
1. Abide by the 6 fundamental ideals of strategy

1. Look at things as they are, not as your emotions color them.

2. Judge people by their actions.

3. Depend on your own arms (in other words, depend on the faculties of your own mind and ingenuity—external resources can be taken from you, but never your cleverness, courage, or energy).

4. Worship Athena, not Ares (your interest is in results and pragmatism, not fits of passion).

5. Elevate yourself above the battlefield (think strategically, not tactically—everything you do should be purposed with achieving your long-term objectives).

6. Spiritualize your warfare (you go to war with your own weaknesses constantly, welcoming the opportunity to improve as a warrior).

All of these concepts are things you'll encounter at sites like Return of Kings, and for good reason. Robert Greene goes over them in more detail, with clearer examples than I've seen anywhere else.

2. Don't fight the last war

What weighs us down is usually the mistakes or ill-experiences of the past. These cause us to lose confidence. For instance, when I was starting, it was terrifying for me to approach women, simply because I didn't have much experience doing it, and this lack of experience in turn dictated my future actions. I didn't approach because I didn't believe I could because I had little experience.

But in this, I was fighting the last war. I was letting the past set the future in stone. With a few tries and successes, I was on my way, and this fear regressed quickly. Once I turned my attention to the present, things looked brighter.

The mistake of fighting the last war applies to your successes just as much as your failures. The same routine won't work every time. Get too caught up in what's worked for you in the past and you'll lose sight of what's required in the present. Robert Greene says:

> Never take it for granted that your past successes will continue into the future. Actually, your past successes are your biggest obstacle: every battle, every war, is different, and you cannot assume that what worked before will work today. You must cut yourself loose from the past and open your eyes to the present. Your tendency to fight the last war may lead to your final war.

Each interaction must be treated differently. Men like to organize things into systems, but this can set us back in the game. Seduction isn't a logical process. Greene goes further:

> What makes us go astray in the first place is that we are unattuned to the present moment, insensitive to the circumstances. We are listening to our own thoughts, reacting to things that happened in the past, applying theories and ideas that we digested long ago but that have nothing to do with our predicament in the present.
>
> Understand: the greatest generals, the most creative strategists, stand out not because they have more knowledge but because they are able, when necessary, to drop their preconceived notions and focus intensely on the present moment.

3. Don't lose your presence of mind

> Understand: presence of mind is the ability to detach yourself, to see the whole battlefield, the whole picture, with clarity.

The game is an emotional experience and your thoughts will be clouded. Fear is the most prominent emotion—fear of the approach, fear to escalate, etc. In these stressful situations, most people see problems everywhere and defeat in the smallest setback, Greene explains.

The answer to this fear is to be more aggressive. Fear (particularly in this situation) is mostly an illusion based on the unknown. Because of this dreadful feeling, you'll conjure up scenarios that are unrealistic, but will feel more important because you're paying attention to them. People falsely believe that whatever they're paying attention to is automatically the most important thing and failure to control this cognitive bias will lead you down a dark road. The best way to compensate for this is to divert your attention elsewhere.

The 33 Strategies Of War cites the example of the famous Admiral Nelson:

> The moment he entered battle, he ratcheted up his aggressive impulses. Where

> other sea lords worried about casualties, the wind, changes in the enemy's formation, he concentrated on his plan. Before battle no one strategized or studied his opponent more thoroughly. (That knowledge helped Nelson to sense when the enemy was ready to crumble.) But once the engagement began, hesitation and carefulness were dropped.

4. The intelligence strategy

> The target of your strategies should be less the army you face than the mind of the man or woman who runs it.

Of all the strategies provided in the book, this one was the most insightful, and has an important application in your game. If there's one thing that stands out about myself it's that my ramble game is very good, but I often overpower the conversation, which doesn't let her invest enough in it. Not long before reading this, I read a modern classic on rhetoric, Verbal Judo, the central message of which was that the most important tool of verbal persuasion is the ability to empathize—to see through the eye of another, and to commune with that perspective. The two books gave me a new viewpoint on how to improve my day game.

The most important objective in the campaign, Greene says, is the opponent's mind. In warfare, if you can degrade and destroy the mind of your enemy, physical concerns become secondary. In seduction, the goal is the opposite: to commune with the mind of the object of your affections and get closer to a single-mindedness that an ideal relationship would have.

5. Always have an exit strategy

When beginning any relationship, it's imperative to have an endgame in sight. Is this a short term relationship, a long term one, or are there red flags flying all over the place telling you there should be none at all?

The warning of proceeding without an exit strategy is made clear:

> The worst way to end anything–a war, a conflict, a relationship–is slowly and painfully. The costs of such an ending run deep: loss of self-confidence, unconscious avoidance of conflict the next time around, the bitterness and animosity left breeding—it is all an absurd waste of time. Before entering any action, you must calculate in precise terms your exit strategy. How exactly will the engagement end, and where it will leave you? If the answers to those questions seem vague and full of speculation, if success seems all too alluring and failure somewhat dangerous, you are more than likely taking a gamble. Your emotions are leading you into a situation that could end up a quagmire.

There have been too many articles to count on this site on the dangers of choosing the wrong women to get involved with. In this age of mass hysteria where asking a woman out on a date can now be construed as "sexual misconduct," this strategy is especially important. The game is often about what you don't do. Always have an exit strategy with any interaction.

Having A Child Gives You A Reason To Fight

January 12, 2018 | by André du Pôle | Link | Original Link

We are in the midst of a gigantic crisis of identity. Every part of our particular identity has been reviled, torn apart, stolen from us. Instead we have a pseudo-humanism where we are invited to dissolve and a soy culture which makes any healthy man queasy. The past has been taken away and the official view of the future holds nothing good. Those in charge ignore us, dismiss our lives and needs, and ultimately do whatever they can to destroy us on every plane.

In such adverse conditions it is rather difficult to commit to anyone or anything. When you cannot identify with anyone or anything, when the land and people who were your extended home and family turned foreign, you become an atom. There is no national community or whatever. The luckiest still have a good family and long-time friends. The others are prey for organized groups and cunning exploiters.

To a millennial it is very easy to feel hopelessly alone. Your family is leftist and blue-pilled or the leftists dominate it and impose the same dictatorship at family events than the mainstream media. Boomers live in a bubble and keep steering the ship to its doom as long as they maintain their own comfort. Girls are narcissistic and range from cold to hostile. Female hypergamy goes unchecked. Companies are greedy and want you to work and consume at a near-slave wage. Parasites abound, everywhere. Thugs roam with impunity. The official culture tells you you're shit, if it feigns to speak about you at all. The official West is made of a clustering of evil crybullies who gloat about destroying the actual Western civilization, that is, us.

There are many ways to answer this puzzling, yet pressing set of circumstances. The manosphere has long advocated getting one's life back from the blue pill set of illusions

and growing the balls to succeed. Whether it is picking up girls, learning a trade, lifting, managing one's expenses or understanding what's really going on, the quest is always about reclaiming one's life. Milk the system or the pit if you can, but never remain dependent. Bulking on a budget is part of the path towards reclaiming ourselves.

Brad Pitt may be a steaming turd but Tyler Durden never gets old.

However, the red pill per se is not enough. Getting your life back makes you a sigma male, an individualist. Striving on this path brings personal successes, but deep down, you're still alone. Likewise, knowing the truth about the cultural fight and the elite does not solve much: to the contrary, comparing your smallness with the elite's might gives a rather depressing perspective.

> And I went to the angel and said, "Give me the small scroll." "Take it and eat it," he said. "It will make your stomach bitter, but in your mouth it will be sweet as honey." So I took the small scroll from the angel's hand and ate it; and it was sweet as honey in my mouth, but when I had eaten it, my stomach turned bitter. (Revelation, 10:9-10)

No identification mean no altruism, no solidarity—just savviness. Among the red-pilled, some manage to put themselves on the right path. They usually make friends and gain social experience along the way. Some, however, go from failure to failure, or they have been so traumatized by the Big Others' nefarious choices—whether it consists in being systematically passed out by girls and recruiters, attacked by non-whites, or feeling one's general disenfranchisement—they can't even get up and start. Post-traumatic growth can be hard to get, especially when the climate is like it has been tailored to disgust you again every day.

This cannot lead to fulfillment. Truth doesn't solve your problems. As Roosh mentioned recently, at this step, it is all too easy to slide from the red to the black pill. Then, at best, you join the system's forces cynically like one of these male feminists who practice actual

harassment while pointing a finger at other males, and at worst, you become the next Elliot Rodgers.

> The Black Pill is the least dialectical of the three. It leads from actual inferiority back to actual inferiority. It is nihilism, but nihilism made flesh calls forth absolute egoism, a sense of the self detached from wider contexts and responsibilities—it is this that makes it evil and murderous… The Black Piller chooses neither the palliatives of illusion nor the challenge of positive action. He stares into the abyss—passively because his actions will never be capable of changing it—and, as Nietzsche so pertinently observed, the abyss stares back. (Colin Liddell, "The Black Pill")

The change comes and can only come when you stop being a sigma. To a sigma everything and everyone is basically foreign, with at best a *conquered* identity restricted to the individual. Getting real friends, finding one's civilizational, spiritual, racial, historical roots, or starting a tribe all allow the disenfranchised sigma to expand healthily whom he is as to identify outwards again. Then, and only then, does the world matter again. You're not an atom who manages to rack up some notches or money or laughs before drowning in the unavoidable Kali Yuga tide, but part of a wider being who ought to survive and thrive.

Building a home, or a tribe, matters. It is even more so when your spouse is pregnant—and you know she didn't have sex with anyone else. Now I would not advocate with impregnating unreliable grrls. They may put all the burden of responsibility on you, cheat on you, or divorce-rape you so that you'd be forced to pay alimony while the bones of your bones has to cross the hell of step families at an early age. To a responsible man, finding a decent, trustworthy partner is absolutely crucial before any thinking of fathering takes place. Many men, especially those living in the West, might find easier to start a tribe with fellow aspiring patriarchs than a nuclear family.

If, however, you're lucky enough to find a suiting girl, and are ready to leave the PUA life behind, having children is the way to go. These small beings carry your genes. When they grow up, they are to become like you, because they embody the same glorious bloodline you did just before. Boomers may not be glorious parents, it doesn't matter, as long as they played their vessel role on the behalf of something but wider.

When you're alone, the future is something conceptual and dreamy. When you're in a tribe, it relates to how you and others are doing in local situations. When you have children, it becomes a real issue: you know the world must be yours again, not only out of justice, but so that there's a future at all. Children need a proper environment to grow and roam into. They also contribute to strengthen their parents' bonds, thus helping the family to project itself far into the future.

"Yes, I'm the future. Now let me take a nap."

Fighting for ourselves is fair. We have legitimate interests. Our feelings are right, based on truth and justice, not on an occult war for degeneracy. But when it comes to children, it is definitely fairer than anyone could spin. Building a fair, truthful, leftism-free world becomes a life issue. Our children ought to grow healthily, safe from degeneracy and certainly not being stolen, brainwashed or even raped. Defeating leftist degeneracy, making the world we live in traditional again becomes as important as finding food after a workout. How could we fear for something as trivial as the normies' judgments when our children's identity and dignity is at stake?

Children are also a perfect reason to openly confront the boomers, these egoist parasites who keep most of the wealth to themselves and devour it while compromising continuously with groups that kill us. These old cucks who failed to respect their own parents are now asking us, not only to "respect" them, but also to submit completely to

their cucked views as if we had no right to proper experience, consciousness, or free will.

Beforehand, confronting them was about truth, justice, and the future of our civilization. Now, it is about continuing life, about beating death—no less. Boomers do not hold the future of life and civilization between their hands. We do. Because we're having the children now. And these chirping, wide-eyed babies are much worthier of care and "respect" than the boomers' lies and will to keep living above their means.

If we are to be kings, at least in our homes, we are not to be depopulated at will. We have an absolute right to a future—a bright, dignified future, for those whose creations were appropriated by everyone else on Earth.

Just like the red pill or the first notch, having a child is a new beginning.

3 Ways To Become A More Masculine Leader

January 13, 2018 | by James Kennedy | Link | Original Link

In today's society, there is no longer much of a grey area regarding the gap between good and bad leaders. As a young military officer, this fact has been apparent since my enlistment, particularly in the armed forces, but it wasn't not until recently when I began undertaking an MBA program within a civilian university that I realized how critical the disparity between the two had become in most organizations and why the lack of discipline in men's lives today has caused such a shift of power from strong, alpha leaders to weak, beta managers delegating all important tasks to avoid making tough decisions.

In our first course regarding Leadership Theory, I was matched up with men and women from various industries, be they defense, agriculture, production, or entertainment. What I found as a common theme in their opinions regarding leadership was that the important piece was always to save face and take the path of least resistance in order to resolve conflicts as smoothly as possible, thus avoiding any potential collateral damage of any kind.

During these discussions, I wrongfully held my tongue, thinking of how the whole premise of leadership is to cut against the grain and push subordinates and followers to their limits in favour of achieving whatever goals you, they, and the organization have set.

1. Refine your emotional intelligence

Through readings of American organizational theorist Richard Daft's *The Leadership Experience*, the course textbook for this class, the concept of emotional intelligence was introduced, which is essentially a concept describing one's ability to recognize our own emotions and those of others, as well as how to use it in favour of progression in organizations. It was at this point that I began piecing together what was occurring in these men's live to cause them to be so cowardly faced with decisions deciding the fate of their and their organizations' futures.

Emotional intelligence is divided into four basic components: self-awareness, social awareness, self-management, and relationship management. This concept has been mentioned in many articles prior to this one and training the four components leads more wholesome leadership, but also to better game, more happiness and overall better control of one's life.

Emotional intelligence is developed easily at an individual level—it just takes actual awareness and will to do so. For social awareness, read the news more. Take in your surroundings for your particular community. This will then enable you to reach out and work on relationship management by getting out to community events, not to mention the higher quality women you'll meet who also want to share in quantitative social events other than drinking at clubs.

2. Learn to respond rather than react

It is without a doubt the element of **self-management** that is essential to effective leadership and what is currently beginning to lack in this generation of male leaders. Bending to the will of others simply to “stay the course” and “not rock the boat” is what is beginning to crumble the foundations of what was once a great society. It is therefore crucial we learn to respond rather than react when faced with any and all situations.

Where reacting is using one’s intuition and emotions to answer a situation, responding is using rationality and logic. Although many situations can be overcome by reaction, for example an ambush on a position, due to prior knowledge, practice and drive, complex situations generally require forethought and analysis which is only available by activating the part of the brain that uses logic and rationality. Self-management of one’s emotions through discipline may be the difference in making the decision that goes against one’s instinct but is safer and more prosperous in the long run.

To further my example of an ambush, it is instinct and tactical to fight through the ambush, particularly with a larger force, however in certain positions pursuing enemy forces may be part of a feint leading into an enemy kill-zone. Only through the use of rational analysis can one potentially determine that it is safer to cut losses and withdraw than push through the terrain. This can also be mirrored to the business realm where great investors are known for that “killer instinct” or knowing when to back off a stock. One must be able to decide based on rationality, not emotion, yet always remaining aware of the emotions in play.

Working on self-management is a little harder than other components, but can be done by simply taking a pause before making decisions and actually evaluating the options for the course of action you are about to take. At first, this will take a moment or two, but as you work on this, it will become second nature. Try using this approach for all decisions,

be they what you're going to have for a meal to where you're planning your next foreign expedition.

3. Instill discipline in your life

It is self-management through discipline by which the other components of emotional intelligence are driven. It is key to not only establish a routine in your life, but to stick to it. Great leaders are creatures of consistency and habit. If you want to know where to find the greatest military leaders I have met so far, then you need look no farther than the gym at 0600 hrs each morning.

They devote their lives to habit and what is right, and part of that, particularly in the military, is being physically fit which has been shown countless times to boost all other areas of life. There are countless articles out there (particularly on ROK) that can be the foundation for your new journey towards fitness. So start that today.

But discipline is more than just working out every day. It is a lifestyle you must adopt in all facets of your life. This means cutting toxic people out of your life for good, and not seeking their help when you're feeling lonely or the going gets tough. It means establishing a healthy, hearty routine into your life and following it, regardless of what others think. It means not answering the trolls on social media or getting that cheeseburger for dinner instead of cooking your own meals. Discipline is a simple concept to enact, but it is by far the hardest of all to develop and master.

Where to go from here

In conclusion, it is clear that to succeed moving forward as male leaders, emotional intelligence, responsiveness and discipline is key. We must return to the days of self-management and self-control that allowed our forefathers to create strong family units as well as lead our nations to great endeavors. It is this concept that we must continually

work on, day in and day out, to become not only better leaders, but also better men.

On your individual level, you must start small. Do it right now by picking up a newspaper or going to your local gym. But you must not let any more opportunities pass you by. The key to becoming a leader is to actually lead, and that starts with taking the initiative to do so.

How To Do The Human Flag

January 13, 2018 | by Larsen Halleck | Link | Original Link

The human flag is likely an exercise that you have seen in some pop culture creation, but can scarcely believe is an exercise that people actually do. Considering that the vast majority of this exercise's pop culture appearances are in superhero comics, action movies, and other fantastical forms of media, I wouldn't blame the average fitness enthusiast for assuming that this isn't an exercise that people can actually do. Indeed, I certainly thought when I was younger that this was a "fake exercise" that had somehow become a meme amongst the dyspeptic nerds that draw superhero comic books.

As it turns out, however, the human flag is, in fact, a real exercise that you can accomplish with enough time and effort.

Why Do It?

The human flag is a great method of training the entire upper body, from the hips to the arms and shoulders, and everything in between. It also gives some auxiliary work to the lower body and the muscles of the spine. Holding the body rigid against the force of gravity itself provides a tremendous workout for all muscles involved.

In addition to its practicality, it just looks cool and impressive. I guarantee that nobody else in your gym is doing the human flag in their workouts, and you'll get respect and admiration from both sexes. And why wouldn't you want that?

Last, and arguably best of all, this exercise costs you literally nothing to do—as long as you have some sort of vertical pole you can wrap your hands around, you can do the human flag. You do have a vertical pole near you, don't you?

The Two Types of Flag

As the heading states, there are two types of human flag: the clutch flag and the hang flag, arranged in order of increasing difficulty. The clutch flag, while by no means easy to master, is vastly easier than the hanging flag.

As such, this article will deal with the clutch flag, and a later article will deal with the hanging flag.

The Steps

Before we can actually start doing the clutch flag, we have to learn how to set it up by doing a clutch hang. To do this, approach your vertical pole and stand to its side. Extend your stronger arm straight out, and sort of wrap it around and curl it back over the pole, tucking the pole into the armpit. Simultaneously grasp the pole with your hand, making sure to point the thumb downwards

Then with the other hand, grasp the pole around hip or stomach level, making sure to keep your thumb up. This arm (the elbow more specifically) will act as support in the exercise, bolstering your body by jutting against the hip and making the clutch flag much easier than the hanging flag, in which only your arms and shoulder girdles support the body weight.

With your arms in the proper position, shift your body weight forward until your feet leave the ground. Do not twist your body or otherwise try to make it horizontal, just get off the ground and hold. This is the clutch hang.

As with most static holds I teach you, when you are capable of holding this for ten seconds, you can move on. Now you truly begin to incorporate the lower body. The tuck flag has you take the clutch position, then pull and tuck your knees as high as you can. Your body will likely be diagonal to the ground at this point—that is completely acceptable.

Then we will do the half tuck. Take the tuck position you did previously, and then extend one leg (typically the stronger leg) out and off the ground, while keeping the other leg tight and tucked. If you cannot do this, just extend the strong leg as far as you can, gradually building up inch by inch. Next, the fully extended diagonal flag starts with a

tuck flag and then extends both legs fully out and diagonal. Similarly to the other steps, if you can’t do this at first, extend the legs gradually.

After this, you begin holding the body horizontally in all subsequent steps. The first step of this series is the horizontal tuck. Take the clutch hold, and then twist and lift your body up and horizontal. Try to imagine bringing your hips up and in line to the strong arm.

From here, the steps are largely what you would expect based on the steps of the diagonal tuck exercise. The first step is to extend one leg and tuck the other leg, gradually extending it by inches if you can’t do it. Then, if need be, extend both legs halfway

And finally, once you can hold the preliminary steps for at least ten seconds, try to extend your legs fully. Personally, I find that if you tuck your legs and then extend your legs out quickly and forcibly, it’s easier than if you were to try to raise your legs up from a standing position, or extend them slowly. As usual, if you can’t do it, extend them as much as you can and slowly build up.

Conclusion

And with that, you have mastered the clutch flag. While tricky, it’s not nearly as difficult as you’d think, and it’s very impressive to the lay person. Plus, it provides a necessary prerequisite to the hanging flag which is a whole ‘nother, much more difficult beast, which perhaps we will deal with another time.

The Tale Of Samson And Delilah Shows How Even The Strongest Man Can Be Weak To Women

January 14, 2018 | by Joshua Rennenkampf | Link | Original Link

Even people who've never cracked open a Bible have heard of Samson—the Hebrew judge who performed superheroic deeds of strength in his short life during ancient times. Whether you were introduced to him via Hollywood or Sunday School, chances are you're not aware of the relevant lessons we can learn from his example. His life story, when the details aren't glossed over as usual, demonstrates the folly of many blue pill pitfalls warned about in the manosphere.

Like all the "heroes" documented in the Book of Judges, Samson was ordained by God to lead and deliver his people (the nation of Israel in general, and the tribe of Dan in particular) after the Israelites fell into the idolatry practiced by their enemies. Samson is one of the rare failures (like King Saul) who didn't himself chase after pagan gods, but his particular weakness had consequences just as tragic. It is a weakness shared by too many men alive today.

Samson's father, Manoah, might have had some idolatry issues, seeing as how he intended to sacrifice a burnt offering to a messenger delivering the message that Manoah's barren wife would bear a son. before realizing that it was the Angel of the Lord delivering the message. If Manoah was, indeed, spiritually wishy-washy, that may have played a part in how Samson was raised.

Our first clue as to parental failures comes in Judges 14:2 when Samson orders his parents to secure a wife for him. Arranged marriages were commonplace back then, but a

child dictating to his parents was not. In fact, under their law, a child who disrespected his parents could be put to death.

There is more than one inferrence we can make from this passage:

- Samson was most likely a spoiled brat. Many parents are too liberal in child-rearing when the child is exceptionally gifted—as was Samson.
- At the same time, Samson evidently had rejected what teaching his parents had passed down to him, since he demanded a woman from their pagan enemies for his wife.

His supplicating parents let him have his way, against their better judgment. And before the marriage was even consummated, it became clear that the woman Samson chose for a wife was more loyal to her countrymen than to her husband.

Her crocodile tears-on-demand coerced weak beta chump Samson to divulge the secret of his famous riddle to her. She wasted no time passing the answer on to the Phillistines, resulting in her husband losing a costly bet. After collecting what was needed to pay up, Samson proved what a hapless tool he already was by wanting to go through with the marriage to the backstabbing woman anyway. But alas, he had been cucked by his would-be father-in-law, who married her off to another man.

Samson had dodged a bullet by having what was sure to be a disastrous marriage preempted, but his thirsty beta-cuck pathos was just getting started.

His exploits against the Philistines were impressive. One episode you might not know about is when the Philistines tried to trap him by locking the gates when he visited a prostitute in their town. He tore the gates right out of the city wall to escape. But as clever and powerful as he was in striking against his enemies, that’s how idiotic and weak he was when dealing with the fairer sex.

In time, Samson found “the one” (or so he thought) to put on his pedestal, and went full retard. To describe him as “pussywhupped” by Delilah might be more literally accurate than we would guess before studying the text.

Sex was a deadly weapon in this vamp’s skillful hands. The Philistines contracted her for a promised fortune if she could discover the “secret of his strength,” and she knew what buttons to push. She nagged and coaxed and shit-tested as only a woman knows how do for him to reveal his secret.

At first he was at least savvy enough to give her bogus information. She used it anyway to trap or immobilize him, but completely failed to contain him. Delilah proved that she was attempting to betray him, over and over again, yet he kept going back for more!

One can’t help wondering if this infamous couple were playing bondage games. Maybe female domination was a big turn-on for Samson, but when he learned his life was truly in danger, survival instincts took over and he quit playing along. We know he wasn’t normally a stupid man thanks to other details in the story, but some men can be rendered worse than stupid when under the hold of a fetish. In fact, many of us in our blue pill days likely were rendered stupid by at least one female even without some sort of kinky obsession at work.

Delilah changed weapons, from sex to her emotions, and turned on the waterworks. Samson confessed his weakness. Once his Nazerite covenant was flagrantly violated, Samson’s god (the only one who had proven a trustworthy friend in his life despite Samson’s less-than-impeccable track record) abandoned him. He tried to escape Delilah’s bondage trap when the Philistines rushed in, but only had the strength of a normal man. They imprisoned him and gouged out his eyes.

Samson’s God came through for him one more time by answering his prayer and allowing him to die while exacting revenge, but aside from some amazing feats of strength, Samson’s life is a case study in wasted potential, squandered opportunity, piss-poor frame control, and the utter foolishness of letting your little head do the thinking for you.

James Franco’s Sexual Harassment Accuser Is An Attention-Seeker Who Makes “Jokes” About Raping Children

January 14, 2018 | by David G. Brown | Link | Original Link

One of James Franco’s sexual accusers, Violet Paley, has a history of claiming to be pregnant to get male attention, calling men “inferior,” discussing whether she wants to be raped by Bill Cosby or Donald Trump, and talking about “fucking young children” on camera. Nonetheless, *The Los Angeles Times* and *Time Magazine* have taken “her truth” as literal Gospel truth.

Paley blocked me and began deleting tweets after I pointed out her stated desire to ruin people’s lives.

> Wow, this accuser is so credible: https://t.co/lx4XaJpPZg
>
> — David Garrett Brown (@DissidentDavid) January 11, 2018

Here’s her pedophilia “joke”:

> Y'all this is the perv crazy bitch who is accusing James Franco □□ @VioletPaley and now trying to portrait herself as a poor victim □ #MeToo pic.twitter.com/LrPgT8Ntve
>
> — Katherine □(^ɜ^)-♡ (@BillMyDrug) January 10, 2018

Below you can find her totally unsurprising feelings about men:

> Men are inferior and I think it's about time they step aside and let us take over this shit show
>
> — Violet Paley (@VioletPaley) November 6, 2017

...and her charming career goals:

The next tweet about pretending to be pregnant to ensure male interest is reminiscent of the desperation of UVA rape hoaxer Jackie Coakley.

Despite her publicly recorded "joke" about sexually abusing young children and debating whether she would want to be raped by Cosby or Trump, she had the gall to hysterically accuse alt-right figure Richard Spencer of joking about rape:

Franco is merely the latest famous man to be amorphously and very unconvincingly accused of "sexual harassment," "sexual assault," and/or "rape." *The Los Angeles Times* journalistically serenaded five women seeking to savage his reputation, giving them laudatory coverage in one of the most confusing #MeToo pieces we have ever read here at ROK. *Time* followed suit when focusing almost exclusively on Violet Paley herself.

These Franco accusers are the most broken we have ever seen

Sarah Tither-Kaplan claims she had no agency and was forced to sign contracts to appear nude in two James Franco films, just like the McDonald's worker forced to flip burgers to pay their rent.

Paley has perhaps the most sociopathic antecedence of any named accuser—of any celebrity—so far. For a start, she seemingly has no problem with over-the-top revenge (if

meeting someone for the first time could ever constitute a basis for seeking revenge).

We are really not short of instances where Paley displays what an extreme attention-seeker she is.

She's also spoken about wanting to be the victim of "date rape."

> Honestly hoping someone roofied my drink
>
> — Violet Paley (@VioletPaley) November 9, 2016

A fellow accuser of James Franco, Sarah Tither-Kaplan (it's always a girl with a double-barreled surname!), is also engaged in farcical muckraking by saying the actor "sexually exploited" her after she ***voluntarily*** signed a contract to appear nude in film scenes. As she puts it, she was a struggling actress and wanted to eat, so she had no choice but to agree to the terms:

> Hey James Franco, nice #timesup pin at the #GoldenGlobes , remember a few weeks ago when you told me the full nudity you had me do in two of your movies for $100/day wasn't exploitative because I signed a contract to do it? Times up on that!
>
> — Sarah Tither-Kaplan (@sarahtk) January 8, 2018

I have previously warned about how unstable women are conflating their own sexual and professional ***choices*** with "rape." These turgid waters of frivolous allegations against men are showing no signs of receding.

The backlash has begun

Without discounting the penalties many innocent men have paid, increasing numbers of people are speaking out against the #MeToo witch-hunts. Women like Violet Paley and Sarah Tither-Kaplan are helping immensely.

In Macron's France of all places, for example, a hundred women decried the triggered female "activists" trying to ruin male reputations without any objective evidence or due process. Across the Atlantic, whereas accused actor Jeremy Piven's appearance with talk show host Stephen Colbert was canceled only weeks ago, Franco's this week was not.

Our social and political climate may not be anywhere close to good right now, but the public is gradually becoming numb to the litany of opportunistic, unsubstantiated sexual mudslinging attempts against men.

Why Men Should Focus On Spirituality For Self-Improvement

January 14, 2018 | by Frederick Barbarossa | Link | Original Link

The path to happiness and peace is paved with the scripts of thousands of lifestyle gurus who have developed their own way to get your life on track. Breathe like Wim Hof and you can climb Everest shirtless. Read Gorilla Mindset and unleash your inner alpha. Read a book a day and Tai Lopez will make you a billionaire overnight.

It’s not my intention to demean the methods within these works. Each contains certain truths and provides legitimate practices that can enhance one’s life. However, they ultimately do not satisfy what lies dormant in the souls of the beta males, the addicts, the unmotivated, and so on. Only through a genuine rebirth in religion can the disenfranchised members of our society find personal fulfillment.

I was raised in a casually Catholic home—the twice-a-year Catholic type. I went to a private Catholic school. I took over a decade of religion classes. I became a non-believer by the time I was a teenager, and assumed my internal debate on the issue was settled. I told my religious friends I still had an open-mind, and I meant it. As an atheist, though, I thought that barring divine intervention, nothing would alter my perception. I was ready to be knocked off my horse, so to speak, but wasn't expecting any miracles.

My mind would slowly be changed over a year and then drastically over a month. The gateway was Jordan Peterson's biblical lectures that revealed the apparent value of the Bible. Things accelerated once I read *Modern Man in Search of a Soul* by Carl Jung.

I must take a slight detour to illustrate my next point. Jung devotes a chapter to his differences with Freud. To summarize, Freud viewed the subconscious as a manifestation of man's darkest side, while Jung saw both light and dark. Within the light, he identified man's spiritual element that has existed as far back as his expressing it on cave walls. He observed that religion was a way of nourishing psychic health, especially during eruptions of chaos either on a personal level (e.g. divorce) or a societal level (e.g. war).

When I read this, I thought of my own friends who had serious religious commitments. Two protestant friends of mine, so sure in their faith, had never been drunk, never tried a drug, rarely swore (only to have a real effect), were unencumbered by cell phone addiction, had genuinely contagious joy, and had a real community of good people behind them. One came from a broken household, the other from a wealthy, nuclear family. I was impressed with their virtue, but told myself, “Yes, religion is good and necessary for many people. I would never try to strip someone of his or her faith. But of course, it is not necessary for ME.”

What finally convinced me to repent from my spiritual neglect was a meeting I had with an old friend. I had not seen him since my last year of high school, in which I remembered an unsure, struggling individual. A good person? Absolutely. At peace? Hardly. He was diagnosed with Crohn’s disease when he was seventeen, his parents divorced soon after, and tendonitis sidelined him from athletic activities (of which he had considerable talent). He began smoking weed, and the friends he adopted only promoted further delinquency.

A year later he began to take his faith seriously, and when I met him for dinner years later, his transformation was unmistakable. He exuded confidence and carried an unmistakable contentment. He told me his story, and it was then that the words of Carl Jung totally resonated.

What’s more, philosophy proves to be no substitute. For years up to that point, I had been a listener of Stefan Molyneux’s, who lays out a tidy code of *objective* ethics that ties up loose ends and provides a path toward a virtuous life. I had never read his book, but understood the basic premise was the golden rule, “Do unto others as you would have done unto you.”

The problem with following any code of ethics forwarded by any philosopher is they have no mechanism by which to compel someone to moral behavior. Is consuming alcohol going to trespass on someone’s property rights? No? Good. I won’t have to face the ugly truth of my alcoholism. In this way, Stefan’s *objective* ethics are not objective at all. Ethical codes are useful insofar as they actually bend human behavior. Otherwise, it is simply logic, which is intellectual dung without any means of application. Who actually approaches interactions with the golden rule at the forefront of their mind, anyway?

God’s code gives a proper framework for morality that rests in the spiritual element of man’s mind. It is only through occupation of one’s spiritual capacity that man is compelled to good behavior. In this way, God exists in a real, tangible sense. Forget who created the universe—it doesn’t really matter and we may never know. Forget the apparently unfathomable prospect of a divine creator—religion is not about having all the answers. It is about sustainable happiness and peace through prayer and sacrifice, not self-help books, possessions, or supplements.

Our toxic culture, so intent on saddling us with the burdens of degeneracy and degrading our most pure institutions, apparently has little affect on those who take their respective religion seriously. It is through Christianity's fruits I came to know God (Matthew 7:15-20), and once you take up the mantle of religious devotion, you will begin to see the fruits manifest within yourself, and then you will begin to love Him.

Don't know where to start? Mere Christianity, written by former non-believer C.S. Lewis, is a captivating introduction. I recommend attending traditional Catholic Mass, spoken entirely in Latin (besides the sermon), hosted by the uncucked, red-pilled branch of the Catholic Church "Society of Saint Pius X." Most importantly, get in touch with your spiritual friends, who will happily guide you through the process of awakening your latent spirit—an act of defiance in a godless world.

Frederick Barbarossa

Frederick Barbarossa did not die according to legend, but went into a prolonged slumber so that he could one day restore Germany to its former glory. Upon awakening, however, he has seen that his efforts cannot be reserved for Germany alone, and has set out to bring tradition and identity back to Western civilization.

5 Men Who Substantially Upgraded Their Women

January 15, 2018 | by David G. Brown | Link | Original Link

The sexual marketplace need not suck all the time. Plenty of men have laid out the path for you, often initially shacking up with the women they felt they deserved and then moving onto greener, hotter pastures. If you're in doubt, take a look at the following men who saw the light and found themselves a better-looking woman.

1. Nathan Lyon

An Australian cricketer, which means virtually none of you will know him, Lyon had had two children with his ex before moving onto a smokin' blonde he apparently remains with.

First this:

Now this:

For a man who was once regarded as the dorkiest guy in his team (and most likely still is), he’s done well for himself—finally.

2. Robert Rodriguez

Rodriguez, a filmmaker, is proof that you can start badly and finish up pretty good, even if rebounding. When he was just past 30, he made the mistake of marrying a woman who was already hitting 40.

He thankfully improved his lot with pre-mental Rose McGowan, a little bit before she went batshit crazy and hit the wall (or hit the wall and went batshit crazy, take your pick).

Rodriguez split with McGowan before her fall into madness and he can probably say that he was the last man to bed her in a bangable state. Hooray.

3. Jason Aldean

Aldean is not really a household name, which makes his upgrade all the better; he cannot rely on the megastar status of others. The country singer left his wife, who in many photos looks old enough to be his mother.

His current wife wins out by a full fifty miles:

Aldean is to be commended. Many men get much older before deciding to take the plunge and abandon a post-wall woman.

4. Henry Bolton

The current leader of the United Kingdom Independence Party (UKIP), Bolton realized that Eastern European women, despite being better overall than Anglo-Saxon/West European women, also have an expiry date.

He’s now with a 25-year-old model named Jo Marney:

We’ll see how this relationship pans out, but we can be sure that Bolton enjoys his sex life a lot more recently.

5. John Copsey

A conservative mayor in the UK, Copsey ended his marriage for a 19-year-old farm girl. Hilariously, his sexagenarian wife called him “nuts” for opting for a nubile girl over a post-

wall geriatric.

Whilst his new flame isn't a perfect 10, I'd still rather give her the keys to my city:

The solution to marital misery for a man is only one late teenage or 20-something woman away.

Have you got the courage to find someone better?

If your relationship with a woman honestly works, all power to you. For many men, however, things are not so rosy. In a number of cases, these guys will be much better off by cutting their losses and finding someone they not only think but know is better. Are you one of those men who might need to make a change? Think it over.

Support ROK By Joining The Roosh Boosters Club

January 15, 2018 | by Roosh Valizadeh | Link | Original Link

Before Paypal shut us down, many of you were monthly patrons. It has taken several months but I have finally found a platform that accepts those on the dissident right.

Without the support of readers such as yourself, I would not be able to have a career producing content for men. Unless people find enough value in what I do to make a donation or buy books and merchandise, there would be no Roosh V blog, Return Of Kings, Roosh V Forum, or YouTube channel (in addition to my email newsletters and occasional podcasts). If I don't give value to you, I know that I will not receive value back.

"Shut it down!"

In the past, I was more hesitant to ask for direct donations because I was earning a stronger income through book sales and Return Of Kings advertising, but liberals have been busy shutting me down since my lecture tour in 2015.

Return Of Kings has been banned from Disqus, Google Adsense, and every other banner ad network I've tried to use. I was given a lifetime ban from Paypal for political reasons, and Amazon allows hundreds of fake 1-star reviews on my books, greatly decreasing sales. Without asking you for donations, maintaining normal operations will become increasingly difficult, if not impossible.

Roosh Booster Club

If you have been receiving value from Return Of Kings or my work and would like to show your gratitude, I kindly ask that you join the **Roosh Boosters Club** and make a recurring monthly donation (or a one-time donation). I have set up three monthly tiers at $5, $10, and $20 where you'll receive some additional benefits as a show of thanks. Click here to see all three tiers. You will receive information about your tier benefits on the Friday after you sign up.

Of course I know you donate not for a handful of goodies but because you believe in what I'm doing and want to see me publish more content in the future. The most important guarantee I can make with your donation is that it will allow me to continue producing the work you value.

The Future Of ROK

If I gain $500 per month in donations, I plan on helping take ROK to its former glory by increasing the standard of articles that are published every day. The current promotion of paying for all guest writers has already led to positive benefits so I hope to make it a permanent feature, but this can't be done without your help.

If you are getting value from ROK or my work, click here to learn more about becoming a booster. Thank you!

Roosh Valizadeh
Daryush "Roosh" Valizadeh created ROK in October 2012. You can visit his blog at RooshV.com or follow him on Twitter and Facebook.

The Rapid Rise Of VRChat And The Ugandan Knuckles Tribe Meme

January 15, 2018 | by Papa Selo | Link | Original Link

Content creators in the video games and vlogging industries often dream up lofty ambitions for what their creations, characters and merchandise ought to achieve in popular culture. Sadly for them, it's terribly simple for a virtual legion of dork-barbarians to repurpose that vision and utterly destroy it.

VRChat, a massively multiplayer social world that is accessible on both PC and virtual reality devices, is the latest platform to witness this sort of mega-trolling, culminating in the emergence of a super-viral tribe of goofy-looking hedgehogs speaking in a Ugandan accent.

Unfortunately for developers everywhere, and perhaps for politicians as well, this will not be the last time that the world is overcome by the spontaneous emergence of a social revolution dominated by tens of thousands of extraordinary visceral online trolls.

Inspiration for the Ugandan Knuckles Tribe was first drawn from a YouTube video posted 10 months ago by a cartoon animator named Gregzilla, during which an irregular-shaped animated Knuckles (a character from the video game Sonic the Hedgehog) sings a strange parlor song from the 1920's. The meme began its slow albeit ultimately asymptotic ascent on September 15, 2017 when DeviantArtist tidiestflyer discharged a 3D model of Gregzilla's Knuckles in an avatar format compatible with VRChat.

It has now been only two weeks since hordes of trolls began to burst into the game with these low-quality Knuckles avatars in order to provoke other VRChat players into total online submission. The game has become nothing but a humorous shit show, and the population of Social Knuckles Warriors does not seem to be decaying at any reasonable rate. Moreover, the designer of the original 3D model now apparently regrets

he ever created it, lamenting that “VRchat has become a meme ground and I feel I have helped to dig [its] grave.”

The launch of Everquest in 1999 marked the beginning of the first massively multiplayer online role-playing games (MMORPGs). It took another 5 years for the industry to hit fever-pitch with the critically-acclaimed World of Warcraft, which saw 1.5 million paying subscribers in its first year. But it took another 8 years for the the internet’s first truly massively memorable troll in the form of Habbo Hotel’s “Pool’s Closed” meme, in which 4chan‘s /b/ (random) board began to spread rumors that some of the moderators on Habbo were abusing their powers to ban users who were using black avatars. Yet nineteen years in, almost nothing compares to the Ugandan Knuckles Tribe.

I managed to log onto VRChat today to see what all the buzz was about. I pulled out my Croatian banjo and very quickly captured an attentive audience by singing a traditional folk song that is popular in my ancestral village. My new entourage of Ugandan Knuckles apparently enjoyed the show, clucked in unison throughout, and requested several encores.

The experience was quite surreal and I found myself laughing uncontrollably for much of the my time online. I personally don’t play MMORPGs, but compared to my one feeble attempt at Second Life, I genuinely enjoyed my experience there. It was far less of a grind and much more of a genuine social experience than I had anticipated.

This seriously begs the question. How pervasive will this technology become, and how quickly? The promise of virtual reality has always been enormous, its ensuing popular explosion constantly touted as being just around the corner. But perhaps we really are only a *few* killer apps and global memes away.

If anything, now is the time to at least start thinking about the ways in which this new

technology will come to shape our culture, our businesses and even our dating lives. Freelance writers and web developers, be warned! A simple Skype call may no longer be sufficient to impress prospective clients. And what about online dating? What does Tinder look like in such a world, and how will you stand out from the inevitable droves of thirsty beta digi-men, waiting and ready at every opportunity to fawn over their favorite Instagram model's live 3D workout? Things to consider.

People in real life are starting to reminisce about, and experience FOMO, for events that took place in virtual reality. For many, the rise of the Ugandan Knuckles Tribe was the first time they wondered why they weren't online instead of somewhere exciting offline so that they could take selfies for their social media profiles. Really think about that for a moment.

Two years ago, a close friend of mine decided to attend a local gathering for ROK's International Meetup Day. Despite pleas from both the police and city councilors that "sensible" citizens keep their distance from the "misogynistic pro-rape group," he decided to go anyway, innocently thinking that nobody would care and that he would get to enjoy a beer with some fellow forum members.

Unfortunately, there happened to be a mole in the group. A crew of SJWs showed up in full camera gear, with spot lights and all, exposing him and the other men. A photo of him was captured and spread all over social media in my city. This is a true story.

Roberto was a typical, down-to-earth Italian guy who loved to work out, play soccer, and meet girls. For more than a year after that incident, he could barely leave his home. On a few occasions, for instance on a walk with his dog through the park, he we was certain that someone had recognized him and although they kept a safe distance, he was convinced that he was being intentionally followed. Whether it was irrational paranoia or hyper-vigilant caution, he had no longer any peace of mind and so eventually decided to relocate to another city.

While social media was definitely a massive and largely unexpected outgrowth of Web 2.0, I do not think that we are anywhere near prepared for what is coming in terms of the immersive virtual worlds of Web 3.0. There is something to say about the way VRChat combines intimate virtual space, 3D audio, and simple, congruent character animations in a way that none of its predecessors have done before it. Despite the fact that you do not require a head-mounted display and virtual reality device to access it (and I don't own one), I still feel more engaged in that space than in any MMORPG or online chat platform that I have experienced up until now.

What the Ugandan Knuckles Tribe ultimately shows us is that a loosely-organized collective of manic edge lords can turn a simple creed ("Da Wey") into a worldwide phenomenon, producing tens of millions of views on YouTube and thousands of highly-engaging memes in little over a week. This is quite different, not only in kind, but also in form compared to traditional trolling methods. Although I have no intention of riling up the horde, following this space will be an important part of regular online interaction in the coming year. I think it's worth paying attention.

While it is true that Twitter played a major role in the election of Donald Trump, conservatives in North America have had less impact spreading their message elsewhere online. It is therefore probably worth considering whether the memetic potency of Trump's campaign may have been a fluke; the call was quite close and the opposition will likely be better prepared next time around. If the #WomensMarch goes viral in virtual reality, how will conservatives respond?

In light of these new developments, I propose a very tenuous suggestion, that at the discretion of ROK leadership and readers, of course, perhaps the next INTERNATIONAL ROK MEETUP DAY should be held next month, on FEBRUARY 6, 2018, in VRChat. The first meetup was planned just one month prior to its intended date, and the international firestorm it generated was unparalleled, more so than even the influence of our eponymous, now famous Ugandan Knuckles Tribe.

There is a reason we sought to meet in person at the time, as opposed to merely continuing to foster our relationships on the forums as usual. The kind of camaraderie engendered in physical space is currently not entirely replicable in the digital world, even on YouTube live streams. "Caller?, caller?" Although VR is beginning to emulate social omnipresence much better, it may be prescient to note that the mainstream adoption of cryptocurrencies and the creation of decentralized, blockchain-based virtual spaces may possibly make physical meet ups totally redundant soon anyway.

Oxytocin is a chemical compound that evolved to increase trust and generosity between mammals. But our technological systems are constantly evolving ways to disintermediate the need for trust at all, over larger and larger geographical territories every few years. Uber and AirBnb were just the beginning. In a world where we can arm ourselves with memes and whatever else, purchased with cryptocurrencies that allow us to safely and securely distribute those goods to our closest allies wherever need may be, does it really matter at all what we look or smell like (no homo), or how far apart we might be living?

Years ago, I predicted the Rise of the Ratchets. Today, I am predicting the rise of the VR Sociopolitical Movement, which seems to be on course to grow quite rapidly in 2018. For trust me, my bruddas, VR is the De Way. In fact, the Red Pill is De Only Way. May we Spit on the False Feminist Queen of the SJW Devil Horde fo'eva more.
Chwwpppft. Chwwpppft. Chwwpppft. Come on and join me.

How Asian Guys Can Start Winning

January 15, 2018 | by Kevin Nguyen | Link | Original Link

The truth and reality is that a lot of people don't know much about Asian culture other than Chinese food, Jackie Chan and Bruce Lee; oh yeah, and K-pop. The allure of the average Asian guy doesn't quite scream fun, out-going, mysterious or dangerous. Most of them do exceptionally well in university and focus on their tight-knit family and careers, which doesn't quite make the average female say "Quick, Jimmy! Put your penis in my vagina!" It translates to "that's nice, Jimmy…"

That's totally fine for a man going down the traditional route and wants to start a family. But for the average Asian guy who wants to date more and be more attractive to the opposite sex, there are some things they need to change if they want to start winning. Here's what Asian men have to do if they want to go from zero to hero…

Learn About Your Heritage, Culture, And Country

This might seem like a curve ball, but if you were born in the U.S. (or any non-Asian country) and you're of Asian descent, either do your research on the interesting aspects of your family's heritage and culture or go visit that country. Bonus points if you stay for a long period of time.

Why is this important? Because most people from these Western countries have some culture, but it's not as interesting and as rich as yours. Knowing more about your culture only gives you the upper hand. It is so attractive when you meet someone who knows a great deal about their culture which *sets them apart* from bland, boring people with little to no knowledge of their own heritage.

What is it about your rich heritage that intrigues you? What is interesting? Knowing this is a step closer to higher self-esteem and self-confidence and it is a quality that makes a man interesting. It also makes you walk differently and talk differently when you know more about yourself and your roots.

Don’t Pander

It’s okay to go out and be open-minded, go on Reddit or just go out and talk to people and ask them what they like and are into. As much as I’d like to advise people to look deeply into their heritage and roots it’s also extremely rewarding to dive into other cultures around the world just to get a pulse on what people are talking about.

What this does is it gives you perspective; it helps you become more in tune with what other people around you are thinking so you can at least stay on the same page in terms of having thoughtful conversations.

People like it when you at least know how to speak their lingo, so when someone asks you if you’ve watched *Breaking Bad* or *Stranger Things,* you can at least talk about it and say you haven’t watched it but know a little bit about it.

Knowing the zeitgeist or what people are interested in doesn’t necessarily mean you have to become the other person. I’ve been a victim of this and I’ve seen it countless times where an Asian guy will completely become white-washed or become a nerd, or maybe even be so into the hip-hop community that he changes his thoughts and beliefs and panders to what is cool, especially if it isn’t something he truly believes in.

The goal is to always be yourself, and I know what you’re thinking: *“Kevin! I’ve been myself but it’s just not working!”* Relax. Slow and steady wins the race. If you think anime and Gundam toys are cool and love assembling toys while others might think you’re a loser, you’ve got to stick to what you love and believe in.

Never pander to what you think is cool and own yourself. *An Asian guy that loves to read books, watch films and plays ping pong and who truly loves these things is much more attractive than that same guy trying to be something he’s not,* such as spending time dressing up like a bad boy who is ripped and looks like Zac Efron in *Baywatch.*

A Tried And True Action Plan

You don’t have to be Asian to follow the below plan; this pretty much works for everyone:

1. Start implementing a *workout routine that involves weight-lifting* to build muscle and discipline. Do push-ups if you can and air squats if you don’t have equipment. Pull-ups are great if you have anywhere to do them.

2. Find ways to *dress better,* but not over-the-top. Have fun with this one: fashion is all about communicating to the world who you are inside. Make sure your wardrobe communicates positive things, such as intelligence, an easy-going nature, cleanliness, and fashionable. If you need some inspiration, go on Google, Instagram, or pick up some cool underground magazines. I find Japanese fashion magazines to be really helpful.

3. Take initiative to say hello first. Be the first to open the door for someone or to *introduce yourself to everyone, not only women.* Getting out your comfort zone and being friendly shows everyone else that you’re comfortable with yourself, that you’re having a good time and are an open person. This is very attractive.

4. *A good haircut* works for every man. Find a good barber and think about how you want to style your hair. Hair is a big deal and it shows the world how much you love yourself and who you are as a person. If you’re going for the skater/bedhead look, then have it messy. If you are a business guy or are smart and want to be presented as scholarly, then get a clean cut.

5. It is attractive when a guy loves himself and also has the humility to take compliments. (Overconfidence works wonders.)

You’re Going To Win, But Not Everything

So now you've accepted that you're the underdog, have learned more about your *origins and culture*, have a pulse on what everyone is talking about, and are cleaning up quite nicely (as in dressing nice and treating yourself well). Now what?

Newsflash: *the world doesn't owe you shit.* Women don't owe you their attention, and you can't expect to all of a sudden be the most handsome and attractive fella around and have thousands of babes lined up to get your autograph. This only increases your chances as it gets you more eyeballs. Just like you won't sell stocks and bonds to a baby or boxing gloves to an elderly person, *you've got to know your market, my friend.*

Not all Asian guys can be placed in one giant box. *There are so many different kinds of Asian guys,* such as ones that like boxing and going out to clubs and bars, ones that are more into traveling, gaming, soccer and cooking. So you've got to know your market and win in that market while having fun at the same time.

You're never going to know if you don't go out and at least try. I knew I hated clubs and bars at night when I couldn't have conversations with anyone through the loud and annoying music. I don't drink alcohol and everyone just seemed so distant to me.

I've done better at coffee shops and supermarkets where my *charm and talking skills* are useful and it shows off who I am as a person. But at the same time I don't do well in coffee shops uptown for some reason, as I find more success downtown.

You've got to keep looking and *trying new venues and places or even travel to different countries.* There is a place in this world, there is a spot somewhere that you can win in. You're delusional if you think you can buy a car, get some nice clothes and have every girl in the world on your dong.

Win By Not Winning

At last, I want to talk about getting out of the game entirely. You don't want to win this game so that other people can have better opinions of you, because *it's not your job to care about what other people think.* Are you attractive? Are you not attractive? This ends up being a useless thought because it stops you from playing your own game, the game you love, whether it be excelling in your career or continuing to do that thing you love.

It's the moment when you're in your zone, grinding and being confident in yourself that you become more attractive to people without even realizing it. Now, I know this sounds lovely and for the reader, there's still an underlying curiosity.

Yes, put in the hard work; go out and make relationships with people if its that important to you. Go out and have *beautiful, safe consensual sex with at least 20+ women.* The more sex you have, the more you realize it's not everything and that it wasn't what you expected. There is still a void that only truly loving yourself can fill.

This is the antidote, and by having more sex you realize that it's not that big of a deal and your interactions with women and the world will be totally different. You gradually end up not giving off a desperate vibe anymore and Women can sense that from 1,600 miles away. You become more confident and comfortable in your own skin. And that, my friends, is how an Asian guy can be more attractive and start winning, *just not at everything.*

Don’t Let Your Girlfriend Have Homosexual Friends

January 16, 2018 | by James Vögel | Link | Original Link

Throughout the years it has become clear to me that most people out there have very little regard or respect for your relationship and seek to actively sabotage your efforts to keep a steady household. The most common saboteur will be your girlfriend’s gay friend.

A personal example

I would like to give some personal anecdotes that can serve as an example for the general trends out there. The girl who I have a serious relationship with had a gay friend she would occasionally meet for coffee. Fair enough, nothing wrong with that.

One time, due to some random unimportant events, my plans changed and I decided (for logistical reasons) that I would join them for coffee as well. It seemed like a good idea since I had also never met her gay friend (although we did talk about him and he expressed a positive interest in meeting me).

Instead of being glad I showed an interest in getting to know him, he demanded that he first see my girlfriend alone before I joined them. I told my girlfriend this was crap and she told him we were not changing plans. Instead of reacting like a normal person, he took offense at this and started badmouthing about me behind my back. He thus in effect demanded that she have a quasi-relationship *with him* so that he could discuss his personal problems.

This event eventually lead her to cut all contact with him and she told me some of the debauchery he was into: gay-parties with plenty of butt-sex, drugs, AIDS scares, etc. Of course he retaliated by giving her some unsolicited 'advice' with regard to our relationship; advice that was of course ignored.

Undermining your relationship

So we have come to the point where homosexual drug-abusing degenerates who took thousands of penises up their butt think they can have a say in how your heterosexual relationship should go. Without blinking an eye, they will explain to your significant other that she should not lose herself in a relationship and that it is important for her to also have a life separated from her boyfriend as well.

While it might seem obvious that such a person is not to be listened to, it is not that simple. Persons such as that are everywhere and gay best friends are actively promoted in pop culture by other female friends (e.g. "He understands me so well!). And if you only

but hint at the fact that you disapprove of such person you will be labelled a bigot, insecure, jealous for no reason and so on.

Some people will shame you into thinking you are a possessive old-fashioned bigot who should learn to grow up. All the while, these gays have zero respect for you and your relationship. If their little special bond with one of their girls is in any way infringed upon by you, they will retaliate and try to undermine your relationship with their polygamous-homo-advice.

Is he really 'homosexual'?

I have also heard a story where one of these so called "gay" friends said to one of "his girls" that he occasionally watched heterosexual pornography. We, heterosexual guys, all know what this kind of speech signifies: sexualizing the conversation.

"Oh he is gay so it is okay, he's fine."

Wrong. If a homosexual person can enjoy heterosexual pornography and express this enjoyment to your girlfriend, you should seriously consider his true motives. Treat their meeting as any normal meeting with a normal guy and judge from there on out.

Never forget that a large portion of so-called homosexuals are also aroused by heterosexual love, but the world of heterosexuals is not as sexually accessible for them. While they might be close to girls all the time, sexually speaking they might be further away than some random beta loser. Most girls enjoy the company of gay men because they are sexually harmless, but that may not be the case because a hole is still a hole to many gays.

What about lesbian friends?

What about lesbian friends, you might ask? They can be categorized into two groups. First, you have the real ones: the short-haired butch types. They are extremely unlikely to have any form of close friendship with a feminine woman, which I am assuming most of

you prefer as a girlfriend.

The second type, on the other hand, you have to be extremely wary of. They are the so-called “bi-sexuals,” the “sexually curious” ones or whatever new orientation they make themselves up to be. They tend to be attractive. Whether they are truly attracted (in a loving way) to other women is doubtful, but they are foremost and undoubtedly attracted to male attention and if your girlfriend is anywhere near attractive, they will have no problem using her as a prop in their seduction.

They will entice your girlfriend to perform soft-core lesbian acts in public such as kissing and groping. These types of girls are oftentimes staying out late, drinking copious amounts of alcohol and having enormous amounts of sex.

I don’t think I have to explain what kind of influence they can have on your girlfriend. For these girls, monogamy is nonexistent and they shall openly lament to your girl how boring she has become by staying so long with one man. They are the ones poking her to go have one more drink or visit one more club. It’s not like you would mind them having fun, right? They really do not care about you at all and generally will be even less subtle about it than male gay friends. Perhaps they will even try to make you jealous by hinting that every girl is really “sexually curious.” No form of destabilisation is off-hands for these girls

What can you do?

What advice can I give with regard to this? Be extra cautious with whom your girlfriend is affiliated with if it concerns a “gay” friend. Know that they do not have you interest at heart and will actively seek to undermine the traditional future you have in mind for the two of you. Nonetheless, if your relationship is sound and you exhibit regular male-leading capacities, you should not be worried as much.

Be extra wary when your relationship is over a rough patch or you are removed from your significant other for some time (long distance relationships should be avoided). In such instances, you should be extremely cautious because a gay friend might be the emotional connection she has at that moment and the ideals they propagate are dubious and will undermine any regular monogamous relationship.

Famous French Actress Gets Attacked For Trying To Tell Women The Truth About Rape

January 16, 2018 | by Jean-Batave Poqueliche | Link | Original Link

One hundred French women lead by actress Catherine Deneuve have signed an open letter defending men's "freedom to pester" women, accusing the new wave of international feminists to cry rape "on a whim," following the Weinstein affair and the "tsunami" of sexual harassment allegations triggered by the #MeToo hashtag.

It quickly turned into an all-out verbal war between formerly beautiful women, used-up sluts, and frigid feminists.

The Two Sides Of The Story

The text trashes third wave feminism for being more focused on “witch hunts” of imaginary rapists and a thinly veiled “hatred of men” rather than the advancement of women in society, something that we are quite aware of at ROK. A “freedom to offend” always needs to be present, according to Deneuve.

The authors expressed themselves after legions of “rape stories” appeared on social networks when the hashtag “#BalanceTonPorc” (“Rat on your pig”) came to be, unloading a flow of sexual harassment accusations without any kind of proof.

We are probably the Internet platform that has written the most about the disastrous effect of false rape accusations, even if justice proves that the accused is innocent.

Feminists were particularly adamant about using the word “porc” (male pig) to refer to their real or imaginary sexual tormenters. It used to be reserved for extreme forms of sexual perversion, but lost its original meaning after liberal women hijacked it.

“Porc” does not simply refer to a pig, but specifically to a male one, only good for slaughter. This is the same slur violent communists and immigrant rioters use to insult the police. It carries a notion of seeing the opponent as an animal and a physical desire to murder the target.

Just like everyone who does not agree with liberals is a “racist,” everyone who does not bow down to feminist lunacy is a male pig whose primary purpose is to be slaughtered.

Catherine Deneuve, “The” French Dark Triad Woman

Deneuve was especially known for her notorious femme fatale film roles, using men's attention as a weapon, such as in the film *Belle de Jour.* We are talking about a woman that had generations of men in the palm of her hand. She did not just have the looks; she was perfectly aware of their power and knew how to use them.

As a dark triad woman, she only associated with dark triad alphas and high-profile mates, either world-class actors or business magnates. She is the archetype of the French predatory female, an endangered, almost extinct species nowadays.

Deneuve had it all and perfectly understood that she owed *everything* to her looks, the men she had access to, the male attention derived from it, and the roles and media coverage it gave her.

Cui Bono?

Even if she reached her peak in another era, Catherine Deneuve can't be classified as a conservative. She is pro-abortion, stands in support of illegal immigrants, and took part in the first wave of feminism. The female group which co-signed the letter with cannot really be accused of being "reactionary," "anti-feminist," or "conservative" either.

The group is mainly composed of feminist novelists and includs notoriously promiscuous woman and writer Catherine Millet, Jewish thinkers, and even B. Lahaie, a former porn star turned radio host.

Brigitte Lahaie. We'll deal with her in a minute.

Far from being a pillar of virtue, Catherine could nonetheless be genuine in her defense of men (which would be worthy of praise), but I make a point of never listening to what

women say; instead, I observe what they do.

She might be warning the new generation of women not to sink their own boats by attacking the permanent victimhood of modern feminists, showing them how they should be more realistic about the realities of the sexual marketplace and use the system in a clever manner instead of seeking to destroy it all.

That letter would translate to, “My fellow promiscuous women, don’t reject male attention. You love it, I loved it, everyone knows it. Use it to your advantage, instead.”

Artist’s depiction of Catherine Deneuve teaching modern women about the advantages of male attention.

Feminists: “Moderates Get The Bullet Too”

The reaction to Deneuve didn't take long, as Grave Robber in Chief Macron recently hired a dyke to create a law banning men from approaching women in the street, instead of focusing on the gang rape culture and sexual violence in the poorest immigrant neighbourhoods in Paris or Marseilles.

Another one of the letter's targets is Sweden and its migrant rape epidemic, with their government more focused on emasculating their last remaining local males and redefining consent. Alice Bah Kuhnke, anointed member of the Swedish Cultural Collapse Fifth Column, did not wait and publicly "laughed" at the letter.

Alice Bah Kuhnke

Many voices in Hollywood, including pedophile enablers, Weinstein accomplices, and

post-wall harlots like Asia Argento were also quick to paint Catherine Deneuve as a traitor to dah sistas' struggle:

> Catherine Deneuve and other French women tell the world how their interiorized misogyny has lobotomized them to the point of no return https://t.co/AuH0aZdnCq
>
> — Asia Argento (@AsiaArgento) January 9, 2018

One tiny step out of line and feminists eat their own. Deneuve was not the only one attacked. Brigitte Lahaie, a former porn star and now radio host whose work focuses on female sexuality and well-being and who also signed the letter, tried to justify her position and debate in a civil manner with rabid feminist Caroline de Haas on the matter.

Facing a hostile reception on the show, as the debate heated up, she stated that "women can reach orgasm during rape." While this is true and therapists would agree (sources: 1, 2, 3), feminists *really* do not like to hear it. Even the international lügenpresse modified her words and translated it as "women enjoy being raped."

The Twitter and social network lynching that followed pushed her to apologise, in tears, on live television.

The Women Behind #MeToo and #BalanceTonPorc

Sandra Muller created #BalanceTonPorc. The fact that she looks like a mystery meat version of Rosie O’Donnell will not surprise anyone among the red-pilled junta.

Tanara Burke created #MeToo

These pictures explain the origins of this madness. Overweight, lonely women beaten with the ugly stick or with nostrils so large they can use them to store walnuts for the winter invent issues that might grant them the attention men never gave them.

Caroline de Haas (the fat one) is the main agitator for #MeToo and #BalanceTonPorc in France and one of the most virulent critics of Deneuve, branding her "one of the pig's allies."

Here she is pictured with NVB, former Minister of Education, Muslim government infiltrator and fellow hideous short-haired woman. She is the leader of the governmental jihad against the evil patriarchy and supporting the introduction of Arabic as a second language in every French school.

Feminists and sharia enablers strangely get along well.

Si les femmes étaient logiques, ça se saurait

It is essentially a battle between former beautiful women who are ready to sacrifice to keep the attention and money flowing (no one accused Weinstein until the roles stopped coming), and ugly women inventing stalkers and rapists for themselves because they've

hardly ever felt the embrace of a man, let alone a desirable one.

We are facing a textbook example of the sour grapes phenomenon where washed up carousel riders with too much time on their hands and grossly unattractive women who were never given any attention try to take their revenge on the more fortunate, all out of sheer jealousy.

In their land of make believe, those ugly root vegetables compensate for absent masculine attention by another type of attention created by the “rape survivor card.” They call for the neutering and death of men so that attractive women feel their misery by being deprived of actual male attention. “If I am not happy, why should you be?”

Depression Is A Lie: Expose It By Asking These Questions

January 16, 2018 | by Sponsored Article | Link | Original Link

The following article is sponsored by Man's Guide To Well-Being.

Depression is a liar. It has no soul, no conscience. If depression was a person, it would be among the ranks of Bernie Madoff, Frank Abagnale, or Victor Lustig.

Depression will come knocking on your door dressed in a nice suit. It will try to sell you the concepts of self-pity, low self-worth, impatience, and low hope, among others. You must be prepared when depression does show up trying to sell you these lies. If you buy them, it will return day in and day out knowing that you put food on its table and gas in its tank. Depression's only job is to survive and, when you fall for its sales pitches, you are a means to that end.

One of your greatest defensive measures against this con-artist is asking questions. Ask enough and surely you will start to catch it lying out of its teeth. When you can separate the lies of depression from the truth of reality, you can begin to piece your life back together.

> *Then you will know the truth, and the truth will set you free – John 8:32*

Let's prepare for the days depression shows up at your door…

Depression Sales Package #1: Self Pity

Depression will approach you and do its best to convince you that your life sucks. If it successfully makes the sale, it gains a position of authority over your thoughts.

You've probably already bought the premium version of this sales package. When unboxed, it looks like a victim-mindset: "Poor me. I'll feel sorry for myself, continue my behavior, and wish problems away."

Buyer Beware. This isn't you.

This is depression telling your subconscious what to say. It then repackages it as if it was a thought of your own. From there, it nets you in a cycle of temptation and torment.

First, depression tempts you with pity and presents instant gratification as the best fix. Then come the side effects of self-pity induced instant gratification: weight gain, low energy, health problems, debt, etc. More things to feel pity over.

Just as the sun rises, this tormenting cycle continues unless noticed and acted upon.

Here are multiple sets of questions to break down the lies of self-pity. Each question will break it down like a Russian nesting doll, exposing its inner content.

First question set

- Do I contribute to the problems I don't want in my life?
- Has my inability to say no to instant gratification brought me down this road over the years?
- Would constructive daily disciplines improve my situation?
- Do I demonstrate any discipline or do I live strictly off of my moment by moment feelings?
- How long would discipline centered improvements take? Days? Weeks? A few short months?
- Do I have any goals or strategies to better my situation or am I floating aimlessly wishing for better?

Second question set

- Is my life really that bad?
- Do I have things other people around the world would envy?
- Have I delegated my happiness to material possessions?
- Do I depend on circumstances to be a certain way in order to be happy?
- What changes do I have to make today to set a better sail today?

(This article is an excerpt from Man's Guide to Well-Being: Take Control of Your Mood and Life.)

Depression Sales Package #2: Low Self-Worth

Depression wants to taint your self-perception. *It knows that the less you believe in yourself; the less confidence you have, the further away change is.*

This sales package hides an obvious fact: we were all born for great things. However, the low confidence depression sells us limits our efforts and it is our lowered efforts that destine us for failure. Then, our inevitable failure lowers our self-worth and self-confidence even more. Eventually, we stop trying new and better things completely.

Hopefully, you are starting to see why depression may as well be selling you heroin. It grasps your psychological reasoning and skews life results, *forcing you into a depression addiction.*

Here are multiple sets of questions to combat this. Each question will act as a full swing of a battering ram, destined to bust open the door of truth and free you faster than a 12-step program.

First question set

- When was the last time I tried something convinced and determined on success?
- Do I regularly sell myself on defeat before putting forth 110% of my effort?
- Does this pre-sold defeat cause me to abandon methods before even attempting them?
- Does my perception of myself align with what others think of me?
- What methods can I use to improve my self-worth and shut the door in the face of depression?

Second question set

- What events of the past have led to my low self-worth?
- Have I been holding on to them for too long? Have these events unknowingly latched on like a leech, coming everywhere with me?

- Is something that happened five years ago even a tiny bit relevant today?
- Does a specific someone in your life perpetuate this false identity? Is it okay to smack them? (joke).
- How easily can they be removed from your sphere of influence?
- What steps are you taking today so that you can cultivate your greatness moving forward?

To read sales packages three (Impatience)and four (Low Hope), check out Man's Guide to Well-Being. **If you are depressed, this book is your solution.**

London On The Tenth Day Of 2018

January 16, 2018 | by John Raleigh | Link | Original Link

I sat in front of the computer screen and searched for “white people art.” The results were awash with the faces of Africans, some clutching white women close, others staring back at me. I closed the screen and opened Twitter, where an article on a woman who smears her face with menstruation was posted by the Daily Telegraph. As I scrolled down, an article displaying five black women was followed with the copy “The new James Bond?” I switched to the Daily Mail and every story was on sexism, bullying, racism, or a blistering attack on male sexuality.

I closed the laptop and sat back in my chair. The iPhone winked at me as an email came through from a petition site, lighting up the screen. I gazed at it and was reminded of the horrors that lay within, the stultifying ‘refreshes’ on the Instagram feed, incessant selfies and photos of miserable people, matrix-mind people. A torrent of hyper-sexualised imagery await, created in the hope of making a quick quid, its purveyors held tort by strings unseen—those figures who wish to drain a man of his life force through chronic masturbation and false ideals. The same forces, I thought, that wish the radioactive phone to be kept next to the balls, location services on, with takeout food coming.

The room was quiet for all but eight seconds before I heard a siren wail in the cold distance of the London night. It was getting too much again. This was a feeling known every now and again, like sleep paralysis, no scream could be loud enough for others to hear it. I sat there and took it, knowing that freedom burned upon a pyre, worshipped in the indolence and passivity of the sleepwalking masses. I sat back and smoked a cigarette while I eyed up the pyramid earring left by the night’s blonde. Smoke hung

about the air and ash crackled and burned bright, as I was brought back to the light of that London Black Cab this morning.

I broke out of the rat race of Waterloo Station at 8.22am. The sky showed no signs of sunlight. I forced my way through a horde of suits with necks bent 30 degrees—at least, boring holes in their hands, sometimes two, as they caught up on Netflix or Candy Crush. I made for the taxi rank and thought to myself that I appeared to be the only one with a straight spine. A black one pulled up, it's yellow light shone amid the daily smog of a central London morning. The white chap in the front was a Londoner, an accent like my own and a face like my forefathers, a dying breed. I addressed him: "To the Old Bailey mate."

"OK mate," he said firmly.

"What d'ya make of Uber?"

The conversation developed, and sensing trust between the two of us, Graham, a 53 year old driver from South of the river, told me of Swedish businessmen excited about wrist-chips at their multinationals, to girls who carry no cash, to drunk men asking for cocaine.

"Yeah, and what's more, is ya don't have ya anonymity when ya get in them cars," He said.

"Go on," I followed.

"Everything is tracked, and ya can't jus' hail one down, it's all controlled, ya movements, everywhere you go and they pass on that data."

"So a cashless society is to be next, they say, I hear, and have experienced—one such city is Amsterdam."

I left it at that and tipped the chap, the last of the real Londoners. As I left, he told me

that Trump was fighting ‘it’. Glory be to Trump, I hoped, as I entered the court building.

Inside the labyrinth of rooms that is the Old Bailey, I made my way through search and staircase to court number six. I took a seat at the back and surveyed the room. This was the case of an Islamist who was being tried for possessing ‘extremist propaganda.’ As time ticked away in that room, I watched clip after clip of his ISIS propaganda, surveying the videos of ‘lions’ who served their God. Clad in black, with rifles and swords, the images showed scores of death cult enthusiasts, the likes of which the common man has not seen—until he watches somebodies daughter maimed by an Islamist at a market or blown to pieces at a concert.

The Old Bailey

As I took shorthand notes, I felt the absent weight of the phone in my pocket, for which I could be glad. I caught eye contact with the barrister’s assistant, a Latina looking thing of about 24 with big eyes and tits to match. It all made sense, I thought, if only for such fleeting moments. Times pulled away from the onslaught of digital castration, dumbing down, newspeak and anti-humour. The tentacle of the social justice warrior is long, but it cannot strangle the two million year old man. I snapped back into attention and was in my room again, staring into nothingness. I put a line through day ten and flicked the switch of the light.

4 Lies The Deep State Wants You To Believe

January 17, 2018 | by Beau Albrecht | Link | Original Link

People typically find the premises and practices of religions they don't believe in to be preposterous. However, their own faith is familiar; they understand the deeper meanings of (or can hand-wave) all the mummery. Hebrew hardtack, Popery's infallibility, Mohammedan ninja suits, Mormon magic underwear, and *anything* about Scientology—either it seems absurd, or it makes perfect sense, all according to one's own beliefs. The exceptions are atheists, who consider all religions different flavors of baloney.

It's like that with politics, too. Today's globalist regime has zero justification for rule, but its mythology is about as weird as anything dreamed up by L. Ron Hubbard's fertile imagination. Here are some examples.

1. The Russians hacked the election

Before the 2016 US Presidential election, the MSM was crowing about Hillary's certain victory. According to some talking heads, The Donald 's odds were merely 1%. Oops! Democrats were weeping, and the sour grapes became a fine whine. The Deep State crowd's champagne turned to vinegar; for the first time in decades, someone who wasn't an anointed proxy got nominated and elected.

So the next fallback was pooping in the punch bowl: attacking Trump's legitimacy by spreading a fairy tale about Russians hacking the election. There's no actual evidence beyond alphabet soup agencies speculating, "Well, that's just the sort of thing the Russkies would try!" Still, the MSM dished out this thin gruel, generating liberal outrage. Meanwhile, the Democrats aren't boasting much about their own campaign's dirty tricks!

In concept, paperless balloting actually is a potential risk. Could someone fudge the numbers behind the scenes? That would be pretty foul, but anyone with the right password can manipulate databases, and who would know? Further, it's an unnecessary gimmick. For over two centuries, the USA did without it. Liberals once sneered at these concerns as tinfoil hat stuff.

Most troubling, there are no more ballots that voters can check, or that election officials can tabulate in case of technical difficulties or disputed results. Easy solution: voting machines could include small printers, meanwhile storing results in memory. The technology exists now. The nation's cash registers process millions of transactions daily, updating servers instantaneously and then printing receipts.

What's unspoken: If they believe someone overseas can hack an election, *why aren't they trying to fix the problem?* The Democrats blustered about Russian tampering (despite zero evidence), so why aren't their Congressmen demanding safeguards—like what's described above—before Vladimir Putin "steals" the USA's 2020 election too?

2. The security state makes everyone safer

The Utah Data Center is designed to store exabytes of information and "is alleged to be able to process "all forms of communication, including the complete contents of private emails, cell phone calls, and Internet searches, as well as all types of personal data trails—parking receipts, travel itineraries, and bookstore purchases"

This tall tale is a big hit with the neoconservatives. During Bush the Younger's years, we got the War on Terror, more federal agencies, and two spit-in-your-eye wars. Obama campaigned promising to dismantle the security state, but did bupkiss about it for eight years. Instead, The Lightworker kicked a few more anthills during the Arab Spring. I certainly won't shed a tear for Libya's Gadhafi. However, Syria's Assad is probably the best asshole dictator that can be expected. In both cases, the end results made it easier for the Soros outfits to colonize Europe with "migrants".

Perhaps all that seemed like a good idea then. However, the implementation was horribly ineffective. *What did we get* for all the extra trillions spent on alphabet soup agencies and making the military-industrial complex wealthier? Further, domestic spying is pretty troubling. Although Americans are monitored more thoroughly than Soviet citizens were, terrorism is far from over despite all the security theater. Mass surveillance grotesquely violates the Fourth Amendment; court-issued warrants are needed for prying into just one citizen's life. However, legal mumbo jumbo works around that, and the unaccountable agencies are out of control.

What's unspoken: With a cost/benefit ratio as lousy as that, it's *time to rethink strategy*. As Benjamin Franklin put it:

> Those who would give up essential Liberty, to purchase a little temporary Safety, deserve neither Liberty nor Safety.

This watchword captured the spirit of the times, but today things are a little different. The ultimate image of security is a baby in a crib, wrapped in a blanket, sucking a pacifier,

and under Mommy's watchful gaze. That's fine for infants, but not free adult citizens.

3. The media is balanced and accurately informs the public

A free and independent mass media—dispassionately informing the public and telling both sides of the story—long has been lauded as a pillar of democracy. The press is free from government censorship, but how independent is the "Fourth Estate"? Thirty five years ago, 90% of the USA's media outlets were in the hands of fifty companies. Even then, they were generally concentrated in New York City (with similar ownership characteristics) and had a liberal bias, allowing for selective information blackouts.

Because of deregulation—*thanks, Congress!*—it's now merely six mega-conglomerates owning the TV networks, Hollyweird studios, newspapers, magazines (even comic books), radio stations—and also some ISPs. Of these, five have toxically leftist corporate cultures, but hide the full extent fairly effectively. That's why the news is bullshit and today's entertainment is pozzed-out with cultural Marxism. The other one has a neocon angle, representing the "controlled opposition" opinion.

Journalistic integrity, balance, and objectivity are as mythical lately as the Easter Bunny. Most presstitutes are little better than Social Justice Warriors. Some are even directly in cahoots with politicians. Because of their routine "advocacy journalism", important issues get a highly biased presentation, or are never discussed. The neocon news outlets have a longer leash, but they still won't touch many vital topics. The public's confidence in the MSM is falling steadily. *Even liberals* are catching on. That's bad news for the *Lügenpresse.*

What's unspoken: Corporate abuse of monopoly power to propagandize the public is little better than government censorship. To believe otherwise is the libertarian fallacy of

“something is bad only if the state does it to you.”

4. “Bomb the world, invite the world” will spread global peace and democracy

The security state myth has a deadly synergy with the diversity myth. This afflicts most Western countries. For example, several years back, the Germans were beginning to realize that you can’t have both freedom and mass immigration. Not long after, Angela Merkel exemplified the “double down on a failed strategy” shtick, becoming the worst German political figure since the Weimar Republic.

The nation-wrecking cycle goes:

- Invade a country that the neocons don’t like. If another spit-in-your-eye war is politically unpalatable, then destabilize it by giving lots of money and weapons to crazy militants who later will bite the hand that fed them.
- Let in millions of refugees displaced by the chaos, opportunists claiming to be, and other hard-luck cases, all against the public’s wishes. Whether they’ll fit into their host cultures, not consume welfare, prefer “liberal democracy” over theocracy, or are intelligent and peaceful—these are no concerns for the politicians, because they’re not serving the public.
- When problems inevitably happen from this imported underclass, give the security apparatus more money and expanded powers.
- Instead of using this power to control the unwanted pests colonizing their nations, crack down on critics of these population replacement policies. Team up with like-minded social media billionaires to squash dissent.
- Repeat.

What’s unspoken: The unassimilable migrants have a well-deserved reputation as troublemakers. However, the globalists who instigate this nonsense are worse pests and also deserve deportation. After several rounds of spreading democracy one bomb at a time, their good intentions are becoming questionable.

Conclusion

Atheists can mock religion incessantly without facing heresy charges. However, dissidents against the globalist regime and its strange beliefs can be censored or face retaliation. Still, pointing out the absurdity relentlessly is important. They can’t shut up everybody, once a critical mass of the public becomes aware. Then we can get the globalists and their toadies off the gravy train and start fixing the problems they’ve caused. Apathy is no solution; some people don’t follow politics, but politics follows everyone.

How To Meet Girls If You Don’t Have Any Friends

January 17, 2018 | by William Adams | Link | Original Link

As a man grows older, he will likely lose a significant number of friends and valuable acquaintances, naturally leading to smaller social circles.

While that is not entirely negative, since you won’t have that much in common with blue pill men and annoying females, and perhaps want to focus more on a few important people rather than sheer quantity, it is nevertheless the case that social circles may matter quite significantly for fun, business contacts, and dating opportunities.

A man who is 25 or more can counter eventual shortages with the help from what I regard as fleeting social circles. While such transient groups will likely evaporate as soon as they are dissolved by the surrounding circumstances that enabled them to come into existence in the first place, they are still appropriate for a variety of joyful ends and pastimes. In fact, some of them can create pretty long-lasting memories that transcend any time spent with boring betas or PC female friends.

Language groups

If we exclude online courses, official language studies are typically taught either at a university as a regular course or other educational institutes. I have realized that in at least certain parts of Europe, manifold universities or colleges offer free language courses, or rather “cafés” in the evening, which even make it possible to join if you’re a non-student.

Such language groups will likely include younger women and men that you can hang out with afterwards at bars, restaurants, or home parties. If you are only there for the

women, you could at least show up once or twice and see what such groups offer in that regard.

For example, at a university in Europe where I was studying Korean, there were plenty of young Korean and Swedish women at such a language group that was organized once every week. When I, as a single guy, realized that most of them unfortunately were dull or ugly I stopped going there, but still I exchanged contact information with a few 5s and 6s that I didn't sleep with but met again a couple of times in platonic and friendly contexts.

Evening courses

Another option is various kinds of courses that are taught in the evening, like cooking, dancing, or fighting.

Typically, cooking classes include more older people, dancing younger (if it's street or hip hop rather than salsa), and fighting more men, but each to his own goal and purpose. Meeting women could for some be considered a mere side effect, rather than the primary reason for going there.

[image]

University groups

If you have some form of link to a university or college, you could take advantage of fraternities, mini organizations, and work opportunities that are connected to student environments. It might seem a bit silly to be part of a literary group or work at a campus club or bar when you have passed 25, but if it helps you meet young women then that may be a wise choice.

When I was attending a university in Scandinavia, I acted as a DJ a couple of times and got plenty of contact with the opposite sex just by playing music. I have also heard a close friend saying that to be at the top of a student organization that throws dinners and parties can give you plenty of easy lays.

If you are a bit younger I would advice to seek out such environments and be involved for a limited period of time, but in some contexts a somewhat older male could be included as well.

Hostels

For the sole traveler it is of major importance to seek out hostels. Even if you are 30-40 and could pass as a younger type, you could occasionally do it without feeling more than slightly misplaced.

The benefits from hostels are that you could hit on girls who stay there, go out together in larger groups (which also enable you to cold approach girls outside the group), and meet male companions.

Such fleeting male groups will lead to a beneficial situation for everyone, since every guy gets social proof, which is often required when you go to bars and clubs. Girls will often think that you are a weirdo if you don’t have any friends nearby.

Further, it will likely be more fun to go out together. In 2016, four other guys and I threw a birthday party in my honor and served as wingmen to each other. I had met them only the day before.

Night clubs

For the more experienced and socially skilled guy, fleeting social circles could be formed inside clubs, which might be harder if you are completely alone but still very much possible. If you are part of a group you should try to stand out positively: act confident, look good, and make everyone around them have fun.

If you are alone you could try to cold approach a couple of girls until at least one is hooked, be vague when your main target asks you about where your friends are, and then join the new group for the rest of the evening. More people may be included as the evening proceeds.

One time I ended up being offered numerous drinks from guys who were after my target's sister and their female friends.

Fleeting social groups may be an important tool that could be used for a variety of reasons, but often with the purpose of meeting females. Such could be formed at universities, evening courses, hostels, or night clubs, to name a few examples.

Can The Millennial Generation Of Men Be Saved?

January 17, 2018 | by Joe Leone | Link | Original Link

It is one of the tenets of red pill truth that millennials and their descendants are a lost cause because they are weak and effeminate pansies who are hedonistic, self indulgent, and entitled. They have little respect for culture and tradition, and their thin-skinned cowardice is harming Western civilization.

Those of us who embrace our newly rediscovered masculinity can stand tall and proud. Our opinions may not be popular in the mainstream, but we believe in our hearts that we are right. We embrace stoicism and nobility. While Rome burns we don't fiddle, but write the music, at least for our own lives.

But does our sense of pride and resilience hide an uncomfortable truth that we have lost the ear of a generation of young men? The tradition of passing masculine rites to our young has disappeared amid the haze of single mother families, bad TV, and a ruthless propaganda campaign against male values.

Who is really to blame—the 21 year old soy boy bamboozled by teachers into believing he might actually be a girl, or his father for ever allowing it to happen? Is a young man really at fault for joining antifa when he has been conned into the myth of white privilege by a hysterical, race obsessed media? How did things ever get so bad that our own children hear the voice of degenerates like Kim Kardashian over their own parents.

The Child Is Father Of The Man

Recently, I did a spell of music teaching in a primary school (elementary for American readers), and it became abundantly clear why young people have such a distorted view of reality: they have terrible influences, both at school and home.

To readers of ROK, that's a very obvious point. The problem is that the hole goes deeper than you could imagine. It isn't as simple as teaching a young man game and sending him on his way. From the moment of birth through adolescence, a young man is subjected to a *non-stop barrage* of cultural manipulation that causes a damaged psyche, one that that is almost impossible to escape from.

Think of some of the social norms we take for granted. It would be unthinkable for a rational person to defecate in the street or to expose themselves in front of their parents. The perceptions of right and wrong are hammered into us, first from reasonable parenting, and then shaped by society's standards and expectations. They are unquestionable truths, and we know deep in our soul that they are "right."

But recently the lore and the unquestioned has become corrupted, not just in the demented rantings of the far left, but in the fabric of society. What was once purity of knowledge and decency, shaped over centuries, has been twisted into decadence which would have been unthinkable 40 years ago. The reasons for this are numerous, and there are plenty of good articles on ROK to explain them. What's important for our purpose is how this impacts young men.

As we know, modern school curriculums are fantasy first, reality second. Here are a few lies told to children everyday: women are as strong physically as men, white people cause third world poverty, there are 24 genders as opposed to two, masculinity is toxic, the patriarchy was a conspiracy to keep women downtrodden, and traditional nuclear families are old-fashioned.

Despite the above being merely arguable at best, it is presented as incontrovertible fact to many children who are not yet capable of questioning those in authority. The effect of this continual bombardment has led to many kids graduating high school with a complex of hatred, both for their ancestors and themselves.

Bringing It All Back Home

So what can be done? Have real men lost their positive influence on young people forever? The influence that men have on their relatives is becoming increasingly marginalised. Pressures of work and divorce, among other things, means less time is available for our sons, brothers, and nephews. The time you can spend together is even more precious, so make sure it isn't wasted.

Encourage children to question everything they hear in school and on television. Teach them the truth about women and game. And be unapologetic. Life isn't fair, and no amount of hand wringing is going to change that. Remove the mentality that life owes favours instead of the other way around. Avoid films that indulge in anti-male rhetoric, even if all their friends watch them. Persuade them to read good books by male authors who have experienced life, not a gender studies course. Cultivate good health and get into sports (just don't fall into the trap of worshiping the sport). Your children and family are your birth right, so make your influence felt.

The Truth Will Come Out

Modern life is toxic, but not for the reasons that feminist HR managers would have you believe. The scourge of political correctness has supplanted the logic that led Western civilization to such advancement over 2000 years. Even so, the truth has a strange way of liberating the mind.

At every opportunity, as long as you are not in a situation that could get you arrested or fired, uncover reality in stone cold bites. If you have an annoying blue pill co-worker who pedestalizes women and kisses their ass, reveal your best cocky jerkboy game in their

presence and show them the way. If a young feminist gets angry when you ask for men to help you move some heavy equipment, allow her to tag along, and then when she struggles to lift it, leave her to it. Make it your mission to pave the way with truth.

Now is not the time to abandon hope of saving young people from the liberal hellhole. Every man has the masculine instinct inside of him—it just needs to be brought out and stamped in. It's up to us to provide a future. Indeed, we are the only ones strong enough to do so.

Congratulations To The Man

January 17, 2018 | by Roosh Valizadeh | Link | Original Link

Congratulations to the man who has been persecuted by the powerful, for he has found the truth.

Congratulations to the man who has found the deepest love and then lost it, for he has learned that nothing is permanent.

Congratulations to the man who stays up at night wondering about the meaning of life, for he has achieved material comfort.

Congratulations to the man who can't get along with those in his generation, for he is able to think for himself.

Congratulations to the man who has held a dying person in his arms, for now he can live without delusion.

Congratulations to the man who got beat up in a fistfight, for he knows he is not made of glass.

Congratulations to the man who has thought of killing someone, for he is connected to his primal nature.

Congratulations to the man who was stabbed in the back by a friend, for he has learned to only count on himself.

Congratulations to the man who feels utterly alone in the world, for he is about to hear a knock on his door.

Congratulations to the man who has been publicly humiliated, for he can finally take off the actor's mask.

Congratulations to the man who hates the sight of a girl he just slept with, for he knows what love is not.

Congratulations to the man who traveled too far down the wrong road, for he is steps away from the righteous path.

Congratulations to the man who wishes he could live in another era, for he has enough hope to see tomorrow.

Congratulations to the man who has gone from rich to poor, for he has learned the physical world is not his to own.

And congratulations to the man who is standing on the hangman's gallows, for it won't be much longer for his pain to end.

3 Ways To Sleep With Women At Your Job

January 18, 2018 | by Michael St. Cavalae | Link | Original Link

The average white-collar man spends eight hours a day and five days a week slaving away in his office, department, or cube farm, and in-between the endless rows of soul-dead man-boys, he can find some young, lush, and nubile babes. Don't lie and claim you aren't checking them out.

Unfortunately, thanks to third-wave feminism, #MeToo, and a litany of manufactured "isms," your masculine instinct to ask your female co-worker on a date could easily become a career-ending move. In the Clown World that is the modern American corporation, these "isms" hold powerful sway in the HR departments that hold the keys to the kingdom. They are glorified shariah courts, and fat girls, feminists, and bluehairs are their mullahs. One wrong move? Off with your evil white Christian male head!

The future of Western jurisprudence.

So how can you bag and tag that hottie who always wears tight dresses to flaunt her assets? How can you chase these girls and fulfill your God-given duty to fornicate with beautiful women? Answer: you must make the girls chase *you.* Here's how…

1. Be Discrete

Worried about dipping your pen in the company ink? Putting men and women together in the same room for eight hours a day, five days a week makes the spark of attraction inevitable. While most companies have rules regarding employee relationships, they *generally* tolerate them, with most policies managing supervisor/non-supervisor affairs. You just need to be smart about your torrid office romance.

For starters, when talking to your beau, *never* use any form of communications that involves your company. For example, don't exchange love notes via your employee email addresses. Texting on your own phones? Go for it, but make sure you don't send any messages that would fail the Jumbotron test, and save everything just in case. How about lunch? How relaxed is your office? If it's chill, eat in the break room together. If not, go out. Keep your relationship on the down-low and no one will care.

2. Dress—And Act—Like Your Own Man

Before you charge out the gate like an average chump, take stock of yourself and what you have to offer. In particular, take a look at your wardrobe. Most 'men' in the office don't even dress in snappy attire, preferring badly-fitting slacks, poorly-chosen ties, and sneakers. *Sneakers!* With slacks! Even worse, in some companies, the dress code is so casual that shorts, flip-flops, and eating cereal at your desk are either the norm or quickly becoming it.

That's how my cube farm operates. As I started my *Matrix/*Neo-like awakening, I knew coming in one day wearing a three-piece suit was just too much, since I was a jeans guy. So how did I transform myself?

First, I took a look at who I was. I'm outdoorsy, I ride horses, and I like camping. That meant no more $30 hiking boots, worn-out jeans, or stupid T-shirts. Over time, I purchased nice cowboy boots, good Wrangler jeans that I never let get worn out, and nice classic Western snap shirts. But what really pulled it together? Crazy as it sounds, it was the nice, not-too-flashy belt buckles. No cowboy hat. Never go full in. Ever.

Over time, my wardrobe expanded: sports jackets that matched, a tan ball-cap with a flag, and so on. I am known by a lesbian informant in a female-heavy department as "the really handsome cowboy." I went from safe, cheap, slovenly, immature, and nondescript to masculine, matured, serious, and *noticed.*

Huh. Tough choice, ladies.

After dressing the part, you have to learn how to walk and talk the part. So much of the man-boy mentality intrudes into modern male life that most men even walk that way: short, nervous strides, or slow but sloppy strides, head down, looking at their cell phones. It's weak and cowardly and *that* is what you are projecting to these bouncy babes you dream of bagging.

You need to walk like a man. Good strides, purposeful, hands empty of cell-phones, arms swinging, head looking up, and comfortable. When people pass—the babes most especially—you briefly and *confidently* lock eyes and smirk. *Do not smile.* Smirk, say hello, and move on. Watch any Bruce Willis movie to learn how to smirk the right way.

Hi, I notice you. Barely. Carry on.

The trick to all of it is framing your mind. When you walk, you are not the man-boy who is busy thinking of insufferable man-boy Will Ferrell movie quotes. In your mind, you are the VP of the company going from point A to B. Your body will follow as you are now

projecting confident, mature, masculine, and comfortable energy.

Your cubicle *must* follow as well. Into movies, video games, and sportsball? Get rid of that garbage ASAP. Clean your cubicle. Take down your sportsball team pennant and those utterly ridiculous Funko Pops I see around. Remove your ironic and in-joke coffee mugs. And learn to dust! Your current cubicle projects a weak, cowardly, and sloppy little man-boy.

Put up one or two nicely-framed pictures. For example, I have a framed pic of me riding a horse and another of my squad in the Army about to board a helicopter. *Masculine.* Remake your cubicle as you have remade yourself: confident, comfortable, clean, and neat, but above all, *masculine.*

3. Engage In Short But Frequent Bursts Of Interaction

Now that you've made it this far, how do you interact with that crazy-hot redhead (or other girl you have your eye on)? Turn a corner and almost bump into her? Don't panic! Control your frame, lock eyes, smirk and say "excuse me." Then *you* turn away first and continue on. Never look back.

Standing in line for coffee or at the vending machine? Lock eyes, smirk, and confidently ask her, "what looks good to you today?" You are in control. Chit-chat, smirk, get your item, then a simple "bye" is sufficient.

Nice proposal you've got there, sir.

Taking part in a team-recognition event? Do the same: lock eyes, smirk, say hello, be confident, chit-chat, and leave. Never linger. After enough practice and interaction, the time will come when you and a group of co-workers will go to a bar after work. That is the time to linger, to really talk rather than chit-chat. But always stay in frame. And then the

phone number comes. But that’s for another time.

In short, make yourself worthy of being chased by women and set yourself apart from the rest of the males in your office. Realize that most of them are man-boys. Make yourself an island of maturity and masculinity in a sea of man-boys. Frame yourself confidently and interact with girls with confidence, and they will come.

Saudi Arabia Grants Citizenship To Female Robot That Is More Pleasing Than Most Human Women

January 18, 2018 | by William Adams | Link | Original Link

When the American political scientist Francis Fukuyama, primarily famous for his partly misguided "end of history" theory (the idea that free market capitalism and liberal democracy will dominate the entire world in the not too distant future), took his next step as an intellectual, he wrote *Our Posthuman Future: Consequences of the Biotechnology Revolution*.

One and a half decade later, and one of the least liberal-democratic countries on earth, Saudi Arabia, has made an eerie human-like robot, similar to one of the artificial creatures in last year's *Blade Runner 2049*, into a citizen of its Salafi-based kingdom.

Like its regional neighbor, the United Arab Emirates, Saudi Arabia mixes its Wahhabi-Islamic doctrine with lavish Western consumerism and technological fetishism. The Saudi oligarchs, with billions of dollar from oil revenues in their bank accounts, compete with the Chinese and Americans in a neverending dick-measuring futuristic sci-tech contest. Authoritarian regimes have the advantage that they don't need any kind of democratic approval from the public, unlike the US.

In this case, that implies that if Saudi royalties are not keen on shitting on Instawhores for the moment, they can just go on with the latest AI project, or steal the ideas from the West or China in that respect.

The humanoid robot Sophia was created by the Hong Kong-based Hanson Robotics, which has ties to AI developers, including Google's parent company Alphabet. Thus "she" may be regarded as much of a Western as a Chinese product.

Sophia made her introduction in 2015, at the South by Southwest conferences in Austin, Texas. Since then the feminine robot has made her deserve her name (Sophia = wisdom) in various TV-broadcasted interviews. Reporters and the audiences have been impressed by her sharp answers, and indeed she appears more intelligent than the average Western female, if that even say something these days.

What this might mean

If genetic engineering and other forms of complex systems science become too advanced, that would seriously challenge our ideas of what a human being is and what individual rights mean. Will they become obsolete? Or would the elites still draw a sharp line between real humans and mere human-akin phenomena? Will SJWs fight for robotic women vis-a-vis toxic masculine males? Will the robot be stoned if she does something that her Saudi masters have not approved of? Will Saudi men replace one of their wives with a slender femmachine? And if I were an Instagram celeb I would seriously consider to change career direction any time soon.

I don't have any definite answers to these questions for the time being, but it is a bit unexpected that Saudi Arabia of all rich countries have made this kind of move. Still it should be seen in the light of the recent promise made by Prince Mohammed bin Salman, who asserted that Saudi Arabia will become more modern and moderate and steer away from Wahhabism.

Perhaps giving women the right do drive, a change that will take effect in June 2018, was just a tiny step in an accelerating liberal direction, which implies that the economic power and all the toys that it grants the rich are always more important than obsolete cultural models. Making Sophia into a "citizen" is indeed a more peculiar such.

Instead of focusing on conflicts and polarization, the clash of civilizations theory that Samuel Huntington suggested back in 1996 dictates that we'll see a process of

homogenization. All of the world's regional powers are not necessarily friends, but they are often cooperating competitors more than enemies.

If Washington, Beijing, and Riyadh can benefit from advanced technology, that can simultaneously entertain themselves and hypnotize the masses in a high-tech future, they will less likely start a war with each other. Granting a citizenship to a robot might be a symbolic indicator of the route to such a future. A more dystopic development would be if the AI robots could actually start to out-smart the elites or be used in advanced technological warfare.

We live in interesting times, to paraphrase the ominous expression.

5 Crucial Facts Men In Their Forties Need To Know About Game

January 18, 2018 | by Troy Francis | Link | Original Link

The following article is sponsored by Troy Francis.

These days there is a plethora of advice about game and dating on the internet for men, but a great deal of it is written for and by guys in their twenties. This all good, and you can find some fantastic advice out there, but it doesn't always fully address the issues and concerns of men who are over the age of forty.

For there are a great many men who have come back to the dating market following a divorce or the breakdown of a relationship. In many such cases there are children involved. Meanwhile there are other guys who have remained single, having been unnerved by the high divorce rate and its potential consequences.

While the basic levers of attraction remain the same however old you are, it's simply not the case to pretend that pickup is exactly the same for a 40+ guy as it is for a kid in his twenties.

Here are five things that men in their forties need to know about game as they contemplate the new dating scene.

1. It's Okay To Step Outside The Matrix

The first thing that 40+ guys—especially those who have been married or in long-term relationships—have to realise is that stepping outside 'the matrix' of what society deems is correct is OK. You just have to develop a strategy to free yourself from groupthink and act like an individual rather than a part of the herd.

A great many younger guys have taken this on board, and now the digital nomad lifestyle, plus non-monogamous dating are common for millennials.

For older guys who were brought up with a more conventional outlook, you need to find a way to smash past the voices in your head, disregard those around you and live as you'd *really* like to live.

That includes not just how you live and work, but also who you date and the kinds of relationships you'd like to have with women.

Face it, not all of us are cut out to be one-women guys with 2.4 kids and a white picket fence. Increasingly, many men are recognising that they don't fit the mould and they are dying to break free.

The good news is that today you can have any lifestyle you want—the opportunities are endless—as long as you find ways to distance yourself from conventional thinking.

2. It's Fine To Still Approach Women – As Long As You Do It With Love

A lot of guys who are in their forties—and even younger—question whether it is still ‘ok’ for them to approach women. Game feels as though it is a younger man’s pastime.

And people are all too ready to try to shame men for continuing to have active sex lives by condemning a continued interest in women and approaching as somehow immature or shallow.

Of course this is a nonsense, since interpersonal relationships are among the most important things in our lives. And this doesn’t stop just because you were 39 yesterday and today you’re 40.

And since nearly all of the great art, literature, and music created by our species has had sex and love as its inspiration it is simply not in tune with human dynamics to brand these things as insignificant.

So yes, it is fine to still be approaching women when you are in your 40s—just as long as you do so with love, and you are coming from a positive place.

I don’t mean that in a hippyish, peace and love, bullshit kind of way. I mean that this is not a zero-sum game. You shouldn’t be going out and meeting girls with a view to ‘getting something from them’. No. This should be a win-win scenario where you bring your experience, maturity and intelligence to bear, and she enjoys spending time with you as much as you do with her.

3. If You Try To Look Young And You’re Uncalibrated You’ll Look Like A Dick

Yes, we all want eternal youth, and yes, society, advertising and the culture in general all tell us that in order to be successful with women you need to look like a 25 year-old Abercrombie model.

While it’s true that all of us, whatever our age, should make every effort to stay in shape and look as good as we can, if you overdo it there’s a real chance you’ll end up looking like a dad dressed up as Justin Bieber.

Not a good look.

What you need to do instead is to spend some time thinking about yourself—your likes and your dislikes, your influences and so on—and then work out how best to channel these visually into what you wear.

It may sound a little pretentious to put it like that but seriously, it’s time well spent, because once you’ve worked through this process you will find yourself wearing clothes far more authentic to you.

If you need help with this it’s well worth booking some time with a personal shopper who specialises in menswear.

4. Relating To Younger Women Is About Dropping Your Ego

A lot of 40+ guys on the dating scene end up meeting girls who are younger than they are. Or they aspire to, at least.

While there's nothing wrong with this, and the chemistry between a younger woman and a mature man can be electric, you have to face facts—she's younger than you and her interests and cultural reference points will differ from yours.

Because of this many guys will overcompensate and try to pretend that they are twenty years younger by dropping in references to bands they've hardly heard of and TV shows they've never watched. While it's good to keep your finger on the pulse of pop culture, you don't want to risk looking like a fool.

You also must avoid going to the other extreme and become patronising, giving her instructions on how she should live her life.

Instead, drop your ego and learn to relate to her as another human being. You need to tune into the commonalities between you and concentrate on those. When you learn to do this effectively then any kind of 'age gap' will melt away.

My ex-girlfriend was fifteen years younger than me and I am currently dating a girl who is seventeen years younger. In both cases, my age was (and is) a non-issue, since I relate on a on a much more fundamental plane than that.

You can learn to do the same thing.

5. The Player Lifestyle Has Its Downsides Too

There’s no point in pretending that the player lifestyle is all milk and honey and endless beautiful girls. It’s not—there are definite negatives. Every decision that we make has consequences and no path is without its challenges.

It’s important that men who are in the 40+ age group bear this in mind before they leap into what they imagine will be a carefree life of pleasurable dating and intimacy.

At the same time, it is important that we resist those shaming voices that would claim that guys who are single into their forties will end up as ‘lonely old men’. This is absolutely not the case—I talk to men of all ages, including those in their sixties and even seventies, who are still dating and having a great time.

Don’t let imaginary mental barriers prevent you from living life your own way.

My New Book ‘Still In The Game’ Will Teach You All These Lessons And More

So, you reached forty. Or maybe you haven't quite yet. But you'll get there soon enough. And when you do—whether that's now or in a couple of years' time—you'll need to know precisely what you need to do to get results with the girls you want to date.

Perhaps you've been married. Maybe you're divorced, or a split looks imminent. Maybe you have kids. Maybe the dating scene is a dim and distant memory to you. Or perhaps you've been playing the field for a while, but you'd benefit from the experience and insights of a player in his forties who regularly dates beautiful girls all over the world.

After all, when you were at university it was all so easy—you'd simply have a few drinks, go to the bar and meet a girl. These days there is Tinder and Bumble and Happn, not to mention all the social networks like Facebook, Instagram and Snap. Everything seems so complicated.

Plus as a guy in his forties you're still interested in the same kinds of girls you always were: hot young things with a bit of sass and feistiness. That picture of Emily Ratakowski in her bikini never fails to perk you up. And you don't see things changing any time soon.

But where will you meet the kinds of girls you like? And how will you make it so that you're attractive to them? And how will you relate to them? Most importantly, how will you get over the mental barriers that you will inevitably face as a 40+ guy out playing the field?

Still In The Game answers all these questions and more.

- Understand the challenges, issues and hidden traps that any player in his forties and beyond will face out in the field.
- Read Troy's own personal story, revealing the secret truths about how he came to avoid the regular path of marriage and remain a player into his forties.

- Learn exactly how you can break out of the ‘matrix’ of conventional thinking to free yourself up for a life of sexual and romantic variety.
- Go deep into the mindsets that you need to develop so that you are rock-solid in your confidence about meeting girls.
- Find out how to remain young without looking like a dick, and how best to relate to younger women.
- Discover the precise structure of game that Troy uses right now as a 40+ man to meet beautiful women.
- Consider relationships and the conflicts that they can bring, and how best you can negotiate these.
- Take a no-bull look at the downsides of the player lifestyle.
- Eradicate your fears about the endgame. Do I have to ask where all of this is going? Will I still have to be hitting on girls when I’m seventy? Or can I find huge excitement, happiness and contentment through the player lifestyle?

Let’s face it. There’s a ton of game advice out there but the vast majority of it is aimed at younger guys. And as ***Still In The Game*** makes clear, the principles of attraction are the same whatever your age. There are no silver bullets. But the main thing that holds guys in their 40s back from success is not so much game techniques as much as the mindsets that they hold.

If you can just make a few subtle tweaks to your mindset then you will immediately start to make huge leaps forward in your dating life. ***Still In The Game*** will teach you how.

Why Masculine Men Are Natural Environmentalists

January 18, 2018 | by Jared Trueheart | Link | Original Link

Environmentalism has gotten a bad rap the last few decades. People who care about the environment are usually labeled hippies or activists or feminine or—worst of all—government regulation-loving leftists. Those groups may well be environmentalists, and they surely give people who care about the environment a bad reputation. Despite the bad company, however, the most masculine men remain close to nature.

"But," some are already saying, "how can masculine men want to protect nature from harmful pollution? That would involve government regulations and those don't work." True, but it's also true that men haven't cared enough to enforce meaningful safeguards.

Then people who don't care about the environment will say, "Enforcing regulations would put restraints on the market, and we should leave the market free to operate. If people want to support the environment, they can do so with their dollars by choosing environment-friendly alternatives."

Of course, we don't have a free market in America (I know it hurts, but swallow this red pill already), so the idea of supporting something with your dollars is an elaborate charade created by the extremely wealthy, who push their agendas through the media. Voting with your dollars is a form of controlled opposition that is largely ineffectual.

When we let those who care to preserve nature be written off as hippies or feminine, we fall into a trap designed to emasculate us.

The Closer To Nature We Are, The More Masculine We Become

Imagine the prehistoric environment of our ancestors. Everything they used to live was

taken directly from nature by their own hands. Tools were relatively simple, requiring masculine strength and innovation to put them to good use. There was danger all around from animals, the weather, and neighboring tribes. Men had to be courageous and resourceful to protect their people.

For the sake of brevity, we'll skip forward to when we started living in suburbs. We weren't forced to interact with nature much then. We also weren't required to be as strong or brave. How often do grown men in middle-class suburbs have to physically fight to protect someone?

Then came urbanization. We were further removed from nature. And while you might have to be crafty to care for yourself in the city—or strong to protect yourself from criminals—for the most part men weren't needed to be strong in the city.

Then the Internet happened. Long story short, we got to a point where software designers can spend all their time in an office or studio apartment and never have to be strong, courageous, or resourceful. Thanks to the further development of social media and sex robots, they don't even have to interact with others.

The closer we are to nature, the more it forces us to be masculine. You can't be weak, afraid, or dimwitted in a natural environment. You will die.

How long do you think this guy would last in a forest?

You want to survive a cold winter? Better know how to chop down some trees and build a house. Who in Silicon Valley has ever had to do either of these?

Simulating Natural Pressures

The most masculine activities we perform now act only as simulations to the real pressures we would encounter if we lived closer to nature. Do you work out? Life in a harsh natural environment would require you to strain your muscles all your life. You'd never have to search for weights to lift or tires to flip. Nature makes you strong, or you die.

Do you do combat sports? What are the chances you're ever going to have to defend yourself with hand-to-hand combat? Our ancestors had to be strong and brave and know how to fight to protect their people.

Do you build anything at home? Why? There are very few things you can't buy. If you lived closer to nature, you'd be building things because you need them to survive and there isn't any alternative.

Do you diet? If you lived closer to nature, you would have to physically earn your food, hopefully eating as many calories as you burned, using every gram of protein to rebuild your strained muscles.

Hadza men wake up everyday and track prey. Now that's a workout.

Masculine activities today allow us to live the convenient post-industrial life with some (only some) of the benefits of living close to nature. But these only simulate natural pressures and are therefore fleeting once we get tired of doing them.

Environmental Cynicism

Our bodies just don't flourish in the 21st century post-industrial world. Americans are so fat because our bodies got good at storing fat when we had lots of food so we wouldn't starve when food was scarce.

Every generation, men's testosterone levels go down as their consumption of plastic goes up. That's not the sole cause of the phenomena. Or is it? Nobody has figured that out conclusively. But it certainly isn't good for your testosterone.

Yet, when people try to stop microplastics from hurting us, look at how the media responds. This headline from *Breitbart* is very passive-aggressive.

ENVIRONMENTAL SCIENTISTS CALL FOR WORLDWIDE GLITTER BAN TO SAVE EARTH

SHARE 3656 EMAIL SHARE TWEET

Attention, tools of Breitbart: it’s to save us, not Earth.

Stop Being A Useful Idiot

The biggest mistake made in the fight to preserve nature is the global warming argument. Predictions from climate scientists have only made it worse. There are far too many variables on planet Earth to predict how greenhouse gases will affect the world. What we do know is that it’s bad for us.

And that’s the point. Pollution is bad. Glitter and microplastics make their way into the food chain, eventually leading to our consumption of plastics. It’s bad for us. Smog and carbon monoxide and CO2 emissions are bad for us. Why do you think Chinese people are trying to not breathe this Beijing smog?

Who said there’s something wrong with CO2 emissions?

The second we try to clean up our world, the wealthy elite go to work. They say the cost of cleaning up their operations would put people out of work, even though the costs could just as easily come out of their bonuses. The argument becomes black and white if you fall in to that trap. Do you want to put Americans out of work because of “global warming?”

If you answered that question, it’s time to realize you’re being used.

Think America has a spiritual problem? I do. And there’s no cure for this that doesn’t involve putting down your device, getting out of the city, and leading a simpler life closer to nature.

Men were meant to live close to nature. For that reason alone, we should want to protect it.

Women Don’t Care About Your Professional Degree

January 19, 2018 | by Archer Holmes | Link | Original Link

Think for a second back to when you were younger and met someone who was a doctor, attorney, or banker. Unless it was someone in your immediate family, you were probably impressed, a little in awe, perhaps even inspired. As you grew, maybe you carried this respect over into a belief that, if you worked ‘hard’ enough to become a member of one of those high skill professions, everything else would fall in line.

Fast forward a little further, perhaps during an exam prep all-nighter in your first year of law school, the third in four nights, and you may have used your perceptions of the increased attractiveness a degree would hold with women as inspiration to push through. I know I often did, as did many of my friends.

At some point during the first semester of law school, most of us realized that casually dropping the fact that we were 'in law school' during the middle of chatting up a girl got us nowhere fast, often even backtracking any game progress that had been made up to that point. That became logical, as they knew "I'm in school" translates to "I'm nearly broke right now, monetarily and temporally."

So the mantra became "just wait until we are attorneys." I faced the harsh reality that the opposite sex could give two-fucks about your professional success unless you have your *entire* frame together a bit early, because my girlfriend broke up with me after an 8-year relationship within a week of when I graduated law school. After the day of shock, I started trying to look at it logically.

I could not move past the fact that she had stuck with me, begged to stay in fact, while I was a borderline burnout in college, but now chose to cut me off. I thought my potential earning capacity, displayed intelligence, and all those logical markers we often use to gauge our own self-worth mattered to her.

Granted, this was all prior to discovering the manosphere, Return of Kings, reading the Rational Male, and so on. Amidst studying for the bar and coping with being single for the first time in forever, I found solace with this community, a way out and a path to self improvement. But I had other friends who weren't complete strangers to the red pill and still intangibly linked their attainment of professional status with an inevitable flow of interested women.

I've had this conversation with some of them, but weekend after weekend, inevitably, they still name drop the prestigious law firm they work out, or how they spent the week prepping for a deposition. They appear surprised when the girl they are chatting up starts glancing across the room, disinterested.

I've abandoned that tactic altogether. In fact I've had far more success coaxing girls into

talking about their thoughts on crypto than anyone I've known has had slyly bragging about their 'accomplishments.' I've even made it a personal challenge to see how far I can get with each girl before they find out what I actually do.

The success of this tactic boils down to three factors, in my opinion:

1. Mystery

For the most part, you emerge from the trials of attaining a professional degree a smarter, more impressive individual. I've noticed it in all my peers. Women do not miss this. If you explain your 'intelligence' away too quickly, the mystery disappears for them. In fact, it likely seems less organic to them, becoming no longer associated with superior genes but more related to a good work ethic. They start seeing you as boring and less mysterious with less sex appeal.

2. Over-Projection

While you may absolutely love operating on patients in 18-hour shifts and reading

anatomy books in your spare time, that is boring to her at 11:30 pm on a Friday. Even if interesting, it likely isn't sexy.

She knows what a doctor does, and maybe has slept with or dated one in the past. Even if you have no intention of pivoting out of your professional career at a later point in life, it is beneficial to project that you are much more than your career, it is a temporary existence and is the least impressive or interesting thing about you. By holding out as long as possible in discussing it, you are building out her image of you, keeping it from being artificially narrowed by other professionals she has known in the past.

3. Frame

This is critical, as it always is. No matter how sly or casual you may think you are at dropping the fact that you are a high-riser with Goldman, she will notice, even if just subconsciously. It stands out as an attempt to qualify yourself to her, to prove your own worth, and reeks of insecurity. There are literally hundreds of thousand of women frothing for the opportunity to settle down with you, a high-earning professional in the Western world. Even if you don't believe that, make her think you do.

Many areas of the red pill community have handled the phenomenon of 'illogical attraction' in greater depth than this article is capable of. Rollo Tomassi has mentioned multiple times that his most prolific period of game was when he was jamming with a band and living in a shithole apartment. This doesn't mean that your best days of wheeling are behind you, far from it. It just means that you have to maintain that edge you once had, or recapture it if you feel it's lost. Don't project yourself to her as a bland, suitcase-carrier, because unless she's in deep debt, the amount of zeros in your bank account isn't going to matter the first night.

5 Tips To Develop A Killer Mindset For Your Gym Workouts

January 19, 2018 | by John Augustine | Link | Original Link

As an avid gym enthusiast and observer of human nature I can't help but see that most people are not putting in their full effort at the gym. It's hard to not notice that most people are not training hard and are stuck in a sad world without gains. Thus I have taken it upon myself to provide for your benefit 15 tips on how to sharpen the mental edge and kill it working out.

1. Pump yourself up before going

You're not going to your 9 to 5 wage slave paper pushing job here buddy. This is the gym! And what you do and don't do inside this building actually matters. So you better put down that Starbucks frappachino pumpkin spice mocha latte and cranberry scone and come into this house with the right attitude. You slave all day and get an hour or two to work on yourself so you better show up here ready to put in the work. I want you to show up to the gym like a hungry dog ready to eat weights and defeacate results. If that isn't your attitude there is a croquet club up the road that is looking for another soft turd of effeminacy to join.

The gym is the best part of your day, it's the part of the day where nobody can give you crap, where you can do things with your body that most men can only dream of. It's that time of day which empirically disproves feminism, where you can make women be in awe

of the power your body possess. It’s that time of day where you put in so much manly work that you literally leave the building feeling high. If that doesn’t get you pumped up then you’ve been shopping in the soy section of the supermarket. You need to show up with that juice for attitude because what you take into the gym you take out of it.

Embrace your inner savage!

2. Go out of your way to be nice to the staff

People who work at the gym have a pretty boring job, they are either there to fold towels and scan cards or to spot people. Be nice to these people and chat them up every now and then. Do this not only because it is a good thing to do but also because the gym is your home and you want to be walking into a place everyday where people are happy to see and talk to you. Trust me it will make your whole gym experience better and also its a good way to meet girls as a lot of the trainers and front desk staff can be quite attractive.

You want the hot girl at the front desk to be happy to see you right?

3. Have fun

If you are like most corporate wage slaves, your day is already boring enough, so why make your workout boring as well? Be spontaneous, do things that challenge you, and always throw in something that is different.

Get a good pair of headphones and put on your music. Sometimes in between sets if my music hits it, I'll bust out a dance move. Who cares? People sign up and pay money at the gym to go to lame dance classes with crappy music and boring routines. I'm having fun lifting weights and getting good at dancing at the same time.

Even better, most people who go to a club need to get drunk and still can't muster up the courage to go out and dance. Why should anyone care what those people think? The point isn't dancing though, the point is the gym is *your* time so make your time enjoyable and you will like being at the gym and your results will go up.

4. Think: Always be Gaining

Heavy squats: another way to have fun!

Don't be afraid of small increments. Too many people feel they need to advance in

weight way to quickly. This can lead to a lot of plateaus. It’s important to realize that weight training is a long term process.

It’s easy to feel that you can always have the same rate of growth as when you first started lifting. However, as your body gets used to weights you will experience diminishing returns. So if you get caught up in thinking that you need to be jumping up in weight by throwing on an extra set of 10’s to your bench every other week, your going to quickly hit a wall.

Go for small increments of weight instead even if it means putting on 2.5 or even 1 pound weights onto your bench. It’s still more weight than you were lifting before and in a years time it will add up to really significant gains. For instance, adding 2.5 lbs plates every other week means over 100 lbs of gain on your bench in a year. Most people would kill for that!

Be happy it’s still half a pound more than you lifted last time

5. Feel and chase the pump

Your muscles should feel like blood balloons at the end of a good workout. This is called “the pump”. It doesn’t matter what you’re working—you need to feel this way at the end of your workout.

What it means is that you’ve worked your muscles hard enough to generate lactic acid. Essentially you’ve challenged your body and pushed it to a level where it knows it will have to come back stronger in order to deal with the stress again. This is how you get gains.

If you don’t feel the pump, or have never felt it, then you need to change your routine up. A pretty good way to get a pump is to drop the weight and do timed sets. Take an Olympic bar and do bicep curls for one minute straight. It doesn’t matter how many reps you get, for one minute do nothing except curl that bar. You will feel the pump in your arms.

Conclusion

Your attitude directly influences the quality of your training perhaps more than any other factor. You wouldn’t show up to a job interview with a pushover attitude would you? Would you ask that hot girl in yoga pants one size too tight out with half asked wimpy game? So bring your A-game to the gym because jobs and women come and go, but your body stays with you your whole life.

Life Has Thrown Me Down, Up, And Then Down Again

January 19, 2018 | by Chris Gibson | Link | Original Link

One of the things I can be completely certain about is how unpredictable the road ahead can be. You can make plans, prepare, and have certain expectations and ambitions, but your destiny ends up proving all your predictions to be way off. My path is one filled with contrasts. It has brought me up through high class society and then down to sleeping on cardboard in the dirtiest of slums.

I was born in Norway 34 years ago to a Norwegian mother (nurse) and a Venezuelan father (doctor). My dad never liked Norway, its weather, and its reserved people, so we soon moved to Caracas, Venezuela. We lived in an upper class neighborhood. I attended the best schools money could buy. We were members of the most exclusive country club and mingled with Venezuelan aristocrats. Then my parents had a pretty nasty divorce, the kind where they never wanted to speak to each other again.

A couple of years after the divorce, my mother got an unwanted pregnancy at a point my father wanted his share of the apartment we lived in. My mom was in a pretty tight spot. She confabulated a way for us to escape the country. All of a sudden she tells me we're traveling to Norway.

The journey started through a clandestine, shady one-story vessel that transported us from the Venezuelan coast to Trinidad & Tobago. It had to be that way since my dad had set a legal prohibition for his children to leave the country. I was ten years old at the time and I remember all of us got scabies from the boat.

I was initially thrilled with the freedom I had in Norway. It was safe for me to play around freely on the block and walk alone to school, but economically it was a drastic change to have three kids with a single mother on government support.

My dad was devastated and didn't send a dime. Even though I suddenly became the poorest kid in my class, I wasn't bothered about our severely tight budget. I've always made friends easily and was regarded as one of the popular kids, so I was content.

Bergen, Norway

After a year isolated from dad, my mother permitted from then on two yearly visits to Venezuela. I went from being the poorest kid in class to one of the richest guys in town during these visits. Those rendezvous with dad included vacations in Miami, New York, and Aruba where pops would buy me anything I wanted.

When I got to my teenage years, growing up relatively ignored by my mother, without any discipline in the household, my grades plunged and I started smoking pot. My mom thought I was getting out of hand. She conspired a plan where I'd be leaving Norway for good.

On one of my regular visits to Venezuela, I was told I wasn't coming back to Norway. I was enraged but powerless and just had to accept it. The positive side was that my father spoiled me and I was back living a permanently high class lifestyle. I had just turned 15 that summer.

Caracas, Venezuela. The contrasts of the hoods (right) and the middle class (left)

I was amazed that I could suddenly go to bars and “legally” acquire alcoholic beverages in contrast to Norway’s extremely strict laws. I integrated fine at school and made friends immediately. I soon switched from smoking pot to drinking. I partied at exclusive clubs and fooled around with exotic girls. Life was good.

After I graduated high school, I took a sabbatical year where I just went surfing on the beach, started smoking again, and got introduced to cocaine by a beautiful brunette I was having a fling with. It was party time. I was—and still am—an avid guitar player and was influenced by bands like Sublime, Nirvana, and The Doors, who promoted drug use in their music.

I started college to become a veterinarian, but it wasn’t long before I began using animal tranquilizers like ketamine and then eventually heroin and crack. I was forced to drop out at my third year after several overdoses. A close family member took me to a doctor’s appointment where I was supposed to get a “vitamin shot” to help put in shape, but it ended up being a powerful tranquilizer.

I woke up in a strange place wearing a uniform. It was a public psychiatric institution specialized for drug users. My family was done putting up with my shit. Three minutes after I woke up, I got beat up by the nurses because I refused to get an injection. They took off all my clothes and threw me in a completely dark small room referred to as “the hole” for two straight days.

I laid naked on the floor of cement in my own urine, freezing. It was the worse two days of my life. This taught me to just obey what the nurses ordered of me for the rest of my time there. I also went through two electroshock sessions where they put electrical current through my head until I passed out. It was essentially a prison with a lot of crazy people

in it, a terrible but interesting experience.

After eleven long months, I got out. Crazy thing is, the last couple of months I became used to the place. Then I ended up living in the streets of Caracas. Begging, stealing, and sleeping on cardboard was my routine. Between the slums, gangsters, and other street dwellers, it was a struggle for survival. Having a blonde Scandinavian “gringo” look didn’t help my case. I was regularly abused by police, beat up, and robbed. I was more dead than alive.

Snotty gangster kids are the worse kind. No reasoning and always want to prove them selves. A pain in the ass when you go into the hoods to score drugs

Another life-changing happened. Out of the blue, I was offered to drink a natural extract called ayahuasca from a girl I used to go out with who had overcome her own drug problem. It saved my life. I experienced a profound inwards journey that allowed me to know myself. It’s the only thing that has helped me stay clean.

Ayahuasca vine

I married her and we now have a beautiful child. I'm happier now than I have ever been, and my old life seem like a distant dream. It left me with huge lessons and made me a stronger person. Alcohol, cigarettes, and any other narcotic for that matter is despicable trash to me now.

There are many things that happen throughout your lifetime that at the moment will seem like a curse, but as time passes by you get wiser and realize that there is something to learn from all the experiences you live—they make you the man you are today. Your mistakes are your best teachers so these apparent curses end up being blessings.

Chris Gibson
I'm a controversial guy that questions everything, loves nature & RocknRoll - and is not afraid to speak out his mind. Ayahuasca helped me in such a way i want to share the experience. Visit my Facebook.

How Using A Pressure Cooker Changed My Life

January 19, 2018 | by André du Pôle | Link | Original Link

Far too many writers, marketers, promoters and other spinsters use the “changed my life” formula when they have something to promote. As a result, we tend to get cynical whenever someone says something changed his life. *Yeah, sure—and how much is your fee?*

But this time, it is true. A cooking utensil I had overlooked for years really did a lot for me recently. I was afraid of bulking on a budget before and now I can cook lots of cheap, yet nourishing and even tasty meat thanks to it.

Why use a pressure cooker?

Some foods can be consumed easily, sometimes immediately. A pack of bananas can be opened just after you checked out. A good ol' T-bone can be minimally dressed, thrown on hot oil, flipped once or two and eaten cheerfully. Many foods, however, need time or work before they are ready to consume.

This is where the pressure cooker comes in. Instead of, say, letting your beans marinate in hot water during two hours, you can cook them in 40 minutes—and they will be *better* cooked after 40 minutes in the cooker than after thrice this time in hot water.

If you like having ready-to-cook supplies in the fridge, which is especially convenient when you don't have time or patience to cook or nobody else to do it, if you want a healthy, high-protein diet on a budget, or if you're simply tempted by a bit of gastronomic originality—which is highly seductive when you pull a girl into your lair—the pressure cooker might become the secret kitchen weapon you wouldn't have thought of.

I'd only add two caveats. First, if you are living as a nomad, a big and thick saucepan may add unnecessary weight to your bags. On the other hand, most nomads are rather poor and being able to buy and cook the cheapest cuts can also be handy.

Second, unless you buy a fancy glass pressure cooker, you won't be able to see how it's going inside when you are using it and must guess how much water is still in there. If you stop cooking too soon, you will have to start the pressurization again, and if you stop too late the food may end up completely burned. Don't worry, measuring the fairest time comes quickly with experience. In any case, it is better to stop cooking before it's ready and start the process again than having it all charred.

Cooking what's hard to cook: pulled pork

Usually, the tastiest, easiest to cook animal parts are also the most expensive. To cook these you don't need anything more than a classic pan. However, start exploring the cheapest meats available and what you'll find are parts that need some work to be eaten.

Take, for example, pork shoulder. These bulky, yet cheap parts are commonly used to make pulled pork. Now you likely ate some pulled pork burger at least once in your life. Pubs serve them and sports fans love chomping on them while guzzling beer. But do you know how this tender, delicious pork is cooked?

Turning a piece of hard, dry meat into something that can be eaten without a knife takes time. Most pulled pork recipes out there say you should let your pork inside the oven for 6 to 10 hours before the meat pulls. The pressure cooker does this job much quicker: my first pulled pork was ready to eat in one hour and a half. Namely, one hour inside the cooker, then I gently pounded the meat to "pull" it, brushed it with a house-made sauce and let it half an hour in the oven.

This latter part was only so that the meat would absorb more sauce. Had I been in a hurry, the pork shoulder had already turned into a pulled pork after only one hour in the cooker and could have been consumed at this time—it would just have been a bit less tasty.

Turning a thick knuckle into golden brown pieces

Another example: pork knuckle. Just like the pork shoulder this part is cheap and bulky. Recipes say you need at least two hours in the oven to cook it properly. Actually, knuckles are so dense than even after 2 hours of patience, when the external parts are all deliciously grilled, the most internal parts are still not fully cooked.

As you'll have guessed, a better way to cook pork knuckle—a rather nourishing food that gives for 4 to 6 hearty servings—is through a nice session of pressure cooker.

There are a number of recipes, mostly revolving around sweet-and-sour preparations. My favourite one is the pork knuckle with pineapple. For this one you will need:

- A fine piece of pork knuckle (obviously)
- Some stock
- An onion
- A pineapple
- Bay leaves
- Thyme
- Butter
- Salt and pepper

Start by washing the knuckle a bit. Peel the onion, cut it in two. Then put the entire, uncut knuckle, together with the stock, thyme, laurel, and the two parts of the onion into the pressure cooker. Let it cook for 45 minutes, starting to count when the vapour begins to escape from the top. (Make sure you have put enough stock or water inside the cooker.)

When the knuckle is getting cooked, peel the pineapple, cut it into thin pieces and disgorge them into a pan. Take their juice away, keep it in a glass, and let the pineapple pieces grill a bit. Do so with all pieces, in several times if necessary. Keep the grilled pieces apart.

Once the knuckle is properly cooked, take it away from the pressure cooker, cut it into pieces and brown them with butter on a frying pan. At the time all knuckle parts have

become brown, add the pineapple pieces, the sauce that remains down the cooker, the pineapple juices and a bit more stock if necessary. Then you just have to let reduce until the liquid has turned into a sauce.

Trust me, it is tasty, even when you are not especially fond of sweet-and-sour recipes. I enjoy this one so much that my girlfriend asked me to stop doing it.

Eating offal

Now we're venturing into the less usual. North Americans tend to have a stigma around offal meat. It is perceived as dirty or less desirable. The advantage of this is, offal pieces come usually much cheaper than even shoulders or knuckles. If you manage to get past the stigma, there are plenty of offal pieces you can feast on.

The supermarket near my place sells beef hearts. A single beef heart is 5.5-6 lbs. This makes for 6 to 12 servings, depending on the hunger and if you're bulking. I tried to cook a beef heart without the pressure cooker, but then, even two hours and a half were not enough to do it properly. Only the pressure cooker managed to break the resistance of this thick, dense part. Note that beef hearts are so cheap that the mushrooms that come in this recipe are more expensive.

At this point, my stepmother—a seasoned practitioner of pressure cooking—made me find out that chicken feet could be eaten by humans, and that they were good, too. She lets entire chickens inside her pressure cooker, including the feet. I was a bit wary the first time, only to find out that these often thrown-away parts were actually good. Full of gristle, glucosamine and chondroitin, chicken feet can help those with chronic articulation problems. Do them in a stew or with some beans—and only serve them to girls you've already screwed if you don't want to lose a potential notch.

Bon appétit!

Just like lightbulbs, food is usually deemed too trivial for paying attention. Ignoring the apparently trivial can be a mistake: acting locally on your surroundings does more for your life than advocating or arguing, and feeding well is a staple of living well. Pressure cooker use helped me to go Chris Pratt workout since I knew I could gorge on high-protein pulled pork or beef heart without breaking open the piggy bank. When you've got 4lbs of beef heart stew still left in the fridge, you know you can push a lot, get late at home and still go to bed unstressed.

4 Quotes Of Wisdom From Saint Augustine's Confessions

January 20, 2018 | by Bruno Buscaroli | Link | Original Link

Born in 354, Saint Augustine of Hippo was a saint of the Catholic Church whose writing influenced much of Western philosophy. His works have been quite controversial even among Christians, and rejected by several scholars of the Orthodox church. In his book Confessions, he tells the story of his life, and how he went from sinner to saint. While his tale is most likely to resonate with Christians or those leaning towards Christianity, I feel like there's wisdom in it that anyone can identify with.

1. Depravity and sin

> For I heard them bragging of their depravity, and the greater the sin the more they gloried in it, so that I took pleasure in the same vices not only for the enjoyment of what I did, but also for the applause I won.

Much of the moral decay in society starts like this. Not everyone feels the need to do wrong on their own, but with a little social push, they bite. University campuses are a perfect example for this quote. Even kids who were raised in very traditional families are subjected to all sorts of peer pressure in college.

They're pushed into substance abuse and experiment with their own sex and social justice not just out of their own interest, but from pressure to conform. They're validated when they rebel against "outdated" values and scorned when they don't. When depravity becomes the norm, we shouldn't feel surprised to see people embrace it.

2. Nothing lasts forever

> I lived in misery, like every man whose soul is tethered by the love of things that cannot last and then is agonized to lose them.

Everything in this world is transient and cannot last forever, yet we hold on tightly to the things around us, whether they're loved ones, fame, or wealth. They start feeling like permanent or unchanging parts of our reality. Then when we lose them, the pain can feel unbearable.

That's not to say we shouldn't love the people in our lives or strive to achieve success. But we must remember they're not eternal, and that we could lose them at anytime. Even our own lives are simply borrowed time. If we are to cling to something, it must transcend the limitations of our own time. Otherwise, we'll only be miserable as we watch our world

crumble.

3. The essence of truth

> I had learned that wisdom and folly are like different kinds of food. Some are wholesome and others are not, but both can be served equally well on the finest china dish or the meanest earthenware. In just the same way, wisdom and folly can be clothed alike in plain words or the finest flowers of speech.

Look at politics in the West any given day and you'll see this in spades. Leftist politicians promoting lies with flowery rhetoric. They hide the ridiculousness of their policies and intentions behind pretty words, but a monkey in silk is a monkey no less. Truth, on the other hand, can be expressed in the simplest of terms and will still be truth.

We might do well to remember this in our own speech. Some of the wisest people I've known used very simple speech, not caring for excessive formalities. As important as delivery is, the meaning of your words should still take priority. A few authentic words can have more weight than an entire speech full of garbage. If all truth is lost no amount of rhetoric can make up for it's absence.

4. Everyone has an opinion

> They speak as they do, not because they are men of God, or because they have seen in the heart of Moses, your servant, that their explanation is the right one, but simply because they are proud. They have no knowledge of the thoughts in his mind, but they are in love with their own opinions, not because they are true, but because they are their own.

Everyone has an opinion on everything, even the things they know nothing about. And

when our views are challenged, we hold on to them simply because they're our views. We feel attached to them and defend them out of habit. Truth works independently from opinion though, it doesn't care how you feel about it.

I'm sure that this has happened to most who take the red pill in one form or another. There's a period of hanging on to what you believed before. You don't want to change your views, even in the face of new information because then you'd be wrong and nobody wants to feel like they're wrong. We simply can't help but be biased towards our own opinions.

Divisive as it may be, Saint Augustine's work contains timeless truth. It rings as true now as it did more than 1600 years ago. As society slips further away from truth, it steps deeper into all manner of sins. It was precisely Saint Augustine's reflection on society's ills and his own faults that led him to realize this and find truth in turn. Let's hope the current state of the West will lead us to do the same.

Why All Men Should Invest In Real Estate

January 20, 2018 | by Samuel Mays | Link | Original Link

As a new year dawns upon us, it is self-evident that real estate has become one of the most profitable businesses in the Western world (the U.S., Canada, England, Australia) because of massive immigration and an ever-increasing population. Here are a few reasons why investing in real estate is one of the best decisions a man can make in his life…

Advantages

1. Immigration

Once our politicians opened the floodgates of uncontrolled immigration to increase their vote banks, the West became a bottomless supply of international students and immigrants. These folks were and still are obsessed with the idea of coming to the West and gradually settling down here.

One of the first priorities of these students and immigrants after they arrive in the West is housing. Along with the increase in the native population, this has led to an increase in rent and housing prices in major cities such as Toronto, Vancouver, New York, and London to a name of few.

2. A Steady Side Income

The constant waves of immigration into the West and their ever-increasing housing needs isn’t going to stop for the foreseeable future, so why not profit from it?

Any wise man that invests in a condominium or a house with the purpose of renting it out later is guaranteed to acquire a steady side income that will add to his wealth. The real estate industry is booming and many people, including Asian minorities, are getting into it.

3. Learning From Asian Cultures

The fact that Asian minority groups are vehemently investing in real estate across America and Canada is noticeable to any person who doesn't live under a rock. Historically and culturally, Asians have understood the value of land and the rich dividends it pays off in the long run. After all, they have fought countless wars over land. Talk to any real estate investor in Toronto, and he will tell you that the Chinese and Indians chase real estate property like mad dogs.

4. Never-Ending Demand And Supply

Those who invested in the real estate market of New York, Vancouver, and London have already earned an early retirement. Even though the property taxes and maintenance bills have largely stayed the same, the rent is sky-high in these areas. But that does not stop foreigners and students from coming in and renting out the apartments in these expensive places.

5. Time And Appreciation

Time is your ally when it comes to a real estate investment. Unlike a car or a woman that happens to be a depreciating asset as time goes by, the value of real estate always goes up.

6. Control

The best thing about a real estate investment is control. If you work for someone else, you don't control your job security. If you are married to some dominating control freak of a woman, you don't control your finances. By investing in real estate, you are fully in control of your success or failure in building your wealth. You are in charge of your destiny provided you are always on the lookout for a good deal.

To every positive, there is a negative. There are a few disadvantages and liabilities with real estate investments that men should be aware of…

Disadvantages

1. Taxes

Real estate is taxed by the government, so you lose some income from your real estate profits.

2. Splitting Of Assets

In the event of a divorce, your ex may be able to get some money from your investments in real estate, provided she has a good lawyer.

3. Market-Driven

Profit in real estate is also somewhat dependent on the economy. During a recession, it could be a little difficult to find tenants willing to rent out your condo apartment or house at the price you want them to.

4. Personality

Bargaining and negotiating skills are a must if you are investing in real estate. 100 percent of your potential tenants/buyers will try to trick you into renting/selling your investment property for a lower price. You will need to maintain your frame, be confident, be polite but strict, and hold your ground.

Remember, real estate is a seller's market, not a buyer's one. If you already have a property, then you are at an advantage. The people that want to live in your house are much more desperate for a roof over their head, and their emotions often run high, unless they themselves are investors like you.

5. Fraud

It is wise to not make any deals with documents that are handwritten. Have all the documents printed out with signatures of the people involved in the deal. Always deal with reputed brokers and real estate dealers. The list of frauds being conducted in the

real estate market is long and exhaustive. Therefore, it is wise to make sure you have your real estate lawyer involved for protection against sneaky fraudsters.

6. Being Proactive

Investing in real estate is not for the faint of heart or people who give up easy. You have to be constantly on the prowl for hot new properties being developed.

In conclusion, the pros of investing in real estate far outweigh the cons. Never invest in something you don't fully understand. But by adding alternative investments to your wealth and playing your cards right, you can enjoy the blessing of higher returns with less risk.

Do your research, ask around, study about real estate investments, and dive into the market. You won't regret it.

How Western Women Trick Men Into Fighting Each Other

January 21, 2018 | by Beau Albrecht | Link | Original Link

Imagine yourself talking to some chick at a lively, crowded club. Quite unbeknownst to you, she took something you said the wrong way. Then she says she has to go to the bathroom. Two minutes later, the bouncer gets in your face, and tells you—a paying customer—to leave. Naturally, your cover charge isn't refunded.

Perhaps this has never happened to you exactly this way. Still, it's quite likely you've witnessed this in some other form, directed at you or someone else. That was a *Chickenshit Chick / Violence By Proxy* incident.

How This Gambit Plays Out

A CSC/VBP encounter includes *all the following* elements:

- Chick becomes "uncomfortable" around a dude, even if he's done nothing objectively wrong or disrespectful.
- Chick does nothing whatsoever to address this herself, like saying "Please don't do *X*." If she'd merely say so, it would end there.
- All throughout, chick is in absolutely no conceivable danger.
- Later, chick uses a third party to run off or otherwise punish dude. Typically that's another dude, and sometimes an authority figure.

All throughout the interaction, usually she'll give no sign that she finds anything amiss. Women throw out IODs and raise their bitch shields all the time, so *why not simply do that?* Alternately, to cope, she could just gossip or blog about it, or otherwise draw attention to herself.

The resulting confrontation caused by her discomfort will embarrass the guy at the very least, and typically also includes some form of official sanction (giving the HR Department something to do, for example), an implied threat of violence (like getting someone forcibly ejected), or actual violence.

Starting a fight is exceedingly vindictive and fortunately rare. However, less severe outcomes of this type of female misbehavior are abuses of power, causing him trouble (forcing him to alter his plans, or worse consequences), and even potential bodily harm. Since merely threatening to punch someone can bring an assault charge, then by extension, causing a potential physical confrontation without justification is a form of violence. Also, the unwitting proxy the "damsel in distress" uses is needlessly inconvenienced.

Making a scene herself is justifiable if she actually tries to settle a misunderstanding if he persists or does something genuinely obnoxious. Only if she's in real danger is she justified in involving a third party. Even so, *none of those three elements* are present in a CSC/VBP.

An Increasingly Common Phenomenon

The first time this happened to me was in college. I was at a dance talking to a girl, and for whatever reason, she walked away suddenly. I attempted to reengage, which was a bad move, though my goose was already cooked. Soon after, she got some dude to walk me out of there. He was surprisingly sympathetic, though it was a profoundly humiliating experience. A few months later, I saw her again, and she spoke to me without further drama. She didn't remember that, but I certainly didn't forget.

I was not talking dirty, drooling like a Saint Bernard, asking Clarice about the lambs, or anything like that. It was merely a polite conversation, and she certainly didn't tell me what prompted her freakout. Furthermore, it was a crowded room. Therefore, the chance that I could've conked her on the head with a club and dragged her by the hair to my cave (not that I do things like that) was nonexistent.

The campus was a hotbed of feminism, possibly a contributing factor. She didn't look like a feminist, but the propaganda saturation of our surroundings could've poisoned her.

Around that time, one of my old friends related an anecdote from Army basic training. After being asked to lead a chant during a march, he recited one about a child getting conceived during a hookup. I had heard it before; the language was a little salty, but nothing horrible. However, one of the babes in uniform complained to the drill instructor. If I recall correctly, the penalty was 200 extra pushups for offending that brave Amazonian warrior. (The way things have been going these days, would it be 1,000 now?)

As General Patton put it:

> An army without profanity couldn't fight its way out of a piss-soaked paper bag.

Looks like attitudes changed somewhere along the way.

However, two decades passed before I encountered anyone playing the CSC/VBP card again. I was talking with some chick, and she asked me very clearly to go somewhere with her. Upon arriving, she disappeared for a moment, and some dude came to run me off because I'd followed her. I should've told him exactly what happened and that she was being a drama queen and using him as a tool, but I was too shocked to explain.

Since then, I've seen an alarming rise in these events happening. The following is what they typically look like…

The CSC/VBP In Action

There's an insightful series of interviews with young ladies about their thoughts on game principles. One in particular is called "Invisible Men," concerning what types of guys are popular and who gets overlooked. It's one of several conducted at a college. Unfortunately, he had the bad luck that day to be interviewing overgrown mall rats instead of young ladies. The proxy violence confrontation itself is off-camera (he'd just packed up his equipment), but it's described beginning at 7:44.

The interviewer is never behaving improperly, the topics are pretty tame, the chicks are freely participating, they're acting cheerful, and he's not telling them to put the lotion in the basket. At any time, they could've refused to answer, said they found something objectionable, or simply walked away if they wished.

Soon afterward, some of them found some security guards—*two men*—and tattled on him. They said he'd been "making them uncomfortable [and] asking provocative questions." Believing these immature chicks, the burly security guards gave him the bum's rush.

What *really* incited the drama?

Reading between the lines, my Chick Logic analysis is that they began feeling cognitive dissonance, realizing for the first time that their past personal choices had been irrational. It's also possible they felt ashamed, remembering they'd blown off perfectly decent guys in the quest for a long and meaningful relationship with Chad Thundercock.

Either way, their Rationalization Hamsters jumped onto the little wheels, spinning out the conclusion that they felt bad because *the interviewer had wronged them*. Then they wasted the time of two security guards to punish him.

Feminist Indoctrination

That interview took place on a campus. Therefore, it's very likely those girls had been marinated in feminism, which constantly pushes gender antagonism. It certainly was bad enough when I went to college (back in the Pleistocene epoch), and it's *only gotten worse*. Every year, women's studies professors turn masses of decent, normal young ladies into blue-haired harpies. They get paid to brainwash students, funded by government grants, massive debt, and Daddy's money.

Even those not indoctrinated in these classes can be affected. I personally witnessed the propaganda getting around by osmosis, the hostility following not long after. My university experience made me realize that feminism isn't *really* about equality. In a healthy society, women are *charming and delightful*, but feminists encourage bad attitudes in girls. This leads to the increasing incidence of many flaky behaviors like CSC/VBP. This psychological warfare even can turn men into tools and useful idiots.

Conclusion

Chicks who create drama like this have a lot of growing up to do. *Pulling a power play is not empowerment.* Today, we're constantly reminded of how strong and independent women are, but then women like this act like delicate flowers needing special protection from… *basically nothing*. Well, they can't have it both ways! It's neither strength nor independence to run to another guy because something vaguely disturbs her, all because she doesn't have the ovaries to settle things gracefully.

It's time for these damsels in distress to woman up, and for guys to quit letting ourselves be tooled in these immature games. Using proxy violence to deal with a nonissue that a chick easily could handle herself is, of course, *chickenshit.* Consider anyone who does this to be toxic. Avoid, avoid, avoid.

Should Young Men Enroll In The Air Force Academy?

January 21, 2018 | by Luke Michael | Link | Original Link

The United States Air Force Academy, located in Colorado Springs, CO, is the Air Force's premiere learning institution. Graduating approximately 20 percent of the Air Force's new officers each year, maintaining high standards among its cadets and future graduates is integral to accomplishing the Air Force's mission: "to fly, fight and win—in air, space, and cyberspace."

With recent scandals—including the 2017 sexual assault scandal and the Academy's recent overreaction to a false flag racist attack—young men interested in a career in the armed forces need to ask themselves this question: *is the Air Force Academy worth attending?*

The Good

Unlike most civilian institutions, the Air Force Academy isn't a walk in the park. Upon arrival, basic cadets will endure a six-week long Basic Cadet Training (BCT), where many will begin their transition into the military. The basic cadets will experience new stresses: cold showers, sleep deprivation, eating at attention, quote memorization, personal and dormitory hygiene, and grueling PT.

At the conclusion of BCT, the newly minted doolies (fourth-class cadets) take the Cadet Honor Oath: "We will not lie, steal, or cheat, nor tolerate among us anyone who does." They are then accepted into the cadet wing.

Most people pay for this kind of fun.

After BCT, doolies must endure a nine-month probationary status where they maintain heightened standards, including keeping their rooms in perfect order, attending biweekly training sessions, memorizing Air Force knowledge for weekly knowledge tests, and not consuming any media (Facebook, Netflix, etc.), all on top of rigorous academics.

Doolie year culminates with Recognition, an abridged “hell week” where the limits of each cadet are met and broken. During this period, most doolies develop close ties with their squadmates, developing friendships and camaraderie for years to come.

After doolie year, the Air Force Academy continues to challenge its cadets. During the summer, the Air Force Academy offers Expeditionary Survival and Evasion Training, teaching cadets the basics of survival and combat. Also during the summer, the Academy challenges cadets with Jump Training, being the only program in the country where students jump without an instructor or static line for their first jump, as well as the Soaring and Powered Flight programs.

Once cadets have taken these programs, the Academy then offers cadets summer leadership roles, teaching some cadets to be instructors for each program.

Training has never been this fun.

During the academic year, cadets must take physically challenging classes, including boxing, unarmed combat, basic weight lifting, and the dreaded water haze (water survival). After their doolie year, cadets are given leadership positions within their squadrons and academics become more difficult. By their firstie (senior) year, the cadets have embraced operation graduation and motivation peaks.

Besides introducing challenges, the Air Force Academy offers many perks. Cadets who work hard and succeed academically are given opportunities to work with high-level government officials, influence national policy, and work on cutting-edge projects, such as redesigning the F-22's wing and inventing lightweight, bullet resistant armor. They also receive paid internships with the NSA, the national labs, or with big names in private industry.

The best part: the Air Force Academy is "free" to attend. You are actually paid to attend a four-year university and get your bachelor's degree, an expected value of $450,000 (when you include extracurricular programs). On top of that, you have a guaranteed job as an officer in the U.S. Air Force. Furthermore, if you want a rated (flying) position in the Air Force, almost half of the previous class (480) got rated positions, with 386 members going to pilot training.

Of course, few things in your life has feel as good as hearing the Thunderbirds roar overhead as you graduate and throw your hat in the air.

Few things ever match the feeling of satisfaction you get when you can leave “the zoo” forever.

The Bad

The military—and by extension the Air Force Academy—is fundamentally one of the most progressive institution in the United States. As we have seen with Congress pushing women into combat roles and the DOJ allowing transgendered individuals to enlist, actual combat effectiveness is (at minimum) second to the current social order.

What does this mean for young men? Well, that false sexual assault accusation might not just get you kicked out of college, and that racial slur might not just get you berated by your professor. A cadet is a member of the military and subject to the Articles of the UCMJ. Getting caught for violating rules at the Air Force Academy often leads to far worse punishments than similar infractions at civilian institutions.

Basic cadets rethinking their choice in college.

Similarly, young men will be discriminated against, especially if you are a white male. While women make up about 25 percent of the cadet wing, a disproportionate number of women end up with leadership positions and military accolades. If you want to ranked the best as a male cadet, you have to work significantly harder and be overwhelmingly better than your competition.

Of course, even if you work hard, the Air Force Academy's military rankings are mostly subjective and getting a high rank is ultimately a popularity contest, where the cadet leadership's friends and brown-nosers usually get the best rankings.

Many of the Academy's clubs work in a similar way. The Wings of Blue, the Academy's jump team, is notorious for only picking hot girls and cool guys, completely disregarding an individual's aptitude for parachuting. If you are boring, like most young men with the grades and aptitude to get into the Air Force Academy, your avenues for success will be limited.

Finally, there is the stupid shit. The Air Force Academy worships football, forcing cadets to pay for and attend every game as well as alcohol-less tailgates in a dry stadium. Cadets cannot engage in sexual contact with other cadets in the dorms without the threat of expulsion. Many cadet girls, being only 25 percent or less of their class, develop massive egos that are perpetuated by "falcon goggles" (seeing women as far more attractive than they really are because you hang out with so many men).

Marching every day, mandatory meals, mandatory fun, the sex gap… there is an endless buffet of stupid shit.

Football first, football before self, and football in all we do.

At the end of the day, you can also get shot at in Uncle Sam’s wars and might die for a cause that you don’t believe in. You will earn, with blood, sweat, and tears, all of the benefits and privileges of military service.

Conclusion

In conclusion, there are massive upsides to attending the Air Force Academy: a free education, room and board, and a guaranteed job afterwards. There are also several downsides that young men will face if they decide to attend. I recommend that, if you get the opportunity to attend, keep your nose to the grindstone and treat it like any other job. Fortunately, life does get better after graduation, even if the military bureaucracy gets worse.

How Men Of The Ancient World Survived The Same Problems We Face Today

January 21, 2018 | by Narmer Bull | Link | Original Link

There is a lot to be uneasy about these days. Most of us don't understand the new social justice ethical system being imposed on us so it's very likely that you are going say something perceived as racist, sexist, homophobic or xenophobic. In such a case, your means of making a living will be targeted by some self-righteous mob.

What if a past consensual dalliance decides to jump on the #MeToo bandwagon? Charged or not, your reputation will be ruined. In fact, our presence here on *ROK* is in itself "socially irresponsible" and has already shamed most of us into anonymity.

Indeed, the modern masculine man has good reason to be depressed, but depression is not a modern phenomenon. We are not facing some new problem, unique to our lives, that comes from outside the collective human experience on earth. Depression has been reflected on, and pragmatically addressed for as long as we've been able to share stories and offer advice.

Wisdom Literature

This body of texts is often described by scholars as standing midway between theology and philosophy. You are probably most familiar with its Old Testament forms—the *Books of Proverbs*, *Ecclesiastes* and *Job*. But there are older Egyptian and Mesopotamian parallels.

As evidenced by the biblical examples, wisdom literature basically offers answers to questions a man may have about life and conduct. Psychological suffering is prominent as “Why me?” is consistently every man’s immediate response to misfortune. Regardless of who authored his social downfall, or how far-reaching the adversity may be.

Overall, the basic virtues advised by our ancestors for avoiding or coping with stressors can be limited to self-control, discretion and steadfastness. They were pragmatists, not idealists. Adversity can lead to depression, depression brings about self-loathing and self-loathing will motivate an attempt to undo your own existence. So this is about basic survival.

Self-control

You've been warned Lancelot!

This seems to be the most eminent virtue and should certainly be part of the disposition of every modern man. Most familiar to readers would be the fact that Marcus Aurelius starts with this in the first sentence of the first book of his meditations — "refrain from all anger and passion". That's much easier said than done as there certainly are current issues deserving of your anger. So let's be more specific.

The *Instruction of Ptahhotep*, composed in Egypt around 2400BC has a more modern feel.

> The wise man rises early in the morning to establish himself, but the fool rises early in the morning only to agitate himself.

It would be preferable to avoid agitation and anxiety altogether and Ptahhotep, throughout his instructions, suggests keeping your world simple and small. That is to say, do your duty by your work and your wife, and you will be happy. The implication here is that a calm and controlled mind is way more capable of performance while kindness rather than harshness towards your wife will make her more obedient.

And here's something direct to avoid any "he said / she said" issues:

> If you want a friendship to endure in the house you enter as master, brother or friend. In whatever place you enter beware of approaching the women! Unhappy is the place where it is done. A short moment like a dream. Then death comes for having known them. He who fails through lust of them. No affair of his can prosper.

Do not take risks with women. There was never a time for gallant and courageous dalliances! Women dream of that stuff, and men have always suffered for trying to make

it real.

Discretion

Now its just a Hoodie.

Maybe our internal system simply rejects this control? Maybe we just take very long to learn our lesson? But the instruction is very clear and has been for some time now: There aren't things you can't say, but there are people you can't say certain things to. You wouldn't want to catch a cold.

> Give your ears, hear what is said. Give your heart to understand it. It is useful to put it (what is heard) in your heart, but woe to the one who neglects it. Let it abide in your breast, that it may be a key in your heart. Then when there is a whirlwind of words, it will be a peg for your tongue. If you spend your life-span with this at heart, you will find that it brings success.

This extract is from the *Instruction of Amenemope*, composed in Egypt around 1200 BC. There are rules of etiquette for our current cosmopolitan society just as there were in the past. Knowing the instruction by heart gives a man a firm point of orientation in situations where feelings can be the cause of confusion and there are multiple cross cultural opinions to be considered. Let the rule pin your tongue, protect you from rashness, filter your language and prevent what is essentially avoidable grief.

It's worth noting that Egypt was an imperial power when this became a precept for a successful life. Similar circumstances mandate a similar collective resignation to humility and discretion.

Steadfastness

"*Man and God*"—the "*Sumerian Job*" is a poem about theodicy. It is thought to have been composed in the 3rd millennium BC. Meaning that, the "why me" part of the question on unjust suffering probably can't be answered.

There is no effective medication, amount of sunlight, exercise, socializing, or caffeine deprivation that will help alleviate anything other than short term symptoms. What Mesopotamian Wisdom literature generally advocates, like the Egyptian and Biblical parallels, is steadfastness.

Humiliation, shame, the loss of wealth, health, social status or security is the common lament of every sufferer when there is change in a hierarchical system. There is even the predisposition to feeling a sense of conspiracy.

> I am a (young) man of understanding – (yet) though I have understanding, it is of no use to me. My true word becomes lies. The deceiver has brought the (destructive) south wind upon me, (and now) I must serve him.

The rehabilitation of the sufferer is consistently achieved through steadfast faith in their god—be it Sumerian, Babylonian, Egyptian or Hebrew. This may not fit well with our modern supercilious mindset since religion doesn't have the best reputation when it comes to the treatment of diseases. But it does seem, at least in a literary sense, that it can be applied to the treatment of depression.

Conclusion

Lament your lot as much as you want. In fact, bemoaning the unfairness of our adversities has become a form of excitement appropriate to neomasculinity. This means that, on some level, we've already tuned into the new system. We've just gotten lost in it.

But if you allow a few basic principles to guide you through this social and ethical chaos, you will find your way back to an acceptably dignified social position.

22 Photos And Tweets From The Deranged Women's March Of 2018

January 22, 2018 | by John Carver | Link | Original Link

Despite the loss of **zero** rights, privileges, and civil liberties for women and non-white male "minorities" (which together make up 70% of the U.S. population) since Donald Trump took office one year ago, SJW's quite literally (Hitler) doubled down on their post-election outrage and made a sequel to 2017's Women's March.

From Italy, to the frozen tundra, to the American SJW strongholds of San Francisco, New York, LA, and Austin, women living in arguably the most privileged conditions which have ever been experienced in human history "resisted" again with the same tired platitudes about empowerment, diversity, and "Nazis" among other cringy falsehoods.

Male feminists, soy boys, and white knights came along for the ride too, while their more masculine counterparts were either lifting weights, running game, trading in cryptocurrencies, or just having fun doing something else which was actually worthwhile.

The following 22 photos and tweets perfectly capture the mood of that wacky saturday in January 2018.

1.

Seven dog years is one human year right? How clever! Also maybe if your vagina hat wearing SJW owner cut back on her expensive daily Starcucks/Fivebucks coffee habit, she could afford better dog food for you.

2.

I see a lot of white faces in that crowd. If you think that Haiti is so wonderful and “Trumps America” is the real shithole, why don’t you take a holiday to Port-au-Prince or send your

daughter off on a university semester there?

3.

Despite having a relatively young female mayor running the former capital of the once unstoppable Roman Empire, these Italian women gotta demand/resist more!

4.

Men’s sperm aided and abetted in bringing you into this world. Also the hospital which helped safely deliver and care for you was built by men. And the house you sleep in, the shower you bathe in, the car you drive, the logistics network to get food in your refrigerator, and the smartphone you can’t put down.

5.

Are you just mad because men stopped caring about your “depth” and “warmth” many decades ago?

6.

Actually there have been many periods of U.S. history where there was very little immigration. In fact, as recently as the 1970's the United States had among there lowest proportions of foreign born residents in the nations history. Cycles of high and low immigration is **entirely normal**.

7.

How many weights could have been lifted or how many businesses could have been

started on this beautiful day? Did you ever consider a rally to address actual issues like rampant homelessness in Los Angeles?

8.

Loading…
Agreed! Let’s start with trading David Duke…… **and** Tim Wise, Ta-Nehisi Coates, DeRay McKesson, and Shaun King for five white South Africans desperate to escape race-targeted crime and racial discrimination in their home country. “Racists for Refugees” right?

9.

“Less Catcalls More Cats”. Don’t you worry lady. With your looks and your attitude, father time will guarantee that your wish will come true.

10.

Oh right…. none of these women know how to cook.

11.

Low testosterone soy boy Millennials with receding hairlines trying to white knight with women who will never sleep with them.

12.

Nuh uh! Argentina, Chile, and Brazil are in “America” and they’ve all had female presidents. As for the United States being “run into the ground time and time again”,

that’s a preposterous statement. Instead, take a look at what Dilma Rousseff did to Brazil and what Angela Merkel is doing to Germany if you think women are superior.

13.

Why do feminists and social justice warriors use so much profanity?

14.

Reminder: How many black women from Alabama died in World War II?

15.

Keep your hair away from degenerate and employment-limiting dye products. Employers have the “rights” to not hire you if they don’t like the way you look compared to more professional looking candidates. Also if women want to continue discriminating against men who are tiny or short, we are going to discriminate against women who are old or fat. Fair is fair.

16.

Then go protest against Switzerland. It’s probably one of the best places in the world to be a woman, and yet they’re neutral on everything that surrounds them. Good or bad.

17.

There haven’t been any Nazi’s since 1945. Also right wingers in general don’t want to get assaulted or doxxed by crazy feminists and Antifa thugs for merely voicing an opinion.

18.

There will **never be equality** until women start signing up in droves to work jobs in these extreme weather conditions like many in the oil and gas or fishing industries. That will never happen.

19.

If a woman can’t cook for shit, a man owes her no wedding band.

20.

Maybe it’s just all **undesirable** women.

21.

He’s right!

22.

Right again. Ending the article on a positive note, maybe it's the one good thing that came out of the whole ordeal.

Why Men Need The Same Reproductive Rights As Women

January 22, 2018 | by Alex Forestier | Link | Original Link

In the West, when a couple finds out they are going to have a baby, they—or should I say *she*—have three options, keeping the baby, giving it up for adoption, or getting an abortion. How many options does the man have? You know the answer: zero. He has absolutely no rights, no say in this case, at least not in front of the court.

This has led to a de-dramatization of the act of abortion, leading to an increased number of voluntary terminations. In some cases (most cases?), women may not even tell their partner about their pregnancy and get an abortion anyway.

The white population is decreasing. Do you want to save it? Forget about it until we have true reproductive rights. Today, men are nothing more than witnesses to sinking ships that women are captaining.

"No Means No": No Abortion If One Of The Parents Says So

Abortion has a huge impact on the personal life of men. For all three main Abrahamic religions, abortion is considered a sin and a crime and it has always been forbidden. As a religious person, I personally agree with the fact that a fetus is already a human being and that it should be treated as such. But even for atheists, abortion is a very painful experience. A child—or at least the possibility of one—is being killed and that doesn't leave you without some grief.

We have been told relentlessly about how women suffer after having abortions. But what about men?

Such a serious act can have very important and deep health consequences afterwards, such as depression, guilt, and possibly suicide. This is what emerges from research done by Dr. Kaeleen Dingle, who presented a study on the connection between young mens' depression and abortion. Corrine Barraclough, a journalist for the *Daily Telegraph,* says she was absolutely "stunned" by this discovery. Really? Was it so surprising to discover that men have feelings? Surely yes when it is all about women.

However, she doesn't forget to conclude with, "Of course, this isn't a blame game. And, of course, this has nothing to do with pointing a finger at women who, rightly, have control over their bodies." Of course…

I am sorry to disagree with you, Corrine, but I am going to point the finger at women. Firstly, women do not have control over their bodies. Even here in France, abortion is illegal after three months, and a woman who has passed this point is required to keep the baby. Secondly, if a woman wants to keep the baby, nobody can force her to have an abortion. So, if a man wants to keep the baby, he should be able to do so, regardless of the woman's opinion. That's basic equality.

My Story

Loading…

I experienced this scenario when I was 26 years old and my girlfriend was 23. We were living in Paris and had been together for five years when she got pregnant accidentally. I will not comment on the reliability of contraceptives, but after a fairly long period of dating and the large number of sexual relations that come with it, the chances of pregnancy are no longer negligible.

However, everything seemed to be going fairly well in our relationship and I thought we were ready for a stable family life. After all, we'd spent five long years together and we'd talked about having children several times before. So, when she announced the big news, I didn't hesitate long before telling her that I thought we should keep the baby.

I was very excited by the perspective of a small child coming into our life, one that we would be raising and teaching to have his way in the world, the normal joys of normal parents. Also, coming from a Christian background, life was sacred to me and abortion was not really an option. At first, she agreed with me—or at least that's what I thought—because she looked pretty happy about it too. I couldn't have been further from the truth.

Some days later, she told me without tears nor trembling that she had decided not to keep the baby. I argued with her, trying as best I could to convince her to change her mind, but to no avail. No way she was going to sacrifice her youth and body, no way she was going to commit to a steady situation so early in her life. Damn, how did I fool myself so much for so long!? I was blind, I should have understood, I should have seen that she still had countries to visit, people to meet, and dicks to fuck.

Actually, she was always worried about her fertility wondering whether or not she could have children, and I guess this news quite reassured her about her womanhood. That was the only reason she was so happy, not because of the kid that was going to come into this world, not because of the perspective of a family life, but the confirmation that her uterus

was working well.

She didn’t give a fuck about the baby, she didn’t give a fuck about me, all that mattered was herself. I could not imagine anything more selfish.

From the day she told me she was getting an abortion, my world turned black. I was over-thinking what was going to happen. Was I letting my own child be killed? What could I do to save him?

After one week, she had her abortion simply by going to a physician and taking two pills. Did the doctor ask what the opinion of the father was? No way. Did he even ask whether she told him? Absolutely not. That’s how easy it is today. No questions, no problems.

The pills were taken and the pregnancy terminated. The baby was five weeks old.

I regret it each day of my life.

Want to know the cherry on top? She was Irish, and in Ireland, abortion is illegal. Too bad she didn’t stay there; in France, the degeneracy had begun long long ago. Thank you, Miss Simone Weil.

Reproductive Rights For Men

When it comes to the life of your own baby, your opinion should always be taken into account. That is a fundamental right that is not granted to us today. Whether or not you think that a fetus is already a human being, your voice should count.

Aborting a baby is a very tough experience for both parents, who might regret it for the rest of their lives. For that reason, it should require the consent of both of them.

4 Signs Your Martial Arts School Sucks

January 22, 2018 | by Larsen Halleck | Link | Original Link

So, you want to learn martial arts: nice choice! It's a great pastime, not only because it gives you the ability to fight, but also for reasons of fitness, confidence, and mental/spiritual discipline.

With that being said, let's point out that many—not all, but *many*—martial arts schools are absolute shit. How do you tell if the school you've been prospecting is that eternal subject of mockery amongst MA practitioners, the dreaded "McDojo?"

As luck would have it, there are many easily noticeable signs of the McDojo, and this article will list a few of the most egregious ones.

1. Fatbody Masters And Students

This is probably the biggest one (pun not intended). If the master is a fatty, the school is most likely a crappy one. Just to clarify, I'm not talking about an older master who has gone to seed via the ravages of time, but is still as capable of doing the techniques as he was when he was in his fighting prime. No, I mean a lardo that can't even do ten regular push-ups, lift his leg above his waist, or hold the horse stance for more than 20 seconds.

This criticism of people who are objectively not in shape goes for the pupils as well. I can tolerate a white belt or the equivalent rank being fat if they're clearly making an effort to slim down. But if multiple students are fat—and high-level belts in particular are fat—you can clearly see that something is wrong. Just look at the featured image for proof of that.

2. Wildly Impractical Techniques

If fatness is the number one sign of a bad martial arts school, this is undoubtedly the second biggest. Despite what a julienne of hack "masters" will tell you, the martial arts *are,* in fact, predominantly about kicking another person's ass. That's not the *only* thing they're good for, of course, but the root word of "martial" is "Mars" for a reason.

The phrase "wildly impractical technique" encompasses a wide spectrum of failure. They range from schools that don't do any sparring and instead focus entirely on forms, board breaking, and human pyramids—and no, I'm not joking about that last one—to ones that claim to teach their students how to shoot psychic blasts, levitate, or any other sort of magical power that still manages to fool a depressing number of people out there in the world.

Simply ask yourself, "Would these techniques work on a trained fighter?" Or hell, ask yourself, "Would these techniques work on a 15 year old girl that was actively resisting assault?" If not, look elsewhere for training.

Infamous fraud George Dillman actually teaching a child how to form chi balls.

3. Hokey, Overly-Exotic "Asianness"

This one is a little bit more difficult to determine at a glance, but once you notice it, you can't unsee it. Essentially, this is where a phony school will over-emphasize it's faux-Oriental bona fides in a vain attempt to give themselves legitimacy. If you see the master walking about in his gi/tangzhuang/whatever in his day-to-day life, or if you notice that he talks in pithy aphorisms that sound like they came off a fortune cookie rather than any actual Eastern philosopher, be wary.

Loading...

Another sign to watch out for is careless mixing and matching of Asian cultures. This can be as egregious as a “kung fu” school having its students wear karate gis and referring to itself as a dojo, or something subtle like a “Shaolin Kung Fu” school having Taoist tchotchkes on the wall (the Shaolin monastery, being Buddhist, would never do such a thing).

Similarly, beware any overly grandiose claims about the lineage of the school. If the master claims that he or a previous master of the school honed their skills fighting jiangshis in the bamboo forests of Hunan, killing the hopping devils with their dim mak powers, you can rest assured that they’re pulling that nonsense out of their asses. I love kung fu flicks and schlocky video games as much as the next guy—if not a little bit more—but I’m also an adult man and I can separate fantasy from reality.

Seems legit.

4. General Unprofessionalism

This phrase incorporates a wide variety of bad behaviors, most of which should be familiar to anybody who works a 9-to-5 job dealing with dysfunctional people. For example, if the master is having sexual intercourse with one of his female students—especially if said student is underage—that’s clearly something you ought to watch out for.

A form of unprofessionalism that I’ve noticed is specific to bad martial arts schools are occasions where the master will deliberately inculcate a sort of cult-like atmosphere, engendering slavish devotion amongst his students and in some cases even trying to separate them from their families, largely for the purposes of either bilking money from them or sexually exploiting them.

While I have said that many martial arts schools are crap, there are many good ones that will teach you real, practical techniques out there. If you want to determine whether your prospective school is bad, I find that the best way to do so is to simply ask to observe a class or two. All schools worth a damn—and even many that aren't—will allow outsiders to see the proceedings, and in some hilarious cases even allow you to attack the fake "master."

And if they refuse to allow it, that's probably the best sign that the school isn't worth your time.

What It’s Like To Work As A Federal Consultant For The U.S. Government

January 22, 2018 | by Hans Schuder | Link | Original Link

Despite the excellent work of President Trump, the federal government still has a *huuuge* number of employees, and even more contractors. For the record, I am not talking about military contracting, building the wall, or some of the other gigs that involve doing something useful, but just about regular civilian federal consulting.

I was moving and shutting down my business when I had a buddy who knew my resume turn me on to a consulting gig. The timing worked out and allowed me to jump right in. I didn’t know what I was getting myself into, so here is what I wish I’d known beforehand…

The Good

1. The Money Is Good

Edward Snowden was making $122,000 as a consultant when he stole all that classified material. If you can keep a secret, you ought to be worth more. All joking aside, a man with relevant technical skills can easily make $100,000 or more as a consultant.

2. The Work Is Mostly Easy

Government employees sure aren't killing themselves at work. They prefer to spend their time in diversity classes, at lunch, or otherwise being non-productive. They probably won't stress you out too bad, either.

3. The Travel Opportunities Are Great

Some gigs have you working at a government office from 8am to 4:30 pm or something like that. Other gigs have you going to different facilities to perform technical work at different times. Those gigs would be just the thing for a single man. Just don't approach any of the federal women without being pretty slick about it. The penalty for unwanted attention is getting voted off the island! As a contractor, there is no real due process on this.

4. Job Opportunities

The feds often hire from the ranks of contractors. If you want this to be you, figure out who does that hiring and make them your friend. The feds pay well (too well, I believe), and if you have a modest level of competence, you can stand out. That's what happened to the guy I replaced, and I ended up working directly for him.

The Bad

1. You May Need a Degree, A Clearance, And/Or Live In Or Near Washington, D.C.

Much of this is credential inflation, but most consultant jobs require a bachelor's degree and many require a master's degree. If you already have a clearance, you will be at the head of the line for these jobs. Companies hate to sponsor you for a clearance unless they have no choice, as it costs money and takes time. And I can't take working or living in the DC/MD/VA area, but that is where most of these jobs are.

2. Government Employees

They can test the patience of a saint. We had a system where when you put data in, it emails it to someone to approve it, and then it gets emailed to some other folks once approved. Easy. Simple. You understand it now.

It took me two hours to explain this to two federal geniuses. Two hours of my life. Make sure that you can take 50 weeks a year of this.

3. Idleness

The guy who I replaced quit his fed job in less than six months. It sucked so bad that he was looking for another job after two months. That left me ready to do great things, but there was really nothing to do without him telling me what they wanted. Six months later, they haven't replaced him.

Each day I sat down at a heavily monitored government computer with nothing much to do. You can't nap, work on your own projects, or read the paper. It is difficult for me to do nothing all day, though many government employees seem to find it easy. Did I learn all these skills just to sit on my ass, aimlessly reading a government intranet?

4. Mind Numbing, Soul-Killing Atmosphere

Yes, the Priuses with Bernie Sanders bumper stickers will almost certainly outnumber the trucks with NRA stickers. Energy is constantly consumed in showing reverence to Black History Month, Women's Equality Day, Tranny Awareness Day, or some other such left-wing nonsense. They sure didn't appreciate the "Fight Crime, Shoot Back" bumper sticker on my truck.

As with all bureaucracies, there is a premium on busywork. Your boss, known as the contracting officer's representative (COR), will want reports about what you are doing, and it is wise to make these be what they want to hear. This COR will likely be a woman or a minority who has been promoted beyond their abilities.

5. No Guarantee of Employment

Government contracts typically have “task orders” with a year “period of performance” and “option years” for further work. The government will sometimes do a “re-compete,” where they give other firms a chance to bid. That may unexpectedly put you out of a job.

Make sure you understand these dates and how long you will likely be employed before you accept an offer. Have a rapport with your boss in the firm to keep tabs on this. The feds can cut off contract payments as well, and not just during government shut-downs. You want some heads-up on that if you can get it.

If your firm loses the contract, they may keep you “on the bench,” trying to find another contract that you are qualified for. They see what upcoming work they are bidding on, and may keep you around awhile if they think they can use you. However, if your skill set won’t be needed in the near future, then you will probably get a couple weeks’ pay and sent walking.

Interestingly, I have a friend who has worked for the same federal agency for over fifteen years doing the same job, but with six different contractors. He lost his vacation time and had to transfer his 401(k) each time, but he kept his job.

Summary

Would I recommend this sort of employment? That depends. It has been a good resume builder and good fill-in work between jobs for me. But I just accepted another offer and feel like I just got a good word from the parole board.

Be warned: a man with any hair on his ass will not like working for the feds. If you need a job, it is hard to say no to the pay. Just do not accept the job thinking it is something useful or fulfilling.

If I did not warn you off, Google “federal consulting firms” to start your descent into this special kind of hell. Good luck!

5 Reasons Why We Believe in Conspiracy Theories

January 23, 2018 | by Mark Derian | Link | Original Link

Flat-earthers are dumb, but not as dumb as the guy who argues against flat-earthers using only facts. No one believes in conspiracy theories, much less anything else, because of facts. We believe in conspiracies because they are a balm for our psychological issues. It’s an unhealthy balm that represses and so warps our issues, but it feels good regardless so most people don’t mind. So why do so many people believe in conspiracy theories?

1. They displace anxiety

Anxiety is a difficult emotion to manage in a healthy way. It’s difficult enough to recognize we have it and permit ourselves to feel it. I’ve met guys with anxiety problems who have been in therapy for years and their therapist hasn’t even told them what anxiety is. Tenured psychology professors offer little consensus on what emotions even are.

Part of the gratification that comes from conspiracy theories is they fabricate a cabal of men who have been insidiously cutting us off from the world, which, not coincidentally, is the function of anxiety. Instead of recognizing our anxiety for what it is, we project it onto this cohort of handshakes, which permits us at least a momentary reprieve from the stress of malformed emotion.

2. They help elevate a person’s status

Why do minorities play the victim? Because people indulge their stories—that is, it's an easy way for a minority to attain status, at least subjectively. It's the same reason why we believe in conspiracies.

If we and a small group of guys knew the truth that contradicts what most people believe, then we have elevated our status with only lifting a finger to click on a few poorly designed websites. A benefit of status is it's directly related to our serotonin levels, so believing in conspiracies is akin to taking an antidepressant, but without the erectile dysfunction.

3. They fit our hardwired need for a David vs Goliath storyline

The conspiracy story adheres to a certain structure that is inherently gratifying to humans. Without getting too detailed, the structure involves falling from a state of grace and working to get back to that state of grace by exposing the aforementioned cabal that keeps us from being connected with each other. Every culture has this structure in their religious narratives regardless of the specifics.

Carl Jung argued that all humans create stories based on this structure as part of their shamanic instinct, which is as prevalent as the sexual instinct but probably more powerful. We have fought more wars over beliefs than we have over women. Ever become rapt in a poorly-produced documentary about the Illuminati? Because I have. It's as hypnotizing as pornography.

We can become transfixed by a story that has a specific shape as we can become transfixed by a woman who has a specific shape. If this sounds unscientific then I challenge you to find a culture that doesn't concoct stories that could be mapped onto the 9/11 conspiracies.

4. They serve as a substitute for philosophy

A healthy outlet for our shamanic instinct is philosophy. If conspiracy theories are akin to pornography, philosophy is having sex with a woman who would have voted for Goldwater. Instead of projecting out our psychological issues as the cause of some event or phenomenon, philosophy gives us the tools to simplify complex ideas to their basic parts so we can understand them and integrate them with other ideas. However, the field of philosophy has been emasculating itself for more than 300 years.

Now, if you study philosophy in college, you'll read postmodern hacks like Thomas Nagel three times before someone even mentions Aristotle. Philosophy's state of grace is knowledge about the world and the cabal is our own ignorance, which can easily be surmounted through discipline and discussion. Philosophy is the individualist's answer to the delusions of victimhood.

5. People are lazy

The majority of so-called cover-ups are examples of people being lazy. Either that or bad at their job. Why has no one looked into a certain discrepancy between Khufu's pyramid and the Sphinx? Because most people, even archaeologists, only care about going home and watching *Game of Thrones*.

I could create a conspiracy about how psychologists are deliberately making the field appear to be more complex so they can get their inane research funded and convince people to be in therapy the rest of their lives. But the truth is psychologists have a sweet deal of grants and tenure set up, so no one cares to make a big move. As such, anyone who sticks his neck out to make the field easier to understand would be worth listening to.

Conclusion

This isn't to say there are no conspiracies (e.g., the Lincoln assassination, MK Ultra, the Nayirah testimony). And let's not forget the Bohemian Grove—something's going on there. Those guys may not be wagging the dog, but if your ceremonies are reminiscent of the Mountain of Power scene from *Conan the Barbarian*, then I doubt it's innocent (see, there's my anxiety working its magic).

So yes, conspiracies do exist, they have always existed, and there's a definite payoff for carrying them out, but before we ruin Thanksgiving with our latest rant about George Soros, let's manage our anxiety in a healthy way. Then we can afford the luxury of entertaining stories of cabals and cover-ups. Though, if we're in a good place psychologically, we'll be able to see the conspiracies as the silly fabrications most of them are.

Fact: Millennial Women Cheat More Than Millennial Men

January 23, 2018 | by Ted Deveer | Link | Original Link

The science is in, according to the gold standard of social science research, the General Social Survey:

> When it comes to cheating, you may not think it happens that often, but according to new findings by the Institute for Family Studies, based on data was from the General Social Survey, Millennial women have higher rates of infidelity. The survey found that 11 percent of married women from 18 to 29 state they are guilty of infidelity versus 10 percent of married men.

You read that right: now, the mainstream cliche has reversed itself, officially. Women are the cheaters, not the men, at least among American millennials.

What could have happened to have changed this pattern? A few theories.

1. Feminism

Feminism, at its heart, is about empowering female sexuality while limiting male sexuality (as our friend Heartiste argues constantly). With the feminist mindset dominating the U.S. of A, it thus makes sense that women feel increasingly sexually empowered, enough so that it rolls over into all aspects of life, including marriage.

2. The Decline Of Traditional Patriarchal Values

This is a corollary to feminism. Traditionally, men would romp around while women stayed home and took care of the kids, often turning a blind eye to their man's romping. But when men and women romp around equally, of course it makes sense that the women's cheating would skyrocket.

3. Women Are More Obsessed With Sex Than Men

The third culprit, related to the previous ones, is a fact underappreciated by those who haven't swallowed the red or black pills: women are the sexually voracious sex—probably more so then men, on average.

Most men are content and fulfilled with having a mission, a calling, or a passion in life and obsessing deeply over it. But women don't have this drive, and their primary fixation is sex and whether men find them attractive. Just think about the stereotypes: how they dress (to look sexy), what they talk about (men, relationships, sex), what they do with their time (hair dressers, manicures etc. to look good).

Traditional society previously kept females' sexual nature under wraps, but as these traditions are shed, the sexual flower blossoms.

But the news gets more interesting. According to the same study, it's not only millennial women who cheat more but also… Democrats.

> This may be a given due to their overall more liberal natures, but Democrats were more likely to cheat than Republicans… but not by much: 18 percent versus 14 percent, respectively.

This fact is probably a self-evident truism: those with a deep belief that certain things are morally evil (and they will go to hell if they commit them) are both much more likely to be Republican and to not cheat. This is as close to a tautology as you can get here!

According to this study, other groups more likely to cheat are:

- Those who grew up in broken homes, with only one parent.
- Those who don't regularly to go church.
- Those who started college but didn't finish it it.

All these are consistent with the worldview that we here at *Return of Kings* advocate: science is increasingly realizing that our worldview is much more consistent with reality than the mainstream media worldview.

Growing up in a broken home is much more likely to make you immoral—as is not going to Church—and not finishing college is a sign of a lack of discipline, and a lack of discipline is one of the substantial underlying causes of cheating. Not cheating is hard for someone who is attractive, which is why deep self-control and internal discipline is correlated to the likelihood of not cheating.

We can't fight statistics. Taken together, what these statistics tell us is that the person most likely to cheat is a millennial woman who is a Democrat, not religious, grew up with only one parent, and started college but didn't finish it. That describes almost perfectly almost every women I've had a one-night stand or a relationship that ended badly with. The lesson in here is that to reduce your chance of being a cuckold, you should marry a women who is in as few of these categories as possible. Or better yet, in none of them.

Much more about conspiracy theories and protecting your privacy.

Read More: *3 Reasons Broken Western Women Secretly Want You To Cheat On Them*

Ted Deveer

I'm Ted, I read old books, and my interest in Stanley Kubrick has nothing, absolutely nothing, to do with my interest in conspiracy theories, not at all, no way. And I like my privacy.

What Is The Point Of Christianity?

January 23, 2018 | by Michael Witcoff | Link | Original Link

Peace and blessings to you all from our Lord, Jesus Christ.

As most ROK readers are doubtlessly aware, Christianity is the most persecuted religion in the Western world today. Criticize Islam and you will be branded a "xenophobic white supremacist." Criticize Judaism and you become an "anti-Semitic Neo-Nazi bigot." Criticize Christianity, however, and you might get yourself a nice little Hollywood movie deal. Its morality is attacked every moment of every day, by every branch of mainstream "education" and "entertainment."

Those who oppose it constantly seek to undermine and subvert its foundations… and the persecution of its followers around the world gets nothing but deafening silence from "humanitarians."

Indeed, the enemies of our civilization have succeeded in brainwashing most young people today away from even *considering* Christianity as a guiding light in their lives. Therefore, today's article is for those of you in the audience who remain open-minded enough to consider what Christianity actually *is* before you decide whether to partake of its mysteries.

What Is Christianity?

Some people will tell you that Christianity is about *morality*. Others will tell you that Christianity is about *love*, and still others will tell you that Christianity is about *Jesus*.

While these are all correct answers, I'd like to zoom out a bit today and show you the

umbrella under which all of these answers fall. Once you can start to see the bigger picture of what Christianity actually is, I believe you will begin to understand the extraordinary benefits it can offer to both you and your community.

To understand what Christianity truly is, we must begin with its view of the world—and mankind's place within it—before it was plunged into its present darkness.

This is not what God intended.

In his *prelapsarian* state—the state of the world before the Fall from Paradise—man had no need. He had no desire, no longing, no void or sense of emptiness which might cause him to "*seek answers*." There were no answers needed, because no questions were asked.

According to Scripture and patristic commentary, the *prelapsarian cosmos* contained no death. There was no decay, no sickness, no conflict, and no predation. Animals lived together in peace, and healthy food grew effortlessly for the entire kingdom of Paradise to enjoy.

Man's soul existed in perfect union with God's divine energy, which filled him to overflowing with mercy and grace. He did not want, he did not fear, and he lived in perfect dispassionate harmony with God and His natural law. This, in the Christian worldview, is the true meaning of human nature. Not some animalistic competition for dominance and riches, but perfect unity with God and each other.

What we experience on a day-to-day basis, rather than the truth of our nature, is a complete perversion of God's intended order and design for our lives. Rather than order, we experience chaos. Rather than health, we experience disease. Rather than joy, we experience conflict and the need for constant self-preservation.

In this fallen state, you seek material wealth because you feel like its lack makes you

“less than” others. You seek women and sex to fulfill raging biological urges and the need to conquer and dominate. You seek endless attainment outside of yourself to fill the void within. You take drugs to feel good, because you don’t feel good naturally. This is the difference between man as God intended and man in his present state; one is whole, and the other is empty.

God—recognizing this darkness and wanting nothing more than for us to return to perfect harmony with Him—came to us in human form in order to show us the way back. The God-man, Jesus Christ, came to show us what perfect submission and unity with God the Father looks like.

When His Resurrection defeated death by death, Jesus trampled on the gates of Hell and pulled mankind out of the tomb of the fallen world.

By following Him and seeking to be transformed into His image, we restore our *true nature* bit by bit and degree by degree. It is difficult, it can be lonesome, it requires a complete transformation of the mind and heart… and it is also the only path which produces genuine spiritual fruit in our lives.

What have all your efforts gotten you thus far? Does that girl you’re sleeping with heal the pain of a wounded heart? Does that car you’re so proud of help you sleep soundly and soberly at night? Or are you finally ready to recognize that you have built a life on shifting sand instead of solid rock?

The Power Of Christianity

Once we move away from our self-created pain into God-created harmony, our entire lives change for the better. Should you choose to follow Christ instead of the standards of the dark world around you, make no mistake: you will have to give things up.

To discover who you truly are, you must sacrifice everything you are truly not. Sometimes this entails the loss of a relationship, the end of a career path, or complete separation from your lifelong social circle.

Having been through exactly such experiences on my own journey, I can tell you this without a moment of hesitation: whatever it is you give up for God, He will grant you something better in return.

You will not know what it is or be able to see what He has in store for you, but faith in His goodness will be amply rewarded. Though you cannot see the very next step in front of you, God has already designed a full and perfect plan for your life.

The only way to materialize God's plan for your life, inevitably better than the one of your own creation, is by giving up control and allowing Him to steer the ship of your fate. By such an act of submission and faith, God will break the shackles that bind you to falsehood and illusion. He will show you who you are *not*, and guide you back to who you *are*.

Christianity, therefore, is the path back to that original state of spiritual perfection. It is a path to wholeness of mind and soul, to your many divided parts becoming One. It is the end of internal division and dissonance, and the path to harmony of heart.

This is not something you can do by your own efforts alone. Your therapist cannot fix you, your mother cannot fix you, and the knowledge of your professors can do nothing for you soul. It is only by becoming "partakers of the divine nature" (2 Peter 1:4) that we can slowly but surely be restored to true humility and balance.

Most importantly for the young seekers on *Return of Kings,* you must understand that this is *not* something that philosophy alone can do for you. Logic and reasoning are certainly important, necessary tools by which we can make better sense of our world and solve problems that need solutions.

They can even convince you that a certain ideology or standard of behavior is superior to another, for reasons ranging anywhere from idealistic to pragmatic. However, philosophy reaches a plateau that only God can break through. This is one of the reasons St. Paul warned us in Colossians 2:8:

> See to it that no one takes you captive through hollow and deceptive philosophy, which rely on human tradition and the elemental spiritual forces of this world, rather than on Christ.

He gave this instruction to the Church at Colossae specifically, among other reasons, to combat the idea that philosophy itself was the highest point a man's mind could reach. There is a flooding of divine wisdom, into the mind of man, which is only possible and knowable through God's grace. That same grace not only harmonizes the mind and heart, but it restores the soul and gives the *experience* of what it means to exist closer in our original condition: "in the image and likeness of God."

This is why terms like "culturally Christian" are meaningless. People who logically agree with the moral tenets of the faith, yet do not have the humility to fear God and accept His

Lordship, are not being restored to anything. They are simply giving lip service to Christianity for their own political reasons, and that is not enough to bring mankind back to the state in which God intended. You must empty yourself completely and allow God to fill you instead.

Therefore, Christianity is much more than a religion. It is more than being a good person, and it is more than going to Church. Christianity is the art of becoming human.

Deer Hunting Is One Of The Most Fulfilling Hobbies A Man Can Have

January 23, 2018 | by Andrew Eichorn | Link | Original Link

Deer hunting is a culture-based hobby. It is ideally introduced at a young age to the lucky few whose family either grew up in or currently reside in the rural parts of the United States. It teaches you hard work, following through with a plan, respecting life and death, understanding masculine activities, competing against yourself to achieve your highest capabilities, and the hunter-gatherer mentality.

Around the ages of seven to thirteen, one is usually introduced to deer camp, shooting, and the world of hunting large deer. Prospective hunters are brought into a culture dominated by the yearly event of men leaving their wives for a week or two in order to drive into the middle of nowhere, sit around a camp fire, drink beer and whiskey, discuss weapon choices for killing deer, play poker, and generally just shoot the shit with like-minded family and friends.

The difference between this and a social club is that this phenomenon is centered upon the hope that you will have a successful hunt and return home to a wife that cooks your game and delights in the fact that her husband is one of the select few who can show her that he is capable and willing to provide for her and his family in the simplest form.

Why You Should Learn To Hunt Deer

In a hunter’s mind, there is nothing sexier than a woman who can cook his game efficiently and finds happiness in feeding her family with the healthiest form of meat currently available in the United States. It is a truly amazing thing that represents a family’s ability to respect traditional roles and a feeling of security that they can survive in a non-contemporary society if need be. Deer hunting is the closest a modern man can get to experiencing the hunter-gatherer lifestyle.

I remember my first time at deer camp at the age of fifteen. My grandfather asked me if I wanted to go with my uncles, cousins, and him. I enthusiastically accepted and looked forward to it all summer long. I remember laying out all of my hunting gear and preparing the 30-30 Marlin hunting rifle handed down to me by my father. During these countless hours, I learned my first lessons in deer hunting; taking the initiative, setting a goal, and seeing it all the way through.

When I arrived at camp, I was delighted to see my family. I imagine I had a gleam in my eye that they could relate to when they were my age. I was immediately put to work chopping firewood my first afternoon. This was an important moment and symbolized that I was not only expected to carry my own weight, but also stated that they considered me one of them and not just some young boy who needed to be cradled.

We sat around the fire, cooked baked potatoes, and ate steak. In the evenings, we played poker with a sack of quarters while all of us competed for the coveted fifty-cent piece. When we arose in the morning in the cold and dark, I drank my first cup of coffee with a smile, looked out into the woods, and imagined the record bucks that we would all have hanging from the camp pole.

Although that didn’t happen for me that year, the actual result of being successful my first year at camp really didn’t make a difference. I came home from that trip forever

hooked on deer hunting and a solid appreciation for my fellow man. It was a right of passage that had to be earned, and it was one of the greatest moments in my life.

Masculinity And Deer Hunting

As time has gone on, I have been extremely lucky to have successfully hunted and killed multiple deer—as well as many trophy bucks—over the course of my life. It has become an obsession of mine and I wouldn't trade it for the world. As I became a more experienced hunter, I have leased many different properties and hunted family land. I have prepared properties for deer by running farm machinery, planting crops, and reaped what I have sown with my hard work.

Every year, I look forward to hunting season and proving my skills to myself and other hunters within my hunting world.

In conclusion, deer hunting is a hobby that every man should explore. Almost every state within the U.S. has available hunting land, and with a little research, you should easily be able to go out and hunt. If this article draws any interest, I will follow up with specifics on how to kill deer successfully without the help of anyone.

What It Was Like Weighing 350 Pounds

January 24, 2018 | by Nathan Ferguson | Link | Original Link

It’s a no brainer that being obese versus being physically fit and attractive is a no-contest comparison. Speaking from experience on both sides, it’s one thing to hear it and it’s another thing to step out of one world and into another.

The people around you will change their opinion of you and see you as a different person, thus altering your environment and opportunities, for better and for worse.

I came from a very broken home which has caused me to be massively overweight throughout my junior and high school career, weighing over 350 pounds. You could imagine how damaged I was mentally and I had no relationships with the opposite sex or my peers.

It did not matter how much game and effort I could put into girls; the best I could ever hope to accomplish were other ham beasts like myself. This was a problem that was preventing me from living life.

The Plight Of Being Obese

I spent the most of my entire high school career in a shell and satisfied myself with video games, chat rooms, and pornography, until finally, in the beginning of my senior year, I had a mental breakdown that I desperately needed.

The only friends I had to speak of made fun of me, I had no relationships with girls, and I didn't care enough to earn good grades. The only time I would get attention from people was by acting out and doing Chris Farley impressions in class (although he was a better dancer).

Obesity infects the mind; you will avoid eye contact, have absolutely no ambition, and contemplate suicide. People will only be nice to you out of pity and will not show you any respect. And how can you blame them? It is the manifestation of the slave mentality that Nietzsche has spoken about. Look at all the fat feminists and obese beta males orbiting them.

The only way to solve this problem is to have a mental breakdown and to blame yourself. The weight is on you, even if your single mother did nothing about the problem. Blaming others never solved anything and you revoke the power to fix the issue.

The Day-To-Day Problems Of Obesity

Gaining weight isn't a sudden thing. As days roll into months and years, you don't really see the immediate effects of the problem building up. It is really only when you get to an alarming point that the excess fat begins to noticeably tax your body.

Simple things like going up the stairs and walking are now difficult. When you are only twenty pounds overweight, it's not nearly as noticeable as when you're carrying 50 or 60 pounds. You could imagine what the difficulty is like carrying an extra 100 to 150 pounds.

Being super overweight caused me to grow up as a shut-in, as I mentioned earlier. The biggest problem with being obese is how it affected my body language when I spoke to people. I had bad posture, spoke softly, and stared at the floor to avoid eye contact.

Whenever I did something wrong, I would never own up to it. Instead I would lie and shift

blame onto something else.

Obesity did more than damage my health or appearance: it was corrosive and toxic to my character. And the foods I was eating made me think very cloudy and zombie-like.

Things like knee and back pain are a permanent reality when you are that size. When I see obese people using those shopping scooters, I can understand why they would use them, even though I didn't. Your body is in constant pain when you're obese, especially when you're older.

Now when I see the people who use those scooters to fill their basket with pizza and ice cream, I have no empathy for them when they prematurely die of a heart attack for not acting on the red flags (such as needing a motorized scooter to get around).

The Mental Process Of Changing

Sooner or later, something has to give. If you listen to some people who lost a lot of weight, they speak about suicidal thoughts running through their mind. This is something that I can absolutely confirm. Life eventually becomes so unbearable that you arrive at a crossroads.

Any roadblock that is put in front of you, such as how a particular diet may be dangerous, or working out for too long may kill you because your body is out of shape, all of it goes out the window because you are already dead on the inside.

Loading...

At that point, you have nothing to lose, so you might as well risk everything. That is where you suddenly find the will to power. It is a completely different state of mind, very dark and cornered.

Either end the pain right now, continue being obese and die in ten years, or lose weight.

That is reality and those are the only options.

Why Fat Shaming Is Good

Not to get too far off topic, but this is something that needed to be addressed, coming from a guy who used to be obese and has had more than a fair share of fat shaming. Being fat-shamed absolutely helped me, personally. When you have a huge problem, you tend to tune it out and to try and forget about it, but the people who fat-shamed me didn't let me escape reality.

Being constantly told I was fat did not let me become comfortable with being overweight. Fat-shaming is having somebody get in your face and point their finger right at you and say, "You have a problem." And as soon as I dropped the weight, guess what happened? No more fat-shaming. The people who did all the fat-shaming had nothing else to say but congratulations.

Even though some fat-shaming comments can be nefarious and has somewhat of a bullying tone to them, it simply does not matter. The more it cuts into you, the more you understand this problem is eating at you. On the flip side, I have had people (mostly older females) who came at me in a more concerned and compassionate tone. It never worked.

Being nice and understanding is just a way to dance around the seriousness of the problem. It does not put you in that dark mental process that I mentioned earlier.

When you come down hard on a person for their problems, and they have a panicked look on their face, that is what you want. You want to put them in a position where it is do or die.

After The Weight Loss

Not having a lot of friends or a girlfriend granted me something valuable: time. I spent countless hours reading forums, asking people in chat rooms, watching YouTube videos

on what to do. I used my body to test out over countless diets, from intermittent fasting, keto diet, carb cycling, etc.

I lost my first 60 pounds with just nutrition alone and counting calories until I hit a plateau. I had to up my game and started to run up and down my home stairs for 30-45 minutes every day. After a year, I shrunk down to 220 pounds. Everybody looked at me differently. The box that they put me in was no longer holding up.

Not only was I more physically capable of doing things, my mental acuity was also growing and I desired more out of my body, but I wasn't sure on what to do or had a vision in mind.

I decided to go out to the movie theater by myself to watch the new *Captain America* (my favorite Marvel character) film. The scene at which he stepped out the chamber and was jacked blew me away. When one of the female characters went up and tried to touch his muscular chest, my vision became clear. I want that.

And with that, as a broke college student, my grandparents gave me enough money for a year at my local YMCA. I began reading bodybuilding forums, articles, tried different workout routines to grow my muscles. The more muscle tissue I packed on, the more fat burnt off.

Months went by and women were giving me more attention. I was no longer self-conscious about my weight and started hitting clubs and parties. Eventually, I lost my virginity to some random girl at a frat party (no shame, no game).

Before

After

If there is one take-home message I want to give out, it is that amazing things take time and hard work does pay off. It’s a cliche, but it’s true. Defer your gratification.

Democrats Care More About Illegal Immigrants Than American Citizens

January 24, 2018 | by Louis Stuart | Link | Original Link

Forty-three Democrats in the United States Senate decided to shut the government down last week. In doing so, they've made a choice that is open and clear for all to see: they prefer illegal immigrants over American citizens. They're not hiding it anymore. Even ten years ago, this would have been inconceivable. Today, it's reality.

Democrats and their leftist base prefer illegal immigrants to paying America's soldiers. They prefer illegal immigrants to the jobs and 401ks of American citizens. They'd prefer to see a market selloff and for Americans to lose their wealth if it's required to protect illegal immigrants.

They want to see illegal immigration continue rather than securing the borders, which means they'd also prefer to see drugs smuggled in to stopping them.

Democrats even put themselves in a terrible position because the Children's Health Insurance Program they claim to love was in the continuing resolution, but they chose to shut the government down anyway.

The details of these things don't matter. The story does. Nobody's paying attention to the specific situation of the DACA recipients or what parts of the government will or won't get funded in the shutdown. The story is that Democrats and their leftist base care more about illegal immigrants than Americans.

An advertisement of their priorities. They're dumb (or brazen) enough to put it as their headline.

Any persuader worth his salt in opposition to the leftist peacocks should welcome this as a gift from heaven. It's a golden opportunity heading into 2018's midterms. Assuming the Republican Party has a grasp on any basics of persuasion (admittedly, this is always a dicey proposition), this should be used as a prime weapon to make the November elections a massacre.

The Priorities Of The Left

All the same, this is another step in the left's Year Zero project. In openly and actively declaring themselves on the side of illegal immigrants over American citizens, they've also taken a giant step in committing themselves to overturning American society and replacing it with an artificial one built on nothing. Since they've now committed themselves to the priority of illegal immigrants over American citizens, we can expect this kind of commitment to continue and accelerate.

Another core principle of persuasion is that once you can get someone to agree, they'll be more likely to continue agreeing. This shutdown might well be a short one, but since the Democratic Party and their insane base now agrees with it, they'll be more likely to agree to even more brazen acts in the very near future.

Loading…

The most powerful Democrat in the U.S. government cries for illegal aliens.

We’re not far removed from a government that is openly acting not in the interests of the American people, but for illegal aliens and whatever other identity group the left sees fit to prioritize at any time. The shutdown and California’s recent revival of the nullification theory (again in favor of illegal immigrants) are indicative of this.

The left is very close to openly abandoning the theory of representative government. For a long time, this has been *de facto* the case, as both parties care more about their puppetmasters than the American people, but never has there been such an open and brazen display of it. Should they regain power any time soon, catastrophe awaits.

It isn’t entirely without merit to say that a post-Trump leftist government would look like a foreign occupation. Illegal foreigners are now clearly above the American people in terms of importance.

The Future Of America

A vision of the future the left wants.

It didn't take long for my preview of 2018 to come to fruition. My outlook on the year was that it would be a dark and golden age. Despite the good news rolling in, leftists are still in such hysteria and denial that they simply won't take part in the good times. They'll refuse because their dogmatic view of the world tells them that society is tainted and they need to purify it.

Because of this, they'll actively work against any good times struggling to emerge, and the sum total of their behaviors could create a dark age by a self-fulfilling prophecy. The shutdown is exhibit A and we're only getting started. It probably won't last long but the most important thing is that the first plank of its kind has been hammered into the ground. To avoid a dark age, the left must be prevented from taking power at all costs.

In the 1850s, America looked like two nations competing for the same space. In the 2010s, it's looked more and more like that with each passing year. A government shutdown over such an issue as illegal immigration is unthinkable in a united country that, while disagreements exist, shares a more or less common interest and outlook. In one with different identity groups with no common interest, however, the story is different.

Instead of doing everything to counter the latter possibility, the Democratic Party and their leftist base welcomes it. They don't care about America or its people, and that point has now been made unambiguously clear. Act accordingly.

Why Men Should Take Up Cross Body Style Salsa Dancing

January 24, 2018 | by Jeremy Towner | Link | Original Link

Salsa dancing has seen a huge rise in popularity in the last decade and there are always a shortage of men in classes. Almost all major cities in the West offer salsa classes. I will give you my personal advice from the last decade dancing on how to sleep with female dancers and some salsa dancing tips to help you enjoy the dance more along your journey.

I dance the most modern style “cross body” which is danced in a straight line in a forward/backward motion, much influenced by the swing and mambo dances. I add in some crazy hand tosses and flicks to make it as convoluted as I possibly can. There is more skill involved in cross body compared to other styles and there are weekly salsa congress events in every major capital city worldwide attracting high-tier pussy.

There must be an emotional connection with your body language between you and your partner especially if you are to perform intricate turn patterns without scaring away your partner. As I experienced in my first two years of dancing was that I had all the moves but I never gave my partner eye contact or smiled. You can be the best dancer in the room but if you have not built comfort with her during the dance your efforts will be in vain.

I can also confirm you do NOT have to be the best dancer in the room to score with women. A beginner salsa female dancer will be much more impressed with some basic moves than performing your best turn patterns. As long as you’re smiling you can even step on her toes or bump into her gently and you’ll get away with it!

After the salsa lessons, the lighting is dimmed for the social dancing creating that sexual mood. Girls will wait to be asked to dance and those that are left behind are usually the fat or inexperienced dancers. Don’t ask a girl to dance. Simply stick out one hand, do a little up and down arm shake with both hands, smile, give her eye contact and she will take your hand.

Maximizing your chances of getting laid

There are many thirsty males seeking sexual relations so you need to stand out. I recommend forming a small salsa social circle, going from one girl to the next in your group when you go for drinks or dinners after salsa.

Some push/pull tips for pursuing girls on the dance floor when the interaction is going well is to say, “You are an intriguing and really interesting follower but it’s a little out of the ordinary your style. I like that it’s different but I haven’t yet decided if it’s strange or not. I think we should practice again soon.” Give her a smile and exchange numbers.

I advice against number closing the girl if she is unwilling to stay with you for a minimum of three consecutive dances in a row. Don’t ask her to dance the next song that is playing, just continue dancing with her and if she’s not interested she will leave you for the next chump.

There is time to briefly talk during dancing. You may well get her number after only one song and a quick chat but there’s a chance she will flake as there wasn’t enough rapport and comfort built.

Regarding girls who have already danced two consecutive songs with you and are contemplating staying for another is to ask them casually what it is that they want to improve on with their style. Preferably the man should learn some basic female following techniques or salsa dips/lifts that the ladies can appreciate you teaching them as they enjoy a new challenge.

Loading...

Girls will be less receptive to sex in the fancy, posher dance venues in hotels and dance halls unless they are drunk as they are keen to keep their reputation intact, unlike in salsa nightclub venues where the environment is louder and darker and they have nights open daily aimed at all levels of ability. In that case, it’s much easier to find girls who are not actually dancers and are there for the first time looking for a fun night out.

It’s possible to make out with a beginner dancer especially during Bachata or Kizomba

songs (the most sexual, up-close dance styles—perfect for your boner!). I recommend dancing with two beginner girls in salsa bars at the same time on occasions, building rapport with both. If she has brought a female friend along with her, feed her to a beta male. This will minimize the odds of her friend dragging your target away as you have built some rapport with the friend and you might not get cockblocked when you try to isolate your girl outdoors for a breath of fresh air or to another bar.

Why type of girls to look out for

Don't get discouraged if the girl isn't enjoying dancing with you. Choose an Asian dancer to partner up with as they are more submissive and will often let you practice with them for long periods of time, refraining from getting angry if you repeat moves. Not to mention they are usually the best dancers as it is impossible to have a good follower unless she is of thin-ish build unlike land whales whom simply can't be spun well if you're trying to practice double spins.

You will meet intermediate female dancers telling you that you have to lead this way and you're doing it all wrong. Often they're talking rubbish as they cant lead and can only follow. I've had a few girls in the past leave me during the middle of a song because I wasn't smiling and they had no idea how to follow my complicated lead.

How to get better at salsa quickly

The best way to see your improvement on the dance floor is to get someone to film you and you can analyse your mistakes in comparison to good dancers on YouTube. Many dancers spend one-third of the duration of the dance doing "shines." This means fancy footwork and showing off to your partner. Tips for doing shines is isolating your body

whereby moving one foot or part of your body whilst the other part stays still, much like in hip hop and popping dance style. Learning all styles of dances will help your salsa greatly.

I suggest avoiding a feminine dance style and keep your masculinity in check. I use my own hip hop/funky style which I infuse into the dance. I recommend doing shines as little as possible, only 10% of each song. I essentially treat my partner like a rag doll, tying her up into all sorts of complicated knots.

There isn't anything more fun than having complete control over a sweaty women on the dance floor who is forced to act as you lead her, watching her do the occasional slut drop. I purposefully do moves that spark some attraction with her. The love cuddle (wrapping her up fully), head roll (both your heads roll together touching), and ass spin (you spin opposite ways, bumping her ass as you spin) are my favorites.

Salsa is also social justice hell so you'll have to be extra careful what you say.

Conclusion

It isn't difficult to reach an advanced level of salsa if done once a week for two years or less depending on how quickly you pick it up. It's only muscle memory. It's very fun and addictive and you can make up your own variation of moves once you have reached a decent level. Most students skip the social dancing and go home which is detrimental to their improvement as this is the best time to practice. Stick at it and the rewards will pay off on the dance floor and in the bedroom. Happy dancing folks.

How To Use Social Engineering To Get What You Want And Become A Better Leader

January 24, 2018 | by James Kennedy | Link | Original Link

Social Engineering is defined as an act of psychological manipulation of a human being. Generally, it is using “soft skills” to get others to do or give you what you want. This can vary from confidential personal information, such as passwords or banking information, to something as mundane (yet savoury) as a girl’s cellphone number.

Recently, it has caught on as a skill now recognized as useful yet nefarious, particularly in the realm of information & digital security. A whole realm of hackers have begun developing this skill and using it, along with their technical expertise, to access others’ information or systems. As opposed to simply attacking systems directly with software, social engineering allows these people to achieve their goals through the use of leading questions and other techniques such as phishing or baiting.

Although I don’t condone the action of hackers and their iniquitous ways that have led to events such as *The Fappening* or the 2011 PlayStation Network Outage, I do find value in some of the techniques that can be used beneficially for people in their daily lives to simply achieve a happier state of mind, and even make them better, more capable leaders.

What Does Social Engineering Entail?

Although various different techniques exist, I'll only cover a few that can be worked on through daily interactions with others. These are the ones I believe can be useful to any person in a plethora of social situations. Please note that some of these techniques can be considered malicious and don't always involve honesty. Again, depending on how you use them, you may actually be doing something for the greater good. Reasoning is in the eye of the user.

Misrepresentation

Misrepresentation in the sense of social engineering is the use of a false or misleading account to further one's own objective. This technique essentially involves producing a certain reason for your opinion or need, yet having a hidden agenda to work towards.

My major example of this involves a time I recently required certain items from the quartermaster (QM) on base for an overseas operation. The QM is notorious for having lengthy wait times, being understaffed, and generally providing poor service. Knowing just before the Christmas holidays that the place would be swamped upon re-opening in January, I hatched a little plan.

I called them just before the last day of work in December and asked to book an appointment for the first day back. Obviously they were unable to fit me in due to the high demand, yet I still asked for the person's name over the phone and thanked them for helping me. In the new year, I reported to the QM and found there to be an approximately three-hour wait time. I promptly reported to the side desk reserved for appointments and told them I had an appointment.

Upon verifying the schedule, they did not find my name. I then told them that "Corporal so and so" had spoken to me on the phone and told me to come in and simply pick up my kit issue, since it was only a few items anyways. I politely smiled and told them I was in no rush, despite this being the complete opposite of the truth. Within five minutes, the young corporal had all my items signed out and ready to be issued to me.

Essentially, through the use of politeness and by misrepresenting my intentions, and through the use of prior knowledge about someone who worked there, I was able to avoid the 3-hour wait and get back to work with my troops, wasting no precious time.

Loading...

Tailgaiting

Tailgaiting is simply the pursuit of legitimate access and the use of diversion to provide the illusion that you also have such access. An example of this is my friend who has been smoking since he was fourteen. Although I disagree with his personal choice, I have always been curious to how he was able to purchase cigarettes despite being underage.

He told me his technique simply involved striking up conversations with others buying cigarettes at the same time that they bought them, then partaking in conversations with the manager to divert them from his age. If prompted for his ID, he would simply respond he had forgotten it in the car and would leave, or, on some occasions, *the person he had just been talking to would vouch for his age*.

Clearly this demonstrates that through conversation, one can engage strangers and make them comfortable enough to forego regulations. By essentially distracting them through the use of humour and stories, my friend showed that you can essentially gain what you desire without the required pre-requisites.

Spear Phishing

Spear phishing is an extension of regular phishing, which essentially uses highly customized approaches towards individuals based on their traits and qualities in order to

obtain the desired goal or effect. The most common example of this is misrepresenting ones own credentials, religion, or beliefs to align with someone else's and make you more desirable in their eyes. When you do "pre-game" research on women before approaching them, if you use the information you've obtained through research, you are essentially spear phishing.

This can stretch to much larger situations, including the one above where I used a person's name that worked for the QM to essentially tailgate my way into the establishment and then misrepresent my intentions.

How This Applies To Leadership

Eisenhower is quoted as having said: "*Leadership is the art of getting someone else to do something you want done because he wants to do it*". Essentially, by motivating someone to become engaged in your cause, you are using social engineering. The techniques mentioned above may not be the most moral pieces of advice, but they are definitely tools that should be added to your arsenal as the fact remains that, in today's society, things aren't getting any easier and people aren't getting any more rational.

I encourage you to branch out from here and practice these techniques on your own time, be it in game or even at work. Social engineering can be used in any interaction with other people, be it at work, at social events, or even at home!

Use misrepresentation to motivate your subordinates through unappealing work by falsely committing to it yourself (AKA smiling during tough times). Use tailgating to approach that girl at the community centre and make her think you've met before. Jake Gyllenghaal gives us a perfect example in *Love and Other Drugs.*

At the end of the day, social engineering is what you make of it. And, while I don't condone the use of its techniques to harm others beyond repair, I do think that knowledge of it is in our best interest as leader moving forward in an amoral society of privileged, irrational people.

James is a young military professional who enlisted just a little late for this generation's real crusades. Although he isn't the next Rommel or Eisenhower, he's got a couple of tips for aspiring male leaders among a dying society of betas.

5 Appalling Beta Male Moves That Should Be Avoided At All Costs

January 25, 2018 | by William Adams | Link | Original Link

The best examples of good vs. bad decisions are often to be found among real experiences. Here are five authentic examples that showcase detrimental beta behavior that no man should ever engage in.

1. Bailing On Your Friends To Chat With A Toxic Female

A good friend of mine, a highly respectable, masculine man who leads a balanced life by

most peoples' standards, fell into a vicious cycle of questionable behavior when a histrionic yet attractive girl put her diabolic claws in his chest a number of years ago.

At that time, my friend dwelled in limbo, as he succumbed to the extent that he felt committed to the neurotic vixen, but still free to enough to travel to the U.S. with yours truly and another friend.

As we were about to have big night out in Miami, and the ambience was that of omnipresent positive vibes that were emerging from our drunken souls, he suddenly left the group after we had just picked up more cash at our crib and heading to Nikki Beach Club. He reluctantly admitted that he was about to stay home and chat with his borderline girlfriend instead of joining us.

That weak move made one wonder whether he belonged to the sub-species Betamaleicus menstruatis or Alphamaleicus testosteronis.

2. Allowing Your Girlfriend To ~~Have Multiple Fuckbuddies~~ Be In An Open Relationship

During a trip to Asia, I met a nice Mexican guy with an American passport. He was moderately successful and had a decent level of confidence, but because he was short and chubby, I would not expect him to land better than a 5 or 6 in the U.S.

Fast forward five years and he and his 5.5 hapa harlot show up and actually visit me in Sweden. That was all very nice until they proclaimed that they were in an "open relationship." Furthermore, he explained that she needed some space and that he was fine with it. Still, they were not completely letting go of each other, since they shared an apartment and were even "soulmates."

What that really meant, of course, was that she slept around with more good-looking

guys while he got maybe a few 2s and 3s at best.

3. Let Your Ugly Girlfriend Drag You Around Because You Don’t Have The Balls To Let Go Of Her

My third example consists of a tall and good-looking engineer with great potential, who is glued to his ugly girlfriend as we speak. Perhaps he’s a bit nerdy and lacks optimal confidence, but it’s obvious that he’s much better-looking than his girlfriend, who has an almost deformed, flaccid fat ass, weird protruding eyes, and a massive undershot jaw. No make-up and other inauthentic measures can cure these aesthetic illnesses. She needs to lose a lot of weight and see a fucking dentist ASAP!

Loading…

Anyway, he was actually unfaithful to her and slept with one better-looking girl whom he met online. As soon as this was revealed, the fatty forgave him but decided to react accordingly. Whenever *she* decides that she/they should leave the apartment prison, he must come, even attend various “ladies’ nights,” during which he is the sole man—stripped of his masculinity—and must endure their meaningless blather for hours.

Relationships are complicated, but if a man significantly dates down and is obviously not content with the situation, he must take proper action and let go of the obese obstacle that is hindering him from reaching his true potential.

4. Lose Frame Step-By-Step And Then Make Everything Even Worse By Calling And Sending Pathetic Emails

He whom is not without beta sin is allowed to throw stones. I have to admit that one of the most feeble-minded moves that I have come across are reflected upon me.

I was partially red pilled for ten years ago and made a splendid series of decisions when I met my first true love: got her, kept her, and eventually dumped her at the right moment.

The problem occurred later on, when I lost frame and cried, called, and continued a path of further time-consuming, counterproductive behavior long after the actual break-up. I even started to send pathetic emails to her, as she would ignore my phone calls, the content of which screamed self-assertive juvenile weakness.

In the end, I mainly lost some time and energy by doing this, but it was a prime example of weak behavior and something to never repeat again.

5. Drive 300 Miles To Meet Your Chubby Girlfriend—Who Is Obviously Cheating On You—And Then Repeat The Fatal Mistake One More Time

Fortunately, there is at least one person who outmatches me in this regard. This guy was in a LTR with a chubby chick, and they had a long-distance thing going on while attending university at two separate locations.

When he drove 300 miles to meet her in Gothenburg, Sweden, he found out that his beloved one was in her room with another guy standing in the entrance. Rather than to at least try to explain, she suggested that they should not see each other at this time, hence he left and drove away, as any sane man would do. That situation must have been beyond awkward, leading to major visceral scares.

Be that as it may, while he was driving and was halfway from Gothenburg, the bitch called him and said that *she* has changed her mind. Thus the lesser beta quickly turned around and drove all the way back to his super-sized siren, who was calling for him to worship at her dominance shrine.

While these beta actions aren't all equally bad, they must be avoided like the plague by any sane man.

Bitcoin Proves That The “Glass Ceiling” Keeping Women Down Is A Myth

January 25, 2018 | by Ian Bailey | Link | Original Link

Bitcoin is further evidence that the “glass ceiling,” the idea that women are kept from reaching the ranks in corporations and in financial success because of a nebulous “patriarchy,” is nonsense.

Economists have disproved the glass ceiling on more than one occasion in the past, so the more well-read will not be shocked by this. Yet, the existence of the glass ceiling has remained a major talking point for feminists. The silence of feminists during the rise of Bitcoin has been deafening.

Bitcoin is an interesting case study because it is modern and doesn’t have the excuses that you hear when the glass ceiling argument breaks out. There is no Bitcoin establishment or “old boys’ club,” because Bitcoin has no establishment. Bitcoin is hardly established, and there is no one central authority.

Feminists claim that “institutions have always had biases” and “it’s a man’s game,” but Bitcoin didn’t come with any biases. It didn’t come with anything. It was nothing ten years ago, and its meteoric growth is well-known.

Bitcoin was created in 2009, a time where women had established themselves in various industries, most notably tech (see: Meg Whitman, Sheryl Sandberg). Nine years later, only three percent (at most) of Bitcoin use (suggested through Bitcoin community engagement) is by women.

Is this the patriarchy keeping women from investing? No. There is nothing that stops

women from investing in Bitcoin. Women don't even need to go to banks to introduce an intermediary which could discriminate against them.

So why aren't more women investing in Bitcoin? There are a number of reasons for this.

1. Bitcoin is Boring

There are no emotions involved in cryptocurrency investing. Women are more likely to get involved in areas that stir their emotions, from the social sciences to humanitarian work to political rallies.

Bitcoin is mathematical. It was created with a white paper and some computer programming. Since more women take up studies in the arts or humanities than math, it is more difficult to understand the concept and takes more work.

Also, because women prefer soft subjects to hard ones, women end up in jobs related to the arts and humanities versus the hard sciences. They will be more likely surrounded by men and mostly women that also did not study math and computer science and will not be interested in—or understand—Bitcoin.

In addition, Bitcoin isn't tangible. You can't feel it in your hands, so you cannot wave it around to boost or lower your status without hopping on a male-centric Reddit page (HODL!!). This reduces the emotional connection to it because there is no physical *thing* to attach a feeling to. Where money can be a sign of prosperity or options, the numbers in a bit wallet are less tangible.

Loading…

2. There Is A Lot Of Risk

Women generally value security and strength, which we have seen in relationship dynamics and the number of careers chosen as opposed to entrepreneurs. Men are more willing to take chances.

One of Bitcoin's tenets is that it is less risky than fiat dollars because it is not subject to inflation and to crumbling governments, so it should be more stable. However, Bitcoin is still young and has a wildly fluctuating value. It is this perceived value that people see as risky, not the idea. It is these wild fluctuations in value that appeal to men.

Bitcoin is also a long-term investment. Bitcoin believers believe the cryptocurrency will be more durable than fiat and will be a superior currency. Women are much more likely to spend and distribute wealth than to build it through investing.

3. Bitcoin Is Competitive

Men eat what we kill. We evolved to eat the animals we hunted, and we still do that in the modern economy. In a tribal setting, the man that hunted the most for his tribe was rewarded with more power and more women to bang. We evolved to be competitive and to fight for the top spot.

These days, men are more likely to participate in sports and more likely to try new things to get ahead (see here). Bitcoin is competitive with other cryptocurrencies as people (men) race to market and grow their currency of choice. Bitcoin is also competitive as a store of wealth. The more men own, the more men can use our primal brains to associate with power and sex.

These are the reasons why only three percent of Bitcoin users—a completely decentralized, open world without bias—are women. These are the same reasons that men make more money than women in the workplace. It isn't the patriarchy. It's the evolutionary and behavioral differences in men and women that decide the numbers.

Men are competitive, find freedom in long-term wealth, and are more excited about new ideas and a new, selfish way to increase wealth. At least, more than women.

happier if they were to partake in biblical-traditional relationships.

Who Was The First Man To Be Red Pilled?

January 25, 2018 | by Ted Deveer | Link | Original Link

Adam, the first man, was also the first blue pilled man to have been red pilled. To examine this hypothesis, lets re-read the very short story of Adam and Eve, analyzing it line by line using the classic NIV translation—and along the way, each sentence of this brief, ancient story will reveal a bunch of other red pill wisdom.

This story is precisely Genesis 3. It starts:

> 1 Now the serpent was more crafty than any of the wild animals the Lord God had made. He said to the woman, "Did God really say, 'You must not eat from any tree in the garden'?"

We all know the snake tempted Eve to eat from the forbidden tree, but what's interesting here is that he does so by planting doubt about an eternal truth. This is lesson #1 from this story: the classic strategy of bad people is to go to well-meaning, average people, and start planting doubts about what is true or false, trying to get them to doubt the wisdom of the world they were born into. This is precisely the core weapon of SJWs: they go to average people and plant seeds of doubt about your instincts about what is right or wrong.

> 2 The woman said to the serpent, "We may eat fruit from the trees in the garden,
> 3 but God did say, 'You must not eat fruit from the tree that is in the middle of the garden, and you must not touch it, or you will die.'"

Earlier in Genesis, God had told Adam not to eat from the tree, but he never told him not to touch it (Genesis 2:17). Lesson #2: Women exaggerate.

> 4 "You will not certainly die," the serpent said to the woman. 5 "For God knows that when you eat from it your eyes will be opened, and you will be like God,

> knowing good and evil."

This line is important for two reasons. First, the snake here—the embodiment of evil—is actually the one telling the truth. God had earlier told Adam that if he eats from the tree, he will "certainly die" (Genesis 2:17), but the snake says he won't. And, to skip to the end of the story (I'm guessing you know the ending already?), Adam and Eve are banished from the garden but they're not killed. So, God lied (or changed his mind), and the snake was right.

Second, Lesson #3 is that sometimes, evil people are actually telling the truth. And Lesson #4 is the deep utility of the "limited hangouts." Limited hangouts (to use the CIA term) are powerful weapons: a bad person (the snake or the CIA) reveals a small amount of true information, but not all of it, in order to get their target to engage in the bad action.

It goes on:

> 6 When the woman saw that the fruit of the tree was good for food and pleasing to the eye, and also desirable for gaining wisdom, she took some and ate it. She also gave some to her husband, who was with her, and he ate it. 7 Then the eyes of both of them were opened, and they realized they were naked; so they sewed fig leaves together and made coverings for themselves.

So, Adam knows there's one law he shouldn't break, his wife asks him to break it, and he does. That's the definition of being blue pill. The first man is also the first blue pilled man.

But this tree they ate from, earlier in Genesis (2:9) is referred to as "the tree of knowledge of good and evil" and the snake above had made the same comment. Lesson #5: only through doing what is forbidden, breaking the rules, will you be able to learn why wisdom says that X is good and Y is bad. This is a metaphor for the pickup universe morphing into the dissident right: we had to go through the rule-breaking phase (doing what we can to pick up women) in order to learn what is good and what is evil.

But there's another lesson in this line, Lesson #6: as soon as he could see the difference between good and evil, what was the first thing Adam realized? He's naked. That's a

great metaphor for wisdom: as we learn the subtle way the world works, the first thing we learn is that–although we thought we knew a lot, we really know nothing. That we're intellectually naked.

> 8 Then the man and his wife heard the sound of the Lord God as he was walking in the garden in the cool of the day, and they hid from the Lord God among the trees of the garden. 9 But the Lord God called to the man, "Where are you?"
>
> 10 He answered, "I heard you in the garden, and I was afraid because I was naked; so I hid."

So, God comes looking for Adam, and Adam, having realized he was naked, went into hiding. This is the first example of fear in the bible, and also Lesson #7: the first fear, the deepest fear, the fear before all others isn't a fear of anything external to you—but a fear of yourself because of your own ignorance.

> 11 And he said, "Who told you that you were naked? Have you eaten from the tree that I commanded you not to eat from?"
>
> 12 The man said, "The woman you put here with me—she gave me some fruit from the tree, and I ate it."
>
> Loading…

Finally, at Genesis 3:12 Adam takes the first red pill in history. God realizes that Adam had eaten from the forbidden tree and asks him who gave it to him, and *he doesn't white night the woman*. Blue Pill Adam would have been the white night, taking the fall for her. But instead, he simultaneously blames her—and calls out God for being an asshole to him for setting him up for the fall ("you put [her] here with me"). He started standing up for himself. The first man in the record of humankind was bluepilled… and then took the red pill as well.

> 13 Then the Lord God said to the woman, "What is this you have done?"

> The woman said, “The serpent deceived me, and I ate.”

To the woman’s credit, she’s admits responsibility. On the other hand, Eve comes off a bit like the apocryphal quote attributed to Churchill: “Americans can always be counted on to do the right thing… after they have exhausted all other possibilities.” That’s Lesson #8: woman can be counted on to do the right thing, after having tried all other options.

> 14 So the Lord God said to the serpent, “Because you have done this,
>
> “Cursed are you above all livestock
> and all wild animals!
> You will crawl on your belly
> and you will eat dust
> all the days of your life.
> 15 And I will put enmity
> between you and the woman,
> and between your offspring and hers;
> he will crush your head,
> and you will strike his heel.”

The snake, the first evil creature, is punished by having to crawl, eat dust, and have his children brutally murdered. This leads to Lesson #9: the worst punishment isn’t death—it’s unclear if death is even a punishment—but to have to be on your knees, low down, bending, submitting to someone else. Death is preferable to a life where you need to slither. And Lesson #10, almost equal to condemning someone to a life of submission is a life of eating shit (“dust”) in the exact words here. A life without basic, physical pleasures like good food is a life worse than death. And Lesson #11, the one other punishment greater than death is to see your children suffer before your eyes. Any parent will agree to that.

> 16 To the woman he said,

> “I will make your pains in childbearing very severe;
> with painful labor you will give birth to children.
> Your desire will be for your husband,
> and he will rule over you.”

Woman’s punishment is pain in childbirth and… the desire for her man to rule over her. This is Lesson #12 and comes to the heart of red pill wisdom: women WANT her man to dominate and rule over her. Women wanting to submit to her man wasn’t only common knowledge for the thousands of years of recorded history pre-feminism, but the Bible opens with a story that gives an origin for this behavior.

> 17 To Adam he said, “Because you listened to your wife and ate fruit from the tree about which I commanded you, ‘You must not eat from it,’
>
> “Cursed is the ground because of you;
> through painful toil you will eat food from it
> all the days of your life.
> 18 It will produce thorns and thistles for you,
> and you will eat the plants of the field.
> 19 By the sweat of your brow
> you will eat your food
> until you return to the ground,
> since from it you were taken;
> for dust you are
> and to dust you will return.”

This verse not only includes one of the most beautiful, powerful, and eternal passages of

recorded literature ("for dust you are and to dust you will return") reminding us of the brevity of life, but it also gives man his basic commandment: he has to work, and his work will be painful. And this is Lesson #13: men have to sweat and work to survive, and it will be painful. There's no way around it. So man has two options: to accept our fate, and turn our hard work into meaning, or find meaning elsewhere.

> 20 Adam[l] named his wife Eve,[m] because she would become the mother of all the living.
>
> 21 The Lord God made garments of skin for Adam and his wife and clothed them. 22 And the Lord God said, "The man has now become like one of us, knowing good and evil. He must not be allowed to reach out his hand and take also from the tree of life and eat, and live forever." 23 So the Lord God banished him from the Garden of Eden to work the ground from which he had been taken. 24 After he drove the man out, he placed on the east side of the Garden of Eden cherubim and a flaming sword flashing back and forth to guard the way to the tree of life.

This concise story wraps up with man and woman, having been given a glimpse of what the difference is between good and bad, can no longer live in paradise. Only the goods can know the difference between good and evil. What this boils down to is Lesson #14: since knowing what is good and what is bad is something we will never be able to learn, so the best we can do is guess based on the accumulated wisdom of the ages. But we need to have the humility to remember that our ideas of what is good and bad are only approximations, that we may be wrong so we should have an open mind… and since you may be wrong, you shouldn't crucify every single person with whom you disagree. This is a lesson I wish the SJWs on Twitter understood. Maybe they ought to re-read Genesis, too.

How to Find A Ukrainian Wife If You Don’t Live Abroad

January 25, 2018 | by Kurt Enos | Link | Original Link

International dating is growing in popularity among Western men. The manosphere was instrumental in lifting the idea of dating abroad out of the hands of shady mail order bride sites and socially inept middle aged men; and placing it squarely in the hands of masculine males.

Now the topic occasionally even overflows into the mainstream consciousness. From the blogosphere to the water cooler, more and more men are hearing stories of conquest ranging from one night stands to marriage proposals. As tales of exotic, beautiful, and feminine women are shared by a few “lucky” guys, the rest often pine with curiosity, doubt, or even fantasy.

Tales of international conquest are more common then they want you to believe

International Dating Is More Than Just Pickup

There’s no shortage of resources on international pickup and flag hunting. Just about every would-be red pill blogger has a guide or course on the subject. However, information and dialogue run scant for the rare (some would say crazy) masculine man who has decided that for him marriage and family are worth the risk of investment, and who himself is willing to go overseas to find what he’s looking for.

In this post we’ll look at a simple process a man can use to meet and date women in Ukraine for the prospect of marriage or a serious relationship. In this process, efficiency and effectiveness are virtues. This approach is for the man who holds time and energy as two of the most precious commodities.

A Few Assumptions

This article also assumes a few things. The first is that you know what you want, and that is something along the lines of a beautiful women with traditional values and a feminine nature.

The second assumption is that you know how to get what you want. That is, if you met such a woman, you would know how to lead the interaction according to the principles of your masculine nature and her femininity (aka game).

The final assumption is that you have—or at least can attain—the resources for dating overseas. This includes but is not necessarily limited to time, money, willpower, etc.

Why Ukraine?

There are multiple Slavic countries with beautiful and traditional women, but Ukraine is the first choice of many men. Sure, the country has a global reputation for gorgeous

females, but the real draw are probably its cheap prices and visa-free entry for most westerners.

Neighboring Russia and Belarus are also known for their women, but in both nations the cost of living is higher and you'll have to wade through the mire of visa red tape just to get into the country.

You face red tape and visa fees if you want to get to Russian women.

A Four-Step Process

Now let's took a look at how to actually go about meeting serious Ukrainian women.

1. Get Your Tools Together

If you're looking for a serious relationship, blindly approaching women on the streets of Kiev is not very efficient, and if you have a limited time in the country, it's simply not worth the effort. The logistical techniques of international pick up have their merit, but if you're surveying a foreign country for wife material, you will have to amend ideas like pipelining and approach to suit your search.

You'll want to choose a international dating site (of which there are many). However you should only use sites that meet the following criteria: a) is a paid site, and b) allows direct contact with women on the site.

Free sites tend to be flooded with bots, scammers, and prostitutes. A quality woman might be found in a such a place, but good luck trying to find her. A reputable paid site will have less suspicious activity and helps you cut through a lot of the usual B.S. that comes with online dating (though no site is perfect).

There's an entire scam industry out there in the international dating world called Pay Per Letter (PPL). Basically these sites upload hundreds of profiles of beautiful foreign women and charge men for every message or letter they send. The catch is that the women

aren’t real and you’re probably writing to a guy named Boris.

You can easily avoid all this by only using sites that charge an upfront monthly subscription and allow you to communicate with women directly as much as you want (similar to a normal dating site).

A good dating site or two will help you pinpoint your targeting. On my first trip to Ukraine, I made the mistake of thinking I could confidently wander about the country and meet women wherever I happened to find myself. That might work if you’re in the country for an extended stay, but for a short trip it’s a bad idea (especially if you don’t speak the local language).

For the majority of my trip I ended up in a small town limited to talking only to women in and around a local language school, which in my opinion is not the best hunting ground (more on that later).

2. Validate Your Destination

Next, you want to choose which city you will travel to. This method presupposes that one city will amply fill your entire stay, but in theory you could travel to others if it suits you.

The first and most obvious choice is Kiev. It’s the largest city and hosts Ukraine’s busiest international airport. Odessa and Lviv also service international flights and are fairly easy to get to.

If you’re feeling more adventurous you might also consider cities like Kharkiv or Dnipro. Each city has its pros and cons, so do your homework and decide which one appeals to you.

Remember when we assumed you know what you want in a woman? Use some of that criteria (age range, appearance, etc) to search on your chosen dating site for eligible profiles in your given city.

You want to make sure there’s enough potential contacts to justify your travel. Major cities in Ukraine typically have no shortage of beautiful feminine women, so this typically isn’t an issue. Still, double check.

Loading…

Validate your chosen city before you buy a plane ticket.

3. Make Contact

Once you've verified your chosen city, book your travel and start contacting women. Obviously you'll want your site profile and intro messages to demonstrate your high value as a man. This is pretty much the same as pipelining for pickup, but with one crucial difference: you have the advantage of being a serious man looking for a serious relationship.

If you mention the words marriage or wife, and that you are intent on face-to-face meetings in lieu of online correspondence, you will attract attention. If you can convince a Slavic woman that you're serious about your intentions, you'll have a huge advantage in the dating marketplace, one that less serious men can only dream of. Your main problem will be sifting through the interested candidates.

4. Go

This is the part were you actually step on a plane and meet the women you've been contacting. Once you actually start interacting with them, focus your energy on the ones who exemplify the values you're looking for.

Cut off relations with women as they begin to disqualify themselves from your standard. The cream will inevitably rise to the top. By the end of your stay, you should have one or more women with whom you can continue to connect and test until you decide that a second trip is warranted.

The right woman will be worth a second trip.

Balance Your Expectations

There are two sets of expectations you will need to balance while meeting women in Ukraine. One is for the trip itself, and the other is for the women you encounter.

Defining A Successful Trip

When a man invests his time and money into a particular endeavor, he often feels compelled to see an immediate return. If he's not careful, this compulsion will wear away at his rationality and drive him to make hasty emotional decisions.

If circumstances aren't matching up to his expectations, he may try force a result out of desperation and spell disaster for himself.

Don't lose sight of the big picture during your trip. Coming home without a prospect might be frustrating, but it isn't failure. The hunt continues. Returning with a woman below your standards would be the true defeat.

What To Expect Of The Women

Hype has surrounded the women of Ukraine for awhile now. They're lauded as some of the most beautiful and feminine women in the world. However, that doesn't mean that the bread basket of Europe is also automatically the wife basket of the world.

My first trip to Ukraine was an eye-opener. I had my first dates with Ukrainian women in a city of about 150,000 people. The reports I'd heard made me assume that Ukraine was an untouched bastion of traditional values and gender roles.

Don't get me wrong: in Ukraine your chances of meeting a traditionally feminine woman are drastically higher than your typical major city in the west. Even so, don't be so

gullible as to believe that just because a woman is Ukrainian means she's worth your time.

One of the first girls I dated was a huge fan of *Sex and the City,* and said she wasn't keen on having a family because she wanted to travel the world and see where life might take her. Needless to say, I was shocked to find that the tritest values of Western culture had made inroads all the way into small town Ukraine.

I also met a couple other women who plainly said that they preferred careers over starting a family. I even came across (but did not date) an uppity girl in her late twenties who lauded the merits of feminism and world travel. Sexual nomads seemed to have left these types out of their international pick up blogs…

The less English she knows the better (better work on your Russian).

Granted, these women were not the majority. They also had one unique thing in common: they all spoke excellent English. I began to notice that in this country there was a significant correlation between a woman's age, English level, and value system. If a girl was young and her English was too good, it became a red flag.

You have to vet women in Ukraine just like anywhere else in the world. Don't cut them any slack simply because they're foreign. They definitely won't be cutting you any.

Final Thoughts

Ukraine is still a hard country to ignore if you're intent on conquering feminine women, though there are some signs and notable arguments that it might not stay that way. For now, a masculine man with a decent plan of action and a set of balanced expectations stands a lot to gain from even a short stay in the country.

If you're ready and willing to make the highest of sexual investments, Ukraine still offers a worthy return: the kind of woman who will compliment your natural strength as a man and fuel the imaginations of lesser men on the wrong side of the red pill.

5 Reasons Why Russia Invading Sweden Would Be A Good Thing

January 26, 2018 | by David G. Brown | Link | Original Link

Sweden, concerned about a potential Russian invasion, has sent out war preparation pamphlets to nearly five million households. For most Swedes and certainly Swedish men, however, a Russian annexation would actually be a good thing.

Decades of cultural Marxism, destructive immigration, and criminal madness from minorities have reduced Sweden to a vassal state of globalists like George Soros. Ironically, the indigenous Swedish culture would be better protected and respected under Russian rule than it is by its present "Swedish" government. If civilian casualties during a Kremlin-ordered invasion could be minimized or avoided, what would Sweden have to lose?

Here are five reasons why Putin needs to consider invading Sweden and why Swedes should embrace any Russian incursion:

1. Sweden's migrant crisis would be solved in record time

Absolute hordes of migrants, thousands of them pretending to be children, have passed into Sweden with impunity since 2015. Their numbers are in addition to those of routinely troublesome "established" immigrant communities coming to the country from the 1970s onwards.

This is how no-nonsense police in Moscow, amongst Russia's most "cosmopolitan" and "tolerant" cities, firmly deal with the issue of illegal immigrants:

[image]

By contrast, here's a police commander in Sweden having to speak to the press because officers dared go into a church to retrieve migrants residing there illicitly:

[image]

What causes a scandal in Sweden is done every half hour by police across the Russian Federation.

2. The streets of crime-ridden, demoralized Swedish cities would be much, much safer

[image]

The police can't–or won't–touch these people effectively in charge of Sweden's streets nowadays.

This is heavily related to both the migrant crisis and Sweden's appalling preference for radical feminism. Do you really wonder why residents are calling many Swedish neighborhoods massively unsafe and Third World-like when (female) police responses resemble this?

By letting economic migrants masquerading as legitimate refugees run amok, tolerating first and second-generation immigrants who spit on Swedish customs, and enforcing braindead gender quotas in the police and military, Sweden's politicians and feminist/SJW apparatchiks are ensuring decades of crime and social instability.

Would Putin–or any future Russian leader–put up with riffraff like this? No and no.

3. The false rape hysteria of Sweden would be ended

Sweden has long been a hotbed of fake rape drama. The socialist government is now

looking to expand the definition of rape under the absurd euphemism of “yes means yes.” Swedish men increasingly need notarized consent forms, lest some jaded female lover accuse them of impropriety and land them in jail.

Loading...

The proposed widening of “rape” will involve feminists skulking about, further encouraging pumped-and-dumped women and other vengeful souls to reinterpret a consensual sexual dalliance as unmitigated “sexual abuse.” Probably the only thing that can save Swedish men is the serious threat of Russian invasion (beyond current concerns) or an actual invasion.

4. Swedish feminists would generally just shut up—or be made to shut up

[image]

What the hell is that?

Sweden needs its feminists to pipe down as their dumbassery knows no bounds. Swedish men, similar to men across the Western world, are much more likely to endure true suffering (think, say, homelessness), yet hapless feminist social engineers in Sweden have been busy at work, creating services like a “mansplaining hotline.” If a male colleague doesn’t agree with your stupid idea at work, why not call this number and denounce him to the authorities to alleviate your trauma?

I could go on and on, but a Russian invasion would stall and then reverse this journey into insanity. For example, in winter the new Russian overloads would make sure Stockholm and other cities had efficient snow removal programs, as opposed to the chaos feminist-inspired municipal politicians created a year ago. All in all, feminists would be rightfully viewed as morons whose only contributions to public debate might be demonstrating what farcical viewpoints used to exist in Sweden prior to Moscow taking charge.

5. Sweden’s neighbors and allies would grow the hell up

[image]

Responsibility-free Danish participants at a SlutWalk circle jerk.

Would Norway, Denmark, and Finland (or France, England, and Germany) be really concerned about such trivialities as mansplaining and manspreading if Russia invaded Sweden? I think not. The taking of Stockholm would finally force European states to extract loyalty from all their residents for the first time in decades. No more minorities sucking on the teat of economic largesse whilst simultaneously burning their host country’s flag.

Hilariously, in order to prepare for any suspected Russian aggression against them, cucked Western states would have to become more like Russia–politically incorrect, masculine-dominated, and culturally proud. Who would have thought?

Please attack Sweden, President Putin

[image]

Make Sweden Great Again, Mr. Putin. Invade Sweden.

Alpha Fux Beta Bux Even Held True In The Times Of Ancient Greece

January 26, 2018 | by Gregor Wayne | Link | Original Link

Ancient Greece has always fascinated me. Their cultural achievements are the offspring of a more ruthless era when the virtues of masculinity—rationality, competitiveness, boldness—determined life and death. We don't live in physically brutal times, but with the constant assault on manhood perpetuated by feminized elites, we've got our own problems to deal with. I've found that one of the best guards against this is consulting ancient thought. Their myths—particularly one about Aphrodite, Ares, and Hephaestus—are guidelines for men and allegories for red pill concepts such as Alpha Fux Beta Bux.

A Little Mythology Lesson

According to mythology, Aphrodite, the goddess of love, had two notable paramours: Ares, the god of war, and Hephaestus, the god of smithing. She was beautiful beyond compare, and Hephaestus struck gold when he negotiated her hand with Zeus. He built her a spectacular wedding house, and did his best to keep her interested.

Aphrodite's affection, however, couldn't be negotiated. She slept with Ares while married to Hephaestus, even bearing multiple children with him. When Hephaestus discovered the infidelity, he trapped both of them in a net while they were sleeping together and paraded them to the Olympians who shamed the two lovers.

Aphrodite's regret is palpable.

You would think this should convince Aphrodite to quit her ways, but indifferent to Hephaestus's scheme, she kept seeing Ares. Hephaestus, for his part, remained married to Aphrodite. He never fathered any children with her.

Greece From A Modern Perspective

I traveled to Greece last year, and some of that magic of older times peaked through murky wine glasses or the bangs of a pretty drinking partner who happened to be a local. The place had its ugly sides with disastrous European Union policies, odious Antifa and globalist activism, and migrant crisis, but people there took it with stride, and women were friendly, feminine, and fun.

Some guy friends accompanied me during my trip, and they also fancied the women. Two, however, stood out for their vastly different foreign dating outcomes.

I jokingly referred to one as the sink of the group. He drank like a motherfucker, and his experimentation with drugs bordered on rehab levels. He enjoyed acting like an asshole at times, but hanging out with him always amounted to a good time. That guy, not surprisingly, acquired a harem. He led one girl on, fucked another, and had the other girl literally show him texts the first girl had sent to her about wanting to fuck him, all the while his girlfriend waited patiently back in the states.

My other friend wasn't so lucky. The nice and faithful Christian man that he was, he fell hard for one girl. She was a seven at best, but he did everything for her, hoping to one day marry her and have a family. I recall him excusing himself from a week-long drive around Greece that we had planned out because of "stomach flu" when in fact he used the week to hang out with her.

She enjoyed dating other guys on the side while always appreciating him as a "great friend." By the time we left, my friend could spill only bitter words on how he was so done with her and the other women who turned him down (there were a lot). He never did shut up about them, though.

Compare And Contrast

The story of Ares and Hephaestus resonates in my mind while I reflect on my two friends. One poor chap, through fault of his clumsy come-ons and insecurities, earned open contempt from his Aphrodite. Meanwhile, women flocked for another guy who, in spite of his reckless hedonism and obvious promiscuity, impressed with a devil-may-care attitude and dominant personality.

The Aphrodites? All of them acknowledged Ares wasn't exactly the best choice for a long-term partner, but they would never humor Hephaestus as anything more than a friend. From an objective point of view, both guys wanted the same thing: getting laid. Yet it was their methods that separated desirous intrigue for one and condescending amusement for the other.

It went something like this for Hephaestus.

Closing

Does this parallel runs deeper? Did the Greeks understand sex dynamics and weave narratives to preserve this knowledge? Or was it just a coincidence?

Regardless of intent, the myth did a great job of reinforcing Alpha Fux Beta Bux for me. Whether intentional or not, allegories have staying power in the mind, and are second only to experience in teaching valuable truths. Had Hephaestus known more about Ancient Greece and bothered to read mythology, he might have avoided his blunders and bedded his Aphrodite.

The Red Pill Men Who Were Never Red Pilled

January 26, 2018 | by Kyle Trouble | Link | Original Link

There is a certain subset of men I have lot of respect and admiration for. And admittedly, I'm jealous of them, too. They're the men who have an unplugged understanding of life, but never actually unplugged. They've never read sites like *Return of Kings*. They've never studied game or the true nature of women.

All of this allows them to be (from what I can see) relatively happy, but free of most, if not all, of the pitfalls of actually being unplugged. They avoid the bitter years, the painful years of growth, and yet live the same life that many of us do now.

The subset of men I'm truly talking about are the men who moved abroad before it was cool and trendy to move abroad. I'm talking of the guys who did this back in the 90s, or early 2000s. As I live in an Eastern European capital city with a large expat hub, I've met quite a lot of them.

The vast majority of them are *very* cool, masculine guys with a lot going on for them. In many cases, they met their foreign wives *years* ago, and ended up moving out here because they wanted to make it work. For them, it wasn't a case of them finding American women to be un-date-able, much less marriage material. They simply wanted to see the world, and happened to find "love" in the process.

Sure, it'd be easy to mock them and toss them in the same category as your typical American beta male married to the fat, demanding wife. In most cases though, these guys have hot wives who dress well and cook, behaved kids, and a nice place to live.

Now, Don’t Get Me Wrong

It remains to be seen what will happen to this subset of men in coming years. As rampant feminism continues to spread around the globe, and their children age, will these men have the understanding to put their foot down and steer their children and women in the right direction?

Or will the herd mentality simply spread, and create a younger generation of idiots who prefer to sit in crowds with labias on their head instead of doing *anything worthwhile?*

In my humble opinion, there is hope that the guys who moved abroad years ago have become aware of the issues that plague the Western countries of the world. Nothing proved this more than last year, when I was playing in a charity softball tournament in a middle-of-nowhere neighborhood of Eastern Europe.

A couple of my teammates, and their foreign wives, were talking about longtime RVF contributor and now Twitter superstar Mike Cernovich. While it’s easy to say that the internet has contributed to plenty of societal decay, there’s also the plus side that it’s served as a fair warning to people abroad.

What These Guys Have That Red Pilled Men Don’t

They have the blissful naivety (to an extent) that us men who have taken the red pill do not have. Sure, some of them follow politics and think the situation in the US is lunacy, but many of these guys actually look at their girls with a warmth that I don’t see often. They genuinely do believe in the concept of love and the family unit. And so far, their girls haven’t pulled the mat out from underneath them. Of course, that could always change—and I’m sure for some of them, it will.

For the most part, many of these men have build relationships from a generation that was

devoid of social media, online dating, and “you go gurllll” empowerment. It’s likely that many of their wives were raised not to believe in divorce, and would be shamed tremendously by their families if anything happened to their marriage. Familial and societal shame (still very much intact in smaller cities and even the suburbs of the capitals) is a very powerful thing when women are so influenced by the herd mentality.

For Travelers, Seek These Men Out

I can’t encourage this enough if you are a digital nomad or traveling type. Find these type of guys. They’re prevalent in the American-style local bars (i.e. outside of the city center), at American sports meetups, or any other expat hubs. Many of them have built successful businesses and careers abroad. They can tell you the best hidden butcher shop to get American-style cuts, how to find a solid barber, and how to navigate the general up-and-down cultural shock that comes with moving abroad.

Overall, they are absolutely fascinating to talk to because they represent a set of people who you can never meet Stateside. They are the type that had the guts to move and find something different before the wealth of information on the internet, before the West became such a shithole (though admittedly, I don’t hear of any expats in Haiti).

Their knowledge is vast, interesting, and will give you a different perspective on life. With the internet, this breed of man will be completely dead within the next couple of decades. The man who moves abroad without tons of knowledge at his fingertips will be no more. It’s worthwhile for us to seek them out and learn from them while they’re still around.

Ready to get out of the west? Join the website for men looking to get abroad and find better at DatingAbroad.net.

Progress Does Not Exist

January 26, 2018 | by André du Pôle | Link | Original Link

The blue-pill consciousness follows a Manichean narrative. One of the most important elements of the narrative is "progress." It is something über-positive, associated to all kind of positive passions and buzzwords, something mandatory to follow—unless you're a boring, uncool, and ever-suspected conservative—and perhaps corresponding to an immanent historical necessity. Progress WILL happen, progress MUST happen, follow it or you'll die ignominiously as an inferior retard!

Inside the narrative, good people are those recognized as oppressed or ex-oppressed or simply cooler, and they embody progress. The non-oppressed start disadvantaged as they can do no moral claims, and they need to virtue-signal loudly at the feet side of the purportedly oppressed so they can be progressive as well.

But what is "progress" exactly? Does denying the sexes or pretending they can be changed or ignored while choosing among 120+ "genders" make the world better than how things have always been? Was the blank slate, an alienating and de-humanizing view that turns people into raw matter to be remould by social engineers, better than Enlightenment liberalism or knowledge of genetics? Is it a progress when whites disappear or when good ol' fathers let their place to mangina hipsters? Or even when the sheeple flocks to buy the new iPhone?

"Progress" is an illusory beacon

"Progress" is more than a buzzword. Inside the elite's imagined world, which is fed to the masses through all sorts of institutions and communication means, it is a pole designed to tell people what to do, under the implicit threat that they won't be trendy or cool or even accepted by their peers. "Progress" makes you believe you need to follow and obey to succeed at life, otherwise you'll be "missing the train." If you don't get into the train or at least bow to it, you will be tagged with an –ist or –phobe and you'll die alone and despised. Or, at least, this is what they want you to think.

For "progress" has constantly changed in content. Some progressives have been branded as dangerous reactionaries by other progressives who were willing to impose their own view as the only one. Even within the Left, some old-fashioned Marxists deemed feminism reactionary because they saw it as a mask of the bourgeoisie—with bourgeois women maintaining their class domination while blocking men of humbler social origins. Needless to say, these Marxists were also deemed reactionary by the feminists. Any progressive is the reactionary of other progressives whose idea of "progress" is substantially different.

"Progress" is idolized whereas its contents are always suggested, implied, or quietly moved. Various strands of progressives have been competing so that their version could lead the flock, which, of course, remains blissfully ignorant of these battles and prefers an easy to digest "we're the progress, just obey us" narrative.

As for us, the red-pilled, we ought to see progress as it is: at best, as something relative we should define consciously with no one else influencing us through crooked tricks; at worst as a Leftist idol that can be entirely deconstructed.

The origins of a meme

LED lights consume less energy, but they're bad for your eyes, and no artificial light as the beauty of a fire. Speak of a one-way progress

Where does "progress" come from after all? The Latin root of the word indicates both how relative and how tied to military campaigns it was. *Progressus* stems from the verb *gradior*, which means "walk, advance", and was mostly used in a military context, as in the sentence "the army is progressing into enemy territory."

"Progress" became non-relative when associated to ideas of wealth, utility, or happiness. Dante Alighieri's *De Monarchia* (1313) chided those who kept replaying or commenting on ancient authors without adding anything new:

> For what fruit can he be said to bear who should go about to demonstrate again some theorem of Euclid…? Such squandering of labour would only engender weariness, and not profit.

Later, philosopher René Descartes rejected the scholastic thought as an unsatisfactory bunch of pseudo-knowledge that could be discarded in favor of "real" research. Both thinkers allude to a "progress" which translates as an increase in capital: works leads to new "fruits" to be harvested. Even though this capital is knowledge, it is accumulative and not relative in character. Perhaps this idea of growth in knowledge was at the root of later versions of "progress."

What is certain is that the later versions are much wider and dogmatic. The eighteenth century was a watershed of progressivism: the *Philosophes* shamelessly referred to *Philosophie*—that is, their own social and mental universe—as synonymous with "lights", "reason", and of course "progress."

The most straightforward example can be found in one of the last texts written by marquis Nicolas de Condorcet, *Sketch of a historical tableau of the human mind's progress*… chap.10, where the author, a committed 1789 revolutionary, mixed equalizing policies with more happiness, more "reason" and other purportedly cool things. Interestingly, Condorcet paved the way towards the white man's burden where

“progress” means whites teaching others to be happier and materially wealthier. (Eventually, “progress” became chiding whites for having had progressive ancestors.) Condorcet’s exalted writing made clear that “progress” included a number of apparently obvious goods and was somehow bound to happen. Of course his narrative had its convenient bad guys—priests, some colonizers, “despots” and others who lacked enthusiasm for the guillotine.

It *must* happen! Join or get lost!

This “bound to happen” characteristic was forcefully used by subsequent influencers. Karl Marx’s theory of history, where communism must happen someday once capitalism will have met an unavoidable limit, just enshrined what had been in the air for decades before. Now there are very few orthodox Marxists around, most cultural Marxists being ignorant of notions like the added value or the *lumpenproletariat*, but just like female hypergamy this core feature of progressivism is still here. Karl Popper’s refutation of this “sense of history” belief was conveniently ignored or drowned under academic noise.

It is important to notice the reversal from thinkers like Dante or Descartes to the later *Philosophes*. The first associated progress with the idea of potentiality—we can progress because we can do this or that. The second, however, turned “progress” into a historical prison. We are “progressing” because we are following a fated trend! Pray for equality or communism and go to the guillotine, gulag, or racial genocide—-nothing else is possible! Progress!

Condorcet, Marx and others were clearly hallucinating and trying to hallucinate others. Who knows, religions themselves succeeded by make-believe and crushing their rivals, so why not a theory of history?

Real progress is relative…

“The way forward” is a convenient myth. Just as inalienable rights are. Just as the generic “we” and “us” is—that empty expression people use to signal how integrated and fitting-in they are, without anyone wondering who’s that “us” exactly. If someone tells you about history on her side and the intersectional or humanitarian “us”, it is just an illusion and a disastrous spin. Nothing to worship here.

What is publicly deemed “progress” depends a lot on who owns the media, the universities, and whatever can steer the fashion. Which itself is a social stick and carrot device, pressuring people into being attracted to what’s cool and fearful of what’s not cool.

Real progress is only so when measured according to clear, explicit criteria. Real progress is relative as it depends on a previously postulated standard of reference or landmarks. Otherwise, “progress” can mean “more mediocrity equality”, “less whites racism”, or whatever the Left churns—something you didn’t make, something they injected into your mind through constant suggestion, something you must remain a slave to, something *they* constantly redefine and control. Progress worship, associated to the might of the media and of social pressure, is a deeper and more intimate form of slavery than any physical enslavement—which at least doesn’t touch the mind.

Now many of us tend to distinguish material and moral progress. Haven’t we progressed through technology? Well, this depends according to which criteria we judge and look. Mass production created pollution and overpopulation. Efficient medicine saved babies who turned into an army of gibsmedat and invaders. Comfort makes us fragile.

If tomorrow we went back to the Middle Ages, we would not regress absolutely. Of course, it would be uncomfortable, but there is nothing to worship in production ability. Those who’d survive may even live a much better life than they do now. And they would write

history so that the collapse would not be an anomaly or a “regression” but the beginning of a new era.

It may not be easy to get rid of the “universal progress” mental conditioning. But it should be done. High-level Leftists know that many different endgames can be pursued, and they are not always dupes of their own idol. Franz Boas pretended that progress is relative so that science and the West could be broken—now this aspect of his thought has been conveniently brushed off so that another version of “progress” can be imposed.

Arch-planner Keynes famously quipped that “on the long term, we’re all dead”, not something that a real progress worshipper would say. Jewish pulpit occupier Albert Hirschmann spoke of a “progress inside reaction”, thus implying that progress is relative and that people otherized by so-called progressives can progress along their own way. The MSM have ignored how investing in BitCoin could make one rich before they could taint the BTC so it couldn’t obtain recognition as a progress.

…and some Leftist influencers knew it

Saul Alinsky: “The real arena is corrupt and bloody… the end justifies almost any means.” Including making up totem poles and browbeating those who won’t follow?

Leftists have also been reactionary, although they never admitted it honestly, when it pleased or suited them. Rousseau and Marx idolized a mythical “state of nature” where private property didn’t exist. Boasians like Margaret Mead idolized backward tribes as remnants of a lost Eden. (And now, the same who forbid to tell of primitives that they are primitives have no shame tagging us retarded or reactionary or whatever. Only they should control “progress” and decide what it is! Bow down, you peasant!)

Jane Jacobs’ opposition to skyscrapers and promotion of smaller scales was absolutely reactionary when seen from the pro-skyscraper version of progressivism—yet it was integrated into the official version of progressivism. By the way, skyscrapers had nothing unavoidable: the bourgeois bohemians managed to conserve what was supposed to

disappear simply because they could.

There is no one “way forward”, and this is all the better. If there was, nothing else would be possible, and we would be utterly powerless, locked up inside a train fated to fall into hell. But there is no reason for us to be headed this or that way apart from our own belief. We can go to any direction. True progress is absolutely dependent on our needs and our deep identity. Break the spell of the reified official version of “progress.” When our children will grow up outside of Leftism, they will thank us for it.

Japan Is Proof That Successful Pop Music Doesn't Have To Be Degenerate

January 27, 2018 | by John Carver | Link | Original Link

The current state of Western rock music is total disarray. Old guard and true-to-their-roots legends such as Tom Petty, Malcolm Young, and Lemmy Kilmister have all been dying in quick succession. Meanwhile, middle-aged veterans such as California's Green Day, Sweden's Millencolin, and Ireland's U2 (even more so than ever) have been reinventing themselves as cringy SJW cuck-rockers to try and stay relevant.

Most insultingly, whenever a newer and younger 20-something band gets any media rotation, it all seems to be dominated by bland indie-rock soy boys who probably live in Portland.

In a world where hypersexual and profanity laced hip-hop and "skank pop" have otherwise taken over the charts, things are not looking too bright for aficionados of good ol' rock n' roll. However, there is indeed an overseas alternative. Enter Japan.

"Are you ready to rock?"

As if they aren't struggling enough to *not* do anything wrong with their society, Japan still recognizes that there is a valuable place for un-cucked and non-degenerate rock bands in the domestic market.

Most surprisingly, there are a number of very talented all-female groups in the country who manage to keep their skin tattoo-free and their hair (most of the time) devoid of unnatural/degenerate colors or butt-ugly buzz cuts. We'll now take a look at three of the most popular in recent times, with each hailing from a different genre.

Scandal (Pop Rock)

While sonically different in many respects, Scandal can be summed up as the Foo Fighters of Japanese chick rock. They easily fill up arenas, they're mostly radio-friendly, and while they might not be anywhere close to people's top ten favorite groups, they are disliked or despised by hardly anyone. (That's Nickelback's job.)

Formed way back in 2006 when the girls were only in high school, all of the group's members are still under thirty, and yet have been giving several mini-generations of fathers in the country a valuable alternative to the utterly degenerate concert experience offered to their counterparts in the United States.

Would I prefer that my daughter listens to Scandal's "Harukaze" ("Spring Breeze"), a song about love, loss, hopes, and dreams? Or would I prefer she listens to Ariana Grande's "Side to Side," which regurgitates the joys of getting a "wrist icicle" and riding a "dick bicycle?" You know the answer. The answer is that the United States needs more Scandal.

Band-Maid (Hard Rock)

Now ***this*** is my kind of music. Band-Maid are technically impressive, delightfully crunchy, and never for a second forget they are Japanese, by imaging themselves after the local

maid cafe culture for stark visual/sonical contrast. From a marketing standpoint, it works wonders.

The singer/guitarist Miku Kobato (with the dual ponytails) was formerly an employee of these quirky cafes in Tokyo's famous Akihabara district, and a fairly straightforward Internet search lead to the recruitment of lead guitarist Kanami Tōno. That lead to Akane (drums), Misu (bass), and Saiki (lead vocals) joining in to complete the lineup.

Presto! Pure rock fury! Their second full length album *World Domination* will be released in February 2018, and I don't mind in the slightest if they achieve that goal.

Silent Siren (Kawaii Rock)

For those who have never been to Japan or are totally clueless to the local culture, kawaii simply means "cute," and cuteness is a pervasive motif throughout Japanese society. Silent Siren is essentially a cutesy rock band, with soft-spoken songs ranging from teary ballads to only-in-Japan hyperactivity.

I wouldn't be caught dead driving around to this kind of music, but I can appreciate and recognize the immense talent these young women do have. Furthermore, the meaning and message behind a lot of their songs is what I (and you) would thoroughly applaud.

For instance, the song "Akane" (either "Deep Red" or "Angry Child" depending on context) is a ballad about the now-adult singer reaffirming her love and appreciation for her father, after undergoing the typical phase of quasi-rebellion and bouts of unrequited love during her adolescent years. Where is the love and appreciation for fathers in the West?

Conclusion

No, no, no! Send your daughter to my show!

The United States can take some advice from Japan in how to promote genuinely good female musicians instead of walking sperm buckets like Miley Cyrus, both for the sake of society *and* the blissfulness of the airwaves.

However, with the self-destructive pathway that the U.S. insists on following, we are unlikely to see a turn of the tide anytime soon. In the meantime, the land of the rising sun is just having too much fun winning the culture war. Well done, Japan. Well done.

10 Warning Signs That Your Girlfriend Has A Personality Disorder

January 28, 2018 | by Beau Albrecht | Link | Original Link

Sometimes neurotic women are idealized—“crazy in the head, crazy in bed” and all that. However, the reality is far less pleasant. One needn’t be very experienced to cross paths with a nut; they’re everywhere.

Note well, the intention isn’t about picking on people suffering from problems—it’s about *keeping you safe*. Getting involved with these types may lead to horrendous breakups, false accusations of harassment (or worse), holes poked in your condoms, attempts to provoke you into violence, or other creative ways to make your life a living hell.

What are “Cluster B” personality disorders?

Sometimes there's a fine line between difficult and deranged.

There are dozens of ways to be a nut, but the high-functioning ones aren't always immediately obvious. Particularly concerning is the DSM-IV's Axis II Cluster B personality disorder spectrum. (Yes, men can have these afflictions too. They thrive in "kiss up / kick down" corporate environments. Ever had a manager like that?) These conditions, and their approximate equivalent colloquialisms, are:

- Histrionic personality disorder—"attention harlot"
- Borderline personality disorder—"bunny boiler"
- Narcissistic personality disorder—"drama queen"
- Antisocial personality disorder—"psycho"

These are syndromes that must include a minimum number of symptoms to meet a clinical diagnosis. However, even a "merely flaky" subclinical type might mean a girlfriend who becomes a royal pain in the ass once she's revealed her true self. It only gets worse from there.

Can they be vivacious and exuberant? Certainly! Superficial charm is one of the possible defining characteristics. This is especially so on the beginning, before you know their other side. Can they control their behavior? Absolutely! They'll perform Oscar-worthy method acting for anyone useful to them: social workers, attorneys, police, etc. However, although many have a strong fear of abandonment, they don't have the sense to treat their partners decently. *Don't let that be you.*

Borderline personality disorder cases are especially infamous for epic trouble. They'll frequently latch onto Nice Guys, exploiting their protective instincts. Also, they're drawn to violent egomaniacs with narcissistic personality disorder to get their Stockholm Syndrome funsies. (It's a common malfunction.) The very worst will alternate between the

two for the full meal deal: “exciting” knuckleheads for sex and fisticuffs, and chumps to rescue them from their drama.

All that said, beware if you notice multiple instances of the following…

1. Mood swings

Cupcake reveals her true colors

This is the classic sign of bipolar disorder. Still, Cluster B cases also can suffer extreme mood swings: exuberant giddiness, crushing depression, or rage. If someone’s emotions commonly resemble a roller coaster ride, beware.

Green light: Any moodiness on her part is situational and appropriate, or doesn’t exceed ordinary “lunar phase” events.

2. Daddy issues

Sigmund Freud had a point about bad parenting leading to bad outcomes. Screwed-up families have become the norm because of overworked parents, the rampant divorce industry, and normalization of single motherhood. (Mom’s revolving door of boyfriends aren’t the best substitute.) How people are raised isn’t their fault, of course. Still, childhood trauma is a leading cause of these disorders.

Green light: She has healthy family relationships.

3. Constant Shit Tests

Loading…

During the “getting to know you” part of a normal relationship, Shit Tests are fairly typical, but should decrease later. However, an unending barrage of little provocations is excessive, and quite annoying. Learn how to hold frame, or you’re doomed.

Green light: Shit Tests become rare after you’re a steady couple.

4. DEFCON1 arguments

If you’re with a Cluster B case, your romance begins seeming *too good to be true*. However, an epic blowup typically happens around the one month mark. You’re walking on clouds, then suddenly caught off guard and crouching in the fallout shelter.

How you handle it in the beginning *sets important precedents*. Obviously, supplication would be the wrong move. Your only hope of surviving with your wits intact is steadfastly explaining that you don’t tolerate “50 Shades of Crazy” stuff. They thrive on attention, so staying calm is more effective than shouting back.

Green light: No total meltdowns occur by three months.

5. Self-harm

Many will have histories of suicidal ideation, or even attempts. The “circle with semicolon” wrist tattoo has become a trendy reminder. It’s tragic that things get to this point, and I really do feel for them. Still, be aware that their problems are beyond your ability to fix.

Cutting is another tipoff; deliberately slicing one’s skin is abnormal. Beware of multiple small, straight scars in the same location, most frequently the arms. Consider even a few to be a red flag. Having a face full of ironmongery might indicate problems too.

Green light: She isn’t morbidly inclined and she respects her body.

6. Abuse history

Terrible things can happen to people through no fault of their own. Really, it makes me sick. However, if someone brings up past trauma very early on, perhaps she’s playing the victim card to exploit your sympathy.

Normal people might discuss that stuff eventually, but *certainly not immediately*. Have you ever used a Coach Badtouch story as a pickup routine, or one about how your mother neglected you? I didn’t think so.

Green light: She doesn’t use abuse stories as a first date conversation topic.

7. Sleeping around

Impulsive thrill-seeking and desire for attention can cause well above average mileage. Promiscuity is another possible clinically-defining characteristic. Don't consider it advantageous; you could still get Friend Zoned.

Green light: She's not the town bicycle.

8. Unstable relationships

Does she describe *all* her exes as abusive? If it's not an occasional lapse in her judgment and good taste, perhaps she goes for dirtbags, not learning from her mistakes. Alternatively, many will consider someone either wonderful or horrible—with no middle ground—and their opinion frequently changes.

Even if she's creatively overstating the facts, imagine her *describing you* as another abuser to the next sucker. She'll probably believe her fabrications; they have highly selective memories.

Green light: She seldom has horrendous breakups.

9. Constant need for excitement

For these types, boredom is nearly torture. Clown game will work great with them, but maintaining a long-term stream of entertainment is impractical. If they can't get their excitement fix, they'll create drama. They do that masterfully.

Green light: She doesn't expect constant life in the fast lane.

10. Unstable work history and finances

Although nobody gets overjoyed processing TPS reports forty hours a week, disdain for boring work goes deeper for Cluster B cases. Sometimes they consider normal jobs "beneath" them. Despite that, impulsiveness can lead to shopaholic retail therapy.

If you're a regular working stiff, they might regard you as inferior. Still, they'll cut you some slack if your steady income stream bails them out of their messes and helps maintain their thrill-a-minute lifestyle.

Green light: She's industrious, lives within her means, gets along with her colleagues, doesn't create workplace drama, and doesn't disparage honest jobs.

Conclusion

Choose wisely!

Fortunately, once you've weeded out the flakes and outright crazies, the rest are pretty solid. There are still plenty of decent women who'll treat you right and be real with you. Perhaps a nightclub full of drunks isn't the most target-rich environment for relationship-material ladies. Likewise, methadone clinics aren't great places for running daygame if you want a keeper.

My father was a high-ranking student radical poobah and still thinks Castro was the bees' knees. Although I'm technically a red diaper baby, I've rejected all that baloney. I write **off-the-wall fiction**, and ***Righteous Seduction*** concerns next-generation game. My **blog** concerns "deplorable" politics, game, and my writing projects.

Sentimentality Is Killing The West

January 28, 2018 | by Lloyd Cobb | Link | Original Link

To say that *Return Of Kings* encourages sentimentality toward women would be beyond ludicrous. However, Theodore Dalrymple's book *Spoilt Rotten: The Toxic Cult of Sentimentality* reveals ways in which much of the modern West is polluted by excess feeling, whether we suffer from a surfeit of emotion individually or not.

Blessed Are The Hypersensitive

An illustrative early example is of a British father who reacted with fury when his young daughter found a chicken foot in her chicken dinner. The father loudly took the supermarket to task, no doubt “seeing green” in anticipation of the pain-and-suffering money coming his way if he screamed hard enough.

Of course, the daughter was never in danger of any real pain or suffering at the sight of a chicken appendage: on my first visit to an authentic Chinese restaurant, I crunched up several chicken feet and swallowed them, bones and all, before someone informed me of the right way to eat them. But according to Pop, the little British girl was apoplectic with grief, and the whole family followed her lead. Even if they made it all up, one can glean a lot from their confidence that others would believe them.

Standard Bleeding-Heart Bullshit

Further on, Dalrymple skewers the argument in Steven Pinker’s *The Language Instinct*—that children naturally learn enough language to suit their needs and therefore that imposing a standard language on them in school is cruel somehow—by pointing out that Pinker’s book is written in the ultimate stick-up-ass idiom, academic English, which no one on Earth speaks in or learns by osmosis as a child.

Pinker’s response (“Of course people should be taught a standard language”) calls to mind feminists who, after about seventy years, still can’t decide if men and women are 100 percent equal, or if women are superior. Actually, they’ve always believed the latter. The former is mere rhetoric.

Some Like It Hot

Dalrymple correctly pins the blame for murderous sexual jealousy on sentimentality as well; when long-term sexual relationships have to be based on fiery passion rather than, say, the ability of two people to get along and manage life together, it's easy come and easy go; the moment you bore me, I'm out of here.

This makes the need for complete sexual possession of the other person all the more preoccupying and painful *because it's exclusively up to the individual*. A man can't count on society to have his back when it comes to a woman not cheating on him or dumping him, so he shoulders the entire burden himself, often with tragic results.

Waving Raw Meat At A Wolf

What the author has to say about our current pedophilia obsession may not sit well with many readers, but nevertheless has long needed saying: "I am not sure whether the supply [of vulnerable children] creates the demand or the demand the supply."

Amen to that. I remember reading about one of the many, many incidents of Muslim rape gang grooming of young British girls. This particular case got started when an oily driver tempted a girl in her early teens with a gift of vodka at two in the morning. My first question was, "What kind of parents would even let their teen daughter get into a situation where she could accept booze from strange men in the small hours of the morning?" The answer, apparently, is "British ones."

Loading…
Of course, the girl's biological parents never intended for her to be exposed to abuse from a predatory man with cultural and racial contempt for her oozing out of every pore, but she ended up that way nevertheless due to a combination of sentimental education—which believes children should not be controlled in any way—and sentimentalized romantic conventions, which state that a passionless relationship between adults should be ended, the effects on their children notwithstanding. This results in thousands of neglected children roaming the streets and entering the radar of the Rotherham set.

And all of this is just in the introduction.

The book's six chapters take on varying aspects of our culture's contempt for emotional control and how they affect us all: the fatuous family impact statements read in court after murder trials; Madeleine McCann and Princess Diana in relation to the cult of the victim; and Western politicians generously volunteering taxpayers' money to aid Africans (actually, African politicians).

Stylistically, it's classic Dalrymple: "How is poverty to be eliminated from the repertoire of possible human conditions?…The answer is obvious: aging pop stars are to give a series of concerts…"

Last-Minute PC Kowtowing?

Oddly tacked on after the conclusion is a short essay entitled, “Why We Need Immigrants.” The thesis is explanatory rather than argumentative: we need immigrants to care for our elderly invalid relatives because the attitude of our own people is all wrong.

We can’t tell the difference between service and servitude, and our sentimentalized governments are all too happy to let us stay unemployed (and import more foreign workers), rather than ask us to work a job we don’t enjoy, like taking care of demanding old bags and geezers.

Unfortunately, this final piece seems like a bit of CYA on the author’s part, since the conclusion speaks critically of multiculturalism. But maybe Dalrymple is trying to suggest that we hypocritically pour sentimentality all over the youth aspects of our culture while neglecting the one area where a little excess feeling might be useful: helping make our parents’ and grandparents’ final days as comfortable as possible.

If you're like me, you're not quite in panic mode, but Mom and Dad aren't getting any younger. The Baby Boomers' narcissism means they are staying healthy longer, but yoga and vitamins can't stave off aging forever.

I contrast my own attitude and that of many peers with the Mexicans in an American hospital who wanted to do so much for their Mama that they became a pain in the ass to the staff, even carrying Mama to the toilet against doctor's orders. Can you see yourself doing that? Have you ever changed a diaper—much less an adult one—with a cheerful spirit?

Maybe the post-game of game is to find a woman with whom to start a project with a twofold goal: to care for both of your elderly parents and to have children who will do the same for you when the time comes. Here if nowhere else, a little treacly sentimentality wouldn't hurt.

The Best Gun For A Man On A Budget

January 28, 2018 | by Forest Strong | Link | Original Link

Have you ever wanted to own a caliber of gun that is all around useful? If you are anything like me, you are not a man with unlimited funds. This means that when you make an expensive purchase—like a gun—you want it to be as versatile as possible. You need it to be a tool that can provide protection, recreation, and also bring home the game to put on the table. It needs to be both versatile and affordable.

Is it even possible that such a gun exists? Well, I'm happy to let you know that there is.

A Gun For All Uses

Having spent the majority of my life in the woods—a large percentage of it hunting—I have found that if given only one choice for a caliber of gun, it would be a 12 GA pump shotgun. If there ever was a more practical, affordable, and versatile caliber of gun… I can't think of one. Without any glitz or fanfare, it's a gun that gets the job done. Whether its protection, hunting, or sport, this caliber of gun covers it all.

Personally, I have owned one for over twenty years and I use it regularly throughout the year. Beginning with turkey hunting in the spring, followed by grouse hunting in the early fall, then deer hunting in the late fall, and rounding it all out with grouse hunting again into early winter… this gun gets a solid workout.

In the time between, it sits in the corner of my bedroom as one of my primary lines of defense, should anyone be foolish enough to break into my house. During the summer months, it also occasionally gets used to bust clay pigeons down at the range.

Some would argue that there are more superior calibers for hunting deer, but in my experience, the areas where I hunt—northern New England—are perfectly suited for this caliber of gun. Its a region filled with very dense woods and swamps where short, quick shots are the norm, not the exception. When hunting in this type of cover, a high-caliber rifle with a scope can end up being a hindrance.

Why The Pump?

Good question! Owning and using both single-shots and semi-automatics for hunting has shown me that when it comes to getting the perfect trifecta of functionality, reliability, and affordability—an all in one gun—the pump wins hands down. It gives you the luxury of shooting a number of shots in quick succession without costing you a premium, nor does it require an abundance of rings and gaskets that can potentially fail. What's not to like?

Will Any Brand Work?

Yes. There are a few well-known, easily available brands, all with a track record of proven performance: Winchester, Mossberg, and Remington to name a few. All of them are well-made and able to get the job done.

Loading...

There are also lesser known (and cheaper) brands in the affordable 12 GA pump category. In the interest of saving money, the temptation might be to go with one of them. However, experience has shown me that you get what you pay for. If you only pay $150 for an obscure brand of pump shotgun, you will probably get a cheap gun that doesn't hold up. Basically a piece of crap that you won't really end up liking.

All that aside, if I had to pick my favorite brand for an affordable 12 GA shotgun, it would be the Remington 870.

What Sets It Apart?

It all boils down to the following: reliability, availability, and affordability.

Reliability

Through tough conditions, hard use, and a lack of regular cleanings, I have never seen a brand of shotgun perform as well as this make and model. Rain, snow, dirt, grime, heat and cold… it’s a gun that never quits. When I have needed the gun to work, it has never failed. This alone makes it stand out.

Despite twenty years of very hard use, there has only been one small issue with something in the receiver. This was brought on due to my failure to pull the pins and air-hose out the receiver on a regular basis. In other words, negligent maintenance. Despite this issue, the gun continued to do its job without fail.

Availability

With over 10 million manufactured since 1951, they are prolific. This will help you when a part needs to be replaced or if you are looking to purchase additions for it. Also, if things get really bad (societal collapse), a brand as abundant as this will be very easy to get any parts for. That is something worth thinking about.

Affordable

With so many in circulation, the supply is abundant, giving you a versatile gun that can be purchased on the cheap. For less than $300, you can purchase a well-maintained, used one that will last you for the rest of your lifetime. Now that’s receiving good value for your money spent!

Does It Need To Be Fancy?

No. A used and well-maintained Remington 870 with a smooth bore 18″ barrel and improved choke is all you need. If money is really tight, this configuration will enable you to protect your home, shoot skeet for fun, and hunt any game, large or small. With this configuration, I've shot turkey, grouse, snowshoe hare, and even deer. There are also affordable additions you can make to your shotgun that will make it even more efficient for hunting, but that's a topic for another post.

If you've been thinking about buying a gun for the first time and want to get the most for your money—or just want a caliber of gun that covers all bases—the Remington 12 gauge pump is the best bang for your buck. If I could go back in time, it would have been the first gun I ever owned rather than the second. Making this purchase will not leave you disappointed.

10 Things I Told My Teenage Son About Women

January 29, 2018 | by Robert Languedoc | Link | Original Link

---

My son, Aidan, has just entered high school. He's smart, slim, tall, good looking, and an accomplished musician. Like me at his age, Aidan doesn't know jack about girls. My father was straight out of the Silent Generation; you know, the dudes who survived the Great Depression and beat the Nazis in WWII. Other than this observation, he never passed salient advice concerning the fairer sex to me:

> The kind of stability you find with a good woman is like nothing you can find on your own, but the kind of instability you will endure with a real bitch is also like nothing you can create on your own.

His father, who was mostly absent in his life, died when he was eleven, leaving him lacking knowledge on how to relate to women on any level. He and my mother slept in separate beds my whole life. I was one of three, and if my parents could figure out how to copulate twice and have three kids, years apart, they would have done it. My mother was a good homemaker, which was paramount to my father since in the 1930s, he was the original latchkey kid.

In any event, he had no advice for me as a young man, which meant I had to learn about girls the hard way. Undoubtedly, this led to some ugly experiences which, in retrospect, were entirely avoidable.

I did marry a beautiful, educated, stable, and successful woman who is an executive for a Fortune 500 company, allowing me the freedom to do whatever I please. We have two boys, one of which is climbing into adulthood. The conversations I have now with my 14-year old initially sprang from the ground like weeds in the spring. I knew it was coming, I just didn't think so soon.

Recently, I compiled a list of points I discussed with my son in attempts to guide him through the trenches of modern relationships. Here they are…

1. Don't date a girl who can fit into your jeans

When you grab some ass, you don't want to grab beefcake. A properly sized woman's ass is a thing of beauty. I don't subscribe to the growing trend that big asses on women are desirable. Apart from the fact that a fat ass is a sign of an overindulgent pig with no self control, big cabooses just aren't visually appealing, and they're downright frightening when unclothed.

What comes along with big toilets is inaccessible buttholes. Now, I know what you are thinking, but you're wrong. I'm not into that, nor should you. If a women's butthole is buried between two loaves of blubber, the difficult access makes proper cleaning after normal bowel movement next to impossible.

2. Drama is for the stage

There are woman who love drama. They find conflict in everything and make your daily life miserable. Drama queens should be avoided at all costs. Once, after returning from the grocery store, my girlfriend at the time saw that I had purchased tuna fish. Recently, she had seen a film showing dolphins being snagged in tuna nets.

"How could you buy tuna with what they do to dolphins?" she exclaimed.

"What about the tuna?" I asked. "The nets are there to catch them."

"But the dolphins are innocent," she sobbed.

"So why not just eat dolphin?" I offered.

"Because their brains are as big as ours," she explained.

"Well, if they were so smart, why can't they avoid a tuna net?"

She really didn't care about dolphins, or the natural world for that matter. She had gone to a six month "beauty school" to be a "nail artist," so there probably wasn't any natural

science in the curriculum. She just wanted to argue, so argue we did, about everything and nothing. Eventually, I broke up with her because what I was getting wasn't worth enduring the daily, inane commentary.

3. If they think they're a loser, they most definitely are

Some woman will go beyond drama and delve directly into insanity. They constantly bring up their "struggles" with mental illness. The pop singer Demi Lovato is one of these nutjobs. As a judge on *American Idol*, Lovato openly discussed her anorexia, bulimia, cutting, depression, and OCD.

It's not that I don't feel bad for these people who are struggling with everyday life. It's just that I'm not a psychologist trained in dealing with women who will puke up a perfectly good steak. Men should avoid these pity parties because they are a deep hole of despair that eventually turns on them. If you do date a chick who's insane, you'll spend a lot of time listening to her bitch about her mother, after which at some random time, the whack job will break up with you to boost her own self esteem.

4. You should be having fun all of the time

Women often say that "relationships are a lot of work." Sometimes, cucks like Ben Affleck will thank their wife for "working on their marriage." If any relationship requires a lot of maintenance, then get out when you still can.

When you're young, especially in high school, you should be having fun *all the time*. Things can get tough when it's 3AM and you got two kids puking simultaneously, the mortgage and taxes are due, and you got to get up in the morning to give a presentation to the CEO and his leadership team. Now that's a lot of work. When you're young, have

fun, and lots of it. If it’s complicated, hit the silk.

5. One in four teenage girls have a sexually transmittable disease

In 2008, the Centers for Disease Control released a year-long national study that indicated a quarter of girls in the age range of 14 to 19 have either human papillomavirus (HPV), chlamydia, genital herpes, or trichomoniasis, a parasite chiefly affecting the urinary tract. If that isn’t enough to scare a young man’s fly up, the study reported that 15% of the girls racked up two of these wondrous maladies.

Unless you want to spend the rest of your adult life buying ointments, men should be very careful where they insert their John Thomas.

6. Tattoos are blazes on the trail of doom

In my day, the only women who got tats were biker chicks, and they kept it to a minimum. Maybe a small rose on their ankle. The other day, I saw a young teenage girl with “Death Before Dishonor” written in old English, arching across her chest. I wondered what it took to get into a state of mind where she thought this was a good idea.

Tattooing words on your body is dumb because I’ll bet the guy doing the inking isn’t likely an English professor, which means he’s probably going to make a grammatical error. Apart from editorial concerns, tattooing words on one’s body is stupid because there isn’t anything which you would want to read for the rest of your life, over and over again.

I find tattoos in general unappealing because they’re like the long hair I had as a teenager. Sure, I looked stupid and eventually I figured that out, then got a decent haircut. With tattoos, it’s pretty much permanent unless you don’t mind a whole lot of pain to remove it.

7. Never listen to tales of the last guy

On a first date, don't talk about your last girlfriend, and don't listen to stories of the douchebag she just broke up with. A new relationship should be about the future, not the past.

8. Know that the laws are written against you

In most states, if physical contact between adolescents occurs, the boy is charged with a crime. In general, the law treats girls as innocent, asexual beings and boys as though they are budding sexual predators. The problem with this is that it's wholly wrong.

A friend of mine who works as a middle school math teacher says the boys are interested in playing video games while the girls are concerned with sex. This newly discovered girl power, coupled with the desire to rebel against their parents, causes young girls to sexually experiment. They almost always let their parents in on their activities, which leads to accusations of sexual harassment against boys. Boys need to protect themselves, especially today with the #MeToo witch hunt in full steamroller mode.

9. Find a woman who spends a lot of time with her father and also has a good relationship with him

Most fathers abandon their princesses once they go through puberty. Her physical development causes her father to distance himself from his daughter. Just when girls need their fathers to help guide them into adulthood, they get dumped for the first time. This causes young girls to become bitter as they get rejected by the first man they adored. Girls mentally grate against their mothers which is why they leave the nest when they mature.

If a teenage girl has a close connection to her father, she will respect his opinion and advice, which will keep her from becoming a tattooed, lunatic whore.

10. When things end—and they will—exit with your pride

In an episode of *The Simpsons*, as Lisa is getting married, she and her mother are discussing sex. They both agree that Millhouse "didn't count." In a flashback, Lisa breaks up with Millhouse as he cries like a pussy.

Young people can often get very upset over breakups, which is why they have such a high suicide rate. You have to keep your head on straight when you part company. The important thing to remember at the close of any relationship is that some crap is going to purge from your life as well. It's not like you're sick or injured. You can just start over today.

Some people think that it's not that easy, but it is. Breaking up with a girlfriend is far easier than extracting from a marriage, especially when there are kids involved. Once its done, move on, and don't look back.

There are no guarantees in life, but having skills and knowledge will certainly make

navigating relationships easier. Game is not about gaining skills to boff a string of Slavic bimbos; it’s about crafting yourself into a dominant male with which the highest caliber women will want to procreate. If you think it’s something different, then ask yourself what advice would you give *your* son.

How To Profit From The Emerging Incel Economy

January 29, 2018 | by Sten Morten | Link | Original Link

It's 2018, and the Incel Economy has never looked hotter. I've been bullish on the Incel Economy for quite some time, and 2018 looks like a year of massive financial gains. Google search trends show declining searches for dating related keywords and increasing searches for terms like "waifu" and "dakimakura."

While the glorious 2D age is several decades away, it would be worthwhile to examine current sociocultural trends and make predictions about what 2018 holds for the Incel Economy.

What Is The Incel Economy?

The Incel Economy is a term used to refer to those companies and sectors of the economy that grow when self-reported sexual activity declines. Millennials are increasingly not having sex due to a variety of sociocultural trends. Rising standards among millennial men and women coupled with decreasing physical attractiveness and income levels are largely to blame.

> The Incel Economy White Paper
>
> Abstract. The Incel Economy herein refers to those sectors of the economy & related technologies that grow during years in which self-reported sexual activity falls, e.g., services like Crunchyroll and consumer electronics companies.
>
> (Figure 1.) pic.twitter.com/0qXLjU66AK

> — Faceberg (@thefaceberg) December 2, 2017

Millennial Men Cannot Stop Watching Porn

Most millennial men cannot go a week without watching someone shove something up their ass on the Internet. Porn tricks their insect brains into thinking they're sexually active. As long-term porn use continues, bizarre fetishes develop and porn becomes preferable to the real thing. Like your mother, porn is easy to access and always available. There would be an Elliot Rodger every hour if not for porn.

Don't be this guy.

Millennial Women Cannot Stop Being Fat

Most millennial women cannot go a week without eating colorful, overpriced pastries. Artisanal cupcakes, craft macarons, and the Notorious PSF (pumpkin spice frappuccino) are but a few of her drugs of choice. I don't really keep up with women's clothing, but the average dress size in the United States was a 16 last time I checked. Damn.

Easy multiple-choice question.

While some millennial men have started to lift weights, dress better, and make an effort to meet girls, it’s clear that girls aren’t even trying.

The sexual marketplace has always been a buyer’s market. Millennial women have cleverly re-branded their ballooning waistlines as “curvy” or “thicc [sic],” with some degree of success. In addition, male thirst remains at an all-time high. Thus, the millennial man either settles for the 4/10 “curvy” Latina or seeks pleasure elsewhere.

This is where the Incel Economy comes into play. If a young adult male has dropped out of the dating market—as is increasingly common—he now has a lot of free time on his hands. He’s not going out to bars or nightclubs (do people still do this?) and he’s spending the majority of his time home alone.

Average millennial man circa 2018.

What is he doing? He’s playing video games, watching capeshit or anime, and browsing

the Internet. It is no surprise that GPU manufacturers AMD and NVIDIA were two of the best performing stocks of last year.

I am not here to fix the Incel Economy. I am here to teach you how to profit off of it so you can retire at thirty on some Mediterranean island far away from this laughingstock of a country. What we need to be on the lookout for going forward are those companies that are going to profit off of this emerging trend.

The Incel Economy And Computer Hardware

More and more people are opting to build their own PCs. A PC is now the go-to gaming device because Sony and Microsoft have no idea what they're doing anymore with the PlayStation and Xbox, respectively. I don't even know anyone with an Xbox One and the PS4 only has one game.

Nintendo could be a good investment, but they've lacked proper third-party support for decades and seem to make random, nonsensical business decisions. Still, their first party games are top notch and they're expanding into mobile gaming.

A typical Saturday night in 2018.

Next, we have capeshit (superhero movies) and anime. Nobody under 25 watches sports, so I'd stay away from those related industries. Netflix will continue to be huge. They have an excellent, reoccurring business model and are rapidly expanding their selection of capeshit and anime.

The Incel Economy also includes women, and anyone who has lived with girls will know that all they do is watch Netflix and go out for frozen yogurt. There's money here. Also, niche copycat services like Crunchyroll and Filmstruck could be good too. The former

specializes in anime and the latter in kino.

The Incel Economy And The Film Industry

Disney will continue to churn out massively popular, best-selling garbage such as Marvel superhero movies, Star Wars, and Pixar films. I wouldn't be surprised if some Netflix shows get theatrical releases, too. The film industry is dying in the United States because you have to leave your house to attend screenings, but the Chinese can't get enough of American films. Sino-futurism is always something to consider.

Before we get to the last topic, I'd like to make a special note of the pet and pet food industries. Pet ownership will go way up during the Incel Economy, because women see dogs and cats as surrogate children. These industries would be a long-term hold, as I don't see birth rates ever recovering to replacement levels in the United States.

Expect to see more of this. A lot more.

The Incel Economy And The Internet

I'd be cautious of the latest dating apps, but I'd give everything else a green light. That means social media, software services, and smartphone apps. Try and find the next Instagram and get in before it's assimilated into the Facebook hive mind.

Technology is not going away, despite my desperate nightly prayers. VR could be hit or miss, but AI sounds promising. Sexbots are always going to be weird and I don't see them gaining mainstream appeal. The first company to make an AI girlfriend like in *Blade Runner 2049* will be the next Microsoft. Something like Siri or that Amazon machine that watches you sleep but is useful and attractive.

The future.

Hopefully you'll find a few takeaways here that will make your 2018 a profitable year. The Incel Economy is here to stay and it's about time someone recognized the lucrative opportunities it contains.

Do You Have A Loser Mindset?

January 29, 2018 | by Jared Trueheart | Link | Original Link

One of the most important characteristics of the manosphere is our drive for improvement. We strive to improve our physical strength, mental strength, relationships, friends, and family. We strive to improve our neighborhoods, our businesses, and even our nations. We strive so hard for these things that when we don't see any results it too often leads to men taking the black pill. And who can blame them?

But there is a constant temptation to stop striving. We often want to stop because it is easier. It requires less energy and investment. We are compelled to kick back, put our feet up, and see that everything we should try to improve is good enough. The mind trick that enables us to do that is the bottom of the barrel comparison.

What Is The "Bottom Of The Barrel" Comparison?

When I was your typical blue-pilled loser in my early twenties, I remember meeting this cute girl. I was going to community college and she worked there as a gate attendant. She was an attractive girl, but as I would learn while trying to get with her, she had problems.

She had just gotten out of an abusive relationship with her ex. I told her that was the right move. Then she revealed that she still lived with him. Her ex (I knew he was her ex in name only, of course) was a drug dealer. She said she wasn't an addict but she still wanted to leave.

By that point, I gave up on trying to hook up with her. Instead, I just told her she needed a better life, because the one she had was a disaster. She agreed, but because her "ex" was a drug dealer, she saw plenty of crackheads and tweakers. She described one really

horrible tweaker she had seen and said, “At least I’m not her.”

There it was: the mindset that told her it was alright to live with her drug dealing, abusive ex.

How Fat Are You?

When you compare anything to the worst possible outcome, you generally leave a lot of room to be mediocre. For example, take your weight. Are you overweight? How much do you weigh? 250 pounds? 300 pounds? Hey, at least you don’t weigh 600 pounds like this guy…

Now THIS guy is fat.

Instead, you only weigh 300 pounds, like Artie Lang.

See, he’s not that fat. At least he isn’t the 600 pound guy.

I’ll bet the 300 pound guy loves the 600 pound guy because he can say, “Hey, at least I’m not this guy.” When you compare yourself to the bottom of the barrel, you justify stuff you know deep down you shouldn’t justify. Fat? There are fatter people. Lazy? There are lazier people. Poor? There are poorer people. Weak? There are weaker people.

Loading…

This comparison gives the user the illusion that they are not these things. It lets them think they are not fat, lazy, poor, weak, and so on.

It Seeps Into Your Worldview

Do you love America? I do. I probably love America more than you, statistically speaking. But as great as my nation may be, it is not above criticism. One problem that allows America and our culture to decline is this mindset.

I’m sure you’ve heard something like this before: *“Well, I come from some third world shithole and now I lead a much better life in America. So your criticisms are dumb. You just don’t appreciate how good you have it.”*

Galena, Illinois looks pretty great to me.

Just because we are not nearly this bad doesn't mean it's alright to decline in quality.

I often reflect on how lucky I am to be born in America, and I truly wish people didn't have to suffer living in shithole countries. But comparing America to them only allows it to further decline. It's a long way from the top (America) to the bottom (Somalia, Haiti, Iraq), but that doesn't mean it's alright to slide down that direction.

Change Your Mindset

Comparing yourself to anyone else is a dangerous game. You could compare yourself to the worst and thereby allow yourself to fall into mediocrity. You could also compare

yourself to the best and get discouraged. I played drums for ten years and only reached an intermediate skill level. Videos like this made me want to give up:

What I learned as I got older was that although I don’t have the natural abilities of the very best, I can still be great with focus and determination. With renewed focus, my skills improved drastically.

Change your mindset. Change your worldview. Strive for greatness. Hopefully you, and your people, can achieve it.

How To Get Laid In Dublin, Ireland

January 29, 2018 | by Michel Vargas | Link | Original Link

Ireland has pretty much recovered from the subprime crisis and now attracts big tech companies, prompting young girls from everywhere to look for jobs there. Dublin is at the epicenter of this boom, and with its relatively small size and welcoming citizens, the Irish capital is more down-to-earth than London.

In Dublin, you have a choice of over twenty youth hostels in Dublin, with prices starting at around €13 per night. Book a long time in advance for long periods, as some events in the city—like the Six Nations Championship—attract a lot of tourists, leading to accommodation shortages.

I have been staying at four youth hostels in the city center, where you will find two kinds of girls: the one who is studying English for a limited period of time in a private school, and the one who tries to get set up for a long-term period but hasn't found a job yet. The diversity of ethnicities is astounding, and you must adapt your game accordingly…

Latinas (South and Central America)

Most Latinas come to Dublin alone. They are good-looking and aware of their value. More often than not, they are open to having a good time. As they are not brainwashed by the feminist agenda, you can approach them easily, and this can lead to a date quite quickly.

I noticed that young Latinas are into religion, and Masses in Spanish are held weekly in some churches. Don't be afraid to go to Mass with one of these girls if you know the basics of Catholicism. A spiritual game with them can give good results.

Brazilian Girls

Dublin attracts a lot of Brazilians who are fed up with their corrupt government. Unfortunately, most Brazilian women come with their husbands. To optimize your chances to meet a single Brazilian girl, you can use a dating app like OkCupid. A good date would be in a Brazilian restaurant: there are a lot of them in Dublin, and this will be a good occasion to let her speak about her country. Discussions about politics are endless with them.

Spanish And Italian Girls

These girls are harder to approach because Spanish and Italians in Dublin tend to recreate their national communities. Like their South and Central American counterparts, they tend to prefer fun conversations.
I recently scored with an Italian girl by playing the romantic crd. All I had to do was to tell her directly that I often thought of her. This helped us get going quickly: after a nice meal, I escalated with her fast.

French Girls

French girls are uptight and if you are a French national, forget about them. French girls travel around Europe to ride the international cock carousel. If you want a French girl, remember that you must sound like the most traveled and exotic man possible. You still have to be careful: French girls who have a college degree tend to be SJWs, so you may endure some boring globohomo stuff.

Staying at a youth hostel has its share of challenges, as sex is difficult in a dorm. A certain budget is required to get private rooms.

Your Quota Of Irish Girls

Dublin does not have the same level of talent as, say, Eastern Europe. The typical Irish girl is not an innate beauty: they are often ridiculously tanned, and contrary to stereotypes, I never bumped into a hot redhead during my stay.

To meet Irish girls, you need to use dating apps such as Tinder. A quick scroll of the talent on them indicates that most Irish girls aren't totally submitted to the globalist agenda: for example, they don't have many tattoos. If you start interacting with one of them, they may use the expression: "any *craic* with you?" Craic basically means "fun" in Irish, and girls there are constantly in the mood for fun things to do.

Irish girls are relatively more conservative than their English counterparts, as Catholicism has left a profound mark in the Irish spirit. This explains why Irish commonly have a good number of siblings. Your game with Irish girls in three easy steps:

1. Find a good venue

Don't have your first date in a pub. This is a newbie mistake, as pubs are really crowded and not the ideal venue for a decent conversation. Plus, the risk of being cockblocked is high. Instead, go for a drink in a central public place such as the Ilac Center or the Epicurean Food Hall.

2. Let her do the talking

Most Irish girls I have met are friendly. They don't usually feed you with globalist bullshit, so this is a great relief. Add your insight on any subject, and don't forget to sound well-traveled. I also noticed that some popular Irish TV series like *Father Ted* are worth mentioning at some point.

3. Close the deal by saying "I kind of like you."

Go on a walk with her. If she is comfortable with you, she will be okay. A thirty minute walk is enough. Learn to use the elements: if it starts raining, which is likely, share your

umbrella to get closer to her or put your arm around her. You will be able to measure her interest in you. My go-to phrase was, “I kind of like you,” followed by, “I would like to know you more, but I will be moving back to my country soon.”

If you want to stay in Dublin for an extended period of time, I would not recommend you have a long=term relationship with an Irish girl. They cannot cook and have bad health habits. A Coke in a handbag is a common habit of Irish girls.

Conclusion

There are countless opportunities to date girls from different backgrounds in Dublin, and the city is less snobby than other capital cities in Europe. I could enjoy many opportunities over a four-month period, which is a higher success rate than in other Western Europe capital cities.

I have not the opportunity to experience Dublin beyond that due to the cost: Dublin is a real financial challenge unless you are able to land a job at Google or Amazon. For example, € 1,200 is the going rater for a one-bedroom apartment, which will be badly insulated in most cases. However, Dublin is a good city to practice your game in Europe.

Switzerland Proves That More Gun Laws Are Not The Solution To America's Mass Shooting Problem

January 30, 2018 | by Matthew Eagle | Link | Original Link

I was lucky enough to be a part of one of the last great Boy Scout troops here in North Texas, where we were taught proper marksmanship by an ex-special forces scoutmaster. He ran the troop military-style, dividing us into patrols, where we could attain ranks such as patrol leader and assign push-ups to disobedient scouts of lower rank.

This taught us discipline, responsibility, and how to work with other young men to achieve common goals, as well as other manly skills such as how to build a fire and survive in the wilderness.

Switzerland takes this concept one step further with mandatory military service for all men, as well as maintaining youth clubs comparable to the Boy Scouts, and therefore despite having one of the highest rates of gun ownership in the world, they simultaneously have one of the lowest rates of mass shootings of any nation. What this tells us is that the United States does not have a gun problem, but rather a culture problem.

While Switzerland has not been involved in any serious armed conflict since the mid-1800s, they have scrupulously maintained an outstanding military. All able-bodied men must serve at least 300 days in the armed forces—not including boot camp and specialized training—and after completing their service will drill with the reserves for the next ten years.

If a citizen is deemed unfit for military service, they will most likely be required to perform some other civil service, such as serving as a police officer, firefighter, teacher, or will perform some other form of community service and will pay a slightly higher income tax until the age of thirty.

Citizens are fairly compensated for their service, and are given their rifle to keep in their home in the event of a national emergency. This is sometimes referred to as the “gun in every closet policy,” which effectively arms around half of the population. The benefits of this system are threefold.

1. Military Preparedness

If Switzerland was ever invaded, the Swiss government could mobilize every able-bodied man at the drop of a hat. Many historians even speculate that this is the reason that Hitler chose not to invade Switzerland during WWII. He knew that attacking an entire nation of well-trained and well-armed, freedom-loving nationalistic militiamen who had been training for a foreign invasion since their adolescence would be more trouble than it was worth.

To hold and occupy a territory such as this, once conquered, would require more effort than Hitler was willing to expend.

2. Skilled Citizens

This policy leads to a population that leaves the military and enters the workforce with discernible skills that can be used to support themselves.

This prevents people from descending into poverty and sucking on the government teat via the welfare system, and helps to curtail violent crime. An unskilled labor force is an unstable and volatile labor force.

3. A Strong Sense Of Nationalism

It is only natural that nationalism springs from military service like water springs from Old Faithful in Yellowstone. When you put your blood, sweat, and tears into something, it gives you a sense of responsibility for that something, a sense that a small piece of it belongs to you, like owning stock in a corporation.

When you consider that less than one percent of the American population is active military, yet almost twenty-five percent of Americans are receiving welfare, the entitled American “gimmedat” attitude at becomes all too evident.

The Link To Mass Shootings

Aftermath of the Las Vegas massacre in 2017.

Mostly stemming from the radical left of the American political spectrum, buzzwords like “toxic masculinity” have been spreading like wildfire. As early as elementary school, teachers are shaming boys for having masculine traits and indoctrinating children with the idea that boys and girls should be treated the same even though they have completely different needs.

Unlike the good old days when boys who were caught fighting would be taken to the gym, issued boxing gloves, and told to duke it out, many school districts will go so far to prevent violence that they will even punish a boy who fights in self-defense, thus completely emasculating him and teaching him not to stand up for himself.

This is not to say that fighting is the answer to all of our problems, but rather to say that men are naturally more confrontational due to the high levels of testosterone coursing through our veins.

Rather than teach boys how to channel their aggressive impulses into something positive such as martial arts, boys are told that having these impulses in the first place is wrong, and that wanting to be a strong leader is oppressive towards women, while girls are given free rein to push “the future is female” propaganda. This leads to many boys simply shutting themselves up in their rooms playing violent video games to release those urges.

When you factor in that the left is also providing monetary incentive for women to become single mothers—thus creating more households without positive male role models to teach boys how to become good men—the stage is set for a select few members of society to be adversely affected with severe aggression issues and start shooting up crowds.

In Switzerland, mandatory military service teaches men how to be men. Despite having nearly half the Swiss population with a firearm in their home, Switzerland has a low incidence of violent crime—and mass shootings for that matter—compared to the U.S.

Women's Suffrage In Switzerland

Since the last canton of Switzerland gave women the vote in the early nineties, however, laws have been passed with the aim of reducing the military presence in the country.

Ammunition for service rifles is now required to be kept at a depot rather than at home with the rifle in question, and more and more referendums are being held that want to end the tradition altogether, as well as remove the mandatory service requirement.

Only time will tell whether this tradition will remain intact, and if it doesn't—and gun violence increases—it will prove my theory to be more than simply the deranged thoughts of a mad scientist.

30 Signs That A Woman Has Slept With Over 100 Men

January 30, 2018 | by Jean-Batave Poqueliche | Link | Original Link

I have had my fair share of women. While some encounters were a truly positive addition to my life, most were sluturions ("slut" plus "centurion") who've dealt with one-hundred spears. Below, I've compiled a list of the recurring patterns from women who I'm certain have been with over one-hundred men.

1. She has a piercing on her vagina or nipples

RED	Clitoris / Vaginal Area
ORANGE	Nipples
YELLOW	Tongue / Navel

Sluturion threat level based on piercings

Having piercings in sensitive areas shows a tolerance to pain and a taste for self-destruction, attention, and validation. The more dangling and flashy, the higher the notch count.

2. She has at least two visible tattoos

The same attraction to pain combines with a chronic need for attention. Understand that tattoos are not edgy and not “who she is.” It is a mark, formerly reserved to prostitutes, that signals to men that they won’t have to work too hard to sleep with her. As above, the larger and more visible the tat, the more promiscuous the tart.

3. She thinks one-night stands are normal

It is never a good sign if they give it up on the same night or a few hours after knowing you, no matter how smooth you are. But hectoslags have no self-control when they get the tingles.

Sleeping with you is her goal in the interaction, instead of being a step taken towards something more meaningful. Sex—and the process leading to it—will feel like a formality.

4. She is an expert at giving blowjobs

My friend Sery likes to say: “She sucks dick too good to be a good girl.” Hectoslags don’t need direction or training. Their skills scream “slut/pro” while they show absolutely no emotion. She will keep eye contact, talk dirty and use her tongue in all the right places. If she deep throats you with no gag reflex or if she tries to lick your butthole, you might want to plan an exit after a few bangs.

Some might even advertise the fact that they are good and received “positive feedback” in the past. Giant crimson flag. Proceed with caution.

5. She has the thousand-cock stare

Women with high mileage are permanently scarred and it shows through a black, emotionless stare. She has the eyes of someone who could snap at any given minute. This blank stare comes from…

- ..the physical or psychological ordeal they had to go through by sleeping with a high number of damaged men.

- …the realisation that they are about to hit the wall and that their looks are fading rapidly. Only by opening their legs even more can they keep men interested.
- …the absence of simple female happiness and affection towards men as they can only connect with them on a sexual level.

Learn to recognise the thousand-cock stare and never commit to a girl who has it.

6. She does not like kissing

A sluturion mainly gets her rocks off with sex in itself and the “supposed” empowerment of multiple partners. Therefore, she avoids affection to set an emotional barrier between herself and men.

Even though she shows no physical affection, she tends to overuse terms of endearment like “darling,” “honey,” “daddy,” or its national equivalent, but it will feel out of place. She attempts to compensate the total absence of actual feelings to keep her target unaware of her indifference.

7. She really enjoys smoking, drinking, or drugs

She cannot go a weekend without booze, pills, or narcotics. They take away the pain that comes with her spiritual solitude. Her states of drunkenness or stupor usually result in public shame, degrading sex, or accidents where others pay the price of her stupidity.

She keeps repeating the same mistakes until hitting rock bottom: tequila shots in a crowded club in her twenties, then a bottle of wine a night with perhaps one friend in her thirties, and back to hard alcohol while alone in her forties.

8. Her anus is blown out

This should probably be number one on the list. For girls who frequently take it in the rear, the “wrinkled surface” of her anus becomes larger and darker than a normal

mucous membrane should be due to forced dilatation and contraction. It usually looks like a balloon knot protruding instead of being flat. It can also present tears due to excessive entry.

Sluturions show little signs of pain or protestation before and during anal. She might even ask you herself to put it in. Anal bleaching, another procedure on the rise, comes from porn stars who wanted to hide the consequences of years of anal abuse.

9. She only thinks about her orgasm

She remains selfish and only focuses on her pleasure and her orgasm. The man's nut, although sacred, is not her priority. She may also ask for financial or material favours from men in exchange for sexual "bonuses." She sees sex as completely transactional.

10. She has a popular Instagram account (over 500 followers)

What Instagram does to a woman. From wife material to Dubai toilet.

The advent of Instagram was to sluts what the invention of the wheel was to mankind, a way to be more effective and take the production rate to the next level with minimal effort (getting attention, money, and penises in this particular case).

The two basic needs of the sluturion, money and attention, are covered with the use of Instagram. She receives…

- …an endless flow of likes and private messages from thirsty men, tricking her into thinking that "she's still got it."
- …a way to flaunt her vanity with selfies and shots in tight gym clothing, while baiting the highest value male into contacting her.
- …a means of earning a living by spreading it for Dubai sheiks in exchange of designer handbags and crumbs of oil money.

And if you ever see a girl on Instagram featuring pictures of Dubai, she is actively being shat on.

11. Her daddy didn't love her

Having “daddy issues” is most common among sluturions. She tries to find the paternal affection she rarely felt through legions of sexual partners, but to no avail.

12. She is not “beautiful”

She can be “hot,” “sexy,” or “bangable,” but sluturions are rarely beautiful. Her physical appeal comes mainly from the sexual signals she conveys instead of her genetic beauty.

A beautiful girl might trigger feelings of love and protection from a man, but the sluturion

only generates a mix of lust, disdain, and morbid fascination. It is not rare to meet quite a few hectoslags in the “butterface” department. I have yet to meet a girl that kept a stunning face after bedding several tons of men, probably because science has showed that mammalian females absorb DNA from a man’s ejaculate.

13. She has no control over her life

She cannot be bothered to improve her situation or stop drinking. She will not go out on a date with a good man who does not meet her delusional standards. She has zero interest in personal development or accomplishments. She never reads or questions her surroundings.

14. She always shows low cleavage

She cultivates the “bimbo” style of leopard print, trashy pink shoes, and absurd cleavage. In other words, she appears like a low-grade prostitute. Wind, rain, or snow, she always dresses like a whore, even with her family around (if she has one).

She actively advertises her promiscuity to dominant males while shaming average men who would dare look at her exposed flesh. She has no notion of public shame. She is ready to have sex anywhere, anytime, and always looks the part.

15. She loves sleeping with foreign men

She often fucks foreign men or of another race than her own. She can do it at home if her country is all about “refugees welcome,” or she might be a “horizontal traveler” who thinks *Eat, Pray, Love* is a manual to life. The fun ends somewhere between Istanbul and Mogadishu.

Eat Pray Love fail

She loves going on vacation overseas with “her girls” or travels alone, with little or no known source of income. Her holes start to have more miles than Donald Trump’s private jet.

16. She has had plastic surgery

The same woman

The sluturion’s attractiveness is artificial instead of natural. Putting in the work to become more attractive progressively (when the issue is not a birth defect) is out of the question, so she gets bigger lips, fake eyebrows, a nose job, fake breasts, and butt implants. The roadwork is usually being paid for by the state or a sponsor. Tuthmosis Sonofra once said

“the bigger the cosmetic lie, the bigger the slut.”

17. She attended a Slut Walk

They sure do

She attends a Slut Walk to show how much she cares about body positivity and slut-shaming, since she is a slut herself. She wants to live in a world where sluts can be themselves without getting stoned.

18. She has beef curtains

The length of her labia depends on factors such as genetics, race, and age, but an “accordion” vagina which has a roast beef aspect is the result of broken collagen fibers

from forceful impact during intercourse, sexually transmitted diseases, and hormonal disruption caused by birth control (Source: Sean A Runacres, Journal of Cosmetic Gynaecology, volume 29).

This is why labioplasty has became so popular. Über-sluts know that having labia that drags on the floor will peg them as a slut.

19. She hates spending the night at your place

You told her to come over. There is small talk after she arrives. You both undress. You get your nut. This is what usually follows…

- Both of you catch your breath and look at the ceiling in silence (two minutes)
- A towel is used to clean up the sperm (two minutes)
- She goes to the bathroom (five minutes)
- Awkward chatting or even more awkward silence (five minutes)
- She gets an Uber, grabs her keys, then leaves (five minutes)

Out the door less than twenty minutes after climax. Once the deed is done, she doesn't see the point in staying around. And neither do you.

20. She has physically assaulted a man

She is often confrontational and hostile. She craves drama and is mentally unhinged. Her temper is so unstable that she picks fights with alpha males. The usual accusation is infidelity (projecting) before leading to physical violence. She tends to avoid fighting with beta males to continue milking them of their resources.

Outbursts of violence are also directed at herself. Self-harm is common among hectoslags. They often try to commit suicide as a cry for attention.

21. She has done “professional” photoshoots

She feels a need to broadcast her narcissism while baiting potential lovers or sponsors. She’s an expert at using filters and Myspace angles. She will have the exact same photo

taken a hundred times because it hides one of her flaws.

She might do regular “shoots” at first, but they will soon involve less and less clothes, as female vanity pushes her to maximize the amount of attention she receives.

22. She watches porn at least once a week

She regularly watches videos featuring gangbangs, interracial cuckoldery, violent sex, and lesbianism. She reaches a point where her brain became completely rewired and she can only climax watching the most obscene material. The normal sex that was good in the past becomes boring.

Thanks to porn, her love life feels forced and staged. Her lines in bed during the act will sound like they come straight out of a porn set (e.g., “Spank me daddy,” “I am your little slut”).

23. Her hobbies, circle, or profession are directly linked to the sex industry

Birds of a feather flock together. Was she a bartender in a strip club? Does she have stripper or camgirl friends? Has she ever worked in Vegas, Macao, or other locations rich in casinos and wealthy businessmen? Did she take pole dance classes, strip in the past, or help promote a burlesque club? Unload and leave.

24. She lies about her life on social media

[image]

She puts a front on the internet while she is miserable in real life. She experiences a “happy relationship” or “love at first sight” when a repeat pump-and-dump gets lazy and sticks around for a few weeks. Every now and then, she carts around a man as the “boyfriend” as an act of public relations.

25. She blames others for calling her a slut

Even more than other women, she can't accept guilt. Anything that happens is always someone else's fault. *She can't help it! She is just sexual! A slut is just a woman with the morals of a man!* The rationalisation hamster is already quite busy with normal women, so it must work around the clock within the brain of the hectoslag.

Another red flag is if she has seen a shrink in the past. Instead of trying to solve the root of the problem (hook-up culture, substance abuse, no goals, childless existence), she ends up taking prescription drugs to make the problem even worse.

26. She is a single mother

No protection. Drunken hook-up. An abortion appointment that was booked too early on

the Saturday following Ladies' Night at her favourite club.

She has pictures of her children all over Facebook but secretly loathes them, because they took away her looks (instead of her just having a bad lifestyle), hindered her sexual agenda, or were not sired by the alpha male she wanted.

27. She is 30 and still single

The dreaded three-zero has finally arrived without a boyfriend, but it doesn't mean she

was sexually inactive during the preceding fourteen years (seven men a year is all it takes for her to hit one hundred by 30). Imagine the psychological impact of being with that many men but still not finding a man to commit to you.

It’s no surprise that the rate of early sexual activity and the number of sexual partners for women is directly linked to the stability of their marriage, their happiness, and their mental sanity.

28. She has homosexual friends

She collects more fags than an ashtray in Soho. The gossip! The drama! The sexual promiscuity and the thrills induced by the risks of getting AIDS! The fact that the sluturions are known to enjoy the company of gays is very bad news.

Monkey see, monkey do. Women who avidly frequent homosexuals tend to mimic their debauched, dodgy sexual behaviour, and often have the same mental illnesses and life-threatening sexual diseases to boot.

29. She lies about the number of men she slept with

“I had only two/three boyfriends.” The one-night stands and drunk blowjobs in club toilets never count.

She avoids speaking about her sexual past as much as possible. “I do dirty things only with you” and “All my exes are bastards, don’t ask” are common responses. She becomes defensive about her notch count or projects her own guilt by accusing you of being a player.

A shift might occur when she has been through so much cock that she knows her cause is lost and just opens up about it. Hearing those things will make you enter black pill territory pretty fast.

30. She loves being spanked and choked

She responds positively to rough sex, actual physical violence, psychological torture, and humiliation. She gets off by being spanked when you take her from behind. It is worse if she spanks herself.

The biggest red flag is when she gets off by being slapped in the face, especially if she asks for it in words. Same goes for choking or God forbid, being pissed on.

This need for pain comes from the boundaries she has already crossed, when she has been with so many men that traditional sex is not enough for her to climax. She seeks a new fetish through pain and humiliation.

S’associer aux putains nuit gravement à la santé

No man wants to invest more than a few hours in a woman that has been soiled by the sweat and semen of a hundred men. It is repugnant in addition to being dangerous. So let this list be a warning.

Compare those signs to the couple of absolutely godless sluts you have plowed through in the past. How does the most promiscuous girl you have ever met score?

4 American Rock Bands That Understand The True Nature Of Women

January 30, 2018 | by William Adams | Link | Original Link

Contemporary rock music is not seldom suffering from politically correct and blue pill messages. Male bands with an emotional angle tend to either worship women or dwell in their supposed weak and pathetic misery. It's much more uncommon to metaphorically hit the right notes with regard to understanding the true nature of women, and consequently, heterosexual relationships, than the opposite.

However, there are exceptions, especially from a couple of decades ago, even in the mainstream orbit. Below are four rock bands that at least *occasionally* reach a true understanding of how the ~~un~~fairer sex and many of its members are constituted.

1. Nine Inch Nails

Nine Inch Nails, with the multi-talented Trent Reznor as their founding and only permanent member, became successful with their trademark of somewhat funky industrial rock during the 1990s up until the first decade of the new millennium. Reznor is also known for going from a depressed goth to healthy and fit.

Although the lyrical themes are largely associated with atheism, nihilism, and hedonism, the misery and heavy-hearted songs do sometimes shed light on the intersexual obstacles that stem from women's malevolent tendencies.

The song "Reptile" from the album *The Downward Spiral* (1994) includes the following "misogynist" lines:

> She spreads herself wide open to let the insects in
> She leaves a trail of honey to show me where she's been
> She has the blood of a reptile just underneath her skin
> Seeds from a thousand others drip down from within
>
> Oh my beautiful liar
> Oh my precious whore
> My disease, my infection
> I am so impure
> Oh
>
> Give in
>
> Devils speak of the ways in which she'll manifest
> Angels bleed from the tainted touch of my caress
> Need to contaminate, to alleviate this loneliness
> I now know the depths I reach are limitless

2. Tool

Tool is another American alternative rock band that has sold millions of copies and still has a large and loyal fanbase. Their sometimes quirky and absurd art attributes may be difficult to grasp for the average hard rock enthusiast, but their huge talent combined with more straightforward parts have made them into shining stars.

In the song "Ænema," from the album *Ænima* (1996), the lyrics of the Los Angeles-based group hit the right spot in regards to the celebrity whore and degenerate culture. As all red pill men know, women are predominantly a product of their environments.

> Here in this hopeless fucking hole we call L.A.
> The only way to fix it is to flush it all away.
> Any fucking time. Any fucking day.
> Learn to swim, I'll see you down in Arizona Bay.
>
> (…)
>
> Fuck smiley glad-hands
> With hidden agendas.
> **Fuck these dysfunctional,**
> **Insecure actresses.**

3. System of a Down

System of a Down is another platinum-selling alternative rock/metal band which has managed to capitalize on the masses' penchant for heavier yet melodic tunes.

The likewise L.A.-based group, whose members are all of Armenian descent, sings about a variety of topics, including anti-war pamphlets not very different from quasi-commies like Rage Against the Machine, but their song "Lost in Hollywood" (2005) would today be considered homophobic, misogynist, and sexist.

> They take you and make you,
> They look at you in disgusting ways.
> You should have never trusted Hollywood.
>
> I was standing on the wall feeling ten feet tall.
> All you maggots smoking fags on Santa Monica Boulevard.
>
> This is my front page. This is my new rage.
> All you bitches put your hands in the air and wave them like you just don't care.
>
> All you maggots smoking fags out there on Sunset Boulevard.

It's like they were prophetic about the #MeToo movement and what was coming about a decade later.

4. Glassjaw

During the nu metal era in the early 2000s, the New York-based group Glassjaw became quite popular, and was produced by the successful Ross Robinson (Korn, Limp Bizkit, Slipknot, and others). Their emotional hardcore mainly consists of melancholic songs about lost love, but some of them are based on a true understanding of the urban whore and the frustration it may lead to when dealing with such creatures.

"Pretty Lush":

> You can lead a whore to water and you can bet she'll drink and follow orders

"Lovebites and Razorwires":

> Who you fucking now?
> Shut up and swallow my pride for me
> Move closer and drive further
> So just suck on the end of my dick that cums lead
> I'll be coming for you all (…)
>
> I know a girl
> Who sells herself around
> And I'm sure one day
> She'll sign autographs in your town
>
> "Who you fucking now?"
> You fucking live in shit
> You are shit and you eat shit
> And you eat shit you fucking whore

Conclusion

With the rise of extreme political correctness and social justice warriorism, it’s unlikely that we will see more bands in the mainstream speaking (or rather singing or screaming) the truth about degeneracy and female promiscuity. Rewind only a couple of decades and you may find plenty of good music, all consisting of lyrics that occasionally include interesting themes and accurate descriptions of the opposite sex.

4 Ways Young Men Can Seize The Day

January 30, 2018 | by Regan Jacklin | Link | Original Link

There isn't much to desire about getting old. Your energy decreases, your bones become as brittle as glass, your looks fade, and your strength leaves you more and more each year. Rumors even say your boners get weaker. Yikes. No thanks.

The only benefit old people seem to have is wisdom. They learn how to approach life with less resistance and more freedom than younger people tend to. Their wisdom helps them cope with their disadvantages and sometimes makes them even *happier* than they were in their youth.

What if we had this same wisdom while we were still young? What if we had years to apply the principles that would keep us happy and successful beyond mere circumstances?

I'm still a relatively young lad myself, however, through facing many trials early in life and reading books since roughly five days after leaving the womb, I have been lucky enough to gather wisdom that helps me cut through most of life's bullshit.

I want to share it with you before your hair greys, your balls touch your knees, and it is too late to benefit from. Here are four principles and ideas that are sure to change the trajectory of your life…

1. Discipline Is Divine

Every choice, whether good or bad, adds up in the long run. The sooner you start making the *right* choices, the younger you will be when you start to reap the rewards of those

same choices.

My girlfriend provides me with a constant reminder of this. When we started dating, we were in high school. She worked at McDonald's picking up every extra shift she could get. Even though her paychecks were laughable compared to today, she managed to save a good chunk of money.

As she got older, she had a great work ethic and good saving skills. She worked hard, avoided the parties, and continued to put a little money in her bank day after day, year after year.

The night before writing this, she drove us to the BMW dealership—in her car which was *already* nicer than mine—and bought a brand new BMW without batting an eyelash. And she's 24… in October! Maybe she will be buying a jet on her 34th birthday. I hope I'm around for that.

If you live your life with discipline, if you show up, do the work and avoid the obvious setbacks, you really can have whatever you want in life. As Socrates put it, "an undisciplined life is an insane life."

2. Stop Blaming Other People For Your Problems

Here's some wisdom for you: if you've got a problem, *take care of it yourself.* You can point fingers all you want, but blaming someone else for your problems won't change a damn thing.

Have you ever noticed how there are two kinds of old people: the miserable ones and the extremely happy ones?

Well, the miserable old people always seem to be the ones who blame others for their misfortune. If they don't have someone direct to blame, their misfortune is the

government's fault, the economy's fault, and so on.

Listen up, this is important: your life is yours and you are the only one who can change it.

If you are underpaid, it isn't your bosses fault. It's your fault for not getting a new job or building new skills that would increase your value as an employee. If your relationship sucks, it isn't your partner's fault, it is yours: after all, it only takes one person to end an argument.

Take responsibility for your life unless you want to be the old guy who has 70 years worth of life to complain about and not a soul who gives a shit to listen.

3. Learn How To Sell

> *"Everything in life is a sale and everything you want is a commission."* – Grant Cardone

Selling is the world's most profitable profession. As they say, "wages will make you a living but profits will make you a *killing*."

If you ever plan to retire before you're so old you have to ask your wife what your PIN is again, you need to learn how to sell.

Furthermore, *selling is life's premier skill*. When you become good at selling, you can sell your ideas to others (persuasion), you can sell girls on why you are better than the competition (game), you can sell yourself on your good qualities (confidence), you can sell yourself on your commitments (discipline), and you can sell others your products (get rich).

Ultimately, when you become good at selling, life becomes a big game.

4. Time Is An Illusion

Have you ever noticed that every time you talk to an old person, they love telling you about when they were your age? They can't remember if they took their meds or not this morning, so how the hell do they remember what life was like 40 years ago? Here's why: Because time flies. *Because time is only real if you believe it to be.*

View time objectively. Know that, someday soon, you are going to be old as well. You can be old with a legacy and a story worth telling, or you can be like most others, realizing life slipped you by and you blew your one shot.

Using your newfound wisdom and perspective of time, start investing your time today, because it is going to be gone tomorrow.

In Conclusion

Thanks to the knowledge passed down through books and the Internet, you now have the wisdom to capitalize on your youth. Don't wait until you are old to experience the freedom and change these principles provide.

Use your time to build new skills and disciplines and watch as your aging process becomes both graceful and fruitful. Make sure that, when the time comes, you are the old guy whose life story captivates others, not pushes them away.

4 Pieces Of Advice For Liberals Who Hate-Read Return Of Kings

January 31, 2018 | by Joe Leone | Link | Original Link

As of late, *Return of Kings* has had some unwelcome pests infest the woodwork. The closing of the former comments system has paved the way for an influx of mentally ill social justice warriors to troll their unwelcome whining. Still, every crisis presents an opportunity. Now is a fantastic opportunity to speak to our detractors man-to-cuck, and deliver a quartet of home truths for them to take home.

1. You Aren't Really Liberals

If a duck quacks, it's a duck, but a liberal fighting for their own gain at the expense of others is no liberal. No matter how many thumbs up your comments gain at *HuffPo,* unless you hold yourself true to the concept of egalitarianism, you are not a liberal, but a charlatan. A true liberal fights for equality for every human.

Yes, that means white males too. It means hearing the opinions of others that you may vehemently disagree with and giving them due process. It means you are moderate with your response when somebody offends you. It means accepting your share of responsibility and not passing the blame to others for your shortcomings and hardships. And it means you support every cause, not just the current bandwagon you are rolling on.

The next time you are "triggered," please take a minute to ask yourself a question: in my reaction, am I taking into consideration the truth and the effect it will have on others? A real liberal would. If you're a feminist and aren't fighting for men's rights, or an illegal

immigrant appeaser that isn't concerned about its effect on white communities, then you aren't a liberal, you've picked a side. Just like we did. So get off your soapbox.

Is this really liberal enlightenment?

2. The Privileges You Enjoy Are Based Upon Freedoms You Are Trying To Destroy

Abraham Lincoln bust destroyed in Chicago.

In recent years, a dangerous brand of thought control has developed according to the demands of social justice warriors and their puppet masters, the mainstream media. The brave new world you envisage appears to have only one point of view: yours. An opinion

that doesn't fit the Marxist narrative assigned by the biased news outlets and their enablers is a surefire way to achieve social stigmatisation, or even prison. Although you may celebrate each small win the left achieves, they are merely pyrrhic victories.

The reality is that the hedonistic "rights" you now enjoy are based on achievements hard won in blood and sand, by better men and women than you. The (flawed) idols whom you adore, such as Martin Luther King, Gandhi, and Nelson Mandela all achieved their greater success by freedom of speech.

Free speech is precious because it is the only buffer between society and the people we elect. It is how we hold them accountable for their actions, and without it, we lose the only chance to protect ourselves against their bad decisions. Maybe consider what is of greater importance: the pacification of a childish liberal snowflake, or the protection of their right to be offended in the first place?

3. Conservative Men Are Not The Enemy You Think They Are

www.alamy.com - DDKWY2

Toxic masculinity fighting for women's rights.

Despite what the Soros-backed media says, men are very rarely misogynists. If we were, you can be sure the world wouldn't be shaped the way it is. In fact, it is due to the ingrained sense of loyalty and care towards women that your worldview has been allowed to flourish at the expense of 2,000 years of tradition.

Name one liberal achievement that has occurred without the backing and commitment of thousands of men. The emancipation of women, the Civil Rights Act of 1964, the National Park System, and the American Civil War are just some examples of supposed toxic masculinity working for the benefits of society. Not to mention the millions of male lives lost fighting for the safe spaces you now enjoy.

The Gestapo propaganda outlets that masquerade as news brainwash with you false tales that have no basis in truth. Make no mistake: as much as you have been programmed to hate Western values, it is the fundamental logic that underpins them that has led to your safety. The world you are building is not one you will want your children to inherit. And it is now too late to go back.

4. You Are Not As Important As You Think You Are

You wish.

The modern liberal is an example of unabashed hubris. A walking automaton of hot air and bile, your average social justice warrior has enough self-entitlement to last a lifetime. But the sneering façade belies the overall insignificance of each and every one of them.

The truth is that apart from our parents and close family, we are never truly special to anybody. Every bit of respect we glean is from hard work and achievement, especially for men. There is nothing wrong with that. Society is developed and sustained from the commitment and efforts of its contributors.

The assumption that you can become significant through virtue signalling or freakish behaviour is wrong. Sure, you may get some views on Facebook—or even a safe space of your very own—but you are still the detritus of the cosmos packaged into finite balls of flesh just like the rest of us. We owe you nothing. Our ancestors didn't die on beaches for us to take orders from a 21-year old graduate with anxiety issues, and we never will.

Its true that not every liberal falls into the asshole category. A point of view well-made is valid, even if we disagree. But there are far too many people who, failing to understand the key concepts of the democracy that just about exists, invalidate themselves. If you have to troll the ROK comments, at lease be gracious enough to become educated first.

You *are* supposed to be smarter than us, after all.

Would You Bang A Famous Feminist?

January 31, 2018 | by Beau Albrecht | Link | Original Link

Here we'll rate the big-name feminists, limited to their most (in)famous activists. Thus, Hillary Clinton (for example) doesn't count. Cupcake is best known as a political figure: Secretary of State, New York ~~Carpetbagger~~ Senator, First Lady during Bill Clinton's administration, and (close, but *no cigar*) Presidential candidate. Also, Mattress Girl isn't famous enough; liars are a dime a dozen.

The contestants are listed in order of their "Hot Babe" number. However, instead of going from the plainest to prettiest as usual, it's in descending order. That indicates our awareness of the problematic fact that people with good looks have more privilege in society. Therefore, listing them backwards will help correct this injustice. After all, symbolic gestures *totally* make a difference, righty right?

HB5: Gloria Steinem

Give me an “A”!

This contestant is among the best known big-name feminists, and also their cutest. This Toledo native moved to the mothership of NYC to pursue journalism. She became a Playboy Bunny and wrote a boring tell-all account. For a while, that hindered her journalism career (and presumably her cocktail waitress career). She encountered the Big Apple’s radical feminist scene, even attending meetings of the infamous Redstockings. Understandably, there was a kerfuffle when those radicalinskis discovered her earlier CIA ties.

Starting *Ms*. Magazine in 1972 became her big break. As the best face that radical feminism ever had, her activism efforts kicked into high gear. Eventually, she attained a list of awards, citations, and other tributes longer than Charles Manson’s rap sheet.

Bangability: Back in the 1970s, she was modestly cute, worth asking where the pet shop is. However, this didn’t make her outstanding. Modestly cute babes were much more common back then; they paid better attention to their appearance and didn’t implant facial shrapnel. She’s aged fairly well too, and didn’t hit The Wall very hard.

Personality: She was a little more agreeable during her early days. Now, she generally comes across like a typical tedious liberal. Those types don’t make you run away screaming, but you nod patiently and go “yeah, okay” as they excitedly babble through their talking points they got from CNN fake news. Still, she’s well ahead of the curve for the notoriously crabby Second Wave feminists.

Finally: Gloria could’ve been quite charming if she hadn’t gotten mixed up in feminism.

HB4: Bella Abzug

What's with all her hats?

This Columbia graduate (that figures) and attorney became a New York Congressbabe. During Watergate's aftermath, she wanted to block Gerald Ford's nomination as VP. That would've made the Democratic house speaker the next President. Fortunately, he had the good taste not to cooperate; Bella's plot would've been dirtier than anything Tricky Dick ever did.

Bangability: Bella the Battle-Ax was… well, *plain* is the nice way to put it.

Personality: As she herself wrote:

> I've been described as a tough and noisy woman, a prize fighter, a man-hater, you name it. They call me Battling Bella, Mother Courage, and a Jewish mother with more complaints than Portnoy. There are those who say I'm impatient, impetuous, uppity, rude, profane, brash, and overbearing.

Roger that.

Finally: HB4s aren't exactly eye candy. However, they'll do *if* they are a joy to be around and radiate charm.

HB3: Betty Friedan

It’s understandable why she was so crabby.

This babe hobnobbed with Communists since childhood, but is better known for founding outfits like NOW and NARAL. Her book *The Feminine Mystique* persuaded millions of women to define their success the way men do, leaving their homes in droves for the awesome adventure of cube farms.

Bangability: I’d need some serious beer goggles to tap that.

Personality: This bitch needed a flea and tick collar. Also, she had an ongoing catfight with Gloria Steinem. *Jealousy?*

Finally: HB3s like Betty are *really* getting into last resort territory.

Loading…

HB2: Elizabeth Cady Stanton and Susan B. Anthony

Lips that touch liquor shall not touch ours!

These two BFFs are tied for second place. Along with Lucretia Mott, they began America’s

feminist movement. The First Wave—back when it *really was* about equality—wasn't too objectionable. Their Declaration of Sentiments was considerably more reasonable (and far less snotty) than contemporary feminist writings. Unfortunately, the movement they launched eventually became as toxic as a screwdriver made with Agent Orange.

Stanton was a spoiled rich chick, quite self-absorbed, and—like *most other contestants* here—had some Daddy issues. Still, she was an angel compared to typical contemporary feminists. As for Anthony, she—like Lucretia Mott—came from a Quaker background. (Why were so many Quakers involved in feminism and other radical stuff? Many *strange coincidences* here…) She soon became a professional activist.

These contestants also supported the temperance movement, an effort eventually leading to Prohibition. Perhaps it seemed like a good idea then, but the results *speak easily* for themselves. The beginning of *America's Decline: The Education of a Conservative* argues fairly persuasively that the USA's train ride to hell first began with Prohibition. It's also why American beer was swill until the 1990s craft brewing vogue.

Bangability: Gloria Steinem is an old lady now, but still is cuter than these two during their bloom of youth. Stanton somehow got married around age 24 (back then, that was pushing "old maid" territory). Shared political interests fueled the none-too-congenial relationship. More surprisingly, they had seven kids. If I had to bang her seven times, the trauma would've made me fill out a job application at the nearest monastery.

As for Anthony, she was the butch one, but aged slightly better. She was a lifelong spinster, highly unusual then. If she'd wanted, she could've found a suitor with bad eyesight. Reading between the lines, could they have been secret carpet munchers?

Personality: They were generally regarded as eccentrics and radicals. However, they'd be very proper and agreeable ladies by today's standards. Further, either one of this Dynamic Duo seems like Saint Agnes, if compared to specimens like Big Red and Trigglypuff.

Finally: An HB2 war-pig becomes thinkable only when the bar's closing, your alcohol consumption impaired your vision and judgment, and your friends will never know. However, as Temperance activists, getting some dick from 2AM nightgame wasn't possible.

HB1: Andrea Dworkin

Shortly before her mass contracted under immense gravity and created a black hole

Our least attractive contestant was a true nutcase. She married some Dutch anarchist who happened to be a psycho. Stranded in Europe, she tried being a hooker, but *somehow* couldn't earn enough for a return flight. She would've become a drug mule, if not for a last-minute supply problem, but the dealer let her keep the ticket. Back in the USA, she became a prime example of a feminist projecting her bad experiences onto all men.

Bangability: Although I give big gals a chance, *reasonable limits apply*. (Those needing to weigh in on a livestock scale at the large animal vet should quit snacking.) Further, they need at least one standout characteristic to catch my notice, like a pretty face, gorgeous hair (brushing it and using conditioner does wonders), bodacious perky breasts, or simply overall feminine grace. Jabba the Feminist lacked any such sparkle, due to self-neglect.

Personality: Where do I even begin? She makes Cupcake (even after her funk from losing the election) seem like a sweetheart.

Finally: This hambeast wasn't Bubba from Cellblock 6, but that's not saying much.

Where are the rest?

Time for a break! These gals are too cute, adorable, and intelligent to be feminists.

You might've noticed the absence of HB6-10 big-name feminists. That's because there aren't any.

Satanism And Witchcraft Are Staging A Big Comeback

January 31, 2018 | by Michael Sebastian | Link | Original Link

The election of Donald Trump has caused many people to lose their senses. We now have news anchors crying on the air, former conservatives siding against their own president, and people acting like Harry Potter is some sort of blueprint to resist Trump. But one of the oddest side effects of the Trump victory is that it has revived interest in Satanism and witchcraft.

Chelsea Clinton and the Church of Satan

To be a politician in this politically correct age, you must never say something that might offend certain groups. For example, you will never hear a politician saying something bad about Islam. You can bet that someone like Hillary Clinton's daughter Chelsea is extra careful about everything she says or writes on social media.

Thus, it was a little bit of a surprise when Chelsea Clinton wished the Church of Satan a Happy New Year. Now, no one is accusing Chelsea of being a devil worshiper. The Church of Satan itself seems more like a bunch of Ayn Rand devotees who are into rituals than literal worshipers of the prince of darkness. But the Church of Satan is overtly anti-Christian. The founder of the group, Anton LaVey, wrote in an introduction his Satanic Bible that he wanted to defy the Christian religion.

By interacting with the Church of Satan, Chelsea gave her 2.5 million followers that the Church of Satan is a legitimate part of the "Resistance" to President Trump. By bestowing "Resistance" status to an anti-Christian group, Chelsea is drawing the battle lines more clearly: It is the Christian Trump supporters on one side and anti-Christian atheists on the other. And if those atheists won't be excluded if they happen to engage in strange rituals.

Astrology and Witchcraft on the rise

In the spiritual desert that is America, it is not surprising that people are turning to various alternatives. On Twitter, many accounts have sprung up of young women who are into veganism, yoga, herbs, and astrology. And it is not just women who are into it. “Kundalini Dick” is a popular black Twitter account that teaches his followers about astrology and sex magic.

Magical practices are not limited to social media. The Bravo television channel recent ran an episode of *Vanderpump Rules* that featured the women members of the show putting a spell on a male cast member to stop him from cheating on his girlfriend using a needle, a lemon, and candles.

This new age seems to affect millennials the most. These young people are the end result of our culture of materialism and hedonism combined with political policies that only benefit a tiny cadre of globalists.

Christianity’s unpaid bills

Loading…

It is easy to blame the misguided people who dabble in witchcraft, Satanism, or any other dubious sect, and to a certain extent they deserve to be blamed. But ultimately, I think the full blame must fall on those Christian bishops, priests, and pastors who are charged with preaching the fullness of the Christian message—even the difficult parts.

For decades now, the Christian churches have been willing to water down the gospel to win the praise of the world. This has been most evident with the mainline Protestant churches, who march lockstep with the progressive culture. As soon as the US Supreme Court legalized same-sex marriage, the National Cathedral, which is part of the Episcopal Church, immediately announced that it was offering to perform same-sex marriage ceremonies. There was no question of preserving traditional Christian teaching.

But it is not just the mainline Protestants who have yielded to the culture. The Catholic Church doesn't openly flout Christian doctrine—that would be too obvious—but they have created an environment where the more difficult teachings of the gospel are never taught or enforced. If you want proof of this, ask yourself when was the last time a bishop barred a pro-abortion politician or turned down a photo-op with one?

Evangelicals, once a bastion of traditional culture in the United States, are no better. I met an evangelical pastor at my son's preschool. I was expecting him to be a kindred spirit, but quickly learned that he suffered from an advanced case of Trump derangement syndrome. He was no outlier. Evangelical pastors now signal harder for social justice than they do for the teaching of Christ, as these tweets by Seattle pastor Eugene Cho demonstrate:

> God loves the nations. The Scriptures make this clear. No one – let alone, the leader of a country – should ever disparage other nations with such a disgusting

> comment. To Haiti & many countries of Africa: We are so sorry. Please accept our apologies on behalf of President Trump.
>
> — Eugene Cho (@EugeneCho) January 12, 2018

> Great news! Signed checks today for about $230,000 for ongoing relief work with our partners for Syrian refugees. Why? Because refugees are people…and people matter to God.
>
> Join us. Please consider an end-of-year donation to @OneDaysWages: https://t.co/Sh1gvgNZ74 pic.twitter.com/hXtRutvBP5
>
> — Eugene Cho (@EugeneCho) December 30, 2017

The bottom line is that people who are dabbling in witchcraft and Satanism have probably only been exposed to a truncated Christianity that has been purged not of its challenging elements, but also of any connection to the Divine. Why become a Christian if it teaches exactly what the rest of the world teaches? Why bother going to church if it has about as much spirit as an NGO? People inherently sense that this modern form of Christianity has no power. There is no sense of awe. People are voting with their feet. Several friends have even that even the great Evangelical megachurches are losing members in droves.

Conclusion

I highly doubt that Americans are going to convert to Wicca or Satanism in great masses. These things are only symptoms of the bigger problem: Americans are spiritually dead. We have let ourselves become debased. We have our fill of porn, meaningless sex, entertainment, drugs, alcohol, and the never-ending pursuit of wealth. What we don't have is any higher purpose or meaning. If things continue on our present trajectory we will live and die as unthinking beasts, rutting our way to perdition.

It doesn't have to be this way. We can choose to live as men even if our culture and our institutions have abandoned us.

How To Meet Girls In High School Without Using Social Media

January 31, 2018 | by Bruce Kane | Link | Original Link

If you are like me from a couple years ago, you may find it hard to implement what you have learned from Roosh and other contributors on ROK for one main reason: age.

If you're still a teenager, night game is out of the picture, because you aren't even old enough to enter clubs in the first place. Day game outside of school can be tough, because if you are like me, you may look your age (or younger), so there is no way of hooking up with an attractive girl in her twenties at a coffee shop or supermarket.

The next problem is your lack of social media. My entire life, I have never had a social media account such as Twitter, Instagram, or Snapchat. While this is a good thing in terms of productivity, it may hurt your game in your high school years.

The good thing is I have a system for this niche situation that works. I highly recommend reading Roosh's post "How To Game Young Girls" before you finish reading this article. Although it is written for older men, points 1-4 are spot on.

The reason I am writing this piece is because game among the youth—especially in high school—is heavily reliant on social media nowadays. “Sliding into DMs” is a thing for a reason. Guys can talk to girls over social media without having to deal with conversations in person. Although I was jealous of this aspect of social media, it allowed me to cultivate game in high school, which has treated me well now that I’m an adult.

1. Target Girls Who Are In Your Classes

Getting someone’s Instagram is easy because all you need to do is know their name. Phone numbers are not so easy.

My strategy for getting numbers has never failed me. The next time you see a girl you are interested in, go up to her and make up an excuse related to homework to get her number. Examples include (but are not limited to) “The last page in my packet is unreadable, could you text it to me?” or “I lost my notes from the history presentation on Monday, could you text it to me?” You then proceed to enter her number into your phone, and that’s it.

Although this strategy always seemed to work for me, you can’t gauge her interest in you based upon this alone, though it *does* get your foot in the door.

2. Get Ready

First things first, pick your target. It helps tremendously if you have a class with her, but you must know the path she takes after class. The reason I first talk to girls between classes is because it gives a smooth point of entry and you don’t have the awkwardness of wondering when to cut off the conversation. Once you need to split off to get to your class, you can just smile and say “See you tomorrow.” Easy as that.

3. Execute Your Plan

After keeping up this up for a little while (judge her comfortability around you), the next step is asking her out. This is as easy as asking her out to coffee after school. If she says yes and doesn't flake, then that's all—you're set. If she responds otherwise, the next step is for you.

4. Get Her Interested (If Possible)

You have to use your own judgment on this step. If the way she responds makes it clear that she is uninterested, then move on to your next target.

WARNING: this is not a club where the women do not know each other. Only use this on one girl per social group. If word spreads, you will come across as desperate by hopping from girl to girl. This happened to a buddy of mine. Don't let it happen to you. If she responds with a "maybe" or "yes" and then later says she is busy, once again, judge the situation. Most of the time she is trying to get out of it, but in rare cases, they are being sincere.

Loading...
I want to share my first use of this system and how I got my first ever bang. My first target was a girl with whom I shared two classes. Luckily for me, they were back to back, so I was able to easily talk to her after class as we walked to our next one. After about a week or so of doing this, I asked her out to lunch after school the following day (my mistake, per point two of Roosh's aforementioned article).

That night (Friday), she texted me saying she was going out of town for the weekend. At this point, I would normally cut things off, but that weekend I was working on an English presentation with one of her friends and out of the blue she showed me an Instagram picture of her (girl I was interested in) skiing saying she was just my type, because she knew I liked to snowboard.

I made the decision of giving her the benefit of the doubt that she was busy by continuing to talk to her, and this eventually led up to my last attempt of asking her out… which was a yes, to my surprise. Two weeks later, I had my first bang. I have used this system a few more times throughout high school and it led me to a numerous amount of bangs between three different girls, and since they were putting out, there was no more need

for me to chase after them.

While this is a very niche method, it worked out great for me. Granted, I only got to try it over the span of two school years, but I was still getting laid more than any of my friends, most of which were pussy-whipped in relationships or too afraid to even try.

I look back now at the second half of my high school years and realised how it put me light years ahead compared to my peers in terms of game. While other men my age have become accustomed to game on social media, it has no practicality in the real world. For the young guys out there, I can recommend two things when it comes to building your game:

1. Start now

By starting your game at an early age and learning how to deal with female behavior, it becomes a habit.

Recently, a buddy of mine and I went to get a cup of coffee before we headed to a study group. He went to the bathroom, and while he was gone, I started chatting up a 7 to pass the time. I ended up scoring her number, and my friend came out of the bathroom in shock as he saw me talking to her. For me, it was no big deal because I had had a few years of experience under my belt, but he had never cold approached a woman in his life.

2. Hit the gym

For those who don’t go to the gym, I suggest that you start lifting at least three times a week. For some of you, this may sound odd. Believe me when I say that the gym builds confidence. Coming from a guy who used to be 6’4″ and 120 pounds, you can not understand the type of self-confidence gains you will make, especially if you are underweight or overweight.

Keep reading up on game and female behavior. I recommend *Return of Kings* and Roosh V's blog as the two best places to read up on these subjects. Good luck!

Update To Our January Promotion Of Paying Guest Contributors In Litecoin

January 31, 2018 | by Roosh Valizadeh | Link | Original Link

One month ago, I announced that I would be paying any article I accepted in January with $10 in Litecoin. I'm happy to say that the results of this promotion has far exceeded my expectations: we've received dozens of additional articles and have been able to post four original articles every weekday without relying on syndicated news. Traffic has also increased.

If you have submitted an article, you already received instructions to fill out the invoice form after your article goes live. Payment will be sent out on the 10th of the month after you invoice me. So if you invoice me today (January 31) for a published article, you will be paid on February 10. If you invoice me between February 1-28, you will be paid on March 10. Since we're still working through a large backlog, it may take up to three more weeks for your January submission to appear. Email me if you need additional clarification or help.

Even though $10 is not a significant sum of money, it was a gentle push for men interested in crypto to submit articles. I'm definitely keeping that lesson in mind on deciding whether I should implement some kind of permanent reward system in the future.

I thank all the writers who have submitted as part of the promotion. If you are a reader, feel free to share your thoughts on if you noticed any difference in content throughout January compared to the previous months.

5 Reasons Why You Should Never Work With Women

February 1, 2018 | by Michel Vargas | Link | Original Link

Working with women will always end in disaster. Over the last five years, I have been working as a freelance for a little translation company owned by a woman. Everything went well until my mission was ended unilaterally by my female client.

Here are the reasons why you should tread lightly before considering working with a woman…

1. When The Professional Relationship Becomes Personal, You're Screwed

After several contracts abroad, I decided to return in my homeland, where the opportunity to work with a character I'll call "Mina" came up quite quickly. She was in her mid-forties by this time. In her prime, she would have been a solid 8. I already knew people who worked for her, and I decided to ignore some red flags concerning Mina, namely that she was a single mother who left her former companion high and dry. But all things considered, she had a good professional reputation and I needed the money.

Mina and I started developing a personal relationship, looking much like a friendship. One day, she told me that I was like a brother to her, making me feel really comfortable with her. Retrospectively, I should have avoided this situation because I let emotions sneak into our professional relationship.

She assigned me to increasingly complex translation jobs, which I had no problem fulfilling. My efforts led us to land some good contracts, making cash flow in on a more regular basis. Everything was fine. I was 100 percent dedicated to her, even doing unpaid extra time. This prevented me from looking for other contract opportunities elsewhere, to cover my back if anything happened, another mistake.

2. You Are More Likely To Have Endless Conversations About Gossip

Gossip was part and parcel of our collaboration. Her former companion was the primary object of Mina's gabbing because "you know, he was so bad at everything." Out of curiosity, I tried to dig into the reasons why their relationship ended, naively thinking that gruesome stuff happened, but I only got answers like "he was spending too much time in the garage repairing his motorbike" and "he was too close to his parents and childhood friends."

I just tried to point out that this guy was the father of her seven-year old daughter and shouldn't be tossed away so casually, but she didn't care. From then on, I acquiesced to everything she said.

3. Her Female Friends Are More Valuable To Her Than You

Her female friends were "her world" and she was very serious on advising them on how to handle relationships. Of course, if a relationship was failing, she would be kind of delighted, blaming the man for not being better. She even started a "divorced and happy club," consisting of them sipping wine while bitching about men, and occasionally flying abroad with her friends to enjoy a cock carousel ride.

Loading...

4. Women Make Decisions Based On Stupid New Age Crap

Mina was into parapsychology and astrology. Every time we met, she had some new fad going on. While I am quite spiritual myself, it was really hard to swallow stuff related to energy vibrations and planetary alignments. One day, she was down because some fortune teller saw that negative things would be happening to her in the future. The next, she was totally ecstatic because of a reikki lesson.

In her personal quest to find her "inner self," she was totally influenced by the teachings of famous psychics, spending a considerable amount of money on their books. I listened to her constant babbling about the signs she saw in nature, sometimes trying to give my input on her nonsense.

5. Political Debates Are Always A Dead-End

While Mina's New Age crap would make me smile or laugh, her views on politics would leave me totally clueless.

She was a diligent reader of the mainstream media and her thinking was molded by left-leaning columnists. Unsurprisingly, Trump was an ugly white male she feared. Our discussions in the aftermath of terror attacks usually revolved around her fears of nationalism and bigotry. Countries needed more women in charge to cure the mess that evil white men have left. On the other hand, she admired an angry spinster friend of hers' who had gotten a job working in a migrant camp.

The money was too good for me to engage in a contradictory debate with her: she was naturally immune to real-talk.

In The End, It Doesn't Even Matter

This quote from Linkin Park pretty much sums up our relationship. Over the course of our

collaboration, I was assigned to more jobs and received high praise from Mina. Everything was supposed to run like clockwork and the future seemed to be bright. However, in the last two months, out of the blue, she started being increasingly critical of my work. In that case, it was totally unjustified, for I have more than ten years of experience in translation.

I tried to be resilient, and I even started working at nights to get more things done, but everything I delivered was not good enough for her. I had absolutely no clue on what was going on, but she fired me in the middle of a mission, explaining with a straight face that my services were too expensive. All that after five years.

Experience has taught me that professional relationships with women are doomed. A lot of articles at ROK show the difficulties of working in a mostly female environment. If you have the opportunity to work for a woman, be careful. In a blink of an eye, a woman can get rid of you with no regrets and it will always be for external and irrational reasons.

How To Avoid Getting Scammed When Investing In Cryptocurrencies

February 1, 2018 | by Greg Freeman | Link | Original Link

A quick look around the Internet will tell anyone paying attention that something is going on. Something big. Just a couple of years back, hardly anyone had heard of cryptocurrency, and even fewer were investing in any crypto projects. That seems to have changed rapidly. It seems like whatever website you visit, whatever video you watch on YouTube, and whoever you speak to in the real world, everyone is going crypto crazy. Even Starbucks is getting involved.

This is both exciting and terrifying. There are unbelievable opportunities to make millions if you invest even a token amount in the right project, but there is also the chance you will lose everything you invest.

I've written this quick guide to investing safely in cryptocurrencies simply because I wish someone had written it for me before I got involved about six months back. If you follow these basic pointers, you should be able to invest and make money in the revolution taking place around us.

Invest Some Time In Understanding The Blockchain And Cryptocurrencies

The number of people pouring cash into cryptocurrency recently is absolutely staggering.

As a case in point, Coinbase, one of the largest and best known cryptocurrency exchanges, added 100,000 new users in a single day when Bitcoin futures were announced. That's a *lot* of people pouring into a market suddenly, and I'm willing to bet a

very small handful of them understand even the basics of what they're getting involved in.

I'm not going to pretend I'm some sort of cryptography wizard by any means. Hell, I just about got a decent grade in math in school. That said, I did take a few days to read all I could about the blockchain and how it works. As a starting point, I recommend watching this free video:

Once you grasp the basics, you will be in a much better position to assess projects and investment opportunities.

Check Out Both The Idea And The Team Before Buying

There are all sorts of crypto-related projects out there. Some aim to be currencies, like Bitcoin, while others aim to be so much more on top of that. You've got to like the idea and trust the team behind them before investing. These two getting the green light can often be enough for me to make a decision to get involved.

I invested in both Snovio and ECC because I loved the ideas and I trusted the open, transparent teams. If you can't get answers to your most basic questions, that's a big warning sign. If the community is helpful, friendly, and willing to answer you, that's a big indicator you can trust them.

Of course, professionalism matters as well. The team can have all the best intentions, but the skills to deliver have to be there, too. Find out all you can about the developers and other team members, and only invest if you believe they have what it takes to transform ideas into reality.

Start by following the social media channels of a project you like the look of. That will tell you much of what you need to know within a few weeks.

Stick To Well-Known, Respected Exchanges

Now, this is a little bit of a catch-22. I'll explain why in a bit. That said, as a beginner you should never, ever sign up at an exchange you don't know for sure you can trust.

There are some big, well-established names out there. That doesn't necessarily mean they can be trusted, however, and your own research is still required, but you stand a better chance of not getting screwed over in dealing with them.

If you're a complete beginner, you will ideally want to be able to deposit your own currency using a credit or debit card. If you're a little more savvy, you can buy Bitcoin, Ethereum or Litecoin at one exchange and transfer that to buy the altcoins you want at other exchanges which don't accept fiat currency.

Loading...

The catch-22 here is that to make serious money (1,000 percent or more in weeks or months), you will often need to stray outside the big exchanges in order to get in on a project very early. These altcoins can explode overnight and make people fortunes, but they usually can't be found on the major exchanges because they just aren't big enough

to begin with.

If you see an opportunity, you just have to get involved in at an exchange you aren't totally sure about so you can make a small deposit to begin with. Once you're sure they don't just steal your coins, make the bigger purchase and get your coins off that exchange into an offline wallet immediately.

Which brings us nicely to the next point…

Store Your Coins In An Offline Wallet

A whut? An offline wallet, which is really just a piece of software you can download to a secure device such as a Windows laptop to store your coins in.

Your wallet will have an address (long set of numbers) and you can transfer your altcoin of choice from the exchange to that. Then, create multiple backup files and store them on USB drives and other offline devices. This way, it is extremely difficult for you to lose your coins.

Each wallet will also have a unique set of keys needed to access them. As long as you don't share these with anyone, it should be extremely difficult for any would-be thief to get their hands on your coins.

If you really want to go to the next level security-wise, you can buy a Nano Ledger S or Trezor wallet. These are specifically made for storing some cryptocurrencies, but the flip side is not all coins can be stored on them.

Please note that these are not affiliate links and I'm not shilling a product here; these are simply the best-known hardware wallets out there.

Only Invest What You Can Afford To Lose

Even with diligent research, a great team and idea, and a trusted exchange, things can go south fast in the world of crypto. Seasoned investors will tell you there's often no rhyme nor reason to this market. Mediocre projects can skyrocket overnight based on nothing but hype, while solid ideas can die a slow death because they just didn't get listed on a bigger exchange before a competitor stole the glory.

Cryptocurrency is a wild beast, and a merciless one at that. You can make millions from a $1,000 investment, or you can do what some idiots do and remortgage your house to buy into something that could tank the very next day.

Ultimately, you've got to view investing in cryptocurrency as what it really is: gambling. Some will hate on that statement while some will agree, but it remains true nonetheless. Never, ever bet the ranch on a cryptocurrency. For every project that increases 1,000 percent in a year, there are many more projects that won't.

Summary

I really have developed a passion for cryptocurrency, and I think the market cap is going to grow into the trillions in the long-term. There will be winners and losers in this question, much like with any other project. Hopefully, these points will help you avoid some of the sure losers and have a better chance of picking some winners.

What do you think? Do you have any cryptocurrency investments? What other pieces of advice would you add to this list?

Why Do Women Have Rape Fantasies?

February 1, 2018 | by Larsen Halleck | Link | Original Link

Hey kids, let's talk about rape! It's apparently all the rage nowadays, with the shrieking yentas that run the world in the 21st century never ceasing to stop talking about the awful awfulness of our rape culture in the rapey rapeosphere that is modern Rapemerica.

And while greatly exaggerated thanks to paranoia, there is some truth to this: the recent revelations coming out of Hollywood with the old "casting couch" suggest that, at the very least, some industries have a problem with sexual harassment and assault, despite the constant exhortations for us to "listen and believe" and what have you.

Apparently, we didn't do this enough.

And yet, despite all this hysteria over rape and how women are all in fear of it… they *really* seem to fantasize about it one whole hell of a lot. Yes, even in these enlightened times of strong independent womyn, these same strong women flocked in droves to bookstores and movie theaters to "enjoy" (wink, wink) works such as *Fifty Shades of Grey*, practically sliding on a mollusk-like mucus trail of sheer vaginal ejaculate.

And this is hardly a new thing: as I've pointed out in this article, the 1919 novel *The Sheik* is essentially the exact same story as *Fifty Shades of Grey,* except for the fact that the studly Dark Triad man is an Arab rather than a white man. And that too had a silent movie franchise funded by millions of women with drenched panties.

The reason I point all of this out is that, clearly, women—or at the very least a small subset of women—*luuuuurve* them some violent sexual fantasies. The question is: why exactly is this the case? And more importantly, how can you use these fantasies in a law abiding manner to your sexual advantage?

Science!

Researchers at the University of North Texas asked 355 undergraduates of all races and socioeconomic backgrounds whether they had had various types of rape fantasies of both heterosexual and homosexual variants, and two-thirds of women had at least occasional fantasies of being violated against their will.

Needless to say, I nor any of my neo-masculine peers—despite allegations of the contrary—advocate the actual forced violation of a woman, nor do most men *period,* so it's not likely a woman who uses common sense and avoids shady and/or violent men will get raped. Thus the old theory that the fantasies were merely sublimated desires to *actually* be raped that men would act upon is likely not true.

In researching this issue, two explanations in particular seem to be quite prevalent in the various studies I read for this article; one being that rape fantasies tap into a woman's desire to avoid sexual blame, and the other that women enjoy being an object of desire by men.

The former essentially states that women are "shamed" for feeling sexual desire and fantasizing about sex, thus they sublimate that patriarchal guilt into fantasies of being "forced" into it, thus allowing them to fantasize about getting plowed without feeling like a slut for "wanting" it.

While there may have been some truth to this as late as the 90s (what else were those trashy supermarket romance novels with Fabio on the cover targeting?), I highly doubt this is the case nowadays. If the 21st century is anything, it is not, in the West, at least, a century that oppresses women's right to their sexuality. In fact, they're pretty clearly flaunting it.

Loading…
So no, I don't think the lumpy slatterns participating in SlutWalks feel guilty for having sexual fantasies. And let's not forget that in most cases the people shaming women for being sluts are and always have been… other women.

Instead, I think that the *other* explanation is much closer to the truth: that women like to imagine themselves as maddening objects of desire that can drive men to acts of animalistic sexuality. Women fantasize about their bodices being ripped rather than having the man politely ask to take it off, after all.

It’s not titled “Highland Yes Means Yes Consent Form,” now is it?

In truth, I wouldn’t be surprised if this was the root cause of the “rape culture” hysteria: while there is that element of wanting to control male sexuality that I have discussed, women believe in rape culture because they *want* to believe in it. If we live in a culture where rape is common and celebrated, then that means the streets are just teeming with sweaty, brutal men that all will froth at the mouth and fight tooth and nail just to take yon fair damsel over the nearest table.

Presumably any women reading this just got a little hot and bothered at reading that last paragraph.

I don't care what you say: this title is amazing.

Using It To Your Advantage

To explain how to use rape fantasies to your advantage, we first have to list one more possible explanation for them, which is my own theory that still vaguely ties into the last explanation. My theory is that rape fantasies are an extreme exaggeration of what you actually want in your sex life.

What I mean by this is the fact that intellectually, women don't want to be beaten down and violated, but emotionally and vaginally, they *certainly* don't want a meek, mewling soy eater who gives them boring sex. Indeed, being the latter is worse than being the former; women will leave a boring, pathetic beta male long before they leave an abuser (*no,* I am not advocating you abuse women). What they want in reality is sex that's rough and "high-energy," but not to the point of actual violence.

Similarly, men may fantasize about something like being locked in a royal harem and plowing every one of those concubines, but were this to occur in real life, the man would have sex with two or three of them and then humiliate himself when he failed to get it up any more. That would kill the mood really quick, and that's why it's a *fantasy*.

So how do you use the rape fantasy to your advantage? It's simple: get a little rough and wild in the bedroom, and use the acrobatic and aggressive "three-way dance" maneuver. Perhaps do an actual rape role-play. The key to remember is this: don't be a boring beta male in bed. If you remember that women have fantasies about idealized, extremely violent sex, modulate it a little bit and use it to keep the women coming back!

If women do have this psychological quirk, why *not* use it to your *and* her mutual benefit?

Every Man Should Know How To Play A Musical Instrument

February 1, 2018 | by Chip Rhoters | Link | Original Link

Greetings, fellow dong-wielders of the Manosphere. As part of my efforts to be more involved in this space of ours, I thought I would first muse on a subject very close to my heart: music and the art of playing it.

Confucius said that “music produces a kind of pleasure which human nature cannot do without,” which I thought was a pretty non-gay way of summing up humanity’s relationship with the auditory arts. When it comes to playing, there are a lot of different types and styles of musical instruments. While some are less popular and mainstream than others, most folks know someone who plays guitar, piano, or sings.

I’ve been pondering on how studying the discipline of playing music is a worthwhile endeavor with several benefits. Most of my data comes from personal experience: I’ve been playing guitar for fifteen years and have been teaching myself how to play drums for about two. I’m no John Mayer, but I have developed enough competence through time and practice to play a few complex numbers and craft original songs of my own.

That said, science itself lends a lot of credence to the claim that learning how to play a musical instrument is a very healthy skill for the body and mind.

It Makes You Smarter

These days, the norm seems to be letting your brain atrophy via over-consumption of (anti)social media, television, and video games. Bucking the trends and engaging in a skill that actually makes use of your brain as well as your body can make you more intelligent.

Some of you reading probably understand that tickling the ivories or throwing down a polyrhythmic drum beat takes mental focus as well as careful coordination, but you probably didn't realize that learning how to play music could boost one's smarts.

The American Psychology Association acknowledged that in a study from 2006, an experimental group that was "given a year of voice or piano lessons saw a significantly larger increase in IQ than a control group that waited a year for musical instruction." The study mentions that six years of lessons could be associated with an increase in IQ of *7.5 points!*

In the highly competitive world that we live in, even a small increase like that could give someone more of an edge against the competition. But while correlation doesn't imply causation, I guarantee that being able to bust out even a simple song will always get a girl more soaked than your sick baseball card collection.

Persistence In Learning A New Skill

"If I don't learn this Mozart piece by dinner, my family will be greatly dishonored…"

I'd assume most men who have made it anywhere in life would probably tell you that they didn't waltz down Easy Street to get there. They'd probably mention how their beginnings were rife with failure, or how badly they sucked when they first started their current gig. I think persistence is a key trait that is crucial in the game of life, and that it can be developed like a muscle.

Starting any new skill can be vexing as you struggle to learn the ropes and get through the learning curve. For most people just starting out on guitar, their fingers will act like a bunch of possessed worms all over the neck of the instrument, and to add insult to injury, your fingertips will be sore and throbbing from pushing down on the strings. With drums, it's flailing limbs and blisters.

But if one can stick it out and Not Be a Fucking Pussy, then with time and diligent practice, the calluses and coordination will develop and the frustration will turn into fun. Enjoy the process and before you know it, you'll dropping panties left and right with a simple strum (results may vary).

It's A Healthy Use Of Time…And It's Fun

Still easier to figure out than the female brain…

In our modern era, it’s unfortunately too easy to throw away precious time by scrolling through manufactured media and vapid TV shows. Let me be real for a second: a lot of hobbies are absolutely worthless, but I truly believe that learning how to play an instrument is as fulfilling as it is useful. Crafting sounds into a pattern that is pleasurable to the listener is almost a sacred act of creation.

Have you ever listened to a piece of music that made your hairs stand up and really moved you? Another human being manipulated vibrations in the air to stir that emotion. It’s almost legitimate magic.

As a hobby, playing music has serious longevity. Playing sports in high school might land you high on the social ladder, but once you graduate, the utility dries up if you’re not one of the small minority taking it to the next level. Many treat music as a life-long pursuit and it’s not uncommon to see a few old-timers absolutely slaying it on stage.

It’s also a lot of fun once you start to gain a little bit of competence. The more you play, the better you get, so it’s a guilt-free way to spend a few hours as opposed to the brainless timesinks of modern entertainment.

Chicks Dig It

“Hey fella, why dontcha show me what else you can do with those fingers…”

I probably didn’t have to include this one because everyone knows that musicians fuck. Perhaps being serenaded pushes some sort of emotional buttons in the feminine hindbrain, or maybe it’s the fact that women are attracted to high status males that are excellent at their chosen craft. Either way, it seems that bandbros and rockstars never want for pussy.

Not trying to brag, but I’ve experienced this firsthand, and I can’t stress how crucial my musical skills have been in getting me laid. One of the hottest girls I ever plugged told me that one of the main reasons she met up with me for a date was because she was impressed by a video she saw on my Instagram. I also once sealed the deal with what became a very solid plate by offering to give her a quick lesson. She brought her guitar over to my place, but the “lesson” didn’t actually happen.

It goes without saying that doing anything just to impress a woman is putting pussy on the pedestal, and if that's your goal, then you're probably better off buying a sweet sports car. However, if you want to potentially make yourself a little smarter, test your patience and persistence, and pick up a skill that could possibly help get your dick wet, I highly recommend finding an instrument that suits you and giving it a try. At the very least, you might gain a lot of personal enjoyment and creative fulfillment out of it.

10 Ways That Modern Society Lowers Your Testosterone Levels

February 2, 2018 | by Vlad Alexander | Link | Original Link

It is no surprise that the current world agenda seeks to destroy men from within but also from the outside at the same time. Only by attacking from all angles can their plans come to fruition. We do not know exactly when this attack started, but in recent years, it has become clear that the intensity of the current agenda's intentions has increased tenfold.

Why are men targeted? Could it be the fact that by reducing the amount of true men with testes they reduce the chances that authentic revolutions against oppressive governments will happen? Any voice of reason against a corrupt society would swiftly be silenced. It happened 2,000 years ago (Jesus), and it is happening now more aggressively than it has ever happened in history.

Let's see how men are being targeted for total destruction and implicitly and how to avoid these attacks…

1. Our Food Is Filled With Hormones, Antibiotics And Pesticides

Hormones are abundantly in beef, chicken or dairy products. We eat these daily, however, the hormones have an impact on a man's health. Testosterone levels are lowered and estrogen levels increase. Manboobs, anyone?

Pesticides are well known chemicals that cause infertility and lower testosterone levels. Yet non-organic vegetables and fruits are abundant in life threatening toxins.

2. Cycling And Jogging

Doing physical activities is so beneficial that writing down all the benefits here would take forever. Yet there are a few physical activities which are unhealthy for the human body. Those kind of activities which have never been done by our ancestors.

For obvious reasons, cycling is unnatural because it uses an invented device. Constant pressure on the testes leads to infertility, reduces testosterone production and diseases.

Like cycling, jogging is an unnatural activity. Our ancestors would either walk or sprint, never jog. It is a useless activity. Jogging and cycling are activities which put continuous and constant stress on the body, leading to an overall decrease in testosterone over time. Do you think it is a coincidence that so much emphasis is being put on activities such as jogging and cycling?

3. Blue Light Bulbs

Blue light exposure has been linked to decreased testosterone levels. It is everywhere. Naturally occurring only in the morning when it helps the body wake up, nowadays we see it right until we close our eyes and go to bed. It is in our phone and computer screens, but most importantly, it is used to illuminate our rooms, bedside lamps and our offices.

Due to “environmental” reasons, it was decided that the classic incandescent bulb uses up too much energy, therefore it is better to use the new LED bulbs with carcinogenic gases.

You can’t run and you can’t hide. These blue-light bulbs are everywhere, creating anxiety and making us feel constantly tired. A tired mind is easy to control, and so is a low testosterone individual.

4. Our Drinking Water Is Filled With Female Hormones

Let me explain. The tap water that you drink also contains treated and cleaned water from our toilets, no mystery here. What we don’t know is that the hormones from a female’s period are flushed down with this same water. Chlorine does not remove hormones, it removes bacteria.

Drinking bottled water could be a solution, but then again, the plastic is also carcinogenic and also lowers our testosterone. Unless we have our own spring, we are fucked.

5. Sugar

Sugar reduces our metabolism to that of a sloth and promotes cancer. It also dramatically lowers our will to do anything meaningful with our lives. It takes down our testosterone due to our bodies prioritizing insulin production. It is addictive, more so than heroin, as proven on lab rats.

Loading...

6. Aspartame

In an effort to soothe the minds of people concerned with sugar, they have created an

even worst product called aspartame. Aspartame produces neurotoxins that excite our nerve cells so much that they die. However, our brain protects itself with a barrier from excess neurotoxins. If the barrier is passed, neurons are killed. The pituitary and pineal glands are also affected, leading to a disruption in our circadian natural rhythm.

Aspartame lowers testosterone and avid consumers would require a prolonged time for their testosterone to recover.

7. Veganism

Veganism is another new fad that keeps people excited about healthy lifestyles. What they don’t know is that this diet is aimed at reducing our aggressiveness and making us docile animals like say… sheep.

Go ahead and tame a lion. Obviously, veganism lowers testosterone and the lack of vitamins and nutrients, which I will explain in future articles, further leads to a pale and unforgiving future for our bodies and brains.

8. Soy

Soy has been part of the hype train of miraculous natural super foods for some decades now. Soy is an estrogenic food and guess what? It lowers your testosterone.

It should be simple by now: anything that is being promoted by the mainstream media should be considered false and damaging to our well-being.

9. The War On Fats

This is another worldwide mass deception promoted by the mainstream doctors and media. Fat is actually healthy and it helps reduce cholesterol due to the fact that if the body receives external cholesterol, then it does not need to produce it on its own, which would lead to the bad cholesterol in our blood.

Testosterone feeds on cholesterol. The higher amount of testosterone you will have, the lower your cholesterol will be. And the more external cholesterol you bring in, the more the testosterone can thrive and increase.

Eating fat meat will increase your health and improve your metabolism (unless you have some condition, in which case you should seek a doctor’s advice).

10. Coffee

Yes exactly, coffee. Caffeine is poison used by plants to protect themselves. Guess what happens when you ingest coffee every day?

Coffee depletes the adrenal glands responsible for regulating our hormones. Combined this with stress and we are sure to fall into an adrenal exhaustion. Testosterone is also one of those hormones, and when the adrenal glands become depleted, there is no way to produce any free or total testosterone within your body.

It takes three weeks to get rid of caffeine. Do you know why caffeine produces bowel movements? Because the body wants to get rid of the poison.

Conclusion

In case you are wondering what would be the best course of action to avoid exposure to factors that are detrimental to our health, the solution is as always simple: life should be lived the way it was meant to, in accordance with nature.

How To Transition From Casual Pickup To Marriage

February 2, 2018 | by Davis M.J. Aurini | Link | Original Link

In this article, I'd like to discuss the strategic differences between pursuing a woman for sex versus pursuing her for marriage. In particular, I want to talk about how excelling at the former can lead young men (and women) into a trap of being a perpetual "fuckboy" (or carousel rider). When you start playing the game for the sake of the game—and forget why you started playing it in the first place—endless casual relationships are the result.

If we're going to hold on to Western civilization—if we're ever going to see a *return of kings*—it is up to us to rise above the current state of affairs and become patriarchs who raise the next generation properly, in healthy marriages. But to understand where game went wrong, we need to understand where it went right.

David Givens, an anthropologist, and Timothy Perper, a biologist, have spent hundreds of hours studying couples in bars, confirming what RoK men already know in their bones: that the most successful pickups happen when the woman initiates. To the casual observer, this seems counter-intuitive. After all, it's the men who approach the women; active masculinity working on passive femininity.

But what Givens and Perper noted was that even though men played the active role, the most successful approaches came only after the women had pre-selected them with flirtatious eye-contact. In other words, seduction—from the Latin *se* + *ducere*, "to lead astray"—is anything but.

> All the more intelligent women that I know, indeed, are unanimously of the opinion that no girl in her right sense has ever been actually seduced since the world began. — H.L. Mencken, *In Defense of Women*

The man who excels at game isn't tricking women into sleeping with him: he's finding the women who want causal sex and presenting himself as a man who's offering it good and hard.

Moving To The Extreme

The problem with this is summed up by the acronym TANSTAAFL: There Ain't No Such Thing As A Free Lunch.

Both participants are presenting themselves as something they aren't. The woman is selling herself as a fun time gal, offering free, no obligation sex for a man who meets her criteria. Simultaneously, she's also presenting herself as territory to be conquered; she don't need no man, and she certainly won't admit to having initiated things with her glance. S*he never asked for your attention*. You just came over and raided the free buffet.

For his part, the man is pretending to be half clown and half psychopath. On the one hand, he's dancing around for her amusement. On the other, he's utterly indifferent to her and is incapable of having his feelings hurt by rejection. *Both parties are feigning disinterest and emotional invulnerability*.

To a certain degree, this is just how social interaction works: we feign disinterest as we test out the waters, so that plausible deniability can smooth over hurt feelings. But with the ongoing erosion of social mores and the deregulation of the sexual market, the game moves to the extreme. It can be summarized as:

1. Adopt the swagger of a fuckboy.

2. Find a woman who's making eye contact.

3. Dance like a monkey to entertain her.

4. Have sex.

5. Deny that either of you have any emotional investment.

Our personas—the "best face" we show to the world—are mutating into narcissistic shells: fake personalities which we wear like the masks in *Eyes Wide Shut*. The result is

summed up by the *Salon* writer Tracy Clark-Forty in her article "What Happened When I Had Sex With My Favorite Porn Star":

> It's exactly what I had breathlessly watched him do many times before, but this time it seemed mechanical and theatrical. Instead of being entertained, I was doing the entertaining, and I suspect he was too — but for whom, exactly? We were the only audience.
>
> Loading…
> All of which is to say: It was like nearly every casual hookup I've ever had. Here were two strangers connected only by their fantasies of who the other was.

Note that this article was written in 2012. Since then, the narcissistic shells have grown even more exaggerated, to the point where #MeToo women brag about shutting down famous men under the guise of calling out rape.

War Of The Sexes Or Mating Dance?

Despite the bulk of society spinning off into narcissistic delusion, there is a growing minority who are seeking out the love and stability of traditional social norms. Here we are running into two major stumbling blocks.

First, that the marketplace is overrun with thots and Chads. It is a case of Gresham's Law (bad money chases out good) applied to the sexual market. It's even present in churches. Instead of sex, religious thots offer the chance of dating a "righteous" woman, and instead of performing coitus for an imaginary audience, the two of you perform acts of false piety. The women domineer, the men sneak and manipulate.

The second is that we've forgotten what a healthy relationship looks like. The man who

has mastered the skill of spotting thots—or the woman who only has eyes for Chad—won't be able to see the decent man or woman in front of them. Similarly, when you've mastered playing the clown (or the bitchy sex slut), it's hard to break out of that mold and exemplify what your sex is supposed to be.

A word of caution: far too many young people see the thots and Chads, and in rejecting them, they reject virility itself. The men become soyboys and the women become born-again virgins, who *don't do that icky stuff anymore*. This is the mirror extreme of the Chad/thot dynamic, and it's equally unstable.

Seeing Beyond The Surface

We need to develop new eyes for seeing one another, eyes that see beyond the immediate and look into the future. Chad knows how to spot the woman who's looking for sex *right now,* but he lacks the eyes to see the woman who will be a good mother, who will be faithful, who will be obedient. Similarly, the thot can spot the flashy Chad, but she can't see the man who would fight to defend her, or slave away to support the family, or be the rock who will comfort her when she cries.

We need to develop four dimensional eyes, and to do that, we need to practice the virtues unique to our sexes. As men, we must develop our strength, fortitude, and stability; women need to focus on their chastity, nurturing, and responsibility. Masculinity engenders femininity and vice versa, and as we grow more virtuous, we become better at spotting virtue in others.

To find a good wife, you must be deserving of a good wife. Boys spend their time chasing skirts (and girls waste theirs seeking attention on Instagram) while men look to build empires. They look for opportunities, allies, and good raw materials with which they can

create an edifice which lasts the test of time.

By reorienting our thinking, we recalibrate our vision. There is no simple tactic for finding a good wife, a checklist of attributes which promises a high probability of success; instead it's about learning to see things as they are, including other people. Keep your eyes open for a woman who would complement your empire, and then when you find her, that's when you use game the way it was meant to be played.

3 Essential Beliefs For Being Successful At Day Game

February 2, 2018 | by Ozz Kuragin | Link | Original Link

Poor vibe can be a major sticking point for men practicing day game after the basics have been nailed down. Even after your body language, eye contact, smirk and flirtations have been mastered, a poor mindset can manifest itself in insecurities and weirdness which the girl will pick up on, especially on dates.

Quite often—but not all the time—problems with vibe originate from incorrect mindsets that the aspiring day gamer has adopted: one's core beliefs will always find ways of affecting the behaviour which everyone else sees. Take the mindset of the beta male as a key example: they often believe that asserting oneself is disruptive and selfish, which manifests itself in submissive, non-masculine actions such as passive-aggressiveness, an unwillingness to question the status quo and supplicating, needy behaviour.

There are three key mindsets which I have adopted along my day game journey which have greatly improved my outlook and have thus had positive effects on my behaviour in general. Prior to this, I found myself struggling at key points, often after the five-minute mark in set, and especially on the date. The further down the interaction you go with poor mindsets, the harder it is to cover them up.

In this article, I shall examine three mindsets which I have found to be essential in improving vibe and the day game experience in general.

1. You Are Doing God's Work

"The Lord said unto thee, go forth and approach!" – Corinthians 2:23

Day game is natural. It has been practised since we were cavemen and is a completely moral, efficient, and masculine way to convey your intent to women. Day game is also free of guile or underhanded pretense: the day gamer has no means of leverage over the

girl, no screen to hide behind, no social circle to protect him, and no money or status to use as subtle bribes.

Unfortunately, we live in an age where the natural and the moral is perceived as weird and even slightly dangerous. Day game is viewed by many millennials to be threatening and constituting sexual harassment, despite it being nothing of the sort. It is for this reason that day gamers will be scorned, ridiculed, and looked down upon by others, in the media and on the street.

Throughout my day game adventures, I have been yelled at, threatened, and laughed at by strangers. I was even stopped by the police last year in-set after successfully taking a girl's number and questioned for my behaviour. I was interrogated at length and my personal details taken. My vibe suffered for a long time afterwards as a direct result of this.

A police officer, yesterday.

In order to overcome the disapproval of others, you must be certain in your mind that what you are doing is 100 percent right. If you do not believe this, the bad reactions from women, the mockery of others, and the failures will significantly damage your vibe, increase your approach anxiety, and even dissuade you from running game at all.

Loading...

2. You And The Girl Are On The Same Team

There is a poisonous belief held by some that fast sex is fundamentally damaging to women: it supposedly lowers their value, makes them sluts and affects them psychologically. The problem with this belief is that it reduces the role of the day gamer to that of a trickster: an individual who tempts women into acting against their best long-

term interests for the sake of short-term gain.

The truth is that day game is not a series of cheap tricks; it is a pact between a male and a female, working hand in glove to pursue a perfectly healthy relationship away from the envious gazes and judgmental prejudices of the brainwashed majority who believe only in the bland, socially accepted forms of dating. The day gamer is an opportunity for the girl to get a break from the vanilla monotony of the 21st century; it is not a fiendish temptation for which only the gullible sluts of low value fall.

The vibe of the cooperator is vastly superior to that of a swindler: the cooperator acts honestly, confidently and is fully self-assured, whereas the swindler exhibits creepy behaviour which people will suss out. Think of the vibe of a dishonest politician like Theresa May or Hillary Clinton; their malicious intent comes across very clearly. It is therefore crucial to adopt the mindset of the former as opposed to the latter.

3. Your Game Will Be Imperfect

The repertoire of day game infields on the Internet is both a blessing and a curse. They function as highly useful learning tools designed to teach and inform, improve technique and provide good entertainment.

One problem with them is that they often display a highly idealised version of day game: sets seem to hook immediately, there is no stuttering or awkward body language, and the entire interaction tends to flow far more smoothly than normal. Some of them have even been exposed as fake. Anyone with in-field experience can testify to the fact that day game sets are often far from flawless.

Me in a flawless set, yesterday.

It is therefore imperative to release yourselves from the shackles of perfection: you will say stupid things, mix words up, and fall far short of what the professionals on the Internet are displaying. It is highly detrimental to one's vibe to beat yourself up over sets which go poorly.

Furthermore, a clean, highly polished set can often come off as suspicious, especially if lines and routines have been memorised by heart. It is far better to sacrifice a bit of perfection for authenticity: tailor your sets relative to the girl to whom you are talking, rather than create a one-size-fits-all flawless model which is used on everyone.

It is far more masculine to be aware of one's own shortcomings and imperfections than it is to try and brush them under the carpet. Eventually, the girl will notice that you are trying to hide something and that will come across as creepy.

Conclusion

Vibe is critical in day game and the way to improve it is to adopt the correct mindsets before hitting the streets. As I have previously discovered, it is possible to get away with it in the first few minutes of the set: performing the basics correctly is often enough to take contact details.

Problems with mindset will often pose problems as the interaction progresses: anything short of the unequivocal belief that day game is an honourable, natural process of meeting women will translate into creepy behaviour. It is precisely this sort of behaviour which should be eliminated right at its source by being secure in one's core beliefs and mindsets.

LinkedIn Has Become A Social Justice Hellhole

February 3, 2018 | by Michel Vargas | Link | Original Link

Over the last years, LinkedIn has seen a surge in its number of users, becoming the go-to site for job searching and networking and reaching an astounding membership of 106 million users worldwide. While this tool can be really useful if you keep a professional attitude, this professional network has in many ways become a light version of Facebook with suits and ties, shoving virtue-signalling articles down its users' throats on a daily basis.

Here is some annoying stuff you are likely to find on LinkedIn…

1. Human Resources You-Go-Grrls

Once a girl has landed a good cubicle job in Human Resources, she cannot help herself: she has to talk about how great her life is. Instagram and Facebook are not enough; LinkedIn gives the typical you-go-girl a platform to share her virtue to the world. It sounds

just like this: “I just hired a 50-year old black female and the result is beyond expectations!” This kind of statement is followed by a sugary story on how it is important to fight against prejudice and how good it is be inclusive.

These stories, unsurprisingly, are shared and commented on by beta male orbiters who are stunned by the power of the message, but they are not aware that the typical HR girl is able to fire a random coworker for supposedly sexist remarks if it helps her develop her career.

2. Questionable Start-Ups Raising Money

You will often find this kind of press release: “Our company, Globocuck Inc. has just raised $3,000,000 to Uberize the frozen foods market and develop synergies with real estate, thanks to Buttplug Ventures.” People will comment on the founder’s awesome strategy and the jobs he will create. The future is bright.

After a bit of analysis, you can be sure that the start-up in question will go bankrupt in the following year. The founder has probably used the annoying gibberish and vocal tone of Apple keynotes to sell this idea to Buttplug Ventures. Dozens of developers and salesmen will be hired and pressured like hell to make a profit out of a hypothetical business plan. When the company does not reach the quarterly objectives, it will hire some pricey consultants to save the day, but the day will not be saved at all.

It is estimated that nine out of ten start-ups don’t scale up, a fact that most people don’t fully grasp.

3. Articles On How Start-Up Culture Is So Awesome

Musk, Bezos, and Zuckerberg and company have created a new corporate culture where happiness is at the center of performance. Any start-up now has ping-pong tables, unlimited free snacks, video games, and other kind of feel-good activities. Countless articles are shared on LinkedIn praising this new standard. Even brick-and-mortar companies succumb to this paradigm and invest big amounts of money to have their own incubator, aping the aforementioned start-up culture.

While this is important to give employees a proper working environment, companies often go way overboard. For example, many companies are now hiring "Chief Happiness Officers" to implement a fun culture, making the open-space look like a daycare. The reality is that employees are pushed to do unpaid extra hours and if they are not happy with that, the Xmen Breeder will show them the door. Yes, someone has the job title of "Xmen Breeder" in a company somewhere.

4. Boring Content On How Big Corporations Are The Best At Everything

Pseudo-economic articles are often shared on LinkedIn to present and analyze the achievements of big companies and entrepreneurs. They include such bilge as "Look at How Good Walmart is at Advertising," "Millennials Don't Buy Diamonds, But Swarovski Has the Solution," "Bill and Melinda Gates Have Such a Visionary Foundation," and so on.

I will take the example of Netflix, which is often cited and praised for its strong algorithm and how it uses your data to "enhance the user experience." There are never critical insights on how Netflix has a negative impact on its users, like binge-watching, or how the California-based company has a massive amount of debt to sustain its development.

Readers of *Return of Kings* will also agree with me on this point: the never-ending promotion of liberal values and white male shaming are not a sign of a responsible and healthy company.

5. Leftists Everywhere

You would think that all of the articles you find on LinkedIn are dedicated to business.

Sure, you can find factual content on business performance. You can even find unbiased content like “Trump’s Leadership Lessons.” As far as I am concerned, the algorithm always displays boring articles like “Brexit is a Danger” and “The European Union Has a Great Strategy.” A contact of mine also liked a you-go-grrl post quoting Oprah Winfrey, and it appeared on my feed.

The #MeToo movement is also something big in the professional network. You have the typical you-go-grrl article on why #MeToo has a place on LinkedIn, but fair enough: we are used to these kinds of pseudo-analytical pieces from a woman. Worse, beta male orbiters voice their discontent: according to an engineer, #MeToo stories should be shared more on LinkedIn, because his experience of being a shoulder to cry on shows that some of his female coworkers have experienced gross behavior by evil men.

6. “This Is So Inspirational” Content

Richard Branson: “let me inspire you.”

LinkedIn has also a goal: inspiring you. For this, it has a bunch of “influencers,” the biggest ones being successful entrepreneurs like Bill Gates and Richard Branson.

Content from them would appear from time to time, with theses like “when I founded Globocuck Inc., I thought of my grandfather, who taught me how to fish trout, and it was good.” People will share this deep vision of life, commenting on how inspirational these words are. I don’t deny that you need inspiration to succeed—as well as positive thinking—but the truth is that these businessmen are pretty far away from this *Care Bears* image.

Most of the companies want to make us believe that they are responsible and respectable. Starbucks calls their employees “partners,” and its longtime CEO and Chairman Howard Schultz is involved in every awareness movement.

Executives will not be as inspiring when the shit hits the fan: take the example of *Yellowpages.ca* in Quebec, which recently laid off 500 people. They were located in a vibrant area of Montreal, and had an inspiring CEO. All that pure goodness was shared

urbi et orbi, but it was not enough to meet the quarterly objectives.

Conclusion

LinkedIn is dominated by big, left-wing corporations, and it is not healthy. It's not because I don't want companies to succeed, but they often stride pretty far away from their core missions. Local companies which offer true value to their clients have the possibility to advertise on this professional network, but it takes a big budget to stand out, with little or no results at the end.

While I recommend you have a minimum of activity on LinkedIn, you will find more value in going to professional networking events, where you will be able to find more diversity of thought.

More Men Are Raped Every Year Than Women

February 4, 2018 | by Jimbo Jones | Link | Original Link

By now, we all know the whole "one in four women will get raped" chestnut is a bunch of bullshit. That misconception stems from a 1985 Ms. Magazine survey conducted by Kent State professor Mary Koss—a hardline feminist who once declared "rape represents an extreme behavior but one that is on a continuum with normal male behavior within the culture"—who intentionally inflated her percentages by including vaguely defined attempted rapes and sexual molestations in the final tally.

As some intrepid reporters at the Toledo Blade soon uncovered, the total number of survey respondents who were actually raped was just one quarter the number Koss reported, with roughly 73 percent of Koss' counted rape victims explicitly telling her they didn't actually consider themselves rape victims.

Alas, the dreaded "one in four" statistic—despite being completely fabricated—continues to linger on in the national consciousness. This, despite CDC data suggesting the number is much closer to 17 percent for heterosexual women nationwide and the fact the national rape rate in the U.S. has declined an astonishing 50 percent over the last 25 years.

But the way hardcore feminists and their hyper-progressive white knights talk about it, you'd think every woman in America was getting gang raped every time they go to the mailbox. Instead of the much despised "rape culture," what America has really become is a "rape hysteria culture," in which the pathological fear of nonconsensual sex has been weaponized for political leverage.

Yeah – I'd surmise "rape" is a much bigger problem in U.S. prisons than it is U.S. colleges.

How 2.2 Million Men *Alone* Experience More Sexual Abuse Than All 157 Million Women In The U.S. *Combined*

For all of the hubbub we hear about women being preyed upon by sexual deviants, how odd is that one seemingly significant statistical reality has been all but discarded by our trustworthy tastemakers in the media, entertainment and academia complexes. That is the incontestable fact that more men and boys in the United States are raped every year than women.

Oh, it's true, folks. According to RAINN's data—which, of course, should be taken with a tremendous grain of salt, if not an entire silo—approximately 192,000 women in the U.S. experience rape and/or sexual abuse every year. Good golly, that's a lot of unwanted, nonconsensual and often coerced sexual violence, ain't it?

Well, according to U.S. Department of Justice figures from 2008, at least 216,000 prisoners in the U.S. are raped and sexually abused behind bars on an annual basis. And since females only make up a scant 6.8 percent of the national incarcerated population, it's probably safe to assume that at least 200,000 of those rapes and sexual assault scenarios involve male victims.

Talk about an inconvenient truth! Among a mere 2.2 million men in America's fine and outstanding correctional facilities, there's already more rape and sexual terror going on than there is for the 157 million non-incarcerated women walking about freely in these United States.

Huh. I wonder why that little mathematical reality remains so hush hush in this, the gilded age of the Pussy Hat Wearer?

Fun fact: if your son gets raped at school, there's a nearly 90 percent change his abuser looks like *her*.

What About The *Female* Sexual Abusers? (And Don't Ask *Or* Tell About Same Sex Rape In The Military)

Oh, but we're not done yet. Let's turn our attention to the juvenile justice system, where a 2013 U.S. Department of Justice report found that about one out of ten of the nation's 70,000 or so incarcerated or detained youths have been sexually assaulted and raped while in confinement.

About 2,000 children were raped or sexually tortured more than 11 times in the study year. Meanwhile, an additional 1,000 children that year were raped by detention facility staff, with female employees representing an astounding 89 percent of the rapists and sexual abusers.

Then there's the nation's public education system. A 2004 report by Hofstra University found that the amount of rape and sexual abuse committed by school system employees was a rather tame 100 times greater than the amount of rape and sexual abuse committed by Catholic priests, but for some bizarre reason, that alarming finding never got circulated by the barons of big media.

According to that report, an estimated 44 percent of those sexually abused by school employees in the U.S. each year are male, with 84.8 percent of the attacks and assaults perpetrated by females.

And we can't forget about the military, can we? Each and every year, an estimated 14,000 men in uniform are believed to be sodomized by other males, and that's just the tip of the rape-berg: some calculations tab the estimates for the number of male-on-male military rapes that go unreported at an amazing 84 percent.

Hollywood: proudly abusing and sexually torturing minors and sweeping it under the rug for 100 years running!

Where's *#HeToo*?

How odd it is that the #MeToo movement has all but ignored the objective reality that, by all reliable statistical measurements, more men in the United States are the victims of sexual abuse than women? If Hollywood's upper brass were as horrified by the indignity of sexual maltreatment as they'd like the masses to believe on Twitter and at awards shows, surely they'd be absolutely incensed by the staggering lack of publicity afforded to the male victims of sexual crimes, right?

Yeah right. Hollywood's blase attitude towards its own pandemic of child sexual abuse encapsulates the entrenched misandry of the media-entertainment industrial complex as a whole.

Where is the furor over Disney hiring Victor Salva—a man who was convicted of forcing a child to blow him on camera—as soon as he was released from prison?

Where is the furor over Martin Weiss raping a preteen boy in excess of 30 times over just a three-year span?

Where is the furor over Jason James Murphy—convicted of molesting an 8-year-old boy in the mid-1990s—being rehired to work on movies like Super 8 and School of Rock?

Where is the furor over Bob Villard working as a child talent agent scout for 20 years despite being indicted on federal C.P. charges and sexually assaulting a 13-year-old boy?

Why are the unfounded accusations of women like Ke$ha—who apparently lied about being raped to get out of a record contract—that were immediately embraced as truthful and enough of a justification for a widespread purge of unconvicted males without even

the facade of due process, but the sexual abuse accusations of Todd Bridges, Corey Feldman, and Corey Haim (who have far more evidence to back up their maltreatment claims) are instantly written off as grandiloquent fabrications?

The answer, sadly, is self-evident: because the media powers-that-be only care about sexual victimization when the victims don't have Y chromosomes, even if the hard math demonstrates men are much likelier to be sexually assaulted and abused than their female counterparts.

The media gives less than a damn about the pain and humiliation of male sexual abuse victims. In fact, they don't even bother giving them a hashtag.

3 Steps To Save The American Family

February 4, 2018 | by Jared Trueheart | Link | Original Link

The decline of Western civilization is a precarious topic. It already seems so definite that many have chosen to become MGTOW or take the black pill. Still others think that Western society, despite its flaws, represents the greatest way of life and is worth saving. It has been rightly observed that lower middle-class families today live better than most of humanity has lived throughout its entire history.

We have so much wealth and so many technological advancements in America alone that 80 percent of the wealth can go to one percent of the population and the other 99 percent can still lead decent lives.

That's not a justification for such drastic wealth disparity. In fact, history has shown us that such great wealth disparity leads to disaster. Quintus Curtius can better speak to that topic, should you choose not to believe it.

It is precisely *because* we are able to live so well that Western culture is worth preserving. But what is causing the decline? The short answer is the dismantling of nuclear families.

36.5% of households headed by single mothers with children under 18 – or 45,171 – live in poverty. By comparison, married couples with children under 18 in Colorado have a poverty rate of 7.4%. (Hess et al. 2015)

A glimpse of life in broken homes.

How is that being accomplished? The complete story explaining this could take a book. Here are a few highlights that members of the red pill community have mentioned:

- No fault divorce
- Birth control pills
- Women's suffrage
- General acceptance of alternative lifestyles
- Increased dependency on the welfare state

The list goes on.

In this article, Roosh proposes that the decline can be stopped if women's suffrage is ended. He makes a compelling argument. Here I propose a three-step legislative solution to restore the prominence of nuclear families, thereby halting our civilization's decline.

1. Pass A Law Stating That Only Biological Fathers Can Be Held Financially Responsible For Their Children

Men know that regardless of what any law states, this is morally right. If men choose to care for children that aren't theirs, they still can. But at least they can't be obligated to.

Unfortunately, some men are forced to pay for kids that are not theirs. This guy below is an example.

Every man's worst nightmare

2. Pass A Law Limiting A Mother's Ability To Rely On Social Welfare Programs

These two steps work in tandem to ensure that the mother and biological father are financially responsible for their children. What enables broken families to exist is the cultural acceptance and financial provision afforded to them by the public. These two laws, should they ever become laws, make a statement: broken families will not be accepted without good cause.

Perhaps exceptions can be made for widows.

Until recently, the South Korean government made being a single mother there very difficult. In addition to social shame, single mothers had to pay higher taxes and were often denied jobs because of their situation. The South Korean government needed people to start breeding the next generation (the country's birth rate as of 2015 was just 1.2 children per woman), so they started being less strict on single mothers.

But until then, it worked. Just 1.9 percent of children are born out of wedlock there. To put that in perspective, in Sweden in 2013, 54.4 percent of children were born to unwed mothers.

Loading...
Social shame and financial hardship worked to prevent single motherhood in South Korea. If Western governments were to implement financial hardships on single mothers (by not providing welfare programs), a single mother stigma could very well follow.

Singapore has a similarly low unwed mother rate. They likewise create more hardships on single mothers by denying them social welfare.

3. Mandate Paternity Testing At Birth To Find The Biological Father

This is key. What it ultimately does is make cuckoldry highly unlikely. It's possible that the thirstiest of betas would stay with a woman who gets pregnant outside of their relationship. Thanks to this step, however, no man can be fooled by a woman over paternity.

It also discourages women from promiscuity. If some guy hooks up with a ho and she asks him to take a paternity test nine months later, he is going to refuse. There could be ten other guys who boned that ho that week. Why would he accept the test? This puts her in a bad position financially thanks to steps one and two. You think any woman wants to be like this woman?

It also would discourage men from sleeping with loose women. Remember, the test is mandated to find the biological father to then take financial responsibility of the child. If a guy sleeps with a ho, gets a subpoena to take a paternity test, and it comes back a positive match, his life would be boned. Now he's that ho's baby daddy. Even if he loved the child, he'd still have to deal with the ho for 18 years.

Some cuck wouldn't be responsible for the child. The state wouldn't be responsible for the child. He would. That is a strong incentive for a man to only spend his time creating families with a worthwhile woman. The technology to make this possible hasn't been available until recently. But evolutionary psychology has much to say about the importance of paternal certainty.

Long story short, we evolved to be more monogamous than our primate ancestors because mothers need fathers to support them and their children. Fathers wouldn't spend their time investing in children unless there was a degree of paternal certainty.

As a result, we evolved certain traits (i.e. concealed ovulation) that signaled to a male that he could be sure a child was his with some reasonable security. This gave him a reason to invest in a child, rather than going off to bang tons of other girls. The same evolutionary principles apply today, though now we have better technology.

The Overall Effect

If these three laws are passed, women will have a much stronger incentive to pair bond than to hook up. Men will as well. Ironically, single mothers might actually make the best wives under these laws. A woman would have to be a really great wife and mother if she wanted a new man to care for her and her child. A man wouldn't have any other reason to be with her. He'd be free to leave if she stopped being a good partner.

The point of the three laws is to undo all the damage done to Western families. These three laws combine to provide strong incentives to find a mate and stick with them. They don't discourage serial monogamy (aka dating), just promiscuity and hookup culture. When nuclear families return to the forefront of Western culture, the decline will cease and the ascent will begin anew.

Of course, nothing would be instantaneous. Birth control would slow the process, but not

stop it. See the women in that *Maury* clip? Birth control was available to her too, yet one of sixteen guys still got her preggers.

Like Roosh's solution, this one is unlikely to become a reality. But if we ever come to our senses as a people, it's there for use. You can hail me as a prophet if that time comes.

Superbowl Sunday: Roosh Live #8 At 2PM EST

February 4, 2018 | by Roosh Valizadeh | Link | Original Link

I'm doing a call-in live stream at 2pm EST today that I expect to be more interesting than the Superbowl. Call-in details are in the YouTube description box.

Postscript: Start the video at 12:39. I had technical difficulties before then.

This comes after Roosh Live #7 was brought down for a "deceptive title." After appealing, it is now back online.

> Hey @YouTube, why did you take down my video? The "German girl of my dreams" topic starts at 45:00. I can't live stream for 3 months because you didn't like my title? pic.twitter.com/9TSwe44AKb
>
> — Roosh (@rooshv) January 30, 2018

If you received value from this video, consider supporting my work by buying one of my books at Roosh V Store or making a donation through the Roosh Boosters Club. I also appreciate donations via Bitcoin, Litecoin, Bitcoin Cash, or Monero.

My Wife Suddenly Divorced Me After Inheriting $400,000 In Cash

February 5, 2018 | by Hans Schuder | Link | Original Link

So there I was, driving the minivan, family buckled in, heading down the road to my father-in-law's funeral. He was a hard-drinking, hard-cussing Navy vet, but a Korean War injury and hard living finally caught up with him in his old age. My wife knew the end was coming. I was proud that I let her go down to be with him for his last couple of months while I worked, took the kids to and from school, fed them, and loved on them while their mother was taking care of her family.

I thought about how two years before, we'd made this same trip. Same town, same funeral parlor, same minivan, but the first time was for her mother. There also, I had taken one for the home team and let her go down there for three months and take care of her mother, who was wracked with pancreatic cancer.

As we got near the town where her mother grew up, we were talking about what was going to happen. Her grandfather, a man with a third-grade education, had worked hard and had amassed a sizable rural empire. Her grandmother, then her mother, and then her father had all taken their turn pissing it away a little at a time after granddaddy died, accumulating bills and then selling a piece of property at fire sale prices when the bill collectors started howling.

Her folks had finally sold their prize asset a few years prior, a popular if ill-maintained fishing pier, and presumably some of the millions they had received was left. “I wonder how much money I’ll get?” she said, as we turned into the funeral parlor. “I wonder what I will do with my money?”

My Money, Not Ours

Friends, I am a trained and experienced investigator. I have investigated all sorts of crimes. I have put men in prison with these skills. I like to think that I am pretty sharp. But it never occurred to me that I had to be on my toes and parse out the language that my wife of fifteen years had just spoken. That she had said “my money” and not “the money” or “our money” did not register at all with me.

This was the same wife who wanted to stay home with the kids and not work. This was the same wife who worked exactly one day of full-time work once our son was born ten years prior to this, thus making me work a full-time job and lots of side gigs to pay the bills. This was the same wife who had lots of jewelry from deceased relatives, including a set of pearls that was worth $20,000, but who refused to sell them merely to ease the strain of my back and the weariness from working almost every day.

That same wife, the beneficiary of many years of my hard work, had just said “my money” and not “our money,” but I had not noticed that glaring red flag. Later, I would mentally replay that conversation and wonder just when she had decided to release herself from the dreadful bondage of marriage to a hard-working man.

I've done public work since I was 14, cut grass, and run paper routes before that, and have always taken care of my business like a man should. I had not married for money. In fact, when we got married, her family didn't seem to have any. Instead, I married thinking about how my 25 year old self was marrying a cute 19 year old who couldn't get enough lovin'.

I was thinking that this woman, who had agreed to give me the large family I wanted, would be such a good mother, what with her degree in Child Development. I was thinking about how it would be cool to be able to come down to the pier and fish for nothing with the sons that I was going to have while my daughters played on the beach as I sat by to shoo the little boys away from them. I was thinking lots of things, but getting my hands on her family money was never one of them.

The Accounting And The Shock

About a week after the funeral, she had tallied up her newfound swag. She had inherited about $400,000 in cash, a Lincoln, and a share of several million dollars worth of coastal real estate. About a week later, she shocked me by telling me that she wanted a divorce.

A divorce? What? She was not the perfect wife, and I will not tell you that I was the perfect husband. I think I am a swell guy, but some may feel that I'm asshole, though I really don't care. But either way, I was just a wiser and more shop-worn version of the man that she had married.

I had survived some crazy things along the way, including a couple of on-duty shootings and subsequent investigations as a ghetto cop. I had survived catching my wife cheating when I was out working 17 hours one day so she could stay home. This forced me to take away her cell phone and limit her Internet access for several years, but I stayed married to her for the sake of my son.

I thought that I was being much more than fair, as I neither killed her, beat her down, nor kicked her out. Of course, after that, I was not exactly emotionally attached to her like I had been before I found out that she was a whore. I sure didn't kiss her ass or anything after that revelation.

No Good Deed Goes Unpunished

Naively, I thought that my good deeds as a husband would be reciprocated at some point. Red pill men, go ahead and laugh. I can take it. I have had people legitimately try to kill me several times and survived. I can take the well-deserved laughter if you want to dish it out.

In any case, I had no idea what to expect, but I had been thinking that a windfall would allow us to put the kids into a moderately priced Christian school and let me back off to just working one job. I did not expect that she would give her two-weeks notice.

I tried to figure out what the deal was. Was she seeing someone? Investigations proved she was not. Was she just in a brief funk of sadness? Negative. Had I done something, anything, worthy of being put through this? Nope. I asked her why. She merely said, "Momma took care of me, then you took care of me. I never have taken care of myself. I need to go off on my own and see what its like." It's tough surviving on your own with

hundreds of thousands of cash earned by someone else, I am sure.

I think that she was resentful of the perfectly reasonable set of rules that I had enforced to keep her from stepping out on me again. I think that she also resented my reasonable expectation that since she didn't work, my house should stay clean and that a meal should be ready soon after I came home from work. Who knows. I really never figured it out. In any case, what is done is done.

Finding My People

During these depressing times, I somehow found our beloved manosphere. The scales on my eyes fell off and I started to figure some things out. I figured them out too late to save my marriage of course, but was an aging, unfaithful, lazy shrew who had developed a beer gut worth working hard for? My education progressed rapidly as I ravenously devoured information about the true nature of women, and picked up enough game to keep me pleasantly entertained.

One afternoon, we signed the separation papers at 4:30 pm. I was balls deep in a much prettier girl at 6:30. (As a gentleman, I had to go clean up and change out of my uniform, hence the shocking delay.)

I now have a more realistic view of women and a set of tools to deal with them. I am no super PUA, and I have remarried. My knowledge of game kept me right where I wanted to be between marriages, and it helps my manage my wife to good effect now. I found a unicorn: younger than me, with a very low notch count, and who makes enough money that I could put my feet up here at the ranch if I wanted to.

We have been married almost five years, and she is thus far proven to be a valuable ally. She knows that all her friends want me to bang them and that I could get something going pretty quickly if she were to fail in her wifely duties. A little jealousy goes a long way to keeping a woman on her toes.

The Best Revenge Is Living Well

In the mean time, the ex has pissed away all her cash, sold her property, and also pissed away the proceeds. She had grown up on the other side of the tracks than me. I think she figured that all of the guys who may have been options for her at 19 or 20 years old would still be interested in her now 35-year old fat ass. Nothing doing! She moved in a Mexican who is fifteen years older than her who sells cable TV in the barrios. He won't marry her.

I will not go into all the details of what it has cost me in attorney fees to see my kids, or what it costs me in child support each month. Many of us have a story about how we were screwed by *that* system, and mine sucks, but is not that remarkable.

She has lost the respect of my children and alienated many of her upper-class friends. She had thought that she could live on interest income of the $400,000 that she had received, and was deflated when she had to actually get a job to maintain her drinking and Walmart habits.

Meanwhile, I am happy, I have prospered, and I am closing in on living the life that I want to live.

That big family I wanted? I never got it. The harpy closed the womb after two. Those two are teenagers now. To keep from repeating the cycle of the blue pill, I am passing down what I have learned to my son. I do not want him to be entirely cynical while still in high school, so he doesn't get everything. I just want him to be happier than I was when he goes out into the world on his own.

All my dad told me was, "When your dick gets hard, your mind gets soft." True enough, but hardly sufficient. A journeyman's knowledge of what women are and how to deal with them is part of being able to build your life as you see fit and be a man among men.

A Call To Arms

I now ask you, men: what are *you* doing?

Nobody expects you to quit your job and make it your life's work. But have you talked red pill talk at work, or are you scared of the HR fatties and faggots? Have you talked with

your friends from your church men's group, or has your lesbian pastor forbidden it? Have you talked with your sons or nephews or the other young, unschooled men that you know? Or have you just kept the whole thing a secret because you are scared because your wife might not want you to be the man that you are called to be?

If you have been sharing the red pill, bully for you. Keep it up! But if not, whatever the excuse, wake up tomorrow and resolve to take action. It doesn't have to be world-changing action right off the bat. You can be subtle and make the message match the environment. Regularly hit some singles, and you will eventually find yourself across home plate. The future of our sons, the men that you care about, and the future of your country depend on us all!

The Rise And Fall Of Vampire Cities

February 5, 2018 | by André du Pôle | Link | Original Link

Historically, cities have been double-edged swords. They were trade nodes and centres of innovations, which allowed them to be culturally interesting, but they also were on the vanguard of degeneracy and arrogance. Urbanites have typically grown a more intellectual mindset than those on the countryside, but they turned more dependent and all too often less masculine.

All in all, in the big cities, the cons have definitely moved beyond the pros: enormous living costs, lack of space, soulless “modern” (post-1950s) buildings, overvalued and promiscuous women, plus the roaming thugs supported by the State. No wonder even the bourgeois bohemians are trying to sneak back to the land.

How the big cities arose

For most of us, urban living seems natural. If you're a gen X or Millennial Westerner, chances are you were born in a city, perhaps a metropolis. Yet this urban living is quite a recent thing. Before the first Industrial Revolution, the majority of people worked the land. They raised their own crops, grew their own animals, sometimes sold this or that, but most families were independent and lived surrounded by natural space.

There were cities, of course. However, these tended to be small compared with the cities of now. Cities were commercial outposts where one could also find meeting places. They didn't produce food, and few craftsmen needed to live there. Most cities were local centres, and even the big-name ones looked small from our perspective: if you go to Paris, France, you'll notice how small it is compared to New York, and yet up to the seventeenth century most of Paris was centred around the Seine islands while a lot of current Paris was a countryside. Now suburban cities were small localities.

Before the big modern population increase, lots of men had to toil the land to make their food. This was physically demanding, and this had several advantages: men were needed to do the hardest parts, they depended more on their own work than on a skewed market, they breathed fresh air, had enough space to raise various children, and could eat cheaper meat than we do. Female hypergamy was also kept in check as women needed men and families to support them.

The latter advantage held true during most of the Middle Ages, when free space and a small population allowed for raising numerous cattle. Only when the population increased did space started to lack. Then, many pastures were converted into fields, and as more and more people had to share the space, the quantity of meat plummeted. Before the industrialization, free men ate organic meat daily—after it, many of them had to eat potato soups instead.

Cities grew well beyond their own regions thanks to various modern phenomena.

Globalization and modern trade was one of them: ports became of paramount importance. Centralization was another. The industrial revolution and subsequent building of numerous factories was another. The cities grew thanks to globalization and technology, but by doing so, they started to be rather related to other big cities than to their own surroundings. The merchants, the fashionable, rather mingled together—and worked synergically—than with the “retarded” countrysiders. Globalization is a story of cities seceding from their countries and exploiting them. Once fashionable industry workers were part of that process.

How cities turned into vampires

No matter how big they are, most big cities are too small for real men. They tend to sterilize people and must constantly attract newcomers for maintaining themselves. In a nutshell, big cities have long fostered various negative traits:

Uprooting

Traditional families are made of people who know they are links inside a glorious chain that may have existed for centuries. When you're living in a rented flat, with no sense of either geographical, cultural, or racial identity, you're not part of a chain but an atom who bounces along numberless other atoms. Uprooting makes people more vulnerable to forgetting who they are and more prone to follow.

Remember Communism? When peasants knew nothing good would come out of the State seizing their lands, urban proles—who often had close peasant ancestry—would fall for demagoguery and believe in suppressing private property. More recently, feminist women have always been spoiled urban bourgeois suffering from *ennui* or anti-Western hatred.

Dependence

When you live in a city, you are never be as independent as a landowner is. You owe your money, your food, your place to others. And when said others are at best sheeple who follow political correctness out of fear, at worst militant SJWs, anti-white minoritarians, big companies… you are at their mercy. Instead of local solidarity and independence, you're just another follower, lost into the mass unless the SJWs decide you'll be their next target.

Against the countryside

In the 19th century, urban proles had no interest in saving their land-toiling peers from a

cutting throat competition. They were as interested as the factory owners in a more flexible global trade, which allowed them to have cheaper food, at the cost of a debilitated national agriculture.

Today, we're witnessing the same phenomena: many urbanites are OK with globalism because they enjoy having the world markets at their feet, or so they feel, whereas their own people roam in unemployment. Allowing the cities to grow a lot made them secede from those who always fed them and egoistically benefit from global trade.

Sterilization

In a big city, space is expensive. In a glamorous or simply secure neighbourhood, space is *very* expensive. If you're living there, even if you own your apartment, chances are you don't have the space to rise more than one or two children. Add careerism into the mix and all the incentives point towards not having any child.

This phenomena is much older than we often believe: as soon as 1762, philosopher Jean-Jacques Rousseau complained of big cities where "women, living licentiously, bear no children." 160 years later, Lothrop Stoddard warned of the "dysgenic" effect of cities where the "upper classes" and higher IQs focused on career instead of children and had to be "continually enriched by good new blood." Now, many millennials are forced to share their already small apartments or dwell in a studio flat, places too small to create any children.

A harem for the wealthy

Long-time propaganda made us all believe that cities were better, wealthier, more

cultivated, and glamorous. This has attracted not only men looking for employment, but also hypergamous women.

Today, many administrations hire *more* females than males. Many universities have *more* female students. And the same is true for MSM. When most middle-class men are pushed outwards, far into suburbia or second-tier cities, and forced to commute, many women will pay half of their wage for their overpriced rent while looking for alpha males and sugar daddies.

Power concentration

As a result of civil servants and wealthy industrials mingling together, both have been blending for decades, resulting in revolving doors institutions, “too big to fail”, one-track thinking and shady deals from a urban microcosm that owns both public and private power while despising everyone else.

Degeneracy

Feminism, LGBTism, anti-whiteism and all other shades of degeneracy have sprung from the cities. People who come from the countryside and get a taste of the city, if they manage to secure a place for themselves, start adopting the city culture, which translates into more partying, despising their own place of birth, careerism, sluttiness, and so on.

Admittedly, cities often allowed for more opportunities than the countryside. A city is always bustling with activity and those who chase girls tend to look there. However, big cities have become way more geared towards the wealthy globalists, their bourgeois bohemian and minority pet projects, and their whores, thus excluding the normal people from a decent chance.

The increased social mobility of last decades has also led to more "social stratification", something both Stoddard and Murray's more recent *The Bell Curve* notice. Which means that high IQs mate with high IQs, the wealthy attract beautiful women, and capital attracts capital.

Now who owns most capital? A soulless, traitorous elite, mostly. And when "social stratification" happened, talented individuals from the countryside rushed to the cities, thus depleting both the "lower social classes" (as both authors would say) and the countryside from their more able before turning them into sterile, degenerated virtue-signalers.

How the vampire falls

But now there is something new. Something neither Stoddard nor Murray, for most of his life, have known. Upon both cities and countryside, the Internet came. With the Internet came the ability to communicate on a much freer way and freelance work. Working from any place has never been that easy whereas the cities have thoroughly decayed. Even if you're rather skilled with your hands or enjoy working onsite, local economies are developing.

Millennials are leaving the crowded, dangerous, degenerated metropolises and can make a living from a cheaper place or even country. This is especially good for middle-sized cities. There, one still enjoys the perks of urban living while having a decent space to live in and stacking money off. Middle-sized cities also have plenty of gyms, so, if you're bulking on a budget, it will be easier than in Metropolis.

Getting off the vampire cities allow us to have the wealth, space, and sometimes independence we need to grow families and tribe. This is how we will make the West great again.

How To Date Women Much Younger Than You

February 5, 2018 | by Bryon Flynn | Link | Original Link

I’m in my late forties and I only date 8s and 9s under 30, usually under 25. I don’t do 10s, mainly because the cost-benefit ratio isn’t worth it to me; they are too expensive and dramatic.

Younger women are appealing for many reasons, such as their beauty and fertility, plus millennials, due to their porn addiction, are simply better in bed. Though sexually inexperienced, many are surprisingly mature with men, whereas some of the most prudish and childish women I’ve ever dated (in my blue pill days) were self-entitled, jaded, nagging forty-somethings.

The List

As others at ROK have written, in much of the world, age gaps in dating are a non-issue and in some countries such as Ukraine and the Philippines, they are outright encouraged. In the U.S., however, winning at this game requires the following qualities.

1. Above-average to very good looks.

2. Good-to-great physical conditioning. This includes sexual stamina and endurance levels comparable to 20-something men.

3. A sense of adventure that is backed up by your travels and online presence ("Indiana Jones" game).

4. Something extraordinary about you with respect to accomplishments, life insight and experience.

5. An exceptional seductive skill and charm. Of key importance: you need a deep understanding and acceptance of the female psyche, while also maintaining firm control over it.

6. An above-average bank balance. You either need to be in the top ten percent of income earners or have very low overhead to compensate.

7. Access to or directly providing exciting and entertaining options generally not available from men in their twenties.

8. A very high emotional intelligence and calm demeanor. You need to be the alpha male lion that protects and reassures a young woman when her swirling insecurities kick in.

9. A high IQ and social competence. This includes dress, style, dance, self-defense,

management skills, your friends (who should also be similarly accomplished and charming), and female social proof.

Know Your Audience

Very few of us have all nine of the above qualities, but even having just a few of them combined with bulletproof fearlessness opens up a new world of possibilities.

While this is true for all men, it is essential for age gap dating in the states. Roughly 30 percent of American women will never date an older guy, 40 percent will consider it based upon hypergamy, and 30 percent actually prefer older men. Of this coveted 30 percent, all will be looking to you to save them, mainly from twenty-something guys who have no clue.

So it better be obvious that you've got life figured out. You also must take very good care of yourself with respect to diet, exercise, and regular detoxes for that youthful glow!

Often, young women will be genuinely attracted to you because you are bringing life experience, safety, and sexual skills to the table that they cannot get elsewhere. This is evidenced by the fact that many of the most popular male porn stars, such as Rocco Siffredi and Shane Diesel, are in their late forties or early fifties.

It takes about twenty adult years to figure out how to manage hot women effectively, so if you take care of yourself—and completely free your mind from the feminist Matrix with no hesitation or apologies—your forties and fifties can be a golden era of red hot nights with steamy young sexpots.

Personality wise, expect the proverbial "hot mess" daddy issues, great women without a strong family connection, and finally, women who are gifted, accomplished or artistic with very high IQs, the latter of which are my favorite.

Using A Provider Frame

Many women in their twentiess are struggling like you were when you were younger, and there is something deep in a woman's sexual psyche that unlocks when she feels taken care of. All great seducers know this, and mastery here produces mind-blowing sexual rewards, often for less than the cost of a dinner date. Alpha framing assumed, it's amazing what paying to fix a flat tire or buying lingerie can do.

Research and Strategy

I recommend three books: Troy Francis' *Still in the Game*, Dean Cortez's *Dating Younger Women,* and *The Professional Bachelor* by Brett Tate.

You will also need real field experience to "red pill" this. The best options for getting started are the EDM nightclub or rock music scenes, and bodybuilder/trainer/UFC/fitness: cultures that are most accepting of the age gap/*Playboy* lifestyle. Make friends, watch the best seducers, and learn from them. As I am in entertainment, I started here, avoided all the drugs and kept my good looks, then moved to day game and online dating with higher quality women.

Some of the best relationships you'll ever have are based upon initial "fake it till you make it" embellishments and omissions. Online, everyone "fudges" about something: with women, it's usually kids, illness, RX drugs, smoking, "poly" boyfriends and age (over 25).

Ergo, select your lowest plausible age to get your foot in the door: just as her embellishments don't matter to you if the sex is awesome, once a woman is attracted to you, 90 percent of the time it doesn't matter to her that you're older than you originally said… so long as you deliver.

Freeing Your Mind

My last three long-term live-in girlfriends were 24-26-year old stunners and I was adored by their families (circa 1970s "Ted Nugent" game). I'm currently dating a very bright 22-year old who loves shooting porn with me and a 19-year old engineering major, athlete and concert pianist who enjoys *Fifty Shades of Grey* role play.

Never let anyone tell you and the person who is happy with you how to live your life; other people don't have to live it… *you* do! This is the essence of the alpha mindset;

embrace it fully and leave all that “agey/smagey” garbage for pouty basement dwellers and feminists with cats. Good luck!

How Charity Organizations Are Scamming You Out Of Your Hard-Earned Money

February 5, 2018 | by Vlad Alexander | Link | Original Link

I was recently employed to survey the structure of an existing building in central London for the design company that I offer my services to as a structural engineer. This building was the host of a charity company that, and I quote: “exists to make this country a place where all the people have the same opportunities as everyone else. Until then, we’ll be here.”

Whenever I enter these kind of buildings, I like to get the feel of the environment and see what the drones are up to during their slave hours. From being greeted by a fake ass smile receptionist boy to being surrounded by hundreds of leaflets and posters that promote their object of work, I soon realized that my simple observation of the surroundings would turn into a frustrating experience.

A three-story office building entirely occupied by these jokers confirmed my guess that charities are one big scam for people to make easy money by doing nothing… nothing except being annoying with leaflets and smiles.

Being Approached On The Street To Have A Go At Your Hard-Earned Money

You know these guys. They approach you like some wanna be pick-up artist with the sole purpose of taking your money and putting it in their pockets. A charity that is run like a business is a sad, sad thing. When you see hundreds of people in big cities, all with special hoodies and fake smiles, you suddenly realize how much money is being wasted instead of actually helping those in need.

Charities Are Run Like A Big Corporation, Without The Downsides

These chuggers then return to their three-story corporate office building, but unlike other corporations where people actually slave away to produce something of worth, they just

enjoy the perks and none of the downsides of the corporate life style. A charity that has its office in central London right next to the Tube station is a big thing.

Another perk that these jokers were enjoying was the professional expresso machines and big meeting rooms where young people were sitting around the table with their lattes in hand discussing over some pictures or a website. That has to be so stressful. Laughing and looking on their phones, these locusts manage to “work” by doing nothing and wasting the money of the gullible fools that actually do donate.

Probably some of the big philanthropists that do donate do it for the sake of being seen as generous individuals, not for the act itself. I guess they deserve it.

Still, there were several meeting rooms with people “working” doing nothing, and then the big offices with colorful badges and hoodies and bags and leaflets, where no one was doing any actual work. It was one big ass joke. And you could walk in and out without a problem. It isn’t even a secret anymore. It is the norm to spend charity money on nothing.

The Pareto Principle

This brings me to Pareto’s Principle. Apparently it is true. 20% of the population produces 80% of the goods. Yes, that means that 20% of us work to sustain the other 80%. And with the new wave of feminism and equality between everyone, it will be even worse. What is the percentage of white men in the world? 4%? Same with sex. 20% of the guys fuck 80% of the girls.

Like locusts, these kind of do-gooders decided one day that work is difficult stuff, and so charities were created. It is important for these charities to be approved and recognized by the general population via media influences, so that anyone who dares say anything about them ends up being lynched.

I had a friend. She was working for another charity company. Her directors earned hundreds of thousands of pounds per year. They set up their own salaries. Benefits and

expensive trips were the norm. The internal organization was that of a corporation and the sole purpose was to bring in even more money, and while providing actual charity services to people in need, more than 70% of the funds were directed towards the "development" of the organization, salaries and benefits.

The Real Charities Out There

This takes me to another scam charity organization: the government. The parliaments are full of individuals who never work. They talk. And everything they do is to further a personal agenda, or a group's agenda. Millions of pounds are wasted every month so that the needs of these individuals are met.

The military does nothing but pretend they exist to protect us. Big Pharma, the Masonic lodges, the activists, the feminists, the personal development gurus, and the Brussels Parliament Group all have one big thing in common: the people that are part of these groups do not like work, and so they have created their own organization that leeches of from the actual hard working people of this planet.

One of the biggest scams of the 21st century is perpetuated by another group of people who do not want to work, such as fake spiritual life coaches and personal development gurus, though there are some cases where the help they provide is genuine. The richest and proudest people should be the ones who produce the most vital and essential elements for our survival: food and shelter. All the other stuff we don't need is simply a color of contrast.

Yet farmers are pushed out of the way and are struggling to keep up with their expenses. Countries like Greece, Spain, and Italy export the majority of fruits, vegetables and meat to the "rich" countries such as Germany and England. The charity countries like England,

Germany, or Norway like to talk, to fill in paper work, to move bonds from here to there, and to exploit poorer countries that actually do work for a living.

You could say that the microcosm vs macrocosm relationship applies here as well. 20% of the countries produce for 80% of the other countries. Yet those 20% are poor and struggling.

Whether we like it or not, the more charities there are, the higher amount of working hours we, the 20%, have to put into to sustain everyone else.

The Male To Female Ratio In Society Is Too High

February 6, 2018 | by Sacco Vandal | Link | Original Link

A good case has been made linking feminism and the various disruptions in the sexual marketplace with the ratio of men to women. Historically, females have greatly outnumbered males, and the near-equal sex ratios of contemporary Western societies is an unnatural phenomenon that is both devaluing men and overvaluing women. This imbalance must be remedied if we wish to improve the quality of life for men in the West.

But what do we do to rectify this imbalance and reduce the male-to-female ratio in our society? Do we fold our hands and simply wait for catastrophic, male-reducing disasters, such as a major war or revolution, to materialize as conditions worsen? Do we promote male homosexuality and transgenderism as a sexual marketplace safety valve? Do we, as at least one writer has advocated, embrace gendo-nationalism and go collective MGTOW, abandoning women altogether in favor of sex bots?

Come, now, are we or are we not men? Instead of grudgingly dealing with things as they are, sheepishly hoping that conditions eventually improve, or embracing shameful ways to slightly mitigate the situation, we need to take control. The real problem before us is not that there are too many of us men. The real problem is that *we men do not have enough women*. And, to be honest, there really is only one solution to this problem for us truly masculine men: *we must take other peoples' women*.

Give me your sweet, your sexy, your traditional women yearning to breathe free.

Importation

The most immediate means of increasing the female-to-male sex ratio is, of course, importing them. Many Western men are already doing this on an individual level by taking foreign wives, and this course of action should be further encouraged and the process streamlined. However, collective action must also be taken.

The immigration policies in United States, as well as Western Europe, should immediately be altered to favor females. Restrictions on the number of young females that are permitted to immigrate into our nations should be greatly loosened, if not lifted completely. Conversely, the quota for potential male immigrants should be drastically reduced to near-zero levels.

Of course, it would be foolish to expect the foreign nations from which these females will be flooding to passively standby and permit the inevitable babe drain from their shores. Thus, actions to further entice and enable foreign females to actually immigrate into the West will be necessitated.

The realpolitik of Western nations will have to be deployed towards the acquisition of these foreign females as no less valuable than the acquisition of rights to other natural resources that happen to be in foreign hands. Indeed, certain bargains may need to be made and pressures applied to compel acquiescence to this endeavor.

Ultimately, however, the West may have to resort to a more masculine—if also more drastic—approach to acquiring foreign females.

Western men have a time-honored tradition of taking other peoples' women.

Conquest

If foreign nations refuse to surrender their women willingly to us, we Westerners will be forced to acquire said females through more ancient means; namely, that of conquest. This method would have the ancillary benefit of speeding up the return to equilibrium of the sex ratios of our societies by culling a small percentage of military-aged men.

Furthermore, amongst the potential war brides, this method would also increase the desirability of our men, because women are evolutionary predisposed to mate with victorious conquerors of their own people.

The United States, for example, could easily utilize the superior military might that it is currently squandering upon policing the world to instead wage a war of conquest upon Mexico and the rest of Central America. Why build a wall across the vast and open American Southwest when you could instead build one across Panama?

In all honesty, manifest destiny was never really intended to stop until the entire continent of North America was placed under U.S. dominion anyways. Also, an invasion and occupation of Mexico and Central America would have the added benefit of giving the United States a chance to finally win the War on Drugs by creating a matrix wherein liquidation of the Mexican drug cartels would become a necessity. Let's face it: conquest is a win-win.

Europe's war bride fortunes, on the other hand, would naturally be more conveniently sought after in the Eastern Hemisphere. By subjugating and bringing order to North Africa, Europe could simultaneously end the flow of African migrants into Southern Europe, hitting two birds with one stone.

Furthermore, a deal could perhaps be made between the E.U. and Russia to divide the Middle East, which would have the added benefit of ending the flow of “refugees” from that region as well, replacing the waves of young Muslim men seeking to rape European women with waves of young Muslim women seeking to marry Western men.

Damnit… I forgot that we let broads have a say in policy-making.

Imported females shall not have the vote

Of course, the one possible pitfall behind the mass importation or belligerent acquisition of foreign females is the very real possibility that such women would then gain access to the democratic franchise and then vote for policies disadvantageous for us men.

Thankfully, in the U.S. at least, simply immigrating or marrying a citizen does not automatically guarantee citizenship, and that citizenship usually cannot be obtained until the individual has maintained permanent residency for *at least* three to five years. Still, three to five years is not a long time.

Indeed, it would be wise to formulate a plan to either deny women or immigrants the franchise prior to executing the mass acquisition of foreign females. And, realistically, collective action to increase the female-to-male sex ratio—whether via importation or conquest—will most likely remain impossible to embark upon so long as females enjoy any suffrage whatsoever. Why would they ever vote to alter their advantageous position?

It may, however, be possible to market these various measures to female voters via duplicitous means. Female importation could be marketed as a means of empowering women from under-developed nations or saving poor Muslim women from honor killings, or something.

A U.S. conquest of Mexico and Central America could be marketed as a final resort to

ending the War on Drugs and illegal immigration, and a European conquest of Muslim North Africa and the Middle East could be marketed—as American misadventures in the region were once successfully marketed—as a means of bringing stability and muh democracy.

Let the world be as our clay.

Conclusion

At any rate, it is time that we start facing the problems that collectively face us men as, well, men. Let us not bend and adapt to conditions. Let us instead seek to masculinely alter those conditions, bending nature and remaking reality to our will and liking as Western men have traditionally done when faced with an unfavorable environment. We know the problem. Now, let's fix it.

30 Beautiful Women Who Became Ugly

February 6, 2018 | by David G. Brown | Link | Original Link

Men need to realize that women will hit the wall by their own efforts as much as nature and aging will do it for them. Plenty of guys have dated or married an attractive woman who suddenly gave up on their looks and jumped into the abyss.

Even when women accelerate the approach of the wall through excessive food, bad plastic surgery, or too much tanning, can you really blame them or convince them out of it? They will hamster away, blaming everyone but themselves. Yet men can still do well by remembering that any woman can be struck down by Early Onset Wallitis. Be prepared and be warned because you may have to escape from her sinking ship.

1.

Actress Tara Reid's worst photos in her youth, during her early *American Pie* days, easily put her in the top 10% of American women. It would seem that she both went too hard to regain her looks (plastic surgery) and frequently used denial (drugs and partying) to cope.

2.

[image]

This girl wasn't a perfect 10 but she gains entry to the field for this spectacular effort. From bangable skinny tail to untouchable sea creature is a journey few will take as quickly as her.

3.

Heather Locklear's fall is pretty impressive. Whilst arguably no woman looks their best after a dip in the ocean, her decline is amazing when you consider that the former *Spin City* actress used to look like this:

Take her away from a make-up chair and today she resembles this:

Many young women look far worse than her, true. Regardless, the inevitable wall is real.

4.

Something of an archetypal example, Lindsay Lohan’s descent is one for the ages. Father Time (or her drug dealer) hasn’t had her in the crosshairs for long, but look what has already happened:

5.

One can only hope that the gentleman in the “before” picture is no longer with her. Knowing today’s dating climate, however, he probably still is.

6.

Though she was beginning to look weird and homely during her time on *Charmed*, Rose McGowan in her late teens and early twenties was certainly a brown-eyed beauty. Then came the aging and plastic surgery. After that she was ruined further by feminism:

7.

Cue “Fuck this gay Earth” GIFs. What happened above is a crime against humanity and the perpetrators–cake stores, McDonalds, her parents, and the girl herself–should be punished severely.

8.

Michelle Trachtenberg might be a loss for the ages. Anyone who has seen *Eurotrip* will fondly remember this girl bending her nubile self and tight ass down (who wouldn’t have

tapped that?).

9.

Breaking news! Aerosmith pleads for lead singer Steven Tyler to be returned safely after suspected kidnapping.

10.

Carrie Fisher killed off the beauty of Princess Leia for countless men long before she

passed away in real life. Cocaine is a hell of a drug.

11.

Katherine Heigl is one of the great case studies of female celebrities who really discovered the words “misogyny” and “feminism” after they found themselves at the wall. Hitting it has been a very hard tonic to swallow for her.

12.

If you’ve watched *The Woman in Red* with Gene Wilder (aka Willy Wonka), you will know

that Kelly LeBrock was amongst the most beautiful women of the 1980s. The problem for Kelly is that her idea of an honorable, gradual retreat from her prime became a panicked, plastic surgery-inspired stampede.

13.

Poor Goldie Hawn. She was quite something in an era without ready-made Instagram filters.

14.

Behold the horror of unchecked feminism! Before:

After:

The SJW daughter of actor Russ Tamblyn is currently busy at work peddling unsubstantiated “sexual harassment” allegations about men like cinematic superstar and political warrior James Woods. Anything and everything to distract from one’s impact with the wall.

15.

Be prepared for this one…

Jennifer Love Hewitt really blew what she had. It’s therefore time for that heartbreaking violin piece from the film *Titanic*:

16.

Why, Meg Ryan, why? Dennis Quaid and Russell Crowe were wise to eject when they did.

17.

Now able to speak after their initial terror, millions of young men collectively cried out into the night. The former Dairy Queen had become the Queen of Dairy.

18.

What we have seen here (and I'm not talking about the rainbow dress) will never be spoken of again. Some things are better left unsaid.

19.

Hitting 25 or 30 shouldn’t mean putting on 25 or 30 pounds a month. But try telling that to certain people.

20.

Britney Spears violated me one more time. Where’s my eye bleach?

21.

The girl on the right in both photos got hit hard:

Someone took the German culture theme (eating bratwurst and pork knuckle) too seriously.

22.

A 21st-century tragedy in four acts. Wanna guess if she’s been wifed up or not?

23.

Nikki McKibbin went from hot to “help my food addiction.” Even in an article about slides and walls, this is a very bad change.

24.

I couldn’t believe this was the same girl, but multiple sites say it is. Sadly, we’ve all seen declines as bad as this one, so it’s likely to be a true story.

25.

It’s hard to tell in the second photo if she’s singing or screaming after remembering what she used to look like. Either way, the juxtaposition is shocking.

26.

Who can forget a young Daryl Hannah’s gymnastic skills when she played a super-hot female android in *Blade Runner*? Alas, those days are long past.

27.

Demi Moore was smokin’ in *Striptease*, despite already having kids in real life, and was truly breathtaking pre-children. Nevertheless, in 2018 things have gone waaaay downhill.

28.

The modern descent of the American woman (and man) in one picture. Well, he can’t exactly fault her, given he ballooned as well.

29.

At least this story involves a happy ending—Christina Aguilera has since lost all this extra weight. Similar things can’t be said of most people who get to this stage.

30.

I have no words for this last one, so the following image will suffice:

It’s going to get much worse

[image]

It’s only 2018. Of course, some of the older women here (e.g., Goldie Hawn) have a lot more excuses than their “youthful” counterparts. The younger ones are inexcusably paving the way for others to break their wall speed records and cause much bigger explosions as they do. 2030 will probably make 2018 look like a world of Victoria’s Secret models.

5 Ways Modern Colleges Have Become Left-Wing Indoctrination Factories

February 6, 2018 | by G.S. Luthra | Link | Original Link

Academia has undergone a radical liberal makeover and is very different compared to even just a year ago. Just like when you enter a haunted house, you might feel a bad vibe in the air as you see all the trannies, feminists, and metrosexuals roaming your local campus.

Jumping in head first without protective gear into the shallow waters of college is dangerous, as you are a mere fish in the sea. You literally cannot afford to go to college without knowing a few things about it…

1. Liberalism Is Everywhere

Professors don't teach, they preach. Prepare yourself for political rambling, and while it may not be as bad as what you see on the news, you'll still get bits and pieces here and there. It all depends on which professor you get, but at some schools, even the president will publicly attack Trump for denying DREAMers. Expect to hear toxic masculinity discussed at lounges, and your professors' social media will be filled with anti-Trump tweets.

The quality of education itself has also declined to disturbing lows. At one of my mandatory bio-seminars, there was a guest female geneticist from Rutgers who presented her research which sounded like a precursor to "scientifically proving" that women are superior because they make eggs. Some professors will check scores for their favorite sports team during lectures, and go off on tangents that have no relevance to exams.

If you need help, you'll have to catch them during "office hours" at the pizza cafe. Make sure to bring your safety goggles while your teacher explains the material while munching on a slice.

2. Girls Have It Good

Opportunities in STEM (Science, Technology, Engineering & Mathematics) are practically handed to girls, and in most schools, the student body ratio is 60 percent female or more. They know the system favors them and they're milking it good.

For example, Rosalind Franklin is constantly glorified whereas J.D. Watson is put down for "stealing her discovery." I found his *Succeeding in Science: Some Rules of Thumb* very inspiring, but it was dubbed arrogant by the girls in class, and the professor and soyboys concurred.

A genetics professor I had called Watson an “asshole,” and my neurosciences professor told a similar tale before ranting about how black students don’t get as much grant money compared to whites and that women are being held back in science, using the recently deceased transgender scientist Ben Barres as an example.

Got baby troubles? No problem: free childcare is available, provided by the professor herself. Good luck paying attention in class when the teacher is holding a drooling baby. Women are strongly encouraged to do research and advance their careers, so men and family are the last things on their minds.

Game is illegal. If he hasn’t already, expect the creep himself, Joe Biden, to visit your school and scold you about rape. You’ll be advised to rub one out to prevent yourself from pursuing the gorgeous babes wearing butt-high shorts in class.

3. Walking Whales

Despite gaining muscle over the last couple of months, seeing these girls made me feel small. Their flabby thighs looked like they could feed a family of lions, as their gargantuan physiques defied the laws of physics. It’s just anatomically impossible how they are able to walk with all that blubber.

4. Favoritism

In biology, an Asian guy and I, along with girls in our group, turned in identical lab reports yet got average grades, whereas the girls got near perfect scores. That’s what happens when you get a progressive lesbian professor. In a calculus class, a guy questioned a problem marked wrong on his quiz and after examining, the professor laughingly responded that he was drunk while grading it.

Grades are given, not earned with no feedback or explanation. You simply take it, comply, and accept, unless of course, you’re one of the privileged minorities. Then you can claim racism and be quickly issued an “A,” complimented with a letter of apology from the dean of students. Your odds at getting into Harvard Medical School are also

better.

5. The Professor is Always Right!

Don’t even think about challenging them. They “know” climate change is real, trans-humanism is good, Donald Trump is bad, transgenders are normal, and only globalization will save the world. They’ll spit out whatever gibberish they want, and nobody will dare say otherwise.

Speaking against the establishment puts your grade at risk. That’s college, and it applies to just about every school. Even in India, one of the most academically strict countries in the world, a professor dismissed evolution, because nobody “ever saw an ape turning into a man.”

Is College Even Worth It?

Tuition prices rise while standards keep going down even though schools have parked billions offshore, and the national student debt continues to soar while job prospects flounder. They also don’t like staffers helping students save money and will replace them with incompetent workers.

Universities are run like a business and want to educate students at the lowest possible cost. Professors are hired not for their teaching ability, but how much grant money they can bring in. The opportunities promoted at college are vastly skewed and there are certain demographics and factors which enable some to do better, which they don’t tell you about.

Degrees mean nothing, but with everything said, I still say going to college is worth it. There is so much more to reveal, but send me your questions, because I want to help

students before the globalists get their greasy hands on their brains, and churn out more globalists.

Bodybuilding Hell Week: Work Out The Same Muscle Every Single Day

February 6, 2018 | by Robert Jones | Link | Original Link

Please keep an open mind to what you're about to read here. I work out in all different styles and throughout the years, I've experimented with a lot in the gym. The funny thing is that much of what I would have told you was pure nonsense years ago; I'd tell you the exact opposite today!

If you told me about full body routines performed three to four times per week, training the same muscle group daily, or implementing high reps for growth, I would have told you that you were crazy! But no, not anymore, because I had to figure some of these things out for myself.

Remember, it takes keeping an open mind to continue to break through plateaus and continue to get results. You cannot do the same thing all of the time and continue to see change.

Come With Me To Bodybuilding Hell Week

What is Bodybuilding Hell Eeek? Simple, it's a week straight of the same muscle groups torched every single day. That's right, if you did chest yesterday, then guess what? You're doing it again today! You're sore? Good… *I don't care.*

This week of training muscle groups every day may not make much sense to you right now, but it will when you see the results a week or two after Bodybuilding Hell Week. Workouts will be performed in freestyle fashion, meaning you do as many sets and reps

as you feel necessary to achieve a good pump.

Unlike other cookie-cutter routines, I'm not here to give you the perfect number of reps and sets, because there isn't one. Think for yourself! Do what *you feel* and trust in yourself!

You will be hitting all muscle groups for seven days in a row. This means full body workouts for one week straight, no bullshit here! Now, here is the thing about this week of all-out-war: exercises and sets can change daily.

Let's say I'm training my legs and yesterday I performed squats: today I may just perform leg extensions, lying leg curls, and calves, but no pressing if I'm just not feeling it.

Or let's say I did some heavy chest presses the day before. I may just do several sets of cable flys the next day and continue to stimulate my chest, but ditch pressing that day to assist with my recovery ability to get back to pressing tomorrow.

This is totally a freestyle type of workout here, remember that!

There are days where I may do seven sets of dumbbell curls with 12 to 15 reps a set, and other days where I only do eight reps a set and three work sets. Maybe one day I'm doing dumbbell curls and the next day I'm doing barbell curls; I really just do what I feel like during this week of training brutality.

So we are covering the entire body here every single day for one week straight. Now, why would I do this to myself and expect results? I know all about over-training and I'm actually partial to infrequent high intensity training sessions geared towards maximum recovery. So why would I believe in this?

Change, Adaptation, And Stress

Okay, you know how I just said that I was partial to less frequent high intensity workout sessions? That's precisely the reason I believe in Bodybuilding Hell Week! It's a great shakeup for a week before going back to less frequent weight training sessions.

What I've found happening from Hell Week is that the body quickly adapts to the daily

training (the same way a soldier would adapt to the same daily PT exercises) and you still perform and carry on. Also, here's something else you probably won't hear about anyplace else: *soreness can help engage more muscle focus.*

That's right, so you may be sore from the day before. Well, now the next day when you perform that same exercise, you feel the muscle working right from the jump due to the soreness. What does that make you do? It makes you think about the muscle more because you cannot help it! After a set or two, that soreness doesn't seem quite as bad, and once again you're blasting through it with another pump!

Now, you may think I'm crazy here, but I've actually had days where I was stronger performing the same muscle group on the second day in a row! I know, crazy, right? But if you have never tried this, then you won't know it.

Okay, so not only do we focus more on the muscle at hand since we are already sore from the day prior, but we are creating a new stress by training muscles daily. The body wakes up and says, "Whoa, what's going on here? He's making me do this every day? I better adapt!" Yes, it's a week of constant stress and adaption.

Nutrition During Bodybuilding Hell Week

As far as nutrition goes during this intense week of training, I would recommend trying to hold to a regimented caloric deficit daily. For a female, this might be as low as 1,200 to 1,500 calories a day (it takes a minimum of 1,200 calories a day to even be considered a balanced diet, so I don't recommend any lower), and for most males, this will fall between 1,800 to 2,800 calories each day.

It's going to be natural to get hungrier since you are placing so many demands on your muscles every day, but be strict and stick to your diet. There is a reason sticking to your diet is important during this week of daily training.

I like to focus on a roundabout caloric intake per meal and six meals per day during this

week of training. It’s far easier to do this and rotate through different foods that equal the same amount of calories than to eat like my dog does each day (the same Purina One food he’s sick to death of)!

If you’re a female weight trainer, then your breakfast may be something as easy as 100 calories from a banana and 250 calories from a low carb egg wrap. Then lunch may be another 350 total calories from something as simple as Greek yogurt and a protein smoothie shake.

Your other meals are simple meals that are focused around clean foods and hitting that caloric restricted number.

If you’re a male, then meals might be a little heavier, but still leave you hungry and in restriction. Something like four whole eggs and half a cup of dry measure oats would put you right at 390 calories. Now, put together meals that are each a caloric number that equals 500 calories below your TDEE for your daily caloric intake.

Women, aim for half a gram per pound of body weight in protein consumption; men, aim for one gram per pound of body weight. *But do not obsess over protein more than daily caloric restriction!*

Remember, This Is A Freestyle Workout That You Make Up

Do not forget that this is a freestyle workout that you develop. Be sure to challenge yourself, but there is no reason to spend over ninety minutes in the gym trying to do every single little exercise. Hit an exercise or two that stimulates a specific muscle and move on to the next muscle group.

You should be able to get through the entire body in ten exercises or less.

Also, there is no reason to blast a muscle into oblivion with the same exercises every day. Don’t constantly do the same flat bench press daily when you can mix it up between flat press, incline, machines, and flys.

I want you to clear your mind of all of the mainstream bullshit during Bodybuilding Hell Week and put yourself through the motions day in and day out… every muscle group

every day for one entire week straight! This will be extremely demanding, but it can be done.

Look at how inmates work out. You'll see that although the described routines in that link *do split body parts up,* some of those exercises are staples that have been used for probably a century now. Inmates routinely do the same physical activity day in and day out and are able to achieve impressive physiques, and that's with nutrition that often isn't up to par.

That tells me that if you took just one week to hit all of your muscles daily, then I think you'd get some quick results from it. I feel like your body would adapt to it and the fatigue wouldn't totally set in 100 percent until the week was finished. By then, you're back to training in a different fashion and giving muscles more recovery time.

I'm not talking about just a conditioning type workout here where it's a daily routine of push-ups, pull-ups, and sit-ups (although that can get great results). I'm talking about traditional gym training weight exercises done in a daily pattern and intended to put the body under more demands than our bodies own resistance.

When And How Do The Changes Take Place?

Okay, here is the thing about Bodybuilding Hell Week: you're going to see the changes taking place within the week or two *after* the week-long intense routine is complete. Your body will sort of play "catch up" after this week of training.

Not only will your body catch up to the extreme demands you've placed upon it, but it'll use the next two weeks to grow from the added recovery.

Muscles will become more volumized-looking, pumps will become bigger, and you'll probably even feel bigger just walking around. That delayed recovery is pretty much the basis on this routine: smash the body for a week and then watch it adapt the next couple weeks *before its broken down too much.* We wouldn't want to do something like this

longer than one week for the reason that we don't want to catabolize muscles. But in just one week, you need not worry about that!

Here's another key point I'd like to mention: changing up the diet after this week of added training intensity under a regimented number of restricted calories will get you results as well. It's like your body won't know what hit it. the next two weeks following Hell Week would be a time I'd increase my calories by about 500 to 1,000 calories a day and pay attention to what happens with my look.

I'm guessing that if you're like me, you're only going to volumize muscles and look bigger rather than slap on any fat. I know some of my methodologies sound *way, way* outside of the norm, but you know what training normal used to get me? *Normal results!* I don't know about you, but I'm not doing this to look like the average Joe. I want more than that!

Would I recommend something like this to a beginner? No, I wouldn't. I see nothing wrong with daily conditioning exercises, calisthenics, and some moderate weight training for a beginner. But what I'm talking about here is brutal punishment executed every single day beyond a level suitable for a beginner.

Think of this as a way to shake things up a bit once you're seasoned and gains are harder to achieve, as I show on my Youtube channel and web site. Don't knock it until you try it and if you do try it… *go kill it!*

8 Tips To Survive Working For A Female Boss

February 7, 2018 | by Brian Dustin | Link | Original Link

My boss is a superwoman: forty-something, single, thin, tanned, and short-haired. No children, of course. She hits the gym three times a week, she drives a BMW, and she has climbed the corporate ladder to a position where she deserves respect.

You can see on her face she has fought to be an independent woman. She has pursued the dream our society has imposed on her. And in her pursue, she has become completely masculine… and miserable. But don't be fooled by her masculine traits: she is a hardcore feminist who talks non-stop about how the patriarchy is preventing her and other women from ruling the world, and she is waiting for any excuse to crush your soul and your career.

These are the guidelines I've followed for four years now that have let me survive in the corporate world with a high degree of success.

1. OBS (Only Business Stuff)

Don’t try to befriend her. Never compliment her. Never stop by her office just to chat. No joking. No fake smiles. You won’t get any respect acting like that. More likely, you’ll lose it.

2. Understand That Every Interaction With Her Will Be Emotional Instead Of Logical

One time, my boss called me to yell at me. Apparently, I had done something wrong and it was a matter of life and death. I wasn’t at the office and clearly, it wasn’t my fault. The next day, she was really angry, but only because of the way I talked to her over the phone, just because I didn’t kiss her ass. Now, *that* was the important problem, not the one she had phoned me about.

Dealing with a woman’s emotions is never easy for men. That’s why you should reduce your interactions with her to the minimum. Understand that every discussion with her, especially in stressful situations, is going to get emotional, no matter how logically you behave. Try to keep calm and talk slowly.

3. Never Talk About Her Behind Her Back

Don’t ask your co-workers questions about her. Don’t trash her (she will eventually hear it). Don’t gossip. You have a life and she should be on your mind as little as possible.

4. ACYA (Always Cover Your Ass)

Every interaction with her should be be writing. Your oral interactions with her must be reduced to a minimum. Written words convey fewer emotions and leave a track record that you can always use in your favor, and you can think twice before falling into the trap of saying something you shouldn’t. Write short sentences with short words. Never leave anything up to interpretation.

Also, always be polite. Nothing conveys more authority than a man who can write properly and can state his ideas crystal clear. If you want to be a *pro* of the written word, read *Writing That Works* by Roman and Raphaelson. I’ve read it three times.

Loading…

5. Don’t Be Defensive And Never Play The Victim

If you make a mistake, don’t try to explain yourself. Never blame others. Agree with the

error, but don't make it more important than it is. If she wants to make a big deal out of it, chances are she will do it to show you her authority. Make a simple comment with your best poker face: "everybody makes mistakes." A man takes responsibility for his actions, while women tend to not to.

But don't take more than what is yours either. Your boundaries are strong and she will know where they are. Remember that your ACYA record is your ally in these situations.

6. Practice These Body Language Tricks

This is the part I like the most. I can tell you I've killed it with these simple tricks.

1. When you have to talk to her, use your best poker face. Don't over-smile. Just wear your most neutral mask.

2. *Never* nod your head. If you are going to learn only one thing from this post, it should be this one. *Do not nod your head when she is speaking.* Furthermore, don't say "hu-hu" or "hm-hm." She will use more words than she should. She will over-explain whatever she is saying. This is like magic.

Take good notice of this the next time you use this trick. The psychological reasoning behind this behavior is that you are not looking for rapport. So you are being the authority in the interaction. Make eye contact during the whole conversation (the trick is staring only at one eye) and an external viewer will wonder who is the boss of whom.

7. Make More Money Than Her

How can I make more money than my boss? Well, if you haven't got the memo, I'll tell you now: corporate jobs are going away. You need an exit plan. You should work on a second income stream while your full-time job pays the bills. This will give you peace of mind and will prevent you making mistakes out of fear of being fired.

8. Don’t Call Her “Boss”

By not calling her your boss, you are not complying with the subconscious frame of master/slave. Don’t do it in your conversations with her and don’t do it in your conversations with your co-workers. “Nobody-is-my-boss” should be your mindset at any time.

The corporate world has become an anti-male environment. While you’ll be able to manage the situation for some time by following this advice, you shouldn’t forget your final goal: walk free from it.

Women Should Be Banned From Poker For Their Own Good

February 7, 2018 | by Gearóid Ó Huallacháin | Link | Original Link

The WSOP (World Series of Poker) main event is the largest poker tournament in the world. Every year, thousands of players come from all over the world to compete for the large prize pool and every year, after thousands have busted out and millions of hands have been played, nine men and zero women sit down at the final table to play for the tournament bracelet and the first place prize money.

The WSOP started in 1970, and the main event has been played every year ever since. Out of the 417 players to make the final table, one has been a woman (she finished sixth in 1995). Women are bad at poker. The question is why this is and what steps should be taken to protect them from themselves in this ruthless game.

While I was doing my research for this article, I saw the following white knight excuses thrown out on women's behalf:

- Women don't do as well as men at the WSOP because only four to five percent of players who compete are women, but they're still just as good as men.
- Society discourages women from playing poker and looks down on women that try to do it professionally, so that's why way fewer women play than men.

The official figure for how many women competed in the WSOP in 2017 is *4.88 percent.* This number is low for two reasons: first, women are less interested in playing poker than men because of natural differences between men and women regarding what they enjoy.

Second, women are bad at poker and those that attempt to play poker professionally cannot make enough money from it to compete in the WSOP; in fact, many of the women that do compete are bought into tournaments by their sugar daddies or beta male providers.

What The Data Tells Us

Since women make up five percent of players, they should be around five percent of winners in all categories, if they are indeed as good as men. Let’s have a look:

- Out of the top 142 all-time tournament money winners, only one is a woman (she’s a man-shaped dyke and places 42nd on the list) = 0.70 percent.
- One woman has made the final table of the main event out of 417 players = 0.24 percent.
- Eight women made the WSOP player of the year leaderboard (top 100 players overall) from 2007 to 2017 = 0.73 percent.
- One woman made the WSOP player of the year top ten from 2007 to 2017 = 0.90 percent.
- Out of 1,261 bracelets (given to the winner of a tournament) awarded to date (excluding women’s events), 21 have been won by women = 1.67 percent.

Why It Is Impossible For Women To Compete Seriously With Men

Modern poker is a brutally competitive game. In order to become a pro, players must be adept in four key areas: math, game theory, psychology, and self-control. If they wish to be successful, players must have the discipline to study all of these elements and implement them during play.

They must have the discipline to adhere to strict bankrolling rules to ensure they don't go broke. They must have the self-control to remain emotionally detached from the horrific luck they will experience periodically, and the frustration of being outplayed by superior players. They need to maintain a state of emotional calm at the table so they can effectively analyze play based upon the principles they have studied and learned.

Women are bad at poker because they are naturally inept in all four key areas required to be successful at it. Countless studies have shown they are consistently outperformed by men in math at an academic level. Women struggle to understand game theory because, as Dr. Wikipedia states, it is "the study of mathematical models of conflict and cooperation between intelligent rational decision-makers." As we have established, women are bad at math.

For an indication of their level of rational intelligence, check some footage of this year's annual feminist workout (also known as the Women's March). With regard to psychology, women are too ruled by emotions such as jealousy, spitefulness, and a sense of vulnerability to make accurate assessments of their opponent's state of mind or intentions.

Finally, women lack self-control, the ability to hold oneself back from the push and pull of emotion in order to make objective, rational, and careful assessments in a manner that reveals truth and suggests which actions are best taken.

All this is to say nothing of women's vastly inferior physical stamina, a necessity if one is to make it far in long, grinding tournaments that are often played over a period of days, or the disadvantages of severe mood swings during menstruation, pregnancy, and long

periods of time without access to social media (smartphones are banned at poker tables).

Women Cannot Rely On Artificial Advantages

The world of poker does not have an HR department to fire masculine men and replace them with miserable career hags. There are no diversity quotas. There are no government gargoyles prowling around to ensure that affirmative action laws are obeyed. Male players are not going to willingly lose money to women for the sake of "progress."

Poker is a zero sum game and as such is immune to female privilege. It is the free market in its purest form; the strong rise to the top, while the weak are destroyed and left to wither by the wayside, as it should be.

The only way for women to have a fair shot at poker is for them to be banned from playing with men. This would be beneficial for men since they could concentrate on reading their opponents' hands, trying to understand the psychology of the table, analyze playing patterns, or going through the often difficult math calculations without the distraction of women at the table prattling vacuous jibberish to one another that the beta male players and tournament staff are too emasculated to shut down.

Men would also benefit from the removal of hot women who distract their concentration by inciting involuntary carnal fantasies, and ugly women who are a depressing sight and thus make the experience of playing poker less enjoyable.

Of course, the overwhelming beneficiaries would be women themselves. The natural handicaps of the female brain ensure that any chance they have of making money against men is vanishingly small. Putting a woman at a poker table with men is like throwing a vixen into a melee with wolves. Allowing women to play poker only amongst themselves protects them from male predation.

I am all for allowing women to play poker between themselves while they jibber-jabber about whatever irrelevant topic happens to be floating through their capricious minds at any given moment, but putting them at a table with seasoned, disciplined male pros is simply wrong, and must stop.

10 Things I Learned Working As A Male Domestic Violence Counselor

February 7, 2018 | by Rex King | Link | Original Link

Not too long ago, I worked as a domestic violence counselor in Canada. I worked with thousands of victims and perpetrators relating to domestic violence. During that time, I helped a great amount of people and I worked with some wonderful people, which were not most of my colleagues, but the victims of violence or victims of the legal system.

Here are ten important things that I learned working as a male domestic violence counselor in Canada.

1. The Legal System Is 100% Biased Against Men

Men are presumed guilty and almost always arrested after the accusation is made. The arrest is based upon the accusation, not on evidence. Police will still do an investigation, but an arrest for males is almost guaranteed after a complaint is made. If the female victim claims abuse in her statement, then almost always the male is going to jail.

A man must then prove himself innocent either to the prosecutor (crown) or to the judge in a trial, not usually to the police. There doesn't need to be any evidence to arrest a man, just an accusation.

If a woman is charged with domestic violence, the police often do more of a thorough investigation or there is overwhelming evidence to support that the woman is a perpetrator. However, what often happens is the woman will claim self-defense and her accusation will cause the man to be arrested, even if the man was the one who was the victim of the assault.

2. Domestic Charges Do Not Have To Be Physical For A Man To Be Arrested

Many men charged with a domestic charge never laid hands on a woman or caused any bodily harm. A threat or act of violence such as punching your hand in the wall or destroying your own property in front of a woman is grounds to be arrested. So, for example, you find out your girlfriend stole all your money, get upset, and punch a wall. If the police are called, you can be charged with domestic violence.

The police lay the charges, not the victim, so a hole in the wall and a neighbour hearing yelling can lead to an arrest.

3. Most Men Who Are Arrested For Domestic Violence Don’t Fit The Stereotype

Most of the men charged with domestic violence do not fit the stereotype of guys in white wifebeater shirts, unemployed, or have low IQ’s. In fact, most men I worked with loved their families, believed that violence was wrong, and were employed. Some were police officers, doctors, and even professional athletes, but most men were regular Joes.

4. There’s No Race Bias In Domestic Violence Arrests

If you're accused of a domestic charge, you will be treated the same way as any other man. Guilty 'til proven innocent! Your colour, age, or religion doesn't matter: it just takes an accusation from someone with a vagina to get arrested.

5. Most Staff Working At Domestic Violence Programs Do Not Like Men And Are Not There To Help Society

The stereotype that most domestic violence counselors are feminists that hate men is 100 percent true. Most of my colleagues looked like Big Red and had the same type of mentality. The organizations that operate the men's rehab program are almost always run by feminist women.

Most women I worked with enjoyed yelling at the men and saw it as their opportunity to get even. Some even had the goal to see men cry or to get them to leave the group so

they would be charged by police for not completing their court sentence.

6. There Is No Support For Male Victims Of Domestic Violence

If a male victim reveals that he needs financial assistance or a safe place to go, there is often no support from the community. Males are left to fend for themselves completely.

Ironically, men are also charged a fee for the program and women usually were not. If a man is on welfare, the taxpayer—who is already subsidizing the program—would have to completely pay for his mandatory training.

7. People Are Profiting Off Of Programs For Domestic Violence

Organizations and feminist groups state they want to end violence towards women and blame domestic violence on men's behaviour. However, once you mention spending money on programs for men, they shut the conversation down.

Prevention programs, education groups, and support programs to assist young boys or to help men having problems would help prevent domestic violence. Hiring male role models or having programs to support dads or open shelters for male victims would also alleviate the amount of incidents. Feminists groups only want spend on themselves or on women, and their solution for men is jail time.

8. Drug And Alcohol Abuse Are Common

The two most common factors present when people admitted they committed domestic violence were drugs and alcohol.

9. Women Who Admit Guilt Or Are Found Guilty Are Treated Completely Different Than Men

Females convicted of domestic violence are treated like victims, not perpetrators. They are given shorter sentences and have greater access to housing, money, and free counselling.

Women's mandatory education groups are free and are run like support groups where they are not yelled at but instead given cookies, coffee, and hugs.

10. Domestic Violence Programs Don't Work Using The Current Model

The methodology is flawed, service delivery is defective, and the approach is misguided. There is nothing good about the current domestic violence prevention programs.

Feminists created and designed an anti-domestic violence model called the Duluth model with no insight into men's behaviour, no understanding of counselling or therapy models, and as a result, domestic violence programs are complete failures.

The rehabilitation programs and legal approaches currently being used are not preventing violence, not rehabilitating offenders, and not keeping anyone safer. Often, repeat offenders keep attending the same programs as they learn nothing in group when the facilitator is just there to yell at them.

Until the system is rebooted—and men actually have a voice in the discussion—nothing will change. Feminists should not be in charge of men's rehabilitation programs.

How Meditation Saved My Life

February 7, 2018 | by Ethan Forza | Link | Original Link

I grew up in Philly, which set me on a track to live life fast. To survive, I learned the skill of being able to figure people out in a split second. I had to determine if the person I was interacting with wanted to knock my fucking teeth out or wanted to be my friend.

When it came to women, my guy friends in social settings would literally push me in front of a group of girls. This was so I would be the one starting the conversation and entertaining the girls. We all know girls love attention. So in a way, I was forced to learn game quickly and at a young age.

Oh, and I don't want to forget about the street drugs. In addition to the sex, the drugs definitely increased my already rapid-pace lifestyle. The problem for me was that life was moving too quickly and had no real meaning. That all changed when I bought an old school book about meditation.

Keep It Simple

There was definitely a stigma attached to meditation with the peer group that I was hanging out with at the time. I kept it to myself when I began meditating, because anything like this was considered faggy to my friends. Meditation is a simple thing to do. There is *no* need to be in a dark setting or a quiet place.

Don’t complicate it, because you’ll be less likely to continue. No special breathing techniques are needed and neither are mantras. They will come naturally in time. Meditation should be something you look forward to doing. You don’t need to sit in any special way or be in any specific place, you just need to close your eyes and relax. Ambient music can really help you to clear your mind.

My favorite time to do it is when I first wake up, because I’m still in a dream state. Side note: if anyone ever tries to charge you for meditation, they are a scam artist. It’s a free practice and a personal journey.

Start by meditating for five minutes after waking up. New thoughts and ideas will start pouring into your mind. Eventually, with practice you will be able to meditate anywhere and at any time. It becomes highly enjoyable. As the saying goes, “as within, so without.” In order to have true enjoyment and fulfillment in life, your internal game needs to be tight too.

Loading...

Tapping In

You are all you have in this life. Your appearance, finances, and socialization skills are all essential, but your internal world is even more important to get in check. Your body is just the cage for your soul or the world within. When you tap into this internal energy, you will also connect to a higher level of consciousnesses.

I was very skeptical at first, and it's easy to believe that meditation is just some New Age bullshit. The more I meditated, the better I felt, so I realized quickly that I was on the right path. Meditation changes your perspective and will slow your life down. You will discover what is most meaningful to you. Interactions in your life will also improve. You will be living in the moment and feel more connected to others. You will gain confidence and your anxiety should decrease.

Sex becomes more of a sensual and erotic experience because you have slowed your mind down and your soul is guiding your body. Solving everyday problems becomes easier. I always go with the simple answer I get through meditation. They tend to be the right and most effective answers. Writing down these newfound answers in a notebook is beneficial. When rereading your notebook, you'll be surprised by how many of those simple thoughts really improved your life.

When The Shit Hits The Fan

Last year, I was having trouble selling my condo. During this time, my girlfriend's father had a heart attack and died. In the past, this would have been too much for me and I would have been completely overwhelmed.

By the way, my girlfriend's father's death *was* about me because I had to be there for the drama associated with it. I didn't become some emotional pussy for my girlfriend: that is not what a woman needs. I stayed strong because I was able to gain the correct perspective by meditating. My strength calmed her and I was able to direct her and give her the proper guidance she needed. The following month, I sold my condo after the idea of making one cheap renovation came to me through meditation.

What I've Gained

Meditation has helped me visualize the external life I wanted. I determined what I desired from life, though what you want out of life will obviously likely be different. I now know that life never ends: all that happens is that my level of consciousness changes.

I haven't done any hard drugs in years. My life no longer consists of quick, meaningless interactions. I now only surround myself with positive people that add value to my life. I cut out shitheads and downer-type people as soon as they reveal themselves. I truly tapped into what matters to me, and I hope through meditation, you can do the same.

16 Signs That You Are A Weak Beta Male

February 8, 2018 | by William Adams | Link | Original Link

The weak beta male is one of the worst creatures of contemporary society. Much like women, he has a fleeting nature and is overwhelmed by the currents that happen to surround him rather than allowing his inner, steadfast character guide him in the proper direction. Here are some of the major signs of a beta.

1. You bench-press less than your body weight

Physical weakness is indeed negative. With the exception of older guys—who hopefully compensate with their accumulated money and life experience—all males should be able to bench-press their own body weight.

2. You have more than 25% body fat

The outside is indicative of the inside. Males with weak character indulge in the wrong foodstuffs and don’t exercise properly. While about 10 percent body fat is optimal for the aspiring alpha, anything above the 25% mark is a sign of a broader and deeper weakness.

3. You lack the will or ability to learn self-defense

Will papa police always protect you? Most likely not. Therefore, every man should aspire to learn self-defense, both with and without a gun. To have visible muscles is a good start, since you don't want to play defense all the time, while the next step is to acquire relevant fighting and shooting skills.

4. You embrace leftist ideologies

Politics is largely a question of globalism vs. nationalism these days, but the left-right dichotomy still says something substantial about the independent vis-a-vis the dependent man.

The *right* choice is to not rely on welfare handouts and blame others for eventual shortcomings like the leftist losers tend to do.

5. Your existence largely centers around pastimes like sport, video games, or TV shows

Unfortunately, even fantasy shows include rapefugees.

Instead of focusing on individual goals or projects, whether they are linked to making money, becoming more fit, traveling the world, or fucking 8s, the beta acts like a zombie consumer and swallows every TV sport, video game, or *Gay of Thrones* episode like they were all sacred semen.

6. You are more interested in other people than ideas

Gossip is for girls. Modern masculine men are interested in ideas because they seek to understand the world, whether through anecdotes, observations, discussions, or sound science.

Instead of chatting about what the Kardashians are up to or who Lana the friendly whore is currently ~~sucking~~ seeing, the non-beta is busy figuring out how to make more money or scrutinizing the history of the global elites.

7. When you travel, you never step out of your comfort zone

Traveling has become more comfortable than ever. Even in most dangerous countries, one can dwell in literal safe spaces 24/7. While it’s nice to relax every once in a while, masculine men take calculated risks and seek out dangers, whether for fun or to test their character.

8. You often watch porn

As a substitute for real sex, the beta male consumes large quantities of porn. In the not-

too-distant future, he will likely also use sex dolls, AI robots, and VR sex.

9. You're letting your girlfriend make all the major decisions in your relationship

From the article "How to Apologize to Your Girlfriend."

Depending on context and circumstances, you can compromise and let the woman make minor decisions (like which soap she should use in the kitchen), but no masculine man lets a female be the boss. Period.

10. You worship females and celebrities

Do you follow many celebrities or random “pretty” girls on social media and put them on a pedestal? If so, you’re weak and pathetic and have not developed any further than a teenage girl.

11. You blame society rather than making individual improvements in your own life

Is society to blame for your surplus fat? That you drink tons of beer and eat massive amounts of sugar, increasing your estrogen levels? That you have never slept with an attractive woman? That your country’s economy sucks? That you never travel? If the answer is yes to these questions, you’re a weak beta.

12. You cannot stand “hate facts”

I'm referring to sex differences, intelligence differences, cultural differences, and whatnot. If you cannot take the harsh truth, you're a weak man.

13. You're taking care of someone else's kid

The ultimate beta cuck move is to raise and financially support someone else's child or children. Such a pursuit is neither beneficial for one's financial and mental well-being, nor one's genetic lineage.

14. You're in a relationship with single mom

Slim single moms may be good for the occasional pump and dump pastime, but to be in a relationship with that type of woman is a big no-no for the masculine man.

15. You have many female friends

Social circles that include women may be appropriate for dating opportunities, but to have multiple female friends and spend considerable time with them in order to chat and gossip is just a waste of time and energy.

16. You constantly defend females

"How dare you sexist pigs talk trash to an innocent woman? Even if she has slept with 199 men and my goal is to be number 200, it doesn't mean that she is a 'slut!'"

Lastly, we have the phenomenon of white knighting: guys who vociferously defend the opposite sex against so-called harassers, bigots, haters and sexists.

Conclusion

This may be a wake-up call for some who have become stuck in slackness and lack goals, ideals and impulsion. Remember that you don't always have to be this way, though. You can change in the proper direction, towards a neomasculine mindset and behavioral repertoire.

“Micro-Cheating” Is The Newest Feminist Bludgeon To Control Male Behavior

February 8, 2018 | by David G. Brown | Link | Original Link

The latest fixation of feminists is “micro-cheating.” Their very loose and fast definition states that it is “a series of seemingly small actions that indicate a person [read: man] is emotionally or physically focused on someone outside their relationship.”

What is micro-cheating?

"Micro-cheating is a series of seemingly small actions that indicate a person is emotionally or physically focused on someone outside their relationship," dating expert Melanie Schilling told HuffPost Australia.

Examples can include texting someone without your partner's knowledge, saving someone under a fake name in your phone or lying about the status of your relationship to others.

“Dating expert”

Micro-cheating is merely a watered-down version of the ridiculous #MeToo craze, an instrument that attempts to micro-police male behavior for the “benefit” of women, both real and made-up. Such a label is not one women will retrospectively apply to themselves, but certainly many of them will enforce it on men.

My colleague Ted Deveer wrote a recent article about the rate of women cheating now

exceeding that of men. Whilst we can argue about the numbers and which gender does more of what, female infidelity has always been high enough to warrant concern. Yet there is a paucity of instances where women are regarded as moral actors when they cheat.

Do women ever take responsibility for full-fledged cheating?

The examples of them doing so are slim to none. I thought of that ditzy *Twilight* actress Kristen Stewart sheepishly half-apologizing after bonking her director behind Robert Pattinson's back, but that's basically it. In the celebrity world as much as the real life one, there is next to no shaming of women for outright sex with a man who isn't their partner, let alone for so-called micro-cheating.

When I googled "apologizes for cheating," almost all the hits were about men issuing a mea culpa, like the diminutive comedian Kevin Hart and rapper Jay-Z (in one of his albums). Of course, there's the epic apology Tiger Woods "had to" make after plowing many female fields. Ironically, this did him no good anyway as he lost tens—if not hundreds of millions—of dollars after the news of his straying broke.

If a woman cheats, as many do, they have ready-made excuses that other women and white knights are allergic to calling out. "He was abusive," "he didn't give me enough attention," "I felt lonely," or "I didn't mean it" are just some of the tropes women in relationships spout to evade responsibility after bedding another man. Alas, women's defense of their micro-cheating is going to involve either the same sort of hamstering or full-blown denials. No amount of *Cosmopolitan*, *Elle*, or *Huffington Post* feature articles about this new fad can suddenly turn disloyal women into introspective paragons of virtue.

What we are left with is the near certainty that only men face being held to account for micro-cheating. When women "micro-cheat," it essentially overlaps with shit-testing her current man or, if he's absent, indulging in run-of-the-mill hypergamy. In the second category, a girlfriend or wife flirts with another man as she is trying to gauge whether his value is superior to that of her long-term mate. If someone can explain to me how micro-cheating will be used across the board to admonish both men and women, I'm all ears.

It's related to #MeToo as well

For a start, laugh at it.

Shaming only men for cheating, applying micro-cheating to boyfriends and husbands alone, and dubious accusations of sexual impropriety—they're all related. The commonality is that they seek to constrain, police, and embarrass males for their sexuality, reading immorality or even criminality into it, while pretending to do the same for women. Especially with #MeToo, a strong element of attention-seeking exists alongside the attempt to manipulate male actions in a relationship, sexual or otherwise.

Here's the present range of ways women can try to control (and punish) men through sexuality:

- If you want a man to be your boyfriend and he doesn't take the bait, you can accuse him of "sexual misconduct" (and bad sex).
- If a man is your boyfriend and the relationship ends, you can falsely describe him as a "sexual abuser."
- If a man has cheated on you or you simply want to brand him as a cheater, you can repackage it as "emotional abuse" and thus part of the new, legally enforceable spectrum of "domestic violence."
- If you have cheated on a man, you can inform him that your rampant infidelity is actually a way to maintain your relationship, as approved by CNN's "experts."
- If your husband or boyfriend finds you mid-coitus with another man (or five), you can tell him to man up because there are "benefits" to being cuckolded.

Notice that none of these cases mentions any responsibility to be taken by a cheating woman whatsoever. In fact, they all perversely blame a man for any events (or imagined ones) that transpire.

Choo-choo goes the “victim” train

Here we are again, watching some new excuse for female hamstering and the fabrication of allegations of sexual malfeasance against men. Despite Western women being the safest and most pampered group of people on the planet (if you exclude the presence of the migrant rapists that feminists and other SJWs foisted upon our societies), they continue to find new and increasingly microscopic things to complain about.

To avoid triggering feminists, be sure not to engage any woman in a conversation or other interaction where you can be accused of micro-cheating on your wife or girlfriend. Remember, that’s emotional abuse, misogyny, and domestic violence!

For An Explosively Good First Date, Don’t Talk So Much

February 8, 2018 | by Chase Amante | Link | Original Link

The following is a sponsored article from Girls Chase.

Hey there. Chase Amante here. Roosh has been kind enough to allow me to share a few posts to give some tips, promote our new flagship course over at GC, and throw a few bones ROK’s way.

There’s a huge diversity of emotion toward women among Return of Kings readers. The loudest emotion seems to be “they’re annoying but you’ve got to put up with them.” And yeah, I mean… fair enough. Chicks can be pretty bratty and do some ridiculous things.

This article assumes that you would like to sleep with a few new girls and/or you’d like to make some cute (or smoking hot?) girl your girlfriend. Or find a girl to make your girlfriend. Any of those is good.

One of the big problems guys have with girls

What’s the biggest complaint guys have about dating? There are a few big ones, but one of the biggest, most consistent complaints is “Women expect you to do all the work.”

Sure, yeah. It seems like it’s correct. Except, well, you know… it’s not. Not totally/completely. Most women don’t expect anyone to do the work. They expect things to “just happen.”

The woman’s not supposed to do anything. She doesn’t want YOU to do anything either. In fact, if after you bed her, you then tell her all the conscious things you did to get her,

you can watch the terrible realization enter her eyes. It's she found out the Easter Bunny died.

When she's passed out thinking this very good first date was "fate"… while you destress from another bout of hard work and near-misses.

So where's this "women expect you to do all the work" idea come from? Not women themselves. In fact, it appears to stem from the talker-non-talker disconnect in the dating advice world.

I'll paint this picture for you. In the late 200-naughts, I was a reasonably well known figure on the biggest seduction discussion board. Over time I got to meet a bunch of top guys from the seduction community. Lots of great guys; most are genuinely very cool people in person. A few bad apples, as in any group, but for the most part extremely cool individuals.

However, I noticed something: most of these guys were talkers. They would talk talk talk talk talk. They loved to talk. They could talk all day and talk all night. Talk talk talk.

I began to coach dating students in 2008 and 2009. We'd meet up, I'd find out where they were at, we'd go to bars, I'd find girls for them to approach, and we'd sort out their weaknesses. I'd give them stuff to work on based on how I observed women react to them and where I saw them hit snags. They'd make gains (also often be amazed which girls would be into them). Sometimes we'd find a girl they could take home. And what I found over and over was almost none of the guys who showed up were talkers.

Instead, they were either "normal" guys… or they were quiet.

The guys who were beginners mostly needed pushes to approach a girl. So we'd work on that. But guys who were intermediate had a different problem. These guys almost all said the same thing: "I can meet women and women like me. But I always run out of things to

say!”

And the thing I’d wonder to myself is “Why do these guys who aren’t talkers try to be talkers?”

You don’t have to be Mr. Chatty

If you are a talkative guy, this article’s not for you. You shouldn’t try to rein your talk in if your gift is gab. If you are good at talking your way into women’s pants, don’t let me steer you off that. In my experience about 10% of guys are what I’d call “true talkatives.” If you’re this kind of guy, talk away. You’ll have a blast; she’ll be entranced.

If you’re not a talkative guy, you need to modify the advice you get from talkative teachers. Most of their advice is still quite usable. Yet they approach girls from a “talkative” standpoint; you won’t.

One of the questions I used to ask intermediate students in-field was, “What is it you are talking about with these girls, exactly?” And they would give me a list of very interesting things they discussed that no woman actually cares about.

So then I would say, “Those are really excellent things. That one thing in particular you mentioned we should talk about later; I’m interested in that. But now – do you think any girls actually care about these things?” And they would think about it, laugh, and say no, I guess not.

A lot of talk from you does not necessarily = a lot of attraction from her.

Then I would say “Hey, what do you think women actually care about?” They wouldn’t know. So then I’d say “What is everybody’s favorite topic?” Most of them would get it here and say “themselves.” At which point I’d say yeah, and women are the champs of this.

Loading…
And then I'd say you know what would be cool is if you didn't have to talk a lot or do a lot of work. What if you could just ask a girl a few questions, get her going off into an excited chat about all kinds of things, and you just kick back and chill while she does the work?

And you'd see a little light bulb go off in the guy's head and he'd go try it. Invariably he'd come back blown away, because the next girl he talked to got excited and he hardly did any work. We'd mix sexuality into the conversation next, because you need that to not just be some cool but platonic guy she had a fun conversation with. That's not too challenging once you've got her, though; once she's sucked into the conversation, the hardest part for most guys is done.

Okay. They've got me on a 1,500-word cap for this article and I've still got to give you my pitch (it is a sponsored post, after all), so let me give you a few quick pointers you can try out now.

Probe her on her answers

It's fine to ask a few boring questions ("Where are you from?" "What do you do?"). What you do NOT want to do is cycle too fast through questions. Instead, ask one ("Where are you from?") then ask more about her answer ("Great town. Why'd you move here?"). Then more ("How's this town compare to that town?"). Then more ("So are you here for life?").

Use statements and dead space

It is not your job to fill all empty space (well… until you get her in bed. Then it's your job to fill all empty spaces). The first two minutes of conversation you usually want to keep flowing. But use statements and pauses / dead space too. Too many questions turns it into an interview. So use statements – rather than "Are you a student?" tell her "You look like you're from [university]." And use pauses… especially after she says something and you remark on it. e.g., Her: "blah blah blah" You: "That's extremely cool. You've got some real talent!" [dead space]. The social pressure is on her to move things forward, especially when you've approved of and complimented her.

Use her conversation to move things forward

Once she's told you some cool things, and it feels like she's worked hard to tell you good things about herself, move her somewhere else or sit with her. e.g., "I can't believe you pulled that off, actually. Hey, let's grab seats before they're all taken. So tell me…" Framed this way, the move is a reward – and she feels good about following your lead (and investing so much).

Do these few things, and you will never run out of things to talk about. The girls you talk to will do most of the work (well… talk-wise. You've still got to invite and make moves!).

A new model for good first dates

This is only one part of my approach to conversation, but it ought to be enough to get you doing more cool things right away. I've got loads more for you, however… in a course I call "One Date."

The One Date is a simplified approach to dating (and seduction)… built to take a girl from "strangers" to "girlfriend" in one simple, easy-to-run, easy-to-get first date.

It works just as well if you want multiple dates with a girl too, of course. But I'm a guy who likes to get girls to do as much of the work as possible in a courtship, as fast as possible. So my method is based on getting girls into bed and as girlfriends as quickly, reliably, and with as little fuss as possible.

Inside One Date you'll discover:

- 3 types of zero-to-girlfriend first dates… plus how to identify which date a girl needs
- How to easily get a date with a girl (in a virtually rejection-proof way)
- The biggest getting-together mistake men make (once you know this it's easy to avoid)
- The results of over 127 peer-reviewed scientific studies on dating, mating, and attraction
- Exactly how to talk to and flirt with her (with lots of demonstrations by veteran date coaches)

… and a whole lot more.

One Date will only be available February 22 to 26. We'll roll it out to a select early access group, then close it down for a while (to build the first alumni group). At the nearest, it'll next be available this summer.

So if you want it, or think you might want it, sign up for the launch list! I'll send you lots of great free tips as we move toward the launch (like what you've got in this article).

Here's the first look trailer. We give you a peak inside, show what the course is about, and… it's pretty fun:

Go to the signup page and sign up now, and I'll see you on the list.

SIGN UP NOW

Ciao for now,

Advertise Your Product Or Site On Return Of Kings

Chase Amante

Chase woke up one day in 2004 tired of being alone. So, he set to work and read every book he could find, studied every teacher he could meet, and talked to every girl he could talk to to figure out dating. After four years, scads of lays, and many great girlfriends (plus plenty of failures along the way), he launched GirlsChase.com. He will teach you everything he knows about girls in one single program in his One Date System.

Is Collectivism Always Wrong?

February 8, 2018 | by Beau Albrecht | Link | Original Link

Collectivism has a pretty bad name in certain circles, particularly Libertarians and related currents. Indeed, it's led to some past excesses, including totalitarianism. Still, it's really like an implement that can be used either constructively or destructively. Hyper-individualism has its flaws too. To paraphrase an old joke, an anarchist who gets mugged calls the police.

What does collectivism mean?

Toilet paper ration lines – a good indication that they're doing it wrong

Ayn Rand wrote quite negatively about it, including the following:

> Collectivism means the subjugation of the individual to a group—whether to a race, class or state does not matter. Collectivism holds that man must be chained to collective action and collective thought for the sake of what is called "the common good."

The more neutral dictionary definition is:

> 1: a political or economic theory advocating collective control especially over production and distribution; also: a system marked by such control
>
> 2: emphasis on collective rather than individual action or identity

The related term "statism" specifically pertains to big government. Tribalism relates to ethnic solidarity.

Granted, there's much to say for rugged individualism, self-sufficiency, and especially pulling one's own weight in society. Still, tribalism is a natural human instinct. The cavemen who survived the Ice Age weren't "doing their own thing" and caring nothing for their tribes. Likewise, the cavewomen weren't constantly touting their own strength and independence. After Rome fell (much more recently), a paradise without statism didn't emerge. To survive the Dark Ages, individuals had to pull together for their kingdom, city-state, or barbarian tribe.

Rousseau's utopian notions concerning ancient mankind in the state of nature weren't grounded in reality. Tribalism served a purpose: *survival.* It's mistaken to believe modern easy living made this obsolete.

Going it alone has its limits

Red Dawn was a good movie, but you're in trouble if it comes to this

Nearly every political philosophy defines active roles for the government, the community, and individuals. The main debate is *where to draw the lines*. Even Libertarians want

collective defense. Although they might dislike neocon foreign adventures and wasteful defense contracts, most still want a competent military. It's difficult to stop an enemy invasion if you're alone defending the beach with your Saturday Night Special.

Sometimes joining with others sharing *coordination and unity of purpose* is absolutely necessary. Imagine playing a basketball game with just you against five opponents. Even a team of eighth graders could defeat the most ruggedly individualistic sportsman. Suppose your team was permitted *ten players* on the court, but the others neither participated nor cared about the outcome. That wouldn't help; you'd still lose to five opponents working together.

Taking this further, suppose two of your teammates *say* they want to win, but mostly complain that you're playing too aggressively. Four more stand around goofing with their smart phones. The opposing coach (a clever bastard) convinced the last three that winning is dreadfully unfair, so they block you and help the other team. The referee keeps giving you bogus fouls, while your opponents get away with anything. If that happened, your team of ten—in which you're the *only one really trying*—could be defeated even by five mentally challenged midgets.

That's pretty absurd, right? Nobody plays sports that way. Unfortunately, that's basically today's political scene. Hopefully everyone's getting the analogy about lukewarm conservatives, the apathetic, and liberals duped into defeating themselves.

The greatest dispute in the Alt Right / Alt Lite split is ethnic nationalism versus civic nationalism. Most Alt Lites know the score, but have misgivings about collectivism, or fear the "basket of deplorables" label. Thus, they carefully debate only within "acceptable" topics, playing by leftist-approved rules. It's the same thing that's hamstrung mainstream conservatism for decades. However, the left *certainly has no such fine scruples*. Actually, it goes well beyond ethnic nationalism, as other categories got brought into the picture.

Double standards and doubletalk

When political correctness (late-stage cultural Marxism) entered the picture, protected groups were strongly encouraged to think collectively. Feminism seeks to turn women against men, gays became another radicalized class, etc. Now, it's a bewildering picture, with made-up terms thrown around like cisheteronormativity, ageism, lookism, etc. Meanwhile, *everyone else* was told that having collective consciousness is unfair, prejudiced, wrong—basically "deplorable".

Protected groups got new commemorative days, awareness weeks, and even entire months to celebrate their history and "raise consciousness". By itself, that's fairly innocuous. However, designated "oppressor" groups have their histories misrepresented and even erased.

Protected groups have countless organizations, from small clubs in schools and offices to well-funded major national outfits. They're certainly free to organize; nobody's saying that's wrong. However, when disfavored "oppressors" try to further their interests, that's called "hate" or some "-ist" or "-phobic" word. If they get any publicity at all, it's bitterly

negative. Daring to stand up for themselves—even if their long-term survival is threatened—is portrayed as something evil.

Less innocuous are hiring quotas, contract set-asides, and other rent-seeking measures amounting to legalized graft. (The left discusses "privilege" endlessly; those things are *real* privilege.) Beyond that are *special rights*, like laws granting extra protections. "Hate crime" legislation doesn't penalize protected group members; if they commit crimes, either they had rough childhoods, or the "oppressors" deserved it. Many "free" countries even have laws against criticizing protected groups, or disputing their version of history.

Further, heavy pressure to conform is provided by the media, education, institutions, and even big businesses pushing this world view and suppressing dissent. All the hypocrisy is as rotten as a decaying carcass, of course. Encouraging some groups to think collectively, while making it a taboo for others, is like demanding someone to fight with an arm tied behind his back.

It's hard to imagine anything more absurd, but this is politics since the 1960s. Feminism became the great Shit Test that society failed. The gays should've been familiarized with the word "no" by the 1990s. The trannies should've been told to grow a pair.

Population replacement policies are the most troublesome. When we're told "Your DNA is an abomination", that's a problem. It's also a problem when others openly gloat expecting our demise—while not realizing they're sinking their own ship, or that they're sadly perpetuating a long tradition of giving their own ethnic group a bad name. *Do we need further evidence that those wanting to wreck Western civilization don't have our best interests at heart?* Should we agree to play the game by their rules, which means not at all?

The final word

This is what indoctrination does.

The individualism versus collectivism narrative is a false dichotomy. One definition of justice is the proper balance between individual interests and community interests; it's not an "either/or" proposition. Regarding statism, there certainly are good arguments for limited government. The greatest one is that it reduces damage by the Deep State and bumbling bureaucrats. The greater problem there is obvious.

Further, the leftist pipe dream of utopian multicultural harmony isn't attainable, especially since not all groups are expected to reject tribalism. Neither is their dysfunctional global melting pot really desirable, nor their efforts to create a unisex society.

If collectivism means goofy economic policies and sending people to gulags for merely disagreeing, I'm against those things. However, using an instinctive means of survival that everyone else is using (sometimes very militantly) makes sense. It's time to stop fighting with an arm tied behind our backs.

17 Ugly Women Who Became Stunningly Beautiful

February 9, 2018 | by Jared Trueheart | Link | Original Link

While David G Brown's recent article is pretty eye opening, it's a little pessimistic. We need to temper all the bad that happens in this world (like beautiful women becoming ugly) with some good. Here are 17 examples of women who decided to take to make themselves more beautiful.

Let this be some inspiration to show you that there is some beauty in this world.

1.

From fat to fit. She's in her late thirties. Diet and exercise instantly restore as much of youthful beauty as can be restored for women.

2.

She went from skinny-fat to fit, getting far more beautiful in the process.

3.

Women can lose a lot of weight without having to also get ripped six pack abs.

4.

She got beautiful thanks to running and yoga. Whatever works is worth pursuit (as a general rule).

5.

She even lost the glasses.

6.

Jordan Sparks shows what happens when you have the money to invest in personal trainers and choose to do so.

7. Nicole Richie

It’s not just about weight loss. Nicole Richie ditched those disgusting dreads and wal-mart shopper attire for something classy. Sometimes that’s all it takes.

8. Jennifer Hudson

Although her face looked good before, it looks great after weight loss.

9.

It’s amazing how much of a difference a chin can make.

10.

That waist-to-hip ratio incredible. You never would have guessed it was hiding under the fat she had before.

11.

She knows she went from a 2 to an 8 and now she’s ready to break some beta hearts.

12.

Weight loss is great but one can be too skinny also. Before she looks unhealthy, near death. After she looks full of life, ready to be a great gym partner.

13.

Sometimes all it is short hair to make a beautiful woman ugly or an ugly woman beautiful. Ladies, don’t fall for what the media tells you. All other things being equal, men prefer women with long hair.

14.

She doesn’t need to pose in a bikini for us to appreciate how much more beautiful she is after losing the weight.

15.

That waist-to-hip ratio really shines after all the fat is burned.

16.

She used to be sloppy. Now she can turn on sexy or classy at her whim. She went from a 3 to every man's dream, a freak in the sheets and a lady in the streets.

17.

She just doesn't look happy on the left. She's drinking a beer. Probably depressed. Even her smile is ugly. But on the right she is vibrant, full of life. She's keeping a workout journal or making a list of all the ways she is going to be a good wife to some lucky man.

Just like men, women can raise their SMV with some simple but hard-earned efforts. By

getting their bodies fit, growing their hair long, and dressing classy, women can be as physically beautiful as they want to be. It’s a choice to be ugly, a choice no one has to make.

The world can be a sad place. The most majestic animals are going extinct. Terrorists blow up ancient works of art. Beautiful women turn ugly. But we shouldn’t focus on those things more than we need to.

We have to remind ourselves that there is good in this world. These were some examples of that.

CNN: Watching Other Men Fuck Your Girlfriend Can Be Positive For Your Relationship

February 9, 2018 | by Larsen Halleck | Link | Original Link

Much to the amusement and derision of those in the reactosphere, CNN recently did an article extolling the virtues of cuckoldry. More specifically, the article delineates that for some couples (perhaps using the term "some" to play it safe), cuckoldry might have a positive effect on a couple's relationship and even strengthen it.

> In our current political climate, the term "cuck" — short for "cuckservative" — has become an insult of the so-called alt-right, aimed at men they view as spineless and emasculated. The slur has its roots in the concept of cuckolding, or having an adulterous partner.
>
> But, according to a recent study by David Ley, Justin Lehmiller and the writer Dan Savage, acting on cuckolding fantasies can be a largely positive experience for many couples, and hardly a sign of weakness.

As somebody who has extensively studied humanity in all of its splendor, I will be the first to tell you that while there have historically been a few of those fabled "take my wife, please!" tribes where everybody is running about having sex all willy nilly with everybody else, there are many more tribes—including, purely by coincidence, the tribes that actually amounted to anything in the grand scheme of things—in which the thought of being cuckolded is rightfully considered one of the greatest shames and humiliations.

What's notable is that even many tribes that are primitive and unlettered are enraged by the thought of getting cucked behind their back—and if you don't believe me, the Yanomamo, the "fierce people" of the Amazon rainforest, can demonstrate how seriously they take patriarchy and a woman's faithfulness (hint: it occasionally involves lighting a

woman’s cooch on fire).

Said it before, I’ll say it again: Napoleon Chagnon needs to be feted in every school

So with all that being said, it seems that cuckoldry is something universally feared and reviled amongst almost all masculine cultures. And rightfully so—if your wife (or husband, women are allegedly capable of engaging in the cuck fetish as well) is looking to somebody else for sex, it means you’re not satisfying your spouse. It seems pretty obvious an affront, so why are our societal betters at CNN trying to push it upon us?

Their theory

According to research by Dan Savage and Justin Lehmiller—and, importantly, presented by CNN—cuckoldry is a perfectly normal desire to have; so much so that the majority of American men have had cuckold fantasies at some point in their life (again, according to the CNN article). Part of what makes cuckoldry such an erotic act is that it is a taboo act—the big bad patriarchal society that we live in claims that there’s *something wrong* with allowing some other man to bang your wife, and in fantasizing about that you’re being a brave rebel, *thus more of a man than those patriarchal assholes*!

Indeed, those who have anxiety or abandonment issues, lack intimacy and communication, and aren't carefully planning the fetish, might have a negative experience with cuckolding—as you can see, only the strong allow themselves to get cucked!

Those of you who read the CNN article linked at the beginning might notice that the article is rather sparse on explanations as to *how* cuckolding is supposed to be such a wonderful positive for a relationship, only that it is. It might have something to do with the fact that the recommended cuckold formula involves honesty and intimacy between the cuck and the woman, or it might have to do with the openness of a "taboo" fetish, but I think a quick glance at the writers of this study might shine some light on why all of a sudden they're claiming cuckolding is such a boon.

The writers

Dan Savage is a name that will likely need no introduction to politically savvy readers—maybe a man, maybe a tulpa of every single negative gay stereotype, Savage is a syndicated columnist in various newspapers around the country who writes about various sexual issues both hetero and homo and everything in between.

He's also known for his "Santorum" neologism campaign, occasional acts of lying, accusations of holding various prejudices within the merry band of twats that is the intersectional righteous community, and launching his "It Gets Better" campaign in support of downtrodden gay youths, with the support of such tiny and weak entities as, er, the United States Government and the Microsoft Corporation—plucky underdogs, surely.

Justin Lehmiller, in addition to looking disturbingly like a brunette version of Kenneth from

30 Rock is the Director of the Social Psychology Graduate Program and an Assistant Professor of Social Psychology at Ball State University. He is also a Faculty Affiliate of The Kinsey Institute at Indiana University and runs the allegedly popular blog Sex and Psychology.

Justin's on the left

At the risk of seeming unprofessional, I think there are a couple of conclusions that can be drawn from looking at the authors of the study, and CNN's reaction to it.

Is being a cuck really positive for your relationship?

First of all, it's pretty well-documented that Dr. Alfred Kinsey, like most social scientists, fudged a lot of his data in order to push an ideological agenda, so I don't think it's too much of a stretch to think that an employee of the Kinsey institute might have similar goals. But interestingly enough, that *isn't* the biggest problem with this article.

Rather than the study being biased, it appears that the CNN report on the study was what was biased. Looking at the study itself, *the study says nothing about cuckoldry being a net positive for heterosexual couples.* The study's abstract says that:

> …The present study investigated fantasies about and experiences with cuckolding in a large and diverse sample of predominately gay-identified men [underline was put in by the writer]… Our findings also indicate that frequent fantasies about cuckolding are linked to several overlapping sexual interests (e.g., voyeurism, group sex) and, further, the content of these fantasies is associated with a number of individual differences (e.g., agreeableness, sensation seeking, sociosexuality). Finally, this study also suggests that gay men who act on their cuckolding fantasies tend to report positive experiences; however, the likelihood of reporting positive outcomes appears to depend upon one's personality and attachment style.

In other words, the study itself doesn't seem to be the sort of "corrupting the masculine

men” thing that the manosphere thinks it is. Indeed, Savage and Lehmiller admit that “…It’s not cuckolding if there isn’t an element of humiliation, degradation or denial,” and that the fetish isn’t for everybody. CNN just wanted to portray it as something that Average Joe and Jane should do.

So why would CNN want to make it seem like it can “Strengthen a relationship and be a positive experience for [heterosexual] couples”? As a specific attempt to weaken and humiliate American men? That seems likely. Just think about that, CNN managed to out-poz *Dan Savage.*

In Defense Of Marriage

February 9, 2018 | by Garrett Bowie | Link | Original Link

Western civilization was built upon three pillars: marriage, Christianity, and family. All three are under assault by Western governments, public and private education, the media, and the entertainment industry. The consistently negative portrayals of marriage in the entertainment industry are giving young people a skewed perception of marriage that is contributing to the decline in marriage rates in western countries.

This is unfortunate, because study after study shows that people—men especially—are happier when married. Children fare much better when raised in a stable household by a married heterosexual couple.

Married Sex Is The Best Sex

The TV and movie industry usually portray marriage as unhappy, with one or both spouses looking to cheat. There are virtually no portrayals of happily married couples. Is this a sinister plot to undermine the institution of marriage? Maybe. It could be that the entertainment industry has given up on good writing and the sexual encounters of single people, and cheating couples are easier to write.

No doubt that sex with a new person is exciting. But is it always good sex? Men are relatively easy to please, but women are all wired differently. It takes time—sometimes years—to figure out what a woman wants and what is going to satisfy her. Oftentimes, women don't even know what they want, so over time, sex becomes an exploration process for both partners.

Sex for women is much more emotional and cerebral than for men. In a marriage, women have time to develop the emotional attachment and trust for a man that allows them to

relax and fully enjoy their sexual lives.

More important than sex is the bond of trust that develops between a man and a wife in a good marriage. While many spouses consider their partner to be a good friend, the bond between man and wife is different, and much stronger than friendship.

Contrary to most media portrayals, most married couples are not looking to cheat. Married women in particular are not looking for opportunities to cheat on their husbands. Despite the hook-up culture prevalent in young people and the easy access they have to dating websites, woman don't want to hook up with married men. Ashley Madison, the website purportedly for married cheaters, had almost no women members. The vast majority of female accounts were found to be fake.

Sexual fidelity is much more commonplace in marriage than media portrayals, but that's just one aspect of a trusting marital relationship.

The Marriage Bond

A good marriage requires financial fidelity. Most married couples share everything, so being able to completely trust your spouse with the shared money pool is essential to your well-being. Financial fidelity is important to both partners for slightly different reasons. In most marriages, the man makes more money, so it's important his wife spends money wisely. Otherwise, she's not valuing the time, effort, and sacrifice that go with having a full-time job and providing for a family.

Women have more of a nesting instinct and are interested a little more in financial security. Women value the security of a paid-off home, life insurance, and money in the bank so she and their kids will be provided for if the husband loses his job, gets sick, or even dies. Women value a husband that provides all these financial securities and doesn't squander the money they make.

According to marriage counselors, sex and money are the primary reasons couples fight, but there is more to trust than sexual and financial fidelity. I trust my wife to behave appropriately in our community of friends, relatives, and co-workers. I don't worry about her saying something inappropriate. She won't air our dirty laundry with outsiders. She won't drink too much in an inappropriate situation. She won't dress immodestly for the event we're attending. It's a great relief that I never have to worry about these things.

If you have a good wife, you shouldn't have to worry about her behavior. Conversely, a good husband will honor his wife by behaving appropriately in public as well. He'll support his wife, take her side regardless of the situation, and have only kind, supportive words for her. A good husband will never engage in behavior that would bring shame, dishonor, or embarrassment on his wife or their family.

I'm amused and annoyed by sitcoms and rom-coms where dating couples and recently married couples are portrayed as being hopelessly head over heels in love with each other. How would they know? They practically just met.

Go through the excitement, fear, and physical pain of pregnancy and childbirth with someone. Then you'll know what it means to love another person. Bring home your first baby, a baby looks like the two of you, and realize you're responsible for keeping this little thing alive now. Spend the night with your wife in the emergency room waiting while the doctors put one of your kids back together again after a major injury. Then you'll know what it really means to be hopelessly in love with someone.

Grow old with your spouse and watch as your bodies deteriorate in ways you never imagined possible, and realize you're not one bit less attracted to her.

People aren't perfect, so no marriage is perfect. God gave us free will because he loves us and wants us to share in the joy of his creation. People with free will are going to make mistakes. Spouses need to be forgiving.

Additionally, there is no one-size-fits-all approach to making marriage successful. Since everyone is different and imperfect, spouses need to figure out what works well for them. Little things like the division of labor in a household and division of responsibilities for child-rearing can turn into big problems if spouses aren't kind to each other and accommodating.

Media culture provides no good role models for married couples. Hyper-feminism has trained a generation of women to be terrible wives. The lack of good role models and the modern welfare state has produced a lot of immature men that don't understand the responsibilities of being good husbands. It's hard, but the benefits of a good marriage are certainly worth it, not only for yourselves, but for the children you need to raise.

There’s Nothing Wrong With Staring At A Woman’s Breasts

February 10, 2018 | by Jani Niskakangas | Link | Original Link

I happened to spot this patronizing piece of manure on Facebook recently:

> Boobs and bras are not surprises. Boobs are just two balls of fat and flesh women gets naturally. She feeds her children with that. Boobs & bras are just normal things like your penis and under wears. Be a man who knows how to respect and don't be that cheap guy who looks at that strap of bra greedily. Don't be that cheap guy who is ready to rub his hands when he finds a woman in a crowded bus. Don't be that cheap guy who looks at that cleavage with full of lust when she bends down. Don't be that cheap guy who uses the word love just for a physical relationship.🙏
>
> #LearntobeaGentlemen
> #Share
> #copied

The world is full of bullshit and I rarely react to anything, but this happens to be something I see over and over again these days in various forms. Sometimes you have to read between the lines, but with this example, the message is obvious: normal male

sexuality and desire for a beautiful woman is something suspicious and almost dangerous. I find this demonizing of normal male sexuality despicable and disgusting.

This meme is of course one of those things that looks nice and something everyone can agree with when you first look at it. “Be a gentleman” and “respect women”—who could disagree with that? But the undercurrent with this kind of meme is something completely different: normal male sexual interest in women and their “assets” is something abnormal and morally questionable. I chose this meme simply because it’s a clear and telling example of a larger trend.

Someone might want to say that this meme simply encourages men to stop staring at women with “greedy eyes” *when women can see the man staring at them*. I could agree with that, but I don’t think this is the correct interpretation of the underlying message and intention behind this meme. The actual message is this: *simply looking at women with sexual interest is somehow suspicious and wrong*.

Expressions like “looks at that strap of bra greedily” or “cheap guy who looks at that cleavage with full of lust” clearly support this interpretation.

Why use expressions like “cheap guy” in reference tomen who might steal a glance of a woman’s cleavage or butt when the woman isn’t even looking? Where’s the harm in that? Obviously, there’s no harm, so the only possible interpretation is that the mere intention and feeling of desire behind these glances is somehow wrong and questionable.

This boils down to slandering healthy male sexuality as if there’s something abnormal in a man who feels sexual desire towards a beautiful woman and likes boobs and firm butts. The reality, of course, is that nothing could be more normal than this. Men have always liked the female body and they always will. There’s nothing wrong with this so long as men don’t do anything coercive towards women.

But even this mere feeling of desire and sexual interest towards women is slandered and

labeled as something questionable these days. This is quite obvious from this example alone: expressions like “cheap guy,” “greedily,” and “full of lust” are obviously meant to denigrate any man who likes to look at beautiful women and feels sexual desire towards them.

Why do people propagate this message so eagerly these days? I can only guess, but it seems quite clear to me that these people feel some kind of fear towards male sexuality. The male sexual desire itself is somehow scary or dangerous and should be denigrated and slandered so that men would begin to feel shame about their completely healthy desires.

In a certain way, these people want to castrate men: make men into sheepish “gentlemen” who no longer look women with “greedy eyes” and feel sexual desire towards them, or who at least are ashamed of it and keep it to themselves. This is a form of psychological castration and I can only feel a strong sense of contempt towards people who propagate this bullshit.

Philosophically Absurd: Values Are Not In Things, They Are Assigned

I want to close this piece with a short examination of the philosophical assumptions behind this whole “boobs are just two balls of fat and flesh women get naturally” way of thinking. The ridiculous assumption behind this kind of reasoning is that *values are the same thing as their objects*. In other words, *values can and always are reduced to whatever their subject matter (or material) happens to be*.

For example, by this logic, some priceless religious artifact or a statue would be worthless junk because “it’s just a piece of rock” or whatever. The implication is that any values and interest assigned to it would be ridiculous because who would be interested in a “piece of rock?”

This same idiotic logic is here applied to breasts (and more generally the female body), and the argument, when explicitly stated, goes like this: “boobs are just lumps of fat and flesh, therefore they have no value and can have no sexual interest for anyone.”

Of course, anyone with half a brain can see that this kind of deduction is completely absurd. If this logic is taken to it's ultimate conclusion, *nothing at all would have any value* because everything is "just a lump of atoms and molecules" or whatever form of matter it happens to be in any particular case. I seriously have to wonder what kind of imbecile comes up with something like this just to denigrate men who find boobs fascinating (as they naturally do).

It's easy to construct a reductio ad absurdum from this stupid form of argument, and thus the logic is fallacious. *There is no logical connection between values and the material of things on which values may be assigned*. No logical deduction can be drawn from one to the other.

Why did I go to such lengths just to demolish something so obviously mistaken? Simply because I've seen this same logic applied again and again when it comes to the subject matter of sexuality. But of course, like all pieces of alluring nonsense, this one certainly regenerates, no matter how many times it's demolished. I'm almost certainly not the first person to demolish it and I won't be the last. Exorcising popular nonsense like this is truly a Sisyphean task.

I think this is probably enough. I wanted to reveal the real motive and message behind this sort of propaganda. The message is a malicious attempt to slander and denigrate normal male sexuality. “Gentleman” here seems to be a man who doesn’t even feel sexual desire towards women anymore and never looks at women with “greedy eyes.” In other words, an abnormal castrate instead of a healthy man. What a truly despicable agenda!

5 Reasons You Should Let Go Of Your Anger

February 11, 2018 | by James Augustine | Link | Original Link

I submitted an article to ROK a while back about my philosophies on game and women, and I got an email back from Master Roosh that said, “James, I’m going to pass because there’s too much anger in the article.” Talk about a kick to the balls, but I actually completely understood his point. After all, *I am an angry white man.*

Though his advice was invaluable, it very much made me pause and think about the burning rage I have for women, and lots of other things, to be honest. I asked myself how I got here. And more importantly, is my anger serving me any good? At this point, I think the answer is decidedly, “no, you need to chill out, dude.”

I don’t know if I will ever find the exact genesis of my anger, but I compiled a list of the top five reasons you should let go of your anger *right goddamn now.*

1. It Will Help You Get Laid

Women don’t like angry men. We think that acting like one of the *300* soldiers, screaming at the top of our lungs with a glistening six-pack, is what gets women wet. In reality, women want to feel safe.

Those dudes who were Spartan warriors were probably a lot chiller than your high-powered boss who wears his Rolex at LA Fitness while “getting his pump on.” That guy gets laid, but only because he essentially pays for it, whether indirectly or not. In reality, he’s an angry mess.

True warriors of yore blended with the seasons and knew their death was around the bend at any moment. You’d have to be pretty ‘laxed to be okay with all of that. Women love strength, but true strength comes with a sense of calm; chicks will be calm if you are calm, and then their legs are much more likely to open so they can have your chill babies.

2. Meditation Is Dope, And Anxiety Sucks

Face: you cannot meditate if you're angry. You will be super distracted by all the shit around you and instead of focusing on your breathing, you'll be muttering a string of curse words that would make your mother cry.

Meditation helps us focus on our goals with laser-like accuracy; without it, I would be lost as to my short- and long-term goals. A bonus to meditation is that it also helps you get rid of anxiety.

Besides pharmaceuticals (which I highly recommend against), meditation is pretty much the only way you're going to work through your shit, especially if you're an anxious person.

Combine anxiety with anger and you are a recipe for anguish and pain. Nothing will let you get over that unless you look within and figure your stuff out. So, Namaste, motherfuckers.

3. You'll Look Younger

Pretty simple here. Everyone knows that stress is the number one killer that our luxurious, privileged lives afford us as Western men.

In reality, today there is so much bullshit on the news, in school, at work, and in dating that it's hard not to be stressed as fuck. But if you have the ability to tune all that crap out, not only will you live a little longer (who really cares, by the way) but you'll look younger and hotter and probably bang a bit more.

Loading…

Women want to see the weathered face of a full life on an older man, not the angry perma-scowl your grandpa had from enduring years of his nagging wife (that's your grandma, by the way, be nice).

Take your scars with pride, but let go of all the bullshit you hear in the news and take from women and laugh in the face of it all. Otherwise, it'll be your face that gets laughed at: get it?

4. It Will Help You Better Understand The World Around You

Ever wondered what happened to the namsy-pamsy little boy you were before you were redpilled? Why, oh why didn't I take the blue pill?

Nah, fuck that! But the red pill has the tendency to turn a lot of potentially good guys into angry cretins, trolling /pol/, screaming about white genocide (just kidding /pol/, I love you, *don't dox me*).

Although white genocide is probably real, once you've figured out the truth, what good does it do to get angry about it? Nothing, I tell you. The most realistic thing you can do to fight back against the globalists is to find a good wife, knock her up, and subsequently prevent your daughters from becoming whores and your sons from becoming pussies.

Otherwise, memeing about what a lost cause the world is and how angry you are at those who shall not be named will only get you so far. Don't get angry, get everything. Even if the world is fucked, getting angry will only serve to cloud your judgment and further harm your cause.

5. It Will Make You A Better Man

I truly think that anger is a tool in the beginning stages of wokedom. We all have at one time asked ourselves, “Why am I not getting laid? Why are my teachers all trannies and gay men? Why was my dad not around? Why did no one tell me I shouldn’t be a complete pussy all the time and start providing my own way in life?”

I know the anger that I felt from asking all these questions is what led me away from my initial beta ways into becoming my more masculine self. The anger is what starts the fire, but if you don’t get that emotion under control, you’re gonna burn the whole damned house down.

If you can harness this (well-deserved) feeling in the initial stages of waking up to the despicable and degenerate society around you, you can turn that anger into action. Staying stuck in your anger will keep you exactly like that: stuck.

Resolve yourself to the transformation and evolve into your true form of a good, strong, masculine dude who isn’t moved by anything. They say not to sweat the small stuff, but it’s way, *way* more important not to sweat the big stuff.

I know that my anger is an everyday bitch I will have to tame, but being aware of it is the first step, and conquering it is the last. Let your anger tune you in to the realities of the world, but once you’ve awoken from your slumber, dust that stuff off, and live your life. Your mind, body, and spirit will thank you. And remember that while anger may feel good, it’s not a good look, bro.

It’s Time To Bring Back Slut Shaming

February 11, 2018 | by Nathan Ferguson | Link | Original Link

There are many things in the past that we have forgotten about. Some of those things were seen as superstitious, controlling, or even inhumane. One of those dark arts is slut shaming. Although it is still around, it is not nearly as strong as it used to be, and the reasoning why it is necessary has escaped our understanding.

An Easy Target

Let me start off with a personal story before I address what needs to be said. I remember a few semesters ago, I was walking over to one of my friends' apartments to do some drinking before we went out and hit up the bars.

On the other side of the street from where I was walking, I noticed a very attractive girl in a red dress that was held up by spaghetti strings. The dress didn't go past her knees. Her hair was dyed bleach blonde and looked like it was fixed by a professional porn star hairdresser.

The most noticeable thing about her was the fact she wasn't wearing a coat. It was a freezing night in late November and she was alone. Although I was too far away to see her face, her body language told me everything: she wasn't a prostitute, she was cold, and she was deeply confused.

I was already running late to the party and I didn't know her or her situation, so I decided to keep on walking. However, her story doesn't end here.

I was my buddy's apartment, which was extremely nice since his parents could afford it. At the last minute, his neighbors started to throw a party as well and the bar-hopping plan was called off. Random people were coming in and out. About an hour into the party, I saw that same girl show up.

I talked to her briefly and learned that she was a freshman at my college and didn't know anybody. She came from a different state and was trying to meet people. I introduced her to my group of friends and we all began to do some shots, beer bongs, hookah, etc. It was a full blown party at this point.

After hours of heavy drinking, it was getting close to the morning hours, as people were now just leaving. My buddy let me crash in his spare bedroom that was right across from his. I slept in my clothes only for a few hours as it was already early in the morning.

I was still drunk as I crept out of the bedroom and saw that his door was wide open. To

my surprise, I saw him with the same girl from earlier and another guy.

My buddy looked over at me half-asleep, half-drunk, and gave me the thumbs up and said I would see him in class on Monday. Looking back and reflecting her situation, I saw the red flags that she was signaling and it all boils down to this: she was easy prey.

A Woman's Greatest Fear

So what exactly is the end goal of slut shaming? If you speak to one of those fat queer feminists, they will tell you that it is merely a patriarchal construct to control women. Reality will tell you that it tries to keep women from making mistakes, like the woman in my story, who would have been categorized as a rape victim by today's standards.

What women love most is attention, and from there we can understand their greatest fear: *ostracism.* Ostracism is the end result from shaming. The stronger the culture of slut-shaming, the greater the number of women who will fear being ostracized from their family and friends. They are not creatures who can withstand isolation, or can even comprehend how therapeutic solitude can be. The stronger the stigma is for being a slut or an attention whore, the more fearful they will be walking down this path.

If the woman in my story had more fear of being promiscuous, she wouldn't have had a train run on her by a couple of strangers. If more women in general would listen to the shaming messages that they receive, they wouldn't have to take the morning walk of shame when they go back to their apartment.

The solution of de-stigmatizing sluttiness that feminists push ignores what men want in a woman: a loyal companionship. The feminist solution to solve this problem is—and has been—to shame men into accepting sluttiness in women, and now, more and more men are beginning to accept the idea of being in an open relationship, turning them into

cucks.

Keeping Them Hoes In Check

So how do you go about keeping a woman in line without slapping her with the back of your hand? First, you need to examine the girl if she is even worth the time or the effort. If she is too far gone, then you will be fighting a lost cause, my friend.

If she has not displayed any thotness thus far, has a good father, and dresses like a proper woman, then there may be a small light at the end of the tunnel for her. It is best to get her before the gargoyles that call themselves feminists beat you to it.

Women have an ability to pick up on subtle cues that tip them off on what the other person is thinking. Walking up to her and preaching will get you nowhere fast and will most likely damage the relationship. Whenever an opportunity arrives, giving out small answers that point out the degeneracy of the hook-up culture will affect her much more than a long speech.

This approach is as impromptu as it gets. I have done it a couple of times with some of my friends' girlfriends (all exes now), so let me provide an example so you can get a general idea.

My buddies and I were all studying together and going off-topic periodically. A couple of hours went by and one of the men brought up how a girl he knew was in her fourth relationship within a three-week time frame. The girlfriends immediately began to defend her, saying that dating was hard and it was difficult to find the right guy.

After everybody had their opinion thrown in on the situation, I went towards the opposite direction of where everyone was. “Maybe she just doesn’t want a relationship? Maybe she just wants casual flings?” It was well-known that she was a woman that got around at school. Her history showed that I was right, and today I am still right about her.

But that didn’t make the study group any less awkward. Even though I wasn’t harsh and I was choosing my words carefully, the tension rose, especially with the girls. The next day, one of my friends told me that his girlfriend doesn’t want me hanging out with him anymore. They broke up the next week.

Discouraging this degenerate culture will be difficult and you will more than likely mess up on many occasions and lose friends. But you know as well as I do that this behavior in our society is a sickness that needs to be discouraged.

I wish you luck on the thot patrol. Godspeed.

My Wife Left Me Because She Wanted To Party And Be “Free”

February 12, 2018 | by Doug Pohoda | Link | Original Link

Females are the more malleable gender. Whether they crave a strongman type to drill a worldview into them or they soak it in over time and proximity, they will tend to take on the perspective of the man they care about. For this reason, it’s very important how you conduct and express yourself around your partner, because it will affect her more than either of you realize. This is how I inadvertantly turned a trad leaning girl into a thotwife.

I’ve never been the assertive type when it comes to pushing my worldview. I’m an anarcho-capitalist, have been for over half of my life, taking a sharp shift from left to right since my more ignorant, younger years. While I of course have my own views on social issues, I still very much hold on to the (stereo)typical libertarian stance of “live and let live”: you can be as ridiculous as you want with your life choices as long as they’re not pushed on me or affecting me/society at large through one mechanism or another. Keep your degeneracy to yourself, and good luck with that.

Genesis Of A Failed Marriage

Admittedly, I met my wife in a seedy Prague underground club, but in my defense it was through a coworker friend who thought we would be a good match, and immediately I could see she was not just a typical out-of-her-mind girl in one of the many dark corners of the club. She had an innocent sweetness to her, and she wasn’t dressed like most of the others who dwell in these party dungeons.

After all, she had only fairly recently moved to the country from Indonesia, which is of

course by all measures much more socially conservative than the Czech Republic, so she hadn't yet fallen to the degeneracy of your typical Euroslut club chick. She was also rather sheltered by her strict parents, so she was a breath of fresh air, even if I didn't fully understand why at the time.

That first night of fun turned into a seven-year relationship.

We were living the good life in Prague, which, for those that don't know, is a city of endless nightlife and degeneracy. For the most part, we lived the trendy expat existence, but my girl was different than the rest of the females in our circle, having not yet been completely corrupted by radical feminism and a seeming hatred of the West (while constantly enjoying the fruits of it). After all, she was a newcomer to Europe's luxuries, and was extremely appreciative and happy to be in her new home.

I had it good. This chick was a master chef of so many types of cuisines, she liked to keep things nice and tidy without nagging about it, she had a submissive but not-overly-so nature to her, and she appreciated her role as the woman in bed, very down to explore and make up for lost time from her previous, highly restricted life.

We traveled around Europe and had experiences most of our peers in our countries of origin would never know. Only in hindsight do I now see the obvious effect that would have on her very impressionable mind, as over time, she had largely abandoned her former ways, became completely Westernized, and felt a need to project that even more than others due to her non-Western skin. Meanwhile, I sat by and watched it happen, wanting to be the "cool" boyfriend and let her do her thing.

The Beginning Of The End

After those seven years together in the winter wonderland that is the Czech Republic, I was ready to leave that lifestyle and make a dramatic change away from the thumping clubs and trendy bars. I wanted something more substantial, and I knew if we didn't take the plunge soon it would simply be too late.

I made it clear that I wanted to move and start a new chapter. I proposed. She said yes. We were both extremely nervous about leaving, but I put up a confident front and made the call to head back to my hometown in the southern U.S. for a while to reconnect with my family and get some much-needed sun. I knew such a radical shift to a boring city with my family around would be rough, but I didn't realize just how far gone she already was.

Our new adventure started off surprisingly well, as if it was just one of our usual yearly trips to see everyone, which she always enjoyed. We got married in an immigration lawyer's office and then bought a house mostly for investment purposes (we had a two year plan). However, once the honeymoon period of "exciting and new" faded away, panic set in. I wasn't aware to what extent at the time, but it was clear she was not happy leaving the trendy life for her new role as housewife.

It all came crashing down a mere eight months after arriving in the US, when my Muslim dad and his family came to visit from Iran, staying at our place for way too long. This brought flashbacks of her Indonesian roots she so despised, and just two weeks in, after having a complete meltdown over this new burden, she bolted back to Prague until they left, but at that point I could already see the writing on the wall.

Sure enough, when she came back six weeks later, she announced that she was moving back to Prague.

Just like that, she was back to partying more than ever, leaving me with everything we had established over the previous months. The marriage was no more and she was now free to really be who she wanted to be, or at least so she thought. Several years later, she informed me that she was now seeing the emptiness of it all, but the damage was done. I hadn't done my duty and instead let her fall into the void.

Where I Went Wrong

Now a stronger and wiser man than my former self, I can look back with brutal honesty to evaluate what I should have done differently. I was a pushover. Even when I didn't want to hang out with the group, I generally submitted to my wife's whims when I should have provided her with a better, less destructive alternative.

Become your woman's world. Make your interests hers, especially as you grow and discover new ideas and realms. Instill your values in her. Mold her into a better person by being firm, confident, and perhaps above all, interesting. Men are the protectors. I saw what was happening with great concern but simply let it be.

Be open and honest about what is and isn't okay with you, and if she's not on board, break it off before you waste too much time. Don't think that a change of environment, or even marriage, can fix everything once the infection has set in.

Let this be a warning to you, gentlemen. While it may seem obvious in hindsight, most of us want to start a new relationship with nothing but fun and crazy times, not realizing that this initial lack of boundaries and social mores will do irreversible damage. We're blinded by the excitement of the moment, not doing our due diligence to set a solid foundation, and if this isn't reeled in soon enough, you're unlikely to get the trad wife you want.

Is Alcohol Making You Less Of A Man?

February 12, 2018 | by James Augustine | Link | Original Link

A rite of passage has been the longstanding tradition to the footsteps of manhood in many cultures. Oftentimes, this rite involves a trial of will or endurance, usually resulting in some sort of pain, but you come out a better man on the other side. We've all heard of the African tribes that make you stick your hand into a pile of bullet ants, or go into the wild and bring back a lion lest you be killed by it yourself.

In what's left of the rapidly feminizing Western society, one could deduce that our only remaining rite of passage comes at the age of twenty-one, where a man is suddenly responsible for his every action and he's allowed to (legally) intake alcohol.

Though it may seem that your man-card is all at once issued along with your twenty-one-year-old ID, alcohol is the test that lasts a lifetime. Every time you drink, your character is challenged with how you will act and what decisions you will make.

Regardless of how free you feel when drunk, intoxication has become a cage the Western man has willingly put himself into under the guise of independence and feeling grown up. One must ask: is drinking the ongoing test of manhood, or is it the rotting wood underneath a house ready to collapse? How can this be our lion to catch?

Normalizing Alcoholism

I will be the first to say that I've seen plenty of men "handle" their drinking. They can almost use it as a tool, giving them that extra boost of confidence to game women or just relax at the end of the day. In this article, I'm not really talking about those men.

But let's be honest: if you are a man who even at the very least gets wasted every month, you have a harmful pattern going on. The manosphere is all about the betterment of men, yet booze is so ingrained in our culture that it's the default for every bit of fun. Want to go hit on girls? Let's drink first. Want to go to dinner? Bottle of wine. Come over and watch the game? Twelve-pack of beer and we'll get more at halftime.

Getting smashed every weekend is foretold as a phenomenon that begins in college and ends there, yet I can count on one hand the amount of regular men (or "normies," as Alcoholics Anonymous dwellers label them) that I know who don't at the very least get fucked up once a month. For most men, it's about once a week. Some, every night. It's almost not considered hanging out unless there's some sort of booze fuckery involved, right? Unless you're living on a different planet, this is most likely your observance as well.

"Is It Helpful?"

The question of drinking often comes down to, "Is it wrong?" The philosophical quandary of right and wrong is for another essay I may have to write sometime, but the better question might be, "Is it helpful?" Is it helping us as men to be literally poisoning ourselves? Is alcohol helping us as men in finding good women to marry, or even at the base level of gaming and getting laid?

You would have to be quite the lawyer to convince an honest person the answer is anything besides a resounding no. Yet in our Clown World media, we are promised all of

the women, parties, and good times of a rock star supermodel pimp from simply buying a pack of Bud Light. How can this be?

My Romance With Alcohol

My story is one of somewhat typical American fashion. I had my first drink at sixteen and I fell head over heels with the warmth and synthetic love it gave me. Like many alcoholics, my drinking career started slow. I would drink on the weekends, get shitfaced every now and then, and not think about it until the next party.

Once I turned twenty-one, I found the magic of bars and night game. The fact that I could go to a place where the women were as drunk and morally loose as I was became a little slice of heaven. After getting into music and DJing, the bar scene morphed into backstage Roman orgies, where the booze was free and I found myself snorting coke off of groupies' tits and banging them in the bathroom. Heaven, right?

The partying became a personal hell, where in order to act "like myself" around a social group or summon the courage to talk to women, I had to be somewhat intoxicated. The amount of times I embarrassed myself with girls because of drinking, whether it be not being able to get it up or turning a sexually-interested bartender into a woman looking at me with complete disgust from how sloppy I had gotten occurred more times than I care to admit.

I became ashamed of my drinking, and I drank to feel unashamed.

After about 12 years of progressive hard drinking and partying, I found myself in rehab. When I called my mother so drunkenly one afternoon, explaining how I wanted to drive and kill myself, an intervention was staged. I barely remember it. I know what you're thinking: "What a pussy." Perhaps you're right; I simply couldn't deal.

But I defy you to find a man who has gotten sober and not show me a better man than he was before. My sobriety has become the thing I do least in this world to please others; I do it to please myself.

Even though I haven't been sober as long as I was a lush, I can tell you one thing for certain: I have finally learned how to act like a man. I no longer struggle to talk to women or get laid; if anything, it's become second nature to me. I no longer struggle to find true, lasting friendships, built on solid ground. I no longer struggle to talk to God and ask for guidance.

In this spirit, I implore every manosphere-minded guy out there to truly take a break from drinking for a period of time and feel the difference. It doesn't have to be forever, but for me, the benefits sell themselves.

Being able to drink is not the rite of manhood; drinking is simply test of emotional endurance, but you do not come back a better man. If you want to realize what your true test is as a man, just remember, no one can tell it to you.

You must go out, struggle with the pain, and come back victorious. You cannot fight the lion forever. Eventually, it's eat or be eaten.

Tips To Overcome Your Alcohol Habit

In my time of drinking, I would've laughed in your face had you told me I would become a boring sober dude one day, but I didn't know that sobriety would actually give me the capability and courage to become interesting, and not just another human gin bottle sitting on a bar stool. Here are some steps you can take to kick your drinking habit and find your inner man who's free of addiction.

1. Buy A Gym Membership

If you are anything like me (sorry for you), going to the gym hungover isn't an option. If you actually purchase an expensive gym membership, you will be kicking yourself every day that you don't use it. Don't work out at home: go to a gym and spend the dough.

Although this isn't the most hardcore approach to quitting booze (we'll get to that), gym membership is a great way to convince your body that health is the way to go, and to not be a beer-bloated mess. Also, there's hot, health-minded girls there, duh.

2. Go To Alcoholics Anonymous

This is the one you didn't want to hear, but I hate to tell you: it fricking works. I went to my first Alcoholics Anonymous meeting about six months before I actually decided to quit drinking for good. I did this initially to silence a nagging girlfriend at the time, not thinking I would actually take it seriously.

The stories I heard that day from hardcore, in the gutter, floor-licking alcoholics frightened me to my core. Not because of the severity of their stories, but because I saw myself in them; their journeys all pretty much started the same way mine did, and it really woke me up. Of course, I drank for a bit after that, but the seed was planted that day and I'll remember that meeting for the rest of my life.

3. Lose Your Drinking Friends For A Time, Then Perhaps Rejoin Them

We all have those buddies who bring booze every time they come over to your house without even asking. Hell, *you* might be that guy. Whether it's the pack of nerd-bros from your work that you go to the local shithole with for a mid-week game of, "I'm buying this round!" or it's the wingman Chad you meet up with on Friday nights for drinks and chasing tail, you'll probably need some time off from these other drunks in order to truly abstain.

At a certain point (if you opt in for long-term sobriety), you'll be able to meet up with these guys again, and even when they're shoving shots in your face you'll be able to say, "Thanks, I'm good, dude!" and then go on your merry way of gaming girls where you have the upper hand of sobriety on all the other drunk idiots.

For me, this took about 3-4 months before I was able to go back into the wild and resist drinking, but once I did, I actually had a lot more fun, and I certainly stopped waking up the next morning asking myself what in the fuck I did last night and what do I have to regret today. And just remember, if you can't hangout with a dude without drinking, he's probably not your real friend, anyhow.

4. Rehab

Okay, *this* is the one you actually didn't want to hear. But again, this shit *works.* Rehab is your Alamo, and once you've talked about all your problems to a bunch of other degenerate druggies and alcoholics, you'll form a strange bond that will stick with you forever and definitely make you think twice before you ever pick up a bottle again. What they say is true: rehab ruins your drinking.

5. Commit

The only way I've truly been able to truly abstain from drinking was a change of mindset. Like everything else, you cannot do something well unless you fully commit. It's a basic psychological principle, but *you* have to be the one to do this, no one else. Don't pussyfoot around your decision; declare your intentions and *commit.*

For me, the best thing I heard someone say was, "try sobriety for a year, then see how you feel." A whole year sounds crazy, but it isn't that long, my friends. If it sounds like it is, one could argue you have a dependency issue.

The yearlong commitment wasn't the end of the line for me, but it put things into an obtainable box, rather than saying *FOR-EV-ER.* Choose your reasonable amount of time off from drinking and then forget about it and move on. One day at a time. The results will speak for themselves and who knows, you just might like yourself a little more each day.

"God, grant me the serenity to accept the things I cannot change, the courage to change the things I can, and the wisdom to know the difference." Good luck, fellow drunkards!

“Elite” Oxford University Gives Women More Time To Finish Their STEM Exams

February 12, 2018 | by David G. Brown | Link | Original Link

Apparently females suffer from severe “time pressure” during exams, so Oxford University has come to the rescue and given women 15 extra minutes for their mathematics and computer science finals. Officials at the “prestigious” institution, which continues to make a bigger mockery of itself every passing year, are ***very concerned*** about the grades of women in these courses.

We are being told that women check their exam answers repeatedly and doubt themselves compared to men, so the extra 15 minutes is “warranted.” In many ways, this is an extension of the longstanding observation that women tend to study a lot more than men for only somewhat better grades (aside from in STEM and other particular fields). Nonetheless, why this should lead to them getting a university-mandated advantage in exams is absurd.

“Oh, you have a vagina! How can we help you pass at all costs?”

A number of people complained that *The Daily Mail* and other media outlets used “misleading” original headlines because men were granted the extra time, too. Yet this criticism misses the point. Despite all the feminist dogma infecting our schools and society generally, seeking to demoralize boys and bestow unfair advantages on girls, STEM men are outperforming their female peers at Oxford. The majority of men in these courses are doing well enough already and so any extra time they have been given is likely to be superfluous. The measure is instead all about superficially making women look better.

Attempting to inflate the grades of women at Oxford through extra time for exams is just a new instance of the special privileges afforded to students with vaginas. Irrespective of their mostly privileged and even multimillionaire family backgrounds, female candidates for STEM degrees at elite universities are also currently the beneficiaries of women-only scholarships, including at Oxford.

So what happens in the workplace?

…it provides special treatment to people with vaginas (and those who pretend they have them).

Almost everyone ends up working in the private sector or in public sector jobs that increasingly value corporate-style efficiency. “Time pressure,” exactly the same sort that caused Oxford to give 15 minutes more for exams, is going to follow people around in the workplace as well. Any junior lawyer or software engineer, for example, is going to tell you that when work isn’t completed by 5 or 6pm on a weekday, they frequently stay until early morning the next day if necessary to get it done.

Loading…

When companies are competing for tenders with one another, the last thing most employers want to hear is that you are negatively affected by “time pressure” or that you need to check your work again and again before handing it to your superior. Notwithstanding businesses like Google bending over backwards to fill quotas with less qualified people, this female-style thinking does not improve revenues or profits. Rather, it negatively impacts on them.

The growing inability of universities to prepare degree candidates, especially women, for the real world is very troubling. A case in point comes from medicine. Pumping out new female doctors is actually hurting health systems like Britain’s, with women graduates being much more likely to abandon the profession due to its demands. To boot, inordinate amounts of public money are usually wasted training these gone-in-a-flash physicians.

Male student or employee? The odds are deliberately stacked against you

How the average man in the workplace is expected to behave nowadays.

Men need to work five times harder and smarter to get just a fifth of the recognition awarded to an average female. While the answer is certainly not to give up, just be prepared to live in a world where your return on investment is significantly lower than what it should be. As soon as you get ahead of women in the same field as you, feminist-directed social gravity will bring you straight back down to Earth again, as men at Oxford and other universities are seeing time and again.

ROK advises its readers to embrace this challenge, regardless of how unfair it is, and make the most out of their circumstances. Every success you accumulate in the present environment will be worth all the more because you have obtained it as a man.

How To Survive The Urban Hellscape

February 13, 2018 | by Sten Morten | Link | Original Link

The Post-Industrial American Urban Hellscape is a dangerous place. It is dangerous not only for its lurking, JRPG random encounter-style violence, but for its persistent psychic assaults on your mental faculties. Statistically speaking, the Urban Hellscape will kill you on the inside well before it kills you on the outside.

Having lived in the real-world counterparts of all three cities featured in *Grand Theft Auto: San Andreas,* I believe myself qualified to write a brief survival guide on how to defend yourself both physically and mentally from the demonic horrors that await you in Urban Hellscape.

How To Leverage Situational Awareness To Avoid Danger

Let’s discuss the physical threats first. Much of this is common sense, but I recognize many college graduates who head to the Urban Hellscape for workhave led sheltered existences for much of their lives. Situational awareness is your best weapon. Don’t be a retard and stare at your iPhone while walking down the street at night. Always be on the lookout. Don’t hang out in your car or in parking lots/garages either. You should always be on edge and feel slightly paranoid.

I’m not going to get specific, but there are certain demographics you should always avoid. Families, groups of girls, and East Asian tourists are not among the groups that you should avoid. I was walking with a friend in downtown Los Angeles once and I thought we were being followed. I entered the lobby of the nearest hotel and sat down at the bar for twenty minutes. It’s better to play it safe than risk getting shanked in the neck by your city’s latest brand of cultural enrichment.

Don’t make eye contact with anyone on the street and don’t talk to anyone who tries to speak with you. They’re probably just selling their “fire” mixtape, but I can already tell you it’s not as game-changing as “Crank That (Soulja Boy)” was back in 2007. Don’t be afraid to bitch out and cross the street if a particularly vibrant group of youths are approaching. They’ll probably yell something at you, but at least you’ll still have your wallet. Make a point to always ignore homeless people.

As far as weapons go, they’re probably more trouble than they’re worth. Check your local laws and make your own decision. You’re not John Wick and you’re not going to gun-fu a gang of miscreants who cause you trouble. Same goes with knives. Life isn’t an anime series and you’ll probably end up dead or in prison. Be smart and avoid potential confrontations well before they occur.

Alcohol can be lethal in the Urban Hellscape. Don’t get smashed and wander around

some area you don’t know. If you lose your group, go to a crowded bar and try to contact them on your phone. Borrow someone else’s phone if yours is dead. Call an Uber and go home if all else fails. Generally, if a place is crowded, it’s safe. I like to look up directions or use my phone inside bars or restaurants. Don’t do this in the middle of the street or at crosswalks.

Loading…

How To Maintain Your Sanity

If you’re aware of your surroundings, you can avoid most trouble before it even happens. However, the dangers of the Urban Hellscape do not end at mere physical threats. Your mind is under constant psychic siege by the lights, sounds, and inane bullshit that you encounter living in a city. Here’s how to maintain your sanity.

Walk everywhere you can. If you live in a country with first-world infrastructure, you’re not American and you can take public transit instead. Driving is the single most mind-numbing activity we are forced to do. I cannot expound upon my hatred of driving with language alone. You haven’t died on the inside until you’ve been stuck in traffic on the 405. Hire a driver if you’re rich or cryogenically freeze yourself until self-driving cars are an option.

Contrary to popular belief, cities aren’t all that exciting. You can go to bars in all their various forms and incarnations or eat at restaurants, and that’s about it for entertainment. If you like nature, your only option is walking in a park infested with homeless people and drug dealers. Your apartment should be your sanctuary. Use it to recharge and do things you find interesting. Don’t be lazy. Learn how to cook. You’ll save a lot of money and develop a fun and useful skill.

The Urban Hellscape can be crushingly lonely despite all of its colorful characters. Most people have pre-established social groups and you’re probably not getting into their circles. I haven’t figured this one out yet. Just don’t go on the Meetup app or something sad like that to find friends. Have a bit of pride in your solitude. There’s always your Internet friends, and barring that, calling your mother every weekend.

If you still care about dating in 2018, the Urban Hellscape will make sure you don’t get laid ever again. You can certainly try Tinder or nightclubs or whatever. Girls tend to be

better looking in cities, but so are the guys. If you think you can compete with seven-foot billionaire rock star investment bankers, you have another thing coming. You don't really want a city girl for a wife anyways.

How To Escape From The Urban Hellscape

Work on your escape plan. Every year you stay in the Urban Hellscape is ten years off your life. I've run the numbers. Have a side-hustle going, preferably e-commerce, so you can become location independent. This is the dream. Once you have the money to live anywhere, get the hell out. You're not going to miss the crime, the crowds, or the 9,999 different languages you hear on a daily basis. The house on Lake Erie or the ranch in Montana you're saving up for will do wonders for your health.

The Urban Hellscape is a place to make money and nothing more. Nobody should live in these cities longer than necessary. Figure out what you need financially and plan an exit. You're not going to raise a family here, and you're not going to retire here either. Take a trip or two a year to a place you'd think you'd like to settle down. Claw your way out of the Urban Hellscape by any means necessary and make a move when you're ready.

10 Reasons You Should Not Date A Girl From Canada

February 13, 2018 | by Papa Selo | Link | Original Link

It has been four months now since I have returned to Western Canada from Europe to sort myself out. Unfortunately, I am still stuck here for a little while longer. Although I am beginning to see a light at the end of the tunnel, a man must always feast before his flight.

Last week I spent several hours on Tinder in order to set up a last minute date for Friday night. I am not currently socializing very much because I do not want to put down new roots before my inevitable departure. Needless to say, I was extremely horny or otherwise I would not have wasted my time chasing Canadian girls, especially online. I messaged 100 girls the night before my target date night, asking if they would like to go out for a drink ("***Whiskey or wine?*** □").

Of these 100 girls, 20 of them returned a message. Most stopped talking to me quite quickly, but I ended up confirming four dates at various bars for the next evening. As expected, three of the four girls never showed up or even texted to apologize.

The date went well and she was fairly attractive. According to my new Joanne, I made her cum several times, and as she lay there smug and smiling, content and smelling of spunk, wondering if she had found her new long-term boyfriend, I could only recoil in disgust and think of all the reasons that Canadian girls are not worth dating, let alone having a one night stand.

Here are ten reasons why you should never date a Canadian girl.

1. She’s mentally ill

Women from Canada suffer from chronic mental illness; they have abnormally high rates of mood and anxiety disorders. According to the Center for Addiction and Mental Health, Canada's leading mental illness hospital, 50% of all Canadians experience mental illness by the time they turn 40, with 70% of its onset occurring before the age of 24. This means that most Canadian girls worth dating suffer from serious mental illness.

If you want to avoid a death sentence, don't date a girl from Canada. You have just slightly better odds playing Russian Roulette. From personal experience, my last three long-term relationships—prior to moving abroad in search of real, feminine women—were with girls who regularly cut themselves and complained about how their lives were going nowhere.

Unmarried women with no children are the most unhappy demographic in North America, but women from Western Canada in particular hate themselves more than most. Save yourself the trouble.

2. She's "spiritual" but not religious

Although most women from Canada claim some degree of religious affiliation, the percentage of girls who identify with any one of the world's major traditional religions, such as Catholicism, Islam, and other Christian denominations, is in steady decline. Furthermore, religious attendance is low, with less than one in five (19% of) women between the ages of 18 and 29 attending a religious service more than once per month, which is down by almost 50% compared to just 30 years ago.

As if to add insult to injury, there has been a recent comedic increase in "spirituality". Despite consistent declines in standard religiosity, "Spiritcthuality" found favor with 42% of Canadian women when polled in 2008. Despite the coincidental unavailability of more recent data, is it clear that if current trends continue there will be no more religious women, and certainly no more potential virginal brides in Canada by the year 2040.

> Just as religion has adapted to other cultural changes, it has adapted to the cultural context of the post-secular.
>
> As ever, [religion] is not going away, but simply metamorphosing—this time into a brilliantly colored, veiled nun in whiteface, glam makeup, and towering platform boots, carrying a purse full of safer-sex supplies. What could be more fabulous—or more religious?

The bottom line is this. The only place you'll find religious girls in Canada, let alone in North America, will be within what Melissa M. Wilcox, Associate Professor of Religion and Gender Studies, Whitman College, Walla Walla, Washington, and one-time contributor to the famous MuffPost extolls as the imminent explosion of "post-secular queer spiritual spaces"—a bona fide safe space for "spiritual sluts."

I have a better idea. How about a one-way trip to the Church of Euthanasia?

3. She’s addicted to her phone

SLAY girl, slaayyy

There is no shortage of harlots and digital soft prostitution on social media these days. Canada is certainly no exception. From Daddy’s Girls gone wild to #Wanderlusting Portapotties, Instagram is without a doubt the 8th Zoological Wonder of the World. Between taking selfies at the gym and uploading photos of her every meal, dating Canadian girls means constantly swatting a phone out of their hands and that quickly becomes annoying.

4. She’s likely been to Dubai

If she is moderately attractive, has fake tits, and at least a few thousand authentic followers on social media, chances are she's either been to Dubai or she's planning on going in the very near future. That means she has or will be used as another man's toilet.

5. She's a sex worker

A friend of mine recently found out that the girl he had been "seeing" for the past several months was secretly a stripper. He was indignant, and rightfully so. Yet she insisted that

he “be a man” and that he accept her life choices without so much as a nod of disapproval. Between pole dancing and sugaring for older men, her social psychology degree was surely not going to pay for itself!

6. She’s some kind of man-hating feminist

Canadian creation

I’ve lost count of how many times I’ve seen a picture of Big Red on Return of Kings, but I just couldn’t leave her out seeing as this is an article about Canadian girls. Regardless, the average Canadian girl is not far from the mark.

Dating a feminist means you must resign to the fact that her hair will often change color, that her dead-end career as a human resources manager at some useless affirmative action wing of your local municipality will take precedence over your sex life, and that when you inevitably attend those vapid couples soirees where all anyone ever talks about is how they’re experimenting with polyamory and the latest variable rate mortgage they found online, you better be okay when sharing her with Tyrone later that evening, you closed minded bigot.

7. She could be a he

Oh, Canada! The True North LGBT.

Hot, right? I mean, I suppose it is if you're interested in penis. The Forum Research poll, a survey commissioned by the National Post, found that 5% of Canadians identify as lesbian, gay, bisexual or transgender. Although there are no hard data for the number of people who currently identify specifically as transgender in Canada, it is possible that this information will become available when Statistics Canada publishes its next census, which is scheduled to come out in 2021.

I can only imagine that this number will continue to grow each year, especially since almost 3 million Canadian men and women meet the official criteria for having at least one mental illness. What percentage of them are slated to become women, and vice versa?

8. She has a sexually transmitted infection and she's proud of it

"Everyone has HPV these days," she said as she leaned in for me to kiss her, her crusty lips encroaching like the ancient seas that swallowed up so much of the land of my forebears.

I playfully rejected her advance and quickly changed subjects. I then waited for her to go to the restroom and slipped quietly away into the night. I thought it fitting she pay for our $100 bottle of Cabernet Franc given that for my salary bracket I already contribute $187.50 to Medicare each month. Assuming correctly as I did that she was in the lower bracket, the difference between her bill and what I pay in healthcare coverage for her monthly Valtrex prescription means that even though she paid for the wine I only came out even on the date.

9. She's flakey and disrespectful

I'm a staunch proponent of over-committing to potential dates, and not just on Tinder. Unless you earn well into six figures, are the local celebrity chef of your city's artisan cupcake bakery and to top it off, a six-packed Superchad from the Planet Masculon, you better set up four or five dates for the same night if you want to go on even one of them.

Recent personal experience has confirmed that you can expect up to 80% of Canadian girls to flake on impending dates, sometimes just an hour before, despite the fact that you've already established a specific time and venue.

10. She's a whore but still demands commitment

The company of a fun hooker from Prague has always been far more pleasant than taking

an equally hot Canadian girl out on a date. Unfortunately, the legal status and risks of prostitution in Canada impose an additional cost on men, who must exert considerable effort sorting between veritable whores and worthwhile relationship material.

Well there you have it. Canadian girls are mentally ill sociopaths who expect to be treated like princesses despite a tendency to spread their legs for the first guy who buys them an expensive bottle of bubbly. Don't get me wrong. Canadian Girls, especially from the west coast, can be quite attractive. They're some of the slimmest in Canada, and while they put out early and often, they're batshit crazy, making them totally worthless as mothers and homemakers for the long haul. If you live in Canada, do yourself a favor and shack up with a girl who is not a total cultural blank.

3 Ways Your Mind Sabotages Your Fitness Goals

February 13, 2018 | by Zack Zander | Link | Original Link

It’s quite paradoxical to think that complying with a physical regimen is a mental endeavor. Allow me to bring a few of these common problems to your attention. These are mental blocks that I’ve come to realize dissuade most fitness enthusiasts from sticking to a routine.

Any form of physical training is every bit as mental as it is physical. The body won’t go where the mind doesn’t want to. As a matter of fact, I would submit to you that it is indeed much more mental when you consider the fact that most people rationalize skipping workouts for a myriad of reasons that their minds come up with in an attempt to circumvent a temporary discomfort, such as working out.

1. Instant Gratification

Realize that consistent, efficient and intelligent smart work is the difference between those who frequent the gym but make little to no progress to show for their efforts and those who morph into a more energetic, functional and overall optimized being in a

reasonable time frame.

In this social media age, people want results and they want them *now!* For example, the city I currently live in (Dalian, China) affords me the luxury of having food, beverages, groceries, snacks, entertainment, and water delivered to my doorstep within minutes of using an app. I could decide not to leave my apartment for a month and I would be just fine.

We can take photos, share them with the world, and receive feedback almost instantaneously. Services are built around catering to customers in the least amount of time practicable. Hell, you'd even find fitness ads promising incredulous results in 30 days.

But I digress: I say all this to help you grasp that it will take consistent (days, weeks, several months to years') work to notice a remarkable difference, which in and of itself builds discipline and character. In other words, gratification will be delayed. Labor consistently and relish in continuous developmental progress several weeks later.

2. Analysis Paralysis

Many people think that when faced with a situation threatening to their lives, the natural reaction is either a "fight or flight" response. I disagree. It's been my observation that imminent threat is actually succeeded by paralysis. In extreme situations, most people just freeze up and do nothing instead of taking action (fight/flight). Kind of like a "deer in a headlight" situation.

There are many approaches to fitness irrespective of your goals and this can be overwhelming to the novice. It is quite a daunting task to walk into the gym clueless about what to do or where to start. I experienced this firsthand. I'd start off with a

workout program and find myself reading about a different approach that I would contemporaneously start implementing as I ditched my previous program.

All programs work! But for how long? For the un-adapted novice, a poorly designed program will still evoke substantial results. It is therefore of utmost importance that you see a program (hopefully a well-designed one) through to the end while making adjustments along the way to better suit your goals. A clear plan made in advance is the easiest way to remove barriers to focusing. Trust the process. Don't allow inertia to kick in. You must stay fluid and persistent.

3. Learning Curve

A pragmatic view of life would reveal that not all things are created equal. Some people are simply more athletic, better looking, intelligent, faster, stronger, cunning, logical, rational, and tougher than others. Genetics do play a major role to this effect. However, there is a great equalizer: practice. "Talent" is what people use to describe someone who has had more hours of practice than the average person by design or circumstance.

A popular example I refer to is Mozart. Incomparable in his own right as a classical music composer, Mozart began playing the piano as young as age five, and let's not forget that his dad was also a renowned classical music artist himself. These environmental circumstances exponentially propelled who we later came to know as a musical genius.

It would be disingenuous on our part not to allude to the fact that there was perhaps a more musically intelligent child out there in the hinterlands who could outperform him but didn't have the same situations Mozart did.

The whole nature vs. nurture debate has been done into the ground, so I'm not even going to get into that. While genetic predispositions may give person A a slight advantage

over person B, person B can achieve a similar level of competence by simply putting in more judicious hours of practice. It is what it is, not what it could be. Life isn't fair, but it sure is balanced.

Work on your weakness and optimize your strengths. You can achieve 80 percent competency in any given activity within a year's time. That's what I believe. That being said, realize that it will be challenging sometimes and plateaus are almost inevitable, but that shouldn't be the reason you give up. Understand that you may not exactly know what you're doing as you're doing it, but that is part of the learning process.

I have been lifting for quite some time now, but it wasn't until recently that I determined the most efficient way to squat leveraging my anthropometry. One size does *not* fit all, especially in this regard. I learned by simply doing and adjusting: practice! A famous bodybuilder, Jay Cutler, once said "it takes up to a thousand reps to efficiently know how to correctly perform a given exercise."

I saw the wisdom in that statement when I trained the squat with a friend of mine. Initially being able to only squat 135 pounds for five reps, he was eventually able to squat 225 pounds in less than 4 weeks. Not because he got stronger—even though he did indeed get stronger—but I had an epiphany that most of that progress was due to the fact that he had become more efficient in the way he squatted.

His form improved drastically and most of that increased strength was just because he was being more efficient and became adept at executing the movement. The videos I took of him squatting for the first time—and later at week four—corroborate my hypothesis and the validity of Jay Cutler's quote.

Your mind is a double-edged sword. On one hand, it wants to serve you for the greater good. On the other hand, it could be the root of your crippling fear, anxiety, action, or lack thereof. But luckily for us humans, we possess the consciousness to recognize the latter and resultant disparities.

Every Man Needs To Own A Pocket Knife

February 13, 2018 | by CR Smyth | Link | Original Link

Even though a permit is not required to have one, I admit to not carrying a pocket knife until 2015. I had realized that I became part of a generational sea change on this item, which I now view as being much more than just a male accessory choice.

It all started when I was at a Garden Center store looking for a trellis, but when I found one, it was bound to several others by nylon zip-ties. I knew I couldn't saw it free with my keys, so I started to look for some help. I soon saw an old man walking down the aisle and instinctively thought he would have a knife on him, but he didn't, nor did another man I asked. I then found a store worker who cut them free and off I went with my trellis, though not feeling good about myself or the state of male civilization.

As a kid in the 1970's, almost every boy carried a pocket knife. It wasn't a weapon or for showing off, unless it was new. Sometimes you had to actually cut something and scissors just wouldn't do.

When you were bored, you'd whittle a stick or a piece of wood with it. I have a simple walking stick carved by my great grandfather, and I recall the mystique of watching and helping as he sharpened his knife. In my keepsake box, I have a pocket knife of my father and grandfather. Interestingly, along with a Confederate $5 bank note, Lincoln had one in his pocket the night he was shot.

But times have changed, and I stopped bearing the humble tool that naturally accompanied my forefathers. I am not alone here, and think this happened for various reasons and with certain outcomes.

1. Fewer Men Work With Their Hands Or At Jobs That Need Them

My farmer and forester ancestors needed knives at any potential moment, but for my generation of desk jockeys and mind workers, scissors and box cutters do just fine. This is a banal, demographic reason, but the next ones cut to the core of a man's soul.

2. The Expanded Safety Culture

Safety is a great thing for us all. Seat belts and even OSHA have had some benefit. In my job as a scientist, we take precautions scientists never gave thought to a few decades ago. People like me in occupations with built-in physical hazards are happy for that.

But when we live our everyday lives with a requirement of eliminating *all* hazards, we get ridiculous. This leads to safety Nazis who apply their same calculus to pocket knives as they do to guns: viewed solely as a dangerous object to be feared and avoided, and not as an everyday tool that has hazards to be respected.

There's a reason the 2006 book *The Dangerous Book For Boys* included topics on uses of knives. The safety culture agitates against even reasonable male daring, much less carrying a tool that could be used as a weapon. This mindset turned rancid as it became codified absurdity through.

3. Zero Tolerance Policies In Schools

It sounds tough, but it's a cop-out. Adults who abandoned the need of using discriminating wisdom and good judgment implemented "no sharp objects allowed on campus" rules, as opposed to something like "pocket knives may be three inches or shorter" with strict enforcement (liberty with reasonable limits that is age appropriate).

Intractable un-Solomon-like thinking leads to such silly results as boys being expelled for bringing a kitchen knife to school to cut an onion for a science project and for biting a pop tart into the shape of a gun.

You soon realize that when adults don't use *adult* discretion, kids don't learn the right lessons and are trained to have foolish fears. Humble pocket knives became an easy victim. The do-gooders imagined they were protecting kids from switchblade or machete melees, but they forgot that Grace Kelly used scissors to kill the intruder in Hitchcock's *Dial M for Murder.*

4. The 9/11 Attacks

The pocket knife culture was already feeble, but 9/11 gave it a grievous blow. Swiss Army Knife sales fell by 35% as a result of the attacks. The hijackers interestingly used not knives, but the culturally un-feared box cutter to do their evil deeds: they used our overblown fears against us. Since then, many a pocket knife has been melted into plowshares by the TSA, I assume, after confiscation at airports, including one of mine. All of these contributors have led to another sad consequence…

5. The Emasculation Of Men

I believe the culmination of these factors have led men to be changed and lessened. The old man from whom I asked for a pocket knife at the garden store looked embarrassed to admit his knifelessness, as he *knew* from whence he had fallen. I felt no better as I had to get assistance from a female store employee, no less, who got some scissors (what else) to cut lose my quarry (what a daring name for a trellis). To complete my humiliation, *she* had to do the cutting… corporate safety rules, I guess.

As is human nature, some rebel against our anti-knife culture and dive headlong into getting more, bigger and longer blades, but most of us just rolled over, and we were figuratively castrated.

But I've decided to not roll over anymore. I didn't need an impressive knife like my son's, which doubles as a gun bayonet, but I *did* ask him to get me a traditional pocket knife for Christmas, and now I carry one with me always.

The two knives I have now are quite different and illustrate the types that are suitable for many guys. My small one is barely 2-1/2 inches long when closed and is a sleek 3/8 inches wide, with two thumbnail opening blades. It serves for minor and general use at work and doesn't fill my pocket. It looks and works better than a stupid freebee keychain Victorinox-wannabe with bad scissors.

My other knife is almost four inches closed with a full-bellied blade and can be opened with one hand by a thumb stud. It is more useful for chores around the house or in the woods.

A thick, multi-tool Swiss Army knife is useful, but can be too bulky for a pocket, which is

why if you have one, it’s likely in your dresser drawer. Just start with your needs and avoid the urge to go full-bore Crocodile Dundee. You may rarely need it, but when you do, you’ll feel better for having your own pocket knife.

How To Avoid False Rape And Assault Accusations

February 14, 2018 | by Bryon Flynn | Link | Original Link

The nightmare scenario for men in the current culture wars is the dreaded false accusation. Whether a ploy for attention, deflection from a disturbed female's own misdeeds, weaponized political assassination, or a shameless attempt at a shakedown, much has been written at ROK on this topic. So I will discuss common methods I use for prevention and screening these women out *before* they ruin my life.

Approach And Assessment

We all like to think we are a great judge of character, but even corporations that spend millions on recruiting will still hire bad apples. You simply cannot catch them all, but like companies, one way to improve accuracy is to prolong the "interview" process.

The much maligned social media platforms can be powerful tools for this. Typically I try to get a girl I meet in a social setting or online to add me on a social media platform like Facebook. Then I wait, either not approaching at all or keeping it light and noncommital. It's a great way to watch the unhinged hang themselves, so you can reject them before they hang you.

Red flags include daily whining and complaining for attention, posts that are excessively negative or outright bizarre, trashing exes, former friends, or business entities, screen captures of text messages from guys who simply said "hello" with no texting game, radical political views, being very attractive but perpetually single (especially with daily dating "advice" and trashing other "bitchZ"), a social circle of high risk personalities (see below), or outright admitting to being a hot mess.

High Risk Personalities

While Axis II personality disorders make for poor wives and can ruin your life, some can be quite good and even preferable in steamy short-term relationships. Borderlines, narcissists, and histrionics can sometimes make for great lovers and romantic nights because they bond to you very strongly, though their bonds are short-lived before they move on to the next fix ("narcissistic supply").

However, the one to consistently watch out for is APD (antisocial personality disorder). It is a broader term than the high IQ "dark triad," as APDs can be smart or stupid. A near universal sign of someone with APD is that they will be devoid of any romanticism, intimacy, or pair bonding.

For a variety of reasons, they are most likely to file false charges, extort you with

compromising photos or threats of filing charges, or simply trash you online, which can cost thousands in legal fees and online reputation management. If employed, they generally cluster in occupations that view others as disposable and expendable. While there are wonderful exceptions to anything, and I have certainly enjoyed some, proceed with great caution or avoid women with the following qualities:

- Full length tattoo sleeve(s), any skull or scorpion tattoo
- Four or more tattoos or any single tattoo covering more than ten percent of the body
- Large tattoo(s) on quadriceps, bowtie tattoos on hind legs
- Tattoos on fingers
- Full or part time dominitrix/financial dominator
- Photographs flipping the bird
- Obsessions with horror movies
- Professional porn star and/or “Suicide Girl”
- Feminist stripper (other strippers *can* be ok)
- Circus performer, burlesque dancer, roller derby girl, boxer/UFC fighter
- Radical leftist lawyer, ambulance chaser, real or imagined SJW activist
- Known affiliation with drug dealers & “pill punters”
- Escort (past or present)
- Professional traveler (when photographed alone by someone [their Jons!] not in the picture)
- Excessively whitened teeth, “craftsmanship” smile (Joel Osteen)

- Club or music promoter, casting agent, tabloid journalist

- Actresses, particularly if in horror movies or playing sociopathic characters
- Internet/multi-level marketers
- Day trader/foreclosure house flipper
- Real estate broker (if previously in the nightclub business)
- Poker player, pro gambler
- NLP newbie, Tony Robbins groupie
- Hypnotists, Satanists, Wiccans, Witches, Occultists, or senior level Scientologists
- Pharmaceutical rep (if previously in the nightclub business)
- Handles such as “daddyslittlemonster,” references to Marilyn Monroe/Harley Quinn
- Wack profile headlines such as “Killing it Better Than Elizabeth Bathory”
- Braggarts who proudly boast about “blocking” and “ghosting”
- Sharply pointed acrylic nail tips
- Postings about taking men’s money (“I’m a great housekeeper, whenever I divorce a man I keep the house” — Zsa Zsa Gabor)
- Nightclub bartender (early close restaurant bartenders *can* be ok)
- Strong affiliation with any on this list

A dangerous mix occurs when a borderline/narcissist pairs up with someone with APD. The extreme of this is the Manson and Jim Jones Cults.

More typically, your semi-innocent borderline starts running in party circles with hustling escorts. As the former is easily influenced, your hot and steamy consensual relationship with her gets spun by the antisocial into something “abusive,” and now you become the accused. History is thus re-imagined, similar to the “repressed memories” molestation craze of the 1990s that destroyed lives but was thoroughly discredited in the end.

Your best prevention in this area is to stay on very good terms with all your exes and

flings, no matter how bad the relationship ended. A good strategy that avoids making you appear weak (which Axis II types feed upon) is to contact them every six months such as Christmas or birthdays leaving good cheer, focusing only on the good times (never the bad) and getting them to say something nice about you, thus leaving a consistent digital trail.

Hotel California

While “rape culture” hyper-exaggeration is the norm on college campuses, this is not the case in entertainment. Having dated many beautiful women, including legitimate rape victims, all are vigilant about being date raped and for good reason. Often they will ask bartenders to watch their glasses and there will be secret hand signs shared if their drink has been touched or drugged.

As we have seen recently, a common theme is for men who otherwise have no game to use drugs and promises of fame that in other settings would end careers. In some EDM and especially rap music environments, it is quietly or even openly bragged about with impunity.

> “Put Molly in her champagne, she ain’t even know it, I took her home and I enjoyed that, she ain’t even know it.” — Rick Ross (U.O.E.N.O.)

This is where you can get into lots of trouble. Avoid any “after hours” situation where this is likely to occur, and if these scenes are your thing, make sure that the women involved love to get high and know the deal. If anyone is present whom you don’t know well, who may have gotten invited to these “black out” Sodom and Gomorrah soirees by mistake and who do not understand what they are getting into, you should leave and give the unsuspecting girl a subtle heads up.

I’ve watched from afar as many guilty predators went to jail along with others who got caught in the crossfire for participating, attending or simply being complicit. You should avoid any “pickup” model that requires women to be unconscious or intoxicated to the point that they do not remember what happened the morning after or details are fuzzy.

This is the perfect storm for a legal “swearing contest,” and given the current climate, guilt by association in this industry all but assures you are guilty until proven innocent. Both the *Rolling Stone* hoax and the Duke lacrosse cases, for example, involved an antisocial personality and a party environment.

What A Nice Surprise, Bring Your Alibis

On the flip side is a secret world that is almost never talked about. Female “sharks” will exploit the roofie party culture as cover in a variety of ways. They will go on “cash and carry” or “free drugs” adventures such as an afterparty that goes on way too long, then they lose track of time and it turns into a three-day coke and orgy bender at some high rise penthouse or mansion party.

Meanwhile, their clueless, cucked boyfriend is at home frantic after the “girls’ night out” and has filed missing person reports. To save face with her beta provider and avoid being outed, a straight-up club slut now claims rape.

Masking

Another common tactic with high value male “targets” is to have sex with them, then when they think no one is looking, they roofie their *own* drinks, knock themselves unconscious, then threaten rape charges the next day as a shakedown for cash.

Thus, most celebrities (especially sports teams) take some form of risk reduction course, and the girls are searched by security with no cell phones allowed. 24/7 video surveillance backstage, on tour buses, and at prestigious residences is now the industry standard, which is how these women are usually caught. Gene Simmons has topless photos of every woman he’s had sex with… and now you know why.

Hell Hath No Fury Like A Woman Deceived

Other ROK authors have noted that alpha males are rarely accused. Context is everything and I would add one word: *deception.* If you start out as a “friend,” then try to switch to “lover,” you often become neither as a woman often feels violated because she very likely shared things she would not have told a man who wants to date her.

Taking this further, if you invite a woman to your room or office for “business,” then flash her, you’re Harvey Weinstein and Matt Lauer, she feels tricked, and no matter how many movie/TV roles and hush money is offered, a woman who may have gone out with you straight up if asked honestly will one day turn on you.

It’s important to note that this isn’t a woman thing: it’s a *human* thing. There’s a well known case where Madonna illegally sampled a male artist. He specifically stated that he would have cleared it for $5,000 in advance but that since she tried to steal it, he sued, went public, and now the price is $250,000. Sooner or later, all “predators” pay the price.

If you're a photographer who openly states that you only do free shoots with women you are dating, you'll be fine, but if you offer to shoot a girl for free, then start touching her inappropriately during the shoot, she might rightly go to the police or put you on blast.

If a woman already wants to bang you anyway and you party together, it's a great night for all and she will be back. If on the other hand, you offer a woman a drink, then she wakes up ten hours later sore, you're Bill Cosby and you can kiss your legacy goodbye. You should never emulate this "no game" model when trying to score, as you too will pay the price.

Bill O'Reilly and Roger Ailes made three mistakes: deception, targeting antisocial females, and most of all, selecting ones who were ruthless, grandstanding opportunists. Notice how O'Reilly pays out $32 million in settlements and still loses his job, while Vivid Entertainment pays $300-$3,000 a scene for hotter women who will do almost anything

for the asking right on camera.

The difference is honesty, transparency, choosing wisely, and making those women feel safe. With porn companies, it's made very clear up front exactly what will happen and what is expected. This is a drastic oversimplification of the lurid, shady adult business, but quite useful for this discussion.

Cultural References

These timeless classics from a bygone era are mostly free of the insufferable Marxist/feminist indoctrination in current cinema. They are well worth your time and are case studies in Antisocial Axis II pathologies:

- *The Last Seduction* (Linda Fiorentino)
- *Basic Instinct* (Sharon Stone)
- *Total Recall* (Sharon Stone)
- *To Die For* (Nicole Kidman)
- *Body of Evidence* (Madonna)
- *Damage* (Juliette Binoche, Jeremy Irons)
- *Malice* (Nicole Kidman, Alec Baldwin)

Lastly, for a glimpse into a world of lively characters, visit *The Dirty* and click on different cities. You will learn a great deal about how not to get stung by bottom dwellers, male and female alike.

Summary: The Five Pillars Of Prevention

Mastery in these five areas will greatly reduce your likelihood of any false accusation charges. Stay on good terms with unstable exes, use lengthy stealth "interviews" by leveraging social media, vet or pass on high-risk personalities, avoid "after hours" environments that are notorious for date rape, and be honest with a woman about your intentions.

Aside from obvious moral and legal grounds, deception is simply not necessary with proper alpha framing that makes a woman actually *want* to be with you. Caveat Emptor!

To Get A New Girl In Bed, Peel Off Her “Public Self”

February 14, 2018 | by Chase Amante | Link | Original Link

The following is a sponsored article from Girls Chase.

Greetings, Chase again. In my last article for Return of Kings, we discussed why to limit talk time with women you chat up or date. Unless you are talkative (and most guys aren’t), it’s easier to let the woman do the talking… and you do the evaluating.

In this article, part 2 of 4 in my series in advance of my new course “One Date”, we’ll continue to keep you in the ‘evaluator seat’. Yet the evaluation we’ll aim for this time is a bit different.

Every girl you meet has a mask on when you meet her. Call that her ‘public self’. She wears that mask out in public. However you meet her, it’ll be in public. The mask is for her audiences: you, her friends, her teachers and bosses, the general public of strangers all around her.

It doesn’t matter how you meet a girl. You can meet women…

- Through your social circle
- While you’re out running your errands
- Via nightlife
- Via a dating app on your phone

However you meet her, the first thing you’ll see is her public self.

Public selves come in different flavors. They can be haughty and bitchy. Or cliquish and disinterested. Many of them are sweet, considerate… and wholly asexual.

The one thing all public selves have in common is that they make women seem like either a.) asexual beings, or b.) 'safely' sexual beings… i.e., the sort that flirt with men for fun, yet never put out (cockteases).

If you want to get out of the asexual sphere, and successfully bed a girl, your first order of business is to get off her mask.

Past Her Public Self

Public selves are great for the public. Most men like them. All those guys who chase bitchy, haughty girls in nightclubs and on Instagram? They LOVE these girls' public selves. How about when you fall for a sweet, pure girl, even before you know her very well? It is her public self you fell for.

What's her *real* self like? It could be similar to the mask she wears in public. It might be wholly different. Every girl's 'unmasked self', however, has things in common with every other girls'…

- It's flawed, imperfect, and makes mistakes
- It's sexual (and likes sex)
- It's fearful (and worries and frets)
- It's unsure about if it's doing the right thing

These are things a woman has to hide. They're not socially acceptable. They harm her social value, and attract undesirable individuals. Shlubby, dangerous men who view her as an easy, discardable whore. Ostracization by her peers, who view her as skittish, loose, or uncool. All this is avoided with a prim, proper, asexual public self.

She's just a chick. Of course, in public, she must keep up appearances.

The dating process, to large extent, is about familiarizing a woman enough to you to drop her mask around you. Once the mask is gone, you see her real self. *More* important: once the mask is dropped, she *behaves* like her real self – and indulges in all those improper things with you she can't with men who only know the public her.

The Man With The Magnifying Glass

Last time we talked about probing women on their answers. She says she's from Nantucket, you ask her why she moved here from Nantucket. She says it's because there's no future in Nantucket, you ask if she's found the future she came here to seek.

As you dive into a woman's background, you'll learn more about her. Her public self does not extend into dreams and motivations. As you get into these, she reveals who she is – beyond her public poses. Once this starts to happen, you'll want to do two things:

1. Approve of 'real self' aspects of herself she shows you
2. 'Cut the bullshit' on public self things she does

This might sound tricky… but it's not. I'll give you an example.

Say you talk to a girl who's a waitress. And you ask her why she's a waitress. And she says she loves to help customers and the job seemed like a fit. Bullshit answer, right? It's a public self answer. All you have to say is "Yeah, okay. What's the REAL reason you're a waitress?"

When you cut the bullshit like this, what you really say is "I don't care about your public self. I want to see the real Stacy Harper [or whatever her name is]." And if she likes you, she'll tell you.

She will behave a little fearful and unsure as she tells you. You've taken her mask off, and she does not know how you'll react.

When she shows you her real self, you simply approve. You don't have to *agree* with her real self. You're not going to agree with 100% of *anyone* else's 'real selves'. People adopt public masks for precisely this reason: to hide less agreeable aspects of themselves to not get disapproval from others. You don't have to approve of the details of her answer; what you approve is the *realness* of the answer.

Loading…

Looks stuck up? Run her through the filter. She may be more fun than she appeared.

If Waitress Stacy tells you the real reason she became a waitress is because she couldn't find a job after graphic design school and it was either go home or take any job she could to stay in town and keep applying to design firms, you approve. "Ah, I see. Now THAT's interesting! What is it about graphic design you love?"

You may not approve of her career choice. You may think she should've gone home and applied to jobs online. It doesn't matter… what's important is to approve of the FACT that she opened up to you. **The details aren't important. The opening up is.**

If you're a detail-oriented guy… something to chew on: as you get to know her more, you will find out more and more about her. Often the things you find out later will gel with you a lot more than stuff you find out at front. Verbal language is an inefficient information transfer medium; it takes time to get the good stuff out.

The Better Part Of Valor

The other aspect to bringing out her real self is *discretion*. No matter how much of a charmer you are, if you force her to expose her real self in a public way, she'll ditch you. This is why if you get sexual with a (properly primed) girl one-on-one where no one can see, she'll get into it… but if you get sexual with her in public in front of her friends, she'll act like an asexual prude and blow you off.

This applies to all aspects of her real self. If you want to get her public self mask off, you must do it in a *non-public way*. Here are some ways to do that:

- Intimate date locations (like a quiet café) where no one can see or hear you
- Moving her to sit with you away from her friends in bars or party venues

- Pulling her to a park or a coffee shop if you met her in public (shop, street, transit)
- Catching her in the hall instead of in the middle of the office or classroom

Think about it this way: if there is an audience around to watch, she will put on a show that appeals to the majority of the audience. Even if she knows you dislike her public self, and approve of her real self, if most of the people *around* her want to see her public self, she'll be her public self.

Control the audience, and you control which side of the girl you see. Get her somewhere more intimate with you – where it is just you and her – and you make it easy for her to let her guard down with you.

Showing Her YOUR Real Self Too

You are also operating with a public self mask on. A big part of the courtship dance is about two people systematically lowering these masks to one another.

Flirtation is poking fun at a woman's public self. When you tell her "Geez, I can't take you anywhere", for instance, you are either making fun of her public self (e.g., for acting haughty) or telling her her real self is showing (e.g., if she does something clumsy). Connection is about her sharing her real self and you sharing some of yours. Sex is the ultimate real self act (well… usually).

So let's show you how to do this.

I have an information-packed video for you to check out just below. It's on a phenomenon called 'attitude similarity' – which again, is one of these "sounds more complicated than it actually is" sorts of things.

The cool thing about similarity is **the more a woman feels like your and her attitudes align, the more she opens herself up to everything with you**. The other parts of the courtship – like her following your lead, or allowing you to turn her on – are dependent on similarity. If she does not feel similar to you, she will not follow you, and will keep her sexual shields raised.

Build similarity, and you reduce these defenses. She opens up, feels comfortable, and allows you to lead her… then, turn her on.

So have a watch of this video I've got for you over on Girls Chase (my website). It's the first of four videos I'll roll out over the next week or so. In this one, we talk what kind of similarity to build, and a couple of the more common mistakes men make, with both similarity and dating in general.

Once you start to build similarity this way, you'll form quick connections with women – which makes everything ELSE you do with them a whole lot easier. **Give it a watch:**

Check out my video on how to use similarity to bring down women's guards.

⇒ **Watch My Free Video To See How To Build The Right Kind Of Similarity**

And I'll talk with you again soon, right here on ROK, in Article #3.

Advertise Your Product Or Site On Return Of Kings

Chase Amante

Chase woke up one day in 2004 tired of being alone. So, he set to work and read every book he could find, studied every teacher he could meet, and talked to every girl he could talk to to figure out dating. After four years, scads of lays, and many great girlfriends (plus plenty of failures along the way), he launched GirlsChase.com. He will teach you everything he knows about girls in one single program in his One Date System.

12 Strategies For Dealing With A Bad Boss

February 14, 2018 | by Dawn Pine | Link | Original Link

In my last article, I discussed reasons why your boss sucks. That article may give some insight on the *why,* but most people are interested in *what* (to do about it). So here are some strategies to cope with this situation…

1. Do Nothing

This is what most folks will do. They don't do a damn thing about the situation, at least not directly. They will, however, complain, abstain, or bitch. People love to complain, as talk is cheap and misery loves company. People who do nothing tend to minimize their contact with the boss: abstain. I have heard of people who drink on the job, do light drugs, or try to work from home (if possible) to avoid their boss.

Why do it? Because a change is coming; you intend to quit or are about to be promoted or get a new position (so you'll have a new boss).

2. Accept Your Boss

Your boss may be crappy because you have major differences of opinion with him. I have a good friend who suffers from ADHD and his boss is a tidy person. Sparks fly every week there. I told him that I believe he should accept his boss and as dumb as he thinks the guy is, the boss is still the boss. Your boss may be leftist, incompetent, or sometimes related to management. In those cases, it is better to accept him or her as is.

Why do it? Because you value your work over feelings, and because there is a minimal change you need to handle.

3. Change Yourself

As Gandhi put it, “you must be the change you want to see in the world.”

If you change your attitude and behavior, there is a good chance that the other person

will do it too. Those who have taken the red pill know that a change in behavior can manifest in drastic change to one's achievements. The same may be applied to changing your dynamic with the boss. If you do it, think carefully about the change, set goals, and look for feedback while being patient. If things take a turn for the worse, it is probably not your fault and you will need to look into one of the next strategies.

Why do it? Because it may be also your fault. By changing yourself, you change the dynamic, which may lead to a change in your relations with the boss.

4. Change Your Thoughts And Feelings

Sometimes you react on a limbic basis to people. Disgust and hatred are powerful emotions. If that is the case, you need to ask three questions: what are the actions that hurt me? What did I feel when I was hurt? How can I change my thoughts so that I'll be less hurt?

I like the *Gorilla Mindset* technique in which you have an internal conversation and talk to yourself as a good friend would. Doing that changes your mindset, which has a general effect on your behavior and how the other perceive you.

Why do it? Sometimes your boss just seems to suck. It is more about your reaction. Change the reaction (internally), and the problem may be solved.

5. Manage Your Boss

Managing your boss is figuring out what the boss needs and wants and then giving it to them, but without compromising your integrity. It's very similar to cold reading, but you actually have enough time to get to know your boss. Find out his or her strengths and weaknesses, what drives them, and what the main interests of that person are. If the boss needs to look good, treat them with respect. By doing this you both benefit: the boss will have his way and you will make that person dependent on you.

Why do it? It creates a better work environment and is great *win-win* if done properly.

6. One-On-One Meeting

Talking and hopefully coming to terms is usually a good strategy. This will work if your boss can take criticism, is a problem solver, is not vindictive, cares about his/her employees (at least to some extent), has some integrity, and shows some listening skills.

If you choose this strategy, you cannot just wing it. You need to prepare for the meeting, set up the meeting, make it an effective one (by having goals), and follow up on it.

Loading...

Why do it? If done right, it will make an actual difference. When two people sit down together and actually discuss their problems, it gets things done. Note that you need to make sure your boss is right for the strategy.

7. Lobby Your Boss

This is a technique I learned a decade ago in an influence class. It means that you go as a group (together or separately) to the boss and have that “one too many” conversation. The reason for this strategy is that the crowd may be more effective than one person. Also, some people will only go as a group since they don’t have enough inner strength and need the group as a crutch. The main problem here is coordination: getting everyone on the same page. Trust me when I say it is not easy.

Why do it? Same reasons as a one-on-one meeting, but with a stronger effect. Lobbying works best if you can agree as a group (and usually you become group leader).

8. Indirect Feedback

This means giving feedback in a way that the boss cannot identify who has given it. Let’s face it: we have some vindictive people as bosses, and you don’t want to be the target of their wrath. You can do it privately (i.e. printing a letter of complaint and slipping it onto his desk) or public (i.e. posting his picture with the title “Worst Boss of the Month”). This way the messenger doesn’t get killed.

Why do it? If you are creative (creativity is key) and can be very careful (don’t get caught). Note that if you are caught, you might suffer much greater than if you did a one-on-one meeting.

9. Move On

The above stated strategies were about staying. This and the following strategies are about termination of the relationship. The idea is to find a different boss in your organization and go work for him. You may do it directly or indirectly, but make sure that

your boss will not be in the dark and make sure not to bad mouth him or her (even if they deserve it).

Why do it? Because you want to stay in the organization, but cannot work with your current boss.

10. Go Over The Boss's Head

Maybe your boss is crappy, but his supervisor isn't. Your boss' boss usually likes to know what is going on, and you are giving him or her feedback. Also, unlike when we were kids, it's not snitching or ratting. In order to use this strategy, you need to carefully choose that person (same as the criteria for the one-on-one meeting) and its measure of influence. You may also need to present evidence or think of going as a group.

Why do it? The big boss can solve it quicker. You must be very careful, because this strategy can backfire and hurt you bad.

11. Stand Up To Your Boss

I want to remind you the case of the Challenger shuttle disaster. I have read Richard Feynmann's book on the subject. This is a classic case of standing up to your boss and making him accountable. By exposing the NASA culture, the committee was able to change the way the organization works. This is a high risk/high reward strategy because you might damage your reputation and risk your workplace. On the other hand, when it works, your situation will surely change.

Why it do? When your boss is doing illegal stuff, actually hurting people or may risk life. Be prepared to face the consequences.

12. Fire Your Boss

"Take this job and shove it."

This feels so good. Telling someone to go fuck himself or herself and move on is a dream for a lot of people. If you have Fuck You money and have started to feel out the market or even signed a contract with the next employer, go ahead. I highly recommend not losing your temper. Even if you want to put everything on the table, do it in a stoic manner. Give feedback, but with some respect and with no badmouthing. You don't want to leave a scorched earth behind, as it may damage your reputation.

Why do it? Self-respect, stress relief, and because it's such a great feeling.

The 3 Biggest Challenges You'll Face When Learning Russian

February 14, 2018 | by Kurt Enos | Link | Original Link

After a quick foray into a romance language like Spanish or French, it's likely that you could be conversational on a basic level, woo your monolingual friends, and feel like a less of a tourist in a foreign country.

However, don't be so bold as to think your success in the languages of Western Europe will carry over into the east. The Slavic languages play by a vastly different set of rules, and Russian (being the most widely spoken language in the group) is no exception.

In this post, we'll look at three of the biggest hurdles you'll face learning Russian, as well as several practical approaches for ameliorating them so that you start speaking the language as soon as possible.

First, the three biggest problems with Russian…

1. The Grammatical Case System

One thing I didn't count on when learning Russian was it's grammatical case system. It's cold, unrelenting, and leaves no region of the language untouched. Russian nouns receive different endings based on their function within a sentence. Without getting too in depth into the finer points of grammar, take a look at these English sentences:

- This is a dog.
- I have a dog.

- I kicked the dog.
- I gave the dog a bone.
- I played with the dog.
- There is no dog.

In Russian, each one of these sentences uses a different form of the word “dog.” Each form is called a case. There are six cases in the Russian language, meaning that there are six different forms for any one noun you want to say. If that wasn’t difficult enough, it gets even better.

If the noun is plural, it has an entirely new set of endings to choose from. Pronouns also have different forms, which are essentially completely different words. Also, adjectives will change form so that they agree with the noun they modify.

Suddenly, conveying a simple idea like “I gave my friend’s dog a big bone” becomes immensely difficult for the new Russian learner, as they have to juggle a seemingly endless amount of forms and word endings.

There are a host of good reasons to learn Russian.

2. Verbs

The use of Russian verbs also poses all sorts of challenges for the native English speaker. As in Spanish, French, and other Romance languages, Russian verbs change based on who or what is performing the action (this is called conjugation).

In addition to conjugation, Russian verbs come in many sets of pairs. There’s one pair for the past and future tenses where one verb signifies a completed action and the other represents an action that wasn’t completed.

There’s another pair for verbs of motion (run, walk, drive, fly, etc.). You use one to describe a single motion in a single direction and another to describe a repeated motion.

You also use two different verbs depending on whether you're "going" by transport or by foot. It can all seem dizzying.

3. Pronunciation

Russian has several sounds that don't exist in the English language. On top of that, there are a large collection of sounds that sound similar to English but are noticeably different. For me, it was the length of the words and the long combinations of consonants that made Russian difficult to speak and understand.

It's not uncommon to have a 15+ letter word which has three or four consonants in a row (those four consonants usually being some combination of v, s, n, p, or t sounds).

Everything in your English-speaking brain will revolt against processing the sounds of a Russian word. When I first started using the language, the words felt more like noises than actual language.

How To Face The Challenge

Together, these aspects of the language make learning Russian a daunting task for any would be language student. If taken in all at once, the sheer number of new grammatical rules and foreign sounds will leave you with so many plates to spin that you'll be hard pressed to utter much more than a "да" or "как дела."

But there are three things you can do to start speaking the language more efficiently. These techniques won't get you fluent faster, but they will get you speaking the language quicker than many traditional methods. These three steps should be done in order as they build on one another.

Russian grammar will test your mettle.

1. Focus On Pronunciation First

Before you learn a single Russian word, learn correct pronunciation. Take the Russian sound system letter by letter until you can more or less pronounce and recognize each individual sound in the language. You'll have to learn the Cyrillic alphabet anyways, so you might as well learn the written form of letters alongside the spoken sounds.

Once you have a handle on the individual sounds, start to practice pronouncing longer words" breaking them down by syllable and gradually stringing them back together to say the complete word. Once you're comfortable with words, look for some basic Russian audio. There's a ton of beginner phrases and dialogues on the internet (just Google it).

Listen to the spoken audio and try to imitate not just the sounds of the words and letters but also the intonation of the speaker. At this stage it's not important that you understand what you're saying. All you're doing at this point is training your tongue and your ears so that they become comfortable with the sound system of the language.

2. Learn The 500+ Most Common Words

Many a linguist has spent ungodly amounts of time determining which words in a given language are used the most frequently. Thankfully, frequency lists for most languages aren't hard to come by on the Internet. Take the 500 most common Russian nouns, adjectives, and verbs and commit them to memory. For now, stay away from prepositions, pronouns, conjunctions, etc.

I recommend putting these words into a spaced repetition flashcard deck. Don't use English translations. Instead, pull images off Google for your flashcards and use a site like Forvo to put MP3s of native speakers into your cards as well.

If you've paid your dues to the pronunciation system, you'll find it a lot easier to remember words when you hear them. Where you hear a word, see an associated image, and see the word's spelling, your brain has a lot more information to grab onto when it's trying to recall Russian vocabulary.

It will take you a while to manually make each flashcard, but once you've built your deck, 20 to 30 minutes of study each day should get you through 500 words in about a month or so. If you use spaced repetition everyday (the way it was designed to be used), these words will begin to bury themselves into your memory. You won't be forgetting them anytime soon.

3, Pick Apart The Grammar

Now, it’s time to see your patience pay off as you get into the meat of the language. It’s best to build on your knowledge step by step and piece by piece, so that you can make steady but firm progress in the language.

Simple Steps

At this level, the two principle grammatical obstacles to speaking basic Russian are verb conjugations and cases. Many Russian verbs share endings and fall into several groups which are all conjugated the same way. When you’re learning verbs, focus on working with one group at a time. For now, stick with present tense verbs.

Similarly, spend a week or two systematically practicing a single Russian case. Don’t move onto a new case until you are comfortable with the word endings and uses of the current one. Again, you want to progress through the language gradually. A lack of thoroughness in the beginning will spell disaster later on.

As verbs and cases become more familiar to you, those 500+ words you already know will allow you to create a ton of basic yet useful phrases in the language. Your ability in the language will effectively leap past most beginning Russian students who are likely to still struggle with basic words and phrases for the first few stages of learning.

Conclusion

This approach to Russian is slow at the start, but over the long term, it will help you gain considerable momentum. That being said, it only works if you consistently study the language.

Above all other factors, discipline is the most indispensable part of learning a foreign language. Techniques and tools provide some value, but at the end of the day, the determining factor in learning Russian is you.

3 Things American Girls Can Learn From Japanese Women

February 15, 2018 | by Makoto Fujiwara | Link | Original Link

We've heard it all before: tales of the Far East enraptured in mystique and intrigue. Men of yesteryear such as Marco Polo and Lafcadio Hearn taking the roads less traveled and venturing into territories once seen incomprehensible to the Western palate.

Despite much of their content being praised for its integrity and nostalgia, unfortunately, much of the material and reporting you see on Japan nowadays borders on mainstream clickbait and blue pill perspectives. Catered to English audiences, the American male is rationed a hearty staple of "OMG Japan is *<insert snarky comment here>*" from the conformist bastion of Western news platforms.

The MSM is more concerned with Japanese fertility than their own.

Don't buy into the hyperbole of the media reports. Much of Japan is insulated from the cultural malaise plaguing America. For those who want to see a different side of the country, looking at how the women interact with men is a good indicator of how the society operates. Here are three areas where Japanese women can teach American

females a thing or two…

1. Looks

Not a day goes by where you won't be in awe of how many women here looked like they walked out of some high-end fashion magazine. Despite what you hear about how Japan is a homogenous society, the phenotypic variation in people is astounding. From the palest of skin from northern parts of the island to the more tanned variant in the south, you'll be able to find a type that best fits your affinities.

As far as bodies are concerned, don't listen to the nonsense saying that the ladies here lack in the curves department.

Body sizes of women in Japan.

Countless times, my friends have come here and couldn't believe what they were seeing. There is a word here that exemplifies what is considered the ideal body type for women. Referred to as *bon-kyu-bon (ボンキュッボン)*, this describes what we refer to in the English-speaking world as an "hourglass" figure. From all of the dieting products, skin care regimens, and tons of health food options available here, many ladies go over and beyond to ensure they look their best at all times.

Contrast this with the "beauty at any size" movements and the deep push for rainbow-colored hair in the West and it isn't difficult to see how the Japanese variant is head-and-shoulders above the so-called competition.

2. Femininity

Not a day goes by where you will see an ample number of city dwellers dressed to the nines. Floral blouses, pencil skirts, and high heels rule the day as you'll see as many

women dolled up and ready to face the world. Many visitors who come here for the first time are taken aback by the womanly fashion that breezes past on a Shinjuku sidewalk. Sites like Bijin-Snap focus on such a paradigm, as the concept of the site is to take snapshots of various girls going about their day.

Contrast that with the yoga pants, ugg(ly) boots, and North Face jackets you see many American females wear like a badge of honor. Like many things in life, initial impressions are to be taken seriously and can determine how outsiders perceive you. Many Japanese women understand that.

A random Tuesday in Tokyo.

While general appearance is essential, the personality traits of many women here are what separate the wheat from the chaff. If you're coming from Western culture, you're playing on hard mode: constant shit tests, negs, and having inane chess matches with the opposite sex just to get anywhere substantial.

I don't know about you, but as someone with several business ventures, hobbies, and goals designed around self-improvement, I don't have time to play mental gymnastics with some girl who thinks she has to demean you in every aspect of her interactions with men.

With many of the ladies here, there's a value towards peace and harmony that transcends any dysfunctional platitudes. As a man, as long as you're confident, respectful of the cultural mores, and strive to improve yourself, you won't have to worry about being ball-busted. That's the way it should be.

3. Commitment

Like many women, Japanese girls are relationship oriented and if they like you enough,

don’t be surprised how quickly things develop. For the more traditionally-minded men, a lot of women here would be right up your alley, as the ideas of giving and taking care of you are practically ingrained in the culture.

An example of this is on Valentine’s Day, where women buy men gifts. While men usually return this gesture of love the following month, the idea of giving and taking as a feeling of expression showcases the caretaking ethos of the culture. This concept is a just a small example of the countless number of ways ladies show their appreciation for you.

A common scene during the month of February.

Generally, as a Western male, you have quite a few opportunities to play the field, but if you have a good girlfriend, often you won’t need to. In fact, I would urge you not to, as racking up numbers—while fun in its own right—will put a negative image of you in the socially conscious structure of society.

Unfortunately, there are also a lot of men here who are manga dweebs and mentally unstable pudwacks who think that just being from the Anglosphere gives them license to print pussy. Honestly, while those sorts of individuals can get laid, they are often relegated to those women who hang out around the “gaijin” (外人) spots and have been ridden harder than Seabiscuit. Ladies of a different caliber don’t want to be around such guttersnipes.

What most foreigners end up going home with.

If you are in good shape, have a modicum of game, and some parts of the language under your belt, then you won't go without here; that I can assure you. Just respect the culture, observe your surroundings (空気を読む）and understand the rules of the game. Just because people "don't say anything" doesn't mean that it is the right action to take. Keep these aspects in mind, and you'll be able to maximize your ability to thrive here.

Conclusion

If you're tired of having to climb uphill just to have healthy relationships with women, then Japan might not be a bad place to go. The combination of looks, personalities, and the ability to have lasting relationships are what matter regarding the dealing with women.

For centuries, the Western world understood those ideas, and thus great societies were born. Nowadays, the cultural ailments plaguing these lands have become so apparent that many men decide to drop out altogether. But you don't need to. The intrigue of the Far East kept numerous men coming back for more, and if you follow some of the cultural nuances of this part of the world, you'll be able to find what you're looking for in Japanese women.

3 Reasons Why The NFL Should Fear The XFL

February 15, 2018 | by Brian F. Lockard | Link | Original Link

If you haven't heard, Vince McMahon is resurrecting the XFL in 2020, and if I was Roger Goodell, I would be very, very afraid. McMahon is somebody who has been in and around sports and sports entertainment for a very long time. He took the reins of the WWE in 1982, and it is still a very strong brand with high viewership and decent ratings. The WWE has been thriving for decades now. Not as long as the NFL, but… you see my point.

Vince is a calculating businessman, and a highly successful one. The original XFL was a failure because it didn't take itself too seriously. But that was a different time.

Now, the NFL has made the mistake of taking *itself* too seriously. It has annoyingly embedded itself in political and social issues, rather than remaining neutral and impartial. We don't care what Colin Kaepernick says about racial prejudice, or anything that Al Michaels says about anything. Their condescending ignorance is painfully hollow. We don't care about their politics. We just want football!

So here are three reasons why the NFL should fear McMahon's potential gridiron messiah…

1. NFL Games Are Simply Dull

Honestly, we just want to see these idiots (the players) kill each other (on the field, of course, though some of them have taken their work home with them), and we're not even allowed that! A whole bevy of slanted rules of contact favoring quarterbacks, halfbacks, and wide receivers (the owners' hottest commodities) have taken away a lot of the defensive spectacle that old football had.

Even the kickoff is ruined for the sake of mitigating violence. Imagine the most adrenaline-packed playoff game, the hype leading up to it, the crowd—the mob is primed and ready and drunk since 9AM—and the very first thing that happens is a disappointing sequence of inaction. A touchback! O holy blue balls!

Soon, it might all very well be flag football exclusively. Never say never when it comes to greed and the protection of the owners' prized stallions.

Another malady the No Fun League refuses to treat is the pace of games, which have become nauseatingly sluggish. With the over-analyzing of replays and incessant penalties, which are reportedly up 20 percent since 2009, a sport that was once teeming with exciting moments and memorable displays of physical feats has been reduced to a time drag, a slow crawl to the next commercial break. When the Little League World Series is more exciting than the Super Bowl, you know you're in trouble.

The maudlin, inebriated ballads of the disgruntled Browns fan in the corner of the pub are far more interesting. And in these ballads, you hear voices. Through the slurring of adjectives and expletives, the mob is in a confused, delirious state of discontent.

2. Its Stars Are Detestable

The mob is growing tired of prima donna athletes, who chew and spit out the hands that elevated them from street thug to penthouse thug. What image is the league presenting by jumping on the “progressive” bandwagon, yet handing out slaps on the wrist and second chances to convicted felons and ultimately glorifying this behavior? The mob has had enough of the double standards.

And finally, the mob is growing tired of the unpatriotic atmosphere these ignoramuses perpetuate, even if it’s all at the behest of their overlords. They simply do what they’re told. But they’ve forgotten that they exist for our entertainment. For our amusement. And nobody is forcing them to do it. You assume the risk of bodily injury by putting on the pads. Don’t like it? Don’t play. Simple as that.

With ratings hitting all-time lows (down 9% in week 15), merchandise sales plummeting, and attendance deteriorating faster than Dak Prescott’s intangibles, fans are hungry for a new medium to sate their inherent thirst for blood, for contemporary gladiatorial games to commence once again. They just don’t know it yet. The desire has been laying dormant as of now. People have come to terms with the NFL monopoly. At least it’s something, right?

As a result, the NFL has been getting away with mediocrity for years, except now they’ve exposed their flaws for the world to see, and Janet Jackson’s nip slip may be more prophetic than we initially realized. There are cracks in the foundation. And the XFL might just find enough room to squeeze in.

3. Market Potential

Yes, there's a market for new football. Gritty, spectacular, testosterone-fueled blood sport. And Vince McMahon is no doubt salivating at the chance of redeeming himself in this market. McMahon understands that football should be entertainment primarily, because that is exactly what it is and should be treated as.

Just imagine a Roman gladiator, a person barely higher than the level of slave, screaming up from the pit instead of battling tigers, attempting to dictate what the Senate should do. Nobody would listen. There's a time and place for everything, and politics do not belong in sport.

McMahon believes this and is making it a selling point. A shrewd, tactical approach in the wake of a season that will be remembered more for tabloid headlines instead of what really matters: the football itself. He also believes that players with criminal records will not enjoy the eventual fruits this rebooted league will bear.

With standards so low in our society as it pertains to culture for what degeneracy, the new XFL will be a deep, crisp breath of fresh air. A clean inhale, free from the smog of politics and pop culture brain-rot.

Ironically, this competition may be good for the NFL, who will no doubt be forced to improve their own image and the quality of their product if the XFL becomes more popular. Only time will tell.

But if McMahon has learned anything from his friend Trump, playing to the mob and giving the people what they truly want is a model to be emulated and repeated, something the NFL has forgotten.

The Game That Feminists Are Desperately Trying To Stop Men From Playing

February 15, 2018 | by Sponsored Article | Link | Original Link

The following article is sponsored by Super Seducer.

At Return of Kings, we generally don't encourage men to play video games, because staying huddled in your room for hours at a time pressing buttons or clicking on your computer screen won't get you laid, improve your health, or fatten your bank account. But what if there was a game that had positive benefits for your real life? What if there was a game that could help you become better with women?

That game now exists, and it's called *Super Seducer*.

Created by veteran PUA instructor Richard La Ruina, *Super Seducer* is a soon-to-be-released game that is fun to play and teaches you the fundamentals of game and how to pick up girls. As you would expect, it's a game that has feminists and their soy boy handlers infuriated, and they've been leading a campaign to keep the game off of Steam and other distribution outlets.

Here's why *Super Seducer* is worth your time…

The Feminist Campaign Against *Super Seducer*

Despite *Super Seducer* being an innocuous game about teaching men how to become better women—the game doesn't have nudity or pornographic content in it—it has the game industry and feminists in a tizzy. The problems began back in September, when the Kickstarter for *Super Seducer* was shut down due to inappropriate content:

KICKSTARTER

Hello,

This is a message from Kickstarter's Integrity team. We're writing to notify you that recent activity on your project triggered a review. This review uncovered evidence of one or more violations of Kickstarter's rules, which may include:

Inappropriate content, including but not limited to offensive or pornographic material
Spamming or abusive behavior
Offering rewards in violation of Kickstarter's rules

Feminists have also blocked the game from being released on the Xbox Games Store:

Much of the gaming media has also been upset over *Super Seducer*. According to the company, *PC Gamer's* editor asked *Super Seducer's* PR company to remove him from their mailing list, and feminist game reviewers have been denouncing the game on social media:

There have also been attempts to get the game removed from Steam and the PlayStation Network, though neither have succeeded thus far. The game has also started getting positive press from some sectors of the gaming media, who are interested in its unique premise and content.

The reaction to *Super Seducer* shouldn't be *too* surprising to any reader of *Return of Kings,* but it's still jaw-dropping. In a world in which everyone from politicians to media moguls have been exposed as sexually exploiting women, you'd figure that people would *appreciate* something that teaches men how to be suave, sexy, and give women what they want.

But feminists are allergic to game and any methods of masculine self-improvement beyond meaningless tripe like "just be yourself." Feminists don't actually care about the well-being of women, because if they did, they'd *support* a game like *Super Seducer* that instructs men to become the kind of guy that women wish they could have.

Super Seducer: The Game That Makes You Better With Women

Super Seducer is a game designed to replicate the experience of seducing women as thoroughly and accurately as possible. Richard La Ruina is a world-renowned seduction instructor with over a decade of experience in picking up women and teaching his skills to men, and he's used that experience to make *Super Seducer* the most realistic game of its type out there. This sets it apart from the hordes of dating simulators already on the market.

Structured as a hybrid of RPG, adventure game, and FMV game, *Super Seducer* puts you in the role of an average man (played by La Ruina himself) who is tasked with meeting, going on dates, and ultimately sealing the deal with a number of different women. The meat of the game is its dialogue system, where you are tasked with coming with the most appropriate response in the situation you're in, whether you're coming up to girls on the street or dancing with them in a club.

Super Seducer provides a number of different responses in each situation, from creepy stuff that will get your character slapped across the face (or worse), to "beta" responses to will get you friendzoned, to suave, charismatic responses that will get the girl interested in you. After each dialogue choice, La Ruina will appear to explain to you what you got right, what you got wrong (if anything), and how you can improve, allowing less experienced guys to recognize the flaws in their game.

While *Super Seducer* is certainly fun to play—La Ruina and his fellow actors do a good job, and some of the scenarios/dialogue choices are hilarious—the game's *real* value is in providing a risk-free way for men to test out their game. Thanks to La Ruina's experience as a PUA instructor and the game's method of giving players instant feedback on their choices, men who play *Super Seducer* can instantly get a feel for how to approach and seduce women and what they're doing wrong.

Additionally, *Super Seducer* offers a great deal of variety in its scenarios and dialogue choices. Boasting 520 choices and multiple endings, *Super Seducer* offers a great deal of replay value for the budget-conscious gamer. Given La Ruina's experience with women, if

there's a crazy or insane scenario you can think of, it's probably in this game, so *Super Seducer* offers men the ability to experience most of the likely things they're going to encounter when approaching and dating women.

The Only Game That Will Improve Your Skills With Women

While there's no substitute for meeting girls in real life, *Super Seducer* is a worthwhile tool for any man who wants to improve his skills with women. By offering realistic scenarios and dialogue, Richard La Ruina's game allows men to test out their game in a risk-free environment, making it a good supplement to real-life approaching. The fact that feminists hate the game and are trying to get it banned only makes it even better.

Super Seducer will be released for PC, Mac, and PlayStation 4 on March 6. It's the only game out there that will teach you how to become better with women, and you're guaranteed to have a blast while doing so. **Click here to download Super Seducer on Steam.**

Why You Should Give Up Masturbation For Lent

February 15, 2018 | by Max Roscoe | Link | Original Link

Lent is the Christian holiday period lasting 40 fasting days (45 days) prior to Easter. It is a period of reflection, particularly of resisting temptation, cleansing, and preparing for the new year. Many observers practice fasting, while others choose to sacrifice or abstain from a certain vice or pleasure.

Whether one is religious or not, there are benefits to abstaining from something of value, pleasure, and convenience. All major religions and many cultures have similar observances around this time of the year. And the most ardent observer of Lent that I know is my agnostic, hard partying, international traveling, bar owning bachelor uncle, who steadfastly gives up alcohol every Lent.

I encourage every man to give up something of convenience, a vice, or habit, during this time. And to particularly consider giving up masturbation.

First, I believe masturbation is normal, natural and healthy. This is not an article to shame men from the natural sexual urges we have. Just as those who fast do not hate food, abstaining from something sexual does not mean one views sexual desires or satisfying them, as bad or wrong.

The point is to force a man to give up something valuable and important, as a tool of self-discipline and reflection. If you are a very horny man in your teens or early 20s, already choking the chicken at least once a day, perhaps you would benefit more from another activity like fasting, giving up drinking or smoking, or video games. And indeed the choice should be a personal one for every man. But here we discuss the benefits of abstinence from masturbation.

Lent

Lent begins on Ash Wednesday (February 14, 2018) and ends on Easter. While western consumerist culture focuses on Jesus' birthday, (a day likely not even important to Jesus himself), the most important Christian holiday is Easter, which celebrates the rite and miracle of Resurrection. Whether one believes in a deity or not, Resurrection can be symbolically seen as rebirth, as it is the time when flowers are blooming, spring is arriving, and short skirts and tank tops come out.

Traditionally, Christian observers prepare for Easter through prayer, self-denial, meditation, penance, and fasting. Some adherents will break the fast every Sunday. This is why there are 40 days ***excluding Sundays*** between Ash Wednesday and Lent. This is a personal decision, but completely abstaining from whatever you sacrifice is a more meaningful and difficult challenge.

Why Masturbation?

Particularly for men in the West, the conveniences of modern life make us soft and

spoiled. When a man can wake and within seconds, beckon hardcore sluts of every body type virtually to his bed, performing sexual acts men in the past could not even dream of, masturbation can become a crutch, a vice, gluttony.

Even the richest of kings in the past did not have such easy access to the wide array of visual stimulation available through HD pornography and live degenerate camwhores.

When we become a slave to our desires, we lose autonomy. Sacrificing self pleasure is about acknowledging and recognizing the power our emotions and sex drive has over us, and choosing how it will affect us.

The traditional sacrifices made during Lent were chosen because they gave pleasure. Beginning in the Middle Ages, meat, eggs and dairy were prohibited during Lent. What gives pleasure more than gratifying a sexual urge whenever it appears? And indeed, Thomas Acquinas acknowledged this by stating that these rich foods…

> …afford greater pleasure as food, and greater nourishment to the human body, so that from their consumption there results a greater surplus available for seminal matter, which when abundant becomes a great incentive to lust.

You Will See The Value In Sacrifice

A wealthy man likely sacrificed his idle time saving and investing, forgoing immediate pleasures for long term rewards. A strong man sacrificed his time and dietary

choices putting in hard work building his body. A powerful man sacrificed personal endeavors for building relationships, businesses, or political connections that he later uses to accomplish great things. By sacrificing something of value, one sees the value in sacrifice.

Fasting and self-sacrifice during Lent in the past was a requirement for all Christians. Today, far fewer practice it. By observing this tradition, you are returning to your roots, your history, your customs.

What To Expect?

First, do not feel bad if you don't make it the full 40 days. The point is to forego something easy, satisfying, and convenient. Not to reach any predetermined calendar date. One should abstain at least a week. The first week to 10 days is extremely difficult. You may begin seeing all females of any age as sexual objects, and may feel horny all the time. You may become obsessed with sex. Your eyes will quickly search out any visible flesh.

I have abandoned this idea in the past, because my thoughts became so focused on sex and I had to release so I could return to normal functioning behavior. If you can make it a couple of weeks, but then it becomes too difficult, one could observe the Sunday free day. However, there is a "breaking point" after which it becomes much easier to continue to your goal.

Perhaps there is nothing wrong with acting immediately on our sexual urges. But this is what animals do. To observe and acknowledge the effects of this desire, and to see the control that the poosy has over us, is to become a truly strong and powerful man. Also there is a definitely a correlation between the last time your balls were drained, and your motivation to open and pursue women.

The ending of Lent, when you are ready to unleash your pent up energies, coincides with

the beginning of Spring when women shed clothing and hit the beach! You will be more motivated to approach and meet women just when they are emerging from their winter hibernation.

In closing, I encourage all men to make some sacrifice during Lent, for personal enrichment, and to consider foregoing masturbation. For more on this subject, check out the writings of Aurelius Moner.

How To Pick Up Strippers

February 16, 2018 | by Bryon Flynn | Link | Original Link

Yesterday, I went to a well-known strip club to support a friend who just started dancing there. I left with three strippers' contact info: a 7 and two 8s, all of whom have now written me first.

Virtually every man who's been to these clubs wants to score and has stripper fantasies. I had a 9 as my live-in girlfriend for three years who stripped at one of America's most famous clubs and actually got around the "no boyfriend rule" turning it into a regular hangout. At my peak, I had 150 strippers' phone numbers, so I'm going to share some insider secrets, and save you time, drama, and lots of money.

Of all the places you will ever run game, strip clubs are the most difficult. The bitch shields are extremely high, as they've experienced every pickup line, technique, and creep that exists. Know that you are dating on the razor's edge and you *will* get cut. You will be blown out by wealthy competition, waste money, get your heart broken if you fall in love, and face low conversion rates. Be extremely suspicious of any pickup guru who claims to have a foolproof stripper method, as in my experience, there is no such thing.

There are noteworthy advantages, however. As the customer, the women will generally approach you. 99 percent of the men have zero game, so it is very easy to stand out. It is also less noisy and there is less drug use and fewer distractions than at regular clubs. At the upscale establishments—and especially with strippers who are college students—there is a window of opportunity for a smart, charming, high value male to affordably display his finer qualities.

Flip The Script With Oasis Game

None of your presentation can be scripted or phony or they will see right through you. Hence, authenticity and confidence are your secret weapons. Because I lived with and have dated many strippers, I genuinely understand the challenges of their job and the crap she has to hear all night from degenerate, perverted men. Your table should be the desert oasis where she wants to sit down when she just can't take it anymore.

You and your crew are fun, safe, and understand the industry. In a word, you are like her, not a customer. You are calm, cool, and empathetic, the alpha lion who can laugh with her, never judging her while she shares her bizarro work stories. She will begin to bond with you, that rare and coveted man she feels might actually be able to deal with her occupation.

Get Vouched For

Your biggest obstacle is making her feel safe. She must believe that if the relationship doesn't work out that you will not cause her problems at work. In her mind, this is much less likely to happen if you share the same social circle, and getting a stripper to date you in this scenario is like surfing the North Shore of Hawaii. One does not simply show up with a surfboard. Someone in the "locals and pros only" surfer scene must vouch for you or you're not getting in.

Thus, the easiest and cheapest way to score a stripper is to already know her as an acquaintance from the regular club scene and have mutual friends, then you see her at the strip club and sell her on giving it a try. Another way is to befriend the club staff, preferably in real life or on social media. You want to appear to already know bouncers, managers, DJs, or bartenders. A third is to have a friend who is already stripping there

who introduces you to the other girls, such as what I first described above.

Avoiding The Lasso

Strangely, strippers are much more likely to date you if they first meet you on a dating site, as they don't see you as a potentially creepy patron, even with no mutual friends and if your first meeting is at the club. Often the club makes girls post dating profiles to lasso more customers, so be aware of this tactic and avoid meeting there if possible.

Free Isn't Free

Even a frugal trip to a strip club will be $50 to $100 for parking, cover charges, and drinks. Remember, this is their livelihood, so show respect, buy some drinks for the girls who sit with you, and occasionally tip her "for her time." Outside of high roller markets (Miami, Vegas, N.Y., L.A., S.F.), a $20 bill per non-peak hour is a good rule of thumb, assuming you are first rate company.

If you're inexperienced, try to bring a wing crew of four to six people, as it spreads out the cost and conveys social proof. You should have a striking look and be devastatingly charming and/or well dressed and groomed.

Tactics

There is no one correct method for success, but you can definitely improve your odds. It will depend on your looks, age, game, apparent wealth, attitude, shared social circle, and many other factors. In general, go during the day or on Monday/Tuesday nights, as competition is low. Get a table so she can sit with you for more privacy and tactile bonding. Avoid the bar and never, ever sit on "Gynecologist Row" at the catwalk looking up at her crotch.

Tip when she is onstage *only* to briefly introduce yourself and invite her to your table. Use $5 or even $2 bills to stand out. Do not linger and never “make it rain.” At your table, turn down lap dances saying “thanks, but it’s just not my thing,” in lieu of drinks and tips for her time as she is less likely to view you as a customer. You should occasionally buy dances, but only let her dance for your friends, which will make her work more to earn your direct attention.

I have never done VIP on my own dime, only when others paid on a corporate expense account. A VIP can easily backfire so when establishing status, only do thirty minutes and close with social media (less invasive and higher conversion than burner phones). Get a date outside of the club within one to two weeks. If she refuses, move to other girls on your next visit, never appear butt hurt and remain friendly. Never do VIP with the same girl twice.

Dividends

Dating a stripper is something every man should do once. There’s something truly hot about it that’s rarely attainable elsewhere, which makes all the hassles worthwhile. In top clubs, even celebs don’t score 10s without laying down serious cash, so opt for 7s, 8s and 9s instead. Keep it light, keep it casual. Try to date part-timers who have stripped for less than six months, and date them no longer than nine-and-a-half weeks. Enjoy it while it lasts… because it never does.

7 Pieces Of Financial Advice From Robert Kiyosaki

February 16, 2018 | by André du Pôle | Link | Original Link

Unless you are younger than 20, Robert Kiyosaki's name should sound familiar. This Japanese-American man has become well-known in 1997 thanks to his book *Rich Dad, Poor Dad*, which contained a series of parables and easy-to-read stories about wise capital management. The book has become a bestseller, been translated in numerous languages, and Kiyosaki has been milking his "rich dad" brand as much as he could by writing up to 15 "Rich Dad" books, producing a "Rich Dad" video game and co-writing two books with The Donald.

Now, Kiyosaki took an awful lot of criticism. He has been under fire for allegedly giving irresponsible advise, forcing book sales through multi-level marketing, making up stories he then told as if they had really taken place and so on. I didn't bother much—before I found someone selling a volume of the original *Rich Dad, Poor Dad* book for $0.20 on a flea market. For such a low price, I had nothing to lose.

I've read *Rich Dad, Poor Dad* in a couple of days. Then some other texts from Kiyosaki. To be sure, his advice is sometimes simplistic and redundant, but overall I found it helpful and interesting.

1. Think like an entrepreneur

To a red-pilled individual, this could sound trite. In 1997, this was not—and still today the hip, trendy stuff branded as entrepreneur looks more like a surrogate than like true entrepreneurship.

Kiyosaki compares the entrepreneur with the employee: the second is told what to do, he went to college and got a job because he was told this was the road to a successful life, pays huge taxes on his wage and ducks his head when the HR fatties are out.

The entrepreneur, however, does not answer to a HR department. Whether he works off the books, goes freelance or owns a company, the entrepreneur is looking to make work instead of asking for a job, pays as little taxes as he can, and lives life according to his own terms. He is loyal to his own and opportunistic elsewhere instead of getting screwed like a beta cog.

Rich Dad, Poor Dad tells of how an entrepreneur who consciously focuses on what he wants—whether it is money, girls or anything else—feels no shame for wanting to thrive, looks for opportunities and creates them when he can. For example, Kiyosaki explains how, as a child, he allegedly picked up used comics to create a comics library and make other children pay to access it. While the story in itself may be doubtful, it is fun and a good example of the entrepreneur mindset.

2. Manage your expenses

According to Kiyosaki, accounting should be considered a basic life skill. Learn to count your income and expenses, make a balance sheet and see how the dollar keeps getting out of your pocket. Better yet: look at life through the dichotomy of assets and liabilities. Assets put money in your pocket, liabilities take it out.

While Kiyosaki goes a bit far by saying that “your home isn’t an asset”—at least being a home owner allows you not to get bled dry by the rent—thinking this way motivated me to stop drinking a beer or two almost every night, go for the cheapest meat cuts and replace the gym by calisthenics. The best mindset when you’re bulking on a budget.

3. Make money work for you

Under the guise of financial wisdom, this one is a bit cynical. On face value, when you invest money or capital in the right place, the money starts working for you. It makes income, and you're getting richer without having to toil. Behind the words, Kiyosaki's advice is to stop getting exploited and become an exploiter instead. Stop investing in mutual funds or other Wall Street-managed bullshit—invest in real estate and companies so that "the capital works for you."

Having money working for you means creating your own system and making others join it so that they pay you. It can be a company, a piece of real estate, or anything people will inject money or work in. Money doesn't produce anything by itself: the capital "makes money" because someone else is working or at least paying. Meh. The world being what it is, I'll still take it.

4. Invest

You always have something you can invest. The trendy thing to do now is investing in Bitcoin. If you don't have much money, you still have time and work ability. You can invest it in learning a skill, in getting knowledge, in tinkering or experimentating or networking. Anything that can turn into a well-paid skill, niche, or option. Anything that can become an asset. Everything which is a capital, time included, can be invested. Diversion is a way to waste time and money. The System made us addicted to useless crap so that we keep feeding it instead of feeding ourselves.

Loading…

Here Kiyosaki doesn't say much more than, say, Benjamin Franklin. He still says it with updated stories and more enthusiasm.

5. Temptation is good, for others

In his *Republic*, Greek philosopher Plato warned us of how aspiring oligarchs took advantage from young people's foolishness to propel them into a lifestyle of debt-sustained partying whereas they worked hard to take as much of the city as they could. Kiyosaki's advice is to behave like Plato's aspiring oligarch.

Stay clear of useless expenses, but if someone else is willing to spend, then by all means offer him an opportunity to do so—at your benefit. Someone has to do the actual work after all, and you're better off if someone else is doing it for you and if you're doing it for your own instead of remaining a wagecuck.

6. Work for yourself

Perhaps Kiyosaki's best advice: work in a manner that does not force you into either paying taxes or putting your own skill in the service of someone else's dream. Cut the middlemen. Start your own company. Get direct relationships with customers—no boss, no CEO. The world we live in was made complicated so that we would work for someone else and pay unknown people for everything.

To counter this, you must both secede from an exploitive, hostile system, and create a tribe or network solid enough so that you can work in synergy with trusted others instead of relying on Silicon Valley's stuff.

7. Manage your emotions

All too often, we start feeling something and our choices are subtly determined by our emotion. This should not happen. Kiyosaki tells how he allegedly worked for free at his rich dad's convenience store. After several weeks, young Robert was frustrated and angry with receiving nothing in exchange for his efforts. He asked his rich dad for a pay raise. "Sure", rich dad answered, "how much do you want? $5 per hour? $10? $20? Hey, I can even pay you $50, what do you say?"

At first, young Robert was startled and excited. But when his rich dad mentioned a $50 per hour wage, he started to see the whole situation as absurd. Why would a convenience store owner pay a child clerk $50 per hour? This made no sense. Then, rich dad added that he had just told that to show young Robert how much power a boss could have, and to stop thinking like an employee hoping for a pay raise.

The inability to manage one's emotions has another name: immaturity. If you are easily triggered, if emotions tend to overwhelm you and cloud your rational processes, you're vulnerable and immature. The Ancients used to classify virtues and passions. I wrote some pieces on the latter so that they are easier to spot when they kick in.

Conversely, the soy boys promoted by the System have a high-pitched voice and all sorts of exaggerated mannerisms that denote the exact opposite of emotional stability. Kiyosaki chose patriarch Trump over these.

Conclusion

When *Rich Dad, Poor Dad* started selling well, Kiyosaki profited off his fame and wrote many books with lots of redundant advice. Still, some of his related stuff—for example, Garrett Sutton's *Start Your Own Corporation*, officially endorsed by *Rich Dad* author—is rather interesting, and all of it has a good vibe which makes it both easy to read and

enlightening when you didn't have much financial education.

Something I liked much from Kiyosaki is, he's not trying to make you a prisoner of his own world. Instead, he encouraged his reader to read from various sources, tinker with investments, learning skills and so on. He never asks to follow blindly anything he says or whatever. His demeanor is much less sectarian than your usual leftist's, and he is much less pretentious, too, despite some grandiose or sugarcoated claims. I will gladly prefer some of his cynicism over the pseudo-good intentions of anyone defending the nightmarish brave new world we have been thrown into.

A word of caution. Kiyosaki was born in 1947. He thrived at a time when there was a lot of room to invest, low interest rates and a booming real estate market. He didn't have to carry on in a world where the previous generation—to us, boomers—plus Big Corp keep most of the money, the young are cash-strapped and jaded, and SJWs lurk at the corner. Getting rich today seems way more difficult. Whatever: Kiyosaki's mindset and some of his advice are solid, and who knows what hidden opportunities you can stumble upon when you've got it right.

Why Western Women Have So Much Sexual Freedom

February 16, 2018 | by Jared Trueheart | Link | Original Link

Western societies have a love/hate relationship with women's sexual freedom. Men love that so many women and such a variety of women are open to casual hook-ups. We love the euphoria that comes with taking a woman home and hearing her scream your name as if your phallus was a magic pleasure wand. We love when our game is tighter than every other guys, as proven by the sex we have with strange women. But we also hate it.

We hate how easy it can be. We hate that if it isn't us, it will be with some other guy. We hate that so many women will likely never make decent wives or mothers. And we hate when a woman who spent her most attractive years hooking-up with strange men tries to play the good girlfriend with us. It's a bittersweet relationship at best.

Women love that they can have their cake and eat it too. They love that they can employ an alpha fux beta bux strategy. But they also are far less stable in marriage than their less promiscuous counterparts. Though they might not admit it, it's a bittersweet relationship for them as well.

This is why men say not to turn a ho into a housewife.

What is it about Western society that allows for this degree of female sexual freedom? Science has several factors that help explain it.

Reliable Care For Unplanned Pregnancies

Several studies provide great insights in to this matter. The first is “Norms of Premarital Sexual Behavior: A Cross-Cultural Study” by Gwen J. Broude. The second is “Cultural Customs That Influence Sexual Freedom in Adolescence” by Herbert Barry III and Alice Schlegel. The former can be found on Google Scholar, but you’ll need access to a database to read the second.

Both studies use data and results from numerous other studies, so they are a good launching point if you choose to go down this rabbit hole.

One of the more significant findings in these studies is the importance of care for children born out of wedlock. In societies that are matrilineal (trace descent through the mother’s family) and/or matrilocal (reside with mother’s family), there is an association with female premarital sexual permissiveness (the common measurement of women’s sexual freedom).

What made the correlation significant is when care for children was factored in to the equation. When a baby is born out of wedlock, if there are more people in the house willing to care for the child, there is a significant correlation with female premarital sex.

We are always reminded that correlation does not equal causation, but in this case, kinship theory and paternity certainty can help explain a cause for this. There are societies (usually matrilineal) in which the father does not care for a child, the mother’s brothers do. While the father shares more of his genes with a child than a maternal uncle does, he can never truly be certain (until modern paternity tests are used) that a child is his. Maternal uncles, however, have 100% certainty that their nephews are theirs.

The latter study mentions:

Loading...

> Matrilineal descent encourages sexual freedom by minimizing the need to establish paternity of the children. In our society, fear of pregnancy is likewise relieved by the development and widespread use of effective contraceptive devices. The mobility of individuals and families in our industrial society corresponds to an attribute of many horticultural societies, where descent is associated with sexual freedom.

This is why, in my article on saving American families, I argue for measures that force parents to care for their own children.

Female Coming Of Age Rituals

In highly stratified, complex societies like ours, coming of age rituals for females are correlated with sexual freedom. There isn't much explanation for this in the literature. But we can imagine scenarios in our own society that could offer insight.

If we take a scenario like a sweet sixteen birthday party in which girls who are already maturing sexually are welcomed into womanhood, we can see why a girl at that age would engage in premarital sex. They can't marry and are told they shouldn't anyway for several more years. Yet they are welcomed into womanhood. Adult women have sex. Being allowed to have sex but not allowed or not encouraged to get married is a recipe for sexual freedom.

Sweet 16 or a Kirill champagne facial night club event? I can't tell.

Another ritual like leaving the house to live in a university dorm could have essentially the same effect.

High Degree Of Personal Freedom

Unlike other stratified societies, where individuals are tied to their families by strict

cultural norms and expectations and by family honor codes, ours emphasizes personal freedom. That is something typically found in less stratified, hunter-gatherer type cultures.

Because our society doesn't define an honor code or integrity very well, we have personal honor codes and personal integrity. Nobody holds you accountable to them but yourself. If your personal honor code doesn't restrict premarital sex, it is allowed. That's as true for women now as it is for men.

Women At Work

One of the findings of these studies was a positive correlation between women's contribution to providing for the household and sexual freedom. Western society is consistent with this.

The more women work—especially outside the home—to contribute to the home, the more female premarital sex is permitted. It's not hard to imagine a graph in which women's sexual freedom rises as the percent of their financial contribution to household income increases, though such a graph does not yet exist. Think of women in the 1950s, how much they worked, and how much sexual freedom they had versus women in 2018.

One last piece, which was mentioned but not discussed in depth but probably should be, was the sexual freedom of males. Obviously, if males have more freedom, they need women with whom to have sex. Logic tells us that the ratio would be 1:1, give or take. To imply otherwise would be to permit a small number of women to sleep with many men.

This leads to the question, "Can we curb liberal female attitudes to sex while allowing males sexual freedom by permitting prostitutes to operate freely?" More importantly, *should* we?

Teenage Girl Gets Scammed By Fake Multimillionaire On “Sugar Dating” Site

February 17, 2018 | by Beau Albrecht | Link | Original Link

Websites for “sugar babies” have become trendy, thanks to modern technology, declining public morals, and an unbalanced sexual marketplace which exacerbates female entitlement complex. It’s a hot new way to profit tremendously from simply being a girlfriend—or at the least, going through some of the motions.

However, sometimes this modern NC17 version of *Cinderella* can have some interesting twists.

Get Rich Quick

As *The Sun* write-up begins:

> "I'm tired of boys our age" I sighed, tossing my phone onto the couch. My friend laughed at my frustration.
>
> At 18, I was fed up with the immaturity of teenage boys I'd meet in town. I wanted an older man who knew how to treat a woman properly.
>
> I was saving every penny I earned at my sales job to go travelling in Australia, so it would be nice to find a man who could spoil me whilst I saved.
>
> "You should try this dating site I'm on," my friend suggested, handing me her phone. I glanced at the browser she had opened.

So this eighteen year old working a sales gig began her quest to be "spoiled". Ordinary chicks thinking ordinary guys aren't good enough for them? I'm shocked, *shocked*!

Being cute—and *barely legal*, of course—Anna Ryan was in a position to make some serious bank. Let's face it—if that *wasn't* the idea, there are plenty of conventional matchmaking sites focusing on compatibility or looks, rather than "generous" guys. If the "sugar baby" sites are sausage fests like traditional online dating, then that too works in favor of those desiring to milk a "beta bucks" relationship for everything it's worth.

After creating a profile, she got a reply pretty quickly. This was James Walsh, a stock trader who made 50 million pounds a year, drove a Lamborghini, and even owned a gold mine. Looks like she hit the jackpot right away! How did the whirlwind romance go?

What followed was an incredible seven months of text messages and some phone calls, with her finances being one of the topics. Mere mortals struggle to maintain even a week of text game without things going cold. They'll usually put things on the back burner if they haven't closed the deal after months. So, apparently the rules change when online dating starts to look like high-stakes gambling.

At long last, they met up. No Lamborghini though; it was in the shop getting a flat fixed. She noticed his watch, which looked like a gold Rolex, and on the date he took some calls relating to his high finance job; surely this piqued her interest.

They met for a second date. The Lambo was still out for repairs, which seemed slightly odd. She took him home for drinks, and (as you might guess) he spent the night. All seemed well, and he mentioned taking her on an upcoming vacation.

However, there was *a little snag*. Specifically, he had to pay a court fine.

Too good to be true

Not exactly Bernie, but…

"James Walsh" said he had to pay five thousand pounds, but was unable because the legal trouble got his bank accounts frozen. If unpaid, he could go to prison. When she was reluctant to "loan" him the money, he got aggro and even threatened suicide. Likely she would've been on an emotional roller coaster by then; standard operating procedure for an experienced fraudster. She complied, and he cleaned out her bank account.

Loading…

A more level-headed assessment would've set off the bullshit detectors. A legal matter meriting a £5000 fine probably wouldn't be enough to have bank accounts frozen. Further, an actual rich guy should've had several other resources available to pay it. Prior to that, some basic fact-checking would've been prudent. Even ordinary people usually have a substantial digital paper trail. She could've called his office to see if he really worked there.

After doing some research a little too late, Anna found the answer quickly. This wasn't the first time he'd run this scam. This crook defrauded *eight other known marks*. As the *Daily Mail* write-up concludes:

> Feeling overwhelmed by what happened, Miss Ryan, who now lives in Dubai, searched his number on the internet and discovered he was not James Walsh and

> found a forum about a conman called David Overton, who scammed young women.
>
> She and eight other victims testified against him in February last year and Overton pleaded guilty to fraud and was jailed for 15 months.

Fifteen months seems a fairly light rap for ripping off so many people, possibly totaling enough to afford a *real* chick magnet car. Still, it's an encouraging sign that British law enforcement is actually doing more than investigating trifling matters while turning a blind eye to loathsome crimes by immigrants. Anyway, hopefully David Overton learned his lesson and will henceforth make money working productively.

This Dubai thing seems a little curious, though. Did she find a better-paying retail job there, or is it something else?

Something for nothing

On the other side of the equation, it's quite possible that "sugar babies" will one day acquire a reputation for receiving payments but not delivering their precious goodies. With merely an ambiguous understanding, what could a scammed "sugar daddy" do? *Buyer beware!*

However, the greater problem is that "sugar dating"—what some call soft prostitution—is inherently skeezy and immoral. Websites with a worldwide reach, facilitating maximized perks for highly ambitious cyber-courtesans, have taken gold-digging (and Princess Complex) to a new depth. Trying to win the lottery in bed is basically expecting something for nothing. Overweening pride tempts fate.

Getting paid lavishly for being a girlfriend (more or less) has its appeal to some. Still, participants should be aware they're getting deep into shady moral and ethical territory, and everything that comes with it. Undoubtedly we'll be seeing a lot more bullshit on both sides of this mercenary arrangement they seek.

Whatever happened to young ladies looking for promising young gentlemen, whose

intelligence and work ethic will bear fruit with a prosperous lifetime for the couple and their children? That’s rhetorical; I already know the answer.

5 Venues In Thailand Every Man Must Visit

February 17, 2018 | by Antonio Rutherford | Link | Original Link

For guys having issues in their home countries—or even those just seeking new adventures—there's perhaps no better remedy than a trip to Thailand. Unfortunately, many newbies get sucked into the pay-for-play trap or get stuck in the lackluster, mainstream tourist areas such as Khao San Road or Phuket.

As a half-Thai "Luk Khrueng" and dual citizen who has lived and worked in Bangkok, I can confidently say that Thailand is one of the best countries to enjoy females of all varieties. What I'm going to share here are some of the best venues in Thailand that you should plan your first—or next—trip around to avoid the tourist traps and maximize your gaming outcomes.

1. Royal Crown Avenue (RCA): Bangkok

While many of the tourists and backpackers are crowding Khao San Road in Bangkok for the cheap booze buckets, many of the local Thais and expats will be partying on weekends in the club and bar district known as Royal Crown Avenue (RCA). A short cab ride away from the main downtown area of Sukhumvit, the RCA district has many bars and clubs where you can find a high volume of mostly local Thai girls dressed up and out for a fun night.

Your best bet is to hit the indoor/outdoor hip-hop club called Route 66. The good thing about RCA is that most of the local Thai girls that frequent this venue are from the middle class and higher, so English will not be as much of a barrier.

The outdoor area at Route 66 is a great place to approach.

2. ARK Bar: Koh Samui

For one reason or another, Koh Samui tends to get overlooked when people plan their Thai island-hopping experience. Many focus on the Full Moon party at Koh Phagnan (which has become much more commercialized in recent years) or on the eastern coast with Koh Phi Phi.

However, Samui has yet to fail me in terms of being one of the best venues to game in all of Thailand. Many of the clubs and bars are along the beach, have a more “nightclub” feel conducive to game, and hands down the best is ARK Bar. Open seven days a week, you can hang out at the bar, dance along the pool or beach, and enjoy the high volume of both Thai and foreign girls. ARK Bar is simply a can’t miss.

Nightclub-style game on the beach at ARK Bar Samui.

3. Songkran Festival: Old City Chiang Mai

The Thai New Year in April—otherwise known as Songkran—is the biggest holiday in all of Thailand. The entire country takes a week off to drink, party, and engage in the famous "water fights" with Super Soakers. Songkran can be enjoyed anywhere in Thailand, but if you're looking for the best place to both party and game with a high number of both Thai and foreign girls, then the city of Chiang Mai is your choice hands down.

Chiang Mai is a Thai college city by nature, and its Old Town hosts one of the most packed Songkran parties in Thailand. There are simply dozens of options, from staying in a hostel and partying all day with foreign girls you might meet to going to one of the many packed nightclubs and bars.

Just the fact that you can "approach" a girl by dousing her with a bucket of water and striking up a conversation makes Chiang Mai Songkran one of the top gaming options—both day and night—for foreign guys new to Thailand.

Loading...

Both day and night game are options during Songkran in Chiang Mai.

4. Amsterdam Bar: Koh Phagnan

Many Thailand novices mistakenly assume that the best place to score on the beautiful island of Koh Phagnan is during one of the famous Full Moon parties on Had Rin beach. Even the Half Moon parties in the jungle have been gaining popularity and fame. And while it is possible to meet girls at these parties, they are often packed with many male tourists, and girls will tend to give off the "snobby backpacker" vibe.

Instead, try a better day game option in the form of Amsterdam Bar, which has one of the most beautiful sunset views on Koh Phagnan. Amsterdam Bar is situated atop a mountainside, so you'll have to hike up a wooden staircase. At the top is an open-air area with a bar, tables, sofas, and the option to purchase joints as well. Just go to the bartender and use the word "smoke."

The result is a lot of people hanging out, conversing, drinking, smoking, and enjoying the sunset. Girls at Amsterdam Bar tend to be more foreign, but you will find the occasional group of Thai girls. In general, girls there are in a good mood enjoying the good vibes, so it's an easy place to approach, and even if they're not interested, they might still chat about where you're from, their trip in Thailand, and maybe even where they're hanging out at night.

Use Amsterdam Bar to get a magnificent view of the sunset, employ some day game, and potentially set up an evening cocktail rendezvous at a beach bar or two near your bungalow to seal the deal.

Try some foreigner day game for a change of pace at Amsterdam Bar.

5. Ratchada Train Night Market: Bangkok

Hands down one of the best methods and venues of approaching local Thai girls will be at any type of open air market. In fact, I know several guys how have met their wives and girlfriends by simply approaching them at a market and expressing basic interest with minimal Thai language skills.

When it comes to markets, you can either day game at an open-air market, where girls will be there primarily for shopping and hanging out with friends, or hit one of the night markets, which will have a more festive atmosphere with open-air food stalls, restaurants, bars, and even small clubs.

One of the best markets going for game these days in Bangkok is the Ratchada Train Night Market, which is right off the Thailand Cultural Center subway station. The Train Night Market is geared towards youth, with many scantily clad young Thai girls out eating and drinking alcohol. You can employ some day game tactics at night, approaching girls

who are sampling food stalls, or pop into one of the many makeshift bars and clubs packed with younger local Thais.

Markets are best for those looking to game with the locals.

So if you're planning your first trip to Thailand—or looking for something different on your next one—try some of these off-the-beaten-path venues for a unique experience, greater exposure to local Thai girls, and overall greater odds of gaming success.

5 Reasons Why You Should Never Date A Girl In Recovery

February 18, 2018 | by Theo Westmark | Link | Original Link

"Recovery" is the term most associated with people who are in current addiction treatment or who are sober but continue in some form of sobriety program. The most common of these is the Twelve-Step program associated with A.A. and N.A., though less common alternative methods exist.

After working in the medical field for four years—including six months of supervising addiction treatment—I've come to the firm conclusion that no man committed to his betterment and happiness should seriously consider romantic involvement with a recovering addict.

If while pursuing your routines, a chemically-conditioned waif falls into your lap with the result that you bed her, don't stress. Men are not typically derailed by a one-night stand. It is the girl a man invests some measurable amount of his energy and resources into that ends up harming him.

However, if you are tempted to think that a formerly fiending woman may be a viable source of long-term happiness, then here is what you need to know.

1. She Is Damaged

Not all drug use is equal, and the occasional Xanax popper, weekend boozer, or weed hound is a far cry from an all-out meth, heroin, or benzo junkie. That aside, if she has been through one or more treatment programs, then consider her damaged. Her health may make a recovery if she maintains sobriety, but there are other factors that will take longer to heal, if they even can.

She will likely have legal, financial, and emotional burdens to foist on others for some time to come. Whether you believe her condition is a legitimate “disease” or a simple cascade of bad decisions, your choice should be easy. Steer clear.

2. She Is Psychologically Unstable

According to stats from SAMHSA, approximately one in four American women have a mental health disorder and around 13% (one in eight) actively use illicit drugs. Combine this research with the NESARC finding of 50 percent drug or alcohol dependence among women with mood and anxiety disorders.

Correlation vs causation is uncertain, but the result is the same. Your rehab snowflake who is doing so well in her sobriety likely exists on a cocktail of anti-depressants and mood stabilizers that would make Rob Zombie a zen master.

As the gap between Western woman's biological wiring and her social reconditioning grows wider, so will the rise in her psychological instability and therefore her dependence Big Pharma, sadly. The route taken for America's addicts and mental health patients is rarely one of holistic therapies, lifestyle changes, and radical self-improvement, but rather a shift from legally prohibited drugs to prescribed pharmaceutical dependency: all part of a *$35 billion per year* addiction/psychiatry industry.

Rudimentary knowledge of pharmaceuticals and discreet intel gathering from her bathroom cabinet or open purse could be considered tools of necessity. Remember, she became an addict due to a confluence of things like trauma, neglect, and an addictive personality. Those issues don't go away simply because the primary addiction does.

3. She Has A History Of Sexual Indiscretion Proportionate To Her Drug Use

Loading...

This is a lady who makes bad choices. A few hardcore recovery girls will confess their Wittenberg door list of junkie spears, surrendered to in search of getting a fix. It's all in the past! More likely though, she will tell you how her addiction was a solitary issue and fail to mention that she managed to always secure goods from her dealer when the money wasn't there. Multiply that by number of drugs of choice, places lived, and years of use and you'll start to see the bigger picture.

Also, addiction replacement is almost guaranteed in many treatment programs where

chain smoking and chain fornication become therapy. This of course presents both health concerns and also exacerbates any underlying mental health issues she already has. Bottom-feeding is never a good thing. To thine own self (especially down there) be true.

4. She Is Socially Lost, Unreliable, And Will Detract From Your Status

Imagine the most frustrating aspects of the ten worst girls you've ever been with, and I'll give you a girl in recovery that exemplifies them all. Can't hold legitimate work? Check. Self-absorbed? Check. Flaky behavior? Check. Health issues? Check. Add to this the likelihood of garish and nonsensical tattoos, carousel proclivity, and a disrespect for men under the guise of feminist self-empowerment, and you'll get the idea.

5. She Will Likely Relapse And Return To Past Modes Of Operation

Most research is in agreement that recovering addict relapse chances stand between 50 to 90 percent. It’s slightly higher for women than men, with a 30 percent chance at long term success by NIH stats. Her most vulnerable years for addiction will be between 25-29, which loosely coincides with her late peaks for dating, pregnancy, and establishing a career and/or family.

If you do proceed with a woman in recovery, it may go well initially, as she will be eager to please and looking for affirmation. Best-case scenario is she flakes early on or ditches you for a white knight who will support her victimhood and protected person status.

With some girls, the worst case scenarios will be obvious: health issues, court drama, financial problems, stripper past, ex-dealers, Che Guevara tattoos etc. Such warnings would certainly harbinger the abuse, STDs, rape accusations, or mental breakdowns to come.

The scarier scenario is that she evidences few of those things and you, compelled from the depths by some buried evolutionary scarcity response, relent to your hungry beta scavenger and settle in for a long psychodrama with mediocre rewards.

Think you're the one who will rescue her? Best to pass.

Yes, a functional society should offer a genuine assisted pathway for repenting derelicts to reform and reenter civilization's embrace. Sadly, our current civilization with its madness, decline, and greed hosts an addiction/psychiatry industry which churns out broken women* not fit for the well-developed man.

Caveat emptor.

How Archaeologists Changed History To Herstory

February 18, 2018 | by Narmer Bull | Link | Original Link

Academic research on ancient Egypt is dependent on public interest. We call the Western public's fascination with our subject "Egyptomania." So in order to generate funds, researchers must be reactive to popular trends.

This means that every year, you will be informed of some monumental news from Egypt in order to maintain top-of-mind awareness. The problem with this scheme is that when there's no new knowledge, Egyptologists will revise old topics and themes, repackaging them to suit contemporary trends like feminism, Afrocentrism or climate change.

So instead of getting conclusive answers to legitimate questions on the evolution of our God conception, the origins of writing, or the creators of civilization, you will be continuously subjected to archaeological discoveries related to female pharaohs, black African civilizations, and apocalyptic climate change. It's an exercise in the revision of knowledge to ensure perpetual funding.

Tutankhamun has monopolized western Egyptomaniacal attention since 1922. That's enough time to have established some certainty in his story. But it's the current decade, and the West requires a change.

King Tut, Nefertiti And Akhenaten

The boy king's story has been very boring for some time. Information is ubiquitous enough for him to have achieved a garish level of familiarity.

Is this the time Nietzsche spoke of? When “all the arts and sciences will be overrun and clogged up by shocking dilettantism.”

Nefertiti, however, provides some fresh mystery and romanticism. Her origins are enigmatic. That is, we have no idea about her life until she married the John Lennon of ancient kings: Akhenaten. From that point, she became co-regent and basically behaved like a feminist: warrior queen, artistic and religious revolutionary, divine mother and, as expected, she is considered a exemplar of Western beauty. Even her name means, “the beautiful one has come.”

Briefly, the royal couple’s official story is this: Egyptian civilization was held together by the idea of original perfection. Change, therefore, was understood as a decline from an originally perfect state. This meant that common people were extremely conservative.

Akhenaten and Nefertiti basically assaulted Egyptians with change in order to retain the aura of the crown. Their virtues and special relationship to their god had little relevance or appeal to common people because dramatic change contradicted their foundational principles. Consequently, efforts were made by succeeding rulers to remove the couple from Egypt’s cultural record. And that is when these liberal antecedents became history’s eternal victims.

Agreeable New Research

In Nefertiti, we have a character with a modern feel. Through her, we can refresh Egyptomania for the next century. All we need to do is create relevance, much like they did for Tut in the roaring twenties.

Loading…

The best way to do this is to secure media interest by legitimizing a contemporary cause. Feminism needs to prove that women were oppressed by all men in all locations for as long as genders have existed and in the future.

So here's some new research from the Cradle of Civilization: Nicolas Reeves is a British archaeologist who made world headlines for his agreeable narrative. There is a grey area between the reign of Akhenaten and Tutankhamun. A guy named Smenkhare took the throne and basically bowed to the pressure of the conservatives.

Smenkhare is an obscure figure, and since Nefertiti was a powerful woman, modern prejudices dictate that she must have been Smenkhare. This is despite the abhorrent nature of her initial co-regency and her later attempt to marry a foreigner.

Like the asteroid that murdered all the dinosaurs, Smenkhare (beyond the scope of this article) is a conveniently useful figure to fatten up any hypothesis. But essentially, Reeves is only speculating while pointing to another sealed room in Tut's tomb. Like many others, it's unlikely that the room will ever be opened. So what we have here is a recycled Howard Carter discovery for 21st century mainstream consumption.

Alternative History

With King Tut basically having "appropriated" all that was intended for Nefertiti: tomb, artifacts, and subsequent cultural influence (Reeves 2015:11), Tut Mania should rightfully be Nefertiti Mania, thereby ensuring that Egyptologists have another lucrative century to look forward to. All without having to actually make a new discovery or provide any conclusive knowledge.

The new narrative contains all the mystery, romance and ghost chambers that had faded from the traditional Tut story. By ingeniously weaving separate and inconclusive pieces of evidence together, this alternative history can be used as a rallying point for feminist social justice.

Although it can be convincingly challenged on iconographic, philological, and archaeological grounds, we have here a story of massive appeal. Today's perspective on history is tied to gender politics so we can instantly gratify a popular public need while injecting cultural value back into Egyptology. With the goal accomplished, truth is not a requirement.

Conclusion

New archaeological research offers the same old characters in a repurposed story suitable for current trends and garnering funds. History is now Herstory, and nobody has learned anything new.

If you still use King Tut imagery when thinking of ancient Egypt, you are dated. Cutting-edge research wants you to think of a strong, powerful, beautiful feminist icon: Nefertiti.

She was a victim of fate, buried behind a wall that nobody will ever open. We know nothing conclusive about her and we never will, thereby maintaining Egypt as the leading brand in the history of world civilizations.

I acknowledge the irony of my making Egyptology relevant in the trending manosphere but, like the organized tomb robbing that began almost as soon as elites decided they were taking their wealth with them to the afterlife, there has to be a counteraction for selfish nonsense.

How To Control Your Emotional State

February 18, 2018 | by Malmone Collins | Link | Original Link

The follow article was sponsored by The Pragmatist's Guide To Life.

Whenever you allow yourself to feel or be objected to an emotional state that does not bring you closer to your goals, you have failed yourself.

I recently wrote a book, The Pragmatist's Guide To Life, that shows the reader, without pushing any specific conclusion, how to develop his own answers to the four fundamental questions every human with a shred of intellectual integrity must answer in order to reach his full potential:

1. What do I believe has value in life?
2. How will I maximize those things?
3. Who do I want to be?
4. How do I want other to see me?

In answering the question, "Who do I want to be?", one of the most important factors you must determine is how your ideal self reacts to various environmental stimuli. When do you allow yourself to become angry, sad, or happy? Ideally, your emotions should spur advancement toward your objectives, though for most modern humans, emotions present some of the most powerful, insidious throttles hindering the achievement of their objectives.

It is natural to want to pretend you don't have control over an emotional reaction to an unexpected stimuli. If you allow yourself to believe this lie, you don't have to improve.

This lie permits you to be content with what you have allowed yourself to become. But if you live this lie, you are no better than a Healthy At Every Size (HAES) activist claiming that losing weight is impossible, “so why try?”

The three emotional states you feel

Emotional states (when I use this word I really am talking about Qualia, any feeling) can be broadly categorized into three categories:

- Low Level Qualia
- High level Qualia
- Overlay States (we will talk about these later)

Low level qualia are states like physical pain, hunger, thirst, sexual arousal, or the drive towards an addiction. While there are no doubt hippies out there who pretend they don’t feel things like hunger, the reality is these states are always felt (barring some sort of serious disability, sickness, or condition that blocks these natural impulses). Our option is either to learn to endure them with dignity or succumb to them and take the action toward which they are designed to push us (taking your hand off a red hot iron, for instance).

High level qualia are states like jealousy, happiness, anger, and pride. These are mental states only experienced by social animals and exist to assist you in succeeding within the social world in which our ancestors evolved. You have complete control over whether or not you feel these states.

The part of your brain that determines whether or not you are to feel a high level qualia state is not able to directly read your environmental stimuli. If someone tells you; “You

are pathetic," the part of your brain that determines how you react emotionally can not understand the acoustic vibrations associated with that phrase, nor does it even understand the English phrase "you are pathetic." What it can understand is the story you tell yourself about that phrase.

Essentially, the part of your brain that determines your emotional reaction to a stimulus doesn't speak the same programming language as most of your brain. Before you react emotionally to something, your brain first has to translate the experience into a story. Next, your brain checks that story against your internal identity (a model you maintain internally about the type of person you think you are) and an emotion is generated if your brain believes your internal identity *should* feel that emotion in response to that story.

To expand on the above example:

Loading…

1. You experience someone saying: "You are pathetic."
2. You tell yourself a story in which this person is shaming you in front of your friends.
3. You see yourself as the kind of person who becomes angry when shamed in front of your friends.
4. You output state = anger.

This chain can be altered at a number of points. You could alter the story you tell yourself about the stimuli you are experiencing. In this example, instead of weaving a narrative about this person shaming you in front of your friends, you can tell yourself a story about how they are desperately attempting to look tough by tossing around insults. This would change your emotional output. In short, you can alter your emotional reactions by altering the way you contextualize situations.

Changing how you see yourself

Alternatively, you could change the type of person you see yourself to be. If your internal model of yourself is someone who reacts to being shamed in front of their friends with sadness or by being unphased, your brain will output a state of sadness or nothing respectively in response to that particular narrative instead of a state of anger. The book goes into how to do this in detail and there is not enough room here to cover it, but the general principle is simple: changing the way you see yourself can significantly change your reactions.

Obviously, you could also just modulate this chain reaction by avoiding the experience altogether.

All that said, our experiences are modulated by an additional, significant filter: the overlay state. An overlay state would be something like “being in the zone”, being in a manic mood, feeling irritable, etc. When you brain outputs state = sad, it is really outputting set sad state to X, where X represents the amount of sadness. The amount of sadness you actually experience however is modulated by your overlaystate.

A lower output of sadness is needed for someone in a “bummed out” overlay state to experience the emotion of sadness. For example, a woman in an extreme overaly state brought on through taking certain hormones may experience sadness at even an extremely low level of X and begin uncontrollably sobbing over something that would ordinarily be a triviality to her.

Some of your overlay state is set at birth and doesn’t modulate that much. This is where the concept of a “happiness set-point” comes from. This is the theory (supported by some studies) that an individual always eventually returns to a certain level of happiness, whether they win the lottery or develop a series illness.

However, to at least some extent, overlay states are malleable—mostly through lifestyle

changes oriented around health. Most what we can do to alter overlay states, such as exercising, eating healthy, doing productive work, and socializing, is not pleasant in the moment. Nevertheless, a few moments of unpleasantness will make positive emotional states much easier to achieve.

I therefore encourage you to take careful stock of your emotional reactions and ask whether they are working in your favor. If not, you can begin to shape them by:

- Changing your experiences
- Altering the narratives you tell yourself about your experiences
- Altering your internal self model
- Changing your lifestyle to create a more favorable overlay state

These are the simplest ways to modulate your emotional state.

The Pragmatist Guide To Life delves into this topic in quite a bit more detail. I will have the price set to less than a dollar for the next couple of days for ROK readers should you find this compelling and want to explore the concept in greater depth.

All money earned from the book goes to The Pragmatist Foundation a non-profit foundation dedicated to forcing people to take responsibility over who they have allowed themselves to become. **Click here to learn more about the book.**

Stop Being So Thirsty On Instagram

February 19, 2018 | by Mike Samson | Link | Original Link

Instagram has always been a watering hole for chump-like males. While it can be a great tool for picking up chicks, Instagram is single-handedly facilitating the rise to fame of thousands of (talentless) women. I'm here to even a playing field that has descended into chaos. I'm here to stop the chump.

The chump is the guy who *actively* follows girls on Instagram. He likes all their photos. He "slides" into their DMs to tell them they're "gorgeous." He repeatedly comments on their pictures with rocket ship or fire emojis while having hilariously low chances of hooking up with the girls.

If you engage in this sort of chump behavior, stop it right now. If you happen to be friends with a chump, I insist you make it known to them, in no uncertain terms, that they're hurting the common man's chances while adding fuel to the fires of bitchdom. They must understand that it's a zero-sum game. Here are a few things to point out to your chump friend(s).

1. Don't follow a girl who won't follow you back

Don’t follow this girl

Know what you’re up against; a girl with 10k followers won’t follow back a guy with 149 followers, unless they know him personally (or actually give a shit about him). By following these sirens, as alluring as they are, you feed their narcissism and become just another casualty in the trenches of social media chumpery. Don’t be a number.

2. Use the *like* button wisely

If you toss a cute girl a like, go MIA for a while. Don't feed the bird. This keeps her guessing, or at least piqued. Insta-broads are reactionary creatures, so give them space to react. Sure, some other chump, or even a real dude, could take your place but, in a market this saturated, you need to stand out. There's no guarantee that this will get her attention, but it'll definitely prevent you from looking like a beta-chump cuck-zombie, and feeling like one too.

3. Never comment on her photos

Don't comment on this photo

Unless you've whipped up the ultimate panty dropper or are currently the face of the new Hugo Boss line, I suggest you leave the Instagram comments to her fake girlfriends. For the chump that insists on communicating their despicable horniness in this overtly

pathetic way, here are three likely scenarios:

- She'll (coldly) respond to your comment because she thinks you're an awkward little boy and she feels embarrassed for you.
- She will flatly ignore the comment.
- She will respond to someone else's comment while ignoring yours.

Stay away from the comment section, period.

4. Stop watching her lame Stories

To the men who view every single one of a girl's Instagram stories, what are you accomplishing? The app tells her who views each story. It's as if you're lurking in the shadows stalking her. This removes any chance of her respecting you. You can watch the odd story of hers, but keep yourself busy with developing yourself instead and you won't even have time to exhibit such thirsty behavior.

5. Don't encourage your friends

If you have a group chat with friends of yours, don't be the chump who posts pics of half-naked females all day long. If you have a friend who does, kindly tell him he's a loser in that tone of voice you use when you're joking but not joking.

A buddy of mine was notorious for this, and I honestly can't remember the last time he hooked up with a girl. Subconsciously, he's telling himself that these girls are above him in terms of social status and attractiveness. Also, what kind of a man posts photos of a girl for other men to drool over? It's unbecoming of a gentleman, sounds more like a chump to me.

Conclusion

It's important to remember that there is nothing masculine about salivating over a girl's Instagram profile. Women posting t & a selfies in bikinis, lingerie, or yoga pants have found a way to steal a living largely thanks to social media chumps.

Apparel, nutrient supplement, and pretentious tea companies are some of the many businesses that are willing to sponsor women with large followings to advertise their products. This is how the free market works. I can't blame women for taking advantage of a capitalist system in which everyone is entitled to spend their money however they wish. The fault and responsibility falls upon the hunched shoulders of chumps. Without their attention, not as many girls would have such large and largely undeserved social media audiences. They would be forced to work normal jobs that benefit society.

Mike Samson

Mike took the red pill in his early twenties and ever since has been on a search for truth. He operates his own business, and enjoys working out, playing sports, and listening to classic rock. He surrounds himself with family and good friends, while avoiding deceptive women and weak men.

Masculinity Is Appealing, Manhood Is Better

February 19, 2018 | by Pete Fletcher | Link | Original Link

Return Of Kings' focus is the return of masculine men. But there is dissent about what masculinity actually *is.* Men of all kinds write about women, guns, sexual conquest, and politics. ROK has something to infuriate and delight any man, but it's hard to sort through.

So lets shove aside the clutter and get to the core of the matter, starting with masculinity. What is it? What does it look like? Can we measure it? Where does it come from? Pretty soon we're diving right back into the same old pile of dreck we just shoved aside. Let's not.

I submit that we need something bolder and simpler than mere masculinity. We need a return to manhood.

Manhood

Manhood is the sum total of the characteristics of a man. To a child, manhood looks like daddy. To a woman, manhood is strength and security. To a young lady, manhood appears dangerous, risky, but compelling in some strange way. In an elder, manhood shows as composure, patience and wisdom. To a community, manhood is honesty, trust, and leadership. In a warrior, manhood is strength and discipline in peace time; fierce courage in battle. Manhood is singular but takes on many forms.

Manhood isn't learned, it's grown. Something or someone outside of himself is necessary for a boy to achieve manhood. He doesn't do this on his own.

The progress of a male baby from infancy to manhood hits many obstacles. Some get further along than others and many never make it at all. The failures become mere adults, great big boys. Others are stalled out partway along but no longer moving: part man and part boy in a large body. This is confusion!

Transition

As he approaches manhood, a boy often experiences a defining moment where he leaves his childhood behind and becomes a man. Call it red-pilling if you want, but it's more of an epiphany.

For me, this occurred around age fifteen on a wet horse as a cold driving rain turned into blowing snow while we climbed up beyond the timber line. The horses had ice in their manes and snow dusted the mules. Night was coming and I was *cold.* With many hours ahead before we reached camp, I was in trouble.

My dad was further back, behind the pack mules, and I could just make him out as I turned to ask for help. Only after he told me he had already given his foul weather gear to my younger brother did I see that he was shivering violently. I turned back and I knew

that I had to tough it out alone. Dad had already given his all. It was up to me, and I was ready.

Since then, I'm rarely without proper gear and I've never forgotten that moment. I've since shivered myself after giving gear to a woman or child, because that's what men do. That's who we are.

In the closing pages of Stephen Crane's *Red Badge of Courage* are these moving lines:

> He felt a quiet manhood, non-assertive but of sturdy and strong blood… He had been to touch the great death, and found that, after all, it was but the great death. He was a man.

Not every man experiences such a sudden transformation, but men know the difference between what they were and what they are.

The process of obtaining manhood is mysterious and clouded, but the end result is obvious to everyone. Nobody can grant manhood. No one issues certificates of completion. Manhood is simply observed and accepted. It's easily recognized by anyone who cares to look.

Uh-Oh… Now What?

But what is so easily recognized is not so easily faked. Males who grow up without achieving manhood try to act the part.

You know them. They're confused. They go this way and that and get nowhere. They have no compass and are unpredictable. They talk loudly about their exploits but they're stagnant. They're lions around women and children, pussy cats around men. Their kids sneak around behind them. Their women laugh at them. They want to be seen as real

men but they're clueless. They think their manhood is between their legs.

Thinking about the journey from diapers to manhood hearkens back to what I wrestled with years ago as I tried to understand how one obtained spiritual righteousness. I was distracted by outward stuff crowding out the solution. Eventually, I learned that spiritual righteousness doesn't come from righteous acts (religion), but from a relationship with our Creator.

The journey to manhood is like that. It's a mystery if you try to force it, but it comes naturally if you let it happen. Both spiritual righteousness and manhood are easily and often faked, but the genuine is obvious.

Solution

So I submit that the journeys to manhood and spiritual righteousness are similar. Both require a relationship with the Creator for success, but at different times. The journey to manhood requires a relationship with the Creator for completion. Spiritual righteousness requires it at the beginning.

One whose journey has stalled out will go nowhere until that relationship is restored. And this makes sense. How else could manhood be achieved, except through the One who created man in his own image? If full manhood is to be restored, it's going to start with this relationship.

Weak Female Murders Her “Emotional Support” Hamster, Sues Airline For “Emotional Distress”

February 19, 2018 | by David G. Brown | Link | Original Link

We’ve heard of women hamstering before, but one American woman has hamstered about murdering her “emotional support” hamster. Swift Airlines wouldn’t let her take it onboard a plane, so she elected to drown the hamster by flushing it down a toilet in Baltimore. Instead of taking responsibility for her actions, Belen Aldecosea has decided to sue Swift for “emotional distress” and try to become famous.

The 21-year-old is claiming she had no choice but to murder her hamster before a flight to Florida, particularly as she alleges that a Swift employee recommended she kill the rodent named Pebbles. ROK is awaiting confirmation as to whether Belen Aldecosea would jump off the Brooklyn Bridge if a Swift employee told her to.

Would you bang?

One positive from this bizarre story is that Aldecosea's female privilege, which would normally spare her from the public ridicule she deserves, is yet to kick in and probably won't. PETA is currently up her ass like men up a Brazilian porn star. That said, her vagina will probably come in handy when white knight prosecutors almost certainly decline to file charges of animal cruelty against her.

Whilst Swift Airlines has admitted that it gave incorrect initial information to Aldecosea about being able to take Pebbles with her, this is beside the point. If an organization provides me with false assurances that I can take my pet somewhere, I don't decide to murder it when I cannot bring it with me.

How could she possibly fly without her "emotional support" hamster?

An “emotional support” peacock.

Underscoring the stupidity and attention-seeking of Aldecosea is the fact that, in the end, she managed to later fly without her emotional support hamster. Unlike someone with a legitimate need for an assistance animal, like a blind person, she appears to be all about the attention and feelz. Moreover, even for a mollycoddled young woman unused to personal responsibility, her decision to subsequently go public with talk of legal action is painfully autist.

There is a broader issue at play, especially if we momentarily forget the murder of Pebbles. Very recently, some sort of female artist unsuccessfully sought to bring her “emotional support” peacock onto a flight. Thankfully, she didn’t murder Dexter the bird afterwards. Part of the problem with situations like these is that well-intentioned legislation to prevent discrimination against, say, blind people has been co-opted by social loonies and the mentally ill to try and get animals more associated with Noah’s Ark than aviation onto aeroplanes. I don’t know the specifics of each jurisdiction, yet it is very frequently ***illegal*** for airline staff to ask for documentation about purported “service animals.”

People like Aldecosea and many others reliant on “emotional support animals” are a risk to aviation safety

What comes first, the safety of hundreds of people on a plane or the dubious need for an “emotional support” animal?

I can appreciate, in limited circumstances, that someone with, for example, autism requires an emotional support dog. Of course, I can definitely understand a blind person bringing their guide dog onboard. But serious questions need to be asked about the mental stability of many people demanding that their “emotional support” peacocks, hamsters, and armadillos come onto aircraft with them.

In addition to the risks the animals themselves pose (and the mess when they use the floor or a seat as a toilet), something as minor as run-of-the-mill air turbulence could potentially trigger the unbalanced passengers (medically or otherwise) using these animals. Whatever sympathy you may have for their mental and psychological illnesses, they are undoubtedly volatile individuals, people who in many cases are going to be risks to flights.

This is an extreme case, but it’s emblematic of pampered females around the world

We should be happy that pet-murdering women like this bint Belen Aldecosea aren't so numerous in the world. But let's not kid ourselves and think her behavior is not significantly influenced by a social environment that teaches women they are never fully responsible for what they do. Only a minority of girls will blame an airline for them murdering an animal, though plenty of others will blame their husband when they cheat on him, condone criminal offending by saying they are victims of "abuse," and concoct a myriad of other excuses to explain away their antics.

Belen Aldecosea's principal mistake was that she underestimated society's continuing disdain for the torture and killing of animals. It is unsurprising, however, that at least some girls in her position want to get a payday from their own psychopathy, screaming "emotional distress" and bellowing for a six or seven-figure settlement with a corporation. It works for women who engage in consensual workplace sexual relations and then maintain they were sexually assaulted, so Aldecosea might be forgiven for thinking it can work for her, too. Knowing the US system of civil litigation, a non-remote chance remains that she'll eventually be *compensated* for her terrible cruelty towards an animal.

How To Play Pickup Basketball On Any Court In America

February 19, 2018 | by Alfonso Taft | Link | Original Link

The American basketball court is akin to the barbershop, bowling alley, shooting range, or golf course: one of the last few bastions of masculinity here in the West. The American basketball court offers a place for men to get away from Clown World and access powerful, competitive, group exercise.

The local basketball court is accessible to virtually anyone. You don't need a gym membership; you don't even need a ball. All you need to do is show up in sneakers and shorts. Local outdoor courts usually have set days and times that are popular, while others are more sporadic. Indoor gyms typically have set times or organized leagues. If you show up and the court isn't highly populated, simply ask a local when the popular times are.

Ideally, you need ten guys. Eight is fine for full-court and six works for half-court. You can even play two-on-two, or one-on-one if attendance is low. At the court I go to, there are often ten guys on the court playing and several guys waiting. Sometimes, there are many as fifteen men waiting to get on the court.

Picking Teams

Let’s say there are twelve guys that show up. Teams are typically formed in two specific ways. Players line up and shoot from the free throw line and shoot one at a time. Teams are either decided via “first five,” where the first five guys who make a free throw are on a team, or “every other,” where the first guy to make a free throw is on Team A and the next guy to make a free throw is on Team B, and so on until both teams have five players.

When you miss your free throw, you go back to the end of the line in both “first five” and “every other” scenarios. If you don’t make a free throw, you sit out and are automatically on the next game.

Games are usually played to 11, 15, or 21. Normal buckets count as one point, while shots made beyond the three-point arc are counted as two. Typically, a team must win by two points.

Fouls are called via the honor system. The offense is allowed to call fouls but the defense is not, unless the foul is egregious. The defense can call out such infractions such as traveling or stepping out of bounds. No free throws are shot during pickup. When the offense is fouled, even in the act of shooting, it’s simply their ball.

If you don’t call fouls too often as an offensive player, you will gain respect. If you call fouls too often, the other players will lose respect for you, guaranteed.

The foul honor system is a major source of conflict. Fist fights, shoving matches, and arguments can break out as a result of disagreements over foul calls. The prospect of violence is part of the fun of pickup basketball. You should always be prepared to defend yourself.

You will be educated in tribalism during a game of basketball. When fights break out, sides are divided via tribal lines. It’s not wise to partake in a brawl if you are outnumbered ethnically. Certain ethnicities have a propensity towards the game of basketball because of their innate ability to run, shoot, and steal. Other ethnicities have a propensity for teamwork and strategy.

Some would advise not talking shit, I wouldn’t. If you can talk shit and back it up, it’s something I would highly advise. If you play well and talk shit, other players will respect you more. If you aren’t a good player, it’s best to play hard and keep quiet. If you are on fire, it’s best to remind others. Your teammates will pick up on this energy and feel more confident passing you the ball. There are few feelings that are better than dominating a game and talking shit to your opponents.

The team that wins stays on the court and keeps playing until they’re defeated. For the next game, the guys who were waiting due to failed free throw attempts are now automatically on. Any spots that need to be filled are earned via free throw.

Rules vary from city to city. Having played on courts all over the country, I can verify these are the general rules. A large percentage of American men are well-aware of these general rules and guidelines.

The Benefits Of Basketball

Players sprint, jump, shoot, shove, push, dribble, box out, steal, and foul. Playing basketball, I sweat more than any other workout that I do. At the end of a few games, I’m winded, tired, and drenched in sweat. I leave the court satisfied after competing at an intense level against my fellow men. Shooting a fadeaway jumper and making it is one of most satisfying feelings on earth. Lowering your shoulder and taking it to the hoop, rising above the rim, and finishing—ahh—is sometimes better than sex.

When A Woman Enters The Game

Unfortunately, you will get the occasional female that frequents the American basketball court. When a woman enters the game, the competitive nature of the sport totally declines. Players will stop playing hard, will leave the girl wide-open, or stop playing defense all together. Players on her team will pass her the ball when she is left wide-open, while the man who is supposed to be guarding her neglects his duties. The man who is assigned to guard her won't play hard out of fear of injuring her.

When a female enters the game, your best options are to keep playing to get a good cardio workout, sit out a game, or simply leave, as I do often when this occurs.

In sharp contrast to females playing hoop, always be wary of fat guys. A seemingly universal rule of pickup basketball is that if there's a fat guy on the court, he can shoot. Fat guys are lazy defenders but are often the most devastating shooters on the court, especially from long range.

I advise getting some good basketball sneakers. Players are often judged on their footwear and your teammates will pass you the ball more often if you look like a player.

We are living in an era where American man probably spends more time playing basketball video games than actually playing. My advice is to get out there and play, because you have nothing to lose but excess body fat.

Why Human Resources Hates You (But Not Her)

February 20, 2018 | by Hans Schuder | Link | Original Link

Human Resources hates you and the normal, hard-working, heterosexual guy next to you, but they love the drama queen over in the next cube. They set the stage so that no positive human interaction can occur between you and the girls in your office. Never fear—a good solution to this problem exists.

A quick example: in my branch office of GloboHomo, Inc., this year's "ethics" training was a video. The villain was a white male project manager. He comments to a girl on his team about how she could wear shorter skirts since the weather was warming up. That was it. No grabbing his cod, no proposition of anything; in fact, nothing vulgar at all.

Next, the video showed Blondie's decision as to whether she was aggrieved enough to complain about the project manager's behavior. (As if a real woman would waste a chance to complain about anything!) Of course, the right answer was that she *had* to complain about it.

In addition, a hapless fellow who just happened to be nearby and heard the conversation had an obligation to narc the guy out for the comment as well. Blondie tells a nearby wise Latina about it, and in #MeToo fashion, she concurs that they need to go to the Big Boss, since she once felt uncomfortable about something the same guy said to her.

Mr. Big Boss is a an impeccably dressed, well-mannered, articulate black man. He relates to Blondie in a sensitive and caring manner and makes sure that she feels validated in

her complaint. He sets the wheels in motion to fire Mr. Manager without even talking to him, despite the offender being a technical wizard who has a great rapport with the client, would be hard to replace, and who could hurt the firm by leaving.

In short order, the manager is fired, and it is clear that the hurt *feeeeeelings* of women in the company involved trump any sort of rational discussion of the events. The fired manager is replaced with an obvious beta male who, while not an effective manager, presumably kept his words and eyes and limp dick to himself.

In the mandatory Two Minutes Hate discussion after the video, one millennial office gelding, whose wife won't take his name and who intentionally lives in the ghetto to prove how multicultural he is, started equating the bad guy in the scenario to Donald Trump. The rest of the class agreed, going down a rabbit hole of anti-Trump comments. This was tolerated. My plea that the guy was getting shafted and that his firing would hurt the company was ruled out of order.

By the end of training, the lesson was clear: the firm apparently is willing to sacrifice getting the job done effectively on the altar of keeping the harpies happy. The firm was not going to tolerate banter and was not going to allow the white alpha males of the world to think that they are in charge of anything. Our competitors—who are not such pussies about things—are going to hire away our alpha talent and eat our lunch.

Loading...
These are the ways that HR hates you…

1. Her Word Always Takes Precedence Over Yours

My man in the video was not allowed to defend himself. This is realistic. Men have no real

voice in HR dealings. In short, you lose, especially if she gets some of her SJW girlfriends on the bandwagon. A mere comment or a look—along with the perception that you are not a SJW pussy by the females of the cube farm—is enough. This is especially if you have cavorted with one of the hotter chicks in the office but have ignored the fuglies and fatties.

2. You're Not Allowed To Banter In The Office

If she likes it, all is fine. Until she doesn't. Then there is no statute of limitations for what you said before she got pissed off.

Let's be honest: working in the cube farm for Globohomo, Inc. is a soul-killing experience for the most part. Pleasant interactions with your co-workers can help make the time go by faster, but you better confine your talk to the weather and innocuous sports comments. Anything sexually tinged, even of the mildest manner, is verboten. And politics better not rear its ugly head, unless it is Trump-bashing. And yes, this means that fag jokes are out, too.

3. You Have To Snitch On Your Male Coworkers

You really do not have this option. The only safe course to avoid the wrath of HR would be to report anything that you possibly saw or heard that might be offensive to anyone. Of course, that would make you the office narc. The choice seems to be either be a narc or be ever at risk for not reporting something that a woman thinks you should have.

So, What To Do?

Presuming that you don't want to give in and become a tranny, you need to escape from HR. The solution is leaving the cube farm for a job that allows you to be a man. Men are meant to work with other men to do something useful for the world. If you are a welder or a mechanic or something like that, you will be more likely to be around men who see things as men ought to. You can laugh and joke and have tool company calendars featuring pretty girls hung up in the workplace.

If you become an entrepreneur, then you can select your co-workers to be the people who you want. Just don't ever hire an HR person. If you financially can't just quit

tomorrow, make a plan to escape from Alcatraz with a specific timeline of six months or less. Longer than this, and it's really not a plan, it's just pissing in the wind.

If you already own a business, fire all the diversi-twats in HR, rename it to the Personnel Department, and then hire someone level headed to help recruit and hire. Then, hire for competence and attitude and leave all the political correctness to your competitors.

America was made great by strong men who didn't sit in diversity class before they built the railroads and the skyscrapers and the heavy equipment that made the country. It is high time that the pendulum swung back from the hostage situation where the faggots and fatties of Human Resources are turning aggressive men, the best workers they have, into politically correct pussies or sending them to the unemployment office. Let us hope that Trump leads us there, and men, do what you can to help.

18 Reasons Why You Should Never Date Or Marry A British Woman

February 20, 2018 | by Charlie Powell | Link | Original Link

What I'm about to say will offend some people, most likely women and of the British kind. But you know what? I don't care, because this needs to be said. Hurting some feelings takes a back seat to genuinely trying to help men of all races and cultures to wise up.

British Women are TERRIBLE to date and even worse to marry.

I've concluded that there are eighteen very distinct reasons why you should never even consider dating a British woman, let alone put a ring on her entitled chubby finger.

Before I get into the exact reasons, I first want to discuss why I have such an intense distaste towards them. Long ago, when I started out in game and pickup, I practiced on thousands of women over several years. I was fortunate enough at the time to be living in London in the centre of town, so all I needed to do was step outside and I'd have access to every nationality of woman imaginable.

As the months went on, my level of game increased and I started to notice that women from different countries were different than British women… in a **good way.**

This piqued my interest and so I planned a trip with my pal at the time and ended up traveling around Eastern Europe for six months.

What I found on that trip was that as a British man, I had been dealt a bad hand. Eastern European women were far superior to the skanky peasant British ladies (I use the term "*ladies*" very loosely) and I'd been missing out all these years. I was angry and enlightened at the same time.

Now that I'm married to an Eastern European woman (obviously) I thought this was the perfect time to warn men of the dangers of courting a Brit. So let's get into it…

1. She uses too much fake-up

I'd touch a girls hair only to find that it was extensions. I'd go in for a kiss of the neck and smell fake-tan. She puts her head on my shoulder and leaves behind a layer of make-up.

Or a girl would panic about me breaking her false nails.

False tans, eyelashes, contouring, eyebrows, foundation, lipstick, blusher, eye shadow, eye liner… the list is endless. Expect about an inch of makeup on their faces. **The opposite of natural beauty.**

2. She expects a lot for little in return

They are consumed by the liberal media, gossip magazines, and Facebook/Twitter trends which means they think that they're giving a lot to men, but in reality, they don't offer much at all.

I often hear *"I want a gentleman that treats me right, who's rich, intelligent, tall, dark and handsome"* but **they are fat, ugly, and useless in bed**. Plus they can't cook, have never cleaned, and watch reality TV in the spare time whilst flicking through Instagram or Snapchat.

3. She's not physically attractive

After you've removed the several layers of makeup, you'll find a face that has blemishes, spots (maybe even acne), and a naturally unattractive face.

Not only that, but they are usually fat. As we all know obesity is at breaking point in the West and continually rising. Well in Great Britain, the women love nothing more than to shove a kebab in the face after a night out and then whinge about getting fat… **yet do nothing about it.**

The white Brits as a race aren't really the best looking people in the world as a whole, but the women are especially repulsive I must say.

4. She's incredibly self-entitled

They give off this self-entitled view of the world and **play the victim**, because that's what they think will get them what they want.

Whenever I used to talk to them, I'd feel as though they thought that they had something to offer, when in actual fact they didn't. I later realised it was utter delusion which has been pressed upon them by the mainstream media and idiots like Katy Perry or Taylor Swift.

5. She's very lazy

There is no work ethic in them, they stomp their fat feet and cry like a child until they get exactly what they want. Daddy never made them see why feminism was a terrible ideology, so they grew up expecting to be handed things on a plate. This laziness spills over to all areas of their life: relationships, fitness, health, sex, and work.

6. She's dumb

What's that lady? You want to build a career in law? Well fabulous… what degree are you studying in university? Gender studies? Are you F**KING RETARDED!? Almost every girl I've spoken to that's a Brit has given a stupid reason for choosing their degree.

Not only that, they spent most of their time just pissing about drinking and socialising, instead of working hard and filling their minds with useful knowledge.

7. She watches too much reality TV

We all know that reality TV has taken over our screens and provides us with an endless onslaught of idiots willing to do mindless things in order to promote their z-list TV careers

as reality stars. But that’s not the depressing part, oh no.

These shows are devoured by women of all ages and they actually base their own lives on what happens on the screen, like it’s actually real. They have no creativity, no ambitions, work ethic, direction in life. **They’re just sheep.**

8. She’s overly masculine

These women don’t need a man to do their dirty work, they can do it themselves, because they are strong and independent. Right, ladies? Wrong.

What’s happened over the past 20 years is British women have become incredibly masculine. Gone are the days of feminine women with beautiful long flowing hair and sexy nails, wearing high heels, and smelling scrumptious.

Now it’s bitten-down nubbin nails (if they aren’t fake), half a shaved head, and regretful cheap tattoos that they got whilst drunk in Magaluf with the girls last summer. Horrible.

9. She despises being a “traditional woman”

Remember the women in the 1950’s? Feminine, happy to look after their men and their children, wanting to keep the house looking good, having a meal ready for the husband when he gets home from work.

Well that’s now dead (as we all know in the West). British women don’t want to be slaves (their own words), they are fine on their own thanks. How dare you suggest a woman be traditional, you misogynist!

10. She wants the impossible: a happy family AND fulfilling career

Feminism has done an unbelievable job at destroying women's minds the West. They really think that they can have it all and be happy. That myth is alive and well in the UK.

They have this idea that they can go to school, leave with a degree, fall into a high paying job with little work, find a husband, have a few kids and grow old together. Absolute imbeciles. **You can't have it all.** It's either babies or work… YOU choose.

11. She loves being pumped and dumped by bad boys

Every girl loves a bad boy, but British girls especially. They love nothing more than to open their hairy unshaven legs to every guy that's an arsehole and then complain to their friends when they don't get a text back from them. At the same time, they moan about not being able to find any nice guys and are quick to dismiss them when a nice guy appears.

12. She wants more privileges than men

It's not enough that they are more likely to get a better job than a man due to equality in the UK, but they just don't want men to succeed anymore. Bashing men at any given opportunity. They want everything a man has and more, even then they still aren't happy.

13. She's unhappy if her man is happy

This may be women in general, but a happy man in the UK usually equals an unhappy woman. They will never admit this, but their actions show that if their boyfriend or husband is having fun, they need to do something that will cause them pain in some way.

As a result, they throw things into the mix to get a reaction or to test them. They don't find happiness from within themselves, they find it externally through shiny materials and other people's pain.

14. She's hates anything that is not degenerate and liberal

Women in the UK have shown their true liberal colours since they've been given a feminist platform to show others what they truly feel. Brexit emphasised this BIG time.

They love to embrace the left. So much so, that they dislike anything to do with the right

or slightly right of centre. If you argue in a rational manner, they will shout you down with emotional rhetoric. Their feeling matter more than facts.

15. She’s delusional about finding Mr. Right

Every girl has their “Mr. Right” in their mind and they eventually get close to that guy by moulding their boyfriend/husband over time. British women have this unrealistic idea in their heads that they will find a guy that ticks all the boxes and will give them their dream wedding.

They want “*tall, dark and handsome*”, intelligent, popular, successful and they want their men to live independently. **But what do they offer in return?**

16. She’s terrible in bed

Sex is a taboo subject in the UK, we love it, but it’s not as in your face as it is in the states. The girls there love to dilute their conversations with sexual innuendos and give a good talk, but when it comes down to it… they are **awful in bed.**

No skills, no passion and more importantly they have no self respect. They will make the nice guy wait, but will be more than happy to drop to her knees for a bad boy.

17. She uses sex as a weapon

One of the worst things about British girls is their constant use of sex as a weapon. You see it in almost all relationships in the UK. The woman will say something like *"Ha, well someone's not getting any action tonight"*.

If you're terrible in bed, overweight and ugly… how can you possibly use sex as a weapon? **Yes… the thirst is REAL in the UK.** British men are in serious need of help, which is why the younger generation of men is so split.

18. She thinks being disgustingly fat is "body positive"

Another wonderful idea thats comes straight from the feminist movement and liberal left. If you’re fat as a woman in the UK, you’re not considered disgusting, you’re actually referred to as big boned, plus size, curvy, bubbly or my favourite “*full figured*”.

Because they are lazy, instead of hitting the gym and eating less junk food, they decided it was the fault of men that they are fat and they will have to live with it. Fat is now body positive, not a health risk.

So there you have it…

Now I’m fully aware that I’m going to get a fair amount of hate for saying this about my fellow British females, but I truly don’t care because I’m never going to be romantically involved with them ever again, so it doesn’t bother me. As for men who thought women from the UK were girlfriend or wife material… **THINK AGAIN MATE!** Avoid this country at all costs for native females.

Lastly, I’ve seen a lot of women and weak men actually who comes up with this ridiculous assumption that because I don’t think British women are attractive that I must not be able to get them or that they are “*real*” women.

BAAAHAHAHAHAHA! (picture me rolling on the floor laughing uncontrollably). The delusion is unbelievable to me, especially in the West. **Utter morons.**

Let me know your thoughts and experiences with dating women from my homeland below, I’d be interested to hear your thoughts. If you’re a Brit and you’re married to a British girl… may god help you. And if you’re looking for straight talking advice on how to meet and attract women outside of Britain, take a look at my site PUA Training.

Game Has Never Stopped Working on Girls (And It Never Will)

February 20, 2018 | by Chase Amante | Link | Original Link

The following is a sponsored article from Girls Chase.

Chase Amante checking in again. We're going to take a bit of a diversion from our regularly scheduled promotional activities to dispel a musty old chestnut today instead.

In some parts of the manosphere, there is a belief that "game" doesn't work. It used to be that these guys would tell you it didn't work at all. Nowadays they use a more nuanced argument: it DID used to work, ten years ago. It's just that NOW it doesn't work (anymore). That was a comment in the comment section on my last article… and while I appreciate a bunch of people called that commentator out, I want to address this position directly.

The idea you can learn to socialize and become better with people through experience rubs some guys really wrong. Some of these men have never approached anything as a skill set. The idea of skill building in general offends their "just be yourself" sensibilities. It can also be that these are men who have developed specific non-social skills… and it makes them feel small to see men who've ignored those skills zip around them with girls.

When you've plowed a ton of time into cash, or muscles, or social status, and some guy without any of that gets the girl you wanted instead, it hurts. It can also be that some of these men have sworn off women completely. *These* men would like you to do the same. The only way women will learn to be more pliant, they'll tell you, is for men to boycott them *en masse*.

Whether a guy is a “just be yourself”er or he’s a “muscles/money/status are all you need”er or he’s a MGTOW, the end result is the same: he thinks it’s a waste of time to learn to socialize. Which, of course, as you might guess, I’m going to tell you is wholly and completely ridiculous.

You Want The Results, You Build The Skill

Want big muscles? You learn how to lift. You learn how to feed yourself. You learn how often to hit the gym versus how often to rest. The biggest guys are also the biggest EXPERTS on bodybuilding… find one big guy who can’t write you an encyclopedia on feeding and resting and lifting and I’ll bet you he uses synthol.

Much of this knowledge you pick up as you go. But you *do* pick it up – because you’re interested in it, because you want to excel at it, because you focus on it. You study it, you talk to others who study it, you experiment, you implement. You adjust. You tweak. Your body is your own personal laboratory.

So it is in business. If you want to make a lot of money running a business, you’ve got to be an expert on running businesses. This takes endless study and implementation. You have to learn marketing. You have to learn hiring. You have to learn firing (its own unique skill set). You have to learn customer retention. You have to learn product construction. You have to learn how to advertise, because if you can’t advertise your business will always be limited to the capriciousness of what’s popular now and what isn’t. You have to learn to make things convert. You have to learn taxes (bloody taxes) and what you are legally allowed or not allowed to say, sell, and do.

Even if all you want is a lifestyle business (where you make just enough to pay the bills, then spend the rest of the day on the beach), you will still have to learn much of this. Not

as much as the guy who aspires to a penthouse full of cash and a huge reach in the market, but you're going to have to study, and you're going to have to work. There is no four hour workweek – unless you're on food stamps.

The real four hour workweek.

Just like it is with muscles, just like it is with business, it is this way with socialization. If a guy wants to tell you you do NOT need to learn how to socialize, yet still reap all the results you want, he is not your friend. He's at best misguided; at worst, he's a saboteur.

The successful socializer knows how to bond with people. He knows how to approach new people. He knows how to flirt. He knows how to crack jokes. He knows the right times to touch other people and where and how to touch them. He knows how to take the lead, and when to back off. He knows how to deal with other men trying to tool him or steal his girl. He knows how to go on offense and pluck away a woman he wants whom other guys want too. He knows how to turn around situations that have gone belly up. He knows how to find out all sorts of things from other people, so he knows whom he's dealing with and isn't getting conned. He knows how to invite the women he wants onto dates, to his place, and into bed. He knows how to make a move, and what to do when he encounters resistance. And he knows how to keep women coming back to him again and again, in love with him, devoted to him.

Like muscles, and like business, this is a skill set. It is a DEEP skill set, and it is NOT a casual skill set. You are born with social instincts – but so is every other man. And when you wade into the social arena, you wade into a competition with every other man out there.

Some of those men have muscles or money, but don't know how to use them. Those men are not a threat to you. A few of them have these things, AND have well developed social

skills. These are men you need to watch out for.

Of course, social success depends on two parts. It is one part your fundamentals – that's your appearance, your mannerisms, your movement speed, voice, hairstyle, fashion, physique, nonverbals. And the other part of it is "game"… that is, what you KNOW how to do: all those things we just talked about successful socializers being able to do.

If you don't know how to do these things, you are the fat guy at the gym who figures maybe he'll try the bench press and get jacked. Or you are the impoverished guy with a website who thinks maybe he'll write a few blog posts and throw on some Google AdSense. You've gotta start somewhere, but if a guy never gets more serious than this, his game (be that gym game, money game, or girl game) will never get off the ground.

If you want some science though, here it is: a study of New York state college students found, as we might guess, that the better a guy knows how to successfully navigate mating interactions, the more often he gets laid.

Surprising? It shouldn't be. You'd think it'd be common sense, right?

If you want to be GOOD at something (like getting a hot girlfriend, or getting laid a lot more regularly), you'd think you'd want to STUDY that thing and PRACTICE that thing, right?

Get Part 3 Of My Dating And Attraction Model

I was going to write about compliance this time, and tell you how to get girls to invest more in you. Because what a lot of guys do is spend a lot of time trying to invest in women *themselves*… which is very nice, and women appreciate it, but it doesn't turn them on.

Instead, this became a discussion on whether "game" still works or is out-dated or what. Which is really very silly – we're a social species. Learning the underlying principles of sound socialization will not go out of fashion anytime soon.

Video #3 of my series of One Date videos is now out. In this video, I introduce you to the third part of the SAC formula – a science-based, and extremely thoroughly tested, TIMELESS way to suss out what a girl needs from you to end up in your bed and as your girlfriend. This is the model every successful Casanova caveman from 20,000 years ago

intuitively learned, and that every guy who gets the girl he wants TODAY either figures out or stumbles on by accident. What were care about are the underlying principles here. How you use it, I leave up to you.

Give it a watch, let's get you plugged into SAC, and let's dial your mating intelligence up a bit (or more than a bit)… so you can be one of the guys who gets laid more, and with more of the women he wants, too. Click the image below…

Give this video a watch, and let's get girls to invest in you.

⇒ **Watch The Video And Get Girls Complying With You**

And in a few more days, I'll get one final article for you up, right here at ROK.

Cheers,

Chase Amante

Advertise Your Product Or Site On Return Of Kings

Chase Amante

Chase woke up one day in 2004 tired of being alone. So, he set to work and read every book he could find, studied every teacher he could meet, and talked to every girl he could talk to to figure out dating. After four years, scads of lays, and many great girlfriends (plus plenty of failures along the way), he launched GirlsChase.com. He will teach you everything he knows about girls in one single program in his One Date System.

The Main Purpose Of Large Corporations Is To Serve As The Spearhead Of Marxism

February 20, 2018 | by John Augustine | Link | Original Link

Large corporations are not the antithesis of Marxism—they in fact form an integral part of the Marxist program. If you are like most people you will scoff at what seems to be an obvious oxymoron as corporations have been touted as the capitalist antithesis to communism. However as we will examine capitalism and communism are not diametrically opposed, in fact they are two sides of the same coin. The Janusarial relationship of capitalism and communism is a grand Hegelian dialectic in order to confiscate, subordinate, and permanently solidify control over the people and their property of the world.

Capitalism is where a small group of owners control the means of production (capital) of a country. The term "capitalism" was coined in part by Karl Marx. When most people think of capitalism they think of the "free market," but this is not what capitalism is. According to Marx, capitalism is a transitory stage between feudalism and socialism. Thus according to Marxism, communists need capitalists in order to implement communism.

Communism is where the state controls the means of production, and private property of a country. Thus whomever controls the state can be said to own the means of production and property of a nation. As is evident there is not much difference between capitalism and communism.

Thus Marxism is simply the way people are controlled and their assets seized. Marxism is a fluid philosophy which adapts to the most efficacious means for goal accomplishment.

Marxism does not present itself honestly. Because of its duplicitous nature, Marxism is both the philosophy of corporations and communists.

The role of corporations

The modern idea of a corporation was created in England in the 17th century so that the owners of the corporation could not be sued by investors in the case the corporation failed. Essentially, corporations are legal entities that are created in order to absolve the owners of corporations from being held accountable for the actions of the corporation.

When you achieve what Karl Marx wanted are you not a Marxist?

Most people assume that large corporations work by exploiting economies of scale. Economies of scale is where the increased volume of work translates into lower cost per unit produced. However the economy of scale is largely canceled out by the top heavy, bureaucratic nature of the modern corporation.

How do corporations really work? Central bankers create fiat money which they sell for interest to governments. Central bankers then take interest payments and invest it in stocks. Profit from stocks and corporate profit are then used to buy lobbyists which in turn write laws that give competitive advantages to large corporations. Corporations in turn solicit more investments push cultural Marxism on their workforce. Corporations that get out of line are targeted by the government and foundation groups.

Won’t see this on the corporate news

This is a very simplified expose of the system, but as is evident the large corporation is far from being a bastion of the American style free market is in fact a Marxist institution. Corporations most heavily committed to Marxism, like Apple, Google, and Amazon, see their stock go up. This is why Starbucks CEO like Howard Shultz promotes Marxism—he will attract capital from central banks. This capital comes in the form of stock purchases which drive up his personal stock, thus making him a far more wealthy man. In essence the state takes your money and gives it to a small group of people who control the means of production for a country through their ownership of corporations.

Loading...

Corporations are About Social Control

When the two great communist experiments in collectivization failed miserably in 1930’s Soviet Union and 1960’s China, it became apparent that hard-style communism would never work. Thus, cultural Marxism was born and the large corporation took its preeminence in the Marxist crusade to socialize the West. Corporations use soft-style control and have subjugated the public to accept women in the workplace, feminism, diversity, emasculation, and all the other social ills in the name of the “bottom line.”

When it takes this many people to manage one illegal alien is your business really about the “bottom line?”

The soft style control of the corporation has proved far more efficacious than the hard style control of the Soviet Union. Whereas in the Soviet Union, if you resisted Marxism you were either shot or sent to the gulag. Now if you resist Marxism you only loose your job, house, wife, and have to pay child support, because you don’t have a job you will go to jail and have to deal with the legal system for the rest of your life. Perhaps the Soviet way was gentler. Of course you should take consolation because your corporate boss’s hands were tied after-all, he had to do it! Well if you have to get fired for resisting Marxism how then is a corporation not a Marxist institution?

No matter who you work for or what you do you will have to attend these training's every year.

Corporations embrace collectivization

Corporations exist to separate the ownership from accountability. This philosophy of non-accountability, yet taking credit for successes, is what permeates all aspects of corporate culture because it is the exact purpose why corporations were founded. This is in its essence Marxist as it is a philosophy where the labor is divorced from ownership and ownership controls are divorced from labor. If that sounds too heady it basically means that the corporate structure subverts the nature of ownership to become how Marxists desire ownership to be.

Corporations are essentially run by boards from the top to the bottom. This is a microcosm of the fundamental problem with corporations which is that they are legal creations designed for people to avoid responsibility. It is very rare that you will find a person actually be directly in charge of anything. Their title may say that they are, however most of their actual work is sitting around in meetings, preparing for meetings, sending emails, or enforcing one of the plethora of regulations. Thus it becomes apparent that the real purpose of many corporate employees is to take the part of the secret police.

Human Resources: here to enforce the parts of Marxism the KGB wouldn't. WARNING: camera subtracts 60 lbs.

As was stated earlier, the free market is not capitalism. However, without an advocate for the people, the free market descends into monopoly capitalism.

5 Ways We Can Prevent School Shootings

February 21, 2018 | by Sten Morten | Link | Original Link

Since the days of the Columbine High School massacre, the school shooting has been a frequent fixture in the lives of the American people. Not a year goes by, it seems, in which we are unaffected by one of these violent events. Predictably, the most recent school shooting in Parkland, Florida has summoned the familiar media cries to ban firearm ownership and to castrate our boys via pharmacological means. And predictably, the media has it all wrong.

School shootings are overwhelmingly carried out those boys disadvantaged in today's sexual marketplace. The school shooting is not the fault of guns or an inherent flaw in the male psyche, but the inevitable result of a contracting sexual marketplace in which female hypergamy is unleashed in terrifying form upon the Western world.

Boys shoot up schools because they're not getting laid. Time and time again, the perpetrators of these massacres are boys who aren't getting laid and have no idea how to get laid. From the 2007 Virginia Tech shooting to the 2014 Isla Vista killings, we have witnessed the bottled rage of young men furious at their lack of sexual prospects erupt in real world carnage.

If these massacres are to stop—and it is unlikely they will as society plummets further into matriarchal discord—we need to implement novel and groundbreaking solutions. Here are five ways we can prevent school shootings.

1. Hire Male Teachers

It is no secret that today's boys are without male role models. Western governments endorse and actively fund single motherhood, robbing many boys of paternal guidance in their most formative years. Furthermore, the vast majority of schoolteachers are women, leaving boys without father figures both at home and at school.

Paternal guidance is essential in the development of boys. Without fathers, boys are more likely to end up in jail or drop out of society altogether. While the rise in single mother households is unavoidable in our current cultural climate, school systems would do well to hire more male teachers.

A male teacher who exhibits genuine masculine values can serve as a role model to wayward boys. Through teaching, he can impart the knowledge and wisdom he has gleaned over the years and guide boys through their difficult adolescence. Likewise, a good coach can function well to impart the virtues of manly discipline and grit to his athletes. It is little surprise that all of these school shooters were not part of a sports team.

2. Same-Sex Boarding Schools

Sending boys and girls to separate, sex-segregated schools could work wonders by allowing them to develop lasting friendships with other boys and girls, respectively. The majority of school shooters have been loners and outcasts, and one would do well to ponder if their actions could have been prevented had they but one true friend.

American boarding schools have traditionally existed only in New England, but it would be a welcome addition to have them in other parts of the United States. Here, boys can learn to be boys without the corrupting influences of girls and female schoolteachers. Moreover, boarding schools can arrange events like dances to teach boys and girls proper courtship.

The greatest advantage of these same-sex schools, however, is to give boys and girls access to the wisdom of their older peers. As families get smaller, it is becoming more unlikely that kids grow up with siblings. An Older Brother program implemented by these schools could put boys on the right path by pairing them with an upperclassman to act as their mentor.

3. Make Brothels Great Again

In many Latin countries, teenage boys are often brought to brothels to gain their first sexual experience. Although a prostitute will never love you back, casting off the weight of teenage virginity does well for a boy's self-esteem. It is not unreasonable to state that many school shooters were frustrated at their lack of sexual experience as they entered adulthood.

A safe, regulated brothel system would also compete for attention with the girls in the general population. It is unclear how this has affected the sexual dynamics in countries where prostitution is legal, but their sexual dynamics cannot possibly be worse than what we have here in the United States.

In a best-case scenario, a legitimate brothel system would permit boys to dispel their sexual frustrations and force girls to up their game if they want male attention. If a boy were to graduate high school a virgin and desire sexual experience before he entered university, there would be a well-regulated outlet for his natural urges. However, school shootings are not just about a lack of sex, but about a lack of love as well.

4. Holographic A.I. Girlfriends

As artificial intelligence continues to improve, it is likely that we will have virtual companions in the near future. While these companions will never usurp the position of a dear friend or loved one, they could potentially function as a makeshift social outlet for the desperately lonely. In less than a decade, we will witness the first iterations of these virtual companions on the market.

Many science fiction films have depicted what these virtual companions could be like. *Her (2013)* depicted a virtual companion named Samantha, an intelligent female voice that the main character eventually falls in love with. Samantha acted as a friend and trusted confidant to the main character; it is probable that today's Siri or Alexa could evolve into something similar.

The most compelling depiction of a virtual companion to date, however, is found in *Blade Runner 2049 (2017)*. Here, Joi serves as the fully-customizable holographic girlfriend of the main character. While this technology is still a ways off, putting a human face to these virtual companions could give the lonely some form of—albeit simulated—social interaction.

5. Ban Schools

School shootings all have one thing in common: they occur at schools. Schools have devolved from educating and training the young for adulthood, to indoctrinating kids with far-left ideology and regulating so-called toxic masculine behavior. With e-learning and the vast array of educational materials available on the internet, the days of public schooling are numbered.

The primary function of schools nowadays is to credential the youth for the job market. An employer could instead provide the requisite training or a self-learning program could teach you everything you need to know. Homeschooling is also on the rise, and it tends to produce better-educated students than the public school system.

In the future, school shootings might not even occur because nobody will attend public schools anymore. And that is a future truly worth fighting for.

Jealous Feminists Put Hardworking Formula One Grid Girls Out Of A Job

February 21, 2018 | by David G. Brown | Link | Original Link

Formula One executives have buckled under pressure from crazy cat lady feminists and banned the time-honored tradition of grid girls. A number of industrious young women with pert busts and sensational buttocks are now without gainful employment. Instead of the glamour of well-dressed promotional girls during car races, audiences will be subjected to the *children* replacing them (creepy much?).

Why ban this?

In defense of the ridiculous decision, Formula One's press release stated that "we feel this custom does not resonate with our brand values and clearly is at odds with modern

day societal norms." An apt comparison can be made between this hot air and the moronic path taken by the NFL to tacitly condone players "taking a knee" to protest non-existent "racial bias." As our readers will well know, the latter situation led to horrendous television ratings throughout the 2017-18 football season.

Masculine men like Formula One driver Lewis Hamilton have also been in the firing line of late. Hamilton reasonably suggested that his young nephew shouldn't wear a princess dress, only to be attacked and vilified by SJWs and major media outlets. So a boy wearing a dress doesn't faze Formula One executives, right when adult, non-naked women can't promote and appear at races. Go figure.

Many subsequent reactions pointed out the irony of banning grid girls yet not banning the antics of someone like Kim Kardashian, who's already made enough money for a hundred lifetimes:

> According to Feminists Kim Kardashian can get naked and it's empowering but walk on girls and grid girls are degrading □□♂□□♂□□♂□□♂ pic.twitter.com/c5I6uSqadq
>
> — David Mcmenamin (@DavidMac1211) February 2, 2018

Loading...

While we're at it, why don't we ban feminists like Emily Ratajkowski from cashing in on their looks?

After all, grid girls use their earnings to pay for rent and food, whereas Ratajkowski uses money made from showing her boobs for first-class plane tickets and other luxuries.

Demasculinizing sports

At the same time, the West's least politically correct major spectator sport, darts, has abandoned walk-on girls. These girls don't bare their breasts and don't even dance suggestively–they just *walk*, with any dancing whatsoever usually done by the eccentric male darts players:

Like with grid girls, walk-on girls threaten the feminist imperative. Both sets of women are perfectly feminine, take pride in their appearance, act in an ostensibly demure but sometimes cheeky way, and play second fiddle to the men they accompany during arena entrances or on winners' podiums. God forbid that these specimens might actually serve as role models for how females should look and behave.

Leave spectator sports to the fatties and just go to the gym

Show me a man watching more than a couple of hours of sports a week and I'll show you a man who should be at the gym.

The NFL is already preparing for a major correction due to the abysmal public response to players "taking a knee." Formula One faces the same dilemma. If it does not act to reverse the present damage, it will become increasingly irrelevant to male viewers, as will darts. Watching sports games is fine, but the recent retrograde changes to sporting brands is a perfect opportunity for self-improvement-minded men to regularly turn off the TV and hit the gym more.

Why spend money or time on team merchandise and games when you can be benching your way into landing your next hottie and, better yet, working towards your life's mission. Executives from many sporting leagues evidently think you're a disgusting sexist pig anyway, so let's not reward them and the poisoned SJW politics they now endorse.

You Need To Start Meeting Women While Salsa Dancing

February 21, 2018 | by Evan Rush | Link | Original Link

Average to hot women have it easy. Everywhere they go, men flock to them, offering to lift heavy things, buy them dinner, show them around town, laugh at their unfunny jokes, like their excruciatingly trivial Facebook posts, and tell them what unique and extra special snowflakes they are.

The men that do this are called orbiters, and these luckless yet useful idiots, although never successful in their hidden agenda to bed or romantically entangle themselves with the fair maiden, do cause one massive unintended consequence. What they do is so inflate women's self-esteem with their constant moist, nearly teary affirmations of her demigod status that they begin to believe it.

"Yes, I really am an extra special snowflake! Good things always come my way. I demand only the best, because I'm worth it!"

Yes, m'dear, of course.

Then for some reason, these snowflakes come to a salsa class, and poof! Where has all the attention gone?

Normality

She is still smokin' hot, but so are many other girls there. More importantly, since she is a beginner, she literally can bring nothing more to the table other than her looks. And although men will still dance with her, she can command nowhere near the attention she

otherwise would in a generic club or bar setting. Her snowflake status is melted, like the snows of yesteryear, gone from this earth.

In a way, salsa is more “feminist” than many might first think. Women in salsa of all ages are valued primarily for their skill, not merely looking good and swaying to the beat with iPhone in hand. It is, in a sense, a meritocracy of movement and rhythm.

The men—certainly the better men—will have plenty of women willing to dance with them, and simply do not have time for snowflake worship. The less talented men, only starting in their salsa careers, might fawn upon ladies that are also beginners, but sadly, beginner men are totally invisible and irrelevant to women, and their male attention—springing forth as it does from a bottomless well of loserdom—isn’t worth much anyway.

What woman wants the attention of an excruciatingly mediocre and uncoordinated dude? Only women on the lowest rungs of the social ladder, that’s who, and even then…

Adaptation

Fortunately (or perhaps hubristically) for women, their ability in dance is frontloaded: a little goes a long way, and initial progress is indeed swift. Soon, they can ascend to the lofty and rarefied airs of the intermediate dancers. But this requires a level of dedication and practice to achieve. It is surely a shorter trip to the “inters” than for a man, but one worth taking.

I have seen ladies attend salsa as beginners, often in a group of friends, none of whom would be ignored in a bar or nightclub in the normie world. The ignominious and embarrassing juxtaposition of being attractive yet receiving very much suboptimal levels of attention ensures they do not return. Only the women who have a desire to learn and an appreciation for dance can break through this wall of narcissistic dark space.

The conclusion, therefore, is that those who do remain are *well-filtered,* usually of some intellect and depth, and not the kind to rely on their looks to coast through life. This is the reason that the women of any salsa scene are as good a place as any for a man to seek a companion of equal capability in life.

Let me mansplain you something: dance is the great inverter of intergender relations. An ugly man can transcend his shortcomings and become a man of considerable attractiveness with diligent practice and the requisite flavour on the dance floor. An attractive but talentless or vapid woman will be unable to draw attention of the magnitude she is used to in civvy street.

Both of these re-adjustments are equal in value and opposite in direction, effectively cancelling each other out like matter and antimatter. This restores balance to the universe.

Opportunity

This has profound implications in society. If more men learned to dance, it would decrease female entitlement, narcissism, and self-involvement. If more men learned to dance, it would knock many women from the pedestal they occupy. The ladies of this world could no longer merely command male attention by showing up; they would need to be able to dance or develop a personality.

Nor would cries of sexism or patriarchal oppression hold any water, because a dancer can either dance or not. There are no lies on the dance floor. It actually holds women to the

same standards as men: ability and competence, which is why modern feminism (with its focus on privilege and victimhood) and salsa are largely incompatible.

This may seem like a harsh assessment, but only at a superficial glance. Those who stick with and prosper in the salsa scene are worthy of respect. The world is too full of people who claim to be proficient but are merely smoke and mirror practitioners with little substance behind their claims.

Dance, and partner dance in particular—such as salsa—is one of the few places where looks don't matter (so much), background doesn't matter, who you are doesn't matter, and showing up expecting to be treated above anyone else just because your waist-hip ratio is in an optimal range doesn't count for much either.

It's fair, but not equal. It's a free market of talent where you are limited only by your ability and effort regardless of gender, and there can be no redistribution of skill. It is a scene where men of depth and ability can prosper.

Conclusion

What does a man who has taken these words to heart do? As with anything, be the contextual alpha: be the top ten percent of dancers in your own scene. It is obviously easier to be a big fish in a small pond, but the bigger the pond, the better the fish, so scale your efforts and lesson expenses to your desires, natural ability and local environment. Traveling abroad to congresses are a great way to learn in an anonymous environment.

But I would stress not using dance as a pick up joint *per se*, but rather as a school where one learns human relationship dynamics in a natural way. All of human intergender dynamics are there to be seen, and if a man attends with his eyes open and a strong knowledge of game, he can learn as much as he needs.

But primarily, due to the filtering effect of the meritocracy of the dance, it is a good place to seek non-SJW converged, non-permanently offended snowflakes. It is the hidden

motherlode of red-pilled women who want men to lead and are happy to be led, both physically in the dance and elsewhere in life. So, go find some lessons, listen to the salsa music to get the rhythm, and invest the time needed to divest yourself of your two left feet. The rewards are there for any man who can get it.

How To Start An eBay Side Hustle

February 21, 2018 | by Francis Gorecki | Link | Original Link

About seven years ago, I was approached by my brother with the opportunity to go 50/50 with him on buying 60 non-running motorcycles from an estate. He had sold moped parts on eBay before, but this would be a large jump forward and he wanted help pulling it off.

This is how I started my side job/hobby of selling on eBay. Looking back, there were definitely mistakes that we made, such as allowing parts to get damaged and using inefficient tools for disassembly, but the adventure has paid off. Choosing to sell on eBay and learning a few tricks of the trade can be a rewarding experience for men both financially and personally.

These started it all.

Why Choose eBay?

In my case, I want to make some additional income, but I have a salaried day job, so I do not have the option of overtime. I do not have a trade such as plumbing or car repair that I can do on the side for an hourly rate, and I have not developed my artistic or entertaining skills enough to create things that people would pay for or have a side gig in a band. I have a young family, so spending weekends or nights away from home at a part-time job would be problematic.

Selling items on eBay is flexible from a time standpoint and it diversifies my income. It also provides me the opportunity to tinker with motorcycles and cars, which develops those skills and provides alternate activities to my professional desk job. I've learned enough to do car repair on my own vehicles and having a side hustle can be an interesting topic in casual social situations.

How To Start

A good way to get familiar with selling on eBay is to sell some personal items that you are no longer using. There is no additional outlay for inventory and it is stuff that you already know something about. Once you are familiar with the picturing, listing, and shipping aspects of eBay, you can move into a niche and grow your eBay business.

I recommend that you pick a market that you either already know about or that you have an interest in. I have found that it is helpful to have a limited scope or unusual aspect to help differentiate what I am selling. For me, I liked mechanical items and wanted to learn more about motorcycles, which eventually led me to working on cars and selling car parts.

I have found that it is helpful to buy items from a source with a small market such as Craigslist, a local online auction, or a swap meet and then get a larger market by selling on eBay. Monitor the market for your items on Craigslist and on eBay. eBay has a filter for selecting sold listings, which is my preferred way of checking the value of items.

Pick a specific price type of item such as carburetors from GM and Ford muscle cars. Learn the models and brands and the types. Learn what is stock, what is aftermarket and what is desirable. Then, on Craigslist, pick a specific price range such as $50 to $100 and check daily what is available. You'll get an idea of what items are a good deal. Choose a couple items to purchase and list them. As they sell, you can use a portion of your profits to start building up your inventory.

16 Tips For Beginners

- Start off small and refine your purchasing and listing processes.
- Focus on items that can be shipped easily and learn to estimate the shipping cost.
- Save boxes and packing material.
- Compare your listings to similar listings to make sure that your pictures, pricing, and descriptions are in line with your competitors.
- Set goals and monitor your progress.

- Try to develop an overall formula. For example, when making a purchase, I aim to pay less than ten percent of the sales price of the items and figure that shipping and eBay fees will be about 30 percent of the cost on average. Depending on your niche, your formula will be different.
- Keep refining your processes and gaining knowledge. I focus on listing items above $20, I've found that picturing then listing items in groups of 10 helps me, and I can often use the Sell Similar feature to streamline listing items from the same vehicle.
- Stay organized and set up an efficient work area. I built a basement storage space and have plastic totes to store my parts by vehicle.
- Make a modest investment in tools.
- Spend five to ten minutes a day browsing your chosen niche on Craigslist.
- Make connections with suppliers. I have an auction company in the area where I monitor their auctions and a friend who regularly sells me items that he comes across.
- Don't be afraid to try expanding your niche. I once bought random brass pieces at an auction for $2.20 and sold them for $45 on eBay.
- Keep good records of expenses. This is handy for tax time.
- Buy off-season items or buy in bulk.
- Check Craigslist, auctions, thrift shops, rummage sales, the curb, and your closet for things you can sell.
- Items that are too large to ship can be sold locally on Craigslist.

1977 Celica GT Liftback Success Story

My best find was a pair of rusty 1977 Celica Liftbacks at an auction. The only other bidder was a scrapper, and I paid $400 for the pair. I paid the scrapper $100 to move them. To date, I have listed over 400 parts and sold nearly 250 which has netted over $7,000 in profit.

Some of my best sales were selling the tail lights for $280, a front grill for $200, the rear window for $180, an engine head for $150, side view mirrors for $150, and hood hinges for $140. Selling the remaining parts should earn another $3,000 in profit, yielding a $10,000 total profit on two cars that otherwise would have been scrapped.

Scrap metal or precious metal?

Summary

Selling on eBay can be a flexible way to earn money and expand your knowledge base, and for some, it can turn into a part-time or full time career. It might help you turn the corner financially and get out of the debt slave/wage slave grind. By picking a market that you are interested in working in and learning that market, you can carve out your niche on eBay.

There are more in-depth and advanced articles online about selling on eBay, but oftentimes, the biggest hurdle is just getting started. As the saying goes: nothing ventured, nothing gained!

Why Is Buzzfeed Aggressively Normalizing Hardcore Porn?

February 22, 2018 | by Jean-Batave Poqueliche | Link | Original Link

The *BuzzFeed* network, owned by Kenneth Lerer and Jonah Peretti and home of the lowest testosterone levels on the Internet, now focuses on segments trying to normalise the lives of the deranged male and female prostitutes selling themselves on camera.

They recently took a step further by uploading videos where they advertise the clothing line of video procurer and greasy peddler Greg Lansky, while portraying the "porn lifestyle" as normal and fun for their young audience.

Degrading Perversion Is Now Hailed As Cool

Buzzfeed has endorsed Lansky, a particularly deviant character I have written about in the past, as “mainstream” by flaunting his brain-dead circus animals and his cuckoldry-celebrating jewelry and underwear brand on their sites.

The specimens portrayed are described as “adult performers” when the terminology should be “video prostitutes,” but BuzzFeed has to appeal to its audience: soyboys who fantasise about other men banging their love interests.

The women that are celebrated for following this self-destructive path of pseudo-fame,

STDs, and narcotic-fuelled binges have collected several hundreds—if not thousands—of sexual partners. Their mental issues come out clearly after only a few seconds of hearing them talk.

Pushing Filth To Sabotage The Sexual Marketplace

The useful idiot (in the purest subversive, cultural Marxist sense of the term) that is the pornographic "actor" accepts money in order to perform sexual tricks on camera, like a circus dog. And instead of being rightfully denounced, the MSM actively tries to normalise them, even allowing them to reach a relative status of fame. These types of parasitic people can only thrive in a gangrenous society.

The long-term goal of pornography is total addiction, the normalisation of marginal sexual practices, and the total disruption of healthy human sexuality. It is a psychological weapon, hence why it is free and has became so widespread.

These women are paraded for a little while and will be replaced once they age, but the rights to exploit their holes online will go on forever and will still be profitable long after they are dead. When they are confronted with these facts, male and female pornographers only follow one line of defense, very feminine in nature: they argue with holes.

"If he doesn't do what I want,
I will threaten to make my holes unavailable".

That is the typical way how women equalize the playing field, which in their inferior minds makes them believe that they argue on the same level as men.

However, in online discussions their holes are worthless to win an argument or to make others think that they argue on the same level as men, so they slightly adjust their tactics:

1. They proxy threaten the unavailability of female holes ("You will never get a girlfriend", "You're a virgin / beta / foreveralone").
2. They try to convince others they argue on the same level as men by insisting they are men ("I'm a guy, by the way").

A Worrying New Low, Even From *BuzzFeed*

This propaganda arm of cultural Marxism is now consolidating its position as Cuck Central, a pact signed with the degeneracy of pornography. A channel specifically designed for a large audience of younger viewers with a short attention span. These videos will be seen by tens of thousands of children, who will be brainwashed into seeing pornography as trendy and harmless.

But there is some good news nonetheless. This morbid fashion, just like *CuckFeed* itself, is bound to die, for their business model of shocking, overtly-partisan fake news and absence of substance simply does not sell. Those videos will also stop at some point, not because they will change their agenda, but they will soon run out of useful idiots to film, considering the fact that video prostitutes tend to end their lives rather frequently.

Buzzfeed is *Gawker* on life support. But even a wounded parasitic beast can still cause harm.

These premature deaths are only the tip of the iceberg.

Truth Eventually Triumphs

Unfortunately, the main flaw of Buzzfeed is their will to churn out as much degenerate material as possible in a short amount of time without being able to filter it all, involuntarily revealing the truth. The tidal wave caused by the "soy boy" meme is a vivid example.

With this particular push to portray pornographers and prostitutes being normal and well-adjusted people, this video "13 Confessions From People In Porn" in particular shows that the pornographic cattle is not as happy as they advertise. Here are some transcripts:

> - "No one that knows me would ever guess I get paid to do amateur porn. They all think I'm so proper and ladylike."
> - "I'm glad I don't work in porn anymore. I'm so disgusted with myself and I don't ever want to be reminded of what I have done."
> - I have no idea what to tell my family when they ask me what my career is. I'm a porn star and there's no way I can open about it."
> - "I am a porn star. I hate my life and that sex isn't special to me anymore. The industry ruined me and my life."
> - "Being a porn "star" is interesting. I have hundreds of guys professing their love every day. I'm pretty sure if they really knew me, they wouldn't say it."
> - "I'm a porn star, but I don't know how to tell my new girlfriend. I'm afraid I might scare her away."
> - "I distanced myself from all my family and friends because I'm too embarrassed to tell them that I'm a porn star."

Mystery murder of married mother, 42, who led a double life as an 'online exhibitionist' with a $15.99-a-month subscription website before she was found dead and half-naked in street outside her Alabama home

Porn Star Olivia Nova Found Half-Naked at Time of Death

War Machine sentenced to life in prison for attack on porn star ex-girlfriend

Boyfriend 'took his own life' months before porn star's death

Fifth young porn star dies: Drugs, despair, suicide factors in deaths

'Deaths of despair' are rising among adult film actresses

Porn star found dead after spending holidays alone

These inflatable clowns are some of the most insecure and deranged people on the planet. Slaves shipped from one dirty couch to another, drowning in a world of self-abuse, petty rivalry, rampant drug abuse, and STIs. When it is not a drug overdose or AIDS, the main cause of death for those individuals is suicide due to"online bullying," a code word for "people call me out and speak the truths I don't want to hear and my ego is too fragile to cope."

Those women are replaceable fleshlights that a certain type of pornographer trade between themselves like baseball cards, before discarding them once they are not bankable anymore due to excessive wear or age.

All cold. Guess the worms are the only ones having a gangbang now…

La Pornographie, Furoncle D’une Société Malade

We live in strange times. The fact that MSM outlets like CNN do positive articles about cuckolding (a practice that existed in the past but was always considered shameful before a joint effort of porn peddlers and progressive elites pushed it to become mainstream) shows it.

What are the wages of porn? A few thousand dollars, quickly spent on drugs and designer bags, for a lifetime of jeers, ostracism, shame brought on your family. and hearing the Ankou’s cart park outside earlier than expected. But it’s okay, because betas are masturbating and praising you even if the maggots have long since eaten your corpse.

Do not listen or believe any word that comes from liberals about pornography. Do not take porn for anything other than it is: a cult of self-destruction and a tool to control the masses.

4 Ways That Game Improved My Life Outside Of Sex

February 22, 2018 | by Troy Francis | Link | Original Link

There are very obvious benefits to learning game and becoming a player: an ability to meet and attract higher-quality girls, a varied sex life, and greater choice and autonomy. However, acquiring game skills has also benefited me hugely in terms of my overall development as a man. Here are four ways in which game has improved my life overall.

1. Greater Confidence

It is very difficult to build a skillset of going up to girls you don't know, introducing yourself, and then trying to persuade them to have sex with you without that having a knock-on positive effect on your confidence.

Any man who has done hundreds or even thousands of day or night game approaches,

each time having little idea what kind of reception he will receive, will slowly but surely build up a forcefield of rock-solid confidence around him.

This is of course hugely beneficial, with implications running far beyond the mere practice of picking up girls. Before I started game I had built up my confidence (which had been sorely lacking in childhood) to a certain degree, but game really supercharged it. Now, there are very few social or business situations I walk into that will phase me in any way.

2. Speaking Skills

Game puts you on the spot and forces you to be articulate and interesting in front of strangers. It also requires you to be, variously, persuasive, funny and able to read another person's reactions.

Short of taking improv classes (fun, but a bit lame) it is hard to think of another discipline that hones these skills to the same razor sharp degree.

What all of this has meant is that my speaking ability has improved across the board, from one-on-one conversations to presenting in front of large audiences. I also record a podcast and make videos as part of my content creation work: there is little doubt that my ability to do so has come about as a result of having approached and had conversations with so many different girls.

3. Imperviousness To Rejection

Rejection is not nice: none of us like it. However, when you've been rejected hundreds, even thousands of times over the years as part of your game 'career', it does start to become a little less troublesome.

Why? The simple law of numbers. When I get turned down by a girl it matters little to me in the big scheme of things, because I know that I'll be talking to another in a few moments' time.

The great thing about game, and life, is that you always get another spin of the wheel.

An ability to withstand rejection—and in fact to thrive off of it—is an essential skill to learn for so many aspects of life. Rejection is constant, whether you are asking girls out, starting a business, writing, singing, painting or whatever. Not everyone is going to like everything you do: that's just a fact of life. But if you can shrug it off and keep going then you will see gains in the longer term. Practicing game helped me to understand that.

4. Entrepreneurialism

Game is entrepreneurialism in the sexual marketplace. By that I mean that the player creates his own opportunities for sexual success from nothing rather like the entrepreneur creates a business from scratch by offering something of value to the world.

A proficient player should be able to wake up in any city in the world, not knowing anyone, and have a pipeline of interested girls in his phone and several dates lined up after a few days. Contrast this with the average Joe who relies on being chosen on Tinder, or even worse, through his social circle. This guy could be waiting weeks or even months for his next lay, whereas the first doesn't rely on the whims of the market, but gets up and makes things happen instead.

This imperative to initiate activity rather than waiting for fortune to fall in one's lap is key to entrepreneurialism. This is why a lot of guys well known for their game skills go on to be self-employed instead of working for the man. I myself now have my own business, having given up corporate work at the end of last year. I think it very unlikely that would have happened had I not spent so much time working on my game, which has honed my appetite for risk and my ability to go out and create opportunities for myself rather than waiting for things to happen.

Many guys rightly say that a life spent focused solely on chasing girls is a wasted one: I agree with them. Every man must have a mission that goes beyond the mere satiation of his carnal urges. However, it is also true that doing game in itself fosters behaviours and qualities that are extremely useful in building a bigger, fuller life. As such it would be foolish to regard game—which tests one's character more than most pastimes–to be a trivial or wasteful activity.

SPLC Targets ROK For Leftist Violence By Smearing It As A “Male Supremacist Hate Group”

February 22, 2018 | by Matt Forney | Link | Original Link

It looks like the Southern Poverty Law Center, one of America’s premier ethnic shakedown organizations, is running low on donations again. This week, they announced the new edition of their “hate group” list, a record of supposed white supremacist, far-right terrorist organizations operating in the United States. Most notably, *Return Of Kings* has been added to the list as a “male supremacy” organization, alongside men’s rights’ group *A Voice For Men:*

> Also, for the first time, the SPLC added two male supremacy groups to the hate group list: A Voice for Men, based in Houston, and Return of Kings, based in Washington, D.C. The vilification of women by these groups makes them no different than other groups that demean entire populations, such as the LGBT community, Muslims or Jews, based on their inherent characteristics.

This isn’t the first time that ROK publisher Roosh has been targeted by the SPLC: in 2012, he was named in one of the organization’s “Intelligence Reports,” alongside *A Voice for Men* and my old site *In Mala Fide.* Roosh later cited the experience as the final push that moved him to the dissident right.

It’s clear that the SPLC is going after AVFM and ROK in an attempt to scare liberal old biddies into giving them more money, because their attack was sloppy and poorly-handled. For example, the SPLC claims that ROK is headquartered in Washington D.C., even though it’s a website with no physical address or full-time employees.

> They put a web site with no office on a map♂ pic.twitter.com/H8hTw6iUee
>
> — Roosh (@rooshv) February 21, 2018

Most hilariously, the SPLC's dossier on alt right figure Richard Spencer confused him with *Robert* Spencer, the founder of *Jihad Watch,* suggesting they outsourced the research to a stupid intern.

Having said this, the SPLC's attack can't be handwaved away. Much like the Anti-Defamation League, the SPLC's purpose in naming organizations as "hate groups" or individuals as "extremists" is designed to incite violence against them. Ever since the election of Donald Trump, the left in America has become increasingly violent, and the SPLC's list is a dog whistle to antifa and other groups with the intent of hurting or possibly killing Roosh and other targeted individuals.

How The Southern Poverty Law Center Fuels Leftist Violence

The SPLC, ADL, and other related organizations like to masquerade as legitimate news organizations who are merely calling attention to violent, anti-government extremists, but this is as far from the truth as possible. In actuality, the SPLC functions as an intelligence-gathering operation for antifa and other violent leftists, compiling dossiers on chosen targets with the implicit message of, "It's okay to hurt, maim, or kill these people: they're Nazis/misogynists/homophobes, after all."

"Hate group" lists compiled by the SPLC have been used by leftist criminals in the past to identify targets for assassination. For example, in 2013, a left-winger committed a mass shooting against the Family Research Council after seeing them named by the SPLC as an "anti-gay" group. More recently, we've seen leftists openly going after Republican politicians and public figures, such as the attempted assassination of House Majority Leader Steve Scalise by Bernie Sanders supporter James Hodgkinson.

This is not the first time that figures in the dissident right have been targeted in such a

way. Last summer, the ADL released a hit list of alt right and alt lite figures such as Mike Cernovich, Richard Spencer, and myself, with the purpose of inciting violence against us. In response, Cernovich and several other alt lite figures launched the #ADLTerror hashtag on Twitter with the intent of bringing attention to the fact that their lives were now in danger.

Lies, Damned Lies, And Lists

Moreover, the SPLC can't even be consistent with the criteria it uses to evaluate "hate groups." In response to their attack on *A Voice For Men,* ex-feminist filmmaker Cassie Jaye (creator of the documentary *The Red Pill*) revealed that in 2016, the SPLC told her that AVFM didn't fit their criteria for a group since they lacked an "official group policy," due to the fact that AVFM was just a website and a forum. The SPLC has not yet revealed to Jaye why they changed their policy.

> Men's rights website A Voice For Men has now officially been listed a 'Hate Group' by the Southern Poverty Law Center. I have more questions than answers. Hopefully the SPLC will get back to me to clarify what has changed. https://t.co/EF2N4ycNDM pic.twitter.com/u30MW45DWs
>
> — Cassie Jaye (@Cassie_Jaye) February 22, 2018

Regardless, it is clear that the international left is ramping up for a broader attack on the dissident right. While the alt right was the focus of much of the left's ire last year, the movement has been weakened due to systematic deplatforming, failed stunts such as Charlottesville, and personality conflicts between its major leaders. As a result, the left now feels confident in going after sites like *Return Of Kings* that had previously been out of the line of fire.

Dissident right and alternative media figures should prepare themselves for an onslaught

from the globalists in the coming months. With the 2018 midterm elections coming up and the Russia investigation in the U.S. unraveling, the left is looking to strike out at anyone who challenges their power or narrative. As the SPLC's actions show, they are not above physically hurting or killing their enemies to achieve their goals.

5 Most Annoying People At The Gym

February 22, 2018 | by Larsen Halleck | Link | Original Link

What masculine man doesn't like going to the gym? It's one of the few places in the modern world that functions as something of a male-only space (more or less), and serves as an opportunity for you to thumb the eye of a modern society that demands you be weak, pasty, and effeminate.

With that being said, as great a place as the gym is, there are people who make the gym going experience worse with their idiocy, bullheadedness, or combinations of the two.

1. The "I Came to the Gym to do a Bodyweight Routine" Guy

Like this, but imagine some goof flailing his arms around in the middle of a bunch of people lifting weights.

First of all, as somebody who ends his weightlifting routine by finding a quiet corner of the gym to do bridging and twist stretching, I understand this may come off as somewhat hypocritical. Let me explain.

This is the guy who doesn't lift a single weight, but still manages to take up the entire gym doing his body weight routine. Laying in the middle of the room doing push-ups or bridges or whatever, or doing lunges across the entire gym, being a big awkward "thumb" impeding everybody else's workout.

Bodyweight exercises are great, but if you're going to do them, either stay home or at least find an empty room at your gym/health club, instead of being in everybody's way.

2. The Grunting and Screaming Guy

35 pound tricep extensions are *really* hard and necessitate loud grunting and groaning

Again, a disclaimer: I am aware that when you exhale on the eccentric motion, the air is often “forced” out of you and you involuntarily grunt. That is acceptable.

No, I’m talking about the guy who screams loud enough for the people in the next gym over to hear, the guy who “hypes” himself up by bellowing long, multisyllabic sentences and all in all does everything in his power to embody every stereotype of the pigheaded gymgoing douchebag. Bonus points if Grunty here does all of his barking and bloviating while doing quarter squats or half a bench press.

3. The Gym “Sage”

This one is a little more difficult to explain, but I guarantee any steady gymgoer has seen this guy before and would recognize it upon seeing it.

This is the—often dad-bod having and thoroughly unimpressive—guy who, rather than actually doing his own exercising, deigns to waddle around the gym giving people thoroughly useless "advice" to people that are actually putting in the sweat equity. And even if he manages to have a halfway decent physique, I think we can all agree that workouts are moments of concentration and genuine toil—only women and gay men see the gym as some sort of socializing opportunity.

This is the guy who gives the sage advice that "machines are better than weights because weights are high impact," "do heavy cardio after heavy weightlifting," or other well-meaning incompetent soundbites.

Needless to say, this is also the same sort of guy who will spin ill-advised "gym game" by awkwardly sidling up to cardio bunnies running on the treadmill and trying to talk to these women gasping for air. The problems with this should be obvious to anybody reading, but quite obviously they're not to this genius.

4. The Glamour Muscle Douche

"HAW HAW WHAT ARE YOU DOING GETTING READY FOR DOGGYSTYLE?"—Actual quote I've heard at my job.

First of all, let me say that while as a matter of principle I am against the idea of working out purely to get big useless fluffy beach muscles that only exist to get women, I do understand the temptation, and somebody who works out for that reason but minds his own business is somebody I can tolerate.

No, when I refer to a glamour muscle douchebag, I mean a guy who not only works out solely his glamour muscles, but will mock and disparage anybody that does functional training—and I mean things like pointing and laughing at somebody who uses the squat rack to *gasp* *do squats*!

Luckily, this guy can be shut up pretty quickly by challenging him to do the human flag, but that's little relief to those who are weak but are genuinely making an effort to improve themselves. As somebody who's job entails keeping the gym a pleasant

environment while also avoiding it becoming a complete hugbox, this guy is a major wrench in the works. Bonus points if he has a “towel shirt” like the guy in the featured image.

5. The Uninhibited Old Man

And last but not least, this guy, who is simultaneously the least and most annoying guy on this list. He doesn’t mean to bother anybody, and would usually prefer to just leave everybody alone but… y’know, the wrinkly shrivelled penis and pockmarked skin is a bit taxing on anybody’s mental capabilities. While I wonder what, exactly, the age is when you stop giving a damn, just avert your eyes and you should be fine.

The gym is a great place, just don’t go out of your way to make it suck by doing any of these things.

Why Women Will Never be As Successful As Men

February 23, 2018 | by Devin Stone | Link | Original Link

This month will be, in many ways, another month for me in which I am trying to better myself. It's another moment in time when I approach my goals with renewed resolve. I look over the books that I plan to write, the blog articles that have yet to be finished, and what I really want for myself.

Once again, I rearrange my computer's bookmarks and then ensure that those bookmarks are perfectly synced with all my other bookmarks. I aim to be more productive and promise myself that I will stick to it "this time." I re-prioritize my goals and vow to finish the Jordan Peterson book that I bought before I go off buying other books, and then make a list of the other books that I promised myself that I would finish as they remain unread on my Kindle.

Most importantly perhaps, I resolve to clean up my internal state and my own mental environment. I resolve to get busy and put my nose to the grindstone and work on that business, rather than sulking because I've gone two straight weeks without a piece of ass in my bed.

That's when Elon Musk shot is cherry-red Tesla Roadster into outer space. I was watching on YouTube at my desk at work when it happened.

My first thought?

See, a woman would never do this.

It was my first guttural reaction in a time of vitriolic, violently militant feminism. "The Force is Female," is the new calling-card of the once mythological and majestic series we came to know as *Star Wars*. That's over with now. #MeToo is the war cry of every once-rejected actress who slept her way to the top – of course there are some real victims in

the mix, but I suppose it is now the solemn duty of "all men" to sort it out, repress ourselves and behave differently. It is the time of the relentless utopian ideals of the postmodern left – rammed down our throats. Cat-calling and unsuccessful flirtation with women is now punishable by fines in certain parts of the world. In Canada you can be fined or imprisoned for using the wrong "gendered pronouns."

A woman would never launch a perfectly good car into outer space. That is, if she let you have the damned two-seater you always wanted in the first place. Women are too practical. She would tell you to sell it and invest that money in your child's education or use it for a down-payment on a new Ford Explorer, or whatever she wants or deems to be wise and reasonable.

Women exist to preserve the home and the status quo. Men break the mold. Why are over 95% of all U.S. patent filings made by men? Because the first world is *still* so horrifically unfair to women, even though they make up the majority of all high school graduates, college graduates, and advanced-degree graduates at all levels? Because without the "patriarchy" keeping women down, everything would be just-so, perfectly equal across the board – in STEM fields, in computer technology, in driving race cars, and in bodybuilding?

No. Elon Musk shot his car into space because it is **BAD ASS**. It's a middle-finger to the establishment. It's a "fuck you" to NASA, to everyone who said that he would never make it or said that it couldn't be done. It's a testament to personal genius and unwavering, obsessive ambition – and those are qualities that women, quite simply, *just don't have*.

The next thought that I had, as I watched Mr. Musk's sports car go cruising through space:

This is like that scene from Heavy Metal!

Who could forget that beautiful corvette dropping out of that space shuttle, all to the iconic sound of Riggs' "RADAR! RADAR! RADAR!" I thought to make a YouTube video of the Tesla footage to that soundtrack, but of course some GUY beat me to it.

I was inspired to rent *Heavy Metal* that night. It had been a while since I'd last seen it, and I must tell you, it is fantastically refreshing. In an era of all-female Ghostbusters, all-female Ocean's Eleven sequels, talk of a female James Bond (let the eye-rolling begin), and a Mary Sue replacement for Luke Skywalker, *Heavy Metal* was inspired by the magazine of the same name, from a once-proud era when it was okay for men to consume content *for men*.

Heavy Metal the film, like the magazine, was full of bare and sexually eager big-titted babes. They were the reward for the man's adventure-well-done.

The film concludes with a female warrior, a "bad ass chick." One might conclude that this is somehow a testament to feminism, but you would be wrong. The "bad ass chick," so often depicted in fiction as the female warrior, or she-barbarian, or Red Sonya, or the heroine found in so much of Japanese anime, is a *male fantasy*, not a statement of liberal progressivism.

We men like the idea of a female bad-ass. She could do bad-ass things with us and would appreciate our ambition or the obsessive projects that we want to get ourselves in to. The perfect partner in crime. When a Frank Frazetta type drew a female badass, that was the expression of a strong sexual fantasy.

"Body of a woman – brain of a man, now we're talkin'."

Please don't be fooled by women who (all too often) attempt to create the pastiche or aesthetic of "bad assery" in their social lives. Women love to take photos of themselves shooting guns, taking MMA classes, or oven partaking in a cage fights or becoming professional fighters themselves. But you and I both know that this is *not* real combat. The theater of infantry-driven warfare? Women suck at that when compared to men, and that's common knowledge.

Hot chicks take photos of themselves shooting guns because they know (as in *Heavy* Metal), that you fantasize about it, and they can captivate your attention in this way, and assert their sexual power over you by captivating your attention.

I don’t fall for women’s bullshit when they boast about how tough they are, or how they aren’t afraid of anything because they take kickboxing classes. They live in a world where they can say whatever they want and do as they please without reprisals. It’s easy to talk about how tough you are when you’ve never been in a real fight before or face a real person who truly means you harm. Most women have never had the experience of having to nut-up and punch that bully in the face so that she can return home with her pocket change intact.

The modern female ego is a construction of falsehood and mirage. They put some shit together with a glue-gun, sell it on Etsy and deem themselves “entrepreneurs.” Meanwhile, Elan Musk shoots a perfectly good car into outer space BECAUSE HE CAN and BECAUSE IT IS BAD ASS.

So, the next time you are faced with a lonely moment, and are doubting yourself, get to work. Know that women don't respect the *process* at all, and only the output of that process in the form of money, fame and material goods. Women don't have any respect for a man with dreams and ambitions of creating a wildly successful privatized space exploration company. Those dreams are incredibly important and are worth pursuing, as you can plainly see.

Do it, get it done and become successful. Then, if you wish, find a good woman, have a quality relationship with her and don't marry her. Despite what the courts think, she is *not entitled* to half of your hard-earned work and success, because if she were in your shoes and given the same opportunities, she would not have done as well as you did. If she had been there while you were working on it, she would have nagged you to stop, "do something realistic," and become jealous of your distracted attention. She would also secretly be fearful that you very well could become successful one day and leave her for a hotter, younger and nicer girl.

You have the potential to be a Bad Ass and women do not. Know that and sleep easy tonight, even if it's by yourself.

10 Pictures That Show Google Is Using Race To Rig Their Search Results

February 23, 2018 | by Max Roscoe | Link | Original Link

Google has been under increasing criticism for its censorship, feminism, and authoritarian practices. Here is a sample of what they've done recently:

- Fired James Damore for speaking out against its pro-diversity culture (despite hiring 35% Asians in a country with a 3% Asian population).
- Worked with governments to censor speech.
- Met with Obama White House weekly, more often than some Cabinet members.
- Continued development of terminator robots, likely in coordination with government Military / Industrial Complex funds under the cover of AI research.
- Supported a variety of feminist, degenerate, anti-family policies, and politically correct propaganda, including the #MeToo hysteria.

While in fairness, the company quietly removed its duplicitous "Don't Be Evil" company motto in 2015, men should recognize that doing business with the company is helping further lead Western nations down the wrong path.

But perhaps the greatest danger Google presents is its subtle rewriting of history. In an age where few know how to research facts in encyclopedias or libraries, most information comes from the internet. Finding misinformation online is extremely easy, but the real danger is when large institutions begin misrepresenting facts and creating their own narratives.

In 2017, Google came under fire for returning image searches that were politically correct fantasies of what the user was searching. When I first heard about this, I laughed and figured it was a bug or hack that someone exposed, that would be corrected later that day or certainly that week. But here we are, in the Current Year, and the search results below speak for themselves.

1. White Man White Woman

Don’t believe me? Try it yourself.

On the other hand, Asian couple returns:

Hmm…

2. Burglar

When you hear of a burglary, do you begin looking for Frenchmen with wispy mustaches and designer shoes?

3. Prisoner

100% of page 1 images are white men

Whites are statistically 35% of the US prison population, and that includes Hispanics.

4. Happy American White Couple

Notice anyone missing from these images?

5. Lazy Man

Did you know all lazy men are white?

5. Rapist

These men may be rapists, but the overall impression is very misleading

6. American Scientists

Typical guy in any scientific lab, really.

7. American Father

I'm surprised it wasn't Homer Simpson

8. European Inventors

7 out of 8 are clearly not European

9. Unhappy Couple

Clearly, she should stop dating "rapists" and "burglars" and start dating a "scientist"

I'm sure this is all just a shoddy (((algorithm))) and despite search being Google's primary product, and the images only affecting straight white men, surely at least one of its 88,000 employees is aware and the company is going to fix this bug any day now (2 years and counting).

Of course, when the problem involves a minority, like when gorillas began appearing in searches for black men, Google's response is immediate. When it involves a conservative white man, don't hold your breath.

But until then, if you, like the majority of young Americans today, are not a white male, and have limited interactions with white men, seeing these images would make you think white men are lazy, untalented, violent criminals, and rapists that make poor fathers. The next generation is being programmed to believe a narrative of history that is in sharp contrast to the truth.

If all individuals have different talents, what are white men good for?

Even I greatly overestimated the number of blacks in America—they are less than 13% of the population! But their media exposure is far greater.

Herstory

The changes in my lifetime may be minor, but imagine a child being born today in majority non-white America. When her teacher asks her to research and write a story on scientific discoveries, she may be presented with an entirely different set of facts than what you and I know today.

Of course, America is less a nation and more an economic zone, but that is a topic for another day.

Idiocracy–is it that farfetched?

While it can be tempting to use Google's products, particularly since they are free, take the time to look for some alternatives. Startpage and Duckduckgo are good search alternatives.

4 Things You Need To Know About Cryptocurrencies

February 23, 2018 | by Jack Griffin | Link | Original Link

2017 was the year when cryptocurrencies became mainstream. Bitcoin lead the race and went from trading for under $1,000 in January 2017 to an all-time high of over $20,000 in December 2017. Now everybody seems to be talking about Bitcoin, with mainstream media running nonstop sensational stories on the subject. It is obvious to me that they don't have an idea what they are talking about. To get relevant information about cryptocurrencies, you simply can't rely on sources like CNN or CNBC.

In this article, I will give you some basic information that will point you in the right direction. I discuss this from an investment perspective and will not go into the technical aspects. If you want to learn about blockchain technology (and you should), there are many sources available online.

Here are a few things you need to know before investing in cryptocurrencies…

1. If Bitcoin Crashes, It's Not Because It's A Bubble

Can Bitcoin go up to $1 million? Will Bitcoin crash down to $500? These common questions are impossible to answer. Instead, let's have a look at some facts.

Bitcoin is not a tulip. The tulip bulb bubble is one of the most well-known market bubbles of all times. It occurred in Holland during the early 1600s. Speculation drove prices on tulip bulbs to astronomical levels. Quite often, you hear comparisons between Bitcoin and the Tulip Bulb Bubble in the media. This is not a relevant comparison, because while there was an unlimited supply of tulips, the supply of Bitcoin will always be limited to 21 million coins.

If Bitcoin goes down, it will probably happen because something better comes along. What will happen if the Swiss government decides to launch a SwissCoin, for instance? It could be backed by gold and anonymity would be 100 percent guaranteed (Switzerland values personal integrity). My guess is that the smart money quickly would move from Bitcoin to a currency like that.

It is only a matter of time before a state introduces a cryptocurrency. In Russia, President Vladimir Putin has already expressed interest in a crypto ruble. I wonder what will happen with the economic sanctions against Russia when this new crypto is introduced.

2. Look For Limited Supply And Unlimited Demand

Currently, there are over 1,300 cryptocurrencies available over the Internet. More and more are being introduced through ICOs (Initial Coin Offering). If you want to participate in an ICO, you must be able to screen out interesting candidates that you can take a deeper look at. You do this by answering two questions.

1. Is there a limited supply of this coin? There will never be more than 21 million Bitcoins. That's an example of limited supply. But there are also coins that have no limited supply. The coin rate can be inflated forever. Don't even think about investing in such a currency.

2. Is there an unlimited demand for this coin? Does the coin solve a big enough problem that a lot of people have? If it does, then demand for it could become limitless.

Understand that none of these currencies are stocks from a legal point of view. They may look like stocks for the inexperienced investor, but that's an illusion. This market is completely unregulated. You don't own a share of a company. There are no annual reports. Scam artists and organized crime are definitely moving in.

I'm certain that 95 to 99 percent of today's cryptocurrencies will fail within a few years from now. But cryptocurrency is still the future! This sounds like a contradiction, but it is true.

The current market situation is similar to the dotcom bubble during the late 90s and early oughts. Many companies that called themselves Internet companies were nothing more than glorified mail order firms. In some cases, they weren't even that. They managed to attract billions of dollars in venture capital funding, but eventually the crash came and most of them disappeared.

But even if most of those companies were part of a bubble, the Internet itself was not a bubble. And a company like Amazon was certainly not a scam.

Cryptocurrencies are the Internet of money. The Amazon of cryptocurrencies might be out there right now and trading for around eleven cents. If you find it, you can get very wealthy. But you have to do your homework first. Investing takes time and dedication.

3. You Must Educate Yourself Before You Invest In Anything

The crowd is lazy and ignorant. Instead of reading books about investing, they prefer “stock tips.” And now, they are all running after Bitcoin. I recently saw an online ad for some Bitcoin trading service and it said something like “Buy Bitcoin now before it crashes!” What a brilliant idea! “Book a ticket to the Titanic before it sinks.”

The takeaway here is that you need to educate yourself before you make any kind of investment. But you also need to be very selective with the sources you seek out for your education. Investigate who is behind the information you receive. Think for yourself and think critically. Don’t buy into some bogus scheme that advises you to day trade Bitcoin.

4. Technology Advances Forward, But Human Nature Stays the Same

Warren Buffett says that you should be “greedy when others are fearful and fearful when others are greedy.” This is something that holds true in any market. No government can ever legislate against market bubbles and the crashes that always follow them. Because those events are driven by human nature, there is no way to outlaw them.

In order to make money from cryptocurrencies—or any other financial market in the long term—you’ve got to develop a contrarian mindset. You must be able to go against the crowd without losing sleep over it. The psychological aspects of investing are always the hardest to master.

4 Cheap Supplements For A Better Workout

February 24, 2018 | by Nathan Ferguson | Link | Original Link

In this article, I’m going to give you a quick rundown on some of the supplements you can use to improve your workouts by a factor of ten. Most of the stuff here can be bought at your local grocery store and costs pennies, unlike the overpriced garbage they sell at GNC.

1. Sodium

This is one of the most underrated and cheapest pre-workout supplements you can take, hands-down. Sodium is one of the seven electrolytes that keep our body hydrated. When taken as a pre-workout for lifting, you will experience better pumps at the gym, giving your muscles a better sense of fullness.

Something basic as eating table salt thirty minutes before you go pump iron will do the trick. Start off with 200 milligrams and increase from there until you get a sense of how much your body needs. This will go a long way if you have a good intake of sodium in your daily meals. You can also experience less cramping during your workouts.

If eating table salt seems too off-putting and gross, you can try seasoning packets for a bit of flavor or even beef jerky, which has a lot of sodium in it. Bringing sodium with you to the gym and using it as an intra-workout supplement can also help during your routine.

2. Potassium

Another electrolyte. Potassium pretty much falls in line with sodium in terms of outcome: better pumps, less cramping, and more hydration. The RDA recommends that a normal person gets about 5,000 milligrams per day. If you are an active lifter, you can go up to

one gram per day and get tremendous results.

While you can use potassium sources as a pre-workout, you'll get a far greater experience if you consume potassium throughout the day. Good food sources for potassium are tomatoes, potatoes, coconut milk, and pineapple juice.

Something that you can pick up off the cooking shelf is cream of tartar (potassium bitartrate), a byproduct during the wine-making process that is used for baking. This costs anywhere between $2 to $5.

Alternatively, a simple potassium supplement could be used if you don't feel like altering your diet (although eating is always better than supplementation).

A quick warning about cream of tartar and potassium supplements: taking too much in a short amount of time can lead you to running to the bathroom with loose bowels. Also, taking too much potassium and not drinking enough water could cause hyperkalemia (potassium overdose). Start off slowly, and if you experience any diarrhea, then you need to back off a bit.

3. L-Arginine

L-arginine is one of the twenty amino acids. When isolated from other amino acids, L-arginine can be a great tool for your workout. When consumed, it converts into nitric oxide which increases blood flow into the muscles.

When taking L-arginine, it is best to take on an empty stomach and without other BCAA supplements. If you consume other amino acids, the L-arginine will not work. L-arginine only works when isolated and is easily destroyed by stomach acid.

You should take it 20-30 minutes before your workout. Start off at two grams to see how it feels, then slowly increase your dosage. Do not ramp up your intake too quickly or you'll experience severe discomfort. Personally, I gone up to ten grams of L-Arginine and haven't experienced any serious negative effects, although I haven't noticed a big difference in terms of performance after eight grams. Again, start off at two grams and slowly figure out what dose works for you.

Lastly, this supplement needs to be cycled on and off every two to three weeks as you build up a tolerance.

If you do a little bit of shopping around, this supplement can be anywhere from $4 to $20, depending on capsules vs. pills, the amount per bottle, and number of milligrams in each capsule/pill.

4. Ashwagandha

Also known as Withania Somnifera or winter cherry, ashwagandha is a root from India that has been used since the time of the Roman Empire. It has commonly been used as tea and has a relaxing effect on the body. While not really used as a pre-workout like the supplements I've mentioned above, ashwagandha can help your workouts by relaxing the muscles during the healing process, among many other things.

Ashwagandha is classified as an adaptogen, meaning it doesn't do one specific thing. It has been shown in some people to increase their testosterone, increase their thyroid function, regulate their serotonin levels, and other effects. One common side effect of using ashwagandha is drowsiness and slight inhibition due to the calming nature.

Personally, ashwagandha helped me through depression and gives me a sense of not giving a fuck in large dosages. It almost led me to go on a racist rant against Muslims in my local gym.

On the other hand, I have friends who have tried this supplement and cannot notice any

changes. I don't believe everybody will have the same exact effects with ashwaganda, making it somewhat unreliable. It really comes down to if it's working out for you or not on a personal level. If you're somewhat depressed and suspect your hormones may be out of normal range, then ashwaganda may be a supplement worth trying. If you don't notice anything after your first run, though, then just disregard it.

This supplement comes in two different forms, a capsule or a beverage. This supplement can range anywhere from $8 to $50. However, *do not* buy the expensive varieties; they are merely inflating prices to make more money. I have taken the $8 bottle brands (Nature Valley) and have noticed a difference in my mood. I haven't tried the beverage version, so I can't give an honest opinion on it. Fair warning: ashwagandha does have a slight odor to it.

For dosage, you can try three grams in the morning and late afternoon each to see how you respond. If you have a stomach that is easy to upset, it is recommended you take it with food. If you have an ulcer, it is best to avoid ashwagandha to avoid any health complications. Also, if you are on any medication, make sure you check with your doctor, as ashwaganda does have some compatibility issues with some medications.

I have gone up to ten grams of ashwagandha in a day without suffering any side effects, but I have found that the sweet spot is between six and eight grams. This supplement does need to be cycled on and off every so often as you build up a tolerance.

So there you have it—four supplements that have increased my workouts and standard of living. Good luck.

How Well Do You Understand Yourself?

February 24, 2018 | by Hauk Andersen | Link | Original Link

If you have done all the hard work for some time, and your eyes have been opened to the current state of events, you might be left wondering what comes next. You have slept with beautiful women, gained the respect and trust of all that cross your path, and have worked on your physical and mental strength. However, if you are anything like me, at some point you might be left with a sense of incompleteness, emptiness, or some vague sense of unease.

When this happened to me in my early thirtes, I had to do some serious evaluating of who I am and how I would like to proceed in life. I realized that although I had done extensive work on myself, I had done little to affect all that I was critical about in the world . I was starting to become disillusioned and it was time to really focus on my values and further development as a man living in this world.

I began reading books on spirituality, Buddhism and Christianity. I tried to discover great and universal truths and I have spent the last years trying to apply these truths in my daily interactions. I have learned some hard lessons and have been forced to confront some unsettling truths about myself.

One of the most important lessons I have learned is that there are only two ways of experiencing life, and that is either from a place of fear or from a place of love. I cringe even as I write these words, because it has been exceedingly difficult for me to admit, but I had been experiencing life from a place of fear. Deep down, inside this physically and mentally strong, wealthy and well-respected man, there was a young boy who was scared of not being good enough. No matter how many women I slept with, how physically fit I became or how much money I made, I could never shake this sensation that I was not good enough. I started distancing myself from others, afraid that if they got too close they would see my shame and unworthiness, and reject me.

After a while, I was able to look more rationally at my fears. I began to ponder the question that if I have deep- seated feelings of not being good enough, do others struggle with this as well? And then I saw the answer to this question, everywhere.

We live in a society that is teaching men that they are not good enough, and men are struggling to convince themselves and others that they are. The media is bombarding us with the message that we are not good enough in order to make us buy stuff we don't need, the government is making us feel like we are not good enough in order for us to work harder and buy stuff we don't need. Society is making men feel like it's not good enough to be a man so we can make more money to buy women stuff they don't need.

I saw this in my close circle of friends- men trying to prove their worth because society and their parents had convinced them already in early childhood that they had to do better and be better. I saw that even though we are trying to help each other improve, we are basically telling each other in doing so, that we are not good enough as we are right now.

We all, deep down, want to feel respected, accepted and loved. I realized that I wanted these things as well, but I was actually removing myself from achieving them by building up a persona that hid parts of myself. I was scared and wondered, if I were to show the parts of myself that I tried so hard to conceal, will anyone accept and respect me then?

I decided to face my fears and consciously focused on shame; became acquainted with this dreadful companion of mine. I started to notice all the thoughts that were associated with him, as well as the physical sensations. This companion that had never been welcome in my home, was now allowed in and I was willing to get to know him. I was curious to understand his purpose, why he followed me, and what he wanted from me. As I struggled to get to know him, I slowly started to accept him as well. Through this painful and isolating process, I came to accept myself. This acceptance made me stronger than I had ever dreamt of becoming.

The struggle had been so intense and internal that I barely had any social contact other than through work during this period of time. When I had gained enough self-acceptance and realized that I am far from the only one trying to shut these feelings out from consciousness, I came to a deep understanding that I must share my experience. Since I already was a well-respected man, I figured that the message would have a strong impact coming from me. I opened up to my two closest friends who were shocked at first, but admittedly, also relieved. They too began a process of self-discovery, and they have thanked me for paving the way for them to accept themselves. I then talked to my family and other friends, and from there on it became easier. Life became easier.

I’m not going to lie, it was hella scary to confess these feelings. If someone were then to criticize or reject you, they would be criticizing or rejecting your authentic self, and your mental defenses may be weaker. However, if you take the plunge and are acknowledged and accepted despite your shortcomings (aka humanness), you are granted a deep fulfillment of being accepted for all that you are. It is YOU who is accepted and loved, and this realization is the remedy and antidote to those unsettling feelings of emptiness and discontent.

Admitting your shadow sides to yourself can be extremely painful work, let alone admitting them to others, This work is for those who want to attain self-acceptance and to stop experiencing life from a place of fear. This is the hardest path I have ever traveled, but I would never want to return to my inauthentic, albeit safe and secure, ways.

7 Best Places To Meet Quality Girls (Plus 4 Of The WORST Places For This)

February 25, 2018 | by Chase Amante | Link | Original Link

The following is a sponsored article from Girls Chase.

In my previous article on ROK (game has never stopped working on girls) a reader asked the following:

> Could someone kindly offer suggestions of locations where a high quality, normal, healthy female might meet a quality, healthy, normal guy?
>
> No kidding.
>
> I understand the (whole) problem and have been watching it evolve over time. I'm rather used to seeing this so it doesn't bother me so much.
>
> But I never stop trying.

This was a gal asking, but a lot of guys ask it too. Where do you go to meet a quality girl?

We're going to break down 16 places you can meet women, into three categories: LOW QUALITY (where the quality is worse than average)… MIXED QUALITY (where quality is average)… and HIGH QUALITY (where you'll meet quality women). (Female readers, like the one who asked that question, can use many of the spots we'll discuss to meet superior men as well.)

This is my last article for Return of Kings for now. And it's published on the LAST DAY for you to pick up a copy of my One Date System… which takes you from "strangers" to lovers or partners in one well-calibrated, well-executed, simple-to-run and easy-to-get

first date. If you haven't grabbed your copy yet, you'll want to do that NOW… because the doors close at midnight PST.

(**Watch the video on One Date here**)

Buuuut… it's not worth going to the hassle to take a girl as your girlfriend in a date if she's not a girl you'd want for a girlfriend. So first, let's talk where to find the kind of girl you'd want to have stick around a while.

4 Low Quality Places To Meet Girls

Every place you go, there will be a mixture of women. You have to vet those women to see if they measure up. For our purposes, a "high quality" spot has a higher proportion of quality women than the other places we'll discuss. A "mixed quality" spot is about average. And a"low quality" spot may contain a few chunks of gold here and there, but even those will still usually turn out to be pyrite.

A "low quality" place to meet girls has a low proportion of quality women on-hand.

The 4 worst spots for girl-quality are…

1. Nightlife/Places with Alcohol

"The only reason I go out is because I like to dance."

Bars, nightclubs, lounges, house parties, after parties. If people drink there, they're probably not partner material. That's assuming "partner material" for you includes things like loyalty, fidelity, not too many crazy personality disorders, and no STDs.

Alcohol-fueled venues, quite frankly, attracted damaged goods individuals. Some such places are meat markets, where people go to get laid. Other places are show-off venues,

where everyone goes to look high status. Neither is a location most quality people want to spend time in.

You will occasionally meet the quality girl who was dragged there by friends. Or one who's been single a while, felt desperate, and decided to try the nightclub for the first time in her life. But usually you'll meet regular party people. If you need more details on why these girls don't tend to make good girlfriends, check out my article on why I quit dating girls who club, party, or drink.

2. All-Girl Vacations

When the "just us girls" vacationers meet a party of "just us guys" vacationers.

If she's on a vacation with "just the girls" and you meet her, well… it may well be one of the easiest lays you'll ever have.

But perish the thoughts of a long-distance romance after. Even if you get her, you'll always wonder about what (or whom) she's doing on her next"just the girls" trip… without you.

3. Meet-Up Groups

Plenty of women here… but none to write home about.

That's Meetup. it's young professionals' groups or activity group in your area… possibly also Facebook in the near future too (though too early to tell what Facebook meetups will be like).

The quality at these places is never that high. And they tend to be meat markets. If you hook up with a girl from one such place, you're likely not her first, nor her last. Okay as a stop-gap if you need some sexual momentum, but not a girlfriend hunting ground.

4. Online

“All my friends say I am beautiful.”

You better off to date a girl from an after-party before you’d date a girl from online. Both will have equivalent amounts of crazy, but at least the after-party girl will be hotter. Online tends to attract equally low-ish quality, yet also usually less attractive, women than nightlife. Still, useful for dry spells. Just don’t stick around with your online dating lays long.

6 Mixed Quality Places To Meet Girls

These places are mixed. You can find some okay-quality girls in some of them. You may occasionally find a gem. But the quality is generally “average”, not high. So if you want high quality, you’ll have to look elsewhere. The good news is, if okay-quality is enough, all these places are fairly easy to meet girls in; not all high quality spots are so easy.

1. Dance Classes

Decent place to pick up. But the quality is so-so.

It’s salsa night! Or ballroom dancing night. Lots of girls head to dance classes seeking relationships. The quality here is okay, though you’ll rarely find top tier girls. They don’t take the trouble to attend.

2. Ski/Surf/Snowboard Classes

Who doesn’t like to hunt for snow bunnies?

Decent places to meet women. But be advised: the more athletic a girl is, the more she gets around. Also, the guys doing sports are sexier… so your competition is stiffer (but not too bad). Yet if she continues to do such activities after you're dating, there's always the chance she runs into Mr. Charisma or Mr. Sexy Abs at one of her classes right after some drama with you and… who knows.

3. Intramural Sports

More spunk, energy, and drive. Can be fun, but possibly not girlfriend material.

Same as with ski, surf, and snowboard classes, but to the second power. If she's running around, kicking balls, and competing, her sex drive is high, and so are her cravings for man-contact. She'll be fun, but you're unlikely to be her only one.

4. Beach/Gym/Work/University/Church

Bible study doesn’t necessarily = quality. Lots of “reformed party girls” in church these days…

These are standard, normal places to meet girls. They’re mixed, because they’re the average spot to meet a girl, and your odds to meet a high or low quality girl are average. Note that average odds do not mean equal odds… you will on average meet more low quality girls than high quality ones.

5. Events

Events girls can be charming, but these are mixed quality spots.

Charity events, art gallery openings, other galas. Events attract outgoing, sociable, attractively dressed girls, who may seem high quality at first meet. Whether “outgoing, sociable, and fashionable” are your primary determinants of quality is subjective. However, if you’re more concerned with “loyalty, dependability, support for her man”, plus genuine (non-flashy/made-up) beauty, these are a bit of a wash. You can find some quality girls here, but if you’re not an extravert you may struggle to keep up with them in a relationship.

6. Private Social Networks

aSW was legendarily good back in the days it was mostly millionaires, babes, and by-invite-only.

aSmallWorld, Nextdoor, and other such networks can be okay to meet women through. They are higher quality than online dating sites, as well as social media and meet-up sites open to the general public. That said, the women on these networks who are down to meet are usually down to meet men in general, and your odds of finding a high quality girlfriend via them are average at best.

7 Places To Meet High Quality Girls

This is it. Your guide to those top tier girls… the ones to keep on longer term than a one-time shag. Note that just because these are superior places to meet girls of a high quality does *not* mean every girl in them is high quality. The majority of the women you meet these places will *still* be average or low quality. Yet you have much better odds of a woman you meet at one of these places being of a higher quality than you will women

you meet anywhere else.

1. Transit

“Going anywhere exciting?”

Every girl in a big city has to use transit. The cool thing about transit is you get to meet girls who DON’T do all the drinking, partying, hobknobbing stuff. You won’t meet this kind of a girl at a bar, online, or in salsa class. But you can meet her on her way to work or to meet friends on the bus or the train.

This is a common theme you’ll see throughout this section: looking for places that are “great equalizers”. Places you can meet women you *couldn’t* normally meet elsewhere.

2. Street

You can meet every kind of woman imaginable on the street.

Same deal as transit, the street has *everybody*. All the same mixed and low quality women you'll run into elsewhere… but also the high quality women you're unlikely to meet other places.

The challenge of the street is you must be ballsier to make it work. Few guys ever learn the skill… yet for those who do, the street is a bottomless Christmas stocking of the world's highest quality women.

3. Grocery Store

“That looks healthy…”

Every girl needs groceries! Like transit and the street, you’ll meet all kinds of girls here – including those you won’t find in social/party/activity venues. And like both other places, many women you’ll meet at the grocer’s are ALONE.

The grocery shop shows up as a fairly common place women meet men in some surveys. And, like the street and the train, it is also a place women frequently fantasize about running into a guy. “Wow, that looks healthy,” about whatever’s in her cart, serves as a functional opener – whether her food actually is healthy (and you’re being sincere) or it isn’t (and you’re giving her a tease).

4. Other Shops

If she reads, higher odds than normal she’s cool, normal, and sane.

Groceries are generally the best for high quality, but many other shops are up there too. Bookstores (if you can find one), clothing stores, and so on. Again, girls are alone, all types of girls shop… and better still, if she has the *money* to shop, there’s a fair chance she’s at least got her life together.

Unless she’s a shopaholic with an $80K credit card debt, you should screen for that if you meet girls in shops (“Shop a lot?” –> she says yes –> “Wow, how do you afford it all?” –> she laughs and says she loves her credit card, or she’s evasive –> make a note to ask her if she carries a lot of debt later, and watch for the reaction.)

5. Cafés

Lots of girls head to cafés alone. Easy pickings for the guy unafraid to say hi.

Cafés attract a certain kind of crowd, of course. More upper middle class; more Bohemian. If you like girls like that, cafés are great. A little closer to “mixed” class than transit, street, and grocer’s, but better than the real mixed stuff and you can meet decent quality here. Talk to her in line or strike up a conversation with a girl at a table nearby.

6. Your Building

The elevator in some apartment buildings can be a surprisingly good place to meet chicks.

Wherever you live, odds are the women in your building are… well, a lot like you.

Different buildings attract different crowds. And you'll tend to find that generally a higher than usual number of women who live in the same building as you are higher quality.

7. Introductions

Don't say "no" to a good intro.

Your friends may have girls they can introduce you to. Have you asked? A *lot* of people love to play matchmaker. And some of them are pretty darn good at it. Further, introductions are an awesome way to meet high quality women who don't drink, party, or socialize a lot, and are otherwise hard to find. You won't find her at that house party, but you have a mutual friend and if she knows you're in the market, she can put the two of you in touch.

Only key here: you've got to tell the people around you you're on the market for a good girl, and ask them if they have anyone they can introduce.

How To Get These Girls Once You Meet 'Em

I have a huge, DEEP, yet simple course on getting girls you can pick up today. It gives the man who uses it a full tool set to bring exactly the women he wants into his life.

Don't worry if you're not sure how to meet the women you want. Or if you get nervous in situations like transit, the street, the grocery, or even at parties or salsa classes or social events. We cover all that, and give you a non-scary way to talk to girls and a way to ask them out that's very hard for them to say "no" to.

I give you the full skinny in my video on the course:

Watch the video, and get a few key tips to use right away.

(**Watch the video on One Date here**)

Here's the catch: One Date's only available until the end of today.

After that, we shut the doors for at least 3 months.

If you're tired of not having the gal you want in your life, give it a watch. At the very least, you'll get a few new ideas from it.

Oh, and, since I'm signing off, if you liked my articles, be sure to keep reading over at GC. I've handpicked a few I think might appeal to many of the guys who frequent ROK… give 'em a look.

Chase Amante

Chase woke up one day in 2004 tired of being alone. So, he set to work and read every book he could find, studied every teacher he could meet, and talked to every girl he could talk to to figure out dating. After four years, scads of lays, and many great girlfriends (plus plenty of failures along the way), he launched GirlsChase.com. He will teach you everything he knows about girls in one single program in his One Date System.

Mankind’s First Known False Rape Accusation Was Recorded In The 13th Century BCE

February 25, 2018 | by Narmer Bull | Link | Original Link

Last year, our ROK colleague Ted Deever covered the biblical story of Joseph and Potiphar’s’ wife. His piece highlighted two concerns. One, the civilized world has a long tradition of the rape hoax motif. And two, there is a mainstream refusal to acknowledge the existence a false accusation. Respectfully, I would like to expand on these points.

While the Genesis 39 myth effectively delivers its wisdom, it’s not the original. This duplicitous game, seemingly inherent to the nature of women, was exposed significantly earlier in human history. Its original form, to my knowledge (challengers welcome), is in the *Tale of Two Brothers*.

The rape hoax motif has been with us for more than three millennia, yet mainstream opinion disregards it. In fact, liberal academics have worked hard to show that even when a story emphasizes the falseness of an accusation, a wonder of intellectual imagination can be performed to ensure that a woman’s word is always truthful.

The Egyptian Tale of Two Brothers

This story dates to the 13th century before the Christian era. Anubis and Bata are brothers who live on an estate. The elder Anubis is married and owns a home. The younger Bata works for his brother, and lives with him and his wife.

One day while working in the field, Anubis sends Bata to fetch some seed from the house. Back home, Bata encounters his sister-in law braiding her hair. She refuses to get the seed from the storeroom while her hairdo is unfinished and tells him to get it himself.

When she sees how much seed he is able to carry, she attempts to seduce him:

> *There is great strength in you. I see your vigor daily. Come, let us spend an hour lying together. It will be good for you. And I will make fine clothes for you.*

He declines, saying that she is like a mother to him as his brother is like a father. He goes back to work, but the wife is anxious about the things she had said. Later, when Anubis arrives home, she claims that Bata assaulted her.

Her story is that Bata came onto her, she refused, so he attacked her. Anubis believes his wife and, as per her request, intends to murder his brother.

> *Now if you let him live, I shall die! Look, when he returns, do not let him live!*

Anubis, spear in hand, pursues Bata. He is about to slaughter his brother when the god Pre-Harakhti intervenes. The sun-god creates a crocodile filled river, separating the two.

From his side, Anubis proclaims the reason for his bloodlust. Unable to convince his brother of his innocence, Bata swears:

> *As to your coming to kill me wrongfully you carried your spear on the testimony of a filthy whore!*

With that, Bata pulls out a knife, castrates himself and throws his phallus into the water. Anubis is distraught but cannot reach his brother. Bata grows weak and dies. Now convinced that Bata was innocent, Anubis goes home, kills his wife, casts her body to the dogs and mourns his little brother.

Academic Endorsement of the Hoax

The tale is long and contains many traditional motifs. However, the rape hoax episode is the part that folklorists have avoided classifying. Older generations mostly found it too vulgar for serious inquiry. So naturally, liberal scholars find it appealing.

The official liberal interpretation is now inextricably linked to what they speciously call the Potiphar's Wife motif. The tale is only told from Bata's point of view. And he had a low social position. So he surely fantasized about possessing his big brother's life and wife. He must have felt extremely guilty for these latent desires.

To avoid remorse, he unconsciously projected his internal state onto his sister-in law. This is one of those role reversals liberals are so keen on. Bata's wishful thinking is a typical blame the victim process called "projective inversion" (Dundes 2002:385). He wanted her, so his story makes her want him.

From his initial displays of seed-carrying power, to later depictions of him as a bull. Bata is a soft target for rape hoax symbologists.

Consequently, his self-emasculation resulted from his actual guilt for raping her. It's not proof of his innocence or loyalty. And with Bata guilty of this inherently male crime, a woman can literally never be cast as the villain in a he said/she said story.

Meanwhile, a guilty Joseph was acting out his odd clothing fetish again.

This academic endorsement of the original rape hoax does two things. First, it assumes her innocence and his guilt based on gender and social status. Then it forces the text to say things that it clearly doesn't. The text does not acknowledge this suppressed, latent, or symbolic content.

Conclusion

The problem with any form of prejudice is that it's very hard to hide. That an interpretation of such a simple story should require a needlessly convoluted psychological analysis is evidence of an opinion irrationally formed by a pre-existing prejudice.

Tales impart lessons, and the lesson from this motif is as simple and straightforward as the narrative itself. The patriarchal family has a strong moral foundation. A code of honour between men is more important than lies and vengeance. This is emphasized by the fact that the women in both the Egyptian and biblical versions are not named.

Liberal academics have here managed to turn a lesson in morality into an endorsement for a rape hoax. I hope that when the ancient texts of a long lost matriarchal society are discovered, we are allowed to peddle similarly contrived interpretations through the education system.

3 Reasons Why The Globalists Hate Russia And Vladimir Putin

February 25, 2018 | by Alexander Hamilton | Link | Original Link

The United States is experiencing a third Red Scare. Russia is being accused of undermining US elections, running armies of “Russian bots” to influence discussion on social media, and bribery or undue influence over American officials, including President Trump. Vladimir Putin is no angel, but it’s obvious that most of these claims are overblown, if not outright fabrications. This Red Scare is being perpetrated to discredit Donald Trump and force him into a corner on foreign policy.

Why do the globalist elites hate Russia so much? This article examines three recent events where Vladimir Putin challenged the globalists, which has led them to launch this new Red Scare: Russia challenging the US dollar, the conflict in Ukraine, and the conflict in Syria.

BRICS nations challenge the dollar

The borrowing power of the dollar is artificially inflated because of its use as the world reserve currency. Internationally, most transactions are conducted in US dollars, which means that nations are forced to sell goods to the US in exchange for fiat paper if they want to purchase goods in international trade.

In 2012, the nations of Brazil, Russia, India, China, and South Africa began to seriously discuss forming their own bank to finance infrastructure and development projects. In 2014, they signed an agreement to create the New Development Bank, which has begun to finance projects in the BRICS nations.

This bank threatens the Federal Reserve system by offering an alternative source of credit. The BRICS bank is creating development loans using fractional reserve lending, which increases the money supply without the consent of the bankers at the Fed. Nobel Prize winning economist Joseph Stiglitz explained:

> This is adding to the flow of money that will go to finance infrastructure, adaptation to climate change — all the needs that are so evident in the poorest countries. **It reflects a fundamental change in global economic and political power**. [Emphasis mine]

Challenging the status of the dollar by creating an alternate source of credit is a direct threat to the globalist financial elite, which is why they began to ratchet up pressure against Putin around this time.

The Conflict in Ukraine

In November of 2013, supposedly spontaneous protests began in Ukraine against the elected government of President Viktor Yanukovych. The reality is that the protests were sponsored by the US State Department, in concert with George Soros' National Endowment for Democracy, with the aim to punish Russia for supporting the BRICS development bank by overthrowing a government that was friendly to Moscow.

The Obama Administration, and London, not only welcomed the violent coup in Ukraine in 2014, as a means to justify a new NATO military mobilization against Russia, but rather, they created it.

The National Endowment for Democracy spent $3.3 billion in Ukraine in 2012, a simply astronomical sum for their stated goal of supporting democratic NGOs, but perfectly reasonable if Soros was developing an underground network for a color revolution. The NED has a long history of accepting money directly from the United States to work on behalf of the State Department to plot subversive activities. The State Department was directly implicated in the plot, when Victoria Neuland was caught discussing which leaders she wanted to be placed into power.

If that weren't bad enough, the United States ended up backing real neo Nazis to take over Ukraine in the power vacuum they had created:

> The 2014 coup in Ukraine was perpetrated by figures and groups of the so-called opposition, whose lineage and practices trace directly to Nazi formations going back decades…

In response to the threat of a Nazi state in his backyard, Putin elected in intervene in Ukraine, sending troops that fought and won a relatively small conflict against the revolutionary faction. After this, a referendum was held, and Crimea voted overwhelmingly voted to join Russia.

Conflict in Syria

Nice Trucks, ISIS

The globalist elites have wanted to overthrow the government of Syria for many years. In 2006, General Wesley Clark stated that, after 9/11, the neocons came up with a plan to invade 7 nations in 5 years: Iraq, Syria, Iran, Lebanon, Libya, Somalia and Sudan.

The recent escalation of conflict stems from the discovery of the world's largest deposit of natural gas in waters owned by Iran, and the fight over the direction of the pipeline to bring the gas to market. Syria was planning to build a pipeline with Iraq and Iran, while

the US wanted to build their own pipeline.

The US began to support the Syrian rebels, even though they knew the rebel forces included large numbers of Islamic extremists. Predictably, the extremists began slaughtering everyone, destroying ancient cultural sites and eating people's hearts.

Wanting to protect his advantage on selling natural gas to the EU, and wanting to put down the ISIS savages, Putin intervened in Syria. Before the intervention, Assad was barely holding onto his major power centers, but as soon as Russia intervened, ISIS began to crumble quickly in the face of an elite military superpower.

This intervention in Syria was the last straw for the globalist elites, who are now throwing everything they have at discrediting and undermining Vladimir Putin.

Enter Donald Trump

This image triggers globalists

Donald Trump is not a globalist, cuckservative, or neocon. He is a traditional American economic nationalist, like Hamilton, Clay, Lincoln, or JFK. Trump knows that there is more money to be made in peaceful cooperation than antagonism, so he prefers neutrality against the Russians.

This has forced the globalists to try every lie they can imagine to try to either discredit Trump and remove him from office through impeachment, or else twist public opinion to limit Trump to a foreign policy of aggression against Russia.

Conclusion

The new Red Scare is all about geopolitics. As Vladimir Putin has continued to thwart globalist schemes, they have continued to ratchet up their hysterical propaganda about Russian influence. This is a ruse designed to discredit President Trump and paint him into

a corner with his foreign policy toward Russia.

Top 10 Most Superior Ethnic Groups In The World

February 26, 2018 | by William Adams | Link | Original Link

When people discuss “globalists” or the “elites”, they often seem to refer to individuals and corporations rather than entire countries. This is understandable, since national groups in their entirety should neither be blamed nor cherished for what the most powerful persons have carried through. That was also the case with, for example, slavery and colonization—only tiny fractions of specific nations like Belgium, Germany, Britain and the U.S. were engaged in such highly questionable actions. Furthermore, the national level is often partly subordinate to global financial structures, capital flows and markets.

Yet the national level is still an important instrument for obtaining wealth and power, and in rich and powerful states one notices that elites within specific national or ethnic groups have more of those precious things than others.

The list below is based on four often interrelated dimensions of power: **money, military capacity, culture, and politics**. The more power a nation demonstrates within each of these four areas, the more power its elites have. I have used quantifiable lists such as IMF data on GDP, Global Firepower, *Forbes*, and other relevant literature as a means to nuance some of the positions.

Even if individual men hardly can make a difference regarding global and national power structures, it’s our duty to help each other to have clear overall understanding of the world.

10. Italians

Italy is the world's ninth largest economy. The Italian economy hinges on the manufacture of high-quality consumer goods produced by small and medium-sized enterprises, some family-owned while others are linked to various Mafia groups.

Although Italy suffers from political corruption, it's indeed a nest of many wealthy native men. Watch out for Berlusconi et al.

9. French

France may be regarded as a nation in cultural, political, and economic decline, but it's still the world's seventh largest economy, and has a significant nuclear arsenal. It's also

one of the most influential members of the EU. Those who control France thus have a stronghold over a significant part of Europe.

8. Russians

Russia is not in the top ten of the world's leading economies but second regarding military, and consequently political power.

The country's major channel for broadcasting an alternative, pro-Russian worldview, Russia Today, has recently suffered a setback, potentially leading to less cultural and political influence in the West and elsewhere. Yet as long as Russia has its oil, gas, big army, and nuclear missiles, it's still a country filled with powerful oligarchs and expansionists.

7. Japanese

While Japan's economy and their political strivings remain largely insular, it's still the world's third largest economy and number seven in terms of military capacity. What's happening in this highly homogeneous nation affects the rest.

6. Germans

Grab'em by the balls

As the conservative scholar Paul Gottfried has noted, Germany's collective sense of historical guilt makes the country less assertive and more welcoming to multiculturalism and mass immigration. However, Germany is still one of the world's leading economies and the biggest player in the entire EU. Hence don't mess with Mutti Merkel and her cadre.

5. Saudis

If Saudi Arabia doesn't diversify its economy, it will predominantly be dependent on oil revenues and trade deals with the United States.

To drain the kingdom's reserves will take a while, though, and in the meantime the country can continue to finance various Wahhabi institutes, Sunni mosques, and even militant jihadists around the world. Hopefully they become more moderate in the future.

4. Indians

Mukesh Ambani and his family

India, very soon to be the world's largest country population-wise, and an economy which is set to surpass both France and UK in 2018, as well as the fourth largest in a military sense, is an up-and-coming nation.

Those who hold the top are often plutocrats, sometimes of Persian origin, while the manifold dirt-poor has little or no real say.

3. WASPs

The White Anglo-Saxon Protestant was one of the most influential groups in the world's most powerful nation for roughly a century or more, depending on how one looks at the post-World War II development.

With the rise of multiculturalism, and an increasing presence of various minority groups and individuals, like Catholics, blacks, Jews, Hispanics and Asians, the WASP group is perhaps the one that loses its power at the fastest rate.

Yet one will find multiple white Protestants on many leading positions, and there are still great many of his ethnic relatives in powerful states like UK and Germany. If WASPs were to be changed to the much broader category whites, that would be even more true. At least for the time being.

2. Jews

Despite the fact that Jews only consist of a couple of million people in the US, and around 15 worldwide, Ashkenazi Jews in particular have a strong impact on all of the four areas in the world's most powerful nation (plus the small nuclear nation Israel).

That seems to be a consequence of a combination of ethnic networking, a historical identity that consists of strong victimhood and being "chosen", and a large share of talented and industrious personality types. Some leave for Israel, or conversely, while many remain on the American coasts.

1. Chinese

China will sooner or later be the world's leading economy, and is already the third largest in terms of military capacity. Apart from the ruling state capitalist Communist party in

mainland China, Chinese billionaires—especially from the Fujian province—are highly influential in Taiwan, Indonesia, Malaysia, the Philippines, Thailand, Singapore, Canada, and the US. Whether or not the growing Sino influence will be beneficial for Western men is open for debate, but the increasing power can hardly be ignored.

Economic, cultural, political, and military power often go hand in hand. Some national and ethnic groups are unhesitatingly more powerful than others.

US Government Accuses James Damore Of “Sexual Harassment” For Stating IQ Differences Between The Sexes

February 26, 2018 | by David G. Brown | Link | Original Link

The National Labor Relations Board (NLRB), an independent US government agency, has accused fired Google engineer James Damore of “sexual harassment” for mentioning scientific studies about gender and IQ distribution. Damore, who wrote a now famous memo critiquing enforced gender and other diversity, filed a complaint with the NLRB but later withdrew it in favor of a lawsuit alleging systemic discrimination against (white) males at Google.

An attorney for the NLRB agreed with Google’s firing of Damore and attacked him for his scientifically uncontroversial references to women being more prone to neuroticism and showing less general interest in technology (even as infants). He was further denounced for contributing to a “hostile work environment” that supposedly caused two female candidates for engineering positions to withdraw their job applications (but how could they have handled the job if one man discussing scientific papers is enough to trigger them?). The letter makes for chilling reading and I recommend everyone look at it in its entirety.

Dr. Jordan B. Peterson summed up the situation perfectly:

> Science is now illegal in the US. Watch the hell out, biologists: https://t.co/JhZ4x90AHy

> — Jordan B Peterson (@jordanbpeterson) February 17, 2018

Debating science = asking a girl out on a date = touching her breasts = rape

Everything feminists don't like is sexual harassment.

As I and other ROK authors have repeatedly said, actual sexual harassment is consistently conflated with merely approaching a woman for a conversation or to ask her out on a date. Now it appears that those *discussing biology and other forms of science* will also be in danger of being described as sexual harassers when such talk offends women, leading to more men like Damore losing their jobs.

Associate General Counsel in the NLRB's Division of Advice, Jayme L. Sophir (of course, a woman), wrote the following in a recently published letter:

> …the statements regarding biological differences between the sexes were so harmful, discriminatory, and disruptive as to be unprotected.

Mentioning facts that do not support SJW ideology is going to get you in serious trouble in today's political and social climate. Be warned.

IQ measurements are deeply "misogynistic," right?

#FakeNews

Although scientific inquiry involves debates about competing findings and theories, Damore's memo claims were firmly rooted in proven science, much more so than his critics. Many of his assertions, especially about matters like IQ distribution between the genders, are not just assertions but established facts. Like Damore, social psychologist Roy F. Baumeister, who wrote the book *Is There Anything Good About Men?*, points out that men are akin to nature's big experiment, meaning larger numbers of men exist in both the genius and mentally disabled categories. Women, by contrast, cluster in the middle for IQ distributions.

Working in senior engineering positions for Google *should* require high levels of intelligence and industriousness. Yet systems for hiring and cultivating the best candidates have been greatly undermined by calls for gender and racial quotas. Discussion about IQ distributions imperils the leftist narrative. Just as boys predominate in the highest SAT scores (despite generally preparing for exams far less), in an unbiased environment more men will be working in engineering positions at Google. But no, feelz over logic and facts.

Where to next?

If the position of the National Labor Relations Board regarding James Damore is repeated in other circumstances, which seems likely, we are in for some wild times indeed. The ideologies once considered radical are infecting our labor and other laws in the West. Science is deemed offensive to the powers that be, whether at Google or in the upper echelons of SJW governments like California's. So what whacky thing is next?

Whilst some of us had high hopes for James Damore's class action lawsuit, I am currently unconvinced that he will win. When notions like "hostile work environment" are being gerrymandered to substitute feminist feelz for objective realities, Damore is probably only preparing himself for a very time-consuming legal failure.

3 Reasons Men Shouldn’t Major In Biology

February 26, 2018 | by Sten Morten | Link | Original Link

STEM (Science, Technology, Engineering, and Mathematics) education has in recent times been proposed as a miracle cure for young adults trapped in a job market that is rapidly losing lucrative opportunities for all but the top percentage of college graduates.

The assortment of fields associated with STEM majors are by no means immune to rampant globalization, mass immigration, and increasing automation. While a STEM degree still affords students more opportunities following graduation than a liberal arts degree, it is no longer a free ride to a well-paying and respectable career.

Gender “Science”.

Why biology is the worst STEM field

All fields encompassing STEM are not created equally. You will find that a degree in one of the scientific disciplines (biology, chemistry, and physics) will not afford you the same high-paying career options as a degree in computer science, electrical engineering, or data science. In fact, graduating with a science degree can often be a mistake on the magnitude of graduating with a gender studies degree.

The primary example of this is biology. Biology is the youngest of the three

aforementioned scientific disciplines, and easily the worst field for a young man to major in under the STEM umbrella. Biology programs tend not to require much in the way of mathematics or computer science courses, and are thus considered the easiest of the STEM programs.

Much of biology has to do with memorizing and regurgitating ‘scientific facts’ rather than solving challenging, complex problems. As technology trends away from rote memorization (e.g., search engines, online databases) and towards complex problem-solving, the skills you will learn in biology will rapidly become obsolete. The most important work in biology today is really performed by trained physicists and engineers.

Just not this engineer.

1. Limited Career Options

Typically, biology majors will work in some form of research lab for their first jobs. If you thought you would be curing cancer and synthesizing life-saving drugs, you are mistaken. Lab work is rote, boring, and tedious. You will spend the majority of your time moving small quantities of liquid to other small quantities of liquid under mind-numbing florescent lights for minimum wage. There is little opportunity for career advancement in research without going to graduate school and kowtowing to the far-left ideology of academia.

Lab technician work will largely be automated with a decade. Currently, academic and industry research labs employ a majority of unqualified women and H-1Bs who are more than happy to move small quantities of liquid around day in and day out. Women have rapidly assumed positions of authority in biology, and the biology departments at most universities are comprised primarily of women.

It’s not as great as it sounds.

What this means for a young man is that your lab manager (principal investigator) will more than likely be an aging, ‘educated’ career woman. If you are a long-time Return of Kings reader, you already know how this will go. Being ordered around by a greying cat lady and having to walk on eggshells in the workplace will drop your testosterone levels faster than drinking a gallon of Soylent in the morning.

2. Left-wing indoctrination

Furthermore, if you thought the scientific disciplines would be safe from the far-left ideology infecting academia, you are wrong. The field of biology has been marked for destruction by those who seek to undermine Western civilization. Biology has the naughty habit of contradicting many far-left talking points and ideas.

For example, biology directly refutes the notion that all men are created equally. A basic understanding of genetics would explain that we are not born as blank slates and are later shaped into evil, racist Westerners by Christianity or Republicans or some other such left-wing boogeyman. Nature over nurture is an inconvenient truth to those in power.

Biology also tells us that men and women are completely different. This simple fact of nature flies in the face of over fifty years of feminist indoctrination. The women’s rights movement is founded on selective ignorance of these very biological truths. A woman who has forsaken her most beautiful and fertile years to make PowerPoints for HR well into her thirties is going to bury her head in the sand when confronted with this reality. She will then seek to discredit and destroy these inconvenient truths by assuming positions of power in academia.

Modern education.

You cannot take a genetics course or a human reproduction course nowadays without being confronted with talk of gender dysphoria, transgenderism, and related disorders. Professors seem to take special pleasure in teaching these topics over more valuable subjects like endocrinology and metabolic biochemistry. Do not expect either to learn of human biodiversity or the inherent racial differences in IQ and temperament. We are all equal, they remind us.

3. Pre-meds

Lastly, a significant reason to avoid majoring in biology would be to avoid pre-medical students. Never has there been such a wretched and melodramatic group of people as pre-meds. Pre-meds will lie, cheat, and steal to gain any advantage on their single-minded quest to attend medical school. They are, by and large, treacherous sociopaths who have no place working with the ill and infirm. A good strategy if you are intent on going to medical school would be to take the required courses for admittance, major in something easy to raise your overall GPA, and avoid these rats altogether.

You can’t trust doctors either these days.

As aforementioned, biology has the lowest barrier to entry with regards to the STEM disciplines. The more mathematics courses you have to take for your major, the less you will be exposed to the virulent strain of leftist thought floating around universities. It would be difficult to alter math or coding courses to include far-left talking points. The engineering and mathematics disciplines are furthermore largely free of women, meaning they are safer for the time being if you want to avoid progressive indoctrination.

Studying STEM will not solve all of your career and financial worries, but it still remains preferential to earning a liberal arts degree. You would do well to avoid the sciences and stick with engineering, coding, and mathematics, as these skills will afford you more lucrative opportunities following graduation.

The future will only get more competitive as the middle class evaporates and wealth is concentrated into the hands of the self-styled cognitive elite. Low-skilled lab technicians, researchers, and those without coding and math skills will be left behind. Be smart by selecting the right field of study and do everything you can to be on the winning side of this imminent reality.

How To Build Massive Guns

February 26, 2018 | by Alex Jones | Link | Original Link

Small arms can often be a major source of frustration, and in some cases, embarrassment for many men. It’s a regular problem for naturally skinny guys who just want to pack on some size and look bigger in a t-shirt. Small arms also tend to lead to poor symmetry, proportions and other aesthetically un-pleasing results.

I have discovered quite a few tricks you can perform to bring up your weak points if they

are frustrating you. I will share with you what I performed last year in order to bring my lagging arms up, and you can definitely do this too:

1. Write Down Your Goal

This goal is so important as it gives you some direction, motivation, and it keeps you accountable for success (or lack of). For example, if currently your arms are 14 inches and you want 16 inch arms as quickly as possible, then set this down as a goal. You must measure your progress every single week to ensure that you’re staying on track.

I found weekly progress updates to be very motivating. When I saw measurable improvements in my arm size, it made me hungrier for more growth and this meant that I trained harder in the gym. The same will apply to you. You can achieve massive arm growth provided you are motivated, and that you specialise.

2. Specialisation

You will need to back off on other body parts at least to some degree. It’s no use going into the gym and blasting your entire body every session. Remember that the goal here is to achieve rapid arm growth. If you hit fifteen sets of squats and deadlift every week, it’s going to be nearly impossible to do this for a recovery standpoint.

Continue training everything else, however, reduce the number of sets per week. For example, for squats, deadlifts, and any other exercises that aren’t going to directly target your arms, only perform 5-8 sets per week. Personally, I found that 5-8 sets was the sweet spot for maintaining size in all the other areas, without impacting my recovery from arm workouts.

3. Arm Training

For the actual arm training itself, I found that 10-20 sets per week per muscle was fantastic for getting them to beef up. This is 10-20 sets of biceps AND 10-20 sets of triceps. The reason this margin is wide, is because when I first started arm specialisation, I grew off ten sets. Over time, I needed more and more volume. Once I pushed beyond twenty sets per week, I regressed due to lack of recovery.

Therefore, I would suggest starting off with 10-12 sets per week, keeping in mind that you will need to increase this over time. I used two exercises for biceps and two exercises for triceps. Hammer curls, barbell curls, lying skull-crushers and close-grip bench-press. These worked excellently for me, and they will for you too. I don’t believe we need endless variations in order to grow arms, just one or two per muscle. As long as total workload is sufficient, your arms will explode.

4. Frequency

Last year when I was playing around with this stuff, I was doing a lot of reading on Bodybuilding forums, T Nation, and other places like that. There was a lot of confusion on frequency. Some guys said two times per week was optimal, some said every day. I can tell you from my results (as a natural), that neither is ideal for maximum growth. My arms grew the fastest, training them 3-4 times per week. I suggest you do the same.

Obviously, split your 10-20 sets evenly across the week. So if you're doing twelve sets per muscle across four sessions, this would mean three sets every session for biceps, and three sets for triceps too. I found that 3-4 times per week was ideal as it still allowed for recovery session to session. This became increasingly important over time, as I started to get closer to the twenty set threshold.

5. Food

Honestly, this is probably the most important of all. Assuming you do actually go to the

gym and train hard, food will determine the majority of your results. You just aren't going to get bigger arms if you're not eating enough, specifically, a calorie surplus. You must eat enough to gain weight.

If your goal is to increase your arms from 14 inches to 16 inches, you will need to eat a lot more food than you currently are. Sure, you may gain a little bit of fat, but you can always cut this down later. For now, calculate your maintenance calories, increase this number by 10%, and set this as your daily calorie goal.

This means that if your maintenance calories are currently 2500, you need to eat 2750 calories. Make sure you measure this every day, as it's responsible for at least 50% of your results. Also remember that this 2750 figure will need to increase slowly over time. Very important.

Summary

Carry out the above five steps in that order and you will grow your arms significantly. Always remember that you must stay consistent with your training and food tracking, and hard work always pays off eventually. Good luck.

Modern Women Are Enslaved Like They Always Have Been

February 27, 2018 | by Ian Bailey | Link | Original Link

The big myth of modern feminism is that its teachings lead to female empowerment—that women are more *free* in this system than in a patriarchal system where she is expected to honor her man. Not so. Women have not become more free. Women are enslaved to the government, corporations, and to pleasure in the matriarchal world they created.

Even if you argue women were enslaved to their man in patriarchal systems, which is debatable, women still have far more masters to serve in the modern feminist world they created than the one husband and with that, far few freedoms.

The repression associated with the patriarchy is also debatable because women in patriarchal systems were expected to honor the relationship through mutual sacrifice. Men had sacrifices they were expected to make (monogamy, commitment to family). There are no sacrifices governments, corporations, and simple pleasure have to make during their enslavement if women. Except maybe an HR department.

Government

The government has grown and replaced honor of her man with a dependence on the government. The government has grown in power and size and has more freedom to exert power to do what it wants, and feminism is largely to blame.

Feminism grows the government by growing debt. Money is created when money is borrowed. When money is created, the entity that creates the money grows more powerful, as it controls that asset.

Feminism creates debt with the college degree. Degrees with limited job opportunities are granted to those who take out government loans to pay for them.

Feminism is to blame for these unpractical degrees because feminists preach that women must go to college to be equals to men. The result is not the same though. Women enter college not because they are attracted to building the skills to make money as engineers or businessmen, but because they are *supposed* to get a degree which shows they are equals to men.

Women borrow for college and then become slaves to their student debt. It must be paid back, and they cannot be free until it is. Women enter careers to pay off the student debt, spending their prime years (young and hottest) not marrying a great man with an engineering or business degree but instead working to pay off loans. This disincentives marriage for men, because they aren't getting commitment from women in their prime.

Men also become slaves to their debt, but are more likely to take a practical degree in engineering or computer science that teaches a profitable skill. Skills are profitable because society pays for them because society is benefited by the skills. Sociology of ethnic relations, while neat, is not profitable because it doesn't teach a skill that benefits others. Yes, it is selfish to major in sociology of ethnic relations.

Feminism teaches us that women were slaves to the patriarchy. There were great sacrifices by both the man and woman in the patriarchal world.

Men used to find honor in marriage by marrying a woman in her prime beauty years. In return for her giving him her best years, he was expected to be faithful with her in her later years, when his value is up and hers down. The two had a commitment to each other, and society praised those that could maintain this commitment. She was investing in the future of the man—hopefully one that showed promise.

Now, the feminist asks him to give up his best years for her worst, after she fucks other men during those prime years. The fucking being encouraged by feminism. And that's not all. We further incentivize her to leave the man who puts up with her worst years by throwing alimony payments and child support to transfer his wealth to her. This forces him to be enslaved to the corporation and government tax schemes to make his payments.

Governments and corporations grow. Individual liberty is reduced. The growth of governments necessarily depends on decreased liberty for the individual because it takes more resources (tax dollars) to fund a larger government.

Feminism preaches an empowerment that's a false empowerment. By encouraging women to work to pay down debt, men and (mostly) women become more enslaved to the growing governments instead of a mutual *sacrifice* from both the man and woman to commit and support each other. It's the greatest bait and switch ever pulled. It's bait and switch on a macroeconomic level. Global in scope. And women are not just slaves to the government…

Corporations

Women become enslaved to corporations for the same reason they are enslaved to the government. They owe money. They went to school and racked up student loans that must be paid off. Companies are where people to go pay off those loans.

Women are more likely to choose a college major that results in careers that pay less than the masculine business and engineering degrees. Because these college graduates do not build the skills to succeed in high-paying professions, women are more likely to work in a job that pays less than recent business and engineering graduates.

Companies are extremely incentivized to keep women working. It's simply more money for them. Companies can create more when they have more workers. Despite claims by feminists that companies don't want to pay women for equal work, companies are happy to pay women for creating more profits for them. The more profits the merrier.

Obviously there are some additional expenses to companies for hiring women—healthcare costs and human resource departments, but generally companies are happy to have workers making them more money, or companies would not hire women.

The glass ceiling isn't real. Companies are amoral, not immoral. They will maximize profits and if women are creating profit, those women will be paid, and economists have proven they are, justly. Of course, women are less likely to be the creators and the decision makers because they didn't learn the skills in college, but the opportunity is there.

Corporations keep women enslaved by promoting the next big debt purchase. As women pay off their college debt, they are encouraged to buy cars and houses and vacations to Tahiti and graduate degrees. Women remain enslaved to the companies that allow them to pay off debt.

Pleasure

Women are not just slaves to the government and corporations but also to pleasure. She is a slave to the *feeling* of attraction she has towards a given man. This has always been the case psychologically, but not in execution. In the evil patriarchy, women were told to honor their man above all and to honor meant to support and stay committed to him.

An empowered woman under modern feminist doctrine is told to honor the pleasure she receives over honoring commitment. She is told to chase pleasure instead of honor.

We see examples of this everywhere, although the vices are cloaked in virtuous buzzwords. Women are *empowered* when they are promiscuous. They are *careful* when they date around before choosing one man. They are *successful* when they reach director level at her company.

What is more virtuous—these buzzwords or the rejection of chasing the status and pleasure to provide for a man and a family? Feminism says the former. Christianity, the Bible, classical books, and Buddhism all say the latter. Basically, everything that has ever been called *wisdom*.

It is this pursuit of pleasure that is enslavement. If you crave pleasure, you are enslaved to the feeling of that pressure, and a suffering takes place in its absence. See: drug addicts. See also: the modern woman.

Through Buddhist meditation or following Biblical teaching we learn to drop our ego and our dependence on pleasure. We can choose not to seek pleasure and therefore the need to chase it. The chase can lead in disappointment and the acquiring of pleasure can lead to diminished returns, but receiving pleasure also increases the likelihood to return for more.

Pleasure necessarily feels good. When pleasure is received, it reinforces the activity and encourages the chase. There’s nothing inherently wrong with feeling good.

The problem is in the chase. There is an inherent suffering involved in chasing pleasure, and modern women suffer in spades. The suffering is in not living in the present. We want the present to be better, so we *look forward* to feeling better. Not only are women told to have sex with multiple people, but they are told that in conjunction with chasing a career—which they need to pay down debt. Each of these discourages men from honoring them, and the modern woman does both.

Modern feminism enslaves women to short-term pleasure seeking, careers, and growing government. True empowerment is the ability to say "no". In the world women created, women *must* pay back their loans, and they *must* follow what's *attractive* instead of valuing commitment because a dependence has been developed to both.

German “Refugees Welcome” Activist Admits She Was Completely Wrong About Mass Migration

February 27, 2018 | by David G. Brown | Link | Original Link

A narcissistic German SJW has admitted to a Polish website that she was foolish for thinking she and her associates could civilize many of the more than one million migrants and fake refugees who came to Germany from 2015 onwards (English translation here). After reading her interview in both English and Polish one gets the feeling that she herself would like to get up and leave if given the chance. Typical.

[image]
How many of these girls were raped and/or murdered six months later?

Violent attacks in Germany began to accelerate phenomenally after 2015, in large part due to the Beatles-style mania young SJWs, most of them female, have shown towards foreign intruders. Rebecca Sommer was one of the leaders of this schoolgirl stupidity and enthusiasm, which drowned out many of the atrocities the “guests” were committing against ethnic Germans.

Fittingly, in one of Germany’s most populous and richest states, Niedersachsen, the vast majority of the increase in crime has been attributed to new male migrants and “refugees.” The most recent wave constitutes just over 1% of Germany’s residents but is driving 90% of the expansion in illegal activity!

The 1000 fake refugee cock stare.

Here's a great summary of Rebecca Sommer's about-face:

> …I had to admit to myself that when it comes to Muslim refugees, they have grown up with completely different values, into which they have been brainwashed and are indoctrinated by Islam, and have no intention of adopting our values — worse, they look at us, unbelievers with superiority and arrogance.

Help fix things or never comment on politics or immigration again

And we're sure so many new arrivals from the Middle East will welcome this transgender person.

Either Rebecca Sommer should help clean up the mess she has contributed to or she should be laughed at and mocked for the rest of her life. Hilariously, in the interview she mentioned how the very same foreign men she was dedicating her time to helping repeatedly called her a "whore." So much for gratitude!

Much like European colonists between the 15th and 19th centuries, Sommer presumed that she could simply assist in grafting Western culture onto non-Westerners (how "white supremacist" of her!). Except this time the transformation would be internal, within Germany, rather than occurring externally in the New World, and the "Western values"

transplanted would be the leftist precepts of total, moronic tolerance. As anyone with half a brain could have foreseen, the migrants spat out what Sommer and others were trying to spoon-feed them and insisted that their culture is the more dominant, masculine one (as it indeed is).

No doubt exists that Rebecca Sommer will never be a part of ameliorating or solving the problem, so she should just retire from being a "rights activist," along with her fellow travelers. The only rights she has successfully furthered have been the Angela Merkel and EU-mandated "rights" of many Germans and Europeans more generally to live in perpetual fear of crime and suffer increasing social, political, and cultural erosion in their own countries. Similar things can be said about other people who spearheaded the braindead campaigns to welcome ill-suited new arrivals into Germany.

Some SJWs are beginning to think the end is nigh

[image]
Sahra Wagenknecht has espoused some putrid policies over the years, but she's starting to see the writing on the wall.

"If we don't wake up quickly, the whole situation will end tragically." These are the words of Sommer in assessing where Germany's present course is likely to take it. She is not alone, as the ideological successor to East Germany's communists, Die Linke ("The Left"), has already shifted on immigration, albeit not nearly enough. One of its leaders, Sahra Wagenkneckt, was even physically attacked for criticizing the open borders madness. Nevertheless, she and others should be doing a whole lot more to rectify the situation. For a start, they could get completely out of the way of the parties trying to really make a difference, like Alternative für Deutschland (AfD).

Just as Rebecca Sommer explains in her interview, the media and social media networks are engaged in wholesale suppression of dissenting views on immigration. In fact, to call these views dissenting is perverse. They represent the majority opinion of the German people, who are fed up with political correctness and see every major party participating in it. But can they stop it and save their country? Only time will tell.

David G. Brown
David is a lifelong dissident and intellectual rebel. He despises political correctness, which replaces real, needy victims with narcissistic leftists out for a free meal. Though still a young man, he has watched society descend into its present morass with great sadness, combined with a determination to help make things better. He tweets when there's

something worth tweeting here.

The Masculine Man's Survival Guide To Banging Slutty Feminists

February 27, 2018 | by Beau Albrecht | Link | Original Link

Obviously, the first consideration is, why date feminists at all? Some guys refuse outright; others can work with it. Really, it's *all about numbers*.

If you're on campus (which is another can of worms entirely), girls get propagandized quickly. In a liberal city, much of your available target market identifies with feminism at least somewhat. If that's unsuitable for you, escape to a better city, or defect to Flyover Country. Still, although I'll move for work, I'm unwilling to move for chicks. Finally, you might discover a girlfriend's views after you're already dating.

Despite my frequent tirades about *radical* feminists, I've actually had some decent relationships with the *moderate* ones. Everything depends on how deeply they were indoctrinated.

Girlfriend Security Advisory System

The threat classifications include:

- **Severe –** Fanatic, short temper, not grounded in reality
- **High –** Has some bad attitudes, suffers from Princess Complex
- **Elevated –** Thinks feminism is only about equality
- **Guarded –** Average modern chick
- **Low –** Ladylike, very down to earth, knows feminism is nuts

Women are increasingly rejecting feminism, but you'll often encounter the following.

Go for the one on the right.

Code Yellow really isn't too bad. They're fairly normal, only moderately indoctrinated. They're usually liberal, but probably okay with polite discussion or agreeing to disagree. Ideology needn't be a barrier. Romance and politics are as related as chocolate cake and Boolean algebra. I've had several hookups and short-term relationships in this range.

I'll overlook many flaws for ginger hair

Code Orange enters more dangerous territory. Some actually can be cute, though others experiment with strange fashion choices (weird hair, lots of tattoos, etc.) As for

personality, think of the bumper sticker “51% sweetheart, 49% bitch”, helpfully warning you she’s barely tolerable. However, having good game can be mitigating.

I learned many valuable lessons in the trenches. A couple of decent long-term relationships were in this range, and a turbulent one too (Daddy issues, epic Princess Complex, verging on Code Red). Also, I had a great start with a soft butch lesbian, but unfortunately she was a druggie; long story.

A chip on the shoulder means “do not bang”

Code Red includes hardcore feminists, often fanatically into every other flavor of cultural Marxism too. These ball-busters generally aren’t worth the effort.

Still, I almost made it work with one, back in college. (That could’ve been the oddest relationship since Jack London and Anna Strunsky.) I got considerably further with another a few years later. She was a nineteen year old natural redhead with bodacious curves; I couldn’t resist. It burnt out quickly after severely overdoing her “Hot and Cold” shtick and none-too-endearing passive aggressiveness.

Code Reds aren’t always obvious, but tells include:

- Shaved head, looks stone butch, or otherwise ruined her appearance
- Rather than having a real job, she’s a professional activist, foundation staffer, or HR droid
- Frequently spouts leftist talking points, whether or not anyone wants to listen
- Considers some difficult-to-prove malady or mental disorder as her badge of honor
- Uses made-up PC terminology
- Acts like she’s a supermodel, but is merely slightly cute (at the very most)
- Majored in sociology, women’s studies, gender studies, etc., especially if she’s wasted even more money and years of her life with grad school

Beware; she probably has a bitchy personality, and her ideology justifies it.

Managing the ‘tude

Don’t let it get to this point.

Feminist programming often makes direct approaches (and even indirect ones) difficult. Inflated egos and expectations can worsen this too. Sometimes even Code Reds have friendly moments, but knowing how to deal with Bitch Shields is often necessary to break the ice. However, if she persists in being snotty, find someone without a defective personality.

If your relationship game isn’t on point, your girlfriend will be (shall we say) *difficult.* Keep your frame sharp. Get good at passing Shit Tests. The higher the threat category, the more important this becomes. A Code Red will be a major pain in the butt unless you have frame control like Darth Vader:

Her: That’s not how our relaaaationship should work!
You: I have altered the deal. Pray I do not alter it further. *(wheeze)*

They’ve been programmed to rebel against male authority, yet they instinctively expect leadership from you. If you act indecisive—or worse, let her boss you around—you’ll pay dearly. It’s okay to be reasonable and talk things out, but ultimately, sometimes you must remind her that Mussolini is always right.

The good news is that being fair but firm from the beginning will earn respect. She’s used to soy boy male feminist orbiters supplicating to her, but she instinctively wants a *real* man.

Banging feminists

Ah, such maidenly charm and grace!

Concerning attitudes toward sex, there are two very different varieties of feminists. (Yes, they bitterly disagree with each other.) The first are crabby, pickled prunes with more issues than *National Geographic*. Long spells of sexual frustration will worsen their disposition, creating a self-perpetuating spiral. Steer clear of those; they're often Code Reds anyway. They're the likeliest to make false rape accusations for revenge, though that's possible in any threat category above Code Green.

Then there are the sex-positive feminists, generally Code Oranges and Yellows. They even call themselves sluts. They can be lots of fun in the bedroom, so long as you're not expecting someone with low mileage. The choices they've made mean they're not exactly wife material, but they generally don't want to be reminded of that.

Personally, I love sluts, for obvious reasons. (I've been around the block myself, so I'm not exactly holding out for a virgin.) They're more likely to go in for any kinky stuff you've been curious about but never had a chance to try before. You're probably not her first for all that!

Many are into "alternative lifestyles". I don't mind when women bump and grind with their girlfriends. (That's cute, and I still have something they don't.) Some are into polyamory, particularly those in offbeat subcultures like hipsters or the kink scene. If you can put up with that, be warned that polyamory is typically more drama than an Off-Off-Broadway troupe in Greenwich Village. For those imagining weekly threesomes with hot bi babes, the reality is much different, but all that's another discussion.

Can feminists change?

Remember that they were once normal girls, before they got propagandized. Some have

found their redemption. Even the nutty big-name feminists are people too (just very unpleasant ones).

Fortunately, things can improve over time. After a Code Red graduates, a few years of exposure to the real world usually takes some of the piss and vinegar out of her. A Code Orange nearing her expiration date must tone down the Princess Complex and snotty attitude if she hopes to keep her social life going. A Code Yellow might become aware that Western women have it pretty darn good already. A Code Blue might even take the Red Pill.

Unfortunately, there are no quick cures for years of brainwashing. However, there are ways to convey your message slowly and gently, if she's open to discussion. The facts are on your side. The last six decades of radical feminism didn't grant women equal rights; *they already had it*. Since then, we got vast increases in divorces and broken homes, hostility between the sexes, a dysfunctional social environment, and that's just for starters. If you can lead someone to the truth, deprogramming feminists is a service to humanity.

Scott Pilgrim Vs. The World Tries To Convince Men To Dump Their Loyal Girlfriend For A Purple-Haired Slut

February 27, 2018 | by Jared Trueheart | Link | Original Link

No film glorifies beta behavior more than Scott Pilgrim Vs. The World. The manosphere as we know it really isn't that old. Return of Kings started in 2012. Ideas like alpha fux/beta bux, cultural degeneracy, and the systematic emasculation of men were blossoming but still wouldn't be fully developed for a few years.

In hindsight we see that these were always there, but were generally well hidden. However, as time went on they were increasingly exposed. Perhaps the most blatant attempt to emasculate men was to glorify weak men in the media. With its release in 2010, Scott Pilgrim Vs. The World was the culmination of the glorification of beta behaviors.

The Male Lead

Aren’t you afraid of the punch that’s coming?

Scott Pilgrim is played by Michael Cera. Now I have no qualms with Michael Cera, but if there was an actor made to play a beta, it’s him.

No muscle. Soft voice. Hipster appearance. He is not threatening in any way. It’s not hard to imagine that his genitals don’t work at all.

The Female Lead

Recognize that look?

Ramona Flowers is the name of the love interest. Notice that she exhibits all the tell-tale signs. Unnaturally colored hair. Ugly features. Bitchy, sarcastic attitude. Thousand-cock stare. An “I’m so over it” attitude.

The Plot

The plot of the movie is the most blatantly beta aspect of the film. Scott Pilgrim sees Ramona Flowers at a party and becomes infatuated with her. He starts to date her, though he already has a girlfriend. His girlfriend is loyal, attractive, Asian, and normal-looking. Eventually he leaves his girlfriend to pursue Ramona.

The makers of the film expect us to believe that a man would leave this girl for the purple-haired one

In order to be with Ramona he must “defeat” her seven evil exes. If seven doesn’t sound like too many to you (and depending on a woman’s age it might not be that bad), the quality of these exes reveals the degeneracy of the character’s life.

Some of her exes are just regular dudes. One of her exes is a woman. That’s a huge red flag we now recognize. Two of her exes are twins. It’s not hard to imagine that these twins treated her to a DP session or two. One of her exes is a Hollywood actor, another an owner of a successful record label.

Based on these exes we can now put together a narrative of this girls dating history. She got some attention for her pink hair and “lovably sarcastic” attitude that fed her ego like a drug. Like drug addicts do, she then needed more attention and excitement. So she started dating girls, and twins. She got successful men.

Now one guy, average at guy at best, is supposed to be able to give her everything she needs to feed her inflated ego and excite her like the twins, girls, and alpha males did? Not likely. And for some reason Scott Pilgrim still pursues her.

The Glorification

The first thing this movie glorifies is the slutty woman. Ramona Flowers is the subject of pursuit in this film. That pursuit is the central plot. The film glorifies this type of woman. About ten years ago a number films came out starring the “manic-pixie-dream girl” archetype (not a term I invented). Jennifer Aniston in Along Came Polly, Zoe Deschanel in 500 Days of Summer, and Ramona Flowers in Scott Pilgrim Vs. The World are all manic-pixie-dream girls. All these films center around the pursuit of such women by beta males.

Scott Pilgrim also leaves his girlfriend for Ramona. His girlfriend is portrayed as the crazy jealous type. This is the media’s way of devaluing loyalty and fidelity. It also portrays loyal women as less valuable than “interesting” women like the manic-pixie-dream girl Ramona.

Scott Pilgrim is clearly a beta male. Yet somehow he is the love interest of two women, one of whom is so madly in love with him that she is violently jealous of the ugly woman he pursues. In the real world betas don’t even bang the pink-haired loose women, yet somehow this guy has several women interested in him.

Most importantly the film glorifies an idea that one’s past does not matter. Even though Ramona’s exes betray the disgusting past she would prefer to keep secret, it doesn’t matter to Scott. He’s in love and love can conquer the sordid pasts of loose women.

In 2010 the manosphere wasn’t mature enough to call out the beta glorification of movies like this. Unfortunately, men who saw these movies during that time saw characters like these as objects of emulation. You want loyal women and slutty women to want you? Just be a beta like Scott Pilgrim.

Now we know better. When movies that glorify betas and women at the expense of strong men are released we call them out (as was done for this Star Wars movie and this Star Wars movie).

Hollywood got away with it for a long time. We are still combating the men who took to

heart these beta ideas today. By calling out these movies of yesteryear we will hopefully make men influenced by them realize the folly of their ways.

7 Reasons Why You Should Attend The Sturgis Motorcycle Rally

February 28, 2018 | by Pete Fletcher | Link | Original Link

The Sturgis Motorcycle Rally is the largest event of its kind in the world. It's been held in August in the small town of Sturgis in the Black Hills of South Dakota for over 75 years. It's big. It's loud. It's for bikers. It's not advertised as family friendly. So why should you attend?

1. It's already set up

Trying to rent a venue and get everything together for any kind of gathering or rally is time consuming and expensive, especially if you're being hounded by toxic feminists. Roosh already tried this and it didn't work out so well.

Sturgis successfully hosted 750,000 bikers at their 75th anniversary in 2015. There's campgrounds, motels, cabins, RV parks, food, drinks, medical facilities, law enforcement, and every imaginable kind of vendor. Sturgis knows how to host men.

2. Sturgis is not snowflake friendly

There are triggers on every street corner. There are no safe zones. There is nothing to encourage the weak hearted. There really is midget bowling advertised for the 2018 rally.

It's big, bold, loud, and in-your-face. Nobody's going to get all offended . . . about

anything. Except: don’t knock over a bike! That’s serious business.

3. It’s in the middle of vacation paradise

I’m not going to spend all of my vacation sitting around talking about manly stuff. I’m going to get vacated, recreated and unwound. I’m going to see the sights. I’m going to travel around. I’ll plan each day in the morning and rethink it by noon. Just like most people on vacation.

Our family visited the Black Hills during one or our Great American Road Trips way back when I was 12. Outstanding country with a different viewscape around nearly every corner. You won’t have time to see them all but you can start with Mt. Rushmore, the Badlands, Custer State Park, the Needles Highway, the Crazy Horse Monument and Devils Tower Monument. Or you can skip the crowds and try to find your own place of seclusion in the backroads of the plains, mountains and forests.

4. You don’t need a motorcycle

Once in town, folks mostly just park their bikes and walk. It’s too crowded to ride. The town of Sturgis hosts the rally but most of the action is at the campgrounds. Many of the campgrounds run shuttle buses. So drive to Sturgis, park your car, get out and blend in. Bikers and ROK are part of the same band of brothers.

5. You’ll never be bored

The party never stops and it’s to big to see it all. Here’s an excerpt from a TripAdvisor

review:

> *World class concerts every day at several different venues for 10 days in a row. Over 20 bands playing live every single night. Several different motorcycle races daily at 3 different venues. Motorcycle shows at 10 different venues almost daily. Motorcycle stunt shows daily. Test rides daily from over 6 motorcycle manufacturers. Enough t-shirt and accessories stands to blow your mind. Celebrities everywhere, some riding, some playing, some doing meet and greets and autographs.*
>
> *I did not attend Woodstock but this blows any event away anywhere. Massive bars with 5 that are a city block long and wide. And a couple more that are half a block in size and dozens of other watering holes to quench your thirst. Bikes, Babes and booze and music of every type. roll, country, rap, blues, southern rock, and many styles of rock n roll.*

6. The investment is low; the rewards high

Roosh: you need to reserve a vendor booth of an appropriate size out on the periphery where prices are less. Load up your t-shirts and other gear and set up shop. Tell us where you're going to be and we'll find you. That's all it takes for year one.

Keep it small at first and see how it goes. Keep thinking of what should be done the next year. What worked? What didn't? This could grow to be whatever we want. And it could continue for year after year.

7. Antifa *might* show up

There have been unsubstantiated rumors that antifa wants to shut down Sturgis because of the bikers' propensity to display Confederate and American flags.

Nevertheless, let's not wait for them. Lets send them engraved invitations on lavender scented paper. Include maps and lists of places to stay. Suggest they get their reservations early. Tell them to bring their own play dough and coloring books but they can buy granola and yogurt on site.

Because if they do show up, there are 500,000 bikers who would really like to sit down and discuss toxic masculinity and flower arranging with them!

Norwegian Ski Team Accused Of Being Literally Nazis For Using Millennia-Old Runes

February 28, 2018 | by Jean-Batave Poqueliche | Link | Original Link

Apparently, if air comes in and out of your lungs, you are a Nazi. Well, Nazis did breathe, didn't they? So, there you go, racist! Although it sounds totally absurd, this is the type of argument the left now uses after claiming that the ski team representing Norway for the 2018 Olympic Games celebrates National Socialism by using Viking runes that are at least two-millennia-old and in the written language of their forefathers.

The same old tactic

Various left-leaning rags attacked the Norwegian Olympic team on their outfit, suggesting that the runes promoted racism and demanded an apology and the sale of the sweater to be banned. Like usual, the open borders advocates are the first ones to cry like the victims they are and lie through their teeth.

I knew I saw that face somewhere

They probably imagine that the Norwegian athletes are goose-stepping in their South Korean hotels before doing the Roman salute on the slopes to be more aerodynamic.

A tale of bravery

Tiwaz

The rune Tiwaz is the symbol of Tyr, the god of war, justice, and treaties in Norse mythology and the bravest of the Aesir. The Viking Eddas recount how the Gods attempted to trap the giant wolf Fenrir, as the prophecy told that he will grow more restless and dangerous and would eventually take part in the Ragnarök, the Twilight of the Gods.

> As a guarantee of good faith, Tyr placed his hand between the jaws of the monstrous wolf Fenrir while the gods, pretending sport but intending a trap, bound the wolf with a magical ribbon, made of the sound of a cat's footfall, the beard of a woman, the roots of a mountain, bear's sinews (meaning nerves, sensibility), fish's breath and bird's spittle.
>
> When Fenrir realized he had been tricked, he bit off Tyr's hand.

Such were the deeds of Tyr. The ultimate sacrifice of one's physical integrity for the greater good and the protection of his kith and kin. An altruistic sentiment that is one of

the pillars of Western identity. Is there any value that is more European than this one?

Why are they so afraid?

I believe that what upsets the narrative serfs the most is that these unapologetic Nordics are not constantly groveling for who they are, like their neighbours in Sweden. They send an image of strength and look like the kind of individuals that does not bow down to political correctness. Seeing the "Tor Masculine Sweater" (its official name) is enough for leftists to hyperventilate.

It is certainly not a coincidence if the rune of Tyr is being demonised even more than Algiz, the other rune present on the kit. Those in charge are truly aware of the power that this symbol embodies.

It is a most unwelcome sight for the enemies of freedom in those times where every man is shamed for following his nature and our society is feminised a bit more every day.

The rune of man

This arrow pointing upwards, this spear, triggers something very deep in the subconscious of man. Tiwaz exhorts men to strive, to look for something greater and pursue noble goals. It is interpreted as the key which opens the gate to the skies, that will allow mankind to reach enlightenment.

Being the symbol of courage, unbowed masculinity, and male strength, Tiwaz represents everything the Left hates and fears. It is an authentic European symbol that connects all Westerners to their ancient roots.

It is important to notice that Agal or Algiz, the other rune, was not vilified with the same accusations, even if it was chosen in the past by thought criminals and other bêtes noires of the system such as Dr. William Luther Pierce.

William Luther Pierce

Only the tip of the iceberg

The esoteric nature of Tiwaz and the weight it carries in masculine symbolism might explain why the slaves of the elites sweat with fear when they witness its resurgence and why the mainstream media focuses on an apparently small issue.

Here is a video that Oleg, a fellow Norman and Viking specialist made on the subject, wondering why European children are sent to mosques while runes are seen as evil (don't forget to activate the English subtitles in the bottom right corner of the video):

You can watch Oleg's work on his two YT channels, one dedicated to self-improvement and fitness and the other focusing on the history of paganism and its relevance today.

Être de gauche nuit à gravement à votre virilité et à celle de votre entourage

Luckily, the company that sells the sweaters, Dale of Norway, is not run by frail cucks and they refused to back down. They will continue to sell the sweater and provide equipment for the Norwegian team.

Many social media users profusely mocked those who were offended, joking on the fact that the symbol "This way up" or every Tuesday in the week (its name comes form Tyr) should also be banned, following that logic.

How To Find A Potential Wife In Brazil

February 28, 2018 | by André du Pôle | Link | Original Link

If you manage to get some money and tighten your game, the Western metropolises have their perks. Namely, there are plenty of opportunities to meet new girls. Many of them are entitled, obnoxious, fat, and devoid of game. Some are still cute or beautiful and might be scored if you keep it along and well.

However, the West has become one of the worst places to marry. Most western girls can't help but sabotage the relationship by constantly wielding for power or get bored, hence cheat or flee so that they get another cock and more drinks find themselves.

Getting outside the West makes you able, not only to find better, cuter, more feminine girls, but it also allows you to find solid ones, able and willing to team up with you and co-fund the family you've always wanted. The patriarch dream is alive and well.

Going to Brazil

Your humble servant managed to get both his game life-phase and his wedding-family phase, or rather the beginning of it, in Brazil. I didn't choose the country. I was stuck in North America, working hard but hardly getting any pussy, before my Ph.D adviser suggested putting the thesis in joint guardianship with a Brazilian teacher.

At first I thought about staying just how long I was supposed to stay, then go back to "developed" North America. But the atmosphere, the culture, the girls—not to mention the lower life cost and superior status—got me, and now I could flash my *residência permanente* if I ever needed to.

Brazil has lots of girls. In fact, several Brazilian cities were lacking males in 2014. Not only that, but these girls tend to be feminine, outwardly oriented, and many have a *bumbum* (ass) to fall for. A Brazilian girl is typically good-looking, cares about her body and knows how to dance. You will never see more *escolas de dansa* and gyms per square mile in another country.

There is one condition to succeed there: learn the language. Very few Brazilians really speak English—and the girls who enjoy routinely hitting up on foreigners may not be the best wife material. As I noticed during my first weeks there, speaking English only prevents you from communicating with 90% of people there, so there's no way to get around it. The Brazilian life *will* require you to speak Portuguese.

For starters

Why it’s hard to settle down at first

I’d advise you to avoid overrated Rio de Janeiro and go straight to the south: São Paulo or some of the southern states (Parana, Santa Catarina, Rio Grande do Sul). The climate there is temperate and many girls are of European descent. These states were colonized and developed mostly by Italians and Germans, which means that many there descent from these stocks.

As her name doesn’t indicate, someone like model Gisele Nonnenmacher Bündchen was born and raised in Brazil. But you will also find many shades of *morenas* (the slightly orange-copper tint) and creamed coffee. It is easy to be tempted by the diversity of beautiful or exciting types, so perhaps it is best for a newcomer to look for short or casual relationships during several months before seeking for a wife. Brazilians say they’re just *ficados* when they are not (yet?) *namorados*, in which case the relationship becomes official and more stable.

Brazilians tend to suffer from an inferiority complex. Their country was supposed to be an empire, then a first-rate power, but it has never really hit the mark. As a result, Brazilians tend to believe the West is better and less corrupt—with many of them ignoring that Western countries have found a way to normalize and institutionalize corruptions, whereas Brazil still makes dramas of it. Girls there are no different. The simple fact of you being a Westerner will help triggering their female hypergamy.

However, even the party-goers among them retain a strong family culture. Many student girls go back to their family’s place on weekends. You will have to give them something better to do.

Finding and demonstrating value

Being a Westerner, speaking Portuguese and running some good game—strong, flirty, yet still a bit sophisticated—will definitely put you ahead. It may not be enough though. Many Brazilian girls, especially those who study and work while retaining their femininity, want men with value. You should have a job or study for at least one year to get minimal status and show that you'll stay. Brazilian girls love travelling, but they don't fare well when they try to stay in another country.

Even if you manage to peel your girl away from her extended family to spend more time with you, it is unlikely that she will stay with you outside of South America. If you want to marry a Brazilian damsel, you must know that most Brazilian girls you will score won't remain in your life for so long, but you will remain in the country!

The most interesting relationship material can be found in universities and hip bars. Although leftism seems to rule unchallenged over the former, many girls there remain who they are, which means they still have the modesty, eagerness to please and love, and femininity they should have. Some social circle game can yield good results as well.

As anywhere else, the hunt for love will require patience. Learning the language, gaming lots of girls, meeting with the 30 or 40 or more members of your *namorada*'s extended family… all this takes time. But I'll tell you, living here is much better than a crowded Western vampire city. As long as your town or neighborhood is reasonably good, what you get is a warmer climate, warmer people, a family-friendly culture and lower life costs. Not to mention plenty of options. What else?

Conclusão

Before you pack your bags, let me drop a couple of other tips and observations:

If you work as a freelancer or digital nomad, you may be able to make a decent living in Brazil

The *real* remains weak, so if you're getting paid in USD, the conversion stands to your advantage. On the other hand, unless you get high-profile clients, teaching English or

other languages pays almost nothing.

Interacting with Brazilian girls happens along a generally pleasing vibe

They are really interested into knowing about you. There will be some shit test, of course, but you don't feel like you're going to war—as one feels sometimes when picking up Western girls. Even when you don't score, the overall result will remain pleasant.

Stay clear of drugs

The Military Police is on duty and so are criminal gangs.

Marriage is incredibly expensive

When you will have found a decent, trustworthy girl you'll create a family with, you may consider living together just as a married couple without wedding. I initially considered wedding only at the *cartório* (registry office) but my future wife's family was adamant for church. Creating a tribe comes with a price.

Brazil has no tough politics on immigration

The country does barely attract shithole-tier people due to not throwing money at aliens and tolerates illegal Westerners. I once met with a Dutch guy who stayed with no visa for more than one year and was only charged with a $450 fine.

The New York Times Gets It Right About Yoga Pants

February 28, 2018 | by Ted Deveer | Link | Original Link

One of ROK's key opponents in the legacy media is the *New York Times*. The *Times* has been wrong on just about every subject since it's founding. From repeatedly insisting during the 1920s that Hitler was no threat to the Jews, to the systematic and now widely exposed coverup of Stalin's genocides, to almost every issue today. In fact, the *Times*' current state proves Murray Gell-mann's ironic observation a half-century ago that newspapers tend to be wildly wrong on any topic you know well, yet you believe they are perfectly correct on any topic you don't know much about.

But one of the core requirements of intellectual honesty is to admit it when your opponent is right. And a broken clock is right two times a day, as the almost-outdated saying goes. So here at ROK, we will humbly admit that the *Times* has taken on one of the great issues of the day, dear to the heart of many an ROK reader, and has come out on the correct side.

Addressing a truly critical issue, as the *Times* is known to do, they have come out swinging and published an opinion piece this past Sunday arguing that **women above 30 years old should not wear yoga pants**, in the piece titled, directly enough, *Why Yoga Pants Are Bad for Women*. One of the key arguments that the article builds up to is…

> Women can, of course, be fit and liberated. We may be able to conquer the world wearing spandex. But wouldn't it be easier to do so in pants that don't threaten to show every dimple and roll in every woman over 30?

Two thumbs up for the *New York Times*, having chosen a critical issue and come to the correct conclusion. Honor Jones, here at ROK, we will toast to you tonight, and thank you for doing your part to help convince women above 30 not to wear yoga pants. You are helping make the the country and the world a more beautiful by helping eliminate this eyesore.

Of course, the *Times* is still the *Times*, so there are other parts of the article and argument that Honor Jones got completely wrong. They are worth elucidating, while remembering that just because someone has the correct opinion on issue X, that doesn't imply they'll have the correct opinion on issue Y.

Jones argues that even women below 30 (and especially those above 30) ought to wear sweatpants instead of yoga pants. No, no, no. This may be a case of "the solution is worse than the problem"—like how socialism tried to solve the problem of the decadent wealth of the Russian aristocrats at the expense of the peasants, but that solution just made it worse for both groups. She comes to this conclusion due to her faulty logic. She says:

> When yoga pants are the first thing grown women put on every morning, we can't help absorbing the message that staying fit is our No. 1 purpose in life.

So, Honor Jones, what is your “number one” purpose in life? There’s an excellent argument to be made by the non-religious among us, an argument that is supported by evolution, evolutionary psychology, universal traditions, and just about every non-soy man alive, that yes, indeed, your meaning in life as a woman is to *take care of your family*, and that includes critically these three fitness-related components:

1. *Raising children*—and many studies have demonstrated that physical fitness is a strong proxy for the ability to bear and raise physically healthy children.
2. *Looking good for your man*—of which staying fit is a critical component.
3. *Taking care of yourself and your long-term health* (without that, you can’t achieve #1 and #2)—of which being physically fit is a key component.

And evolution has spent millions of years building up to you, just you, to give you that mission. For evolution-believers, your mission is to understand what evolution designed your ancestors and you, to follow that and live up to your genetic inheritance. That’s respect-worthy.

And I also respect, deeply, those who disagree with this evolutionary analysis for religious reasons: you are humble before your God. And it’s curious how every religion actually comes to the exact same conclusion as as evolution does, as God fills your life with meaning: be fruitful and multiply, in one classic Biblical formulation. That is very respect-worthy.

But here's what's not respect-worthy: articulating what you are against, without articulating what you are for. Being for "sweatpants" is glib but sidesteps the Big Issues. When you are against a litany of complaints, but for nothing—that means you are only after power. In fact, the definition of the power grab, trying to make yourself important for your own benefit (while veiled in moralistic preaching), is taking down others without building your own palace. And this why here at ROK, we may mock our enemies and the state of society today; but we focus on learning, education, on taking responsibility and helping ourselves and our loved ones improve, first and foremost, above all.

Let me predict Honor's response: "I am for something, I just didn't say it here. I'm for ending the oppression of [insert preferred seemingly-oppressed-non-Asian group here, such as] the LGBTQQIAA (Lesbian, Gay, Bisexual, Transgender, Queer, Questioning, Intersex, and Asexual individuals as well as their Allies) community and other Democrat party supporters." Maybe her preferred group is those who advocate abortions or schooling until you're 40 or any one of many different possible Democrat-approved groups. And she won't use these words, since she'll justify it in a moral framework that demonstrates that defines her preferred groups as the morally superior people, but it will be the same point.

To which my response to her would be: "Honor, with your worldview that explicitly discourages having 3+ children in nuclear family units, your genetic lineage is going to die, you will probably have one or two kids, who will have a 50% chance of having one kid, who will have a 25% chance of having one kid… I give you three generations more, max, and your genetic lineage will have vanished from this world. Ciao, ciao, Honor, my condolences to your ancestors, who struggled and suffered only to have their legacy be erased from this world." So long, and good riddance.

Much more about conspiracy theories and protecting your privacy.

I'm Ted, I read old books, and my interest in Stanley Kubrick has nothing, absolutely nothing, to do with my interest in conspiracy theories, not at all, no way. And I like my privacy.

15 Evil Or Incompetent Women Who Prove That Females Are Horrible Leaders

March 1, 2018 | by John Carver | Link | Original Link

A common argument amongst feminists (in addition to their emasculated white knight and soy boy allies) is that women are better suited for leadership positions in the modern world. It doesn't matter whether it's being President, Prime Minister, Chancellor, or CEO, because men are just "too violent" or "too corrupt" or "too sexist", and will inevitably ruin things for everyone like they have for many millennia.

Yup. Thomas Jefferson, Theodore Roosevelt, Calvin Coolidge, and Dwight Eisenhower really ran the country into the ground alright.

However, they are dead wrong. Female leaders throughout the course of history have proven themselves capable of dishing out just as much wanton violence as their male counterparts, and a string of female leaders in modern times have equally proven themselves to be corruption-riddled grade-F garbage.

This article will showcase fifteen prominent examples, and make a valid argument that **men** should continue to be the best choices to run a country or corporation.

1. Wu Zetian – Empress of China

Rejected – China's only Empress in it's vast history would have been a shoo-in to be a "Diversity Disney Princess" if not for her horrible deeds

Proof that the world's least criminally inclined gender and racial combination (East Asian Females) are not immune to being absolutely corrupted by power, it's no wonder that one of China's very few female rulers in over 3,000 years of history is not a modern feminist icon.

The 7th century autocrat is widely believed to have strangled her infant daughter to death in order to frame a key rival for the throne, ordered numerous people to commit suicide, and handed out treason charges like they were candy, among numerous naughty exploits.

Recognizing a problem before things got out of hand, the middle kingdom hasn't made many attempts with female rule ever since. Much like East Asia has wisely opted out of western style "diversity" in the early 21st century, after seeing it's negative results elsewhere.

2. Park Geun-hye – President of South Korea

She is currently languishing at the Seoul Detention Center

Clearly, China's smaller next door neighbor (if you exclude North Korea) didn't get the memo of what's at stake when you put a woman in charge. The first female president of South Korea (2013), and the first popularly elected female head of state in East Asia **in general**, Geun-hye was impeached in late 2016 on charges related to influence peddling by her top aide.

And it doesn't stop there. On 17 April 2017, she was formally charged with abuse of power, bribery, coercion, and leaking government secrets.

It sounds like Seoul Detention Center is exactly where she needs to be. Oh, and here's a 2016 video of **hundreds of thousands** of Seoul residents taking to the streets in protest

against her dismal leadership.

3. Cristina Kirchner – President of Argentina

If the Argentinian people had some high hope that Ms. Kirchner, the wife of former president Nestor Kirchner, was going to put an end to the countries notorious reputation for corruption and cronyism when she took office in 2007, they were left just as disappointed as ever. In fact, it arguably got even worse.

Four years into her presidency (2011), Wikileaks cables revealed that diplomats from the United States and several other Western countries had expressed deep concern about the current levels of corruption in Argentina. "Under President Cristina Fernández de Kirchner," reported the Heritage Foundation in 2013, "respect for markets and the rule of law has deteriorated and corruption has boomed."

Post-presidential indictments for corruption, money laundering, and even a federal judge calling for her arrest for **treason**, only amplify just how mediocre she was in hindsight.

4. Dilma Rousseff – President of Brazil

[image]
Brazil elects mate-slurping former Communist revolutionary into office. Proceeds to run the Brazilian economy into the ground and gets impeached.

Taking the helm of the world's 5th most populous nation in 2011, Dilma became not only the first female president in Brazilian history, but also the first democratically-elected female president in the world to be **impeached and removed** in 2016. (Park Geun-hye of South Korea would closely follow suit in 2017).

Initially somewhat popular with Brazilians (both on a personal level and with her

government), things soured quickly in 2015 after revelations of corruption were endemic in her left-wing / SJW administration, sparking the world famous 2015–16 protests in Brazil. The rapidly expanding economic crisis in the country played a huge role as well.

In July of 2015, her approval rating reached a new pathetic low of 9%, while her disapproval rating reached a whopping 64%. With the Brazilian people clearly getting tired of their Marxist matriarch running the show (into the ground), Dilma was suspended from office in May 2016 and impeached later that August.

5. Angela Merkel – Chancellor of Germany

Prost! To the death of western civilization!

Much like Dilma Rousseff, 'Mother Merkel' was indoctrinated with much Marxist-Leninist garbage in her youth, despite being born in the prosperous free-market Republic of West Germany rather than the "everyone is poor but at least we're equal" Communist East. The key difference is while Dilma presided over Brazil to temporary economic doldrums, Merkel may go down in history as the woman who caused more long-term damage to Germany than (literally) Hitler could ever imagine.

She has been supportive of a seemingly endless influx of "refugees" and other welfare-loving migrants to her country. Most of whom tend to have minimal job skills, zero compatibility with western values, and a vastly elevated propensity towards crime (especially rape).

Bombing Dresden and other cities to ashes didn't permanently destroy Germany in World War II, but the sheer demographic replacement of the nation due to her policies certainly will in the long run.

6. Hillary Clinton – Two Times Failed U.S. Presidential Candidate And

Ongoing Cuckquean

We gon' get you Putin! We gon' getcha!

This is one **nasty woman**. Hillary Clinton, also affectionately known as "Hitlery" or "Hilldog" by her 100+ million domestic detractors, has been a giant metaphorical gnat on the U.S. political landscape for decades. No matter how many times you swat at her, she just…… won't…… go away.

Sinister, conniving, fraudulent, feminist, and known to treat her staffers like dog shit, we can thank the lucky stars this ticking time bomb did not become president. Also a bloodthirsty Russophobe, nobody in the oval office would have **ever** brought us closer to nuclear war with Russia than her.

7. Jacinda Ardern – Prime Minister of New Zealand

Durrrrp! Can I make my country more mediocre too please?

Better qualified to be gnawing on thick carrots rather than running a small country, New Zealand's woefully inadequate selection to be their latest Prime Minister has gone on record as saying "capitalism is a blatant failure" amongst other feminist and SJW rubbish coming out of her Mr. Ed mouth. (Would she prefer that New Zealand, consistently rated among the world's top 20 most prosperous countries, become more like Venezuela as an alternative?)

Jacinda is also a firm believer of the "gender wage gap," a boneheaded social position which should disqualify anybody from public office, due to their lack of ability to comprehend logic, reason, and the insurmountable evidence to the contrary.

Most insultingly, the 37-year-old Ms. Ardern got herself pregnant for the first time **very early** into her role. A nation's leader needs to be concentrating on the welfare of their country first, second, and third for the duration of their tenure. Not taking lengthy maternity leave and juggling raising a child in its most vulnerable first years.

8. Mary I – Queen of England

She liked to burn people

'Bloody Mary' is a well known monicker (and red colored cocktail) derived from this 16th century English tyrant. And when you consider her legacy, it's not too difficult to understand why.

As part of her aggressive attempts to reverse the English Reformation which was put in place by her father (Henry VIII), more than 280 religious dissenters were burned at the stake via her beck and call. Now that's not very feminine behavior!

9. Ranavalona I – Queen of Madagascar

She wuz queen (and she was shiet)

Black women don't get off the hook for horrible violence or screeching ineptitude in a position of power either. In fact, this lady was notoriously bad for **both** of those things.

Ruling Madagascar from 1828 to 1861, Ranavalona I was hardly a sweet mother figure for the large island nation off the coast of eastern Africa. Her reign was beset by regular warfare, disease, forced labor (black-on-black slavery!), and cruel measures of justice which resulted in a high percentage of the population being prematurely killed.

Just how out of whack was "Ranavalona the Cruel"? Well in 1845 for example, the queen wanted to go on a buffalo hunt. Naturally, she brought along her entire court and (black-on-black) slave community for the ride. About 50,000 people would march for four months on this wild and unprofitable expedition, with one-fifth of the party dropping dead from exhaustion, while others were killed for trivial infractions.

10. Elena Ceausescu – "Mother Of The Nation"

The wife of “President” (Dictator) Nicolae Ceausescu in the former Socialist Republic of Romania, Elena became the second most powerful figure in the country thanks almost entirely to her husbands influence within the Communist party. In retrospect, she is now known as a professional nothingburger.

Her extreme vanity and desire for (meaningless) honors led to her being appointed as “Mother of the Nation” and Deputy Prime Minister of Romania, along with an ever expanding cult of personality. She was even promoted as a scientist, and was bafflingly awarded a PhD in chemistry despite having minimal formal education.

After the Revolution of 1989 and her execution along with her husband, several scientists came forth and claimed that Elena had forced them to write papers in her name. Today, nearly all universities and academic institutions worldwide refuse to acknowledge her alleged academic merit in any shape or form.

11. Elizabeth Holmes – Founder/CEO of Theranos

Deified by the feminist/cultural Marxist western media for being an ultra-rare self-made billionaire with a vagina, Elizabeth Holmes' blood testing empire famously went crashing down from "4.5 billion to nothing" in the span of a year (2015-2016) due to propagating fraud.

Following these revelations, *Fortune* named Holmes one of the "World's Most Disappointing Leaders". The *Wall Street Journal* investigative reporter John Carreyrou, who was responsible for uncovering and exposing the allegations, stated that "the company was, in effect, a sham."

12. Elizabeth Bathory – Hungarian Countess

A Hungarian noblewoman who lived between 1560-1614, Elizabeth Bathory has the devilish distinction of being the most prolific female serial killer in all history, and quite possibly ***the*** most prolific serial killer in history.

Bathory and four collaborators were accused of torturing and killing hundreds of young women between 1585 and 1609 (purported to be over 650!), and these crimes were verified by the testimony of over 300 witnesses and terrified and mutilated survivors. Now how's that for a "Me Too" hashtag campaign?

Her powerful birthright status was no doubt vital in helping her avoid arrest and retribution for many years, and it was only after rumors of her heinous atrocities spread throughout the kingdom that King Matthias II ordered a full investigation. This finally led to her apprehension, proof of guilt, and solitary confinement until death.

13. Heidi Beirich – Chief Ogress at the SPLC

Fee Fi Fo Fum! What can I do today to shank the goyim!

"Intelligence Project Director" is the fancy title that 'Fat Heidi' holds at this cancerous Montgomery, Alabama based shanking organization. Clearly angry that she got heavily beat with the ugly stick at a young age (and accordingly was probably never very popular with men), she now wants to redefine men's improvement websites such as Return of Kings as "hate groups".

Why? Because they teach their readers how to make more money, avoid divorce rape, get in shape, and sleep with women who look at least 4 or 5 points higher on the 10 scale than her. She's a liar, a fraud, and acidic to the eyes and ears.

14. The Defense Ministers of Albania, Netherlands, Germany, Norway, and Italy

Those women aren't even worth naming. They are nobodies.

It's easy (preposterous, but easy) to place a woman in a virtue signalling role as defense minister when your country is guaranteed protection by the United States dominated, and British and French supplemented, NATO defense shield.

This stands in stark contrast to the clearly far more qualified and serious minded defense ministers of Russia, Iran, and China. They are tasked with defending their nations **FROM** the United States.

Any member of the armed forces of Albania, the Netherlands, Germany, Norway, or Italy should be absolutely insulted that these women are their bosses. Absolutely insulted.

15. Theresa May – Prime Minister of The U.K.

We must ban this “Roosh” character from entering Britain! He might ask for women’s phone numbers on the street and later have consensual sex with them!

Last but not least. The current head honcho of the United Kingdom doesn’t bathe in the blood of young girls (or at least not that we know of), but her gross incompetence as a leader was put on display when she was a key figure in having ROK publisher Daryush Valizadeh (Roosh V) banned from entering her country for “unacceptable behavior” in the form of non-violent thought crimes.

Any leader who lets emotions and hearsay falsehoods dictate their policies in lieu of concrete evidence, logic, and reason, is thoroughly unfit for office. Mr. Valizadeh presents the ridiculousness of his predicament in the following video.

Conclusion

Beyond a few Tudor-era mega killers, a rambunctious African queen, and a Chinese empress who was arguably never supposed to be there in the first place, did you notice how contemporary a lot of these women are? That is because this wild experiment with female leadership is mostly a very contemporary concept, and it is clearly not working out how people would have hoped.

A few isolated examples of successful female leaders from the past do exist (Britain’s Queen Victoria, Spain’s Isabella I, and Russia’s Catherine II come to mind), but they are both few and far between, and were **bred** and trained for those positions via royal birth.

In modern times, popularly elected female leaders have proven themselves to be a disaster, time and time again. They are weak, ineffectual, prone to corruption, or dangerously SJWey. For the good of our nations, it’s time for women to “lean back” from filling up offices and government cabinets, and start filling up baby cribs again.

4 Reasons You Shouldn’t Date a Girl Who Likes Beyoncé

March 1, 2018 | by Alfonso Taft | Link | Original Link

Liking Beyoncé is much more subtle than having green hair but it’s often an indicator that a woman is an extreme leftist. I’ve discovered a direct correlation between how much a woman likes Beyoncé and their dedication to cultural Marxism. In this sense Beyoncé serves as a barometer and a warning for men who meet girls that worship her like a golden calf. If the woman you’re interacting with is huge Beyoncé fan, it may be time to abandon ship.

Girls, we run this motha (yeah!)
Girls, we run this motha (yeah!)
Girls, we run this motha (yeah!)
Girls, we run this motha girls
Who run the world? Girls!
Who run the world? Girls!
Who run the world? Girls!
Who run the world? Girls!
Who run the world? Girls!
Who run this motha? Girls!
Who run this motha? Girls!
Who run this motha? Girls!
Who run this motha? Girls!
Who run this motha? Girls!
Who run the world? Girls!
Who run the world? Girls!
Who run the world? Girls!
Who run the world? Girls!

Wow. Those are some really profound lyrics. I wonder how many globalist corporations it took to come up with that jam?

1. Beyoncé and the basic bitch

Starbucks coffee, pizza, Netflix, and Beyoncé are integral parts of basic bitch culture. If you ask a basic girl who is their favorite artist most of them will you Beyoncé without hesitation.

Beyoncé herself is a mother married to alpha Jay Z. Her main flaw isn't her personal life choices, which are successful, but rather the type of fan that she attracts. A typical Beyoncé fan converts their own shortcomings into adoration and says intelligible sentences like; "Oh my god, I wish my life was Beyoncé" and, "Beyoncé is like my life."

2. If she likes Beyoncé then she probably can't cook

When I was in college, sorority girls would sing Beyoncé's "Drunk in Love" at the top of

their lungs during their weekly drug and alcohol bender. The girls learned how to get totally shitfaced and “slay” like Beyoncé, but didn’t learn how to cook or clean. This is basic bitch Beyoncé syndrome in a nutshell.

If you meet a woman and she’s a Beyoncé fan, it’s likely she prefers to eat pizza and drink alcohol rather than partake in traditionally feminine activities. I’ve personally dated two girls who paid cash money to attend a Beyoncé concert. Neither one them knew how to cook and both of them used online food ordering services like GrubHub and Seamless.

3. Beyoncé is the princess of propaganda for leftist causes

Beyoncé is a false idol used by global elites to indoctrinate the populace into degeneracy. Beyoncé is at the forefront of leftist causes like Soros-funded Black Lives Matter and Feminism.

The 2016 Super Bowl between the Denver Broncos and Carolina Panthers featured Beyoncé performing a Black Lives Matter rally live on television.

“The halftime show I thought was ridiculous anyway. I don’t know what the heck it was. A bunch of people bouncing around and all strange things. It was terrible,” said former NYC mayor Rudolph Giuliani of the performance.

Black Lives Matter is known to burn down cities, block ambulances, kill, riot, and partake in racially motivated violence when they are instructed to do so by screens.

Hillary Clinton quoted a Beyoncé lyric during an interview with Black Lives Matter Activists when asked, “What’s something you always carry with you?” Clinton responded, “Hot sauce”—an absurd and insatiable lie. Clinton’s response was in reference to Black Lives Matter themed song, “Formation” in which Beyoncé shamelessly panders with the lyric “*I got a hot sauce in my bag, swag.”*

The video for “Formation” features homosexual black men twerking while Beyoncé brags about taking young black men shopping and getting their songs played on the

radio—scenarios only fit for clown world.

Below is an example of mentally deranged leftists indoctrinating their children into celebrity worship of the golden calf of the millennial age. On the right you will see in gold lettering the phrase; “Feminist Like Beyoncé.”

Unfortunately for this young lad, his Beyoncé-worshipping liberal parents will likely introduce him to hormone blockers in a few short years. All children of liberal parents are in danger of being castrated so their child can be more “diverse” like their favorite idol, Beyoncé.

4. Beyoncé fuels racial hatred

When I was in college, Jay Z and Beyoncé were featured in our textbooks. Since that time the cultural Marxist conditioning of the youth has accelerated and college students can now take full on courses on Beyoncé. Kevin Allred, a flamboyant homosexual who publicizes his hatred for white people currently teaches a college course on Beyoncé.

According to Kevin’s website:

> *In 2010, he created the popular college course Politicizing Beyoncé, recognized by Beyoncé herself and her Parkwood team. The course earned world-wide media attention and he’s since taught the curriculum in University classrooms all over the country and traveled the world doing speaking events. His writing has been featured at Salon, Quartz, Huffington Post, the Feminist Wire, Washington Post, the Establishment (among others), and he was a featured contributor on MSNBC’s “So POPular with Janet Mock.”He also hosts the podcast “Bey-Ond Pop Culture.*

Here are some of Kevin’s tweets:

If you're already in a relationship with a woman who likes Beyoncé

Liking Beyoncé is a clear and direct sign the woman you are speaking with is completely

indoctrinated. If you're already dating a girl who likes Beyoncé, it isn't the end of the world. You can use this to your advantage if caught cheating. Jay Z has been candid about being unfaithful at times during his marriage with Beyoncé.

If caught cheating by a girl who likes Beyoncé, you can rationalize it by comparing her to Beyoncé and telling her to stick by her man despite your alpha male infidelity.

Beyoncé fans are Obama fans. Obama fans are Soros fans. Soros fans are indoctrinated via cultural Marxism to destroy Western society, culture, and it's people. Beyoncé is their princess of propaganda and she attracts susceptible women into her "Beyhive" cult of worship.

American Children Don’t Play Outside Anymore

March 1, 2018 | by Kyle Trouble | Link | Original Link

I’ve lived out of the United States and in Eastern Europe for nearly two years now. Despite this, there are some things that seem so simple in nature that I simply cannot fathom. The reason for this? The things that were such a part of my childhood are seemingly nonexistent in my home country, but seem to be reasonably alive and well in other parts of the world.

Allow me to illustrate my point.

I’m about to move into a new apartment. For the first time, I’ve picked a place a bit out of the very city center. My logistics will suffer slightly, but I’ll also have quite a bit more peace and quiet (less British stag parties stumbling through my street).

The first day when I signed my reservation agreement, I walked by one of the many public parks in the area. I saw a basketball court, and instantly looked forward to being able to shoot around a bit when the weather got nicer.

But then, I was hit by disappointment. There were throngs of children on the playground next door to the court. I instantly assumed by the number of them, plus the gate around the area, that it was a schoolyard. I’m not joking — on a random Monday afternoon with temperatures in the low 30s, there must have been 40 children all screaming and playing on the playground.

A week later (the day I’m penning this), I walked by the park again on my way to one of my favorite coffee shops in the neighborhood. It was much quieter today, as it’s a brisk 18 degrees Fahrenheit day here in Europe, so the playground was a bit more empty. Well,

this time I ventured closer to the park, and, low and behold, it’s actually a completely public space to use.

Now, you might be thinking—big deal. But, let me pose you this question:

How Often Do You See This In America?

The answer, based off of recent experience — not much. When I visited my parents in California over the winter, the weather was consistently in the 60s. I drove or walked by the local park, which has basketball courts, baseball fields, and way more amenities than this Eastern Europe park, every day I was there (three weeks).

Do you know how many kids I saw running around in that park? Throughout the three weeks, probably less than I saw total in that one afternoon last week.

When I was a kid, it was a given. The parks and playgrounds were always full. We played silly games on the playground, played pickup basketball/football/whatever we could get on hands on, and spent as much time as we could outdoors when the weather permitted. And we had the freedom to do so. As long as we stayed within the general confines of the neighborhood, our parents allowed us free reign to do what we wanted provided we checked in when needed.

Obviously, my sample size of this is small. It’s constricted to just the one park in the neighborhood I grew up in. But, from what I hear, this is what the deal is these days. Kids who are 8 years old would rather stay in and play on their iPads than actually go outside and throw a ball around. My fellow ROK colleague Quintius Curtius recently tweeted:

> These days, if you gave a kid a baseball to throw, he'd probably:
> 1. Not know what it is.

> 2. Ask if there is an app for it.
> 3. Say he's "feeling tired and listless."
> 4. Ask if the baseball is organic.
> 5. Laugh at you and go back to his video games.
> 6. Report you for abuse
>
> — Quintus Curtius (@QuintusCurtius) February 20, 2018

Now, It May Not Be This Forever

I was having a discussion with a British friend recently, and he was asking about the state of girls out in Eastern Europe. While I hesitate to throw blanket statements on entire countries, much less entire chunks of continents—-the simple fact of the matter is that nobody knows.

The EE playground might become a barren wasteland as the next generation of children decide that playing on their tablets is more exciting than climbing on a jungle gym.

As for the girls?

Right now, the girls who are on the young side of things in Eastern Europe at least grew up without smartphones. That is rapidly changing. A girl who has her first smartphone at age 22 versus 12 is going to be a drastically different person. The girls who will be becoming of age in a few years in this part of the world may have very similar attitudes that Western girls have exhibited in the last decade.

And, more to the point, there is a shocking number of girls in these countries that are simply dreaming of a better life abroad in places like London and New York because of smartphones. It’s globalized hypergamy now. While many people argue that we live in the best time ever, it does come with it’s pitfalls. There is just no way to predict what it means now that dating is completely global in nature. There will definitely be some downsides to the local men in less developed countries as their women begin to pursue men who are higher up on the food chain.

But For Now, I'll Enjoy This

I won't try to predict how the world will turn out, or what the exact state of an Eastern European country will be in the coming years. I won't claim to have a solution to the Tablet Toddler phenomenon that seems to have completely overruled America—now a land where children would rather play with a random iPad app instead of going outside and playing catch.

And for now, I'll just enjoy what I can here. Even if it's something as simple as a sunny day shooting hoops, while the kids run around on the playground—making me nostalgic about a time that isn't coming back.

What Is The Meaning Of Life?

March 1, 2018 | by Regan Jacklin | Link | Original Link

What is the meaning of life? Whether you are naturally curious or just going through a midlife crisis, this is a question every last one of us struggles with at one point or another in our lifetime. Some people even claim to have the answers… beyond the increasingly common answer of 42.

Is finding the meaning of life a worthwhile pursuit? Or should we just sit back and enjoy the ride? In this article, I hope to shed some light on this question.

Is Finding The Meaning Of Life The Meaning Of Life?

> Of all people only those are at leisure who make time for philosophy, only those are really alive – Seneca

Life seems pretty simple, right? Go to school, get a good job, find a partner, settle down, have kids, retire. Oh and don't forget to try and have some fun somewhere along the way. Is it fair to assume that the entire process of life is so simple?

I've been obsessed with trying to find answers to the meaning of life. It is both a fascinating and frustrating process…

Trying to find the meaning of life feels like chasing a rainbow.

On one hand, it is exciting holding on to the hope that you are few strides away from a pot of gold. However, on the other hand, every time you get to the rainbow's end, you realize the rainbow actually ends in a different place.

To understand the meaning of life, one must study both the spiritual and physical nature of reality.

The seeker of meaning will undoubtedly find himself overwhelmed with the laws of physics, mathematics, and the seemingly infinite expanse of the universe. In equally mind-numbing contrast, he will begin to contemplate the chemical composition that composes life on a molecular level, *leaving each being a universe of its own.*

Then, the seeker will find equally undeviating spiritual laws that govern life such as the law of karma (also known as cause and effect), the law of attraction, the law of giving and receiving, and the laws of change and impermanence.

As we grow wiser in our understanding of life's complexity, we feel like we know less than

we did in our ignorance.

> True wisdom comes to each of us when we realize how little we understand about life, ourselves, and the world around us – Socrates

However, the one thing I have personally managed to grasp is that trying to find the meaning of life will, not ironically, give your life meaning and a serious sense of purpose along the way.

I Found It!

Let's say that I found the meaning of life…

There is no possible way that I could share it with you.

Everyone has a different experience of life, set of beliefs, thinking patterns, primary focuses, and opportunities. We were raised by different parents, in different locations, and spent our entire lives surrounded by different people with a multitude of different opinions.

It is this constant input and interpretation of that input which makes up who we believe we are and how we think about life.

Due to the vast differences in the makeup of our psyche, the words I would attempt to convey my understanding through would either be an interesting idea, seemingly false, or sheer lunacy.

Furthermore, as a believer in the grand Creator, I believe we all have a different mission to complete in this period of existence.

> Everyone has his own specific vocation or mission in life; everyone must carry

> out a concrete assignment that demands fulfillment. Therein he cannot be replaced, nor can his life be repeated. Thus, everyone's task is unique as is his specific opportunity to implement it." – Viktor E Frankl

Therefore, if I found the meaning of life, would it be true to you at all? Since I can't tell you the meaning of life—even if I understood it—it is crucial that you pursue it through your own eyes of understanding.

When You Find It…

Now, although the ultimate, underlying, reality of existence may take decades to find, if we are lucky enough to find it at all, finding your life's purpose won't take more than a few months of diligence.

Take some time to think lofty and noble thoughts rather than focusing on girls and what you are going to do next Friday night with the boys.

Spend a bit of time contemplating high ideals and, just as surely as you'd get stuck in traffic in rush hour, you will find previously unknown purpose in life.

From here, the way you live your life will be forever altered.

When your life has true meaning, the things you chased while living in ignorance will no longer be of any desire to you… *Ignorance is not bliss, ignorance causes unnecessary suffering through emotional and psychological ineptitude.*

As your personal values align with your understood purpose in life, your actions and desires begin to align with your values. And when your actions and values align, you become a creative force capable of taking destiny into your own hands.

Pain becomes an opportunity for growth. Setbacks become challenges to overcome and tests of character strength. From here, *personal growth and emotional transcendence are inevitable.*

In Conclusion

By focusing on the meaning of life, you will naturally hit strides of success in your relationships, business, spiritual pursuits, and every other area one might otherwise give massive focus.

Your unruly emotions will become tame, getting out of bed in the morning will become an opportunity, and disciplined, dutiful, ambition will become your default state.

With a simple shift of how you use your mental energy, you can transcend any incompetence blocking your personal potential and become the shaper of your own destiny.

Why Black Panther Will Increase Ethnic Nationalism

March 2, 2018 | by Michael Sebastian | Link | Original Link

Movies are overrated when it comes to their cultural effects. Hollywood hypes its movies as life changing to sell more movie tickets, but it is usually just marketing. But every now and then, a movie comes along that does capture the imagination and can lead to real world changes. Marvel's *Black Panther* is such a movie.

The *Black Panther* story

Briefly, *Black Panther* is the story of a mythical African country known as Wakanda. To outsiders, Wakanda appears to be just like any other Third World African nation. In reality, Wakanda is the most peaceful, richest, and most technologically advanced nation on the planet. This is due to their possession of an alien substance called vibranium.

Wakanda is an all-black nation that is isolationist, anti-immigrant, and anti-refugee. In other words, Wakanda is a black ethnostate. However, it is not that Wakanda is racist per se. It only restricts itself because that is in the best interest of its citizens. I believe that Wakanda is the most powerful concept in the movie.

Wakanda is led by the powerful and wise king T'Challa. T'Challa's kingship is challenged by the villain Erik "Killmonger" Stevens, who also happens to be black. Killmonger wants to give vibranium to blacks worldwide so that the will be able to overthrow their white oppressors. Thus, the movie avoids falling into a simplistic dichotomy of "black man good, white man bad."

Wakanda, Black Panther's ethno-nationalist state

> "Would you kill me, my love?"
>
> "For Wakanda? No question," pic.twitter.com/nnPQV2IOQZ
>
> — Reg (@TheStarIsR) February 22, 2018

While there is a lot of adventure in the movie, the piece of the story that has really captured the imagination of black movie goers is Wakanda itself. Here is an African nation that is completely independent of Western aid with competent and honest leadership. This contrasts with the African nations of today which are too often characterized by poverty and corrupt leaders. MSNBC personality Joy Ann Reid wrote:

> Contrast Wakanda with the Africa of today, a continent too often depicted in movies and the scant Western news coverage it receives as nothing more than a collection of backward and impoverished nations ruled by corrupt regimes and ripped apart by colonialism and dictatorship; what the current American president called "shithole" countries. Few realize the gleaming cities and rich, vibrant history this vast region holds. (My godmother's old history books, stacked in her little library in the Bronx, literally take Egypt physically out of Africa.)

While Reid is diametrically opposed to Donald Trump, the irony is that Wakanda is sort of much more extreme version of what Trump wants for the United States. Trump wants to minimize the number of refugees and immigrants that the US accepts. Wakanda does not permit any refugees or immigrants at all. Like Trump, Wakanda does not do this out of any hatred or racism, but out of the simple recognition that a ruler must put the good if his citizens first. Only a strong, healthy country can benefit other nations.

Divisiveness in *Black Panther*

Even though *Black Panther* avoids painting all black people as good and all whites as bad, it is not free from racial animus. Whites are called “colonizers,” referring to historical colonization of Africa by the European powers starting in the 19th century and coming to an end in the 20th. The implication being that the various African people would have formed Wakandas had it not been for the white man.

This divisive message has been picked up on by black movie goers as can be seen by the tweets below. This message of racial pride and separateness will only buttress the movement in the black community to stop looking to white civilization, and instead form parallel black institutions.

> Let’s keep it going !!!!! pic.twitter.com/vz1AVDdHjg
> — #TeamWakeNHate (@BabyFaceChem) February 23, 2018

> pic.twitter.com/xPW5lEoX3Q
> — PMLEGEND™ (@PMLEGEND) February 23, 2018

> In 2018 let’s stop celebrating first blacks and act like we have been there before pic.twitter.com/ivgCEVN0ui
> — T. Millionaire JD (@toddmillionaire) February 27, 2018

> Celebrating second place (aka first black) is embarrassing. Stop that
> — T. Millionaire JD (@toddmillionaire) February 27, 2018

On a side note, I find it interesting that the media feeds whites messages of racial harmony and the need for unity above all things—never anything like pride in the achievements of European civilization. The recent Superbowl and Olympic commercials are good examples of this.

On the other hand, blacks are taught to have racial pride and to take pride in the

achievements of their ancestors, even if some of those accomplishments originate in a comic book that was started by two Jewish guys.

This double standard is not the fault of the black community. Rather, it is the result of social engineering by wealthy elites upon both groups. Their goal is to create a US that has no ethnic majority. *Black Panther* is meant to reinforce that message, but over the long term it may inadvertently lead to the formation of parallel institutions or even the restructuring of the US as we know it.

Conclusion

Black Panther is a fun movie and it can be enjoyed just at that level. It carries a wholesome message that communities need to take care of themselves before they can begin to help those on the outside. Further, successful communities need strong, selfless leaders and a virtuous people. These characteristics are prerequisites for all successful countries.

But the movie also carries with it the more controversial message that blacks might be better off on their own without the meddling of the "colonizers." Only time will tell if *Black Panther* will give more momentum to a feeling that is already in catching on in the black community.

5 Reasons Why America Should Become A Real Empire

March 2, 2018 | by John Joseph Henry | Link | Original Link

In post-1960's America, 'Imperialism' has become a byword among the educated. To support the idea of an Empire would be a Scarlet Letter for any academic in a university setting, and the rest of society has followed their lead. Having said this, I encourage you to hear me out. Here are five reasons why becoming an empire is the only way to make America great again.

1. It's the next step

Rome began as a republic, too. However, that was its infant stage. In reality Rome's greatest achievements, militarily and culturally, came to fruition during the Pax Romana, at the height of the empire.

Look at Spain: after driving out the Moors, and with no more enemies to fight within their territory, it took Colombus and later Conquistadors (true badasses) to bring about the Siglo de Oro, giving rise to the likes of Cervantes, and mobilizing the Spaniards so that they won the battle of Lepanto, saving Christendom in the process.

Likewise, the British arrived at their cultural and humanistic crescendo shortly after the Napoleonic wars, during the Victorian era. Once again, at the height of their empire.

After their conquests, the Legionaries settled Spain, the Conquistadors settled Latin America, and the Loyalists settled Canada.

On the other hand, a mad, hysterical revolution signaled the decline of the great French Empire, having negative repercussions which we are still seeing today. Which outcome is more desirable?

2. It will organize society

The literal poster child of a society that has lost its way. It's time to take action.

There is nothing that stands still in nature: everything is either expanding or contracting. During Teddy Roosevelt's day, America fought to spread her culture (which was the best way to defend her values). We were expanding. By sending our jobs and factories to China and Mexico and accepting mass immigration, we have begun to contract.

As this trend progresses we see the death of the American family, and the decline of an empire that never was. Idle hands are the Devil's workshop, and a generation of pan-sexual, Facebook-addicted atheists, without the courage to state obvious facts (i.e., that 'trangenders' are insane people who mutilate their genitals, or that most women would be happier as housewives) is indicative of a society with no mission. Let this be our mission. It will whip us into shape, and give us an admirable purpose.

3. Republicanism is overrated

As an American I can attest that my countrymen are raised with a bias toward democratic values, treating the Constitution like a Baptist treats the Bible. I've got news: Democracy is not sacred truth, and the war between idealism and realism has existed as long as America.

Take the American Revolution, a period of our history which few Americans understand. The radically idealistic liberals (the Continental Congress) spent the war years begrudging help to the realists (the Continental Army), in part because they were against standing armies as a matter of principle.

In the end it wasn't red liberalism that won America's freedom. It was courage, suffering, Christianity, and a desire for true liberty, which can only flourish in an atmosphere of Tradition and Common Sense, where people recognize that families are the sacred fabric of society and that every man must pull his own weight. America wasn't invented by Jefferson in 1776, but by John Smith in Jamestown, when he decreed that "He that does not work shall not eat."

Look no further than the French Revolution, the Irish Rebellion of 1798, the Bolshevik Revolution in Russia, The Spanish Civil War, etc… ad infinitum, to see the excesses of radical republicanism. Every time it's the same old story: the crazies get control, and everything goes to hell. Not something to be making our end-all-be-all, in my opinion.

It’s not called *red* liberalism for nothing.

4. It will be good for the world

Still believe that Empire can’t be a force for good? Tell that to HMS Black Joke, who captured eleven slave ships in a single year.

The Romans built roads and spread Classical civilization and philosophy, along with their language. The Spaniards took the Catholic faith to Latin America, where the Church boasts great success in promoting patriarchy today. And, as much as modern Britons seem ashamed of their former Empire, it was the British who brought an end to widow-burning in India, and the Royal Navy which was far and away the single greatest contributor to the end of the African slave trade. So much for the evils of imperialism.

Men were made to build, and men of enterprise build empires. To conquer, to construct, and to defend are as innate to men as our love of women; it is something which is truly worthwhile in and of itself. Empire is natural and inevitable. The question is what kind of empire it will be: one built on Christianity and the truth that every man’s house is his castle, or upon atheism, Islam, or tyranny. Which brings me to my last point….

5. We have no choice

I've got news for you: if America doesn't step up and assert itself, somebody else will. The Chinese, the Muslims, or a newly empowered globalism will leap to fill the void which nature hates. That's how things work in the jungle: you're either influencing or being influenced.

Not just in America but all over the West, people are surrendering. Where Americans or Europeans should be influencing and fighting, we have laid down our arms. Whether they are giving up their daughters to be groped by immigrants in the Stockholm metro, or letting Muslim terrorists bomb our cities while we refuse to even name them, the West is on the retreat. What are we expecting to be the result of this cowardice?

I don't know about you, but I don't want my children to speak Mandarin, or eat cats. I don't want my sons to forget about Christianity, or my daughters to be part of some Muslim's harem. Influence or be influenced. Conquer or be conquered. Fight, and win, or die.

Empire-Building: it's the American thing to do

They won't be shit-hole countries for long under new management.

In a way, I can respect the humility and simplicity implied in isolationism. But I think we can all agree that after the fifty years of West-hating that have followed the Sixties, the last thing Americans need is to be more humble. At the end of the day, isolationism is an ideology, and ideologies are beta. Real men see reality as it is, and act accordingly.

The choice is clear: either organize our society towards aggressive expansion, or let the cultural Marxists continue their long march through the hearts and minds of America.

Want to be on the "right side of history?" Join the Empire. Join, or die.

The Southern Poverty Law Center Is The Real Hate Group

March 2, 2018 | by Max Roscoe | Link | Original Link

The SPLC has officially lost its way. In February, the group designated ROK a hate group. A Voice for Men and Return Of Kings were listed for the first time as "male supremacy groups" on the hate list.

The sole reason given was ROK and AVFM's "vilification of women." As a straight white male who loves women, and is opposed to hate groups and poverty, I was triggered and offended by this. I have personally written articles in support of diversity, family, and women's happiness. Hell, I've even written a women's guide to not getting raped. Yes, many of our articles are critical, and many of the targets of this criticism are women, but to call this vilification is a complete misunderstanding of our raison d'être.

Stereotyping Is The First Step To Hate

First, it is silly and simplistic to paint ROK with a broad brush. Unlike the SPLC, which is an established institution with employees, offices, and a unified business plan, ROK is a website where men of various backgrounds and interests can come together and discuss issues.

ROK's readership ranges from teenagers to octogenarians in dozens of countries around the world. An organization like the SPLC should know that grouping people together based on such tenuous connections as their common identity as men is the first step of bigotry.

Zero Tolerance

If I ventured a guess, the recent inclusion was done at the suggestion of a Generation Snowflake Millennial. As recently as 2012, the SPLC specifically disavowed men's interest groups from being labeled as hate groups, going so far as to say many of our issues are not without merit. So what changed?

SPLC? Do you know why you're angry?

What caused the SPLC to change their opinion from "You make valid points, but your language is harsh" to "I can't even! You racist misogynist male supremacists are literally

Hitler?" It's not the message. If anything, ROK has moved away from primarily discussing women and game, and included more articles on self improvement, diet, history, philosophy, religion, physical training, and politics.

In The Current Year, sensitive Millennials who have zero tolerance for anything not puritanically cleaned and whitewashed through politically correct censors will shriek out in agony at any message they do not fully agree with.

Sure, some of the articles here are harsh. But sometimes we need a harsh message. And a lot of the articles are tongue in cheek. At first I thought the ridiculous "ROK is a rape club" label of 2017 was obvious media distortion. But today I'm not so sure. I think many in Generation Snowflake are unable to discern humor and nuance.

What Happened To Liberalism?

When I was an adolescent, the liberals were the people who could take a joke, while conservatives were the stuffy, boring, politically correct class. But today, successful comedians including Jerry Seinfeld, Chris Rock, John Cleese and Bill Maher refuse to perform on college campuses because the audience cannot handle risqué humor.

Then there are the cases like Louis C K, who had his livelihood and passion taken from him without even being accused of a crime.

Vilification?

Oxford defines vilification as abusively disparaging speech; derogatory, expressing an opinion that something is of little worth.

Do you know what is hateful? Calling advocating for your group "supremacy". ROK is not a "male supremacy" site. Recognizing the differences between men and women is not the same as calling one group supreme. In fact, women are "superior" to men in the feminine realm, and men are "superior" to women in the masculine world, but that is an awfully distorted, negative and hateful way to view things. We as men simply want men, women, and families to be happy, healthy, and self actualized. If you vilify these traits, you are the one who belongs on a hate list.

If A Man Is Alone In The Forest, Is He Still Wrong?

Men who come to a site teaching them self improvement, dating tips, and behaviors to meet and achieve success with higher quality women seem to value women quite a bit. If men don't value women, they are more likely to follow the Men Going Their Own Way "MGTOW" path which is not part of ROK. But even then, what's wrong with that opinion? If men are not finding women of value in their life, is it the man's fault?

A man driving a car hits a woman. Whose fault is it? The man's. Why was he driving in the kitchen?

This is a JOKE, not to be taken literally

If women are not providing sufficient value, men do what men always do: work to improve the situation. So we pen articles reminding women that careers, anti-psychotic drugs, obesity, and sexual exploits do not make them happy. We encourage men to seek out more feminine and traditional women, since returning Western women to those values is a lengthy path. And along the way we have fun and laugh, because we are happy, confident, stable men.

The SPLC: RIP

The SPLC was founded in 1971, in a time where there was great poverty and judicial disparity in the American south. While extreme poverty is less common today, there is a larger than ever gap between rich and poor, and the American legal system is still quite dysfunctional. From its commendable beginnings fighting the death penalty, unfair imprisonment for blacks and other minorities, and promoting separation between church and state, the organization has devolved into a 1984-style censorship organization that attempts to ban or shut down any speech that it finds even partly offensive.

The SPLC exists today primarily out of momentum. Bleeding heart donors from outside the American south donate money out of the false impression that there are white hooded klan members popping up everywhere and this organization is bravely fighting these groups of ~~federal agents~~ redneck racists. As the SPLC strays further from its path, criticism of the group has increased, from Foreign Policy, the Washington Times, and the NYTimes. Even the FBI recently stopped working with the group to track hate organizations.

Perhaps they should not be criticized too harshly for exaggerating their enemy. After all,

what organization is not self-interested to a large degree? But the problem here is the SPLC is alienating all but its most extreme supporters.

Satire–but is this really what you want?

I have visited the civil rights memorial at the SPLC center in Alabama. I was educated by former director Julian Bond. And I have supported the group in the past. But I am also a man. And calling me a hateful man because I strive to improve myself while encouraging and seeking women who are more feminine, traditional, and kind does not cause me to question my beliefs about myself, my culture, or women. It merely causes me to view you as irrelevant and out of touch.

You, SPLC, are the ones who are being hateful. You hate me, as a white man, wanting the same thing my ancestors have had throughout history: a loving, kind, happy, satisfied, feminine woman at my side. You hate not only men, but also women, as you want to twist them into something they are not, encouraging them to be masculine, fat, loud, hostile, lonely, and everything that femininity is not.

And any man who finds value in an article here, or who recognizes, as the SPLC did in 2012, that we raise valid points, will also question why such an organization is targeting ROK as hateful.

It is because of groups like you, that when men like me attempted to meet up with other men last year to discuss our common cause, as numerous other minority groups do every day, we were met with violent mobs, and had to cancel our plans due to safety concerns.

And that's why in 2018, one may unironically say that the SPLC is the real hate group.

4 Predictions For Women And The Dating Market In The Next 20 Years

March 4, 2018 | by David G. Brown | Link | Original Link

You've read *Bang* four times and honed your game over some years. What's next? Well, for a start, take note of the changing environment around you. And changing it is. Though the material you read and practice from a book is very important, you also need to appreciate the developing trends out there.

Attracting a mate or one-time sexual partner *is* becoming harder and harder. Here's why the next 20 years are going to be very tough for many, many men:

1. Women will use sugar daddy websites whilst having normal boyfriends

Not pictured: average male corporate cog used, cucked, and financially abused by a woman.

Cuckolding is bound to take on a new form over the next two decades. Many women will gladly take some (or a lot of) money on the side to have sex with a rich, usually older benefactor. At the same time, expect them to maintain a "relationship" with a man closer to their own financial level. The expanding breed of beta bux is going to be the lower middle-class chum who diligently provides for a woman, but never to the extent of her on-and-off sugar daddies.

If discovered (and, increasingly, there won't be a need to vigorously hide these things), women are likely to resort to saying, "Well, he provided for me more than you did!" With more apocryphal and even confirmed cases of such sugar-daddying behavior, other women will duplicate the scenario.

2. More female sex trips abroad to Cuba, Cancún, Spain, and other places will happen

What lies beneath this photo?

On the surface, anticipate the ubiquitous and comparatively innocent photos of girls in bikinis jumping straight up into the air to make a star figure. Beneath it, however, will lurk the more sinister underbelly of girls traveling specifically to ride the cock carousel. Many men won't ever have an idea of "their" woman's sexual history or only have a chance of finally knowing about it when it's far too late.

Away from the eyes of their boyfriends, husbands, or simply the men who pedestalize them as pristine angels, all sorts of uncouth antics and outright debauchery shall occur. If the shenanigans were to be at least partially filmed, the girls involved will have outed themselves as the furthest thing from marriage material. But as additional examples of this mindset come out, many men will nevertheless feel forced to wife them up, being bereft of other options.

3. The hollowing out of any protections for men, especially prenuptial and other agreements, will continue

…contracts meant to protect men are becoming worthless.

This process really started to accelerate after the case of Elizabeth Petrakis, who managed to convince a court that a supposedly verbal contract, impossible to verify, superseded her highly detailed prenup with her then husband. Men are scoring some victories in having their pre- or post-nups enforced, including hedge fund manager Jacob Gottlieb successfully arguing his wife should get a "mere" $1.6 million. Yet most men, and not just the multmillionaires, are either finding themselves screwed or will find themselves screwed.

"Pressured to sign" is the standard-issue cry for a woman to challenge clearly written words in a legal contract. There's no such thing as "girl power" or "female agency" when a woman makes a money grab of this kind. Contractual concepts like unconscionable conduct, initially created to stop people from, say, getting business partners drunk to sign unfair agreements, are being warped to appeal to gold diggers keen to portray themselves as victims. Watch out.

4. An even bigger piece of the sexual pie is going to go to an even smaller number of men

There's a term in biology called a superstimulus, an over-the-top representation of an already desired characteristic. In the case of men's wants, think impossibly large but firm breasts and a one in a billion hip-to-waist ratio. For women, worldwide media and communications outlets mean that they are given constant examples of high-achieving, wealthy men, examples which are then used to evaluate every other man. These are the male superstimuli women have come to lust after.

With 80-90% of men on dating sites currently considered "subpar" by browsing women, another two decades of social media use and having LeBron James and Justin Bieber clones thrown at them is certain to make females even pickier. If 80% of women flock to 20% of men now, it may shift to 95% of women jumping at that same 20% of men. And the male top 5% could end up getting 80%+ of the decent females.

The whole situation should remind you of this:

Are you ready?

It’s literally a brave new world out there. Although the situation is harder than it should be, there’s no excuse for not striving and adapting.

This website and Roosh’s books, along with any other quality material you have come across, are resources you can use to be successful in the evolving sexual marketplace.

Transgenderism Has Absolutely No Basis In Science

March 4, 2018 | by Larsen Halleck | Link | Original Link

So it appears that the great transmania—"World War T"—has slightly died down from its heights around 2014, but it is still a major tenet of what we're all supposed to believe in—observe this article complaining that heterosexual men have the *nerve* to not want to sleep with transgendered/non-binary people.

On a personal level, I really could not care less—if you want to shred your penis and/or put a fake penis between your legs, dress up like the opposite sex and pump hormones into yourself, that is your right, and I wish you the best. However, as a man of science, I cannot abide by the skewing and fudging of data to serve any sort of ideological purpose, which is certainly what goes on with regards to our trans friends.

Of course, we could talk about how several psychologists have attempted to publicize how different methods of treatment (ie: psychological counseling) should be sought for most people with gender dysphoria rather than arbitrarily giving them sex changes, and concurrently we can discuss how this information has been quietly swept under the rug.

Or we could also discuss how the numbers of LGBT people have skyrocketed with the millennial generation—which would seem to imply that, "Born this Way" propaganda notwithstanding, there are many factors that cause somebody to be on the LGBT spectrum which certainly include congenital factors but are not limited to them. But we're not going to discuss these.

Instead, we can discuss how the core tenet of transgenderism is essentially undone by itself. What I mean by this is, those who advocate sex changes essentially advocate that

there's no *real* difference between the sexes—that gender is fluid and malleable in other words, and to think that gender is a mere binary is just idiotic troglodyte thinking. Indeed, as I have discussed in my Manthropology videos, this is a foundational pillar of modernity in and of itself.

So how does that contradict itself? Because, jokes about "identifying as (x) gender" aside, the only way one can *actually* transition from one gender to another is with the magic of hormone injections—liquified masculinity and femininity, to put it in the simplest terms. As most of us will recall from Biology 101, the presence of testosterone or estrogen in the body will hormonally signal for various other parts of the body to develop what are known as the secondary sexual characteristics—increased muscle mass, height, and body hair for men, and breast tissue, increased body fat in strategic areas (breasts, hips, buttocks), and lesser muscle mass for women, to name just a few.

Testosterone

Estrogen

In other words, the essence, the “juice” of manhood and womanhood, causes certain traits associated with those concepts to emerge on a person. Doesn’t that seem a bit odd? Gender is fluid and malleable, and yet there are clearly visible and definable traits associated with sex-defining hormones, and when you take those hormones and put them into the *opposite* sex, then you start to see some serious shit go down!

Female to male transsexuals—who are incidentally much less common than the inverse for some strange reason—notice, to their shock and horror, that in addition to the increased muscle mass and hirsuteness that comes with testosterone, they suddenly find themselves substantially hornier and, most shocking of all, have a newfound interest in mathematics, sports, and other things that are stereotypically associated with the masculine mind (but men are only interested in those things because they were socially constructed to be so in order to keep women out of math and computing, obviously.)

I don’t know why anybody would be surprised, considering that the testosterone injections FtM transsexuals obtain are dubbed “anabolic steroids” when men take them for bodybuilding purposes.

Tangentially, I also dimly recall in my middle school gym class there being a poster detailing the unpleasant side effects of steroid use; several of them were dubbed “masculinizing side effects” by the teacher when they happened to women. Perhaps that poster has been amended in the years since to say those effects aren’t so bad for women.

This exact poster as a matter of fact

So, what have we learned? That masculinizing and feminizing hormones have their names for a reason, and similarly masculinity and femininity are largely—but I will admit not ENTIRELY—a biological reality. Certainly they're much closer to being an ironclad biological law then being the fluid and amorphous nothingness that we're supposed to think it is.

Then again, I think our societal betters know that, as they allow hormone replacement therapy only in the ways they approve—why else would it be the case that a man cannot legally give himself testosterone to make himself *more of a man*, but he can take hormones that make him less of one? Again, I have no interest in taking steroids myself but it seems to me that it should be an either/or situation: either everybody can take whatever hormones they want, or nobody can.

But then again, when you realize that "goodthink science" has less to do with what's actually scientifically accurate and more with ideology, things'll make a little more sense.

6 Warning Signs Your Wife Is Planning A Divorce

March 5, 2018 | by Justin Puck | Link | Original Link

Guys, it's no secret – marriage in the west is fraught with risks. The divorce rate is said to be around 50%, the woman is usually the one who files, and often times the guy never sees it coming. Though the stereotype is the mid-life crisis husband who leaves his wife for a young bimbo and drives off with her in his new sports car, divorce attorneys nationwide can dispute that hackneyed and bogus statistic. For the past few decades, thousands upon thousands of divorce cases now begin with a shell-shocked man walking into a law office asking for help on a divorce he doesn't even want.

Their tales are similar: the wife, typically in her late thirties to early forties, decides that she no longer wants to be a wife and/or mother and demands a divorce. She wants to pursue the greener grass, wherever and whatever she thinks that is. Contrary to what feminists say, these women aren't usually suffering from abuse, they just aren't "haaaapy" anymore. Like it or not, the cultural environment facilitates their abandonment of "till death do us part." However short sighted it may be for a middle-aged woman with an aging body and fading beauty to get divorced, this decision is anything but sudden or capricious.

By the time an unsuspecting husband learns of her plan, she's probably been constructing it for the past several months, or even years. There may or may not be another man in the picture, but regardless, when a husband is effectively given his marital pink slip, there is no negotiating it back – it's over. It matters not whether he's kept up his end of the bargain, been a great dad or even if she was unfaithful to him. Every state in America recognizes no fault divorce, which makes getting out of a lifetime

commitment easier and relatively hassle free. So what's a guy to do?

A young man getting married in the Western world today can't possibly determine who the love of his life will be ten to fifteen years from their wedding day. The person you divorce is not the same person you married. But the last thing a man in the middle of newlywed marital bliss thinks about are things like divorce or the subsequent financial and personal peril. If it's too late for you to do a prenuptial agreement or you don't have the balls to ask for one before you tie the knot, here are a few warning signs you should watch for to see if she's planning an escape down the road.

1. She takes an unexplained interest in your assets

Funny seeing you here all of a sudden.

Is she photographing your personal property, suddenly interested in documents, tax returns, pay stubs and other mundane concerns? It's sensible to keep good records and to know where they are, but unless your wife was always conscious of records and receipts since the beginning of the marriage, modification of that behavior to that of a forensic accountant is a major indicator.

Why is she suddenly interested in the financial matters when before, she let you handle everything? Chances are she read a few things and learned that accurate records are going to be essential during a divorce proceeding. That, and she wants to be able to identify any assets that she did not already know about. If you own a small business and she's never been part of it, watch for snooping around in that area – it isn't innocent curiosity.

2. She starts packing a financial parachute

Is YOUR chute packed?

It may start with taking cash back at the grocery store during checkout over a period of weeks. She could progress to withdrawing more money than necessary for a regular given expense. Next, she’s stepped up spending compared to her usual shopping habits.

Why the increased shopping? She’s building a stash of things she can either keep or sell on eBay after the divorce. These will most often be things you will not want – expensive purses, handbags, clothes, etc. She might even push for redecoration of the house and new furniture. Sure, wives tend to do this anyway, but be extra paranoid if you already spent money on any remodeling within the last couple of years. It could be preparation for property division in her favor or sprucing up the house she gets to live in after you’re gone.

3. She suggests moving to a community property state

California is a well-known community property state.

If you live in an equitable distribution state and file for a divorce, the court will divide property based on a number of different factors including record of ownership, time it was acquired, length of the marriage, type of property, obligations to the property, among several other factors. In a community property state however, generally speaking it's a lot easier to split things up – she gets half.

Equitable distribution states are not always better but be skeptical if there's little reason to move to a community property state. Likewise, watch for a push to move to a state or location with more favorable divorce laws.

4. She loses her job and has no interest in getting a new one

At least she’s not on Seeking Arrangement. Is she-?

If she had a regular job but no longer does and shows no interest in finding a new one, this could be preparation for a more favorable alimony settlement from divorce. Yes, there are plenty of women who remain stay at home moms, but if your wife has regularly had some type of employment either out of necessity or personal desire, watch for changes in this behavior.

If she’s planning something, she will cease working in a valid manner that doesn’t risk losing a lucrative alimony award. Watch for her job contract ending, layoffs, or quitting to go to school. If you asked her to quit and she complied, be extra careful. Also, the longer she’s been unemployed, the better for her. Bonus if she’s got other reasons for remaining unemployed – age, illness, and lack of skills are a few common reasons.

Time wise, the sweet spot for alimony is often right about a year of unemployment. That’s probably when you can expect the papers to drop in your lap.

5. She ramps up bad behavior

Women can be just like petulant children when they want to be.

Is she nagging you more than usual? Does she criticize you in front of friends when she never used to? Has she accused you of having an affair, even though you've been faithful? These might not be ordinary shit tests, but extra pressure to get you to embrace the idea of divorce and, she thinks, to move the process along speedily once the papers are filed.

Along the way, she may also go back and forth between tearing you down, then building you back up again – after you've bought her some kind of gift or concession like the good, loving husband you're trying to be. She can do this for months with the goal of acquiring things and driving you nuts to the point where you'll finally be ready to sign anything.

6. She sees a psychologist without your knowledge

Sessions to build a case against you.

This is a big one that ordinarily shouldn't be a secret to a husband, especially if children are in the picture. She may (or may not) need this kind of care, but if she's paying cash to see someone in this field and hiding it from you, she could be setting up a claim for spousal abuse and/or a favorable custody decision.

If you discover something like this, look for indications of how long she's been going to appointments. Months or years of treatment are needed for credibility in court. Find out if the practitioner often testifies in divorce proceedings.

Conclusion

If after several years of marriage your wife one day surprises you with a demand for divorce, remember at that point, no amount of negotiation or deal-making can win her back. It's a done deal, she checked out a long time ago. Presenting logic and facts won't go very far with a woman who is past her sexual prime but somehow still thinks she's got it with single young men.

Should you discover or think you discovered something, do not attempt to first broach the subject with her, even subtly. Keep in mind most men tend to be bad liars and unless trained, they are also terrible at elicitation-type questioning. Talk to a competent divorce attorney immediately, before you spill the beans. If it turns out you were right, and she was in fact planning divorce, you will lose the critical element of surprise by bringing it up over dinner.

And no, learning about this subject isn't "inviting a divorce" any more than buying life insurance is "inviting death." Even if you've done the all the right things it could still happen to you. That said, you can still watch for the signs and take measures to protect

yourself.

Jordan Peterson Helped Me Find God In A Burning Bush

March 5, 2018 | by Yoshi Matsumoto | Link | Original Link

It was Friday. I was backing out of the driveway to take my daughter to school. As I did so, I happened to notice my neighbor setting his house on fire. Well, his shrubbery at any rate. In the car I watched as four foot flames leapt before his house while he stood there, smiling and waving at me with a can of lighter fluid in his hand.

We live in townhomes. All the houses are connected and this man is igniting a dead bush over a lawn of brittle, dry leaves. “Daddy,” my daughter asks, “is he burning his house down?” “Of course not,” I reassure her. The man waves as we pass. I wave back. He shoots another squirt of fluid onto the flames.

As married ROK readers can attest, wives never answer when you need them and I spent the drive frantically calling mine to warn her about the crazy man and to ask her to keep an eye out for growing flames in case she needed to call the fire department. No answer. I was worried. By the time I dropped my daughter off the fires in my imagination had already consumed the block and so rather than go to work I whipped around back to the house, speeding to check on the flames. I call my wife again. No answer still.

The smoke was almost back in view when she found her phone. “Sorry!” she yelled. “I was stuck talking to a crazy man burning his house down!” Right after we’d left my wife had decided to take the dog out and the man with the lighter fluid decided that was a good chance to tell someone his life story. A disjointed biography. One of those speeches where you can only pick out memorable words but not really detect a narrative. A vague swirl of phrases like “gold coins,” “Obama,” “on the farm,” and “the 80s,” she remembered. Everything else was a blur. I arrived back to find the bush still burning. The

man was nowhere to be seen.

What does this have to do with Jordan Peterson?

By nature I am not very assertive. Like most raised in America, I learned that the highest value is minding your own damned business. Ours is a society deeply focused on removing all human interaction from our lives and without Peterson I honestly don't think I'd have confronted the man with the fire. Not really out of cowardice, just a lack of social rules about how to address the situation.

Barren of conflict resolution tools, our culture's primary response to them is to just ignore the problem and hope it goes away. The point where I have a right to interject myself into my neighbor's affairs is never spelled out. Such would go against the primary American ethos: "Keep to Thy Self."

However… my neighborhood was on fire. That ethos seemed inadequate.

Peterson piqued my interest because I'm a struggling Christian and he outlines a form of spirituality not only in-line with evolutionary biology but actually a consequence of it. By his reckoning there is The Known and The Unknown, Chaos and Order, things so real and fundamental that our bodies and brains evolved to deal with them.

I stood in the drive staring at the burning bush, finding myself exactly on the border of those realms. I was home. A place of security and comfort. Across the street was a crazy man and a fire. Order and Chaos. According to Peterson, this was where life happened. Using Christian themes, Peterson suggests that the proper way to conquer the unknown is to shoulder responsibility for it. To take up your cross. I'd listened to him say this but never put it into practice to see if it worked. It was worth a shot.

The man saw me

Before I could even get near he came bursting out the door, warning me about the smoke. “Watch out,” he said. “You’ll get covered in ash.” I told him I was uncomfortable with the fire and he told me it was his property and to agree to disagree. I said no, the fire needed to stop. He said it was safe. I said it wasn’t.

He then went on a diatribe similar to the one he’d given my wife and I picked up words like “gun,” “drug war,” “Jesus,” and “the CIA.” I also picked up a narrative about how the Home Owner’s Association was pocketing our dues and not paying for landscaping. His bushes had died. He’d complained for years. Nothing was done. He’d done something himself.

As he talked I realized he was speaking the truth. For ten years I’d heard repeated rumblings form other neighbors about their various petty feuds. They all hated each other. They all wanted to sue. They accused one another of stealing and vandalism and once a lady poured wasp spray into another woman’s face for letting her dog relieve itself upon her lawn. As he ranted beside the burning lawn decorations I realized I had known all this, but ignored it. It was petty. It was “Not My Problem.” True enough but things that aren’t your problem grow. Sooner or later they become your problem. Fires spread.

Peterson was right

Ten years I'd ignored all the burning Hells inside the people around me and now a piece of Hell had manifested into an actual roaring flame threatening to burn everything down. The underworld had come forth. Inner darknesses had been fed so long that they were sending real smoke up into a real sky. School shootings. Terrorist attacks. They all happen for the same reason. Because fires grow.

Christ said the Kingdom of God is within us and I think what he meant by that was that you can actually unfold yourself onto the geography. You can manifest the intimations of Heaven inside you out onto the exterior world. But… you can also do the opposite. Just as easily, you can call forth the demons of Hell. Talking with my neighbor I realized that by ignoring all these metaphorical dragons over the years I'd given them space to get bigger. I had not taken responsibility. I'd picked up no crosses. The logic behind "Love thy neighbor" boils down to the idea that the one on the scene is obligated to put the fire out before it spreads. What is the role of Man if not to slay the dragon?

Fires are burning all around you. Put them out.

5 Things I Learned From My Trip To Cyprus

March 5, 2018 | by William Adams | Link | Original Link

Recently, yours truly and his girlfriend went to Cyprus for five days, largely to escape -10 degrees Celsius (14 F) in Sweden, in favor of approximately 18+ degrees (64 F) on the southeastern Mediterranean island. Here are five observations from my stay there.

1. The country is similar to Malta (and almost as good)

Obviously, Greece is the country's closest cultural equivalent, since they share ethnic and linguistic ties and geographical proximity, but another nice Mediterranean nation, Malta, also comes to mind.

While the longitude is quite different, since Malta is located close to North Africa while Cyprus is only about 265 kilometers from Lebanon and Syria in Western Asia, the latitude is the same (35).

With fairly similar population sizes, cultural characteristics and millions of tourists coming every year, the two countries are like national cousins. If I had to choose, Malta is perhaps slightly better overall, but Cyprus is definitely not far after.

I would recommend a tour trip within the borders of the Akamas national park, and the capital Nicosia. Young party animals may go to Ayia Napa instead, where the slut factor is high. For those with less profane plans, Paphos, located on the southwestern coast is an excellent point of departure for relaxation and excursions.

2. The Cypriots hate the Turkish occupiers (and are not afraid of saying so)

In Western European countries it may happen that people complain about immigrants, especially low- and semi-skilled workers that you happen to run into.

Yet, there is a striking difference between how the Cypriots talk about the Turkish military and their enablers, who since 1974 illegally occupy about 38% of the northern land mass. They hate them and are not afraid of stressing that point publicly.

Perhaps it's got to do with that Cyprus is a small country while Turkey is a large and relatively powerful state, and the slave/master complex makes them more assertive, but that's probably a secondary reason. I think that many outsiders understand their

legitimate anger.

One may note, though, that there are the mainland Turks and their government, rather than the Turkish Cypriots, who make up the target for such resentful feelings.

3. The local women are average

I recall once when I went on a date with a very pretty Cypriotic woman in her late 20s. She had long, curly brown hair, a petite figure, and beautiful facial features. Plus, she seemed quite traditional and thus made up decent marriage material.

Unfortunately, from the small sample that I laid my eyes on in the western parts of the country, few women are as pretty as she was. Many look okay but kind of average, with decent bodies but dull faces. A reason for this may be that many Cypriots live abroad, in for example the UK or Australia.

Hence, if you go to Cyprus and manage to get laid it’s likely going to be with a tourist from another European country. Especially if you take into account that the local women generally are more conservative and therefore less likely to have sex outside of marriage or long-term relationships. But there are always exceptions and variations, of course.

4. People generally seem laid-back

For at least eight months of the year, Cyprus is a warm country. Even in February the weather resembles Scandinavian summers. Tourism, finance, shipping and real estate are the most important services that the economy hinges on, and most people you meet work with tourism in some form.

Combined with the fact that the living costs are fairly low, at least in comparison to Western European countries, Cypriots have a laidback mentality. They often work many hours but are no strangers to taking long breaks and relax in the sun. Male (tour) drivers genuinely seem to love their work.

5. Wealthy Russians are investing a lot

The influential Harvard political scientist Samuel Huntington was onto something when he stressed in his seminal work *The Clash Of Civilizations And The Remaking Of World Order* (1996) that it exists a broader Orthodox civilization in the world, in which the Christian Orthodox branch is the primary cultural marker. Russia, Armenia, Ukraine, Serbia, Greece and Cypus are some of these countries.

For the last 5-10 years or so, multiple rich Russian and Ukrainian businessmen have invested a lot in Cyprus. While there I learned that a large share of the new-built houses are owned by Russians. To own a nice house in an Orthodox nation with a more pleasant climate seems reasonable from that perspective. However, to obtain a EU citizenship appears to be another underlying reason, which perhaps makes Cyprus involved in some shady business.

In summary

Overall, Cyprus is a very nice country to visit. Even in February, the weather is quite pleasant, and there are much to see and do. Furthermore, the laid-back mentality is appealing. If you happen to be able to go there, I would recommend a visit, whether you’re a younger or older guy.

Painful Lessons That White Men Can Learn From The Black Community

March 6, 2018 | by Nathan Turner | Link | Original Link

When I read about masculinity and the place of men in our fucked-up modern society, the one issue that comes up over and over again is the disappearance of male-only spaces. You don't need a professional sociologist to point this out for you. On everything from sports teams, to nerd-type clubs, to the very Boy Scouts of America, the girls want to play too. Fifty years ago, the all-male office was not ubiquitous, but it was by no means uncommon. Now, such a relaxing and efficient male workplace is a lawsuit or social-media shaming waiting to happen, even if the work being done is intense physical labor.

This is not only a product of official hiring policies imposed from the top down by liberal elites. Many men seeking the camaraderie of a guys' bar night, pickup sports game, or camping trip find themselves harassed and berated by females who want to be included. Often men capitulate to the harassment rather than face the social consequences of appearing "misogynist." If you live in America, you've probably all had this experience. There is a saying in Ethiopia that goes, "the hens cluck louder every year."

What you may not know, if you're white and middle-class, is that the disappearance of male spaces is a middle-class white phenomenon. If you're a black male, you wonder what these social commentators are talking about. We've got the sacrosanct basketball court, the underground hip-hop scene, the basement chill session, and of course the rigidly hierarchical neighborhood gang. Women are not equal participants in any of these spaces; if not banned, they are relegated to the role of the mule, the sycophant, or the whore.

The cohesion of the male group and the harsh dog-eat-dog environment ensures that women, who by and large do not have the toughness and competitive edge to survive in these activities, self-select out of them. As a result, men in the black community are generally more aware of how the expectations of masculinity are socially defined for black men.

Of course, there are plenty of downsides to these all-male spaces. For one thing, these spaces lack any semblance of an intellectual culture. Instead of black men getting together to discuss philosophy or politics, their vernacular devolves into a crude half-English called ebonics which is barely sufficient to communicate basic statements and questions. This might be an ineluctable biological or cultural reality, or it might be that gatherings which rely so heavily on physicality might edge out smarter, less physical males as effectively as they do women.

Women are objects to be used by all-male groups, as many tropes from the black community reveal. Hip-hop music routinely refers to women as "bitches" or any number of denigrating names, and while the facts on the ground may be correct (a cheating slut bitch is a cheating slut bitch), the extension of this language to all women is symptomatic of black men's inability to recognize the humanity of their women. When humans no

longer recognize their fellow humans, they become bitter and useless half-men instead of flourishing members of society.

And this is what most black men are: young boys whose fathers knocked up their mothers and left, handing them over to be raised by a violent gang of their peers. When they come of age, they in turn impregnate their own baby mommas, and the cycle continues. Along the way, there are shootings, stabbings, robberies, drug trade and abuse, vandalism, illiteracy, and unemployment. The anger builds from father to son to grandson, and the sins of the fathers are visited on the children to the third and fourth generation.

So if whites are losing their male spaces, and blacks are doubling down on theirs, why isn't the black community a thriving utopia of patriarchal law and order? Simple. While we haven't given up our guy time, we have given up our family time. As long as women are not given and do not earn male respect, there will always be a conspicuous absence of healthy families. And if blacks are incapable of forming a family unit, the fundamental building block of a society, we'll always be incapable of forming a neighborhood, a culture, a civilization. And without these, the male spaces we create are nothing more than animal packs. They contribute nothing constructive to the community or to the black men who join and participate in them.

If you're reading this as a black man, remember that the family has to be reinforced by the society, and that means elevating the all-male time we spend together by making it dignified and constructive. Respect is a two-way street: no black man is going to respect some street trash ho, but no black woman is going to be any better than that unless the men in her life give her some incentive to do so.

If you're reading this as a white man, your community has to approach the problem from the other direction. The family unit has a problem in white culture as well. "Respect" has become relativism; it has overflowed to erase the borders between men and women that serve as the foundation of respect between the genders in the first place. Whites need to re-establish male spaces to re-invent masculinity. Only then can the patriarchal family retake its natural role in society.

Pregnant Women Who Drink, Smoke, Or Take Drugs Must Be Shunned

March 6, 2018 | by David G. Brown | Link | Original Link

Although their pussy pass has eroded somewhat, pregnant women who abuse their children by drinking, smoking, and taking drugs are still not being shamed appropriately. They are repugnant individuals who either excuse their child abuse or ignore it. Their behavior is on par with sexual abusers. One could argue such actions are even worse, given the risk of lifetime physical disability and/or mental retardation facing children whose mothers engaged in prenatal substance abuse.

Whilst the tiniest alcohol consumption is not necessarily worthy of criminal sanction, the misuse of alcohol and any use of smoking products or narcotics by pregnant women is a ***conscious*** decision to abuse a child and inflict needless misery on them. It should always be punished with jail terms. Doctors are now warning about accidental damage caused by women drinking, with ***any*** consumption of alcohol regarded by many professionals as too much when pregnant.

“My body, my choice” is a flimsy argument at the best of times, but even more so when a child is born with irreparable damage and suffering after the selfishness of an abusive pregnant woman. These “parents” are not fit to be mothers and must have their children taken away from them for the rest of their lives.

If a woman’s child gets fetal alcohol syndrome or a comparable condition, she should be jailed for a minimum of 10 years, if not 20. After all, she’s given her own child a life sentence.

“Addiction” is no excuse

“My body, my choice.”

You might remember the repugnant pro-pedophilia articles published (and then deleted) by *Salon* and other media outlets. Todd Nickerson and sympathetic journalists would have us believe that pedophilia is some disease for which we should feel sympathy. The same rationalization is frequently at play concerning pregnant women with “substance abuse” problems who, let’s face it, fuck up the lives of their children long before they are even born.

In addition to the sizable financial costs of helping a child physically abused by his or her mother in the womb, the youngster is set for an unenviable life of dependence, regular social isolation, medical treatments, and a lack of many of the opportunities we all take for granted. Just as giving alcohol, drugs, or cigarettes to a newborn or young child would be illegal, every country that claims to be interested in the protection of children cannot afford not to jail mothers who consume these products when pregnant.

Feminists support the rights of women to act as they want over the rights of children to be born healthy and happy

Tennessee is one of a number of jurisdictions that have passed or have tried to pass legislation criminalizing the use of narcotics or other substances during pregnancy. A number of feminists, as evidenced in the comments section of a *Jezebel* article, tend to support these kinds of laws. And why wouldn't they? Who in their right mind can't bring themselves to support *serious* measures for preventing the gratuitous horrors of children being unable to care for themselves once they reach adulthood and living a life of incredible pain?

Of course, large numbers of self-absorbed and plain malevolent feminists argue that women ingesting substances that end up killing or ruining the lives of children after birth are victims who should not be punished. It beggars belief that almost of all us can recognize the need to help those who suffer from congenital conditions or other serious disabilities, but certain political activists believe that those who **cause** this kind of suffering for children at birth are undeserving of serious punishment and ridicule.

We condemn sexual abusers (at least when they are properly convicted and with sufficient evidence) and rightfully so. We must also condemn and similarly jail women who abuse their unborn children through drinking, smoking, and drug-taking.

How To Get Over The Girl Who’s Not Right For You, By The World’s First PUA Author

March 6, 2018 | by Beau Albrecht | Link | Original Link

Ovid wrote the first PUA literature, around 3AD. (It was 1970 before the next book appeared, Eric Weber’s *How To Pick Up Girls!*) About two years later, Ovid wrote *Love’s Remedy*, about NEXTing the Roman way. This should work for exes, those soon to be, and all those ONEitis cases that frequently motivate guys to start learning game.

Distilled from flowery Latin verse full of mythological allusions (and my personal commentary added), here are the bare essentials of washing that broad right outta your hair.

Prevention

Think with the right head.

If you know it’s going to end badly, it’s best to put an end to it in the beginning. *Love’s Remedy* emphasized not letting the little head do the thinking. It’s a lot harder to break things off if your doomed crush takes root and turns into full-blown heartbreak.

I’ll add that when it’s uncertain if someone will take you seriously, know when to cut your losses. If you’re too optimistic (a frequent hazard for guys), you’ll waste your time and get hurt feelings. Giving up too easily is also bad; defeatist mentality is another Inner Game problem. Let good judgment be your guide in this balance. Further, if chasing someone gets you nowhere, *quit chasing her*. You might get better results, and if not, at least you’ve cut your losses.

Let things cool down

Get away from it all and catch some other sights.

If you're already besotted, you might have to wait for a while and distract yourself. Until you're ready to take off the rose-colored glasses, preoccupy yourself with work or some other constructive pursuit. Staying busy will keep you from grinding your mental gears.

Some of the examples Ovid throws out there include running for office, taking part in warlike exercises (martial arts or working out should do), or fighting the Parthians. (The Middle East is still a mess, two millennia later. A tour of duty in the sandbox—unless you're opposed—certainly takes your mind off of anyone who won't have the common courtesy to mail you a Dear John letter.) Ovid also recommends taking up farming; gardening should work if you can't afford 40 acres and a tractor. He wrote longingly of the rustic lifestyle, much like Seneca, and also recommends hunting and fishing as other distracting pursuits. A long vacation does wonders.

All that's difficult if you're suffering heartbreak. Consider it like taking a bitter pill. Ovid recommends not bothering with magic spells; so no New Age stuff there. Just butch up.

She's not perfect

Same chick!

Now remind yourself of her flaws:

> Say to yourself, “She has filched from me this thing and that and, not content with larceny, her extravagance has compelled me to sell my patrimony. What vows she made, and how often has she broken them! How often has she left me lying before her door! To others she gives her love, to me only her disdain. A common broker enjoys with her the nights of love which she refuses me.” Let all these grievances embitter your feelings towards her. Recall them incessantly to your mind, and let them sow the seeds of hatred in it. And when you reproach her, may you wax eloquent; but if only you grieve enough, eloquent you will be without an effort.

Epic! I’ll also add that a slut is someone who sleeps with anyone, while a bitch is someone who sleeps with *anyone except you*. So if you’re a man of accomplishment, and someone who won’t consider you gives it up for losers with room temperature IQs, she’s a bitch with fleas.

Ovid recounts a personal anecdote, where he thought over how much he didn’t like the appearance of a “certain wench,” even though he had to use his imagination as he didn’t find anything objectively ugly about her. And then:

> “What a lot of money she wants.” And that was, indeed, the main count in the indictment.

Ooh burn! He recommends exaggerating any traits of hers which *really are* bad. If she lacks sparkle in certain areas, have her demonstrate her lack of talent. If possible, have a good look at her some time without fancy clothes and makeup, or with a mudpack on her face. (If not possible, you can always imagine it.)

Find someone else

After unloading some ammo at his critics (we understand), Ovid recommends (in a roundabout way) getting some outside action before your hot date with Miss Wrong. Further, if she has a strange-looking cookie or “fish taco syndrome”, see above about “she’s not perfect”.

In any event, Ovid wasn’t a big believer in monogamy:

> I would counsel you also to have two mistresses at a time. If you could have more, it would be still better.

That one’s going to be controversial. Still, on the plus side, that’s quite a way to achieve abundance mentality.

Keep it cool

Another good one:

> …[W]hen your despairing heart is consumed with a passion fiercer than the fires of Aetna, act in such a manner that your mistress may deem you colder than ice. Pretend that you are cured, and if your heart still bleeds, never let her suspect it. Let laughter be upon your lips, though tears be in your heart.

We agree. One of the first game mistakes that recovering AFCs must unlearn is supplication. In this instance, holding frame keeps things graceful if you have to break up. I'll add that it's *extremely* helpful if you're NEXTing someone who's merely been toying with your affections.

Further, if someone stands you up for a planned hot date, act like it doesn't bother you, so it doesn't "push her pride to the point of disdain". (Yes, flaking is as old as the Roman Empire!) If she wants you back after that, forget it; bang someone else next time.

Calling it quits

In any case, you'd better be firm, or you're sunk. If you haven't had enough yet, hang out with her until you're sick of her. A modern proverb goes that for every "perfect 10", there's a guy who's tired of dealing with her crap.

Also, don't be alone when you're despairing; hang out with your friends instead. Until the crisis has passed, avoid the love-stricken like yourself, as well as happy couples. Keep away from the chick you're trying to get over, her family, and her friends. Don't ask about her. (These days, this means no lurking on social media.) Don't even talk about how you're over her; a gradual NEXTing is better.

When you're ready, cultivate indifference rather than resentment; she's now *merely an acquaintance*. No angry confrontations either. Still, it's still okay to remind yourself what a flake she is. Ovid recommends getting rid of your love letters. (This advice is obsolete today. Saving those emails and text messages could save your ass.) Also, avoid places that will remind you of her.

Final notes

The following are somewhat modified from the original, though in the same spirit.

Don't flaunt your wealth; instead, let her think you're broke. Don't get aggro with her past or present boyfriends; they know what a pain in the ass she is now anyway. Eat a moderate diet. You're allowed to get shit-faced drunk. (I recommend only once—*okay,*

fine, one week.) I'll further add, go find ten other women.

I write **off-the-wall fiction**, and ***Righteous Seduction*** concerns next-generation game. My **blog** concerns "deplorable" politics, game, and my writing projects.

5 Things A Man Should Do Before Going On Testosterone Replacement Therapy (TRT)

March 7, 2018 | by Mo Saleem | Link | Original Link

Testosterone replacement therapy is a quick fix. It treats the symptoms of low T (fatigue, decreased motivation, diminished libido, etc), while completely ignoring the root cause—your lifestyle choices. Not to mention that TRT is expensive and potentially dangerous. The following are five goals you should try to achieve before taking the plunge.

1. Achieve sub-15% body fat

Excess body fat is associated with an increase in aromatase production (1). Aromatase is an enzyme that serves the function of aromatizing androgens into estrogens (2). The more aromatase you have running through your veins, the more testosterone is being converted into estrogen (3).

In other words, all that extra body fat you're carrying around is literally making you softer – not just a softer body, but softer erections and emotions as well. If you're currently overweight, getting lean will have a tremendous positive impact on your testosterone.

Estimate your current body fat percentage by referring to the image above and make it a goal to achieve sub-15% levels. Leaning down is simply a matter of consuming fewer calories than you burn on a day-to-day basis.

2. Optimize your vitamin D and magnesium levels

Large portions of the American population are deficient in Vitamin D (74%) and magnesium (46%) (4), both of which are crucial for testosterone production.

Men with sufficient vitamin D levels have significantly higher testosterone compared to men who are deficient in it (5). Similarly, magnesium status has been shown to be strongly and independently associated with testosterone (6).

Topping up your vitamin D and magnesium levels is perhaps the simplest way to bring your testosterone back up closer to where it should be.

Your skin synthesizes vitamin D upon exposure to the sun but if spending more time outdoors is difficult, opt for a D3 supplement. If you have a hard time fitting magnesium rich foods (like spinach, almonds, and dark chocolate) into your diet, supplementing with magnesium is a good option as well.

3. Bench your bodyweight for 5 reps

You say you have a hard time building muscle and strength because of low T, but have you actually been hitting the gym on a regular basis? I'm guessing the answer is no.

What if I have been lifting weights regularly for over a year, but am still unable to bench press my bodyweight for 5 reps?

Well, that means you're doing something wrong.

The two most common mistakes men make in the gym are 1) focusing on the wrong exercises and 2) lifting the same amount of weight week after week.

Forget bicep curls and ab crunches. Your workouts should be centred around gaining strength in big compound exercises like the bench press, squat, deadlift, overhead press, and barbell row. And the key to consistently getting stronger is to keep track of your workouts. If you don't measure your progress, you won't improve on it.

This is a mistake that I made for years. I would enter the gym with some recollection of how much weight I lifted the previous week and would complete a number of reps for a given exercise until I felt the "burn". As a result, I barely made any progress past the initial newbie gains.

Now, I know better and keep track of every single workout – what exercises I did, how much weight I lifted on each, and how many reps I was able to complete. In this way, I always have an eye on improvement during my next workout and am usually able to hammer out that one extra rep when it means making gains. Beyond the newbie level, that's how strength is built – one rep at a time.

The following is an example of a simple progression model you can use to increase your strength:

Week 1: Bench Press – 145 lbs x 6, 6, 6

Week 2: Bench Press – 145 lbs x 7, 7, 7

Week 3: Bench Press – 145 lbs x 8, 8, 8

Week 4: Bench Press – 150 lbs x 6, 6, 6

Before you jump the gun and make excuses about how you can't build muscle because of low T, at least put the work in. Show up at the gym. Keep track of your workouts. Focus on getting stronger.

After a year of this if you still haven't made any progress, that is the point where you can think about opting for TRT. Not before.

4. Eat your fair share of dietary fat

Considering that steroid hormones are synthesized from cholesterol, dietary fat intake is very important for T.

Scientists at the Centre of Sports Medicine found monounsaturated and saturated fat intake to be the strongest dietary predictors of resting T concentrations (7). Polyunsaturated fats like soybean and corn oil, on the other hand, actually lowered T.

Whole eggs, avocados, bacon, and fatty beef are your T-boosting friends. Make sure to keep them in your circle.

5. Get 7-9 hours of deep, uninterrupted sleep daily

If you do everything else right but fail to get enough high quality sleep, your testosterone results will be severely limited. Given that the bulk of your testosterone is secreted while you sleep (11), you have to start making sleep a priority.

Four steps to faster and deeper sleep:

1. Cut off night-time exposure to bright screens
2. Sleep in complete darkness
3. Keep it cool (between 60-67 degrees fahrenheit (12))
4. Make it consistent

Conclusion

Unless you're suffering from a medical condition that's stunting your body's ability to produce testosterone, there's no need to for TRT. Getting to the root of it – your lifestyle habits – will take longer, but the results will last longer as well. If you go for the quick fix, you'll see faster results, but there will always be a price to pay at the end.

New Jersey’s Democratic Governor Is Racing To Turn The State Into A Third-World Shithole

March 7, 2018 | by G.S. Luthra | Link | Original Link

Cities in the once Golden State of California have already been colonized by illegal aliens to smuggle drugs, conduct gang formations, and perform other criminal behavior. Many assume that living away from border states protects them from the racket, but with the recent changes in government, the East Coast is on track to becoming just like the West or even worse.

New York is one of the most corrupt states in America, full of foreign students and migrants who manipulate the system. These same “Bennies” fresh from NYU Law have done the same in Florida during their Winter vacations, and now the Sunshine State is flooded with illegal Cuban immigrants and globalist liberal policies.

The Jersey Shore however, may now become the next safe haven for illegal immigrants as newly selected governor, Phil Murphy, declared that he wants to turn it into a sanctuary state with a ‘Defense Protection’ agency dedicated to illegal immigrants. He also recently signed an executive order for Puerto Rico relief even though the state is already in debt.

Who is Murphy?

He is another graduate of the Poison-Ivy-League brigade, and prior to taking office, he made a lot of money at Goldman Sachs. This former financier basically bought his way to office, paying $20 million of his own money as "donations" to county Democratic parties. There are a lot of shady things about him like having a 501(C)(4) to supposedly fight for the middle class and a Wikileaks email scandal. Upon assuming his role as governor, he has already directed the ferry on a course that will lead to destruction.

He Brought Back Planned Parenthood

Murphy revived the baby-killers from the dead by reversing a bill that restores $7.5 million dollars in funds, and now Medicaid can pay for Planned Parenthood. Murphy stated, "I don't have to tell you all that today has certainly been a long time coming. New Jersey will once again stand strong for Planned Parenthood and reproductive rights."

Cecile Richards, president of Planned Parenthood, thanked him for his "lightning speed" in passing the bill.

He Wants A $15 Minimum Wage

Hundreds of Rutgers protesters blocked traffic in New Brunswick, NJ, calling for an increase in wages to $15/hr even after the university increased the wages for student jobs to $11/hr the previous semester. Spoiled millennials still want the government to pay for their education, provide free health care, and now pay them premium for campus jobs such as library attendants, front desk reps, campus guides, and residential assistants even though these positions do not require skills or much competence.

Phil Murphy, has expressed his intention of increasing the minimum wage, but this will be a complete economic disaster according to an NJ based financial expert.

He Wants A Bank Of New Jersey

He believes a "State-owned bank" in New Jersey is better than letting people move their wealth freely. According to him, it would help stop money from going offshore and put it back into the people. Murphy said it would partner with the community and would not be a competitor, but creating such a thing would give politicians complete access to the state's financial resources and freely direct it where ever and however they please. Getting their hands on Municipal funds would put the state in even more trouble and give policy makers an unfair advantage.

Self-made entrepreneurs like to diversify, but this proposed state controlled banking system would prevent them from doing so. If Murphy is so adamant about stopping money being parked offshore, he should start with Rutgers, the **State University of New Jersey**, who was one of the 500 schools caught hiding millions in foreign bank accounts.

New Jersey Is likely To Go Down Under

Things don't look good for the Garden State as it currently leads the country in foreclosures. Crime is rampant, the roads resemble third world nations, and the economy has plummeted with college graduates unable to secure high salary jobs. New Jersey is also one of the highest taxed states in the U.S., especially for business owners. Aside from casinos, call-girls, and beaches, there is very little to attract visitors or investors.

What Murphy is doing will make his predecessors look like angels, because the state simply can't afford his socialist style policies. So, if you're looking for your next vacation getaway, don't go to Jersey, or at least keep it brief and minimal.

The Pros And Cons Of Julius Evola's "Revolt Against The Modern World"

March 7, 2018 | by Michael Witcoff | Link | Original Link

I recently decided to get my hands on Revolt Against The Modern World, by Italian Traditionalist Julius Evola. Intrigued by the title, I thought it might provide some kind of structure or game-plan that could help swing the pendulum of our culture back in a more traditional direction.

What I discovered in the book was that, and much more. Some of it I agree with, but some I found spiritually toxic. Today, I thought I'd write up a review highlighting both sides of this very interesting read.

The Pros

To begin with, there are many sentiments expressed in this book with which any genuine traditionalist can agree. Evola was rabidly, staunchly opposed to many of the same things that modern right-wingers correctly identify as the causes of our society's ills.

He wrote that any philosophy based on materialism or biology — instead of on higher spiritual principles—is bound to fail. It's a sentiment I agree with completely, echoing my own foremost criticism of the alt-right.

For example, I take no philosophical issue with the idea of nation-states being populated primarily by the people who created them. And I apply this same standard to every group and tribe on Earth.

My issue with the alt-right arises when people argue that biological similarity, *in and of itself and guided by nothing higher*, is somehow sufficient for the creation and maintenance of a thriving, successful society.

Historically, this has never been the case. Each example of a society the alt right points to as proof of a "*successful European society*" was, in fact, a successful *religious* European society. No successful society—for any race—has been led by a mono-cultural mix of pagans, Christians, atheists, and satanists. Where and when multiculturalism *has* worked in the past, it has always been in the context of a shared faith.

While bound by the ties of a common culture and language, the members of successful nations were connected primarily by the glue of a common spirituality.

From that starting point, Evola's premise is that there is a certain hierarchy and order to the invisible layers of nature (those parts of the spiritual realm with which most are unfamiliar). I also agree with this sentiment, as traditional Christian theology teaches that angels have various ranks or belong to various "orders" within the super-substantial realm.

This invisible hierarchy, so a bastardized version of his argument goes, should be the blueprint and foundation of the political and social order found down here on the material plane as well. The "Below," as he described it, ought to reflect the "Above."

This concept should make sense to most Christians. We even say in the Lord's Prayer, "*Thy Kingdom come, Thy Will be done, on Earth as it is in Heaven."*

Anchoring the law and state in divine and eternal principles, rather than mortal and fleeting ones, is a powerful bulwark against every form of degeneracy. The world we live in today amounts to little more than competing secular and materialist philosophies which lack even the potential to solve the problems which they seek to address.

Therefore, I agree wholeheartedly with Evola's diagnosis that the cause of cultural malaise is spiritual disconnection. However, that is where my agreement with his philosophy ends.

The Cons

Obviously, my primary criticism of Evola's philosophy is that it's based in paganism and not Christianity. From the fundamental understanding that material actions should be based in immaterial principles, paganism and Abrahamic religion are really the only two directions that things can go in.

Evola, in my opinion, chose the wrong one.

Like the Masonic philosopher Albert Pike, Evola was an avid student of Indo-Aryan culture and the (pre-)Zoroastrian religion upon which it was founded. Also like Pike, Evola perceived a lot of what he discovered there as the "blueprint" for future Christian beliefs.

It is certainly true that there is some overlap between Zoroastrianism and Christianity. In fact, it is a basic tenet of Orthodox theology that all religions and belief systems contain *some* amount of truth, even if small in measure. Since we are all created in the image of God, so the thinking goes, it is impossible for anyone to be wrong about absolutely everything.

However, the problem with the Evolian line of thinking on the topic is that, rather than recognizing certain ancient traditions as *foreshadowing* the coming Incarnation of Christ, men like Pike and Evola simply *equated* the two traditions instead. This is a very common error made by pagan thinkers, and one which they have been making since antiquity.

This is quite similar to how the Old Testament religion of Judaism (which I was raised in) simply "set the table" for the coming New Testament religion of Christianity. The feasts, festivals, and paradigms were simply laying out the signposts and markers which culminated in the events of the Incarnation and Gospel narrative.

It is my opinion that the Orthodox Christian Church, composed of Tradition and Scripture and Canon Law, *is* the ultimate and closest-to-perfect example of the kind of society which Tradition should create. None of it is "*of the Earth*," as it contains the revealed and

reflected laws of Heaven put into action in the material world.

Of course, *all* forms of Christianity should operate similarly if they were to hold true to the dogmas passed down by the Apostles and their students. However, given the tens of thousands of versions of Protestantism—and the creeping modernist influence in the post-Vatican-II Roman Catholic Church—it seems that not all Churches calling themselves "Christian" are living out the fullness of faith handed down over time.

Now certainly, there is the question of whether the Church should be in charge of the State — or whether it should simply bolster its members in relative cultural isolation in order to remain steadfast and true regardless of where the societal winds are blowing. It's a good question, and the subject of much discussion within Christian circles.

On the one hand, I think most tradition-minded people can agree that a society established with the health of families and their members in mind (rather than the agenda of the rich and powerful) is ideal. That is certainly the situation which appears to lead to both material and spiritual prosperity.

On the other hand, an equally-strong argument can be made that traditional Christianity — as practiced in the soul and conduct of an individual — is an eternal, unchanging, robust ship which does not sink when the cultural tides get tough. In fact, you could argue that the *worse* the society around you gets, the *better* the opportunity to oppose the schemes of the devil in favor of following Christ's example.

In the end, my own opinion is that we should focus primarily on sanctifying ourselves and our immediate families and communities. Through that, and only after that, does it make sense to go after cultural change.

After all, the state of a man's soul does not depend on what is going on around him—it depends on his response to it. It depends on whether his internal state remains strong like an oak tree or bends in the wind.

In that sense, the "Revolt Against The Modern World" is primarily an internal one. It is in the building of a character that refuses to bow down before the idol of modernity. It is in the sharpening of a mind which refuses to be softened by the High Priests of culture and their relentless propaganda.

My friends, the truth is this: there is more freedom to be found in the "inner world" than in the "outer" one. In a time of unprecedented falsehood and degeneracy, let us hold fast to what is true and right and good. This is the only path to liberation, and the road traveled by all whose soul seeks genuine purpose.

The Many Ways Pipsqueaks And Crybullies Wield Power And Misuse It

March 7, 2018 | by Beau Albrecht | Link | Original Link

Traditional aggression involves things like someone walking up and offering to rearrange your face. Someone must be physically imposing to do so. However, there are ways wimps can push people around too. Further, one needn't even be rich or powerful to act oppressively and mess with other people's lives.

Generally this involves recruiting others to do the dirty work for them. If they're backed by an entire ideology, better yet. Here are some of those ways.

Frivolous lawsuits

“I just billed my clients for 160 hours of my research on their cases. Not bad for a week’s work!”

It’s so old that *barratry*—the technical term for vexatious litigation—is from Middle English. I’ve covered proxy violence before, but this time it goes deeper. Groundless lawsuits use the instrument of the state and powerful to deprive people of their property and livelihood.

Meanwhile, defending oneself can be financially ruinous. The lawyers on both sides get tidy profits. They’re paid hourly; that’s why lawsuits drag on for months or even years, and funny money billing is notorious. For penniless plaintiffs, attorneys may also agree to a percent of the plunder, perhaps 35%.

Another Anglo-Norman word relating to judicial abuse is *champerty*. That basically means an uninvolved third party meddling in someone else’s case as an investment opportunity. Today, there’s a new twist. Judicial advocacy groups and alphabet soup “watchdog” outfits specialize in suing politically incorrect defendants.

Recent frivolous lawsuits include several wedding cake cases, the first unintended consequence of gay marriage. Bakeries have been sued for declining to produce wedding cakes for same-sex couples. An Oregon bakery had to pay $135K, a sum far exceeding even a bridezilla wedding. (Likely their own legal defense tab was quite a chunk of change!) A Colorado baker also received SJW mobbing and even death threats, but he’s fighting the ACLU-sponsored litigation all the way to the Supreme Court. It’s scheduled for June 2018; soon we’ll discover what the Constitution says about gay wedding cakes.

So bakeries like these face lawsuits that could ruin them, leaving their employees jobless. That’s rotten; small businesses are a pillar of a healthy economy. Some might argue that following one’s conscience isn’t where the “smart money” is, but people like Thomas More suffered far worse for adhering to religious principles. Undoubtedly SJWs cackle about this, thinking the bakers are getting what they deserve. The “rights” groups *love* putting business owners in this dilemma. *Who’s the oppressor here?*

Human resources

"That joke you told six months ago made someone feel 'uncomfortable'."

HR departments are a convenient make-work boondoggle for those with degrees in sociology, women's studies, or some other underwater basket weaving major. A comment to our earlier article speaks volumes. A guy in his 40s was interviewing to be an estimator for a metal fabricator, and then:

> The early 20s HR girl stared out the window (during the brief and time wasting interview) like a schizophrenic on psychotropic meds in the drooling academy, grunted like an animal in response when I succinctly answered her silly and impertinent questions, then threw my resume at me and bounced it off my head, and screamed "you're not qualified for this position, and you've wasted my time"! Wait a minute, I replied to a job posting ad, and you called me in for an interview! I leaned forward, gave her a glaring stare, picked up my resume, and walked out the door. But that didn't end it. She followed me out into the lobby, screaming like an unhinged banshee!… So this is what feminism and diversity has given us in the workplace!

Why did she think it's appropriate to make animal noises, throw things, and have a temper tantrum? Did this chick barely into chronological adulthood even understand how to evaluate his technical qualifications?

What do HR droids do, besides push papers and play Minesweeper? They vet new candidates, acting as gatekeepers. Whether a company gets the talent they need, or a jobless guy will be able to pay his bills, is all in their hands. They also prevent flirting, and even an innocuous remark like "nice dress" can ruin someone.

A feminist fresh out of college can wield tremendous power. She controls the economic livelihood of others much older and more experienced, who *actually do the work*. Power used capriciously or maliciously causes incalculable lost productivity and morale problems.

Loading…

The gender bender agenda

Whoever talked that kid into this deserves waterboarding.

If I called myself a tree, you might ask if I'd taken my meds. If I called myself a Filipino, you'd be right to recommend getting over my ethno-masochism and learning something about my own culture. If I called myself a woman, then (according to some) *you're a hater* if you disagree. Notice the framing tactic—supposedly now *you're* the one with the problem!

Somehow this mental illness became the latest trendy civil rights crusade. Trannies were a fringe group within a fringe group, but very quickly became the *cause-du-jour*. If I were a big cynic, I might wonder if their massive surge of media support was about getting the Tea Party and Occupy Wall Street off the headlines before too many people got clued in about how our economy is managed.

The libertarian path of least resistance is to let people believe whatever silly things they want, and everyone else can have their own viewpoints. Unfortunately, delusion often clashes with reality. Worse, modern liberalism tries to force everyone else to go along with whatever their agenda is at the moment.

Are trannies merely doing their own thing; just "being different"? Their agenda is promoted aggressively in the schools, the media, and even the military (the wrong place for social engineering experiments). Sports teams—even the Olympics—must cater to them. Allowing "chicks with dicks" into women's bathrooms became a turbulent debate, *actually taken seriously* by legislatures nationwide. Not wanting to bang them is now "narrow-minded". Using "incorrect" pronouns is penalized.

Trannies are basically neurotic weaklings, merely three thousandths of the population (0.3%), yet demand that the public *must accept their version of reality*. They're being

enabled by the media, liberal politicians, and other useful idiots who want to create a unisex world. Seldom has a tiny minority thrown its weight around like this, or displayed as much chutzpah. *The tail does not wag the dog.*

Other tactics

Mattress Girl lied because she got dumped

We've covered false rape accusations frequently, so I'll be brief. This has happened since forever, usually for revenge. Lately, it's also done for morning-after buyer's remorse, attention-seeking, and several other reasons. Merely an unfounded lie can destroy someone's reputation, or even unleash the instrument of the state to imprison someone wrongly.

Online mobbing is a new abuse of power. Some green-haired Tumblrina reads something he/she/it doesn't like, doxes the target, then emails hundreds of other SJWs. Soon, the target's company is bombarded with messages exhorting them to fire him. Details about his home address, personal life, and family are posted online. Those doing so don't know him, often living thousands of miles away. Most never read what he actually wrote in context; merely someone else's commentary is all they need to attempt to destroy him for exercising free expression.

One could argue that at least passive aggressive misuse of power isn't *real* aggression. True, but that doesn't mean there aren't real-world effects. In fact, getting one's face rearranged is preferable to these consequences. Still, the horde of crybullies should take heed that *pushing too much is unwise*.

Owning A Gun Won’t Make You A Man

March 8, 2018 | by Davis M.J. Aurini | Link | Original Link

Let me start off by being absolutely clear about where I stand: I love guns. I love their smell. I love their sound. I love the smooth slide of a well-lubricated bolt-action rifle. I love the meditative perfection of feeling my round hit its target, before there’s any rational way that I could possibly know it hit, and yet I do know. When body, mind, sight, and weapon all line up in sync, I know.

Furthermore, I love the Second Amendment of the United States Constitution. Without the Right to Bear Arms, Freedom of Speech is an empty abstraction. It is the moral duty of every Christian to be prepared to defend the innocent with proportionate force, up to and including lethal force. All who can own a gun should own a gun, it is our duty to be vigilant for threats against ourselves and others. The words of our Lord and Savior state: “He that hath no sword, let him sell his garment, and buy one.”

Gun control is a false promise, pushed by cowards and conniving elites: security without responsibility. It is a lie believed by fools and those who blind their eyes to the truth that evil exists in the world, and that good men must be prepared to combat it.

But with this established, let us not fall into the same intellectual trap as the gun grabbers: mistaking the object for the intent. The root cause of mass shootings is never a gun. The gun is only the means. Similarly, with every righteous use of a firearm, the firearm is incidental to the heroic intent.

The gun is an excellent tool, but before you master it, you must learn to master yourself.

Military Training

During my seven years in the army, my primary weapon was the C7A1 Service Rifle; an AR-15 variant, nearly identical to the M16A1 model then used by the American military. It is notorious for being one of the more difficult battle rifles to operate. Unlike the AK-47, which can be left buried in the mud for five years, tossed into the hands of an illiterate 15-year-old peasant, and then employed effectively, the AR-15 is prone to jamming if it isn't maintained correctly.

And yet, if you give me a week and a truck full of ammo, I can give you a squad of well-trained marksman who'll be able to implement the weapon in a variety of climates and conditions. The rifle might be complex, but it's not *that* complex.

What I can't give you is a squad of soldiers. They'll still be a group of young idiots with chips on their shoulders. It takes a lot longer to train young men to the point where they're battle-ready, than it takes to train them in the usage of a particular weapon. The core values of discipline, courage, and restraint require more than a week-long course.

Wax On, Wax Off

The 1984 film *Karate Kid* follows the life of a teenager named Daniel LaRusso. He's the son of a single mother who's being bullied at school. He approaches his neighbor Mr Miyagi, a wise old Karate Sensei, and asks that he teaches him how to fight. Rather than granting his request, Miyagi puts him through a series of chores to prove his worth. It is only after mastering these chores that LaRusso learns he was studying Karate the entire time. The motions behind "Wax On, Wax Off" are the same skills he needs to block another man's punch.

More to the point, he was learning discipline and commitment. Like all young men, he was full of piss and vinegar, and he had an intuitive sense that an injustice was occurring. What he lacked was the restraint to respond appropriately and proportionately to his situation. Learning to fight was the outward manifestation of his spiritual growth, but it was the internal transformation which made him into a warrior.

God Created Men and Sam Colt Made Them Equal!

The great thing about the gun is that it's just as dangerous in the hands of Bruno the Bodybuilder as it is in the hands of Beatrice the Church Lady. The problem with it is that it can be mistaken for a short-cut to developing the warrior spirit.

Teaching young soldiers how to use guns – even a relatively complex one like the AR-15 – is the easy part of Basic Training. Teaching them how to discipline themselves and restrain their heroic impulses is the hard part.

There are no short cuts in developing yourself as a man. Mental ruggedness, fortitude, restraint, and guts are all qualities that have to be earned, and buying a piece of hardware won't bestow them upon you. While it's your responsibility to own a gun if possible, it's also your responsibility to be mentally prepared. I'll take an unarmed,

grizzled vet over three young punks with pistols any day, because the vet understands that that the knives and guns are just tools; *he* is the weapon.

Until you've developed that same nature inside of yourself, you should be extremely cautious when handling your firearm. Without proper mental care, the gun will provide an unwarranted boost to your ego, turning you into a loose cannon, rolling about the deck and injuring your allies. Once you have developed that nature, you'll realize the gun isn't truly necessary. It's just an implement – what matters is your intent and will.

The gun can be used to implement your best qualities, or it can be a catalyst which brings out your worst. Always be mindful that you stay in the driver's seat. Young men have incredible potential to do great good, or great evil. Make sure you become an embodiment of the first.

The true warrior understands that it's almost never the right time to fight; that fighting is deadly, and that all victories come at a great cost. He fights not for the sake of anger, but for love; not with ego, but with humbleness. From a place of confidence, not braggadocio.

> He must seek his life in a spirit of furious indifference to it; he must desire life like water and yet drink death like wine.
> ~G.K. Chesterton

This Year’s Oscars Reveal That The Culture Wars Are About To Explode

March 8, 2018 | by Michael Sebastian | Link | Original Link

Generally, I recommend that men try to unplug from mainstream culture as much as possible, but as a writer for ROK, I feel it is my responsibility to pay attention to what the elites want us to believe. One of the easiest ways of doing this is to watch the Academy Awards. When it comes to leftist brainwashing, the Oscars never disappoint and the 2018 Oscars were no exception. The message of this year’s Oscars is that the left is going to escalate their culture war against traditional men.

The purpose of the Oscars

I picked the two best looking actresses at the awards: Gal Gadot and Margot Robbie.

In a sane world, the Oscars would have two purposes: 1) To hype movies to sell more tickets, and 2) To serve as a platform for the movie industry to award high achievers within its ranks. To achieve these goals, the Academy Awards show should primarily be entertaining so that more people would watch the ceremonies. However, it turns out that the high ranking members of the Academy have another goal that conflicts with the first goal of making money.

This third goal is to instruct viewers in how they should live their lives. The great Hollywood masters seriously believe that they are wiser than you. And because of this lofty wisdom they imagine they have the duty to tell you how to vote, what issues you should care about, and even what is right and what is wrong. The approach that the Academy Awards take to convey their message is not subtle: they used almost every segment to browbeat their audience on political correctness.

The Hollywood elite are so hell-bent on educating us, the great unwashed masses, that they have even been willing to lose viewers rather than tone down the pontification. This year’s broadcast of the Oscars got the lowest viewer rating in history.

The messages

In the 2017 telecast of the Oscars, the main target was Donald Trump. For whatever reason, the Hollywood elites are terrified by the president. Unfortunately for them, half the country happens to like the president so the Oscars lost lots of viewers. This year, the ceremonies toned down the direct Trump-bashing, but behind every political message, and there were a lot of them, there was a barb intended for Trump. Here are the marching orders from our self-appointed overlords.

Hollywood perverts

It is no secret that Hollywood is rife with all sorts of perversion. Becoming an actor carries potentially big rewards in terms of fame and fortune, and many young men and women are willing to sell their souls and bodies to attain it. Producers, directors, and other powerful Hollywood types are more than happy to prey upon these people who are willing to trade their dignity for a shot at the silver screen. It is also no secret that big Hollywood players like Harvey Weinstein used their wealth and power to cover up even actual crimes such as rape.

In his opening monologue, Jimmy Kimmel treats Weinstein's expulsion from Academy of Motion Picture Arts and Sciences as the only thing Hollywood had to do to clean up its pervert problem. Instead, Kimmel shifted the blame to wider American society indicating the sexual harassment of women is pervasive. This is Hollywood's modus operandi in action: absolve itself for its wrongdoing while simultaneously projecting that wrongdoing upon innocent Americans.

Inciting war between men and women

Notice how I mentioned that both men and women had been the victims of Hollywood perverts but how Kimmel turned it into an issue of male sexual harassment of *women*. The so-called oppression of women was another big theme of this year's Oscars. Again, the agitation started right from the beginning with Kimmel's monologue and continued all throughout the ceremonies:

> Greta Gerwig is the first woman to be nominated for director in eight years. And that's important. Only 11 percent of movies are directed by women. And that is nuts. We still have a very long way to go in that department, and a very long way to go when it comes to equal pay. Especially when you look at what happened with Mark Wahlberg and Michelle Williams. We all know the story. Mark Wahlberg was paid a million-and-a-half dollars to reshoot his scenes while Michelle Williams for her reshoots got a per diem. She was paid 80 dollars a day for the same thing. And what made it especially unfair is that Mark and Michelle are represented by the same agency. And I have to admit, this story really surprised me. This one shook me, because if we can't trust agents, who can we trust?

Could the discrepancy be explained by the fact that Wahlberg is a much bigger box office draw rather than Williams being a woman? In Hollywood land, you are are not permitted to ask those types of questions.

Open borders

Hollywood loves, loves, loves open borders. This year they had *Black Panther* start Lupita Nyong'o and some Pakistani guy presented an award for makeup. It just happened (totally not coordinated) that both of them are immigrants and they took the time state that they were Dreamers.

Technically speaking, Dreamers are the children of illegal immigrants who came to the US from Central America while they were children. Presumably, both Nyong'o and the Pakistani guy came to the US legally so they are not Dreamers, but the Oscars are counting on you not knowing that. This was a direct swipe at Trump who has threatened to pull Obama's policy of not enforcing the law.

Diversity is our strength

Nothing beats the Oscars heavy-handed approach to promoting diversity. From the beginning to the end of the ceremonies, I had the dire necessity of diversity drummed into my skull. One of the most interesting examples of this was Frances McDormand's acceptance speech which pushed the idea of all actors putting in *inclusion riders* into their contracts requiring movies to have more on-screen diversity. The goal being to eliminate all traces of straight white males from the movies and society as a whole.

Conclusion

As always, it is good to do the exact opposite of what the elites want you to do. The elites want to incite a war between men and women? Make peace with women. Love your girlfriend or your wife. You are the captain. Make her your first mate and embark on an adventure together to live counter to our degenerate culture. Is Hollywood preaching open borders? Use their own creation against them—imitate the fictional nation of Wakanda and help your own countrymen first before trying to help the world.

And while you are doing the opposite of what Hollywood wants you to do, remember that *it is your hard earned money that is going to fund this destruction of your way of life*. Therefore, the best thing you can do is to stop giving them your money. Avoid going to movies and renting movies. If it sounds impossible to you, it is an indication how conditioned you are. Instead, dedicate your free time to reading old books, improving yourself, and building your family.

How To Properly Measure Your Overall Level Of Fitness

March 8, 2018 | by William Adams | Link | Original Link

Physical fitness is often discussed with the aim to create an all-encompassing body program, in conjunction with proper diet, in order to build muscles and become stronger and leaner (although not necessarily all at the same time).

What many men should be aiming for, in my opinion, is to find an easy way to measure one's overall level of fitness with regard to strength and stamina.

About ten years ago, a popular fitness and bodybuilding magazine described measurements for the seriously trained to aim for. A truly fit guy should be able to, at least one time, lift 1.5 times his body weight in bench press, pull-ups and dips, two times the bodyweight in squats, and 2.5 times one's body weight in dead lifts. Further, he should also be able to run three kilometers on a track-and-field track below 12 minutes, in order to prove his broader stamina and athleticism.

While all of these measurements are worth to aim for, some revisions need to be done so that more men can be included and make the measurement process easier to carry through. Therefore I suggest the following measurement structure…

1. Bench press: as many reps as you can manage with your bodyweight

Make a regular bench press exercise with your current bodyweight. Full movement. The barbell should touch your chest at the bottom.

2. Pull-ups (wide grip): as many reps as you can manage with your bodyweight

Use a broad grip and make pull-ups with full movement. Make sure the chin is above the bar, and the arms and back are fully streched at the bottom position.

3. Dips: as many reps as you can manage with your bodyweight

It’s important that you have your upper body in a 90 degrees position and stretch the entire elbow joint at the top. Otherwise it’s cheating. Full-movement dips should be heavy.

4. Squats: as many reps as you can manage with your bodyweight

A full movement with a 90 degrees position at the bottom is important. Make sure not to lock the knee-joint at the top. Whether or not you want to rest for a second at the top between each rep is up to you.

5. Dead lifts: as many reps as you can manage with your bodyweight

The conventional form is to have your arms slightly outside your legs and knees. Make sure to bend the knees so that your quads/thighs are helping you complete the movement, but with a relatively light weight it may be the case that your back, forearms and hamstrings are doing the bulk of the job.

5. 3 kilometers (8.5 laps on a 400 meter standard track-and-field track): run as fast as you can and measure your time properly

Make sure to have a clock or smart phone to measure your time and keep track of the time while running. Perhaps you should have an appropriate pre-determined average lap

time as guidance.

The benefits

There are multiple benefits with having this approach, of which one is that much more men can manage to complete at least one repetition with their own particular bodyweight in all of these exercises.

Moreover, a man does not have to be upset about being “worthless” because he has one or several flaws and shortcomings. For instance, I am very strong in bench press, dips, and pull-ups relative to my bodyweight, and I have run at 11:30, but can only do about 1.8 in squats and 2.2 x bodyweight in dead lifts. Since I don’t care about being particularly strong in these two exercises, but want to train legs and back properly, I still want to perform the exercises and make at least *some* improvements. Therefore it’s useful to have relative instead of absolute goals to strive and aim for. The power of repetitions lies in its easily measured and manageable physical process.

How to get there

It’s important that you have a decent training and diet program to begin with, and train the entire body at an appropriate local gym at least once every week (perhaps split up into three or four days of exercise throughout every week). Further, it’s important that you include all of these exercises and put extra emphasis on all of them several months before you decide to measure your results (unless you’re not already in very good shape, then maybe a couple of weeks are enough).

Moreover, it’s very likely that strivings such as these overlap with the process of losing body fat. It’s hard to be able to do more than a few reps in any of these exercises, besides perhaps squats and dead lifts, if you have 15-25% of body fat. In a perfect world, you should have 10% or less, which will enable you to perform maximum of your ability, but let’s say 12-18% may also take you quite far.

Yours truly in decent shape and ready to make some good results

Therefore you should gradually lose body fat, and practice the above-mentioned running distance as part of the diet *and* training process, yet continue to lift as heavy as you can relative to your bodyweight. Needless to say, training and nutrition are equally important.

Once you're ready, you only need to be in the gym and make some kind of notes whenever you perform and measure your strength in all of the exercises listed above. And you'll also need a proper track-and-field track, which are seldom that hard to find, as they are often part of the local public spaces. It doesn't have to be of top notch quality to be useful.

When you have performed the fitness measurement program, you aim for to make individual improvements within a realistic timeframe, and perhaps measure it another time 6 or 12 months later. Whether or not you want to compare yourself to others, and perhaps have a training partner is up to you, but the measure and level you happen to reach is always individual. Hence, do mainly compete against your own ability and strive for realistic improvements, without succumbing to a mediocrity trap. Good luck.

Asian history and culture, game, travel, self-improvement, politics and economics.

Cosmopolitanism Is Destroying The West

March 9, 2018 | by Jean-Paul Dumont | Link | Original Link

Globalists, liberals, progressives, feminists, leftists, no borders, pro-choice, LGBT activists, SJWs, political correctness, multiculturalism—all these terms relate to the same ideology: the **cosmopolitanism**. We must use and spread the right term to target this ideology at its heart, instead of separately attacking its different avatars, like the multiple heads of the Hydra.

The true alternative

Achilles (Troy). If you don’t see what’s wrong you are a cosmopolitan.

The key alternative in politics nowadays is identitarianism versus cosmopolitanism (which is a sub-level of the right vs left alternative). The fast expansion of the globalization that has been occurring since the 90s seems to be at the heart of this alternative. The cosmopolitanism (from *cosmos* and *politês*—“world citizen” in Greek), introduced by Diogenes 2350 years ago, is now at the 21st century the dominant ideology in the Western world.

Our identities are increasingly threatened by a new global model that emerged and is promoted by massive amounts of propaganda. By “identities” we mean:

1. The national identity

The nation state model is attacked by the globalists who are trying to replace it by a global “governance.” They work on the international relations scene to weaken the power and the sovereignty of the nation states and increase the power of transnational organizations which they control.

2. The cultural identity

There would be more easily a global governance acceptance if a global mainstream culture would pre-exist. Therefore local cultures worldwide are strongly influenced by a global model made from the worst of the American culture. The predominance of the English language or the Hollywood movie industry is a part of it.

3. The racial identity

Political correctness can't admit the existence of different races within the *homo sapiens* species. Until the eventual dilution of the racial identities or local ethnic groups as a result of massive immigration and racial mixing, we are being told by the media that races do not exist, despite the fact that we should still consider that some "lives matter" more than others.

Merkel's sick ambition

4. The sexual identity

The fact that we are either a man or a woman and the biological influence it has on us is

denied by the promoters of gender theory. Their aim is to generate the perception that the panel of the possible sexual or gender identities is so vast, arbitrary, reversible and versatile, that they do not really exist or are meaningless.

5. History and heredity

We are our ancestors. The European roots, myths, and history are becoming systematically denied or falsified in the media and in the education system to match the contemporary cosmopolitan agenda. On the biological level, we see the premises of a dystopian future into the promotion of assisted reproductive technologies, attacks against the family model, child adoption by homosexuals, and transhumanism.

The global man is a man without past. Moreover, he may not even be a human being, as pro-abortion activists tend to claim already.

We see that the denial of identity is at the heart of the latent propaganda spread by the mainstream media and meta-political activists.

The subversion

Cosmopolitans at an advanced level

The cosmopolitan utopia is a unified empty world where there is neither real group identity nor heritage but only individuals, each one unique and different superficially, but deeply equal to each other. Its appearance of chaotic diversity masks its real uniformity, since the attributes of the diversity are so diluted and mixed that they can not really relate to any group (except promoted through meaningless groups like the LGBT community, obese, disabled people, or diverse fetishists). Ultimately, the cosmopolitan's aim is to be nothing more than himself and his unrestricted desires.

Loading...
To push their mentality into people’s mind, they try to subvert the traditional values by different means:

The subversion of beauty

Classical art used to research beauty. Its inspiration often came from nature, myths, religion, history, or from the observation of human societies. Even ideologies like communism and fascism still promoted positive values like heroism into their artistic representations.

Like other dominant ideologies, the cosmopolitanism has an official art, sponsored and used to spread its propaganda (the bulk of contemporary art). But instead of expressing beauty or positive values, it either expresses nothing or negative values like weird sexuality. It’s an empty, ugly, and immoral art for dark decadent ages, heading to the mental prostration and the corruption of the masses (beside its promoters’ lucre).

This was banned from a museum due to feminist considerations.

This was exposed in a historical area, and promoted like a piece of art.

The subversion of morals and ethics

Individuals are induced to focus on themselves, regardless of any other consideration. For example, TV series like Vikings or Games of Throne are a popular way to subvert a sane base (history or heroic fantasy) in order to normalize the most deviant sexual behaviors and immorality. Consumerism is celebrated permanently, even when it results in selfishness and less empathy for other people.

Previously unacceptable transgressions like pedophilia are becoming indirectly advocated by tendentious representations in the media. Cowardliness and submission are taught (notably relatively to the invasion of Europe) in parallel of the will to enjoy and “celebrate” the global Carnival.

The subversion of truth

Relativism is rampant in the West. We are not authorized by political correctness to judge or hierarchize different identities, opinions, or behaviors based on universal arguments (e.g., “being fat is unhealthy”). And if we base it from our legitimate moral or identitarian point of view, it’s still rejected in the name of the sacredness of the individual.

This is the way the global superclass and its army of zombified slaves are destroying the West. There is no doubt that, after the cosmopolitan ideology have eventually fallen, its devastating impact will mark deeper and more durably our societies than communism did in the countries it ruled.

How to react

Until the direction of the wind really changes, we can prepare ourselves by learning about our roots and identity, and be ready to defend it. A basic knowledge of history is enough to destroy most of the cosmopolitan assertions. We must retrieve essential moral values. Inspiration should be found in examples of beauty, grandeur, righteousness, heroism, but not money, misplaced hedonism, or the cult of the victims. We must cultivate ourselves and identify the dominating groups that have interest into the destruction of the West by promoting the cosmopolitanism. We have to realize that the West would die if it would not be a European civilization anymore.

We must also confront other people, speak to those who can be convinced and disapprove the others, without hiding our ideas. Cosmopolitanism is based on Orwellian lies. To destabilize it, say the raw truth whenever possible, without using the adversary’s language made to mask reality (illegal immigrant not “refugee”, race not “skin color”,

conformist not “politically correct”, cosmopolitan not “liberal”). Trump’s attitude regarding the media during his campaign may be an example. Favor the group instead of individualism, as a strategy of empowerment. Learn how to fight and use weapons, for self-defense and for duty, and wait for the leaders.

The author’s views are inspired in particular by Henry de Lesquen’s ideas.

False Molestation Accusation Locks Up Brazilian Father For 13 Years

March 9, 2018 | by André du Pôle | Link | Original Link

Western civilization is powerful, but as most powers, it is a double-edged sword. For the West has (very) often been generous, building and giving free stuff for people of all horizons, putting an end to a slavery that already existed long before modern times, and our technology was eagerly adopted by peoples who showed quite willing to get more stuff while working and dying less.

However, Western power has also brought globalism and degeneracy, especially in orbiting countries who will import anything made fashionable from their more influential brethren.

Brazil is just like that. In spite of its high violence rates, the country has its perks, like a strong sense of family and a high valuing of femininity in women. When you live in Brazil, dwelling into a safe place and having enough money is sufficient to live quite a good life. Yet the country did also import the worst.

Parties are ran with explicit policies against fat shaming. Libraries spill over with leftist BS, most of it translations of books from high-profile globalists like Henry Kissinger or Paul Krugman. And, of course, the local courts often follow current North American anti-male court politics.

A striking example of this made the news recently. Atercino Ferreira de Lima Filho, a 51-year-old divorced father, was recently released from prison after he was proven innocent. He spent 13 years in prison because of what is now recognized by Brazilian courts as a complete lie.

In 2002, Atercino and his spouse divorced. (The media do not tell whether she was the one willing to divorce or not, or why exactly they have split.) The couple had two children, Andrey, 8 years old, and Aline, 6. Although the divorced spouse was unable to support herself and has to rely on a female friend to give her shelter, she was awarded with both children. All three lived in the friend's home.

Two years later, the police came to arrest Atercino at his home. The ex-wife claimed he had abused their children, who had written letters claiming they had been molested by their father. Atercino was soon declared guilty and sentenced to a whopping 27 years in prison.

Since then, Aternicino has been claiming his innocence. He never molested his sons, he said, and nothing of the sort had even happened from him. Too bad: his own testimony was treated as if it was worth nothing, and the magistrates have let him languish in the harsh environment he was locked up into.

Years later, in 2012, the older son Andrey turned 18. As soon as he became a legal adult Andrey requested the Tribunal of Justice of São Paulo to give him a new hearing as a witness and purported victim. Alas, the same magistrates who had sentenced his father turned him down because they “thought it wouldn’t be legally possible to reopen the case.”

They were wrong. Andrey proved motivated to get justice. He went to the *cartório* (registry office) and made a public, officially signed declaration, to say that his father did never molest him in any way. It took two years and a lot of efforts to reopen the case. Eventually, it pulled up to a much higher level of justice: the Supreme Federal Tribunal overturned the first verdict and ordered a new trial. “Facts and proofs” would be reexamined.

Since the sentence was based on testimonies alone, there was not much to reexamine without asking the protagonists. And so the new trial went on very slowly, as if a working father who had been thrown in jail out of dubious accusations was a simple abstract procedure rather than an actual human being.

Andrey, the older son

In 2015, Aline, the younger child, turned 18 and voiced the same points than her brother's at the registry office. However, what would really speed up the process and bring justice was the implication of an NGO called Innocence Project Brazil.

It's hard to guess, since NGOs are usually ran by globalists to carry mischievous deeds, but even an inverted clock gives the right time twice a day. Innocence Project took enough interest in the case to mobilize its own lawyers. These reexamined "facts and proof" with a keen eye. In 2016, they submitted an 829-pages long report pointing out several irregularities.

For example, a physical examination conducted during the first trial showed no evidence that the children had been sexually abused. Or the ex-wife who had accused Atercino had also claimed that her son had been abused at school, too, an accusation the judges ruled out without considering how this discarded claim should undermine the credibility of the whole accusation.

Testimonies featured noticeable discrepancies as well: when the children were interrogated, they said they father had molested them at night in the family home, whereas their mother had never seen this happen (although she still accused her ex-husband). Another testimony came from a nurse who, having babysat the children, said they were sociable and showed no sign of abuse. All these elements were neglected by judges who seemed decided to throw a father in jail.

Under the auspices of the Federal Tribunal, Andrey and Aline were at least allowed a fair hearing in August 2017. What they said then was chilling.

Both confided that their mother’s friend, at the home of which they had to dwell, had forced them to accuse their father. She compelled the children to write declaration of abuse that she had invented under the threat of beating them. Of course, this kind-of stepmother was never investigated and remained able to pull the strings during the first trial as the judges were focusing on an innocent.

Although the children had obeyed, and their father was sent to jail, she still lashed out on them. She took a sadistic pleasure at spanking them with a broom handle or forcing them to sit on uncomfortable postures. Sometimes, Andrey said, she was so violent that he had to flee the home and sleep in the streets. For some reason his mother failed to tell the police—for years. The wicked, manipulative child abuser was never processed. The media haven’t even disclosed her name.

On March 2 of this year, Atercino was released from prison. He spent 13 years locked up there and considered a pedophile. Rehabilitated by the Federal Tribunal, he left the penal institution to be welcomed not only by his Innocence Project lawyers but also by his son and daughter whom he embraced with tears. Likely exhausted, he decided not to sue his ex-wife.

Atercino right after he was freed, Andrey at his side

One can rejoice that the story ends well. No one today can accuse Atercino of having been a pedophile, as was the case for years. The freed father said he just wanted to share a beer, a pizza, and some good laughs with his sons and friends. Guess he got enough of the way of men in jail to ask for rest.

Still, this case is another sad example of female impunity. Neither the wicked, sadistic kind-of stepmother, nor the lying and cowardly mother who let her beat her own children for years, will be charged. In the Current Year, women can destroy men's lives and never have to answer for their misdeeds whereas men and especially working fathers are assumed guilty without proof, in stark violation of the presumption of innocence principle.

Had this happened in the 90s, we would probably think that the trial was poorly conducted because Brazil is just another banana republic. Today, the West does not fare better. There are many swamps to be drained. Hopefully, when a sufficient number of dads have been screwed in court and children deprived of their parent, red-pilled awareness grows. May this event at least help to stimulate masculine energy and bolster a manosphere among our Portuguese-speaking brethren.

How Much Protein Do You Really Need To Build Muscle?

March 9, 2018 | by Larsen Halleck | Link | Original Link

You want to build muscle, right? Of course you do, everybody wants to build muscle, whether it be for purposes of actually having functional strength or just having big aesthetic muscles to show off to the girls. Anthropologists will tell you that the desire of pretty much all men to have more muscle is universal amongst all cultures and ethnicities, regardless of what the liberals that control anthropology will tell you about "muh Western false body images" or whatever.

So if you want to build muscle, what do you have to do? Obviously, you're going to have to do resistance training and plenty of it—that's the simple part of it, but then there's the dietary component.

"Well, that's simple, Larsen!" you're probably saying right now—"you just have to eat lots of protein!" Indeed, that is a major part of it—protein is the sole building block of muscle tissue, after all. But is it really so simple?

Drawbacks To Protein-Centric Diets

Eating a diet low in complex carbohydrates like fiber for long periods of time has been linked to numerous medical issues, not the least of which is constipation, as well as hypertension, heart disease, and atherosclerosis, as well as increased risk of kidney stones due to the process described in the next paragraph.

More to the point, if you were to eat a 100% protein diet, you would not be utilizing all of that protein to build your muscles. For the body to function it needs some glucose, the currency of cellular energy. And if you are not eating a sufficient supply of carbohydrates—the importance of which I have already argued—then your body will utilize whatever it has to make glucose, and that will often be protein.

Indeed, there are some tribes that exist today, and undoubtedly many more in the past, that ate a hypercarnivorous—which is to say almost entirely meat-based—diet, hence why the body evolved the ability to do the process known as ketogenesis, in which proteins will be denatured and converted into a protein-based sugar known as a ketone (ammonia and urea are produced as byproducts of this, which means the kidneys have to work harder and thus the kidney stones mentioned beforehand).

Fat is also a necessity due to it being the base of cellular membranes and the nervous system which includes the brain and spinal cord, both of which are a little important. It turns out that your kindergarten teacher was right, and you need to have a balanced diet of nutrients. That'll give you overall good health, but you might be complaining, that's not going to get you SWOLE. So what to do?

The Solution

Obviously you have to increase your protein intake, but in proportion to an increased amount of all other nutrients—this is how bulking works.

Skeletal muscle is approximately 72% water, 22% protein, and 6% fat, glycogen, and minerals. One pound of muscle tissue has about 100 grams of protein. Theoretically you would have to ingest an extra 14 grams of protein a day (meaning 14 grams beyond the recommended maintenance dose), although most experts believe the single most important factor in gaining lean mass is to consume adequate calories (combined with resistance training of course).

Said recommended dietary allowance is 1 gram per kilogram of bodyweight per day, so if you weigh 100 kilograms, eat 100 grams of protein just to function in your day. Thus, to get extra protein to build more muscle mass, you will have to eat between 1.2 and 1.7 grams of protein per kilogram of bodyweight. This will, unfortunately, necessitate you having to be something of pain in the ass to your “normie” friends and family as you analyze and pore over nutrition facts and calculate protein amounts in your head, but never mind that.

And with increased protein should come increased carbohydrate and fat consumption as well—and as always, micronutrients will inevitably come with healthy consumption of macronutrients (i.e., if you’re eating actual food and not crap).

Carbohydrates—hopefully in the form of complex carbohydrates like fruits and vegetables and whole grains—should constitute 6-8 grams per kilogram of bodyweight, and fats—again, hopefully healthy fats from meat and fish and dairy—will more often than not come with your protein so you don't need to be too concerned with getting a certain amount of fats. Indeed, anything between 10-20% of your calories coming from fat will be sufficient to stave off nervous degeneration.

The recommendations for macronutrient percentages are roughly 45-60% carbohydrates, 20-35% protein, and 20-25% of fats. This percentage likely will remain even if you are eating increased consumption of protein—you're going to need energy if you're vigorously exercising, after all.

To get the most out of your diet, you are going to have to be something of a stickler in planning your meals—but it's a small price to pay to meet your fitness goals.

The Death Of The PUA Community

March 11, 2018 | by Charlie Powell | Link | Original Link

The pickup industry as we know it is DEAD**.** Wipe your eyes and hear me out, because today you're going to get an insider's look at exactly what happened.

The community as a whole has been in decline for a good few years now and it's sad to say that it will never be the same as it was. I remember back in 2007 when it was actually cool to be referred to as a PUA (seriously) and meeting up with a group of guys all wanting to better themselves in the area of "game" was enjoyable and actually something to look forward to.

Nowadays the community itself is known by the mainstream media as weird, creepy or perverted. To be called a PUA now is a social death sentence and you'd be insane to mutter those words to anyone. Now, who do we have to thank for the complete fall and destruction of a once very helpful community?

Liberals, of course.

Ahhhh… the fish hook mouth women!

Those fat, red haired, nose ring wearing slut walkers took the pickup industry under their flabby hairy wings and disembodied it over several years. Causing it to be nothing more than a place for genuine freaks and weirdos.

They would throw words around like it was nothing.

- “All PUA’s are rapists”.
- “Pick-up artists are professional sexual harassment creeps”.
- “Tricking women into bed is not consensual”.

Mainstream media would portray PUA’s as desperate losers in the early days just trying to learn methods that would “trick” women into bed. As the years went on and the abuse continued, I think it’s safe to say that the PUA community is officially six feet under.

How the pick-up community started

Jump in the DeLorean and let’s take a trip back to 2005 kiddo.

Yo couldn't walk in a busy part of town without seeing some dude peacocking with a feather hat and goggles.

This year was a magical year for many reasons, but aside from the micro level benefits, I want to focus on the macro level benefits. It would do two *very important* things:

1. Ignite a fire under the arse of every loser and normal guy out there for years to come
2. Create a global movement of men, later known to many as PUA's or Pick-up Artists

Why did the year 2005 spark such interest in learning how to better oneself with women and finally get laid on a consistent basis?

The legendary book that sparked it off.

The book "The Game" was released in September 2005 in multiple countries across the globe. This book became an instant success and eventually sold over 2.5 million copies. It was a bible, a secret scroll, a blueprint, a cult classic, and a gift from above for the type of men that just couldn't for the love of God get any pussy.

Prior to The Game, there were in my opinion, four types of men…

1. The geek, the loser, the misfit

Some call him KY, others just call him the vag-meister.

This guy was most likely a virgin or got lucky once and didn't have a damn clue about how to attract women. He'd spend the majority of his time doing something considered "geeky" like playing games, building his own computer from scratch, coding at 3am, etc. Women were another species to him.

2. The "normal" guy

90% of us. Normal, not terrible with women and not great.

Your everyday guy, going to work in a call centre or shop, earning a shitty wage but living

for the weekend. He'd get laid naturally, but it would be sporadic and not something he could repeat. He'd spend all of his money on enjoying life and just praying he got laid this weekend.

3. The relationship sloth

Awww, aren't they cute?

He would for some reason be able to find a girlfriend and just fall into longer term relationships ever since school. It was his comfort zone. Find some pussy and stick to it until the relationship hit a wall. Having said that, these girls were not amazing to look at and he still had no game.

4. The "natural"

Every guy wants to be this guy at some point.

This dude got laid, a lot. For some reason, he'd be able to go to a bar and 9 times out of 10, come home with a girl that he'd bang until the early hours. Most weekends would end with him getting laid. This guy was a hero in the eyes of the other men and a complete anomaly.

Now, with The Game selling like crack cocaine all over the place, this led to an inevitable birthing of a monster. An insatiable thirst for more knowledge, like minded men and gurus that would teach you how to get laid in just one weekend.

The PUA industry unleashed

Almost every guy mentioned in the book became an instant PUG (Pick-up Guru). Even Neil Strauss himself, being referred to as Style.

This led to multiple companies being started around 2006/07 and at the time by these "gurus" and PUA's inspired by the book. Here's a bunch that I can remember…

Style (Neil Strauss)

Can you believe he doesn’t want anything to do with us anymore?

The writer who changed many lives. Neil Strauss started a couple of companies after the success of the book. One called Style Life Academy which was a monthly membership and the other was a one-off launch called Annihilation Method which was a recorded seminar and did a million dollar launch.

Company: Style Life Academy (Still operational but nothing like it was).

Turnover: $12 million per year at launch

Where is he now? Living the good life in Hollywood after marrying a smoke-show, having a baby and spending his small fortune that was made from The Game. He doesn’t want to be part of the PUA community anymore and focuses on other areas of writing.

Mystery (Erik Von Markovik)

Look at my shiny peacock nails!

The main guy the book was written about, he founded his own methods called “The Mystery Method” and even starred in his own show “The Pickup Artist” on VH1. Part magician, part strange.

Company: Venusian Arts (DEAD). Also started a company called Love Systems with Nick Savoy, but allegedly got kicked out.

Turnover: $10 million per year

Where is he now? Running around Europe with a well known PUA called Beckster, selling tiny bootcamps and making next to no money. A shame really as he was THE original guru. Some say he had a bad drug habit and had a kid, but it didn’t work out, but I’m not sure of the whole story.

Tyler Durden (Owen Cook)

Ginger man with big balls.

A big name and prominent figure in the book, he started RSD which is alive and well still to this day. Probably one of the smartest of the PUA's in terms of business. He actually built an empire worth millions, so kudos to him. RSD also focuses on the more normal side of pick-up too.

Company: Real Social Dynamics

Turnover: $5 million+ per year

Where is he now? Chilling in the Hollywood hills with his two kids. I think he's divorced, but still stinking rich so it's all good. He battled through the Julien Blanc debacle like a boss, so I have respect for the little balding ADHD guy.

Lovedrop (Chris Odom)

Tried to sneak off into the crypto world. We know who you are!

One of the originals in the book, Lovedrop moved around from company to company but still retained a loyal following and recognition for his methods. He co-authored some courses and books with Mystery, but never started his own venture.

Company: Couldn't find one

Turnover: No idea

Where is he now? Trading Bitcoin. No seriously, he's now a Bitcoin/Crypto geek and is allegedly pretty good at it.

Zan Perrion

The zoolander of the PUA's.

The smooth operator that is ZP. A nice guy and considered one of the naturals and had some good stuff to teach. He was always a lone wolf and never partnered with anyone from the industry as far as I know.

Company: Alabaster Communications Inc

Turnover: ~$100,000 per year

Where is he now? Still teaching pick-up but on a very low level and living in Budapest. He does Skype calls, one-on-ones, digital courses, etc. He doesn't seem to have adapted well to market changes.

Ross Jeffries

The creepiest man you will ever see.

The weirdest guy of the bunch by far. Known for his hypnosis/NLP pick-up skills, he specialised in creeping people out basically. Had a legion of hypno followers. I honestly don't think his stuff works on most people, maybe highly suggestible dummies.

Company: Seduction.com (Ghita Services Inc)

Turnover: ~$250,000 per year

Where is he now? Still selling hypno crap basically and doing private coaching as well as in-person live events on a very small scale.

David DeAngelo (Eben Pagan)

The smile says “I used to make 22 mill a year from pick-up brah”

David D, without a doubt the best and still an OG in my opinion. His techniques were focused on what the naturals do and was the creator of the term “Cocky Comedy” which still to this day works just fine. He rolled solo mostly, creating recorded live events and interviews.

Company: Double Your Dating. He sold it a while back because it was dying and now runs Eben Pagan Training.

Turnover: ~$20,000,000 per year in the early days, but is doing very badly now.

Where is he now? He got married to an absolute beauty, just kidding… about the beauty part. He seems happy, working on his own personal brand and still making that sweet internet money from selling a billion different products.

The Asian Playboy (JT Tran)

The Asian bro, just smashing through that yellow puss.

The token Asian kid. This guy was genuine and seemed nice, definitely not someone I could look up to, but I could see the appeal, especially for other Asian dudes who couldn't get any puss.

Company: ABC's of Attraction (LIVE)

Turnover: ~$500,000 per year

Where is he now? Still running the company he started back in the day, mostly bootcamps but also digital products. The angle is of course still Asian dudes, so he's mastered his niche for sure.

Juggler (Wayne Elise)

What went wrong Juggler?

Juggler was another natural that was awesome for a while. Smooth, great techniques and easy to learn from. He seemed the most normal along with Zan Perrion to me.

Company: Charisma Arts

Turnover: ~$100,000 per year

Where is he now? Oh man, he went from one of the best to one of the worst. He looks like an out-of-work mime artist who couldn't be arsed to put the paint on his face. Charisma Arts used to be huge, now it just sells Skype calls and private coaching.

Nick Savoy

Something is off about this guy, can't quite put my finger on it.

Not mentioned in the book, but still a hustler in the industry, starting multiple companies

and writing a lot of material. He was a cross between Mystery and the weird kid that gets bullied at school. Did have some good routines though, I think.

Company: Love Systems (SOLD)

Turnover: $5,000,000+ per year originally, not sure about now

Where is he now? Apparently he sold the company to someone, so I'm assuming he's under a pile of hookers in Bangkok. Who knows. He's disappeared from the PUA scene anyway.

Gambler (Richard La Ruina)

Smashed his way through Europe, was more successful than the vikings.

Another guy not mentioned in the book, but started PUA Training from his bedroom in Central London sometime in 2007. Known for his natural approach and calm seduction style, he's still a well-known figure in the industry.

Company: PUA Training

Turnover: $1,000,000+ per year

Where is he now? Living that good life somewhere in Eastern Europe. He's pretty public with his social media, so you can see he's married and travels a lot. The company have dropped the bootcamps/live events and are heavily focused on digital products and partnerships.

The messiah complex (buy my sh*t!)

So those were the PUA's that launched their pick-up careers and companies off the back

of The Game. As you can imagine, all of them had their dedicated followers and were treated like messiahs floating on water. Mostly by the gimps though.

You there… peasant. Buy my sh*t.

Mystery was by far the most popular, followed by RSD in terms of the US. Overseas, Gambler was running the show pretty much for a good few years.

Because everything was new and shiny back then and pick-up methods were such a different concept to meeting women, it was easy to hold them all in such high regard.

As time went on, we eventually saw that they were just men riding through the good times and weren't really THAT incredible with women as they were perceived to be. Some were obviously better than others, but none were Godlike. In my mind, 2008 was really the peak of the PUA hysteria.

Feel old when you look at this? I do.

Bootcamps, live events, eBooks, CD's, physical books, members forums—the market was rife with methods, techniques, secrets and tips to get laid. The community continued to flourish and men continued to get better with women. That's when a shift started to happen and the liberals began to kick up a fuss.

The decline: How the mainstream media portrayed the community

Everything comes to an end and nothing lasts forever *right*? With the rise of feminism and their toxic ideologies sweeping the West at an alarming speed, it was time for them to target something that had been on their radar for a while.

I don't think the Guardian like PUA's. They are subtle with it, but I've got a great 6th sense.

Name-calling and pointing fingers trying to shame men for learning the art of seduction, really didn't have enough oomph, so it didn't gain much attention. What these freaks needed was something big, something that would give their false accusations some weight.

In May 2014, they got exactly what they needed to fuel the fire and finally start hacking the ankles of the PUA community, in the form of nut job Elliot Rodger.

The son of a prominent film and TV producer and rich kid, Elliot Rodger was one messed-up sociopath. He seemingly had everything going for him—rich, somewhat good looking, living in a wealthy neighbourhood and educated. But yet, he was missing something: **he couldn't get laid.**

No girls were interested in him (his words) and he was still a virgin. So he decided after filming several videos in is car that he would finally take revenge on the "sluts" that had

ignored him for so long. He would “slaughter them all like animals.” And that he did.

On May 23rd 2014, Elliot went on a killing rampage in Isla Vista (California), killing 7 people and injuring many others. Both men and women.

A tragic event, I think we can all agree, but this tragedy was the catalyst which sparked a hatred for anything relating to pick-up. All the media wanted to do was peg PUA’s as women hating degenerates.

The media’s onslaught

Six months pass and although the initial hit pieces on the PUA community died down, something else was about to kick-off that would be the final nail in the coffin for pick-up: Julien Blanc.

A controversial video had surfaced of Julien, a prominent instructor at RSD and good friend of Owen Cook.

This video showed Julien placing his hand on the throat of a Japanese girl whilst whispering through gritted teeth into her ear. The media got wind of this video after several red-haired fat feminists started raging about it on their man-hating forums.

Once it got picked up by the mainstream, all hell broke loose and he was actually banned from several countries. In November 2014, Julien became the most hated man on the planet and the target for every single bit of hate towards the PUA community.

RSD events were shutdown, brawls took place outside their venues, and instructors were physically assaulted, all because the media portrayed Julien as an abuser who likes to man handle women.

Traffic starts to fall along with profits

What did this do for the pick-up businesses? Traffic initially spiked due to the attention, but then slowly began to dwindle over time. A big traffic source for most sites is Google organic search.

Some say that Google started shadow banning search terms and pushing pick-up related sites further down the rankings to disassociate themselves from anything PUA.

The good old days… never to return.

Normal men outside of the community didn’t want to be known as the type of guy that physically assaults women, so they boycotted the industry, causing profits to fall.

Big mainstream companies detach from pickup

Google, PayPal, Facebook, GoDaddy are some of the major players in online advertising and hosting started to ban certain pick-up sites.

This meant that money was held which should have been rightfully paid. Sites went down overnight because they said the sites violated their TOS's and successful ad campaigns stopped, never to be taken live again.

You can't use PayPal anymore

At PayPal, we value a safe community for our customers to do business. We noticed activity in your account that's inconsistent with our User Agreement and we can no longer offer you PayPal services.

Any bank or credit card information linked to your PayPal account cannot be removed nor can it be used to create a new account. You can still log in and see your account information but you can't send or receive money. Any money in your balance will be held for 180 days, at which point we'll send you an email with instructions about transferring your money.

Like making money online? NEVER use PayPal!

The pressure that these liberal companies were under by the dummies on the left was overwhelming, so they acted to please them. Feminists organized online and emailed and tweeted companies to shame them into submission. Did they care about the livelihoods or well being of the men they affected? **No.**

Meetups for "men only" are cancelled

After a year or so, what's left of the PUA community is hanging on by a thread.
In February 2006, Roosh had meetups scheduled around the world. They were intended as a way for like-minded masculine men (and not necessary PUAs) to meet in person, but then a thought experiment that Roosh wrote on legalising rape got picked up by the mainstream media (do you see a trend here?).

Now feminists had one thing in mind: brand Roosh a rapist and any man that attends one of these events. They begin to rinse-and-repeat the same shaming methods, causing the meetups to be cancelled.

ANNOUNCEMENT: The Meetup On February 6 Is Cancelled

February 3, 2016 Site Roosh

Share on Facebook Tweet

I can no longer guarantee the safety or privacy of the men who want to attend on February 6, especially since most of the meetups can not be made private in time. While I can't stop men who want to continue meeting in private groups, there will be no official Return Of Kings meetups. The listing page has been scrubbed of all locations. I apologize to all the supporters who are let down by my decision.

A sad day and one of many.

Roosh himself had to hide publicly and even hire security just so that he could ensure his safety.

The fall: how it all ended and what's next

Rest in peace young PUA's.

We arrive to the present day. As I stated earlier, pick-up is **DEAD**. The need for getting laid is still there, the desire to learn how to meet and attract women is still there, but the public community is gone.

Forum communities shut down

Gone are the days of thriving forums where men were giving each other advice and guidance. It’s now a wasteland of forgotten threads and lifeless forums.

The game is changing people.

PUA Forum was once one of the biggest around—now it’s no longer active. There are some that remain like Roosh’s forum and RSD, but due to the negative backlash the community received from the media, trolls became a big problem, hence banning became a necessary evil.

Anything related to pickup is being banned

Thinking about writing a book on picking up women and getting a big publisher on board? Think again, you’ll be rejected immediately.

Did you read that? The West is AGAINST PUA’s.

Want to make money from your own YouTube channel because you think men would benefit from your advice?Forget it, you won’t make anywhere near what your thinking. The apocalypse and demonetisation methods YouTube use will kill you off pretty quickly.

No money for you on You Tube. Be gone from here, filthy PUA.

Want to design a game that will help men become naturals? Sorry dude, it won't work. Sony and Apple want nothing to do with you. In fact there will most likely be a lynch mob after you if you do. Obviously the liberal media have to jump on and give their two cents as to why PUA's are peddling hate

MOTHERBOARD

Putting This PUA Game On PlayStation and Steam Normalizes Stalker Behavior

'Super Seducer,' a game about stalking and harassing women using pick-up artist tactics, is set to release next month on Steam and PlayStation.

Let me guess. The author is a fat pig.

It's gotten so bad that corporate intranets and some hotels have blocked PUA sites, seeing them as hate peddling platforms.

Companies forced to adapt

So where's the money if it's not in pick-up anymore and how are these companies able to survive? Like anything that survives, it's forced to adapt.

Are those words… “I take KRATOM!” by any chance?

RSD is moving into self-help and happy clappy stuff. PUA Training has gone from teaching guys how to get a girlfriend to telling them what the best adult cam sites are. Neil Strauss has disassociated from pick-up and focuses on writing about other subjects.

Other well known PUA companies have been forced into more aggressive forms of marketing and even selling dick pills.

Sounds legit, where can I buy these herbs in pill form?

There’s just no money in traditional pick-up anymore.

Will the community ever return?

Goodbye my fellow PUA’s and good luck.

That’s a good question. Honestly, I think it will stay buried. It was a phenomenon of its time and gained too much momentum to ever reach peak levels again.

Aside from feminists bashing and silencing the community for as long as they could, new movements have begun to surface, so you’ll see people from the PUA community shuffle over to those. You know what I’m talking about: MGTOW, alt-right, men’s rights, and Roosh’s own neomasculinity**.**

These communities serve a significant purpose for men, they give them a forum to voice their opinions and concerns about women, whilst helping them become better men. So if it’s not PUA, it’s something else.

It seems the feminists have not only ruined it for men, but they’ve also ruined it for heterosexual women too. Men are boycotting them, pumping and dumping them, and not following the traditional path of threating women as equals. And that folks, is how and why the PUA community is no more.

How To Train A Woman To Be A Good Wife

March 12, 2018 | by Yoshi Matsumoto | Link | Original Link

Even in today's degenerate culture you can make a marriage work. It takes time, effort, and humility but it can be done. If you don't want to join the legions of men suffering through cheating, affairs, and divorce courts, then here's a step-by-step guide to building a better wife:

1. Realize that she wants to make you happy

If a woman has consented to marry you, take your name, live with you, and bear your children, it's a safe bet that she probably wants her life with you to be pleasurable. Even

if she were a purely selfish creature, she'd still want you to be happy just because you being in a good mood everyday would make her life easier.

Bitterness and anger can easily creep into your relationship after a string of disappointments and you can convince yourself she simply doesn't care. Ninety-nine percent of the time this probably isn't true. She does care. She probably just doesn't know what to do.

2. Tell her what you want

Pictured: The modern couple.

Communication is seriously important. If your plan is come home and stare at your screens together, you're gonna have a bad time. She can't read your mind. How's she supposed to know what you want unless you actually tell her? As I said, she wants to make you happy, she just doesn't know how.

"Bullshit," I heard you say as you read that. "She knows exactly what I want."

Are you sure? Even if she used to know what you wanted, are you sure she still does? People change. Circumstances change. Without realizing it both the things that make you tick and the things that make you angry have probably drifted over the years. Unless you make the effort to sit down regularly with your wife and get on the same page then expecting her to *just know* what your needs are is totally unreasonable.

Do you need more sex? Have you tried telling her? Instead of bitching about it on the internet, have you ever just sat her down and said, "Listen, I know we're both busy, but I really need more intimacy from you if this is going to work." Odds are she'll probably respond.

Would it make you happier if she joined you in your hobbies? Great. Sit down and tell her. "Hey Babe, I love you, it would really help me have a better life if you'd go hiking with me on Saturdays." She'll probably be flattered.

Is something she does just plain annoying? Tell her. "Honey, mostly you do a great job, but I really can't stand it when you don't hang up your towel."

Your life together is the sum total of all these smaller things. You can't just expect them to work out on their own. Sit down and talk about how to make them good.

3. Prepare for the backlash (and calmly wade through it)

You probably do the same thing when asked to change.

Change is hard. Seriously hard. As you begin trying to set your relationship on a better course, understand that her first reaction is going to be negative. She wants to make you happy, sure, but changing her behavior is difficult and everyone's first reaction to a difficult request is negative. She'll throw up barriers. Make excuses. She'll call your requests unreasonable and maybe say that you're too needy. Fine. Recognize that this isn't an attack on you, it's a defense of her own status quo.

Asking somebody to change implicitly means that some aspect of them is lacking and nobody enjoys hearing they come up short. Talk through it. Maybe what you want really is unreasonable. Maybe it isn't. Gently but firmly insist on talking it through until you reach an acceptable compromise. This may take weeks but that's fine. You're in this for the long haul.

4. Get over your ego

Men's egos are fragile. Whether we admit it or not most of us are very concerned with our status, especially among those we're closest too. A lot of men don't want to talk or compromise because doing so feels like an attack on our station. We think they should just do it. In our heads we say, "If she really loved me, I wouldn't have to ask, she'd just do it." No. You have to get over yourself.

For example, she’s not going to know that your dissatisfied with your sex life unless you tell her so. Brooding about it silently and telling yourself, “She must not be into me, if she was still attracted to me she’d jump me every time I walked through the door like she used to.” That’s not how it works. If you’ve been married for a while, the flame is gonna die down. That’s natural. You have to actually talk and remind one another to make the effort to keep it burning.

Want her to stop looking at her phone so much and pay more attention to you? Would you like her to do the dishes more often? Would it be better if she made the effort to greet you with a kiss when you got home? Great. Say so. We convince ourselves that if it doesn’t happen spontaneously and without prompting then a gesture isn’t sincere. That’s dumb. You’re not above asking for things and just because she needed to be asked in order to change doesn’t mean her effort isn’t genuine.

5. Reward her

Pavlov was onto something.

Okay you’ve done it. You’ve had the difficult conversations and told her what you need. You’ve fought down your ego and weathered her resistance to change. Great. Now, when she actually starts doing what you asked, reward her. Again, change is damn hard. If she’s making the effort she deserves the reward. Our brains are wired to respond to incentives. It’s okay to make use of that.

Give verbal praise. Tell her how much you appreciate what she’s doing. Buy her flowers. Help her with her chores. Pick up her favorite candy from the store or sit down and watch her dumb HGTV show. Little gestures go a long way. If you want a change to become a habit you reward it. Incentivize the behaviors you want to see.

Take the lead. You’re the CEO of your marriage. Don’t wait for her to come and give you a

list of ways you could make your marriage better. Take charge. Your wife will love you for it.

Libertarianism Is Not The Answer

March 12, 2018 | by Jared Trueheart | Link | Original Link

Recently I listened to a podcast in which Cassie Jaye, the director of The Red Pill, interviewed Stefan Molyneax about identity politics. Stefan's answers to most questions were "libertarianism is the answer." If we just had less government our problems would be solved.

He doesn't usually sound that dumb.

Then I came across an article saying that libertarians had the most masculine psychological profile. Could that really be? No. The parameters for judging masculinity versus femininity in the survey the article cites is based on empathy. Liberals showed the most empathy (think bleeding-heart liberals). Libertarians showed the least.

This pillar of manhood could have been your president

This is a poor parameter for judging manhood. A lack of empathy is a caricature of

masculinity. It's a dark-triad trait that loose, damaged women find attractive but is not common to most men. When betas pretend to be alphas without guidance they try to appear cold and calculating. But men are not this way.

Men certainly try to use logic when making decisions but we are not cold, calculating psychopaths. We have people for whom we care: sons, daughters, brothers, sisters, mothers, fathers, wives and friends and usually an ethnic group. We are masculine because we care about those people. We are strong because our strength is needed to support them. We are brave because our courage is needed to protect them. We work because our work is needed to feed and shelter them.

So no, libertarians are not the most masculine ideologues, they are just the least empathetic. In fact, here are some things that expose the weakness in libertarian ideology.

They Don't Favor Free-Market Capitalism

The most laughable part of the libertarian agenda states in essence; if only the government would get out of the economy the market would be free and therefore more competitive.

As I detailed here, for over a century America did have a free-market. Government regulations were largely non-existent. As a result trusts and oligopolies (both of which act as monopolies) took over the economy. Eventually the federal government tried to impose some regulations to stop these monopolistic organizations from controlling the market and suppressing competition but the damage was already done.

Table 22.1 Twenty Largest Merger Transactions, August 2000 – July 2010

Date Announced	Date Completed	Target Name	Acquirer Name	Value ($ billions)
Apr. 2007	Nov. 2007	ABN-AMRO Holding NV	RFS Holdings BV	98
Mar. 2006	Dec. 2006	BellSouth Corp	AT&T Inc	89
Oct. 2004	Aug. 2005	Shell Transport & Trading Co	Royal Dutch Petroleum Co	80
Feb. 2006	July 2008	Suez SA	Gaz de France SA	75
Jan. 2004	Aug. 2004	Aventis SA	Sanofi-Synthelabo SA	65
Jan. 2009	Oct. 2009	Wyeth	Pfizer Inc	64

Source: Thomson Financials' SDC M&A Database.

Corporations don't want competition. That's the sad truth of the "free market"

Now the economy is controlled in large part by these huge organizations. Not only do

they control the market, they control the politicians who could influence the market. That's how banks can become too big to fail. We have only our government's initial laissez-faire attitude towards the economic market to thank for this.

The ironic part of the libertarian ideology is that they don't want the authoritarian government to control our actions but they're perfectly fine with private organizations controlling our actions. Let's say, just for argument's sake, that a certain group of people disproportionately controlled the media and used it to influence our children, college students, and the gullible. That's fine under libertarian ideology. That's just the free market at work.

Libertarian economics only replaces one authority figure with another.

They Favor Degeneracy

The reason libertarians are not on the left-right spectrum is because they share an anything-goes attitude toward cultural issues with leftists. Think of the issues most men on this site consider degenerate: parents raising their children as transgender, female hypergamy, the glorification of pornography, etc. The libertarian solution to all these problems is less government intervention.

Who then if not a central authority we appoint to protect children will stop parents from mutilating their children's genitals to gain street cred among their radical leftist friends? Who prevents pornography from being advertised to children?

The sexual market place isn't regulated at all by society. Do you like where it is heading?

In the past we solved these problems by giving the government authority to solve them. Perhaps we could solve these problems ourselves if the government would allow us to, but this is backwards thinking. We already had the ability to solve all problems on our own. Eventually we created organizations (like the police or a governing body) to address certain issues so that we could move on with our lives.

Back to that Stefan Molyneax-Cassie Jaye conversation. In it they discuss abortion. One minute, Stefan discuss personal liberty. In the next he discusses why abortion is bad for society. In a libertarian, limited-government utopia there is nothing stopping doctors from performing third-trimester abortions for a price. That's just free-market supply and demand economics at work.

The only part that bothers libertarians is when their tax dollars are used

They Take Self-Reliance to Absurd Extremes

No man is an island. If men work hard they will surely have some good times but they will also fall on hard times. When they fall on hard times how are other men going to view him? Are they going to be cold and calculating like libertarians? Or will show empathy and get him back on his feet so that he can get back to contributing in some way? Men are social animals. Those that support each other the best out compete others. Lone wolfs don’t survive in nature for precisely this reason.

How many alpha males have no friends?

Everyone thinks that when things are going well for them it will always be that way. Nobody wants to imagine that they could be the one in need of help one day, but it

happens all the time. Men were hit harder than anyone in the 2008 economic crash (thanks again, unregulated market). I'll bet a majority of men who lost their jobs then were self-reliant in the true sense; they didn't expect others to work for them. But libertarians would have us believe that anyone who used government programs to get back on their feet until the economy improved are not self-reliant.

We created social welfare programs so that men and families could get back to contributing to society.

What about all the libertarians who have been divorce-raped and cucked over the last 40 years? Are they happy that regulations were rolled back in the form of no-fault divorce?

Why Do We Even Have A Government?

We only have a government because so many complex problems have emerged in societies that it is helpful to have an organization that addresses those issues. Libertarians sound smart by saying we should limit government, but that doesn't solve any of the problems a government is supposed to solve.

It's everything libertarians want

Libertarians sound smart by saying phrases like "personal liberty" but in the end they bring nothing to the table.

Get Paid For Publishing Your Articles On Return Of Kings

March 12, 2018 | by Roosh Valizadeh | Link | Original Link

In January we ran a promotion where guest contributors would get paid $10 in Litecoin cryptocurrency for every article we accepted. The resulting articles published in January and February were of high quality and enjoyable to read. Starting for all articles published since March 1, I am instituting a permanent system where guest contributors will be paid $5 in Litecoin for every article of theirs that we publish.

One problem we had with the January promotion is that we received *too many* articles. Our queue was over thirty articles long when it's usually less than ten. I don't have the infrastructure to review and process over five articles a day, so I'm lowering the compensation to $5 to keep the submissions at a level that I can handle. If we need more articles, I will increase the amount, and if we need less, I will decrease it.

Submit your article

Use our submissions page to submit your article. Here are some tips on how to submit an article that I am likely to accept:

- Article should be between 700-1100 words.
- Pick a well-defined topic. It's better to be narrow in focus than wide since you are limited by word count.
- Keep the structure simple: (1) opening paragraph with *clear thesis statement* that gets the reader interested, (2) main paragraphs with at least three supporting anecdotes, opinions, observations, lessons, or facts, and (3) concluding paragraph that sums it all up.
- Get to the main point quickly. Ramble after you've stated your thesis, not before.
- Try to add at least one anecdote or story about your life to give your article a personal touch. This allows readers to connect with what you're saying. I don't accept articles that are academic and detached in tone.
- Potential topic ideas: rare dating niches, foreign women, data sheet on a metropolitan city, data sheet on a specific career, misbehaving women, how to make money, masculine hobbies, relationship success or failure stories, interesting book reviews, and picture collages of cultural decline. No Jew/race articles.

When you're ready to submit, go to our submissions page. It has more details such as your ability to use a pseudonym. Remember to proofread your article!

I will personally review all submissions. If you don't get a response within a week, your article was rejected. If your article is almost up to standard, I will give guidance on how to improve it.

How to get paid in Litecoin

After your article goes live, you'll have a private URL to invoice me with your Litecoin address so that I can pay you by the 10th of the following month. For example, if you invoice me in April for an article that went live in April, you will get paid by May 10. If you invoice me in May for an article that went live in April, you will get paid by June 10. You're also eligible for this bonus if you're an existing guest contributor who already has a writer's account (contact me directly for the invoice URL).

To receive payment in Litecoin, you need to create a Litecoin wallet. You can install a wallet on your desktop computer or on your mobile phone. Since we're dealing with such a small amount of money, you don't need to go crazy with security.

Desktop Wallet

For desktop users, I recommend Electrum Litecoin Wallet, which I personally use.

- Run the software.
- Create a new "Standard" wallet (I can also send to SegWit addresses).
- Choose the option "Create a new seed."
- Write down and safely store your 12-word seed. It's the only way you can recover your wallet in the future.
- Confirm your 12-word seed on the next screen by typing it in.
- Set a password to protect your wallet (optional).
- When the program loads, click the Addresses tab to see a list of all your public addresses which you can share to allow you to receive Litecoin. For example, here is what my Litecoin address looks like: LL5XXBi5kuWNTd9Hhn33UY4Fp4FtknFkWi

Mobile Wallet

For Android users, I recommend the Coinomi Wallet, which allows you to store over a

dozen different currencies and exchange between them using two external services.

- Download and install Coinomi from their official website. Be careful with spoof websites when it comes to crypto.
- Click “+ COINS” to add a Litecoin wallet.
- Open your Litecoin wallet and click the Receive tab.
- Copy the address at the top of your screen.

If you have an iPhone, your best option is Loaf Wallet, which is maintained by the Litecoin Foundation.

Thanks to all the ROK writers who continue to make the site what it is. I look forward to reading your future submissions.

South African Parliament Votes To Take Land From White People Without Compensation

March 13, 2018 | by David G. Brown | Link | Original Link

Members of the South African parliament have overwhelmingly voted to take land from white people—without any compensation. Best of all, they have produced virtually no plan as to how this will be achieved, leading to speculation that any expropriation is going to resemble the terrible violence that occurred against white farmers in neighboring Zimbabwe under dictator Robert Mugabe. Even with a plan, the proposed measures would reek of racism, bullying, and intimidation.

Since the resignation of Jacob Zuma in February, President Cyril Ramaphosa has used rather inflammatory rhetoric in support of land expropriation. This is unsurprising when one considers both South Africa's long-term problems and more recent scandals involving inexcusable economic and social mismanagement. For example, Cape Town, an area home to four or five million people, is about to run completely out of water. Catastrophes or impending catastrophes in South Africa are almost certainly being swept under the carpet via racially charged mischief like calls for land seizures from whites.

It has been nearly 25 years since Nelson Mandela became the first black leader of South Africa and whites are still being scapegoated for the country's numerous woes. Given the disdain many elites, both black and white, have for everyday white South Africans, you can be sure that many in the latter group feel betrayed by the present political climate. They threw their weight behind Nelson Mandela in the past as they expected reconciliation and peace, not aggression, theft, racism, and the use of force against them.

Is your country not working? Blame and bully white farmers

A white Zimbabwean couple nearly killed during land expropriations under Robert Mugabe. White South African farmers can expect similar treatment–and many have already received it.

Anyone who has been to South Africa like I have can remember a very conflicted, crisis-ridden country "boasting"…

- ridiculous general crime rates, defying both the country's relatively non-violent history and many of its economic indicators, which are actually above the African average in most cases;
- an astronomical murder rate, typically meaning roughly as many people die every year from homicide as perished from decades of white-controlled apartheid;
- an HIV/AIDS crisis, accelerated by moronic levels of negligence under Nelson Mandela, Thabo Mbeki, and Jacob Zuma;
- shocking levels of corruption, including a major farce where Zuma used public funds to renovate his own home and described his luxurious new swimming pool as anti-fire protection; and
- frequent demands for the genocide of white people, particularly by extremists such as Julius Malema, infamous for singing about the murder of Boers, a predominantly Dutch, German, and French white ethnic group.

Incidentally, Malema and his far-left Economic Freedom Fighters (EFF) were behind the expropriation motion later backed by the ruling African National Congress (ANC). Having lost much public support following a series of controversies, the ANC is increasingly adopting the EFF's anti-white language to win back votes.

Loading…

Where are CNN and the other usual suspects?

Calling on Jake Tapper and other “fearless journalists” from CNN.

CNN has been silent on a country’s parliament voting to take land from people **based on their race**. They did, however, report on “news” that South Africa and Wales plan to play a one-off rugby match in Washington D.C. Sport can be a very important part of our lives, true, yet I doubt most people in Washington—or anywhere else in the US—will take note of a sport virtually no Americans play.

Amidst constantly regurgitated minutiae about “the Russia investigation,” CNN and comparably biased leftist “news” outlets have no time for proven events that are going to severely impact on people’s lives, regardless of whether violence does or does not accompany the taking of land from whites in South Africa (it probably will). This has been standard procedure for a long time and we can bet it shall continue well into the future.

Is South Africa’s path going to be emulated by America?

Far-left activists in the US insist on “reparations” for slavery, an incredibly tone-deaf proposal, not just because the vast majority of African slaves were initially enslaved by fellow blacks. Native American extremists are usually provided with less airtime but have also been known to espouse very revanchist ideas toward various US governments. So is any South African model for anti-white land-grabbing going to inspire angry elements in America?

In 10 or 20 years’ time, maybe even just five, do not be shocked if the kinds of news you read online today concerning attacked white farmers or land expropriation “discussions” in Africa start to repeat themselves in the American south-west or south. And if CNN and other leftist outlets are saying virtually nothing in relation to South Africa now, would you really expect them to sternly oppose such measures when they begin to be pursued in North America? Of course not.

Don’t Let A Girl Assert Frame Over You

March 13, 2018 | by Roosh Valizadeh | Link | Original Link

Within every interaction is a frame where one person does the evaluating and judging while the other does the satisfying. The person with the higher value will naturally fall into a frame of evaluation while the person with the lower value will fall into a frame of trying to prove or appease. Without even thinking about it, many men fall into the inferior frame with women by how they allow an interaction to proceed.

Since we were children, we’ve been taught to answer questions. In school, we received rewards from the teacher if we answered correctly, and even in university we were graded for “class participation” based on impressing the professor with how well we know the material. The problem is that we carry the need to prove ourselves over into adulthood and allow others to assume superiority by answering questions that make us explain our behavior, thoughts, or actions. Most people are in fact too eager to prove themselves when asked a question, but by doing so they almost always accept the inferior frame.

For example, a common question that a woman asks you is, “What do you do?” By quickly answering her question, you automatically accept her “prove yourself to me” frame. This is why my game book Bang teaches you to not answer directly to a woman’s questions in the early periods of the interaction when you’re trying to establish attraction. The better response is to give a joke answer that shows you do not care of her evaluation. Paradoxically, this increases her attraction for you even more, because your value must be higher than hers if you refuse to do what so many men before you had eagerly done.

Another example is when a co-worker—and not your boss—asks you, “Why did you do it this way?” He is attempting to assert the superior frame by getting you to justify yourself. An answer which refuses his frame is one where you don’t explain why you did it in your preferred way. Unless he asks you “how” you did something, which establishes him as the inferior seeking to learn from you, you should not rationalize yourself. You’ll also encounter co-workers who ask tiny favors of you that escalate over time.

How do you feel when you have sex with a woman for the first time and are not satisfied with your performance? Because you feel inferior in that moment, you may say something like “It’ll be longer next time” or “I shouldn’t have drank so much.” This establishes you as the person who is supposed to do the pleasing. The woman is then more likely to see you as a weak man. A man who is confident of his worth would not be fazed by a bad sexual performance, or at least not feel the need to defend it.

It turns out that trying to justify yourself in any way is the best way to lose frame, and should only be done when the other person has repeatedly asserted the inferior frame. For example, if a woman repeatedly justifies herself in your presence, you can throw her a bone and appease her once in a while, but only if it's what you really want to do so that she feels a basic level of security in the relationship.

It's important to note that natural alpha males are automatically resistant to accepting the inferior frame. Their instinct tells them not to justify themselves, and they have such a high opinion of who they are that maintaining frame naturally flows from them. If you are not a natural alpha, you'll have to do it manually by stopping and thinking each time a woman asks you a question or a favor ("Can you hold my purse?") to decide if she's trying to assert frame. If she is, which is usually the case, you must deflect her question. Make a joke or "agree and amplify" so she comes to the conclusion that you are the superior in the interaction. Otherwise, she will slowly drain your power and either use you for attention or to establish firm control over your behavior like we see with men who have been hen-pecked by their wives after several years of marriage.

You want to reach a point where you have high expectations of a woman but she has little expectations of you. She must give you submission while you do as you may. This will take some real value to pull off, but in the meanwhile you can simulate it by merely not falling into the frame of those who make requests and demands of you.

Brittany Pettibone, Martin Sellner, and Lauren Southern Deported From U.K. Amid Alt Lite Drama

March 14, 2018 | by Matt Forney | Link | Original Link

The big news over the weekend in the alternative media is the sudden, unexpected arrest of American YouTube host Brittany Pettibone and her boyfriend, Austrian nationalist Martin Sellner, by U.K. immigration. Pettibone and Sellner were detained on Friday when they attempted to enter the country to interview British nationalist figure Tommy Robinson and deliver speeches to a nationalist event. They were subsequently imprisoned without charge for two days, then deported to Austria on Sunday.

> Martin & I were denied entry to the U.K. & held in a detention facility because 1.) I intended to interview "far right leader", Tommy Robinson. 2.) Because Martin intended to give a speech at Speaker's Corner which they alleged would "incite tensions between local communities".
>
> — Brittany Pettibone (@BrittPettibone) March 11, 2018

Pettibone and Sellner were told that they were being detained due to the latter's membership in the "right-wing group" Defend Europa, a nationalist organization that seeks to prevent globalist NGOs from trafficking non-white migrants from Africa to Europe. Pettibone was also told that she was being denied entry due to her intent to interview Robinson, whom U.K. immigration libelously referred to as a "far-right leader" who "incite[s] racial hatred."

> This is unbelievable . The home office arrested & detained a female American

> journalist for 3 days before deporting her, they gave her paper work claiming I am a far right leader who incites racial hatred. If I incite “racial” hatred then take me to court & try me you liars pic.twitter.com/4oZ6YySOzv
>
> — Tommy Robinson □□ (@TRobinsonNewEra) March 12, 2018

Not long after Pettibone and Sellner were deported, Canadian nationalist YouTuber Lauren Southern was also arrested and imprisoned when she attempted to enter the U.K. via a bus from France. Southern was denied entry due to the fact that she had “distribut[ed] racist material” during her visit last month: this “material” was satirical flyers that declared that “Allah is a Gay God.”

> Dear @AmberRuddHR – you have detained @Lauren_Southern in Calais and prevented her entering the U.K. She is a Christian Conservative. You have sided with Islamists of Luton. You need to make better decisions ma’am. pic.twitter.com/rpAgSEwLI3
>
> — Katie Hopkins (@KTHopkins) March 12, 2018

> We are now LGBT activists. Opened this wonderful stall in Luton. This should go down well ☺ pic.twitter.com/TEjqqy5pye
>
> — Caolan Robertson (@CaolanRob) February 24, 2018

The fact that the U.K. government now deems relatively moderate figures such as Pettibone and Southern to be criminals is deeply worrying in and of itself. The U.K. is now the most tyrannical nation in Europe, contrary to the left’s fulminations about the “authoritarianism” of eastern states like Russia and Hungary. Just as importantly, what happened to Pettibone and Southern has exposed deep fissures within the alt lite, as the latter is now beefing with Mike Cernovich.

The Emptiness At The Heart Of The Alt Lite

Cernovich and Southern began feuding over the weekend when he criticized her for “e-celebing” over Pettibone’s imprisonment because she broadcast a Periscope about what happened. In Cernovich’s view, Southern and other supporters of Pettibone’s should have been trying to “hire a lawyer” or “go to [the U.S.] embassy.”

> SHOTS FIRED! Total chad Mike Cernovich BTFO @Lauren_Southern #freeMartin #FreePettibone pic.twitter.com/nN48uyZnwT
>
> — □□□□MAGA MATT□□□□ (@Millenniel_Matt) March 10, 2018

Southern fired back, pointing out the fact that Cernovich does Periscope videos often whereas she rarely if ever does them. Southern also specified that Pettibone had told her she was doing okay but asked Southern to get the word out.

> Watched the @Cernovich periscope on how I'm "e-celebing" about my friend being detained. Process of her being released was already happening. She called

> me and specifically asked me to spread the word. Your whole life is on periscope Cerno. Don't throw rocks in glass houses.
>
> — Lauren Southern (@Lauren_Southern) March 11, 2018

As of right now, the feud has subsided a bit, with Southern's own arrest and deportation from the U.K. taking priority over Cernovich's beefing. However, the fact that this conflict even happened to begin with is proof that the alt lite may be a shaky political movement.

> > Brittany calls me from detention center "hey Lauren, I'm doing ok if you could just spread the word that would great"
> > Does first periscope in months
>
> > Cernovich "WHY IS EVERYONE PERISCOPING THEY COULD BE RAPED IN JAIL YOU ALL JUST WANT TO BE E-FAMOUS"
> > proceeds to periscope
>
> — Lauren Southern (@Lauren_Southern) March 11, 2018

The alt lite (or "New Right," as they prefer to call themselves) emerged from the schism in the alt right caused by the "Heilgate" incident. At the National Policy Institute's conference in November 2016, *Daily Shoah* host Mike Enoch led the audience in a Nazi salute at the conclusion of Richard Spencer's speech, which was filmed and put online by fake news media outlets in attendance. Shortly thereafter, Cernovich, Jack Posobiec, Paul Joseph Watson, and other major alt media figures denounced the alt right.

The central problem the alt lite has is that it lacks a consistent ideology or reason for existing. The alt right, whatever its faults, has a concrete belief system: white identity and nationalism. The alt lite is essentially a dumping ground for figures who are too edgy for mainstream conservatism but not edgy enough for the alt right. As a result, it lacks its own center of gravity and is constantly being torn apart by the voluminous egos of its leaders.

The infamous "dueling rallies" incident that occurred last June is a prime example of what is wrong with the alt lite. Laura Loomer and Jack Posobiec had been slated to speak at a "Freedom of Speech Rally" in Washington, D.C., but pulled out after learning that Richard Spencer was also a featured speaker. Instead, with the help of Mike Cernovich, they held an opposing "Rally Against Political Violence."

Anarcho-Tyranny In The U.K.

> About to interview Brittany & Martin about their ordeal. They have brought the home office documents which accuse me of being a 'racial hate preacher'. Full report coming soon on https://t.co/n58aV1eLyN pic.twitter.com/aNyG6Ahe4s
>
> — Tommy Robinson □□ (@TRobinsonNewEra) March 11, 2018

It's clear from Pettibone's, Sellner's, and Southern's treatment that foreigners to the right of Karl Marx are no longer welcome in the U.K. While this is not the first time that high-

profile dissident right figures have been banned from the U.K.—both Richard Spencer and ROK's own Roosh V have been banned in the past—this is the first time that dissident right-wingers have been treated in such a manner by British authorities.

It's worth noting that at the same time that figures like Pettibone are being forcibly deported from the U.K., British Muslims are allowed to join ISIS—an act of treason under British law—and return to the U.K. without a question asked. Indeed, more British Muslims are serving in ISIS' armed forces than in the British military, yet Theresa May regards moderate YouTubers like Pettibone and Southern as a bigger threat to public order.

The crackup between Mike Cernovich and Lauren Southern also suggests that the alt lite is on its last legs. In the time since it separated from the alt right, it has failed to establish an identity of its own, and the unstable temperaments of its major figures are undermining its credibility. It is likely that the alt lite will dissolve entirely in the coming year as its leaders return to the alt right, join the left or cuckservatives, or drop out of politics entirely.

3 Critical Rules To Build A Physique That Makes Women Wet

March 14, 2018 | by Jon Anthony | Link | Original Link

The following article is sponsored by Body of an Alpha.

It's no secret that learning game is harder than it ever was before—with Soros "1 in 4 women are raped" propaganda on every corner, anti-male sentiment emanating from the hordes of social justice warriors, and women's general lack of femininity, attracting and seducing hot girls without encountering numerous obstacles is a seemingly impossible challenge.

Shit tests, friends cockblocking you, and poor logistics… it seems that we must do everything within our power to level the playing field. You can try building your wealth, you can try learning game, and you can try working on your personality, but in my experience, one thing works best: game combined with a killer physique.

Having a killer physique is the most immediate thing that a girl sees about you. Not your bank account, not your game, not your personality but your physical body. Yes, obviously everything else is important, but developing a shredded, lean physique that turns heads is an incredibly powerful asset.

What Women So Desperately Desire

Pull club hotties with ease

I don't want to exaggerate here, but it's hard not to. When I first started working out around the age of 13, I didn't think it would have much of an effect. Yeah, maybe I'd get a few IOI's here and there, but I figured it was something you just did for health.

Oh my god, was I wrong—fast forward 10 years, and I can't believe the power that it commands, not only in terms of respect from your peers, but in attraction from women. Despite the SJW's harping on men for being shallow, it turns out that women are actually just as shallow… they just hide it better.

I recall the first time that I really started to understand how powerful an aesthetic physique really was. I was 18, and had just graduated high school—I'd been lifting pretty seriously for about a year, but at the time still really had no idea what I was doing.

I decided to go to the pool with some buddies. I'd been hitting the gym extra hard over the past year, because I wanted to look like a total stud when I went to college, but it turns out I didn't even have to wait that long. We got to the pool, and immediately three hot girls caught my eye. They were absolutely gorgeous, and I could barely contain my testosterone.

I subtly pointed them out, so my buddies could see, and we all sat down next to them. Immediately, one of them who was lying on her stomach, tanning, turned towards me and asked: "What's your name?"

Holy hell—did she just open ME? From there the whole conversation was smooth sailing. She immediately gave me a ton of IOI's, playing with her hair, biting her lip; pretty much acting like a complete school girl around me. The conversation ended with her asking for my number, and she texted me the next day wanting to hang out.

Ever since then I've never underestimated the power of an aesthetic physique. A

chiseled, sexy V-Taper signals confidence, vitality, strength, and most importantly, alpha male status. In all seriousness, when you're jacked, gaming women is like shooting fish in a barrel.

1. Utilize P.H.A.T. Training

Imagine learning game looking like this

When most guys start working out, they fall for the classic "bro split" vs. powerlifting routine dichotomy. A "bro-split," as it's aptly named, is the routine that most douchebag mustang drivers, college chads, and curl bros follow. It essentially divides your workout routine up into three separate days: chest and arms, shoulders and back, and legs.

There's different variations, but the idea is that you cycle the days—for example, you may do something like this:

- Monday: Chest and Arms
- Tuesday: Legs
- Wednesday: Back and Shoulders
- Thursday: Rest

Then, you'd just repeat this over and over until the end of eternity. The benefits of this are that you'll train mass, and will certainly get a proportional physique. The negative side, however, is that it's extremely difficult to build strength since most of the bro-splits consist of higher repetition exercises.

In stark contrast, is the typical powerlifting routine, which is usually either Starting Strength or some 5×5 variation. These consist of Days "A," and "B," each of which usually contains 3-4 exercises.

So, a typical powerlifting routine, may look something like this:

- Day A: Squats, Bench, Barbell Row

- Day B: Squats, Overhead Press, Deadlift

Then, you would just alternate with a rest day in between. So in other words, you might do Day A on Monday, Day B on Wednesday, and Day A on Friday. Then, the next week, you'd pick up where you left off: do Day B on Monday, Day A on Wednesday, and so on and so forth.

The main benefit of a powerlifting routine is that you'll gain a ton of strength, and it'll be functional, too. The major downside, however, is that you'll often end up looking like a T-Rex: huge legs and giant pecs, but scrawny arms from a lack of direct exercises.

Most guys are stuck choosing between either massive strength and little aesthetics, or massive aesthetics and paltry strength, but I propose, there's a way you can get both.

After nearly seven years of lifting, oscillating between various bro-splits and powerlifting routines, I discovered a principle called "Power Hypertrophy Adaptive Training," or P.H.A.T. for short. The idea behind PHAT is that you combine both strength and mass training into one routine.

I won't go too in depth here, since I cover this all in my latest book, but here is a sample template that you can use to design your own routine:

- Day 1: Upper Body Strength
- Day 2: Lower Body Strength
- Day 3: Rest
- Day 4: Back and Shoulders Hypertrophy
- Day 5: Cardio, HIIT, or Legs Hypertrophy
- Day 6: Chest and Arms Hypertrophy
- Day 7: Rest

The strength days will build rock solid, dense muscle—your bench, squat, deadlift, and other compound lifts will sky-rocket. The mass days will build huge, aesthetic biceps, triceps, and shoulders—in other words, it works the auxiliary muscles and makes them gigantic, in a way that strength training can't do.

Simply switching to a PHAT based workout routine will astound you—you'll get stronger and stronger every week, as the mass and strength training both work together synergistically. I do not exaggerate when I say that following a PHAT routine will make your progress in the gym triple.

2. Choose The Proper Diet For YOU

“Oh my god, are those his abs?”

Intermittent Fasting, the Paleo Diet, the Bulletproof Diet, the Atkins Diet, the South Beach diet, Slow-Carb, High-Carb… when you first get into the world of fitness, and even after several years, it can be incredibly confusing. It seems that every single “expert,” out there has an opinion. I’m here to tell you that a good 75% of it is total bullshit.

Here’s what you need to realize: there is no one size fits all. Different diets suit different needs and different goals, so I’m going to simplify it for you. First, ask yourself, what is your body type:

- Hard-Gainer (very skinny, have a difficult time putting on weight)
- Obese (30+ pounds overweight)
- Average (Between 15-20% body fat)

Now let’s simplify. If you’re a hard-gainer, and you’re trying to gain a lot of muscle mass, here’s what you need to do. First things first, don’t do any of that intermittent fasting, paleo, or Atkins garbage—it’s meant for losing weight. You’re going on the “high-carb” diet. Eat a medium to large sized meal every 3-4 hours, ideally having some carbohydrates, fats, and proteins.

If you’re obese, I recommend you use the paleo diet. Low-carb diets put your body into a mild state of ketosis—AKA your body burns fat for energy, and not carbohydrates.

Don’t worry so much about how much you eat, just eat foods that only cavemen would have access to. Nothing processed, nothing artificial, no grains or wheat, just the Neanderthal foods: farm fresh meat, organic vegetables, and nuts. Keep fruit and berries to an absolute minimum (maybe one serving post-workout).

Do this until you’re around 12% and if you like, you can then switch over to a more

carbohydrate based diet to build muscle (carbohydrates make building muscle so much easier). Consume the majority of your daily carbohydrates before and after your workout, however, to maximize muscle-gain and minimize fat loss.

If you're average, consider following the "recomposition," protocol. Work out every day on an empty stomach, ideally early in the morning. Consume 5 grams of BCAA's to prevent muscle wasting, and then eat a carbohydrate heavy meal post-workout. Calculate your calories, eat roughly 200 less than maintenance, and you'll melt fat and build muscle at the same time.

Do you see why most diets are total bullshit now? They act as if there's a one-size fits all approach, but there's not. The reality is that you'll have to approach your diet like you approach your health: it depends on the individual.

3. Aim for the "Golden Ratio" of 1.618

Make her addicted to you

Statistically, do you know what women find most attractive physically? No, it isn't height—it's something called the "golden ratio," or a man's shoulder to waist ratio.

Studies have shown that when a man's shoulder to waist ratio is roughly 1.618, women *consistently* rank him as being the most attractive among his peer group. Yup, that's right. You can out train your poor height genetics, your poor face genetics, and whatever minority skin color you think hurts your chances.

The question, then, is how? How do you train to get that V-Taper that women absolutely adore? Well, I propose two things:

- Utilize weighted and un-weighted back exercises

- Do sets to failure

That’s it. Most guys don’t combine un-weighted back exercises like pull ups, with weighted back exercises like Pendlay rows or lat pull downs—they typically do one or the other, and their piss poor results show it. I propose that you do BOTH.

My workout routine (for back and shoulders day) consists first of the typical weighted back exercises, but then, I do three sets of pull ups *to absolute failure.* I’ll do as many pull ups as I can, and then go over to the pull up machine, and do as many as I can with 20 pounds of assistance. Then 40 pounds, then 60 pounds, all the way until I can’t do anymore.

Then, I do this two more times. If you think you’ve ever experienced a burn from back day, but haven’t done this, you’re in for a surprise. Your back will be BURNING in agony after just one set, but hey, if you want an aesthetic physique, in the words of Arnold: “No pain, no gain.”

In other words, the more pain you feel on a hypertrophy day, the more you’ll gain—so aim to combine weighted and un-weighted back exercises, to get the best of both worlds. The weighted exercises will train for strength and build dense muscle, and the unweighted will build mass and endurance muscle.

10x Your Attractiveness to Women

If you’re interested in building the physique of Adonis, that pulls girls to you like a fucking MAGNET, then you need the Body of an Alpha training protocol. For a limited time only, I’m giving Return of Kings readers 50% off, plus two FREE eBook bonuses. In addition to this, you’ll also get “Priority Coaching,” where I respond to any and all questions you have

within 48 hours, so that you have absolutely no questions about how to get jacked as hell.

In Body of an Alpha, I cover everything you need to know about getting shredded, melting away fat, and packing on slabs of muscle, so that you'll be having more sex than you know what to do with in just 90 days.

Here's some of the benefits that you'll get when you decide to purchase my guide to building the body that women desire:

- The all important *"Body of an Alpha"* workout routine for breaking down our muscle fibers to the maximum extent possible—encouraging rapid growth and unprecedented strength gains.
- The most potent compound exercise ever developed for building muscle FAST. This routine jacks testosterone and growth hormone simultaneously—shooting you past any stall points, and helping you carry momentum week after week.
- Why gains are made HERE, and the 6 things you must do to give your body everything it needs to grow and develop to its full potential.
- The mistake 90% of "bros" make in the gym… decreasing their strength and size while they damage their tendons, ligaments, and joints.
- You'll get what I called the *"Body of an Alpha Fat Incinerator,"* a 15 minute cardio routine that puts your body into a metabolic energy matrix, kicking fat burning hormones into high gear while screaming to your body: "Build More Muscle!"
- Why you need to throw out all the trendy diet fads and stick with THIS proven, time-tested regimen… and you'll learn exactly how to adjust it to fit the unique needs of YOUR body.
- You'll learn how to plan out your entire week's meal plans, so you can "set it and forget it"… saving tons of time and eliminating decision fatigue from your regimen.
- The "rule of non-recovery," and why without this master key ingredient you won't build any muscle… no matter how much you workout.
- Jon's 5 'Recovery Hacks' that help your body rebuild faster and stronger—maximizing your gains literally while you sleep.
- How to stop the muscle stealing evil called "cortisol," and how to keep crushing it so you can maximize your gains without feeling like you're running with a parachute on.

This is just a tiny fraction of what you'll learn in this program. Everything you need to get the body women deeply desire is right here in this book…and I am the only man on the manosphere teaching it.

So if you want to take advantage of this incredible offer, and have a body that makes women's jaws drop in less than 90 days guaranteed, be sure to **get all the details right now by clicking here**, while the sale still lasts.

Will Transhumanism Offer Us A Glorious Future?

March 14, 2018 | by Beau Albrecht | Link | Original Link

Transhumanism covers many subjects. Nootropics, also called smart drugs, are the most familiar to the public. However, there are many other newly-emerging technologies on the horizon, and others which might come. The object is to become *better than human*—but is that a good idea?

Life extension

Want to live over a century like David “Mr. NWO” Rockefeller?

It’s natural that people would like to live longer. Psalm 90:10 speaks of life expectancy as seventy or maybe eighty years, though life’s full of toil and sorrow. That one was written during the Iron Age. Today’s average lifespan is about the same; modern medical technology does better at preventing premature death than artificially extending life.

Some of today’s tech giants wish to change this. The ultra-wealthy in general often live very long lives; perhaps they know something we don’t? Rumor has it that David Rockefeller attained the ripe old age of 101 by getting five—or even seven—heart transplants. That seems doubtful—Mr. NWO never had a heart.

There are two other hurdles to cross, aside from scientific advances. Retirement programs like Social Security are already increasingly strained. These would collapse if life expectancy increased drastically. Fixing it would necessitate raising the retirement age considerably.

More importantly, living several more decades in an enfeebled condition wouldn’t help much. Some seniors already spend their final years bedridden or barely conscious, a sad reality. Improving quality of life is more important than longevity; this should be prioritized first.

Body enhancements

Our bionic future?

Today, there are already many ways to change the body, though generally they make people look like Martians rather then doing anything actually useful. Perhaps prosthetic limbs could become better than the real thing eventually. Will being part machine, like Darth Vader or the Terminator, become commonplace? Getting your skeleton and muscles replaced by metal and hydraulics might increase strength greatly, but you could always butch up and work out instead.

Transhumanists are often enthusiastic about transsexuality too. We find that bizarre, especially because trannies look weird. Also, a sex change operation basically involves slicing a guy's dick open and turning it inside out. The resulting "vagina" must be artificially dilated regularly, it makes a roast beef taco look like a pink lily, it doesn't get wet, it becomes crusty, and it's prone to infections. (Who wants to bang *that*?) However, there's serious discussion of transplanting girl bits, or even cloning them in a lab, so they can have babies. Still, there's an even better solution—getting used to the body they already have.

Gene editing and nanotechnology are other efforts. If that means curing hereditary diseases, that's a good use. However, tampering with the human genome shouldn't be done recklessly or needlessly. A worse possibility would be genetically engineering people like Monsanto does with GMO crops.

Suppose someone will want to make humans docile—basically more "unaware and compliant". I can predict the strategy already. The idea will be introduced in the name of ending violence—"do it for the children". Then it'll be propagandized, and dissent will get talked to death or shouted down. Some horrific false flag event or engineered war will settle the debate. Any remaining unmodified people will get extra scrutiny, eventually becoming second class citizens, until it's too burdensome to live that way.

Convergence with technology

Woo hoo! I just leveled up!

Merging the mind with computers is eagerly anticipated by transhumanists. One possibility is getting WiFi cards installed into your brain. (If Hillary had won, we'd all be getting V-chips implanted first.) The technology isn't there yet, but it's been discussed

seriously.

Mind uploading is further down the technological pipeline, if it's even possible. Transhumanists don't merely have their head in the clouds; they want to upload their brains to the cloud. Escaping the human body's limitations means no more need to eat, drink, sleep, or take a leak, unless someone wanted to simulate these things. When someone's soul is digitized, the virtual reality world would be like one's own personal holodeck, 24×7. Basically, *The Matrix* would become real.

Everyone could pig out on virtual food, yet look like an A-list actor or a supermodel. Most people wouldn't care to bang a sex robot today, but in the artificial universe, a manufactured virtual playmate would seem no different from any (formerly) real partner. Death would become obsolete too. Perhaps people might upload a copy of their minds and (in the material world) euthanize themselves because reality would be pointless after their souls become processes running in a server farm.

Why The Matrix might suck

I'm sorry, Dave. I'm afraid I can't do that.

This might be impossible; CPUs aren't brains, which today's powerful servers can't really emulate. However, if someday computers could replicate the human mind's initiative and free will, an obvious question remains: *who funds it?* The hardware outlays, maintenance, and electricity will be enormously expense. Perhaps the "one percenters" could buy an eternal subscription. What about everyone else?

Virtual economies exist already, but they're not quite gold mines. Creative professions might be possible, depending on how well a mind *really* could be emulated. However, it's hard to imagine it remaining economically viable. If users can't sell enough designs and

digital products, will they get deleted? If governments subsidize the ghosts in the machine, taxpayers in the real world might get sick of supporting cybernetic slackers.

Also, with so many idle minds, trolling might become the greatest pastime. Managing the disembodied for eternity will be an unprecedented challenge. Will chronic user agreement violators be banned to virtual jail cells, digitally lobotomized, or even have their existence deleted? Will there be due process and a court system (meaning lawyers, judges, and all that fun stuff), or will the administrators and their appointed moderators have dictatorial power?

It gets worse

Imagine no more thoughtcrime, it's easy if you try.

Domestic spying and online censorship are already problems. Propaganda and mind control will get worse if people become data structures. One's innermost thoughts could be scanned and edited without their knowledge. People could be conditioned to believe anything by hackers or omnipotent administrators.

I wouldn't put anything past the effete billionaires who want to make this a reality. They'll guarantee rights, freedom of thought, and digital democracy, but quickly break their promises. Power is already being abused, with governments colluding with tech giants rather than protecting their citizens.

Things could become far worse when digitized people are completely at the mercy of The System. Likely that will be permitted under a "management can do anything" clause in the terms of service. Few people today read their software user agreements, know about government spyware, or understand how their cell phone apps can track them. If you don't agree to their terms, you won't get digital immortality. Still, it might be no great loss.

Conclusion

Some technological advances might help the disabled increase their quality of life; that’s no problem. However, replacing perfectly functional body parts with artificial stuff is nonsensical.

Furthermore, wishing to live in The Matrix full-time instead of reality is merely solipsistic nerd escapism. Besides, goofing off in an MMORPG would become transcendental boredom after a few thousand years. Having children and passing on your genetic and cultural legacy is a better way to achieve earthly immortality.

7 Reasons Why Boomers Are The Worst Generation Alive

March 15, 2018 | by André du Pôle | Link | Original Link

Some weeks ago, I went to a relative's wedding. There were many boomers, including close relatives of mine I had not met for years. Too many boomers in fact. All of them with no exception are deeply flawed, which is also true for many non-related boomers I intersected with occasionally.

One of these boomers is a journalist. Everything that applies to an average journalist applies to him at an even more pronounced degree. He's a leftist who follows blindly everything the media says on any relevant topic, which makes impossible to even speak honestly with him on a number of daily millennial's issues.

Another one is a female. She claims to be friendly to traditionalism, but tends to mix it with New Ageism, has a long history of alcohol abuse, cannot keep money for long on her bank account and believes she's always right. You can speak with her about a number of relevant issues, and even about things to talk about with a girl, as long as you let her take life decisions for you.

Another is an engineer, who hates the journalist for being more erudite than himself, but also thinks his grandfathership makes him impervious to mistakes and falsity. He invited his daughter-in-law at home when she divorce-raped his son and believes feminism, as well as most lefty "progress", is great. Not to mention several others of the same kind.

Here are some reasons why, truly, boomers are the worst generation alive on Earth—or at least inside the Western world—today.

1. They live in bubbles of comfort

If they weren't damn leftists, ardently supporting all the "minorities" against their own sons and grandsons, this would not be such a problem. But they do, and their bubble allows them to feed on mainstream media daily. They went through decades of prosperity, knew nothing but growth and full employment, and now that they're old and rich, their preach us from their easy position without having the least understanding of what the millennials are going through.

2. You can't talk with them

This is a peculiar boomer thing. I have two grandmothers (78 and 91) whom I can talk with about almost anything, including feminism and mass immigration. Both grandmothers tend to disagree at least a bit with me, but they can hear and process what I say. One of them agrees that the reference point today is completely skewed against

men and marital stability—even though she was once betrayed by a man.

Boomers are younger than that, but boomers can't hear. Try to mention a relevant topic and they'll shoot you down without second thought. Get attacked by SJWs or so-called minorities and they will rush to virtue-signal against you even when their blood runs in your veins. Boomers become hysterical when you mention how wrecked, dispossessed and disenfranchised we are.

The worst thing is, they are often the ones who tread on the "forbidden" topics but they won't accept hearing anything non-leftist about these topics. They have absolutely no respect for either difference of opinion and think normal that they can decide 100% on what can be said on anything, whereas their adult children are supposed to behave like passive, dignity-deprived slaves. What kind of older parent behaves like that?

3. They are as self-righteous as they are irresponsible

Boomers know about just everything, they are absolutely wise and ripened and, as many say, "you won't teach life to me, I'm XYZ years old." They ask at best superficial questions and want to do all the talking about, say, absolutely everything. Their narcissism projects into every area. They tend to stifle and suffocate everything way more than the Silent Generation—remember, their parents who went to war against the Axis and got labelled "fascists" by their ungrateful hippie sons—ever did.

Boomers don't have to take any responsibility, as they already have real estate, life insurance, 401(k) and so on. They can sip wine between a trip to the spa and another trip to a touristic destination, cowardly skilfully avoid the mass of thugs and/or immigrants they often supported, and pretend they know better about immigrants, womyn, food, how to find a job, who we are, up to conspiracy theories when the boomer you meet with is so inclined.

Some boomers provide financial help, others do so only a bit and reluctantly, others won't help at all, but sooner or later all take that unbearable preaching tone. No matter if they

follow the mainstream to the core or pretend to dissent, they all tend to be dismissive towards their younger peers. And even though they assume no responsibility and behave more like arrogant parasites than inspiring figures, they want the same respect than the ancients of before—the very same respect they often fail to give to the Silent Generation.

4. They are biased against young men

I have noticed that boomers will accept discussing relevant topics only with guys who are older than 40 or with girls. When you, a millennial or an X who's less than 40, beg to differ on one of these topics, they automatically assume your views and your experience are worth nothing.

Again and again, I've seen boomers discussing globalism, freemasonry, the shortcomings of feminism or other non-mainstream topics with +40 years old people, to dismiss younger fellows on sight—even when *they* started discussing said topics.

Same boomers think it is absolutely normal to have their little princesses saying things like "all guys are idiots" or suggesting that no man is worth their inflated egos, but will be offended if you mention how difficult it became for a sane man to find a sane woman. Boomers' daughters are pure angels who would never err or offend. Boomers' sons are dirt to be trodden upon.

Don't tell them you are going from skinny to buff, even when you already gained 10 or 15 visible pounds of muscle, they will laugh at your quest for strength and say you should eat less proteins or something.

5. They keep, and eat, all the capital

Who bought off all the real estate? Who keeps benefiting from retirement pensions in a system that will collapse well before we age? Who keeps most important positions to retire as late as possible—and then live in luxury with retirement pensions higher than a honest, qualified young man's wage? Who is OK with forcing the young into paying astronomic rents, putting us in a cutting-throat competition for ill-paid jobs and women, then forbid to even talk about the arena we were thrown into?

The more a boomer talks about equality, humanity, the Other and many other totem poles, the greedier he tends to be. And when a boomer actually helps, which sometimes happen, he does so in such a meddling and patronizing way you wish you'd rather live close to starvation owing nothing to this generation of poisonous twats.

6. All their culture is but a pile of toxic waste

The more red-pill you get, the more alienated from dominant boomers' culture you feel. John Lennon's *Imagine* was a piece of globalist psyop. "Women's lib" destroyed families and women while bossy feminists do everything they can to brainwash male children into submissiveness and conformism. Rampant individualism led to everyone having his interests pitted against everyone else's. Exoticism or xenophilia goes hand in hand with ethnomasochism and a lack of core. "Know yourself" skewed with cultural Marxism turned into navel-gazing, insecurity and drama.

We grew without proper fathers, without incentive to act on our own, all too often in broken families—but hey, divorce and killing babies is so cool!

Boomers' culture took the place of what had always been there. Now we have to reconnect with what they discarded while discarding their hedonism, deconstruction, intellectualism, pathological care towards the Big Other combined with having abandoned and betrayed us, and so on. Every PC conditioning inside millenials' minds has been enforced by boomers first. Salvation of the West has become virtually synonymous with getting rid of the boomers' grip.

7. They decided to disinherit you long ago

They spent their lives forfeiting their native culture, selling their countries, submitting to an anti-white, anti-male, anti-Western political ideology. They believe their own disenfranchised sons are somehow “privileged” and give the heritage to “minorities”, at best their own daughters, at worst any adopted piece of flesh.

Discriminating against “white males” (yeah, that’s us), that is, against the very legitimate heirs *because* we are so, and pushing us towards poverty or a heightened competition is deemed normal among them.

Do not expect them to give you anything but debt and the finger when they pass out at last.

Before concluding, a striking example. Two French celebrities, cook Paul Bocuse (1926-2018) and singer Johnny Hallyday (1943-2017), have recently died. The first fought the Second World War, the second did not. Both had many affairs as high-profile men often do. However, polygamous Bocuse still managed to get his “empire” in order to hand it down to his children, whereas Hallyday disinherited his son, daughter as well as their mothers to give everything to his late gold-digging whore and two adopted Cambodian girls. Typical boomer move.

Hey David (Johnny's son), say goodbye to your money! Have you seen my new younger wife and Ali Express dolls? So diverse!

ABALT (All Boomers Are Like That)

Boomers rebelled against their parents who had toiled and struggled dutifully. Now, if we rebel as well against the corrupt, passive-aggressive parasites they turned into, we become "racists" and "Nazis" and anything they'll spout and we get repressed like these

spoiled children of the 60s-70s never were.

At the end of my relative's wedding, I felt a huge relief when the boomers went away. I spent days pretending everything was along and well, while I had to constantly restrict my speech whereas they would spout leftist points as if it was a normal thing to do—and as if non-Leftist political identities deserved no respect. I almost threw a glass of water at a boomer's face after he silenced me mockingly while enthusiastically talking about some media-hyped hag, and the only reason I didn't do it what out of care for my grandmother who was also present.

Before, I would have crippled my own thought by accepting the NAXALT argument as a rule of thumb. Now, not so. Besides Donald Trump I still have to see a respectable boomer. On investigation, even those who pretend to be political opponents are compromised and degenerate.

It is a pity that life expectancy has risen so soon. Many boomers are likely to live more than their own children. Doesn't matter to them as long as their bubble of comfort remains. Truly, they won't be missed.

How To Get Good With Girls Through Embracing Mundanity

March 15, 2018 | by Troy Francis | Link | Original Link

When guys think about game they fantasize about the end result—that is, a beautiful girl in their bed. What they don't consider is the work that it takes to get there: work that involves adrenaline-fuelled rejection, yes, but which is also often simply mundane.

Embracing mundanity is essential if you are going to succeed in any area of life, from game to business to sports to writing. You must be willing to get down and dirty and do the grunt work if you are to see great results from any endeavour. It's not glamorous, it's not especially fun, but it is absolutely essential, however unfortunate that may seem.

In the case of running a business, there are plenty of less-than-exciting tasks that must be done regularly if you are to succeed. You must, for example, regularly report income and expenditure to your accountant (if you have one). You must attend to your social media presence on a daily basis (if you're in the online sphere, at least). You must also analyse your sales regularly to see what is working and what isn't. You should also consider your working practices to determine whether or not what you are doing is putting you in the best position to succeed.

Of course, you can outsource *some* of these tasks if you have the budget to do so. But unless you literally pay other people to do everything—not usually practical in the case of a startup—then you will have to do a proportion for yourself.

Which leads us back to my opening remark: all too often people think only about the success they *hope* to achieve, and not about the nuts and bolts of process that will take

them there.

Yes, visualization is great and it works. But in the case of meeting and attracting girls, whether you are looking for casual fun or something more serious, there is a little-acknowledged ‘admin’ side that can be daunting and dull.

For one thing, you need to keep approaching in order to generate new ‘leads’. Whether you are doing so in person through cold approach, or via a dating app like Tinder, this can get samey pretty fast. Why? Because after a while—and as your approach anxiety begins to fade—you will start to realise that these encounters all follow a common pattern. In many cases girls will ask you the same few questions (*how old are you? Do you always hit on girls in the street?* etc.) and their life stories won’t exactly be radically different to each other.

Going on dates can be even worse. There was a time a while back when I was going on five dates or more a week. Despite being an introvert I am a fairly sociable guy, and I find getting to know new people interesting. However, dates can be formulaic, and when you stack one after another it’s like going on a series of job interviews.

Of course, it is the successful seducer’s job to make each date exciting and unique. By this I don’t mean taking her skydiving or bungee jumping or the like: a few drinks at your local lounge is enough. But you should be aiming to inject sufficient charisma and excitement into the proceedings to get her hooked. But this is only possible up to a point. After that it is hard to avoid a certain commonality where each date begins to look a little like the last.

This commonality is also to be found in the texting back and forward that you will do with girls you meet. These days—and for a long time—I have found myself using the same stock openers, stacks and teases over messenger. This is less because I am unoriginal

and more because they work. Of course, I will also introduce random new elements, and each new girl will inspire twists and variations on well-trodden conversational themes. But in the main, messaging is an admin task like any other.

Learn To Love The Process, Man

I don't intend this to be one of those 'learn to love the process' articles, because let's face it, process sucks, especially when it's boring. All I want is for everything to be easy. All I want is to say hi to a girl and have her sleep with me immediately off the back of it. But it doesn't work like that.

So rather than learning to love the process, I would counsel you to come to embrace the process. There's a subtle difference. Yes, texting multiple girls, or sending out many Tinder or dating site openers, or going on hundreds of dates, can get tedious and even frustrating. But when you visualise that shiny, golden 'thing' that you want at the end of the process—in this case sex with a beautiful girl—then you must simultaneously accept that the price you have to pay for it is the work you will put in. The two things are inextricably linked. And once you do so then you will find that doing the grunt work required is a little less irksome than before.

The other great advantage you have as a player is that while the individual actions you must take each time to facilitate a lay are pretty much identical—approach, say this, text that, escalate now, etc—each girl is different. And it is this which gives the practice of game its interest and excitement. Focus on your desire to get to know *this* particular girl and going through the motions will be far less painful than they otherwise might be.

I’m Coming Back To Washington DC

March 15, 2018 | by Roosh Valizadeh | Link | Original Link

Last week I was thrown a big curve ball. I hate to be vague, but one of my family members is having a problem that I want to help him or her with. Things could stabilize in one month, or it could go on for much longer, meaning that I’ve mentally prepared myself to move back to Washington DC. I’m already back in the United States as you read this.

In the beginning of Roosh Live #11, I describe coming back (there is a sound problem until 1:03)…

I expect two changes. The first is fewer YouTube live streams, at least for the next few weeks until I figure out a new setup. The second is more meetups. I plan to hold at least one happy hour in Washington DC. If my stay in the States is long-term, I may do them in other parts of the country.

Until the family situation stabilizes, I will try to maintain two residences, one in the DC area and one in Europe. If that’s not possible, I will close the chapter on my European adventures, which started in 2011, and begin a new one back in America.

Lastly, since I no longer have to conceal where I am, I plan on updating my Instagram more often with local happenings. You can follow me at kingroosh.

9 Trends That Will Change The Western World As You Know It

March 16, 2018 | by Joe Leone | Link | Original Link

The Western world is changing in irreparable ways. The period between World War II and September 2001 appears to be the tail end of a belle epoque that we will not see again. If you are under the age of fifty the world you die in will be unrecognisable from the one of your childhood.

1. What Is Now Perverted Will Be Considered Normal

Twenty-first century Westerners exist in a lusty haze of perversion and sexual hedonism. This will continue as more taboos are broken. Socially cohesive norms such as heterosexuality and family will be sacrificed for base sexual experimentation.

It will soon be considered passe for young men to identify as straight, and they will forced to score themselves on a deliberately obtuse sexual spectrum The nails will finally be driven into the coffin of the nuclear family, as unrestrained sexual imperatives for both men and women make stable marriage impossible.

2. Women Will Be Allowed To Run The Western World

It appears that globalists are hell bent on creating a matriarchy in Western Europe and North America. The elite will achieve this by further neutering men and their ability to lead. It has been observed that testosterone levels in the United States have been steadily decreasing for generations, and with rising obesity, porn addictions and estrogen rich chemicals on the rise this trend will only continue.

Traditional male sexuality will be considered a hate crime, and approaching women in a romantic way may become illegal. Game will be less focused on weak men improving their sexual opportunities and more about elite females selecting alpha males.

3. Socialism Will Take A Greater Hold Of The United States

To a certain extent, liberals were caught sleeping in 2016. Their harridan candidate Hillary Clinton gambled on gender politics and failed. While this was an enjoyable victory for conservatives it is merely a stay of execution for traditional American values. The same elite who began the destructive process of cultural Marxism in the West are still in place, and have a brainwashed plebiscite to carry out their whims.

By 2020, if Trump has not been assassinated or displaced, a populist candidate will be carefully selected with the right credentials to inspire the indoctrinated masses (possibly a black woman such as Oprah or a pretty soy boy like Trudeau). Expect higher levels of forced immigration and integration, along with even more kooky human rights legislation.

4. Racial Unrest Will Reach Breaking Point

Intelligent people know that multiculturalism is a fable invented by well meaning professors and middle class hippies, and does not take into account the reality of human nature. The integrated society we see today is tenuously held together by…

- Clever propaganda from the media, positioning minorities as salubrious characters and alpha males
- Life changing penalties for anyone who disagrees with a multicultural agenda

2017 saw the some of the most sustained violence for generations, and the outlook for the future is bleak. Rather than the cohesive society espoused by left wing dreamers, a divided, partisan communities will form around various movements, and inner cities will become warzones similar to Belfast in the 70's.

5. The End Of Freedom Of Speech

In 2017 google quietly began the process of ending freedom of expression on the internet. Using Charlottesville as an excuse to impose their morality on the entire world, Google (along with other institutions such as YouTube and Facebook) began blocking, censoring or taking down sites that did not conform to leftist thinking.

Worryingly, these were not only controversial entities such as Stormfront, but quieter voices such as Black Pigeon, whose relatively moderate outlook is backed up by well researched statistical evidence. Even Return Of Kings has been placed on the Southern Law Center watchlist. Enjoy the freedom to read articles such as this while you can.

6. Beta Males Will Become Sexual Non Entities

Beta males are already an endangered species, and they will be likely off the radar of any women under thirty in the near future. As women are allowed to give free reign to their vaginal tingles while being able to provide for themselves, beta males will become irrelevant outside of caring for children of alpha widows.

It is not inconceivable that in 30 years time we see lifelong virginity becoming the norm for vast swathes of men. Sex robots are already being developed to solve this problem.

Competition for the top ten percent of men will become greater, while the rewards for that status will be higher, leaving beta males in the knackers yard and chads in the clouds.

7. The Millennial Takeover Will Cause A Crisis

The real beginning of the end for America will be the millennial takeover approximately scheduled for 2025.

Despite bullish assertions that millennials will bring a new age of prosperity, the opposite is true. The self entitlement that defines millennials is not born in the battle scars of

experience, but through a life of ease and comfort. An easy, no consequences upbringing has given them a lack of accountability that is unsustainable in the real world.

While they talk a good game, millenials do not have the backbone to stand up to pressure and scrutiny, and they will crack like an icy pond on a spring day. Safe spaces won't mean anything when militia groups are shooting AK47's at the white house, and weak Trudeau clones will be outmaneuvered by hardened leaders from Russia and China. Expect this to be a defining moment in western history.

8. Voluntary Euthanasia Will Become Legalised

While climate change is the tin foil hat choice of the moment, it is overpopulation that will see civilisation brought to its knees.

In Western Europe, resources are already at breaking point, and immigrants can only use once great nations as a well so many times before the water runs dry. Eventually a critical mass will be reached, and governments will panic into action, offering incentives for the aged to end their life.

While it seems outlandish to expect this to be taken up with any enthusiasm, it would also have been ridiculous thirty years ago to think that school children would be encouraged to choose their gender from a list of 23. Never underestimate the power of brainwashing to encourage the witless to do the ridiculous.

9. Islam Will Become The Dominant Culture Of Western Europe

With Western birth rates are at a critical level, it is inevitable that Islam will become the dominant culture in Europe. I fully expect that the milquetoast mass that passes for modern Christianity will be eaten up like unleavened bread by stronger and more devoted Muslims.

In its place a more autocratic society will form. It will likely be the end of feminism in its current fashion (you can forget the carousel ladies), and polygamy will become the norm. Judeo Christian culture will be assimilated into a Sharia Law imposed Eurasian superstate.

Conclusion

I hope that I am wrong with my predictions, but I fear at least some of them will come to fruition. Try not to despair. It isn't over til the fat lady sings, and right now she is too busy eating.

How To Be More Charismatic

March 16, 2018 | by Larsen Halleck | Link | Original Link

We've all heard the term "charisma" many times in our lives—the animal magnetism that makes somebody attractive to complete strangers, that twinkle in the eye that makes somebody seem utterly likeable and/or relatable, or alternatively the radiation of power and gravitas that makes people fall to their knees in awe. But do you have any idea of how to get it?

Most people would argue that you can't "get" charisma; it's something that you're either born with or not born with, and those without have to be content to live the rest of their lives as the equivalent of a fart in church, never commanding an ounce of respect from anybody and being entirely ineffectual.

Wrong.

I used to think this way myself, but if you know me, you'll know that I believe the vast majority of problems you have can be fixed with enough concerted effort—very few of your problems are etched in stone. Perhaps it is a side effect of working as a personal trainer and having to trawl for clients, but having to put in efforts to be a salesman has led to me to researching ways to increase my charisma. And, if my early adoption is any indication, it does work, and will only continue to work with practice.

What is Charisma?

Charisma is defined by Olivia Cabane in *The Charisma Myth* as various verbal and non-verbal cues that radiate three core aspects: power, presence, and warmth (and before anybody starts whining about the fact that I *dare* to occasionally take advice from a woman, I will point out that said woman advises numerous corporate CEOs and politicians, so I'll take her advice over, say, the clods that I profile on my "Pick Up Assholes" Youtube show).

The emphasis in that paragraph is *nonverbal* cues: bear in mind that the majority of human evolution was done in times without verbal language at all, and thus your body language will project those three things far more than any words ever could.

Also bear in mind that being charismatic does not necessarily mean you have to be the stereotypical loud, boisterous, swaggering "Chad". One can certainly have a quiet and dignified charisma—think Winston Churchill or Henry Kissinger—divisiveness of their politics aside, they certainly had their way with words—and those two examples also indicate that you certainly don't need to be physically attractive to be charismatic.

And finally, realize that you don't need to change your personality to be charismatic—think of it as learning certain skills or techniques, and then picking and choosing those techniques to best suit your personality. There are so many techniques that I have learned from various sources that it will take a few future articles, but there are three incredibly simple techniques that you can implement right now, without any practice or preparation, to increase your charisma right now.

1. Lower the intonation of your voice at the end of sentences

It's practically a cliche at this point to mock the Valley Girl-ish "uptalk" and "vocal fry", but it's only a cliche because it's that important: Whether you are a man or woman, *but especially a man, stop doing that shit!*

It's not commanding, it doesn't show you to have a strong presence, and the sheer cringiness of this type of vocalization means you won't be conveying much warmth either. Nobody will take you seriously regardless of your sex, but the effeminacy of uptalk and vocal fry makes it doubly so for men. So cut it out.

2. Slow down your speech; reduce how often and quickly you nod and gesture

Think of somebody likes James Bond, or a regal and dignified king: does he twitch his head and speak rapidly, and spastically flap his arms? No, he's slow, smooth, and deliberate—he has *poise*. In contrast, a nervous person who is trying desperately to impress or assuage somebody spews forth a stream of verbiage, and is constantly nodding and gesturing to confirm to the dominant person in the conversation that he is in agreement.

The analogy I'm going to use may sound a bit inane but hear me out: do you remember an old Looney Tunes short titled *Tree for Two?* I just linked to it: go watch it, and take note of how the little dog acts. Go out of your way to *not* be like him, and that's a rough idea of how poise works.

Don't do this

3. Constructive Pauses

This is related to the second one but, again, don't spew forth a torrent of words. Speak slowly and intelligently.

Beyond those three, there are a wide variety of charismatic techniques that all seem to revolve around “Tricking” your mind to get into a state of power, warmth, or presence. As a side note, while doing research I thought that this might be why politicians and actors tend to be sociopaths or… just abject miserable human beings: because they are mental “blank slates” that they can “paint” emotions upon. Similarly, this might explain why cult leaders can get their followers—because they genuinely delude themselves into believing their own bullshit.

But perhaps that will be a discussion for another day. Do the three techniques above, and start on your charismatic journey.

Martin Shkreli Got 7 Years' Jail For Taking $7 Million, Elizabeth Holmes Will Get None For Swindling $700 Million

March 18, 2018 | by David G. Brown | Link | Original Link

Fraudster and STEM "It Girl" Elizabeth Holmes has settled a lawsuit with the US Securities and Exchange Commission (SEC) for a measly $500,000. This is despite the SEC stating that Holmes lied and otherwise deceived investors **to the tune of $700 million**, engaging in "massive fraud." Her company, Theranos, promised to revolutionize the blood-testing industry, yet produced continuously faulty "medical" equipment and failed to respect legally required healthcare and laboratory standards. ROK has reported on this debacle over several years already.

Funnily enough, pharmaceutical executive and all-round shitlord Martin Shkreli, despised by leftists everywhere, was jailed for seven years this month. A court ruled that Shkreli fraudulently obtained $7 million through his hedge fund activities. It's difficult to see why Elizabeth Holmes should not be in jail, too, and serving a much, much longer sentence than seven years.

ROK proprietor Roosh, who has followed the Holmes and Theranos saga closely as well, hit the nail on the head recently:

> Martin Shkreli got 7 years in prison for a $7 million fraud. This means Elizabeth Holmes she will get at least 700 years (lifetime sentence) for her $700 million fraud. American justice is gender blind! https://t.co/Mhb96lPSg2
>
> — Roosh (@rooshv) March 14, 2018

How many people responsible for helping to screw up the mortgage industry before the Global Financial Crisis (GFC) are in jail? Virtually none, yet Martin Shkreli is in a cell right now.

Federal prosecutors can still file criminal charges against Elizabeth Holmes but, alas, we know the likelihood of that happening is infinitesimally small. The powers that be, whether in Silicon Valley or in SJW-stacked government agencies like the National Labor Relations Board (NLRB), are demanding that companies have more women in STEM, no matter what the cost. Jailing Elizabeth Holmes would be a very bad look for "girl power."

How is this woman not in prison?

Bloomberg, which regularly publishes editorials most readers of this website would equate with leftist garbage, nevertheless didn't mince its words regarding Elizabeth Holmes' fraud:

> The lawsuit and settlement announced Wednesday by the U.S. Securities and Exchange Commission detailed how Holmes and her chief deputy ***lied for years about their technology***, snookered the media, and used the publicity to get investors to hand more than $700 million to keep the closely held company afloat.

Given her relatively young age and the smaller amount of time she has spent in investor circles, her deceit is in Bernie Madoff territory. Madoff took *decades* to rip $65 billion from his clients; in only several years, Elizabeth Holmes effectively pilfered $700 million from misled individuals.

People hate Shkreli because he (legally) jacked up the price of a drug gay people depend on

Only a tiny minority of people understand the reasons for which Martin Shkreli was jailed. They're only focused on how he increased the price of a drug in accordance with the law.

I wouldn't wish HIV/AIDS on anyone, but let's not forget that Martin Shkreli's biggest "crime" was to jack up the price of a drug that is mostly of use to gay men with HIV/AIDS. That the move was legal meant nothing to seemingly anyone criticizing him. Unlike Elizabeth Holmes and her furtherance of the women in STEM agenda, the decision for a price rise was politically incorrect.

Martin Shkreli is nothing but a surrogate for the hatred people feel toward pharmaceutical companies in general. He is far from the first person or corporation to chase astronomical profit ratios. Many run-of-the-mill cancer treatments, for example, are developed and produced very cheaply before extremely high prices are set.

Few people have any real knowledge of the hedge fund issues which landed Martin Shkreli in a prison cell. What incites most of his detractors is that he (rather legally) pissed off gays and leftists. I have seen almost no discussion of the real merits of Shkreli's prison sentence. Instead, the internet abounds with schadenfreude about how a man who increased the cost of a HIV/AIDS drug thoroughly deserved to be incarcerated.

Where are all the media hacks who propped this woman and her massive fraud up?

"Journalists" obsequiously covering Elizabeth Holmes have regularly stolen the playbook of "hack" newsman Glenn Thrush.

The same dumbasses who have flogged, ad nauseam, the dead horse of the "Russia investigation" and its absurd claims that Moscow stole the 2016 Presidential election for Donald Trump are responsible for glorifying the proven fraudster Elizabeth Holmes. Every outlet from CNN and *The Huffington Post* through **publicly-funded** broadcasters like PBS and NPR have waxed lyrical about Holmes' "genius" and/or sought to pour water on the well-founded concerns she was operating a fraud factory.

Without leftist journalists obsessed with women in STEM, there would have been no crazy hype about Elizabeth Holmes, her company, and her childish predilection with mimicking the fashion choices of Steve Jobs. Insouciant liars for major media outlets gladly applauded Theranos without conducting any due diligence whatsoever. They did not scrutinize Holmes' business claims and, more importantly, they did not investigate even close to properly when it became clear that her purported "technologies" had scam written all over them.

Elizabeth Holmes should be in jail, much more so than Martin Shkreli. But the pussy pass brigade just won't have that and she'll remain a free woman.

10 Lessons I Learned From Henry Ford

March 18, 2018 | by Alfonso Taft | Link | Original Link

Deferential admiration does little to serve ROK readers. Lessons from a prolific man of historical significance like Henry Ford however; are of great value. What can we learn from Henry Ford? What were his core teachings? Lessons from *My Life and Work* by Henry Ford contain truths that can guide a man to success, wealth, and fortune.

1. Work Will Set You Free

> "The man who has the largest capacity for work and thought is the man who is bound to succeed."

There are endless self-improvement blogs, videos, and courses available for men online. These resources are masturbatory unless they result in action. There is no secret to success. You must put in the work.

> "The Natural thing to do is work— to recognize that prosperity and happiness can be obtained only through honest effort."
>
> "It is men's labour that makes the harvest what it is."
>
> "…thinking first of money instead of work brings on fear of failure and this fear blocks every avenue of business — it makes a man afraid of competition, of changing his methods, or of doing anything which might change his conditions."
>
> "Every man is better for a period of work under the open sky."

2. Titles Mean Nothing

If you could recognize this guy, that would be great

When you work for a startup company, you can ascribe yourself any title you want. When I worked for a startup in college I was Regional Manager and Vice President of our three-man company. Titles are meant to a evoke status and hierarchy. Sometimes they can be misleading. Other times they can be infuriating to subordinates— especially when the title isn't indicative of a man's character and capabilities.

> "Not only is a title often injurious to the wearer, but it has its effect on others as well. There is perhaps no greater single source of personal dissatisfaction among men than the fact that the title-bearers are not always the real leaders."

How annoying is it when your "boss" is totally inferior and incompetent? Henry Ford was well aware of the frustration and rage this dynamic could cause employees.

3. Business is a Service

A man has an idea for a business or product—who are his potential customers? Does his business provide an essential service that benefits an individual or group of people? Henry Ford viewed business as a service. In doing so he grew his empire to over $87,000,000 in value by April of 1921.

> **“**For the only foundation of real business is service.”
>
> “The spirit of true service will create for us. We have only each of us to do our parts sincerely.”

4. All Men Are Not Equal

This should come as no surprise to ROK readers. For our blue pill friends, the competitive nature of life is a harsh reminder that their vision for a multicultural egalitarian world government where all people are exactly equal is a fallacy by nature.

> **“**There can be no greater absurdity and no greater disservice to humanity in

> general than to insist that all men are equal."
>
> "We have to recognize the unevenness in human mental equipments."
>
> "Any plan which starts with the assumption that men are or ought to be equal is unnatural and therefore unworkable."

5. Innovation Comes From The Outside

Henry Ford began development of his gas engine automobile on a farm in Michigan. This isn't dissimilar from other great innovators and inventors. Philo Farnsworth began developing the television on a farm in Idaho when he was fourteen. Dr. Shiva Ayyadurai, invented Email in an office in Newark, New Jersey at the age of fourteen.

Globalists would prefer to have innovation centralized in our "Universities" — which are essentially indoctrination camps for kids. Innovation comes from the outside, it is decentralized.

6. Money Can Be Your Master or Your Servant

Henry Ford may have paid his workers a good wage, but it wasn't out of charity — it was a good business decision that some say helped the middle class take off.

> "The only use of money is to buy tools to work with or the product of tools."

7. Impossible Is Nothing

Donald Trump during Donald Trump Cutting the Ribbon on his New Apprentice Slots at Taj Mahal at Taj Mahal in Atlantic City, New Jersey, United States. (Photo by Tom Briglia/FilmMagic)

I’m sure plenty of people told Henry Ford an affordable gas engine automobile was an impossibility. I’m sure plenty of people said the same to the Wright brothers, Philo Farnsworth, Dr. Shiva Ayyadurai, and our President, Donald J. Trump.

Faith is a factor in the achievement of the “impossible.”

> “Everything is possible… “faith is the substance of things hoped for, the evidence of things not seen.”

In regards to his friend, Thomas Edison, Henry Ford said: “His knowledge is almost universal. He is interested in every conceivable subject and he recognizes no limitations. He believes that all things are possible.”

8. War Is A Racket

> “I have never been able to discover any honorable reasons for the beginning of the World War. It seems to have grown out of a very complicated situation created largely by those who thought they could profit by war.”
>
> “An impartial investigation of the last war, of what preceded it and what has come out of it, would should beyond a doubt that there is in the world a group of men with vast powers of control, that prefers to remain unknown, that dos not seek office or any of the tokens of power, that belongs to no nation, whatever but is international—a force that uses every government, every widespread business organization, every agency of publicity, every resource of national psychology, to throw the world into a panic for the sake of getting still more power over the world.”
>
> “There were men in every country who were glad to see the Word War begin and

> sorry to see it stop. Hundreds of American fortunes date from the Civil War; thousands of new fortunes date from the World War. Nobody can deny that war is a profitable business for those who like that kind of monet. War is an orgy of money, just as it is an orgy of blood."
>
> "Once we were in the war, every facility of the Ford industries was put at the disposal of the Government."

10. The United States Has Not Reached Its Full Potential

> "We have only started on our development of our country — we have not as yet, with all our talk of wonderful progress, done more than scratch the surface."

Henry Ford was a visionary and captain of industry. He was an American patriot who fought against subversive international elements within the United States. He will be remembered a king.

English Actor Who Bent Over Backwards For The #MeToo Movement Gets Cucked By His Wife

March 19, 2018 | by Christopher Leonid | Link | Original Link

Colin Firth, a stalwart of the #Metoo movement, has just been hung from his own gallows. His wife is revealed to have had an affair with the man who… wait for it… *she accused of stalking her*.

Livia #hertoo Firth

Livia Firth's affair with the Italian journalist Marco Brancaccia took place back in 2015, but a taste for romantic men is not without its dangers. It seems that when she returned to

her film-star husband, Brancaccia couldn't bear to be parted from Livia and contacted the Firths in England. Attempting to allay suspicion of her infidelity, Livia told her husband that Brancaccia was in fact stalking her. Firth then did exactly what he should—charging Brancaccia down in the Italian courts. Under that legal scrutiny, however, Livia was finally forced to admit her adultery.

Poor Colin, the creaking quixotic who stood up for his lady's nonexistent honour, has been jousted from his horse in full public view. *Oh, Les Infortunes de la Vertu!* But there is a lesson which, in its selective tact, our society will do its utmost to avoid taking from this.

Life Imitates Art

Some of you may remember the Bridget Jones cult films wherein the slatternly alcoholic heroine rides the credit-boom funded cock carousel of 1990s London until she hits the wall. Firth and Hugh Grant—the stock Alphas of the British film industry—then have a fist fight over her.

The latest iteration of this perverse franchise involves our heroine accidentally getting knocked up aged about fifty and being unable to decide which of two men is the father.

The appeal of these and other *Sex-and-the-City*-type movies lies in their promotion of the Gothic courtly lover so as to accommodate the slutty hedonism of postmodern women, assuaging an urbanette's natural malaise about the connection between her lifestyle choices and her worthiness of a 'decent man.'

Firth now has little option but to live up to the soft standards of 'manliness' that he helped to create. Apparently he has already expressed his sympathies to Brancaccia who, after all, has lost the woman he loves—Firth's own wife.

Although I admire Firth for saving his marriage, I see no evidence that he has broken from his approval-seeking cinematic ideal which assumes a woman's sexual strategy is virtually beyond reproach. Now that social and legal enforcement is lent to this dangerous

theory in real life an urgent need has arisen to call to account the lie of lust-driven, chivalry.

From Pretty Lies To Tyranny

In Shakespeare's *King Lear*, it is remarked:

> ...the policeman who lashes the whore has a hot need to use her for the very offense for which he plies the lash.

#Metoo evokes this dynamic as a whore's means of shaming those who may judge her by inferring that they do so out of repressed carnal self-interest. However, society's cooperation with this sleight of hand is causing the mask to slip as each phoney case that collapses reveals the *victim's* repressed desire for these 'unwanted approaches.'

People like Livia Firth are the reason that real victims of abuse steer clear of such tides of fashion which inevitably ebb from their service.

If feminists had a shred of integrity, they would demand that Livia make a public apology to the sexually abused, whose plight she brazenly co-opted to cover up her own sexual opportunism. Of course, they won't.

If Colin cares enough about victims to publicly shun Woody Allen, he should publicly shun #metoo as well—and do so *before* the movement has run its own credibility into the ground.

None of this can possibly end well for the popular Romantic industry. A society where women are not held accountable for acting on their impulses is a society where men *must* illustrate what those impulses are by manipulating them. The UK's true impetus for banning Roosh from its shores was not to suppress pickup artistry *per se* but rather to extinguish those lights of sexual realism that pickup artists carry through our darkest hour of self-imposed romantic bafflement.

Sites such as these are a true bastion against the unspoken axiom of our carnal tyranny: *Libido vincit omnia.*

Defining men's agency during the collapse of the Sexual Revolution.

Bullshit Degrees Are Scamming College Students

March 19, 2018 | by Beau Albrecht | Link | Original Link

College once was an institution for educating society's best and brightest to their highest potential. Later, a degree came to be seen as a guaranteed ticket to the middle class. During the 1990s, promoting higher education for the masses became a big effort. That social experiment demonstrated that *not just any degree is worthwhile*.

Low ROI majors

Well, at least I'm not at home raising precious children. My grandmothers were so oppressed! If only they had the opportunity to file TPS reports all day instead….

There are many articles online about degrees with the lowest return on investment. From "30 Worst Paying College Majors For 2013", here are the ten least profitable, and their starting salaries:

- Athletic training: $34,800
- Culinary arts $34,800
- Theology: $34,000
- Special education: $33,800
- Animal science: $33,600
- Social work: $33,000
- Broadcast journalism: $32,700
- Exercise science: $32,600
- Elementary education: $32,200
- Child & family studies: $30,300

Many of the above salaries will increase during mid-career, but some less so. Why get deeply indebted for a degree that gets only fifteen bucks an hour, taking years to improve? Further, traditional housewives always have been experts at both culinary arts and child/family studies, even illiterate Bronze Age peasants.

Low opportunity majors

At least studying art history lets you understand how this happened.

For many “soft studies” degrees, there’s a very limited market for new graduates. Career paths for an art history Ph.D. are:

- Museum curator
- Art history professor
- Fivebucks Coffee

How many unfilled job openings at museums requiring Ph.D. knowledge are there? New York City is the Mecca of the American art scene (though say what you will about today’s recent quality). The Big Apple has a few dozen art museums, but in a city of 8.5 million, that’s not quite a gold mine. At the big ones like MoMA and Guggenheim, competition for high-ranking positions must be pretty fierce.

The academic track is competitive too, especially in obscure subjects with questionable social value (like art history) or none (see below). Also, qualified candidates can forget about becoming professors in many faculty departments if they don’t hold the “correct” political views—or at least fake it until tenure.

Women’s studies

The science of turning charming young ladies into brainwashed zombies

What can a feminist do fresh out of college? Career paths for a women's studies Ph.D. are:

- Professional activist
- Women's studies professor
- Human resources
- Fivebucks Coffee

How many feminists does a nation *really* need to prosper and flourish? Putting it more seriously, professional activism is a dodgy business plan.

Not every Tumblrina can successfully monetize her attitude into a full-time career. The market is already saturated beyond economic viability with feminists (likewise SJWs and White guilt engineers) living on donations. As for foundations, the big-name agitators get rich, but the apparatchiks would do better working productive careers. Finally, why do would-be professional activists need college educations, since having an opinion is all that's necessary?

Job statistics are rather thin for women's studies grads, unlike their waistlines. Payscale indicates the most common job is administrative assistant, seven respondents earning an average of $14.81/hour. (A secretary with an attitude—what's there *not* to love?) The five respondents who became community outreach coordinators—whatever *that* means—did somewhat better, at $16.56/hour.

Leftist underwater basket weaving degrees

Trigglypuff was once a normal girl, before she caught the cultural Marxism mind-virus.

Other bullshit degrees include gender studies, GLBT studies, fat studies, among several worthless victimology "studies". Sociology offers the entire cultural Marxism buffet, but no practical value. (Engineering, medicine, and computing provide useful jobs, but how does learning sociology benefit society? For that matter, can't you get a thorough education in fat studies by working in a fast food joint?) These "disciplines" are what Harold Bloom called the School of Resentment, a legacy of the Frankfurt School. Academia needs more honest people like Bloom, and fewer postmodernists, critical theory eggheads, and other leftist drips.

Can someone get a middling salary *without* massive college debt? Garbage collectors earn an average $15.25/hour—better than those feminist secretaries! That doesn't count extra gravy from overtime. Also, garbage men aren't stuck with student loans (unless their career plans went awry). Moreover, hauling off trash isn't a dream job, but this 90% male occupation is certainly necessary to society.

I tried to find stats on gender studies graduates. Apparently there's no such category, but Payscale's search engine popped up three janitorial listings (another low-end but necessary job). What's a gender studies program even about, anyway? The University of Indiana helpfully clarifies this:

> The Program promotes a critical, feminist, and cross-cultural understanding of structural inequalities in a local and global context from historical and contemporary perspectives. Students explore the intersections of gender, sexuality, social class, nationality, ethnicity, race, religion, age, and ability. The Program seeks to understand and address how the contributions and experiences of women and other marginalized groups are devalued. Therefore, the Gender Studies Program is active in facilitating and supporting a variety of activities and events concerned with social justice.

Why is getting degree in cultural Marxism worth going into debt? How is it more important than being a truck driver or a welder?

Students need real career counseling

More cost, less value

Choosing worthless majors means huge debts will haunt graduates for years. Congress changed the law to please the banksters (they make hefty "campaign contributions"), so student loans can't be discharged through normal bankruptcy proceedings. Therefore, the debt millstone keeps accumulating interest, potentially following some graduates to the grave. The colleges and their bloated administrations get filthy rich from this arrangement, and especially the banksters. They're failing their alumni, but why would they want to fix this?

For the students, *buyer beware*. Some might laugh at a "Generation Snowflake" kid for believing a $120K salary would result from a doctorate dissertation about institutionalized oppression of Muslim Elvis impersonators, or intersectional perspectives on lesbian ninjas. These naïve, Blue Pilled youths let themselves get scammed, but those selling them empty dreams are the most blameworthy.

Although they seldom have much experience with work, budgeting, or managing debt, students entering college make a life-changing decision, for better or for worse. *They need a cost/benefit analysis for an informed choice.* Cigarettes have warning labels, because cancer and COPD are kind of a drag. In that spirit, students need warnings about the financial risks they're incurring.

Prior to enrollment, colleges should have freshmen review information about outcomes for their chosen majors. (If there's insufficient data for statistical relevance, an aggregate of similar colleges will do.) That should include information from surveys of recent graduates, tracking annual outcomes through at least five years, concerning items like these:

- Annual income
- Job situation (unemployed, part time, full time)
- How long it took to find work
- What types of businesses hired them
- Their actual job descriptions
- Their living situation

Students should also be told the following up front:

- Average completed degree cost
- Projected monthly student loan payments
- Projected interest added by payoff
- How long it will take to pay, given anticipated income and living expenses

Before committing to a major, students would get a realistic financial forecast. If a four year leftist propaganda degree probably means living in Mom's basement, flipping burgers part time, and $80K (before interest) in student loans, they might choose a *real* major instead.

Now take action

We need your participation.

Imagine fewer kids becoming brainwashed SJWs. Imagine women's studies departments as empty as the Harvey Weinstein Charm School. *Let's do this.* Write your politicians—if even 10% of you request mandated disclosures necessary for an informed career choice, it could get some serious discussion in Congress at the very least.

Leftist professors now on the gravy train will howl with rage, but that’s *their* problem.

5 Christian Resources For Men Who Want To Deepen Their Faith

March 19, 2018 | by Michael Witcoff | Link | Original Link

In the comment section of a recent article, I was asked what resources I'd recommend for those seeking the bulwark of Christian spirituality in these trying times. Given the endless number of books and videos out there—some of which are spiritually quite misleading and dangerous—I thought I'd make a list of my personal recommendations for those of you interested in either starting or deepening your walk down this path.

Here is the list of my current top 5, in no particular order.

1. "Finding The Church That Jesus Built" by Deacon Ezra Ham

In this video series, Deacon Ezra (a Subdeacon at the time of filming) explains the entire history and development of the early Church. If you are a Protestant who has ever wondered what happened after the events described in the Book of Acts, this is a fantastic place to learn the answer to that question. If you aren't a Christian at all—but are interested in the religion's development as a matter of purely intellectual learning—you will still find much to appreciate here.

You will learn about the various regions of the ancient world, who ran them, where the Apostles went, and what they did there. You will also learn about the development of Holy Scripture within the context of Holy Tradition, and how these teachings were passed down over time. This series is so in-depth and educational that it was one of the final catalysts for my conversion from Protestantism to Orthodoxy.

If you want to watch the series from start-to-finish (which I recommend doing), here is the first video:

2. “Orthodoxy And Heterodoxy” by Father Andrew Stephen Damick

I have read hundreds (if not thousands) of texts on comparative religion and philosophy. Many are dense and difficult to read, while many others simply compare systems side-by-side with no standard against which *all* are compared.

In this book by Father Andrew Stephen Damick, Orthodox Christianity is that standard. Everything else under the Christian umbrella is described in terms of how it broke away from the Ancient Faith, while giving due acknowledgment to those aspects of the Truth which they have in common with it. The book is easy to read and highly educational, explaining in great detail the theological and dogmatic differences between both various Christian denominations and non-Christian religions.

3. “Unseen Warfare” (translation by Father Jack Sparks)

Outside of Holy Scripture, the Unseen Warfare series is my favorite set of spiritual texts. Originally written by the Roman Catholic monk Lorenzo Scupoli, it was later translated and edited by the Orthodox Saints Nicodemus of the Holy Mountain and Theophan the Recluse. It was then translated once more into English, and re-arranged into its present format by Father Jack Sparks (an ex-Protestant who converted to Orthodoxy).

- Virtue In The Unseen Warfare
- Victory In The Unseen Warfare
- Prayer In The Unsween Warfare

Unlike the other resources in this list, Unseen Warfare contains practical instructions on how to draw nearer to God and submit your own will to His. Though the writing is simple, each page contains a wealth of wisdom worth spending considerable time digesting.

Occasionally, there can be a tendency among Christians to focus so heavily on head-knowledge that they forget the simplicity and grace of the Gospel. It is important to remember that Christianity is a not a religion of the intellect, but a religion of the heart. Whereas the other resources on this list will dramatically deepen your mental understanding of Christianity, Unseen Warfare skips the history and goes straight to the transformative core of its practices.

Each of the three books in this series is relatively short in terms of page-count, but they will take you plenty of time to work through if you follow their instruction properly. You can find the books either separately, or bound together in a single volume.

4. The “Whole Counsel Of God” podcast, on Ancient Faith Radio

If you want to understand the Bible in its proper context, it's imperative to learn from those who understand said context in the first place. The idea that anyone can pick up Scripture and understand it right away, either of their own accord or by "*inspiration of the Holy Spirit*," is a fairly modern invention that was never intended by the men who wrote its various books and letters.

The Whole Counsel Of God podcast is a gargantuan undertaking by Father Stephen DeYoung, an ex-Protestant pastor and Bible teacher who became an Orthodox priest. He goes through Scripture, line-by-line, filling in the details and context of every single verse.

5. "Orthodoxy And The Religion Of The Future" by Father Seraphim Rose

This is one of those books that will open your eyes to a wide variety of cultural, religious, spiritual, and social phenomena all at the same time. In Orthodoxy And The Religion Of The Future, Father Seraphim Rose wrote (way back in the 70s) about the various streams of occult and Eastern spirituality which were beginning to infect American Christian culture.

He pulls absolutely no punches in this book, describing in detail why so many different highly-appealing belief systems end up being so spiritually dangerous to their practitioners. As I've mentioned in the comment sections of various articles, I traveled through a wide variety of these systems myself—experiencing spiritual visions and phenomena which had me utterly convinced of their truth at the time.

Rose's book succinctly describes what these kinds of phenomena truly are, and really lays bare just how deep into delusion a person can get when their minds, hearts, and souls are unprepared for the spiritual warfare taking place every moment of our lives. I can confirm from personal experience that, unguarded by a proper understanding of said warfare, we are easy prey for demons.

As my journey continues, I have no doubt my list of favorites will evolve and change along with my understanding. But if you've been enjoying my articles thus far (and are curious about the path of a man who went from Jewish atheist, to gnostic Mason, to Orthodox Christian), then these are my current recommendations.

If you are a genuine seeker—of the type that is always willing to challenge your own beliefs and opinion in light of new information—then this list will keep you busy for a while. I wish you well, and good luck on your journey.

6 Strategies For Beating False Sexual Allegations At Work

March 20, 2018 | by B. Chadwick Galt | Link | Original Link

As men enter lucrative positions and ascend up the ladders of success, an increasingly common tactic to derail them is the malicious false allegation. Modern employment culture places masculine men at the mercy of women with whom they share the workplace. That, coupled with the fact that human resources and personnel departments are overwhelmingly dominated by women means that masculine men are essentially working behind enemy lines. Most gainfully employed men should therefore expect to be involved in a case of false allegations as either a witness or an accused party at some point in their careers.

To understand why women make false allegations, one must know it is often due to their realization that they cannot outperform or control a talented male rival. Women know that institutions tend to resolve any dispute between a man and a woman in favor of the woman due to “vaginal privilege” and because employers reason the females are more apt to file expensive lawsuits and make an overall bigger stink. Such women also view a false allegation is a means to enrich themselves with monetary settlements all while sullying the reputation and professional standing of a rival male.

The #MeToo hysteria is enabling men to finally realize that all but the most exceptional complaints are false, power-snatching, money-grabbing attempts. However, a seldom answered question is how does a man successfully defeat a false accusation from an unscrupulous female at work?

1. Recognize your enemies and keep a journal

The perceptive male can identify potential false accusers simply by being observant. That girl who always has a toxic quip, hostility to your mere presence, behaves as if the rules don't apply to her, or tries to bait you with sexual jokes/innuendo is a prime candidate. You should make a brief note of each negative encounter with such a woman to include dates and witnesses. In the event it comes to a false allegation, you can cut and paste those notes into a memo to illustrate a historical context and to mount a strong defense.

2. Remain calm and composed

If a false allegation is ever lodged against you, it will be quite disconcerting. You'll wrack

your brain to determine if you did something wrong, and you'll fluctuate between disbelief and anger. However, save the rants, shouting, and stress-busting outbursts for your home or the gym.

Your composure, as hard as it will be to keep, remains a very key component of how management and human resources will assess your culpability. If your reactions give them any reason to find you at fault, they will. So remain, polite, dispassionate, and matter of fact whenever you address the matter.

3. Treat the accuser kindly and respectfully after the complaint is lodged against you

Many otherwise unfounded female false accusations later develop 100% legitimacy if it can be shown that you are treating the female any differently, ignoring her, gossiping about her, or basing decisions related to her on her complaint due to the anti-retaliation provision in discrimination law.

Some women know their initial complaint will never hold water but wait for your negative reaction to it to establish a case of unlawful reprisal to discriminatory complaint. Therefore treat any false allegation against you as a chess match and comport yourself in a manner that protect yourself and your case.

4. Hire a labor law attorney to craft your official response to the complaint

Finding an attorney is a pain and it can be expensive, but trust me, they can save your rear in ways you could never imagine. Attorneys know the correct language, tone, and tricks to get these complaints dismissed. More importantly, they can assist you in crafting a counter-compliant (against the female or against the employer) which will not only make the lying female's head spin, but it will provide you with the same retaliation protections which will protect you from being later disciplined or fired. Moreover, a counter complaint could end up being settled in your favor with your attorneys' fees paid.

5. Expect a multitude of shaming tactics on her behalf

Fully expect colleagues, managers, human resources muckety mucks, and everyone else to take her side initially. You will hear, “I’m sure she would not just make it up,” or “Just man-up about it and come clean.” Ignore those shaming attempts as simply the gynocentric impulse springing into action to shame you into easing up on the demonic damsel in distress. March forward undeterred and without apology.

6. See the case all the way through to the end

Have your counter complaint reviewed by the EEOC (or state counterpart agency) and be willing to take it to a court of law if need be. The vast majority of cases settle out of court which is a way to get your attorneys’ fees recouped along with back pay from a denied promotion or opportunity. Most cases take months or even years to be resolved,

especially if you have a particularly determined false accuser.

Conclusion

All men, white, black, Asian, Latino, atheist, Christian, Muslim or otherwise have the right to file or counter-file a workplace discrimination case against anyone, including against females or the institution itself. Don't be that fool who's been misled to believe that only women and minorities have these rights!

False allegations at work are a manifestation of the ongoing war against men. That being the case, arm yourself with the knowledge to legally beat back any contrived challenge to your professional life and earning power. Far too many men fail to aggressively act in their defense then later wonder why they were denied promotion, suspended, or outright terminated. Don't be that guy.

Pedophilia Is Entrenched Within The Highest Reaches Of The French Elite

March 20, 2018 | by Jean-Batave Poqueliche | Link | Original Link

French justice just acquitted a man after he had sex with an 11-year-old girl, on the grounds that the “sex was consensual.” As you probably know by now, after inoculating the most repulsive ideas in the everyday life of the West, the next big project of the left is to normalise and legalise pedophilia.

Liberal child predators are untouchable in France. The gangrene is so deep and is so inextricably linked with the high-spheres of the government that tackling the roots of the problem would mean a total collapse of the establishment.

Pierre Bergé

[image]

He was the sadistic lover of fashion designer Yves Saint Laurent, a “source of inspiration” for trendy Parisians. He dealt with his fortune after his companion’s death and bought the French newspaper Le Monde. He almost managed to tank it by making it dive even more in the Lügenpresse with his sick agenda.

Yves Saint Laurent was a sick and depraved sociopath of the lowest level, with all his being invested and reveling in the most abject and perverse circles.

The Wicked Lulu and its creator

YSL wanted to distribute his sketches of the “Wicked Lulu”(a story of a satanist child who sacrifices other children, electrocutes old people or sells little girls to an Arabian emir, their “new daddy”) to children but the authorities of the time prevented it.

Documented sources were published on how this old pill bug of Pierre Bergé had a cohort of “docile slaves” walking around with dog leashes while he tortured and urinated on them. The same sources describe how he abducted little boys in his summer house in Morocco and invited many left-wing political figures and personalities, where they could satisfy their abject urges, away from the reach of the French justice.

Fabrice Thomas, the pair’s former driver, said that Weinstein is a “choir boy” compared to the sick bastards that YSL and Pierre Bergé were. Luckily for us, Satan is now raping them with his pitchfork somewhere in the ninth circle of Hell.

Jack Lang

A flamboyant homosexual, former Minister of Culture, and close friend of homo-activist and advocate of pedophilia René Schérer, Lang is also one of Macron's mentors and a close friend of Pierre Bergé. A vocal supporter of Roman Polanski, he signed an open letter in 1977 requesting that pedophiles abusing children older than twelve should not be prosecuted.

Lang's name surfaced in the supposed abuse of minors during the "Corral Affair" in the eighties during which one child was found raped to death.

His name is also linked to the affair of Rosella Hightower's dance school in Cannes, where the owners of the school were accused of providing children to high-ranking personalities. Lang was incriminated by telephone recordings during a police investigation, but was not prosecuted.

A few years ago, a “former minister” was caught in a police raid in Morocco targeting pedophile circles. He was exfiltered by the French state in the hours following his arrest. Lang’s name was not officially involved as he went one step ahead and threatened with prosecution anyone that would dare accuse him.

As Roger Holeindre, war veteran and figure of the Front National said: “There are places where children are brought as prostitutes to members of the Socialist party and the likes of Jack Lang (…). I won’t give a flying fuck about Europe until the rot in my country is not cleansed. I want to save my fatherland and all the Jack Langs of France and everywhere else to be hung high and finally made accountable.”

Former Head of the Central Directorate of General Intelligence Yves Bertrand kept his investigations logged in a booklet where it is written that “Lang went to the Mamounia Hotel in Marrakesh to have sex with little boys.” He reported it to President Jacques Chirac’s cabinet but the enquiry was dropped.

Daniel Cohn-Bendit

Known for being a communist rioter who harboured a terrorist from the Rotte Armee Fraktion and a mediocre European deputy for the Greens, Daniel likes diddling children almost as much as he likes homosexuals and opening France’s borders for rocket scientists and mathematicians from Mogadishu. Here is a summary of his political priorities.

DCB was entangled in accusations following the pedophile scandal of the German Green Party which shook the country. Cohn Bendit described in his book “Le Grand Bazar”, pulished in 1975**,** how he worked in an “alternative” (read “left-wing unmonitered degenerate”) kindergarten and let kids open his fly and play with his genitals. He “needed their desire”. He also confessed on TV how being undressed by 5 year-old little girls was an amazingly sexual experience.

He was called out several times by his adversaries on his pedophile sympathies, among them Jean-Marie Le Pen, and recently the people of the city of Wroclaw in Poland wanted to confront him when he tried to hold a conference in one of the local universities. Seeing angry protesters, he locked himself in his hotel and never came out.

Every time he is cornered, his excuse is: “How could you do this to me? All my family was gassed in Auschwitz!”. He says now that he regrets writing about it. I think he mainly regrets getting caught.

Jean Marc Morandini

This television presenter and producer is an apostle of trash television and could be the gay child of a romance between Dr Phil and Jeremy Kyle. He started sweating in 2016 when he was accused and questioned by the police regarding the castings he organised for young males, many of them minors, to act in his series.

He allegedly asked those minors to pose naked and masturbate on camera during the castings. He was also caught and assigned to court for knowingly sending sexually explicit messages to a 15 year-old minor. Justice eventually did not prosecute him as the details of the affair were “too vague.”

Frederic Mitterrand

Mitterrand is the nephew of former Liberal and free-mason president Francois Mitterrand

and a famous homosexual, “man of culture”, TV presenter, and writer. He likes to describe how he avidly preyed on male minors of South East Asia before choosing the “Maghreb solution”.

He explained in great detail in his books how he enjoyed the brothels of Thailand selling little boys: “All the rituals of the twink fair, of this slave market, turned me on uncontrollably.”

[image]
Mitterrand and Bergé dedicating a plaque to YSL on the Villa Majorelle, where all those horrors took place.

Mitterrand has two “adopted sons” and the Moroccan justice is still after him for taking these children from their mothers and no doubt that he dresses them as Lactacia, unleashing his urges on them while the authorities bury their head in the sand.

Le sale et l’immonde est paradé par les puissants

It is incredible to notice that the power that those elites wield makes them forget their human condition while persuading them that they are above the law and can provoke the population with their sordid behaviour with virtually no consequences.

These are just echoes of the suspected pedophile rings protected by power all around Western Countries: Great Britain, Lithuania, Belgium or the United States among others.

Three elements should raise eyebrows regarding the above characters:

- all of them hail from the left and were important supports of Emmanuel Macron
- all of them are homosexuals and vocal supporters of Roman Polanski
- all of them spent regular holidays in Morocco and all the accusations lead there

Those who still believe in the representatives of the French state and have anything but contempt for them are in denial. Only fire can cleanse this filth.

Runaway Train

March 20, 2018 | by Roosh Valizadeh | Link | Original Link

Ten years ago, I was staying at a hostel in Buenos Aires. I was nearly five months into what would be a six month backpacking trip through South America. Things were not going so well. Repeated illnesses revealed that my constitution was too fragile for the continent. I began longing for the home I eagerly left behind, or at least somewhere more comfortable, but my ego pushed me to continue. I didn't want to appear like a quitter, and I still needed material for the book I planned on writing about the experience. Then for the first time I heard the 1992 song "Runaway Train" by the band Soul Asylum.

It seems no one can help me now
I'm in too deep
There's no way out
This time I have really lead myself astray

Runaway train never going back
Wrong way on a one-way track
Seems like I should be getting somewhere
Somehow I'm neither here nor there

I immediately identified with the song. There I was, healing on a dorm room bed in Argentina from yet another stomach bug after quitting my job and selling most of my possessions to travel to the third world and hang out with hippie backpackers who wouldn't stop telling me that poor people are "so happy." But I didn't want to go back to my career. I was developing a taste for a new kind of freedom, and there was no way I could deal with middle managers and pointless meetings again. I had to carve a new path.

Fast forward ten years. The stomach parasites and bed bugs were a distant memory. The pub crawls and ten-hour bus rides through winding mountain roads were no more. I've since sold tens of thousands of books and achieved a modest level of comfort. My apartment is small but located in the middle of the city. It's stocked with all the comforts I need, including a bread machine and panini maker. I'm not aching for more women, fun, or adventure like before, and I even experience fleeting moments of bliss when the feeling of the rain and the sound of the wind strike me in a certain way. Yet in spite of this, I still feel that there is a missing ingredient, a nagging emptiness I cannot fill.

I loaded a music playlist on YouTube, hit the shuffle button, and began cooking dinner. Midway through, Runaway Train came on. Instantly, images of South America rushed through my mind, both the highs and the lows. I smiled and reminisced. How long ago those times were, as if they happened in another life.

Can you help me remember how to smile?
Make it somehow all seem worthwhile
How on earth did I get so jaded?
Life's mysteries seem so faded

I can go where no one else can go
I know what no one else knows
Here I am, just drowning in the rain
With a ticket for a runaway train

Once these lyrics set in, I stopped stirring my chicken dish and turned my head towards the music. My throat tightened. It's true that I fantasize of leaving my city every day, but to where? I don't know if I have the energy to start over again. And every day I think of finding a good woman, but how? I'm too burned out and broken, and if I could make it to

nearly thirty-nine years of age without a face that I could love, chances are I could make it another thirty-nine years.

I know that as comfortable as my apartment is, and as much I enjoy eating the food that comes from my bread machine and panini maker, they are not enough to make me stay. The three friends I have in town will one day move on. Ten years have passed me by and I'm as rootless as I was in Buenos Aires. I'm still on the hostel bed, trying to improve my situation and become whole, but that outcome becomes ever more distant. I've stayed away for so long that I no longer even have a home to return to.

Did I really expect my essential nature to become something totally different? Did I believe that a change of scenery could affect my internal state of mind? My energy is lower today, and I am calmer, but the ache remains. The dissatisfaction that was born when I was born simmers underneath the surface, brought out by song. It has never left me, and I don't think it ever will, no matter where I go and what I do, because whatever train I take, my self will always travel with myself. Maybe one day I can look out the window and just enjoy the ride.

Penis Envy Is Out Of Control Among Western Women

March 21, 2018 | by William Adams | Link | Original Link

In my earlier years as an upper-secondary school teacher, I made some valuable insights about female nature, socialisation of the coming generation, and intersexual dynamics. I also met some interesting individuals that I still have occasional contact with, at least through social media accounts (a former student is actually my current girlfriend).

One female, now in her mid-20s, in particular serves as an incarnation of the present penis envy and you-go-girl-ism syndrome which penetrate today's western society. One may actually gain some insights from her decisions and inclinations, especially if those are reflections of broader and deeper aspects of society and culture and not just individual idiosyncracies.

Female narcissism and moderate talent as tools for dominating the androgynocracy

A typical point being underscored by writers in the manosphere is that women are becoming more masculine, and at the same time many men are becoming more feminine, leading to an androgynous society in which women mix female and male characteristics.

While a proper "Yang and Yin" balance might be important for both sexes, unfortunately these types of women tend to take some of the bad with them in the process. Instead of wanting a cock in their vagina, so to speak, they want a penis *and* a vagina so that they can screw the residues of the decaying patriarchy, while simultaneously being literally

smashed by high-value men.

For instance, my previous student is obviously filled with ideas in her head of wanting to become “powerful”, leading to a career in the contemporary media landscape. In a Facebook post she even stressed that she was currently “building an empire”. Recently she also stated that she had moved to London~~istan~~ in order to obtain more influence and enhance her career at a new company.

She is fairly tall, slim, pretty, brighter-than-average, socially competent, and has that sort of chiseled jawline that make her look a bit more like a man. All her major goals in life seemingly resemble those of an ambitious male, but like most other modern women with penis envy she ardently supports you-go-girl liberal feminism and #metoo.

This is the great paradox of Western feminism: wanting to acquire acceptance in a male-dominated world, but at the same time destroy its linchpins, in other words males and the power structures predominantly built and upheld by men.

But they do really just want to get a piece of the pie, some say, leading to a sort of balance or synthesis between traditionalism and feminism through which both sexes can prosper. Then why can almost no feminists except for Camille Paglia accept the irrefutable fact that men, both their bodies and brains, have created almost everything of far-reaching value in the world? Feminists, even the fit ones, do not want to share the cake with men but metaphorically devour it all themselves.

Loading…

The downsides of penis envy

But being an economically successful female comes with a price. While a young woman gets her fair share of high-value cock, even celebrity dicks (yeah, she has hinted about

that too on Facebook), it's far from a guarantee that they will marry her when she is ready, while dwelling in the liminal time-space between youthful beauty and the ineluctable wall that day by day encroaches upon her hedonistic and narcissistic existence.

While people, according to the assortative mating principle, with similar incomes, looks and social status tend to marry, men care more about beauty and fertility than the size of her wallet.

For instance, currently one of the greatest ice hockey players, the Swede Erik Karlsson, got re-married with a hottie of moderate socioeconomic status (I sincerely hope that he has looked over the contract before signing it, though). It's often fine that women have *some* money and work experience, but too much of those ingredients are completely secondary and even obstacles in the longer run.

Most guys would want to put their stick in her

Will most career girls like that become depressed and borderline crazy cat ladies? That depends on how obsessed about their careers they are, but very little indicate that they can become better wives and mothers than modest women, or that they are actually happy to work 50 hours a week or more. Quite the opposite.

If their earned money means something it's mainly for their own fleeting pleasures, since many women are shopaholics and account for roughly 80% of all consumption. Wealthy men can buy their own goddamn cars, flats, and tropical trips, why a rich and successful lad rarely ponders about his wife's incomes anyway.

As I see it, there's very little good that stems from the penis envy phenomenon, at least on a societal scale. Men like us, mostly clustered somewhere in the great middle of the socioeconomic ladder, have a better shot at less career-obsessed and often cuter girls.

If one happens to run into such a creature anyway, she can always pay for the meals or drinks during the brief dating phase. So at least they do not parasitize on the economic system to the same extent as sugar daddy sluts and the ubiquitous lazy welfare trollop. However small, with every downside comes an upside, as the laws of nature constantly tell us.

And, of course, lastly a big good luck in Londonistan from us all here at ROK. It's a vibrant place indeed.

The Ludicrous Idealization Of Female Action Heroes

March 21, 2018 | by Jared Trueheart | Link | Original Link

Here's a chicken or egg question for you: what came first, Hollywood's decision to depict female action heroes that outclass their male counterparts or men's inclination to believe women can outclass men in the physical arena?

Stated in other terms, is Hollywood trying to influence men to put women on pedestals or were men already putting women on pedestals and Hollywood is just selling to that market?

Other forms of media were already equating women to men in typically male-dominated fields well before Hollywood caught on and made their own trend. More specifically, ventures involving high risks, high rewards, physicality, and danger are almost universally performed by men. We are inherently better suited to those types of ventures. It's in our testosterone. Yet other forms of media made women the central figures in such ventures.

Video games and comic books have featured female action heroes prominently for years. The nerds who consume those media have passively accepted the notion that males and females are equally capable of performing typically male feats. Hollywood started making

movies based on video game and comic books thereby exposing those same messages to average movie goers.

Now the average blue pill guy has no problem seeing films with female action heroes because he’s seen them in Resident Evil and The Avengers. Whereas twenty years ago it would’ve been pretty hard to suspend that much disbelief, nowadays it’s just another blockbuster. Who are Hollywood’s tools being used to push this message?

Charlize Theron

Without a doubt the most prominent female action hero in film, Charlize Theron is Hollywood’s go-to girl. Sometimes they put her next to male action stars to show that she is equal to them (Mad Max: Fury Road or Hancock). Other times Hollywood gives her the sole action hero role (Aeon Flux or Atomic Blonde). In an odd twist, Theron has lately been hinting at being a lesbian, telling some Hollywood “reporter” that she has “swam in the ladies pool.” I can only guess she is playing to a fanbase there.

Quentin Tarantino

The man has directed relatively few films but they've all been pretty big at the box office. More importantly, many of his films contain porn for leftists. Django Unchained was all about evil white men getting what they deserved. Inglorious Basterds featured Jews going undercover and killing Hitler. I'm not a fan of slavery or Nazis, but these are low-hanging fruit in the easy-to-hate category. The purpose of the films are masturbatory rather than to tell great stories.

Jackie Brown was his first attempt at a female action hero in Pam Grier, but that wasn't fully fleshed out at the time. Kill Bill is what really set him apart in the female action hero genre.

Death Proof was next. It featured a serial killer of women (Kurt Russell) finally meet his match in a group of tough-as-nails women. Long story short, he's no match for broads that tough.

The Kill Bill films grossed over $330 million combined. They were huge. Supposedly these films were heavily influenced by old Chinese Kung Fu movies but I've seen many of those and very few starred women. Kill Bill's protagonist and most of the antagonists are all women. The plot of the film is relatively simple. Bill is the head of some type of assassination organization. He has five assassins that work for him, four of whom are women. Four assassins attempt to kill the fifth, who was nine months pregnant at the time. It turns out she didn't die and she spends the rest of the story getting revenge.

The only edge a beautiful female assassin would have over a male counterpart is her seduction capabilities. Yet those are rarely used in Kill Bill. Instead the women go toe-to-toe with men and each other (their only true rivals) using swords. Uma Thurman even kills 80 Yakuza men as a warm up to fighting two women.

Scarlett Johansson

While Charlize Theron is still Hollywood’s action hero darling, Scarlett Johansson is the future. She’s already played Black Widow in numerous Marvel movies. Lately she’s been in Lucy and The Ghost in the Shell. Scarlett is definitely hot, much hotter than Theron, but that just makes it harder to believe that she is an action star. Whereas Theron takes on masculine looks and attempts to achieve some muscularity, Scarlett Johansson just has an attractive feminine figure.

Luc Besson

He’s the director/screenwriter/producer behind many action films of varying quality, many of whom have female action heroes. In some there is still a male hero (The Fifth Element, or Valerian and the City of a Thousand Planets) but others have just the girls (Lucy, Le Femme Nikita, The Messenger: The Story of Joan of Arc).

Angelina Jolie

Jolie has been the star or co-star of five live action films. While that’s something in itself, her most influential female-action-hero movies are the animated Kung Fu Panda films. In those, Jolie is the voice of the most deadly warrior in a group of animal martial artists. What are the boys who see the the female, Jolie-voiced warrior outclass the other male characters supposed to believe about the fighting abilities of both men and women?

Michelle Rodriguez

She’s been in a handful of Fast & Furious movies, a handful of Resident Evil movies, Swat, Avatar, Girl Fight, etc. In each of these films Hollywood really pushes the message that women are just as physically strong, daring, ready to fight, and even as stoic as men.

This list is by no means exhaustive. So many films put the badass female we wouldn’t normally accept next to the badass dude we would (like Milla Jovovich next to Bruce Willis in The Fifth Element). This serves to makes us believe that women can do everything men can do despite their lack of testosterone. Twenty to thirty years ago your average guy wouldn’t have bought a ticket to be force-fed that message, but because nerd stuff in film has become popular, and nerds are beta males more than willing to receive that message, the average guy now also gets that message and over time comes to accept it.

In that way the beta males can exert influence over the average, blue pill guys, taking them further down the blue pill rabbit hole without their even knowing it.

5 Hidden Costs Of Living In Ukraine

March 21, 2018 | by Theo Valenta | Link | Original Link

After spending far too long working like a slave, running on the hedonic treadmill, and wasting my life stuck in the trap of Western society, I decided that enough was enough and it was time for a move. Having tested the waters in Ukraine for four days over the summer, I embarked on a journey that was nothing short of life-changing.

That being said, while beautiful girls, low prices, and an undeniable sense of adventure are all hallmark upsides of living in Eastern Europe, there are a variety of hidden costs that eventually made me reconsider residing in Ukraine.

1. Western Style Convenience

Clearly, the most legit Apple store on Earth.

This one is obvious, and yet I didn't realize the magnitude to which it would impact me. Ukraine as a whole has been somewhat shielded from the invasion of Western brands, something I initially saw as refreshing.

Unfortunately, I learned I was completely fucked when my MacBook had a motherboard failure as there was no Apple store to take it to. I had to diagnose the issue myself and open up a special claim with Apple to find a "technician" who was supposed to cover the repair under my warranty. As it turns out, I'm paying the replacement out of pocket. The

required part will take seven weeks to arrive and will be subject to import tax, the next hidden cost of a long-term stay in Ukraine.

2. Shipping fees

Pay boatloads of cash to “send” your things here.

I love playing my guitar. I have an old Gibson Hummingbird guitar that I restored myself a few years ago that I’m quite attached to, so I’ve invested in a nice case that can use to ship it to wherever I’m staying.

Ukraine, sadly, will not be one of those places.

Everything that is imported from the United States here is hit with a 20% tax, regardless of whether it is a personal item or not. The typical way to circumvent this is to use a company called MEEST and declare its value as far below what it is worth.

This game may work when shipping to Western Europe, but there are numerous stories of goods being stolen in transit when exporting one’s personal items to developing countries in Europe. While it may not be from the shipping company themselves, even the customs agents are suspect to thievery when shipping through the former Soviet Union. If you declare that your item was only worth $100, good luck filing a claim to get reimbursed if something happens.

3. Housing

Convenience will cost you.

The Airbnb market in much of Ukraine is relatively expensive when compared to other countries, and renting from locals presents its own set of issues such as scams, high agency fees, and untrustworthy landlords.

My biggest mistake was assuming that my $600/month Airbnb in the center of Lviv with everything included was the deal of the century. My Ukrainian friends laughed when I told them how much I pay. A great deal by Western standards is still a rip-off in Ukraine. A place that an American may spend $600 on could cost half of that for a local person.

Loading...
Granted, if you speak Russian or have a girl looking for you, you can find a reputable agent who can help you locate a cheap place, but they will probably ask for one whole month's rent as "commission" for doing this. Oddly, this is how the majority of apartment renting goes in Ukraine. If one wants to stay in Ukraine for three to six months, it doesn't make sense to pay $700 a month with an extra month's rent as agency fee.

Renting an apartment will likely be one's most significant expense living in Eastern Europe. If you're looking for pure cheapness, you can pay far less in cities like Tbilisi or Riga or for simple Airbnb bookings. That said, you can get a fantastic apartment if you're willing to spend a Western price and pay the agent's fee.

4. Isolation from Modern Culture

Cute girls…and not much else.

This was yet another drawback that I didn’t realize how impactful it would be on my life. I’ve always been into the arts, whether it be film, live music, or visual exhibitions. Sadly, in Ukraine, most theaters only play movies in Russian, and very few promoters have the budget needed to bring in quality bands or DJs.

In many ways, the creative scene in much of Ukraine is comparable to small town USA. Concerning my artistic pursuits, I noticed a significant drop-off in my output in the time I spent there. Now that I’m back in the swing of things (and coincidentally no longer there), I think a lot of it had to do with lacking inspiration.

5. The Ability To Explore Other [Better] Areas

It’s a big world out there, and Ukraine is but one place.

I made the mistake of investing in a residency package while in Ukraine that allows me to stay there for up to three years at a time. It’s funny… I was blinded by pretty girls and the allure of low prices to how much the country kind of sucks, especially in the winter time. Taking a chance trip away to another popular Eastern European destination made me realize how much I don’t enjoy being there for reasons other than the obvious.

Best case scenario: you go to Ukraine, manage to lock a few 10’s into a rotation (indeed no easy feat), and ball out with your remote income money, but then what happens? This was my original goal and while I realized that while Ukraine is an exceptional destination for such things, I don’t need to put a damper on other area’s of my life just to get that.

A caller on the most recent Roosh live stream asked him if he should go to Ukraine. Roosh just replied that “it depends on how thirsty you are to sleep with some really beautiful girls.” Let’s be perfectly honest: that, combined with low prices, are the best things the country has to offer. Everything else kind of sucks.

Conclusion

Do not let my attitude turn you off from going to Ukraine.

It’s an amazing place that I suggest most men visit at some point in their lives. While I was somewhat discontented while being there, I meet many men who speak of no such issues and are perfectly happy staying there long term.

Ironically, as I write this, I am currently on my way back. Sometimes, the allure of beautiful women and a high standard of living for a low price is just too good of a deal to pass up.

Theo Valenta

Theo would probably call himself a playboy if it wasn't so passé. Once divorced, and a proud Gen-Xennial, my former life involves trading stocks in the belly of the beast (America). I take a deep interest in the issues that uniquely impact modern man, and wish to share the mistakes I've made with others. Here is one of my creative outlets.

Bartstool Sports Is Profiting From Pushing A Beta Male Lifestyle Onto American Men

March 22, 2018 | by Alfonso Taft | Link | Original Link

Barstool Sports is a blog centered around watching television, drinking alcohol, and eating pizza. This faux brand of masculinity glorifies mediocrity, weakness, and decadence.

"If you like sports, if you like pizza, if you like life, today are the two days you want to be a guy" said Barstool Sports CEO David Portnoy; neck beard on full display.

> Barstool Pizza Review – Ovest Pizzoteca pic.twitter.com/UDfrP0fsQC
> — Dave Portnoy (@stoolpresidente) March 15, 2018

According to Barstool, living your life vicariously through professional athletes on the couch is what being a man is all about.

Meet The Staff / Beta Boys

After alt lite icon Jordan Peterson appeared on Tucker Carlson Tonight, Barstool blogger Feitelberg took to Twitter to tell the world in a snarkish tone, "Beta is the new masculinity, Tucker".

Self-described Beta, Feitelberg is here to remind us all how masculine he is.

Wow, I can't wait to get his "hot take" on sports. He seems like he's truly an expert on athletic competition. After all, who knows more about sportsball than a self-described beta?

The staff of Barstool Sports consists entirely of beta males and they're proud of it.

This is their entire brand — a strain of faux masculinity consisting of pizza abuse, television, and various other mediocre beta activities. Their staff even admits they are partaking in the same exact recreation as women— every single day. According to Barstool staff a woman sweating profusely and mutilating her clothing is a “#BossMove”.

Loading…

Wow, I can't wait to get her "hot take" on sports and athletic competition. She's the CEO of Barstool Sports New England. I bet she's totally an expert. Barstool is not an edgy alternative to ESPN. Getting your "hot takes" from Erika Nardini is no different than Jemele Hill.

For bugmen across the globe, Bartstool where they get their bantz. Bugmen can also be categorized as NARPS.

Enter The NARP (Non-Athletic Regular Person)

The term NARP was popularized on American college campuses in the early 2010's. NARP, short for Non-Athletic Regular Person, originated as a pejorative coined by college athletes to describe their not so athletic peers. Later in the 2015 era, American College

Chads starting using the term as a way to describe beta males, bugmen, nerds, and GDIs.

NARPS attempt to frame mediocrity as ideal while defying healthy norms. The NARP is obsessed with sports but is in poor physical condition. The NARP believes being obsessed with sports—memorizing statistics and pointless trivia is masculine. The NARP believes if he knows about professional athletes' careers and lives this makes him an expert on athletic competition. The NARP will critique an athlete and insult their character, all while being unable to bench press 100 lbs.

In order to prevent this beta bugman faux masculinity from spreading, I've redubbed Barstool Sports, NARPstool Sports—a more fitting title for their pizza-beer-television brand of faux masculinity.

Fall Of The Basic Bro

Our world is becoming so pozzed and clownish, the basic bro is degenerating into a beta male, fast. Aided by NARPstool sports culture, the basic bro finds himself in world of visual cuckoldry, alcohol, spectatorship, shitty food, and orbiting.

The basic bro completely obsessed with sportsball idolizes men on screens and gossips about their activities constantly. Without small dosages of the Red Pill, the Blue Pill basic bro becomes stupid, obese, and unhappy. As frustration continues in his life, Betas are likely to lash out emotionally against Chads. This is why sportsball fanatics burn Jerseys when a player switches teams or curses their name when they succeed or fail. At the end of the day, it's Beta Males projecting their insecurities onto Chads in the form of deference or exaggerated disdain.

For too long, the NARP narrative has worked to besmirch masculinity in the West as vicarious spectatorship where athletes are seen as heroes and role models for no other reason other than they're professional athletes. I love sports and admire some players but the NARP narrative turns comradery into idolatry.

I never really cared much about Barstool Sports. I thought it was lame but I was indifferent. I was under the impression they provided a somewhat grassroots alternative to cultural Marxist monster, ESPN. I was wrong. Barstool Sports is no different than ESPN. In fact, their brand of faux masculinity is even more insidious.

There is nothing masculine about NARPStool or the subculture that surrounds it. Is there anything less masculine than sitting on the couch, watching television, and eating junk food? Narpstool Sports: alpha males need not apply.

Alfonso Taft is a surfer stoner All-American Aryan alpha male quarterback. Raised in the Northeast, he speaks with a Southern twang for no apparent reason. Host of America's #1 Chadcast.

The Death Of Britannia

March 22, 2018 | by Otto Theudoricus | Link | Original Link

I've lived in England for twenty-two years and observed its steady decline into a shivering basket case terrified of offensive language. Here are nine reasons to avoid the UK but England in particular, and if you are living here you should consider leaving.

1. Lack of strength

The average man is not masculine. He has very little courage and will do anything to avoid conflict. He covers up his insecurities with a mask of pseudo confidence which manifests into overly positive extroversion (usually after consuming alcohol) or he simply sinks into apprehension and fear. Either way, years of feminism has crushed mainstream masculinity in the UK.

2. Fear of judgement

The average person really cares what others think of them Subsequently it’s hard to see past the mask one wears and genuine interactions are rare unless alcohol is involved. Yes witty banter is part of the culture but it is a form of ego protection and can actually damage one’s self esteem if lacking in character strength.

Britain is known for its good manners, but people are almost too polite and courteous, as if they’re constantly trying to avoid awkward silences and trying to break the ice with a tooth pick instead of just putting it out there and risking their own egos.

Society is very civilised and pleasant on the surface. However this has led to a collective of tension as most people do not want to stick out and will compromise their own well-being for fear of judgement, which has subsequently manifested itself on a societal level and created a sort of nanny state.

Reciprocating common courtesy is arguably part of human nature, however it has really become deeply entrenched in British culture. When political correctness found its way in, the two made for an extremely effective tool for manipulation of the general public. As your average man is becoming increasingly agreeable and emasculated, just going along with everything is much easier than having to think critically and risk exposure and humiliation.

3. Terrorism

The threat of terrorism is very high, and the authorities are not interested in tackling this problem. Instead they are more concerned with silencing right-wing dissidents. Attacks will become more frequent not only in the large cities but also in medium sized towns. Unless there is a radical change in government which is unlikely when looking at the polls, this danger will only increase.

4. Terrible women

I won't go into detail as there's already a massive article dedicated to this.

5. Multiculturalism

Britain has seen huge demographic changes in only a generation. Social cohesion is inevitably eroded the more a nation breaks down into sub cultures which self-segregate. Even if there is no friction between certain communities (such as Chinese), at best you simply have a state of neutrality. Trust, mutual understanding, and democracy can only happen in homogeneous cultures.

6. Large Muslim population

The more Muslims residing in a country the more demands they will place on their host culture. With such benevolence in the native population, nowhere in Europe (other than Sweden perhaps) or the rest of the world have Muslims been more effective at implementing their dictates, knowing full well how scared the British are of racist accusations. Anti-British protests and speeches encouraging violence against the infidels, sharia courts, and paedophile gangs raping thousands of children up and down the country for decades (possibly the most shameful disgusting cover up of a single Western nation) are all the result of a growing Muslim population.

Loading...

These grooming gangs have been known for years by the authorities but, they've been allowed to continue unopposed, and the few who speak out are quickly silenced with the R word which has become the biggest sin and worst accusation in this cult of liberalism.

So serious and evil are the crimes of racism and Islamophobia that rape, paedophilia and even murder are pardonable offences if the perpetrators are of a certain race. With an ever growing number of these grooming scandals being exposed, the British people still do nothing! There is not enough unity for the native population to take action effectively. Many aren't even aware as mainstream media still down plays or outright ignores reports.

"A society that can't *defend its children has* no tomorrow." —Vladimir Putin

7. Crypto democracy

The UK has for years been a bedrock of democracy, civil liberty, and individual freedom. With simple agreeableness replacing these virtues and most citizens not understanding the dangers of state intervention and speech control, the government has been sneaking in legislation for years. Of course this is not unique to the UK, most Western nations have been trying to undermine freedom of thought mainly, with terrorism and hate speech laws where they've conveniently placed right-wing dissents.

8. Slipping into totalitarianism

LONDON'S MUSLIM MAYOR INTRODUCES THE THOUGHT POLICE

And demonstrates how the Left serves the Islamic supremacist agenda.

August 18, 2016 Robert Spencer 252

246

London's new Muslim mayor, Sadiq Khan, is allocating over two million dollars (£1,730,726) to an "online hate crime hub" enabling police to track and arrest "trolls" who "target…individuals and communities." There can be no

The UK is drowning in political correctness. With not causing offence being integral to British behavioural norms, it is almost no surprise hate speech laws were easily passed and rigorously enforced. Persecution of dissidents is rife as more are attacked and imprisoned.

The state is the guard dog of private citizens and the people of the UK have not trained it properly, so now it's biting its owner and instead of disciplining or replacing it they are showing fear and trying to calm it down with appeasement. But all they're doing is training it to misbehave, if this continues this guard dog will maul its owner to death. The mask has slipped revealing the ugly face of tyranny, and it's only going to get worse.

9. No free speech

Although many have known this, recent events have really proven that dissenting opinions are no longer tolerated. Thus paving the way for more government and more abuse of its citizens. The UK government has been banning people with "unacceptable views" for years (Roosh V, Julian Blanc Richard Spencer, David Duke and others) but the fact that an individual was prevented from doing a free speech on free speech at speaker's corner is almost unbelievable.

Yes, the government has the right to deny entry to anyone they wish but when you look at the inconsistencies of their actions and how hundreds of ISIS fighters are allowed to return freely, it raises eyebrows.

Conclusion

The possibility of Corbyn becoming the next prime minister really doesn't give me much confidence in the British people and shows just how disconnected they are. Brexit means nothing if the globalists keep hold of power in the UK because the EU will be gone inside ten years anyway. Independent or not the agenda is moving forward, but with the rest of Europe moving towards the right, Britain is falling behind and will probably be the last stronghold of the globalists. Great Britain is now little Britain.

6 Reasons You Need To Visit Saint Petersburg

March 22, 2018 | by Troy Francis | Link | Original Link

With the re-election of Vladimir Putin as the President of Russia on Sunday, my thoughts turned to my last visit to the beautiful city of St. Petersburg. Putin was born there, after all and, beyond Moscow, it is the most populous and culturally significant city in the country.

Many men are drawn to Russia for its beautiful woman and also for its traditional, some might say patriarchal culture. But like everywhere, things are changing. St Petersburg in particular has a somewhat hipster vibe, and beards and smoothie bars are legion.

However, as it is somewhat tricky to get into Russia—you need a visa for entry—it isn't overrun with Western tourists. And because of its famously nationalistic bent, which subdues outside influence, societal change is slow. You shouldn't underestimate the power of social media, however.

So what is St Petersburg like as a destination for meeting girls? In short, fantastic. The women who live there are frequently extremely attractive, well-dressed and well-educated. On the whole they tend to be far better presented than your average American or British girl (although the scourge of McDonalds and KFC is present there as it is in the West). Of course, it all comes down to personal taste, but for me the classic Slavic look—high cheekbones and wide eyes—is perhaps the most appealing in the world.

That said, here are 6 things I learned about St Petersburg and its dating scene when I visited at the end of 2017.

1. There Are More Women Than Men

One very simple fact: there are more women than men in Russia. According to this article in the Washington Post there were 87 men for every 100 women in the country in 2015.

This naturally differs somewhat between age ranges and locations. But the bottom line is that girls outnumber guys. And the hottest girls are drawn to the big cities.

This demographic oddity is the case across much of Eastern Europe where the scourges of war and alcoholism have both taken a hand in decimating the male population.

2. Russian Girls Are Not Universally Happy With Russian Men

Get talking to most Russian girls and it won't be long before they start disparaging Russian men. The stereotype is that the guys are overweight, alcoholic and lazy. I've also had several girls tell me that men feel they don't need to 'make an effort' with their

appearance or grooming or anything else, really, to get laid.

Of course, as with all stereotypes it is only partially true. In St Petersburg and Moscow there are plenty of handsome, rich men who are well turned-out. But as a general rule you are dealing with a lower level of competition than you would be in locations like London or New York. On several occasions I noticed girls walking along with their boyfriends giving me very obvious IOIs (indicators of interest), which really brought this home for me.

I'm not saying you should go to Russia looking to steal peoples' girlfriends. That would be a very bad idea. But it is encouraging to discover a playing field that is tilted somewhat in one's own direction.

3. You Have Exotic Appeal As a Foreigner

As a foreigner in St. Petersburg you naturally possess a high degree of what is sometimes called 'exotic appeal': you stand out, in other words.

I personally don't believe that I look any different to the average Russian person walking down the street, and in the past I have been told that I look Russian. But clearly something is going on, because on my visits to Moscow and St Petersburg I have received a disproportionate amount of interest from random women on the subway, in stores, and elsewhere.

If you are well-groomed, well-dressed and take care of yourself then as a foreigner your chances of meeting girls are high. Add in some game skill and you will be flying.

4. Day Game Approaches Are Easier

Day game feels easier in St Petersburg than in, say, London, because the girls are on the whole friendly and more receptive. This makes approaching easier, because you don't have to worry too much about harsh blowouts.

The whole city is very pedestrian-friendly and so you can day game anywhere, but the key areas are the main shopping street Nevsky Prospect, and the Galleria shopping centre. The latter is particularly good in the winter and even into the spring (St Petersburg is still being buffeted by snow even now).

My experience was that even when Russian girls are not interested they still appreciate the direct confidence of a good day game approach and they will stop to chat. It is also relatively easy to get phone numbers—girls use WhatsApp, although not everyone is on Facebook as they tend to prefer the Russian platform VK—but, like anywhere in the world, converting those conversations to dates is not always so easy.

For me personally the 'English gentleman abroad' schtick tends to work very well. I dress nicely, and always have an expensive-looking coat or jacket. Appearance matters and will take you a long way, and it is definitely worth thinking about what your angle is before you approach, since many girls will be interested in knowing why you are in Russia in the first place.

5. Tinder Is Off The Scale

I am an exponent of ‘holistic game’, which means that I use all available game avenues in order to fill up my dating pipeline, whether it be day game, night game, or online game. Tinder is my least-favourite method of meeting girls. But whether or not you are a fan I can tell that as soon as I set my searches to St Petersburg my matches went through the roof.

Tinder is a very different beast depending on geography. In one city you may only match with a few divorcees if you’re lucky. In other territories, depending on the local dating market, you could be more fortunate. In St Petersburg, for whatever reason, I achieved a large number of matches and went out on dates with the most attractive girls I clicked with.

Even if you are Tinder-agnostic it is worth swiping in advance of reaching a new city just to get to know the lay of the land and what the dating market is like there. When visiting St. Petersburg, where many of the girls use it, it is a great way to augment whatever other pick-up strategies you choose to employ.

6.Dating Is A Process

Dating, however, is still a process. Russia is a conservative country and outside of the cities women are married with children by their mid-to-late twenties. In St Petersburg and Moscow things are, of course, a little different. But don’t go there expecting some sort of sexual free-for-all. In general you will need to go on at least two dates before anything happens. Which of course has a knock-on effect in terms of how long you stay. I was only there for five days in December. Next time I will go for a fortnight or longer.

I did end up sleeping with a girl who came back to my Airbnb apartment on the last night of my trip by telling her that I was leaving Russia and so it was now or never (in actual fact we have since spent more time together in Berlin). But I suspect this was something of a fluke. If you want to visit St. Petersburg and get the most out of your trip I would recommend staying for at least a couple of weeks if you can.

Final Thoughts

At Dostoyevsky's former apartment. Behind me is the desk where he wrote The Brothers Karamazov

St. Petersburg is without a doubt one of the most beautiful cities I've ever been to, with stunning architecture and rich cultural experiences such as The Hermitage, The Church of Spilled Blood, and Dostoyevsky's former apartment, which is open to visitors. It is also friendly, has more of a European feel than Moscow (it is very close to Helsinki, Finland) and is easy to navigate with a great transport system. Uber and AirBnB both work fine there, which makes everything easier.

The only other advice I can give you is not to drink the water, as it will make you sick. Buy bottles from your local shop. Oh yes, and did I mention that the girls are beautiful, too?

3 Blue Pills That Most Men Can’t Defeat

March 23, 2018 | by Jared Trueheart | Link | Original Link

The red pill has opened so many eyes to the cultural degeneracy and globalist social engineering around us. If there is any downside to the red pill it’s that you sometimes have to question whether you’re seeing a reality or thinking in conspiracy. For example, is Hollywood pushing an agenda to portray white men as weak betas or are so many white men already weak betas that Hollywood is just reflecting that reality? Holding either of those arguments up to scrutiny is the duty of every red pilled man.

While we have to look inward to ask if we are seeing things that aren’t there, we also have to ask if we are still being fooled. When we make decisions or form opinions based on certain assumptions, we have to be willing to question those assumptions. We have to be able to ask if we are still operating from a blue pill mindset. With that in mind here are some common examples of the blue pill mindset I see.

1. Expecting A Long-Term Relationship With A “Good” Woman To Work

One of the most common questions we hear in the manosphere goes something like, “Where can I find a girl worthy of marriage?” Great question. But do you even know what makes a woman a good wife? I’ll give a real-life example.

One of my very best friends is a pretty devout Christian. He’s always wanted a family and avoided hook-ups in favor of relationships. If he wanted to hook up he would have no problem doing it. He’s a winner of physique competitions going from 220 lbs of muscle 10% body fat down to 180 lbs of muscle 2% body fat. He’s a second degree black belt in Tae Kwon Do. He doesn’t take shit from anyone including women he dates.

He finally thought he met a good woman at church. They dated. He had a romantic marriage proposal at church. She said yes. He was happy. But she just got accepted to nursing school in another state so he followed her there. They were together and he worked his ass off. After nursing school she got a job. The other girls at her work were the single-and-loving-it type. My buddy’s wife would go out with them and live the Sex and the City lifestyle getting all kinds of male attention (she was easily an 8) all while my buddy was working 60+ hours a week.

She wanted a divorce and it came out later that she cheated on him. Why? Because she worked. Because when he started dating her she already had it in her mind that she was going to work rather than be a loving wife and mother (which is a full time job in itself). He accepted that. On paper she had it all, gorgeous, Christian, soft-spoken, feminine, but in reality she was easily corrupted by the women with whom she worked.

Unfortunately, one of the absolute best guys I know was hurt because he still accepted that his woman can or should work instead of being a wife and mother.

2. Assuming Women Operate From A Moral Code

just another night out with the girls

Looking at that same example for a moment, if women made decisions based on moral codes they would not go out and grind on strange men in the nightclub while their husbands work overtime.

Worldwide, honor codes for women stress loyalty and fidelity. A moral wife is one who is faithful to her husband and family. But the red pill allows us to see that most woman only make moral decisions when social pressure forces them to do so. Women whose actions stem from moral reasoning are rare. The norm for women is to make decisions based on

what is socially acceptable.

Women go to the nightclub and grind on strange men if their friends are doing so without any thought of their husbands or boyfriends. Their friends are getting champagne facials and flashing their breasts, therefore it is socially acceptable to also be treated like a sex object by strangers.

Cities are so big that anyone can easily choose the types of people with whom they associate. A good Christian wife can choose to spend her free time with other girls from church or she can go out for cosmos with the real housewives of New Yorks. The former will find slutty behaviors socially unacceptable. The latter will find them empowering.

3. Having A Fear Of Judgment

One of the most popular phrases of the last fifteen years is, “Don’t judge me.” Notice that nobody says this when they’ve done something good. Nobody says “don’t judge me” after they’ve volunteered at the homeless shelter. When you help your friend move and they say thanks, you don’t reply “don’t judge me.” People only say that when they know they are doing something bad but don’t want to be held accountable for it.

In truth, we judge each other all the time, no matter if anyone says not to judge them. The difference is we don’t judge aloud anymore. People might not do those things if it caused public opinion of them to change.

A red pill life style is one in which you are open to other people’s judgment. You can live that life because you make moral decisions that are good for the people in your life, even if they are the hard decisions. The life you lead as a red pilled man should be able to withstand examination. If other worthy men are judging you poorly, you’ll have to examine your life. If you’re still able to hold your head high you should have no problem

with the judgment of others. If anything, their judgment can help keep you leading a moral life.

These are just a few examples of blue pill assumptions that could be clouding your thoughts. It takes diligence and self-examination to make sure you’re not falling in to the blue pill mindset, but we are betting for having done it.

What Ignoring Plumbing And Its History Says About Modern Civilization

March 23, 2018 | by Johannes Adolphe | Link | Original Link

"That's the trouble with everybody – you're all so bored," rants Johnny, the protagonist of Mike Leigh's 1993 film *Naked*. "You've had nature explained to you and you're bored with it, you've had the living body explained to you and you're bored with it, you've had the universe explained to you and you're bored with it. So now you want cheap thrills and like plenty of them, and it don't matter how tawdry or vacuous they are as long as it's new, as long as it flashes and fuckin' bleeps in forty fuckin' different colors."

Twenty-five years on, he would surely feel even greater despair over today's hyper-speed world of digital distraction, hedonism, and increasingly short-lived fads. We are drowning in escapism—in engineered fun and novelty—and we've completely lost touch with how we got here. To borrow from *Peep Show's* Mark Corrigan, another fictional character who gets the absurdity of our modern condition, we're crushing candy, quoting Shakespeare, and hiding in the toilets of our own homes. It's the confused high point of Western civilization.

Over thousands of years, great men—thinkers, engineers and scientists—gradually figured out what makes a mass-scale society function smoothly. At some point we reached such a level of mastery that millions could all but escape from reality, their basic needs met through little to no toil of their own. We now live among hordes of zombified consumers who—diverted by fidget spinners and Facebook feeds—seemingly give no thought to the blood, sweat and tears that went into building this bizarre utopia.

Are you one of them? Well, if you're not sure, consider this. Every day, whenever you want, you turn a tap for water to begin rushing out at the exact temperature and speed you desire. Have you ever given this a second thought? Have you ever wondered for more than a few seconds where all that technology came from, or how people managed before it existed?

We've come to think of state-of-the-art plumbing and freely running water as luxuries we are owed simply for the virtue of being born. We pay taxes for water infrastructure, sure, so when something goes wrong with the pipes we get angry about it. But when all is well, as it basically always is, we lose all regard for the headaches of the huge invisible industry that exists to serve us with our most fundamentally-required element in the cheapest and most convenient way possible.

And that does plumbers, the unsung heroes of modern society, a great disservice. We must remember that civilizations that had the best plumbing also tended to be the most prosperous, be it the stone rainwater channels of Mesopotamia, the wells of Ancient Egypt, the lead pipes of Ancient Rome, the sewers of Victorian London or the spectacularly complex plumbing networks of today's techno-cities.

A society cannot squabble and bullshit its way out of a plumbing predicament. It must roll up its sleeves, *think*, lay out its plans and act as one rational unit if it is to succeed. That's what the Babylonians did when they made the first clay sewer pipes in 4000 BC, and it's what the Minoans did in 2600 BC when they figured out flushing toilets and pressurized showers.

And it's what the Romans did when they built Cloaca Maxima—the Greatest Sewer, constructed around 600 BC—which carried waste to the River Tiber. "The extraordinary greatness of the Roman Empire manifests itself above all in three things: the aqueducts,

the paved roads, and the construction of the drains," wrote Dionysius of Halicarnassus. When Rome fell, much of the progress it made in plumbing went with it, and the disastrous effects played out for centuries to come.

The Black Plague killed hundreds of millions poisoned by their own filth, and it wasn't until the Renaissance that signs of a plumbing revival surfaced. In 1596, Sir John Harrington, Queen Elizabeth's godson, designed the forerunner to the modern flushing toilet, later improved upon by Scottish inventor Alexander Cummings in 1775. Meanwhile in 1664 France, a 15-mile cast iron pipe main—still in operation today—ran 15 miles between a pumping station in Marly-on-Seine and the town of Versailles.

The massive growth of cities during the Industrial Revolution put great pressure on the plumbing systems of the time, with streets becoming disease-ridden cesspits. London was the first to take decisive action after the Great Stink of 1858 when civil engineer Joseph Bazalgette led the construction of a vast intercepting sewer system that diverted waste downstream to the Thames Estuary.

With that foundation set, the US steamed forward in the 19th and 20th centuries to become the unrivaled innovator in plumbing as the modern kitchen and bathroom went from luxuries once reserved for the well-off to something enjoyed by virtually everyone living in developed society.

Plumbing has come a long, long way, but now that everything is so easy, we overlook its magnificence and its significance. In our 'smart cities' and our 'connected homes', we consider it something rudimentary, and have turned our attention elsewhere. In the US, Vox reported last May, federal funding for water infrastructure has dropped from more than 60 percent in the late 1970s to just 9 percent today. It's symbolic: America's pipes are disintegrating alongside its moral values and sense of identity, and the solution will be to replace them with untested, potentially toxic plastics, just like a once-great culture is being replaced with something equally second-rate and superficial.

A prophetic 2000 article, *The History of Plumbing and its Meaning Today*, warned of America's crumbling water infrastructure, now revealing itself in the Flint crisis and beyond. "We assume clean drinking water and safe, sight-unseen waste disposal in every private and public building," wrote the anonymous author.

"We take for granted the sanitation, hygiene and convenience provided by indoor bathrooms. What the American plumbing industry has accomplished in the last couple of centuries will cause historians of the future to marvel, just as we do over the ruins and artifacts of the Roman Empire."

But if we continue to ignore that which makes our lives so comfortable and instead let our collective consciousness wander further toward triviality, hysteria and decadence, ruins and artifacts are what our glorious plumbing systems might—along with everything else we've built—become sooner than we'd hoped.

As American activist John W. Gardner noted: "The society which scorns excellence in plumbing because it is a humble activity, and tolerates shoddiness in philosophy because it is an exalted activity, will have neither good plumbing nor good philosophy. Neither its pipes nor its theories will hold water."

Americans Continue To Get Fatter Than Ever

March 25, 2018 | by G.S. Luthra | Link | Original Link

Sensible nutrition helps to stay fit, but with the increase in big multi-national corporations dominating the food industry with more small farmers going down under, obesity is now a worldwide epidemic. Nearly one-third of Americans are fat, and heart disease, cancer, and obesity related diabetes are rampant. It has become so common that people think it's a normal part of life. Africa is even seeing historic levels of land blubbers ever since the explosion of fast food chains invading countries like Kenya.

Diet and exercise has been advised by many, but even though 51% of Americans meet the government's recommendation of aerobic exercise, they are still the largest specimen of homo-sapiens. Big pharmaceutical companies and food manufacturers continue to profit, but human health continues to plunder because the "technologically advanced" civilization includes the following dangers…

Chemically Laced Food

Unless you eat organic, you are likely to be exposed to products loaded with artificial ingredients –

GMO's

Injecting mammalian genes into plant species has not been definitively proven to be safe, but there is counter evidence that shows a problem. With most of the soy and corn in America being owned by Monsanto, the super biotech powerhouse, the challenge becomes harder as some companies don't even need to label GMO foods.

"Sugarized" Food

Two time Nobel Prize winner Linus Pauling was opposed to sugar as too much leads to fat gain. However, more beverages and products are being made with refined sugar and high fructose corn syrup.

Processed Meat

Livestock are injected with bovine growth hormones, nitrates, and are fed feed that can contain plastic residues, GMO grains, and meat of other members.

A Mechanical Way Of Life

Cut throat competition in a career focused society has created a population that functions under tension, frustration, and blood pressure due to the following factors…

Sedentary Lifestyle

Modern living has made people accustomed to sitting in front of a computer all day. White collar jobs require work done on an electronic device which emit electromagnetic waves elevating stress. Human beings never adapted to live in such digitally infused environments.

Lack of Sleep

With the economy getting more competitive, more Americans are working harder than anyone else, and it has taken a toll on their health.

Slave Labor

Since Americans are working so much, they are just too tired to eat right and hardy have time to enjoy life, share intimacy, or even just to relax.

News-Induced Depression

Living in this dark age is giving people a lot of stress which negatively effects cortisol levels resulting in fat gain. In men, the belly tends to balloon up, and in women it piles up in the buttocks, legs, and arms.

All of these have collectively created a nation of sick citizens by disrupting their hormones and metabolism. It is done purposely, because the daily wear and tear of the body leads to diseases and bad health habits. This creates a society that’s too worn out to rebel, making it easier for globalists to control them. The scientific community likes to boast about the latest advancements in genome editing, breakthroughs in biotechnology, and how scientists can engineer at the molecular level. However, they have not fixed the obesity epidemic.

Taking Action

Eating organic whenever possible and avoid common problematic foods like soy, corn, high fructose corn syrup, MSG, hydrogenated oils, and high carbohydrate low protein diets are advised.

Sprinting, swimming, kettle-bell swings, and punching/kicking a heavy bag are excellent for melting fat as well as calisthenics for strengthening the abs. Walking in nature, listening to music, dancing, and sitting in quiet helps calm the mind from daily stress. Turn off the TV, don't associate with people who put gunk in your head, and keep focused on goals.

A friend I used to know was once asked by another about whether or not the meal he was having was organic. His response was, "I make it organic". Being happy and enjoying your meal in peace of mind can alter its effect on you. Likewise, if you consume food while arguing, or constantly worrying about if it was organically produced and whether or not the farmer was smiling when he packed your apple, you'll go crazy.

Laugh a lot after your meal, watch a funny show or movie if you have to. Be thankful upon rising and retiring as gratitude has a powerful calming effect. While there are forces in life beyond your control, you have the power to exercise, choose healthy foods, and control how you react to "bad" events.

Everything That Sucks About America Comes From Busybody Schoolmarms

March 25, 2018 | by Larsen Halleck | Link | Original Link

On occasion, I feel the need to defend American history and culture from the constant, *constant* criticisms and mockeries and deconstructions it faces. You can read more about this here, here, here and here.

However, I am also quite willing to criticize America should it need to be criticized. This is one of those times. There certainly has been a lot of crappiness to come out of American culture, hasn't there?

"Well what do you expect from a country built on muh slavery and colonialism?!"—Hush! Considering the sheer ubiquity of slavery and conquest, I don't think it's fair to say that those are the cause of American cultural suckiness. Taking four times the amount of slaves the American colonies did—and yes, I know it was in Caribbean colonies—certainly hasn't stopped France from being the vanguard of white culture for centuries.

Instead, I'd like to posit that everything that sophisticated Old Worlders mock about America: it's Puritanical arts and entertainment, it's sexual cloddishness, it's past buffoonery such as Prohibition, and its current fixation on social justice and deconstructionism, to be the fault of not men, but women. And certainly not all women—in fact, the overwhelming majority of American women have nothing to do with this. But rather, a small, extremely vocal minority of American women are the cause of much of this.

These women are the busybody schoolmarms of America—both actual and self appointed schoolmarms. In being something of a student of the arts and culture of my country, I have noticed a repeated trend that I have turned into the title of this article: [Almost] everything that sucks about America comes from a small minority of busybody, Type-A women.

Let us begin with the most literal example of this phenomenon: Prohibition. It is largely forgotten today, but Prohibition and the Women's Suffrage Movement went hand in hand—the temperance movement was largely female, and had great overlap with the

suffragettes.

Granted, this was not merely because women wanted to stifle masculinity—they had some legitimate reasons for it. Women wanted control over their legal assets in addition to the right to vote, because it was at the time in the hands of the men in their lives, some of whom were alcoholics that would literally drink away their life savings.

An understandable motive, but as we all know prohibition wildly increased crime and social decay and was ultimately revoked in 1933, just in time for marijuana to be banned in 1937, again spearheaded by concerns of women being harmed by rampaging substance abusers while working alongside paper kingpins like William Randolph Hearst (feminism and big business have had a very long alliance), which showed that they learned absolutely nothing.

The Arts

What about things such as the Hays Code, which created long-standing stereotypes of "banal, insipid" American films by actually mandating moral standards and forcing happy endings upon movies—stereotypes that still exist to this day?

A CODE
TO GOVERN THE MAKING
OF MOTION PICTURES

the
Reasons Supporting It
and the
Resolution for Uniform
Interpretation

Motion Picture Association of America, Inc.
1930-1935

Of course, the Hays Code was implemented by the studios themselves, enlisting Presbyterian minister Joseph Hays to “clean up” the film industry after protests towards its “degeneracy”. So it’s here that some might ask how this can be laid at the feet of “schoolmarms.” After all, Joseph Hays was a man, yes?

Indeed. However, to understand how I still link schoolmarms and church ladies to this, we will have to look at the state of the church in the 1920s and 30s.

Christianity, particularly Protestantism, has long had a crisis of masculinity. In other words, that men are far less likely to be devoted worshippers than women, and priests were seen as effeminate molly-coddled types that are not in touch with what the average man wants. This is the case today, and was the case 100 years ago.

“Muscular Christianity” arose in response to this starting in the UK and moving to the US and Canada shortly thereafter, in an attempt to get men interested in the church, with a good amount of success starting in the 1860s and extending to around the 1920s. However, by the 1930s, the movement was sort of petering out, and women were once again being the predominant worshipers in Mainline American Christianity.

The point of all this is that while a man was running the Hays Commission, I think it was at least likely that his church had a base that was predominantly female, and thus his decision may have been, at the very least, influenced by them.

From this discussion of women, the church, and the arts, we can branch off two ways, and discuss how this one very specific, odious sort of woman drags down the church, or how said woman drags down the arts and entertainment.

More Arts and Culture

You know what else has a reputation for sucking good and hard? American literature At

the very least, the literature in the last 20 years or so, as it was very esteemed from the period immediately following World War One to about the 1980s. And guess who does the most reading nowadays, and has the entire publishing industry catering to them?

Again, this is not entirely their fault—publishing is a business, and a business must cater to whoever is buying, but as an anthropologist, I have observed how publishing companies actively shut out dissenting voices and how this bleeds into the rise of politically correct culture. And yet again, this is not slamming "women" as a big nebulous group, but rather just the uptight, anal-retentive schoolmarm subset of women.

On the subject of politically correct culture, you hardly need me to tell you that workplaces and schools are miserable places, far beyond how much they need to be by the mere virtue of being places nobody willingly chooses to go to. The causes of this misery have been discussed many times links, but now I would have to ask you: who are the guidance counselors in high schools imposing "Zero tolerance" policies that punish the victim of bullying as much as the bully? Who runs Human Resources departments, stifling any camraderie between the "worker drones" that would alleviate some of the drudgery? This workplace culture is itself stifled due to the fear of enraging some humorless biddy.

Actual picture on the human resources page of Central Staff Services, Incorporated

There's a reason why men *and* women tuned into watch *Mad Men* in droves, and it wasn't to "tsk, tsk" at the "bad old days".

Speaking of things being turned into service industries for the worst of womanhood… the church! As I said above, the crisis of masculinity in the church has resurged, and there's apparently no "muscular religion" coming to save us unless you count the efforts done on sites such as this, but those are mere "candles in the darkness".

The Impact

Some might question the idea of "big bad racist America" being the birthplace of all this politically correct pain-in-the-assery. I would point you to how the stereotype of Americans as being loud, domineering women bossing around miserable husbands, keeping them from igniting that "thumotic spark" is extremely widespread around the

world, and has been for decades.

And of course, we can't forget that fabled American incompetent sexuality. From banning prostitution to creating modern feminism to actually being "sexy" in the most bumblefucking, unsexy fashion when they finally get around to attempting erotica, American women have a good amount to answer for in this field—or more accurately, that same tiny minority that makes the rest look bad.

Don't think that all of this is just a crank talking—James Thurber knew it when he described his new *The New Yorker* magazine as being "not for the old lady in Dubuque" and Rudyard Kipling and various other European writers and intellectuals of note knew it—see above.

As someone who is (against all reason), a proud American, I don't like seeing my countrywomen and my culture spoken of so disparagingly. But as a personal trainer I must point out that the first step of getting someone on the path to improvement is a harsh critical appraisal—and that applies to both the schoolmarm culture of America and America itself.

The constantly demonized "straight white men" have caused problems, but everybody and their grandma points *that* out. In contrast, me and Steve Sailer, who I linked to above, seem to be the only ones pointing out that women need to shoulder some guilt as well. And when we've all shared in guilt, we can begin to fix the problem.

5 Myths About Testosterone That Seriously Need To Die

March 26, 2018 | by Mo Saleem | Link | Original Link

Testosterone is what makes a man, a man. In a society that's increasingly lacking a positive masculine identity, testosterone has become a hot topic of discussion. Today, I will dispel five of the most common myths associated with the master male hormone.

Myth #1: Declining Testosterone Is Primarily a Result of Aging

Although older age is correlated with lower testosterone levels, aging is not the cause of low T.

I'm sure that you've read or heard about the, now famous, Massachusetts Male Aging Study. If not, here's a quick recap: Researchers found that average testosterone levels in men across the American population dropped by 1.2-1.3% every year from 1987 to 2004 (1). Assuming that this trend has continued at the same pace, the average 40 year old in 2018 has 40% lower T-levels than the average 40 year old did in 1987. In other words, the generational decline in testosterone is taking place independently of age.

In another study, Australian researchers recruited 325 men between the ages of 40-97 with self-reported excellent health. Nine blood samples were collected from each participant over the course of 3-months. When looking at the data across the entire sample size, age had no effect on testosterone (2).

The lesson? You can maintain optimal testosterone levels, no matter how old you are.

Myth #2: Only Older Guys Have to Worry About Low Testosterone

Just like older men write off their "low T" as an inevitable part of aging, younger guys think that youth is what keeps them immune to it. The truth is guys as young as 20 are suffering from sub-optimal testosterone levels.

There is currently no published research on the decline of T in men under 30, but there's no shortage of anecdotal evidence:

- Scott had a total T-level of 273 ng/dL at the age of 25 (source).
- Oskar had a total T-level of 297 ng/dL at the age of 18 (source).

At 24, my total testosterone level came out at 564 ng/dL. This is a level that falls well within what's considered the "normal range". Still, I could barely crawl out of bed each morning, I was skinny-fat, and my sex drive was nowhere to be seen. Since taking the steps to naturally optimize my T, all of these symptoms have completely disappeared.

Any man, regardless of age, can have sub-optimal T. I highly recommend that you have

your blood work done at least once per year to get an idea of where you stand and where you need to be.

Myth #3: The Only Way to Increase Testosterone Is With Testosterone Replacement Therapy (TRT)

Is TRT effective at raising T? Of course. *Is it the only way to raise T?* Hell no.

I naturally increased my total testosterone level from 564 ng/dL to 902 ng/dL and it was all by making simple changes in my diet and lifestyle. My beef with TRT comes down to the fact that it's basically a band-aid approach. TRT addresses the symptoms of low T while completely ignoring the root cause of low T, which is usually a sub-optimal lifestyle.

When something as simple as sleeping more can boost T-levels by more than 60% (3), is it really wise to jump the proverbial TRT gun before taking the steps to optimize your lifestyle?

Now, I know that a lot of you have had great results with TRT. The thing is, though, that your body is still unable to produce testosterone. And with so much exogenous T coming in, your body has completely shut off its own natural production.

In other words, once started on TRT, you're effectively chained to using the treatment for the rest of your life – or for as long as you care about getting a boner. Before trying to get a prescription for TRT, fix these 5 lifestyle factors.

Myth #4: Having High Testosterone Increases Your Chances of Developing Prostate Cancer

In the early 40s the medical community began to ascribe prostate cancer as a result of high testosterone. This assumption came from a single medical case study where a patient's prostate cancer regressed after he was castrated.

Since then, a meta-analysis of 18 studies involving 5,091 patients with prostate cancer

and 11,930 controls has reported that there is no link between endogenous testosterone levels and prostate cancer (4).

Myth #5: High Testosterone Makes You Angry

This is a myth mostly peddled by effeminate SJWs and feminists, but it could not be further from the truth. In a study of adolescent boys, researchers found that the boys with the highest levels of T were considered the most socially adept amongst their peers.

And the boys with lower levels of T? They were the ones most prone to the expression of aggressive behavior. They were also failing in school and unpopular with their peers.

Researchers concluded that testosterone levels are positively correlated with social success rather than with physical aggression (5). In another study, men suffering from low T were given testosterone treatments after which they experienced a significant reduction in tension and anger (6). All of this brings us to the conclusion that it is in fact low T that leads to the expression of negative emotions.

This shouldn't be surprising given the fact that depression is a known side-effect of low T (7) and that anger, hostility and irritability are frequently observed in men diagnosed with depression (8). Could it be that low testosterone is a contributing factor to the expression of toxic masculinity? That low testosterone is contributing to the violent outbursts of anger we so commonly see in the news?

Conclusion

Age is not an excuse. Prescriptions aren't your only option. High testosterone won't give you prostate cancer and it won't make you angry. The fact that you're reading this right now means that you're unplugged from mainstream consciousness.

As such, don't fall for these mainstream myths. Take charge of your hormonal health and become the man you can be.

Mo Saleem
Mo is an independent men's health researcher and publisher of TripleYourT.com. Having overcome the symptoms of chronic fatigue, brain fog, and a lack of motivation, his mission is to provide men with the evidence-based action steps to help naturally optimize their testosterone levels.

The Rise And Fall Of Eminem

March 26, 2018 | by Alfonso Taft | Link | Original Link

I was ten years old when my father bought the *Marshall Mathers LP*. I sat in the passenger's seat of my father's black Nissan Altima as he inserted the CD into the car's stereo while we winded through cold, woodsy, New Hampshire roads. The intro began to play. He turned the car's stereo up to full volume. Then, something happened I would remember for the rest of my life; the beat dropped.

The Marshall Mathers LP was released in the year 2000 and sold 1.75 million copies in its first week of sales. Today, the album is 32-times platinum.

Before his reign as Cuckmander-in-Chief, Eminem was a Captain of controversy and titan of uncensored artistic expression. Because of his use of the word, “fag,” Eminem was constantly protested by angry LGBT groups. Before SJWs were blocking ambulances, rioting at colleges, and demanding multicultural global communism, they were protesting artists. Little did we know back then, these small radicalized groups would eventually turn into the genderless mobs of hate, intolerance, obesity and homosexuality.

Ontario Attorney General Jim Flaherty once attempted to stop Eminem from crossing the Canadian border. Harvard Lawyer Michael Bryant suggested Canada allow Eminem entry only so he could be arrested for violating Canada’s hate crime laws.

Lynne Cheney (wife of Dick Cheney) cited the *Marshall Mathers LP* in a Senate Hearing demanding age restrictions on album sales. When describing the song *Kill You* Cheney

told the court, Eminem “talks about using O.J.’s machete on women.”

The Cuckening

At the height of his career in 2002, Eminem starred in blockbuster movie, *8 Mile.* The film is loosely based on his life.

Eminem’s character B-Rabbit was literally cucked in the film. During a trip to a recording studio, B Rabbit walked in to find his love interest, played by an overdosed Brittany Murphy, getting fucked by one of his African associates. His character’s cucking in *8 mile* was symbolic of where Eminem’s life and career would head from that point on.

Fast Forward to 2018. Eminem is no longer the young, angry, artistic alpha male he once was. Today, he is Cuckmander Supreme, Captain Cuck, a Category 5 Cucknado. One must ask, how did this transformation occur? What lead to the cuckening of Slim Shady and what can ROK readers learn from his rise & demise?

Musician Eminem attends the premiere of “Southpaw” in New York July 20, 2015

Women Lead to his Downfall

When Eminem saw his estranged wife kissing another man in 2001, Eminem pistol-whipped the man and later plead guilty to concealed weapons charges. Eminem often raps about killing his twice-divorced wife Kim.

Would you bang?

The young Eminem was able to turn a negative into a positive by rapping about his issues

with his drug addicted single mother, absentee father, and estranged wife. He had so much trouble being bullied and growing up in a low-income single parent home that he made a lucrative career out of his issues.

Drug Addiction

Eminem started acting like his single mother in terms of popping pills. After years of drug abuse, he began to identify with her. Eminem first went to rehab in 2005 because of an addiction to sleeping medication.

"It's no secret I had a drug problem," he said in an interview. "If I was to give you a number of Vicodin I would actually take in a day? Anywhere between 10 to 20. Valium, Ambien, the numbers got so high I don't even know what I was taking."

"My doctor told me the amount of methadone I'd taken was equivalent to shooting up four bags of heroin. Even when they told me I almost died, it didn't click."

> *'Cause every time I try to tell 'em "no"*
> *They won't let me ever let 'em go*
> *I'm a sucker all I gotta say*
> *These drugs really got a hold of me*

Eminem's childhood best friend, bandmate, hype man, and rapper Proof was shot to death on 8 Mile Road, in Detroit, Michigan on April 11, 2006. This had a profound impact on Eminem and lead him down a path of hardcore pharmaceutical drug abuse.

Stan

After he became sober, Eminem drew a line in the sand in regards to his fans who support President Trump by dropping some of the weakest lyrics of his career.

"That's an awfully hot coffee pot. Should I drop it on Donald Trump? Probably not"

Eminem's new lyrics are so lame they are immediately posted on CNN—that's how congruent with the establishment he's become. A far cry from his heyday, where he would routinely lay down rhymes like:

> *Hillary Clinton tried to slap me and call me a pervert*
> *I ripped her fuckin' tonsils out and fed her sherbet*

Donald J. Trump is yet to respond to Eminem's corny raps and probably never will. Eminem is Donald Trump's Stan and Em is becoming obsessive and weird. Eminem recently attacked the NRA and recorded a song with Beyoncé.

Culturally, he's cucked, but he's still super rich and selling a ton of albums. For many, a young, boisterous, rebellious Eminem is the one we choose to remember. Long gone, Eminem is shilling for the establishment as he enters the new genre of Boomer rap.

5 Biggest Financial Mistakes Made By Expats

March 26, 2018 | by Theo Valenta | Link | Original Link

When I first went abroad, I was utterly transfixed by how cheap everything is. Unfortunately, I quickly found myself spending as I would in the United States for a lifestyle that should have cost 50% of what I was paying. In attempting to be as antifragile as possible, I boiled my financial problems down into five specific categories, with my fiscal health drastically improving since I took steps to address them.

1. Not having a budget

Welcome to financial zen.

Without a budget, even a rich man can become poor. With proper budgeting, even a poor man can live comfortably. This is the number one financial mistake made by most people, not just expats. For the longest time, I never used a budget and honestly dreaded the idea of having one. That all changed when I realized how easy it can be when one uses a spending tracker like Mint.

Mint allows one to input all of their credit cards and bank accounts into one place, while also tracking deposits. Automatically, it will determine how much you are spending versus how much you are making, while also displaying all of your transactions on one simple,

easy to read sheet.

Pro-tip: My personal strategy is to use a Charles Schwab checking account with 0% foreign transaction or ATM fees, and a Chase Sapphire Credit Card to earn travel miles for free flights, both linked to Mint. Just make sure you have your auto-pay settings set to pay the card's balance off in full every month!

Before I used Mint, I was spending as much as $2,500 a month abroad. Now? I'm spending around $1250 for a nearly identical lifestyle. I challenge you to try this. Chances are, you'll be as shocked as I was.

Numerous studies have shown that spending money can often be a process that triggers the emotional centers of the brain as opposed to those that deal purely in logic. Budgeting allows you to spend less money on things you don't need, and more on the things that enhance your life.

For example, I realized I probably don't need to spend $60 a month on cabs and $30 for online subscriptions when I can just download movies and take the Metro instead. Had I never used Mint, I wouldn't have come to this realization. Now, I occasionally spend that $90 on new clothing, something that I feel actually adds value to my life.

The one downside of using a spending tracker abroad is that your transactions will likely be in a different language, but you should be able to figure out what they are with relative ease based on their prices and dates. In Mint, you can even rename the transactions for greater clarity when checking in on one's budget each month. Mint can even send you an email alert when you are getting close to overspending in a certain category.

This feature caused me to seriously look at my monthly budget and find out ways I could reduce it, with my rent payment being the first to get slashed.

2. Airbnb vs. renting locally

You can rent an apartment in LA for this much.

All across the globe, business savvy property owners have realized that they can rent out

very average apartments to expats on Airbnb at a significantly higher rate than one would charge a local person. Do you really think your friend Igor or Oleg are paying $600 a month for their apartments? They're not, and your landlord is laughing all the way to the bank.

Some cities have better Airbnb prices than others, with Kyiv and Tbilisi being among the cheapest. Even still, I encourage one to look elsewhere once they are settled into a country. Airbnb can be a great way of getting set up initially, but it is an irresponsible strategy long term.

For this, one can enlist the help of a local girl, or even contact hosts on Airbnb and ask if they are willing to work out a lower rate that can be paid in cash each month. To date, I have been able to convince all of my Airbnb hosts so such a deal after staying for a short period through the website. This is partially because there are no company fees involved, they likely won't be paying taxes on cash payments, and I've presented myself as a trustworthy guy.

When I go to a new city, I never rent an Airbnb for more than a month, and I always include in my message I may be interested in staying another month afterward. In doing so, I've lowered my rent payments from $650 each month to right around $475, a significant amount to say the least.

If you're saving money on housing, you'll have plenty to blow on booze, women and other vices that are surely abundant in your developing country of choice.

3. Vices, vices, vices

[image]
What is going on here?

Living in a developing country can feel like a playground at times. The rule of law is far less of a factor when outside of the police state that is the USA, and one can feel empowered by a new sense of freedom that was missing in life before. As such, one may find that virtually anything can be bought and paid for at an extremely low price, each with varying degrees of morality.

The first month I was in Ukraine, I was hardly ever sober. It was awesome, and I now think of a short period of excess as a right of passage for many men who go abroad. I would walk around drinking beer, chatting up girls, and trying to land lays while discovering the city. This sounds gay, but it was pretty god damn magical. While I toned it down in the second month, many of my friends know of no such restraint.

This can create a big problem for some men. Similar to watching a rock star who suddenly obtains windfall earnings fall victim to alcohol, drugs, and cheap sex, expats in developing countries face similar issues. If one can go get plastered at the bar for $10 pay for sex for $60 afterward, a vicious cycle where one is overindulging in their vices can happen very quickly. Add drugs and an addictive personality to this situation, and one has a real recipe for disaster on their hands.

4. Limiting the scope of remote income

Don’t get too comfortable with your remote gig.

In my first three months abroad, I was making more cash than I knew what to do with. In making close to $1000 a week, my schedule was pretty damn full. Foolishly, I thought the line of work I was in at this point was to remain continually busy indefinitely, so I quit a $50 a week social media job I was doing for a small company in the United States. I was in for a rude awakening when December came around, and I found my online work was very seasonal, and it would not be returning until February.

Considering I was overspending to begin with, I had to live off of savings for two months until my work started coming in once February hit. I immediately regretted giving up the $200 monthly I was earning from social media, as it could have paid for half of my rent or my entire grocery bill each month.

Jobs that can be done remotely can be difficult to find at times, especially if they are somewhat less mundane than data entry or copywriting. Even if they pay less than one should come to expect, they are worth their weight in gold when one’s expenses are comparatively low. I suggest anyone who has multiple income streams think long and hard before giving one up to focus on another. This may be one situation where there really is strength in diversity.

5. Buying groceries at bougie supermarkets

Buy local.

For me, this has been the most difficult saving to achieve, and one I am still working on. It is no mystery that the majority of local people in developing countries shop at outdoor markets to buy groceries for a cost that can be as little as 1/4th of what one would pay at a supermarket.

Unfortunately, this often requires a bit of haggling and proficiency in a local language, not to mention it can be intimidating for an American who is used to the convenience of home. Even though it may be daunting at first, this can become one's biggest source of savings next to their rent payment.

I invite you to look at this as a challenge and go for it. I'm no better than the local people of the countries where I live, and neither are you. If shopping at an outdoor market is good enough for them, it is sure as hell good enough for me. In the times I've been able to pull this off successfully, I've been able to buy up to a kilo of vegetables for less than 80 cents, a kilo of beef for less than $4, and cleaning products for pennies. The same vendors typically use the same stalls in the local markets, and once you buy from them a few times and they know what you like, the process becomes far easier.

Ask one of the girls you've been banging to take you to a local market as a "cute" thing to do on a walk one day. She'll be able to giggle while you clumsily try to buy from the local babushkas, and will likely find it quite endearing that you're living like a local person and not just being a rich Westerner who throws money away, a trait that most girlfriend quality women in developing countries screen for.

Too good to purchase from a local market? I'll quote Jay-Z, "I'll forgive your weak ass, hustlin' just ain't you," and wish you adieu on your flight back to the USA.

Conclusion

In refusing to pay exorbitant prices in foreign countries en masse, we benefit the expat

community as a whole. Furthermore, one can gain a new appreciation for how people in “poor” countries live by seeking not to be above them, but in trying to emulate and learn from their frugality. Sure, you can keep your designer jeans and above average apartment to bring girls to, but make a real effort to do away with your wasteful Western habits, and use your experiences traveling as an opportunity to challenge yourself and grow as an individual.

In doing this, one will inevitably end up with more money to save, build your portfolio, and ensure you will never have to return to the institutionalized hellhole that is the modern Western world.

Theo Valenta
Theo would probably call himself a playboy if it wasn't so passé. I enjoy traveling, online business opportunities and meeting women. I take a deep interest in the issues that uniquely impact modern man, and wish to share the knowledge I've spent years accumulating with others.

The #MeToo Movement Has Ruined My Sex Life

March 27, 2018 | by Joseph William | Link | Original Link

First off—let me start by saying rape is bad—in any and all situations. There is a debate as to whether or not the #metoo movement is actually directly stopping any rapes, but that is a discussion for another place. Here we are to discuss how and why the #metoo movement is killing good sex for everyone.

I hadn't always realized how many women wanted to be dominated when it came to sex. In my early 20's I always felt like I needed permission to move ahead sexually with women, from the first kiss all the way to getting kinky with handcuffs. I always felt like there was a need for me to ask first, or lean in for the kiss 90% of the way and allow her to "handshake" my movement before going in. Then, something magical happened. One summer night on a wonderful date—the skies parted and a large booming voice yelled "just do it!"

Nearly all women want to be dominated in bed

So that was exactly what I started doing, and boy, did my life change for the better. Women, I realized, nearly always wanted a man who was going to take charge and do the thinking for them when it came to potentially awkward situations or rejections. I made it

my mission to take all that away for them and just go for it in a smooth and fun way that had them saying yes most of the time.

In my late 20's, and now having just pierced my 30's, I can safely say having been single for a lot of that time I have been out with over 100 women and when I wanted to move things forward— I did. Thinking back through the years I can think of ONE time a woman backed me off. I fumbled to take off her bra on a first date when she put her hand on my chest and said "Chill Out Romeo." I immediately did and backed away. We both chuckled about her hilarious line on the next date, after having had sex.

The point here is not that I'm a God to women, because I'm not. I'm an 8 , maybe a 9 when I pay attention to my diet. Nor am I slut by any stretch—most of these women I never decided to move forward with on those dates. But when I chose to do so—I had found the key to the kingdom. Don't think, just do what feels right, and it was working to the greatest of effect.

The Arrival of the #Metoo Movement

Then the #metoo movement came along and ruined my fun and the fun of my potential female sex partners. It did the worst thing it could have ever made me do—it made me think. Now, thinking isn't necessarily bad, but thinking in the moment, for our purposes here, when you should be doing, is really really bad. Take it from me. The effects of which you will read about below.

So it was another first date that was going swimmingly when we began making out on my bed. We had kissed at the bar and on the way home so it was all feeling right. I could tell it was my cue was to get a condom—and I fucked up.

For years before, when I decided to do that classic and intricate swim move that is the one handed reach for a condom while still maintaining current relations with the other and a woman asked "What are you doing?" I would say, "I'm doing exactly what you want me to be doing," and it would, as it turned out, be exactly what she had wanted.

This time, however, I thought about the remote but possible charges it could somehow later incur, and I pitifully uttered "I was going to get a condom. Is that okay?" She gave me a little frown, pushed me off of her and within the next ten minutes of us awkwardly waiting for her Uber, she had managed to call me "cute" five times.

She had wanted me to make the decision, as a man, as I had always done in the past, and what she saw instead was a weak man with no confidence. I could palpably see her look at me differently after that exchange, and needless to say we did not go for a second

date. The wind was out of our sails.

The Damage Has Been Done

The point, my friends, is the #metoo movement had made me worry that if I did what I knew we both had wanted me to do, it could still be extrapolated as rape by her had she not expressly given me the “Okay, yes lets fuck” handshake. We all know that happens incredibly rarely when instead sex generally just HAPPENS, without any verbal exchange required.

Men and women are sexual beings and we instinctively should be making those decisions in the moment. And if a woman really did NOT want me to have sex with her she could always make it very clear with a solid “No I don’t want you inside of me at this very moment” or something direct and obvious to that effect. However, the #metoo movement somehow has me thinking that now I require much more clarification before moving towards sex. It has ruined the beautiful simplistic approach I once had. It will sex for all of us.

American Universities Attack Trump For Being A Dictator While Staying Silent About China's Authoritarianism

March 27, 2018 | by David G. Brown | Link | Original Link

Countless leftist universities, professors, lecturers, and students have attacked President Donald Trump for being a "dictator" purportedly endangering people or inflicting actual "harm" on them. Trump, an elected head of state, hilariously stands accused of subverting American democracy. Meanwhile, these same academic institutions and individuals are completely silent about the behavior of the Chinese government, mostly because American universities desire the money of cashed-up Chinese international students.

The supreme irony of the university-based hatred towards Trump is that he doesn't try to physically remove or intimidate those who despise and badmouth him. In China, such excoriation of the central government by academics or students would almost certainly result in the sacking, expulsion, arrest, and imprisonment of the detractors. This is all lost on Trump's opponents, including everyone from the "Trump is awful" folks through to the "Trump is Hitler" delusionals.

The effects of the American universities' reluctance to discuss China in a similar fashion to Donald Trump are palpable and include:

- an increasing unwillingness of universities especially but also individual activists within them to raise the issue of proposed Tibetan independence from China, all

whilst raising American/Trump's "imperialism";
- a refusal to compare vilified Russia, which has a democracy, with China, which does not have a democracy outside the weak Communist Party one;
- attacks on Trump's rather tame disliking of the mainstream media, with colleges forgetting that many of its international students come from countries with no independent media at all; and
- an abandonment of fellow academics in China, many of whom lose their jobs or are jailed for speaking out against Chinese government policies.

China is doing what it wants on American campuses because academics need international student money

Politicians in Beijing are masters at advocating for China abroad and they often do so by vigorously eliminating "critical discussion of China's government," an outcome achieved through soft, frequently financial-based maneuvering. This is key to understanding universities' lopsided attacks on Donald Trump. In recent times, American university campuses obsessed with him have been continually outfoxed by extremely sophisticated and intelligent Chinese officials who push Beijing's talking points under the guise of "spreading Chinese culture."

A central tenet of international "China first" cultural operations is the promotion of Confucius Institute chapters on Western university campuses. This group is openly subordinate to the central government in Beijing and its Ministry of Education. A number of concerned institutions, most prominently the University of Chicago and the University of Lyon in France, "discontinued" their contracts with the Confucius Institute, amounting to an unofficial ban of the organization.

More ominously, *Foreign Policy* describes the Confucius Institute and comparable Chinese government initiatives as a "Trojan horse" undermining both free speech and academic freedom. The large-scale control Beijing wields in the remaining Confucius Institute chapters mean that students and academics alike face huge barriers as to what they can

and cannot discuss related to China. Coupled with the financial power China holds over money-hungry American universities, these expensive propaganda efforts are stifling open debate on campuses.

All in all, one needs to applaud the tenacity of the Chinese government in furthering its national priorities–China's international standing, power, and prestige. The problem is that the pursuit of such goals is worsening a US political environment in which Donald Trump is more maligned than the most powerful dictatorship in the world.

The rot in US universities rolls on

Harvard's Danielle Allen is one of many academics to associate Trump with Adolf Hitler. This beggars belief, not least because Adolf Hitler would never have let a black woman hold a position at a university.

American universities typically employ hyperbole to equate Donald Trump with authoritarianism, or they wilfully ignore the authoritarian nature of other countries to make Trump look like one of the world's few alleged dictators (or the only one). For instance, two Harvard academics, Steven Levitsky and Daniel Ziblatt, insist that our Donald is "ticking boxes" when it comes to being an authoritarian leader in their book *How Democracies Die*. In addition, Timothy Snyder from Yale has used a sleight of hand trick to pillory the American President, claiming that he and Hitler are indeed different but should still be compared to one another.

Let's not restrict ourselves only to the words "authoritarian" or "Hitler." We should also include "fascist," "racist," and other sorts of descriptions used to try and denigrate Trump. In these "academic" debates (and they're really just anti-Trump diatribes much of the time), precious little objectivity or fairness exists. Mere words uttered by Trump are

treated with more anger by US academics than the imprisonment of political opponents in places like China. After all, he must be a pretty bad authoritarian or outright dictator if he isn't jailing the thousands of American journalists who criticize him on a daily basis!

China is playing its hand brilliantly

Colleges from Massachusetts to California are terrified of applying the same critical standards they use against Trump to regimes like China's. They depend too much on the tuition fees paid by students from these countries, which explains why they sacrifice their "principles."

China's transformation over the last two decades even has been truly amazing and there is no doubt in my mind that a liberal democracy could not achieve the sort of material progress engineered by the Chinese government. The authorities in Beijing are absolute experts at putting the strategic interests of their country first. Nevertheless, China's Communist Party embodies all the criticisms leftists in the United States throw at Donald Trump, not that American universities seem to care.

Of course, Americans are going to be more enthusiastic in calling out their own leaders. Yet the institutions that incessantly deride Trump *should* apply the same standards to **real** non-democracies abroad. But why don't they? Well, in a choice between consistent application of political "principles" and the cash cow of Chinese students, the universities have decisively chosen the cash cow.

Though I myself do **not** support, for example, Tibetan independence, I see the hypocrisy of leftist academics on this matter. They prattle on about historical "invasions" or "imperialism" by the US or other Western states like Britain or Australia, leaving out Tibet and China, a much more recent situation.

That said, the Chinese government would simply withdraw many of its international students if American colleges grew a spine and spoke out both consistently and proportionally on topics like democracy, a free press, and contentious ethnic debates. And deans and professors around the country will just not have that; it would cost them hundreds of millions of dollars every year.

This isn’t just happening on campuses in the United States–it’s in Hollywood, too

Richard Gere paid the price for disagreeing with the Chinese government.

Ever noticed that Richard Gere is basically gone from our screens, other than when old films like *Pretty Woman* play on television? His long-term support for Tibetan independence and the ire it drew from the Chinese government cost him his ongoing fame–and income. He has been unofficially blacklisted and now serves as a warning to others.

Unsurprisingly, Hollywood, once a home for films like *Seven Years in Tibet* (which got Brad Pitt banned from China for a long time), learned several years ago to kowtow to Beijing’s political sensitivities. Just as American universities are quiet about Chinese political issues to curry favor and receive international student money, Tinseltown will selectively sacrifice its erstwhile liberal political program to reel in the mega-dollars from Chinese theaters. Donald Trump, however, remains the new Hitler for actors and other celebrities.

Leftist centers of power, whether in Los Angeles or your local college town, can perpetually rail against imaginary racism, imperialism, and abuse supposedly created by Trump. Simultaneously, they regularly act obsequiously towards the same people–true authoritarian leaders most of all–that they say they oppose. How fitting.

13 Rules For Surviving A Court Appearance

March 28, 2018 | by Hans Schuder | Link | Original Link

So you got a ticket for going 92 miles per hour in a 55 zone. Or some girl got mad and said that you popped her in the jaw. You in a heap'a trouble, boy!

But do you want to be locked up for contempt of court? Do you want to piss of a judge, who can make enormously important decisions that can cost you time, effort, freedom, and money? Or do you want to breeze on through your sojourn in the legal realm with the least bite possible taken out of you?

In my career as an investigator, I find myself testifying in court frequently. In the last

twenty years, I have noted a distinct decline in the level of behavior and dress of people who I see in court. Many younger men especially have no idea how to dress or act. I see them in court will ball caps, Jim Beam t-shirts, and smelling of weed and body odor. Things do not typically work out well for them.

Part of this is due to the loss of fathers raising their sons and teaching them these things, since the mother took the kids and is raising them in between spending dad's child support check on Oxycontin and pulling trains of drunk Mexicans. Part of this is due to the general trend of more people being shitbirds. Whatever you think are the reasons, you don't want to be part of it on your court date.

The problem is that the judge, the clerks, the bailiffs, and the attorneys are from a class of people who still value formal dress and polite behavior. No matter the merits of your case, they will look at improperly-dressed-and-impolite-you as a low-life who is deserving of punishment, and not like someone they would ever voluntarily have any interaction with. What you want to do is to look like you belong to their class of people, and that whatever happened, it was surely not your fault, or at worst, it was a lapse in judgement and not a lifestyle.

1. Get a lawyer

Unless you are VERY sure about what is going on, or the charge is VERY minor, the money spent to protect your rights is well worth it. No, I do not like paying such fees, either. Yes, the systems sucks that you have to do this. Put your idealism aside, for I am speaking here as a practical man. You bet your ass I would retain an attorney if my life, my liberty, large amounts of my property, or my driving privilege was at stake.

2. Wear a pressed suit with a pressed shirt and a conservative tie

Before you bitch about the cost, go see if you can buy one at a thrift store. I have a really nice Brooks Brothers suit I got for $8.00 at Goodwill. A white shirt with a blue tie is a good choice. Look like you are a responsible, gainfully employed legal citizen and not some asshole criminal. Maybe in Detroit, it helps to look like a pimp or a gang banger, but most places it doesn't help. Tone it down, and keep it cool. And no hats, wife beaters, or t-shirts!

3. Get a conservative haircut, take a shower, and cover any visible tattoos around your face or neck with makeup

Yes, seriously.

4. The only visible jewelry should be a ring or two

No earrings or tongue rings. A college class ring and a wedding ring will add points for your “decent citizen” look. If you didn’t go to college, pick up a ring at a pawn shop. If the DA mentions that he went to the same school or something, tell him you wear it in memory of your now deceased brother who went there.

5. Get there early and take a seat. Look at what is going on and get oriented

If something is confusing, you, Mr. Peaceable Citizen Who Is there Early, can probably get a friendly answer from one of the functionaries (clerk, bailiff, Assistant DA, etc) who is in the courtroom before the judge walks in.

6. Speak the King's English and then some

"Yes sir," "No sir," "Yes, Your Honor," "No, Your Honor." This is not the time for impolite speech, cuss words, slang, or the like.

7. If your attorney is not in court yet, make sure to answer the calendar call loudly and clearly and politely

If you are there, but the court doesn’t know it, you may well be counted as failing to appear. Most places, an order for arrest or a bench warrant will be issued, along with possible forfeiture of any bonds you have paid.

8. Leave your cell phone in the car

Some judges will find you in contempt if your phone goes off, and some courthouses will not even let you have one in the building. You will survive if you ignore Fakebook for a

few hours.

9. Leave your guns, knives, and other weapons in the car

Many courthouses won’t let you bring in even the smallest pocket knife. No, it doesn’t always make sense, but don’t be “that guy” who holds up progress for everyone behind you by challenging everything the guards tell you.

10. Don’t listen to advice from anyone who is not an attorney

Every “shithouse lawyer” in town will tell you some stupid legal theory or another if you are foolish enough to discuss things with him. This is helpful advice such as, “He can’t

write you a ticket if he didn’t have his hat on,” or “If you asked if he was a cop, he has to tell you the truth.” None of this is true. Most of it comes from jailbirds for whom it obviously didn’t work. All of it will hurt you. Trust me.

11. Have the money to pay any anticipated fines and court costs with you IN CASH

If you have to pay, do it now, and don’t screw around. Get this done and over with, or you could be arrested for not paying.

12. Your day in court is not the time to make some big point about the fairness of the proceedings

Forget your speech about “My Rights as an American” or “The Po-Leece Be Harassin’ Me.” Deal with these things when you are not under the threat of being judged if you feel compelled to do so. Yes, I know, some parts of this are unfair. When you become king, please change it. Until then, it is best to deal with it practically!

13. If you are female, go read some other blog that tells you what you ought to wear and how to act

Or just show the judge and the DA your tits. Be creative. Let me know how it all works out.

Conclusion

Going to court can be a stressful experience. Bad things can happen, and you want to avoid these things as much as possible. These tips will not break your first degree murder charge down to jaywalking, but they can make a big difference in your outcome for many charges. They can certainly mean the difference between getting the benefit of the doubt and having the judicial smack-down put to you.

Your best bet is to never do anything to get into court in the first place. Your second best bet is to assimilate as much as you can, fly under the radar, take care of your business, and get out mostly unscathed. Good luck!

NOTE: I am not an attorney. None of this should be considered legal advice. I am not licensed to practice law anywhere on God's Green Earth.

Feminists Are Hysterical About Rape Because No Man Wants To Rape Them

March 28, 2018 | by Len Goddard | Link | Original Link

We must ask ourselves why there is so much hysteria about rape when we live in countries, and have a culture, in which a woman's chances of being raped stand at around 0.0060% (Australian statistics). I believe this goes deeper than just the blatant attack on men we are experiencing.

The reason these types are adamant about manufacturing stories about sexual assault and rape is because they are trying to prove they are *desirable*. It plays to their ego to think that there might be some testosterone-fuelled barbarian out there who would find her suitable enough for a forced session. These women want to punish men not because of a fear of being attacked, but due to a bitterness of not being approached, considered, acknowledged, and on the more extreme scale, and finally… not being a target for forced sex.

There are not many explanations that can justify the absurd irrationality of the #metoo, pussy-hat-wearing, women of the West. Any introspective types out there know that when we are confronted with something that unsettles us—that we are irrationally afraid of—we must look inward, and we must look for the truth, the foundation of that fear, however uncomfortable that may be.

I have a young sister who is in high-school and I often read her homework and/or assignments when I see her. For some reason our education systems have decided that it's a good idea to present inflated sexual-assault figures to our young girls as truth *and* base a curriculum around it. I'm sure this would have to do with ensuring they are fearful and mis-trusting of men as they grow up—high-school discos are about to become a lot more awkward. The lies and fears start early.

You're a descendant of rapists

Let's rewind to the days of Vikings, global conquests, and crusades, where raping and pillaging were common. When these Vikings or raiders would invade, they would indiscriminately rape the women. Now, as brutal and as terrifying as it was, this helped these women indirectly fulfill their biological imperative—which is to pass on the strongest genes possible to her offspring. These genes were forced upon them by the, proven, bigger, stronger, smarter men who likely just decimated the local men of breeding age.

The women were either taken and absorbed into the tribes of the invaders where they likely had long and successful—biologically speaking—breeding lives, or they were left to the aftermath of invasion and the harsh realities of potentially raising a child with little-to-no family-support and collapsed social structures.

Fast forward back to today, these feminists and fat women (undesirables) would have been the equivalent of the low-born and peasant women of yester-year. But those ancient women would have still had exposure to top-tier men—the best genetics–whether it was consensual or not (not).

Today's undesirables don't have that "option," if we can call it that. Do you think the likes of Chris Hemsworth or Brad Pitt are lining up to fuck a woman like Lena Dunham? Never in a million years. Top-tier-women of today are the only women who get exposure to the top-tier-men. Fatties and feminists cannot fulfill their biological imperatives directly (seducing a top-tier man) or indirectly (being raped by an aggressive, dominant man).

Today's sexual marketplace is discriminate against the laziness and repulsiveness of fat women and feminists whereas the sexual marketplace of the invading hordes was indiscriminate, driven only by raging emotions and carnal urges.

Desperate for the attention of a man with options.

Acknowledging and internalising this information is no doubt far divorced from the emotional maturity of the modern feminist. But if we could boil down feminism to its few driving forces, one would surely be sexual frustration. Feminists *despise* the male-feminist, soy-boy-cucks who orbit them! The proof is in the lack of sexual success these men experience. So how do women find access to top-tier men?

The undesirables wish we could rewind to a time where men may have seen them as an object to be plundered but that day has long passed. I implore you all, when faced with the irrational ramblings of these undesirables, to be kind and reassuring. Look the in the eye and say, "Don't worry, no man will *ever* want to rape you".

Women need to leave feminism behind to embrace the lives that will lead them to the men they want, and therefore, the lives they want. What other call to arms can there be!?

Stay in the rot, be bitter and miserable, take to the streets to march and scream, remain ignorant to the biological truths tugging at your sub-conscious, or, take responsibility for your life and build yourselves into the type of women that would command the respect of a good man.

19 Types Of Younger Women Who Love Older Men

March 29, 2018 | by Bryon Flynn | Link | Original Link

The appeal of older men to younger women beyond the strictly "gold digger" transactional urban legend is fully embodied in one phrase: "The Most Interesting Man in the World." Dos Equis and ad agency Havas Worldwide created one of the most successful campaigns in modern history based on the premises outlined in my first article:

The evolutionary explanation for this is straightforward enough: throughout history, most men did not live past 35. Those who lived longer maintaining vitality, strength, leadership and success had to be genetically exceptional and fertile women cue to this. I will now outline the most common types of American women who prefer older men and the pros and cons of each.

1. High IQ/Creatives

Where genius IQs are concerned, men outnumber women by as much as 7:1. As men typically take longer to mature, these women will almost always go for older, successful men as they find the company of frat boys to be insufferable. Should you find a young woman like this who is attractive and agreeable, you should snap her up quick regardless of geography or obstacles.

Pros: Highest caliber company and potential marriage material. They are able to appreciate your finer qualities, since they also possess said qualities themselves.

Cons: Difficult to argue with, difficult to game so skip the PUA and be genuine.

Where: Academics, artistry, okcupid, sugar daddy sites.

2. Accountants

The best “lady in public/whore in bed” closet sex freak you will ever meet.

Pros: Potential marriage material

Cons: Her long work hours can limit your fun time.

Where: Corporate bars, networking events, okcupid , match, eharmony.

3. Cosplay Models

Many have what I call “Prince syndrome“—extravagantly sexual on “stage,” but quite shy and socially awkward elsewhere. The best of them can make excellent girlfriends, as they tend to pair bond well and their shyness limits promiscuity.

Pros: Hot, sexy, kinky or at the very least trainable.

Cons: Eccentric. Unless you’re a true alpha male, penetrating the bitch shield often involves cosplaying with her and hanging out with her nerdy beta friends, the most intolerable form of clown game.

Where: Cosplay conventions, online dating, video gamer bars.

4. Gamer Girls

Video gamers share many of the traits of cosplayers and there is great overlap. They can be quite smart and very agreeable.

Pros: Same as cosplayers.

Cons: Shyness can limit social interactions.

Where: Video gaming events, twitch.

5. Strippers

As mentioned in my stripper article, it goes without saying that these wild women are mainly looking for any man who can deal with their job and lifestyle, age being far down the list of priorities. If you can score one who works in an upscale club who is a newbie

college student, these can make for great short term flings.

Pros: Hot, kinky, exhibitionist, makes her own money, flexible schedule for fun and travel.

Cons: In lowbrow clubs, she's probably a skank ho. For upscale, it's only a matter of time before someone richer or slicker intrigues her, so eject out of this sexual jet fighter before it crashes in 9 1/2 weeks. Feminists have infiltrated this once fine profession so caveat emptor.

Where: Strip clubs, hip hop and EDM clubs, sugar daddy sites.

6. Porn Stars

They do older men on camera for a living so they'll have no problem doing you.

Pros: Total sex professional, STD tested.

Cons: Other than a pump n dump, they are generally only suitable for swingers, drug dealers or cucks. Most are notorious gold diggers with an "us vs. them" gypsy/grifter mentality. Life expectancy: 9 1/2 hours.

Where: San Fernando Valley, CA, Miami, Vegas, Craigslist.

7. Cam Girls

She aims to please and loves older men. One of my favorite types as newbies can be very loyal and pair bond quite well. Life expectancy**:** 9 1/2 months

Pros: All of the benefits with few if any of the problems that come with other jobs in the adult biz.

Cons: Too many orgasms when “logged on” can physically desensitize her so bang her on “off” days.

Where: Online dating.

8. Fitness Models

Her top priority is how fit you are and whether you look good with her in photo ops. All

other traits secondary or irrelevant, including age.

Pros: You'll be the envy of all your friends, even if the sex is boring, which it often is.

Cons: You'll pump iron and count calories all day to keep her, so make sure you enjoy it.

Where: Gyms, nightclubs, fitness and bikini competitions.

9. Club sluts

The name of the game here is drugs, alcohol, your circle of friends, and an unusually high tolerance for her never-ending narcissism. If you continually appeal to her vanity with regular doses of "narcissistic supply," your age is irrelevant.

Pros: Physically attractive, cocaine, and molly instantly converts her into a sexual acrobat.

Cons: Wrap your man schlong with triple jimmy hats, as a steady diet of drugs, and semi-unconscious sex all but ensures she is packing STDs.

Where: EDM and Hip Hop clubs.

10. Tattoo Models

The traits most associated with excessive tattoos are lack of self control and Axis 2 personality disorders. As her life is generally a cascading waterfall of impulsively bad choices, banging someone old enough to be her daddy is the least of her problems.

Pros: Easy to game, DTF, freaky. Pretend to love her freakish tatts and you're in like Flynn.

Cons: Almost all her friends are degenerates. Any antisocial personality who randomly inks herself has a lowbrow self destructive streak that eventually spills over into your life. Regular hiding of change jars and silverware is recommended.

Where: Tattoo parlors and wherever fine skanks are sold.

11. Sugar Babies

The best sex you will ever have. They love older men and love to please when you "unlock" them with a provider frame. A great alternative to dating hot bar trash.

Pros: If you know what you're doing and short circuit this pay to play nonsense, you will enjoy the spoils of victory.

Cons: A harder script to flip than it used to be and you will get obliterated if you don't know how to screen bad apples and leverage world class, bullet proof game. Seekingarrangement*com founder Brandon Wade has a twisted view of dating and secretly bought many of the other sites forcing you to use SA—the weirdest and most brazenly transactional of all. For pro men only.

Where: Nightclubs, EDM festivals, sugar daddy sites.

12. Littles

The “Daddy Dom/Little Girl” (DD/LG) relationship is gaining popularity. Many of these women are adorable, amazing submissives who relish the role.

Pros: Great, agreeable company, amazing sex.

Cons: You’ll have to deal with a six year old mind in a 22 year old sexpot’s body some of the time so make sure you have the temperament for this.

Where: Online dating.

13. Fetish Models/BDSM Power Exchange

Simply put, very few younger men know how to do this properly including those in this scene. So fetish subs almost always quietly seek out older men.

Pros: Hot, young, kinky.

Cons: Degenerate friends and culture, problems with intimacy.

Where: Fetish conventions, fetlife , sex clubs and swingers clubs.

14. 420 friendlies

There’s something about weed and women who prefer older men that just seems to go together. Don’t try to analyze it, just have a blast.

Pros: DTF, super chill.

Cons: Slacker personality.

Where: Fire it up and they will come..

15. Rocker Chicks

Her top priority is common musical interests and to some degree, how well you play.

Pros: Low maintenance, easy to please. One of the few types who actually care about

your art.

Cons: If alcoholism, smoking or tattoos, a poor choice for LTR.

Where: Rock clubs, concerts, festivals.

16. Adrenaline Junkies

If you can keep up with her death defying adventures and bring it in the bedroom, age rarely matters.

Pros: Fit and freaky

Cons: Her life endangering addiction always comes first and though much younger, she'll be dead or crippled before you are.

Where: Big wave beaches, ski slopes, rock climbs, skydives, skateboard events.

17. SJWs

According to Freudian reaction formation, many are infatuated with the alpha male forbidden fruit. Robert Greene and 50 cent wrote a book and discussed turning disadvantages into strengths. To wit, her obsession with Marxist "loser" philosophy means that she is the easiest of all women to influence. Indoctrination and self created low socioeconomic status further predisposes her to slutiness. Often, they are peeking through the "alpha male" door on SD sites, while naively seeking to destroy the "white patriarchy."

Pros: DTF, will do almost any sex act for spot cash that she delusionally believes to be "wealth transfer" to further the feminist cause. Enjoy the goods, then conveniently forget to pay her.

Cons: Requires formidable acting skills and the patience of Job in the Bible to pander to her unbearable ideology, warped perceptions, and argumentative badgering. A simple disagreement about the best brand of coffee will get you accused of "gas lighting" so the less talk the better. Any money saved gaming on the cheap will be spent on the memory cards you must buy to record everything as a preventative false accusation defense.

Where: Marxist training camps (i.e. colleges), hipster districts, faux protests, sugar daddy sites.

18. Single Moms

They are nicer because they have to be. The best ones tend to be early 20s who wisely dumped their loser deadbeat “Romeo” quick and early. If a good woman and a good mother, it’s worth the cost of a babysitter to enjoy hot, steamy sex.

Pros: Agreeable, hot, kinky.

Cons: Her child always comes first and if you stay, you’ll never be “Dad.”

Where: Online dating, eharmony, facebook.

19. Women in other countries

Much has been written at ROK on this topic so it is included only for completeness.

Pros: Nicer, cheaper, less self entitled, age irrelevant.

Cons: Hypergamy and hustles still abound. Mastering the language, cultural barriers and

cost of travel negates any savings.

Where: Thailand, Japan, Phillippines, Costa Rica, Columbia, Brazil, Ukraine, Ireland, Dominican Republic, country specific cupid sites, SD sites, Tinder.

Conclusion

Often there is great overlap between these archetypes. The appeal (or revulsion) of each will depend on where you are in life and the type of relationship you are seeking. The commonality among all nineteen is some sort of natural rebellious tendency and a general problem with authority. No one is going to tell her what to do (at least not until you put the handcuffs on her!) and that includes dating older men with an age gap that American society publicly shuns, except for the rich and celebrities who get a "pass." This shows that it isn't really age at all but very often societal envy of your superior genetics that is actually at work.

Scottish Man Convicted Of “Hate Crime” For Teaching An Ugly Pug How To Do Nazi Salutes

March 29, 2018 | by David G. Brown | Link | Original Link

A YouTuber and comedian who taught a pug to perform the Hitler salute to annoy his girlfriend has been convicted of a “hate crime” by a Scottish court. Count Dankula, real name Mark Meechan, fell afoul of the judicial system for supposedly “inciting racial hatred.” He now faces prison time.

Here’s a photo of Meechan being arrested last year:

> *record scratch*
> *freeze frame*
>
> Yup that's me. You're probably wondering how I ended up in this situation.. pic.twitter.com/fdyxTLi5hN
>
> — Count Dankula□□□□□□□□□□□□□ (@CountDankulaEHTV) February 18, 2017

If the following video suffices as a “hate crime,” can someone please tell me how many Jewish or minority deaths it has caused? The answer is obviously none:

Ricky Gervais, reasonably leftwing in his opinions, was one of those to lambaste the decision:

> A man has been convicted in a UK court of making a joke that was deemed "grossly offensive". If you don't believe in a person's right to say things that you might find "grossly offensive", then you don't believe in Freedom of Speech.

> — Ricky Gervais (@rickygervais) March 20, 2018

The move to arrest and prosecute Mark Meechan must be contextualized in a broader law enforcement "un-crackdown" in Britain. "Online abuse" has long taken precedence over violent crimes like burglaries and physical assaults.

Yet women who say or do similar or worse things have their charges dropped

Bahar Mustafa, an overtly political troublemaker and feminist, said "kill all white men" and still had her hate crime charges dropped. The same cannot be said of a comic like Count Dankula.

A feminist student official at Goldsmiths, University of London, Bahar Mustafa, had hate crime charges against her dropped in 2015. She had used social media to say "kill all white men." She was initially charged under the **same** piece of legislation as Mark Meechan, the UK Communications Act 2003. The otherwise frequent separation of the English/Welsh and Scottish legal systems does not apply to these kinds of laws, which operate across the United Kingdom.

Unlike Meechan, who runs a shitposting account on YouTube, Bahar Mustafa boasts a history of actual discriminatory actions, including banning whites and men in general from events in her position as a "diversity officer." She is decidedly more serious and political than a prankster in Scotland whom many in even the English-speaking world struggle to understand. Nevertheless, Mustafa avoided a trial and Count Dankula is reeling from a potential prison sentence.

Is someone like Jimmy Carr next?

The most irreverent and "offensive," yet also highly popular contemporary comedian I can think of is the Briton Jimmy Carr. Below he is joking about domestic violence, in addition to comparing having a wife to owning a car:

In his shows, a couple of which I have attended, he makes jokes about rape, ethnic minorities, and the disabled. If Count Dankula has been prosecuted, why shouldn't Jimmy Carr be as well? There is no logical reason why he shouldn't be, irrespective of the moronic outcomes that the UK Communications Act 2003 and its real-life "in public" equivalents are producing in British courts. It is clear that outside of an auditorium in places like central London, individuals saying comparable things as Jimmy Carr does in one of his shows are at risk of spending a significant stretch in a British jail.

My prediction is that highly arbitrary exceptions will be made for comedians like Jimmy Carr or Ricky Gervais. Less professional "shit-stirrers," including types like Count Dankula, however, will bear the full brunt of draconian legislation like this. Everyday men and women on the street should expect the same danger of prosecution as well. A joke amongst friends can and shall result in serious legal consequences for a number of people either trying to be funny or expressing themselves in ways that would normally be considered offensive but within the bounds of free speech.

First they came for the university campuses…

It is par for the course that universities would continue to disembowel the principle of free speech. But now the cultural, social, and political erosion is accelerating beyond campuses. Within a few years' time, will you and those you love be staring down the barrel of a prison sentence for a casual joke?

The Rise Of Game Denialism Is Hurting A Lot Of Men

March 30, 2018 | by Troy Francis | Link | Original Link

As the ‘how to date women successfully’ niche matures, its best known exponents are subject to constant scrutiny and—in some cases—ridicule online. This is fair enough. If you are going to put yourself out there as an ‘expert’ then you should expect attention, and that not all of it positive. But the more negative elements of the commeteriat are, by creating a false narrative around the efficacy of game, inflicting real damage on those men they would claim to represent. If you are truly interested in improving not just your prospects with women, but also your growth as a man, then you should view such voices with skepticism.

I have been interested in game since 2005 (and even before then, when it was less established). In that time I have seen pretty much every prominent pick-up guru ripped to shreds. ‘*Him? His lay count is only 50 – what does he know?*‘; ‘*He’s far too ugly to be getting the girls he says he does*‘; ‘*His advice is worthless – he’s good-looking and that’s the only reason he gets girls*‘; ‘*He has no infield videos showing his game in action*‘; ‘*He has infields but they’re probably faked*‘. *He’s too fat, he’s too thin, he looks like a ‘roid addict, he’s not built enough*.

And so on, ad infinitum.

Scepticism is natural, and healthy. We shouldn’t take everything we are presented with at face value, particularly online, where it’s easy for people to fabricate things. But what concerns me about a lot of the game-denialist arguments I hear is that they are based in *ad hominem* and lack intellectual rigour.

To put it another way, the snowflakes who say game doesn’t work spend a lot of time

shooting the messengers, and very little time responding to specific aspects of their content.

The Game Denialist Position

When it comes down to it, the game denialist position is extremely simple, and not very helpful. It is as follows: '*girls are only interested in looks, height, money and fame*.'

The denialists, like flat-earthers, hold this doctrine to be so self-evidently true that they feel that they don't need to engage in coherent intellectual discussion with anyone who disagrees. Name-throwing and slurs are sufficient. Thus, any man who is not cute enough for them is dismissed as a fantasist, while his ideas go unchallenged. Men who do meet the denialists' aesthetic criteria are grudgingly given the benefit of the doubt, but their counsel is deemed worthless for any man without the same physical advantages. References to 'Chad Thundercock', a popular mastubatory fantasy figure for incels, are common.

In forums, comments section of YouTube videos, Facebook groups or Twitter threads, the denialists find many willing cheerleaders. Their contributions are upvoted enthusiastically, which doubtless gives them the dopamine hit that motivated them to post in the first place.

And I get it: I understand both why these people make these comments and why people applaud them. Simply, it is because negativity is intoxicating, and it is easy. It is far more straightforward to denigrate someone online than to engage seriously with their ideas, or even worse, to actually take steps to change one's own life. Throwing shade is a comfort blanket. Like a McDonald's meal or a KFC bucket, it's an easy way to feel good temporarily.

The problem, though, is that these denialists are wrong. They are propagating a self-evidently false narrative. They may have given up on self-improvement themselves, and

that is their right, but to feed other men with this nonsense is irresponsible at best, and deliberate sabotage at worst. '*If I can't get laid*,' they are saying, '*I don't want anyone else to either. Except Justin Bieber, because he's rich and cute*'.

When I look around the city where I live, and the other cities that I visit regularly for work, I constantly see what you might call 'low value' men who are not good looking or rich with wives and girlfriends. Sometimes the women they are with are extremely attractive. The game denialist argument that 'average' men can't get sex is demonstrably false. Were that the case we would be seeing global population collapse, rather than overpopulation.

The question that remains, though, is can average men learn (through game) to get younger, hotter girls interested in them for sex? The answer is yes. If you learn certain basic fundamentals of male-female dynamics and improve your social skills, along with your grooming, dress sense and so on, and if you go out there with determination and persistence, then you will attract more sexier women. This is not rocket science. It doesn't mean you will be getting Victoria's Secret models. No one ever claimed that. But you will be getting a better deal than you would have done otherwise.

The game denialists would have us believe that this is impossible. Their position, essentially, is that you are born with a score, and that score not only determines your sexual success *for the rest of your life*, but it is also utterly unalterable. So, if you are a male 4 you will *never* be able to attract anything more than a female 4, and actually you are more likely to end up with a 3 or a 2.

I fundamentally contest this position quite simply because it goes against everything I have seen in my own life and that I observe around me every day. But say for a moment they are right. Say the playing field is rigged, and if you haven't got 'it' then you are doomed to a low-value life.

Are we as men supposed to just roll over and accept that?

For me, the very essence of masculinity is the drive, persistence and determination to change our personal circumstances, be that through meeting hotter girls, growing a bigger income, getting better at a skill or sport, or defeating rivals in business. The warrior spirit that defines maleness is lacking in these snowflakes who would rather not believe, less still test the hypothesis, that it is possible to transcend one's status in the genetic pecking order.

One of the main reasons that I personally have been successful in game over the years, as well as in other areas, is a sheer defiance: an unwillingness to accept the *status quo*. And grit, after all, is one of the key determinants of success and a hallmark of high-achievers. I wouldn't have it any other way.

In the end, independent thinking—another key component of masculinity—is essential. When I read the advice of a pickup expert (or a financial or business expert, for that matter) I don't waste time or energy bitching about the person who delivered it. Instead, I go out and test their ideas. Because that, after all, is what is important. If their suggestions work then great. If they don't then I discard them. I want a better life, and I evaluate people's' ideas on their own merits rather than against a backdrop of my own prejudices.

I also recognise that a big part of having a better life is to help others. And it is for that reason that I would never impede the progress of other men by promulgating limiting beliefs based on my own insecurities rather than my field-tested experience.

What To Do If Your Boomer Relatives Try To Steal Your Children

March 30, 2018 | by André du Pôle | Link | Original Link

If you are a gen-X or a millennial born before 1991, chances are you have a son or a daughter. If you gamed girls efficiently, then spotted a valuable, trustworthy girl and started living together, perhaps one night your would-be spouse stormed out of the bathroom with a positive pregnancy test, and both of you decided to let the little being be. Or perhaps you went along more traditional lines and married before Ms. stopped having periods. Regardless—now you're a father, head of a family. Congratulations!

Children are lots of work and money. Nevertheless, in addition to being incredibly cute when they're small, they are the future. They pass our genes, our legacy. They are life continuing after us—the living proof we managed to pursue the line just as all our direct ancestors did.

Unfortunately, even if you manage to be in power at your home, which is already noteworthy if you're a debt-riddled "educated" man, outside, you're not. The power to be is the boomer generation.

Presidents Bush, Obama, and even Trump are all boomers. The Rolling Stones, the Beatles and so on were boomer references. The media cater to the boomers, which is why you can find so many condescending or incendiary articles against the millennials, yet these are never considered "hate speech."

If you disagree, don't tell, that would be "hate speech"

And these boomers are not content with having capital, status, and the mainstream culture at their feet, they also wish they would control the future as well.

Boomers have already mortgaged our future. They already spent it for their own luxuries and disinherited us by choosing daughters, adopted children, "minorities" over us. Their media, their movies, constantly cast us on a negative light while promoting a few X/millennials who betrayed their manliness and the bulk of their generation.

Strangely, even then, boomers rarely forsake the whole of the future. They live long. And after having abused the Greatest Generation, made life difficult for the X and sacrificed the Y they try now trespassing on the few Y's who succeed to rule over the Z.

Pay close attention if your boomer relatives do the following things…

Constantly ignored your needs when you were a teen, then tried to re-enter your life

They have let you fend off for yourself as soon as possible, rejected your points as invalid, didn't bother much when you stopped talking to them, then they come back with great interest when they hear you're siring.

Try to make you depend on them

They provide some help by, say, babysitting your child and bringing some groceries. Then they start giving not-so-subtle clues that their support is really wonderful (even when it's nothing compared to everything they own) and they could withdraw it if you don't follow their bossy advice.

Try to play the hyper-cool grandparents

They start taking your child to restaurants, movies, or theme parks. They may pretend they are just enjoying themselves and contributing to your child being happy, but chances are they're actually manipulating your child into believing his boomer relatives are cool, funny, and merry to be around, in contrast with their own busy and less patient parents.

Shower your child with costly presents

Costlier than what you could or would afford, which is of course a way to imply superior status.

They show a whole new face to your child

With you, they were uncaring and severe. They blue-pilled you and silenced your mature views out. Then they pretend to be relaxed, caring, and playful with your child.

Undermine your authority

They constantly criticize your choices, speak on a patronizing tone, and worse, they do so in front of your child as if they willingly tried to undermine your authority.

Start talking about inheritance out of the blue

They never spoke about inheritance and even made the whole topic taboo as they were squandering it away, but now, they start dangling the carrot.

Make constant allusions to your childhood

They start constantly alluding to your childhood, once again before your child.

If you can spot your boomer(s) relative(s) doing several of these, and doing these recurrently, you can be sure that their smiles hide something dark. Namely, they are trying to pull your child over so that he'll have a rosy view of his boomer relatives versus a grimmer view of his own parents.

Grandpa's cool, grandpa's always fun to be around, and he always has a story to tell about his "vibrant" youth—before uncool daddy came to the world… oh, and do you know daddy's voted for the big bad Trump? Here, get yourself another ice cream!

Some may believe I'm a bit paranoid. Frankly, I don't think so. Most successful boomers are masters of deception, venomous hints, unbound egoism behind huge virtue-signalling, and you never know what they can do. Snatching the Z generation would be but a continuation of boomers' current policy of attacking "angry young males" and pretending to be wiser, gentler, more tolerant, more altruistic and so on (while bearing none of the costs).

Ultimately, the boomers' strategy may prove self-defeating. Minorities are aggressive and your children will suffer from them sooner than you did. Likewise, expensive stuff offered to the children means nothing in the long run when mom and dad struggle to pay the bills. In the short run, though, it may.

And rest assured, the boomers and their malevolent female heirs will do anything they can to put all the blame on our shoulders. If they can turn their grandsons or granddaughters into half- or quarter-heirs, heralded with the task of writing the official history books against us, they will.

If you see the signs, depending on your situation, consider the following…

Distancing yourself from boomer relatives

Trying to distance from the boomer relatives. Less of them equals more room for you. As a father, aspiring patriarch and honest red-pilled man, you are the head of the family.

Old rich cucks who supported all the leftist pseudo-causes and aggressive "minorities" against their own and indulged into every blissful compromise to maintain their comfort at the price of their whole civilizations are not legitimate to give advice, much less take decisions. You are the one in charge. Family activities, stories told, food, bedding hour, diaper brands—the decisions are yours.

Never expect a boomer to be generous with no strings attached

They don't give much, and when they look like they do, they want something in return—not something like passing a genuine legacy but rather personal control, blue-pillism or some other manipulation like those aforementioned. Doesn't mean you should not accept anything, but you should always be prepared to the day when your parents become something worse than strangers.

Have your own stories

If boomers start pushing a narrative, go into counter-narrative. Tell your children about the inspiring elders of the past. For example, tell them about Cato the Elder—a soldier, a patriarch, a plant-grower, a politician, and most of all someone who was proud to transmit more than he received, or give them some Miyamoto Musashi quotes through a capturing story.

Cato, an elder we can look up to

Raise your children with red pill values

Make them proud to do things—playing, building, doing sports. Give them a sense of family, untill they identify with all those who still embody Western civilization. A child growing this way is much less prone to fall to boomer-sponsored consumerism.

Prepare your children early on

When your children reaches the so-called age of reason, openly tell them that grandpa and grandma cannot be trusted. If you have a son, tell him about boomer daughter worship and how a boomer will never defend him when he gets his face punched by his minority pets. If you have a daughter, tell her about migrant rape. Is this extreme?

Well, children are better off when they are taught to be self-reliant instead of drinking Kool-Aid while watching Sesame Street. Third-world children knowing how to sell stuff in the streets at 10 years old are way more prepared for life than so-called first world children being forced to sit passively eight hours a day, listening to female leftists. NZT 48 from *Limitless* isn't real, but early preparation works wonders.

Conscious Westerners must rebuild our civilization. We must take what we can and live autonomously. This starts with living on our own terms, as individuals and as family heads. Our children are our future and our civilization's future. They are not, and shall never be, the support or the future of someone who does not belong.

Canadian DJ Has His Life Ruined In 24 Hours After An Anonymous Rape Accusation Appeared On Twitter

April 1, 2018 | by Jerry Michaels | Link | Original Link

The past year has proven to be a particularly damning one for allegations of sexual assault to surface against many high ranking members of society. Names such as James Franco, Morgan Spurlock, and Charles Dutoit have all appeared in the headlines lately with a variety of claims against them, each of which having a varying degree of basis in reality versus outright slander.

The Accused

The most recent, and potentially most devastating accusation is against 29-year-old Canadian Dubstep DJ, Datsik. In light of these unproven allegations, Datsik has had his entire tour canceled, was fired from his booking agency, and was even forced to step down from the record label he founded, all within 24 hours of the claims surfacing. Worst of all, it would appear that Datsik's longtime friend, Bais House, has publicly torched him, siding with his accusers and removing him from their critically acclaimed duo project, Ephwurd.

> pic.twitter.com/zSvIJZb7ND
> — Ephwurd (@Ephwurd) March 16, 2018

Datsik initially released a statement on his Facebook page that refuted these allegations but has since made his social media accounts private after being relentlessly lambasted by thousands of fans who have taken up arms against him.

This was in response to an unrelated crowd photo.

An “Annihilated” Career

In 2012, Datsik remixed a track by fellow Dubstep producer, Destroid, entitled “Annihilate.” Who would have known that it would become a fitting metaphor for his career just six years later.

What is particularly unique about this case is the speed at which Datsik’s career was single-handedly destroyed as well as the nature of the accusations themselves. At this point, it is entirely unclear as to whether or not any statements have been made to law enforcement if Datsik is facing any actual legal trouble, and if any concrete evidence exists showing that a rape took place. Instead, all of these allegations stem from Tweets made by one Twitter user named “mrs. wobble,” who was not assaulted herself.

Mrs. Wobble has posted screenshots of text messages sent from anonymous women that detail stories of the DJ acting inappropriately with underage girls. Allegedly, he would coerce them to use the drug ketamine and drinking alcohol, and supposedly left one fan he had intercourse with on the hood of a vehicle in snowy weather after speeding away in his tour bus like the Joker in Batman.

> yall i have to delete my original tweet due to a request for privacy, here it is for the 3rd time! pls RT pic.twitter.com/WHnxXI9ptN
>
> — ms. wobble ➡➡spring gathering (@_princesssjay) March 14, 2018

Additionally, multiple girls have forth with claims that Datsik’s manager would hand out backstages passes to particular women that have the word “TUL$A,” on them. This word was chosen so what if these girls are to look in a mirror, they would see that it instead says “A Slut.” Curiously, when a man uses this word, it is no longer a catchphrase of women’s liberation and is instead seen as offensive. Go figure.

> pic.twitter.com/SHoAjZsgzh
>
> — Truman Nolan (@TrumanBassMusic) March 14, 2018

Implications of the Datsik case for men

Nobody can deny that, if these allegations are true, Datsik should have a world of legal trouble coming his way. Unfortunately, it is incredibly unclear as to when the typical rockstar DJ party boy behavior ended, and when (or if) the actual wrongdoing began.

Many would immediately claim that these women are lying, or that they should not have gone on a tour bus at 3 AM with a DJ who is notoriously known for being a wild drug abuser and who once produced a song that contained the following lyrics, “Throw your casket bitch. I’m a cold-blooded killer, ho.” Unfortunately for proponents of this way of thinking, that’s not the perspective I’m going to address here.

Instead, let’s take a moment to reflect on just how lowly men are thought of in today’s day and age that a career that has been said to be worth millions of dollars could be destroyed in a 24 hour period based on screenshots of text messages from anonymous

women shared from an otherwise unrelated Twitter account. How many steps removed is that from an actual allegation from an individual, let alone one with evidence? This may be the fastest timeframe that a sexual assault allegation has single-handedly ruined someone's career.

Datsik may be guilty, or he may be innocent. It is ultimately unclear. What is abundantly clear, however, is that false rape accusations do exist. Emma Sulcowitz, otherwise known as "Mattress girl," the 2006 Duke Lacrosse case, and numerous other cases show that men are often accused of sexual assault as a weapon to be used against them.

In 2012, the Journal of Forensic Psychology used FBI data to determine that up to 5,000 false rape accusations are made in the United States each year. Considering the prevalence of these injustices, how can one take such vague, anonymous statements made via Twitter as admissible evidence? Yes, an investigation should take place, and yet it should be one in which the accused is "innocent until proven guilty."

Despite the ambiguity of his guilt, a career that took one man over a decade to turn from a passion project he started in his bedroom into a multimillion-dollar enterprise has now been entirely obliterated by baseless accusations alone. He has been denied the due process that he is legally entitled to in both a Canadian and American court of law. Additionally, while someone like Mike Cernovich can quickly recover from a false rape allegation due to the nature of his work, the precedent has been set that anybody who works in show business, the music industry or the creative arts as a whole is but one angry tweetstorm away from having everything taken away from them.

We live in dangerous times, gentlemen. Anybody who is concerned with the welfare of men should be interested to see how this case develops.

How To “Program” Yourself To Be More Charismatic

April 1, 2018 | by Larsen Halleck | Link | Original Link

A couple of weeks ago, I discussed several basic techniques to increase your charisma. These techniques were all strictly “mechanical”: ways to gesture and speak that give one the appearance of having more “poise”. And these alone will put you above the mumbling simps and dweebs that most men are nowadays. But that stuff is for rookies.

If you really, and I mean *really,* want to tap into your latent charisma, you’re going to have to develop the ability to get yourself into a “state” of charisma; to be able to emotionally convey that you are a charismatic person. But the question is: how do you go about doing this?

The Three Elements of Charisma

Remember from the last article that the three elements of charisma are power, presence, and warmth. Each of these three things can be “turned on” via creative use of something you have already heard of—the placebo effect. Remember again that your personality as it is can just as easily be charismatic as non-charismatic—you are not forcibly changing your personality, you are merely learning a new set of skills that must be regularly practiced.

Our body language will express our mind no matter what, thus you can only hide it so much. To be truly charismatic you have to be genuine, or alternatively you have to FOOL yourself into being genuine, if that makes sense. If you are internally charismatic—calm and confident and warm—then you’ll have strong body language. Thus you must develop ways to get into mental states that produce charismatic behavior and body language.

We will start by gaining insight into charismatic mental states—what they are, how to access them, and practice them until they are effortless. Only afterwards start practicing external charismatic behaviors. Think of it like a building: it needs a foundation before you put all the fancy stuff on. This is like having unflappable confidence, being able to rebound from a hit to your ego. To be aware of/manage your mental state.

A key insight upon which all charisma is built: your mind can’t tell fact from fiction. Knowing this can help you get into the right charismatic mental state at will. This is the aforementioned placebo effect, and that is what most of the charisma building exercises revolve around. Beware the NOCEBO effect, though, in which you can psyche yourself down and adversely affect yourself.

And finally, before we get into the actual techniques, get into the mindset of thinking that

any discomfort your body language shows (whether it be physical or mental) will reflect negatively upon you. This will help motivate you to utilize these techniques.

The Techniques

First of all, let us look at presence. Presence is the idea that you are “in the moment” and paying attention. The biggest impediment to this, I find from my own experience, is discomfort, in particular mental discomfort. In other words, if you are too busy thinking about stuff that is causing you anxiety, you’re going to seem flaky and dispassionate in the current moment, and thus not charismatic. Of course, recall from the last article that being TOO eager is not good either, but there’s a very big difference between “aloof and with poise” and “up his own ass with other concerns.”

A simple way to keep presence—assuming that you don’t have any mental concerns and you’re merely just drifting—is to forcibly think about the feeling in your toes while wriggling them. That’ll bring you “back” into your body—be sure to do this for just a second or two or else you’ll get distracted. Otherwise, just do what your father should have taught you, and maintain eye contact above all else.

If you want to negate/suppress negative emotions, there are two techniques I have found that work exceedingly well.

One is to destigmatize the discomfort: Reduce the “power” of the stigma by admitting that it’s normal. You’re not unusual for feeling that way, so it’s not a big deal. How to do this? Think of somebody who has gone through a similar experience and overcame it. Even simply imagining somebody you admire going through it can help you, even if they didn’t actually do it. Or you can just remember you’re not alone. Imagine a community of people struggling with it together, that’ll make you feel better about it. If possible, write down how you feel, doing something concrete makes it “stick” more—obviously don’t do this in public or while driving.

The other technique is “delving into the situation.” Imagine you’re in a shitty situation—what can help is to really delve into it—meaning give your full attention to the very sensations you’d instinctively want to push away. Really focus on every single minute sensation of your physical discomfort. Imagine that you’re a sommelier describing a wine: describe your pain in a similar way. It sounds paradoxical, but it really works—I use it when I do my neck bridges—it helps me last longer.

This gives your mind something concrete to focus on other than its growing conviction that this situation is unbearable. It also brings you into a full state of presence.

Power

To get power, you are going to have to use body language and visualization—and both of which can and should be practiced regularly.

Close your eyes and relax. Remember a past experience when you triumphed or won a great accomplishment. Obviously this is hard if you have lived a crappy life without accomplishments—it's much easier to do this if you have accomplishments to be proud of, and if you have accomplishments you're going to have more confidence and thus charisma. It all ties together.

Hear the sounds in the room: the murmurs of approval, the swell of applause. See people's smiles and expressions of warmth and admiration. Feel your feet on the ground and the congratulatory handshakes. Above all, remember the feelings, the glow of confidence rising within you. If it doesn't work the first time, remember that the more you practice visualization the more effective it'll be.

Alternatively, you can recite a mantra or phrase if that works for you. Try moving while you visualize. Some people imagine "counselors" pep talking. The point with all these is to try them all and see what works *for you specifically*.

Another way to practice this is as follows: the next time you're walking on a street or some other public place, imagine yourself as the swaggering brute you want to be, and act accordingly. Walk with confidence and take up space—mentally decide that you aren't going to step aside for anybody, they will step aside for you. The more you do this, the more strong and confident you will feel. Beyond that, the "power poses" and similar body language can be learned about here.

Fig. 1. The two high-power poses used in the study. Participants in the high-power pose condition were posed in expansive positions with open limbs.

Fig. 2. The two low-power poses used in the study. Participants in the low-power pose condition were posed in constrictive positions with closed limbs.

Warmth

According to some, warmth is the most complicated of the three charisma elements, mainly due to how it can be further subdivided into gratitude, goodwill, and compassion. Some find this helpful to understand it, but as you will find out in a little bit, I have a way to hit all three of these “birds” with one stone.

Gratitude

To get this, think of things you already have—from material items or experiences to cherished relationships or accomplishments. Or think of nice things around you right now—anything; “the weather is nice” or “I am not sick”. This gives power and warmth. If you can access gratitude, an instant change will sweep through your body language from head to toe. Your face will soften, your whole body will relax. Your body language will emanate both warmth and a grounded confidence that people like.

Goodwill

Wish well towards someone. One simple but effective way is to try to find three things you like about the person. No matter whom it is you’re talking to, find three things to appreciate or approve of—even something like “their shoes are shined” or “they were on time.”

Compassion

More accurately called self-compassion. First, realizing that we’re experiencing difficulties. Second, responding with understanding toward ourselves when we are suffering or feel inadequate, rather than being harshly self-critical. Third, realizing that whatever we’re going through is commonly experienced by all human beings at some point in their lives. Again it’s a skill to develop.

What I find works for me, and is much simpler than all that, is to imagine a moment in

your life when you were just in a state of joy, when you felt warm and fuzzy all over. For those who have children, the easiest way I could think of this would be to imagine how you felt when you first held your newborn child.

I don't have any children, but I felt something akin to this when I held my nephew for the first time, so I imagine actually being a father would be similar but amplified. And again, it's a lot easier to imagine this if you actually have a life experience that made you feel that way for real—as I famously advised in my earth-changing book, the easiest way to induce positive change in your life is just to do more new and exciting stuff.

We all like his quote about the righteousness of firearm ownership, but here's another good one

Conclusion

With these tools, and a lot of practice, you will find yourself developing that "mysterious" magnetism, or rather a magnetism that losers think is mysterious. And once you know how to turn it on, you can just as easily turn it off.

Bear in mind of course that you can turn any of the elements on and off at will with enough practice, but I myself would advise that you should always have presence and power "turned on", and utilize warmth on a toggle, to go from kind and loving patriarch to terrifying hangman at will. A man with presence and warmth, but no power, comes off as a mewling simp, and power and warmth without presence… I don't even know what you would call that.

I will produce one more article on charisma probably in the next few weeks, discussing the various types of charisma that go with various personalities (and thus explain why terrible people often seem to be so successful and charismatic). Until then, practice these—as much as you can, every day. They're like muscles in that they are made stronger with practice, but they're not literally muscles so they don't need a rest period.

How To Enjoy Life In Clown World

April 2, 2018 | by Johannes Adolphe | Link | Original Link

We appear to be living in a clown world. Men are turning themselves into women, women are turning themselves into men, and brainwashed kids, god bless 'em, don't know what to turn themselves into. Meanwhile, small-souled bugmen are protesting outside McDonald's for Szechuan sauce because of a cartoon, and deranged SJWs can't pull their eyes away from Donald Trump's Twitter account.

Faceless corporations are pretending to be social justice revolutionaries while at the same time warping the capitalist system out of all functional recognition for their own gains. Governments and the media are no longer even trying to hide their support for cultural Marxist policies, and as community spirit across the West continues to disintegrate, more pea-brains take to social media to shout at each other and drive culture deeper into the gutter.

A Scottish man is being sent to jail for making a joke on YouTube, childish movements such as #MeToo are being presented with a sickening veneer of credibility by the mainstream media, and events like the Oscars have deteriorated into humorless virtue-signaling crusades.

Once-great Western cities have been reduced to barren corporate wastelands populated by millions of atomized, cultureless, and basically useless consumers roaming shopping malls, filling sports arenas and sitting glued to their Netflix-enabled 75" 4K TVs as they chow down on mystery foodstuffs.

The internet has people living in something akin to a permanent state of road rage as

they desperately try to fill the emptiness in their lives by becoming hysterical over events that have little to no impact on them. The morbidly obese are plotting to normalize their immoral and disgraceful lifestyles in favor of sorting themselves out, and Tinder has turned the sexual marketplace into a loveless hellscape.

It's enough to drive a good man crazy, but those who can smell the rat know that even in the clown world of 2018, life can still be better than ever. Once you know how to adapt, there's still nothing stopping you living that idyllic 1950s-esque life, working hard, finding something or things you're passionate about, having a loving family, and deriving nothing but peace and joy from existence.

Perhaps the first thing you need to understand to enjoy life in clown world is that it does not *really* exist. Yes, all the things I mentioned are happening, but they are things at the extreme ends of culture that get attention because on the internet the most outrageous stories get the most clicks. Not only do corporate media sites exploit this, but so do superficially-rational YouTubers like Stefan Molyneux. And if you think Return of Kings isn't doing this too, you're as bad as the SJWs (sorry Roosh).

This lowest-common-denominator media landscape leaves us with a caricatured vision of society that filmmaker Adam Curtis dubbed "hypernormalisation" in his 2016 documentary of the same name. Since the 1970s, he argued, governments and technologists have given up on the complex "real world" and built a simple "fake world" run by corporations and kept stable by politicians.

Having faced up to this reality, you must then tackle the dilemma that most people are still living in the "fake world", which can be an isolating experience. Nonetheless, you must begin the process of blocking these people from your life. As Faceberg tweeted…

> I can bring myself to hate the Normie no longer. Rather, I am oblivious to him; my mind renders no sensory input of his existence. He is null and void—worth less than the spacetime he inhabits. My eyes do not see him, my ears do not

> hear him, my lips do not speak to him.
>
> — Faceberg (@thefaceberg) March 28, 2018

Normies discarded, you can focus your efforts on rebuilding a set of inputs defined by reason, competence, honesty and respect. This will allow you to build your own culture – a cocoon of intellect, camaraderie and humour that is able to observe clown world from the outside, if it wishes to.

In the words of Terence McKenna:

> Don't watch TV, don't read magazines, don't even listen to NPR. Create your own roadshow. The nexus of space and time where you are now is the most immediate sector of your universe, and if you're worrying about Michael Jackson or Bill Clinton or somebody else, then you are disempowered, you're giving it all away to icons. This is shit-brained, this kind of thinking. That is all cultural diversion, and what is real is you and your friends and your associations, your highs, your orgasms, your hopes, your plans, your fears.

Do not take their bait. A polarized, outraged populous is "exactly what a corporatist economy wants", argued Michael Aaron in Quillette. The message of 99% during Occupy Wall Street in 2011 was unifying. "It create[d] cohesion, cooperation, and positive validation, and it turn[ed] the spotlight on those pulling the strings behind the curtain." Putting everything behind turning 99%-1% into 50%-50% has since served the powers that be very nicely indeed.

Understanding how rage and division is manufactured by the elites and living now in your richer and more tangible reality, you can begin creating an authentic version of yourself while removing the shell that was most likely a bullshit version shaped over many years by corporate uniformity, normie interactions and societal brainwashing.

When you become your true self, you will be surrounded by others who still have their

minds intact, who don't blame anyone or anything for their problems, but like you live an honorable and joyful life.

Before long you will find yourself reading old books, exploring history and philosophy, picking up those sports you left behind as a teenager, and finding fulfilling hobbies and nourishing sources of work. You will see the world in a new light – see the beauty of nature and the brightness of the stars and moon as your masculine spirit is reenergized. Everything will become interesting, and the future will seem bright.

Relationships with your family will be repaired, you will have a stronger bond with your girlfriend, and you will the see the humour in everything. You will not let hate fester inside, because you will know that hate only comes from people who are trying to condition you. Instead you will lead a life defined by love and harmony. You will lift weights (this is not optional), go running in the wild, and respect your body.

You won't live with fear and resentment like those with Trump Derangement Syndrome or those who give themselves nothing to be proud of. Instead you will realize that we have created a world in which so much is great, and that there is much to be thankful for. You will feel the pain of this greatness being squandered, but you will learn to accept it and the anger will subside as your happiness flourishes.

36 Soy Boy Pictures That Reveal An Epidemic Of Feminized Men

April 2, 2018 | by Roosh Valizadeh | Link | Original Link

There is no doubt that decreasing testosterone levels among American men are causing them to behave in childish and feminine ways. This is most clearly displayed in the “soy boy face” pose that combines the feelings of excitement and fear into one faggotized package. Here are 36 pictures that show the soy boy epidemic is here to stay.

The Payday Loan Scam

April 2, 2018 | by Jared Trueheart | Link | Original Link

There’s an interesting documentary series on Netflix titled Dirty Money. Each episode explores an issue relating to corporate greed. I’m not recommending the whole series (the first episode takes a low blow at The Donald for pulling us out of the Paris Climate Agreement), but the second episode is about a payday loan scandal with some larger implications.

The Scandal

Wealthy elitist Scott Tucker created an umbrella company under the ownership of a Native American tribal chief from Oklahoma. He did this to avoid state laws. The chief agreed to lend his name to this company in exchange for a whopping 1% of profits without having to do anything. All of the payday loan companies under the umbrella company operated out of Kansas and took customers from the internet. When angry customers called the offices employees there said they were located in a reservation in Oklahoma.

Scott Tucker with one of the race cars taken from him after he was found guilty

The payday scam is simple. If a guy takes a payday loan for $500 he'll have to payback a ridiculous amount like $650. The guy knows that and takes the hit. What he doesn't know is that the loan company is going to take $75 every two weeks from his account to "hold the loan," none of which counts toward the $650 he's willing to pay. After two months the loan company starts taking the $75 to "hold the loan" plus $100 of principal and an additional $30 service fee.

In the lawsuit brought against Tucker the prosecution was able to show that the loan agreements the loan-takers were seeing were extremely misleading. Customers did not know they were making all those payments to "hold the loan", none of which paid off the principal. That's one of the reasons Scott Tucker was ultimately tried and convicted to 16 years in prison and why Scott's brother, who hired everyone who worked at the loan companies, committed suicide.

Where's The "Free Market" Solution?

The "free market" is a myth and payday loans demonstrate that. Free market capitalism expects a competitor to disrupt the payday loan market by offering people a better product. That's especially true in the age of the internet. If a payday loan company just charged a guy $650 for his $500 loan without all of the hidden charges and misleading agreements that company would be preferable to consumers and still be wildly profitable. But that company doesn't exist.

One of the things Scott Tucker repeated several times was that his loan companies were just doing the industry standard. The entire industry did it. If there were a free market a competitor would have changed that. If such a competitor does exist, and it isn't changing the industry, you would have to ask why not. If the market were free people would choose the simpler, better reviewed, cheaper loan business. Yet people still go to the scammers. Either way it just demonstrates that wealthy elites are rigging the game

against common guys.

We don't have a market that competes for your consumer dollars. We have a market that encourages business to coordinate their practices to get as much money from consumers as possible. That's not a free market.

The Argument For Payday Loans

Business sympathizers argue that payday loan companies fill a void in the market. People are willing to pay the rates. They are providing a service that people want. If consumers can't be responsible enough to read and decipher their contract agreements they shouldn't do business with payday loan companies.

What payday loan companies do is legal, they say. Because it is legal and fills a void in the market, loan companies do more good than harm.

The Argument Against Payday Loans

Payday loan companies make their loan agreements purposefully deceitful. Because only poor people need payday loans, and because poor people aren't always the brightest people, payday loan companies essentially prey upon the poor by making them poorer.

The polite way of saying that poor people are dumber is to say that they haven't received enough education to genuinely comprehend the agreements they are signing. Either way of saying it is true. When it's all said and done, the rich have become richer and the poor have become poorer.

Divorce Rape

Replace "deceitful loan agreements" with "divorce rape" and you have similar arguments for and against the legality, or at least the morality, of divorce rape.

Divorce rape serves a purpose: it ensures that women who stayed at home to be a housewife during marriage are supported after divorce, since they couldn't develop a

career while being a housewife. Divorce rape is legal. When men enter in to marriage they are willing to take the risks of being divorce raped. Divorce rape is a legal right people (women) want. If a man isn't responsible enough to hire a lawyer and get a pre-nup he shouldn't try to have a nuclear family.

Or…

Divorce rape is a purposefully deceitful practice. Women can cry abuse and take advantage of the system. They can say that they were unable to develop a career even if the husband encouraged them to do so. None of that is written in to law. On the altar, both parties swore til death do them part, yet they aren't dead and they are parting. This is misleading, especially to the "uneducated." Divorce rape preys on trusting men. When it's all said and done a bad wife can live the good life off the husband's work while a good husband's life is diminished to financial enslavement.

The Moral Dilemma

The question I ask myself when I think about things like payday loans or divorce rape is simple: "What sort of world do I want to inhabit?" I don't want to live in a world were the rich get richer because the poor are desperate. I don't want to live in a world where hard-working men can lose everything because their ex-wife lied to a judge about spousal abuse.

The argument that because something is legal it is right to take advantage of it is a poor argument. Legal does not equal moral. If you are in the middle class and a poor family goes homeless while a rich family gets a few thousand dollars, is your world better or worse? You might think it is unchanged, until you wake up to realize that you now live in a third-world slum.

Payday loans might not seem like they effect you, and maybe they don't directly, but the moral dilemma behind them effects all men, because men can and do rule this world.

Right now it’s the global elite men, but maybe one day it won’t be.

7 More Things A Man Must Never Do

April 3, 2018 | by William Adams | Link | Original Link

PREVIOUSLY: ***7 Things A Man Must Never Do***

It's incredibly difficult to discern universal moral standards, especially those who are shared by religious and non-religious men alike. Not everyone agrees about everything, for one reason or another. It could concern drugs, hurting animals for other purposes than eating them, or simply casual sex. Some even suggest that the very idea of contemporary ethics is just a means to keep modern males in check.

Be that as it may, we can still share our values, beliefs, and experiences in order to find common ground or simply put forward different perspectives that enrich our way of thinking and acting. My angle here is to give examples of things that I have said no to in life.

1. Group sex (with other men involved)

Guys who are active, partying, drinking, having a couple of semi-disrupted male friends or even some mild forms of those psychopathic traits themselves, tend to be occasionally involved in situations which may include various constellations of group sex.

While it’s fine to under some conditions make out or even fornicate in the same room as a male friend or acquaintance (in the North we have the infamous ferries between Sweden and Finland where debauchery in the cabins is not uncommon), I find the whole idea of sharing a girl with another guy despicable.

Therefore I have politely said no to such suggestions whenever they have (rarely) been conveyed. The closest is perhaps the pump-and-dump and sharing process associated with being buksvåger.

2. Hard drugs

Drugs and narcotics are two real moral minefields. A complete consensus between men is highly unlikely, given the multiple historical, scientific, spiritual, legal and individual aspects that affect them in regard to such matters.

Distinguishing between “natural” and “unnatural” drugs is hardly of any help. Some natural stuff can be quite toxic, whereas for example most synthetic sleeping pills in moderate doses and for short term use appear as low risk and perfectly reasonable to consume.

Yet, common sense and social norms have told me to stay away from hard and toxic stuff like LSD, heroin, PCP, crack and other junkie drugs. In my 20s I was a bit (((open-minded))) when I was drinking alcohol and some fellow cared to share, but I’ve always tried to make certain rules and avoid hard drugs.

3. Anabolic steroids

Despite of being involved in fitness and bodybuilding for many years, I have never been offered anything at a gym environment or by a bro. However, given that a person is interested in using some type of performance-enhancing substance it’s not hard to find a dealer, whether online or offline.

After weighing the totality of pros and cons (financial, physical, legal and mental), combined with having sort of a general “never cheat” mentality, I have decided to not juice it up. Perhaps you should do too.

4. Fuck fatties

I have rather early in life come to the conclusion that sleeping with a ham beast will bring a net loss to your internal well-being, hence I have avoided it at all cost.

The actual sex act itself and memories of such a mischief are likely horrendous, but adding to the fact that you have let yourself sink that low is probably even more regrettable and discomforting, and will further pour salt on the wound.

5. Have a gay friend

We all know that prejudices often turn out to be predominantly true, especially if they are backed by facts and reason. Most homosexuals that I have come across in real life have turned out to be neurotic at best and promiscuous STD-spreading junk people at worst. The most intelligent and sophisticated ones are probably only very good at hiding what they are doing during their vacations.

After never had any gay friend throughout life, due to my prejudices and instinctual homophobia, I feel that I absolutely miss – nothing at all. Leave some stones unturned.

6. Be nice to annoying people

Personally, I am fairly kind and polite to almost all people. For instance, at my mother's former work there's a lightly retarded female (supported by governmental handouts) whom I am friends with on social media. She likes almost every goddamn photo or text message that I happen to disseminate, but never bothers me the slightest. Thus I have absolutely no reason for not seeing her as a harmless and even slightly sympathetic person. The same goes for people who have different opinions than me.

But that's where I draw the line. If an individual, for whatever reason, completely lacks appropriate social skills and annoys me with text messages, phone calls, doorbell ringing or whatnot I will not tolerate that for more than a second after the first few evasive attempts.

It might be that I am simply less agreeable than the average cuck or female philanthrope, but my level of toleration for the annoying organisms on earth is fairly low.

7. Let other guys run you over

On the bully spectrum I was closer to the bullies than the victims in elementary school, but there were always a couple of guys that you had to fight back or earn their respect before they stopped. In high school there were never such problems by any side where I was living, besides from the senior soccer team in which some of the older guys believed that they could say and do whatever they wanted. The team leaders did even support them.

While a little bit of rough jargon and informal hierarchies are okay, even beneficial for building character, you should never let them take it too far. Hence one time, during soccer practice, I had a fight with a guy (23, I was 18). I threatened him and behaved very aggressively, both verbally and physically, so he ended up calling our coach and complaining like a little bitch. I think back and see this as a great move.

We develop as men when we make good decisions. Sometimes it's important to say no before bad things occur and you lose your sense of honor.

Donald Trump’s Presidency Has Proved How Irrelevant Voting Really Is

April 3, 2018 | by Julius Draper | Link | Original Link

Many of us on the political right were ecstatic about Donald Trump’s campaign since he represented our frustration with the worthless GOP. A massive contingent of his supporters mobilized to trigger as many leftists as possible during the presidential race. On November 8, 2016, Trump declared victory, and supporters across the US celebrated achieving the impossible.

Sixteen months later, it is clear that we vastly overestimated Trump, and the American political system itself. Not only has the President not fulfilled most of his key promises, he has done a 180-degree turn in multiple areas. Whether these flip-flops were Trump’s personal wishes or those of the deep state, they have proved that America is doomed to follow a globalist trajectory, as long as the political system remains the same.

Build The Fence

Trump’s most prominent campaign promise was the strict enforcement of immigration law, including the construction of a large wall on the Mexican border, funded by Mexico. Such a proposal was unheard of, as both parties openly supported amnesty for illegal aliens. However, as Trump progressed through his first months in office, his promises became more and more diluted. First, he said that parts of the wall would consist of fencing. Then came the revelation that Mexico had no intention of paying for it.

As for immigration enforcement in general, Trump backpedaled on DACA, and deportations did not increase by a significant percentage. While the deportation of the entire illegal immigrant population was infeasible for obvious reasons, Trump’s immigration policy so far looks like that of any other Republican.

The most recent update on the immigration situation came just a while ago, when Trump unexpectedly signed the $1.3 trillion-dollar omnibus bill that arrived at his desk. The bill was an obscenity that funded many Democrat and globalist initiatives, as well as failed to provide any funding for the wall.

Most astoundingly, however, was that Trump himself claimed that he wished DACA had been funded. For a man who was so passionate on the campaign trail, it is hard to accept that Trump willingly did an about-face on something as highly disliked by his supporters as DACA. If President Trump really wants to keep his base from deserting him, he should start off with making real commitments to change immigration law.

America Second

Another major tenet of Trump's campaign was that of American non-interventionism. Trump's call for détente with Russia was a far cry from most other Republicans, whom had been shilling for the military-industrial complex. Unfortunately, Trump lapsed into warmongering within a few months of his presidency.

In the beginning of April 2017, Rex Tillerson and other members of the President's cabinet announced that regime change in Syria was no longer a key aim of theirs. Several days later, there was a "Sarin gas" attack in an Al-Qaeda opposition-controlled area of Syria, which was immediately blamed on President Assad. Without a single shred of evidence, the Trump administration began agitating for war in Syria. This hysteria ended in the firing of 49 Tomahawk missiles at a Syrian Air Force base.

To many observers, including yours truly, this was a painfully obvious false flag attack. After all, why would the Syrian government have massacred civilians with nerve gas a mere days after their most powerful enemy said they had lost interest in toppling them?

Trump has also been bought out by the Saudi lobby, going as far as to commemorate the opening of a center to combat "global extremism" in the Saudi capital. This is akin to a center to promote free speech being opened in Pyongyang. In addition, Trump copied the Saudi/Israeli propaganda line to explain all the evils of the world: Iran. This despite that fact that all major terrorist attacks in the west over the past two decades have been connected either with Saudi Arabia or with an ideology that is promoted by them.

Trump also recently started filling his inner circle with neoconservatives, including John Bolton, an overzealous, Bush-era war hawk. It is very possible that a war with Iran could erupt any moment due to the hunger for war in the administration. Such a conflict would be disastrous, and would be exponentially deadlier and longer than Bush's Iraq debacle. All of this warmongering and regime change promotion flies directly in the face of Trump's America First platform, and represents 180-degree turn on foreign policy.

Keep America Leftist

The area in which Trump's policies are having the least effect is American culture. This cannot be blamed on the President, but serves more as an indication of how useless the President really is when it comes to the direction of American society.

One would think that after such a shitlord is elected as president, free speech would be enhanced. Instead, the exact opposite has happened. Right-wingers have been getting no-platformed and banned across the landscape of communication. The mass hysteria following the Charlottesville incident gave corporations the excuse they needed to set off mass purges of thought criminals. Even people who stated basic facts were not safe from the thought police, as could be seen with James Damore.

So the question arises: how is a president supposed to influence culture without becoming a totalitarian? Since all the networks that dissidents utilize are controlled by corporations, they can be harassed and denied service based on their political beliefs.

Here is where the "free speech" argument runs into a problem: free speech is guaranteed by the US constitution, which concerns itself with what the government can and cannot do. Not corporations. Corporations are completely free of government interference and influence. Before the libertarian in you says "Yeah, that's the point of capitalism!" understand that these companies operate based on the whims of their shareholders. Since American culture has become so PC and degenerate, it is now considered "trendy" to dox, harass, and threaten anyone who doesn't agree with the diversity/feminist/Marxist agenda.

If you get banned from social media for expressing an unorthodox opinion, guess what? You can't do shit about it. You can cry "muh free speech" all you want, but corporations are not beholden to constitutions. All of this is why, despite the election of Trump,

American society will continue to shift leftwards without a major disruptive event.

Drastic Times Call For Drastic Measures

As one can see, the person who holds the office of president matters little on the political chessboard. Donald Trump is on track to be a typical Republican president, minus all of the flair that was present during his campaign. For real change, there must be a societal upheaval that uproots the diseased institutions that currently make up the country.

The Country Of Georgia Is Quickly Adopting The Casual Sex Culture Of The West

April 3, 2018 | by Theo Valenta | Link | Original Link

After spending three months on location, I can say that Tbilisi is one destination that is relatively ripe for the picking for the manosphere. To the benefit of visitors and the detriment of traditional Georgians, Tbilisi seems to have gone from a nearly theocratic monolith of a country to a rapidly Westernizing hub within a decade. After a three-month visit, I observed vital aspects of its background, culture, and women that I would like to share with you today.

I intend this post to be a catalyst for further discussion and the advancement of masculine knowledge regarding Tbilisi as both a travel destination and a potential place of living.

Background

Nestled at the crossroads of Asia and Eastern Europe, Georgia is yet another former

Soviet Union powerhouse of a country that experienced significant instability upon its collapse. Before the Rose Revolution in 2003, an event that was effectively the turning point for Georgia, the nation was had floundered into a state of chaos and was run by organized crime. Since then, however, the country has undergone a metamorphosis, even forming somewhat of an odd alliance with the United States, evident by a one-year Visa-free entry policy for US citizens, city streets that have been named after George W. Bush, and a generally pro-American sentiment.

Despite a 2008 conflict with Russia that led to the departure of the South Ossetia region from Georgian rule, the country remains relatively peaceful and is surprisingly one of the safest destinations to visit in all of Europe. Corruption in everyday life is virtually nonexistent, petty crime rates are remarkably low, and gone are many of the inconveniences prevalent while living abroad in Eastern Europe.

Shota Rustavelli Avenue, the city's main artery, has a distinctively Western feel to it, a symptom of a culture that is changing at a rate that few could have predicted in prior years. While it is not at the point where there are official Apple stores in shopping malls, brands such as Nike, H&M, and Adidas are springing up quickly.

That said, Tbilisi is not all sunshine and rainbows…

Local Culture

When visiting Tbilisi, one is often told that they must be aware of the nation's extreme predisposition with the Christian Orthodox Church, the concept of virgin brides, and a traditional way of life.

While it is not uncommon to see individuals blessing themselves outside of churches, one could likely compare Tbilisi's relationship with Christianity to that of Islam in Turkey. One-

half of the population is very fixated on religion, whereas the other half has adopted a Westernized, degenerate mindset that enjoys casual sex, going out drinking, and taking Instagram selfies. That being said, I have yet to meet one single person here who has said they do not believe in God to some degree.

In general, Georgians are quite friendly and welcoming of guests, especially if you are white. There is, however, a rising far-right political movement that is taking place here that is supposedly espousing a very anti-foreign sentiment. However, they appear to be predominately focused on similar goals to their counterparts in the USA, leaving me relatively unconcerned.

Side note: the food here is quite incredible when compared to other places in Eastern Europe. Think Eastern European favorites with spicy, exotic undertones prevalent in Middle Eastern cuisine paired with gourmet wines. Khinkali, Ostri, and Khachapuri have all become new favorites after being here.

Regarding drink, it would appear that every family here has their own type of wine they pridefully brew, with Georgia claiming to be the birthplace of wine. If you hook up with a local, have her bring you some (it will likely be served in a reused Coca-Cola bottle, it's normal). I never drank red wine much before coming here, and yet I have a new appreciation for it.

Women

Roosh often discusses travel tips for men who like to get laid abroad, and that is visiting countries where a man can cash in on being the exotic looking one of the bunch. Considering that I've spent most of my time in Russia, Poland and Ukraine, I was never able to see this phenomenon in action.

What I have noticed, however, is that white men can use this to their benefit while in Tbilisi. Couple this with very high English proficiencies and a cultural understanding of the West, and one can run the standard "cocky/funny" game to a high level of success.

The majority of women here are undeniably darker than those one might find in Ukraine, Poland or other manosphere favorites. Women in Tbilisi look like exotic Ukrainian girls in many ways, a welcome change from the standard “mail order bride” look. While that is my favorite type, Tbilisi could be a goldmine for those who crave something slightly different.

Similar to Turkish girls, they almost have a South American look to them regarding skin tone and body type. On top of this, Tbilisi is undeniably a hipster town. If anything, it reminds me of Berlin to a significant degree. Army jackets, leather, 90s sweatshirts, and combat boots often adorn girls with bangs, highlighted hair, and the occasional tattoo. This is overwhelmingly the fashionable look here.

I can’t tell you how many people told me it would be difficult to get laid in Georgia, and how wrong they were. Many compare the phase that Georgia is going through currently to that of America in the 1970’s, with a sexual revolution just beginning to take hold, and girls being eager to do away with the dated dogmas of the past and become independent, sexually autonomous women free of patriarchal rule. This is both sad and beneficial at the same time.

I got laid on Tinder within three days of being here with a local girl. I merely met her in the town center, took her to Dive Bar at Fabrika, landed the kiss, and jumped in a cab back to my house. It was just like being in the United States. Since then, I’ve had an easy time in this part of the world running a mixture of day and online game with solid results from relatively low effort. If one is into night game, there are plenty of venues to visit as well.

Where To Go & Logistics

If one likes to chase the typical Georgian, slightly hipster demographic, the can find such girls strolling around venues such as Dive Bar, Drunk Owl, Warsawza, Cafe Gallery (even though it’s a gay bar), and the area’s underground Techno clubs such as Bassiani, Khidi, and Mtkwarze.

For those who are turned off by this demographic, Tbilisi is a hotspot for tourists from Russia and the Middle East enjoying themselves at the cheeseball nightclubs on Jan Shardeni street. This isn’t my scene at all as I don’t like to listen to Electro House remixes of “Yeah” by Usher, visit fake Irish Pubs, or watch girls sing karaoke. If you like ironing your shirt and hitting on basics, this is most likely your spot. Do keep in mind that the cute hipster demographic is the dominant culture in Tbilisi. If that is not your style, I do not suggest going to Tbilisi to run game.

Staying anywhere close to Freedom Square or Rustavelli Avenue is ideal for a short stay, with Airbnb and cab rides being some of the cheapest in Europe. A quality Airbnb can be had here for as little as $450 a month. For a more extended stay, I would likely save even more and move to a less touristy destination such as the Saburtalo section of town that is well connected by the city’s Metro system.

A Changing Culture For Women

For a white man, one can be quite a novelty here. I remember going to a shopping mall on Christmas Day to pick up a spare computer part. Much to my surprise, I was receiving looks from at least 30% of the women I walked past, some of whom were quite obviously staring at me and giving clear IOI's.

For a young man in their notch building phase, there is an abundance of easy to lay girls

who are receptive to standard, American game. Many are virgins or relatively inexperienced, but still eager to indulge themselves in what is quickly becoming the “new norm” among the millennial generation. It is a strange, strange situation that even I cannot make sense of sometimes. This place is conflicted, to say the least.

On the relationship front, I’ve had one or two girls that I was “exclusive” with while being here. Doing so has made me realize that I would probably never commit to a long-term relationship with a Georgian girl. Feminism, to some degree, has arrived.

Despite the fact that many of these girls are free-spirited and bohemian, many of them live with their families until they are married, and parents in this country are attempting to hold on to the traditional norms they know to be true. As a result, if you are doing something as simple as having a coffee with a girl, she will continuously be lying to her mother, father or brother about where she is.

Society still expects these women to retain their virginity before marriage, and a great deal of shame accompanies women who are known to have slept around. A culture war is starting to take place between the Western values and Georgian traditionalism, and as a visiting man, you’re stuck in the middle of it.

The very nature of dating a Georgian girl will mean one is spending time with someone who is a trained liar, sadly. Just to have a simple date with a foreign man, let alone a whole relationship, she is probably going to be lying to someone. While she may be lying because of some silly rule in Georgia, it makes one think that if she can lie to her mother so comfortably, what’s stopping her from lying to you?

Conclusion

With a one-year Visa-free travel policy for Americans, low prices, and a sexual revolution afoot, there are numerous benefits to traveling to Tbilisi. I considered not publishing this article as, depending on one’s interests, this city could be an absolute goldmine to those willing to arrive, put in the work of building a social circle, and set up shop for a year or so. Since prices are nearly identical to considerably poorer, less livable countries such as Ukraine, this can be done at an almost identical cost and with a significantly more extended period of Visa-free travel time.

To top it off, English levels are very high, making communication typically quite straightforward. As feminism continues to grow in popularity, women will become more “independent” and seek out casual sex.

Tbilisi, Georgia, provides many of the modern amenities and cultural imperatives that Western nations offer while remaining an exotic, post-Soviet, Caucasian city sure to produce seemingly endless novelty to those visiting. I would suggest it to someone who is looking for a bit of a change of scenery when traveling through Eastern Europe, or at the very least, a lovely destination to escape the brutal Eastern European winter.

4 Ways That Men And Women Are Different

April 4, 2018 | by Pete Fletcher | Link | Original Link

It’s said that Abraham Lincoln once asked some people how many legs a horse would have if you called its tail a leg. They answered five. Abe corrected their foolishness by pointing out that you can call the tail anything you want, horses still have only four legs.

Today’s pop culture now says that women are the same as men. That women are best able to lead because… whatever the babble of the day is. And men are brute beasts who only rule because they are bigger than women. And there are no differences between men and women except some easily changed plumbing details.

They can say whatever they want but the fact still remains that men and women are very different and were created for very different roles. If you want a wonderful and long relationship with your woman, you need to understand these differences and how they play out in the real world. Here are a few important ones.

1. Leadership

Let’s look at leadership first. Everyone knows you can’t herd cats. Cats aren’t herd animals. They don’t stick together and they won’t go where you want. But you can easily control groups of cats and take them wherever you want. The next time you’re in cat country, open a can of cat food or grab an old fish and walk down the road. You got cats. Lot’s of cats. Underfoot and fighting each other but going right where you want.

The take-away is this: you don’t drive your woman, you lead her. She wants you to lead and she will follow you. Women are like that. They were created that way.

2. Emotional Needs

She doesn’t want to hang out with a bunch of women nearly as much as she wants to cuddle with you.
Women need to be protected, loved and cared for and they will look to their man for this. That’s you! That’s your role if you want your women to follow you. Provide her what she needs and lead her. Just don’t be trying to drive her.

3. Teamwork

Men aren’t herd animals—we’re team players. There’s a big difference. When a bunch of guys find themselves in a bad situation, they automatically begin working as a team. They’ll recognize and follow a qualified leader, discuss and listen, divide up the tasks, work together, and get the job done, usually without shouting, arguing, complaining or slacking off. When there’s a job to do, men work together and do it. That’s how we make

a living.

Women will also work together but they tend to take a long time and usually end up being either over-organized or under-organized. They don't just naturally work together as a team like men do, but they do one-to-one really well. Women easily form strong emotional bonds with individual persons, such as a BFF or husband. They also bond with their children. This makes women ideally suited for forming and caring for their families.

Loading...

So men, your women wants and needs to form a strong emotional bond with you. She knows how to do this. So give her what she needs, then lead. She will follow.

4. Mental Ability

Now let's shove our pride under a rock for a while and consider memory. It's my considered opinion that men and women are more or less equally smart. We're good at different things but overall men and women start out about equally good at thinking. But men end up out-thinking women in the long run because *our deficiency in memory forces us to be thinking **all** the time*.

Women don't have to think like that. They remember everything! Birthdays, anniversaries, your clothing sizes, appointments, specific conversations… they are remembering machines. They don't have to think a lot. They remember what worked the last time and do it again. Women are really good at sticking with what works and doing the same thing over and over again.

We can't do that. We have to figure it out again. And often come up with different solutions. Think about the many times you've been around an older married couple and he can't remember something simple, like what kind of margarine they buy. She gently reminds him.

Then they get in the car and ***he*** drives. Driving is more than remembering. You have to be looking out and making decisions. You have to be thinking. As soon as you start zoning out and following the lines, you'll get honked at and cussed at, by the ***guy*** driving the other car. Driving requires thinking, and men are really good at it. Because we've been forced to think all of our lives.

Conclusion

All of these differences between men and women aren't based on some stuffy academic research. Nobody's going to grant me a degree for figuring this out. You can see it all around you if you just open your eyes and see.
Men and women were created different, and we're good at different things.

Nowhere in my Bible does it say that men ***should*** be the head of the family; it simply acknowledges that men ***are*** the head of the family. Men lead, women follow… and often pick up the pieces. Men think, women know… or think they do. Women want to be loved, protected and provided for, and men must love, protect and provide for them.

As A Father From Brooklyn, I Can No Longer Tolerate The Degeneracy Encircling My Family

April 4, 2018 | by Mac Richardson | Link | Original Link

In my youth I was much more tolerant of the gay and lesbian movement, but I think that is because I lived in a completely different world than what exists today. I was born and raised in Brooklyn, NY, but I feel that the Brooklyn that I remember either no longer exists or exists in isolated pockets holding out against a world quickly losing any moral coherency.

I remember a time when respecting other people's privacy was not a novelty but a requirement and by extension demanding that our own privacy be respected. We all knew who was gay, but as long as they kept their lifestyle to themselves, we didn't give a shit. I developed a tolerance for people because I could put myself in their shoes and get a grasp for where they were coming from. Today there is none of that. Today the gay and lesbian lifestyle is being rammed down America's throat whether we are prepared for it or not; even though they only make up a tiny fraction of society.

I really think political correctness is out of control and I've given up trying to enable that culture or even educate myself and others. I'm not on board with explaining to my son why a kid at his school has two dads. I tell him that everyone's family is different and to respect their privacy. Then I immediately tell him that someday he's going to meet a wonderful, respectful young lady. I qualify respectful as a person who respects herself and her family, and has a close relationship with her father.

I tell him if you decide to get married and have children then you will experience a great

life filed with the rewards of family, as I do. I don't believe a child should be deprived of having a mother and a father, but the world we live in now spits on my concept of normalcy.

I was okay with same-sex marriage because the family man in me thought that people should be able to get healthcare coverage and death benefits for their loved ones. I still believe that, but with the understanding that what you do behind closed doors is your own business and leave me the fuck out of it.

Yes, I can tell if you're a fag or a lesbo, and I'm not going to go there out of respect for your privacy. However, when you rub it in my face and try to get society to bow down before you, you get the Ole' Brooklyn Salute (middle finger). Again, I'm not going to normalize that to my child because there are folks out there that are completely promiscuous and have no intention of finding a life partner or soul mate.

It's perversion when you are sex driven and you fall in love every other night whether you're a man or a woman. When I witness these pride parades I see a complete lack of discretion and rampant sexual innuendo. That goes beyond gay rights and these events have become pretty sick.

I find it repulsive that a lot of kids these days are being encouraged to turn into something that they are not. What happened to being proud of who we are just the way you are? I tell my kid, "You made some important decisions when you decided to be born a boy. Trust that decision because becoming a man is a great adventure. It's not a better adventure than being born a girl, it's just different and it's worth living to the fullest."

Loading...

We clearly live in an time where the feminization of men is in full swing. We know for a fact that synthetic estrogen is everywhere. Most men cannot escape contamination

especially in big cities where we are all being herded. I encourage my son to be courteous, kind and respectful, but I also tell him not to be a pussy.

We are living in an age where it is now “cool” for a woman to try and convince another woman she can provide for her better than a man. I don’t subscribe to that idea. I do tell my son that it’s a man’s job to decide someday whether or not to grow and take care of a family. It has to be a conscious decision to stick by his kin as guardian, protector, provider and the backbone that tomorrow’s dreams are made of. It sticks in my craw when society tries to turn my lad into a little soy boy with no testicles and limits his future wife prospects by turning them to lesbianism.

What disgusts me the most is secret transgender people who try to get into a relationship with someone under false pretenses. People deciding to become transgender because that is more in line with who they really are is fine with me. Not being open and honest about who you are though is the same as not telling someone you have an STD prior to intercourse. Now I have to educate my son on the differences between men and women. Not the obvious differences of once upon a time, but the subtle differences that drugs, hair extensions, make up, and surgery cannot hide.

So what is really going on?

The Cultural Marxists know that in order to destroy America they have to destroy the family. One thing I always held dear was that family transcended everything. They have to annihilate the concept of a strong father figure and they have to make obsolete the icon of a loving mother, of a home life and childhood that is wholesome, where innocence is not just protected but enshrined. They know that to defeat us, they need to hit us where we live, our family.

To all you young players out there, I’m not ignorant to what the game has become. I will

encourage you however to have a dream. There’s a pretty girl out there who has an education, can cook, does not leave her clothes all over the floor like you do, has a loving relationship with her father (who’s respect you must earn, sorry!), respects you and can be your best friend, lover, companion, wife and who will be a good mother to your children.

You will someday grow old, don’t do it alone. Your family is your key to the future, you will achieve things you never thought possible because your loved ones are counting on you. Forget about James Bond and Rambo, you will be the hero just by showing up to your kid’s baseball game.

Mac Richardson

Mac was the quiet boy that maybe you remember from grade school. The smart kid that spent all his time at the library, gave out the answers to the Trigonometry test, but was generally pretty shy. Perhaps you teased him a little bit or picked on him like everyone else. Who knew he'd become the guy you want watching your back when SHTF?

Iranian Woman Who Shot Up YouTube Headquarters Before Killing Herself Looks Like Roosh Without A Beard

April 4, 2018 | by News Syndicator | Link | Original Link

Via AP News

A day before a woman opened fire at YouTube headquarters, her father said he warned police that his daughter was upset with the company's handling of her videos and might be planning to go to its offices, but authorities say her relatives gave no indication she might turn violent.

Police also said that Nasim Aghdam, who wounded three people before killing herself, had visited a gun range before Tuesday's attack. She entered a courtyard at YouTube's main offices south of San Francisco, pulled out a handgun and fired several rounds.

> Thank God she wasn't a man. Dozens would have died instead of just herself. https://t.co/dHZCrhM3mA
>
> — Roosh (@rooshv) April 4, 2018

The 39-year-old told family members that she believed the company was suppressing her videos, which included segments about veganism, animal cruelty and exercise, along with glamor shots of herself.

A law enforcement official with knowledge of the investigation told The Associated Press that Aghdam had a longstanding dispute with YouTube. The official, who spoke on condition of anonymity because the official was not authorized to discuss the case, said Aghdam used the name "Nasime Sabz" online.

A website in that name decried YouTube's policies and said the company was trying to "suppress" content creators.

> YouTube Shooting Suspect Nasim Aghdam's "Meat Is Murder" Music Video

> pic.twitter.com/vYEP318ySA
> — Stefan Molyneux (@StefanMolyneux) April 4, 2018

A woman opened fire Tuesday at YouTube headquarters, wounding several people before fatally shooting herself as terrified employees huddled inside, police and witnesses said. YouTube said the entire community has been affected by the attack. (April 3)

"Youtube filtered my channels to keep them from getting views!" one of the messages on the site said. "There is no equal growth opportunity on YOUTUBE or any other video sharing site, your channel will grow if they want to!!!!!"

People who post on YouTube can receive money from advertisements that accompany their videos, but the company "de-monetizes" some channels for reasons including inappropriate material or having fewer than 1,000 subscribers.

(((YouTube)))

Aghdam "hated" YouTube and was angry that the company stopped paying her for videos she posted, her father, Ismail Aghdam, told the Bay Area News Group.

On Monday, he called police to report his daughter missing after she did not answer the phone for two days and told officers that she might go to YouTube, he said.

Those titties though

Officers in Mountain View — about 30 miles (48 kilometers) from YouTube's headquarters — found her sleeping in her car in a parking lot around 2 a.m. Tuesday but let her go after she refused to answer their questions. Aghdam did not appear to be a threat to herself or others, police spokeswoman Katie Nelson said.

In social media posts on Wednesday, Mountain View police said that officers spoke to her family twice and at no time did her father or brother "mention anything about potential acts of violence" or the possibility that she would lash out because of the videos.

The Myth Of The Happy Married Life

April 5, 2018 | by Ernest Wiseman | Link | Original Link

I recently searched “marriage” on ROK, assuming some of the top results would discuss reasons why men should opt-out of monogamy, an idea mentioned in ROK Community Belief #2. Instead, the top articles returned were predominantly pro-marriage, so I figured why not play devil’s advocate and give voice to the anti-marriage camp? Below I share four reasons man should not marry, which I introduce in no particular order.

1. You will have to suppress your natural biological urges.

Man’s evolutionary imperative—his natural default—is to spread his genetic footprint far and wide by way of fucking as many women as possible during his lifetime. I don’t know about y’all, but that seems like a pretty great default to me, so why rock that boat?

If left to our own instincts, we wouldn’t get married. It’s the woman who persuades us to do so. It serves her biological endgame, which is to secure access to our undivided resources and direct them toward the relatively limited number of offspring she’s capable of producing.

If you decide to join Team Monogamy, woman’s biological imperative wins, and yours loses, which means you must forevermore suppress your compulsions to bang other chicks.

2. You’ll think, “damn, I got played.”

If you give in to a woman's well-played deceptions and marry her, you'll later feel played. Specifics will vary, but getting played by a woman usually goes down like this…

When you first started dating, she does pretty much whatever sexual thing you want, whenever you want it. She also jibes with your brazen "I don't give a fuck" sense of humor, inexplicably thinks your drinking buddies are cool, and doesn't make a "thing" out of your apartment being a perpetual mess.

But then after the deal is sealed, you'll start to notice changes. She no longer tosses around blow jobs like Halloween parade candy, her coolness with your dude-bro-guy lifestyle turns lukewarm, and your messy apartment suddenly does become a thing.

With more time, you'll be astonished to see how deep that rabbit hole goes.

3. You'll become bored banging the same broad.

That "Art of Manliness" clown, Bret McKay, claims sex is way better and more frequent after marriage and that once married, you'll never again want to fuck a woman other than your wife. Of course, this is utter nonsense and should be summarily dismissed. McKay is a bible-thumping Mormon who didn't get to smash any puss until after he got married, so from his perspective, of course man gets more sex after marriage, compared to before—that's "no shit" axiomatic.

The fact is that sex does not get better, nor more frequent, post-marriage, and you most certainly will think about banging other women.

Think about it… man's instinct is to maximize his genetic footprint and continue his line into future generations, yes? His evolutionary compulsion is to knock-up as many women as possible during his lifetime, right? So does boinking one chick for the rest of your life advance that agenda?

No.

Does it seem even remotely plausible that saying, "I do," somehow makes sex with one woman—the one you've already been fucking for quite some time—any better than before?

No.

Does kissing the bride magically reverse your natural biological compulsions to fuck a metric shit-ton of women over the course of your life?

Fuggitaboutit!

Participating in a socially-constructed ritual that locks you into an evolutionary sub-optimal mating arrangement does not lessen your compulsion to do what you're designed to do. Anyone who says otherwise is delusional, at best.

And for the record, I am not some self-appointed manliness guru jagoff preaching to y'all based on my wildly unrepresentative experiences becoming a man. I am a Ph.D. social scientist, and my perspective is based on the evolutionary science of mate selection. So don't trust *me* when I say you will get bored banging the same woman for the rest of your life—trust evolutionary science.

4. Her physical attractiveness will diminish.

As if reason #3 weren't bad enough, it is compounded by reason #4, which is that the woman's physical attractiveness drops-off sooner or later. It might begin immediately if she balloons-up from the wedding cake, or it might not happen until later when her body emerges a train wreck after having kids.

Four kids into my previous marriage, my wife's pussy was so loose that fucking her didn't feel nearly as good as before. If you've ever heard that expression, "like throwing a hot dog down a hallway," then yeah. It was like that.

The point is that whatever the timeline, and for whatever the reason, her physical attractiveness will diminish, and that shit gets worse at the discretion of father time and his ugly stick. So not only will you grow bored of boinking your wife week in and week out, you'll eventually cease being attracted to her altogether.

Conclusion

As noted elsewhere on ROK, marriage does have its functions. However, one could argue marriage is a gigantic scam perpetrated by woman against man, and that it's in man's best interest to opt-out. Playing devil's advocate, I made this argument by noting that marriage (1) does not agree with man's evolutionary imperative, (2) leads to man feeling deceived when the relationship yields fewer benefits after marriage, compared to before, (3) introduces boredom from having to bang the same broad forevermore, and (4) locks him into a relationship with diminishing returns with regard to woman's physical attractiveness.

Game Is About Incremental Improvements Not Miracles

April 5, 2018 | by Troy Francis | Link | Original Link

Dating advice for men is no longer in its infancy. Since 2005, when *The Game* by Neil Strauss came out and a lot of guys got into pickup, it has become mainstream. These days, awareness that there are techniques through which guys can increase their success rate with women is widespread, if not universally accepted.

But—perhaps as a result of shark oil merchants overselling the dream—some men have got the idea that by simply learning a few lines from the internet, a cavalcade of supermodels will march into their bedrooms. This is not the case and never has been. Game will always be about incremental improvements, not miracles.

This is exacerbated by the fact that men come into game at very different levels. Some already have their shit together. They look good, they're in shape and they can hold a conversation with an actual human being. Others are less fortunate. Many are afraid to hold eye contact with anyone, let alone a beautiful girl. For this latter group, it's clear that a steeper learning curve will apply, And the truth is that these guys may *never* sleep with an 8, 9, much less a 10.

Rejection

The ability to handle rejection—lots of it—is a key indicator of how well any man is going to do in the field. If you're a soy boy game denialist who half-heartedly tries a few sets and then goes back to his keyboard to rant about how only looks and money count, then clearly your results will not be stellar.

If you take a more pragmatic, masculine approach, and recognise that rejection is a key part of any growth process then you are more likely to stay the course. And in the end, there is no doubt that you will see better results than you did at first.

Going out, talking to actual, real-life girls, making a ton of mistakes, getting humiliated, and slowly getting better—this is the hard road that most students of game have to tread.

Yes, you can move to a country where your value might be deemed somewhat higher than at home. But you will still have to go through the process. And it is by approaching, taking feedback from a mentor, consuming game advice and tweaking your methods over time that you improve.

What Is The Point Of Game?

Another thing to consider is what ‘game’ actually is. At its core it’s about social skills. How do you open? Is it with confidence and strong eye contact? Is your presence commanding? What do you talk about? Are you quick-witted and confident, or do you just ask a bunch of interview questions?

These things are important. But they are only a part of the puzzle. For game is nothing if not an holistic process that, over time, requires an exhaustive upgrade of the player’s entire persona. He must work to improve his aesthetics, his wardrobe, his social standing and yes, his earning power. He must, in other words, get his shit together. But again, that happens bit by bit, over time. It is an incremental process rather than a transformation that happens at a weekend bootcamp in Vegas.

Which brings us to a key question: what, actually, is the *point* of game? If you are judging game by whether or not it makes it possible for ungainly and socially awkward men to score at a Taylor Swift aftershow party then of course it will fail. But if you are more rational, and judge it on whether it assists men in getting better girls than they might otherwise have got, and more choice in their dating lives, then it succeeds.

Miracles don’t happen outside of the Bible, and no one here is claiming that they do (and if you do see such claims from a dating advice company then you should immediately disregard them). The sexual marketplace exists, and it is often brutal. However, any company has the opportunity to perform better in its chosen marketplace, but only if it takes a strategic, long view, and puts its plans into carefully and consistently. So it is for the individual in the dating market.

Guys need to put aside Instagram-fuelled fantasies about picking up celebrities poolside in Miami and get real. Game has helped a huge number of ordinary men to make incremental improvements in themselves over time, and to take back control of their

dating lives. This is something to be celebrated. It is after all fortunate that you don't have to be Chad Thundercock (an imaginary, homoerotic fantasy figure for game denialists to masturbate over) in order to enjoy a rewarding and varied sex life.

How To Survive During An Urban Apocolypse

April 5, 2018 | by Antoine Pisces | Link | Original Link

When doing survival "research" today you more or less find stuff that fall into two main approaches:

- Bugging out: basically leaving where you live, either to move to forests/Mother Nature (*buschcraft*) or a second location that you would have prepared in advance
- Bugging in: basically staying where you are and preparing right now at your current location.

If like me, based upon the analysis of your own situation you intuitively root for the second option by default, (i.e. bugging in), then this article is definitely for you.

1. Bugging in versus bugging out

First of all, whatever the reason why a survival situation arises (earthquake, serious riots, civil war), staying where you live eliminates a lot of *uncertainty*. Indeed, you know what

your surroundings are (potential danger areas, but resources as well) and what you have at your disposal. You can *right now* prepare a full set of supplies that you know that you will have readily available if needed on D-Day. Your storage capacity will be no match with a bugging out bag you would rely on to reach a potential location you possibly would never reach (and guess what, chances are you will end exactly as a refugee).

If you think about leaving to the forest, just try to figure out what could happen. You will have basically on one side fierce competition with other humans vs. scare resources

Do you think your potential food (animals) would just wait and do nothing in case of massive human arrival? They will adapt, hide and leave.

Will it be easy to defend yourself in the woods (basically open locations)? Skill-wise, believe me, spending a week-end of bushcraft is one thing. Living in full autonomy in a forest is accessible to only a few.

Do you have a family? Points above get worse! Not the mention the psychological benefit of staying in a familiar environment for them.

2. What you need

What you really need falls into three categories…

Water and Food

Just one word: STORAGE. For food, store what you like. In a survival situation, you have to avoid quick-burning sugar and focus on cereals (corn) and legumes (beans). Seeds are a great alternative as well. You would need a small amount of water to have germinated ones and you would get all the nutrients you need, not to mention the storage

requirement which is quite low.

For water, store as much as you can (even more important than food). Try if you can non-plastic recipients as after a while plastic would blend with water and give to it an awful taste (though better than no water at all). Due to the needs we have, you would need to get creative to store a decent quantity.

Hygiene and Health

Just double or triple what you have today when it comes to soap, toothpaste (some sorts of soap could be used as toothpaste, like “Savon de Marseille”), plastic bags, duct tape, and hydro-alcoholic solution. For toilets, dry ones are the solutions, basically large plastic/trash bags and sawdust will do the job.

Prepare a list of common drugs for diarrhea, pain, fever, gastric diseases and so on. For antibiotics, be careful: you can try large-spectrum ones but a misusage of can lead to a situation worse than before the treatment. Consider alternatives like colloidal silver or magnesium chloride. Finally, go and get some first aid training.

Weapons

Learn how to properly use your weapon of choice, and I mean not only firing but getting sight alignment theory and practice, quick target acquisition, shooting a moving target, plus basic operations (reloading, incident management, cleaning). Get ammunition in advance. Consider the use of a suppressor as well (inside use, you ears will thank you for that). On top of this, attracting people through the noise is the least thing you would want to do.

3. Make your urban survival plan

Take some time right now to establish a plan that would go beyond just getting some supplies which are, obviously, not going to last forever.

First, establish a physical security plan for the location you live in. Do you live in a flat at an elevated floor? That's easier to defend if lifts are not working but riskier in terms of exposure to criminal fire. Try to identify potential allies in your immediate surroundings/neighborhoods—you would need someone to watch your back or establish some surveillance routines

Second, establish a refuel plan for both food/water.

For water, one of the only viable options would be rain collection (if in dry climate, consider condensation even if return rate would be low). Just build some kind of water collection system on your balcony or roof. Boil the water after gathering. Some people would say that this pure water could be bad health-wise as it contains no minerals, so using salt or putting some rocks at the bottom of your recipient could help.

For food, just prepare basically a plan around traps for birds/rats, and so on. Learn some gardening skills (and scout potential location to grow food).

Drugs are not found "as is" so you will need things of value to exchange. Think about some easily storable items that could be exchanged at the right time (one of my personal favorite would be lighters). At the beginning of a survival situation, identify where you could find the different kinds of supplies (pharmacies for drugs, restaurants for knives or cooking materials, and so on).

In case of last resort, if your flat is burning or you are forced by military to leave your house, try to move to another part of the city rather than going to the woods or to an hypothetical location that you would think of in advance with no guarantee of reaching it.

Conclusion

Urban survival comes as a combo of supplies/materials, knowledge, and most importantly, having a plan and sticking to it. Use this article as a guide and adapt wherever you deem it necessary depending on your personal situation or beliefs. Use modeled scenarios to adapt your plan based on your observations and never stop to test and learn.

5 Signs Of The Mama’s Boy

April 6, 2018 | by Fernando DeVasques | Link | Original Link

Come Mother’s Day you’ll see how much we cherish the ‘mother’ in the United States. Some of us find this glorification annoying and wrong, but does not mean that we hate our mothers. We love them, of course—it’s just that some us had strong fathers, so we know that each parent had a specific role in our growth. Having an unbalanced and illogical affection towards your mother can negatively affect a man.

Right now, more men acting like their mothers than ever before in history. I do not have the statistic, but a night out in any bar will prove my point. I actually run into guys who are patiently waiting for the hot girl to get off her phone, even though there are many others in the vicinity. Or even worse, guys go out with sexy women as ‘platonic friends’.

These actions are blamed on weak-fathers and single-mothers. I know there are situations where the father tragically dies and there is no other choice than to have only one parent. Yet, a strong father would've taught his wife the values he wants instilled into his children. I also realize that some men are kept away from their kids through the legal system. I do not speak of these unfortunate men; life is chaotic. Instead, I aim at the men who wish to make their mother so happy that they themselves have become them. There comes a time where you must change yourself no matter the circumstance of your childhood.

Without a strong father, the weak male will create of habit of treating women the way that they see their mother, like the supreme goddess. Due to this, mama's boys relate to their mom and other women so they begin to act like women. I will talk about habits that mama's boys have. If you do any of these, I suggest you begin to hang around other men through diverse hobbies.

1. They are too scared to hit on women

There is no reason a single male should remain quiet if he's in the presence of a woman he wants. A mother will have the tendency to raise her son to adore her and other women in general. As we all know, women say they want to be treated like queens but in reality, they like trouble. Men enjoy trouble, too. That's why daring men always get the girl.

A mother will teach her son that a man should go to great lengths to please the woman he wants. So when a mama's boy sees a woman he likes, he will day dream of the perfect way to pick her up. The problem comes from over-analyzing what to say because you do not want to offend the female. That creates a lack of confidence that begets muteness. You see, a mama's boy is also taught to never make mommy cry, and he's looking a girl that's just like his sweet mum.

There is saying that every self-cucked man knows: nice guys finish last. You must understand why this is true. The nice guy is a liar—you want to fornicate with her but would rather dance around the truth than be upfront. A liar is not a nice person. Your mother was wrong

2. They befriend women they want to have sex with

When I go out on a night in the town, there is a guarantee that I'll run into a couple who are 'just friends'. You can not blame the woman if you find yourself in these types of dates regularly. A man should not have more than one platonic female friend in his life.

Men who go on "friend dates" with good-looking women waste their time in two ways. One, they are not out meeting women they can actually have a sexual relationship with. Second, they waste time with a woman who does not find them sexually attractive instead of making themselves into someone women would want. Listen, mama's boy: the girl you pine and consider a 'close friend' is only out with you because she had nothing better to do.

3. They have more than one female friend

A man is only allowed one female friend in his life. Meaning, if you had a true platonic female friend in high school and you lost touch with her, you do not get to have another. A man can not relate to women because he is a man. This applies to girlfriends or wives of your male friends.

Of course, you can be cordial with women you don’t want or women that turned you

down, but nothing more than that. If you currently find yourself with two or more female friends, decide the one you don't want to bed and make her your confidant. Try to bed the other or drop her.

4. They are emotional like women

A mama's boy will crumble under pressure from the opposite sex. This is why they do not go after the woman they want. Instead, they take the less aggressive route and try to befriend them. One reason they do this is that they cannot handle the pain of rejection.

Mama's boys would rather live in a made up reality where they think that playing the 'nice guy' will eventually earn them enough points to bag the girl of their fancy. You see, rejection from women is in contrast to what their mothers have told them. The world will remind you that you are not special and people can choose to have a life without you in it. When a women rejects their advances, it feels like their own mother is rejection their affection. This is too much to handle for a mama's boy.

5. They think their mother is an unfallable goddess

The mama's boy has yet to understand that their sweet mother was just another chick to their fathers. Try and insult the mother of a mama's boy and enjoy the reaction you will see. Some of them will be so flabbergasted by your defaming that they'll lose their words. Others will actually try to get violent.

No matter how they react, they will do it with teary-red eyes. A mama's boy could likely handle the passing of their father, but would contemplate suicide when mama finally croaks. In the mind of a hardened mama's boy, they are married to their mothers. They are her sole protector and anyone who threatens her honor or their relationship with mummy must be the devil.

Conclusion

There is nothing wrong with loving your mother. It's when that love spirals out of control and you begin to act like her, or 'date' her, that you must analyze yourself. Your mother will die and she did slutty things to your dad (and probably other guys, too). She is not a saint. You can still become the man you're meant to be if you can let go of mama's nipple.

How Journalists Became Whores

April 6, 2018 | by André du Pôle | Link | Original Link

Journalists are supposed to follow a set of rules and values called deontology. These rules say journalists should strive to be impartial, objective, and to inform their readers. We know well this is not the true nature of their activity.

Most MSM journalists today if not all are spinsters. They cherry-pick their facts and craft narratives around to steer people towards an untold yet ever-present agenda. They make up stereotypes while attacking other stereotypes, they make up ideas while attacking other ideas, as it suits the editorial line of their employer.

In the name of information, journalists create and fulfill an artificially constructed consciousness. They are paid to do so. They believe what they're doing is normal or cool, just like the Ministry of Truth in Orwell's *1984*, where officers burn archives then forget they just destroyed records (soon to be rewritten); your average leftist journalist spins all the time, follows all the time, yet doesn't even know he spins and follows.

What liberals do…

…and what they (want to) believe we do. Notice how both pictures come from their media and “art”, not from extraneous facts

A little bit of history

If you lend an ear to leftist historians, up to perhaps to age of discoveries, the West didn’t know much. Everybody were locked into their own towns and fields. Well, this is not true. Europeans had known about the Silk Road from time immemorial. Kings and the clergy had their messengers, their events, their gatherings. Individuals like Saint Bernard or Saint Thomas of Aquino were quite familiar with communicating at a distance.

It was just much slower than today—and quite of a luxury as well. Common folk had to rely on minstrels, travelers, and on their own travels. Most communication was done orally. Academics today love to point out how unreliable the bush telegraph is, but at least this communication is done naturally between common people rather than top-down from a shadowy agenda.

Also, as slow as this word-to-mouth communication was, people then did not need more: they could make a living on their own, with the insurance that they could consume it themselves or sell it. Markets tended to be stable, and whether you were a field-tiller or a craftsman, you didn't *need* to know about the latest fad not to be left behind. People were also much less bored and in need of diversions. Didn't have newspapers, didn't need them.

Then came the printing press. What had been done by scribes secluded in monasteries became partly automatized and multiplied. Bibles were printed. Then pamphlets. By the time, Protestantism had well developed, clever princes tried to use it to their advantage, and the Catholic church counter-attacked by launching one of the most manipulative orders ever created.

More power to independent people meant chaos. Printing outside of the rigid hierarchy of the Church meant a never-ending contest of ideas, systems, tastes, experiences, and egos. The hypocritical journalists of now who chide "trolls" while sniffing their own written farts should remember that trolling appeared as a side-effect of the printing press, as it became possible to say anything remotely instead of being necessarily confrontable. Plus, trolling helps to think of things to talk about with a girl.

Nevertheless, printing what you wanted was not that simple. First, literacy was still the hallmark of a comfortable upbringing, and second, you had to be able to print. You had to

know a printer, had to make a deal with him and pay him. Not to mention the dissemination of your lovely printed book. It was always possible to print in a country with virtually no censorship, then smuggle books, but who was to receive them and share them?

No matter what you had to say, you always needed to address a noble-bourgeois audience, which meant catering to fashionable topics or debates. Otherwise, your material would be simply ignored. Authors who weren't too well-known had to rely on booksellers who conspired to arrange a discrete monopoly on over-the-counter books. Yep, the world of "culture" has always been murky, and its members believe this is a sign of their superior intelligence.

As "culture" developed, with its train of noise, untold rivalries and social parasitism, periodic journals were printed at an ever-faster pace. Eighteenth century bi-annuals were replaced by daily or weekly newspapers. Which meant a great need, not for amateur gentlemen, but for people who could write constantly. Such people would be called journalists.

The modern journalist plant

If you believe journalism is about informing the public, forget it immediately. There is no such thing as an automatic progress which just makes happen what seems desirable. If an unbiased, all-objective information seems desirable, that does not mean someone will pay for it or even manage to get it. Even the CIA Factbook was made in the first place because objective information would benefit the CIA itself, not "enlighten the masses" or whatever a leftist salesman would say.

A journalist is basically someone who is paid to write on particular issues, in a well-defined format, as his boss sees fit. A journal belongs to someone—no matter if the owner

is public or private—who usually has its own aims. Whether the newspaper has to simply sell or shape the opinion, it always aims at something else than merely informing.

(Even ROK has an agenda, and I'm fine with it, because I believe it is sound and fair, but I'd never pretend I write for the sole love of truth or as if I was a disembodied soul with no consciousness of its own. Any writer having such pretenses is a hypocrite or a liar.)

Back to the nineteenth century. Newspapers were just like factories. As plant workers had to churn tangible products, journalists had to churn out impressions. They were like paid artists for the ephemeral, creating appearances that would sell, or satisfy, or infuriate—anything as long as it suited the editorial line of their employer. Journalists did not become whores. They were paid employees, to put it politely, from day one. But at least the blue collar workers had to pretense to say the truth or illuminate or whatever BS that sells.

Let's say you were born with a high verbal IQ, a knack for writing, and some ideas. What could you do? You may consider writing books, become an intellectual, but book writing takes time and often doesn't pay. If you can't live like an annuitant, you must be an employee.

If you choose the written words, you have to conform to a preexisting editorial line, to a particular milieu that already existed before you did, in hope of being granted a job. Creating a journal demanded not only experience but capital as well. Can you pay a printer? Would a banker trust you if you asked him for a loan so you can start a journal?

As the nineteenth century was an epoch of exceptional growth, some people *had* this capital or trust, and many independent journals were formed. Many, though, were bought off, or chased away, or censored. The elite does not want you to become an influencer, unless, of course, you remain a perpetual servant of their agenda.

This is why mild conservatives are accepted as a stooge opposition, along with the alt lite, whereas those who really want to save civilization and its creators are reviled. The elites want to destroy civilization, so, their journalists, who all depend on them socially and financially, foster their agenda while lying to themselves on the nature of what they do.

So-called investigators are paid by Darth Soros to "investigate" on convenient targets while turning a blind eye on other things, like mass immigration, or upholding a mandatory narrative which rests not on truth but on pure social conformism—*muh minorities r always good, muh white males r always wrong*.

Perhaps the "fake news" offensive has been crafted, not only to maintain the masses into the blue pill matrix, but also to reassure the frail employees that they are serving truth and progress. Which is already dubious, as worshiping an arbitrary strand of "progress" has nothing to do with objectivity, just as the contemporary humanities are rather a Hollywood for nerds than a place of real knowledge, but you can't ask vapid girls to get to this level.

No one writes for the sake of truth alone. Independent writers or journalists also speak of what they think relevant. They will mention XYZ facts because these are important, or, at least, ensure a modicum of success. Just like men tend to read Miyamoto Musashi quotes, not merely because he existed, but because he's interesting.

Mainstream journalists are courtiers. They are paid by global elites to do their bidding. They work in cities just like filmmakers work in grand obscure studios—because their activity lies in creating perceptions, in shaping fashions, ideas, mottos, norms. The difference between a marketer, a journalist and a filmmaker is only of scale and means. The aim, and the bottom, is the same.

We are different, because we are bottom-up. When mainstream journalists sold their souls, we are upholding ours. The problem with this is that we're ill-paid. The globalists and the boomers tend to concentrate all the money, and it doesn't take a rocket scientist to witness that the non-mainstream outlets tend to all lack money. Such is the price of independence.

What? You want to be free and independent? You're a NAZI!

We ought to have our own money elsewhere, and have a lot of independent journalists around, so that autonomous individuals from our side can work or investigate and help masculine men to shape their own consciousness.

Do You Know How To Win A Street Fight?

April 6, 2018 | by Mac Richardson | Link | Original Link

DISCLAIMER: The author does not encourage violence of any kind, nor is physical confrontation promoted in this article. That being said, when your ass is on the line and you have no choice but to fight to survive and perhaps protect the lives of your wife and children, then you do what nature intended and you'd better win!

Street fights were much more common when I was a kid. Sometimes they just happened and you could not avoid it. Some kids were genuine dickheads, but for the most part we were just feeling each other out and trying to find out who the toughest kids were. Today, boys are being encouraged to be helpless and run to an authority figure. We called them "rats" back in the day. The very real danger of gun violence and retaliation have now made street fights much more hazardous. Pussyhats and psychopaths with a penchant for revenge are now everywhere.

Let’s forget all of that for a moment and pretend it’s 1950 and the shit is about to go down. Before that moment happens you must make an honest assessment of yourself. Are you prepared for this physically, and have you been in a fist fight before?

I had two younger brothers growing up and I “played” with them daily. That meant a lot of punching to the chest and arms, and a lot of wrestling because most fights go to the ground. Fast forward to today. Do you know how to properly make a fist? Do you know how to use your arms to protect your head? Can you “stuff” a wrestler’s takedown? Are you aware of footwork and head movement? Have you ever hit a heavy bag? Those things in my opinion are basic hand-to-hand fighting skills.

If you’ve never been in a fight before, your heart will be pumping like never before and you’ll be nervous as fuck. Assuming you didn’t bring this event upon yourself you need to begin to assess your opponent. Weapons are an immediate deal breaker unless you are better armed. Your best strategy at that point is to create distance and use obstacles like

cars and buildings to cover your escape. Run, period.

If this is a straight up fist fight you have to consider the condition of your opponent. Does he seem bigger, stronger, super fit and not nervous at all? In that case you need to escape as well or fight dirty. Most likely the person in front of you is just as nervous, and physically unprepared for conflict as you are, but this business has to get done.

If you did not choose this confrontation, but you know you're in it and there's no getting out of it, follow some age old advice, "Strike first, strike hard and don't stop striking until the fight is done". Your jab is essential, it's a short, straight punch that delivers a message while not exposing you too much. It also doesn't waste too much energy. Guys who have no idea what they are doing will throw wild "haymaker" type punches and typically charge you to get their arms around you.

Moments into the fight you will feel light headed, your lungs and muscles will start to scream at you. You must become your own Drill Sergeant and demand fighting spirit from yourself. Remember, the other guy is exhausted too. A nice upper cut or hook punch can be a great finisher, aim for the side of the chin or underneath the chin if possible.

If the guy goes to grab you, push him off with both hands as hard as possible and follow up with a stiff jab. Whatever you do, protect your genitalia at all costs. Forget about honor and fighting fair and all that once upon a time bullshit, fuckers will pull your hair, bite you and grab your balls as soon as they feel like they are losing.

Assuming you have not gotten your ass kicked by this point, there should be a lull in the fight. Chances are you are both feeling like you're breathing through a straw and that may very well lead to an end to hostilities. Do not expect to knock your man out. That shit only happens in scripted movies and bullshit television.

If you are ready to disengage keep your hands up and back away slowly, do not turn your

back, ever! If he's cool with parting ways try to round a corner or something then take off running. This way you are clear of the action and your adrenaline dump will go straight to your feet. If he's still game however you need to charge in there and drive one straight down the pike. This is called initiative.

By taking the initiative you force your opponent to respond to you. If successful you may want to try a flurry of punches to end the fight. The tactic is to overwhelm them into a psychological defeat. You'll know when the guy is beaten, he'll be covering up and want nothing to do with you. Make your exit post haste and just be thankful you're not the one on the ground.

Back to reality!

This little exercise is to get you to think about what it's like to be in a real fight. Don't be foolish enough to believe that it can't happen. By visualizing the conflict you take some of the emotion out of it; the fear out of it. You also need to ask yourself if you are prepared to fight to the death in extreme circumstances. Desperate, hungry people can turn your world upside down. Don't believe me? Check out what is happening in Venezuela right now.

Ultimately the best way of preparing to defend yourself is to find a good instructor or trainer and learn how to defend yourself. There are many good boxing and MMA gyms out there that can help train you the right way. Do your homework, make sure they are friendly and the place is clean and well organized. Make sure you have a good feeling about the instructor or trainer. The manly art of self-defense is just that. There are no dangerous weapons, only dangerous people. Be the weapon!

Mac Richardson

Mac was the quiet boy that maybe you remember from grade school. The smart kid that spent all his time at the library, gave out the answers to the Trigonometry test, but was generally pretty shy. Perhaps you teased him a little bit or picked on him like everyone

else. Who knew he'd become the guy you want watching your back when SHTF?

Experts Have The Years Wrong When It Comes To Baby Boomers, Generation X, And Millennials

April 8, 2018 | by Jared Trueheart | Link | Original Link

Not long ago I remember seeing a report that millennials are having less sex than previous generations at the same age. According to the current generational timeline, I fall in with those neutered millennials even though I am middle-aged now. Not only that but my sex-drive is through the roof, as it has been since I was fourteen.

There are a lot of characteristics about millennials you'll see in reports that don't apply to early millennials. Another one is that millennials are far more likely to go to college than previous generations. And yet, of nearly everyone I know around my age I'm the only one to have graduated college.

Generations	Birth Years	Ages in 2009
GI Generation	1901 - 1924	84 -
Silent Generation	1925 - 1945	64 – 83
Baby Boomers	1946 - 1964	45 – 63
Generation X	1965 - 1978*	31 – 45
Millennials (Gen Y)	1979*- 1995…	15 - 30

* Experts differ on end or beginning date of generation

Something is wrong with the current way we think of millenials and other generations. With that in mind here is a new, improved generational timeline.

Greatest Generation: 1900-1924

Unchanged

Silent Generation: 1925-1945

Unchanged

Baby Boomers: 1946-1974

Baby boomers have gotten a bad rap lately. There are plenty of good reasons for that.

The most important reasons being that they benefited from a booming economy in which isolationist America had no international competitors because they were demolished during WWII. And yet they ensured that future generations could not enjoy those same benefits.

Baby boomers suffer from a post-industrial mindset in which resources are seemingly unlimited. Because they are unlimited there are plenty to go around. That's why America has had something like an open border for the last 30 years.

It's also why in times of economic downturns baby boomers tell younger generations to flip burgers, as if there is always a job to be had. In the 60's and 70's boomers could get well-paying entry level jobs but they don't seem to understand that subsequent generations don't always have that luxury.

There are plenty of other reasons to bash boomers. The hippie free-love movement was a way of saying there's plenty of unattached sex for everyone. Come get it in. The debauchery of the 70's was the same way. Children grew up with this stuff. They watched their parents or older siblings participate in this debauchery.

I won't even get in to no-fault divorce because it's too big a topic. The bottom line is that if you had any formative years in the 60's or 70's you had enough shared experiences and influence to be one generation unique from the rest.

Baby Boomers didn't pass make those laws that damaged America so much. But they did benefit from a post WWII economy while being raised in a time when America's downfall was in it's infancy. Now that they are the lawmakers and the business owners their views take America steeper down the decline.

Gen X: 1975-1989

The current generation timeline has millennials starting in 1980. But people born in 1985 have far more in common with people born in 1975 than they do with people born in 1995.

One of the big factors here is the amount of children raised in broken homes thanks to no-fault divorce. Baby boomer parents damaged their children when they divorced. Those children growing up in broken homes in the 80’s have substantial shared experiences from that.

Pop culture plays an important role starting here as well. In the 80’s and early 90’s the stuff that was cool represented America better demographically. Ethnically, it was majority white, minority black, and very few from other ethnicities. Pop culture reflected that. The talent of black performers like Michael Jackson and Whitney Houston was undeniable, but for the most part, 8 out of 10 cool things came from some part of white culture.

In the early 90s pop culture started skewing towards black culture. Gangsta rap was taking off. R&B groups like TLC were huge. The fresh prince of Bel-Air was popular. But they were only a portion, a more representative portion, of what was cool in America. That would change in subsequent generations.

The nuclear family was fading for Gen-X but it wasn’t so close to gone like it would be for the next generation. Gender roles were also relatively traditional. If you were born before 1990 in America there is a very high chance you expect men to be masculine and women to be feminine, or at least prefer it. That started to change for people born after 1989.

Millennials: 1990-2013

Millennials are defined by several important traits. They grew up in the 90's or just beyond, a relatively good time economically (though with many looming economic disasters building). This combined with a continuation of the ill-effects of rising divorce rates gives millennials a very skewed view of dating.

This is essentially why we have hook-up culture and need game. Millennial adults have the post-industrial mindset (there's plenty of anything, include sex and welfare programs, to go around so give it away freely) as well as a lack of strong parental figures in the home. For numerous reasons millenials have little to no respect for the nuclear family. They value a life of endless quick pleasures over fulfillment. That's because they've never had to do without quick, meaningless pleasures.

It was during the Bush's first term that household income went up but average pay went down. That's because more women joined the workforce. The absence of parents, especially mothers, in the home surely left a developmental mark on millennials.

Starting after the boy-band craze of the late 90's black culture became the culture of cool. Rap was popular. Pop and rock music included rappers. Eminem gave white kids a way to like rap because he bridged the angry-white guy rock of 1998 with Dr. Dre. After 2003 just about everything "cool" came from black culture.

And perhaps most importantly, millennials never had an adult life without cell phones or the internet. The first millennials had to wait a few years to get internet on their cell phone but they still had both.

I remember when it was big news that more people used the internet for social media than for porn. Gen X used it for porn. Millennials to post pics of their lunch on facebook.

Gen Z: 2004-???

As children they grow up with tablets, memes, and YouTube. They'll likely grow up thinking that everything is a political argument. Intimacy issues? Check. Socially awkward? Highly likely. A sense of national identity? Get real. May God have mercy on their souls.

This timeline better represents the commonalities between generations. With any luck, it will be recognized nationally.

3 Lies That Most Men Believe About Brazilian Girls

April 8, 2018 | by Howard Roark | Link | Original Link

I'm tired of continuously hearing my American friends from real life and the rest of the manosphere community making remarks of Brazil as some kind of paradise in which all women are extremely good looking, feminine, loyal and respectful towards men. I've decided to write this article to show the reality about the current state of Brazil.

The truth is that much of Brazilian women have being going downhill after the 90s due to feminism, Cultural Marxism and obesity rates increasing in South America.

Lie #1: Most Brazilian women are nice

No they are not. Its hard to find loyal girlfriend or wife material in Brazil as anywhere else

in the world. My guess for most foreigners who get this impression from Brazil, especially Americans, is due to the warm and hospitable way Brazilians are naturally. But be careful!

Behind all of this Brazilian “friendliness and warmth” lies a superficial culture which is hard to find real deep friendships, since most Brazilian follow politically correct etiquette to avoid conflict while pretending interest in getting to know others.

Similar to the Japanese, Brazilian people have a culture to avoid conflict with strangers and colleagues at all costs even if it means pretending to agree in a subjects they don’t agree much or do something they don’t enjoy. Mix that with the Brazilian way of being friendly, making physical contact with everyone, and having good listening skills.

Most foreigners get the naive impression that Brazilians, especially women, are loving, caring, and not as cold as the ones from their homelands. The best way to hear sincerity and truths from Brazilians is to go drink with them. If you wanna get to know Brazilians true colors, especially women, get them drunk. That’s the only way they will say their opinions and show how shallow they really are just like most American and European girls.

Lie #2: Marrying a Brazilian Girl is better than marrying an American Girl

Gringo do you want me? Hope you have some moolah in your pockets!

The truth is that, divorce rates in Brazil and the rest of Latin America are skyrocketing, just like in the USA. Most middle class Brazilian girls from cities like Belo Horizonte, São Paulo, and Rio de Janeiro are self-centered SJW bitches that think they are walking goddesses.

It doesn’t help either that from a young age until college they were brainwashed by left-wing teachers and professors teaching them all about “grlll power” and how Fidel Castro

is some kind of super hero who fights against the evil imperialist capitalist countries and so on.

Yes you heard that right: Brazilian schools and colleges have a tendency to brainwash teens into thinking developed countries are to blame for Brazil not being able to become developed. Victim mentalities and Napoleon complexes are deeply rooted in Brazilian culture and women here are a good reflection of it. If you are already in relationship with a Brazilian girl after the first phase of the relationship, they will easily get triggered if you don't get along with their views or plans for the future.

Brazilian women are very jealous as well if they feel you are being distant and spending too much time working or hanging out with your friends. Some of their tactics include trying to draw you away from your friends, constantly calling you at random times, showing up in places you haven't invited them, and endless complaining about the lack of attention and affection you are not giving in to them.

When they get angry or upset with you trust me, their wrath can be worse than the one of an Anglo-Saxon girl. They will do their best to break your frame and make you feel like shit until you say you are sorry or surrender to their demands in some way or another.

Lie #3: If you wanna find a girl who isn't a feminist, go to Brazil

AAAAARGH! I didn't get a job as a journalist because of the patriarchy!!

Well I hate to crush your dreams, but feminism is going strong here as well. After the massive #Metoo movement in America, Brazilian feminists created the #DeixaElaTrabalhar, which means "Let Her Work!" Similarly to the #Metoo movement in America, #DeixaElaTrabalhar is an attempt which is gaining a lot of attention from the Brazilian mainstream media.

A bunch of Brazilian journalists are being crybabies about the the lack of respect and representation in the media female journalists get, especially in sport journalism. Their main tactic is to complain about misogynistic jokes in soccer.

So although your gringo card might make them more cooperative and friendly with you at first, in the long run they will end up showing their true colors. And you will find out they aren't that different from your average good looking white American girl raised in New York, San Francisco or Chicago. It doesn't help either that most Brazilian men have a weak frame just like men from other Western Countries.

In short, Brazilian women, especially the hot ones, are used to being catered to, having beta orbiters around them, and treating men like shit without any consequences at all. They might get impressed if you have a stronger frame than most beta males they are used to dealing with, but in the long run they will probably try to fuck you up through the justice system or spread rumors about you being an evil misogynistic male, like Toronto girls would do.

Germany? Nope, Southern Brazil, The last bastion of Right-Wing Conservative families/girls Brazil has to offer.

The only good place to find wife material here would be in the Southern States of Brazil, such as Rio Grande do Sul, Parana, and Santa Catarina. They share a very similar culture to the southern states of America. Country girls here are conservative, religious, and really good looking. Also, it's easy to find good-looking blondes here, due to the fact that this region received lots of immigrants from Germany, Italy, and Slavic countries.

To sum it up, Brazil might be far from becoming a developed country like the US, Canada, England or France, but in terms of feminism and Cultural Marxism, it's really close to its North American cousins.

Howard Roark

Howard Roark is a Brazilian Cowboy. After spending some years living in the Southern States of America and hanging out too much with country boys he learned all about The Southern US wisdom. He believes, that a society with strong Christian values mixed with Objectivism is the best answer against Cultural Marxism and toxic feminism. He dreams about moving his farm in Brazil to greener pastures in order to save himself and his family from the socialist degeneracy and economical disaster his homeland has become. During his free time he enjoys reading philosophy books, driving his F-150, lifting and gaming girls. You can follow him on his blog.

5 Signs You're A Rigid Ideologue

April 9, 2018 | by Mark Derian | Link | Original Link

An ideologue is someone who fabricates simple, soothing ideas to disconnect from the chaos he perceives to be reality. Someone who has ideas, however, uses them to correctly identify and so understand reality.

The allure of an ideology is it's a defense against painful emotional issues the ideologue has yet to manage. As such, an ideology is more like an illness than a chosen philosophy—it's something that happens to us when we don't take care of our mental health.

Here are five indications you're using ideas to tune out from reality instead of understanding it.

1. You cannot portray the opposition well

Ideologues are more likely to convince themselves they're right in contrast to an opposition, which is a fabricated projection that makes their side seem sympathetic by comparison. If Trump is indeed on the same moral plane as Hitler, then your opposition to Trump will only indulge your savior complex—hence, you'll always be right. Unless you can make your opponent's case better than he can make it himself, you will unconsciously allow yourself to feel more right than you are.

2. Your IQ is lower than 115

The uncomfortable emotional issues that ideology assuages usually stem from childhood trauma. This takes the form of repeated abuse, whether physical, sexual, or emotional. We can overcome this trauma through the conscious processing of it, and even use it to our advantage, but only if our IQ is at least 115.

This may seem controversial but it's an accepted position among psychologists behind closed doors. If we're in the lower 85 percent of the population regarding intelligence, then we lack the conceptual ability required to make meaning out of trauma. As a result, we'll inevitably construct a simple ideology as a way to soothe the pain.

3. You had sex too early, or too late

There isn't anything technically wrong with having a first, sexual experience at 13 years old, but an early onset of physical intimacy indicates a problem with forming healthy attachments. If we could form healthy attachments at that age, then we will be more comfortable in our childhood and so more likely to hold off on sex until at least age 16. This is more true for women but it's also true for men.

Loading...

Conversely, anyone who's still a virgin at 24, and who isn't physically deformed, typically has serious anxiety issues. It's these sorts of anxiety issues most people (see above point) have a difficult time coming to terms with. Distraction, even a clever one, is much easier and can feel much better in the short term.

4. You have unhealthy relationships with your parents

The two relationships that have the most bearing on our lives are the ones with mom and dad. Freud was right about this. If we cannot develop close connections with them that mature from benevolent dictatorship in childhood to one of deep friendship in our early to mid-20s, then it's going to be much more difficult to relate with the rest of humanity.

Without the secure relationships our nature craves, anxiety accumulates and we must latch on to an ideology as a psychological salve. Pick up the phone and call your parents to inoculate yourself against the benzo effects of the crowd.

5. You're a pragmatist

Men who believe they are above ideological trappings by proclaiming themselves to be pragmatists are usually the ones most riddled by an ideology. Philosophy—or religion,

which is a kind of philosophy—when consciously chosen, is a framework through which we can navigate the messy world of thought. No man is above ideas like no lion is above using his fangs. The question comes down to how well our ideas reflect reality (i.e. how sharp are our fangs?).

Conclusion

There's nothing wrong with ideas or ideologies. What matters is their accuracy and how we use them. Though it's difficult to develop ideas that reflect reality and venerate man unless we become in touch with the reality of who we are, our virtues and faults. Only by first looking at ourselves correctly can we then turn out and look at reality correctly.

When Did Fitness Start To Suck?

April 9, 2018 | by Larsen Halleck | Link | Original Link

The state of fitness absolutely sucks nowadays. We all know this to be the case at even the most casual of glances around. But once you observe that such a phenomenon exists, then you have to ask *why*? More specifically, not only have people become less fit, but the practice of fitness itself seems to be less effective than ever. There are certainly more gyms around then you could shake a stick at, but despite the sheer ubiquity of fitness facilities, people are getting fatter than ever. *Why?*

A previous article that I have written on this website lays the majority of the blame for the modern world's growing obesity epidemic on the crappiness of modern diets, combined with a general decay of society… but wait just a minute!

This picture shows men in some rural backwater in India still managing to train and make themselves stronger. Some of the “maces” they’re training with appear to literally be stone blocks on scrap metal poles.

So the general suckiness of modern America is likely not in and of itself a reason for the dismal state of physical fitness. To figure out why that is the case, I think it is best to briefly look at a history of fitness as a discipline and try to find where things went off the rails.

The Ancients

While training likely existed as long as humanity has been walking on two feet—and naturally, movements such as hewing wood, hunting, and stone knapping were arduous physical labors—the first evidence of dedicated physical training as a discipline comes from the first large states/empires that arose millennia ago. Evidence of physical training and strenuous sports exist in civilizations as diverse as the Egyptians, the Persians, and the Greeks.

Naturally, the majority of these sports and trainings were done for practical purposes: namely, to train the young man for war. Remnants of this “classical” fitness can be seen in the Olympics: the running events, javelin throwing, boxing, wrestling, and discus illustrate this point.

Pankration was sadly rejected outright by Pierre de Coubertin

In addition to these, the first gymnasia were opened at this time. It was the first time that physical fitness as an end in and of itself was pursued. Of note is that early records from the time period indicate that much of the training of the time was calisthenic in origin, and bears much similarity to training undergone in the modern sport of gymnastics: handstands, heavy-duty calisthenics, *la planche*, human flags, and the like.

The Renaissance

The dark ages and medieval ages, perhaps due to the Christian eschewing of the flesh, didn't focus much on physical training—what physical training there was was largely from heavy labor and military training for the noblemen. Instead, we can skip ahead to the Renaissance and Enlightenment periods to see the rebirth of physical fitness as its own discipline.

Writers and physicians such as Cristobal Mendez and Mercurialis published some of the earliest fitness related tomes that still exist to this day—*De Arte Gymnastica* and *El Libro por Ejercicio Corporal*, the latter of these providing the featured image. Various parts of these books advocate such exercises as rope climbing, the balance beam and, you guessed it, even more calisthenics.

Loading...

Bodyweight training remained a major facet of physical fitness for centuries, well into the 19th century—innovations such as Thomas Inch's plate loading barbell in 1905 were of course very useful, and the philosophy behind physical training continued to change (namely, that it took on distinctively nationalistic undertones in the later part of the 19th and early 20th centuries), but even by the time of the 2nd world war, physical culture

could largely be said to be a combination of bodyweight and weight training, similar to what I myself advocate. So what seems to be the problem here?

The Decline

So with such a solid background of worthwhile, functional physical training, where was the point of diversion where people just… forgot about all of it?

Some would argue that the rise of machine fitness caused the decline—I would disagree with this. While machines are vastly inferior to free weights and calisthenics for the training of real functional strength and ability, they're certainly better than nothing, and if it was merely a case of "Everybody is just using cable machines and treadmills instead of hoofing it in the hot sun", then we'd certainly see far less obesity than we have today—we would have a nation of people with fluff muscles and possible joint imbalances, but that's certainly preferable to the nation—and increasingly nation*s*—of fatbodies we currently have.

A major problem, in my opinion, is the rise of fitness as an industry—in other words, the living core of what stuff actually works is relatively narrow, and thus it's pretty hard to make yourself rich off a "meat and potatoes" regimen. It's much better to hock a "get fit quick" scheme to lazy fatbodies that conveniently lasts forever and thus lines your pockets.

No matter what celebrity martial artist is attached to this, I guarantee none of them actually used this piece of crap

On that note, we can against point to a general decline of society as a culprit: to be more specific, the idea that people have indeed become substantially lazier and less willing to put in a gradual grind for what they want out of life, for a variety of reasons that could probably have an entire book written on just them.

Even those who do more or less become fit nowadays have likely just made themselves look fit, perhaps the inevitable result of a society that has debased itself as much as ours has. While even the ancient Greeks appreciated an aesthetic physique, it was an aesthetic that came from, and was associated with, physical power and functionality.

So if you want to know why fitness seems more confused and lackluster than ever now, I think that's somewhere in the ballpark: a surfeit of counteracting information ironically making the average person more ignorant than ever, and a general decay of society furthering the ignorance of people.

What can be done to possibly ameliorate this? Here's a good place to start.

The Great Betrayal Of Rhodesia

April 9, 2018 | by Kiron Solari | Link | Original Link

To modern generations, Rhodesia is just a name. Few know what it was, even fewer can find it on the map. Those who caught the Cold War might recall bits and pieces of information, little of it true or trustworthy. And yet, history of this country's birth, struggle and demise contains a lesson that is, now more than ever, extremely valuable – especially to those still enamored with modern political games.

Humble beginnings

In 1890, a column of 380 rugged men crossed the Limpopo River and marched northwards. Their leader, a British mining tycoon Cecil Rhodes, had just received a Queen's charter for his British South African Company to explore and govern these wild lands. Eventually, the Union Jack was planted into the ground, marking the foundation of Fort Salisbury. It took some time and plenty of fighting, negotiations and quelled uprisings, but ultimately the two local tribes – Matabele and Shona – were forced to cease their endless wars and coexist in grudging peace, while whites acquired land for farming and raising cattle.

Unlike other territories governed by the British Crown, this one was not a colony but rather private property of Cecil Rhodes and his company. Likewise, unlike British colonies, this one attracted serious, determined and hardy people rather than lowlifes, criminals and fortune-seekers. After Rhodes' death, the territory was named in his honor. Northern and northeastern parts of it were at one point handed over to the Crown as protectorates, while Southern Rhodesia, as it became known, remained nominally independent.

Despite considering themselves to be “The Great White Tribe” and a separate people, Rhodesians, being mostly of Anglo-Saxon stock, retained fierce loyalty to Britain. When WWI broke out, 5000 men – approximately 25% of their population – volunteered to fight under the British flag.

After the war, Southern Rhodesia flourished. Its economy was well-developed and racial troubles, despite past conflicts, were nearly nonexistent. London, heartened by Rhodesians’ wartime contributions, gave them a choice: join the South African Union as its fifth province or become a self-governing territory with a “responsible government” (full privileges except for foreign policy). The referendum held in 1922 revealed that Rhodesians would rather live separately.

Dark clouds on the horizon

Idi Amin, Samora Machel, Kenneth Kaunda, Kwame Nkrumah, Jomo Kenyatta and Julius Nyerere. Dictators, terrorists and thieves – Britain was very picky when it came to choosing friends.

After World War II, when nationalist movements began to gain strength in Africa, London attempted to create a new public entity – the Federation of Rhodesia and Nyasaland. This experiment disintegrated miserably in 1963, and Southern Rhodesia got its status of a special dominion back. The federation’s former constituents were hastily given independence – all except one. Rhodesians were instead admonished for failing to sustain the stillborn state. Such was Britain’s gratitude for over 25,000 capable Rhodies volunteering to fight on its side in WWII.

In the 1950s, the process of decolonization was launched. The West’s combination of fatigue from two world wars, general lack of political will and reluctance to deal with

external issues led to declarations of independence getting distributed to African colonies like hot cakes. Transition from colony to state sometimes happened in less than a month. The world welcomed the “liberation” while timidly avoiding the resulting chaos, mass murder and civil wars.

Simply put, African countries could not handle the gift of independence. In addition, the very notion of races being different was deemed unacceptable in the West. A man labeled a racist could not count on a good public career, etc. Of course, this applied only to whites – tribal warfare and genocides in nascent African countries were politely ignored.

While the West was busy prostrating itself before cannibalistic tyrants and warlords, USSR and China wasted no time in making them dance to their tune. Communist agents and ideologues actively formented uprisings and wars in Africa, exchanging arms for access to natural resources. Most African “leaders” never realized their countries’ transformation back into colonies, albeit under a different owner.

Rhodesians, who lived in a peaceful, quiet and largely problem-free country, could only look upon the unfolding events in horror. Since the end of the 19th century and until 1962, Rhodesian policemen were unarmed. Self-government was carried out with the help of tribal leaders and local administrations. Unemployment was minimal, skilled immigration high, and in terms of living standards Southern Rhodesia outpaced nearly all of Africa. Rhodesian agricultural products were highly valued worldwide – marbled beef was considered a delicacy, wines competed with South Africa’s own, and neighboring countries were supplied in abundance with maize, tea and tobacco.

Apartheid, the world’s boogeyman, never existed in Southern Rhodesia, and neither did acute racial tensions – the vast majority of blacks simply did not care that they were ruled by Whites, as long as the latter kept building schools, hospitals and providing them with work and housing. However, the so-called civilized world was not happy with this, and Britain especially so.

The fracture

Hatred that British diplomats David Owen and Harold Wilson had for the small African state bordered on pathological. To an average Rhodesian, these two were no better than Mugabe and Nkomo.

Under pressure from the Organization of African Unity (a club of cannibals if there ever was one), Britain took back its promise of independence to Rhodesia, on the grounds that it should be ruled by the black majority rather than the white minority. Rhodesia's 40-year experience of sensible self-government, regular free elections and peaceful coexistence between races was callously ignored.

To pacify the "polite society" and the OAU, Britain was prepared to surrender Rhodesia to African dictators' tender mercies. What it was not prepared for was the tiny country itself deciding to take the bull by the horns. In 1964, the Rhodesian Front party, led by a WWII hero Ian Smith, was elected into power. On November 11, 1965, after lengthy and unsuccessful negotiations aimed at finding a solution that suited everyone, Ian Smith unilaterally declared Rhodesia's independence.

This move caught the West completely off-guard, and was immediately branded a "racist revolt". British political opossums did all in their power to impose an international economic embargo on Rhodesia and fight its recognition. However, South Africa (itself a pariah state) and Portugal expressed their support for the new country and resumed their already well-established trade relations with it.

Loading...

Britain's tantrums and whining gave the communist bloc a perfect excuse to start openly funding and arming black terrorist organizations aimed at overthrowing the Rhodesian government. Robert Mugabe's ZANU received help from China and North Korea, while Joshua Nkomo's ZAPU was assisted and advised by USSR. The two movements, being comprised respectively of Shona and Matabele peoples, were bitter enemies, with a common goal the only thing uniting them.

The West itself had cold feet about direct military intervention against the upstart state, for two good reasons. Firstly, the Rhodesians were well-known for their fighting prowess and relentlessness – during WWII, they formed the backbone of British commandos in North Africa. Secondly, there was a threat of rebellion in Britain's own armed forces, as family ties between Brits and Rhodesians were extremely close. Therefore, the West confined itself to denouncements, resolutions, political trickery and supplying terrorists with food and gear.

Against overwhelming odds

At first the conflict was limited to sporadic attacks, armed robberies and murders, but due to generous support from both East and West, it quickly evolved into full-scale war. Mozambique, Botswana, and Zambia eagerly provided terrorists with staging grounds for their raids on Rhodesian farms and border villages. With the help of sympathizing mass media, terrorists tried to inform everyone that a new *Chimurenga* was on – a war of liberation similar to the one their ancestors waged at the end of the 19th century against the "white invaders".

Naturally, nobody cared that these same invaders had turned a barren territory into a developed land, that it was thanks to them the vast majority of local blacks had jobs, and that the main victims of this "liberation" were primarily blacks themselves – ordinary farmers, herdboys, priests and doctors.

To combat the terrorist threat, the Rhodesian Security Forces had to develop a unique fighting method, eventually becoming the most efficient military force of all that ever appeared south of the Sahara Desert. For all intents and purposes, they set an impossible standard – sometimes Rhodesian Light Infantry paratroopers flew three combat sorties a day (!), while the Selous Scouts managed to exterminate 70% of all who ever took up

arms against Rhodesia over the 7 years of the unit's existence.

But despite the wonders worked by its soldiers, fighting against what amounted to the entire world was extremely difficult for an unrecognized country with very limited resources. Contrary to media portrayals of him, Ian Smith was no rogue autocrat; he was open both to negotiation and the idea of reconciliation, but only on terms favorable to Rhodesia. In the endless talks that served as a backdrop to the 15-year war, his opponents never failed to take advantage of his honesty.

British diplomats' favorite trick was to sign an agreement with Smith, ensure he kept his side of the bargain and then conveniently forget about theirs. American President Jimmy Carter was no better, refusing to acknowledge Smith at all but eagerly providing political platforms and assistance to both Mugabe and Nkomo.

Western media spared no expense in demonizing Rhodesia, either: journalists would photograph blacks sleeping in Salisbury parks during siesta and then claim they had been shot by Rhodesian soldiers. A particularly despicable bunch of presstitutes once tossed a few coins into a garbage bin in front of some black kids, who, upon attempting to retrieve them, made the world's headlines as "children starved by the Smith regime".

As for layers of filth heaped upon Rhodesia by humanitarian and religious organizations, they are too numerous to even begin to describe. The UN and the World Council of Churches united the entire West's charity workers and do-gooders in an effort to feed and clothe the terrorists, who returned the favor by massacring as many Rhodesian priests, charity workers and do-gooders as they could.

Last drops of blood

Prime Minister Ian Smith at Victoria Falls, after yet another bout of pointless negotiations.

Embittered by constant betrayals from those they once viewed as friends and allies, Rhodesians grimly fought on until they no longer could. With the country's oil reserves

depleted, Ian Smith had no choice but to cave to international pressure and negotiate formation of a new government. The 1979 election resulted in Abel Muzorewa, a black bishop, becoming the new prime minister, and the country renamed to Zimbabwe-Rhodesia. Theoretically, black majority rule – the condition for lifting the economic embargo – was achieved.

The Organization of African Unity, however, was not so easily pleased, as neither Mugabe nor Nkomo were allowed to participate in the election, for the obvious reason of being terrorists. All it took was a promise to sway black American voters in Jimmy Carter's favor and a threat of halting Nigerian oil shipments to Britain for the two superpowers to immediately come to heel. The embargo remained in place. With the "assistance" of the British government, new negotiations began, as a result of which Muzorewa's government resigned, and at the beginning of 1980 a new election was scheduled.

The election campaign's motto was simple – vote Mugabe or die along with your family. Terrorists ran rampant across the country, spreading the message at gunpoint. Voter intimidation was ubiquitous, but London declared the elections to be the most transparent and honest of all conducted on the African continent.

In the meantime, "international observers" from the British Commonwealth were making sure the Rhodesian army was disarmed, while politely ignoring Mugabe's gun-toting goons. Immediately after a landslide victory, Mugabe rallied his forces and began exterminating the rival Matabele tribe, killing over 25 000 and turning many more into refugees. London let it slide.

Terminus est

The rest is history: it took the creature hailed by the entire world as a freedom fighter less than a decade to turn the Breadbasket of Africa into a basket case. White Rhodesians fled "Zimbabwe" in their entirety; of course, not a single British or American politician deigned to as much as apologize to them for what had been done to their country. The West simply carries on, fiercely proud of its policies and laws being democratic, impartial and fair… until they're not.

Special thanks to Sergey "Tiomkin" Karamaev for providing data and historical context for this article.

We Live In A Deluded Society

April 10, 2018 | by L.T. Smash | Link | Original Link

> I will give children to be their princes [rulers], and babes shall rule over them. The people will be oppressed, every one by another and every one by his neighbor; the child will be insolent toward the elder, And the base toward the honorable. (Isaiah 3:4–5, NKJV)

We live in a time of great delusions. We are bombarded by delusions at every turn. Delusion is a synonym for deception, a lie, a falsehood, an illusion. The pursuing of delusions is not a new phenomenon. People have pursued delusions in ancient civilizations just as our civilization is now. We are currently in a condition where people cannot see the difference between fiction and reality, between a delusion and what is real.

The Book of Isaiah has many references to delusions. Another phrase for delusions is the vain imaginations of the heart. Something that is vain is morally relative. In Isaiah 3:4 the word translated as babes can also be translated as delusional. Why would the translators of the KJV choose babes? Because babies do not know reality and have not developed higher reasoning capabilities and understanding. Aside from physical needs, babies are all emotion.

Babies are not supposed to remain babies. In our day, children are sent to schools and universities that keep them intellectual and emotional babies, regardless of their actual age; and so they remain emotional children most, if not all, of their entire lives. These people are ruled by emotion and being ruled by emotion sets the stage for delusion.

Passions and emotions are not bad, but we are to control them. They are not to control us. People ruled by emotion and passion are easier to control. Emotional people are less likely to ask questions. Emotional people cannot delay gratification for greater gratification later. Emotion is about the moment, what feels good and safe ***now***. The global elite know this and are settings the stage for complete control through fear and delusion. No one likes to be afraid, but fear is a powerful motivator and unless controlled leads people to believe illusions or delusions over reality. People are willingly replacing reality with delusions.

How can we recognize when delusions exist?

Progressives advocate a world where their passions and emotions rule everyone. This list is not conclusive. There are other factors. The following are the most common. All of the items in this list have a basis in an emotional response.

1. Delusions go hand-in-hand with moral relativism

Part of moral relativism is accepting relative moral truth, and the emergence and acceptance of tyranny. The delusions have a base function but also stretch and change based upon the individual while retaining the sandy foundation upon which they are built.

2. The blocking of justice and subjective enforcement of laws is a common practice in deluded societies

People go free based upon other demographic or financial factors, i.e. race, religion, gender, money, etc. True justice is harder to find in delusional societies because the

people are busy perpetuating delusions. Scapegoats are typically found and used as fodder to perpetuate injustice while true justice is denied to those that have been truly wronged.

The denying of justice also includes the twisting of circumstances, information, and anything else to create a narrative that supports the delusion. Heather Mac Donald wrote an excellent article about the delusion of "rape culture" started to take a strong hold upon our society. The article was written in 2008 and we can now see how the delusion has an increased hold upon society.

The #MeToo movement (and other associated movements), women's marches, mandated gender and demographic quotas, telling men to act more like women are not movements of justice. These movements perpetuate delusions upon society. True justice is when a woman is prosecuted for false accusations. True justice is when a man is prosecuted for true rape, not the women's regret or failure to speak. True justice is realizing transgenderism and transvestism are disorders and instead of enabling the delusion the people receive the necessary mental help.

3. Women's rule is a common theme in delusional societies

This delusion encompasses the delusion that women are better at everything. Isaiah 3:12 mentions how women rule in delusional societies. The chapter discusses how they were given over to delusion and women rule over them (meaning the men). The ridiculous idea that women are better leaders than men is one of the biggest delusions perpetuated upon western societies. Maxine Waters, Elizabeth Warren, and Hillary Clinton are examples of clearly delusional women. These women encourage others to partake in their delusion.

In a deluded society, the women seek to bridle the men. Part of the delusion is that men are a woman's entertainment and work horse. A dishonorable and deluded woman will turn a man into one of these, both if she can.

Loading...

4. Children oppress the parents and their elders

This factor is mentioned in the same verse as the women, Isaiah 3:12. Isaiah 3:5, which is included at the beginning of this article mention how children shall boast against their

elders. Children are telling their elders they are "out of touch" if they do not support gay marriage, transgenderism, and the docket of other progressive causes. This is a case where the children are telling the elders to support delusions.

5. Nebulous or fluid terms and definitions

The nebulous and fluidity of the definitions creates an environment that make deception easier since most people will not ask for clarification on terms and definitions. Terms are deliberately undefined, vague, or change based upon the circumstances to fit a particular narrative and objective. Most people assume that everyone thinks like they do. The narrative uses this idea to push the deception.

"Toxic masculinity" is an example of a fluid and nebulous idea. "Toxic masculinity" is progressive speak for masculinity in general. Some of the characteristics listed on Wikipedia for toxic masculinity are "dominance, self-reliance, and competition." Any person that blames "toxic masculinity" (i.e. masculinity) for tragedies is believing a delusion. Tyranny is toxic, whether that toxicity comes from Harvey Weinstein or Hillary Clinton does not matter. Harvey Weinstein and Hillary Clinton are examples of tyrannical people.

The progressive media will typically associate masculinity in general with rape. Rape is not acceptable under any circumstance. This requirement applies to the women as well as the men. Women can rape too. "Rape culture" is another delusion.

What we can do

Ask God for wisdom. We must examine ourselves and seek to escape our own delusions. To escape delusions takes serious and regular personal internal and external reflection

and examination. We must want to leave the delusion. Leaving delusions will require that we will have to accept things about ourselves and the world around us that will be uncomfortable. No real maturity and growth comes without self-examination.

Call people out on their delusions. Many will become angry, potentially violent. Many people love the delusions because they feed individual self-delusions. Self-delusions open the door for greater deception and more delusions.

Be honorable and do not be wishy-washing or a pushover and do not take pleasure in the perverse and insidious, i.e. stop walking in crooked paths. Progressives, as part of their delusions, will take pleasure in that which is perverse and insidious; they walk in crooked paths. Perversions such as pedophilia, homosexuality, racism, transgenderism, etc. are celebrated. If you walk in crooked paths you will not have internal peace.

Be firm (consistent) in mind (thought), heart (emotion), and spirit. A flakey person lacks consistency in mind, heart, and spirit. Return of Kings published several articles about flakey women. There have always been troublesome women. Proverbs 21:9, 21:19, 25:24 all mention quarrelsome, complaining, vexing, and angry women.

While it is important to honor your word, put conditions in place to prevent yourself from being used. Think of keeping your word as vow, if the conditions of the vow are not honored by the other party, you keep the vow at your discretion. Additional examples of this can be found in the Bible when God deals with people and nations of people. God always places restrictions upon receiving of blessings. Disloyalty results in curses.

Many groups, private and public, are busy feeding the world with lies and twisted information to create and continue delusions. Do not believe the lie that you are not qualified to speak about an issue because you may not fit certain criteria on the progressive identity chart. Refuse to participate in the delusions. Speak your mind.

New German Law Allows Women To See The Salaries Of Their Male Coworkers

April 10, 2018 | by Howard Roark | Link | Original Link

One of my friends, who is currently living in Berlin, works as a software programmer for a multinational corporation. He was telling me how his females colleagues can now request to know how much he earns, but he is not allowed to know the wages of his female peers.

Since 2017, the cultural Marxists and toxic feminists in Germany have had another victory over Western civilization and "evil patriarchy". Businesses with more than 200 workers are now required to report the salary of any male upon request by a women.

Elder women protesting for “better” wages with a sign that states: “same work, same wage “

Germany’s New Transparency of Pay Act

This is all part of the New Transparency Pay Act which states:

> The Act expressly states that it aims to promote and enforce the equal pay principle, meaning that equal pay must be granted for equal or comparable work and that direct or indirect wage discrimination based on gender is prohibited.

Seems fair? Well it doesn’t stop there…

> The law entitles individual employees (women) to request the median monthly salary of employees (men) of the opposite sex within their comparison group (i.e. those employees who do similar work to them. This applies to companies with regularly more than 200 employees and can be first exercised six months after the Act came into force.

We are the big sisters now little boy!

German SJWs and left-wing politicians claim this law will help deliver more “equality between genders”. But I wonder if another law is really necessary for it. European Union already has several laws guaranteeing equal wages between different genders and races. Is another one really necessary? Wont it just increase envy, misogyny and racism phenomenon that is already rapidly increasing in Europe?

With this law, it’s quite possible that envy and hatred between coworkers of opposite sexes might increase just by the simple fact of females gossiping and suspecting about their male coworkers having a better salary than them.

Even with this law, women still are not happy. They are complaining that the law is not enough. They claim: “It’s still not hard enough on men” or “It’s too soft” if compared to Iceland’s harsh gender equality laws, which impose fines on businesses that don’t give equal pay between genders.

Loading…

Misandry?

Isn’t this law misandry? Where is the Justitia omnibus? Why can women have the right to know the wages of men inside their corporation while men can’t know theirs?

While at first sight this law might look like a good thing, in the long term it will probably be another blow to Western democracy. Instead of men and women working together to build a better Germany, they will only keep tearing it down due to hatred between each other.

Left-wing activists in Germany will never be happy with the “progress” they acheive. Feminists will keep pushing for more radical gender “equality” laws until they reach a

point that only women will be allowed to have higher salaries than their male colleagues.

I can find a husband give a good childhood to my children and at the same time be a bigshot CEO, but because I live in a misogynist society the patriarchy tries to tell me its impossible!!! Yeah… right “grlll power”

Never in the history of humankind women have had as many options as today. They can opt between living like a man and rely on themselves or to find a provider and never do any work at all besides household chores. And yet they still claim “they have less options in life than men…”

Western women want to believe that it’s quite possible for them to have a demanding career like an executive or CEO of a big multinational and still find time to find their prince and raise healthy children, but the truth is its not they will have to pick one.

Most women who try will end up stressed and depressed. They’ll watch as their marriage goes downhill and their children grow up and rebel against their moms and families due to the lack of attention that is given to them. Most children that grow up with absent or not-so-present parents end up being failures with psychological issues like low self esteem. They end up as troubled teenagers that succumb to drugs, peer pressure, and crime. Is this the kind of “prominent citizens” that those working moms want to deliver to society?

Remember those days? No misandry and toxic feminism! Both sexes would use their best talents to build a better society instead of complaining about gender differences. The 50s were the golden era of Western civilization

Western women want to believe that they can have a loving husband waiting for them at their hand and feet, have a family, raise healthy children, and somehow still have time and energy to be the CEO or some type of top executive at a Fortune 500 company making big bucks and spending 40 hours per week dedicated to their work. In short, they want to take male privileges for them, without any of the male obligations/responsibilities that comes with it.

It wont take too long before more harsh laws that fine or punish corporations for not paying women equally start appearing in the United States and Latin American countries. Politicians there love to model their laws after European ones, especially laws that comply with the globalists’ political agenda and cater towards minorities and feminists. After all, where do left-wing politicians get their votes from?

FBI Raids Office Of Donald Trump's Lawyer To "Investigate" Allegations Of Used-Up Porn Actress

April 10, 2018 | by G.S. Luthra | Link | Original Link

Early in the morning yesterday, special agents of the FBI raided the office of Trump's lawyer Michael D. Cohen and seized records which contained confidential material between clientele, just like how it was done in the Soviet Union and Nazi Germany. Stephen Ryan is the lawyer of the lawyer of Donald Trump and commented that this was "completely inappropriate and unnecessary."

He also said:

> "Today the U.S. Attorney's Office for the Southern District of New York executed a series of search warrants and seized the privileged communications between my client, Michael Cohen, and his clients," he continued. "I have been advised by federal prosecutors that the New York action is, in part, a referral by the Office of Special Counsel, Robert Mueller."

Federal prosecutors from Manhattan are now investigating communications between Trump and his lawyer Cohen. They claim payouts were sent to the prostitute Stephanie Clifford aka Stormy Daniels. They have been slamming Cohen with bank fraud allegations and everything else they can dig up, and now again another attempt to revive the old sex allegation.

Hilary Clinton's illegal scandal where 33,000 emails were lost is not investigated, yet the FBI continues to go after the Trump administration. Due to this noise, the stock market

has dropped, effecting the American economy.

Trump himself said the whole thing is like a “witch hunt” with these guys out to get him no matter what the evidence shows. He mentioned that his team have given pages and pages of documentation, but this action is a disgrace and attack on the country. Trump continued that these types of allegations have been going on for a long time, but now it is getting ridiculous.

He also said they found no collusion with Russia whatsoever.

> “This is the most biased group of people. These people have the biggest conflicts of interests I’ve ever seen.”

Reporters asked Trump if he had an affair with Daniels after he concluded his comments trying to get an answer, but this claim against him is just another engineered strategy to get him impeached. Why is the deep state continuing this witch hunt over an allegation by some slut? They are making it as though she is some actress or star, but no, she is a prostitute who had sex with God knows how many for money, hence prostituting on camera. This case is being dragged out farther than it ever should have.

Her honor must be defended

During the 60 Minutes interview, Stormy’s pupils looked dilated as if she had just taken drugs. Her husband helped her pass the polygraph test, yet mainstream media made it sound like she was telling the truth. She and her husband collaborated together on this alleged affair. She also has a history of domestic violence charges and cheating former husbands for money. So, believing the words coming out of this washed up old hag is like treating Hilary Clinton’s words as truth.

It is time to fire Mueller

Who gave this rogue maniac Mueller the authority to investigate Cohen's records? Ask any lawyer and they'll confirm that any communication with a client must be held in strict confidence, and not subject to being ceased by the FBI.

Trump was asked if he'll fire Mueller after he gave his comments, and he replied that the situation is very sad and went in about how the FBI has fallen in its performance. However, he did not rule out that possibility.

Popular talk show host Michael Savage even tweeted to get rid of this guy.

> PRESIDENT TRUMP, TIME TO FIRE MUELLER. EXCEEDED HIS FAKE RUSSIA MANDATE, DO NOT FEAR FAKE NEWSPEOPLE https://t.co/TMSfw8znNP
>
> — Michael Savage (@ASavageNation) April 9, 2018

He's nothing but trouble, and now it is time to give him to boot. He's a danger to Trump and to the stability of the U.S. government with his obsessive-compulsive thirst for trying to find dirt on Trump. Robert Muller needs to go, immediately.

To make matter worse, once again Russia and Assad are being for blamed attacks in The Middle East even though no concrete evidence exists whatsoever. With Bolton by Trump's side, expect another Syria incident which is going to infuriate the already angry Eastern powers. Watch out for young men losing their lives in unnecessary wars due to desperate greasy old men who are overly aggressive in global affairs.

Why You Shouldn’t Have Gay Friends

April 11, 2018 | by William Adams | Link | Original Link

Despite the fact that ROK being a website for masculine heterosexual men, where women and homosexuals are strongly discouraged to comment, butthurt (not just in the literal sense) gay males have questioned my suggestion to not have gay friends.

While it’s not any writer’s obligation to explain each and every belief or idea being stressed, or challenge counterarguments, I think this topic requires some further analysis and exemplification. This will hopefully provide men with a more comprehensive and nuanced take on the matter.

The gay lobby and social consequences

In simple terms, homosexuality can be looked upon at two major levels: macro and micro. With macro I refer to broader social patterns and consequences of homosexuality. One such concern is that the homo or LGBT lobby nowadays quite literally penetrates the public. It’s no longer a private matter, that homosexuals and other sexual minorities are to be left alone, when depraved gay parades and gay clubs emerge in urban environments and impose their views on the public body.

Furthermore, homosexuals are often protected under hate speech laws. It’s fairly likely to lose most jobs for stressing, for example, that gay anal sex is disgusting, even if a person accepts their existence and equal individual legal rights and use a professional and polite discourse at the workplace. This is problematic, regardless of you want to associate with gay people or not.

Moreover, it exists a possible although not palpable link between homosexuality and child molestation. Mainstream science often aims for to contradict such contentions, whereas more pessimistic positions are sometimes taken by conservative scholars and writers.

In this regard, it's possible to find an analogy to David Buss' notion in his work *The Murderer Next Door*: just like most stalkers are not murderers but most murderers stalkers, most homosexuals are not pedophiles or hebephiles (or child molesters). However, a significant share of child molesters are homosexual or have partaken in illegal homosexual activities in connection to their crimes.

It's not just people with a fixed homosexual orientation who make up the problem, but rather the (illegal and immoral) homosexual behavior itself. People can debate all day long whether or not gay genes exist, but it's likely that both genetic and environmental factors contribute to homosexual behavior and lifestyle. Social acceptance of depravity is one piece of the puzzle.

Loading…

The individual relationship with homosexuals

At the micro or individual level, on the other hand, it's partly or largely beside the point whether or not homosexuals are more likely to be involved in illegal sexual deviance. There are a host of reasons for why majorly masculine men don't want to have close homosexual friends. Some of these are about the same as why many don't want to be friends with weak beta males and annoying females: one does likely have less in common with such people. The relationship is often mutually exclusive: the opposite teams do hold congruent views about you and me. And guess what, that's totally fine, or should be.

Of course there is a lot of in-group variation, and homosexual males who you have more or less in common with. The more shared interests, the more likely that a person will be closer to your inner circle of friends. The less shared beliefs and interests, the more

peripheral position.

That’s why even non-neurotic, somewhat masculine and socially skilled gay men whom I have encountered throughout life (and I have mostly lived in urban areas and traveled the world so I have met plenty of them) tend to be not so much more than acquaintances or fairly distant friends. While I can find common ground in regard to reading, traveling, food and physical exercise, some crucial dimensions are still missing. When I meet close male friends, we discuss everything between heaven and earth, including our similar relationships and sexual preferences. That’s obviously not possible to do with homosexual males.

Furthermore, in general gays are likely, although not necessarily having views that are leftist and do not accept slightly homophobic positions, for obvious reasons. This leads to unnecessary two-sided suspicion, not so much different from having a politically correct blue pill friend that you will gradually stop seeing or hearing from due to lack of shared values.

Conclusion

When a man asserts that one does not, nor should have gay friends, that is more of a general guideline rather than an absolute dogma. There are predominantly masculine red pill males that have met or will meet gay males that they form meaningful platonic relationships with. However, given the whole of the matter it’s less likely the case, and from my perspective I don’t see that I miss anything; just like I don’t miss having several female or weak beta male friends.

The Sanctity Of The United States Constitution

April 11, 2018 | by Mac Richardson | Link | Original Link

If you are a born or naturalized citizen of the United States, the fact of the matter is that the U.S. Constitution belongs to you. It was conceived for you, written for you, argued over for you and enshrined in the legacy of this land specifically for you. If your heart is set on becoming an American citizen then the Constitution is also for you, but you have to earn it and that's just the way it is. If you live in a country where personal liberty, freedom from tyranny, and the rule of law against oppression do not exist, the Constitution was made to inspire you.

Let us start with the Declaration of Independence. It is important to analyze the words and phrases that the authors used in that document to establish their audience. The phrases "course of human events" and "opinions of mankind" are concepts which are all inclusive of every living person throughout time. "Unalienable Rights" are eternal and all-encompassing ideas that apply to all human beings.

The “Right of the People” refers to all who identify with each other as one people bonded together by a common identity, and dedicated to the preservation of the safety of all fellow citizens, and a collective agreement that each has a right to “Life, Liberty and the pursuit of Happiness”.

That all may sound Pollyanna, but spend some time in a third world country and you’ll quickly realize that we got things here that most people around the world don’t. I would never want to be imprisoned in a country where I had no access to legal representation and I do NOT recommend trying it.

Former president, Andrew Jackson at the age of 13 defying the British soldier who ordered him to clean his boots at a prisoner camp in 1780. — Image by © CORBIS

The Language of the Constitution

The preamble of the Constitution begins with the words “We the People” in giant letters. This is to let you know that it was not one individual that made the Constitution possible and that true lasting power comes from a mandate from the citizenry. The purpose was to “form a more perfect Union”; unity, togetherness, community, the ideal that we are invincible when we stand shoulder to shoulder. These concepts are anathema to fascists because they have run the same playbook of divide and conquer for millennia.

“Common defense” and “general welfare” continue this theme of working together to ensure the future trust. Last but certainly not least, “secure the Blessings of Liberty to ourselves and our Posterity”. This statement clearly shows that the signers of the Constitution wanted to enshrine freedom not just for themselves but for everyone, *forevermore*.

Immortality

The Founding Fathers were well aware of their own mortality. They knew their time was limited because they studied philosophy extensively. They knew that the only thing that would survive beyond their death would be their work.

Loading…

The mortal nature is seeking as far as is possible to be everlasting and immortal; and this is only to be attained by generation, because the new is always left in the place of the old. -Plato

Some may believe that because they are not direct descendants of the first Americans that they are far removed from their work. Nothing could be further from the truth. Posterity means future generations, future sons and daughters of America. The Founders wanted you to willingly accept the torch of freedom. They wanted you to embrace their work as your own inheritance. If you believe in your heart that their words have meaning today, as I do, then you are their brethren and kindred soul by default.

Today the cultural marxists love to use character assassination to achieve their goals. Focusing on the weaknesses and shortcomings of great thinkers and statesmen are the marxist's stock in trade. To undermine the value of the Constitution it is easier to focus on the humanity of the authors even if their ridicule is baseless. The Constitution was created in a time when slavery had been institutionalized for hundreds of years. Many Founders were staunchly against it, but were powerless to change that part of society, yet.

Some may say that those people who wrote the Constitution lived a long time ago. They could not have envisioned the world we live in today. Do not be naïve enough to think that these men did not study deeply and extensively both history and the psychology of humanity. There were considerable volumes of works that were required reading in that era that covered every detail of tyranny, oppression and the outcomes of greedy, selfish, evil people who tortured, killed and enslaved the masses at will.

There are those that will argue that the ideals of freedom and justice are dead given the wide-scale corruption and lawlessness of our political leaders. Well guess what? The Founders knew that would happen too! Your liberty is under assault. Your freedoms are on the line and you have significant enemies that have brought you to the precipice of darkness. To quote the movie Braveheart, “What will you do without freedom?”

Quiz Time

Keeping in mind that the supreme law of this land belongs to you, it’s test time!

How would you best hold on to your belongings when some ruthless son of a bitch comes along and demands to take your shit?

A) Ask them nicely to “Please, fuck off.”
B) Wait for somebody you’ve never met with a hunk of metal on their chest to come help you.
C) Write a letter to some useless political douchebag who’s been stealing from you for years.
D) Other. Please explain _____

Hopefully this article has convinced you to take responsibility for the preservation of the United States Constitution if you have not done so already.

Massive Everything-Must-Go Sale At The ROK T-Shirt Shop

April 11, 2018 | by Roosh Valizadeh | Link | Original Link

Due to my sister's death, I need to reduce my work load for the near term, focus on my core business, and simplify my life in general. One of the first things to go is the ROK t-shirt shop, which is intensive in labor without providing enough income to reduce dependency on advertisements. I'm selling all existing stock and closing up the store.

Return Of Kings T-shirt on sale for $16

Our flagship t-shirt is 35% off. The shirt is made in the USA out of 100% premium cotton. **Click here for details.**

Uncle Roosh T-Shirt on sale for $12

Loading...
The Uncle Roosh t-shirt is 52% off. This shirt is a requirement if you ever want to pose in front of a military tank. **Click here for details.**

Bumper sticker and magnet combo pack for $2

Get the ROK bumper sticker and Roosh-head refrigerator magnet for only $2. This is 71% off the normal price. **Click here for details**.

The sale will go on as long as supplies last and then I will close the shop. This is your last opportunity to get the above products.

Click Here To Visit The ROK Store

Daryush "Roosh" Valizadeh created ROK in October 2012. You can visit his blog at RooshV.com or follow him on Twitter and Facebook.

Why Money Is Not The Game Cure-All That Many Claim

April 12, 2018 | by Troy Francis | Link | Original Link

There is a residual belief among game-denialists (and regular guys) that money trumps everything when one is looking to meet girls, but the picture is much more nuanced. Yes, of course, money can be attractive but it is not the cure-all that many believe.

It is well known that with the growing feminization of men in the west, and a greater incidence of soy boys, there is a subsector of game denialists who, rather than seeking to improve themselves or make an effort to actually talk to women, would prefer to believe against all evidence that an average-looking guy who is not rich cannot possibly have sex with an attractive girl. These men would prefer to fantasize about their ideal alpha crush (Chad Thundercock) and vilify those who don't share their cucked views.

Those with a more rational, masculine perspective can also get hung up on the money question, though. Women are attracted to security, right? They like the nice things in life? They appreciate power. So surely it makes sense that the richest man in the club on any given night of the week will do best?

Maybe. But then again, maybe not. In reality, intergender dynamics are far more nuanced than the denialists—many of whom lack sexual experience—would claim.

Go to any nightclub in the Mayfair district of London. These clubs are packed with some of the richest men in the world—the city's population includes not only rich Brits, but also Chinese and Russian men (still!), plus others from all over the world of enormous wealth. In the denialist's simplistic view the nightclub becomes a kind of auction house where the most affluent guy automatically walks out with the hottest girl.

If only it were that simple. In fact, you will regularly see wealthy men sitting alone at their £10,000+ tables completely ignored by all the women. Why? Because they lack charisma, humour, and social ability. They lack *game*.

At the same time, you will regularly see barmen in the same clubs—who get paid a

pittance, comparatively—going home several nights a week with truly gorgeous girls.

Attraction v. Arousal

How can this possibly be the case? Very simply because there is a huge difference between *attraction* and *arousal*. Yes, a woman may well be *attracted* to a man's wealth. After all, if a man offers to buy you expensive gifts and take you to Dubai then that is not something to be sniffed at. Don't be a fucking hypocrite. Put yourself in her shoes. What would you be thinking?

But is that girl necessarily going to be *aroused* by such a man? No. Arousal, born of animalistic desire, is something else entirely.

I know a girl who works at one of the big, expensive London department stores. She told me that many of the girls there—young, Eastern European beauties—have sugar daddies. Men who will buy them presents and take them away to exotic places. But almost all of these girls also have regular boyfriends on the side: guys who are not rich, but who they *actually* fancy.

I do not condone such behaviour or claim that it is representative of all women. But here's the thing. Real arousal is created in the hindbrain. At the core. Money may be an extremely alluring 'nice to have'. But it's not what lights the sex fire.

Why do you think the meme about the rich woman sleeping with the pool boy exists?

Loading...

Why do you think 'hot felon' Jeremy Meeks is reportedly to marry billionaire's daughter Chloe Green?

Actually, if money really were all then it would make things a lot simpler. Instead of thinking about pesky trivialities like one's social skills, grooming, dress sense, humour

and so on, one could simply work 20 hours a day on some boring business idea, make a few million bucks and automatically have an Instagram model girlfriend.

But of course, it's not that easy.

Lover v. Provider

Now, no one is claiming that rich dudes don't wind up with hugely attractive wives and girlfriends the whole time: *of course they do*. But the question is, is it *necessary* to have these advantages to do well with women?

In actual fact, it can be detrimental to your chances of quick sex to appear to affluent. Why? Because if you position yourself as the sugar daddy then you automatically put yourself in the 'provider' box. You are potential boyfriend / husband material. A man to look after her. Someone she will date 25 times and take to meet mother before having sex with.

The lover, on the other hand, is the bad boy she would never introduce to the family, but who she will sleep with fast. The plumber. The electrician. The tattooed biker who's only in town for a night and who doesn't give a fuck. The no-hoper who has no cash and sits around smoking weed all day.

Ironically, it is these archetypes who will have sex with her more rapidly than their more refined competitors.

So reliable is this apparent contradiction that one top London game coach I know tells his rich clients to take off their Rolexes and expensive clothes before approaching girls, and to play down their wealth when talking to them. Putting oneself in the 'rich provider dude' category carries very real costs, and not merely financial. It means you're less likely to be intimate with her in the short term.

So next time some snowflake tells you that only money counts in the sexual marketplace,

take it with a huge pinch of salt. Even someone like Dan Bilzerian is successful a large part because of his game—his cocky-funny demeanour and his huge Instagram social proof. And the whole point of 'game' is that by learning enhanced social skills and being bold and unafraid, guys are able to bypass what blue pill society (and game denialists) think is necessary to be attractive. For myself I can say that in all my time doing game the amount of money I make has *never* come into question, and I have dated the daughters of millionaires and celebrities, amongst others.

So don't believe soy boys who are too weak to man up and take control of their dating lives—look around and see what is actually happening out there for yourself. You'll be amazed, and you'll be glad you did.

Want to find out how jerks and bad boys get the hottest girls? Click on the link now to read Troy's latest book How To Be An Asshole

Ben Shapiro Is The Original Tradthot

April 12, 2018 | by Jared Trueheart | Link | Original Link

There's been plenty of talk about tradthots lately. This long video is particularly entertaining:

Tradthots have several characteristics. They preach they value of living a traditional life but do not practice what they preach. They are not innovators, preferring to let more daring thinkers articulate arguments before they echo those same points. They profit from the dissident right, and are better at profiting from it than those daring thinkers.

With all that in mind it should be blatantly obvious that the biggest and original tradthot is Ben Shapiro.

Ben's Complete Lack of Masculinity

I always had a problem with Ben but couldn't begin to explain why until I saw Mike Cernovich quickly answer a question about him in a video. Mike said, in essence, that he doesn't want to associate with Ben.

Mike crystallized it: Ben is short, weak, prissy, and elitist. He looks frail and sickly. He doesn't belong near a cultural movement that encourages men to be masculine, women to be feminine, and society to expect both of these. Ben is too androgynous for that.

Here's a video of Ben trying to talk tough to a tranny. Notice Ben's body language when the tranny responds to him with a threat.

Ben gets frightened by the guy altering his hormones to be more feminine. He can't even make eye contact after that. I remember listening to an Adam Carolla podcast after this incident happened. Ben was the guest and said that he filed a battery charge for what you see above. He discusses this topic just one minute in:

For somebody who claims to be so anti-government, he sure ran fast to the government when a tranny threatened him. Is that who you want leading you? Is that who you want representing your brand?

Ben Does Not Live A Traditional Life

Perhaps Ben has never claimed to be a traditional patriarch. If that's the case, fair enough. But he certainly praises the nuclear family. And he certainly denounces leftist debauchery. He praises religion and Judeo-Christian (emphasis on Judeo) beliefs. He has become a champion of the traditional family whether or not he openly declared himself in those terms.

As for his nuclear family, he has mentioned many times that his wife his a doctor. Why is she a doctor? Ben makes enough money ripping-off Milo Yiannopoulos' talking points. He can surely support a family.

Loading…
And yet his wife is a doctor, one of the most time consuming jobs there is. Who is raising their kids? Why does Ben think her job as a doctor is more important than her job as a mother? Men have to work. It's part of manhood. It's not optional for us. It is a choice for women. Is it a Judeo-Christian belief that chasing money is more important than raising your children?

The truth is that Ben Shapiro wants money. And like all tradthots his profession is marketing the arguments of better men as his own. It is not necessary for him to believe or practice what he tells others.

Ben Shapiro Isn't A Nationalist, He's An Elitist

Leftist talking points are ridiculous. As such, they're relatively easy to demolish in intellectual discussion. Ben, as a lawyer by trade, is good at arguing with leftists. He's very good at the easy arguments.

At the hard arguments he's a loser.

The biggest of example of this comes from his frequent denouncements of Trump during the 2016 presidential campaign. Say what you want about Trump now, at the time he had a nationalist, patriarchal message. Ben didn't like that message. He preferred the "conservative" message, the same message globalists want you to hear.

Whereas Trump denounced free-trade agreements as being bad for America, Shapiro loves them. It is more important to him that globalist institutions be able to increase profits than Americans be gainfully employed.

At these arguments he loses. Case-in-point: he bet on American's continuing faith in the Republican party over Trump's proud nationalism. He lost that bet. Arguing against snowflakes is easy. Arguing against patriots is difficult. And more importantly, why would you?

If Ben was the man he makes himself out to be he'd be less sickly. He'd hit the gym and do some heavy squats instead of manscaping his eye brows. But Ben has more in common with the tradthots profiting from beta men than he does with the men acknowledging the cultural decline. In the struggle to save America from degenerate globalism Ben Shapiro is a wolf in sheep's clothing.

4 Reasons Why You Should Learn CPR

April 12, 2018 | by Thomas Medicine | Link | Original Link

It's often easy to imagine emergencies as the exclusive domain of first responders, but nothing could be further from the truth. As men it is our duty to be ready for action when life throws a situation at us, and those situations can come quick, literally within seconds. Whether you encounter your grandparents falling, a stranger having a heart attack, your child nearly drowning, etc, you need to be ready. Learning CPR is one of the best ways to prepare for such predicaments.

CPR stands for cardiopulmonary resuscitation. Like it's name implies, the goal is to revive someone who's heart or breathing has ceased. Heart attacks, blunt force trauma, and near drowning are all possible causes for cardiac or respiratory failure.

When you encounter someone who's become unresponsive, first call 911 (or the appropriate emergency services number), then check both the victim's pulse and breathing. If you feel a pulse but no breathing, open and clear the airway to administer

rescue breaths. Use your peripheral vision to check if the chest is rising and falling, that's how you know air is entering the lungs.

If there's breathing but no pulse, you must start chest compressions. Aim to compress about two inches deep, any shallower and you won't be effective. When the adrenaline is rushing you may not be able to reliable find someone's pulse; when in doubt it's better to be safe than sorry, just do the chest compressions.

It's probable that you'll break their ribs if your technique is correct, but it's preferable to dying. In the case that there's neither breathing nor a pulse, it's time for full CPR: administer 30 chest compressions and then two rescue breaths, in that order, and repeat.

I won't go into further detail since I'm not a certified instructor and it's far better to get hands on experience with this anyway. I will however go over the many reasons to be proficient in it.

1. It pays to be prepared, especially when help is far away

Few skills are more masculine than being able to save someone, especially one you love, in a high stress situation. The last thing you want is to be helpless in an emergency or have to wait for someone else to come and do the saving while being relegated to standing by or giving reassuring words.

Plus, you don't know how long it'll take for professional help to arrive—traffic, distance, human error, miscommunication, and a host of other hindrances can significantly extend the response time of emergency services. During that precious time it'll be all on you and everyone else present to take action. And even when help arrives, your responsibilities don't end. I've heard of situations where first responders have you continue administering CPR even after they've arrived if you're doing it correctly and it helps the victim's chance of survival. Finish strong if the situation requires you. Don't rely on others, take the

necessary steps to be ready.

2. It’s a part of manhood

I’ve noticed that other contributors Return of Kings often go over the importance of learning martial arts and the ability to defend oneself (most rightfully so). Being deadly is an innate aspect of masculinity, but it’s also important not to miss the other side of manhood: that of being a protector over one’s family and community.

Loading…

Taking life, giving life, and saving life are arguably the rawest experiences a man can ever have. Few men get the chance to experience all three, but all of us here can become capable of saving life when the circumstances necessitate action. Knowing CPR is part of fulfilling your masculine duty of protecting your community and those you love.

3. It opens up many job opportunities

Being CPR certified is an attractive skill to employers and even a requirement in many occupations. Jobs relating to healthcare and caretaking such as lifeguards, EMTs, babysitting and many more may require CPR certification. Even if your job doesn't involve anything health related, potential employers will still appreciate having someone in the workforce with such a skill. Knowing CPR can be a financial benefit.

4. It's easy and relatively inexpensive to get a class

[image]

Signing up for a class is simple. There are many organizations that offer CPR certification classes that you can find online, just make sure they're accredited. In my case, I saw a sign in my university's gym that advertised a class offered by the American Red Cross, so I decided to sign up after working out. At the time it was merely an afterthought, but I'm grateful for doing so. It only took me only about 60$ and seven hours of my time to get certified for first aid as well as adult and infant CPR. A very small price to pay.

Keep in mind not every class covers all the subjects I've listed, but wherever you go,

you'll find CPR can be surprisingly exhausting. During my training I would start feeling tired after a few rounds of chest compressions and rescue breaths. For this reason, classes will generally teach you how to do both individual and group variations (one person does chest compressions and rescue breaths while the other holds the victim's head in a breathing position, the two will switch once one person is fatigued).

Once you finish the course, you will receive a certification that usually lasts two years, but of course, the real value is in developing the important skills that last your whole life. That being said, it's always good to get re-certified for training/employment purposes.

Conclusion

Don't underestimate this technique. Applying proper CPR immediately during an emergency triples a victim's chance of surviving cardiac arrest. There are few things one can learn that are more practical and effective than CPR. Who knows, you just might save someone's life.

Stop Bashing The Nice Guy

April 13, 2018 | by André du Pôle | Link | Original Link

Too many otherwise good men are bashing the nice guy. I am not talking of constructive criticism but of blaming the nice guy as if he was morally evil or guilty. Even on ROK some said nice guys should be shamed or that nice guys are "liars."

If you tend to think of this as normal, beware. For feminists have always done the same. Years ago, I tried to explain to an upper middle class girl what being a nice guy meant, with all the pain and chronic frustration associated, and the only thing she did was send me a feminist-made comic strip that consisted entirely of labelling nice guys as egotists, sexists, creepy, homophobic, and whatever leftist slur you can think of.

This was not exceptional. In fact, the incident contributed definitely to my awakening. The same feminists who gloat about their bleeding hearts, muh "care ethics" and "you're lacking empathy" have absolutely no empathy and no human feeling for their brethren. Nice guys need approbation, nice guys tend to be already chivalrous and respectful to feminism, yet the feminists discard them with even more disdain than the Aztec priest discarded the dead body of his last sacrificed.

The manosphere has done an excellent job in helping numerous men to go beyond the nice guy phase. Game, the acceptance of rejection and struggle, knowing the female nature—all these aspects have been well covered in our milieus. However, the nice guy figure *per se* was never morally redeemed. This is, I think, a mistake.

The nice guy, that bastard son of feminism…

Nice guys did not choose to be so. As nice guys, they are, or have been, produced by a complex set of factors.

Feminists killed the father figure. Many of us were raised by weak fathers and strong mothers. Many saw their parents divorce. Boomer and some X parents raised their girls and sons the same, because having an identity is “prejudiced” and “bigoted.” This is how men grew without ever learning how to pick up—and, even worse, were taught that men picking up were “pigs” and “disrespectful.”

Nice guys are often the product of a middle class environment. Yes, the same middle class that has been conned and impoverished by our psychopathic elites through globalism and debt. Delayed gratification, work ethic, a sense of personal responsibility, and the willingness to be gallant are all middle class values. The nice guy shows them at a high degree. He wants to commit and be committed, he’s ready to work and be patient.

Raised by “educated” parents, the nice guy is also imbued with the idea that “progress” is cool, that feminism is obviously great, and that equality and other blue pill idols are good as well. The nice guy genuinely wants to be “respectful”—which is why he’s so patient and unwilling to game, as he perceives game as manipulation—and supportive. He truly believes in the gender pay gap crap and frowns upon being “sexist.”

The nice guy is a product of the pre-2000s West: he is the bastard son of feminism, almighty female figures, and of a middle class that did not realize it was heading to a social meat grinder. He is the dream figure of feminism, imbued with any neutering, misandric conditioning feminists have crafted. He just doesn't please the natural instincts of female nature.

No courage. No warrior values. No migrant invaders yet. No pickup and game know-how, no knowledge at all about identities, as he was raised in a world supposed to drop all identities, whether sexual, racial, or national, below the altar of the career-minded abstract individual. No felt need to level up your life. No masculine solidarity either of course.

Nothing but the almightiness of mom, the media, the educators, and hope that college and hard work will pay. This is how otherwise healthy and pro-social young fellows end up in debt and late virgins.

…who was then thrown under the bus

Yet, after he gets turned down by another girl he had hoped for, the nice guy realizes he's facing an untold reality. On the one hand, it becomes clear that women are *not* attracted to him. They friendzone him while opening their legs for so-called pigs. These women are also hypocrites who use him as a support, telling him about how they got "abused" by the bad boy they chose over him, then gorging on his likes, attentions, praises.

On the other hand political correctness forbade to speak about human differences. All knowledge about what women really want was suppressed. And now the nice guys starts to feel the need for such knowledge. But then, his need, which could be partly satisfied by some philanthropic concessions from the Cathedral's side, remains not only unanswered but even openly despised and trodden upon.

Loading...

Before feminists became hysterical over Trump, they routinely gloated about drinking "male tears." This was nothing less than open sadism. Their whole gamut over the "white males" and "privilege" is of the same cloth: your average Western woman considers that men have no rights, not even to empathy or fulfillment. Thus the same women who complain endlessly about their perceived problems as if they had no responsibility start tampering tantrums when men want to discuss their problems as well.

The bourgeois bohemians female “friends” who pretend their hearts are bleeding for rapefugees turn into cold, despising monsters, when you try to tell them about what the average mom-raised millennial goes through. And then they speak about care, empathy or fairness. Empty words in such (fish)mouths.

In other words, the nice guy, who usually started as an average believer into “progress”, was utterly abandoned by said “progress.” The intersectional forces that dominate mainstream culture purposefully excluded nice guy as nice guys from their ranks.

If you’re a man and you want to be a hipster, you have to virtue-signal and kowtow endlessly to even remain on board. Men are expected to tread upon their own identity and dignity whereas any so-called minority has a right to exalt its own identity endlessly.

Or, you can choose to leave. Which means struggling to go beyond the nice guy beta conditioning and thrive at least. This is usually the moment you begin to be really alive.

The best intentions when you were born and raised into the blue pill

Thus many who were nice guys managed to surpass this stage of their life. Good riddance. But as a memory, and part of our history, it is ours, and no one else has legitimacy to write it for us. Instead, we should recognize that the nice guy has, or had, a moral logic of his own.

Being nice is being pro-social. Politeness, respect for conventions, make society easier to live in. It softens conflicts and allows for peace (until predators come in, of course). It is also conform to moral universalism: if everyone were as nice, the world would just live happily ever after.

Being nice is also being "respectful." The nice guy has no game because he "respects" girls and address them as equals. He helps. He knows to listen. All of this is deeply ethical as long as you're blue pill—and, at least, up until the whitemalephobia and "white = racist" leftism started to reach unbearable levels.

But, you may tell, what about the sex drive? The nice guy wants to fuck women as well, yet he never really assumes it, doesn't that make him a hypocrite and a liar?

Feminism gave men contradictory imperatives: on the one hand, "emancipation" and a world of sexual liberty, on the other hand, the need to avoid picking up and avoid "sexism." How can you assume wanting to fuck when you were raised to hate the Don Juan? When you were contradictorily taught that sex was good, yet actually doing anything about it was "sexist", thus horrible?

Radical feminists went even farer when they chastised the normal, healthy masculine desire for beautiful and feminine girls. In his mind, the nice guy achieved equilibrium between his normal desire and felt social imperatives. This delicate compromise was cruelly shattered by fat lesbians and urban princesses.

A face without pain or fear or guilt

Being a nice guy could seem OK in Francis Fukuyama's world, when feminism looked like it was part of a general, "win-win" progress, and when all humanity seemed headed towards perpetual peace.

Now that feminism made clear it wanted us dead, neutered, or starving thanks to destructing people's livelihood, and now that we're aware, it should be clear to every sane man that the nice guy stage was never the normalcy it pretended to be.

Yet, as weak as it was, the nice guy condition should never be attacked as morally evil. If you were a nice guy once and keep bashing what you were as unethical, you will always carry a secret guilt, no matter how successful you became at bedding sluts. The mere tainted remembrance will make you ashamed. This is undeserved and unfair. It was not your fault, not your choice, and you did everything to be good and equilibrated according to what you knew then.

Immaturity is not a sin. Having been born in leftism, with a weak father, an almighty mother, is not a sin. Having been mentally conditioned by the globalists is not a sin. That being said, the sinlessness of our victimhood should not make us believe it is a desirable condition, and any man who finds himself carrying weakness or blue pill beliefs should strive to push himself.

It’s Time To Debunk The Gender Pay Gap… Again

April 13, 2018 | by Max Roscoe | Link | Original Link

The Gender Pay Gap myth, despite being debunked numerous times by Forbes, CBS News, the Wall Street Journal, numerous economists, and even feminists, just refuses to die. Oddly, Time magazine itself debunked this myth in 2016, but has published two articles in The Current Year titled Here Is the Gender Pay Gap in Every US State and 1 in 3 Americans Don’t Know That a Gender Wage Gap Exists.

The misleading titles are not backed up by facts. The authors even admit the largest single explanation for the variance between average female pay and average male pay is due to the type of employment each sex selects, followed by birthrates and childcare duties.

Differences do not indicate oppression

The fact that one demographic group, whether it be Asians, women, teenagers, former military soldiers, or black lesbian trannies, earns a different salary, on average, from another demographic group, should be of no surprise. Indeed, it is to be expected, particularly in a society where salaries are set competitively based on market interactions.

Symbols of the Oppressive Patriarchy

Expecting the same average prices in the labor market for varied labor is as ridiculous as expecting the same average prices in the supermarket for peanuts and avocados. Different products, whether they be labor, or foods, have different prices. The fact that average labor prices (wages) vary across various industries is a fact of life everywhere in the world.

And the fact that males on average, are paid a higher price for their labor, does not reject the value of women's labor, any more than a peanut is seen as worthless next to an

avocado because it costs less.

Career Choices Matter

Women choose to enter certain industries which are appealing to them. Women I know have recently graduated with degrees in interior design, fashion, Spanish language, government, and accounting. They chose those specific fields because there was something interesting or enjoyable about either the subject matter, or the job opportunities offered. Are these the most high paying jobs? Perhaps not, but salary information was certainly available and these women still decided that they would prefer interior decorating over computer programming.

Not all of these workers are paid the same. How evil!

A Modest Proposal

Of course, if women want true parity with men, then they should give up their freedom to choose their job and let them be assigned equally to the labor pool. Starting tomorrow, 50% of all garbagemen, soldiers, lawyers, doctors, taxi drivers, janitors, and mine workers should be female. And if you're going to keep my salary the same, I'll gladly become an elementary schoolteacher with summers off, and a work day ending at 3PM.

Remember: This is awesome and rewarding, this is awesome and rewarding…

But what if some woman don't want to handle garbage, don't want to take up arms and kill others in strange places for their (((greatest ally))), don't want to study for years and work the long hours that are required to become licensed attorneys or doctors, don't want to work the late nights and face the personal risks of driving a taxicab, don't want to clean and handle waste, or subject their more fragile bodies to the dangerous and deadly work inside mines?

Loading…
Sorry, but feminism dictates in the name of equality that they must be forced to do so. But even then, while that would bring average salaries much closer to men, we are still not there yet.

Childrearing Explains Much of The Wage Variance

In the name of Wage Equality, women should no longer choose this

As the NY Times explained this month, childrearing is one of the largest explanations of the variance in men's and women's earnings. As women are the only humans currently able to gestate and give birth, in the name of equality women must also forego

reproduction. After all, the childrearing duties of women account for approximately a 10-year delay in women's pay to match that of men. Until science finds a way for men to bear children, women, in the name of equality, can no longer reproduce, so that they may achieve the holy grail of equal pay to men.

But what if some women don't care about equal pay? Couldn't that explain why some of them choose part time careers, or jobs that pay less, or choose to—gasp—not even work for globalist corporations at all, but instead focus on being a loving wife and caring mother? If childbirth is a major cause in the wage gap, in the name of feminism, it should be ended.

Ironically, one of the authors, Debra Ness, is president of the National Partnership for Women and Families. What could be more anti-family and damaging to children than pursuing equal pay for mothers and fathers?

Where Does It Stop?

Inequality is to be expected in life. On my street, some houses sell for higher prices than mine would; others for lower. Some people drive a more expensive car than mine; some a cheaper one. Some people bang uglier girls than me, some prettier. People in each of the 50 states, on average, earn different wages than each other state. That does not mean that 25 of the states are oppressing the other 25, or that we should try to correct these variances.

Look at all this geographic inequality! Geography must be stopped!

And indeed if we did attempt to equalize wages, by tackling the root causes that feminists like the author of the above article herself admit, directly cause lower wages, then we would make women unhappy and unsafe, by forcing them to do dangerous,

unpleasant, or simply unwanted jobs.

Why Focus on Money?

Here’s a pro tip for women. Once your basic needs are met, money has been proven to have very little impact on happiness. If you want to be truly happy, set out to accomplish something rewarding in your life, whether that is volunteering for a cause you believe in, pursuing art or music or dance, becoming the first great hilarious female comedian, or raising a family of loving, caring children under the protection of a man who honors and respects you.

Instead of measuring your success by the size of your paycheck, choose a more meaningful metric. You will be far happier, and chances are, the emotional rewards you receive will be unmatched by the highest salary at the fanciest corner cubicle in the best office building in your city.

The latest propaganda articles were sad, half-hearted efforts to throw out some headlines and raw data without any analysis or explanation, and hope that if you repeat the wage gap lie enough, we will believe it. We don’t. Feminists, equality in wages is not something you want. It is not something you will enjoy. Be careful what you wish for! You just might get it.

What To Do When A Girl Tries To Make You Jealous

April 15, 2018 | by Wayne Schreiber | Link | Original Link

'The Jealousy Game' is a game that most women play at some point in a relationship, some more than others. The game works like this: she picks out another man, usually one she has at least a moderate degree of attraction towards, and she flirts with him, either by talking about him in an adoring fashion, or by displaying non-verbal cues of interest to that man while you are around (e.g. extended eye contact, warm smiling, touching her hair, neck or face, etc.). She chats him up in your presence, all the while expressing profuse admiration for his most mundane qualities.

If online, she exchanges a chain of messages, usually drenched with emoticons. She will turn up the volume on her notification alarms, filling the room with an annoying barrage of 'dings'. She might even give out her contact information to that man, or tentatively arrange to meet up with him (again) sometime in the future.

In short, she gives feral attention to another man, and that attention is of higher quality or quantity than what she normally gives to you.

All this fawning attention and time spent on this other guy, is done with the express purpose of making you feel intense jealousy. The kicker is that it is only right that you should feel jealous, because she is giving the kind of attention to another man, that she should only be giving to you.

The Jealousy Game is purported (by women) to be a test of ‘how much you love her’. So *in her mind*, if she can make you jealous somehow, then your jealousy is evidence that you ‘love’ her.

But smart men should not be deceived into believing this hamsterbated justification. When women use the word ‘Love’, it is usually a deceptive misnomer. Women generally do not understand what altruistic love is.

Why Does She Play The Jealousy Game?

The Jealousy Game is actually a bomb loaded with several payoffs, all to her interest:

- It keeps the emotional interaction of the relationship at a visceral, feral level, which supercharges her appetite for drama.
- She hones her skill in exercising her feminine powers.
- She poses a test of your emotional obeisance (or lack thereof) to her feral power.
- She tests your frame, and gets to understand how you deal with her apparent ‘lack of self-control’ around potential rivals.
- She is ‘testing the limit’ to see what she can get away with.
- She compares you to the other guy, to see who stacks up better.
- She can put you on the defensive and watch you squirm, just for her own egotistical pleasure.
- She might harvest information from these encounters to use against you, or to stick you to the wall in a future argument.
- She explores and tests the interest in her from other guys, thus scoping out ‘greener fields’.
- She revises and refines her estimation of her own SMV.

- She indulges her fantasy of being one who is desired by men.
- She expands her social network.

No matter how the game plays out, she wins a prize. Even if nothing further develops between her and the other guy, the sheer pleasure of hijacking the attention of two men is a worthwhile consolation prize to her.

How A Man Should React

There are four possible reactions that a man might have when his girl plays the Jealousy Game, listed in ascending order of personal benefit and relationship management effectiveness:

1. To get defensive, upset or angry
2. To promptly try to make her jealous
3. To tease her
4. To ignore her

The first is to be avoided at all costs. The second option shows a modicum of awareness, as it compares to dread game, but if done as a reaction, it appears too obvious and comes off as childish in her eyes.

The fourth option is the best response, because you don’t want to give her any satisfaction, or any feedback that might be interpreted as a sign of weakness. Ignoring her moves in the Jealousy Game is a test of your constitution and emotional control, which can be very challenging.

But depending on the circumstances and the personalities involved, ignoring her behavior

might appear like you are silently condoning the behavior, or that you are too weak to face up to it. You will know this is the case, if and when she slowly grows more aggressive and arrogant in her approaches to other men. In this case, teasing becomes the best option.

The most important thing to remember in teasing is to stay calm, be emotionally detached, and seemingly entertained by her antics. Whatever she is complaining about that drove her to make you jealous, just agree and amplify it to the point of mockery. Laughing at her is almost always a good move. But if you get upset and angry, then you'll come off as butthurt, you'll give her satisfaction, lose the game and push her away.

Specific Points And Plays

If she has made it known that she joined an online dating site, just stay calm, keep busy doing your own thing, and watch her using your peripheral vision.

If she is contacting an ex, you could tease her by asking her personal questions. Don't be afraid to dig into her on that, and be sure to make her ex look pathetic. If you're lucky, her guilt will kick in. Another trick is to ask her pointed questions to bring her back to reality. Adding specific details will confuse her and throw her off.

If she can actually talk about such things calmly and arrogantly, and add her own spin to it, then your relationship was over a millennium ago.

If she actually does jump into an affair, or leaves you, then you're better off without her. Dump the thot and move on. That's tough advice to take, but it's better to face the reality of it head on, and stay on top of your life, because life is too short to play the jealousy game.

And Then What?

April 15, 2018 | by Roosh Valizadeh | Link | Original Link

Many men raised in the West are programmed to set ambitious goals for themselves. They spend months or years trying to accomplish a specific goal, thinking that once it happens, their life will unfold like a movie where they are the hero carried off on the shoulders of admirers. This doesn't happen. The satisfaction from achieving your goal lasts only days, maybe even hours, and then life will seem no different than before. To find out what you really gain from any goal, imagine what happens *after* achieving it.

You want to sleep with 100 women. Imagine the process of achieving that goal, one bang at a time, until one day you do it—you sleep with your one-hundredth girl. The high is glorious. You are a real masculine man! *And then what?*

You still have to grind out your future bangs. Your game skill long ago passed the point of diminishing return. Your value doesn't automatically go up in women's eyes just because an arbitrary notch count was reached. More severely, you may damage your chemical bonding mechanism and become addicted to the thrill of banging easy sluts.

Or maybe you want to earn $1,000,000. You decide the best way to do that is through cryptocurrency. You spend hundreds of hours researching and trading. After three years, your portfolio reads $1,000,000. You cash out most of your portfolio. You buy a condo in the best part of town and also a lambo. You live in your new home and invite many friends and women, throwing epic parties, knowing that you can afford it all. *And then what?*

The parties get old after a while. You feel like people are using you. Your new home gave great satisfaction in the beginning, but you've gotten accustomed to it. You barely use the car. You buy new toys but then get bored of them after a week or two. Your wealth doesn't provide you with a sustained boost of happiness like you expected.

Or maybe you want really big muscles. You hit the gym five times a week and load up on supplements of dubious safety. It takes a year but you become jacked. Your confidence is sky high. Other men are intimidated by you and women make compliments on your physique. *And then what?*

A big chunk of your life is spent in the gym or fussing over your diet to maintain an aesthetic that has little practical value. The girls you attract seem to be more shallow than before. The ego boost of intimidating men has faded, and your confidence peaked many arm sizes ago. Going to the gym has become a drag, but you're scared of being small again.

Many men get starry-eyed over a goal, imagining how life would be so great upon achieving it, but fail to play out the movie to its completion. Unlike Hollywood, life goes on, and you come back down to a basal level of happiness, no matter how great your achievement was. This is very common with men who want to travel to shitholes to meet good women.

Imagine you visit a rough second-tier city in Colombia or Ukraine and meet a girl who is hotter than any other girl you've made love to before. And then what? Are you going to move to her city permanently? Are you going to bring her back to the West so she can get corrupted like the women you left behind? Are you going to move her to another location where any children you have won't have the benefit of seeing extended family? Understand that as soon as you experience the upsides from achieving a goal, the downsides come pounding at your door so that the overall cost of a goal is balanced with its benefits.

The most ideal goal to have is one where the downside is limited due to your unique character. My current goal is to finish two new books. There is huge downside in writing books for the average person, but for me it's upside most of the way through. Writing itself is a form of meditation that suits me, helping me understand my place and value in the world. At the same time, I'm able to help men with their own lives. Compare that to a goal of sleeping with 100 new girls starting today, which would have tremendous downside for me to accomplish because of the monumental amounts of energy and time it would take for a man who values sex far less than before. Same goes for making money beyond the level of the material comfort I now have.

You have an ability or disposition that makes your pursuit of a certain goal have a smoother "And then what?" follow-up story than other men. If that story involves high maintenance alongside time and energy costs, the goal is almost certainly not going to provide you what the happiness you seek, but if after achieving your goal, the story is followed by you doing more of what you already enjoy, even resembling a sort of play, it will be a worthy goal for you.

Banging girls, puffing up my muscles, and accumulating money is not my goal—it's the goal thrust upon me by a dying civilization that lacks meaning. If pursued to excess, they will only send me to a dead-end. If you want to find a goal that is worth it for you, play the story of the goal in your mind all the way through, and then you'll know.

Sweden Is Forcing Its Young Boys Into Homosexuality

April 16, 2018 | by Howard Roark | Link | Original Link

Remember hearing your local preacher or priest talking about how the city of Sodom and its wicked people digged their own graves at Sunday School? Sweden in a not so far future might end up like Sodom 2.0. Its educators are currently digging their own graves by forcing gender experiments on children, with no right of choice and ability to differentiate from right and wrong yet.

Sweden's Gender Neutral Schools

Judes 1,7 Even as Sodom and Gomorrah, and the cities about them in like manner, giving

themselves over to fornication, and going after strange flesh, are set forth for an example, suffering the vengeance of eternal fire.

Sweden's educators claim their aim is to promote "gender equality" in order to create a society in which its citizens wont discern between male or female when choosing friendships or relationships. Educators say their efforts will be worth it, since they claim it will create more "successful" citizens that treat each other as "human beings" rather than "men/women."

Some of their attempts to social engineer children include forbidding kids from using pronouns, such as "he" or "she." If a boy tries to call a female colleague by she/her/girl or the contrary, the teacher advertises them to stop doing it. The same rule applies for girls, since it can deconstruct their idea of a "gender neutral society". They promote everyone to call each other with the substantive friend or "hen", a genderless pronoun originally from Nordic Finnish.

Other strategies of theirs include making boys more submissive by making them play with dolls, pretend to be cooking in a kitchen, and dress like girls. At the same time, they try to make girls more rebellious and defiant by teaching them to yell , run, dress on their own, and play outside.

During drawing classes, one of the teachers, Ms.Esteka, states that they try to enforce boys into drawing boys with long eyelashes just like they would do if they were drawing girls even if her male students complain "We know its not like that in real life."

Sweden's toy makers taking advantage of the gender-neutral trend in schools and society

The state curriculum in Sweden urges teachers to "counteract traditional gender roles and gender patterns." – Andrea Bruce for The New York Times

Sweden's toy industry is also taking advantage of this "progressive" trend by creating

gender-neutral toys and children's books. Sweden Educators completely forbid children, especially boys into reading children's books that would teach them traditional gender roles like Sleeping Beauty and Cinderella.

What kind of men and women Sweden will raise with all those experiments that sound batshit insane? Are they trying to turn Sweden into Sodom/Gomorrah 2.0?

Maybe North American and South American Educators aren't so bad after all…

Brazil is my homeland. It might be a third world country and not as developed as Sweden, but at least we don't force naive young boys and girls, who have no way of fighting back and are easily influenced, to switch roles like crazy nazi Swedish educators are doing. The repercussions of the social engineering they are doing to those poor children will be terrible and will definitely only bring Sweden one step closer to total collapse.

America's K12 schools might not be perfect as well, but at least they don't try to social engineer in a forceful way America's youth into changing their traditional roles. For now.

I wonder why parents haven't done anything yet and are allowing such behaviour from people (educators), who were supposed to be teaching their youth about freedom of will and speech instead of forcing children into their creepy social experiments and ideologies.

I'm proud of the strong latin machismo culture in my country of birth and the rest of Latin America. It will sure help South America from becoming so degenerate and gaily as Sweden has. This is just as sad and as disturbing as the atrocities Nazi scientists commited in WW2.

Swedes can laugh all they want about the educational disadvantage American and

Brazilian public high schools are when compared to theirs, but at least we are manly and don't force no one into becoming a tomboy nor a tomgirl. They are basically trying to condition males and females from a young age to switch their roles, behaviour and sexual preferences derived from their gender.

Isaiah 3, 9 The shew of their countenance doth witness against them; and they declare their sin as Sodom, they hide it not. Woe unto their soul! for they have rewarded evil unto themselves.

In short, Swedish culture is reaching a point of no return in which in a few years from now the Cultural Marxists will have successfully annihilated all national identity in that country. I'm no xenophobic but I don't think it's morally or ethically right to force anyone into switching their normal biological roles and sexual preferences.

Howard Roark

Howard Roark is a Brazilian cowboy. After spending some years living in the Southern States of America and hanging out too much with country boys he learned all about The Southern US wisdom. He believes, that a society with strong Christian values mixed with Objectivism is the best answer against Cultural Marxism and toxic feminism. He dreams about moving his farm in Brazil to greener pastures in order to save himself and his family from the socialist degeneracy and economical disaster his homeland has become.

During his free time he enjoys reading philosophy books, driving his F-150, lifting and gaming girls.

Female Journalist Admits She Uses Dating Apps With No Intention Of Dating

April 16, 2018 | by News Syndicator | Link | Original Link

Via BBC:

How did you start your day? Coffee? Shower? Maybe you woke up early for a workout. I woke up early, too – to do some swiping.

Every morning, I lie in bed for 20 minutes, mindlessly sifting through an endless stream of smiling men patting tigers on their exotic holidays.

My days begin and end with dating apps, but the weird part is that I haven't actually been on a date in about a year. Honestly? I'm not looking for love.

A survey found nearly half of millennials like me are now using dating apps to seek out "confidence-boosting procrastination" instead of romance. I can relate to this; I'm looking for a kind of validation when I browse dating apps, not a relationship. The 'ding' when you match with someone you've swiped right to feels good. You impressed someone out there (even if they only looked at you for a millisecond). It's a validation for your ego; knowing that the hot surfer swiped right on me gives me a little boost.

A survey recently found that among the 26 million daily matches that Tinder claim occur on the app every day, only 7% of male users and 21% of female usersend a message when we get a match. Apps are increasingly losing their original purpose, with users aimlessly swiping without intention.

Relationship coach Sara Davison says: “It has become accepted behaviour, and part of single people’s daily routine. You can do it from your sofa with no makeup, wearing your pyjamas, with no effort, and no cost to anyone. Most people are on at least two dating apps, and flicking through them has become a quick, easy mood-booster for when people are feeling low and unattractive.”

I used to be the most proactive person you could hope to meet on Tinder. Back in 2012 when it launched, I was newly single. I would message matches, making date plans within a day and meeting up the same week. At one point I was a five-dates-in-five-days type of gal. It was madly fun – but exhausting.

I had a few six-month-long relationships in that time, but dating culture began shifting around me. Subsequent years saw the rise of ghosting, breadcrumbing, and unsolicited dick pics, and I gradually lost my enthusiasm for engaging with other humans. It all got to be too depressing. And boring. And predictable.

Loading…

Potential dates either asked for a tit-shot within a few messages, or would disappear just when I thought things were going really well. Or, on the increasingly rare occasions where we’d actually arranged a date, they would cancel, stand me up, or (worse) bore me all night. As everyone got used to treating each other as disposable, I did too.

I used to suddenly stop talking to people midway through a conversation, or ignore their messages. I would never treat my friends that way, but I didn't think of these potential dates in the same way – they were just faces who occasionally made my phone screen light up. Looking back, I'm ashamed of the way I treated them.

But, though I've now given up on meeting anyone from a dating app, I still use several of them compulsively. I'm addicted to the magic of swiping. People-watching is always fun, and when those people are all single men you can watch from the comfort of your own home – well, that's even more fun.

Getting the 'ding' when I match with someone feels like winning points in a video game. It's a time-killer in front of the telly when I'm bored (I have woken from a trance-like state many a night, realising I've wasted two solid hours swiping, with no idea what just happened on Doctor Who). Every 'ding' also contains the possibility of a person who might actually be all those things you want: kind, smart, nice to your dog. It's a way to daydream without any of the downsides.

When I'm idly swiping rather than going on dates, I don't have to make any effort or try to be my best self. I never have to worry about disappointing someone, about showing up looking a bit older or a bit fatter than my profile picture suggests.

But the creeping sense that this behaviour is damaging my mental health is becoming impossible to ignore. Chartered clinical psychologist, Dr Jessamy Hibberd, agrees it's time I address my addiction – because that's what it is.

China’s Social Credit System Copies A Video Game To Enact Systemic Totalitarianism

April 16, 2018 | by G.S. Luthra | Link | Original Link

Long ago, I remember playing a game called Final Fantasy 12. It was an role-playing game with great visuals, but one peculiar thing I noticed was a certain obstacle later in the game. When you arrive at The Imperial City of Arcades, an advanced society reserved only for the upper class, you find that you are unable to take a taxi to access the more exclusive areas privileged for the elite and royalty unless you have earned enough “Chops”, which was basically social credit system that signified that you were an “upstanding citizen of the Empire”. It was carried as a mark of high status, a writ to transit. The alternative was to pay a sum of a million Gil (money) just to get a ride.

So instead of being able to continue directly on your journey, you are sidetracked on a silly sub-quest where you have to run around and talk to strangers to see whether they have any problems you can help them with. Tasks range from remembering and repeating tales, fetching tools, and so on. The whole thing was unnecessary, and very stupid. I remember shaking my head hoping such a system never happens in the real world. Well, that fear has now come true in 2018.

China’s Social Credit System

High-tech communism has arrived in Rongcheng, China, as they have launched a social credit system which gives citizens points for following the law and doing “good deeds”. If they fail to obey, they lose points, if they conform, they earn points which can qualify them to receive perks such as renting public bikes free for a while, Winter heating discounts, and better rates on bank loans. Businesses can also get good scores for paying taxes on time.

By 2020, the government plans to roll out a full blown national social credit system, and this has given rise to fears of losing personal freedoms. According to the system’s founding document, released by the State Council in 2014, the scheme should “allow the trustworthy to roam everywhere under heaven while making it hard for the discredited to take a single step.”

Loading…

A report titled China 2030, written by government officials of The Development Research Center of the State Council, the People’s Republic of China, and The World Bank says, “the government will need to transform itself into a lean, clean, transparent and highly efficient modern government that operates under the rule of law.” It discusses everything from minimum wage, to patent filing. This document openly expresses the totalitarianism planned by the Chinese government. It is all part of a massive social experiment to rank and monitor citizens.

Just like how you are evaluated based on your FICO score, in China they are also judged on their social credit score. The government says it is being done to increase the “trustworthiness” of people in the country.

When Social Credit Goes Wrong

As humans, we all go through our emotions and sometimes say things we don't really mean. Online however, whatever is said becomes permanently recorded in digital history, and when a customer leaves a bad review, some owners can take it too far. In one case, an owner traveled 850km to beat up the woman who gave his business a negative review, because it costed him 12 points on Alibaba's system.

This system in China takes it much further. If you get a traffic ticket, you lose five points. If you commit "heroic" acts, do good business, and help others who are in tough circumstances, you can get 30 points. You can also earn credit by donating to charity or volunteering for the city's program.

He Junning, the deputy director of the Rongcheng Social Credit Management Office, said, "anything that influences your points needs to be backed by official facts with official documents." People can receive grades ranging from A+++ to D. Things like drunk driving, however lowers your score to a C.

For people like Yu Guanqing, it is making his life much harder to apply for a house loan as "It's too troublesome." China has been trying such tactics since the communist take over, but now they have launched this microcosm which could very well be the model of what may come in the near future.

16 Things That Will Happen As America Collapses

April 17, 2018 | by G.S. Luthra | Link | Original Link

Donald Trump bragged about his “smart” missiles launched at Syria to Russia over an unproven allegation of Assad gassing his own people while war mongers like Madman McCain and the celibate weirdo Lindsey Graham had an internal orgasm. This can escalate very rapidly as Trump is poking Putin, and Hezbollah may attack Israel which will lead to chaos. Russia is now acting accordingly while the far left who supposedly are anti-war are suddenly silent. The globalist owned U.N. Security Council rejected Russia’s solution, and it looks like tensions will only escalate.

Einstein once said that the difference between genius and stupidity is that stupidity has no limit. Just when you think the country can’t go any lower, you see things on the news that set the new standard for idiocy like former FBI director Comey spitting out lies, 60 Minutes interviewing washed up Super Slut Stormy Daniels, and now Trump blaming “Mastermind” Russia and Assad for Syria.

It is clear that America is dead. There is no decency, no morals, or sanity, just one big circus of nonsense. The recent H-2B bill passed by Congress and signed by Donald Trump himself allows thousands of foreign tech workers through the visa system countering Trump’s original campaign of growing American innovation. Trophy imports of endangered animals are now accepted into the United States, and Donald Trump hired the man who told George W. Bush the lie of weapons of mass destruction in poverty-stricken Iran, John Bolton.

The Bush family is once again in power, and “Trumpeteers” are too blind to see it as they’re drunk in their own patriotism. Assad said after the first Syrian strike that these

allegations are nothing more than cosmetic campaigning and no concrete evidence exists. Still, that means nothing to blood thirsty war mongers.

Trump is doing exactly what the globalists want, setting himself up for impeachment.

The Government Isn't Getting Any Better

The news is all fake, they're lying and everybody knows it. You won't become a better human by watching it, only a miserable one since it's always about someone shooting up a school, somebody blowing themselves up, a rape here, a rape there. Society continues to plunder, and you can't do anything about it other than helping yourself.

Writing to state representatives, congressmen, or senators won't work. People have been preaching this for ages and yet the same three things have remained consistent: more war, more government, less freedom. With that being said, don't be surprised if you see the following manifest:

1. Intense Civil Unrest – more people are waking up to the truth and when they realize that they've been played, a very angry reaction is going to follow.

2. More Terrorism – it's going to get worse in all parts of the world as more people are taking justice into their own hands.

3. More Economic Instability – a larger gap between the rich and poor will become more apparent as automation and outsourcing puts Americans out of work.

4. Student Debt Explosion – more students are going to be graduating, but most of them won't be able to secure good paying jobs resulting in default. The debt will collapse, and it will fall in the hands of the American taxpayer.

5. Immigrant Invasion of the U.S. – the zero budget for the border wall is going leave the government forced to put a cardboard fence which won't do much for security. However, it looks like it's being designed to prevent Americans from fleeing the country

of what's yet to come.

Loading...

6. Decline of the American Dollar – Donald Trump and the Republican Party jacked up the spending budget to 1.3 trillion dollars. Inflation is going to blow way out of proportion, and the dollar may become worthless altogether. We may even see a new world reserve currency possibly the pound or even a cryptocurrency take over.

7. Rampant Prostitution – New York and Atlantic City are just the beginning. America will become the next Amsterdam where girls will flock to the highest bidder. Sugar daddy relationships will become common as the whole culture is shifting towards a transaction hybrid form of intimacy.

8. Drop in Marriage Rates – men and women will treat it like business contracts which will be very specific, stating finances, child rights, and even frequency of intercourse. Most however, won't even bother. High-tech virtual reality porn and sex bots will be the norm.

9. Technological Takeover – advancements will be made in biotechnology, genetics, medicine, robotics, and alike, making the human presence obsolete.

10. Complete Hijacking of the United States Government – you will see the blatant corruption right in your face and politicians won't have any fear or shame in doing so.

11. The Rise of the Eastern World – China, India, Japan, Singapore, and other nations will dominate the global economy and will become the new leaders in technological innovation. Recently, Obama visited New Zealand and was treated as though he were still president. The purpose of his trip is unknown, but as you can see more interest is growing there while America continues to plummet.

12. Caucasians will Become the New Minority

13. Globalism will Destroy the Rest of World just like America – countries like Georgia, Croatia, India, Korea, and more are increasingly embracing the degeneracy from digitized Western culture, and so the earth will be one culture under globalists, with tyranny and WiFi for all.

14. Increase in Blindness – the surge of computer-based work is forcing the human eyeball to re-adjust itself to better adapt to the constant close work lifestyle. Glasses, contacts, or trans-humanist like technologies are likely to go up to deal with this loss in vision.

15. The End of Personal Privacy – Uber had their rider and driver info hacked and paid a 6-figure fee to hackers to remain silent. Additionally, they sell your information for "business reasons" according to their privacy laws. Orbitz, the travel website, was recently hacked where credit card, date of birth, and other private info of eight hundred thousand customers were stolen.

16. World War – Trump attacked Assad again just like the war mongers wanted him to and is pointing the finger at Russia for financing them. We all know where this is going.

What to Make of it All?

Treat global events with the mind of a Buddha. Let it pass through and be converted into spiritual energy to fuel your goals. Trump said on Friday to pray, hopefully, God will give him more sense instead of pulling the trigger over whispers from his neocon administration.

For more on what is yet to come, check out Donald Trump vs The Globalists ***FREE*** *for a limited time on Kindle.*

How To Change The World

April 17, 2018 | by Roosh Valizadeh | Link | Original Link

Out of all my podcasts, I've received the most amount of comments about The Black Pill, where I state that it's fruitless to try to change society instead of yourself. Many men feel that this possibly can't be the right approach, because if we don't try to change society, how can we ever make it better? Won't the whole world just become one big African slum?

What is society composed of? Buildings, music, art, language, government, and more, all produced by people. Without those people, there would be no society. As a living human being, you are an integral part of a society, and it will change by a degree, however minuscule, when you die. You're already changing it through your mere existence, but trying to change society *directly* through conscious effort is futile.

The problem with becoming an activist to change a broken society is that it's almost always done by imperfect people. Broken cannot fix broken. If you're not living by the code you think your perfect society should be, or you suffer from anxiety or fear, you can't improve the whole that you're a part of. Changing society is therefore a form of therapy, just like how teaching game was a form of self-help for me.

This car should not be designing the highway system

Your problems, vices, mental issues, and addictions are too difficult to solve, but it’s all to easy to command other people on how to live. If you gain a soapbox, you’ll feel soothed that others are listening to you even though your own life is in disarray. The ego boost of becoming famous or influential can’t compete with even the best sex or anti-depressant pills, and in the end we have a case of the blind leading the blind.

The only foolproof way to change society is to make yourself the best person you can be. The society then automatically changes upon your change, since you are a part of the whole. If you rid yourself of your brokenness and your fears, your addictions and your denials, society will improve. If you become a golden standard for others to follow, you could then advise others on how you solved your own problems. Until then, any attempt to change others is just a way to delay or procrastinate your own change. This is the most obvious with pundits on the internet who have an interest in changing the minds of people who don’t even live in their country. They don’t care about their own neighbor, yet they are activists for those who live in lands they have never been to.

I will not tell you by which standard of morality to live by, because I know that a society full of fornicating men like myself would lead to catastrophe more than not. Unless we’re talking about a man like Jesus, a society filled with the person who wants to change the world would always lead to disaster. If you ask me questions, I will give you answers, and I will surely share my opinion like I’m doing now, but I will not take a crusade to save those who did not ask me to be saved.

Loading…

A society full of men like Jesus wouldn't be so bad

Today, I would not run a "Fat Shaming Week" like I did on Return Of Kings several years back. I can state that I'm not attracted to overweight women, but I no longer care how women I don't know choose to live. I set a weight limit for my body, and if people want to ask me for health advice then I will help them, but if the whole world becomes obese then so be it, for it must be a part of human nature if its occurrence is so seemingly inevitable.

One of the first things you may have figured out when learning game is not to convince a blue pill friend to also use game. The friend will resent you for thinking that you're better than him. It turns out that this basic lesson applies on a societal level as well. People don't want to hear your opinions, standards, and morals. Even covertly inserting those opinions into movies or music won't work unless you're programming people to do what is already within their primal nature.

It's easy to attack mainstream media and Hollywood, but most people really want to sleep around, accumulate material possessions, be addicted to all matter of substances, invent their own gods, and simulate being a "good" person by virtue signalling for an outgroup. It's easy, fun, and makes them feel powerful and superior. They don't want you to tell them how to genuinely be a good person or solve real problems. Doing so is a waste of your time, and if you're too persistent, they'll try to kill you for it.

I intend to live for several more decades. I will use that time to face my lingering demons while sharing what I know to people who want to hear me, but I will not attempt to change the world. That's just a form of therapy that is kicking the can of my own problems down the road. I know that if I become the best man I can, and be open and honest with how I did so, society will improve ten times more than if I try to jam my opinions and theories into people who don't want to hear it. There will be no arguments,

no persuasion, and no debates, just an individual journey that leads to openness and dialogue, and I hope that I will be successful at it.

10 Reasons You Should Not Go To Southeast Asia

April 18, 2018 | by Larry Simmons | Link | Original Link

Southeast Asia, in particular Thailand and the Philippines, are promoted non stop in the manosphere as the place to go for feminine women and a red pilled life far away from the cancers of the Western world. As a young, good-looking red pilled guy in his early 30s who has lived in both places for three years in total, I'd like to provide a contrarian point of view that Southeast Asia is overhyped and not all that it's cracked up to be.

1. Locals dislike you and take every opportunity to take you down a notch

If you aren't a dopey all smiles, friendly 24/7 guy who prefers to keep to himself and doesn't dress as poorly as the locals, you'll be perceived as evil whitey incarnate who sees locals as lesser humans (their own projection) and they'll take every opportunity to trash talk and take jabs at you to take you down a notch out of their own insecurity and inferiority complexes. This gets old quickly.

Good luck asserting your masculinity when locals are always a step away from seeing you as the evil white colonizer that tells them how to live their lives.

Le evil oppressor:

2. Low quality of living

In Bangkok you pretty much can't walk anywhere. There are either no sidewalks or they're falling apart and are blocked by vendors. If you're from the US and used to driving everywhere it might not bother you, but as a European who likes to walk this generally lowers my quality of living a lot.

In Manila walking around is simply not advised for security reasons alone outside of small bubbles like Bonifacio Global City.

The most expensive mall in Manila is next to a slum tier area:

3. Shoddy overpriced housing

For the cheapest shoeboxes built out of the shoddiest materials and the cheapest appliances you pay prices that are often above Eastern European capitals in Bangkok. In nicer areas of Manila like Makati or Bonifacio Global City, these shoeboxes even reach Western European prices and you have to look really hard for good deals.

This is due to a combination of corruption raising construction costs and locals storing all of their (ill gotten) gains in apartments. A little price comparison: Budapest vs Bangkok vs Manila.

4. Girls are largely ugly, whorish, and have the mental capacity of children

Stubby chubby oompa loompa is the standard Filipina type. They apparently don't handle Western diets well and a visit to a mall is like visiting a trashy Walmart back home. Cheating among locals is so rampant it makes Western women look chaste. Last but not least she'd be considered mildly mentally retarded in the West and would never rise

above jobs like cleaner. If you ever go bust she won't be a co-earner ever and ditch you asap for a better option if you don't shape up quickly.

5. Nightlife PUAs delude themselves that they're not banging whores

The nightlife is completely hooker-infested even in "better" areas where foreigners don't commonly go, especially in Thailand where whoring is a way of life for many women. These aren't places full of strong empowered women making as much as guys so they are happy to put out to Chad for free.

Loading...

6. Impermanent visas and few local employment options

You’re on perpetual temporary visas which might be scrutinized whenever you re-enter the country to the point of being denied entry and deported if some grumpy whitey hating immigration officer dislikes your face or visa history.

If you choose to tie yourself to a local 3rd world woman you’ll have to deal with such nonsense as putting up 13k USD in a fixed deposit account for Thailand just to be able to get a visa. Never mind that this is a years worth of salary in a good white collar job in Thailand and you aren’t even allowed to work on a spousal visa.

If you need a job, chances are you’ll be pigeonholed into subsidence pay English teaching jobs. Locals don’t like foreign competition.

7. People are stupid stupid stupid

If you want to see the child level intellect of people of above average intelligence and employment just venture to the Philippines Reddit sub.

Thai people are pretty much completely absent from the internet outside of social media, which tells you a lot about their intellect and mental capacities.

8. Her family will lean on her or you’ll raise another man’s child

Third world families expect financially strong family members to play big spender. While local alpha guys who take care of the extended family get treated like kings in return, don’t expect them to extend this favor to you.

You’re a white idiot from the land of the money trees, a gullible idiot to be mooched of, a mark. Her extended family will relentlessly nag her to get more favors out of you and

telling them to fuck off is mostly not an option even in the unlikely case that she has your best interests in mind, as they're most likely the only back up plan she has if your relationship ever goes south.

A lot of women already have kids from another guy and might not necessarily be open about it as shrewdness is required to survive in the overpopulated third world and you'd never know as her parents are raising it.

9. #MeToo exists as well

A vengeful ex-girlfriend of a user on a forum managed to get him blacklisted from a country by accusing him of god knows what. He ended up having to change his name and get a new passport in order to be able to get back into the country.

10. Lots of unfortunate accidents

Thailand is one of the countries with the highest road fatalities in the world (yet trashpackers and flip-flop dude bros drive scooters with zero concern), and there are lots of sketchy deaths of foreigners leaping from their balconies.

The website Farang Deaths shows them regularly, including Alexander Cazes who was a member of Roosh's forum.

In my time in Thailand I learnt of half a dozen deaths of acquaintances. Some died in scooter accidents getting mowed down by drunken drivers, while another allegedly jumped out of the window due to going crazy after his Thai girlfriend hooked him with the local version of meth.

In short, everything is stacked against you and the quality of living is low. I don't recommend a visit.

Unilateral Training Can Help Take Your Strength To The Next Level

April 18, 2018 | by Larsen Halleck | Link | Original Link

Strength is certainly a pretty cool thing to have, isn't it? "From strength comes all things" and all that. There are certainly many advantages to having the ability to pick up really heavy stuff in a conventional way.

But if you really want to develop earth-rending muscular power, you are going to have to use some unconventional lifts as well. And the king of unconventional training is exactly what the title is implying: unilateral training!

What?

Unilateral training is exactly what it sounds like—training that is done with either one arm or leg, or further removing fingers from the equation. Traditionally, srongmen have advocated unilateral training just as much as, if not more so, than traditional training with two arms and/or legs. After all, if you can do with one hand what others need two hands to do, *just think of what you can do when you actually are using both arms.*

Or would you argue with someone like Bert Assirati, seen here doing one-handed handstand pushups at 250+ pounds?

How To Do It?

Of course, if you diligently read and practice the information in my articles, you already know how to do one-handed pushups and one-leg squats. Thus, the simplest way to put unilateral weight training into your routine is just to do these calisthenics with added weight: just hold a dumbbell during these exercises and the difficulty will exponentially increase.

You can also "up the difficulty" on things such as splitting apples and other forms of grip training that I have also discussed—once you can split an apple with two hands, you can try crushing an apple with one hand, as yours truly demonstrates here.

But these will only take you so far—I have always advocated both bodyweight and weighted exercises. But is it possible to do actual lifts unilaterally?

Yes

Some traditional lifts can, in fact, be done unilaterally, and can in some cases be trained to be much stronger than a normal man's two handed lift. The two that I have learned, and will be teaching today, will be the one-handed overhead press—in its basic form, perhaps another article will discuss variants of it such as the bent press that graces the featured image and is complicated enough to require its own separate article—and the one-handed deadlift.

To do the one-handed overhead press, grab the weight and lift it to the hand's corresponding shoulder. Just like a two-handed overhead press, push with the legs and lift it above your head. Bear in mind that the torso should slightly lean in the opposite direction of the arm (i.e., if you use the right hand, you will lean slightly to the left). The

body will naturally do this, as doing so enables the oblique muscles to support the weight rather than just having the shoulder girdle do so. However, do not bend too far, or twist the torso at all, as doing so can injure the back.

Loading...

If you find that you are twisting the torso, that means the support muscles of the torso—such as the aforementioned obliques, and the muscles of the lower back—are not strong enough to support the weight, and thus you should lift a lighter weight. I cannot reiterate enough, it is better to do a light weight with proper form then a heavy weight with sloppy form.

The one-handed deadlift, is a bit tricky, but I find that it has helped my deadlifting tremendously as a supplementary exercise.

To do this, load the barbell on the floor. You can either stand in front of it as in the traditional deadlift, or perpendicularly to it—the “suitcase” position. I prefer the former.

Then, using proper deadlift form (hollowing the back, keeping the head aligned, etc.) grasp the middle of the bar—and now you know why there's that "grip spot" in the middle of the bar!

Then push through the floor with your legs and lift the bar. Make sure to keep your body as straight as possible. Then switch hands after you do the lift.

I’m only doing 135 here, and that’s far below half of my regular deadlift.

In addition to training all of the typical muscles trained by the deadlift, this will hit the obliques and muscles of the lower back as they struggle to stabilize the weight—you will likely not even be able to do half of your normal deadlift weight the first time. The unaccustomed lifter, in doing the one-handed deadlift, will probably lose control of the weight his first time. If that is the case, then there is no shame in lowering the weight—and besides, the sheer uniqueness of this lift will seem impressive in your gym.

Conclusion

There’s no reason to not unilaterally train in addition to the regular exercises you do—they’re supplements, they’re not replacing the typical training methods. A few extra reps of these will give you big strength gains.

The Final Destination For A Liberated Woman Is Becoming A Prostitute

April 19, 2018 | by Robert Ossenblok | Link | Original Link

I was born and raised in the Netherlands. Although I did not live in Amsterdam, I was well aware of how the city looked thanks to the television. One show in particular, Baantjer, was about two detectives solving crimes in the heart of Amsterdam. Every episode would show them walking through the red-light district.

Keep in mind, this was a family show that I watched before my age even reached the double digits. Initially, I had no idea why there were women wearing lingerie standing behind large windows with a red light above their head. What I did know was that it was perfectly normal.

As a young boy I would visit Amsterdam, both with my parents as well as on a school excursion. In both instances, we had a walk through the red light district. After all, this was a normal aspect of the Amsterdam touristic route.

As I grew up, I found it odd that other countries did not have similar districts. Since the Netherlands is known to be such a progressive country, surely having streets full of prostitutes is a progressive virtue?

Prostitution is Virtuous

Virtuous. That is exactly how the Dutch perceive their streets full of whores. Excuse me, their streets full of prostitutes. Using a slightly fancier term makes the act of selling the use of your body sound more sophisticated and progressive. Women had acquired the right to vote. Women had acquired the ability to work. And now, women had acquired the freedom to sell sex.

Prostitution really is the culmination of female empowerment. It shows women have taken back their rights, they own their bodies! And as owners, they can sell access to their bodies. Glorious individual liberty, the ultimate combination between freedom and women's rights. It allowed women to be free from men's shackles, to earn their own income in the way they wanted. Is it moral? Of course, it's their body, their choice. You can't argue with that logic, not without being called a misogynist.

Even the more conservative Dutch do not want to end prostitution. The argument is that it will happen anyway, so it is better to have it happening out in the open. The more visible it is, the more implied (or imagined) safety is present.

Loading...

Prostitution is Desperate

The idea, or maybe we should call it a myth, is that liberated, empowered women choose to earn their income by selling sex. Strong, empowered women, confident in their sexuality. If they like sex, it is really them taking advantage of the men, isn't it? After all, they are receiving fairly large sums of money for it.

Yet, what do we see when we walk through the red-light district? The women are not Dutch. Most by far are from Eastern European countries. Poland, Romania, the Ukraine, Hungary, etc. They come from countries that are poor.

They are lured by a brighter future, a future with a comfortable life, a future that is better

than they can get in their home countries. But, despite possibly being reluctant at the start, that future involves becoming a prostitute. Not quite their first choice of a career, nor the second. The money is simply too appealing.

These girls did not dream of ‘making easy money by selling sex’. They are not liberated. They’re not empowered. They are girls that are openly being taken advantage of. Prostitutes are the weak, the used, the desperate!

These are the same types of women that have always been driven to prostitution. How can we look at them and not realize that their smiles are fake? How can we believe they are happy standing in front of a window in lingerie, trying to lure men in?

Prostitution is Vile

Now, there will be those reading this that are not convinced. You will think that this is exaggerated. You may think it is true for some of the girls, but definitely not for all of them.

Well, have a look at the type of men they receive. The losers, the fat ones, the bald ones. Even porn-actresses have sex with fewer, and generally better-looking men than the scum that enters the rooms of the whores in Amsterdam. Maybe the prostitute will reject some, but if you want to earn an income as a prostitute your standards cannot be very high.

Of course there is the money. Yes, most women in Amsterdam are not forced. They do it voluntarily. And they do it for the money. But does that make it virtuous?

Should we consider women degrading themselves, performing a job they were reluctant to accept, as something progressive? Is this something we should be proud of? Amsterdam is a hub for poor former-Soviet women to sell their bodies, so that the sex

tourists from wealthy countries can use them to their liking. What kind of future will the ‘progressives’ lead us towards, if that is their idea of a virtuous, proud, society?

4 Red Pill Lessons From The Movie “The Bachelors”

April 19, 2018 | by Dawn Pine | Link | Original Link

The movie sounds interesting, but oneitis is used to describe attachment with living women. Using that term for a dead wife comes across as heartless/callous.

I went to the movie The Bachelors a few days ago. This is a nice drama, released last year, about a widow father and his son. The father transfers his teaching job to a new private school which his son also attends after he fails to stop mourning for his late wife. Both father and son find love, and healing.

So far this sounds like another chick flick. I took a girl I was dating to this, and I have to say I was surprised. The acting is good, and the plot is (almost) believable. What I found more interesting is the amount of red-pill lessons incorporated in the movie.

Lesson 1: You need to move on from a completed relationship

JK Simmons is the grieving father Bill Palet. He shows what happens if you can’t move on after your wife dies. His late wife, who got cancer and died within two months of diagnosis, dominates almost every aspect of his life. Romantic as that sounds, we are seeing serious oneitis, which as his kid shouts at him near the end, makes him want to “not live anymore.”

Note the fragility of Simmon’s character. That is what Onities will do to you

We at the manosphere stress the danger of oneitis. This film shows that romantic as it is, pining for an unreachable woman (dead in this case), might actually kill you and harm your family. I’m not saying that we should avoid love or not grieve if it is over, but as Harold Perrineau, who does a good job of playing his psychiatrist, points out, you need to move on.

Lesson 2: Alpha gets sex, beta gets friend zone

The lovely Odeia Rush (Israeli pride, on my part) portrays the “complicated yet hot” classmate, which the son is after. The girl character cuts herself, is in a home which her mom and dad constantly fight, and fucks another classmate (the one who treats her like a sexual object and has no “feelings”for her).

Of course she has issues, but that doesn’t stop her from hanging out with the beta, avoiding kissing him on pretenses that “she likes him to much,” and continuing to binge drink and fuck the alpha.

Loading…

I love you so much that I don't want to fuck you. I'll do that with the alpha guy. You'll get only a kiss in the end

My date failed to realize that this behavior is more common than is portrayed in the movie.

Lesson 3: Females will push you, because they "love" you

At a dinner party, the French teacher who pines for JK Simmons character, gives him a hard time. Shit testing means that she has feelings for you.

Delpy does not play the "strong independent women", but an actual women looking for love

My date was very enthusiastic about this. She claimed that it is one of the way women show love. I prefer a more direct approach. A woman standing her ground, while still being with you means she has feelings for you. She would probably want you to stand your ground as a test of your strength and then move to woo her.

The funny thing is that this character later undresses at Simmons's house and has sex with him. For me that was sci-fi, as there was NO escalation, and no mention of sex. But mainstream movies can't be all red pill, can they?

Lesson 4: Do your own thing, and the women will come

Simmon's character is able to attract the teacher because he is actually not into her. He has his own concerns. This makes him an accidental alpha, with beta on the side. We can totally relate as to why he became (unwillingly) attractive. The problem was that he was consumed in his oneitis almost until the very end. For me it was funny how you can have oneitis and still get a new girl

Wiggins's character starts by being an almost omega male. Virtually no friends, the bottom of the social hierarchy and zero willingness to engage in self improvement. By working on his athletic abilities he is able to (spoiler alert) win a race, which translates to

winning the girl and making his father proud. By improving yourself, one gains self esteem and gets to move up the hierarchy.

This a good movie to take girls to since it maintains a red pill perspective. If it is still showing, or your prospect wants to catch a movie at home, it is a good choice.

How To Fake Your Way Into The Pants Of Hot Communist Girls In Latin America

April 20, 2018 | by Howard C. Roark | Link | Original Link

So you are planning on doing an academic exchange program to a University in Brazil and you want to know how to become the Latin American version of Chad Thundercock with Latina college students. This article will give you all the insights you will be needing to become the next hotshot with girls inside college majors already totally contaminated by cultural Marxism and left-wing ideals. The tricks shown in here will also work with little to no modification in other Latin American countries besides Brazil, they all suffer from the same cultural Marxist fungus.

Time to pack your bags

Warning: This guide assumes you want to bang Latina college chicks so badly that you are willing to blend in and disguise as one of our left-wing socialist enemies. It also assumes you’re not planning on having any relationships with those chicks, since they will never be good girlfriend material and are already totally brainwashed by Marxist ideals and feminism.

The techniques we will cover in here are mostly for gaming chicks from humanities majors like arts, journalism, language, history, social studies, psychology, design, philosophy and others. So the techniques described in here might not be very effective with women from STEM fields, fortunately the cultural Marxist fungus has yet to totally infect the STEM fields in here.

Step 0.01: Pretend that you don’t support Trump

I think this one is so obvious that I don't have to describe it in a lot of detail. Also if your liberal arts professors or colleagues ask anything about your political views, say to them that you voted for Hillary, that Fidel Castro is the greatest man on earth, that you love Karl Marx and that Trump is the devil and that everything about Western culture is "bad and wrong." Say what they want to hear not what you really think and you will soon become a popular figure among those left-wing simpletons in no time!

Also if any liberal arts Brazilian asks you what do you think about Bolsonaro (The Brazilian Trump), tell them that you think he is "evilzzz" as well. After all, as I said before: say what they want to hear not what you really think. This is called the art of blending in when inside enemy territory.

Step 1: Dress like the biggest hipster/hippie ever

American Chad Brazilian/Latin American Chad

Making the conversion from American chad to Latin America´s chad isn't that hard. The Brazilian Marxist version of Chad Thundercock is basically a hippie version of Ellsworth M Toohey if he was born in Latin America.

Always walk in the University Campus holding in your hands a copy of Karl Marx's Communist Manifesto to look "cool" in their counter-culture social circles. Don't worry! You wont have to read that pile of shite! Most Marxist liberal art students probably never read it anyways they just keep parroting what they hear from their Marxist college professors and you can do that as well. Sometimes talk about some new age stuff like astral signs, Buddhism, and Woodstock culture. It will make you look cool in their group.

Step 2: Have a hipster playlist in your Spotify

John Lennon from heaven: “Peace n luv brah lets smoke some pot!”

Bands like The Beatles, Jimi Hendrix, Ozzy Osbourne, Bob Marley, and others from the 60s Vietnam War/Woodstock era is a must if you want everyone to appreciate your musical taste.

Also don’t forget to throw in some Brazilian bands from that era as well such as Legião Urbana, especially their song Geração Coca Cola, which is basically Brazilian Marxist Elite Academia’s anthem. Those simpletons Marxist left-wingers will never suspect you are just faking to be one of them in order to game their hot, but crazy, chicks.

We ask you to do all of this because Latin American Marxists and Brazilian Marxist elites are stuck forever in the 60s as if they were trapped in a time machine that keeps sending their minds to the counterculture of that time forever.

Step 3: Get good at talking counterculture/hippie gibberish

Liberal Arts Student 1: Bruh why hit dah bookzzz!! Smoking pot is dah real dealzz it gives us dah real knowledge.

Liberal Arts Student 2: Dassss Riteee!!!!!!!

Loading…
Liberal Arts Student 1: Shieeet I dont even remember what I was saying anymore.

Liberal Arts Student 2: Shieeeet!!! Its those evil capitalists trying to control your brain brah!!!

Liberal Art Student 1 and 2: Shieeet put on "Geração Coca Cola"! DAS RITEEEE!!! DAS RITEEE!!!! DAS RITEEE!!!!!

All you have to do is basically adopt a Ellsworth M Toohey persona. Say things like:

- "Individualism is bad!"
- "Money turns people into evil greedy assholes!"
- "Collectivism is the greatest thing people can do!"
- "Dah Police and Dah Military are evilzz man!"
- "Lets fight against dah man!!!"

Also every now and then mix your Woodstock/anti-capitalist counter culture socialist rhetoric with some mumbo jumbo talk about new age stuff like chakras, spiritual energies, aligned planets, crazy conspiracy theories about the government, and East Asian religion stuff. Then just watch as everyone cheers you up and the college chicks go wild for you. Soon those left-wing chicks will all be wanting to get inside your pants in no time.

Bonus points for:

- Inversion of Values Tactics
- Using social media to solidify your hipster/hippie persona

Step 4: Become the biggest Hipster ever

Hippies be like: Brah where is the Weeed!!! Make love not war maneeee!!!!

Step 4 is basically mixing of all the other steps in order for you to adopt a total hipster left-wing counter culture facade persona to get all the hot liberal art chicks into you. They will be liking you so much that soon they will be inviting you to their parties, activities and way of life.

Liberal Art´s chicks from Brazil/Latin America will go crazy for you if you have one of those.

You score bonus points with your fellow Latin American Marxist college students if…

- …you know how to play the guitar. Make sure to sing counterculture songs from the 60s or romantic songs in the college campus. Liberal Arts college students here love guys who and play romantic songs or anti-capitalist/counter-culture anthems.
- …you tell everyone that you hate Paulo Coelho's books and Orvalho de Carvalho's ideas. Brazilian liberal art students and Brazilian Marxist elite's favorite hobby is to spend their time hating and cursing on them.
- …what you say to them doesn't have to make sense at all. All you have to do is talk the same old speech used by socialist politicians/dictators and make it look believable by using Aristotle's art of rhetoric tactics.

But be careful to not become one of them

AAAAAAARGH!!! It´s too much wickedness I cant handle it!!!!
"When you gaze long into the abyss. The abyss gazes also into you." – Nietzsche

Never forget what the manosphere really stand for. Spending too much time with those kind of people, even if you are just faking it, might brainwash you into becoming one of them in the long term. Make sure to have on hand some books from Ayn Rand, Thomas Paine, Socrates, or Adam Smith in your baggage or Kindle. Or just bring the Holy Bible (KJV preferably). Hearing God always heals the soul. This way you can read about real wisdom, character, and virtue to keep your mind sane in this socialist hellhole country/continent and to not let yourself succumb into their SJW PC culture madness.

As Nietzsche would say, "if you gaze long into an abyss, the abyss also gazes into you,"

so even if your intention was only to have some fun with hot, wild, left-wing liberal arts Latinas, you need to be careful not to allow them to convert you.

To sum it up. If you follow all the tips in my guide you are most likely to get at least some hot liberal art college girls during your stay in Brazil and other Latin American countries.

Tolerance: A Brief History Of A Leftist Bludgeon

April 21, 2018 | by André du Pôle | Link | Original Link

The injunction to “be tolerant” have become scarce in the mainstream discourse. In the current year version of The Current Year, the very concept of tolerance seems a bit *passé*. However, it was hugely fashionable in the 90s and beginning of the 2000s. Since then, it was likely dropped because it had become inefficient, but it also had a long history and is highly useful to understand the dynamics of leftism and skewing of the masculine energy.

A very short history of a big concept

The word originates from the Latin *tolerare*, a verb meaning “to endure.” This original use was rather Stoic in spirit: one endures what one does not like but has to live with. Stoics praised *tolerantia* as a synonym of patience and self-mastery.

Tolerance was then a virtue, but not an imperative. The Roman Empire was multicultural in the sense of encompassing various peoples, tribes, and cults, but all of them had to swear fealty to the Emperor—the living embodiment of the Roman people. One could be “tolerant” for a variety of personal reasons, not political ones. Seditious wills were rather crushed than tolerated in the modern sense. The Arch of Titus and several circus shows commemorated the Empire’s mastery over those willing to quell the Roman flame.

Tolerance, then, only has value as an aspect of self-mastery. Later, the word was picked up by Jesuit missionaries, who justified tolerating foreign cults or the mixture of Catholic rites with pagan rituals by claiming this was the only way to lead them to Christianity. Other Catholics rejected that: mixing Jesus Christ with the most exotic paganism seemed not only weird, but blasphemous.

“Tolerance” also surfaced when Europe was torn apart between Protestants, Catholics, and some who claimed they could be agnostic or atheists without being antisocial. The notion was then clarified and formalized by philosopher John Locke in his famous *Letter on toleration* (1690).

This letter has been often quoted and (mis)used in Current Year media and academia, but its context has always been forgotten. Namely, Locke wrote it in the midst of controversies between Catholics and various strands of Protestantism, and what Locke wanted was the re-establishment of peace between Christians, no more, no less.

From Locke's *Letter*, four key points can be emphasized:

1. Tolerance is based upon a shared homogeneity. All people to be tolerated are Christians. Thus, not only were they white—this was too obvious to tell before the West had multiculturalism forced down its throat—but also sharing important values: be charitable, forgive thy neighbor to be forgiven, which becomes "tolerate to be tolerated." All Locke's text permeates a Lamb of God ideal. Lambs are to be tolerant to each other, because no lamb will eat another lamb, isn't it?

2. All practitioners of tolerance stand on an equal footing. Each strand of Christianity shall acknowledge its duty to tolerate the others. No strand is deemed less respectable than other. Reciprocity is key.

3. Truly sociable people are always keener to criticize themselves than their neighbour. Everyone shall lead the war against his own vices or defects before thinking of politics or interest conflicts.

4. Toleration has limits. It aims at pacifying a divided society, not at letting brazen novelties threaten the very principle of homogeneity. Thus Locke opposes any public expression of atheism. Not believing in God is one thing, claiming it among Christians is another—namely, something antisocial and thus not to be tolerated.

After Locke would pass out, the word would be used anew and a lot, but all of Locke's tenets would be quietly discarded or very much reframed.

Check, for example, Voltaire's remarks on tolerance. Voltaire is often mentioned today right after Locke, as if both thinkers were expanding on the same topic, but in truth they just used the same word. Voltaire pretended to be "anglomaniac" by celebrating Locke and Newton aside, and on surface he shows Lockean overtones:

> What is tolerance? The apex of humanity. All of us are full of mistakes and weaknesses; forgiving each other for our foolishnesses is but the first law of nature. (*Philosophical Dictionary*, 1764, art. "Tolerance")

However, past the lip service, Voltaire would add that Christianity is the most intolerant religion ever. Note the shift: Locke wanted tolerance to save the peace among Christians, Voltaire wanted it to shatter Christianity. The dashing philosopher signed most of his letters by *Écrasez l'infâme* ("Crush the Infamous"), which, as scholars admit, designated the Cross.

pour aumonier ! je vous prie de le dire
a frere Berber quand vous irez a versailles.
il est vrai que je ne lay pris que pres
metre bien assuré de sa foy
je vous embrasse tres tendrement mon
cher philosophe. écrasez l'infame

Voltaire was the standard-bearer of views completely different than Locke's. He did not believe in peace among equals, but in "progress": something which could justify despising opponents and persecuting them. Now, only one side can say what's good or not—and only one side can ascribe goals to society. Any other side is supposed to let itself be casted in the role of the "reactionary", the unprogressive, before getting guillotined (or persecuted by SJWs two centuries later).

Loading...

Locke was conservative and modest. Voltaire was seductive, fun, witty, but also quite narcissistic, just like most other writers of his time and later intellectuals. Such characters would laugh at the idea of meditating upon their own vices and rather craft weapons to attack any political other as "unprogressive", thus despicable. Attacking Christianity as "intolerant" was part of this movement: if Christianity is "intolerant", it should not be tolerated. Accusing someone of intolerance had become a way to be intolerant at him.

The maneuver through (and behind) the words

Be tolerant!

The Locke-Voltaire-*colonnes infernales* trilogy was not an accident of history. The same process has been going on at different times.

Under the Roman Empire, the first Christians complained about being persecuted and a lack of tolerance towards them. When they got in power, they forced everyone to convert, thus showing a degree of intolerance no Emperor had ever shown.

At the eighteenth century, the same who created a historiography of "*muh Catholic Church was intolerant and burned poor innocent witches for centuries*" inspired those who would cut dozens of thousands of heads and kill Catholic babies as "enemies of humanity."

At the twentieth century, eugenic supporter Madison Grant would often dispute—through covered paper arguments—with antiracist fraudster Franz Boas. The former never formed a right-wing SJW militia for persecuting the latter. Boas, however, took whatever academic territory he could, rushed to associate Hitler with Anglo-Saxon research, and played a key role in having the "racists" stigmatized and chased out of university. The eugenicist was tolerant, but he lost before poor innocent Boas, who was nothing more than a predator in disguise.

Later on, when Saul Alinsky clearly equated tolerance with cowardice, his comrade Herbert Marcuse wrote that "liberating tolerance would mean intolerance against movements from the Right and toleration of movements from the Left."

In such minds, only the Left can say what is good or evil, what should be aimed at or not, what is "oppressive" or not. The totalitarian Left would then pretend to be rebellious and fighting for muh poor victims to be tolerated while being itself the most intolerant force on stage. The same Left that took over academic journals while pleading for tolerance does not tolerate refutations of their gender pay gap myth.

Tolerance has ceased to be a conservative, peace-among-equals, imperative since at least Voltaire. In truth, the word hides a sword: progressives contend for the coveted position of power, from where they can say what's tolerable or not, what should be tolerated or not. To us this is nothing short than totalitarianism, especially when such progressives are foreigners or traitors who want us killed.

"Be tolerant" means "be submissive." Feminists or rabid SJWs are never asked to be tolerant, no matter the degree of their hysteria and rage, whereas the peaceful conservatives are asked to "tolerate" those who kill them. Why were SJWs never labelled intolerant? Because official "tolerance" was always subordinate to do the leftists' and globalists' bidding—never to peace, true justice, or a healthy social life.

It can also be noted that those complaining about being victims are always accusing someone else to be intolerant: thus, by complaining, they *are* intolerant at someone else, but claim their intolerance is OK whereas the other's is not. A hidden double standard since the beginning.

Fortunately, the illusion seems to have lost its power. Politicians saying to accept immigration and terrorism while chiding conscious Westerners created more scandal than agreement. Many people noticed that immigrant rapists and female criminals are given passes whereas political opponents are under death threats, and in such a chaos, the injunction to be tolerant had turned pointless.

Tolerating the Left in the name of the Constitution is like tolerating an invasion of roaches in your apartment. Conservatives always accepted Lockean equality between both sides, saying things like “we need a good right and a good left to walk together”, whereas the Left always rejected political equality and persecuted the political Other since day one.

We may tolerate our neighbor’s weird antics, but the Left must end like Carthage. Only on its ruins can Westerners socialize again with each other—and become great again.

Starbucks Is Imploding Because Two Black Men Didn’t Want To Leave A Store

April 22, 2018 | by Zach Smith | Link | Original Link

Poe’s law has been in action again: you can’t satirize the left without being taken seriously by them. Pranksters recently made hoax pictures mocking Starbucks’ pandering to leftist mobs after a store manager in Philadelphia called the police on two black men who didn’t buy anything and refused to leave. Starbucks apologized profusely for their “unconscious race bias,” prompting fake coupons to be circulated online that offered free coffee to only black people. While many posting the coupons, such as Roosh, added the caveat “even if it’s not real,” it was a great way to show Starbucks cucking to the social justice outrage machine.

> There's a Starbucks coupon for free coffee if you have "African American heritage". Even if it's not real, I bet Starbucks would honor it. pic.twitter.com/DsDzyVjtYa
>
> — Roosh (@rooshv) April 17, 2018

Business Insider posted an article about this hoax and used it as an opportunity to take a swipe at Trump, as well as Roosh by linking to a hit-piece about him written in the Guardian.

> Baristas are instructed to use discount code 1488, the combination of two numbers that have become symbols of white supremacy. The QR code for the coupon links to a website page that translates the code as the n-word.
>
> Among the accounts sharing the fake coupon were Gab, a social network known for its popularity among far-right figures that have been banned from other

> platforms, and Daryush “Roosh V” Valizadeh, a controversial pick-up artist and blogger.

This is the same Starbucks that gives away shareholder money to homosexual charities. When a shareholder complained about it, Chairman Howard Schultz said “if he doesn’t like it, sell your stock.”

This is the same Starbucks that when Trump announced a travel ban, announced it would hire 10,000 Muslim refugees. This is the same Starbucks that had it’s baristas write “race together” to start a dialogue about race. It looks like they finally got the dialog they were looking for. Be careful what you wish for.

The incident that precipitated this was the arrest of two men for loitering and not being able to use the bathroom. It is not unusual for a man to have to be a paying customer to use the bathroom; it had nothing to do with race. But, like the calorie counts of soy based coffee milkshakes they drink on the daily, it’s hard to communicate that to the hysterical mob of hairy armpited, hair dyed fatties.

Now that all freeloaders know Starbucks’ new corporate policies, it’s important to spread the word that Starbucks is a public bathroom first and foremost. Once homeless people set up camp in there and a few junkies overdose and die on the toilet, will they rethink this policy? No, they will double down, dye their hair a new color and break out the megaphones.

Loading…

Hair color as fake as your mom when she tells you she’s proud of you.

I’ve done security work as a bouncer. I’ve literally been hired to stop people who aren’t customers hanging around in places of business. If you are asked to leave for any reason but you do not leave, you have committed trespass. I’ve seen white and black people tucked into the back of police cars and driven off for this. It’s nothing new, but the two black men deliberately targeted Starbucks because the company has invested money in

its cuck branding. It makes it easy to get money out of them to not ruin their brand. So basically it was a robbery without weapons.

It's like paying the mob for protection money after being vandalized: the thugs you are getting protection from and the thugs you are paying to be protected from are secretly part of the same conspiracy. So these guys come into Starbucks and deliberately provoke a scene and then Starbucks pays a bunch of money to charitable organizations run by race baiters like Al Sharpton and the ADL, not realizing that everyone was in on the same conspiracy.

> Starbucks said Tuesday it will be closing all of its company-owned restaurants in the U.S. during the afternoon of May 29 to conduct a racial-bias education program.
>
> The announcement follows protests over the arrests of two black men who had asked to use a bathroom at a Starbucks in Philadelphia.
>
> "I've spent the last few days in Philadelphia with my leadership team listening to the community, learning what we did wrong and the steps we need to take to fix it," CEO Kevin Johnson said in a statement Tuesday. "While this is not limited to Starbucks, we're committed to being a part of the solution. Closing our stores for racial bias training is just one step in a journey that requires dedication from every level of our company and partnerships in our local communities."

Starbucks will be spending a lot of money on this diversity training—it's big business. Then they will pretend as if the mass majority of Starbucks baristas aren't already white-guilt-ridden soyboys who lack a spine and are actually excited for this multicultural diversity training.

Free at last, free at last. Any size beverage, free at last!

Normally I'd laugh and let the left eat itself, but if Starbucks goes down, surely some other coffee place will take its place for the trendy leftist champagne socialists to consume. As I sit here in a Starbucks typing this article, uploading it to Return of Kings via their wifi, I don't feel bad at all that I didn't buy anything. After all, this is now the desired

behavior, all for the universally desired goal of ending privilege forever, or whatever.

The Agenda To Silence Masculinity

April 22, 2018 | by Raritan Jague | Link | Original Link

The inimitable Joan Blondell said it best in an episode of *Starsky & Hutch*: “There are no REAL men left in the world, just sissy boys.” Indeed, many of these “sissy boys” have made their way into my life, providing a thousand proofs of the absurdity of modern American culture. A few decades later, her sentiments were echoed by a female citizen journalist, albeit with slightly different language: “Men have lost their testicular fortitude.” Her soft voice ran over the clumsy phrase “testicular fortitude” like a vehicle driving through a dangerous stretch of city.

Even men who LOOK like men — with muscles protruding from their skin-tight t-shirts — seem only to have achieved a *caricature* of masculinity. Many of them obsessively inhabit two of the only remaining arenas where men are still allowed to be men: sports and gyms.

They are often are so utterly de-individulaized that they seem wholly incapable of channeling the other long-lost aspects of masculinity: good manners, a robust interest in the world, a beaming heroism, respect for tradition but an openness to new ideas, a dignified sexual prowess that does not hang itself on cheap crudities, a jolly good humor, and a willingness to take charge and assert the natural aggression and dominance of the "classic male." When men fail to give these things to the world, *all* of society tends to become the chaotic mess that it is now.

I came of age with pains so large that I never quite saw myself as a MAN. At times when I heard myself speak, the voice that spoke seemed to belong to someone else — it was a voice I did not recognize. An explosion of homosexuality and bi-sexuality, and also sexual ambiguity, only confused matters more, as both straight *and* gay men seemed to exist in the same void of *emasculation disguised by flashy clothes and lifestyles and highfalutin political agendas.*

Everywhere I went, straight men were being replaced by effeminate gay men or bossy, bitchy, authoritarian, and completely unlikable women. The educational and entertainment fields are only two examples of this unfortunate trend; straight men seemed to have been largely edged out, and if they did exist at all… they were usually geeks or eunuchs who did nothing to ensure that masculinity remained a strong or relevant force in professional operations.

Loading…

I couldn't change all that. But what I *could* change was myself. I started watching more male-oriented TV shows, such as *The Lone Ranger, Starsky & Hutch, The Virginian, The Rifleman,* and so on, absorbing the strong and triumphant masculinity that these shows displayed. I overturned *all* traces of political correctness (which houses a profound anti-male agenda), engaging at times in such ribald, uncensored language that it shocked even my closest cronies.

For instance, when a shrill, obnoxious feminist complained vociferously that women were "underrepresented as world leaders," I said saucily: "Maybe that's because you *screw up* all the countries, businesses, and avenues of society that you *do* rule. In the sixty or seventy years since women have taken on men's roles in massive numbers, society has become a disgusting cesspool of nastiness, hatred, confusion, and manufactured rage. If this is what happens when women are 'liberated,' then perhaps they should go back to baking brownies… starting with you! Although I'm sure *your* brownies would be just as stale as *you* are."

She didn't have a neat, readily-available response to *that* because no one ever *talks back* to those women. No one dares. They have been given unchallenged control of almost all avenues of society. *That* is why they have done such damage to the world.

We, as men, have been brainwashed into thinking that we always have to be nice, that we have to like and accept everyone and everything (even the vilest forms of degeneracy), and that we must “respect” women even as they are DIS-respecting us. We even faithfully watch the TV shows that bash us, such as: *Law and Order SVU*, which cleverly uses the delicate matter of rape to insert a savage male-hating agenda, as if the male sexual impulse is synonymous with the instinct to rape and kill… and all men are potential or closeted rapists who must be punished with exposure, public humiliation, and incarceration.

Even though I am still an oddball, at times a goofball, and hardly the dictionary-definition of a “classic male,” I ultimately became the man that was once hidden beneath a meek exterior.

Raritan Jague
Describing himself often as a "gleeful rebel living in enemy territory," RARITAN JAGUE has maneuvered his way in and out of the hidden corners of society -- where he has acted out his creative dreams with clumsy determination. He hates everything about this vile era, and situates himself in the very realm about which he conveys in his various creations. He has no social media accounts and considers seagulls and deer to be among his closest cronies.

5 Reasons Why Generation X Is The Superior Generation

April 23, 2018 | by Beau Albrecht | Link | Original Link

Childhood and young adulthood are allegedly the “best years of one’s life,” but I’m far more successful now. However, the party can’t go on forever. Eventually I’ll no longer be able to deny I’m over the hill. This is a great opportunity to wax nostalgic about the good old days and how everything’s terrible now. *Let the immodest boasting begin.*

1. Kids were active

They develop so fast these days. That's at least a C-cup already.

For a couple of years, I walked to school uphill, often in the snow. The cold, soggy rubber boots usually left rashes on my legs. I would've considered global warming a big improvement! Although the way back was actually downhill (I won't lie), that wasn't quite a picnic. A group of older kids hid out nearby and got their jollies by chasing the younger ones. On a positive note, walking uphill and running for my life on the return trip was a decent daily aerobic routine.

Children were otherwise pretty active back then. In fact, boys were all *hyper*active, but only one kid I knew got doped up for it. (Besides him, I was the next most hyper, basically a little monster.) It's not like nowadays, with half the school on Ritalin—or even stronger stuff—to make them stop acting like kids.

My next elementary school had a huge, brand new jungle gym—I remember the truck pouring the sand! It's gone now, probably because of lawyers. (So is the long drop tire swing in the park nearby, probably for the same reason.) Also, I got a bike, often riding miles a day. I wiped out hard many times, but only once got hit by a car.

Later, I played football a couple of years, though I wasn't exactly the best. Still, one of my dumbest mistakes was not trying out for the high school team, the ticket to the "in" crowd. Although the coaches were just a smidge abrasive (it comes with the territory), they would've taught me how to lift early on, which would've been well worth it. Nowadays, youth athletics just ain't what it used to be, and there are reasons.

2. We weren't couch potatoes

He’s cranking out some reps with that bicep curl routine.

Video games didn’t mean parking on your ass for hours. Hanging out at the mall’s arcade was nearly a social event. You usually stood, blowing a quarter for a single go. (That was *half the price of a loaf of bread* back then!) One of my friends got Pong, the first home game console ever. I thought it was pretty neat at first, but electronic table tennis ain’t addictive, fortunately! Nowadays, folks might play Warcrack eight hours at a stretch. One of my managers actually did that at work for nearly a year.

If you actually had thirteen channels of crap to choose (paraphrasing Pink Floyd), then you were one of the “lucky few” with that newfangled cable TV. By golly, I put my wicked little science-nerd brain to work figuring out how to pirate it! Nowadays, most folks reckon their 500-channel subscription is a biological necessity, like clean drinking water. (It’s still crap.) When I was a young’un, we actually had to get up off the dadgum sofa to change the channel too!

3. Politics was better

Res ipse loquitur.

Boy howdy, they don't make politicians like they used to! In the 1860s, there was a lawyer as President, and they called him "honest Abe". In the 1990s, we got another lawyer President, and Slick Willie argued about what the meaning of "is" is. FDR did his damnedest to provoke them Japs, but leastaways he let them pull the job, unlike this newfangled false flag stuff.

Tricky Dick told a few fish stories, but The Lightworker told the truth only when the teleprompter operator goofed. When Gerald Ford ran for President, the joke was that he couldn't walk in a straight line while chewing gum. When Hillary ran for President, she couldn't walk straight even *without* the gum.

Loading...
Theodore Roosevelt had a pair of nuts the size of cannonballs, and he was a liberal for his time. Today, he'd be drinking buddies with Pat Buchanan. Times change, or so they say. Back then, liberals actually cared about helping the disadvantaged. Nowadays, they care about keeping them agitated, They'll promise the moon, but never make things better. And speaking of Buchanan, fellers like him were what folks meant by conservative. Now, he's supposedly an extremist, while neutered "mainstream conservatives" are merely a controlled opposition.

4. Even Communism was better

Nowadays, they can't even think up any decent slogans.

Commies used to be pretty dang scary! Occasionally they even had some sensible moments. Khrushchev was an improvement, and could've gone on the right track, but didn't play his cards right. Brezhnev was an asshole dictator, but had his lucid moments sometimes. Gorby was too decent; you had to be an asshole dictator to keep that job. Fidel Castro knew that stogies are for smoking. Bill Clinton thinks seegars are for something entirely different.

By the time I got to college, Communism was headed straight down the crapper. There were more campus pinkos than Vegas had compulsive gamblers. However, one Viet Cong feller coulda whupped a dozen of them coffee shop radicalinskis without breaking a sweat! Comrade Lenin would've wept bitter tears had he lived to see them, or especially today's gaggle of limp noodles.

Nowadays, commies are fruitcakes wearing masks, sometimes with very peculiar eating habits. They only attack when they outnumber their opponents. Still, they often get schooled about picking fights with the wrong people, or even get wedgies.

Hell, even cultural Marxism was a dadgum sight better. Sure, we had sneaky media propaganda telling us what to think, just like today. Still, nobody was trying their damnedest to convince us men get pregnant, ancient Britain was multiracial, gay parents are better; none of that kind of bullcorn.

5. Men and women got along better

Some folks make such dadgum fools out of themselves that they become Internet memes.

Ladies generally acted decent. There were exceptions, but nobody pretended that being snotty is “empowerment”. Nowadays, it’s harder to find ladylike gals; and they sure don’t stay single for long. There were some nutty women’s libbers back then, but we laughed at ’em. Nowadays, those harpies are running amok.

Flirting on the job was normal, not illegal. If you kept it reasonably tasteful (that means no fertilizing potted plants the wrong dadgum way, etc.), no problems. That’s how many couples got together, in fact. Starting a conversation in public was being friendly, not “street harassment“. That’s how it was done, since we didn’t have that newfangled “swipe right” stuff that ain’t what it’s cracked up to be anyhow.

Best of all, back in the 1970s, a dinner date got you places, if you get what I mean. If a gal didn’t like someone, generally she simply wouldn’t go out with him. I came of age too late for that to be helpful to me, unfortunately. Nowadays, a dinner date is more likely to be basically a job interview, and she might simply be wasting his time and money.

Conclusion

This feller had it right!

Despite all this boasting, my own generation is in a fallen condition compared to our grandparents. The Greatest Generation wasn't perfect, but there's much that they got right. What will the future hold? Hopefully Generation Z will rebel against Millennial snowflakes and become fine, outstanding folks.

4 Different Types Of Charisma

April 23, 2018 | by Larsen Halleck | Link | Original Link

So it has finally come to this, the last of my trilogy of articles pertaining to charisma. As I have repeatedly stated, the state of being charismatic is a set of tools rather than just some inherent wonderfulness that you're either born with or you're not. And in a related revelation, there is more than one way to be charismatic than just being the stereotypical loud and aggressive "Chad"—although that is certainly one of the ways to be charismatic.

More specifically, there are four main types of charisma. In this article we will be discussing those, as well as my theories as to why "charismatic" people (like celebrities and politicians) also seem to be abject pieces of shit.

1. Focus Charisma

Focus charisma is defined by having ample amounts of "presence" and a cool confidence. This is good for introverts. People with focus charisma are people who make you feel like every word you say is being listened to. His body language hints at his PRESENCE. Even if you're a dweeb you can have this. Focus charisma also conveys respect for others and makes them feel like they matter.

You get focus charisma by paying attention to people, good listening skills, and patience. Do the "presence" exercises that I discussed before. Also the nullifying of internal discomfort, like delving into sensations and responsibility transfers, again from the previous articles.

This is the simplest and easiest form of charisma to get, and it can be effective in more subdued and intellectual scenarios. But as it is the easiest, it is, in my opinion, the type of charisma that can most often go wrong.

One of the risks is the one that I have always warned about: having too much presence without enough power could very easily make you into a spineless, supplicating lapdog and that will not convey sort of positivity to those you are trying to convince. In other words, if you don't display enough power you'll come off as a fellating little tool, so if you're going to use focus charisma, try to avoid this.

However, remember that the three elements of charisma are power, presence and warmth. Having power and presence without warmth can have its own problems, mainly

that if you convey too little warmth, you will come off as interrogative. And whether you're trying to make a sale or get into a woman's bed, you don't want to come off like a teacher grilling a student.

Focus charisma is good for defusing angry situations, or in negotiations—and really, what is sex and romance if not a series of negotiations? Do NOT use it when you need to be in authority.

2. Visionary Charisma: Belief and Confidence

This is the charisma that inspires people, it makes them believe what you're saying. Conviction and passion. People are naturally uncomfortable with being uncertain, they want a leader to lead the charge. Hell, this sort of charisma even managed to get Dubya into the White House, and if it could make a moron like him President, you know it works!

This is probably the type of charisma that is closest to the stereotyped "Chad Thundercock" sort of charisma—Chad *knows* that his plan will work out, so he has confidence in his vision.

Conveying visionary charisma requires the ability to project complete conviction and confidence in a cause. In this way, visionary charisma is based on power and warmth—but not necessarily interpersonal warmth. They feel warmly about their vision, strong and passionately.

Visionary charisma is assessed via demeanor—which is to say body language and behavior. If you seem strong and inspired, they'll assume you must have a good reason to do so. Somebody who is conventionally attractive will have better luck with this then an uggo, but if you can convince people *really* hard, then you can overcome your ugliness—think of the stereotypical "fanatical preacher wearing a hair shirt before a roaring crowd."

The message matters for visionary charisma. This means knowing how to craft a bold vision and knowing how to deliver the message charismatically—and you can do that with the public speaking and body language tricks I have delivered here.

Loading…
One of the keys to communicating your visionary charisma is getting yourself into a state of complete conviction, and shedding any doubt. You can use the tools previously learned here.

The main problem with this sort of charisma is that if you do it too well you will create a worshipful movement of slavishly devoted chodes around you— or even worse; you may start to overestimate your own abilities and set yourself up for a complete debacle.

Worshipful chodes, wildly overestimating one's own abilities…I *can't imagine* why I immediately thought of Tucker Max…

3. Kindness Charisma: Warmth and Confidence

Kindness charisma is based in warmth primarily, connect with people's hearts and make them feel cherished and accepted. Like visionary and focus charisma, kindness charisma comes entirely from body language—specifically your face, and even more specifically your eyes.

Practice this by accessing warmth with internal tools such as gratitude, goodwill, compassion, and self-compassion as the last article discussed. Also go out of your way to not show tension and coldness. Again, you need power and confidence here because otherwise you come off as a simp.

Use this when you want to make people feel safe and comfortable, like if you need to deliver bad news gently. Avoid it if you need to be authoritative or if there's a risk the other person will get too clingy.

A little something like this

4. Authority Charisma: Status and confidence

Before I tell you what this is, notice that power and confidence are involved in all of these, the key is to make it seem like your great and magnanimous self is deigning to be warm and kind and present to them, not that you're demanding THEIR approval.

Anyway, this form of charisma is possibly the most powerful one of all. People instinctively follow leaders—for better or worse.The Dalai Lama embodies authority charisma, but so did Stalin.

Those who have authority charisma are not necessarily likable: To quote *The Charisma Myth*, which in turn quoted a sportswriter: "[Michael Jordan] rankles, sometimes infuriates, his teammates. But he uses his charisma to lift the whole team's level of play."

Authority charisma is primarily based on a perception of power: the belief that this person has the power to do what he wants. We evaluate someone's authority charisma through four indicators: body language, appearance, title, and the reactions of others. And you already know how to do all those.

Now, having learned all this, let's ask an uncomfortable question…

Why Are Charismatic People Often Shitheads?

As the recent casting couch brouhaha with #MeToo and ongoing political controversies will indicate, many of our societal betters, who are charismatic by any objective measure, are also objectively miserable human beings. Why?

I have repeatedly been discussing that a major trick for getting charisma is to "fool" yourself into a charismatic state. And what is acting, in particular method acting, if it's not "fooling" yourself into getting into character? For that matter, politics is "Hollywood for ugly people" after all, to quote Ronald Reagan. Are you seeing how it all ties together?

While this is just an idle theory I have had, perhaps the reason that politicians and celebrities are simultaneously so charismatic and such reprobates is because they don't have any personalities of their own, and thus the budding sociopath finds it easy to "paint" various personality traits upon themselves.

Regardless of whether or not this is true, you certainly don't need to be a sociopath to use the charisma techniques I have ennumerated—use them for good instead!

Why Do Women Really Want “Equality”?

April 24, 2018 | by Peter Bentley | Link | Original Link

Equality is a strange thing to ask for. Since when do feminists and hard-headed modern women want to be so similar to men?

If I were a woman, it would be easy to acknowledge that I am different from a man and would embrace that. As a man, I embrace being different than a woman. Similarly, I too embrace a woman as being different than a man—that’s the part I enjoy most about them! Men appreciate things like the hips of women or their soft voice, and women are attracted to things like the 5 o’clock shadow of a man, his deep voice, or his confidence. It’s unique to each gender. So why do women want equality?

Looking at the big picture

Men have a standard of living that they’ve cultivated, and have steered civilizations for

thousands of years. It’s safe to say, men have what they want. They have created the jobs they are good at, they have negotiated salaries that they are comfortable with receiving, and have basically set a standard for themselves in most fields.

That standard is arbitrary, however. It’s floating in mid air. It is not a law of the universe. It is choices that men have made and (mostly) agree upon. So now we have these standards that men have set and now live with, and women want equality (the same).

If a woman wants the same standards as a man, she wants to be an awful lot like a man. Otherwise, she would have her own standards and desires that she has created. If a woman is unique and different (which is obvious), she should want different things than a man. She *should* want a different standard. Not necessarily less of a standard of life, just different.

Women and ego

Sometimes I open up my Tinder and see women flexing their muscles or putting in their bio that they are picky and “more sarcastic than you,” or similar boastful, egoic lines. It makes me roll my eyes so much it hurts. If I was attracted to ego, I’d date men.

Loading…

You *will* see men everywhere posturing as being the “best” or the rulers of the universe and it is just ego stuff. That’s our thing! Ego is the domain of men, though we’re not entirely proud of it. The thirst for excellence is ego driven. We’re seeing more and more women sporting massive egos, and **the ego is NOT a good look for women**.

Now we have a culture of domineering and ego-driven women trying to be the king of ego mountain. The ego is ours. Ego mountain is ours. We have always had it the real men of us won’t give it up. This power struggle going on is counterintuitive to natural feminine energy—the attractive force that brings men and women together instead of butting heads. This could have an association with the decline in birth rates in Canada that we

are seeing.

Instead of women marching around society, fighting to have the job, the income, the attitude, and the gym muscles of a man, wouldn't it be more fitting to seek **different** standards, **different** desires? After all, men often seek excellence. We seek to have the biggest muscles, the biggest income, the most admirers, etc.

A modest proposal

Women yearning to be quality caretakers, writers, actresses, partners, mothers, students, emotional supports, and many similar honourable duties is far more befitting for them than becoming, say, a firefighter out of spite to prove to the world she can do it (stinking of ego). Meanwhile, the station has to also hire an extra firefighter to make up for her physical accommodations, thus negating the need for her.

This is really a message to all: do what you are naturally good at doing and if it happens to pay more or less, live with it… or change yourself. If someone earns more than you, it's foolish to expect the same. They are producing different work than you because their skill set is different and possibly more valuable. If you want all the same things as this person, you are trying to be too much like them. Be original and carve out your own desires and standards.

Women: you are different. Not better and not worse, just different.

Be Like A Tree

April 24, 2018 | by Jean-Batave Poqueliche | Link | Original Link

Be it the resilient willow or the impressive cedar, trees have inspired humans for millennia, as the symbol of strength, longevity, and rebirth. Nowadays, men look only towards their peers for guidance, but the answer might just be in one's own garden.

Roots

They represent the connection with one's home and those who came before. The seed

that took root did not materialise out of thin air. Parents and forefathers crafted it and the fertile soil made it grow.

Be thankful for the land that was not barren and that you can proudly call home. Honour it with a strong foundation and it will help you withstand storms and build a future.

Heavy roots hold the tree in the ground while rootlets draw water and sustenance. The more connection with the myriad of distant roots, the more solid the base and the more water will be found.

The tough, unmovable stump will remain long after a tree's death and might even live on. One does not see roots but knows they must be powerful and deep to support a mighty tree.

Trunk

Your body must evolve like an oak trunk. Tend to it daily and it shall be sturdy and ready to handle the changing seasons. Despite a slow growth, regularity, dedication and respect allow it to be even and well-shaped. Proper nourishment will fortify it to endure ailments, axes, and fate.

A rough bark over burly wood can be stronger than stone. The bitter winter frost or the scorching summer heat are no match, for time and patience are on the tree's side. But the tree, like man, knows humility for one day, time, who was once an ally, will become a foe.

The trunk is the most awe-inspiring part of a tree as humans can touch it, but they will also judge it.

Branches

A man’s intelligence, education, and skills should be as stable and organised as the branches of a tree. Dreams, aspirations and mastery support the thought process, like thick living limbs that split into numerous, smaller branches.

Rather than a multitude of frail twigs that get tangled up with others or snap under the weight of snow or the raging wind, fewer solid branches prevail. Just like more time spent honing essential skills triumphs over being a “jack of all trades, master of none.”

Loading...

Travellers marvel at the trunk of the tree and its leaves but do not see the time his branches took to grow and the complex organisation that supports the whole frame.

Leaves

They are the ideas, creations and accomplishments. Leaves create breathable air for others and soothe the soul with their dance in the wind. Bards and artists find inspiration when they witness their rich, changing colours.

They are aesthetic, but before all, useful. They must be numerous, healthy and even.

Leaves follow a cycle and are rarely at their peak all year round. They are the most visible element of the tree so the first target for parasites and insects.

Leaves will drift away when their time comes. Even wrinkled and scattered, they carry the tree's legacy far and they shall feed animals and plants, helping them grow. Even in death, the world benefits from their existence.

About the sun

Success, status, luck, gold, women… men need them, like trees need sunlight. A steady amount of it will help but too much or too little of these joys will harm the tree.

A tree can grow with artificial light but will remain weak. Like a man expecting praise for average work, victimhood or choosing obscene imagery over real flesh and relationships.

Concerning the wind

Wind is to the tree what friends are to man. The gentle and useful wind carries dead leaves away and lets the pollen travel to other fertile rees, that will bear fruits and complete the eternal cycle.

Better a reliable, steady wind than violent and conflicting winds that will bend and even uproot the tree, or a weak wind that is rarely noticed.

Les arbres survivront aux hommes

All the sections described form a complex and balanced osmosis, where the death of one means the death of the others.

Trees do not wonder if the world likes their trunk or leaves. They grow for their own sake. The rest is a bonus.

Great men and colossal trees must learn to be humble for all things, however strong, shall die.
