say that the reason that women have abortions is because of men. But this is false, of course. The reason why women have abortions is because they deliberately prefer men who are bad boys. They are attracted to these men, and these men want premarital sex. They give them the sex in order to be liked by these bad men. They choose the bad men. The good men who are chaste and marriage minded are passed over. You can read about it in the article I blogged about earlier in the week about the hook-up culture, and see a study on the hook-up culture from the Institute of American Values too. And remember that the hook-up culture is praised by feminist leaders. They are the ones who wanted it.

Most women are attracted to bad men. Many cannot resist the attraction and choose the bad men. They are attracted to men who do not try to lead them or judge them on moral or spiritual issues. They go too far with them physically and bond to them and then cannot see their flaws. They eventually have sex with them to try to make them commit. Bad men don't commit when they are given sex, though. Then the women vote for abortion to get out of it – because they feel that they are victims. Then they blame all men for their own bad choices and claim that the consequences of their actions could not be predicted. They make themselves out to be victims. But the real victims are the children and the good men who are passed over.

None of this would be happening if women thought through what they really wanted – lifelong married love – and then 1) prepared themselves to be wives and mothers and 2) chose chaste men who were prepared to be fathers and husbands. They choose the wrong men. They pass over good men because we are "too strict". They deprive children of life or fathers. They blame men. It's that simple. The problem is that we are too scared to tell women that they are wrong about how they choose men.

A recent survey sent to me by Nancy P. even found that men are more interested in marriage and commitment than women. When will we realize where the problem really lies? Blaming men isn't the answer. We need to teach women to disregard the tingles and the peer pressure and pick the right man for the jobs of husband and father, based on the requirements of the male roles. And that means that we need to roll back feminism, and defeat the idea that man have no roles. Marriage-capable men only turn away from male roles when they see that women are not interested in marriage-minded men.

# Is the root cause of crime poverty or fatherlessness?

**Wintery Knight** · 19 July 2013 · Archived copy · Original

If we were really serious about stopping gun crime, then we should go after the root cause of gun crime. So what is that root cause? The answer might surprise you.

Here is Dr. Robert Rector of the Heritage Foundation to explain:

> Census data and the Fragile Families survey show that marriage can be extremely effective in reducing child poverty. But the positive effects of married fathers are not limited to income alone. Children raised by married parents have substantially better life outcomes compared to similar children raised in single-parent homes.
>
> When compared to children in intact married homes, children raised by single parents are more likely to have emotional and behavioral problems; be physically abused; smoke, drink, and use drugs; be aggressive; engage in violent, delinquent, and criminal behavior; have poor school performance; be expelled from school; and drop out of high school.[19] Many of these negative outcomes are associated with the higher poverty rates of single mothers. In many cases, however, the improvements in child well-being that are associated with marriage persist even after adjusting for differences in family income. This indicates that the father brings more to his home than just a paycheck.
>
> The effect of married fathers on child outcomes can be quite pronounced. For example, examination of families with the same race and same parental education shows that, when compared to intact married families, children from single-parent homes are:
>
> - More than twice as likely to be arrested for a juvenile crime;[20]
> - Twice as likely to be treated for emotional and behavioral problems;[21]
> - Roughly twice as likely to be suspended or expelled from school;[22] and
> - A third more likely to drop out before completing high school.[23]
>
> The effects of being raised in a single-parent home continue into adulthood. Comparing families of the same race and similar incomes, children from broken and single-parent homes are three times more likely to end up in jail by the time they reach age 30 than are children raised in intact married families. [24] Compared to girls raised in similar married families, girls from single-parent homes are more than twice as likely to have a child without being married, thereby repeating the negative cycle for another generation.[25]
>
> Finally, the decline of marriage generates poverty in future generations. Children living in single-parent homes are 50 percent more likely to experience poverty as adults when compared to children from intact married homes. This intergenerational poverty effect persists even after adjusting for the original differences in family income and poverty during childhood.[26]

People on the left claim that poverty causes crime, but they don't look for the root cause of poverty. The root cause of poverty is the decline of marriage, which produces fatherless children. Unfortunately, some people promote the decline of marriage because they do not like the "unequal gender roles" inherent in marriage. So what is the main tool that the anti-marriage people use to increase the number of fatherless children?

Dr. Michael Tanner of the libertarian Cato Institute explains one of the causes of fatherlessness in his testimony to Congress:

> Welfare contributes to crime in several ways. First, children from single-parent families are more likely to become involved in criminal activity. According to one study, children raised in single-parent families are one-third more likely to exhibit anti-social behavior.(3) Moreover, O'Neill found that, holding other variables constant, black children from single- parent households are twice as likely to commit crimes as black children

> from a family where the father is present. Nearly 70 percent of juveniles in state reform institutions come from fatherless homes, as do 43 percent of prison inmates.(4) Research indicates a direct correlation between crime rates and the number of single-parent families in a neighborhood.(5)
>
> As Barbara Dafoe Whitehead noted in her seminal article for The Atlantic Monthly:
>
> The relationship [between single-parent families and crime] is so strong that controlling for family configuration erases the relationship between race and crime and between low income and crime. This conclusion shows up time and again in the literature. The nation's mayors, as well as police officers, social workers, probation officers, and court officials, consistently point to family break up as the most important source of rising rates of crime.(6)
>
> At the same time, the evidence of a link between the availability of welfare and out-of-wedlock births is overwhelming. There have been 13 major studies of the relationship between the availability of welfare benefits and out-of-wedlock birth. Of these, 11 found a statistically significant correlation. Among the best of these studies is the work done by June O'Neill for the U.S. Department of Health and Human Services. Holding constant a wide range of variables, including income, education, and urban vs. suburban setting, the study found that a 50 percent increase in the value of AFDC and foodstamp payments led to a 43 percent increase in the number of out-of-wedlock births.(7) Likewise, research by Shelley Lundberg and Robert Plotnick of the University of Washington showed that an increase in welfare benefits of $200 per month per family increased the rate of out-of-wedlock births among teenagers by 150 percent.(8)
>
> The same results can be seen from welfare systems in other countries. For example, a recent study of the impact of Canada's social-welfare system on family structure concluded that "providing additional benefits to single parents encourages births of children to unwed women."(9)

The poverty that everyone complains about is not the root cause of crime. The poverty is caused by fatherlessness. The fatherlessness is caused by welfare. Fatherlessness is also caused by laws and policies that make it easier for people to divorce, e.g. – no-fault divorce laws. Again, it's people on the left who push for no-fault divorce laws. So the left is pushing two policies, welfare and no-fault divorce, which cause crime.

# J. Warner Wallace: the difference between murder and killing in the Bible

**Wintery Knight** · 20 July 2013 · Archived copy · Original

Here's former LAPD detective turned apologists J. Warner Wallace to explain what the Bible says about killing vs murder.

Excerpt:

> I occasionally present a talk on the nature of truth, and as part of this presentation, I discuss the existence of objective moral truth claims. I often ask my attendees if it is ever "OK" to kill someone. Every group typically contains a large number of people who believe the Christian worldview condemns the use of deadly force unilaterally. But the Scripture delineates a distinction between killing and murdering. "You shall not kill" is actually *not* a command found in the Ten Commandments. The command from scripture in the original language actually says "You shall not murder" (Exodus 20:13). The Hebrew word for "murder" literally means "the intentional, premeditated killing of another person with *malice*."

He then goes over the provisions governing murder in the laws of his home state of California.

And then this:

> It's interesting to note, however, these exceptions are *not* the invention of modern humans; they are simply a reflection of ancient Biblical Law. The Bible is the source for these modern laws and the exceptions come straight from the pages of scripture:
>
> **An accidental killing is not murder:**
>
> ***Exodus 21:12-13***
> *Anyone who strikes a man and kills him shall surely be put to death. However, if he does not do it intentionally, but God lets it happen, he is to flee to a place I will designate.*
>
> ***Numbers 35:22-25***
> *But if without hostility someone suddenly shoves another or throws something at him unintentionally or, without seeing him, drops a stone on him that could kill him, and he dies, then since he was not his enemy and he did not intend to harm him, the assembly must judge between him and the avenger of blood according to these regulations. The assembly must protect the one accused of murder from the avenger of blood and send him back to the city of refuge to which he fled.*
>
> **A killing performed in self-defense (or in defense of one's home) is not murder:**
>
> ***Exodus 22:2***
> *If a thief is caught breaking in and is struck so that he dies, the defender is not guilty of bloodshed*
>
> **A killing performed in an attempt to save the life of an innocent person is not murder:**
>
> ***Exodus 2:11-12***
> *One day, after Moses had grown up, he went out to where his own people were and watched them at their hard labor. He saw an Egyptian beating a Hebrew, one of his own people. Glancing this way and that and seeing no one, he killed the Egyptian and hid him in the sand. (God did not judge Moses as a murderer because he was protecting the life of the slave)*
>
> ***Genesis 14:14-16***
> *When Abram heard that his relative had been taken captive, he called out the 318 trained men born in his household and went in pursuit as far as Dan. During the night Abram divided his men to attack them and he routed them, pursuing them as far as Hobah, north of Damascus. He recovered all the goods and brought back*

> *his relative Lot and his possessions, together with the women and the other people. (God did not judge Abram as a murderer because he was protecting the life of Lot)*
>
> Killing becomes murder when (and only when) it is not properly justified, and the justifications are clear: you can use whatever force necessary to protect your own life from a hostile aggressor, or to save the life of an innocent from such imminent, life-threatening danger. The difference between the legal or illegal use of deadly force is really a matter of *motive*, *intent* and *justification*, and these distinctions come straight from the pages of Scripture.

Previously, I wrote a post featuring the famous theologian Wayne Grudem, where he takes a look at the concept of self-defense in the Bible and concludes that it is justified.

# Carson Weitnauer reviews the new DVD on hummingbird flight

**Wintery Knight** · 20 July 2013 · Archived copy · Original

Here is a review of a new DVD from Illustra Media about birds and flight. (H/T Apologetics 315)

Excerpt:

> First, the film features interviews with a variety of scientists, a philosopher, and a wildlife photographer. The full list includes Carsten Egevang, Thomas Emmel, Ann Gauger, Paul Nelson, Timothy Standish, and Dylan Winter. While some of the interviews felt a bit repetitive, they were generally woven together with skill, suggestively making the case for intelligent design. (One of the weakest moments is when one of them admits he wants to "make a shrine" to honor the birds).

I don't see why anything is wrong with that! These are *birds* we are talking about – not *cats*.

He continues:

> That's the power of the 'argument' in the film: they don't quote any holy books, they don't make up any "Christian" facts, they just explain, in some detail, how the different component parts of a bird makes avian flight possible. From the development of the egg, to the first flight of a new bird, to a microscopic view of the feathers, to the unique functionality of the hummingbird's tongue and the distinct nature of its flight, to the extraordinary coordination of the massive starling murmuration, and the unbelievable migration pattern of the artic tern, the question is raised: how could this have come about by an unguided process of survival of the fittest, random mutation, and lots of time?
>
> Flight is an "all or nothing proposition." Either you can fly or you can't. But to fly, birds require numerous, highly sophisticated systems to work in coordination: the rapid beating of the heart, the huge breast muscles to power the wings, an efficient respiratory system, a lightweight digestive system, navigational systems for migration, an internal gyroscope for stable flight, acute vision to identify food, and more. How could all of these interconnected systems have emerged, without any foresight or plan, to create the new ability to *fly*?
>
> Furthermore, it is clear that hummingbirds are a very unique kind of bird, with, for example, wings that can beat more than a hundred times *a second* and a heart that can beat more than 1,250 times *a minute*. Hummingbirds eat so much, the equivalent amount of daily food for an adult human would be 150 pounds a day! To accomplish this feeding frenzy, the tongue extends and withdraws a unique mechanism in *less than one-twentieth of a second, thousands of times a day*.
>
> The second line of argument is the comparison of birds with award-winning, groundbreaking examples of intelligently designed flying machines. That is, when you compare a Boeing 747 or the "Nano Air Vehicle" (an experimental surveillance drone), it is evident that the flying systems of birds are more advanced. Why, the film asks, if we so readily accept 'intelligent design' for 747s, are we averse to using this same explanation for birds?
>
> […]The third feature is a wide range of computer animations that provide detail and insight into various biological components. I was worried these might be cheesy or overwrought, but they are instead illuminating and interesting. Nor are they stuffed into the film to show off some fancy computer graphics, but inserted with purpose, to more emphatically make distinct points. The professional standards make these animations a strong addition to the overall effect of the film.

I already have this DVD, and I am going to watch it this weekend, and this review makes me even more interested in doing that. Sometimes I quote something from a review here and think "now the readers don't need to read it" but I really do recommend clicking through and reading this review of the Flight DVD. He's not just reviewing the

DVD, there are a lot of opinions and ideas in there!

I noticed that Carson had some words of caution about Paul Nelson and Tim Standish because they are young Earth creationists, but I don't think that is a problem because there is a huge difference between a Ken Ham or a Ken Hovind and a Paul Nelson or a Tim Standish. Paul Nelson has a PhD in philosophy of science from the University of Chicago and Tim Standish has a PhD in biology from George Mason University. They are also both involved with the intelligent design movement. These are not outsiders.

By the way, I posted previously about how scientists are trying to reverse engineer the design of the flight feature in the hummingbird system, for use in nanorobotics.

UPDATE: Eric Chabot of Ratio Christi has another review of it here.

# Clear thinking about Rachael Slick's departure from Christianity

**Wintery Knight** · 21 July 2013 · Archived copy · Original

I saw that Brian Auten of Apologetics 315 tweeted a post from Right Reason by philosopher Glenn Peoples about Rachael Slick, the daughter of CARM president Matt Slick. Rachael recently announced her departure from Christianity for atheism.

Here is the passage where she explains why she left Christianity:

> This changed one day during a conversation with my friend Alex. I had a habit of bouncing theological questions off him, and one particular day, I asked him this: If God was absolutely moral, because morality was absolute, and if the nature of "right" and "wrong" surpassed space, time, and existence, and if it was as much a fundamental property of reality as math, then why were some things a sin in the Old Testament but not a sin in the New Testament?

Now this is not necessarily basic apologetics, but it is fairly easy to respond to, and I posted something about it earlier in the week. I just want to point out that I don't really view these sorts of objections as serious objections, since the core of Christianity is about the existence of God and the resurrection of Jesus. Peripheral issues like Bible difficulties don't really matter if the core is sound. The main focus in Christian apologetics isn't on fine points of inerrancy or doctrine, it's on God's existence and the resurrection, which authenticates Jesus as the Messiah. More on that later.

I wanted to quote from the post that Brian found though, because I think this really explains some very important things that Christians need to understand in order to avoid these sorts of Bart Ehrman / Dan Barker de-conversion stories.

And here it is:

> To a Christian who up until now has taken the faith seriously an an intellectual level, holding a view that this faith is robust enough to withstand a bit of light prodding such as this, the solution would have been a bit of light (yes, actually very light) reading on the subject – and there is plenty to be done. This is to say nothing about the rather idiosyncratic view of morality expressed here (comparing moral truths to mathematical truths does not bode well!). And yet this moment of dorm room theology banter lead headlong to this:
>
> I still remember sitting there in my dorm room bunk bed, staring at the cheap plywood desk, and feeling something horrible shift inside me, a vast chasm opening up beneath my identity, and I could only sit there and watch it fall away into darkness.*The Bible is not infallible*, logic whispered from the depths, and I had no defense against it. *If it's not infallible, you've been basing your life's beliefs on the oral traditions of a Middle Eastern tribe. The Bible lied to you.*Everything I was, everything I knew, the structure of my reality, my society, and my sense of self suddenly crumbled away, and I was left naked. I was no longer a Christian. That thought was a punch to the gut, a wave of nausea and terror. Who was I, now, when all this had gone away? What did I know? What did I have to cling to? Where was my comfort? ??I didn't know it, but I was free.
>
> Dramatise much? You couldn't answer a much discussed question in theological ethics. You could have added a bit of learning at this point, but instead you make out that you intellectual world has been nuked. The closing statement sums it up better, I think: "I was free." And that was really the point of this. Here's my pick for the real culprit, in the next breath:
>
> For a long time I couldn't have sex with my boyfriend (of over a year by this point) without crippling guilt. I had anxiety that I was going to Hell. I felt like I was standing upon glass, and, though I knew it was safe, every time I glanced down I saw death.
>
> But over time – thanks to the deconversion, that changed. It's telling that she chose to draw attention to this.

> Numerous times I have seen people turn away from the faith, not because they became aware of new intellectual reasons to reject it, but because the appeal of remaining in the faith became dulled by the drive to live a life that was not compatible with it (and that number includes "apologists" for atheism). You see something, you want it. But you have this belief that you shouldn't do it. So, as is human nature, you rationalise. You re-create the world of truth around you and what you want. "Maybe this Christianity thing isn't true after all…" What changed? The evidence? Nope. The arguments are as good as ever. Your *will* is what has changed. This is confirmed by the celebratory comment that "Freedom is my God now." No doubt, and that is what you were pursuing. Christianity hindered you, so bye bye Christianity. As was shown in the study *Losing my Religion*, and as I commented in a recent podcast about why some reject Christianity, there is a correlation between having sex outside of marriage and giving up one's religion (usually Christian, in the American context in which the study was carried out). Other factors that correlate with abandoning the faith include drug and alcohol abuse, eating disorders and get this – *lacking* a higher education. But that's another matter, and of course does *not* answer questions about the truth or otherwise of atheistic or religious claims. It also makes sense that the time when a young person leaves their parents' home and out into an environment where a smorgasbord of choices are now available to them is the most likely time that they will walk away. The comments thread at the blog where this story is told is full of the usual and can be paraphrased thus: "Oh, you taught her to THINK? Big mistake Dad, of course she was going to walk away!" Not even close to the mark. It was not critical thinking that sunk this faith. It was desire, as it so often is. The intellectual reason offered is absolutely flimsy, and certainly not offered an intellectually respectable presentation.

I think that's very well said, and my experience with other decoverted fundamentalists has always been that they often had non-cognitive issues driving the deconversion:

- boyfriend and girlfriend issues
- popularity issues
- sexual activity / sexual orientation issues
- unrealistic expectations of a pain-free life
- unrealistic expectations of God providing financially
- unrealistic expectations of God making their foolish decisions "work out"

So here's my advice to parents who want to avoid this sort of rebellion.

First, don't concentrate on the inerrancy of the Bible as much as you emphasize the good philosophical and scientific arguments for a Creator/Designer. More effort should be put on the mainstream findings of science: cosmology, fine-tuning, origin of life, Cambrian explosion, galactic habitability, stellar habitability. The resurrection is also key, but should be defended with a minimal facts approach using mainstream historical methods – not by assuming inerrancy. The existence of God and the resurrection are the strong core of Christianity, not inerrancy. I am saying this as someone who believes in inerrancy for the autographs. It's better to lay a foundation rather than trying to defend too much.

Secondly, don't try to force children to act beyond what their worldview can bear. It is OK for you to have children and to go about doing your Christian ministry based on your convictions, without trying to demand that your kids operate at that level. Instead of telling them what to think, always try to show them both sides. Once a person sees a couple of William Lane Craig debates or Mike Licona debates, they are probably going to want to be like Craig and Licona naturally. But the main thing is that the actions have to be supported by knowledge. When the young person has taken the time to study on their own and sorted out the evidence for themselves, then they will be able to operate more and more authentically as a Christian. The studying comes first, and then the acting like a Christian comes second – at least in a challenging society like ours where we really have to know our stuff cold to stand firm. But you can't expect the actions before the studying.

Third, don't just rest your support or opposition to various positions on the Bible. For example your views on theism and the resurrection should be rooted in secular arguments and secular evidence. Consider it a joy when you can go outside the Bible and confirm something the Bible says with secular evidence. Especially scientific and historical evidence. Connecting the Bible to real world evidence eliminates the painful anxiety of being "separate" and "other". Always make the data the issue, not the position. The data can be debated more easily.

For example, if the issue is gay marriage, spend lots of time talking about the health effects of the gay lifestyle on gay men, the effects of same-sex parenting on children, the social costs of HIV/AIDS, the scientific evidence against the "gay gene", the low levels of stability and exclusivity in gay relationships, etc. Look – young people don't want to feel weird having to defend every moral conviction with the Bible in public. Teach them secular reasons for everything that the Bible says, and it will reduce their anxiety and make being a fully convinced Christian in public much easier.

I think that one of the biggest problems out there right now is that Christian men and women are under so much pressure to conform to the sexual standards of the day in order to have a boyfriend or girlfriend. Some people really want to have boyfriends and girlfriends who are first and foremost physically attractive, and their faith gets in the way of achieving that goal. They see superhot guys and superhot girls, and they think about how impressed their friends will be if they are "with" that person. Young Christians basically have a "God will provide the perfect person for me" view of relationships, and their method of figuring out who God wants is by having tingles, not by thinking about what marriage is and finding someone who can do the job. Very often, just being superhot is no guarantee of willingness to marry, though, and may actually be more of a guarantee that you are going to be pressured for sex. Did Rachael do a good job of choosing a marriage-minded boyfriend who values chasity and is ready to commit in order to get sex?

So what to do about that pressure for sex? Well, when I think about why I am totally convinced that premarital sex is stupid, it's because I want my future marriage to last. And I have looked at evidence from peer-reviewed studies that shows that the number of premarital sex partners is a threat to relationship quality and stability. I want to make effective Christian children, and to impact the church and the university. I want my marriage to be an example to others. A divorce wrecks all of those plans. With the evidence in my hand from mainstream research, it is much easier to accept and act on what the Bible says about premarital sex. The Bible doesn't have this data, we have to look outside the Bible to get the data to confirm it. Has Rachael looked outside the Bible to be persuasive about what the Bible says?

For a young person facing her non-Christian peers, parroting "the Bible says" is not as reasonable or defensible as saying "the Bible says, and mainstream scientific evidence confirms". We need to make evidence the foundation. The problem with young people is that they are surrounded by other young people who are just as clueless as they are. A pretty easy question from a young friend cannot easily be answered by a person who has a very limited knowledge apologetics gleaned from Christian rock music and television shows. What we need to do is to get them looking outside of their peer group for answers, and that means connecting them to real scholars with real logical arguments supported by real mainstream science and history. We need to connect the Bible to the data in the real world.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines

- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument

# Physicist Michael Strauss discusses Christianity and science at Stanford University

**Wintery Knight** · 21 July 2013 · Archived copy · Original

This is one of my favorite lectures, by one of the people I admire the most for his scientific work and robust, evangelical Christian faith.

**About Michael Strauss:**

His full biography is here. (I removed his links from my excerpt text below)

Excerpt:

> I had an interest in science and theology, so in 1977 I chose to go to Biola University where I could study both subjects in detail. I thoroughly enjoyed college and participated in intramural sports, was elected to student government, served as a resident assistant, competed in forensics, and studied a lot. As I neared college graduation my dual interest continued so I applied to seminary and to graduate school. After graduating *summa cum laude* from Biola, I decided to pursue a graduate degree in physics at UCLA.
>
> During my first few years of graduate school, I developed an increased interest in quantum mechanics and subatomic physics and decided to do research in a field that dealt with these subjects. I joined a High Energy Physics experimental group doing research at the Stanford Linear Accelerator Center (SLAC) and moved to the San Francisco Bay Area to actively participate in research at SLAC. I graduated in 1988 with my Ph.D in High Energy Physics (a.k.a. Elementary Particle Physics). If you would like to know more about High Energy Physics, the Particle Data Group at Lawrence Berkeley Laboratory has a very nice interactive adventure that teaches you all about the subject. My research advisor was professor Charles Buchanan and my disertation was titled "A Study of Lambda Polarization and Phi Spin Alignment in Electron-Positron Annihilation at 29 GeV as a Probe of Color Field Behavior."
>
> After graduation, I accepted a post-doctoral research position with the University of Massachusetts at Amherst. I continued to do research at SLAC where I joined the SLD experiment. My research interests centered on the SLD silicon pixel vertex detector. I wrote most of the offline software for this device, and did physics analysis which used the vertex detector, including tagging *b* quark events for flavor specific QCD (Quantum Chromodynamics) analysis. In the seven years I was employed by UMASS, I only spent 3 days on the Amherst campus. The rest of the time was spent in California.
>
> […]In August 1995, I accepted a job as an Assistant Professor of Physics at the University of Oklahoma (OU) in Norman, Oklahoma. The University of Oklahoma has a vibrant high energy physics research group involved in experiments at the Fermi National Accelerator Center (Fermilab), and CERN. I joined the DØ experiment at Fermilab where I continue to do research in elementary particle physics. As a member of the DØ collaboration I have made contributions to the testing of silicon sensors for the upgraded vertex detector, to the track finding algorithms, to a measurement of the photon production cross section which probes the gluon content of protons, and to other QCD measurements. I am currently studying properties of *B* mesons that contain a *b*-quark, the production cross section of jets coming from quarks and gluons, and other QCD analyses. At CERN, I am a collaborator on the ATLAS detector.
>
> I received tenure in 2001 and was promoted to the rank of Professor in the summer of 2010. Most of the time at OU I have taught introductory physics classes to physics majors, engineers, and life science majors. In these classes I have used a number of interactive techniques to facilitate student participation and learning. I have been privileged to win a few awards for my teaching. In 1999, the Associated Students selected me as the Outstanding Professor in the College of Arts and Science, and in 2000 I was awarded the BP AMOCO Foundation Good Teaching Award. In 2002, I was given the Regents Award for Superior Teaching. I received the Carlisle Mabrey and Lurine Mabrey Presidential Professorship in 2006 which is given to "faculty members

> who excel in all their professional activities and who relate those activities to the students they teach and mentor."

He seems to have done a fine job of integrating his faith with a solid career in physics research. It would be nice if we were churning out more like him, but that would require the church to get serious about the integration between science and faith.

**The lecture:**

Dr. Strauss delivered this lecture at Stanford University in 1999. It is fairly easy to understand, and it even includes useful dating tips, one of which I was able to try out recently at IHOP, and it worked.

Here is a clip:

The full video can be watched on Vimeo:

UPDATE: I pulled the MP3 audio from the lecture in case anyone wants just the audio.

**Summary:**

What does science tell us about God?
– the discoveries of Copernicus made humans less significant in the universe
– the discoveries of Darwin should that humans are an accident
– but this all pre-modern science
– what do the latest findings of science say about God?

Evidence #1: the origin of the universe
– the steady state model supports atheism, but was disproved by the latest discoveries
– the oscillating model supports atheism, but was disproved by the latest discoveries
– the big bang model supports theism, and it is supported by multiple recent discoveries
– the quantum gravity model supports atheism, but it pure theory and has never been tested or confirmed by experiment and observation

Evidence #2: the fine-tuning of physical constants for life
– there are over 100 examples of constants that must be selected within a narrow range in order for the universe to support the minimal requirements for life
– example: mass density
– example: strong nuclear force (what he studies)
– example: carbon formation

Evidence #3: the fine-tuning of our planet for habitability
– the type of galaxy and our location in it
– our solar system and our star
– our planet
– our moon

It's a good lecture explaining basic arguments for a cosmic Creator and Designer. If you add the origin of life and the Cambrian explosion (Stephen C. Meyer's arguments), then you will be solid on science apologetics. That's everything a rank-and-file Christian needs.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life

- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument

# Can computers become conscious by increasing processing power?

**Wintery Knight** · 21 July 2013 · Archived copy · Original

There is a very famous thought experiment from UC Berkeley philosopher John Searle that all Christian apologists should know about. And now everyone who reads the Wall Street Journal knows about it, because of this article. (H/T Sarah)

Searle is writing about the IBM computer that was programmed to play Jeopardy. His Chinese room example shows why no one should be concerned about computers acting like humans. There is no thinking computer. There never will be a thinking computer. And you cannot build up to a thinking computer my adding more hardware and software.

Excerpt:

> Imagine that a person—me, for example—knows no Chinese and is locked in a room with boxes full of Chinese symbols and an instruction book written in English for manipulating the symbols. Unknown to me, the boxes are called "the database" and the instruction book is called "the program." I am called "the computer."
>
> People outside the room pass in bunches of Chinese symbols that, unknown to me, are questions. I look up in the instruction book what I am supposed to do and I give back answers in Chinese symbols.
>
> Suppose I get so good at shuffling the symbols and passing out the answers that my answers are indistinguishable from a native Chinese speaker's. I give every indication of understanding the language despite the fact that I actually don't understand a word of Chinese.
>
> And if I do not, neither does any digital computer, because no computer, qua computer, has anything I do not have. It has stocks of symbols, rules for manipulating symbols, a system that allows it to rapidly transition from zeros to ones, and the ability to process inputs and outputs. That is it. There is nothing else.

By the way, Searle is a naturalist – not a theist, not a Christian. But he does oppose postmodernism. So he isn't all bad. But let's hear from a Christian scholar who can make more sense of this for us.

UPDATE: Drew sent me a link to the full article by Searle.

Here's an article by Christian philosopher Jay Richards.

Excerpt:

> Popular discussions of AI often suggest that if you keep increasing weak AI, at some point, you'll get strong AI. That is, if you get enough computation, you'll eventually get consciousness.
>
> The reasoning goes something like this: There will be a moment at which a computer will be indistinguishable from a human intelligent agent in a blind test. At that point, we will have intelligent, conscious machines.
>
> This does not follow. A computer may pass the Turing test, but that doesn't mean that it will actually be a self-conscious, free agent.
>
> The point seems obvious, but we can easily be beguiled by the way we speak of computers: We talk about computers learning, making mistakes, becoming more intelligent, and so forth. We need to remember that we are speaking metaphorically.
>
> We can also be led astray by unexamined metaphysical assumptions. If we're just computers made of meat, and we happened to become conscious at some point, what's to stop computers from doing the same? That makes sense if you accept the premise—as many AI researchers do. If you don't accept the premise, though, you don't have to accept the conclusion.

> In fact, there's no good reason to assume that consciousness and agency emerge by accident at some threshold of speed and computational power in computers. We know by introspection that we are conscious, free beings—though we really don't know how this works. So we naturally attribute consciousness to other humans. We also know generally what's going on inside a computer, since we build them, and it has nothing to do with consciousness. It's quite likely that consciousness is qualitatively different from the type of computation that we have developed in computers (as the "Chinese Room" argument, by philosopher John Searle, seems to show). Remember that, and you'll suffer less anxiety as computers become more powerful.
>
> Even if computer technology provides accelerating returns for the foreseeable future, it doesn't follow that we'll be replacing ourselves anytime soon. AI enthusiasts often make highly simplistic assumptions about human nature and biology. Rather than marveling at the ways in which computation illuminates our understanding of the microscopic biological world, many treat biological systems as nothing but clunky, soon-to-be-obsolete conglomerations of hardware and software. Fanciful speculations about uploading ourselves onto the Internet and transcending our biology rest on these simplistic assumptions. This is a common philosophical blind spot in the AI community, but it's not a danger of AI research itself, which primarily involves programming and computers.
>
> AI researchers often mix topics from different disciplines—biology, physics, computer science, robotics—and this causes critics to do the same. For instance, many critics worry that AI research leads inevitably to tampering with human nature. But different types of research raise different concerns. There are serious ethical questions when we're dealing with human cloning and research that destroys human embryos. But AI research in itself does not raise these concerns. It normally involves computers, machines, and programming. While all technology raises ethical issues, we should be less worried about AI research—which has many benign applications—than research that treats human life as a means rather than an end.

Jay Richards is my all-round favorite Christian scholar. He has the Ph.D in philosophy from Princeton.

When I am playing a game on the computer, I know exactly why what I am doing is fun – I am conscious of it. But the computer has no idea what I am doing. It is just matter in motion, acting on it's programming and the inputs I supply to it. And that's all computers will ever do. Trust me, this is my field. I have the BS and MS in computer science, and I have studied this area. AI has applications for machine learning and search problems, but consciousness is not on the radar. You can't get there from here.

# Why did Detroit go bankrupt? Who is to blame? Whose fault was it?

**Wintery Knight** · 22 July 2013 · Archived copy · Original

This article from Front Page magazine traces the history of the city of Detroit.

Excerpt:

> Beginning in 1962, Detroit has endured a steady diet of Democratic mayors and their social welfare agenda. Beginning in 1962, Mayor Jerome Cavanagh ushered in a "Model City" program to a nine-square-mile section of the city. It was based on a Soviet Union-style approach, aimed at rebuilding entire urban areas all at once. The effort was funded by a commuter tax and a new income tax that Cavanagh told residents would be paid by "the rich." Yet the same central planning that that formed the heart of the Model City program was extended to the people themselves, who eventually resented being told by government how to run their businesses and their lives in exchange for government goodies. Unsurprisingly, the program was a monumental failure.
>
> Then there were the riots. In 1967, police broke up a celebration at a "blind pig." Blind pigs were after-hours clubs that featured gambling and prostitution and had been part of the traditional black culture in Detroit since Prohibition. The political leadership considered them antithetical to the Model City program. An enraged neighborhood did not. People took to the streets, igniting the worst race riot of the decade. Black-owned business were looted and burned to the ground. Forty people were killed and 5,000 were left homeless. Thus began the "white flight" out of the city center, totaling 140,000 people over an eighteen month period, ensued. The city never recovered.
>
> None of this stopped the progressive agenda from continuing to be implemented. Public employees were given precisely the exorbitant wage and benefits packages that are coming back to haunt the city now. This Democrat-fostered attitude extended to private sector unions, whose equally exorbitant packages, along with efficiency-strangling work rules, made the cost of doing business in the Motor City prohibitive. As a result, much of the car industry that formed the city's employment backbone left for right-to-work states that provided a far less hostile — and far more affordable — business climate.
>
> As chronicled here, the same progressive-inspired insanity destroyed the Detroit public school system (DPS), which itself stands on the brink of bankruptcy. This tragedy is highlighted by several sad realities. In 2009, DPS students turned in the lowest scores ever recorded in the national math proficiency test over its then-21-year history. The state of Michigan, led by Detroit, has one of the highest black-white achievement gaps in the nation. As of June 12, only 1.8 percent of the system's students were capable of doing college level work.
>
> Yet by far the most telling indictment of the system is this mind-bending reality: a full 47 percent of city residents are *functionally illiterate.*

The governor of Michigan Rick Snyder has just come out and said that he will not ask for a bailout from the federal government of Detroit.

Excerpt:

> Michigan Gov. Rick Snyder and the bankruptcy specialist he appointed to fix Detroit's unprecedented financial problems put the blame Sunday squarely on the city and defended their decision to file for Chapter 9.
>
> The Republican governor said Detroit created the problems and stood steadfast behind his decision to file Thursday for bankruptcy, with the city roughly $19 billion in debt.
>
> "This is a tragic, difficult decision, but a right one," he said. "It's not about just more money, it's about accountable government."

> He said corruption and city leaders ignoring warning signs for 60 years contributed to the problems. Among his biggest concerns, Snyder said, is the decline of municipal services for Detroit's remaining 700,000 residents, including police response times of nearly one hour.

Thank God. Maybe now they will start to elect Republicans for the first time in over 50 years.

# Hobby Lobby granted temporary injunction from Obamacare abortion mandate

**Wintery Knight** · 22 July 2013 · Archived copy · Original

The Daily Caller reports.

Excerpt:

> A federal appeals court granted The Hobby Lobby Stores, Inc. a preliminary injunction against the Obamacare contraception mandate, Friday.
>
> The ruling prevents the government from enforcing the mandate against the Christian craft company, which has resisted the healthcare law's requirement that companies provide employees health care plans that cover contraception on religious grounds.
>
> In a decision read from the bench the court ruled, "There is a substantial public interest in ensuring that no individual or corporation has their legs cut out from under them while these difficult issues are resolved."
>
> The Becket Fund for Religious Liberty, which is representing Hobby Lobby, considers the ruling to be a major victory.
>
> "We were extremely pleased that the court granted [the preliminary injunction]," Adele Keim, a an attorney with the Becket Fund on the Hobby Lobby's case said in an interview with TheDC. She explained that the Justice Department has until September 25 to decide whether to appeal the ruling.
>
> "The tide has turned against the HHS mandate," Kyle Duncan, general counsel with the Becket Fund and lead attorney for Hobby Lobby, said in a statement.
>
> If the government were to enforce the mandate against the Hobby Lobby, failure to provide contraception in their plans would cost the company $1.3 million a day in fines, according to the Becket Fund.
>
> There are currently 63 lawsuits challenging the contraception mandate, according to the Becket Fund.

The Weekly Standard had an article about the Obamacare abortion mandate a while back.

Excerpt:

> As of August 1st of next year, the morning-after pills that must be provided free of charge, from coast to coast, will include Plan B and ella. Both drugs arguably act, in part, as abortifacients — by keeping a fertilized egg (or a newly conceived being) from implanting in the uterine wall. ("Pregnancy" is no longer medically defined as commencing with conception, but days later, at implantation.) None other than Planned Parenthood — a favorite of President Obama — admits that taking a morning-after pill not only helps prevent ovulation but also "thins the lining of the uterus," adding, "In theory, this could prevent pregnancy by keeping a fertilized egg from attaching to the uterus."
>
> […]CBS News notes ella's "chemical similarity" to RU-486 (which will not be "free" under Obamacare). The *New York Times* describes it as being RU-486's "chemical relative." The *Washington Post* describes it as being RU-486's "close chemical relative." WebMD says that it works to prevent the implantation of a fertilized egg — in other words, as an abortifacient. Dr. Justo Aznar writes that between 50 percent and 70 percent of the time, ella "will act by an abortive mechanism." The European Medicine Agency acknowledges that the drug has the "ability to delay maturation of the endometrium likely resulting in prevention of implantation."
>
> Far from denying that ella can prevent implantation of the fertilized egg in the womb, the FDA observes that it could potentially cause an abortion even later. It notes that there "are no adequate and well controlled studies in pregnant women" pertaining to ella, while the drug has been found to cause abortions in pregnant rats and

> rabbits: "Embryofetal loss was noted in all pregnant rats and in half of the pregnant rabbits," the FDA declared.
>
> Jeanne Monahan of the Family Research Council writes that, like RU-486, ella not only works to prevent implantation but also causes embryos to be aborted post-implantation. She writes, "Plan B can prevent an embryo from implanting in the uterus, thereby causing its demise. However, Plan B cannot terminate an already implanted embryo…. Ella can cause the demise of an embryo that is already implanted in its mother's womb, in addition to preventing implantation after fertilization." Dr. Rich Poupard of the Life Training Institute (who doesn't think that Plan B likely acts as an abortifacient) says that "ella is basically RU-486." He explains that both drugs act to block implantation, and, if implantation does occur, they act to prevent progesterone from adhering to the uterine lining, thereby denying the embryo the nutrients it needs to survive.

Obamacare forces pro-life individuals and businesses to subsidize abortions.

# Iowa Human Rights Commissioner told pastor and family to "burn in Hell"

**Wintery Knight** · 22 July 2013 · Archived copy · Original

The Weekly Standard reports.

Excerpt:

> In Sioux City, Iowa, a local pastor is asking for the removal of a newly appointed member of the city's human rights commission. The city council appointed Scott Raasch to the commission, which adjudicates discrimination complaints, on July 8. However, the Rev. Cary Gordon, executive pastor of Cornerstone World Outreach, recently brought to light threatening comments Raasch left comments on Gordon's Facebook page over Gordon's vocal opposition to the Iowa Supreme Court legalizing gay marriage.
>
> According to the report from the *Sioux City Journal*:
>
> In one comment, Raasch wrote: "You are haters and bigots and you will get what's coming to you sooner or later. I hope you rot in hell."
>
> Gordon replied, "I hope you repent of your sins and accept Jesus as your Lord and Savior. I wouldn't want you or anyone else to go to hell."
>
> Raasch wrote, "I know Christ and don't need a snake oil salesman like you to tell me about him. I guess that's the difference between us because I think there are many people that deserve to burn in hell … including you and your entire family."
>
> "He gives blatant death wishes to anyone who disagrees with his political or sexual views," Gordon said Thursday. "He is obviously unstable and filled with raging hatred."

It's very important to understand what kinds of people are appointed to these Human Rights Commissions. They sound so good, but actually they are just politically correct Inquisitions. And they appoint the most radical left-wing extremists to them – people who are incapable of even listening to points of view other than their own. We don't need Inquisition panels to tell us what to think.

# What the death of Prop 8 means for democracy and the rule of law

**Wintery Knight** · 23 July 2013 · Archived copy · Original

ECM messaged me about this post from the Public Discourse. The author is the person who managed to get a constitutional amendment defining marriage in California, only to see if defeated three times by judges.

Federal judge was in a gay relationship:

> The Prop 8 challenge landed in the San Francisco federal courtroom of Vaughn Walker. We're supposed to accept that this happened randomly, and that the plaintiffs weren't tipped off by someone in the court system to file the case at a particular time when Judge Walker happened to be the one who'd get it.
>
> Whether by accident or grand design, it was a fortunate assignment for the plaintiffs. Walker was a judge in a long-term committed relationship with another man—in other words, he was in exactly the type of relationship as the plaintiffs who were bringing suit. Walker never disclosed this critical fact to Prop 8 supporters, or to the public, despite judicial rules requiring such disclosure if even the *appearance* of impropriety was present.

Private citizens have to defend the law of the land:

> While the lawsuit stood before a hometown judge, state officials did everything in their power to throw the case. Both then-Governor Arnold Schwarzenegger and then-Attorney General Jerry Brown refused to defend the law enacted by the people of California, despite their sworn oath of office to do so. The current Attorney General, Kamala Harris, dutifully took the same course.
>
> Of course, the constitution of California does not give to the governor or the attorney general the power to decide for themselves which laws are constitutional and which are not, nor are they free to determine which laws shall be defended and which shall be abandoned. But no matter.
>
> **Having orphaned Prop 8, leaving it and the seven million citizens who enacted it defenseless in court, it fell to the backers of the initiative to defend the law in the federal courts. This not only cost the supporters of Prop 8 over $10 million in legal expenses; it ultimately put a sleeper hold on the initiative.**

Ninth Circuit Court of Appeals:

> Next the case headed to the Ninth Circuit Court of Appeals, where it became the province of a panel including Stephen Reinhardt, senior judge of the circuit and widely considered to be one of the most liberal (and most overturned) judges in America. I frankly never expected much relief out of what many conservatives ruefully refer to as the "Ninth Circus." But even I was surprised by the chicanery involved in Reinhardt's handling of the case.
>
> It turns out that his wife, an attorney with the ACLU, had advised the plaintiffs' lawyers on strategy before this very case was even filed! Reinhardt refused to recuse himself from deciding the case his wife had participated in, and went on to write a majority opinion finding that Prop 8 was unconstitutional.

And then on the Supreme Court, and we know how that ended.

The conclusion of the piece is very moving, but saddening too.

Here's part of it:

> I feel like we were cheated. Just like I felt as a kid watching the bad guy put a sleeper hold on his opponent, or hitting him below the belt or with the brass knuckles while the referee had his back turned, so have the legal

> system and politicians cold-cocked the people of California—seven million of whom went to the polls to lawfully enact Prop 8. Only this time, I realize there's not likely to be a rematch. The cheaters won.
>
> I feel like the rule of law has been shredded, and conniving politicians have been rewarded for ignoring their sworn oath of office. Public confidence in the judicial system has been dealt a severe blow. Supporters of same-sex "marriage" may be happy with the result today, but hold on until the tables are turned and a conservative governor and attorney general refuse to defend a law they don't personally support, and there's nobody left with standing to defend it. The seeds of that action will have been sown by leftist politicians like Brown, Harris, and Schwarzenegger.
>
> I feel like a broadside has ripped a great hole in the initiative and referendum process itself. I have managed nearly forty statewide ballot initiative campaigns in my career. The initiative process is one of the few viable ways to get a recalcitrant government to respond to legitimate issues that are not being addressed by the legislature or the state administration. By its nature, citizens are often pushing a law that is opposed by those in power.
>
> Now those very people in power—the governor and attorney general—have been given a pocket veto over the initiative process itself. They can invalidate any measure they don't personally support simply by refusing to defend it in federal court. Such power was never contemplated by the framers of the constitution, or by the people of California, but that is the practical result of the Supreme Court's ruling on Prop 8. Again—it is marriage today, but tomorrow it could be any other issue on the political spectrum.
>
> I feel a measure of sadness for all the people who worked so hard for something they believed so passionately—a belief shared by millions of people. Campaigns are about ideas and laws, certainly, but they involve real people.
>
> So I think about people like Scott Eckern, a distinguished musical producer, who was forced to resign from the California Musical Theater in Sacramento over his $1,000 contribution in support of Prop 8. I think about Marjorie Christofferson, a then-67-year-old employee at her family-owned Mexican restaurant in Los Angeles, who was forced to take a leave from the business over donating a mere $100 to our campaign.
>
> I think about the 80,000 people just like them—moms and dads, retirees, students, husbands and wives—who gave generously of their financial resources to allow us to mount a winning campaign. I think about all the pastors, priests, bishops, rabbis, imams, and other religious leaders who put their religious differences aside to work together in support of the eternal truth about marriage—that it is a covenant between one man and one woman, modeled after God's own covenant with us.
>
> And I think about the 250,000 volunteers in our campaign who walked precincts, knocked on doors, and manned phone banks, including Jose Nunez, a proud immigrant and newly sworn-in US citizen, who was physically assaulted by a Prop 8 opponent while waiting to distribute signs outside his Catholic church.
>
> All of these people paid a tremendous price. They, and the voters, deserved better than to be left undefended before the legal system, abandoned by those sworn to defend them, ignored by judges determined to impose a particular result, and then orphaned by the Supreme Court as the great referee pretended not to see all the nefarious activity going on with the case right in front of them.

I still haven't really gotten my head around all of the unfairness that happened with the defeat of Prop 8 by leftist lawyers and judges. How can it be that elected officials refuse to defend the law of the land? But this is not just a California issue. The Obama administration also refused to defend DOMA in court. The amount of money and time that was spent in vain by the pro-marriage team on these legal efforts makes me very unhappy. The Prop 8 campaign involved millions of dollars, thousands of volunteers, and enormous amounts of time spent by everyone. Conservatives can't take on these Herculean tasks and keep losing. The money and time we spent on defending marriage is gone once it's gone. It can't be spent a second time on something else.

We are already living in a time where over 40% of children are being born out-of-wedlock – facing the world

without their father, because women choose to take welfare instead of marrying a good man before getting pregnant. We are already living in a world where over 40% of first-time marriages end in divorce, thanks to no-fault divorce laws and anti-male divorce courts. Gay marriage just makes it worse, and that's the real tragedy. The family is dying, and no one seems to care. No one seems to be aware of the purpose of marriage for society. They are so busy smashing it down that they never stop to ask why it was there in the first place.

# 10 Facts About the NT Canon that every Christian should memorize

**Wintery Knight** · 23 July 2013 · Archived copy · Original

J. Warner Wallace tweeted this must-read post about a series of 10 posts by New Testament expert Mike Krueger.

Here's the list of 10 facts:

> Mike Kruger, author of *Canon Revisited: Establishing the Origins and Authority of the New Testament Books* (Crossway, 2012) and the forthcoming *The Question of Canon: Challenging the Status Quo in the New Testament Debate* (IVP, 2013), has a helpful series on the New Testament canon, linked below, "designed to help Christians understand ten basic facts about its origins. This series is designed for a lay-level audience and hopefully could prove helpful in a conversation one might have with a skeptical friend."
>
> Here are the posts:
>
> 1. "The New Testament Books are the Earliest Christian Writings We Possess"
> 2. "Apocryphal Writings Are All Written in the Second Century or Later"
> 3. "The New Testament Books Are Unique Because They Are Apostolic Books"
> 4. "Some NT Writers Quote Other NT Writers as Scripture"
> 5. "The Four Gospels are Well Established by the End of the Second Century"
> 6. "At the End of the Second Century, the Muratorian Fragment lists 22 of Our 27 NT Books"
> 7. "Early Christians Often Used Non-Canonical Writings"
> 8. "The NT Canon Was Not Decided at Nicea—Nor Any Other Church Council"
> 9. "Christians Did Disagree about the Canonicity of Some NT Books"
> 10. "Early Christians Believed that Canonical Books Were Self-Authenticating"

Here is one from the list that I did not know before. (#4)

Excerpt:

> For Christians struggling to understand the development of the New Testament canon, one of the most confusing (and perhaps concerning) facts is that early Christian writers often cited from and used non-canonical writings. In other words, early Christians did not just use books from our current New Testament, but also read books like the *Shepherd of Hermas*, the*Gospel of Peter*, and the *Epistle of Barnabas*.
>
> Usually Christians discover this fact as they read a book or article that is highly critical of the New Testament canon, and this fact is used as a reason to think that our New Testament writings are nothing special. The literary preferences of the earliest Christians were wide open, we are told. Or, as one critic put it, early Christians read a "boundless, living mass of heterogenous" texts.[1]
>
> Because this fact is used to criticize the integrity of the New Testament canon, then all Christians should be keen to learn it. While the fact itself is true—early Christians did read and use many writings not in the canon—the conclusions often drawn from this fact are often not.
>
> When scholars mention the Christian use of non-canonical writings, two facts are often left out:
>
> 1. *The manner of citation*. It is important to note that while Christians often cited and used non-canonical literature, they only rarely cited them as Scripture. For the most part, Christians were simply using these books as helpful, illuminating, or edifying writings. This is not all that different than practices in our modern day. A preacher may quote from CS Lewis in a sermon, but that does not mean he puts Lewis's authority on par with Scripture itself.
>
> A good example of this phenomenon is the use of the *Gospel of Peter* by the church at Rhossus at the end of

> the second century. Scholars often appeal to this story as evidence that early Christians had no established gospel canon. However, there is no evidence that the church there used the book as Scripture.
>
> When we ask the question about which books early Christians cited most often *as Scripture*, then the answer is overwhelmingly in favor of the books that eventually made it into the New Testament canon.
>
> 2. *Frequency of citation*. Another often overlooked factor is the relative degree of frequency between citations of New Testament books and citations of non-canonical books. For example, scholars often appeal to Clement of Alexandria as the standard example of an early Christian that used non-canonical literature equally with canonical literature. But, when it comes to frequency of citation, this is far from true.
>
> J.A. Brooks, for instance, has observed that Clement cites the canonical books "about sixteen times more often than apocryphal and patristic writings."[2] When it comes to gospels, the evidence is even better. Clement cites apocryphal gospels only 16 times, whereas, he cites just the gospel of Matthew 757 times.[3]
>
> In sum, Christians need to memorize this simple fact about the New Testament canon: early Christians used many other books besides those that made it into our Bibles. But, this should not surprise us. For, indeed, we still do the very same thing today even though we have a New Testament that has been settled for over 1600 years.

How many of these did you not know? Check them out!

# Comprehensive survey of all the research (pro and con) on gay marriage

**Wintery Knight** · 23 July 2013 · Archived copy · Original

Ari and Mathetes sent me this amazing evaluation of all of the research on same-sex marriage.

Excerpt: (links removed)

The most detailed effort yet to open the hood and see what is actually inside these studies was performed by Loren Marks of the LSU School of Human Ecology, who published a paper in *Social Science Research* in 2012 examining the 59 published studies behind the APA's breezy assertion of a scientific consensus. (Marks did not examine the other 8 studies cited by the APA, which were "unpublished dissertations.") Marks opened his paper by comparing the research on same-sex families to the by-now bulletproof research showing the advantages of traditional married parents over "cohabiting, divorced, step, and single-parent families," noting that those studies used "large, representative samples" such as "four nationally representative longitudinal studies with more than 20,000 total participants." By contrast, Marks found:

> -"[M]ore than three-fourths (77%) of the studies cited by the APA brief are based on small, nonrepresentative, convenience samples of fewer than 100 participants. Many of the non-representative samples contain far fewer than 100 participants, including one study with five participants"

> -The samples were "racially homogenous," none of them focusing on African-American, Hispanic or Asian-American families. Of course, social science studies of the family commonly find large racial disparities – picking an all-white sample is an extremely easy way to bias your results.
>
> -More broadly, he cited a "continuing tendency of same-sex parenting researchers to select privileged lesbian samples…'Much of the research [still] involved small samples that are predominantly White, well-educated [and] middle-class.'"
>
> -"[C]omparison studies on children of gay fathers are almost non-existent in the 2005 Brief."
>
> -"[I]n selecting *heterosexual* comparison groups for their studies, many same-sex parenting researchers have not used marriage-based, intact families as heterosexual representatives, but have instead used single mothers…[one pair of researchers] used 90.9 percent single-father samples in two other studies."
>
> -The APA, while ignoring these flaws in the studies it relied on, excluded one of the largest studies available, which had found significant differences in educational outcomes on the theory that assessments by teachers (i.e., tests and progress reports) were "subjective assessments." Note the contrast between this and the APA's eager acceptance of self-reporting by parents.
>
> -Most of the studies ignored "societal concerns of intergenerational poverty, collegiate education and/or labor force contribution, serious criminality, incarceration, early childbearing, drug/alcohol abuse, or suicide that are frequently the foci of national studies on children, adolescents, and young adults," and again the APA simply ignored one "book-length empirical study" that had used a more diverse sample and had concluded that "If we perceive deviance in a general sense, to include excessive drinking, drug use, truancy, sexual deviance, and criminal offenses, and if we rely on the statements made by adult children (over 18 years of age)…[then] children of homosexual parents report deviance in higher proportions than children of (married or cohabiting) heterosexual couples."
>
> -"[V]irtually none of the peer-reviewed, same-sex parenting comparison studies" looked at adults raised in same-sex parent homes, but only at children and adolescents, thus excluding from consideration social and emotional problems that are commonly observed only in adulthood. Research on children of divorce, for example, has found a number of problems that do not surface until adulthood.

> Nobody who has not already made their mind up would find research of this nature conclusive of anything.

And regarding the new Regnerus large-scale study of gay parenting: (links removed)

> One recent study that attempted to fix the problems Marks identified was published in the same edition of the same journal by University of Texas professor Mark Regnerus. Regnerus' study had – as he freely admitted – limitations of its own, discussed below. But the reaction to Regnerus' work – in contrast to how the badly flawed studies examined by Marks were swallowed uncritically – vividly illustrates why credible, unbiased research on this topic is so hard to come by.
>
> Regnerus set out to do a truly randomly selected study over a large population sample, and to remove the problem of biased parental reporting by interviewing adults about their childhood experiences. His sample covered 15,000 respondents, and despite the subsequent firestorm, no problem was ever identified with his methods or the data he gathered. Unlike most of the prior research, the respondents with a "gay father" or "lesbian mother" (more on which below) were, respectively, 48% and 43% black or Hispanic. His findings were dramatic across numerous types of outcomes, detailing greatly elevated incidence of parental rape, parental pedophilia and suicidal tendencies; as he explained his findings,
>
> Even after including controls for age, race, gender, and things like being bullied as a youth, or the gay-friendliness of the state in which they live, such respondents were more apt to report being unemployed, less healthy, more depressed, more likely to have cheated on a spouse or partner, smoke more pot, had trouble with the law, report more male and female sex partners, more sexual victimization, and were more likely to reflect negatively on their childhood family life, among other things.[…]Anyone familiar with how liberals respond to scientific findings they don't like can predict what happened next: immediately upon the publication of his study, Regnerus was subjected to a campaign of vilification aimed at discrediting his work, destroying his professional reputation and deterring any other scholar from pursuing a similar line of inquiry. The University of Texas convened an audit of his study to deal with the pressure campaign, and the editor of the journal hired a prominent, vocal critic of Regnerus to audit the peer-review process that led to its publication. Andrew Ferguson and Matthew Franck detail the blow-by-blow of this campaign to destroy Regnerus.
>
> And by and large, Regnerus passed the audits. The UT audit found "no falsification of data, plagiarism or other serious ethical breaches constituting scientific misconduct."The journal audit grudgingly concluded the journal editor acted correctly, despite a lot of sniping by its hostile author at Regnerus and the peer reviewers. But the liberal blogs and newspapers continued to act as if Regnerus had been unmasked as a charlatan.
>
> Twenty-seven scholars (including Marks) signed a joint letter defending Regnerus' sample selection:
>
>> [T]he demographics of his sample of young-adult children of same-sex parents – in terms of race and ethnicity – come close to resembling the demographics of children from same-sex families in another large, random, and representative study of gay and lesbian families by sociologist Michael Rosenfeld that has been well received in the media and in the academy…We are disappointed that many media outlets have not done their due diligence in investigating the scientific validity of prior studies, and acknowledging the superiority of Regnerus's sample to most previous research….We are also disappointed that many of our academic colleagues who have critiqued Regnerus have not publicly acknowledged the methodological limitations of previous research on same-sex parenting.
>>
>> …Regnerus has been chided for comparing young adults from gay and lesbian families that experienced high levels of family instability to young adults from stable heterosexual married families. This is not an ideal comparison. (Indeed, Regnerus himself acknowledges this point in his article, and calls for additional research on a representative sample of planned gay and lesbian families; such families may be more stable but **are very difficult to locate in the population at large**.) But what his critics fail to appreciate is that Regnerus chose his categories on the basis of young adults' characterizations of their own families growing up, and the young adults whose parents had same-sex romantic relationships also happened to

> have high levels of instability in their families of origin. This instability may well be an artifact of the social stigma and marginalization that often faced gay and lesbian couples during the time (extending back to the 1970s, in some cases) that many of these young adults came of age. It is also worth noting that **Regnerus's findings related to instability are consistent with recent studies of gay and lesbian couples based on large, random, representative samples from countries such as Great Britain, the Netherlands, and Sweden, which find similarly high patterns of instability among same-sex couples. Even Judith Stacey, a prominent critic of Regnerus's study, elsewhere acknowledges that studies suggest that lesbian "relationships may prove less durable" than heterosexual marriages.** Thus, Regnerus should not be faulted for drawing a random, representative sample of young-adult children of parents who have had same-sex romantic relationships and also happened to have experienced high levels of family instability growing up.
>
> (Emphasis mine; footnotes omitted).
>
> The vehemence of the attacks on Regnerus, by people who were happy to tout far less reliable studies, ought to be a gigantic red flag to anyone tempted to view the social science in this area as the work of disinterested professionals who care only to find the truth. And any tour of the work of Marks, Regnerus and their critics should disabuse anyone of the notion that we have ironclad-for-all-time scientific proof of equal outcomes that should be cast permanently into Constitutional law. Given the many common-sense reasons, grounded in experience, to think that both fatherhood and motherhood have unique value, the overwhelming scientific evidence that traditional marriage is superior to all the *other* family structures that have been studied, the relative recency and rarity of same-sex parent households and the current state of the science, the most logical answer is that both Congress and the voters of the State of California could rationally conclude that a family with a mother and a father is preferable to a family with two mothers and no father or two fathers and no mother.

I really urge all of my readers to click through and read this entire essay, and then please tweet or share it or send it to all your friends. We do NOT want a repeat of what happened when the liberal left rammed through no-fault-divorce, which was the first redefinition of marriage. We can't afford another round of this. We already have a 42% out of wedlock birth rate, and it's going up.

We've had the normalization of premarital sex put through by leftist public schools, taxpayer-funded contraception pushed through by the leftist Obama administration, and no-fault divorce pushed through by leftist feminists and leftist trial lawyers. We can't keep taking shots at the institution of marriage. Marriage was designed from the start to protect and provide for innocent, vulnerable children. We are doing harm to children every time that we privilege the desires of adults over the needs of children. I find it disgusting that the people who are so influential at destroying marriage today are often the same ones who benefited from intact families and two loving parents yesterday.

# WaPo poll: most “moderate” and “conservative” Democrats oppose Obamacare

**Wintery Knight** · 24 July 2013 · Archived copy · Original

From the leftist Washington Post.

Excerpt:

> The landmark health-reform law passed in 2010 has never been very popular and always highly partisan, but a new Washington Post-ABC News poll finds that a group of once loyal Democrats has been steadily turning against Obamacare: Democrats who are ideologically moderate  or conservative.
>
> Just after the law was passed in 2010, fully 74 percent of moderate and conservative Democrats supported the federal law making changes to the health-care system. But just 46 percent express support in the new poll, down 11 points in the past year. Liberal Democrats, by contrast, have continued to support the law at very high levels – 78 percent in the latest survey.
>
> […]The shift among the Democratic party’s large swath in the ideological middle– most Democrats in this poll, 57 percent, identify as moderate or conservative – is driving an overall drop in party support for the legislation: Just 58 percent of Democrats now support the law, down from 68 percent last year and the lowest since the law was enacted in 2010. This broader drop mirrors tracking surveys by the non-partisan Kaiser Family Foundation and Fox News polls, both of which found Democratic support falling earlier this year.

The Weekly Standard notes that Democrat legislators have been switching sides lately, and voting to delay implementation of some of the Obamacare mandates.

# What is pre-suppositionalism? What is presuppositional apologetics?

**Wintery Knight** · 24 July 2013 · Archived copy · Original

The Messianic Drew has a post up where he explains seven reasons, and I'll add a still more important reason below.

His introduction:

> While most Christians will agree that there is a need to defend the faith, many will not realize that there is a debate regarding methodologies. This paper will address the various apologetics methods, and then analyze before critiquing the relatively new method of presuppositionalism. While this method has a lot to offer from a practical apologetics standpoint, it cannot be held rationally as a worldview. This paper will give seven reasons why this is the case.
>
> Before addressing presuppositionalism, an introduction to other apologetic methodologies is in order. The main form of apologetics used historically is called Classical Apologetics. Under this method, the apologist gives arguments for the existence of God, and then proceeds to develop Christian evidences for the Christian worldview. Arguments like the moral argument, and other reason-based argumentation tend to dominate this method.
>
> If classical apologetics is a two-step method, evidentialism is a one-step method. The evidentialist will usually forego rationalistic argumentation and will simply bring out evidences for the Christian worldview. The method of Gary Habermas is an example of evidentialism.
>
> Those methods as well as presuppositionalism are the main methods of apologetics. There are others as well, such as fideism, which tells people to just believe without argument. Polemical apologetics seeks to attack other worldviews. There are cumulative case methods of apologetics, where two worldviews face off for which one better answers life's deepest questions. There is also eclectic apologetics, which seeks to borrow methods from other schools of apologetics depending on the need.
>
> This brings the discussion to presuppositionalism, which seeks to examine the underlying assumptions of any worldview. In short, presuppositionalism states that one's foundational views are the only truly relevant factor in discussing worldviews. The founder of modern presuppositionalism is Cornelius van Til.

Here are his 7 points:

1. Presuppositionalism is circular reasoning
2. Presuppositionalism minimizes common grace
3. Presuppositionalism confuses ontological priority with epistemic priority
4. Presuppositionalism presupposes a highly controversial theory of knowledge
5. Presuppositionalism often forgets that Christianity is, at least in principle, falsifiable
6. Van Til's apologetic might not even be Christian, but may be merely theistic
7. Presuppositionalism faces the problem of incommensurability

And here is #6 in detail:

> John Johnson gives a devastating critique as to why Van Til's system is wholly inadequate when addressing other faiths, such as Islam. Van Til argues from Romans 1:18-21 that non-Christians suppress the truth, and that a presuppositional technique is necessary. However, this section of the Bible deals with knowledge of God, but not theological issues about the Trinity, Jesus, salvation by grace through faith alone,

> etc. [12] Instead, it only says that unbelievers are without excuse for denying monotheism. Paul reinforces this in Acts 17, when he talks about the statue to an unknown God. Paul deals with the Athenians on their own ground.
>
> A more practical example is what I call Artscroll Judaism. This is a fundamentalist sect of Orthodox Judaism, with its own think tanks which can give you an answer to anything. Anyone who is willing to take the leap into the system will find it every bit as coherent as one would find the Reformed Christian view.
>
> John Warwick Montgomery gives a fable about a conversation between two presuppositionalists from two different religions: the Shadok religion, and the Gibi religion.
>
> Shadok: You will never discover the truth, for instead of subordinating yourself to revelational truth (The Shadok Bible) you sinfully insist on maintaining the autonomy of your fallen intellect.
>
> Gibi: Quite the contrary. [He repeats the same assertion substituting the Gibi Bible for the Shadok Bible.] And I say this not on the basis of my sinful ego but because I have been elected by the Gibi God.
>
> Shadok: Wrong again! [He repeats the exact same claim, substituting Shadok Election for Gibi Election.] Moreover, the sovereign election of which I am the unworthy recipient has been the very work of God the Shadok Holy Spirit. And all of this is clearly taught in the self-validating Scripture of our people, which, I should not have to reiterate, derives from the true God and not from sinful, alledgedly autonomous man.
>
> Gibi: How dare you invert everything. [He laboriously repeats the preceding argument, substituting Gibi election, the Gibi Holy Spirit, and the Gibi Bible.]
>
> Shadok: Absurd! This is the inevitable result of your colored glasses.
>
> Gibi: It is you who have the glasses cemented to your face. Mine have been transparent through sovereign grace and Gibi election, as proclaimed by the Gibi God's word.
>
> Shadok: Your religion is but the inevitable byproduct of sin—a tragic effort at self-justification through idolatry. Let's see what the Shadok God really says about his word.
>
> Gibi: I will not listen to your alleged "facts." Unless you start with the truth, you have no business interpreting facts at all. Let me help you by interpreting facts revelationally.
>
> Shadok: Of course you will not listen to the proper interpretation of facts. Blinded by your sin, you catch each fact as you would a ball—and then you throw it into a bottomless pit.
>
> Gibi: That's what you do with what I say—a clear proof of your hopeless, pseudo-autonomous condition. May the Gibi God help you.
>
> Shadok: May the Shadok God help you![13]
>
> As Montgomery notes, this encounter is hopeless, since neither side can appeal to neutral facts to solve the dispute. Both sides are reduced to chest-thumping, loud assertion, and empty fideism.

It's funny but it's true! This is presuppositionalism in action. It's arguing without appealing to any facts.

And here is my eighth point from my post on presuppositionalism.

Excerpt:

> My view of presuppositional apologetics is that is as a system, it is circular reasoning. It assumes Christianity in order to prove Christianity. But there is an even worse problem with it. It's not a Biblical way of doing apologetics. It's man's way of doing apologetics, not God's. I think that the best way to understand Van Til's apologetics is by saying that it really just a sermon disguised as apologetics. The problem is that Van Til's sermon has no basis in the Bible. Wherever he is getting his view from, it's not from the Bible. When I look the Bible, I don't see any Biblical support for the view that pre-suppositional apologetics is the *only approved way* of defending the faith. Instead, the standard method seems to be evidentialism.

In Romans 1, Paul writes that people can learn about God's existence from the natural world.

Romans 1:18-23:

[18]The wrath of God is being revealed from heaven against all the godlessness and wickedness of men who suppress the truth by their wickedness,

[19]since what may be known about God is plain to them, because God has made it plain to them.

[20]For since the creation of the world God's invisible qualities—his eternal power and divine nature—have been clearly seen, being understood from what has been made, so that men are without excuse.

[21]For although they knew God, they neither glorified him as God nor gave thanks to him, but their thinking became futile and their foolish hearts were darkened.

[22]Although they claimed to be wise, they became fools

[23]and exchanged the glory of the immortal God for images made to look like mortal man and birds and animals and reptiles.

And in Acts, Peter appeals to eyewitness testimony for the resurrection, and Jesus' miracles.

Acts 2:22-24, and 36:

[22]"Men of Israel, listen to this: Jesus of Nazareth was a man accredited by God to you by miracles, wonders and signs, which God did among you through him, as you yourselves know.

[23]This man was handed over to you by God's set purpose and foreknowledge; and you, with the help of wicked men, put him to death by nailing him to the cross.

[24]But God raised him from the dead, freeing him from the agony of death, because it was impossible for death to keep its hold on him.

And finally from the same chapter:

[36]"Therefore let all Israel be assured of this: God has made this Jesus, whom you crucified, both Lord and Christ."

Professor Clay Jones of Biola University makes the case that the use of evidence when preaching the gospel was *standard operating procedure* in the early church. (H/T Apologetics 315)

Intro:

In 1993 I started working for Simon Greenleaf University (now Trinity Law School) which offered an M.A. in Christian apologetics (Craig Hazen was the director). Much of my job was to promote the school and although I had studied Christian apologetics since my sophomore year in high school, I decided I needed to see whether an apologetic witness had strong Biblical precedence.

It does.

As I poured through the Scripture I found that Jesus and the apostles preached the resurrection of Christ as the sign of the truth of Christianity.

What follows are some of the passages which support the resurrection witness.

Here is my favorite verse from his massive list list of verses in favor of the evidential approach to Christian apologetics:

Mat. 12:39-40: A wicked and adulterous generation asks for a miraculous sign! But none will be given it except the sign of the prophet Jonah. For as Jonah was three days and three nights in the belly of a huge fish, so the Son of Man will be three days and three nights in the heart of the earth.

Jesus is saying that the resurrection was deliberately given as a sign to unbelievers to convince them. ("The Sign of Jonah" = the resurrection)

So, I see that God uses nature and miracles to persuade, which can be assessed using scientific and historical

> methods. Can anyone find me a clear statement in the Bible that states that only pre-suppositional arguments should be used? I could be wrong, and I am willing to be proven wrong. I think we should use the Biblical method of apologetics, not the fallen man's method of apologetics.

Presuppositional arguments, like the ontological argument from reason or the epistemological argument from reason are good. Presuppositionalism as a system is not good. It's good to learn presuppositional arguments, but as part of a quiver of arguments – not in isolation.

By the way, Eric Chabot posted a fascinating discussion between presuppositionalist James White and Richard Howe on this topic, where the point about how presupositionalism cannot prove Christianity in particular came up.

Presuppositionalism is not a Christian methodology. It's neither Biblical, nor can it be used to prove Christianity. It's man's system of apologetics, not God's.

UPDATE: David Haines posted a couple of criticisms of presuppositionalism here.

UPDATE: A rebuttal to the first of Messianic Drew's points is here.

# Pastor Matt: How apologetics saved my faith

**Wintery Knight** · 24 July 2013 · Archived copy · Original

Here's a must-read post from Pastor Matt Rawlings whose reading list I wrote about before.

Excerpt:

> I became a Christian at 24 after a cancer diagnosis. I had been an atheist for 10 years but came to God in desperation. I left Capitol Hill (and politics altogether) to learn about Christianity. I attended what many believed was a conservative seminary but had slowly slipped into liberalism by the time I arrived in 1999. I was sold on "higher criticism" (or a skeptical approach to the historicity and inerrency of Scripture) and joined the then growing "Emergent Church" movement. Within a few years, I was where Rob Bell is now–a soft universalist with a condescending attitude toward conservatives. Yet, I was also spiritually dead and was struggling with depression. I was quickly headed back to the atheism I had thought I had left behind while praying for my life.
>
> During this time of personal struggle, my wife and I were helping a small church in Charleston, West Virginia. When an elder learned my wife had a degree in micro-biology and had helped overseen a science program at Cornell, he asked her to meet with the youth group and answer their questions about science and the faith. In preparation, she picked up the book The Case for a Creator by Lee Strobel (Zondervan 2005). She devoured the book and went on and on about wonderful it was and how I had to read it. I resisted as the cover struck me as "fundamentalist nonsense." Yet, she persisted and it became clear that either I was going to read the book or spend a few nights on the couch!
>
> I opened the book with a bad attitude. After all, my seminary professors had told me that "apologetics is dead!" and that "Generation-X and -Y desired experience not 'answers.'" I was even more resistant when I saw the first few chapters take on evolution. I was convinced Genesis 1-11 was all myth, Darwin had been proven correct and that only nutters questioned it. But after reading Strobel's interaction with Dr. Jonathan Wells and Dr. Stephen C. Meyer of the Discovery Institute, I realized I had no real counter argument to intelligent design.

Read the rest.

The Case for a Creator is one of my favorite apologetics books. I have read it once, but I've listened to the audio version TEN TIMES. This book more than any other is the perfect introduction to science apologetics for beginners. I really recommend the audio book as a companion to the print version. I gave it to a friend of mine in Scotland who is from a very fundamentalist background, but she has been able to apply what's in the book in conversations because she listens to the audio book while she drives.

When I read this post by Pastor Matt, I felt that his faith was not just castles built in the sky. A lot of pastors basically start by assuming (without any evidence) that the Bible is correct in everything it says, and then they start lecturing everyone else about what the Bible says without ever having done a moment of investigation into the evidence for or against what they are preaching about. They've never read anyone who disagrees with them, and they don't know how to explain what they believe to anyone outside the church walls. I have to tell you that this is one of the *the most uncomfortable feelings* to have when you are not yet a Christian. You are in a building filled with people who don't know whether what they believe is true. You are being lectured by a man who typically has no idea how to show others that what he is talking about is true, except for appealing to feelings. I don't know about you, but that really makes me uncomfortable. I trust people more when I know they are good at something practical, like mechanical engineering, medicine, automobile mechanics, weight-lifting, nutrition or cooking. When you read outside the Bible, it's basically treating Christianity like it's a real area of knowledge. That makes me interested, because it means we are talking about something real, not just a personal preference or a subjective experience or a community custom.

Pastor Matt is different. He's read tons of stuff outside the Bible, and he's not presupposing anything when he preaches about God and Jesus. He's got informed beliefs about this stuff. He's authentic. And you can see the strength of his convictions by looking at what he's read. He talks about his faith like we might talk about our professions. We have convictions about what we do that creates value for others because *we know how to do it*. When a pastor reads a lot on logic, philosophy, history and science, then he is able to know whether what he says he believes is really true or not *out there in the real world*. When I listen to my pastor and look at our church book store, I get very disappointed. It makes me wonder why I can't go to a church like Pastor Matt's church. Wouldn't that be great? I would really fly out of bed on Sunday morning if I thought "what is he going to teach on this morning, that I can use at work on Monday morning?" I am always interested in hearing what someone else *knows*. I am one of those people who is always asking the dentist, the doctor, the mechanic, and the food preparers "how did you do that?" I even got the recipe for the cilantro-lime rice that Chipotle makes by asking the woman who was making my burrito bowl. How did you do it? I want to know how you know.

I have a good friend of mine right now who is going through a tough time with her church. She keeps telling me that Sunday school is very emotional, and clearly designed to comfort people and make them feel "gooey" (her word). This is a woman who is on fire academically and is making tons of money in a summer job in her field. She just got a new scholarship, too. She keeps thinking that Sunday school is supposed to be the time to learn about difficult things and practical things. It's causing her to really get bored with church and even to look for a new church. I think a lot of young people are tired of being entertained in church, and they would like to get their minds on some real knowledge about God and what he's done in history and in nature. I'll bet that Pastor Matt doesn't have any problems packing his church with young people. Young people can tell when someone really knows what they are talking about, the same way that a dentist knows about teeth, or that a tax preparer knows about tax laws.

By the way, J. Warner Wallace had something to say about what he taught kids when he was a youth pastor in his latest podcast. I think it's relevant to this post.

# Obama's D.C. appeals court nominee equated pro-lifers with Ku Klux Klan

**Wintery Knight** · 25 July 2013 · Archived copy · Original

From Powerline blog, a look at the record of Obama's latest judicial nominee.

She opposed the church invoking the First Amendment as a defense to government intervention in hiring decisions:

> Only four Republican Senators out of eight on the Committee asked questions today. Ranking Member Grassley (and later Sen. Cruz) inquired about a statement Pillard made regarding *Hosanna-Tabor Evangelical Lutheran Church v. EEOC*. In that case, the Supreme Court, by a vote of 9-0, found that the Establishment and Free Exercise Clauses of the First Amendment bar suits brought on behalf of ministers against their churches under the anti-employment discrimination laws, because churches and other religious groups must be free to choose their leaders without government interference.
>
> Prior to the decision, Pillard wrote that the position of the defendant church represents "a substantial threat to the American rule of law." This statement was the focus of questions by Grassley and Cruz.
>
> Pillard tried to side-step the inquiry by confessing that she is an imperfect predictor of how the Supreme Court will rule (she was referring to a statement she had also made that "the big news will be if the Court decides [the case] for the Church"). This was a cynical evasion.
>
> The problem is not Pillard's failure to predict how the Court would rule; **the problem was her radical position that the church's invocation of its First Amendment rights substantially threatens the rule of law.** Pillard was unwilling to defend this position, so she dodged the question.
>
> The significance of the 9-0 vote in favor of the church is not Pillard's failure to anticipate it. The significance lies in the fact that she took a position too radical for any of the Court's liberals to adopt. In fact, according to Cruz, Justice Kagan described the government's position in the case, which Pillard supported, as "amazing."

She compared pro-lifers to the Ku Klux Klan:

> Pillard did no better with a question from Senator Lee about her argument that anti-abortion protesters are comparable to the members of the Ku Klux Klan who were the subject of the anti-KKK post-civil war statute. Pillard made this argument in the context of litigation trying to use that statute against anti-abortion protesters.
>
> Pillard testified today that the comparison is "not at all fair." She explained that she had been forced to rely the anti-Klan law because there was nothing else on the books with which to go after militant anti-abortion protesters (Pillard hoped to use RICO, but the Supreme Court had shot theory that down). Pillard assured Sen. Lee that, because Congress has since passed legislation to deal with such protesters, there is no longer a need to use the anti-Klan law.

She opposes federalism, one of the biggest causes of American prosperity:

> Finally, Sen. Flake questioned Pillard about her "transnationalism" referred to in my earlier report. He asked her about a statement in which, apparently, she indicated that international law provides a promising source of new rights for U.S. citizens, now that recognized domestic sources of such rights may be largely exhausted.
>
> Pillard said she doesn't agree with this view. She testified that she merely trying to explain to a Swiss audience the difference between our system and the system to which Europeans are accustomed. Specifically, she was trying to explain that we have a federal system.

> I don't have the statement that Sen. Flake was referring to, and thus cannot yet evaluate the plausibility of Pillard's explanation of it. I can say, however, that Pillard is a less than ideal candidate to be explaining federalism to foreigners or anyone else. For she views "the federalism impulse" as a "sort of demonization of government" and an "effort to impede the ability of government to govern."

Here's more on her record from Life News.

Excerpt:

> Among some of her greatest hits, the former Deputy Assistant Attorney General argues that abortion is necessary to help "free women from historically routine *conscription* into maternity." As if her militant feminism wasn't apparent enough, she takes the opportunity in some of her writings to slam anyone who opposes the abortion-contraception mandate as "reinforce[ing] broader patterns of discrimination against women as a class of *presumptive breeders*."
>
> A mother of two, Nina wrote a 2011 paper, "Against the New Maternalism," which argues that by celebrating motherhood, society is creating a "self-fulfilling cycle of discrimination." Those ideas bleed into Pillard's extreme pro-abortion views, which suggest that technology is somehow manipulating Americans to consider the personhood of the unborn. In one of her most jaw-dropping statements, the President's nominee even criticizes the ultrasound. She believes it manufactures "deceptive images of fetus-as-autonomous-being that the anti-choice movement has popularized since the advent of amniocentesis."
>
> As crazy and outrageous as her other comments are, this one is a denial of basic biology! She actually rejects modern science on human development because it conflicts with her hard-core ideology. If that doesn't disqualify someone from the second most prestigious court in America, I'm not sure what does. Except maybe this: Pillard is so fiercely opposed to abstinence education that she has said publicly she would declare it unconstitutional. In "Our Other Reproductive Choices," Nina argues that abstinence-only curriculum is "permeated with stereotyped messages and sex-based double standards" which, in her mind, makes it "vulnerable to an equal protection challenge."

Wow, you can really tell a lot about Obama's views on churches and pro-lifers from his judicial nominees, can't you?

# Robert P. George: what is religious liberty? what is conscience?

**Wintery Knight** · 25 July 2013 · Archived copy · Original

From the Public Discourse, an article that explains why freedom of religion is a human right. (H/T Chris S.)

Excerpt:

> In its fullest and most robust sense, religion is the human person's being in right relation to the divine—the more-than-merely-human source or sources, if there be such, of meaning and value. In the perfect realization of the good of religion, one would achieve the relationship that the divine—say God himself, assuming for a moment the truth of monotheism—wishes us to have with Him.
>
> Of course, different traditions of faith have different views of what constitutes religion in its fullest and most robust sense. There are different doctrines, different scriptures, different ideas of what is true about spiritual things and what it means to be in proper relationship to the more-than-merely-human source or sources of meaning and value that different traditions understand as divinity.

Religious liberty is the ability to use reason and evidence to determine the truth about religion:

> **For my part, I believe that reason has a very large role to play for each of us in deciding where spiritual truth most robustly is to be found. And by reason here, I mean not only our capacity for practical reasoning and moral judgment, but also our capacities for understanding and evaluating claims of all sorts: logical, historical, scientific, and so forth. But one need not agree with me about this in order to affirm with me that there is a distinct human good of religion—a good that uniquely shapes one's pursuit of and participation in all the aspects of our flourishing as human beings—and that one begins to realize and participate in this good from the moment one begins the quest to understand the more-than-merely-human sources of meaning and value and to live authentically by ordering one's life in line with one's best judgments of the truth in religious matters.**
>
> If I am right, then the existential raising of religious questions, the honest identification of answers, and the fulfilling of what one sincerely believes to be one's duties in the light of those answers are all parts of the human good of religion. But if that is true, then respect for a person's well-being, or more simply respect for the person, demands respect for his or her flourishing as a seeker of religious truth and as one who lives in line with his or her best judgments of what is true in spiritual matters. And that, in turn, requires respect for everyone's liberty in the religious quest—the quest to understand religious truth and order one's life in line with it.
>
> Because faith of any type, including religious faith, cannot be authentic—it cannot be *faith*—unless it is free, respect for the person—that is to say, respect for his or her dignity as a free and rational creature—requires respect for his or her religious liberty. That is why it makes sense, from the point of view of reason, and not merely from the point of view of the revealed teaching of a particular faith—though many faiths proclaim the right to religious freedom on theological and not merely philosophical grounds—to understand religious freedom as a fundamental human right.

Here's the definition of conscience – it's not just autonomy to do whatever you want:

> Conscience, as Newman understood it, is the very opposite of "autonomy" in the modern sense. It is not a writer of permission slips. It is not in the business of licensing us to do as we please or conferring on us "the right to define one's own concept of existence, of meaning, of the universe, and of the mystery of human life." Rather, conscience is one's last best judgment specifying the bearing of moral principles one grasps, yet in no way makes up for oneself, on concrete proposals for action. Conscience identifies our *duties* under a moral law

> that we do not ourselves make. It speaks of what one must do and what one must not do. Understood in this way, conscience is, indeed, what Newman said it is: a stern monitor.
>
> Contrast this understanding of conscience with what Newman condemns as its counterfeit. Conscience as "self-will" is a matter of feeling or emotion, not reason. It is concerned not so much with the identification of what one has a duty to do or not do, one's feelings and desires to the contrary notwithstanding, but rather, and precisely, with sorting out one's feelings. Conscience as self-will identifies permissions, not obligations. It licenses behavior by establishing that one doesn't feel bad about doing it, or, at least, one doesn't feel so bad about doing it that one prefers the alternative of not doing it.
>
> I'm with Newman. His key distinction is between conscience, authentically understood, and self-will—conscience as the permissions department. His core insight is that conscience has rights *because it has duties*. **The right to follow one's conscience, and the obligation to respect conscience—especially in matters of faith, where the right of conscience takes the form of religious liberty of individuals and communities of faith—obtain not because people as autonomous agents should be able to do as they please; they obtain, and are stringent and sometimes overriding, because people have duties and the obligation to fulfill them. The duty to follow conscience is a duty to do things or refrain from doing things not because one wants to follow one's duty, *but even if one strongly does not want to follow it*. The right of conscience is a right to do what one judges oneself to be under an obligation to do, whether one welcomes the obligation or must overcome strong aversion in order to fulfill it.** If there is a form of words that sums up the antithesis of Newman's view of conscience as a stern monitor, it is the imbecilic slogan that will forever stand as a verbal monument to the "Me-generation": "If it feels good, do it."

Where are these rights under attack today? Well, in this country we have situations where Christians are being forced to act like atheists in public in order to avoid offending atheists. The view that Christianity is something that should be kept private because it is offensive to atheists is an atheist view. So what this really is then is atheists forcing their atheism on Christians. You can see atheists attack religious liberty today when valedictorians are forced to hid their true beliefs in order to avoid making atheists feel bad. Conscience is under attack in many places, but one of them is the abortion mandate in Obamacare, which requires Christian business owners to provide their employees with drugs that can cause abortions. So there are very real threats to religious liberty and conscience today. If you value religious liberty and conscience rights, then you should oppose expanding the power of any government that is hostile to those rights.

# Why doesn't God give us more evidence of his existence?

**Wintery Knight** · 25 July 2013 · Archived copy · Original

Have you ever heard someone say that if God existed, he would give us more evidence? This is called the "hiddenness of God" argument. It's also known as the argument from "rational non-belief".

Basically the argument is something like this:

1. God is all powerful
2. God is all loving
3. God wants all people to know about him
4. Some people don't know about him
5. Therefore, there is no God.

You may hear have heard this argument before, when talking to atheists, as in William Lane Craig's debate with Theodore Drange, (audio, video).

Basically, the atheist is saying that he's looked for God real hard and that if God were there, he should have found him by now. After all, God can do anything he wants that's logically possible, and he wants us to know that he exists. To defeat the argument we need to find a possible explanation of why God would want to remain hidden when our eternal destination depends on our knowledge of his existence.

**What reason could God have for remaining hidden?**

Dr. Michael Murray, a brilliant professor of philosophy at Franklin & Marshall College, has found a reason for God to remain hidden.

His paper on divine hiddenness is here:
"Coercion and the Hiddenness of God", American Philosophical Quarterly, Vol 30, 1993.

He argues that if God reveals himself too much to people, he takes away our freedom to make morally-significant decisions, including responding to his self-revelation to us. Murray argues that God stays somewhat hidden, so that he gives people space to either 1) respond to God, or 2) avoid God so we can keep our autonomy from him. God places a higher value on people having the free will to respond to him, and if he shows too much of himself he takes away their free choice to respond to him, because once he is too overt about his existence, people will just feel obligated to belief in him in order to avoid being punished.

But believing in God just to avoid punishment is NOT what God wants for us. If it is too obvious to us that God exists and that he really will judge us, then people will respond to him and behave morally out of self-preservation. But God wants us to respond to him out of interest *in him*, just like we might try to get to know someone we admire. God has to dial down the immediacy of the threat of judgment, and the probability that the threat is actual. That leaves it up to us to respond to God's veiled revelation of himself to us, in nature and in Scripture.

(Note: I think that we don't seek God on our own, and that he must take the initiative to reach out to us and draw us to him. But I do think that we are free to resist his revelation, at which point God stops himself short of coercing our will. We are therefore responsible for our own fate).

The atheist's argument is a logical/deductive argument. It aims to show that there is a contradiction between God's will for us and his hiding from us. In order to derive a contradiction, God MUST NOT have any possible reason to remain hidden. If he has a reason for remaining hidden that is consistent with his goodness, then the argument will not go through.

When Murray offers a possible reason for God to remain hidden in order to allow people to freely respond to him, then the argument is defeated. God wants people to respond to him freely so that there is a genuine love

relationship – not coercion by overt threat of damnation. To rescue the argument, the atheist has to be able to prove that God could provide *more* evidence of his existence without interfering with the free choice of his creatures to reject him.

**More of Michael Murray's work**

Murray has defended the argument in works published by prestigious academic presses such as Cambridge University Press, (ISBN: 0521006104, 2001) and Routledge (ISBN: 0415380383, 2007). The book chapter from the Cambridge book is here. The book chapter from the Routledge book is here.

Michael Murray's papers are really fun to read, because he uses hilarious examples. I should mention that I disagree with his view that God's work of introducing biological information in living creatures has to be front-loaded.

Here's more terrific stuff from Dr. Murray:

- "Who's Afraid of Religion?", Inaugural Lecture delivered March 30, 2006. Franklin and Marshall College.
- "Seek and You Will Find", in God and the Philosophers. Thomas Morris, editor. Oxford: Oxford University Press. 1994.

**Is there any evidence of God's existence?**

Yes, just watch this lecture by Dr. William Lane Craig. It contains 5 reasons why God exists and 3 reasons why it matters.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument

# Annual median household income down $4,500 since Democrats won Congress in 2006

**Wintery Knight** · 26 July 2013 · Archived copy · Original

Median Household Income Under Obama

The Wall Street Journal reports.

Excerpt:

> The recovery that began four years ago has been one of the weakest on record, averaging a little more than 2%. And it has not gained speed. Growth in the fourth quarter of 2012 was 0.4%. It rose to a still anemic 1.8% in the first quarter but most economists are predicting even slower growth in the second quarter.
>
> We hope the predictions of a faster growth in the second half will be right, but the Obama Treasury and Federal Reserve have been predicting for four years that takeoff was just around the corner. Stocks are doing great, and housing prices are rising, but job growth remains lackluster. What has never arrived is the 3%-4% growth spurt during typical expansions.
>
> […]What about the middle class that is the focus of Mr. Obama's rhetoric? Each month the consultants at Sentier Research crunch the numbers from the Census Bureau's Current Population Survey and estimate the trend in median annual household income adjusted for inflation. In its May 2013 report, Sentier put the figure at $51,500, essentially unchanged from $51,671 a year earlier.
>
> And that's the good news. The bad news is that median real household income is $2,718, or 5%, lower than the $54,218 median in June 2009 when the recession officially ended. Median incomes typically fall during recessions. But the striking fact of the Obama economy is that median real household income has fallen even during the recovery.
>
> While the declines have stabilized over the last two years, incomes are still far below the previous peak located by Sentier of $56,280 in January 2008. No wonder Mr. Obama is now turning once again to his familiar political narrative assailing inequality and blaming everyone else for it. He wants to change the subject from the results on his watch.
>
> The core problem has been Mr. Obama's focus on spreading the wealth rather than creating it. ObamaCare will

> soon hook more Americans on government subsidies, but its mandates and taxes have hurt job creation, especially at small businesses. Mr. Obama's record tax increases have grabbed a bigger chunk of affluent incomes, but they created uncertainty for business throughout 2012 and have dampened growth so far this year.
>
> The food stamp and disability rolls have exploded, which reduces inequality but also reduces the incentive to work and rise on the economic ladder. This has contributed to a plunge in the share of Americans who are working—the labor participation rate—to 63.5% in June from 65.7% in June 2009. And don't forget the Fed's extraordinary monetary policy, which has done well by the rich who have assets but left the thrifty middle class and retirees earning pennies on their savings.
>
> Mr. Obama would have done far better by the poor, the middle class and the wealthy if he had focused on growing the economy first. The difference between the Obama 2% recovery and the Reagan-Clinton 3%-4% growth rates is rising incomes for nearly everybody.

And remember, thanks to Obamacare, medical insurance premiums have soared over $3,000. We are getting *poorer* because of Obama's big government policies.

Whose fault is it?

In the 2006 mid-term elections, the Democrats took over the House and Senate. That was the beginning of the Nancy Pelosi and Harry Reid spending spree. Millions of dollars have been wasted on ineffective government programs, handouts and bailouts. We've had trillion dollar deficits for the last four years under Obama, and over 8 trillion added to the national debt since Pelosi/Reid 2007. All that deficit spend does have an effect on economic growth – businesses know that they are going to have to pay it off at some point, either through higher taxes or inflation or both.

# Democrat bill to punish criticism of cross-dressing heads to Senate

**Wintery Knight** · 26 July 2013 · Archived copy · Original

CNS News reports.

Excerpt:

> The full Senate will consider a bill sponsored by Sen. Jeff Merkley (D-Ore.) that would add "actual or perceived sexual orientation" and "gender identity" to the list of federally protected traits, which currently include race, religion, age, gender and disability.
>
> The Family Research Council describes The Employment Non-Discrimination Act (S. 815) as "giving special rights and protections to people based solely on their sexual behavior," warning that ENDA "is to the office what the repeal of Don't Ask, Don't Tell was to the military." (S.815.pdf)
>
> ENDA cleared the Health, Education, Labor and Pensions Committee July 10th on a 15-7 vote, with Republicans Mark Kirk (Ill.), Orrin Hatch (Utah), and Lisa Murkowski (Alaska) voting with the committee's Democratic majority.
>
> […]"[The President] thanks Committee Chairman [Tom] Harkin, Senator Merkley, and Senator Kirk for their leadership on this important issue. The President has long supported an inclusive ENDA, which would enshrine into law strong, lasting and comprehensive protections against employment discrimination on the basis of sexual orientation or gender identity. "
>
> The bill imposes penalties under Title VII of the Civil Rights Act of 1964 and the Employee Rights Act of 1991 on private employers who discriminate against individuals on the basis of their "gender identity," which the legislation describes as "the gender-related identity, appearance or mannerisms or other gender-related characteristics of an individual, with or without regard to the individual's designated sex at birth."
>
> Under the bill, state and local officials, including those who work for local school districts, are not immune, and can also be sued in federal court for employment discrimination.
>
> "Unlike past bills, Sen. Merkley's version doesn't include an exemption for bathrooms, which means that employers at daycares, public schools, and Christian businesses would all have to change their restroom and shower policies to accommodate men who dress like women and vice-versa.," FRC president Tony Perkins noted.

Republican senator Ted Cruz is alarmed at the way that government is trying to force their moral views on individuals and businesses.

Excerpt:

> In an interview with the Christian Broadcasting Network, Senator Ted Cruz (R-TX) said he believes the legalization of same-sex "marriage" may lead to those who express religious objections to homosexuality being prosecuted for hate speech.
>
> "If you look at other nations that have gone down the road towards gay marriage, that's the next step of where it gets enforced," Cruz told CBN host David Brody. "It gets enforced against Christian pastors who decline to perform gay marriages, who speak out and preach biblical truths on marriage, that has been defined elsewhere as hate speech, as inconsistent with the enlightened view of government."
> In Canada, where gay 'marriage' was legalized in 2005, Christian pastors, public officials, educators and business owners have all faced heavy fines and lengthy court battles after speaking critically of the homosexual lifestyle. In one case a pastor was fined $7000 and ordered never again to speak publicly about the issue of

> homosexuality after he wrote a letter to the editor of a local newspaper criticizing the homosexual agenda in schools.
>
> Both Sweden and the United Kingdom have also prosecuted people who expressed traditional views on homosexuality, including a Christian pastor in Sweden who was sentenced to a suspended jail term for "inciting hatred" for preaching against homosexual behavior. The UK has recently seen a rash of cases in which Christian street preachers were arrested simply for preaching that homosexual conduct is sinful.
>
> The French government has criminalized speech against homosexuality, resulting in a member of parliament being hit with a $4,000 penalty and ordered to pay $2,000 in court fees after he said he thought homosexuality was "inferior" to heterosexuality and said the practice would be "dangerous for humanity if it was pushed to the limit."

There is a word for using the power of government to force religious and moral views onto citizens. That word is *fascism*.

# Three debates on divine sovereignty, predestination and free will

**Wintery Knight** · 26 July 2013 · Archived copy · Original

The two views being debated below are Calvinism and simple foreknowledge. Calvinism is the view that God unilaterally predetermines a selected group of individuals who will know him – the "elect". Foreknowledge is the view that God draws people to him who he foreknows will freely respond to his overtures and come to know him. What does the Bible teach about these issues?

The Calvinist debater is Dr. James White:

> James White is the director of Alpha and Omega Ministries, a Christian apologetics organization based in Phoenix, Arizona. He is a professor, having taught Greek, Systematic Theology, and various topics in the field of apologetics. He has authored or contributed to more than twenty books, including *The King James Only Controversy*, *The Forgotten Trinity*, *The Potter's Freedom*, and *The God Who Justifies*. He is an accomplished debater, having engaged in more than one-hundred moderated, public debates with leading proponents of Roman Catholicism, Islam, Jehovah's Witnesses, and Mormonism, as well as critics such as Bart Ehrman, John Dominic Crossan, Marcus Borg, and John Shelby Spong. He is an elder of the Phoenix Reformed Baptist Church, has been married to Kelli for more than twenty-eight years, and has two children, Joshua and Summer.

The Foreknowledge debater is Dr. Michael Brown:

> Michael L. Brown holds a Ph.D. in Near Eastern Languages and Literatures from New York University and has served as a visiting or adjunct professor at Southern Evangelical Seminary, Gordon Conwell Theological Seminary (Charlotte), Trinity Evangelical Divinity School, Fuller Theological Seminary, Denver Theological Seminary, the King's Seminary, and Regent University School of Divinity. He has contributed numerous articles to scholarly publications, including the Oxford Dictionary of Jewish Religion and the Theological Dictionary of the Old Testament. Dr. Brown is the author of twenty books, including, Our Hands Are Stained with Blood: The Tragic Story of the "Church" and the Jewish People, which has been translated into more than twelve languages, the highly-acclaimed five-volume series, Answering Jewish Objections to Jesus, a commentary on Jeremiah (part of the revised edition of the Expositor's Bible Commentary), and several books on revival and Jesus revolution.

Now, let's get ready to rumble!

**First debate**

A nice friendly debate that introduces the topic. This is the best debate for casual listeners and non-Christians.

The MP3 file is here.

Summary:

- Introduction to Calvinist James White and some of his 90 debates
- What is Calvinism and why is it important?
- Does God love all people the same way in Calvinism?
- Does God desire the salvation of all people in Calvinism?
- Is the offer of salvation to all people a genuine offer on Calvinism?
- Does Calvinism diminish or augment God's sovereignty?
- Can God accomplish his will by permitting evil creaturely actions?
- Did Jesus die only for the "chosen", or for the possibility of salvation for all?

- Does a person's responding to God's offer of savaltion detract from Gods glory?
- Does our ability to resist God's grace mean that we are "stronger" than God?

There is a little static in the audio for a few seconds every time they come back from a break, but nothing major.

**Second debate, on specific passages in the Bible**

Same two guys, but this time they tackle the meaning of specific Bible passages.

The MP3 file is here.

The passages being disputed:

- John 6
- Romans 8, 9
- Ephesians 1

Each person gets 8 minutes to exegete the text, followed by 4 minutes of cross-examination by the other debater, followed by 3 minute conclusions by each debater. These texts were chosen by the Calvinist debater.

**Third debate, on specific passages in the Bible**

Same two guys, but this time they tackle the meaning of specific Bible passages.

The MP3 file is here.

The passages being disputed:

- Luke 13:34-35 (Deuteronomy 5:28-29)
- Ezekiel 18:21-32 (Jeremiah 3:19-20; Ezekiel 22:30-31)
- 1 John 2:1-2 (2 Pet 2:1).

Each person gets 8 minutes to exegete the text, followed by 4 minutes of cross-examination by the other debater, followed by 3 minute conclusions by each debater. These texts were chosen by the foreknowledge debater.

# New study: marijuana use by teens is linked to permanent brain abnormalities

**Wintery Knight** · 27 July 2013 · Archived copy · Original

From the National Post.

Summary:

> Smoking a few joints with friends growing up may be the furthest thing from harmless for developing young brains, a new U.S. study suggests.
>
> Teenagers who regularly use cannabis during their adolescent years may cause permanent brain abnormalities by using the drug, and increase their risk of developing serious mental disorders such as schizophrenia, a study published this month in the journal *Neuropsychopharmacology*, a division of the journal *Nature*, hints at.

The problems occurred in younger mice but not in older mice:

> The study, conducted by researchers at the University of Maryland School of Medicine, examined the cortical oscillations in mice. Cortical oscillations (patterns of activity of neurons in the brain believed to underlie various functions) are very abnormal in schizophrenia and in other psychiatric disorders. Scientists exposed young mice to very low doses of the active ingredient in marijuana for 20 days, and then allowed them to return to their siblings and develop normally.
>
> "In the adult mice exposed to marijuana ingredients in adolescence, we found that cortical oscillations were grossly altered, and they exhibited impaired cognitive abilities," says the study's lead author, Sylvina Mullins Raver, a PhD candidate in neuroscience and neurobiology at the University of Maryland, in a press release with the study. "We also found impaired cognitive behavioral performance in those mice. The striking finding is that, even though the mice were exposed to very low drug doses, and only for a brief period during adolescence, their brain abnormalities persisted into adulthood."
>
> When researchers repeated the experiment solely on adult mice, cortical oscillations and ability to perform cognitive behavioral tasks remained normal.
>
> […]"Previous research has shown that children who started using marijuana before the age of 16 are at greater risk of permanent cognitive deficits, and have a significantly higher incidence of psychiatric disorders such as schizophrenia. There likely is a genetic susceptibility, and then you add marijuana during adolescence and it becomes the trigger," says the study's senior author Asaf Keller, PhD, Professor of Anatomy and Neurobiology at the University of Maryland.

Now I know that young people have trouble making decisions, and that they have the attitude that no matter what they do, nothing bad will happen to them. But I still think that when you teach a young person, it's important to appeal to evidence like this and say to them "this isn't just me telling you what to do, this me me telling you what is true". Obviously how you impart this information to them is going to affect whether they believe it and apply it to themselves.

In case you need more data, here is some more from previous posts.

Fox News reports:

Excerpt:

> Recent research from Duke University in Durham, N.C., found teenagers who smoked marijuana habitually during their adolescence showed a decrease in their general intellectual ability as they progressed into

> adulthood.
>
> But now, there is an even more chilling possible side effect of cannabis use – an increased risk of stroke.
>
> According to a new study from the University of Auckland in New Zealand, marijuana may double the risk of ischemic stroke and transient ischemic attack (TIA) in young adults – even those who had no risk factors that often contribute to an attack.
>
> […]Conducting the first case-controlled study of its kind, Barber and his colleagues studied 160 ischemic stroke/TIA patients between the ages of 18 to 55 (an average age of 45), who had their urine samples screened when they entered the hospital. As a comparison, the researchers examined urine samples of 160 control subjects who had been admitted to the hospital for other medical reasons.
>
> Of the 160 stroke patients, 16 percent tested positive for marijuana use within the past couple of days, compared to only 8.1 percent of the control patients. According to Barber, the stroke patients were very well matched to the controls, with no differences in age, mechanisms for stroke or other vascular risk factors.

Here's a study from last year that found that smoking marijuana can permanently damage intelligence.

From the UK Telegraph.

Excerpt:

> Teenagers who regularly smoke cannabis are putting themselves at risk of permanently damaging their intelligence, according to a landmark study.
>
> Researchers found persistent users of the drug, who started smoking it at school, had lower IQ scores as adults.
>
> They were also significantly more likely to have attention and memory problems in later life, than their peers who abstained.
>
> Furthermore, those who started as teenagers and used it heavily, but quit as adults, did not regain their full mental powers, found academics at King's College London and Duke University in the US.
>
> They looked at data from over 1,000 people from Dunedin in New Zealand, who have been followed through their lives since being born in 1972 or 1973.
>
> […]Professor Terrie Moffitt, of KCL's Institute of Psychiatry, who contributed to the study, published in the journal *Proceedings of the National Academy of Sciences*, said "persistent users" who started as teenagers suffered a drop of eight IQ points at the age of 38, compared to when they were 13.

In addition to looking at studies, it's important to look at countries that have legalized marijuana, so that we can see the results.

Other countries have tried permissive drug policies have been tried and they have *failed*.

Excerpt:

> Amsterdam authorities say they are to halve the number of brothels and marijuana shops in the city's "red light" district and surrounding area

> The city announced plans to clean up the area a year ago and since then 109 sex "windows", from which prostitutes attract customers, have been closed. The new measures aim to reduce the number of windows to 243 from 482 last year, a city spokesman said.
>
> Amsterdam also wants to close half of the 76 cannabis shops in the city centre.
>
> "Money laundering, extortion and human trafficking are things you do not see on the surface but they are

> hurting people and the city. We want to fight this," deputy mayor of Amsterdam Lodewijk Asscher told Reuters.

The Family Research Council explains how permissive drug policies don't actually work.

Excerpt:

> History provides evidence that legalization of drugs in foreign nations has not been successful. For example, opium was legalized in China earlier this century. That decision resulted in 90 million addicts and it took a half-century to repair the damage.[59]
>
> Egypt allowed unrestricted trade of cocaine and heroin in the 1920s. An epidemic of addiction resulted. Even in Iran and Thailand, countries where drugs are readily available, the prevalence of addiction continues to soar.[60]
>
> Modern-day Netherlands is often cited as a country which has successfully legalized drugs. Marijuana is sold over the counter and police seldom arrest cocaine and heroin users. But official tolerance has led to significant increases in addiction. Amsterdam's officials blame the significant rise in crime on the liberal drug policy. The city's 7,000 addicts are blamed for 80 percent of all property crime and Amsterdam's rate of burglary is now twice that of Newark, New Jersey.[61] Drug problems have forced the city to increase the size of the police force and the city fathers are now rethinking the drug policy.[62]
>
> Dr. K. F. Gunning, president of the Dutch National Committee on Drug Prevention, cites some revealing statistics about drug abuse and crime. Cannabis use among students increased 250 percent from 1984 to 1992. During the same period, shootings rose 40 percent, car thefts increased 62 percent, and hold-ups rose 69 percent.[63]
>
> Sweden legalized doctor prescriptions of amphetamines in 1965. During the first year of legalization, the number of intravenous"speed" addicts rose 88.5 percent. A study of men arrested during the legalization period showed a high correlation between intravenous use and a variety of crimes.[64]
>
> Dr. Nils Bejorot, director of the Swedish Carnegie Institute and professor of social medicine at the Karolinska Institute in Stockholm, believes the solution to the growing drug problem is consistent social and legal harassment of both users and dealers.[65]
>
> Great Britain experimented with controlled distribution of heroin between 1959 and 1968. According to the British Medical Journal, the number of heroin addicts doubled every sixteen months and the increase in addicts was accompanied by an increase in criminal activity as well.[66] And British authorities found that heroin addicts have a very good chance of dying prematurely. On the crime front, Scotland Yard had to increase its narcotics squad 100 percent to combat the crime caused by the "legal" addicts.[67]
>
> The Swiss opened a "legalized drug" area in Zurich seven years ago and local addicts were given drugs, clean needles, and emergency medical care. Unfortunately, the liberal policy backfired and the number of addicts surged to 3,500; violence surged, too. "Needle Park," as it came to be known, was a place of open warfare among rival gangs, and even police faced gunfire. Their cars were attacked and overturned. In February 1995, officials ended the experiment, conceding that it had evolved into a grotesque spectacle.[68]

Now are the people who push for legalizing marijuana aware of these facts? Do they think about society will be like if more human beings who have spouses, children and jobs are more able to get their hands on drugs? Will they complain when their spouse loses their job, or they lose their job, and their children suffer? Will they blame themselves, or will they keep on smoking and blame others for their own decisions? We all have to think about the people around us before we do stupid, selfish things.

# Crime in Canada reaches lowest level in 40 years due to Conservative party policies

**Wintery Knight** · 27 July 2013 · Archived copy · Original

Prime Minister Stephen Harper
From the National Post.

Excerpt:

> New figures show Canada's crime rate dipped to its lowest level in 40 years last year, the very year the federal government enacted some of its harshest tough-on-crime policies.
>
> Just under two million criminal incidents were reported to police in 2012, about 36,000 fewer than the previous year, according to a Canadian Centre for Justice Statistics study on police-reported crime.
>
> The decline is primarily attributed to decreases in non-violent crimes. In fact, 2012 marked the ninth consecutive year that both the volume and severity of crime was down.
>
> According to the study, 543 homicides were reported across the country, 55 fewer than in 2011. Youth crime was also down.
>
> "As a result, the homicide rate fell to its lowest level since 1966," the report concluded.

Relaxing gun control laws was also likely a factor:

> Although crime rates have been falling for years, the federal government passed a controversial omnibus crime bill early last year. It set a number of mandatory minimum penalties for drug trafficking and sex crimes against children and got tough on pot producers, young offenders, Canadians imprisoned abroad seeking a transfer to a Canadian institution and ex-cons seeking a pardon.
>
> **The government also scrapped the controversial long gun registry last year.**

A gun registry is nothing but a promise that the government will confiscate weapons later. When the registry goes away, people feel safer about buying guns. The more citizens who are legally armed, the worse it is for criminals.

I'm posting this to show that unlike our own government, some governments are actually doing things that work to

solve problems. But all of this goes back to qualifications. Stephen Harper *has* the BA and MA in Economics. He is an economist, so he understands how laws and policies influence human behavior. That's why when he makes a policy, he gets the results he wants to get. He actually knows what he is doing. He is actually doing work that he knows how to do. It *can* happen.

# Why do younger evangelicals put happiness and popularity over morality and truth?

**Wintery Knight** · 28 July 2013 · Archived copy · Original

Here's an interesting post by Mark Tooley in the American Spectator.

Excerpt:

> A new generation of evangelical elites is imploring evangelicals to step back from the culture wars. Mostly they want to escape polarizing strong stances on same-sex marriage and abortion, and perhaps also contentious church-state issues, like the Obamacare contraceptive mandate.
>
> Purportedly the evangelical church is failing to reach young, upwardly mobile professionals because evangelicals, who now broadly comprise perhaps one third of all Americans, are seen as reactionary and hateful. On their college campuses, at their coffee shops, and in their yoga classes, among other venues, some outspoken hip young evangelicals want a new public image for their faith.
>
> […]A popular young evangelical blogger echoing Merritt's theme is Rachel Evans, who conveniently grew up in the Tennessee small town famous for the Scopes Monkey Trial. Her 2010 book was *Evolving in Monkey Town: How a Girl Who Knew All the Answers Learned to Ask the Questions.* "We are tired of the culture wars," she explained in a recent interview. "We are tired of politics." Lamenting the church's preoccupation with "shame and guilt," she urged evangelicals to reconsider their opposition to same-sex unions.

The post has a nice history of how evangelicals have always been involved in moral and political issues, and it's worth reading. But I want to make a different point below.

What's at the root of this movement to back away from moral issues? Here's what I think is the problem. When you advocate for moral causes like protecting the unborn, or school choice, or freeing the slaves, a bunch of people are not going to like you. Christians in the time of Jesus knew that being bold about their Christian convictions would make a lot of people think bad things about them – they expected it. But young evangelicals have gotten the idea that being a Christian should not involve any sort of unhappiness and unpopularity. They wouldn't have learned this from the Bible, because the Bible emphasizes suffering and unpopularity as part of the normal Christian life. It is their experience of church (and the hedonistic culture around them) that is likely to reinforce that view.

What young evangelicals learn in many churches is that religion is something that is centered on the Bible and the church building – it is not something that flows into real life. They learn that you can't find out anything about God from the Big Bang, the DNA, the fossil record, or even from the peer-reviewed research on abortion, divorce, or gay marriage. They learn from the Bible that helping the poor is good, but then they never pick up an economic textbook to see *which economic system really helps the poor.* What you learn about in church is that religion is private and has no connection to reality whatsoever. This fits in with their view that Christianity should make them happy, because they've learned that it doesn't involve any studying to connect the Bible to the real world.

What follows from having a view that Christianity only lives in the Bible and church, and not out there in the real world of telescopes and microscopes? Well, most young evangelicals interpret what their pastor is telling them as "our flavor of ice cream" or "our cultural preference". They don't link Christianity to the real world, they don't think that it's true for everyone. They think that you just accept what the Bible says on faith, and that's all. No reasons can be given to non-Christians outside of just asking them to accept the Bible. Younger evangelicals believe that there are no facts that confirm or disprove Christianity – it's just a blind belief. Young evangelicals think that their faith doesn't have to be complemented with careful study of how things work in the real world.

What is the result of this anti-intellectual compartmentalization of faith? The result is that young evangelicals will balk at the idea of telling someone that they are going to Hell if they don't believe in Jesus. They will balk at the

idea that feminism is to blame for the destruction of the family. They will balk at the idea that the best way to help the poor is to push for free market capitalism. They will balk at the idea that it is wrong to kill unborn children. They will balk at the idea that disarmament and pacifism embolden terrorists and tyrants to attack peace-loving people. They will balk at the idea that traditional marriage is better for society and children. They will balk at the idea that man-made catastrophic global warming is not supported by science. *They lack courage because they first lack knowledge*. They don't know how to make the case using hard evidence. They don't learn that hard evidence is important in church.

If the purpose of religion is to have happy feelings and be liked, then studying the real world to find out whether the Bible is true is bad religion. If religion is divorced from reality, then it's just a personal preference influenced by how a person was raised. No young evangelical is going to lift a finger to take bold moral stands if they think their worldview is just one option among many – like the flavors of ice cream in the frozen section of the grocery store. They have to know that what they are saying is true – then they will be bold. An example: there was a time when people believed that God did not create the first living cell, because it was just a simple lump of protoplasm that could easily come about by accident. Now we know better, and we can boldly make the case for intelligent design based on hard evidence – if we put in the time to study the evidence. And it is the same for everything – from theological claims, to moral claims, to social claims, to economic claims, to foreign policy claims. It doesn't matter if people call you names when you have the facts to support unpopular claims, *and that's why public, authentic Christianity is built on facts.* Non-Christians being offended by your claims doesn't change the way the world is.

We have to turn away from our own ignorance, laziness and cowardice if we hope to have the ability to stand up for our beliefs in public. Christianity is not about being happy and feeling good and being liked by others. In a society that is increasingly secular and relativistic, studying outside the Bible necessarily precedes an authentic Christian life. There is no shortcut. We might have been able to get away with fideism 50 years ago, but not anymore. Not now.

# Does a commitment to naturalism undermine rational thought and textual meaning?

**Wintery Knight** · 28 July 2013 · Archived copy · Original

Dr. William Lane Craig recently had a formal debate with an atheist philosopher named Alex Rosenberg. Rosenberg is a strong naturalist and he suggests all kinds of counterintuitive outworkings of naturalism in his book. Dr. Craig brought up a bunch of those strange views in his debate, and I listed them out in my summary of the debate as follows:

1. The argument from the intentionality (aboutness) of mental states implies non-physical minds (dualism), which is incompatible with naturalism
2. The existence of meaning in language is incompatible with naturalism, Rosenberg even says that all the sentences in his own book are meaningless
3. The existence of truth is incompatible with naturalism
4. The argument from moral praise and blame is incompatible with naturalism
5. Libertarian freedom (free will) is incompatible with naturalism
6. Purpose is incompatible with naturalism
7. The enduring concept of self is incompatible with naturalism
8. The experience of first-person subjectivity ("I") is incompatible with naturalism

We are concerned with #1 and #2 in this post.

Now I was visiting my parents last week in my home town and Dad and I went to church on Sunday. He wanted to listen to some weird sing-song-voiced pastor on the drive there, but I plugged in my smartphone and we listened to these three podcasts by William Lane Craig instead.

- Arguments in the Debate "Is Faith in God Reasonable?" Part 1
- Arguments in the Debate "Is Faith in God Reasonable?" Part 2
- Arguments in the Debate "Is Faith in God Reasonable?" Part 3

Dr. Craig was explaining in part 3 (I think) about how he went on the offensive with the 8 points, and Dad asked me why Dr. Rosenberg wrote that if naturalism is true, then nothing written down is meaningful. He also wanted to know why Dr. Rosenberg would write a book if his worldview entailed that nothing written down is meaningful.

The solution has to do with Rosenberg's denial of "intentionality", which is the idea that something can be about something else. For example, I can think about what I had for breakfast today on the way to church (two apples and coffee) or I can think about the sermon today in my home church and how good it was. A naturalist believes that the whole universe is made up of pure matter alone, and matter cannot be about anything. So Rosenberg denies this common sense view of "intentionality" or "aboutness" because there is no room for it on his naturalistic / materialistic / physicalist view of reality.

Here is a post by Bill Valicella on Maverick Philosopher blog that answers Dad's questions.

First, Rosenberg's own view from his book.

> A single still photograph doesn't convey movement the way a motion picture does. Watching a sequence of slightly different photos one photo per hour, or per minute, or even one every 6 seconds won't do it either. But looking at the right sequence of still pictures succeeding each other every one-twentieth of a second produces the illusion that the images in each still photo are moving. Increasing the rate enhances the illusion, though beyond a certain rate the illusion gets no better for creatures like us. But it's still an illusion. There is noting to it but the succession of still pictures. That's how movies perpetrate their illusion. The large set of still pictures

> is organized together in a way that produces in creatures like us the illusion that the images are moving. In creatures with different brains and eyes, ones that work faster, the trick might not work. In ones that work slower, changing the still pictures at the rate of one every hour (as in time-lapse photography) could work. But there is no movement of any of the images in any of the pictures, nor does anything move from one photo onto the next. Of course, the projector is moving, and the photons are moving, and the actors were moving. But all the movement that the movie watcher detects is in the eye of the beholder. That is why the movement is illusory.
>
> The notion that thoughts are about stuff is illusory in roughly the same way. Think of each input/output neural circuit as a single still photo. Now, put together a huge number of input/output circuits in the right way. None of them is about anything; each is just an input/output circuit firing or not. But when they act together, they "project" the illusion that there are thoughts about stuff. They do that through the behavior and the conscious experience (if any) that they produce. (Alex Rosenberg,The Atheists' Guide to Reality: Enjoying Life Without Illusions. The quotation was copied from here.)

And here is what Bill says about that:

> Rosenberg is not saying, as an emergentist might, that the synergy of sufficiently many neural circuits gives rise to genuine object-directed thoughts. He is saying something far worse, something literally nonsensical, namely, that the object-directed thought that thoughts are object-directed is an illusion. The absurdity of Rosenberg's position can be seen as follows.
>
> 1. Either the words "The notion that thoughts are about stuff is illusory" express a thought — the thought that there are no object-directed thoughts — or they do not.
> 2. If the latter, then the words are meaningless.
> 3. If the former, then the thought is either true or false.
> 4. If the thought is true, then there there are no object-directed thoughts, including the one expressed by Rosenberg's words, and so his words are once again meaningless.
> 5. If the thought is false, then there are object-directed thoughts, and Rosenberg's claim is false.
>
> Therefore:
>
> - Rosenberg's claim is either meaningless or false. His position is self-refuting.
>
> As for the analogy, it is perfectly hopeless, presupposing as it does genuine intrinsic intentionality. If I am watching a movie of a man running, then I am under an illusion in that there is nothing moving on the movie screen: there is just a series of stills. But the experience I am undergoing is a perfectly good experience that exhibits genuine intrinsic intentionality: it is a visual experiencing of a man running, or to be perfectly punctilious about it: a visual experiencing AS OF a man running. Whether or not the man depicted exists, as would be the case if the movie were a newsreel, the experience exists, and so cannot be illusory.
>
> To understand the analogy one must understand that there are intentional experiences, experiences that take an accusative. But if you understand that, then you ought to be able to understand that the analogy cannot be used to render intelligible how it might that it is illusory that there are intentional experiences.
>
> What alone remains of interest here is how a seemingly intelligent fellow could adopt a position so manifestly absurd. I suspect the answer is that he has stupefied himself by his blind adherence to scientistic/naturalistic ideology.

If you want to sort of double check the details, then go ahead and watch the debate or read my summary or listen to the debate audio, and then listen to Dr. Craig's three podcasts that I linked above.

I know a lot of you are thinking right now "Hey! You cheater! That's a presuppositional argument! You said they

were bad!" Well, I didn't say they were bad, I said that the epistemological view of presuppositionalism was bad. Presuppositional arguments are *good.* See below for a few posts about them. Use them all you can, but use the good scientific and historical evidence, too.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument

# Should Christians expect to know God's will by means of feelings and intuitions?

**Wintery Knight** · 28 July 2013 · Archived copy · Original

There are two views on the topic of decision making and the will of God. The view you learn in the church is called "the traditional view". I call this view the feelings/intuition view. This view that elevates feelings / intuitions to the level of divine communications from God. The more practical view is called "the wisdom view". I call this view the battlefield commander view. I am a proponent of the wisdom / commander view.

Let's learn about the two different views:

> [The traditional view is] that God has a plan for our lives and that we receive guidance through methods such as "open and closed doors", "feeling led" and "the still, small, voice".
>
> [The wisdom view] holds that God does not have an "individual will" for our lives, but rather that all of God's will can be summed up within two categories, God's sovereign will and God's moral will. Basically God's sovereign will is all the things that god decrees will happen. It is hidden (mostly) from us, and does not play an active part in our decision, although some of it is revealed in the bible. God's moral will is the part that we must concern ourselves with in making decisions. It is fully revealed in the bible and our decisions must be made within it. We may use wisdom in applying god's moral will to our lives, or we may be in an area not covered by god's moral will. We must finally submit in advance to God's sovereign will, being prepared for him to sovereignty intervene and redirect us through whatever means he wills (see James).

Here's a bit more from someone else:

> Regarding the view that God has a personal will for us individually that we have to discern and find, J.I. Packer says, "The first thing to say is that the idea of guidance is actually a novelty among orthodox evangelicals. It does not go back farther than the last century. Second, it has led people to so much foolish action on the one hand, and so much foolish inaction on the other, as well as puzzlement and heartbreak when the 'hotline' to God seems to go silent, that it has to be discredited. Third, it must be said that Scripture gives us no more warrant constantly to expect personal 'hotline,' 'voice-from-the-control-tower' guidance than to expect new authoritative revelations to come our way for the guidance of the whole church." (Hot Tub Religion, page 118).
>
> As to the point of the question, how do I make decisions, I attempt to make decisions in light of three factors: God's moral will, wisdom, and my personal desires. If something is opposed to God's moral will, then I should obviously flee from it. If it's not opposed, then I consider the wisdom of the choices. For example, would it be wise for me to marry a woman who loves Jesus, though we have nothing else in common? Probably not. If the options pass the criteria of wisdom, then I'm free to choose how I wish. If I'm offered two jobs, and both are honoring to God, and both would be wise to take, then I'm free to choose the job I would like more. I don't need to put out a fleece or await some other confirmation from God. If it's moral and wise, then the only question as to whether or not it will honor Him is my attitude.
>
> Some examples of this model used in the Bible (in theological circles referred to as the Wisdom Model) are in Paul's planning of a mission to Rome in Romans 1:9-15, 15:22-24, the Jerusalem Council (Acts 15:1-29), and Paul's instructions for legal disputes (1 Cor 6:3-6).

The best book on this topic is Garry Friesen's "Decision Making and the Will of God". In it, you'll find a full assessment about what the Bible teaches on this topic.

When I am trying to decide what will be effective, I look at Christian scholars, at their papers, books, and public

debates. That's effectiveness because it is addressed to a non-Christian audience in public with the force of reason and evidence. It is persuasion and it is addressed to rational minds. I want to change the minds of people who have a large influence on society on the whole. I don't think that offering Christianity as life-enhancement or self-help is really "having an influence". I think that offering Christianity as truth, with support, is "having an influence".

So let me be clear about what I believe:

- I don't think that God normally talks to people directly
- I don't believe that life is an Easter egg hunt, filled with clues accessible only to emotion and intuition
- I don't believe that God expects people to discover a specific will for their lives using non-rational means
- I think that people make up their own life plan that is consistent with the Bible
- The goal of the life plan is to be effective, and there are no other considerations
- I think that there are many good things a person can do, but that some are more effective than others
- I think that with respect to the goal of serving God effectively, *my happiness is expendable*
- I don't think that the purpose of doing something for the Lord is to feel good about ourselves
- I don't think that people should choose ineffective things to do just because they like them
- I don't think that people should choose ineffective things to do just because they are good at them
- I think people should do hard things that they don't like – as long as it's more effective
- I don't think that any course of action is as effective as any other – some plans accomplish more
- I don't think that life is totally unpredictable and irrational and subjective
- I think that we can know what is or is not effective by studying and learning about the world
- I think life is like a battlefield that must be surveyed, understood and acted upon deliberately

I think that every person is the commanding officer of his or her own life, and each person must study everything they can, make a plan that is consistent with the Bible's moral prescriptions, execute the plan and achieve whatever they can achieve for the Lord. And the goal is not comfort or happy feelings, but real achievements. Not for the purpose of being saved, of course, because salvation is a free gift of God because of what Jesus did on the cross. Life is more like a battle than a vacation resort or a buffet or a shopping center. God's will for us is not have happy feelings, but that we freely choose to sacrifice ourselves out of obedience and service to him. In my case, that means studying hard things, making money, saving money, and giving money away to good scholars, sponsoring good events and being persuasive to non-Christians. None of this necessarily makes me happy, but it does work to bring glory to God. I cried when I had to learn calculus, because it was so hard. But who cares? The main thing is that I have money now to sponsor Christian speakers or to give books to Christians to read, and God is happy with that.

I think that it is very important to realize that God is not impressed by our not being smart and not being effective. If we have the ability to be smart, then we should be smart, whether it makes us happy or not. If we have the ability to make money, then we should make money, whether it makes us happy or not. If we have the ability have a great influence, then we should have a great influence, whether it makes us happy or not. There will be plenty of time for happiness after we're dead. But this life is a time of serving, and we should try to serve effectively, whether it makes us happy or not. With respect to God's purposes in the world, my happiness is expendable.

Whenever someone questions my goals and plans by saying that I am asserting my will over God's will, the first question I want to ask that person is this: "how do you know what God's will is?" and "what is your basis for thinking that my plan to serve will not be effective?". I want to know if I have misunderstood something about the way the world is, or miscalculated in some way. I want someone to look at my calculations and show where they are going to produce a less optimal result for the Lord. That's the only concern I have – effectiveness for the Lord. Usually what I have found is that the other person wants to make the purpose of life *their own happiness*, and it makes them happier to choose what to do moment by moment, without having to study anything or make plans. It's

not that they have better goals (for God) or better plans (for God). It's that they want their goals to be above God, and they don't want to make plans other than to do whatever makes them happy.

This article by Greg Koukl may be helpful.

And I also found this summary of the Friesen book useful:

- Part 1
- Part 2
- Part 3
- Part 4
- Part 5
- Part 6
- Part 7
- Part 8
- Part 9

In nine parts.

# IRS employee union opposes making Obamacare apply to themselves

**Wintery Knight** · 29 July 2013 · Archived copy · Original

CNS News reports.

Excerpt:

> The National Treasury Employees Union, which represents Internal Revenue Service employees, is urging its members to oppose legislation that would force federal employees off their government healthcare plans and onto the state and national healthcare exchanges established under Obamacare.
>
> Members of Congress and their staffers are already required to participate in the exchanges, which will go into effect next October 1st under the Affordable Care Act.
>
> However, a bill (HR 1780) introduced in April by Rep. David Camp (R–Mich.) would extend that requirement to all federal employees, an idea that does not sit well with the union.
>
> So NTEU is strongly urging its members – including the Internal Revenue Service agents tasked with implementing Obamacare – to oppose Camp's legislation, which would compel them to personally participate in the same healthcare program they will be enforcing.
>
> **On the NTEU website, union members are urged to email their congressman and senators, asking them to oppose H.R.1780. NTEU provides a sample letter that members can simply sign and send, or rewrite it as they wish:**
>
> **"I am a federal employee and one of your constituents. I am very concerned about legislation that has been introduced by Congressman Dave Camp to push federal employees out of the Federal Employees Health Benefits Program (FEHBP) and into the insurance exchanges established under the Affordable Care Act (ACA).**
>
> […]Last election cycle, the NTEU donated $547,812 to pro-Obamacare Democrat candidates, including Rep. Nancy Pelosi ($10,000), Sen. Sherrod Brown (D-Ohio) ($11,000), and Sen. Tammy Baldwin (D-Wis.) ($12,500). And that figure doesn't include the $62,500 the NTEU donated to the Democrat National Committee, or the $125,000 it gave to various left-leaning super PACs.
>
> However, the union only donated $24,000 total to Republican candidates during the same time period.

Wow. And recently we saw that three of the biggest automobile manufacturer unions were also pushing back against Obamacare. Apparently, no one who actually worked to get Obamacare passed wants it for themselves. They just want it for other people.

# Reza Aslan's new book on the historical Jesus gets celebrated by left-wing media

**Wintery Knight** · 29 July 2013 · Archived copy · Original

Fox News reports. (H/T Melissa P.M.)

Excerpt

> Reza Aslan, author of the new book, "Zealot: The Life and Times of Jesus of Nazareth" has been interviewed on a host of media outlets in the last week. Riding a publicity wave, the book has surged to #2 on Amazon's list.
>
> Media reports have introduced Aslan as a "religion scholar" but have failed to mention that he is a devout Muslim.
>
> His book is not a historian's report on Jesus. It is an educated Muslim's *opinion* about Jesus — yet the book is being peddled as objective history on national TV and radio.
>
> Aslan is not a trained historian. Like tens of thousands of us he has been formally educated in theology and New Testament Greek.
>
> He is a bright man with every right to hold his own opinion about Jesus—and to proselytize his opinion.
>
> As a sincere man, Aslan's Muslim beliefs affect his entire life, including his conclusions about Jesus. But this is not being disclosed. "Zealot" is being presented as objective and scholarly history, not as it actually is—an educated Muslim's opinions about Jesus and the ancient Near East.
>
> "Zealot" is a fast-paced demolition of the core beliefs that Christianity has taught about Jesus for 2,000 years. Its conclusions are long-held Islamic claims—namely, that Jesus was a zealous prophet type who didn't claim to be God, that Christians have misunderstood him, and that the Christian Gospels are not the actual words or life of Jesus but "myth."
>
> These claims are not new or unique. They are hundreds of years old among Muslims. Sadly, readers who have listened to interviews on NPR, "The Daily Show," Huffington Post or MSNBC may pick up the book expecting an unbiased and historic report on Jesus and first century Jewish culture. (I will let my Jewish friends address Aslan's statement on MSNBC that, "there were certainly a lot of Jewish terrorists in first century Palestine.")

I took a look at the  author's CV and I don't see a single degree in ancient history on it. He is a professor of creative writing, though. Studying "religion" is not the same thing as studying ancient history, by the way.

Here is his faculty page at UC Riverside:

> Professor Aslan joins UCR from the Center of Public Diplomacy at University of Southern California. He has Degrees in Religions from Harvard University, and the University of California, Santa Barbara, as well as a Masters in Fine Arts from the University of Iowa, where he was named the Truman Capote Fellow in Fiction. He is currently working on his Ph.D. at University of California, Santa Barbara. He is the author of the New York Times Bestseller, No god but God: The origins, Evolution, and the future of Islam which has been translated into half a dozen languages, short-listed for the Guardian (UK) First Book Award, and nominated for a PEN USA award for research Non-Fiction.

He has a PhD in sociology of religions. SOCIOLOGY. Not history.

A search of publications on Google Scholar turns up no academic articles on the historical Jesus.

Here are his recent non-academic publications from his web site – see if you see any in academic history journals:

> The Devastating Consequences of the anti-Morsi Revolution
> Vocative, July 2, 2013
>
> Bahrain's Fake Sectarian War
> Foreign Affairs, June 30, 2013
>
> Missing Mahmoud
> Foreign Policy, June 12, 2013
>
> The impact of the Arab Spring on the Palestinian Authority's foreign policy.
> Council on Foreign Relations, April 24, 2013
>
> Israel risks its place in America's affections by its tone-deaf policy
> The National, February 4, 2013
>
> Divided by the Same Father
> Tony Blair Faith Foundation, November 30, 2012
>
> Rejected by Religions, but Not by Believers
> New York Times, October 4, 2012
>
> Political Islam in the Middle East
> Council on Foreign Relations, December 7, 2012
>
> Grand Ayatollah or Grand Old Party?
> Foreign Policy, February 29, 2012
>
> Fire This Time
> Los Angeles Review of Books, September 11, 2011
>
> Ibn Battuta: World Wanderer
> Time Magazine, July 21, 2011
>
> **Backward Glances: Islamic Erotica, Then and Now**
> **Playboy Magazine, January 2011**

Now, I do think it's possible for someone without formal training to write a book on the historical Jesus. But I would regard such books with skepticism. Especially when he dates the Gospel of Mark to later than 70 A.D. – definitely not a mainstream view. The atheist scholar James Crossley dates Mark to the late 30s to early 40s, for example. But a plausible case can be made (by an actual historian) that the Gospel of Mark is dated sometime in the mid-50s.

The real story here though is media bias. Why is the liberal media so interested in promoting a book about the historical Jesus which questions the orthodox view of Jesus, whereas they were not doing anything to promote Darwin's Doubt, which questioned the orthodox view of Darwinism? I think there is a double standard here. Meyer did his PhD work on these issues and has the relevant academic publications in science journals. (Here is one that was published in a peer-reviewed journal) And Meyer has actually debated his thesis with his opponents.

My previous post on media bias explains a bit more about what the left-wing media is really like.

UPDATE: Mathetes posted a link to this article on First Things.

Excerpt:

> Aslan does have four degrees… a 1995 B.A. in religion from Santa Clara University, where he was Phi Beta Kappa and wrote his senior thesis on "The Messianic Secret in the Gospel of Mark"; a 1999 Master of Theological Studies from Harvard; a 2002 Master of Fine Arts in Fiction from the University of Iowa; and a 2009 Ph.D. in sociology from the University of California, Santa Barbara.

> None of these degrees is in history, so Aslan's repeated claims that he has "a Ph.D. in the history of religions" and that he is "a historian" are false.  Nor is "professor of religions" what he does "for a living." He is an associate professor in the Creative Writing program at the University of California, Riverside, where his terminal MFA in fiction from Iowa is his relevant academic credential. It appears he has taught some courses on Islam in the past, and he may do so now, moonlighting from his creative writing duties at Riverside. Aslan has been a busy popular writer, and he is certainly a tireless self-promoter, but he is nowhere known in the academic world as a scholar of the history of religion. And a scholarly historian of early Christianity? Nope.
>
> **What about that Ph.D.? As already noted, it was in sociology. I have his dissertation in front of me. It is a 140-page work titled "Global Jihadism as a Transnational Social Movement: A Theoretical Framework." If Aslan's Ph.D. is the basis of a claim to scholarly credentials, he could plausibly claim to be an expert on social movements in twentieth-century Islam. He cannot plausibly claim, as he did to Lauren Green, that he is a "historian," or is a "professor of religions" "for a living."**

Well that settles it. His PhD has nothing to do with the historical Jesus. He's unqualified.

# William Lane Craig debates Peter Millican: Does God Exist? Video, audio and summary

**Wintery Knight** · 29 July 2013 · Archived copy · Original

The audio of the debate can be downloaded from Apologetics 315.

Description:

> Christian philosopher William Lane Craig debates atheist Peter Millican on the topic: *Does God Exist?*The debate was organised by the Philosophy Society at Birmingham University on October 21, 2011 for the Reasonable Faith tour. The Tour was co sponsored by UCCF, Damaris and Premier Christian Radio (audio via their Unbelievable podcast). Want to hear every audio debate by William Lane Craig? Check out the audio debate feed here.
>
> Full Debate MP3 Audio here. *(2hr 23min)*

Dr. Millican proved to be an amazing debater, and that allowed Dr. Craig to show the full range of his talents in a way that he has never done before. This was a great debate – right up there with Craig's two debates against Austin Dacey and Paul Draper. Dr. Millican is excellent at analytical philosophy, had studied cosmology and physics, and he came prepared to answer Craig's arguments. There is NO SNARK in my debate summary below, out of respect for Dr. Millican. However, I haven't proof-read it, so please do point out any errors. The debate audio has 32 minutes of Q&A.

And if you like my summary, check out another summary by J.W. Wartick.

**Dr. Craig's opening speech:**

There are good reasons to believe that God exists.

There are no good reasons to believe that God does not exist.

A1) The origin of the universe

1. The universe began to exist
2. If the universe began to exist, then the universe has a transcendent cause.
3. The universe has a transcendent cause.

The origin of the universe is confirmed by philosophical arguments and scientific evidence.

There cannot be an actual infinite number of past events, because mathematical operations like subtraction and division cannot be applied to actual infinities.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, cannot be eternal into the past.

Even speculative alternative cosmologies do not escape the need for a beginning.

The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

A2) The fine-tuning of the universe

1. The fine-tuning of the universe is either due to law, chance or design.
2. It is not due to law or chance.

3. Therefore, it is due to design.

The progress of science has revealed that the Big Bang was fine-tuned to allow for the existence of intelligent life.

Type 1: Constants like the gravitational constant are finely-tuned, and are not dependent on the laws of physics.

Type 2: Quantities like the amount of entropy in the universe, are not dependent on the laws of physics.

The range of life-permitting values is incredibly small compared to the possible values of the constants and quantities. (Like having a lottery with a million black balls and one white ball, and you pick the white ball. Even though each individual ball has the same tiny chance of being picked, but the odds are overwhelming that the whichever ball you pick will be black, and not white).

Not only are the numbers not due to laws, but they are not due to chance either. It's not just that the settings are unlikely, it's that they are unlikely and they conform to an independent pattern – namely, the ability to support complex life.

A3) The moral argument

1. If God does not exist, then objective moral values do not exist.
2. Objective morality does exist.
3. Therefore, God exists.

Objective moral values are values that exist independently of whether any humans believe them or not.

Michael Ruse, an atheist philosopher agrees that if God does not exist, then there is only a "herd morality" that is determined by biological evolution and social evolution. There no objective moral standard, just different customs and conventions that vary by time and place. Anyone who acts against the herd morality is merely being unfashionable and unconventional. On the atheistic view, there is nothing objective and binding about this evolved "herd morality". However, people do experience objective moral values, and these cannot be grounded on atheism.

Furthermore, God must exist in order to argue that there is evil in the world. In order to be able to make a distinction between good and evil that is objective, there has to be a God to determine a standard of good and evil that is binding regardless of the varying customs and conventions of different people groups. Even when a person argues against God's existence by pointing to the "evil" in the world, they must assume objective moral values, and a God who grounds those objective moral values.

A4) The resurrection of Jesus.

1. There are certain minimal facts that are admitted by the majority of historians, across the ideological spectrum: the empty tomb, the appearances and the early belief in the resurrection.
2. Naturalistic attempts to explain these minimal facts fail.
3. The best explanation of these facts is that Jesus rose from the dead.

A5) Religious experience

People can know that God exists through experience. In the absence of defeaters for these experiences, these experiences constitute evidence for God's existence.

**Dr. Millican's opening speech:**

Dr. Craig has the burden of proof because he claims that God exists.

The Christian God hypothesis:

1. An omnipotent, omniscient, omnibenevolent God created the universe.
2. This God cares about humans.

3. This God has acted in history though the life of Jesus of Nazareth.

This is a factual claim, and we are discussing the evidence for whether these claims are true or false. We are not interested in religious practice, or the consolation of religious belief, nor any other religions.

A1) Religious pluralism and epistemology

Human beings are purpose-finding creatures – we are prone to prefer explanations that involve purpose.

Human beings are pattern-finding animals – we tend to find designs in states of affairs.

Human beings have an interest in maintaining religious hierarchies because of the power it gives them.

Religious beliefs are not determined by rational considerations, but are determined by geographic location.

The same non-scientific method of generating religious beliefs (purpose-finding, pattern-finding, geographic location, parental teaching, charismatic speakers, praise songs and worship, religious education, ancient holy books) is being used in several religions, and it leads to different, contradictory truth claims. So at least some of those conflicting claims are false. And if the method is generating some false claims, then it's not a good method, and it undermines all the religions that use those methods.

A2) Absence of evidence is evidence of absence

There is no scientific evidence for God.

A3) Mental processes depend on physical systems

There is no scientific evidence for a disembodied intelligence.

Our universal human experience is that intelligence and mental operations require a physical brain.

The quality of our thinking depends on physical conditions, like being tired or on drugs.

But Christian theists believe that mental processes can exist independently of an underlying physical reality, unimpaired by the death of the physical body and the brain.

R.A1) The origin of the universe

1. There is no evidence that whatever begins to exist requires a cause. All the evidence we have of things beginning to exist are when something is created from rearrangements of other things that already existed.

The closest analog we have to something coming into being from nothing is quantum particles coming into being from nothing, and that causation is random.

There is no evidence that thoughts can bring about physical effects, and Bill is arguing for a mental cause to the origin of the universe.

Even if things that begin to exist IN the universe have causes, it doesn't hold for the universe as a whole. Bill is committing the fallacy of composition.

Time begins with the universe, but our experience of causation is that it is a temporal process. So if there is no time "prior to" the universe's beginning, then how can there be a cause to the universe?

It's possible that there could be something outside our universe that is eternal.

It's also possible that the Big Bang could be wrong, and this universe could oscillate eternally and not require a beginning.

2. There are cosmological theories that avoid the beginning of the universe by positing a prior period of contraction prior to the Big Bang.

The beginning of this universe depends on general relativity, and that theory breaks down at the level of quantum

mechanics.

3. There is no evidence that minds can exist without an underlying physical system. So even if there is a cause of the universe, then it is neither an abstract object nor a mind. It would have to be something else, and not something we are familiar with – we are just not in a position to speculate of what it could be.

R.A3) The moral argument

Atheists do believe in a standard of morality that is not based on what groups of humans believe.

Utilitarians think there is a standard of moral values that is objective, because the measure of human happiness (for the greatest number) is objective, even if people are mistaken about what promotes that happiness.

Kantians have a rational process for determining which moral imperatives should be universalized.

Humeans have a system that is rooted in natural human sentiment.

**Dr. Craig's first rebuttal:**

I do not have the only burden of proof. The topic is "Does God Exist?". If Dr. Millican answers "no" then he has a burden of proof, otherwise we are left with agnosticism.

R.A1) Religious pluralism and epistemology

First, there is no single common method of adopting a religion.

Second, MY method this evening is logic and evidence and personal experience – which is the same as his method. So his comments about how people in different religions adopt their religion through parents, church, singing, etc. have no bearing on the arguments I will be making.

R.A2) Absence of evidence is evidence of absence

Absence of evidence is only evidence of absence if we can reasonably expect that there should be some evidence that is not present. He would have to show that there should be more evidence for God's existence that the 5 arguments that I already presented – something that we should expect to see that we don't see.

R.A3) Mental processes depend on physical systems

No response by Dr. Craig. (but see below)

A1) The origin of the universe

1. He says that there are speculative cosmologies like the multiverse that escape the need for a beginning, but that's false, the BGV proof applies to them, and they do need a beginning.

He says that you can escape BGV by positing a contraction prior to the expansion. However Vilenkin says that any contraction phase is unstable and would introduce additional singularities that would hamper any later expansion phase.

He says that we need a theory of quantum gravity in order to describe the early universe. But Vilenkin says that the BGV proof is independent of gravity as defined by general relativity.

He did not respond to the philosophical arguments for a beginning of the universe.

2. He says that we don't have experience of things coming into being except from material causes. However, it would be even more difficult to explain the universe coming into being on atheism since you can't appeal to a material cause nor to an efficient cause. Even Hume recognizes that things can't pop into being without causes.

He talks about how in quantum physics virtual particles appear out of nothing. But that's false, because the quantum vacuum in which virtual particles appear is not nothing, it is a sea of subatomic particles and energy. Quantum physics is not an exception to the idea that things that come into being require a cause.

He mentions the fallacy of composition. But I am not saying that everything in the universe has a cause, therefore the universe as a whole has a cause. I am saying that non-being has no capacity to bring something into being. Non-Being doesn't even have the potential to bring something into being.

3. He says that there are no unembodied minds, so the cause of the universe can't be an unembodied mind. But the argument concludes that there is a non-material cause, and it can't be an abstract object, so it would have to be a mind.

In addition, we ourselves are unembodied minds. This is because physical objects cannot have the properties that minds have, like the property of having feelings.

Material conceptions of mind don't explain identity over time.

Material conceptions of mind don't explain free will.

Material conceptions of mind don't explain intentional states (thinking about something).

Material conceptions of mind don't explain mental causation.

The best explanation for our own first person experience of the mental realm is a substance dualism. We are non-material minds, and we can cause effects in the physical world. And God does the same thing. He is a mind, and he causes physical effects.

A2) He gave no response.

A3) He says that there are atheistic theories of morality that don't depend on the opinions of groups. But these theories all depend on the idea that human beings have instrinsic value – that they are the sorts of things to which moral considerations apply. Naturalism cannot ground this moral value – human beings are no more valuable any other animal.

Also, there are no objective moral obligations in naturalist systems of morality, because there is no one in authority to command them. Moral prescriptions require moral prescribers.

A4) He gave no response.

A5) He gave no response.

**Dr. Millican's first rebuttal:**

R.A2) The fine-tuning argument

We have to be careful not to judge what counts as finely-tuned through our intuitions.

We have to be careful about reasoning for a sample size of this one observable universe.

We don't really know about the full range of possibilities for these constants and quantities.

There might be other universes that we can't observe that aren't fine-tuned, and we just happen to be in the one that is fine-tuned.

The fine-tuning might be solved by future discoveries, like the inflationary cosmology removed some of the fine-tuning.

There might be a multiverse that we don't have evidence for right now.

We need to be careful about using science to prove God because science might change in the future.

The universe is very big and mysterious.

This argument doesn't prove that God is good. He could be evil = anti-God.

God created the universe inefficiently if his goal was to produce life.

God created the universe too big.

God created the universe too old.

God created too many galaxies and stars that are not hospitable to life.

If the universe were fine-tuned for life, then there should be more aliens.

If the universe were fine-tuned for life, then there are probably lots of alien civilizations. But then Jesus would have to appear to all of the aliens too.

R.A1) The origin of the universe

2. It's not a big deal that you can get multiple solutions to equations involving subtraction of actual infinities. For example, the equation 0 x y = 0 has many solutions for y, but that doesn't mean that multiplication doesn't work in the real world.

A2) Absence of evidence is evidence of absence

I would expect that there would be more evidence than there is.

R.A1) The origin of the universe

2. The BVG proof might be overturned by future scientific discoveries. We have no reason to be confident in current physics.

I agree that the quantum vacuum is something and not nothing, but it's similar to nothing.

We don't have any reason to believe that things that come into being require causes – except for our universal experience that this is always the case.

3. As to the cause of the universe coming into being, you said that it could only be an abstract object or a mind, and it can't be an abstract object because they don't cause effects, so it must be a mind. But there are all sorts of things we've never thought of that it could be other than a mind.

I agree that mental properties are not physical properties and that epiphenomenalism is incorrect. Physical objects can have "algorithmic properties" as well as physical properties, it doesn't mean that computers have minds.

**Dr. Craig's second rebuttal:**

R.A2) Absence of evidence is evidence of absence

He expressed his personal opinion that there should be more evidence, but that's not an argument.

God knows how people will respond to getting more evidence or less evidence and he has to be careful not to take away their free will to disbelieve by piling them up with coercive evidence. God's goal is not just to convince people that he exists. God's goal is to have people respond to him and pursue him.

A1) The origin of the universe

2. He said that multiple answers to equations are no problem. But the problem is that you can't translate multiple answers into a real world context.

The problem is that you are subtracting an identical number from an identical number and getting contradictory results, and that cannot be translated into the real world, where subtraction always gives a definite single result.

He talks about how you can get multiple answers with multiplication by 0. But 0 is not a real quantity, it is just the absence of something, and that cannot translate into the real world, because it has no being.

He says that I am only using evidence from current physics. But that is the point – the evidence of current physics and cosmology supports the beginning of the universe.

3. He said that an umembodied mind can't be the cause, but we are minds and we cause effects on our physical bodies.

In addition, the design argument supports the idea that the cause of the universe is intelligent.

A2) The fine-tuning of the universe

He says we should be cautious. Of course.

He says the probabilities can't be assessed. But you can just take the current value and perturb it and see that the resulting universe loses its ability to support life, and you can test an entire range around the current value to see that that vast majority of values in the range don't permit life.

He says that the current physics is not well-established, but there are so many examples of fine-tuning across so many different areas of science that it is not likely that all of them will be overturned, and the number of finely-tuned constants and quantities has been growing, not shrinking.

He says it doesn't prove that God is good, and he's right – that's what the moral argument is for.

He says that God isn't efficient enough, but efficiency is only important for those who have limited time and/or limited resources. But God has unlimited time and resources.

He says that the universe is too old, but the large age of the universe is a requirement to support intelligent life – (i.e. – you need third generation stars to provide a stable source of energy to planets, and those stars require that two generations of stars are born and die).

He said what about aliens, and theists are open to that, and God can certainly provide for the salvation of those beings, if they have fallen into sin.

**Dr. Millican's second rebuttal:**

R.A1) The origin of the universe

3. Just because epiphenominalism is false, it doesn't mean that substance dualism is true.

The majority of philosophers of mind do not accept substance dualism.

R.A3) The moral argument

The majority of philosophers are moral realists, but a minority of philosophers are theists. So that means that there must be some way of justifying morality on atheism, which I will not describe right now.

Atheists can express their opinion that humans have intrinsic moral value.

He grants that atheists can perceive moral values. But if atheists can perceive moral values, then why is God needed to enable that?

Atheists can express their opinion that humans are special. We can be rational, and that makes us special.

Atheists can express their opinion that it is good to care about other humans because they are of the same species.

R.A4) The resurrection of Jesus

We don't have any reasons to believe i the supernatural.

The gospels are written late for the purposes of evangelism.

The gospels are not independent, e.g. Matthew and Luke depend on Q.

John is the latest gospel, and the Christology of John is the highest of all.

The four gospels agree because the early church rejected other (unnamed) gospels that didn't agree.

Matthew 27 – the earthquake and the raised saints – is not recorded in any other contemporary non-Christian source.

**Dr. Craig's final rebuttal:**

A3) The moral argument

He says that human beings are rational, and that gives them value. But atheists like Sam Harris prefer the flourishing of sentient life. He includes non-rational animals as having moral value. So without God, we see that the choice of who or what has moral value is arbitrary. And where would objective moral duties come from if there is no moral lawgiver?

The fact that most atheists accept objective moral values doesn't mean that they can rationally ground those values on their atheistic worldview. You can't provide a basis for moral values on atheism by counting the number of atheists who accept objective morality. It's not surprising that atheists can perceive objective moral values IF they are living in auniverse created by God who grounds these objective moral values and duties that atheists perceive.

A4) The resurrection of Jesus

He cites Geza Vermes and Bart Ehrman as authorities on the historical Jesus, but both of them accept all three of the facts that I presented as minimal facts. Ehrman doesn't accept the resurrection of Jesus because he presupposes naturalism. He rejects the resurrection on philosophical grounds, not historical grounds.

**Dr. Millican's final rebuttal:**

R.A5) Religious experience

Religious experience is an unreliable way to test the claims of a religion, because lots of religions have them and they make contradictory truth claims. In the future, we may discover naturalistic ways of explaining religious experience.

R.A4) The resurrection of Jesus

Even if you can make a case for the resurrection based on these3  minimal facts, there are other stories in the New Testament like Matthew 27 that are quite weird and they undermine the 3 minimal facts that even Geza Vermes and Bart Ehrman accept.

R.A1) The origin of the universe

Bill hasn't shown that there is any reason for thinking that things don't come into being, uncaused, out of nothing.

A4) The problem of evil

Theists can't explain what God's specific morally sufficient reasons are for permitting the apparently gratuitous evil that we see.

# North Carolina Republicans get pro-life bill signed into law

**Wintery Knight** · 30 July 2013 · Archived copy · Original

Republican governor Pat McCrory signed a pro-life bill into law in North Carolina. ABC local news reports.

Excerpt:

> North Carolina Gov. Pat McCrory on Monday signed into law a measure directing state officials to regulate abortion clinics based on the same standards as those for outpatient surgical centers, a change that critics say will force most to close.
>
> […]The law, pushed through by the Republican-majority legislature in the session's waning days, directs the Department of Health and Human Services to revise the rules for abortion clinics. It follows similar actions by Republican-controlled legislatures in other states.
>
> Critics say the move will effectively close most of North Carolina's 16 abortion clinics because only one now meets the standards of an outpatient surgical center. An ambulatory surgical center costs about $1 million more to build than an abortion clinic, state Division of Health Service Regulation (DHHS) director Drexdal Pratt told lawmakers earlier this month. It's unclear how much it would cost existing clinics to convert to higher standards once they are set by DHHS.
>
> […]The law also prohibits abortions for gender selection and allows any health care provider to opt out of participating in abortions, extending that option beyond doctors and nurses. The measure also prohibits abortion coverage in insurance plans offered by cities, counties or the online marketplace for private policies being established under the federal health overhaul law.

Life News reported on the reaction from North Carolina pro-lifers.

Excerpt:

> The law addresses concerns about the administration of abortion inducing drugs and rules for abortion facilities, North Carolina Right to Life informs LifeNews. The pro-life provisions that were left intact after the compromise are: the opt out for abortion in the federal exchange and the city and county employee health plans, as well as the sex selection and web cam abortion bans.
>
> "Thousands of unborn children's lives will be protected from abortion," stated Barbara Holt, President of North Carolina Right to Life, "by preventing the expansion of tax payer funded abortion through the federal exchange. By passing this legislation, our state has also demonstrated that it will not tolerate unborn babies being aborted just because they are the wrong sex or doctors being miles away from the patient when they administer drugs that kill the unborn baby and can harm the child's mother."
>
> […]North Carolina joins Virginia, South Carolina, and Tennessee, as well as 19 other states, by opting out of abortion in the federal exchange; 14 states , by banning "web cam" abortions; and 6 states, by prohibiting sex selection abortions.

How's that for some Tuesday morning good news?

# Planned Parenthood must pay $1.4 million in Medicaid fraud settlement

**Wintery Knight** · 30 July 2013 · Archived copy · Original

The Heritage Foundation reports.

Excerpt:

> Planned Parenthood Gulf Coast, which serves southeast Texas and Louisiana, agreed this week to pay $1.4 million to the state of Texas, settling claims that one of the largest abortion providers in the Southeast had fraudulently overbilled the state's Medicaid program.
>
> Texas Attorney General Greg Abbott's office stated that its investigation into the fraud allegations "revealed that Planned Parenthood Gulf Coast improperly billed the Texas Medicaid program for products and services that were never actually rendered, not medically necessary, and were not covered by the Medicaid program."
>
> The Texas Planned Parenthood allegedly "falsified material information in patients' medical records" to bolster fraudulent claims for reimbursement.
>
> Alliance Defending Freedom's recent analysis of state and federal audits of family planning programs suggests that in 12 states, Planned Parenthood affiliates overbilled Medicaid for more than $8 million. One federal audit of New York's Medicaid family planning program reported that certain providers, "especially Planned Parenthoods," had engaged in improper practices resulting in overpayment.
>
> Despite mounting accusations of fraud, the organization that performs roughly one out of every four abortions in the U.S. has continued to ride the waves of taxpayer funding to annual surpluses. During its last reporting year alone, Planned Parenthood received over half a billion dollars in taxpayer government funding, all the while performing a record 333,964 abortions. To solidify its place as the top abortion provider in the country, Planned Parenthood announced that all local affiliates would have to begin providing abortion services starting in 2013.

A one million dollar fine doesn't seem like much, compared to over $500 million in taxpayer subsidies. But it's a start. Abortion is a for-profit business. If we make abortion unprofitable, then abortion will go away.

# Answering 9 objections to the resurrection of Jesus

**Wintery Knight** · 30 July 2013 · Archived copy · Original

I found this post on Eric Chabot's Think Apologetics blog.

Here is his list of objections:

1. The Legends Hypothesis
2. The Naturalistic Objection
3. We Can't Use the Historical Method to Determine Whether A Resurrection Took Place
4. False Testimonies Hypothesis
5. The Resurrection Story Was Invented From Other Dying and Rising God Stories
6. The Intramental/Hallucination Hypothesis Objection
7. The Analogical Objection
8. The Genre of the Gospels Are Historical Fiction!
9. The Faulty Sources Objection

Here's the detail on #4:

> There is no reason to distrust the conviction of those that testified to having seen the risen Jesus. As James Warner Wallace points out in his latest book people lie or have an ulterior motive for three reasons:
>
> 1.Financial Gain: In this case, we don't see any evidence for this. The NT shows the disciples/apostles being chased from location to location, leaving their home and families and abandoning their property and what they owned.
>
> 2. Sexual or Relational Desire: The NT does not say much about their "love lives." There are Scriptures that speak to sexual purity and chastity.
>
> 3. Pursuit of Power: While Christianity became a state sponsored religion in the 4th century and the Popes became powerful both politically and religiously, there is no evidence (pre 70 AD), for the early disciples pursuing power as they proclaimed the resurrection of Jesus. Just look at Paul's testimony here:
>
> "I have worked much harder, been in prison more frequently, been flogged more severely, and been exposed to death again and again. 24 Five times I received from the Jews the forty lashes minus one. 25 Three times I was beaten with rods, once I was pelted with stones, three times I was shipwrecked, I spent a night and a day in the open sea, 26 I have been constantly on the move. I have been in danger from rivers, in danger from bandits, in danger from my fellow Jews, in danger from Gentiles; in danger in the city, in danger in the country, in danger at sea; and in danger from false believers. 27 I have labored and toiled and have often gone without sleep; I have known hunger and thirst and have often gone without food; I have been cold and naked." – 2 Cor. 11: 23-27

There are lots of useful links to answer many of the objections. It's worth reading because Eric is used to having to deal with these objections in his daily work. What you see on the list is what he sees on the ground, dealing with the questions of skeptical students at a major university.

# Cell biologist Michael Denton interviewed on the merits of the design argument

**Wintery Knight** · 30 July 2013 · Archived copy · Original

The latest ID the Future podcast is short (11 minutes) and sweet.

The MP3 file is here.

Quick biography of Dr. Michael Denton:

> Michael Denton is a Senior Research Fellow in Human Genetics in the Biochemistry Department at the University of Otago in New Zealand. Dr. Denton studied medicine at Bristol University and developmental biology at Kings College, London University, where he gained a PhD in 1974. He trained in Pathology at the Post-Graduate Medical School, London, and at the Hospital for Sick Children in Toronto. He has held university lectureships in Sydney and Melbourne, Australia. For many years his main research focus has been on the genetics of human retinal disease, and he wrote the book *Nature's Destiny*.

He is critical of Darwinism, but his own theories about the design of the cell tend more towards higher order physical laws than direct intervention by an intelligent agent. But he does acknowledge design arguments in three areas, see below.

Topics:

- The mechanistic reductionist view of cells has broken down
- Now, people are more looking at the higher order organization of matter
- A better explanation is that there are higher order laws that organize base matter
- These are not mysterious, these are higher order physical laws
- The focus used to be on genes are everything – the building blocks
- The form of the cell is more important
- The machine analogy is failing at the higher order level – that's the first area of design
- Another area of design is at the lower level
- At the lower order level, there are machines like the ribosome
- These machines have complex specified information, and they need an explanation too
- The origin of life, the origin of ribosomes, are another area that looks designed
- A third area of design is the fine-tuning of the universe for biological organisms
- The argument made by Stephen C. Meyer about the origin of life is correct
- Origin of life research is declining because it cannot be explained without design
- Design is the best explanation for the OOL we have right now, based on the data we have

See below for other recent ID the Future podcasts.

# Obama administration gave $500 million of foreign aid to Islamic radicals

**Wintery Knight** · 31 July 2013 · Archived copy · Original

From Investors Business Daily.

Excerpt:

> The sequester has "cost jobs," says President Obama, and "gutted investments in education and science and medical research." But somehow he's earmarked $500 million for Hamas terrorists.
>
> Circumventing Congress and with no fanfare, President Obama last week issued an executive order enabling him to send an additional $500 million directly to the Palestinian Authority in the West Bank — much of which you can bet will wind up going to the Iranian-backed Hamas terrorist organization.
>
> According to Obama, "it is important to the national security interests of the United States to waive the provisions of" Congress' legislative restrictions "in order to provide funds . .. to the Palestinian Authority."
>
> At the beginning of his first term, Obama promised close to $1 billion in aid to the Palestinian Authority, with then-Secretary of State Hillary Clinton pledging none of it would reach Hamas.
>
> But the Hebrew-language newspaper Yediot Acharonot has documented that tens of millions of dollars in aid for the PA — from Israel — ended up being used by Hamas for weapons. If Israel can't guarantee its own aid is safe, how can we?

The Christian Science Monitor has more on Obama's generous use of taxpayer dollars.

Excerpt:

> The US military has been ignoring warnings that its spending in Afghanistan is funding Al Qaedaand the Taliban. And John F. Sopko, the Special Inspector General for Afghanistan Reconstruction (SIGAR), appears to have had enough.
>
> He issued a blistering cover letter with SIGAR's quarterly report to Congress today that called into question what "appears to be a growing gap between the policy objectives of Washington and the reality of achieving them in Afghanistan."
>
> The US has $20 billion of Afghan reconstruction spending scheduled, and a further $10 billion requested for the 2014 budget. But after 11 years of war, there are "serious shortcomings in US oversight of contracts: poor planning, delayed or inadequate inspections, insufficient documentation, dubious decisions, and – perhaps most troubling – a pervasive lack of accountability," Mr. Sopko wrote. Good intentions, he added, appear to be running way ahead of commitment to execution.

Now I know what Obama meant when he said that the economy works better when you "spread the wealth around".

# Republican Congresswoman refuses to abort baby diagnosed with fatal condition

**Wintery Knight** · 31 July 2013 · Archived copy · Original

Unborn baby scheming about doing the right thing

Here's a story from National Review:

> *World* magazine brings some happy news today: Representative Jaime Herrera Beutler (R., Wash.) and her husband Daniel Beutler have announced the birth of their daughter. What makes this particular arrival noteworthy is that Abigail was diagnosed in utero with Potter's Sequence, a rare condition that impairs kidney and lung formation. Doctors informed the Beutlers that their daughter would not be able to breathe and would therefore expire moments after birth; they recommended an abortion.
>
> Instead, the couple sought out treatment and prayed for a miracle. They finally discovered an experimental procedure, involving saline injections into the uterus to assist in lung development, and physicians at Johns Hopkins who were willing to try it. On July 15, a mere 28 weeks into the pregnancy, their faith and persistence yielded the world's first recorded survivor of Potter's Sequence. Despite lacking functional kidneys and weighing a mere 44 ounces at birth, little Abigail is breathing independently and responding well to peritoneal dialysis.
>
> In a statement on the congresswoman's Facebook page, the Beutlers thank the many doctors and nurses who rendered assistance, as well as "the thousands who joined us in praying for a miracle. But most of all, we are grateful to God for answering those prayers."

Fox News had more:

> The congresswoman explained on her official website as well as on her social media pages that many doctors were pessimistic about the baby's chances of making it to term, and were fairly certain that if she survived through birth, she would live only moments. Herrera Beutler is against abortion and said she refused to

> consider it as an option.
>
> “With hearts full of hope, we put our trust in the Lord and continued to pray for a miracle,” she wrote on her congressional site.
>
> The announcement by the congresswoman was, essentially, a testimony about holding out hope and defying the odds.
>
> Abigail has no kidneys and had no amniotic fluid in the womb. During the pregnancy, doctors injected saline solution into the womb in the place of amniotic fluid.
>
> At birth, Abigail had fully developed lungs and she is breathing on her own, suggesting that the relatively uncommon treatment had worked. Abigail still requires ongoing dialysis and will eventually need a kidney transplant.
>
> Herrera Beutler and her husband said they were thankful for the doctors and nurses who were not willing to accept the fatal diagnosis.
>
> “We are grateful to the thousands who joined us in praying for a miracle. But most of all, we are grateful to God for hearing those prayers,” Herrera Beutler and her husband said in a joint statement. “As far as every doctor we’ve spoken with knows, Abigail is the first baby with bilateral renal agenesis to breathe sustainably on her own.”
>
> Dr. Louis Halamek, a neonatologist at Lucile Packard Children’s Hospital in California, said they are cautiously optimistic about the future of the baby, born after a 28-week pregnancy.
>
> “Despite Abigail’s prematurity, small size and life-threatening disease, she is doing well,” Halamek said.
>
> Herrera Beutler, 34, is in her second term in Congress, representing the 3rd district covering the southwest portion of Washington state. The *National Journal* included her on its list of “The Top 25 Most Influential Washington Women Under 35.”

I think that a lot of Democrats are going to be surprised with this story, because they think that protecting the unborn is something that Republicans want to impose on others, but won’t do themselves. After all, Democrats are always passing taxes and regulations from others – but they don’t think that any of that applies to them. Al Gore rants on and on about global warming, but he still spends $30,000 a year in utility bills. So imagine how surprised the Democrats are to see that Republicans aren’t frauds and hypocrites. Yes, we actually believe in protecting the unborn even if it means that we will be less “happy” and less “fulfilled”. That’s what being pro-life means – welcoming children into the world and supplying for their needs, even if it requires us to make sacrifices.

# Do atheists and agnostics have a burden of proof to bear?

**Wintery Knight** · 31 July 2013 · Archived copy · Original

My friend William B. shared this Enlightenment Journal post, written by philosopher Paul Copan.

Excerpt:

> In conversations with atheists, they may challenge us: "You're claiming that God exists. Therefore, the burden of proof rests on you, not me. So … where's your evidence?"
>
> Atheist Michael Scriven insists "we need not have a proof that God does not exist in order to justify atheism. Atheism is obligatory in the absence of any evidence for God's existence."1 Or perhaps someone has told you that belief in God is just like belief in Santa Claus or the tooth fairy. Where do we begin to respond to such assertions?

Here is his list of advice:

1. define your terms — especially *atheism*
2. the atheist also bears the burden of proof in making the claim, "God does not exist."
3. look out for the "atheist's" slide into agnosticism, from claiming *dis*belief to mere *un*belief.
4. distinguish between the two types of agnostics — *ordinary* and *ornery*.
5. distinguish between "proof" and "good reasons."
6. we have good reasons for belief in the biblical God, but not in mythical beings like mermaids, elves, unicorns, the tooth fairy, or flying spaghetti monsters.
7. we should distinguish between two types of ignorance — innocence and culpable — and the agnostic would be quite culpable of refusing to seek.

I want to say something about #7, so here's the detail on that one:

> **Seventh, we should distinguish between two types of ignorance — innocence and culpable — and the agnostic would be quite culpable of refusing to seek.**When a Western tourist travels to Cambodia, she might not be aware that exposing the sole of her foot or bottom of her shoe is insulting and offensive. The tourist may offend someone out of ignorance of this cultural taboo. But this ignorance is *innocent*.
>
> There's another kind of ignorance. What if you are driving down a highway and not paying attention to speed limit signs? An officer may stop you and ask why you were speeding. You cannot rightly say, "I didn't know what the speed limit was — or even how fast I was going. So you shouldn't give me a ticket." Obviously, if you are driving, you are responsible for paying attention. Ignorance is no excuse. It is *blameworthy* rather than innocent.
>
> Likewise, to say "I do not know if God exists" may reveal a failure in my responsibility to seek God ("I do not *want*to know"). In this case, I would be at fault. The Christian Geneticist Francis Collins of Human Genome Project fame said he was an agnostic in college. Yet he confesses that his "I don't know" was more an "I don't want to know" attitude — a "willful blindness."11 This agnosticism eventually gave way to outright atheism — although Collins would later come to faith in Christ. He began reading C.S. Lewis' *Mere Christianity*, and Collins realized his own antireligious constructs were "those of a schoolboy."12
>
> Because the existence of God is a massively important topic, we cannot afford not to pay attention — especially in an age of so many diversions. Philosopher Tom Morris points out that sports, TV, restaurants, concerts, cars, billiards, and a thousand other activities can divert us from the ultimate issues of life. As a result, we don't "tune into" God. And when a crisis hits (death, hospitalization, natural disaster), we are not really in the best condition to process and make accurate judgments about those deep questions.13 The person

> who says, “I do not know if God exists,” may have *chosen* to live by diversions and distractions and thus to ignore God. This is not an innocent ignorance; this ignorance is the result of our neglecting our duty.
>
> So the theist, atheist, and militant (ornery) agnostic all bear a burden of proof; the theist does not have a heavier burden since all claim to know something. Furthermore, even the alleged ordinary agnostic still is not off the hook. For one thing, one *cannot* remain neutral all his life; he will make commitments or hold beliefs all along the way that reflect either an atheistic or theistic worldview. He is either going to be a practical atheist or practical theist (or a mixture of the two) in some fashion throughout his life. But he can’t straddle the fence for long. Also, the ordinary agnostic may say, “I do not know,” but this often means “I do not care” — the view of an “apatheist.” Refusing to seek out whether God exists or not; refusing to humble oneself to seek whatever light about God is available; living a life of distractions rather than thoughtfully reflecting about one’s meaning, purpose, or destiny leaves one *culpable* in his ignorance, not *innocent*.

I had have conversations with people who were not believers, who often tell me flat out that they don’t know whether God exists, or what he is like, but that they live their lives as if he doesn’t exist, and they are not investigating whether they are right. They are very happy operating without any God looking over their shoulder. And God is OK with that, because he doesn’t want to force people who don’t want him into an eternal afterlife with him. He is seeking after and drawing people who will respond to him.

It’s very important to ask questions of atheists and agnostics that will surface this often hidden desire to live life without God. Often, you can get people to show some interest in God’s existence and who Jesus was just by letting them put into words their own decision to avoid God and not investigate God. That is an opportunity for the Holy Spirit to step in. It’s not that you have to be mean, it’s just a good idea to ask questions and then don’t jump on them when they confess. Letting them get the words out there is all you need to do.

Here’s my previous post on whether atheism means a lack of belief in God.

# Ball State University sides with Darwinian Inquisition and against academic freedom

**Wintery Knight** · 1 August 2013 · Archived copy · Original

Evolution News reports:

> In a blatant attack on academic freedom and the unfettered consideration of scientific viewpoints, the president of Ball State University (BSU) in Muncie, IN, has imposed a gag order on science faculty forbidding their discussion of the theory of intelligent design (ID) in science classrooms.
>
> Ball State has been the focus of media attention since an extremist atheist group, the Freedom from Religion Foundation, demanded an investigation into whether Ball State physicist Dr. Eric Hedin had informed his students about the theory of ID. Dr. Hedin's interdisciplinary honors course "Boundaries of Science" included a "Partial Bibliography" listing books favorable to, and others critical of, intelligent design.
>
> Now BSU's President Jo Ann Gora has declared that ID is a "religious" idea at variance with "the consensus of science scholars" and may not be discussed in science classes, since that would be a violation of "academic integrity."
>
> "Students and the public are owed a genuine evaluation of the merits of ID, touching as the theory does on ultimate questions of life's origins," responded Dr. Stephen Meyer, director of Discovery Institute's Center for Science & Culture. "However, when scientific discussion is censored by a university, fair-minded evaluation becomes impossible."
>
> Dr. Meyer is the author of the recent *New York Times* bestseller *Darwin's Doubt*, a rigorous summary of the current state of the argument for intelligent design.
>
> "In the Orwellian world of Ball State's president, academic freedom apparently means only the 'freedom' to support the majority's view," said Dr. John West, associate director of the Center for Science & Culture. "This is exactly how the academic 'consensus' against the theory of intelligent design is maintained — by intimidation, fiat, and legal threats."
>
> ID theorists hold that a variety of features observable and testable in living creatures and in the fossil record are best explained as the product an intelligent cause rather than an unguided process such as natural selection. Dr. Meyer's book, for example, begins by examining the abrupt origin of complex, diverse animal life in the Cambrian era, 530 million years ago.

Not unexpected, given what we knew about the panel charged with evaluating Dr. Hedin's course.

But I do have some good news today. Tune in at 2 PM to read my report on yet another new peer-reviewed paper hostile to Darwinism.

# New PNAS study: maximum animal diversity exists at the beginning of the fossil record

**Wintery Knight** · 1 August 2013 · Archived copy · Original

From Phys.org – news of a study that is *lethal* to orthodox Darwinian belief. This is *huge*.

Excerpt:

> Our understanding of how animals on the planet evolved may be wrong, according to scientists at the University.
>
> In a new paper, recently published in the *Proceedings of the National Academy of Sciences*, evolutionary biologists from the Department of Biology & Biochemistry looked at nearly one hundred fossil groups to test the notion that it takes groups of animals many millions of years to reach their maximum diversity of form.
>
> Contrary to popular belief, not all animal groups continued to evolve fundamentally new morphologies through time. The majority actually achieved their greatest diversity of form (disparity) relatively early in their histories.
>
> Lead researcher from the Department of Biology & Biochemistry, Dr Matthew Wills said: "This pattern, known as 'early high disparity', turns the traditional V-shaped cone model of evolution on its head. What is equally surprising in our findings is that groups of animals are likely to show early-high disparity regardless of when they originated over the last half a billion years. This isn't a phenomenon particularly associated with the first radiation of animals, or periods in the immediate wake of mass extinctions."
>
> The team used published descriptions of extinct groups in order to construct 'morphospaces'; empirical spaces in which anatomically similar species plotted close together, and more dissimilar species plotted further apart. By looking at the manner in which the occupied 'volume' of space changed through time, they were able to track changes in morphological disparity.

Evolution News analyzes how the authors of the study explain away their findings to keep faith with Darwin.

Excerpt:

> Why did 20 or more separate animal phyla suddenly appear in the geological blink of an eye? Because "**Clades reach highest morphological disparity early in their evolution**," answer Martin Hughes, Sylvain Gerber, and Matthew Albion Will… The Cambrian animals exploded onto the scene because evolution works fast sometimes. It seems to be a pattern that high disparity occurs early on. Must be a law of nature. What, you've got a problem with that?
>
> These three biologists from the University of Bath took a bath in their own assumptions. They don't deny that the animals appear suddenly. They just believe that when opportunity arises, evolution works fast to fill up the landscape with endless forms most beautiful. Under the section, "**Why Do Clades Have Early High Disparity?**" they say:
>
> **What might explain the prevailing pattern** of **early high disparity in clade evolution**?
> Both **ecological** and **developmental** explanations have been **proposed**, and our results remain **consistent with both**. The **"empty ecospace" model**predicts that **clades will radiate and diversify more rapidly when colonizing a new environment**. This colonization **may** occur because **ecospace has been vacated** by other occupants (e.g., in the wake of some other extinction, typically the result of external, physical factors) or because a **hitherto inaccessible environment** or other **resource** has been rendered viable by **the acquisition** of some **novel, "key" adaptation** or **series of characters** (an intrinsic, biological trigger). **Morphological change** under these circumstances **may** be **rapid** either**because transitions are unusually large** or because **rates of cladogenesis** are**unusually high** (even with "normal" step sizes at each

> splitting event). (Emphasis added, reference numbers omitted.)
>
> Jaws should drop at that "explanation." If Hughes, Gerber and Wills were simply *describing* what is found in the fossil record — the sudden appearance of complex animals — it would be one thing. But they attempted to *explain* how these complex animals appeared, so suddenly as Jonathan Wells described in the film *Darwin's Dilemma*, that it's comparable to less than two minutes on a twenty-four-hour clock.
>
> […]As Stephen Meyer shows in *Darwin's Doubt*, prior to the Cambrian explosion there were only microbes, sponges and the enigmatic Ediacaran fauna that most paleontologists do not consider related to the Cambrian animals. There were no jointed appendages, eyes, guts, nervous systems or any of the other organs, tissue types and body plans that characterize Cambrian phyla. What kind of Darwinian "miracle" would it take to get all those complex traits in blink of an eye? Calling it "cladogenesis" is like calling the simultaneous chance appearance of cars, boats, and airplanes "vehicle-o-genesis."
>
> The model has striking similarities to the old notion of Punctuated Equilibrium discussed in Chapter 7 of *Darwin's Doubt*. In fact, the *PNAS* paper was edited by Steven Stanley, "an early advocate of the punctuated equilibrium model" according to Meyer (p. 137). As such, this new model is really a throwback to the old "punk eek," and suffers from the same drawbacks: it's an attempt to explain away the absence of evidence for evolution by claiming, without any mechanism better than old-fashioned neo-Darwinism, why the fossil record shows a discontinuous pattern, not a record of a gradually branching tree.

There's a lot more in that Evolution News article.

Now, I'm pretty sure I read about this upside-down tree of life years ago in a little book by biologist Jonathan Wells entitled "Icons of Evolution". Dr. Wells made the case that Darwin's iconic picture of "the tree of life" should really be inverted. Darwin thought that the root came early in the fossil record, and the branches came later – by mutation and selection. The truth is that the branches come first. The diversity is all at the beginning of the fossil record. This falsifies evolution (again).

Is this new study going to make the naturalists change their religion? Probably not. Because science has nothing to do with the presupposition of naturalism. Darwinists presuppose naturalism for other reasons that are insulated from experimental science. It's a faith commitment – and they don't care about revising their faith when the progress of science reveals new facts.

# Michelle Malkin: why do so many women judge men's character by their appearance?

**Wintery Knight** · 1 August 2013 · Archived copy · Original

Michelle Malkin is concerned by women who think that convicted criminals are actually innocent. Why? Because they are *HAWT*.

She writes:

> I would like to declare a war on women — namely, all those cringe-inducing ninnies who lust after every celebrity criminal defendant with big muscles, tattoos, puppy-dog eyes or Hollywood hair.
>
> You know who I'm talking about, right? America's Bad Boy groupies. They'reon the courthouse steps with their "Free Jahar" signs, cooing over how "hot" and "cute" the bloodstained Boston Marathon bombing suspect is. He "can blow me up with babies," one moral reprobate quipped shortly after his capture. "I'm not gonna lie, the second bombing suspect, Dzhokhar Tsarnaev, is hot. #sorrynotsorry," another young girl boasted.
>
> Among the callous accused killer's victims, in case you'd forgotten: 8-year-old boy Martin Richard, who had been cheering on his dad and other family friends at the race. But who cares about an innocent dead child blown to bits by pressure cooker bombs in the name of Allah? *Jahar is HAWT!*
>
> Far from a minuscule fringe, the Ja-harem is a growing social media phenomenon. Its members mimic Justin Bieber's Beliebers, adopting the last name of their Tiger Beat terrorist and doodling hearts around his mug shot. In heat or in jest, these depraved females continue to spread viral photos, memes and hashtags of their Islamist Idol. One woman showed up at Tsarnaev's court appearance Wednesday donning a "Free the Lion" T-shirt. Another sported a "Dzhokhar Tsarnaev is innocent" tee, while her gal pal shouted, "Exonerate!"
>
> For those ladies who prefer jocks to jihadis, there's accused murderer/NFL star Aaron Hernandez. He's "fine as wine," one woman lusted. He's "too damned sexy to go to prison," another lamented. "He can come to jail at my house," sighed yet another. In response to one of gangsta Hernandez's Glock-wielding Instagram pics, one sick chick slavered, "Soooo hot with the combination handgun-mirror selfie."
>
> Fugitive cop-killer Christopher Dorner also had his own fan club. Parked in front of their TV sets, women cheered on the "kinda sexy" homicidal maniac as he terrorized Southern California before perishing in a cabin inferno. "I'd honestly hide Dorner in my house," one fan girl enthused. Tens of thousands "liked" Dorner's various support pages on Facebook.
>
> Harmless Internet chitter-chatter? Don't kid yourselves. While some of the murderers' panting minions may be joking, it's irresponsible women like these who end up enabling, marrying and conspiring with public menaces.
>
> They're your neighbors and relatives, suburban gals like Colleen "Jihad Jane" LaRose and Jamie "Jihad Jamie" Paulin-Ramirez of Colorado, who agreed to wed Muslim terrorists and conspired to kill Swedish cartoonist Lars Vilks. Paulin-Ramirez dragged her 6-year-old (whom she renamed "Walid") to Ireland to assist with the plot. Family members said she was "easily influenced" and that "any man that came along … she kind of followed like a lost puppy."

There's a lot more like that in the article. I think that what is happening to women today is that they are convinced that the relationship is for their benefit, not God's, and not the children's. They know that being seen with a good looking man makes them happy. They don't really know much about married life and how much marriage costs. Instead of trying to pick a man with some savings and a good job and a gapless resume, they prefer to choose someone who is "hawt" and who is fun and amusing. There is no other consideration in play – they just want a man to make them happy, and they think that marrying a man will transform him into a happy-feeling making machine. Who cares about mortgages, bills and obligations?

It reminds me of a study I saw a while back, which was discussed in the UK Daily Mail.

Excerpt:

> It takes a woman just three minutes to make up her mind about whether she likes a man or not, a study has revealed.
>
> The average female spends the time sizing up looks, physique and dress-sense as well as taking in scent, accent and eloquence of a potential suitor.
>
> Women also quickly judge how he interacts with her friends and whether he is successful or ambitious.
>
> It also emerged most women believe 180 seconds is long enough to gauge whether or not he is Mr Right, or Mr Wrong.
>
> The study also found women rarely change their mind about a man after their initial reaction – and believe they are 'always right' in their assumptions and judgments.
>
> The report which was commissioned among 3,000 adults to mark the release of Instinct, a new book by Ben Kay.
>
> Kay said: 'I think a lot of people believe in trusting their instincts when dating. It makes it seem more magical, like it's coming from somewhere deeper.

I am not sure if this method of choosing mates should be used by Christian women. If the goal of a relationship is to please God and serve him, then our feelings should not be the guide. God is the customer of the relationship, not the woman, and not the man. The goal of a relationship is not primarily to have happy feelings – because that can lead to being selfish and destructive. It makes no sense to say that you are driving drunk in order to please God, or playing Russian roulette in order to please God – pleasing God needs to be done intelligently, with preparation, and respecting strict moral boundaries, if it is going to stand the chance of being effective at achieving his goals. It's so easy to think that God is just interested in our happiness, but he isn't. He is interested in us knowing him, serving him, suffering with him and understanding him.

Also, think of the harm that can be caused if women use emotions to choose men for the role of making them happy, instead of the role of making God happy. Men are designed by God to be protectors, providers and moral/spiritual leaders. According to this study, women are completely disinterested in whether a man can perform these traditional male roles. Because it is clear that nothing at all can be known about a man's ability to perform these roles by looking at his appearance and style. Even if a man has a confident way of saying what a great provider he is, it doesn't mean anything – if you want to know how much a man earns, look at his paycheck. I told that to a woman once, and she told me that she would rather use her "intuition" to guess how much a man makes. And to have the "feeling" that he makes a lot, instead of seeing the paycheck. That makes no sense to me, though. The only way to know if a man has savings is to see his investment portfolio. You can't see the size of his portfolio by looking at his shoes.

Here are some ideas about what women should be doing to assess men for these roles:

- protector: does he understand which ideologies and policies oppose marriage, faith and family? is he good at defending his views against secular leftists?
- provider: what does his balance sheet look like? what does his resume look like? what does his university transcript look like? does he give to charity?
- moral leader: what has he written or spoken about related to moral issues like abortion, marriage, parental rights, etc.?
- spiritual leader: what has he written or spoken about related to theology and apologetics? does he have long-term mentoring relationships with other committed Christians?

None of these ways of judging a man can be accomplished in 180 seconds, and probably not even in 180 hours. It takes time to measure a man for marriage. And having fun with him is not the way to measure him.

# New study finds connection between early use of marijuana and mental illness

**Wintery Knight** · 2 August 2013 · Archived copy · Original

The Wall Street Journal reports.

Excerpt:

> There is a significant and consistent relationship between marijuana use and the development of schizophrenia and related disorders. Schizophrenia is considered by psychiatrists to be the most devastating of mental illnesses. Patients who suffer from it often experience auditory or visual hallucinations, severe social withdrawal and cognitive impairment. Many require frequent and prolonged hospitalization in psychiatric wards.
>
> Schizophrenia affects almost three million Americans—more than six times the number of people with multiple sclerosis, two and a half times the number of people with Parkinson's disease, and more than twice the number of people with HIV/AIDS. Less than one-third of patients with schizophrenia can hold a steady job or live independently. A large portion (about one-third) of homeless people in the U.S. suffer from the disease.
>
> Though they receive little attention in the legalization debate, the scientific studies showing an association between marijuana use and schizophrenia and other disorders are alarming. A 2004 article in the highly respected British Journal of Psychiatry reviewed four large studies, all of which showed a significant and consistent association between consumption of marijuana (mostly during teenage years or early 20s) and the later development of schizophrenia. The review concluded that marijuana is a "causal component," among others, in the development of schizophrenia and other psychotic disorders.
>
> A 2007 study in the Lancet, a British medical journal, concludes that using marijuana increases the risk of young people developing a psychotic illness, such as schizophrenia. This risk is greatest—up to a 200% increase—among those who use marijuana heavily and who start using at a younger age.

I thought this article was useful for parents who need some ammunition when talking to their children about drugs. Children can be pretty irrational. You show them studies, and they say "that will never happen to me". That's just how they are. But at least when you show them the evidence, it might stick in their mind a little more. It's all in the way you present it, I think. The idea is to be truth-focused and authentic, rather than confrontational. Maybe discuss it as a policy issue rather than a parenting issue.

# New study: breastfeeding is slightly better for children's intelligence

**Wintery Knight** · 2 August 2013 · Archived copy · Original

From the Wall Street Journal.

Excerpt:

> Breast-feeding longer can make children smarter. That's the conclusion of a study published Monday in JAMA Pediatrics, a journal of the American Medical Association.
>
> […]The latest study examined and rated each child's environment based on factors such as how many books are available, and gave each mother an IQ test. They also asked detailed questions about factors that might influence IQ, such as child care, income and parental education. They then subtracted those factors using a statistical model. Dr. Belfort said she hopes that "what we have left is the true connection" with nursing and IQ.
>
> […]Researchers at Boston Children's hospital followed 1,312 babies and mothers from 1999 to 2010. They found out how many of those children were still consuming their mothers' milk at their first birthday, and then tested the children's intelligence at ages 3 and 7.
>
> […]Children who were still nursing after a year had higher receptive language scores at age 3, which means they understood what was being said to them better than their formula-fed peers. At age 7, the breast-fed children scored higher on verbal and nonverbal intelligence tests.
>
> In 3 year olds, every month of breast-feeding raised cognition scores by an average of .21 point. Each month of breast-feeding was associated with a .35 more verbal IQ point and a .29 more nonverbal point in the 7 year olds. A full year of nursing would boost a child's IQ by about 4 points over a child who didn't nurse, said Dr. Belfort, a significant bump considering that IQs average around 100. That is for children getting some breast milk in their diets; those consuming only breast milk before starting to eat solid foods around six months of age saw even greater advantages.
>
> […]The possible link between breast milk and brain development is only starting to be teased out. Some theories suggest that it isn't the content of the milk but the bond between mother and child developed while nursing that accounts for some of the boost. Other ideas hinge on nutrients found in breast milk such as DHA and ARA, which are fatty acids linked to brain development. Some formula companies put DHA and ARA in their offerings.
>
> […]One difficulty in studying breast milk is that every feeding can vary based on the mother and what she has eaten. So the Boston researchers also examined a component in mothers' diets that might be responsible for children's brain development: fish, which contains DHA.
>
> The authors found that more than two or more servings of fish per week seemed to confer IQ benefits, but that boost in children's cognition wasn't statistically significant.

Gee, we haven't had any controversy on this blog since… yesterday! I wonder what everyone thinks of this study. Does it ring true to you?

# Ryan Anderson explains how gay marriage is already infringing on religious liberty

**Wintery Knight** · 2 August 2013 · Archived copy · Original

Dr. Ryan Anderson writes about the threat to religious liberty in National Review.

Excerpt:

> Thomas Messner, a visiting fellow at the Heritage Foundation, has documented multiple instances in which laws forbidding discrimination based on sexual orientation, as well as laws redefining marriage, have already eroded religious liberty and the rights of conscience.
>
> After Massachusetts redefined marriage to include same-sex relationships, Catholic Charities of Boston faced a mandate to place children with same-sex couples. Rather than go against its principles, Catholic Charities decided to get out of the adoption business — a move that helps neither the orphans nor society. When Massachusetts public schools began teaching grade-school students about same-sex marriage, the town of Lexington's school superintendent, Paul Ash, defended the decision to the *Boston Globe* with this statement: "Lexington is committed to teaching children about the world they live in, and in Massachusetts same-sex marriage is legal." A Massachusetts appellate court ruled that parents have no right to exempt their children from these classes.
>
> The New Mexico Human Rights Commission prosecuted a photographer for declining to photograph a same-sex "commitment ceremony." Doctors in California were successfully sued for declining to perform an artificial insemination on a woman in a same-sex relationship. Owners of a bed-and-breakfast in Illinois who declined to rent their facility for a same-sex civil-union ceremony and reception were sued for violating the state nondiscrimination law. A Georgia wellness counselor was fired after she referred someone in a same-sex relationship to another counselor.
>
> In fact, the Becket Fund for Religious Liberty reports that "over 350 separate state anti-discrimination provisions would likely be triggered by recognition of same-sex marriage."
>
> In a letter sent to priests, deacons, and pastoral facilitators in 131 parishes, the Catholic bishop of Springfield, Ill., explains that a same-sex-marriage bill state lawmakers are considering this year does not include meaningful protections for religious liberty:
>
> [It] would not stop the state from obligating the Knights of Columbus to make their halls available for same-sex "weddings." It would not stop the state from requiring Catholic grade schools to hire teachers who are legally "married" to someone of the same sex. This bill would not protect Catholic hospitals, charities, or colleges, which exclude those so "married" from senior leadership positions. . . . This "religious freedom" law does nothing at all to protect the consciences of people in business, or who work for the government. We saw the harmful consequences of deceptive titles all too painfully last year when the so-called "Religious Freedom Protection and Civil Union Act" forced Catholic Charities out of foster care and adoption services in Illinois. . . . There is no possible way– none whatsoever — for those who believe that marriage is exclusively the union of husband and wife to avoid legal penalties and harsh discriminatory treatment if the bill becomes law. Why should we expect it be otherwise? After all, we would be people who, according to the thinking behind the bill, hold onto an "unfair" view of marriage. The state would have equated our view with bigotry — which it uses the law to marginalize in every way short of criminal punishment.
>
> Georgetown University law professor Chai Feldblum, an appointee to the U.S. Equal Employment Opportunity Commission, argues that the push to redefine marriage trumps religious-liberty concerns:
>
> For all my sympathy for the evangelical Christian couple who may wish to run a bed-and-breakfast from which they can exclude unmarried, straight couples and all gay couples, this is a point where I believe the "zero-sum" nature of the game inevitably comes into play. And, in making that decision in this zero-sum game, I am

> convinced society should come down on the side of protecting the liberty of LGBT people.
>
> Indeed, for many supporters of redefining marriage, such infringements on religious liberty are not flaws but virtues of the movement.

Now, I have previously written that a good case can be made against same-sex marriage on secular grounds alone, but make no mistake – the more gay rights advance, the more religious liberty declines. This issue is not about equality, it's about trampling on the rights of anyone who voices any disagreement with the gay lifestyle.

# After pro-life laws were passed, abortions declined 7.4% in Arizona

**Wintery Knight** · 3 August 2013 · Archived copy · Original

Life News has some good news for us.

Excerpt:

> A new report from the state health department in Arizona shows the number of abortions there has declined more than seven percent, thanks in part to the passage of more pro-life laws limiting abortions.
>
> The Department of Health Services annual abortion report shows a 7.4% decrease in the number of abortions performed in Arizona in 2012 as compared to 2011.
>
> Abortions dropped 8 percent from 2010-2011 after dropping 30 percent the year before.

Here's a bit more about the law passed by the Republicans in Arizona:

> Early in 2012, Arizona Gov. Jan Brewer signed a pro-life bill into law to ban abortions after 20 weeks of pregnancy. This bill, called "The Mother's Health and Safety Act":
>
> - Prohibits abortion after 20 weeks because of the safety risks to the mother and the pain endured by the preborn child
> - Ensures women have an ultrasound at least 24 hours prior to an abortion
> - Establishes an informed consent website which details the facts about fetal development, risks of abortion, and services available.
> - Requires doctors performing surgical abortions to have admitting privileges at a hospital within thirty miles of the abortion facility.

Lately, we are seeing a lot of these bans on abortions after 20 weeks in states that have Republican-controlled legislatures and Republican governors. It's good news! And in 2014, we'll get another chance to vote pro-life again and see some more hope and change.

# Millionaire gay couple sues Church of England to get gay wedding in a church

**Wintery Knight** · 3 August 2013 · Archived copy · Original

Well, that didn't take long, did it?

The UK Daily Mail reports.

Excerpt:

> The first legal challenge to the Church of England's ban on same-sex marriage was launched today – months before the first gay wedding can take place.
>
> Gay father Barrie Drewitt-Barlow declared: 'I want to go into my church and marry my husband.' He added: 'The only way forward for us now is to make a challenge in the courts against the Church.'
>
> The legal move means an early test for David Cameron's promise to the CofE and Roman Catholic bishops that no church would be forced to conduct same-sex weddings against the will of its leaders and its faithful.
>
> Ministers set down a 'quadruple lock' in the new same sex marriage law – which received Royal Assent last month – which is supposed to protect those churches which oppose gay marriage.
>
> However the guarantees will have to be tested in the courts and gay rights groups have been expecting to bring an early challenge.

How is the suit likely to be resolved?

The article notes that:

> [A] succession of past court cases have resulted in defeats for Christians who were in disputes over equality laws, and in particular courts have always found in favour of gays who have challenged Christians.
>
> In recent years notable cases have ended in the sacking of a town hall registrar who refused to conduct civil partnership ceremonies, the sack for a Relate counsellor who said he would not give sex advice to gay couples, and defeat for a couple who declined to let a room in their hotel to a gay couple on the grounds that they were unmarried.
>
> Colin Hart, of the Coalition for Marriage said: 'The ink's not even dry on the Bill and churches are already facing litigation. We warned Mr Cameron this would happen, we told him he was making promises that he couldn't possibly keep.
>
> 'He didn't listen. He didn't care. He's the one who has created this mess. Mr Cameron's chickens are coming home to roost and it will be ordinary people with a religious belief who yet again fall victim to the totalitarian forces of political correctness.'
>
> Mr Hart added: 'We now face the real prospect of churches having to choose between stopping conducting weddings, or vicars, and priests defying the law and finding themselves languishing in the dock.'

Yesterday, I blogged about how gay activists are already infringing on religious liberty in the United States. It's happening here. Isn't interesting that many people who falsely claim to be Christian nevertheless voted for a President who is in favor of gay marriage? And now we are getting the consequences of gay marriage – the end of religions liberty.

# Short pro-life responses to six pro-choice slogans

**Wintery Knight** · 3 August 2013 · Archived copy · Original

Two posts: (first post, second post) by Daniel Rodger, who lives in the UK.

Here are the six slogans:

1. *'It's a women's right to choose.'*
2. *'Don't like abortion? Don't have one.'*
3. *'Keep your Rosaries off my ovaries.'*
4. '*Vote Pro-choice. Politicians make crappy doctors.'*
5. *'May the fetus you save be gay.'*
6. *'Stop the war on women.'*

I had not heard #5 before. But here are the first two responses:

> 1. *'It's a women's right to choose.'*
>
> Of course we all respect someone's right to choose, it would make you seem like a moral monster to deny something western civilisation values so highly. However, clearly there are many circumstances where the right to choose has its limitations. No-one is trying to tell women they can't choose what to eat or who to talk to but the idea that choice is absolute is nonsense. One must clarify what is being referred to when we talk about having a right to choose to do something. If I wanted to choose to shoot my dog or beat a child for fun you would likely be abhorred at the nature of my choice and tell me that I have no such right to do so.
>
> Very few people think that we should be able to kill other human beings with impunity which means that the nature of this 'choice' begs the question and assumes something about the nature of the unborn. That they are different, less valuable, outside of our moral circle, disposable and whose geographical location justifies their killing in the name of Western autonomy. Clearly whether someone is male or female they do not have the 'right' to choose to do whatever they want. Dressed up in more philosophical language we would find ourselves responding to the bodily autonomy objection that has been suitably refuted elsewhere ad nauseam.
>
> 2. *'Don't like abortion? Don't have one.'*
>
> Let's try and use similar logic on some other moral quandaries, 'Don't like slavery? Don't own one.' Don't like wife beating? Don't beat yours.' Don't like child abuse? Don't abuse yours. Don't like strawberries? Don't eat them. What this slogan does quite effectively is that it moves abortion from being something that may be an objective moral wrong that kills a developing and innocent human being to one of personal tastes. Very few people would accept that preferring strawberries over apricots is morally similar to preferring to keep slaves or not, yet this is the category the slogan is putting abortion in. Slavery is wrong because it treats intrinsically valuable human being's as a commodities that can be traded and sold.
>
> However the real crime of this slogan is that it promotes the idea that those who are Pro-life only think abortion is wrong because they don't like it, which is false. Whether someone likes strawberries or apricots is a personal preference that no-one would disagree with, but equivocating between that and an act that kills another human being is absurd and assumes moral relativism. This leaves the proponent of such a slogan in the position of having no authority to tell us that neither slavery and wife beating are wrong if I happened to like them. Lets get this straight, when someone who holds the Pro-life view says abortion is wrong they are not simply saying they don't like abortion, they are saying it is objectively wrong regardless of how someone may feel about it.

His first post covers the first three objections, the second post covers the latter three objections.

If you like these, you can find a whole collection of them here.

# Leftist RINO Lindsay Graham will get primary challenge from Nancy Mace

**Wintery Knight** · 4 August 2013 · Archived copy · Original

Republican candidate Nancy Mace (South Carolina)

The Daily Caller has some great news for conservatives who are sick and tired of being stabbed in the back by a fake Republican.

Excerpt:

> The first woman to graduate from the Citadel is planning to challenge South Carolina Sen. Lindsey Graham in the Republican primary next year.
>
> Charleston businesswoman Nancy Mace will head to Goose Creek Saturday to announce her Senate campaign, The Daily Caller News Foundation has learned.
>
> "This isn't about one senator," Mace told TheDCNF. "The only way to change Washington is to change who we send to Washington."
>
> "Washington is out of touch," she added. "Voters are frustrated. They're looking for someone authentic."
>
> In a June fundraising email, the Senate Conservatives Fund listed Graham as one of three Republican senators the group would support a primary campaign against if "strong, conservative challengers emerge."
>
> Mace, who has written articles for The Daily Caller, is a Fort Bragg native who graduated from South Carolina's military college in 1999, becoming the first woman graduate since the Citadel was founded in 1842. She later wrote a memoir of her experience at the school and runs a public relations firm in Charleston.
>
> […]When Paul ran ads against several swing state Democratic senators who voted against his proposal to stop foreign aid to Egypt, Pakistan and Libya, Graham came to their aid. Graham joined West Virginia Democratic Sen. Joe Manchin in a conference call defending his vote.
>
> "I think the overwhelming majority of Americans oppose giving tax dollars to countries that hate our culture,

> burn our flag and train terrorists," Mace told TheDCNF.
>
> Mace said that Graham refers to his Republican critics as being "to the left of Obama, but he has has been with Obama on many issues." She pointed to the Gang of Eight immigration bill — Graham's harshest critics nickname him "Grahamnesty" — along with the Troubled Assets Relief Program bailout, cap and trade and his votes to confirm Supreme Court Justices Elena Kagan and Sonia Sotomayor.
>
> Mace argued that justices in the mold of these Obama appointments "upheld Obamacare," the controversial federal health care reform law she would like to defund.
>
> Last year, Graham distanced himself from the Americans for Tax Reform pledge against tax increases, causing the group's leader Grover Norquist to brand him "not a thought leader in the Republican Party."

She's only 35 years old!

Now if we could just find someone young and conservative to challenge John McCain in a primary, we'd really be in good shape.

# New study confirms that predictions about junk DNA by Darwinian naturalists are false

**Wintery Knight** · 4 August 2013 · Archived copy · Original

First, let's see what Darwinian evolutionists predict about junk DNA, before we look at what the experiments show.

Here's biologist John Timmer to explain the orthodox Darwinian view of DNA from 2007:

> Personally, I fall into the "it's all junk" end of the spectrum. If almost all of these sequences are not conserved by evolution, and we haven't found a function for any of them yet, it's hard to see how the "none of it's junk" view can be maintained. There's also an absence of support for the intervening view, again because of a lack of evidence for actual utility. The genomes of closely related species have revealed very few genes added from non-coding DNA, and all of the structural RNA we've found has very specific sequence requirements. The all-junk view, in contrast, is consistent with current data.

Got that? According to Darwinists, DNA is almost entirely junk – this is what is consistent with the view that creatures have evolved through a process of random mutation and selection. The estimates that I've seen from evolutionary biologists range from 95% to 99% junk. Now let's compare the religion with science, and separate mythology from reality.

Now let's compare that with intelligent design theorist William Dembski's view of "junk" DNA, from 1998:

> Even if we have a reliable criterion for detecting design, and even if that criterion tells us that biological systems are designed, it seems that determining a biological system to be designed is akin to shrugging our shoulders and saying God did it. The fear is that admitting design as an explanation will stifle scientific inquiry, that scientists will stop investigating difficult problems because they have a sufficient explanation already.
>
> But design is not a science stopper. Indeed, design can foster inquiry where traditional evolutionary approaches obstruct it. Consider the term "junk DNA." Implicit in this term is the view that because the genome of an organism has been cobbled together through a long, undirected evolutionary process, the genome is a patchwork of which only limited portions are essential to the organism. **Thus on an evolutionary view we expect a lot of useless DNA. If, on the other hand, organisms are designed, we expect DNA, as much as possible, to exhibit function. And indeed, the most recent findings suggest that designating DNA as "junk" merely cloaks our current lack of knowledge about function… Design encourages scientists to look for function where evolution discourages it.**

Now let's look at the experimental evidence and see whose prediction was proven right by the progress of science.

Science Daily reports on a new study that confirms the previous study that falsified Darwinian predictions about junk DNA.

Excerpt:

> Researchers from the Gene and Stem Cell Therapy Program at Sydney's Centenary Institute have confirmed that, far from being "junk," the 97 per cent of human DNA that does not encode instructions for making proteins can play a significant role in controlling cell development.
>
> […]Using the latest gene sequencing techniques and sophisticated computer analysis, a research group led by Professor John Rasko AO and including Centenary's Head of Bioinformatics, Dr William Ritchie, has shown how particular white blood cells use non-coding DNA to regulate the activity of a group of genes that determines their shape and function. The work is published today in the scientific journal*Cell*.
>
> "This discovery, involving what was previously referred to as "junk," opens up a new level of gene expression

> control that could also play a role in the development of many other tissue types," Rasko says. "Our observations were quite surprising and they open entirely new avenues for potential treatments in diverse diseases including cancers and leukemias."

Now, this is yet another falsification of Darwinism, to go with the other papers that I keep posting about new research that falsifies Darwinism. How many papers do we need to falsify Darwinism? Or maybe belief in Darwinism is like belief in naturalism: just a philosophical presupposition that is not accountable to the evidence at all.

# William Lane Craig vs Walter Sinnott-Armstrong: evil, suffering and God's existence

**Wintery Knight** · 4 August 2013 · Archived copy · Original

This is one the top 4 best debates that William Lane Craig has done in my opinion. (The other two are Craig-Millican debate and the first and second Craig-Dacey debates) This one doesn't seem to get a lot of play on the Internet: there's no video, transcript or anything. But it is a great debate, and on a problem we are all concerned about: the problem of evil and suffering. One other thing – Sinnott-Armstrong is also a very courteous, respectful and intelligent scholar and he is very good at defending his side. This is a very cordial and engaging debate, and because it was held in front of a church audience, it was targeted to laymen and not academics.

The MP3 file is here.

There is also a book based on this debate, published by Oxford University Press. I was actually able to find a PDF of it online. I should also remind people that you can get the wonderful Craig-Hitchens debate DVD from Amazon.com if you are looking for a debate to watch, or show in your church.

**The debaters:**

- William Lane Craig
- Walter Sinnott-Armstrong

**The format:**

- WSA: 15 minutes
- WLC: 15 minutes
- Debaters discussion: 6 minutes
- Moderated discussion: 10 minutes
- Audience Q&A: 18 minutes
- WSA: 5 minutes
- WLC: 5 minutes

**SUMMARY:**

**WSA opening speech:**

Evil is incompatible with the concept of God (three features all-powerful, all-god, all-knowing)

God's additional attributes: eternal, effective and personal (a person)

He will be debating against the Christian God in this debate, specifically

Contention: no being has *all* of the three features of the concept of God

His argument: is not a deductive argument, but an inductive/probabilistic argument

Examples of pointless, unjustified suffering: a sick child who dies, earthquakes, famines

The inductive argument from evil:

1. If there were an all-powerful and all-good God, then there would not be any evil in the world unless that evil is logically necessary for some adequately compensating good.
2. There is evil in the world.
3. Some of that evil is not logically necessary for some adequately compensating good.
4. Therefore, there can't be a God who is all-powerful and all-good.

Defining terms:

- Evil: anything that all rational people avoid for themselves, unless they have some adequate reason to want that evil for themselves (e.g. – pain, disability, death)
- Adequate reason: some evils do have an adequate reason, like going to the dentist – you avoid a worse evil by having a filling

God could prevent tooth decay with no pain

God can even change the laws of physics in order to make people not suffer

Responses by Christians:

- Evil as a punishment for sin: but evil is not distributed in accordance with sin, like babies
- Children who suffer will go straight to Heaven: but it would be better to go to Heaven and not suffer
- Free will: this response doesn't account for natural evil, like disease, earthquakes, lightning
- Character formation theodicy: there are other ways for God to form character, by showing movies
- Character formation theodicy: it's not fair to let X suffer so that Y will know God
- God allows evil to turn people towards him: God would be an egomaniac to do that
- We are not in a position to know that any particular evil is pointless: if we don't see a reason then there is no reason
- Inductive evil is minor compared to the evidences for God: arguments for a Creator do not prove that God is good

**WLC opening speech:**

Summarizing Walter's argument

1. If God exists, gratuitous does not exist.
2. Gratuitous evil exists.
3. Therefore, God does not exist.

Gratuitous evil means evil that God has no morally sufficient reason to permit. WSA doesn't think that all evil is incompatible with God's existence, just gratuitous evil.

Everyone admits that there are instances of evil and suffering such that we cannot see the morally sufficient reason why God would allow it to occur.

The claim of the atheist is that if they cannot see that there is a moral justification for allowing some instance evil, then there is no moral justification for that instance of evil.

Here are three reasons why we should not expect to know the morally sufficient reasons why God permits apparently pointless evil.

1. the ripple effect: the morally sufficient reason for allowing some instance of evil may only be seen in another place or another time
2. Three Christian doctrines undermine the claim that specific evils really are gratuitous
3. Walter's own premise 1 allows us to argue for God's existence, which means that evil is not gratuitous

Christian doctrines from 2.:

- The purpose of life is not happiness, and it is not God's job to make us happy – we are here to know God. Many evils are gratuitous if we are concerned about being happy, but they are not gratuitous for producing the knowledge of God. What WSA has to show is that God could reduce the amount of suffering in the world while

still retaining the same amount of knowledge of God's existence and character.

- Man is in rebellion, and many of the evils we see are caused by humans misusing their free will to harm others and cause suffering
- For those who accept Christ, suffering is redeemed by eternal life with God, which is a benefit that far outweighs any sufferings and evils we experience in our earthly lives

Arguing for God in 3.

- If God exists, gratuitous does not exist.
- *God exists*
- Therefore, gratuitous does not exist.

Four reasons to think that God exists:

- the kalam cosmological argument
- the fine-tuning argument
- the moral argument
- the argument *from* evil

# Aetna pulls out of Obamacare exchanges in Maryland – can't operate at a loss

**Wintery Knight** · 5 August 2013 · Archived copy · Original

Left-leaning Reuters reports on the implementation of Obamacare in Maryland.

Excerpt:

> Aetna Inc pulled out of Maryland's health insurance exchange being created under President Barack Obama's healthcare reform law after the state pressed it to lower its proposed rates by up to 29 percent.
>
> Under the law, often called Obamacare, each U.S. state will have an online exchange where Americans will be able to buy insurance plans, starting on October 1. The government is counting on about 7 million people to enroll next year for this insurance, many of whom will qualify for subsidies.
>
> The success of the exchanges, as well as the expansion of the government's Medicaid program for the poor, are key elements in the political battle between Republicans and Democrats. State officials say the price of the new insurance plans will help determine whether enough people sign up.
>
> In an August 1 letter sent to the Maryland Department of Insurance, Aetna said the state's requirement for rate reductions off its proposed prices would lead it to operate at a loss. The rate reductions include products from Aetna and Coventry Health Care, which it bought this spring.
>
> "Unfortunately, we believe the modifications to the rates filed by Aetna and Coventry would not allow us to collect enough premiums to cover the cost of the plans, including the medical network and service expectations of our customers," Aetna said in the letter to insurance commissioner Therese Goldsmith.
>
> **According to online documents, Aetna had requested an average monthly premium of $394 a month for one of its plans and the agency had approved an average rate of $281 per month.**
>
> Aetna Chief Executive Officer Mark Bertolini said earlier this week during a conference call to announce financial results that it was closely looking at its plans for the exchanges since buying Coventry.

> Like most other large U.S. insurers, Aetna has taken a cautious approach to the new products which must include a broader set of benefits and be sold to all people regardless of their health.

Doug Ross blogged about the cost of health insurance in Ohio a while back. He linked to this article from Forbes magazine.

Excerpt:

> [O]n Thursday, the Ohio Department of Insurance announced that, based on the rates submitted by insurers to date, the average individual-market health insurance premium in 2014 will come in around $420, "representing an increase of 88 percent" relative to 2013…
>
> […]It's called "rate shock," but it's not shocking to people who understand the economics of health insurance. In August 2011, Milliman, one of the nation's leading actuarial firms, predicted that Obamacare would increase individual-market premiums in Ohio by 55 to 85 percent. This past March, the Society of Actuaries projected that the law would increase premiums in that market by 81 percent…
>
> […]What are the drivers of the increase? According to Milliman, the two biggest drivers are (1) risk pool composition changes, such as forcing the young to subsidize the old, and the healthy to subsidize the sick; and (2) Obamacare's required expansion of insurance benefits, particularly its mandated reductions in deductibles and co-pays…

Doug makes the point that we already knew what happens to the cost of health care when government imposes price controls – we get a shortage of health care, and prices go up. We knew that. Obamacare is nothing but a further intervention into free market to impose more price controls. Guess what? It's going to do the exact same thing. The only way out of this mess is going to be for government to ration care by reducing the number of doctors and delaying treatment with waiting lists – exactly what happens today in Canada.

During the election campaign, Obama promised everyone that his health care policy would result in lower premiums. What reasons did we have to believe him when he said that? Did he have a record of competence on health care policy, like Louisiana governor Bobby Jindal does? Did he have a career in private sector health care to draw on, like Mark Bertolini does? No. Obama had nothing but talk. And we were too busy watching television to care.

# Virginia crime rate dropping after post-Obama gun buying spree

**Wintery Knight** · 5 August 2013 · Archived copy · Original

Dad sent me this article from the Richmond Times-Dispatch.

Excerpt:

> Gun-related violent crime continues to drop in Virginia as the sales of firearms continue to soar, a pattern that one local criminologist finds interesting "given the current rhetoric about strengthening gun laws."
>
> Major gun crime collectively dropped for a fourth consecutive year statewide, while firearms sales climbed to a new record in 2012 with 490,119 guns purchased in 444,844 transactions — a 16 percent rise over 2011, according to federally licensed gun dealer sales estimates obtained by the Richmond Times-Dispatch.
>
> The proliferation of guns occurred as the total number of major reported crimes committed with all types of firearms in Virginia dropped 5 percent, from 4,618 offenses in 2011 to 4,378 last year, according to Virginia State Police data.
>
> Looking back over seven years, total firearm sales in Virginia have risen a staggering 101 percent from 2006 to 2012, while gun-related crime has dropped 28 percent during that period.

The one really good thing about the Obama Presidency is that it's caused a lot of law-abiding Americans to purchase firearms out of fear that the government would ban them. Increased firearm ownership by law-abiding citizens is very bad for criminals, who now face a stronger deterrent to their criminal ambitions.

Previously, I had blogged about what the Bible says about self-defense, with some help from famous sytematic theologian Wayne Grudem. Dr. Gudem, whose PhD is from Cambridge University, concluded that the Bible was consistent with self-defense and firearm ownership. Now let's take a look at the peer-reviewed data and see how we can explain why self-defense is a good idea to others.

**The peer-reviewed research**

Whenever I get into discussions about gun control, I always mention two academic books by John R. Lott and Joyce Lee Malcolm.

- The Lott book was published by the University of Chicago Press (now in its 3rd edition)
