- The Malcolm book was published by Harvard University Press

Here is a paper by Dr. Malcolm that summarizes one of the key points of her book.

Excerpt:

> Tracing the history of gun control in the United Kingdom since the late 19th century, this article details how the government has arrogated to itself a monopoly on the right to use force. The consequence has been a tremendous increase in violent crime, and harsh punishment for crime victims who dare to fight back. The article is based on the author's most recent book, Guns and Violence: The English Experience (Harvard University Press, 2002). Joyce Malcom is professor of history at Bentley College, in Waltham, Massachusetts. She is also author of To Keep and Bear Arms: The Origins of an AngloAmerican Right (Harvard University Press, 1994).
>
> Upon the passage of The Firearms Act (No. 2) in 1997, British Deputy Home Secretary Alun Michael boasted: "Britain now has some of the toughest gun laws in the world." The Act was second handgun control measure passed that year, imposed a near-complete ban on private ownership of handguns, capping nearly eighty years of increasing firearms restrictions. Driven by an intense public campaign in the wake of the shooting of schoolchildren in Dunblane, Scotland, Parliament had been so zealous to outlaw all privately owned handguns

> that it rejected proposals to exempt Britain's Olympic target-shooting team and handicapped target-shooters from the ban.

And the result of the 1997 gun ban:

> The result of the ban has been costly. Thousands of weapons were confiscated at great financial cost to the public. Hundreds of thousands of police hours were devoted to the task. But in the six years since the 1997 handgun ban, crimes with the very weapons banned have more than doubled, and firearm crime has increased markedly. In 2002, for the fourth consecutive year, gun crime in England and Wales rose—by 35 percent for all firearms, and by a whopping 46 percent for the banned handguns. Nearly 10,000 firearms offences were committed.
>
> […]**According to Scotland Yard, in the four years from 1991 to 1995 crimes against the person in England"s inner cities increased by 91 percent. In the four years from 1997 to 2001 the rate of violent crime more than doubled. The UK murder rate for 2002 was the highest for a century.**

I think that peer-reviewed studies – from Harvard University, no less – should be useful to those of us who believe in the right of self-defense for law-abiding people. The book by economist John Lott, linked above,compares the crime rates of all U.S. states that have enacted concealed carry laws, and concludes that violent crime rates *dropped* after law-abiding citizens were allowed to carry legally-owned firearms. That's the mirror image of Dr. Malcolm's Harvard study, but both studies affirm the same conclusion – more legal firearm ownership means less crime.

# William Lane Craig lectures on the evidence for the resurrection of Jesus

**Wintery Knight** · 5 August 2013 · Archived copy · Original

Justin Brierley, host of the Unbelievable radio show, tweeted about this lecture.

This is a long form explanation of the resurrection argument that Dr. Craig makes in all of his debates on the existence of God. The speaker introduction goes for 6 minutes, then Dr. Craig speaks for 35 minutes, then it's a period of questions and answers with the audience. The total length is 93 minutes, so quite a long period of Q&A. The questions in the Q&A period are quite good.

**Introduction:**

- Many people who are willing to accept God's existence are not willing to accept the God of Christianity
- Christians need to be ready to show that Jesus rose from the dead as a historical event
- Private faith is fine for individuals, but when dealing with the public you have to have evidence
- When making the case, you cannot assume that your audience accepts the Bible as inerrant
- You must use the New Testament like any other ancient historical document
- Most historians, Christian and not, accept the basic minimal facts supporting the resurrection of Jesus

**Fact #1:** the burial of Jesus following his crucifixion

- Fact #1 is supported by the early creed found in Paul's first letter to the Corinthians (1 Cor 15)
- Fact #1 is supported by the early Passion narrative which was a source for Mark's gospel
- Fact #1 passes the criterion of enemy attestation, since it praises one of the Sanhedrin
- Fact #1 is not opposed by any competing burial narratives

**Fact #2:** on the Sunday following his crucifixion, Jesus' tomb was found empty by some women

- Fact #2 is supported by the early Passion narrative which was a source for Mark's gospel
- Fact #2 is implied by the early creed found in Paul's first letter to the Corinthians (1 Cor 15)
- Fact #2 is simple and lacks legendary embellishment, which argues for an early dating
- Fact #2 passes the criterion of embarrassment, because it has female, not male, witnesses
- Fact #2 passes the criterion of enemy attestation, since it is reported by the Jewish leaders

**Fact #3:** Jesus appeared to various people in various circumstances after his death

- Fact #3 is supported by the early creed found in Paul's first letter to the Corinthians (1 Cor 15)
- Fact #3 is supported by multiple, independent reports of the events from all four gospels
- Fact #3 explains other historical facts, like the conversion of Jesus' skeptical brother James

**Fact #4:** the earliest Christians proclaimed their belief in the resurrection of Jesus

- Fact #4 explains why the earliest Christians continued to identify Jesus as the Messiah
- Fact #4 explains why the earliest Christians were suddenly so unconcerned about being killed

Dr. Craig then asks which hypothesis explains all four of these facts. He surveys a number of naturalistic hypotheses, such as the hallucination theory or various conspiracy theories. All of these theories deny one or more of the minimal facts that have been established and accepted by the broad spectrum of historians. In order to reject the resurrection hypothesis, a skeptic would have to deny one of the four facts or propose an explanation that explains those facts better than the resurrection hypothesis.

I listened to the Q&A period while doing housekeeping and I heard lots of good questions. Dr. Craig gives very long answers to the questions. One person asked why we should trust the claim that the Jewish leaders really did say that the disciples stole the body. Another one asked why we should take the resurrection as proof that Jesus was divine. Another asks about the earthquake in Matthew, which Mike Licona and I doubt is intended to be historical, but is more likely to be apocalyptic imagery. Dr. Craig is also asked about the Jewish scholar Geza Vermes, and how many of the minimal facts he accepts. Another questioner asked about the ascension.

You can see this evidence used in an actual debate, against a historian who disagrees with Dr. Craig. That post contains a point by point summary of the debate that I wrote while listening to it.

If you are looking for a good book to read on this topic, the best introductory book on the resurrection is "The Case for the Resurrection of Jesus" and the best comprehensive book is "The Resurrection of Jesus".

# President Obama intervenes to exempt Congress from Obamacare

**Wintery Knight** · 6 August 2013 · Archived copy · Original

From the Wall Street Journal.

Excerpt:

> To adapt H.L. Mencken, nobody ever went broke underestimating the cynicism and self-dealing of the American political class. Witness their ad-libbed decision, at the 11th hour and on the basis of no legal authority, to create a special exemption for themselves from the ObamaCare health coverage that everybody else is mandated to buy.
>
> […][Obamacare] means that about 11,000 Members and Congressional staff will lose the generous coverage they now have as part of the Federal Employees Health Benefits Program (FEHBP). Instead they will get the lower-quality, low-choice "Medicaid Plus" of the exchanges. The Members—annual salary: $174,000—and their better paid aides also wouldn't qualify for ObamaCare subsidies. That means they could be exposed to thousands of dollars a year in out-of-pocket insurance costs.
>
> The result was a full wig out on Capitol Hill, with Members of both parties fretting about "brain drain" as staff face higher health-care costs. Democrats in particular begged the White House for help, claiming the Reid language was merely an unintentional mistake. President Obama told Democrats in a closed-door meeting last week that he would personally moonlight as HR manager and resolve the issue.
>
> And now the White House is suspending the law to create a double standard. The Office of Personnel Management (OPM) that runs federal benefits will release regulatory details this week, but leaks to the press suggest that Congress will receive extra payments based on the FEHBP defined-contribution formula, which covers about 75% of the cost of the average insurance plan. For 2013, that's about $4,900 for individuals and $10,000 for families.
>
> […]This latest White House night at the improv is also illegal. OPM has no authority to pay for insurance plans that lack FEHBP contracts, nor does the Affordable Care Act permit either exchange contributions or a unilateral bump in congressional pay in return for less overall compensation. Those things require appropriations bills passed by Congress and signed by the President.
>
> But the White House rejected a legislative fix because Republicans might insist on other changes, and Mr. Obama feared that Democrats would go along because they're looking out for number one. So the White House is once again rewriting the law unilaterally, much as it did by suspending ObamaCare's employer mandate for a year. For this White House, the law it wrote is a mere suggestion.
>
> The lesson for Americans is that Democrats who passed ObamaCare didn't even understand what they were doing to themselves, much less to everyone else. But you can bet Democrats will never extend to ordinary Americans the same fixes that they are now claiming for themselves. The real class divide in President Obama's America is between the political class and everyone else.

Just keep in mind that there is only one party fighting to repeal this monstrosity, and it's the Republican Party. The Democrat Party wrote this bill, they supported this bill, and their supporters helped push it through. Now they are trying to get THEMSELVES out of it. But they still want it to apply to YOU. The only people trying to get YOU out of it is the Republican Party.

# Wendy Davis can't explain how Gosnell murders and late-term abortions differ

**Wintery Knight** · 6 August 2013 · Archived copy · Original

The Weekly Standard asked Texas state senator Wendy Davis about her filibuster of the ban on abortions after 20 weeks.

Excerpt:

> Texas state senator Wendy Davis spoke at the National Press Club in Washington, D.C. Monday afternoon about her 13-hour filibuster of a bill limiting late-term abortion, her life story, and her future in politics.
>
> Davis has become a champion for pro-choice activists, but during her recent whirlwind national media tour, she never commented on late-term abortion doctor Kermit Gosnell, who was convicted of murder in May for killing infants moments after they were born.
>
> Following her Press Club speech on Monday, THE WEEKLY STANDARD asked Davis to explain the difference between the late-term abortions that the Texas state senator wants to keep legal and the illegal Gosnell killings.
>
> Davis didn't answer the question. "I don't know what happened in the Gosnell case," she told me.
>
> **THE WEEKLY STANDARD**: The supporters of these bans, they argue that there really isn't much of a difference between what happened in that Philadelphia case with abortion doctor Kermit Gosnell [killing born-alive infants] 23 weeks into pregnancy and legal late-term abortions at 23 weeks. What is the difference between those two, between legal abortion at 23 weeks and what Gosnell did? Do you see a distinction between those two [acts]?

> **SEN. WENDY DAVIS**: I don't know what happened in the Gosnell case. But I do know that it happened in an ambulatory surgical center. And in Texas changing our clinics to that standard obviously isn't going to make a difference. The state of the law obviously has to assure that doctors are providing safe procedures for women and that proper oversight by the health and human services department is being given. It sounds as though there was a huge gap in that oversight, and no one can defend that. But that's not the landscape of what's happening in Texas.
>
> In June, House Democratic leader Nancy Pelosi was similarly unable to explain the difference between the Gosnell murders and late-term abortions. Planned Parenthood president Cecile Richards ducked the question in July.
>
> Polls have consistently shown that solid majorities of Americans, including women, support banning most abortions that occur later than 20 weeks after conception.
>
> Asked what she thinks of polls showing women support limiting abortion after 20 weeks of pregnancy, Davis told me that people "don't really understand" the issue.

I actually think that it's pro-abortion people like Nancy Pelosi and Wendy Davis, and their media sycophants, who don't understand abortion.

Here is the ignorance again, this time on Jezebel, a radical feminist web site, as reported by the American Spectator.

Excerpt: (links removed)

> Other examples include a Jezebel article that declares “the concept of fetal pain is bullshit.” It’s a fascinating piece, full of superfluous nicknames and profanities, centered on the astounding assertion that “there’s no evidence that nonviable fetal pain is a thing.” Even more fascinating, however, is that the author, Katie J.M. Baker, doesn’t cite one ounce of scientific evidence to support her claim. Instead, she awkwardly transitions into an incoherent rant against Republicans.
>
> But despite the left’s panic, there is a strong case to be made that unborn children feel pain by 20 weeks.
>
> In a 1999 article published in the *British Journal of Obstetrics and Gynaecology*, Dr. Vivette Glover and Dr. Nicholas M. Fisk explain a key fact:
>
> The most important evidence [of fetal pain] is anatomical. For the fetus to feel pain, it is necessary for the requisite nociceptive pathways to be developed. This involves neural connections between peripheral receptors and the spinal cord, upward transmission via the spinal cord to the thalamus, and from there to the outer cerebral layers.
>
> Among the scientific jargon lies a key word – “nociception,” which has to do with nociceptive neurons. These “generate trains of action potentials in response to painful stimuli, and the frequency of firing signals the intensity of the pain.” In other words, they are what make pain painful. Glover and Fisk say that “most incoming pathways, including nociceptive ones, are routed through the thalamus and, as stated above, penetrate the subplate zone from about 17 weeks” into a pregnancy.
>
> Now it’s true we might never know for sure exactly when an unborn child feels pain and to what extent. But Glover, Fisk, and others conclude that it is very possible pain is felt by at least 20 weeks. “Given the anatomical evidence, it is possible that the fetus can feel pain from 20 weeks and is caused distress by interventions from as early as 15 or 16 weeks. This sets a limit to the earliest stage that analgesia might be considered,” according to Glover and Fisk. They don’t suggest that abortions should cease, but instead recommend that painkillers be administered to children about to be aborted.

Pro-lifers are very familiar with what a baby can do at all stages of development. We have to be, because we have to be able to debate this issue using the real evidence. We are also the ones who push for informed consent and mandatory ultrasound, whereas the other side opposes both of those. Why is that? It’s because the pro-life side has the evidence and pushes it, whereas the pro-abortion side tries to hide the evidence and appeal to feelings. Abortion supporters don’t know, and they don’t want anyone to know. Their embrace of abortion *depends* on their not knowing the truth.

Pro-lifer Amy Hall tweeted about an editorial from CNN that makes this point about willful ignorance. The author writes that pro-lifers want to ban abortion after 20 weeks in order to protect unborn children who have a heart beat. Huh? Unborn babies have a heart beat at week 6, according to the well-respected Mayo Clinic. That means that the CNN journalist was off by 14 weeks in her statement.  That’s the level of knowledge that you have on the other side of the abortion debate. It’s a self-serving ignorance designed to give them maximum autonomy and maximum irresponsibility.

For myself, I think that I’ll continue to look up to  pro-life women like Jaime Herrera Beutler and Michele Bachmann. They get it.

# William Lane Craig debates James Crossley on the resurrection of Jesus

**Wintery Knight** · 6 August 2013 · Archived copy · Original

This is my favorite debate on the resurrection.

You can watch the debate here:

The MP3 file can be obtained from Apologetics 315.

There is not much snark in this summary, because Crossley is a solid scholar, and very fair with the evidence.

SUMMARY

**William Lane Craig's opening speech**

Two contentions:

- There are four minimal facts that are accepted by most historians
- The best explanation of the four minimal facts is that God raised Jesus from the dead

Contention 1 of 2:

Fact 1: The burial

- The burial is multiply attested
  - The burial is based on the early source material that Mark used for his gospel
  - Scholars date this Markan source to within 10 years of the crucifixion
  - The burial is also in the early passage in 1 Cor 15:3-8
  - So you have 5 sources, some of which are very early
- The burial is credited to a member of the Sanhedrin
  - the burial is probable because shows an enemy of the church doing right
  - this makes it unlikely to to be an invention

Fact 2: The empty tomb

- The burial story supports the empty tomb
  - the site of Jesus' grave was known
  - the disciples could not proclaim a resurrection if the body were still in it
  - the antagonists to the early Christians could have produced the body
- The empty tomb is multiple attested
  - it's mentioned explicitly in Mark
  - it's in the separate sources used by Matthew and John
  - it's in the early sermons documented in Acts
  - it's implied by 1 Cor 15:3-8, because resurrection requires that the body is missing
- The empty tomb was discovered by women
  - the testimony of women of women was not normally allowed in courts of law
  - if this story was being made up, they would have chosen male disciples
- The empty tomb discover lacks legendary embellishment
  - there is no theological or apologetical reflection on the meaning of the tomb

- The early Jewish response implies that the tomb was empty
  - the response was that the disciples stole the body
  - that requires that the tomb was found empty

Fact 3: The appearances to individuals and groups, some of the them hostile

- The list of appearances is in 1 Cor 15:3-8
  - this material is extremely early, withing 1-3 years after the cross
  - James, the brother of Jesus, was not a believer when he got his appearance
  - Paul was hostile to the early church when he got his appearance
- Specific appearances are multiply attested
  - Peter: attested by Luke and Paul
  - The twelve: attested by Luke, John and Paul
  - The women: attested by Matthew and John

Fact 4: The early belief in the resurrection emerged in a hostile environment

- There was no background belief in a dying Messiah
- There was no background belief in a single person resurrecting before the general resurrection of all of the righteous at the end of the age
- The disciples were willing to die for their belief in the resurrection of Jesus
- The resurrection is the best explanation for the transformation of the disciples from frightened to reckless of death

Contention 2 of 2:

- The resurrection is the best explanation because it passes C.B. McCullough's six tests for historical explanations
- None of the naturalistic explanations accounts for the minimal facts as well as the resurrection

**James Crossley's opening speech**

Appeals to the majority of scholars doesn't prove anything

- the majority of people in the west are Christians so of course there are a majority of scholars that support the resurrection
- there are Christian schools where denial of the resurrection can result in termination

The best early sources (1 Cor 15:3-8 and Mark) are not that good

1 Cor 15:3-8 doesn't support the empty tomb

- verse 4 probably does imply a bodily resurrection
- the passage does have eyewitnesses to appearances of Jesus
- but there are no eyewitnesses to the empty tomb in this source
- appearances occur in other cultures in different times and places
- Jesus viewed himself as a martyr
- his followers may have had hallucinations

Mark 16:1-8

- Mark is dated to the late 30s and early 40s
- The women who discover the tomb tell no one about the empty tomb

The gospels show signs of having things added to them

- Jewish story telling practices allowed the teller to make things up to enhance their hero
- one example of this would be the story of the earthquake and the people coming out of their graves
- that story isn't in Mark, nor any external sources like Josephus
- if there really was a mass resurrection, where are these people today?
- so this passage in Matthew clearly shows that at least some parts of the New Testament could involve
- what about the contradiction between the women tell NO ONE and yet other people show up at the empty tomb
- the story about Jesus commissioning the early church to evangelize Gentiles was probably added
- there are also discrepancies in the timing of events and appearances
- why are there explicit statements of high Christology in John, but not in the earlier sources?

**William Lane Craig's first rebuttal**

Crossley's response to the burial: he accepts it

Crossley's response to the empty tomb: he thinks it was made up

- rabbinical stories are not comparable to the gospel accounts
- the rabbinical stories are just anecdotal creative story-telling
- the gospels are ancient biographies – the genre is completely different
- the rabbinic miracle stories are recorded much later than the gospels
- the rabbi's legal and moral ideas were written down right away
- the miracle stories were written down a century or two later
- in contrast, the miracle stories about Jesus are in the earliest sources, like Mark
- the rabbinical stories are intended as entertainment, not history
- the gospels are intended as biography
- just because there are some legendary/apocalyptic elements in Matthew, it doesn't undermine things like the crucfixion that are historically accurate

Crossley's response to the evidence for the empty tomb:

- no response to the burial
- the empty tomb cannot be made up, it was implied by Paul early on
- the women wouldn't have said nothing forever – they eventually talked after they arrived to where the disciples were
- no response to the lack of embellishment
- no response to the early Jewish polemic

Crossley's response to the appearances

- he agrees that the first followers of Jesus had experiences where they thought Jesus was still alive

Crossley's response to the early belief in the bodily resurrection:

- no response about how this belief in a resurrection could have emerged in the absence of background belief in the death of the Messiah and the resurrection of one man before the general resurrection of all the righteous at the end of the age

What about Crossley's hallucination theory?

- Crossley says that the followers of Jesus had visions, and they interpreted these visions against the story of the Maccabean martyrs who looked forward to their own resurrections
- but the hallucination hypothesis doesn't account for the empty tomb
- and the Maccabean martyrs were not expecting the resurrection of one man, and certainly not the Messiah – so that story doesn't provide the right background belief for a hallucination of a single resurrected person prior to the end of the age
- if the appearances were non-physical, the disciples would not have applied the word resurrection – it would just have been a vision
- the visions could easily be reconciled with the idea that somehow God was pleased with Jesus and that he had some glorified/vindicated non-corporeal existence – but not resurrection
- not only that, the hallucination hypothesis doesn't even explain the visions, because there were visions to groups, to skeptics and to enemies in several places

What about the argument that only Christians accept the resurrection?

- it's an ad hominem attack that avoids the arguments

**James Crossley's first rebuttal**

Regarding the burial:

- I could be persuaded of that the burial account is accurate

Regarding the non-expectation of a suffering/dying Messiah:

- Jesus thought he was going to die
- this thinking he was going to die overturned all previous Messianic expectations that the Messiah wouldn't suffer or die
- the early Jews could easily reconcile the idea of a suffering, dead man killed by the Romans with the power of the all-powerful Messiah who supposed to reign forever
- no actually bodily resurrection would have to happen to get them to continue to identify an executed corpse with the role of Messiah

Regarding the belief in the bodily resurrection:

- it would be natural for Jews, who believed in a general resurrection of all the rigtheous dead at the end of the age, to interpret a non-physical vision of one man after he died as a bodily resurrection, even though no Jew had ever considered the resurrection of one man before the general resurrection before Jesus

Regarding the testimony of the women:

- Just because women were not able to testify in courts of law (unless there were no male witnesses), the early church might still invent a story where the women are the first witnesses
- first, the disciples had fled the scene, so only the women were left
- and it would have been a good idea for the early church to invent women as the first witnesses – the fact that they could not testify in court makes them ideal witnesses and very persuasive
- also, it's a good idea to invent women as witnesses, because the Romans had a rule that said that they never killed women, so they wouldn't have killed these women – Romans only ever kill men
- in any case, the first witness to the empty tomb is angel, so as long as people could talk to the angel as being the first witness, that's the best story to invent

Regarding the consensus of Christian scholars:

- I am not saying that Craig's facts are wrong, just that appealing to consensus is not legitimate
- he has to appeal to the evidence, not the consensus

Regarding my naturalistic bias:

- I don't know or care if naturalism is true, let's look at the evidence

Regarding the genre of the gospels:

- the creative story-telling is common in all genres, it's not a genre in itself
- stuff about Roman emperors also has creative story-telling

Regarding the legendary nature of the empty tomb in Mark:

- First, Christians interpreted the visions as a bodily resurrection
- Second, they invented the story of the empty tomb to go with that interpretation
- Third, they died for their invention

**William Lane Craig's second rebuttal**

The burial:

- Bill's case doesn't need to know the specifics of the burial, only that the location was known
- the location is important because it supports the empty tomb
- to proclaim a resurrection, the tomb would have to be empty
- a tomb with a known location is easier to check

The empty tomb:

- creative story telling was common in Judaism: retelling OT stories (midrash), romances/novels, rabbinical anecdotes
- but the gospels are none of these genres – the gospels are ancient biographies
- Craig also gave five arguments as to why the tomb was empty
- the burial story supports the empty tomb
- there is multiple *independent* attestation, then it cannot be a creative fiction invented in Mark alone
- the witnesses were in Jerusalem, so they were in a position to know
- regarding the women, even though Jesus respected the women, their testimony would not be convincing to *others*, so why invent a story where they are the witnesses
- the male disciples did not flee the scene, for example, Peter was there to deny Jesus three times
- if the story is made up, who cares what the male disciples did, just invent them on the scene anyway
- the angel is not authoritative, because the angel cannot be questioned, but the women can be questioned
- there was no response on the lack of embellishment
- there was no response to the earliest Jewish response implying that the tomb was empty

The appearances:

- we agree on the appearances

The early belief in the resurrection:

- he says that Jesus predicted his own death
- yes, but that would only cause people to think that he was a martyr, not that he was the messiah – something else

is needed for them to keep their believe that he was the Messiah even after he died, because the Messiah wasn't supposed to die
- and of course, there was no expectation of a single person rising from the dead before the general resurrection, and certainly not the Messiah

The consensus of scholars:

- Jewish scholars like Geza Vermes and Pinchas Lapide accept these minimal facts like the empty tomb, it's not just Christian scholars

Against Crossley's hallucination hypothesis:

- it doesn't explain the empty the tomb
- it doesn't explain the early belief in the resurrection
- hallucinations would only lead to the idea that God had exalted/glorified Jesus, not that he was bodily raised from the dead
- the hallucination theory cannot accommodate all of the different kinds of appearances; individual, group, skeptic, enemy, etc.

The pre-supposition of naturalism:

- if Crossley is not committed to naturalism, then he should be open to the minimal facts and to the best explanation of those facts
- the hallucination hypothesis has too many problems
- the resurrection hypothesis explains everything, and well

**James Crossley's second rebuttal**

Religious pluralism:

- well, there are lots of other religious books
- those other religious books have late sources, and are filled with legends and myths, and no eyewitness testimony
- so why should we trust 1 Cor 15 and the early source for Mark and the other early eyewitness testimony in the New Testament?
- if other religious books can be rejected for historical reasons, then surely the New Testament can be rejected for historical reasons

Genre:

- the genre of ancient biography *can* incorporate and commonly incorporates invented legendaryt story-telling
- this is common in Roman, Greek and Jewish literature and everyone accepts that

Empty tomb: multiple attestation

- ok, so maybe the empty tomb is multiply attested, but that just gets back to a belief, not to a fact
- multiple attestation is not the only criteria, and Craig needs to use the other criteria to make his case stronger

Empty tomb: invented

- if there is a belief in the resurrection caused by the visions, then the empty tomb would have to be invented
- why aren't there more reliable stories of people visiting the empty tomb in more sources?

Empty tomb: role of the women

- there are women who have an important role in the Bible, like Judith and Esther
- Mark's passage may have used women who then kept silent in order to explain why no one knew where the empty tomb was
- if the fleeing of the men is plausible to explain the women, then why not use that? why appeal to the supernatural?
- we should prefer any explanation that is naturalistic even if it is not as good as the supernatural explanation at explaining everything

Empty tomb: embellishment

- well there is an angel there, that's an embellishment
- anyway, when you say there is no embellishment, what are you comparing it to that makes you say that?

Appearances: anthropology

- I've read anthropology literature that has some cases where people have hallucinations as groups

Appearances: theology

- the hallucinations would not be interpreted against the background theological beliefs that ruled out the resurrection of one man before then general resurrection of all the righteous dead
- these hallucinations could have been so compelling that they made the earliest Christians, and skeptics like James, and enemies like the Pharisee Paul abandon all of their previous background beliefs, proclaim the new doctrine of a crucified and resurrected Messiah which no one had ever expected, and then gone on to die for that belief
- the hallucinations could have changed all of their theology and reversed all of their beliefs about the what the word resurrection meant

**William Lane Craig's conclusion**

Supernaturalism:

- None of the four facts are supernatural, they are natural, and ascertained by historians using normal historical methods
- the supernatural part only comes in after we decide on the facts when we are deciding which explanation is the best
- a tomb being found empty is not a miraculous fact

Genre:

- the gospels are not analagous to these rabbinical stories, the purpose and dating is different

Empty tomb:

- what multiple attestation shows is that it was not made-up by Mark
- and the argument was augmented with other criteria, like the criterion of embarrassment and the criterion of dissimilarity
- Judith and Esther are very rare exceptions, normally women were not viewed as reliable witnesses
- if the story was invented, whatever purpose the inventors had would have been better served by inventing male witnesses
- Craig grants that the angel may be an embellishment for the sake of argument, but there are no other embellishments

- the real embellishments occur in forged gnostic gospels in the second and third centuries, where there are theological motifs added to the bare fact of the empty tomb (e.g. – the talking cross in the Gospel of Peter)
- he had no response to the earliest jewish response which implied an empty tomb

Belief in the resurrection:

- there was no way for Jewish people to interpret an appearance as a bodily resurrection before the end of the world, they did not expect that
- they could have imagined exaltation, but not a bodily resurrection

**James Crossley's conclusion**

Supernatural explanation:

- as long as there is any other other possible naturalistic explanation, we should prefer that, no matter how unlikely

Creative stories:

- some of these creative stories appear within the lifetimes of the people connected to the events (none mentioned)

Embellishment:

- you should compare to earlier stories when looking for embellishments, not later
- and we don't have any earlier sources, so we just don't know the extent of the embellishment

Jewish response:

- they probably just heard about the empty tomb, and didn't check on it, then invented the stole-the-body explanation without ever checking to see if the tomb was empty or not

# Erika Harold: Harvard law graduate and former Miss America runs for Congress

**Wintery Knight** · 7 August 2013 · Archived copy · Original

Republican candidate Erika Harold

The Weekly Standard reports.

Excerpt:

> The most interesting House primary of the 2014 cycle began in June in the 13th District of Illinois. It pits freshman Republican congressman Rodney Davis against an insurgent candidate named Erika Harold. Davis is a political operative who won his seat last year nearly by accident. Erika Harold is a 33-year-old lawyer. Who happens to have been Miss America.
>
> […]In addition to the charisma and poise native to good politicians, Harold has exhibited the principled toughness of the best pols. And again, to appreciate this aspect of her character, you need only go back to Miss America.

Her platform as a Miss America candidate included abstinence:

> Harold competed three times for the Miss Illinois crown, which she finally won in 2003. Each time, she ran on a platform of abstinence. But one of the arcane traditions of Miss America is that while contestants choose their own platforms when competing for the state crown, it's the state organization that decides what platform the winner will take to Atlantic City. The year Harold was named Miss Illinois, her state committee settled on a bland platform opposing "youth violence." (Think of it as "world peace," for the children.) Harold agreed to oppose youth violence.
>
> After she was named Miss America, however, Harold decided to add abstinence to her platform for the year of her reign. She didn't abandon "youth violence" but rather included it, along with abstinence, in a broad appeal to kids to respect themselves by standing up to bullies and avoiding sex, drugs, and alcohol. This was, as a

> matter of both intellectual coherence and moral sense, a significant improvement on the pure "youth violence" platform she'd been handed. The Miss America organization did not like it one bit.
>
> The organization pushed back hard and told Harold to keep quiet—especially about sex. The disagreement made national headlines and culminated in a news conference at the National Press Club in Washington, where the newly crowned Harold told reporters, "I will not be bullied. I've gone through enough adversity in my life to stand up for what I believe in." Miss America stared down the pageant and won.

Promotes fiscal conservativism to African Americans:

> Harold was already interested in politics. During a Miss America appearance at East St. Louis High School, students asked her what she wanted to be when she grew up. She told them, "My ultimate goal is that I want to be the first black female president of the United States." While still an undergraduate at Illinois, she volunteered for conservative Patrick O'Malley's doomed 2002 Illinois gubernatorial campaign. She also volunteered with the Republican National Committee in an effort to promote conservative economic principles in African-American communities. After graduating from law school, she joined a Chicago firm where her practice has specialized in health care law and religious freedom.
>
> […][W]hile Harold tries to resist easy classification, her ideological markers are highly suggestive of a conservative worldview. There's the abstinence, of course. She's fiercely pro-life. She favors concealed-carry gun laws. And she's on the board of Prison Fellowship Ministries, the program founded by Chuck Colson.

Focused on religious liberty:

> The most interesting part of Harold's legal practice has been her work defending faith-based entities. In one case, for example, she represented a retirement community affiliated with a religious group. The organization featured a cross on its logo and used a Bible verse in its mission statement—which attracted a lawsuit from an advocacy group contending that this amounted to discrimination. Describing this work, Harold says, "It's a passion of mine."
>
> Looking across the broader national landscape, Harold sees ample reason to be concerned about religious freedom. "We're starting to see ways in which our constitutional protections are being encroached upon," she says. "We all are less free when any group isn't afforded their constitutional protections."
>
> And not just less free, but less well off. Harold says that her time with Prison Fellowship Ministries has deepened her appreciation for the good religious organizations can do. "I've seen firsthand the need for there to be a space in public life for religious groups to be able to offer service to their fellow man," she says. When government seeks to quarantine religious organizations, moving from freedom of religion to "freedom of worship" (to use the formulation President Obama favors), "it's far too limiting in terms of the good they can do for the public, and it's far too restrictive in terms of the protections which are afforded religious groups by the Constitution. We give something up when we say that certain voices aren't welcome in the public square."
>
> Harold says she intends to make religious freedom an issue in her campaign. This is fitting at a time when the HHS mandate, the Hobby Lobby case, and the torrent of litigation about to be unleashed by the Supreme Court's gay marriage decisions appear likely to make religious freedom a central front in the culture war.

We have such a deep bench, so there's reason for optimism – if you're a Republican like me! Here's another story I found about another young, female Republican candidate Elise Stefanik. I would not be annoyed at all if all of our candidates were women or minorities or minority women. I wouldn't even be annoyed if our candidates were some sort of dolphin-alligator hybrid monstrosities, (although I prefer pretty lawyers ladies). The main thing I want is that our candidates are *conservative*. That's what really matters to me.

# Woman who claims to be a Christian denounces premarital chastity

**Wintery Knight** · 7 August 2013 · Archived copy · Original

*UPDATE: This post has been linked by Captain Capitalism, a libertarian non-Christian who respects Christians who act consistently with their beliefs.*

Here's the plan for this post. We're going to take a look at a post by a woman who claims to be a Christian. In that post, she offers some reasons why premarital chastity is wrong. Then we'll take a look at what the Bible says. Then we'll take a look at what the research says. Then I explain what this trend among Christian women means for marriage-minded men.

First here is the post by "Joy". Her reasons for disagreeing with premarital chastity are as follows:

1. Chastity makes women who have had premarital sex feel ashamed
2. It does no harm for a woman to have premarital sex before marriage
3. God made people with a sexual drive, so God thinks that premarital sex is OK
4. Most people are already having sex, so God thinks that premarital sex is OK
5. Practicing sex with men you don't intend to marry makes you better at marital sex

In another post, she is more clear about her views: (these are her actual words)

- Choosing to not to abstain from sexual intercourse before marriage is not shameful.
- Your decision to abstain or not to abstain does not necessarily have any connection to the health of your future marriage.
- Your decision to abstain or not to abstain does not necessarily have any connection to the health of your future sex life.

Now first off, she has no Biblical evidence for any of these assertions in the original post I linked to. She also has no evidence from outside the Bible for any of her assertions. Assertion #3 in the list of 5 above seems to me to justify adultery as easily as it justifies premarital sex. Now, you might expect a person who claims to be a Christian to look first to the Bible to see what is right and wrong, then to look to evidence to strengthen the argument when discussing it with others inside and outside the church. For Joy, feelings and peer-pressure are enough to make anything morally OK. Now let's take a quick look at what the Bible says about chastity and premarital sex:

> 1 Cor. 7:8-9
>
> 8 To the unmarried and the widows I say that it is good for them to stay single as I am.
>
> 9 But if they cannot exercise self-control, they should marry. For it is better to marry than to burn with passion.
>
> The idea of "burning" here has to do with sexual desire. Here Paul tells all unmarried people that if they cannot control their sexual desires, they need to get married. Why? Because Paul assumes that one cannot fulfill this sexual desire outside of the marital bed. While Paul would love for them to remain single (1 Cor. 7:7), he believes that sex outside of marriage is a destructive sin and *cannot* be used as a gratifying release of our sexual passions.

Now what evidence outside the Bible is there to support that? Here's some:

- New study: delaying sexual activity produces improves relationship quality and stability
- New study: staying a virgin longer enables more satisfying relationships
- New study finds that teens who lose their virginity are more likely to divorce

- New peer-reviewed paper highlights the benefits of pre-marital chastity/abstinence
- Does being a virgin before marriage affect marital stability?
- Two things you can do to make your marriage last

Now back to Joy, What I have found when dealing with women like Joy in the church is that the Bible has no authority over them. Not even the words of Jesus have authority to lead them. And obviously they are not impressed with evidence from science, history, etc. Their sole reason for acting the way they do is their own feelings, which largely stem from hedonism and vanity – the desire to feel good and to please and impress their peers. Whatever they do that seems right to them cannot be questioned or judged. If things don't "work out", then they are a helpless victim. God's will for them is that they do whatever they feel like in order to be happy.

It's very very important for men who are seeking marriage to understand that the typical woman they meet in the church does not understand that Christianity imposes any obligations on them. They don't look at the Bible for moral guidance, but for comfort. And they don't study outside the Bible to become persuaded (and persuasive) about what the Bible teaches. Their view of Christianity is that they are good where they are, and that there is nothing that they should be studying or planning for in order to achieve goals, like evangelism or marriage. Everything has to be easy and feel good.

Fortunately, there is a way to detect the women who are serious about Christianity, and it can be done by simply asking them questions to see if they have moved beyond the feelings/selfishness model of Christianity to the truth/responsibility model of Christianity. All you have to do is ask them questions to see how much effort they've put into confirming what the Bible teaches by reading outside the Bible. Christians read the Bible to know what's true, and they read outside the Bible to convince themselves to act on what they know is true, and to show to others what's true in a persuasive way. But reading outside the Bible is at war with the feelings/victim/don't-judge-me view of Christianity pushed by people like Joy. That is because the more you read, the less room there is for doing what you feel like. When you study, what you learn constrains your actions.

When you ask a women questions about Christianity before marriage, you can see whether 1) she has studied these issues already or 2) she wants to study these issues, or 3) whether she has no interest in studying anything, no matter how useful to God it might be. You do not want to be married to someone who thinks that breaking God's law is OK if she feels like it, and who has done no reading or studying of relevant moral issues in order to build up her own ability to have self-control for the good of others around her.

I think men should avoid women who respond to the claims of Scripture and the evidence from research by sticking their fingers in their ears and saying "don't judge me! don't shame me!". You can't make a *marriage* with someone who is dismissive of moral obligations, and who acknowledges no higher authority than her own feelings and the approval of her secular, progressive peers. The Bible forbids "unequal yoking", which is the marriage of a Christian to a non-Christian.

And I'll go one step further and say that this attitude of "rules make people feel bad, so we shouldn't have any" is destroying our society. We really need to be a bit more brave about holding immoral, destructive people like Joy and her progressive friends accountable. Note: Just to be clear, I don't mind if a person is a non-Christian and has had premarital sex, then becomes a christian and is from that point on abstinent before marriage – that is *fine*. It needs some attention and care to make sure that it doesn't cause problems, but it's totally acceptable to marry someone like that in my view. What is wrong is to claim that Christianity and premarital sex are *compatible*. That's the mistake I am arguing against.

UPDATE: In the comments below I like to other posts on "A Deeper Story" showing that these women are also pro-gay-marriage. So they are really not Christians in any knowledge-oriented sense, but just applying the label to themselves inconsistently, perhaps like secular Jews call themselves culturally Jewish while not believing in God.

# William Lane Craig lectures on naturalistic alternatives to the Big Bang

**Wintery Knight** · 7 August 2013 · Archived copy · Original

Here's the lecture, which was given in 2004 at the University of Colorado, Boulder. A very liberal university!

This lecture is suitable for intermediate and advanced Christian apologists.

The description of the video states:

> This is quite simply one of the best lectures William Lane Craig (a philosopher of science) has given. Craig explores the origins of the universe. He argues for a beginning of the universe, while refuting scientific models like the Steady State Theory, the Oscillating Theory, Quantum Vacuum Fluctuation Model, Chaotic Inflationary Theory, Quantum Gravity Theory, String Theory, M-Theory and Cyclic Ekpyrotic Theory.

And here is the description of the lecture from Reasonable Faith:

> A Templeton Foundation lecture at the University of Colorado, Boulder, laying out the case from contemporary cosmology for the beginning of the universe and its theological implications. Includes a lengthy Q & A period which features previous critics and debate opponents of Dr. Craig who were in attendance, including Michael Tooley, Victor Stenger, and Arnold Guminski.

Craig has previously debated Stenger and Tooley previously. And they both asked him questions in the Q&A time of this lecture. Imagine – having laid out your entire case to two people who have debated you before and who know your arguments well. What did they ask Craig, and how did he respond?

This lecture is based on a research paper published in an astrophysics journal, and was delivered to an audience of students and faculty, including atheist physicist Victor Stenger and prominent atheist philosopher Michael Tooley, at the University of Colorado at Boulder.

The whole research paper that the lecture is based on is posted online.

# Blue Cross, Aetna, United, Humana opt out of Obamacare exchanges

**Wintery Knight** · 8 August 2013 · Archived copy · Original

From CNS News.

Excerpt:

> Major health insurance companies – Blue Cross, Aetna, United, Humana – have fled the Obamacare health care exchanges in various states, which are scheduled to start on Oct. 1.
>
> […]The ACA requires every American to have health insurance, or pay a penalty. Individuals who are not covered by their employer can enroll in the state or federal government-run health care "marketplace," which will provide subsidies to individuals between 100 and 400 percent of the poverty line.
>
> Aetna, a fortune 100 company with $34.2 billion in revenue, has pulled out of public exchanges in three states, and will not be part of the individual health insurance exchange in its home base, Connecticut.
>
> […]Aetna will also not participate in California's exchange, and a spokesperson told CNSNews.com that the company never intended to do so.
>
> "We did not withdraw exchange plans in California, as we never planned participation nor filed [Qualified Health Plans] QHPs to participate in the California exchange," a spokesperson said.
>
> Anthem Blue Cross has withdrawnfrom its bid to participate in the state's small business exchange, as well.
>
> United Health Group, the largest health insurer in the United States, has also taken a pass on the Golden State's individual insurance market under Obamacare.
>
> As a result, roughly 8,000 policyholders will be left searching for new insurance.
>
> […]Only three companies remain in Connecticut's "Access Health CT" exchange, following Aetna's departure.
>
> Similarly, only five plans are participating in the exchange in Georgia, after Aetna and Coventry Health Insurance dropped out last week.
>
> The *Savannah Morning News* noted that this will "leave residents of some parts of the state with limited choice."
>
> […]Two of the three largest health insurers in Wisconsin will also not participate in the state's online marketplace under Obamacare, it was announced on Wednesday.

But I thought that Obama said that people who liked their current health care plan could keep it?

> "No matter how we reform health care, we will keep this promise: If you like your doctor, you will be able to keep your doctor, period," Obama said on June 15, 2009.
>
> "If you like your health care plan, you will be able to keep your health care plan. Period," he said. "No one will take it away. No matter what."
>
> That promise, however, has been revised by the Department of Health and Human Services (HHS), which now says, "you may be able to keep your current doctor" in the health insurance marketplace.

Oh I see, once the election is over, then the truth comes out. But it doesn't matter, because Obama already won the election on the strength of the lie.

# Five common objections to the moral argument

**Wintery Knight** · 8 August 2013 · Archived copy · Original

Apologetics 315 posted a list of five objections to the moral argument from philosopher Paul Rezkalla.

Here are the 5 points:

1. "But I'm a moral person and I don't believe in God. Are you saying that atheists can't be moral?"
2. "But what if you needed to lie in order to save someone's life? It seems that morality is not absolute as you say it is."
3. 'Where's your evidence for objective morality? I won't believe in anything unless I have evidence for it.'
4. 'If morality is objective, then why do some cultures practice female genital mutilation, cannibalism, infanticide, and other atrocities which we, in the West, deem unacceptable?'
5. 'But God carried out many atrocities in the Old Testament. He ordered the genocide of the Canaanites.'

That last one seems to be popular, so let's double-check the details:

> For starters, this isn't really an objection to the moral argument. It does not attack either premise of the argument. It is irrelevant, but let's entertain this objection for a second. By making a judgement on God's actions and deeming them immoral, the objector is appealing to a standard of morality that holds true outside of him/herself and transcends barriers of culture, context, time period, and social norms. By doing this, he/she affirms the existence of objective morality! But if the skeptic wants to affirm objective morality after throwing God out the window, then there needs to be an alternate explanation for its basis. If not God, then what is it? The burden is now on the skeptic to provide a naturalistic explanation for the objective moral framework.

If you have heard any of these objections before when discussing the moral argument, click through and take a look.

# William Lane Craig lectures on failure in the Christian life

**Wintery Knight** · 8 August 2013 · Archived copy · Original

I found this audio on Brian Auten's Apologetics 315 web site.

Here is the MP3 file.

And here is my summary.

Intro:

- the topic of failure is not one that is often discussed by Christians
- failure #1: failure in the Christian life which is the result of sin
- failure #2: when a Christian is defeated while trying to serve God
- the consequences for failure #1 can be worse for the Christian
- the consequences for failure #2 can be worse for the world as whole
- how is it possible for a person to fail when they are obeying God? (#2)
- how can it be that God can call someone to a task then let them fail?
- failure is not persecution – persecution is normal for Christians
- failure is not trials – testing is normal for Christians to grow

Bill's failure:

- Bill had submitted all the coursework for his second doctoral degree
- but he had to pass a comprehensive oral examination
- he failed to pass the comprehensive exam
- Bill and Jan and his supporters had all prayed for him to pass
- how could God allow this to happen?

Solution to the problem:

- God's will for us may be that we fail at the things we try in life
- there are things that God may teach us through failure
- Bill learned that human relationships are more important than careers
- we need to realize that "success" in life is not worldly success
- true success is getting to know God well during your life
- and failure may be the best way to get to know God well
- it may even be possible to fail to know God while achieving a lot
- the real measure of a man is loving God and loving your fellow man

Practical:

- give thanks to God regardless of your circumstances
- try to learn from your failure
- never give up

The ending of Bill's story:

- Bill spent an entire year preparing for a re-take of his exam
- Bill was awarded his second doctorate "magna cum laude" (with great distinction)

- Bill learned that American students are not well prepared for exams
- the year of studying remedied his inadequate American education
- in retrospect, he is thankful for the failure – he learned more

If you like this, you should pick up Craig's book "Hard Questions, Real Answers", which has a chapter on this problem. And here is a similar lecture that Dr. Craig gave at his home church in Atlanta on the same topic. I'm not posting this because I've had a catastrophic failure or anything. But I think in this economy, I am seeing a lot of my plans dashed and I am being forced to circle the wagons a little and take fewer risks. I am being forced to aim for smaller goals, and plan for future difficulties. It does bother me that I can't comfortably take risks to achieve the best goals that I want to achieve. But I have to play the hand I'm dealt, and do what looks doable right now. Some of my friends are having the same problem of having to recalculate what is probable and what is possible.

# New study: college women binge drinking more often than college men

**Wintery Knight** · 9 August 2013 · Archived copy · Original

Here's an article about a recent Harvard study in U.S. News and World Report.

Excerpt:

> Female college students exceed government-suggested limits on weekly alcohol consumption more often than male students do, according to a new report by researchers at Harvard University.
>
> Men and women are starting on something of an uneven playing field. In 1990, the National Institute on Alcohol Abuse and Alcoholism, a division of the National Institutes of Health, suggested that men drink a maximum of four drinks daily and 14 drinks weekly. The guidelines for women suggest that they max out at three drinks a day and seven drinks a week.
>
> "Recommended drinking limits are lower for women than for men because research to date has found that women experience alcohol-related problems at lower levels of alcohol consumption than men," says Bettina Hoeppner, a Harvard Medical School professor and coauthor of the study, published in Alcoholism: Clinical & Experimental Research Friday.
>
> […]"With women's greater tendency to exceed weekly guidelines than men, there may be long-term implications for women in particular," the study suggests. "Women are at a greater risk than men of engaging in drinking habits during college that are more likely to result in long-term harm."
>
> Hoeppner says that the weekly limits are designed to prevent future health problems due to excessive drinking, such as liver disease and breast cancer. Of students who had had at least one drink during the first year, 60 percent of men and 64 percent of women reported exceeding the weekly guidelines at least once.
>
> Earlier this year, the Centers for Disease Control warned about the increasing number of women and girls who binge drink and said that it's an "under-recognized problem."
>
> "It is alarming to see that binge drinking is so common among women and girls, and that women and girls are drinking so much when they do," Robert Brewer, head of the CDC's alcohol program, said in a statement.

The College Fix wrote about this article, and noted that the response from feminist blogs like Jezebel were dismissive.

Excerpt:

> Reaction to the piece has emerged via a write up on the feminism website *Jezebel* that defended the girls' decision to join, saying sororities "suck," and that "equal opportunity for women to succeed means equal opportunities to act like liver-shredding idiots."
>
> *Jezebel* writer Erin Gloria Ryan goes on to claim these girls are content with their decisions:
>
> "When college women are free to do what they want, some of them are going to want to behave like college jackasses. They're going to drink, swear, hook up sloppily and indiscriminately, barf in the streets, and generally act like boorish male characters in straight-to-DVD sex comedies. Oh, and one more thing: despite what an entire subgenre of concernmongering Little Girls Lost trend pieces on the phenomenon might have you think, they're perfectly happy."

Everything is going according to plan here, if you ask the feminists. In fact, this was their goal: equality.

What do you think is causing women to binge drink more than men? Is it some external force or is it something

inside them that is driving it? When I talk to college-aged women about this, they usually don't have a good answer for why they are doing it except because their friends are, and they feel obligated to participate.

In a previous post, I wrote about a study from the Institute of American Values that found that one of the reasons why women binge drink so much is to make them feel less responsible for hooking up with anonymous men at parties. After all, they reason, if they choose to drink themselves into a stupor then they aren't responsible for what happens next. They can have stories to tell people about the superhot guys they hooked up with, but without feeling guilty about anything.

# The kalam cosmological argument explained in a 4-minute video

**Wintery Knight** · 9 August 2013 · Archived copy · Original

Here's the 4-minute video that I would like everyone to tweet and share on Facebook:

It does go over the scientific evidence that has emerged recently that caused scientists to accept the beginning of the universe.

Here's a re-cap of the three main evidences for the Big Bang cosmology from Caltech.

Excerpt:

> **What is the Big Bang?**
>
> According to the big bang theory, the universe began by expanding from an infinitesimal volume with extremely high density and temperature. The universe was initially significantly smaller than even a pore on your skin. With the big bang, the fabric of space itself began expanding like the surface of an inflating balloon – matter simply rode along the stretching space like dust on the balloon's surface. The big bang is not like an explosion of matter in otherwise empty space; rather, space itself began with the big bang and carried matter with it as it expanded. Physicists think that even time began with the big bang. Today, just about every scientist believes in the big bang model. The evidence is overwhelming enough that in 1951, the Catholic Church officially pronounced the big bang model to be in accordance with the Bible.
>
> Until the early 1900s, most people had assumed that the universe was fixed in size. New possibilities opened up in 1915, when Einstein formulated his famous general relativity theorythat describes the nature of space, time, and gravity. This theory allows for expansion or contraction of the fabric of space. In 1917, astronomer Willem de Sitter applied this theory to the entire universe and boldly went on to show that the universe could be expanding. Aleksandr Friedmann, a mathematician, reached the same conclusion in a more general way in 1922, as did Georges Lemaître, a cosmologist and a Jesuit, in 1927. This step was revolutionary since the accepted view at the time was that the universe was static in size. Tracing back this expanding universe, Lemaître imagined all matter initially contained in a tiny universe and then exploding. These thoughts introduced amazing new possibilities for the universe, but were independent of observation at that time.
>
> **Why Do We Think the Big Bang Happened?**
>
> Three main observational results over the past century led astronomers to become certain that the universe began with the big bang. First, they found out that the universe is expanding—meaning that the separations between galaxies are becoming larger and larger. This led them to deduce that everything used to be extremely close together before some kind of explosion. Second, the big bang perfectly explains the abundance of helium and other nuclei like deuterium (an isotope of hydrogen) in the universe. A hot, dense, and expanding environment at the beginning could produce these nuclei in the abundance we observe today. Third, astronomers could actually observe the cosmic background radiation—the afterglow of the explosion—from every direction in the universe. This last evidence so conclusively confirmed the theory of the universe's beginning that Stephen Hawking said, "It is the discovery of the century, if not of all time."

The article goes into detail about each of these three evidences.

**The Big Bang is not compatible with atheism**

According to the Secular Humanist Manifesto, atheism is committed to an eternally existing universe, (See the first item: "Religious humanists regard the universe as self-existing and not created."). If something non-material brought all existing matter into being, that would be a supernatural cause, and atheists deny that anything supernatural exists. The standard Big Bang theory requires that all the matter in the universe come into being *out of nothing*. This falsifies eternal models of the universe, which are *required* by atheist Scriptures.

This is a bad time to be an atheist, given the state of science. It was easier to be an atheist before we made these scientific discoveries, but given the progress of science it's not rational to be an atheist anymore.

# William Lane Craig offers advice to Christians considering marriage

**Wintery Knight** · 9 August 2013 · Archived copy · Original

This post is a 3 in one: one lecture, one question and answer, and another lecture – all on different topics. My friend Neil S. requested this so I'm posting it.

I got this lecture from the Reasonable Faith web site.

Dr. William Lane Craig is the top living Christian apologist and debater in the world today, and has 2 Masters degrees and 2 Ph.Ds. He also has scores of academic publications including books from Oxford University Press, etc.

The MP3 file is here. (14.5 Mb, about 41 minutes)

Topics:

- the stresses of ministry on marriages
- the Christian position on divorce
- balancing marriage with academic pursuits
- the importance of marrying the right person
- Dr. Craig's politically incorrect advice for choosing a spouse
- Advice for men: Marry someone who believes in you and who supports you in your calling
- Advice for women: Be the kind of person who can commit to being a helper and supporter
- Advice for men: Beware of the career woman who will put their career over supporting you in your calling
- Advice for women: Be careful about marrying if you think that your goals are more important than your husband's goals
- Advice: Don't try to find the right person *for you* but instead focus on learning about marriage and preparing for marriage
- Advice: Flee youthful lusts and pursue righteousness, love and peace
- Advice: God intends for sex to be within the bounds of marriage, so you need to guard yourself against unchastity
- Advice for men: be careful what images and movies you see with the goal of keeping your chastity
- Advice: your highest responsibility after your relationship with God is your spouse, and your studies are third
- Advice: it's better to drop classes or give up your graduate studies entirely rather than destroy your marriage
- Advice for women: understand that you have to work at the marriage in order to help your man finish his studies
- Advice: set aside a period of the day for communicating and bonding with your spouse
- Advice: cultivate the ability to talk with your spouse on a personal level, and maintain eye contact
- Advice for men: do not break eye contact with your wife, and also hold her hand when communicating
- Advice: do not be embarrassed to seek out a marriage counselor, but make it a good counselor
- Advice:  don't just be doing stuff for your mate, but also be vulnerable and transparent with your mate
- How your relationship with your wife helps you with your relationship with God
- How do you handle the rebellion of children without being overbearing and authoritarian?

There is a period of Q&A at the end. There is another piece of advice that comes out in the Q&A for women: take an interest in your spouse's work even if you don't care about it, and ask him about it every day and try to understand it. Go to the man's workplace and see what he does. Go to his presentations. Get involved in the man's

ministry and help him in practical ways. Another piece of advice is to not paper over the differences – it's good to argue, because it means that problems are being confronted and worked through. Husbands should have a good male friend to talk to, and wives should have a good female friend to talk to.

I like how Dr. Craig has thought about how to have a successful marriage, how to choose the right woman, and how to love his wife. I like how he calls out men on the chastity thing. I think that chastity is more important for men than for women, because it's the men who take the lead in choosing and pursuing the right woman for their plan.

Secondly, here is my previous post on Dr. Craig's advice for married couples, where he gives 5 points of advice for married couples.

Here are the main pieces of advice Dr. Craig gives:

1. *Resolve that there will be no divorce*
2. *Delay having children*
3. *Confront problems honestly*
4. *Seek marital counseling*
5. *Take steps to build intimacy in your relationship*

And here's the controversial one (#2):

> 2. *Delay having children.* The first years of marriage are difficult enough on their own without introducing the complication of children. Once children come, the wife's attention is necessarily diverted, and huge stresses come upon you both. Spend the first several years of marriage getting to know each other, working through your issues, having fun together, and enjoying that intimate love relationship between just the two of you. Jan and I waited ten years before having our first child Charity, which allowed me the finish graduate school, get our feet on the ground financially, establish some roots, and enjoy and build our love relationship until we were really ready to take on the responsibilities of parenthood. The qualifier here is that if the wife desperately wants children now, then the husband should accede to her wish to become a mother, rather than withhold that from her. Her verdict should be decisive. But if you both can agree to wait, things will probably be much easier.

Third and finally, here is a previous post on Dr. Craig's advice for choosing a good spouse, with illustrations from his own marriage.

For example, Bill's first story about Jan occurs early after their marriage while he is working on his first Masters degree at Trinity:

> And it was also at that time that I began to see what an invaluable asset the Lord had given me in Jan. I remember I came home from classes one day, and found her at the kitchen table with all the catalogs and schedules and papers spread out in front of her and she said, "look! I've figured out how you can get two Masters degrees at the same time that it would normally take to get one! All you have to do is take overloads every semester, go to all full-time summer school and do all these other things, and you can do two MAs in the time it takes to do one!"
>
> And I thought, whoa! Are you sure you really want to make the commitment it takes to do this kind of thing? And she said, "Yeah! Go for it!" And it was then I began to see that God had given me a very special woman who was my supporter – my cheerleader – and who really believed in me. And as long as she believed in me, that gave me the confidence to dream bigger dreams, and to take on challenges that I had never thought of before.

If you want to hear another Christian husband talk about how his wife supports him, listen to this lecture called

“Giants in the Land” with Dr. Walter Bradley. It’s actually my favorite lecture. I also really like his testimony lecture. If you’re looking for guidance, these are some of the people I would recommend.

# Mark Steyn: Nidal Hasan trial shows we are not serious about national security

**Wintery Knight** · 10 August 2013 · Archived copy · Original

From National Review. This one is a must-read. It was hard to even find the "best part" to excerpt.

Excerpt:

> On December 7, 1941, the U.S. naval base at Pearl Harbor was attacked. Three years, eight months, and eight days later, the Japanese surrendered. These days, America's military moves at a more leisurely pace. On November 5, 2009, another U.S. base, Fort Hood, was attacked — by one man standing on a table, screaming "Allahu akbar!" and opening fire. Three years, nine months, and one day later, his court-martial finally got under way.
>
> The intervening third-of-a-decade-and-more has apparently been taken up by such vital legal questions as the fullness of beard Major Hasan is permitted to sport in court. This is not a joke: See "Judge Ousted in Fort Hood Shooting Case amid Beard Debacle" (CBS News). Army regulations require soldiers to be clean-shaven. The judge, Colonel Gregory Gross, ruled Hasan's beard in contempt, fined him $1,000, and said he would be forcibly shaved if he showed up that hirsute next time. At which point Hasan went to the U.S. Court of Appeals for the Armed Forces, which ruled that Colonel Gross's pogonophobia raised questions about his impartiality, and removed him. He's the first judge in the history of American jurisprudence to be kicked off a trial because of a "beard debacle." The new judge, Colonel Tara Osborn, agreed that Hasan's beard was a violation of regulations, but "said she won't hold it against him."
>
> […]Maybe this Clinton-era directive merits reconsideration in the wake of Fort Hood? Don't be ridiculous. Instead, nine months after Major Hasan's killing spree, the Department of Defense put into place "a series of procedural and policy changes that focus on identifying, responding to, and preventing potential workplace violence."
>
> Major Hasan says he's a soldier for the Taliban. Maybe if the Pentagon were to reclassify the entire Afghan theater as an unusually prolonged outburst of "workplace violence," we wouldn't have to worry about obsolescent concepts such as "victory" and "defeat." The important thing is that the U.S. Army's "workplace violence" is diverse. After Major Hasan's pre-post-traumatic workplace wobbly, General George W. Casey Jr., the Army's chief of staff, was at pains to assure us that it could have been a whole lot worse: "What happened at Fort Hood was a tragedy, but I believe it would be an even greater tragedy if our diversity becomes a casualty." And you can't get much more diverse than letting your military personnel pick which side of the war they want to be on.

It's so depressing. I guess we can only hope that we come to our senses before the next attack.

# William Lane Craig explains the moral argument to Georgia Tech students and faculty

**Wintery Knight** · 10 August 2013 · Archived copy · Original

This video has 3 parts, as well as questions and answers in individual clips.

For those who cannot watch the video, you can grab the MP3 file of the lecture, or read this essay by Dr. Craig which covers exactly the same ground as the video.

Part 1 of 3:

Part 2 of 3:

Part 2 of 3:

If you want to show this lecture and Q&A to your apologetics group, you can find the DVD here.

You can also read a debate transcript where Dr. Craig puts his ideas to the test, against Dr. Richard Taylor.

# Pro-life doctors banned from presenting scientific evidence at MWIA conference

**Wintery Knight** · 11 August 2013 · Archived copy · Original

From the Daily Caller. (H/T Mary)

Excerpt:

> A group of pro-life OB/GYN doctors was unceremoniously banned at the last minute from presenting a panel on abortion at an international conference for women in medicine in South Korea last week.
>
> Dr. Mary Davenport, one of the three pro-life doctors scheduled to speak, told The Daily Caller she was shocked because the group's presentations detailing the risks of abortion were "straight academic talks."
>
> "It wasn't any kind of advocacy position about what any nation's abortion laws should be or anything like that," said Davenport. "But we find this all over — that due to political correctness there's some things you can't say."
>
> Davenport and her two colleagues from the American Association of Pro-Life Obstetricians and Gynecologists (AAPLOG) learned of the cancellation the night before the presentation was supposed to take place.
>
> As to why the group was invited only to have its event cancelled, Davenport said "it doesn't make a lot of sense to me." She theorized there was a split between the conference's organizers, the Medical Women's International Association (MWIA), and its Korean hosts.
>
> "The Korean people wanted to hear what we had to say," Davenport said. "But I guess they were overruled by the leadership of this particular organization."

Life News had more about another attempt by the MWIA organizers to shut the scientists down.

Excerpt:

> MWIA's press release emphasizes that the presentations were censored because their conclusions were politically incorrect. The title of the press release is "MWIA is proud to stand for women's rights." It "regrets" that MWIA invited presenters "who would deny women their basic right to choice." For good measure, it throws in some slander, stating that the speakers' presentations– which were to summarize recent studies from such esteemed journals as the Journal of Reproductive Medicine, BJOG, PLoS ONE, and numerous others– have "no scientific merit."
>
> The real motivation is clear: these speakers were censored for daring to share data that might show that abortion has downsides for women.
>
> What's worse, MWIA leaders actively prevented people who wanted to learn more about the topic on their own time from doing so!
>
> > With the cancellation of our talks, our host Anna Choi, head of group of 680 Korean obgyn physicians who stopped doing abortions, had decided to set up a radio and newspaper interview for us during the time that we were supposed to present.
>
> > When we got to the "radio" interview that Anna had set up, it was actually a television interview, and the newspaper reporter was there also.
>
> > They put the three of us up front like a "panel" discussion, and the reporters started asking us questions about our presentation, allowing us an opportunity to talk about what we came to present. About 20 minutes into the interview, the Secretary General of MWIA, a Canadian woman, burst into the room (I

> kid you not. …and all of this is on camera), and came up to the table and said “What presentation is this? Donna Harrison said “it’s not a presentation”. So she snarled “Why are you being interviewed? At that point, the answers were left to Anna, our host. Anna said that this was a requested interview by the press.
>
> The SecGen then said “Who gave you permission to interview these people?” And the reporters said “We are the press, we don’t need anyone’s permission. We have freedom of the press” And the Sec Gen snarled at Anna and said “Did you arrange this? Did you talk to the organizing committee?” And Anna said “I am on the organizing committee. I don’t need to talk to anyone.” And the Sec Gen stood in front of the camera, and refused to move, and said “The interview is over.” Then the reporters said “You can’t do this. We have the freedom of the press. You are interfering with the freedom of the press.” But the Sec Gen would not move and said “The interview is over.”
>
> We exited to the hall, and a Belgian and German woman were waiting. They started to make fun of the Korean translator, and to snap pictures in her face. And she said “You can’t do this. This is my country. I will call the police.” And they actually grabbed at her, and then one of the Korean reporters put a huge camera in the Belgian woman’s face and started taking photos of her. A fist fight almost ensured between the women, but another of the Koreans stepped in and kept any contact from happening. And all of this was on camera. And then our Korean hosts ushered us down the hall, and down the elevator, along with the reporters and camera crew, and we resumed the interview in the commons area downstairs by the trash cans and the bathroom. We were able to complete the entire interview, and instead of our audience being a few women doctors from the conference, we now have an audience of probably a few thousand.

Wow. This is probably why pro-choice people oppose those laws that require that a woman have an ultrasound before having an abortion. If they actually know what they are aborting, then maybe they wouldn’t do it. The pro-choicers don’t want them to know the facts. Not from peer-reviewed journals, and not from ultrasounds.

# Can you dispense with apologetics and just preach the gospel when evangelizing?

**Wintery Knight** · 11 August 2013 · Archived copy · Original

I found this post by another apologetics-enabled pastor thanks to a tweet from J. Warner Wallace.

I'm going to quote the whole thing in full:

> There are those who wholly question the enterprise of Christian apologetics. They assert that God will call those whom he chooses, and apologetics is just a distraction to the work of the Holy Spirit and the revelation of God. This was Karl Barth's position.
>
> The idea is prima facie nonsense. When a missionary travels to another country to proclaim the gospel, she learns the language of the people so as to communicate in terms that they understand. **Apologetics is simply the language the secular world uses to talk about God.** To say we shouldn't practice a rational defense of the Christian faith is like saying the missionary need not study language, because the Holy Spirit can do whatever it wants.
>
> When I was a junior in high school, a church youth group in which I was participating took me to a weekend retreat in hopes of setting up camp in my heart. This was in Southeast Texas, and the only people who ran Christian camps there were Baptists. I remember listening to a firey preacher say quite a bit about hellfire, and I spent a good deal of time after his lectures asking him questions. Admittedly, I had not read the Bible, and he had. The Jesus I wanted to talk about was a projection of the niceties I most enjoyed. He was frustrated with me. I'm sure I was not particularly respectful or informed or interesting to him. And after what was probably a lot of patience, he said to me, "Sometimes you have to stop doubting and just believe." Of course this was a wasted answer on a thinking person. It was an act of the missionary saying, "I'm tired of learning your language."
>
> Compassion requires translation. We must be about the work of addressing hard questions with meaningful answers. And the cause of Christian apologetics will always be essential.

Oh, what a world it would be if every pastor was like this. It would be a different world.

Here's a related post I found in Brian Auten's Weekly Apologetics Bonus Links.

Excerpt:

> And Tim Keller wrote, in his book, The Reason for God, "All doubts, however skeptical and cynical they may seem, are really a set of alternate beliefs." Whenever we doubt, whenever we question, we are philosophers.
>
> This is also true of evangelism and apologetics – we are all evangelists, we are all apologists; although many wish to distinguish between the two, there is no distinction, for every time we clarify our beliefs to a sceptic, we are defending it from misunderstanding and misrepresentation. The Apostle Peter wrote, in 1 Peter 3:

"But even if you should suffer for righteousness' sake, you will be blessed. Have no fear of them, nor be troubled, but in your hearts honor Christ the Lord as holy, always being prepared to make a defense to anyone who asks you for a reason for the hope that is in you; yet do it with gentleness and respect, having a good conscience, so that, when you are slandered, those who revile your good behavior in Christ may be put to shame."

> Here evangelism, apologetics, righteous behaviour and worship are all woven together into one seamless whole – "if you should suffer for righteousness' sake"; "in your hearts honor Christ the Lord as holy"; "always being prepared to make a defense to anyone"; "the hope that is in you"; "do it with gentleness and respect, having a good conscience"; it is how we are called to live.

> This, indeed, is the role of the church, and we all have our part to play.

> **Unfortunately our time is often wasted: too many Evangelicals engage in endless debate about worship styles (or, more accurately, musical styles), because, we say, we must find ways of attracting people to church so that we might preach the gospel to them. We organise and promote endless programmes to the same end – fashionable attempts to catch the attention of a fashionable fickle world. Some, perhaps, have merit, and some, perhaps, are reached; but sooner or later we must explain what we believe, why we believe it and why unbelievers don't; and, we must learn to do this on 'their' turf, in terms they understand.**

There's that view again, that preaching the gospel without any evidence to strangers is what causes them to become Christians. Just bring them to church and preach at them – that will turn Muslims and Hindus into Christians, they tell us. I don't think it works, though.

I was just having a chat with a certain lady who lives in the South who was explaining to me about what a poor job Christians are doing (in general) of evangelizing down there. Apparently, they are often doing one of three things. 1) they ask people to come to church, 2) they ask people to read the Bible, or 3) they preach the bare gospel message to them and hope that this will magically work to convince people to become Christians.

I think that sometimes Christians can be so enveloped in their own culture that they forget how to talk to people from outside that culture. In fact when you look at those 3 approaches, the main common denominator seems to be a complete unwillingness to inquire into the person's current views and life situation. Instead of trying to have some context in which to maneuver, the popular approach seems to be to dismiss all of that inquiring into the other person's views. And even if the questions are asked about where the other person is coming from, then there is still work that needs to be done to answer those questions. Work that isn't being done in many cases.

I think that the most common Biblical model agrees with this, too. In the Bible, if you could authenticate your message using miracles, then you did that, as with Jesus and the paralytic. If you couldn't do miracles, then you pointed to other miracles that someone else had done, like Peter in Acts. But always you were aware and informed about what your opponents believed, in order to counter them, like Jesus vs the Sadducees, or Paul vs the Greeks. I think we need to do better than just expecting that people will believe you based on your say-so instead of having non-rational and rational objections that need to be addressed first.

# Why does Richard Dawkins refuse to debate William Lane Craig?

**Wintery Knight** · 11 August 2013 · Archived copy · Original

Because Richard Dawkins doesn't understand basic logic:

That's the latest video from Peter Byrom, aka BirdieUpon. (H/T Peter S. Williams)

And don't take my word for it, look at what sensible atheist Jeffrey Jay Lowder has to say about it:

> I find myself in an odd situation. I agree with Dawkins' decision not to debate Craig, but *not* for the reasons he has given (more on that in a moment). With all due respect to Dawkins, I don't think he should debate Craig because he simply isn't qualified to do so. If *The God Delusion* is any indication, Dawkins clearly isn't familiar with contemporary philosophy of religion, whereas Craig is an *expert* on the philosophy of religion.
>
> The idea of Dawkins debating Craig would would be like a championship bodybuilder, who just happens to have a green belt in Taekwondo, agreeing to a fight with an eigth-degree black belt. Bodybuilding is not *completely* irrelevant to Taekwondo and the bodybuilder may be the best bodybuilder in the world, but bodybuilding and Taekwondo are clearly not the same thing. The black belt would *easily* and *decisively*beat the bodybuilder.
>
> There is no shame or dishonor in declining a mismatch. If the black belt challenged the green belt (bodybuilder) to a fight, the bodybuilder would be rational–indeed, *wise*–to decline the invitation. The bodybuilder needs to clearly acknowledge, however, that he is declining because it would be a mismatch.
>
> And if Dawkins did decline the invitation on the grounds it was a mismatch, theists shouldn't act as if they've scored some major victory, just as, say, Billy Graham's refusal to debate an atheist philosopher of religion shouldn't be viewed as a victory for atheism.

Billy Graham shouldn't debate Peter Millican the same way that Richard Dawkins shouldn't debate William Lane Craig. Exactly!

But I don't even agree with Mr. Lowder that Dawkins can do biology, either.

Drawings of Haeckel's embryos were discredited in the 19th century, according to research published in the peer-reviewed journal Science.

But Dawkins cites the faked the 19th century embryo drawings as evidence of evolution. He's not good at biology, either.

Dawkins' recent book doesn't even interact with recent scientific discoveries and publications.

Excerpt:

> Richard Dawkins' new book, The Greatest Show on Earth, is being touted as a scathing rebuttal to intelligent design (ID), yet an actual response to mainstream ID thinking can hardly be found in the book. Though the book makes passing mention of "irreducible complexity" in a couple places, there are zero mentions of leading ID proponents like Michael Behe, William Dembski, Jonathan Wells, Phillip Johnson, Stephen Meyer, or any other well-known ID proponent. Instead, Dawkins refers extensively to "creationists," repeatedly attacking young earth creationism, while also making heavy use of fallacious (and dubious) "poor design" examples that rebut no argument made by a leading advocate of design since perhaps the 19th century. It seems that Dawkins didn't have the stomach to tackle the actual modern theory of intelligent design in his new book.

Mr. Dawkins, when he isn't busy pushing for infanticide and adultery and aliens causing the origin of life, hasn't bothered to engage at all with recent criticisms of evolution – he is still stuck in the 19th century. This is not a

person who is credible about anything related to evolution and biology. He cites professors of German language as an authority on the historical Jesus, for goodness' sake.

The reason why atheists like him is because he is rude, crude and insulting. And that's what popular atheism is all about. Blindly believing in eternal universes, unseen aliens and untestable multiverses, and being insulting to real scientists, real historians and real philosophers. If you are a science-respecting person, then you are reading Stephen C. Meyer's "Signature in the Cell" and "Darwin's Doubt". That's where the real science is being done – not using faked embryo drawings from the 19th century.

# 19 facts about illegal immigration

**Wintery Knight** · 12 August 2013 · Archived copy · Original

From Doug Ross' blog.

Excerpt: (links to mainstream sources removed)

> The following are 19 very disturbing facts about illegal immigration that every American should know…
>
> **#1**57 percent of all households that are led by an immigrant (legal or illegal) are enrolled in at least one welfare program.
>
> **#2** According to one study, the cost to U.S. taxpayers of legalizing current illegal immigrants would be approximately 6.3 trillion dollars over the next 50 years.
>
> **#3** The Obama administration has distributed flyers that tell illegal immigrants that their immigration status **will not be checked** when they apply for food stamps.
>
> **#4** The Department of Homeland Security says that it has lost track of a million people that have entered this country but that appear never to have left.
>
> **#5**One out of every five children living in Los Angeles County has a parent that is in the country illegally.
>
> **#6** In one recent year, taxpayers in Los Angeles County spent 600 million dollars on welfare for children of illegal immigrants.
>
> **#7** Thanks to illegal immigration, California's overstretched health care system is on the verge of collapse. Dozens of California hospitals and emergency rooms have shut down over the past decade because they could not afford to stay open after being endlessly swamped by illegal immigrants who were simply not able to pay for the services that they were receiving. As a result, the remainder of the health care system in the state of California is now beyond overloaded. This had led to brutally long waits, diverted ambulances and even unnecessary patient deaths. At this point, the state of California now ranks dead last out of all 50 states in the number of emergency rooms per million people.
>
> **#8** It has been estimated that U.S. taxpayers spend $12,000,000,000 a year on primary and secondary school education for the children of illegal immigrants.
>
> **#9** It is estimated that illegal aliens make up approximately 30 percent of the population in federal, state and local prisons and that the total cost of incarcerating them is more than $1.6 billion annually.
>
> **#10** The federal government actually has a website that teaches immigrants how to sign up for welfare programsonce they arrive in the United States.
>
> **#11** The Obama administration recently introduced the very first "unmanned" border station along the Texas-Mexico border.
>
> **#12** The Obama administration has sued individual states such as Arizona that have tried to crack down on illegal immigration.
>
> **#13** According to the FBI, there are approximately 1.4 million gang members living in our cities. Illegal immigration has been one of the primary factors that has fueled the growth of these gangs.
>
> **#14** As I have written about previously, there are only about 200 police officers assigned to Chicago's Gang Enforcement Unit to handle the estimated 100,000 gang members living in the city.
>
> **#15** Mexican drug cartels make approximately 6.6 billion dollars a year "exporting" illegal drugs to the United States.
>
> **#16** It is an open secret that Mexican drug cartels are openly conducting military operations inside the United States. The handful of border patrol agents that we have guarding the border are massively outgunned and

> outmanned.
>
> **#17** According to the Justice Department's National Drug Intelligence Center, Mexican drug cartels were actively operating in 50 different U.S. cities in 2006. By 2010, that number had skyrocketed to 1,286.
>
> **#18** Overall, more than 55,000 people have been killed in drug-related violence in Mexico since 2006. That same level of violence will eventually show up in major U.S. cities unless something dramatic is done about illegal immigration.
>
> **#19** It is being projected that the Senate immigration bill will bring 33 million more people to the United States over the next decade.

Please click through to Doug's blog post to get the links if any of these surprise you. They shouldn't.

As always, I am in favor of increasing legal immigration by skilled immigrants. But illegal immigration is something else entirely. It is infuriating to me that the costs for all of this Democrat "generosity" to law-breaking illegal immigrants is going to be paid for by our children, who are on the hook for a $17 trillion national debt. Not only that, but it's the poorest of the poor who have to face the problem of the drug cartels and pay the costs for the schools, hospitals and social programs that support illegal immigration.

# Left-wing media turning on Obama over his foreign policy failures

**Wintery Knight** · 12 August 2013 · Archived copy · Original

Dr. Stuart Schneiderman has read all the left-wing news sources and found some surprising views.

Excerpt:

> The news hasn't really reached the public, but Obama-supporting media outlets are starting to see the mess that the Obama/Clinton/Kerry foreign policy has produced.
>
> It is so bad that columnists are not even trying to moderate their negative judgments.
>
> From Frida Ghitis on the CNN site:
>
> America's foreign policy has gone into a tailspin. Almost every major initiative from the Obama administration has run into sharp, sometimes embarrassing, reverses. The U.S. looks weak and confused on the global stage.
>
> This might come as happy news to some opponents of the administration who enjoy seeing Barack Obama fail, but it shouldn't.
>
> America's failure in international strategy is a disaster-in-the-making for its allies and for the people who see the U.S. model of liberal democracy as one worth emulating in their own nations.
>
> On Russia, she continues, the verdict is clear:
>
> Relations with Russia have fallen off a cliff, making the theatrical "reset" of 2009 look, frankly, cringe-worthy.
>
> Syria, of course, is even worse:
>
> Obama dramatically warned Syrian dictator Bashar al-Assad, as he slaughtered his people by the thousands, that if he used chemical or biological weapons, he would cross a "red line." The line was crossed and not much happened. Syria is crumbling, self-destructing in a civil war that I, for one, believe could have turned out quite differently if Washington had offered material and diplomatic support for moderates in the opposition. Fears that the opposition would be dominated by extremists became a self-fulfilling prophecy.
>
> The centerpiece of the Obama/Clinton foreign policy initiative was Egypt. You know how that has worked out:
>
> But it is Egypt where America's foreign policy fiasco is most visible.
>
> It was in Cairo in 2009, where the newly elected Obama, still reflecting the glow of sky-high expectations, launched his campaign to repair relations with the so-called "Muslim World."…
>
> Nobody knew what would happen in Cairo's Tahrir Square a few years later. But today, the same people who yearned for democracy despise Washington. When Egyptians elected a Muslim Brotherhood president, Washington tried to act respectfully, but it showed a degree of deference to the Muslim Brotherhood that ignored the ways in which the group violated not only Egyptians' but America's own standards of decency and rule of law.
>
> As tensions in Egypt grow between Islamists on one side and the military and anti-Islamists on the other, there is one sentiment shared by all: Both sides feel betrayed by Washington.
>
> Egypt's most powerful man, Gen. Abdel Fatah al-Sissi, said, "You [the U.S.] left the Egyptians; you turned your back on the Egyptians, and they won't forget that."

It's not just CNN, though. He has quotations from articles in the radically, radically leftist New York Times and the left-wing extremist New Yorker, too. The New Yorker is disgusted with the way that Obama has handled Libya. It's getting so bad that not even Obama's biggest cheerleaders can ignore it.

# Why do Christians leave the faith? The surprising importance of apologetics

**Wintery Knight** · 12 August 2013 · Archived copy · Original

From Black, White and Gray.

Excerpt:

> Several colleagues and I recently finished a study of why Christians leave the faith, and we were surprised at what made a difference as well what didn't seem to matter. In the next few weeks, I'll be reviewing our findings in a series of posts.
>
> To start with, let me tell you how we conducted our study. We were interested in how people who left the faith—let's call them deconverts—explained their actions; i.e., why did they think they left the faith. In order to do this, we found a website on-line in which former Christians post their "testimonials" about their religious history. We chose 50 of these testimonials and read, reread, and reread again each one and then we discussed them as a group. Our goal was to find themes in these deconversion narratives, and several themes did emerge.
>
> […]All told, we found four general explanations offered by these 50 people as to why they left Christianity.
>
> The first explanation regards intellectual and theological concerns about the faith. A full two-thirds of the testimony writers emphasized these concerns and some wrote about little else.
>
> Some of the intellectual concerns were issues that would be faced by members of any religion, not just Christianity. For example, what is the relationship between religion and science? Does believing in one negate the other? What is the role of logic versus faith?
>
> One man, who was a fundamentalist Christian in young adulthood, defined faith and reason as mutually contradictory, and he described his departure from Christianity as a victory of reason. He wrote: "for most of us, the battle was entirely within ourselves. It was a pitched battle between our faith and our reason, and eventually our reason just refused to be suppressed any longer, no matter what the potential consequences."
>
> Many other writers, though, focused on theological issues specific to Christianity. One of the issues that arose with the existence of hell and how that could be reconciled with the Christian image of a loving God. Basically, how could a loving God throw his children into hell for eternity?
>
> A man raised as a Baptist expressed what he viewed as a contradiction between love and hell: "Would a loving father really not allow some people to have a chance and send them to hell for eternity? I don't think so!"
>
> One woman, who loved her grandparents, now deceased, wondered how God could condemn them for not having believed in Him. She exclaimed: "what the hell kind of jerk was God if he'd condemn people like my grandparents?"
>
> A related theological issue regarded human suffering here on Earth. If God is powerful and loving, why is there suffering? One writer likened God's allowance of suffering to a negligent police officer. "What if a police officer sat and watched silently as a child was murdered even though he had the power to stop it?"
>
> Other writers attributed to God a more active role in human suffering, often pointing to His actions in the Old Testament. A former Methodist wrote of his doubts about God starting early in his life when he learned about Noah's Ark. "The turning argument for me was actually a story that is in children's Sunday school books – Noah's Ark. I started to really think about the fact that God pretty much killed the ENTIRE planet." Similarly, a former Pentecostal described God's actions in the Old Testament as "atrocity after atrocity."
>
> The final frequently-expressed concern regarded the Bible and its reliability. Is it accurate? Is it believable? A former Catholic dismissed the Bible altogether. She wrote: "Science has all but proven that the Old Testament could not have happened. It is also fast proving that the New Testament is nothing but fiction."

My friend ECM had a different take on it, commenting on Facebook:

> I'm going to go out on a limb and state that most people simply don't care.
>
> You can refute arguments/do apologetics all day long to the run-of-the-mill village atheist, but that's not going to do you much good in reaching the average non-believer since they're generally apathetic about the whole project–God, etc., simply has no impact on their daily lives.
>
> What I think would help is if *actual* Christians walked the walk a bit–I think this is, really, the crux of your problem. Too many of you say you believe in God and are Christians, but how many actually abide by the general strictures of the faith?
>
> This has a rather disconcerting effect on non-believers and it makes people like me, who are at least open to the idea*, more wary because how can I very well take you seriously if you're not actually practicing it? It smacks of "do as I say, not as I do." (It also gives the media et al a hammer w/ which to beat Christians over the head with ad nauseaum, causing massive damage to credibility.)
>
> (It doesn't give me an pleasure in saying any of this, but there it is from someone that's at least open to the concept.)
>
> (And please! Please let's not turn this into a thread on apologetics aimed at 'showing me the light'–I know all the arguments and have gone over them a thousand times w/ the Knight via email, chat, etc., so I'm well-versed on all it.)
>
> *I would classify myself as a small 'd' deist.
>
> I should clarify: when I say "average non-believer" I am also referring to, in far too many (most?) cases, those that actually profess a belief in God and identify as Christian.

And my friend Dina wrote this:

> Apologetics should be more than winning debates with athiests. Today, defending the faith ought to be more concerned with ridding the church of the crowd pleasing rot that has infiltrated it over the last century. The problem is exactly what ECM and lots of us see in professing Christians. Sadly, many many people who profess to be Christians are no different from the world, so the world views us all as either hypocrites or liars. Times may change, society may change but God and the bible does not. The bible is the only rule to direct us and while philosophy has much to offer, if it backs up the bible do we need it in the first place? If it goes against the bible, then its worthless man made opinions. The problems with Christianity started in the church, and the solution will have to start in the church as well. He did it before and He will do it again.

I replied and said that stronger, more consistent Christians are important, but I think apologetics is needed in order to build them up – because, as I've written before – people only act Christianly when they have reasons to believe that Christianity is objectively true.

# Harry Reid: Obamacare is “absolutely” a step towards single payer health care system

**Wintery Knight** · 13 August 2013 · Archived copy · Original

Here’s a Forbes magazine article by health care policy expert Avik Roy.

Excerpt: (links removed)

> When I speak to conservatives about health care policy, I’m often asked the question: “Do you think that Obamacare is secretly a step toward single-payer health care?” I always explain that, while progressives may want single-payer, I don’t think that Obamacare is deliberately designed to bring about that outcome. Well, yesterday on PBS’ *Nevada Week In Review*, Senate Majority Leader Harry Reid (D., Nev.) was asked whether his goal was to move Obamacare to a single-payer system. His answer? “Yes, yes. Absolutely, yes.”
>
> In one sense, this isn’t shocking. Reid and many other Democrats, including President Obama, have often stated that their ideal health-care system is one in which the government abolishes the private insurance market. Video of the PBS discussion isn’t yet online, but here’s how Karoun Demirjian of the *Las Vegas Sun* described it:
>
> Reid said he thinks the country has to “work our way past” insurance-based health care during a Friday night appearance on Vegas PBS’ program “Nevada Week in Review.”
>
> “What we’ve done with Obamacare is have a step in the right direction, but we’re far from having something that’s going to work forever,” Reid said.
>
> When then asked by panelist Steve Sebelius whether he meant ultimately the country would have to have a health care system that abandoned insurance as the means of accessing it, Reid said: “Yes, yes. Absolutely, yes.”
>
> Reid noted that he and other progressives fought hard for a “public option” in the exchanges as a Trojan horse for single-payer, but Democrats didn’t have 60 votes in the Senate to achieve it:
>
> The idea of introducing a single-payer national health care system to the United States, or even just a public option, sent lawmakers into a tizzy back in 2009, when Reid was negotiating the health care bill.
>
> “We had a real good run at the public option … don’t think we didn’t have a tremendous number of people who wanted a single-payer system,” Reid said on the PBS program, recalling how then-Sen. Joe Lieberman’s opposition to the idea of a public option made them abandon the notion and start from scratch.
>
> Eventually, Reid decided the public option was unworkable.
>
> “We had to get a majority of votes,” Reid said. “In fact, we had to get a little extra in the Senate, we have to get 60.”

Do you like the service you get at the Department of Motor Vehicles or the Post Office? How would you like to get your health care the same way? That’s what the Democrats are trying to do. We could have gone in another direction and legislated consumer-focused health care, providing an experience similar to Amazon.com – but we didn’t. We can’t keep electing communists and then acting surprised when they push us towards communism.

# Apologetics 315 interviews Dr. Phil Fernandes on apologetic preaching

**Wintery Knight** · 13 August 2013 · Archived copy · Original

I was going on a long road trip recently and was looking for some good audio to listen to. Dina suggested SermonAudio.com to me, and I found some excellent lectures from Dr. Phil Fernandes. I find it it very easy to listen to this guy. And here's Brian Auten to interview him on apologetic preaching – the inclusion of apologetics in regular Sunday preaching.

The MP3 file is here.

Description:

> Today's interview is with Phil Fernandes, president of the Institute of Biblical Defense, and the pastor of Trinity Bible Fellowship in Silverdale, Washington. He talks about apologetic preaching, how to incorporate apologetics training into the local church, evangelism, common objections to apologetics, encouragement and advice to pastors, audio/video resources, and more.
>
> Phil's books include:
>
> - *Hijacking the Historical Jesus*
> - *The Atheist Delusion*
> - *Seven Great Apologists*
> - *Contend Earnestly for the Faith: A Survey of Christian Apologetics*

This interview is awesome, especially in the second half. Here's a sample: "It's not my job as a pastor to meet people's felt needs". Awesomeness.

I like this Dr. Phil. He's very very practical and his preaching is informed by encounters with people who disagree with him. Sometimes I get the idea that pastors aren't really talking to people outside their church, but not this guy. He's grounded.

# Why do Christians leave the faith? Dashed expectations of a “nice” God

**Wintery Knight** · 13 August 2013 · Archived copy · Original

Part 2 of a brilliant series by Bradley Wright. This time he explains how people leave Christianity because they expect God to meet their needs and he doesn’t.

Excerpt:

> In a study of religious deconversion, we analyzed 50 on-line testimonies posted by former Christians, and in these testimonies we found four general explanations for deconversion. The first explanation, which I wrote about last week, regarded intellectual and theological concerns about the Christian faith. The second, which I elaborate here, regards a failed relationship with God. Almost half (22 of 50) of the writers expressed sentiments that in some way God had failed them by His not doing what they thought He should.
>
> God’s perceived failure took various forms, most of which fall under the general heading of “unanswered prayers.”
>
> One way that people felt that God had failed them happened when He did not respond to requests for help during difficult times. A young man raised in a Baptist church epitomized this feeling of failure when he wrote about God not answering his prayers about family difficulties. He wrote: “The first time I questioned the faith was when my grandmother shriveled up in front of me for 6 month’s due to cancer. I was 13 & my mother & father [were] getting a divorce. My father told me I should have been aborted. I prayed to God but nothing fails like prayers.”

So you can see here where people have this expectation that it is God’s job to give them good health. But is that anywhere in the Bible? Is it God’s job to make us healthy so that we can have a happy life, even if we are busy spending that happy life ignoring him and not knowing his character. When you ask a serious Christian what it is like to be a Christian, we will tell you that what God is about is NOT making us healthy or happy, but instead giving us time and peace to study him, to make plans to serve him, to execute those plans, and to have (sometimes unhappy) experiences that cause our sympathies to change as we feel what God feels. In short, life is about getting closer to him, and suffering and sickness is one of the tools God uses in order to get us to know him as he is and to participate in the relationship.

> Likewise, a woman raised in a Methodist household described her step-father as “cruel and abusive” to her, and she could not understand why “if God loves me, why won’t he protect me instead of letting this happen to me?”

I think the reason why God allows suffering like this is to create people who take his rules about sexual morality seriously. When I was growing up I had front-row seats to the divorces of many of my friends. I remember vividly talking to children who cried to me about how they felt when their mothers invited new men into the house after the divorce. Pain and suffering like this is a reminder to us that the moral law is real, that God expects us to follow it in order to prevent harm. One of the reasons why I am chaste is because I listen to the stories of men whose girlfriends aborted their babies, the stories of women who cohabitated and then were betrayed, the stories of the children of divorces. And from this I learn that morality is real and it matters.

> In a variation of this theme, some deconverts lamented God’s inactivity amidst spiritual difficulties. A man in his forties, a former elder at a charismatic church, wrote: “In my own life, no matter how much I submitted to ‘God’ and prayed in faith, ‘sin’ never seemed to leave me. Well, what’s the point of being ‘saved’ if you aren’t delivered from ‘sin’?”

This is why accurate theology matters. No serious Christian thinks that you stop sinning after you become a Christian, and no serious Christian thinks that prayer alone is a solution to sin. To stop sinning, you need to engage more than the spirit, you need to engage the mind. Most people want to spiritualize things because prayer is easier than study. But if you want to stop sinning, the best way is a combination of prayer and study. If you want to stop premarital sex, study how premarital sex affects STD infection, risk of divorce, future marital stability, oxytocin, quality of marriage, and so on. Study the risks of divorce. That's how you stop sinning. Some people want to dumb Christianity down to the level of superstition then they complain that it doesn't work. But Christianity is better when you learn more and work harder.

> A former Southern Baptist described the various good things that God failed to give him: "God promises me a lot in the bible and he's not come through. Ask and it shall be given. Follow me and I will bless you. I promise you life and promise abundance. Man should not be alone. I have a plan for you. Give tithe and I will reward you. All broken promises. This god lacks clarification. This god lacks faith in me. He wants my faith. I want his too."

Do you know what I expect from God after reading the Bible? I expect what Jesus got: pain and suffering during obedience. What kind of simpleton reads the Bible and thinks that it is about getting goodies from God? That is NOWHERE in the Bible. It's projecting Santa Claus onto God and that isn't going to work – God has other plans for us, and those plans involve work and pain. People become Christians because they want to be like Jesus, and they understand that Jesus was not having fun. He was doing a job, and he wasn't happy or appreciated.

> Other writers took a different approach to God's failures. They too sought God's help, but when they did not receive it, they simply concluded that God did not exist. A former member of an Assemblies of God church explicitly linked unanswered prayers and the existence of God: "How many humble and totally selfless prayers offered up to and ignored by the imaginary skydaddy does it take for the average person to finally throw in the towel and say [God doesn't exist]!!!!" His answer: "Too damn many."

It's so strange to me that people think that the best way to see God interfere is to pray. The way I see God working in my life is when I go home and listen to some debate about the problem of evil, and then the next day some atheist asks me out to lunch to talk about why God allows evil. Maybe instead of doing easy things, we should actually invest in our relationship with God and then see if he responds by giving us work to do. Maybe a relationship with God is about serving him, and the joy is about seeing him reward those efforts by working with us and through us. Maybe God has more for us than just entertainment.

> Still others sought a tangible sign of God's presence. A former Pentecostal exclaimed: "There were many nights while in bed I would ask God to show me the truth, or give me some type of sign to show that he or she existed. These prayers would never be answered. So I would just go on with my life having doubts." Likewise, a former Baptist missionary wrote: "I've begged God to show himself to me and put an end to my inner torture. So far it hasn't happened and the only thing I know for sure is that I have unanswered questions."

I think this paragraph is interesting, since I consider attending church, praying and singing hymns to be less practical when compared with practical and difficult things like chastity, apologetics, charity, studying hard things, getting a good job, committing to caring for others who have special needs, etc. If you want to feel the presence of God, then do the right thing and take the punishment for doing it. That's what Christianity is really about. When William Dembski was drummed out of Baylor University for opposing the presupposition of naturalism in the sciences, he experienced God more than all snake-handling, tongue speaking Pentecostals in the history of the universe. Similarly for Michele Bachmann's decision to take in 23 foster children into her home. Christianity is a serious religion, and it is not accessible to superstitious people who reduce it to singing and praying alone. Christianity is about serious people doing serious things. Even reading the Bible is not enough – you need to study

the Bible.

**The example of Dan Barker**

I've actually written about this before in the context of Dan Barker, a charismatic fundamentalist praise hymn singer and writer who expected God to validate all of his irresponsible ministry decisions. Eventually, he fell away from the church because he had this ludicrous Santa Claus caricature of God that didn't match reality. Dan Barker is the complete opposite of everything I consider a manly Christian to be. He is the polar opposite of what I recommend to men when I recommend that they study math, science, engineering and technology, avoid music, singing and dancing, and prefer apologetics and conservative politics over speaking in tongues and apocalyptic fiction. This man, when he was a "Christian", was the complete opposite of the WK Christian man model. Men should be practical.

I think that Christians should protect themselves from the Dan Barker outcome by being aware of how emotional experiences and praise hymns warp your view of God. God is a person, and he has a goal for you – to know him. To achieve that goal, it may not be effective to just give you everything you want. It may be the case that God has to allow you to experience some suffering, to increase your character and to bring your goals in line with his character. Children have to grow up, and shielding them from pain and responsibility doesn't allow them to grow up.

In my own case, I have my own disappointment with God, revolving around my chastity while waiting for marriage. But does that cause me to reject God? Hell, no. I just assume that he has something else he wants me to do instead of being married, and I am OK with that. It's part of this relationship that God's goals are important to me. I have to participate and hold up my end of the relationship. When it comes to God's purposes in the world, my happiness and comfort are expendable. That is an appropriate response, I think, to Jesus' own self-sacrificial behavior on the cross. I was born obligated to him, and I am OK with that. It does not bother me.

By the way, I wrote about Part 1 in the series, which was about how the #1 cause of apostasy is lack of apologetics.

# Which culture condones killing young girls or throwing acid in their faces?

**Wintery Knight** · 14 August 2013 · Archived copy · Original

Here's a story from the UK Daily Mail. (H/T Blazing Cat Fur)

Excerpt:

> A 10-year-old schoolgirl died after being shot as she was walking home from a bible study class in Egypt.
>
> Jessi Boulus died from the single shot to the chest as she made her way through the streets of Cairo on Tuesday.
>
> Her death is yet another example of rising tensions against Christians in the country after supporters of ousted President Mohammed Morsi and his Muslim Brotherhood started to target Egypt's Christian minority, holding them partly responsible for his removal.
>
> Jessi's mother told the BBC News she believes her daughter was targeted due to her religion.
>
> 'She was my best friend, my everything. Jessi was just becoming a young woman,' she said.
>
> 'Every woman dreams of becoming a mother, and for 10 years I was lucky enough to be a mum. I'll miss Jessi calling me mum – I know I won't ever hear it again.'
>
> Jessi's father told the website: 'Jessi was everything to us. Her killers didn't know that Jessi was my life – my future. They killed our future. I lived for her. We both did.'
>
> Her parents said that they had noticed rising tensions in recent months and had discussed emigrating but had decided to stay in Egypt as it was their home.
>
> In April, a Muslim mob attacked the main cathedral of the Coptic Orthodox Church as Christians held a funeral and protested there over four Christians killed in sectarian violence the day before.
>
> Pope Tawadros II publicly blamed Morsi for failing to protect the building.
>
> Egyptian security forces stood by during a brutal attack on Coptic Christians in Luxor days after Mohamed Morsi's removal, according to Amnesty International.
>
> During the 18-hour-long attack on 5 July, the security forces left six besieged Coptic Christian men – four of whom were then killed and one hospitalised – to the mercy of an angry crowd.
>
> An angry mob armed with metal bars, knives, tree branches and hammers attacked Christian homes and businesses in Nagah Hassan, 11 miles west of Luxor, after the dead body of a Muslim man was discovered near the homes of Christian families.
>
> Despite local residents' and religious leaders' repeated calls for help, security forces on the scene made only half-hearted attempts to end the violence and sufficient reinforcements failed to arrive.

And another story from the leftist BBC.

Excerpt:

> The Zanzibar government has offered a reward of 10m Tanzanian shillings (£3,970; $6,170) for information leading to the capture of attackers who threw acid at two UK women, police say.
>
> Kirstie Trup and Katie Gee, both 18 and from London, had acid thrown on their faces, chests and hands.
>
> The island's Police Commissioner Musa Ali Musa told the BBC that there was "no prime suspect" for the attack.
>
> He said that a lot of people had been questioned and information gathered.

> However no-one has been arrested or charged and investigations are continuing, Mr Musa said.
>
> […]The two young Britons, who were volunteering for the charity Art in Tanzania, have been flown back to the UK.

Previously I wrote about Islamic child sex-trafficking and Islamic gang rape.

I post these stories because it's become fashionable in certain circles to condemn "judging". Everybody wants to be liked these days, and that means being "tolerant" and seeing all views and cultures as equally valid. Even Christains are taken in by it, extolling the virtues of not judging anyone, and judging people who do think that evil really is evil.

When you meet someone who says that it is wrong to judge, show them these news stories.

# Gay activists pressure D.C. mayor to remove ex-gay singer from MLK memorial concert

**Wintery Knight** · 14 August 2013 · Archived copy · Original

From Life Site News, a story about one of the most Democrat cities in America, and its Democrat mayor. (H/T Mysterious WG)

Excerpt:

> D.C. Mayor Vincent Gray admitted Monday that he made the final decision to remove gospel singer Donnie McClurkin from the lineup of performers at a city-sponsored concert held Saturday at the Martin Luther King memorial in respond to complaints by gay activists.
>
> McClurkin was to have been a headline performer at the event , called "Reflections on Peace: Ghandi to King," which marked the beginning of a planned series of events to commemorate King's life during the run-up to the 50th anniversary of the civil rights leader's "I Have a Dream" speech.
>
> But on Friday, several homosexual activists contacted the mayor's office to complain about McClurkin's inclusion in the show because the gospel singer is a vocal ex-gay who believes homosexuality is a "curse" which can be overcome through prayer and determination. They threatened to protest the event if he was allowed to perform. Soon after, it was announced that McClurkin would no longer be part of the program.
>
> Initially, the mayor's office claimed McClurkin had volunteered to step aside. "The Arts and Humanities Commission and Donnie McClurkin's management decided that it would be best for him to withdraw because the purpose of the event is to bring people together," said Gray's spokeswoman, Doxie McCoy. "Mayor Gray said the purpose of the event is to promote peace and harmony. That is what King was all about."
>
> But on Saturday, McClurkin posted a video to social media claiming there was nothing mutual about the decision, and that the mayor's office told him not to come.
>
> On Monday, Gray confirmed McClurkin's account, telling the *Washington Post*, "This was an issue involving a potential controversy at an event that was going to focus on harmony and peace, and we just didn't think that was appropriate for this event."
>
> McClurkin said the decision was made to placate a group of 15-20 homosexual activists. "Fifteen or twenty people," the gospel singer said, shaking his head, "compared to thousands upon thousands who were coming out to worship Jesus."

Well, to be fair, gay activists and their allies in the Democrat Party aren't really keen on worshipping Jesus, either. And not shy about preventing others from doing so.

> This is not the first time former homosexuals have been subjected to campaigns of intimidation by gay activists in the nation's capital.
>
> The kickoff event for the first-ever "Ex-Gay Pride Month," scheduled to be held at Family Research Council headquarters in D.C., was postponed last month after threats of protests and violence by gay activists.
>
> And in 2007, at a county fair in the nearby suburb of Arlington, angry homosexual activists harassed and assaulted a group of ex-gays and members of Parents and Friends of Ex-Gays (PFOX) at their fair booth.
>
> Last year, a metro Washington school district was sued by PFOX after the superintendent publicly told students that the group's flyers offering information on unwanted same-sex attraction and urging tolerance for those who leave the homosexual lifestyle were "reprehensible and deplorable" and labeled their contention that sexual orientation can be changed "a really, really disgusting message."
>
> In 2008, an American Psychological Association symposium on the role of religion in homosexual therapy to

> be held at the Washington Convention Center was canceled under pressure from gay activists who worried the panel might lend credibility the notion that individuals can overcome their homosexual inclinations, either through reparative therapy or other means.
>
> "Conservatives … were going to use this event to draw credibility to the so-called reparative therapy movement," Gene Robinson, the openly homosexual then-bishop of the Episcopal Church told the *Washington Blade* gay news outlet at the time, taking partial credit for the symposium's cancellation. "It became clear to me in the last couple of weeks that just my showing up and letting this event happen…lends credibility to that so-called therapy."
>
> On Capitol Hill, some Democratic legislators have called for an outright ban on such therapies. One California congresswoman introduced a resolution in the last session of Congress called "Stop Harming Our Kids" that condemns therapies aimed at changing sexual orientation, and urges states to introduce laws banning their use with minors.

So who is right about reparative therapy and ex-gay people? Let's look at the peer-reviewed science.

This study was done by Otago University in New Zealand.

Excerpt:

> Otago University researcher associate professor Elisabeth Wells has looked at the connection between adverse childhood events and sexuality and found those who experienced trauma were significantly more likely to be non-heterosexual.
>
> The study used results from the New Zealand Mental Health Survey, which surveyed almost 13,000 people aged over 16 between 2003 and 2004.
>
> Participants were asked whether they thought of themselves as bisexual, heterosexual or homosexual and if they had same-sex sexual experiences or relationships.
>
> Less than one per cent of people identified themselves as homosexual, but three per cent had a same-sex encounter.
>
> Wells said the more "adverse events" experienced in childhood – including sexual assault, rape and domestic violence – the more likely the person identified with one of the non-exclusively heterosexual groups.
>
> She said most people from disturbed backgrounds were heterosexual.
>
> However, the study showed a clear relationship between negative events in childhood and homosexual or bisexual relationships later in life.

I actually studied the issue of what causes homosexuality and whether it can be repaired using therapy a while back using books by medical doctors like Jeffrey Satinover and Joseph Nicolosi. (Nicolosi's new book is here) It turns out that there are some genetic factors that make homosexuality more likely, but the real causes are environmental, e.g. – sexual abuse during childhood or failure to bond emotionally with the same-sex parent.

I wonder how many people actually go after the research when forming their opinions on issues like abortion and same-sex marriage? I always head straight for the research and debates. I think that my opponents prefer personal attacks and speech codes!

Comments to this post will be strictly filtered to stay clear of Obama's laws restricting free speech on controversial issues.

# Physicist Frank Tipler on the usefulness of refereed journals, then and now

**Wintery Knight** · 14 August 2013 · Archived copy · Original

I really enjoyed this episode of the ID the Future podcast.

Description:

> Is the only good science peer-reviewed science? Are there other avenues to present important scientific work? On this episode of **ID The Future**, Professor of Mathematics Dr. Frank Tipler discusses the pros and cons of peer review and refereed journals. More than fifty peer-reviewed papers discussing intelligent design have been published, but critics of the theory still proclaim a lack of peer-reviewed work as an argument. Listen in as Tipler shows how things have changed with the peer review process and what we can do about it.

About the speaker:

> Frank Tipler was born and raised in Andalusia, Alabama. His first science project was a letter written in kindergarten to Werner von Braun, whose plans to launch the first earth satellite were then being publicized. Von Braun's secretary replied, regretting he had no rocket fuel for Tipler as requested. By age five, he knew he wanted to be an astrophysicist. But he's always been a polymath, reading widely across disciplines and into the history of science and theology. After graduating from MIT and the University of Maryland, he did postdoctoral work at Oxford and Berkeley, before arriving at Tulane in 1981.

Whenever William Lance Craig often cites a book by two physicists named "Barrow and Tipler" called "The Anthropic Cosmological Principle" (Oxford University Press, 1988) in his debates to support the fine-tuning argument. This Tipler is that Tipler! Dr. Tipler is a master of the physics of cosmology and fine-tuning. However, I definitely disagree with him on some of his ideas.

The MP3 file is here. (17 minutes)

Topics:

- the changing nature of refereed journals and peer-review
- previously, the refereed journals were more about communication
- now, ideas are not taken seriously unless they are published in these journals
- the problem is that referees can be motivated by ideological concerns
- before, an obscure patent official named Einstein submitted a physics paper and it was published
- now, an uncredited person would not be able to have a brilliant paper published like that
- today, there are so many scientists that many more papers are submitted
- although it restricts BAD ideas, it can also end up censoring NEW ideas
- the problem is that any really brilliant idea has to go against the prevailing consensus
- peer-review may actually be holding back the progress of science by censoring NEW ideas
- some referees are motivated to censor ideas that undercut their reputation and prestige
- Dr. Tipler was told to remove references to intelligent design before one of his papers would be published
- how scientists with NEW ideas can bypass the system of refereed journals when they are censored
- peer-review has value when it finds errors, but not when it suppresses new ideas

I think this one is a must listen. As much as I like peer-reviewed research, it's important to acknowledge the

limitations. I think if you're going into a debate, you definitely want to be the one with the peer-reviewed evidence. Let the other guy be the one making assertions and stating his preferences and opinions. But that doesn't mean that the peer-review process can't be improved – I think that it can be improved.

Here is a listing of some recent peer-reviewed publications related to intelligent design.

# AF first sergeant faces reprisals from gay boss for refusing to affirm homosexuality

**Wintery Knight** · 15 August 2013 · Archived copy · Original

Here's the first one from Fox News.

Excerpt:

> Monk has served as a first sergeant at Lackland Air Force Base in San Antonio since 2011. He recently returned from a deployment and discovered he had a new commander – an open lesbian.
>
> "In one of our first meetings, she was talking about her promotion and she mentioned something about a benediction," Monk told Fox News. "She said she wanted a chaplain but objected to one particular chaplain that she called a bigot because he preached that homosexuality is a sin."
>
> "She then said, 'I don't know what kind of people actually believe that kind of crap,'" Monk said, recalling the meeting. "I knew I was going to have a rough time in this unit and I would have to be very careful what I said."
>
> That moment came when Monk was called in to advise the commander on a disciplinary matter involving an Air Force instructor accused of making comments objecting to gay marriage.

And then Monk had to advise his lesbian officer about someone who disagreed with homosexuality:

> Seven people filed complaints about the remarks. It then became Monk's job to advise the commander on disciplinary action.
>
> "Her very first reaction was to say, 'we need to lop off the head of this guy,'" Monk said. "The commander took the position that his speech was discrimination."
>
> Monk suggested she use the incident as a learning experience – a way to teach everyone about tolerance and diversity.
>
> "I don't believe someone having an opinion for or against homosexuality is discriminatory," Monk told Fox News.
>
> From that point, Monk said he was told that he wasn't on the same page as the commander and if I didn't get on the page they were on, they would find another place for me to work."
>
> "I'm being chastised about what's going on," he said. "I'm told that members of the Air Force don't have freedom of speech. They don't have the right to say anything that goes against Air Force policy."
>
> Monk, who is a devout evangelical Christian, said he met with the young instructor and told him that he was fighting for him.
>
> "He was really concerned," he said. "He said he felt like he was on an island – that he couldn't be who he is anymore. He didn't understand why somebody would be offended."
>
> The instructor was eventually punished by having a letter of counseling placed in his official file.
>
> Monk soon found himself in a very similar position after his commander ordered him to answer a question about whether people who object to gay marriage are guilty of discrimination.
>
> "She said, 'Sgt. Monk, I need to know if you can, as my first sergeant, if you can see discrimination if somebody says that they don't agree with homosexual marriage,'" he said. "I refused to answer the question."
>
> Monk said to answer would have put him in a legal predicament.
>
> "And as a matter of conscience I could not answer the question the way the commander wanted me to," he said.

I actually wanted to joint the military when I was young. But I knew that if I ever disagreed with my superiors on issues like abortion or gay marriage, that I would have trouble transferring my skills to a new career. I chose to go into computer science so that I could get my skills without being censored or sanctioned by teachers who didn't agree with me. I wanted to avoid having to change who I was because someone else disagreed with me and wanted to push their views on me by exercising power. I had read about what atheists did to Christians in communist countries, and I didn't want to be exposed to that. I knew that I had to choose a field where I could always take my skills and leave if I sensed danger.

# New study finds highest-ever risk of breast cancer from abortion

**Wintery Knight** · 15 August 2013 · Archived copy · Original

Life News reports on the latest studies confirming the link between abortion and breast cancer.

Excerpt:

> A newly-published study shows the highest-ever abortion-breast cancer risk for women of any previously-published study on the link between the two.
>
> A Bangladesh study published in the Journal of Dhaka Medical College on risk factors for breast cancer, led by Dr. Suraiya Jabeen, found a statistically significant 20.62-fold increased risk among women with abortion histories. The new study on the abortion-breast cancer link is by far the highest risk elevation reported among 73 published abortion-breast cancer studies.
>
> Physical inactivity, being menopause, positive family history of breast cancer and history of induced abortion were found important risk factors," the authors wrote.
>
> Professor Joel Brind, a professor at Baruch College, City University of New York who is an expert on the abortion-breast cancer link, said the reason why the risk elevation is so high is because it's "a measure of relative risk."
>
> Observing that women in Bangladesh have very traditional childbearing patterns that reduce breast cancer risk, he explained: "Almost all the women are married (97% currently married; the rest widowed) and with child by the time they are 20, and all of the kids are breastfed. Ninety percent had their first child at age 21 or younger (99% of controls did). They typically neither take contraceptive steroids nor have any abortions. Nulliparity (childlessness) or abortion before first full term pregnancy (both of which mean no breastfeeding) in a population in which breast cancer is almost unheard of, makes the relative risk very high."
>
> Brind continued: "Although the authors did not include a measure of their abortion link's statistical significance, their raw data was complete enough to calculate a 95% confidence interval of 12.85-32.51, making abortion by far the strongest and most significant risk factor observed in these Bengali women. In plain English, women in this population who had any induced abortions were more than 20 times as likely to get breast cancer, compared to women with no abortions."
>
> According to the study, additional minor reproductive factors influencing breast cancer risk included: use of oral contraceptives (1.47-fold increased risk); early first birth at or before age 21 (0.35-fold reduced risk); having two or more children (0.29-fold reduced risk); and increased number of months spent breastfeeding (0.30-fold reduced risk).

Now let's take a look at some of the previous studies.

**Previous studies**

Life News reports.

Excerpt:

> A study in the Asian Pacific Journal of Cancer Prevention shows abortion increases the risk of breast cancer for women.
>
> C. Yanhua of the First Peoples' Hospital of Kunming in Yunnan province and his colleagues found the abortion-breast cancer association after comparing data from 263 cases of breast cancer and 457 controls without the disease. Their analysis covers the years 2009-2011.
>
> The authors examined information on disease diagnosis, demographics, medical history, and reproductive

> characteristics of the patients involved and also looked at short menstrual cycle, old age at first live birth, never breastfeeding, history of oral contraceptive use, postmenopausal status and nulliparity to determine in abortion-breast cancer link exists.
>
> They write that "multivariate model analysis revealed the significant independent positive associations with breast cancer of shorter menstrual cycle, older age at first live birth, never breastfeeding, history of oral contraception experience, increased number of abortion, menopause status, and nulliparities."
>
> "Number of abortion showed an increasing higher risk of breast cancer," they added, while saying that women who had one live birth lowered their risk. "As far as women who had once a live birth, it showed decreased the risk of breast cancer compared to nulliparous."
>
> "This study showed an increased risk of breast cancer with times of abortion. The association between abortion and risk of breast cancer in a study in China showed that the risk factors of female breast cancer included abortion times more than two (Li et al., 2006)," they continued. "Another study found that risk was raised among women reporting at least one abortion, but no trend was seen with number of abortions (Heuch et al., 2008). In a meta-analysis study, pooled odds ratio for number of abortions greater than and equal three was statistically significant (95%CI:1.68-5.36) (Tao et al.,2011)."
>
> "In conclusion, in this study the estrogen related risk factors of breast cancer included woman who had longer menstrual cycle, older age of first live birth, never breastfeeding, nulliparity, and number of abortions more than one. Therefore, it is recommended to women with these risk factors perform breast cancer screening tests earlier and regularly," they said.

Previously, another study was published in Oxford University's European Journal of Public Health, and the abstract is posted on the US National Library of Medicine National Institutes of Health (aka PubMed).

Here are the results:

> With statistical controls for number of pregnancies, birth year and age at last pregnancy, the combination of induced abortion(s) and natural loss(es) was associated with more than three times higher mortality rate than only birth(s). Moderate risks were identified with only induced abortion, only natural loss and having experienced all outcomes compared with only birth(s). Risk of death was more than six times greater among women who had never been pregnant compared with those who only had birth(s). Increased risks of death were 45%, 114% and 191% for 1, 2 and 3 abortions, respectively, compared with no abortions after controlling for other reproductive outcomes and last pregnancy age. Increased risks of death were equal to 44%, 86% and 150% for 1, 2 and 3 natural losses, respectively, compared with none after including statistical controls. Finally, decreased mortality risks were observed for women who had experienced two and three or more births compared with no births.

Life Site News adds more:

> A single induced abortion increases the risk of maternal death by 45 percent compared to women with no history of abortion, according to a new study of all women of reproductive age in Denmark over a 25 year period.
>
> The study found that each additional abortion is associated with an even higher death rate. Women who had two abortions were 114 percent more likely to die during the period examined, and women had three or more abortions had a 192 percent increased risk of death.
>
> Elevated rates of death were also observed among women who experienced miscarriages, ectopic pregnancies or other natural losses. Among women with a history of multiple pregnancies, women with a history of both abortions and natural losses, but no live births, had the highest mortality rate.
>
> Women who had never been pregnant had the highest mortality rate overall.

> However, women with a history of successful deliveries were the least likely to die during the 25 years examined.
>
> The study is the second record linkage analysis of Danish mortality data to be published this month.
>
> The earlier study was limited to comparing mortality rates following only the first pregnancy outcome. It found that abortion of a first pregnancy was associated with a higher rate of death compared to death rates among women who delivered a first pregnancy. The higher death rate among women who had abortions persisted for each of the first ten years following the first pregnancy outcome.
>
> […]Dr. Reardon is the director of the Elliot Institute, which funds research related to abortion. He believes further research is needed to explore how the outcomes observed in this latest study may be influenced by abortion's impact on natural pregnancy losses. A new population study from Finland, for example, has found that abortion is associated with higher rates of preterm delivery, low birth weight delivery, and perinatal deaths in subsequent pregnancies.
>
> "We knew from our previous studies of low income women in California that women who have multiple pregnancy outcomes, such as having a history of both abortion and miscarriage, have significantly different mortality rates," Reardon said.
>
> "But this new study is the first to examine how each experience with abortion or miscarriage contributes to higher mortality rates," Reardon observed.
>
> "This is called a 'dose effect' because each exposure, or 'dose,' is seen to produce more of the same effect, which is what one would expect if there is a cause-effect relationship," he said.
>
> Reardon believes that a truer picture of the benefits of childbirth and the risks of abortion and pregnancy loss is now emerging because of a shift to more reliable record linkage studies. Such studies have been conducted in Finland, Denmark and the United States.

And another from Life News.

Excerpt:

> A new study published in the *Asian Pacific Journal of Cancer Prevention* in February reported a very statistically significant increased risk of breast cancer for women with previous abortions as opposed to women who have never had one.
>
> The study, consisting of 1,351 women and led by researcher Ai-Ren Jiang, reported a statistically significant 1.52-fold elevation in risk for women with induced abortions and a "significant dose-response relationship between (the risk) for breast cancer and number of induced abortions," meaning the risk climbed with a higher number of previous abortions.
>
> For premenopausal women who have had abortions, the numbers were relatively small, and the observed 16% risk elevation was not statistically significant. However, for those with three or more abortions, the risk climbed to a statistically significant 1.55-fold elevation.
>
> "The results have revealed that induced abortion was related to increased risk of breast caner. Premenopausal women who had ≥3 times of induced abortion were at increased crude odds ratio (OR) (2.41, 95%CI: 1.09-5.42) and adjusted-OR (1.55, 95%CI: 1.15-5.68)," they wrote. "Postmenopausal women with a previous induced abortion were at increased crude OR (2.04, 95%CI: 1.48-2.81) and adjusted-OR (1.82, 95%CI: 1.30-2.54), and there was a significant increase trend in OR with number of induced abortions (p for trend: 0.0001)."
>
> […][A] Chinese study in 1995 by L. Bu and colleagues, including Janet Daling of the Fred Hutchinson Cancer Research Center, reported a statistically significant 4.5-fold elevated risk among women with previous induced abortions who developed breast cancer at or before age 35, compared to older women (who experienced a

> statistically significant 2.5-fold elevated risk)

Here's another study from the Journal of the American Medical Association (JAMA), showing that excessive consumption of alcohol is a rish factor for breast cancer.

Excerpt:

> Consumption of 3 to 6 alcoholic drinks per week is associated with a small increase in the risk of breast cancer, and consumption in both earlier and later adult life is also associated with an increased risk, according to a study in the November 2 issue of JAMA.
>
> "In many studies, higher consumption of alcohol has been associated with an increased risk of breast cancer. However, the effect of low levels of drinking as is common in the United States has not been well quantified," according to background information in the article. "In addition, the role of drinking patterns (i.e., frequency of drinking and 'binge' drinking) and consumption at different times of adult life are not well understood."
>
> Wendy Y. Chen, M.D., M.P.H., of Brigham and Women's Hospital and Harvard Medical School, Boston, and colleagues examined the association of breast cancer with alcohol consumption during adult life, including quantity, frequency, and age at consumption. The study included 105,986 women enrolled in the Nurses' Health Study who were followed up from 1980 until 2008 with an early adult alcohol assessment and 8 updated alcohol assessments. The primary outcome the researchers measured was the risk of developing invasive breast cancer.
>
> During the follow-up period, there were 7,690 cases of invasive breast cancer diagnosed among the study participants. Analyses of data indicated that a low level of alcohol consumption (5.0 to 9.9 grams per day, equivalent to 3-6 glasses of wine per week) was modestly but statistically significantly associated with a 15 percent increased risk of breast cancer. In addition, women who consumed at least 30 grams of alcohol daily on average (at least 2 drinks per day) had a 51 percent increased risk of breast cancer compared with women who never consumed alcohol.
>
> The researchers also found that when examined separately, alcohol consumption levels at ages 18 to 40 years and after age 40 years were both strongly associated with breast cancer risk. The association with drinking in early adult life still persisted even after controlling for alcohol intake after age 40 years.
>
> Binge drinking, but not frequency of drinking, was also associated with breast cancer risk after controlling for cumulative alcohol intake.

Now let's take a look at some other factors that raise the risk of breast cancer.

**Abortion and breast cancer**

Many studies show a link between abortion and breast cancer.

Study 1: (September 2010)

> Based on the expression of estrogen receptor (ER), progesterone receptor (PR) and HER2/neu (HER2), breast cancer is classified into several subtypes: luminal A (ER+ and/or PR+, HER2-), luminal B (ER+ and/or PR+, HER2+), HER2-overexpressing (ER-, PR-, and HER2+) and triple-negative (ER-, PR-, and HER2-). The aim of this case-control study is to determine reproductive factors associated with breast cancer subtypes in Chinese women. A total of 1,417 patients diagnosed with breast cancer in the First Affiliated Hospital, China Medical University, Shenyang, China between 2001 and 2009 and 1,587 matched controls without a prior breast cancer were enrolled.
>
> […]Postmenopause and spontaneous abortion were inversely associated with the risk of luminal tumors. By contrast, multiparity, family history of breast cancer and **induced abortion increased the risk of breast cancer**.

Study 2: (March 2010)

> OBJECTIVE: To explore the risk factors of breast cancer for better control and prevention of the malignancy.
>
> METHODS: The clinical data of 232 patients with pathologically established breast cancer were investigated in this 1:1 case-control study to identify the risk factors of breast cancer.
>
> RESULTS: The history of benign breast diseases, family history of carcinoma and**multiple abortions were the statistically significant risk factors of breast cancer**, while breast feeding was the protective factor.
>
> CONCLUSION: A history of benign breast diseases, family history of carcinoma and multiple abortions are all risk factors of breast cancer.

But wait, there's more.

**Birth control pills**

Many studies showed that taking birth control pills caused an increased risk of breast cancer.

Study 1: (March 2003)

> RESULTS: Among the youngest age group (<35 years, n = 545), significant predictors of risk included African-American race (RR = 2.66: 95% CI 1.4-4.9) and **recent use of oral contraceptives** (RR = 2.26; 95% CI 1.4-3.6). Although these relationships were strongest for estrogen receptor-negative (ER-) tumors (RRs of 3.30 for race and 3.56 for recent oral contraceptive use), these associations were also apparent for young women with ER+ tumors. Delayed childbearing was a risk factor for ER+ tumors among the older premenopausal women (Ptrend < 0.01), but not for women <35 years in whom early childbearing was associated with an increased risk, reflecting a short-term increase in risk immediately following a birth.

Study 2: (October 2008)

> **Oral contraceptive use ≥1 year was associated with a 2.5-fold increased risk for triple-negative breast cancer** (95% confidence interval, 1.4-4.3) and no significantly increased risk for non-triple-negative breast cancer ($P_{heterogeneity}$ = 0.008). Furthermore, the risk among oral contraceptive users conferred by longer oral contraceptive duration and by more recent use was significantly greater for triple-negative breast cancer than non-triple-negative breast cancer ($P_{heterogeneity}$ = 0.02 and 0.01, respectively).

All of this research shows that abortion is bad for women, but I also should mention that abortion is always bad for the unborn child, especially sex-selection abortions, which target women more than men.

**Conclusion**

The total cost for breast cancer treatment, which raises medical insurance premiums (private health care) or taxes (single-payer health care), has been estimated to be between $1.8 billion and $3.8 billion dollars. In addition, the government spends billions of dollars each year on breast cancer research. All of this spending is costing taxpayers a lot of money, as people demand more and more government funding of breast cancer research and breast cancer treatment (with either private or single-payer health care).

# Physicist Luke Barnes previews Craig-Krauss debate in Sydney, Australia

**Wintery Knight** · 15 August 2013 · Archived copy · Original

First, a preview of the Craig-Krauss debate that took place yesterday from Sydney-based philosopher Luke Barnes, whom I've written about before.

Excerpt:

> Krauss is in Sydney to debate the question "Why is there something rather than nothing?" – the traditional starting point for an ancient argument for the existence of God. Kraus, of course, is a cosmologist, known in the field for his work on the cosmological constant and dark matter, and to the wider public for books such as *The Physics of Star Trek* and *A Universe from Nothing*. Krauss's opponent is the Christian philosopher William Lane Craig. He has built a career around the philosophical defence of theism, and is best known outside academia for his many public debates with atheists.
>
> I am, like Krauss, a professional cosmologist and astrophysicist. I've also interacted with a philosopher or two, and I've read a lot of Craig's work. So I thought it might be opportune to offer a guide to the uninitiated.
>
> […]Krauss's latest book claims that advances in science have shown that we can answer the question "why is there something rather than nothing?" without invoking God. His argument can be summarised as follows:
>
> 1. The basic stuff of the universe, as we now understand it, consists of matter and energy, space and time, governed by laws of nature.
> 2. Particles of matter correspond to certain configurations of quantum fields. There is a configuration that corresponds to no particles (the "vacuum"). A state with no particles can evolve into a state with particles. Thus, matter can appear from no-matter.
> 3. The universe as a whole may have zero net energy.
> 4. There are theories that suggest that that space and time themselves are not fundamental, but emerge from a state without space and time.
> 5. The laws of nature may be stochastic and random, in which case there may be no ultimate laws of nature.
> 6. Since we can imagine the universe coming from a state with no matter, no particles, no space, no time and no laws, something can come from nothing.
>
> Krauss's book was far from universally acclaimed. Fellow unbeliever and physicist-turned-philosopher David Albert wrote a scathing review for the *New York Times*. Krauss responded by calling Albert "moronic" and generally dismissing philosophy as a waste of time. I'd love to stick up for a fellow cosmologist, but I'm with Albert and my reasons mirror his.
>
> Fundamental physics is, always has been and – unless it undergoes a major identity crisis – always will be about what the basic stuff of the universe is and how it interacts and rearranges. There is nothing deeper. Thus, there can be no answer within science as to where that stuff came from, why it is that type of stuff, why it obeys laws, why those laws, or why there is anything at all. All scientific explanations stop at the basic stuff.
>
> This is why Krauss's argument fails. Particles can appear from no-particles, not from nothing. The underlying field is always there. A state with zero energy is not nothing. There must first be a thing before we can measure its energy, even if the number we get is zero. A physical state with no space or time, however strange, is still not thereby nothing. A universe with laws that vary from place to place and time to time is clearly not the same as one with no laws at all. It just makes the laws more complicated. Step 6 makes an unjustified leap from "something from not-these-five-things" to "something from nothing."
>
> There must always be questions that science leaves unanswered. Naturalism posits that there is nothing but the

> stuff of science. Here, then, is the challenge for naturalism. To believe naturalism, one must believe that these questions are unanswerable. Not just unanswered, not just awaiting a breakthrough, not just an open research question. They must be non-questions, meaningless strings of words, nonsense cleverly disguised as the oldest and deepest questions mankind has asked about reality. Unfortunately for Krauss, to have any hope of doing that he's going to need to put on his philosopher's hat.

Dr. Craig posted his comments about the debate after it happened:

> The dialogue last night with Krauss went really well! We largely avoided the personal attacks and finally focused on the philosophical issues. Krauss did not mount much of a defense of his claim that physics can offer plausible explanations of why something exists rather than nothing and did not seem to understand Leibniz's argument, taking it to be about the temporal origin of he universe. Now on to Melbourne, where the dialogue will be moderated by none other than Graham Oppy!

You can also find a full review of the debate by someone who attended it here.

Excerpt:

> Krauss decided not to primarily attack the premises of the contingency argument but rather the very nature of deductive syllogisms. To do this he presented the following syllogism (I admittedly did not get to write this down but this was the general idea):
>
> 1. Mammals practice homosexuality.
> 2. Craig is a mammal
> 3. Therefore Craig practices homosexuality. (I honestly can't remember the exact phrasing of the conclusion but you can see the general gist)
>
> This shocked me. Not only was it an obviously invalid argument but it got a big laugh from the audience (who didn't seem to see how bad it was). To Krauss' credit he did at least say that the conclusion was obviously false (at least to his knowledge) but it struck me as very disrespectful. Krauss complimented Craig on being a genuinely nice guy but continued to make regular quips about his use of deductive logic and lack of intellectual honesty. He also attacked the second premise of the argument as obviously question begging.
>
> Krauss concluded his last minute with personal E-mail correspondence between himself and Alexander Vilenkin concerning the Borde-Guth-Vilenkin theorem, a piece of evidence that Craig often employs to demonstrate that the universe began to exist. Unfortunately there was a lot of text on the slide but the main point from Vilenkin seemed to be that the BVG theorem could break down if it turned out that a quantum theory of gravity held to be true. I look forward to this letter becoming public so we can have a better look at it. I was disappointed that Krauss did not raise this earlier or spend more time explaining it. Krauss appealed to evolution, the multiverse and the appearance of apparent "poor tuning" as a way of defeating the teleological argument. Clearly Krauss was conflating the teleological argument from cosmology with some sort of intelligent design argument for biological complexity; a forgivable error for a layperson but not someone of Krauss' stature.

I am praying that Dr. Craig is able to help Dr. Krauss consider the existence of God respectfully and fairly, and I hope you will as well. I do admire Krauss for agreeing to have these debates. He's not just having one debate or two debates, but several. And this is not the first time he's debated Dr. Craig either. You have to admire the man's willingness to defend his views. I think a lot of atheists in the universities are insulated from arguments like Dr. Craig's, and they'll stay insulated form them unless them make an effort to hear the other side.

# Should young people be dating before they are ready to get married?

**Wintery Knight** · 16 August 2013 · Archived copy · Original

A thoughtful post on The College Conservative that I agree with, written by Bryana Johnson.

Excerpt:

> I wonder sometimes if I am the only one who winces to hear a thirteen-year old speak with cavalier abandon of his or her "ex?" Since when is it considered healthy and acceptable for underage people to be in "relationships?" Just what do parents and educators expect to be the result of the romantic conquests of these middle-school children and young high school students? The results I've witnessed personally are beyond disturbing; they are downright sinister, and have caused me to question whether or not those who claim to champion marital fidelity and family values are paying any attention at all to the standards we are passing to our children.
>
> The trouble with underage dating is that it presents an entirely faulty view of what interaction with the opposite gender should be about. Rather than placing emphasis on building one strong relationship with one person at a stage of life when a marital commitment is feasible, dating encourages young people to pour their energies into consistently seducing other young people at a time when neither of them are capable of making any long-term commitments. Their "relationships" are destined to fail from the get-go because they are founded on unhealthy perceptions of love and not backed by any real necessity to stick it out.
>
> The beauty of marriage, as it was intended to be, is that it teaches two people of opposite genders to learn to work through incompatibilities and give of themselves. In the same way, the great ugliness of dating as it is practiced by our culture and portrayed by our media, is that it teaches two people of opposite genders to be selfish by giving them an easy "out" when things don't go according to their initial feelings. I believe it is fair to say that this form of dating is a training manual for divorce, because it encourages young people to grow accustomed to giving their hearts away and then taking them back.
>
> Sadly, parents who should know better continue to display shocking naïveté regarding the absurd practices of driving their twelve year olds out on a "date," or purchasing provocative clothing for their sixteen-year-olds, or sympathizing with their broken-hearted fourteen-year-olds by assuring them that they'll "find someone better." "They're just having fun," they'll tell us, rolling their eyes at what they consider to be our tightly wound principles. I work a volunteer shift at Crisis Pregnancy Clinic where I witness every week the ruined lives and broken dreams that "fun" has left with our youth.
>
> Another defense offered for the ridiculous habit of underage dating is that the kids are "just learning how to relate to the opposite sex." It doesn't take a Ph.D. to figure out that what they're really learning is how to recover quickly from a break-up and set their sights on another gorgeous and equally hormonal person. The culture of dating is a culture of hunger and unsatisfied eyes that are always looking around for affirmation via someone or something else.
>
> But perhaps the most ludicrous and most willfully naïve assertion is that "relationships" between young teens are "not really about sex." Just what do we think such relationships are about between people too young to be interested in any of the other things (family, stability, home-making, etc. ) that come out of a romantic involvement with the opposite gender? Contrary to such half-baked assurances, it *is* all about sex for these young people. Whenever they forget that, the pop-culture is quick to remind them of it. In the media, girls are unfailingly presented as having value to boys only in proportion to their physique and their manner of flaunting it. Boys are presented as bestial and incapable of responsibility. Overwhelming, this is the primary message being offered to our kids by the movies, magazines, music artists, and commercials directed at their age group. It is inexcusably irrational for us to suppose that their relationships with one another are untainted by the

> stereotypes that surround them.
>
> […]While social conservatives may proclaim the virtues of pre-marital abstinence and fidelity, their actions don't line up with their words. They behave as though they expect our young people to embrace or at least abide by the values we preach to them, all the while continuing to direct them in lifestyle choices that foster the opposite principles and attitudes.

I really like it when women are very very direct about boundaries. There's something reassuring to about a woman who makes moral judgments and doesn't care about whether it makes people like her less. She's trying to help people make wiser decisions so that they don't get hurt over and over and wreck their chances of having a stable marriage. I have to give her my respect for that. I've always subscribed to the duct tape theory of love. The more you bond and pull away, the less you can bond to someone you really care about. Teenage dating is breakup training. Boys shouldn't be dating until they have proven that they can carry out their roles: protector, provider, moral and spiritual leader.

# Walt Russell explains how to read the Bible effectively

**Wintery Knight** · 16 August 2013 · Archived copy · Original

Below I go over two potss written by Biola University New Testament professor Walt Russell. The material below is almost the same talk he gave for the Stand to Reason Masters Series in Christian Thought. His book on the subject of interpreting the Bible is called "Playing With Fire: How the Bible Ignites Change in Your Soul". I highly recommend that you read the book, so you know how to read the Bible effectively. But these four articles will teach you most of what you need to know if you don't want to buy the book.

Here is part one which talks about how postmodern relativism is at odds with discovering the original intent of an author.

Excerpt:

> Twenty-four year-old "Janet" (not her real name) was angry at my emphasis on seeking to discover authors' intentions when we read their texts. She was an evangelical Christian and a second grade teacher in a public school. She prided herself in helping her 20 students learn to love literature. She would read them a story as they gathered around her, and then ask each child, "What does the story mean to you?" She prodded them to come up with their own unique meanings. With such strong encouragement, the class of 20 would eventually have 20 different meanings for the one story. Janet sensed that I was a naysayer about such "love of literature." Pouring a little emotional gasoline on the fire, I said, "Janet, you're certainly doing your part to insure that these 7 year-olds will never recover from a radically relativistic view of meaning!" Now I had her full attention.

Here is part two which talks about the importance of knowing the genre of a text before you try to interpret it.

Excerpt:

> "INDIANS SLAY TIGERS!" — the newspaper headline virtually screams out at you. The thought of something being slain is repulsive. You're gripped by a mental image of southern India's Bengal tiger. You imagine its beautiful face, its stripes and piercing eyes. Then your image is shattered by the sudden blast of a high-powered rifle. You see the exquisite creature writhe in pain, fall gracelessly in its tracks and die. Having read no further than the headline, you feel sick, as if you've witnessed something tragic.
>
> But *should* you feel this way? The slaughter of an endangered species — especially one as magnificent as the Bengal tiger — is horrifying, no doubt. But suppose you failed to notice that the headline "INDIANS SLAY TIGERS!" appeared in the *sports page* of the morning paper. Clearly enough, it now refers to different Indians, different Tigers and a different manner of slaying than you originally thought. And is it really that tragic that the Cleveland Indians badly beat the Detroit Tigers in a major league baseball game last night? Not unless you're a long-suffering Detroit Tigers' baseball fan. But how do you now know that the headline is about baseball and not tiger-slaying in India? You look at the words "INDIANS SLAY TIGERS" and you know exactly what each word means. When you combine these words, how can they not mean exactly what you first thought they did — that *Indians slay tigers*? Answer: because their meanings are communicated (as the meanings of *all* words are) through *genres*!

Here is part three which talks about the importance of reading the context of a verse before you try to interpret it.

Excerpt:

> "Never Read a Bible Verse!" That's the title of a little booklet my friend and Christian radio personality, Gregory Koukl, has written to help people read the Bible well. What great advice. "That's right, never read a Bible verse. Instead, always read a paragraph — at least." But the current is flowing the other way in our

> popular sound-bite culture. Not to be left out (or left behind!), the Church has its own version of sound-bite culture: *verse-bite culture*. In verse-bite culture we take a sentence or sentence-fragment from a biblical paragraph, memorize it out of context, write it on a little card, put it on a billboard, a plaque, a rock, etc. Somehow we think that just because this little chunk of Scripture has a verse number in front of it, it was meant to be a free-standing unit of thought. Nothing could be further from the truth.
>
> Apart from the fact that chapter and verse divisions weren't added to the New Testament text until 1560 — long after the New Testament's inspired authorship — there is a more important reason for never reading just a Bible verse, and instead reading at least the paragraph that contains it.

Here is part four which talks about the importance of applying the words of the Bible to your life.

One verse that is often misinterpreted is missing from the articles, but present in the STR lecture. It's Philippians 1:6 that says "6 being confident of this, that he who began a good work in you will carry it on to completion until the day of Christ Jesus". Russell says in the lecture that this promise is specifically intended for the church in Philippi, to whom Paul is writing, not necessarily to all Christians. He is giving them a promise just after directly referring to their good work in supporting him in his ministry. Some verses are just not meant for us, and the context reveals it.

# Correcting four myths about the history of the Crusades

**Wintery Knight** · 16 August 2013 · Archived copy · Original

Here is an interesting article from First Principles Journal. (H/T The Poached Egg)

Intro:

> The verdict seems unanimous. From presidential speeches to role-playing games, the crusades are depicted as a deplorably violent episode in which thuggish Westerners trundled off, unprovoked, to murder and pillage peace-loving, sophisticated Muslims, laying down patterns of outrageous oppression that would be repeated throughout subsequent history. In many corners of the Western world today, this view is too commonplace and apparently obvious even to be challenged.
>
> But unanimity is not a guarantee of accuracy. What everyone "knows" about the crusades may not, in fact, be true. From the many popular notions about the crusades, let us pick four and see if they bear close examination.

The four myths:

- Myth #1: The crusades represented an unprovoked attack by Western Christians on the Muslim world.
- Myth #2: Western Christians went on crusade because their greed led them to plunder Muslims in order to get rich.
- Myth #3: Crusaders were a cynical lot who did not really believe their own religious propaganda; rather, they had ulterior, materialistic motives.
- Myth #4: The crusades taught Muslims to hate and attack Christians.

Here's the most obvious thing you should know. The Crusades were *defensive* actions*:*

> In a.d. 632, Egypt, Palestine, Syria, Asia Minor, North Africa, Spain, France, Italy, and the islands of Sicily, Sardinia, and Corsica were all Christian territories. Inside the boundaries of the Roman Empire, which was still fully functional in the eastern Mediterranean, orthodox Christianity was the official, and overwhelmingly majority, religion. Outside those boundaries were other large Christian communities—not necessarily orthodox and Catholic, but still Christian. Most of the Christian population of Persia, for example, was Nestorian. Certainly there were many Christian communities in Arabia.
>
> By a.d. 732, a century later, Christians had lost Egypt, Palestine, Syria, North Africa, Spain, most of Asia Minor, and southern France. Italy and her associated islands were under threat, and the islands would come under Muslim rule in the next century. The Christian communities of Arabia were entirely destroyed in or shortly after 633, when Jews and Christians alike were expelled from the peninsula.[6] Those in Persia were under severe pressure. Two-thirds of the formerly Roman Christian world was now ruled by Muslims.
>
> What had happened? Most people actually know the answer, if pressed—though for some reason they do not usually connect the answer with the crusades. The answer is the rise of Islam. Every one of the listed regions was taken, within the space of a hundred years, from Christian control by violence, in the course of military campaigns deliberately designed to expand Muslim territory at the expense of Islam's neighbors. Nor did this conclude Islam's program of conquest. The attacks continued, punctuated from time to time by Christian attempts to push back. Charlemagne blocked the Muslim advance in far western Europe in about a.d. 800, but Islamic forces simply shifted their focus and began to island-hop across from North Africa toward Italy and the French coast, attacking the Italian mainland by 837. A confused struggle for control of southern and central Italy continued for the rest of the ninth century and into the tenth. In the hundred years between 850 and 950, Benedictine monks were driven out of ancient monasteries, the Papal States were overrun, and Muslim pirate

> bases were established along the coast of northern Italy and southern France, from which attacks on the deep inland were launched. Desperate to protect victimized Christians, popes became involved in the tenth and early eleventh centuries in directing the defense of the territory around them.

This is always good to know when you are answering Muslims, because they do tend to bring it up.

# A clip from the 2013 Reasonable Faith speaking tour in Australia

**Wintery Knight** · 17 August 2013 · Archived copy · Original

The question is "why should anyone care about Paul's view on homosexuality, since Paul never met Jesus?"

Here is the answer:

Dr. Craig's answer is two-fold. First, he said that Jesus was a Jew and had the same views on this question as Jews normally did. Second, he cited Jesus' teaching about marriage being the union of one man and one woman in Mark 10:7-9 and Matthew 19:5. I heard this same verse presented when I was listening to the "It takes a Family" 2013 lectures, in the lecture by Dr. Robert Gagnon, who is an expert on what Jesus says about homosexuality.

Here are the relevant links, if you want to get yourself ready:

- "Jesus and Marriage" ~ Dr. Robert Gagnon @ ITAF '13
- Jesus and Marriage Q&A ~ Dr. Robert Gagnon @ ITAF '13
- "Paul and Homosexual Practice" ~ Dr. Robert Gagnon @ ITAF '13
- "Paul and Homosexual Practice" Q&A ~ Dr. Robert Gagnon @ ITAF '13

I had to respond to a similar question recently in the comments of this blog, too. The questioner "JB" asserted that Christians could also be pro-abortion, and I replied with this:

> Well there you have it. It doesn't matter that the early church took in abandoned infants and prohibited abortion, because JB knows what the Bible really meant – not the early church.
>
> Look:
> http://birdsoftheair.blogspot.com/2010/11/early-christianity-on-abortion.html
>
> Quote:
>
> Recently I came across a reading of the Didache. "The what?" you may ask. The Didache is a book written somewhere in the first or second century. For a long time it was up for consideration as Scripture. It was believed to be the Teaching of the Twelve Apostles. Eventually it was agreed that the book was an excellent book, but not inspired Scripture. So I was pleased to be able to download this admirable book containing good teachings from the early Church fathers.
>
> The book seemed to be largely a lot of quotes from Scripture. You'll learn the basic rules of Christianity — "First, you shall love God who made you; second, love your neighbor as yourself." You'll learn that "grave sins" are forbidden, like adultery, murder, fornication, and so on. (They specifically include pederasty in the list.) There are instructions regarding teachers, prophets, Christian assembly, and so on. Lots of the normal, good stuff. But, since this was written sometime prior to 200 AD, I was somewhat surprised at this instruction: "You shall not murder a child by abortion" (Didache, Ch 2).
>
> More are linked here:
> http://www.priestsforlife.org/magisterium/earlychurchfathers/fatherscover.html
>
> Notice how these early Christian sources conflict with JB's assertion that there can be pro-abortion Christians. Not just one time, but many, many times. That's because JB is wrong in his interpretation of the Bible.
>
> Basically, what JB has been doing in his comments is interpreting the Bible against the grid of modern non-Christian ideologies and completely disregarding the interpretations of the text by the people who were closer to the original events. Bible-believing Christians get the meanings of the words from the people who were closest to them, whereas JB is trying to project modern immorality back into the ancient text for his own purposes.

Note: I do get annoyed with people who claim to be Christians but aren't, so I wasn't at my best there.

But just like Dr. Craig, I am appealing to the people nearest the events to see how the Bible was interpreted at the time. Of course I had all the time in the world for my reply, and Dr. Craig had to have his ready in a split-second. Still Dr. Craig could not have answered this challenger, because he was busy in Australia doing debates with Lawrence Krauss in several big Australian cities. He couldn't be here to answer this person's questions. I hope my answers were as good, but it was left to me and two other commenters WorldGoneCrazy and Doug to answer JB. There was no one else to do the job.

J. Warner Wallace recently wrote a post about what it takes to be a Christian apologist.

He had 3 points:

> **Accept Your Identification**
> Peter tells us in 1 Peter 3:15 that *all* of us have a duty to be ever-ready to make the case for our hope in Jesus. This isn't an option reserved for a few well-trained professionals; all of us, regardless of position or vocation, are tasked with this honor. As I wrote in *Cold Case Christianity*, when we, as Christians, live without embracing this aspect of our identity, we are living an *abbreviated* Christian life. The sooner you accept this aspect of your Christian character and identify yourself as an apologist, the more likely you are going to take it seriously. Start calling yourself a Christian Case Maker ("apologist") today.
>
> **Accept Your Obligation**
> Although every Christian is called to be a Case Maker, some are definitely better than others. Once you begin to identify yourself in this way, you'll sense your own inadequacies as you engage others. As a result, you'll likely begin to train yourself (formally or informally) to meet the challenge. You may find yourself in a certification or advanced education program, but you may not. Some of the best and most effective apologists are not formally trained in apologetics. The two best-selling apologetics authors in America, Josh McDowell and Lee Strobel, have no formal training in the area of apologetics or philosophy. It's clear, however, that both of these men take their obligation as Christian Case Makers seriously and have studied their worldview and practiced their craft.
>
> **Accept Your Location**
> While many of us would love to leave our "day jobs" to work as vocational apologists, let me encourage you to stay wherever God has already placed you. I am a "one dollar apologist"; a Christian Case Maker who still derives 90% of my income from my career as a detective. I have always equated my life as a Christian with my life as a Christian Case Maker. For this reason, I could no more call myself a vocational Christian apologist than I could call myself a vocational Christian. God has given me this set of investigative skills so I can share them with others, and He's placed me in this career, at this time and place, as part of the larger Christian family.

I don't think anyone sees the battlefield as well as J. Warner Wallace does. And he is tolling the bell for you in that post.

Were you in?

I remember vividly a story in the past when walking down the corridor of my apartment building with my laundry hamper full of dried clothes. I was being stopped by a U.S. Marine who asked me about the U.S. Marine hoodie I was wearing. He asked me a question I will never forget. He said “were you in?”.  I said that no, I was not in, because I was trained as a software engineer at the undergraduate and graduate level and that it was my day job to write code. (In fact, I am going to be working all day Saturday and Sunday with JQuery, JSP, CXF, JAXB, JSON, JPA/Hibernate and other technologies to get my REST web services complete for Monday morning stand-up). But I told him then that as part of learning about America, which all Americans should do, that I had been reading the U.S. Marine Corps reading list and that I bought this hoodie to show my support for the Marines. I think he was hoping that I was a former marine. The motto of the USMC is “Semper fidelis” which means “always faithful”. And that’s exactly what God expects from us, according to 1 Corinthians 1:1-5.

Were you in?

# After action reports from William Lane Craig vs Lawrence Krauss debate in Sydney

**Wintery Knight** · 17 August 2013 · Archived copy · Original

The first one is from blogger Stephen of ChristianFaith.com. (H/T Apologetics 315)

Excerpt:

> William Lane Craig (WLC) attempted to deal with the main topic along classic logic paradigms (too much in my view), but Krauss (at times) was simply spoiling the dialogue with constant interruptions and diversions. In other words, he chose not to fight fair and intentionally landed some low blows.
>
> […]After that he gave us a useful dumbed-down materialist version of how the universe came into existence from 'nothing' and attacked Craig's model for a transcendent beginning to the universe(s). An odd analogy (a reference to homosexuality) was used to counter Craig's Kalaam cosmological argument but his 15 minutes were, overall, engaging, well-paced and entertaining. His personal style of humour was critical to his presentation as he freely admits that scientists within his own discipline of physics are often regarded as 'obnoxious' (his word, not mine).
>
> In short, Krauss was confident, engaging, cocky and unconvincing re: the actual topic – *'Why is there something rather than nothing?'*
>
> Craig's 15 minutes were a direct contrast to Krauss's.
>
> Craig relied on his written notes far more heavily than the free flowing style of Krauss and he presented his views on the topic with intense logic and refined public speaking skills. His constant reference to the Leibnizian cosmological argument firmly imprinted in my mind that Craig was firmly committed to the central topic and he did his expert best to convince us of it. For example, Krauss's various concepts of 'nothing' has been the subject to much derision by some (not just theists) and Craig deliberately exposed Krauss's inconsistencies by quoting Krauss himself! For example:
>
> - "There are a variety of forms of nothing, they all have various definitions."
> - "The laws of quantum mechanics tells us that nothing is unstable."
> - "Nothing weighs something."
> - "Nothing is almost everything."
>
> And this is where Krauss's biggest problem lay. It's his definition, ultimately, of 'nothing'. Craig exposed the issue in just one slide and even Krauss looked uncomfortable in his chair as the quotes above were read out.
>
> Which brings me to the next point, which for some of you will seem quite trivial.
>
> I was seated close to the stage and had a great view of Krauss the man. I watched him closely as Craig presented his views and was very disappointed to see some of his reactions that I would describe as just plain rude. Without a buzzer this time, Krauss was constantly either rolling his eyes in disapproval at some of Craig's statements or even raising his hands at times to publicly announce his disapproval.
>
> Why do this? One can only interpret this as arrogance and rudeness. I could not imagine Craig himself or Ravi Zacharias or John Lennox adopting these negative (look-at-me-folks) non-verbal gestures.

Stephen then links to a reaction to the debate from physicist Luke Barnes, whose preview of the debate I blogged about before.

The review is in a comment by Dr. Barnes:

> It went alright, I think. A little too much interruption, and some red-herrings from the moderator, but

> reasonably civil and on-topic.
>
> The most interesting bit came when Craig was trying to justify premise 2 of his argument:
>
> “If the universe has an explanation, then that explanation is God.”
>
> Krauss disputed this premise in the opening speech, saying that it just assumed God did it. Craig’s argument for premise 2 went something like this:
>
> A. Definition: the universe is the totality of physical reality. (Call it the multiverse if you like, if there is one.)
> B. Then, if the universe has an explanation, it cannot be in terms of physical things.
> C. Since the universe includes all matter, energy, space and time, the explanation must then be a transcendent, immaterial, spaceless and timeless entity.
> D. The only thing that Craig can think of that can be a cause whilst being immaterial is an unembodied mind.
> E. Thus, if the universe has an explanation, then that explanation is a transcendent, immaterial, spaceless and timeless mind. That being deserves the title “God”.
>
> Krauss responded by questioning the definition. He tried to get Craig to say that physical reality was just everything in spacetime, since then he could say that science can talk about spacetime foams and other postulated physical things more fundamental than spacetime. I think, given more time to clarify, Craig would have said that spacetime foam is a physical thing (since it can appear in physical theories) so its part of the universe.
>
> Krauss also responded that D merely states the limit of the human mind, and says nothing about reality. Craig could have responded by asking for an alternative, or rephrased the argument as an inference to the best explanation. I think that “the only hypotheses I can think of” type assumptions are lurking behind almost all inferences. (Maybe I can show that from Bayes theorem. I’ll have a think about that.).
>
> This was the most relevant bit of the debate, but then things got sidetracked (I think because of the moderator).

I replied to Dr. Barnes on his blog like this:

> I think that Dr. Craig is leaving it to his opponent to present and defend alternatives to his views. It’s not his job in the time he has to present alternatives and refute. That’s the job of his opponent. Dr. Peter Millican did a good job of doing that in his debate with Dr. Craig, and Dr. Craig had to defend and refute the alternatives that Dr. Millican presented.
>
> Thanks for your comments, Dr. Barnes. I linked to your preview and to this review of the debate as well.

Not sure if I want to spend the time summarizing these debates. It’s a joy to summarize a debate with Austin Dacey, or Walter Sinnott-Armstrong or Peter Millican, but Dr. Krauss is not in that class of debaters. But I think these debates are useful to show the fundamental unattractiveness of atheism as a worldview. I don’t want to be anti-reality like Dr. Krauss – always taking refuge in speculations and hiding from scientific evidence in order to keep up the delusion for as long as possible.

# RNC threatens to cancel 2016 primary debates on pro-Democrat CNN

**Wintery Knight** · 18 August 2013 · Archived copy · Original

The Hill (left-leaning) reports.

Excerpt:

> The Republican National Committee (RNC) voted unanimously Friday to pull the group's partnership with NBC and CNN for the 2016 GOP presidential primary debates unless the networks kill their planned films on Hillary Clinton.
>
> "We don't have time for the media's games," RNC Chairman Reince Priebus said before the vote at the RNC summer meeting in Boston. "We're done putting up with this nonsense. There are plenty of other news outlets."
>
> According to the resolution, called "In support of media objectivity and accountability" and obtained by The Hill, the RNC called the planned films "political favoritism" and accused NBC and CNN of airing "programming that amounts to little more than extended commercials promoting former Secretary Clinton."
>
> CNN announced last month it had planned a feature-length film on the life of the former secretary of State and possible Democratic presidential contender. NBC will air a four-hour mini-series starring Diane Lane as Clinton.
>
> Earlier this month, Priebus sent letters to CNN President Jeff Zucker and NBC Chairman Robert Greenblatt warning he'd pull GOP debates from the networks over the films, which he called "a thinly veiled attempt at putting a thumb on the scales of the 2016 presidential election."
>
> The chairman argued that moving ahead with the movie projects was evidence that neither network could be trusted to be fair arbiters in a presidential debate.
>
> […]The RNC is looking to exert more influence over the debate process. In 2011 and 2012, the GOP candidates endured more than 20 debates, which some have said resulted in the party emerging from the primaries weakened by infighting and embarrassing nationally televised incidents.
>
> This week, the *Washington Examiner* reported that the RNC is considering some high-profile conservative media personalities, like Sean Hannity and Rush Limbaugh, as potential debate moderators.
>
> "I actually think that's a very good idea," Priebus said.

The Washington Examiner reports Mark Levin is also being considered, and I think he'd be a much better choice than Limbaugh or Hannity.

Excerpt:

> The move comes as several conservatives are pressuring the party to have Limbaugh, Hannity and Levin ask the debate questions. "It makes a lot of sense. We'd get a huge viewership, they'd make a lot of news and maybe have some fun too," said one of the advocates of the radio trio hosting debates.
>
> The idea took on life when RNC Communications Director Sean Spicer was asked about debate hosting during a Sirius XM radio interview last week. "Mark Levin should ask the questions," Spicer said, according to Breitbart news. That way, he said, grassroots conservatives would have a debate questioner who thinks like them.
>
> Party boss Reince Priebus earlier this month also told conservative radio's fast-rising star Andrea Tantaros that he would be open to a talk radio debate including her, Hannity and Levin. "I actually think that's a very good idea," Priebus said on the Andrea Tantaros Show. "I mean, there's a lot of good people out there that can

> actually understand the base of the Republican Party, the primary voters."
>
> Potential candidates, however, might have a problem with the developing plan. New Jersey Gov. Chris Christie, for example, is a target of Levin, who this week told Fox that he will urge voters to reject the moderate Republican. "I will do everything I can, in my little way, to make sure he is not the nominee," Levin told Neil Cavuto.

I agree with Levin on Christie. Christie helped Obama get elected in 2012.

What do you think? Would you rather have Mark Levin than Candy Crowley as a debate moderator? I think that CNN is basically an extension of the Democrat Party, and the academic studies on media bias bear that out. The GOP should stay as far away from CNN as possible during the 2016 election.

# Former soldiers arrested by UK police for defending their business from burglar

**Wintery Knight** · 18 August 2013 · Archived copy · Original

So this news story from the UK Daily Mail should come as no surprise to anyone who reads British writers like Theodore Dalrymple or James Hannan or Peter Hitchens.

Excerpt:

> Two men were dragged to court for apprehending a Romanian they caught burgling their business.
>
> A nine-month ordeal ended for Steven Iliffe, 54, and son Daniel, 26, yesterday when a judge threw out the case against them.
>
> They had begged police to go on a roof to arrest career criminal Petre Ilie.
>
> But officers were barred by their superiors, via their radio, due to health and safety rules.
>
> Eventually, the father and son, both former soldiers, went on the roof themselves to tackle the armed man.
>
> They were stunned when the police later arrested them on suspicion of attempted murder – and later charged them with the lesser offence of causing grievous bodily harm with intent.
>
> Yesterday, the pair said they were considering legal action against Leicestershire Police.
>
> Mr Iliffe senior said he had suffered a heart attack in a cell triggered by the stress of his arrest at their scrap metal business in Hinckley, Leicestershire, last December.
>
> He added: 'We had suffered a string of burglaries and went up onto that roof only because the police had refused to do so.'

The criminal is in the country illegally, too:

> Leicester Crown Court was told yesterday that Ilie, 39, already had 'a number of convictions for burglary, failing to surrender and breaching court orders' in the UK under the name Christopher Tudor.
>
> In 2010 he was deported but sneaked back into the UK.
>
> He was then arrested again alongside the Iliffes.

I hope that the United States doesn't ever get to the point where the government prevents law-abiding citizens from defending themselves from criminals. The UK is a very liberal country, so they are very much into the idea that evil is good, and good is evil, so that everyone is "equal" and liberals can feel compassionate.

I know that formerly liberal countries like Canada have been pushing back hard against crime, with measures like abolishing the long gun registry, a tough "omnibus" crime bill, and renewed protections for self-defense. I guess that's why their crime rates are at a 40-year low. Canada is serious about stopping crime. They do what works, and then they get the results that they expect to get.

# William Lane Craig Alex Rosenberg debate: Does God Exist? Video, MP3 audio and summary

**Wintery Knight** · 18 August 2013 · Archived copy · Original

Below, please find my summary of the Craig-Rosenberg debate, which occurred on February 1st, 2013 at Purdue University.

Brian Auten has posted the MP3 audio of the debate at Apologetics 315. J.W. Wartick has a review of the debate here. Tom Gilson has a review of the debate here. Here's another review of the debate from Carson Witnauer.

**The debaters**

William Lane Craig:

> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology in La Mirada, California.
>
> Dr. Craig pursued his undergraduate studies at Wheaton College (B.A. 1971) and graduate studies at Trinity Evangelical Divinity School (M.A. 1974; M.A. 1975), the University of Birmingham (England) (Ph.D. 1977), and the University of Munich (Germany) (D.Theol. 1984). From 1980-86 he taught Philosophy of Religion at Trinity… In 1987 they moved to Brussels, Belgium, where Dr. Craig pursued research at the University of Louvain until assuming his position at Talbot in 1994.
>
> He has authored or edited over thirty books, including *The Kalam Cosmological Argument*; *Assessing the New Testament Evidence for the Historicity of the Resurrection of Jesus*; *Divine Foreknowledge and Human Freedom*; *Theism, Atheism and Big Bang Cosmology*; and *God, Time and Eternity*, as well as over a hundred articles in professional journals of philosophy and theology, including *The Journal of Philosophy*, *New Testament Studies*, *Journal for the Study of the New Testament*, *American Philosophical Quarterly*, *Philosophical Studies*, *Philosophy*, and *British Journal for Philosophy of Science*.
>
> Craig's CV is here.
>
> Craig's list of publications is here.

Alex Rosenberg:

> I joined the Duke faculty in 2000. Previously I was professor of philosophy at Dalhouse University in Canada, Syracuse University, University of California, Riverside and at the University of Georgia, in the US. I have also been a visiting professor and/or fellow of the Center for Philosophy of Science at the University of Minnesota, as well as the University of California, Santa Cruz, Oxford University (Balliol College) and the Research School of Social Science of the Australian National University. Here at Duke, I am co-director of the Center for Philosophy of Biology, along with Robert Brandon, Dan McShea and Fred Nijhout.
>
> In addition I am the director of the AB Duke Scholarship Program and its associated summer Duke in Oxford Program at New College. Along with Professor Martha Reeves of the Sociology Department I co-direct Duke's summer program on Globalization in Geneva. Check the links below for more information on these programs.
>
> My interests focus on problems in metaphysics, mainly surrounding causality, the philosophy of social sciences, especially economics, and most of all, the philosophy of biology, in particular the relationship between molecular, functional and evolutionary biology.

Below is the summary from tonight (February 1st, 2013).

If you like the summary below, please friend me on Facebook and/or follow me on Twitter.

**Summary of the debate**

**Dr. Craig's opening speech:**

The topic: What are the arguments that make belief in God reasonable or unreasonable?
First speech: arguments for reasonableness of belief in God
Second speech: respond to arguments against reasonableness of belief in God

Eight arguments:

1. Contingency argument: God – a transcendent, personal being – is the explanation of why a contingent universe exists.
2. Cosmological argument: God is the cause of the beginning of the universe, which is attested by physics and cosmology.
3. Applicability of mathematics to nature: God is the best explanation for the applicability of mathematics to nature.
4. Fine-tuning argument: God is the best explanation of the fine-tuning of the universe to permit life.
5. Intentionality of conscious states: God is the best explanation of the intentionality of our mental states.
6. The moral argument: God is the best explanation for the existence of objective moral values and duties.
7. The resurrection of Jesus: God is the best explanation for the core of historical facts accepted by most ancient historians across the ideological spectrum.
8. Religious experience: God is the best explanation of our immediate experience and knowledge of his existence.

**Dr. Rosenberg's opening speech**

First argument: The fallacy of ad hominem

- I don't know whether to laugh or to cry
- Dr. Craig has said all of that before in other debates
- You didn't need to come out on this cold night
- Craig's arguments have all been refuted
- Dr. Craig just doesn't listen
- Dr. Craig is not interested in getting at the truth
- Dr. Craig is just interested in scoring debate points
- The adversarial system is the wrong approach to decide truth
- Dr. Craig is very confident about his take of physics

Second argument: The fallacy of arguing from authority

- 95% of members of the NAS are atheists
- Therefore Dr. Craig cannot use science

Third argument: Effects don't require causes

- I am going to pretend that Craig said that "every effect requires a cause"
- Quantum mechanics shows that some effects occur without causes
- A particle of uranium (which is not nothing, it is something) decays without a cause
- This uncaused effect is the same as the universe coming into being out of nothing uncaused
- Therefore the principle of sufficient reason is false

Fourth argument: Silicon-based life and the multiverse

- If these constants had been different, maybe we would have other kinds of intelligent life, like silicon-based life
- Carbon-based life is not the only kind of life, maybe you can have other kinds of life, none of which have been observed
- There could be different kinds of life in other areas of the universe that we can't see
- There are things we can't see that disprove the current physics that we can see
- Quantum foam is evidence that a multiverse exists
- The multiverse would solve the problem of fine-tuning

Fifth argument: The Euthyphro dilemma

- The moral argument is refuted by Euthyphro dilemma
- Dr. Craig is such a moron that he has never heard of the Euthyphro dilemma ever before
- This is found in the first and simplest of Plato's dialogs
- Why is Dr. Craig so stupid that he has not read this simple dialog ever before?
- Evolution explains why humans evolve arbitrary customs and conventions that vary by time and place
- Alternative moral theories: utilitarianism, social contract, etc. that don't require God

Sixth argument: Mormonism undermines Dr. Craig's three minimal facts about Jesus

- Why is Dr. Craig so stupid and ignorant to persist in pushing such an ignorant, stupid argument?
- Mormonism is a silly religion that is not historically well founded
- Therefore, Jesus was not buried
- Islam is a silly religion that is not historically grounded
- Therefore, the tomb was not found empty
- Scientology is a silly religion that is not historically grounded
- Therefore, the eyewitnesses didn't have post-mortem appearances
- Eyewitness testimony is unreliable in some cases
- Therefore, eyewitness testimony was unreliable in this case
- Apparitions of Mary are bizarre
- Therefore, the majority of historians are wrong to think that the disciples saw post-mortem appearances

Seventh argument: Deductive problem of evil

- Evil and suffering are logically incompatible with an all good, all powerful God

Eight argument: God is not just to allow evil and suffering

- God cannot make the evils of this life right in the afterlife

**Dr. Craig's first rebuttal**

Dr. Rosenberg sketched the deductive argument from evil.

Dr. Rosenberg presupposes naturalism. Naturalism is a false theory of knowledge:

1. It's too restrictive: There are truths that cannot be proved by natural science.
2. It's self-refuting: no scientific proof for naturalism exists.

That's why epistemological naturalism is considered false by most philosophers of science.

But more importantly than that: Epistemological naturalism does not imply metaphysical naturalism. (E.g. – W. Quine)

Dr. Rosenberg has to present arguments in favor of (metaphysical) naturalism, not just assume that (metaphysical) naturalism is true.

Dr. Craig presented eight arguments against metaphysical naturalism taken from Rosenberg's own book:

1. The argument from the intentionality (aboutness) of mental states implies non-physical minds (dualism), which is incompatible with naturalism
2. The existence of meaning in language is incompatible with naturalism, Rosenberg even says that all the sentences in his own book are meaningless
3. The existence of truth is incompatible with naturalism
4. The argument from moral praise and blame is incompatible with naturalism
5. Libertarian freedom (free will) is incompatible with naturalism
6. Purpose is incompatible with naturalism
7. The enduring concept of self is incompatible with naturalism
8. The experience of first-person subjectivity ("I") is incompatible with naturalism

Metaphysical naturalism is false: it is irrational and it contradicts our experience of ourselves.

And epistemological naturalism is compatible with theism.

Rebutting Dr. Rosenberg's responses:

1. Contingency: no response

2. Cosmological: he mis-states the first premise to say every effect… when it is whatever begins to exist…, the origin of the universe was not from a vacuum, virtual particles come from a vacuum not nothing, there are interpretations of QM that are compatible with determinism. Rosenberg has to believe that the entire universe popped into being from non-being.

3. Mathematics: no response

4. Fine-tuning: the multiverse is refuted by empirical observations of the universe. Without fine-tuning, it's not that we still have silicon to make life out of. It's that we lose basic minimal things like chemical diversity, matter, stars, planets, etc. No life of any kind, not just no carbon-based life.

5. Intentionality: no response.

6. Moral argument: the answer to the dilemma is that you split the dilemma: God is the standard of good, and the commands flow from his unchanging moral nature. The commands are not arbitrary, and the standard is not external to God. Dr. Rosenberg is a nihilist and he cannot ground good and evil on his nihilistic view.

7. Resurrection: The Gospels are early eyewitness testimony. Mormonism and Islam have nothing to do with the minimal set of historical facts about Jesus agreed to by the majority of ancient historians across the ideological spectrum, general statements against eyewitnesses do not refute the specific eyewitness testimony in this case.

8. Religious experience: No response.

**Dr. Rosenberg's first rebuttal**

I wrote a book and you should buy it, because it got me invited to this debate. Let me repeat the title a few times for you. Please buy it.

Dr. Craig is right, there are multiple interpretations of QM, not just the one I presented, including deterministic ones.

All the disturbing implications of naturalism that Dr. Craig stated follow from metaphysical naturalism, and metaphysical naturalism is true. (Note: he equates science with metaphysical naturalism)

Science proves that metaphysical naturalism is true, but I won't say what specific scientific tests prove my

philosophical assumption of metaphysical naturalism.

I'll pretend that the Big Bang (science) doesn't disprove naturalism, like Dr. Craig said. Again. (covers ears) La la la, there is no Big Bang.

We didn't come here to debate epistemological naturalism and metaphysical naturalism.

Let me explain the problem of intentionality since I'm so smart and no one knows what it means.

There are many answers to this problem of intentionality.

My answer is that most scientists are naturalists, therefore naturalism is true, regardless of the argument from intentionality of mental states.

That's how I would respond to one of the eight problems with naturalism that Dr. Craig raised. I won't answer the other seven problems.

It is an argument from ignorance to argue that the applicability of mathematics to the universe requires a designer, because there are non-Euclidean geometries. Craig's argument, which he gets from people like respected physicists like Eugene Wigner, is bizarre. It is bizarre, therefore I refute Eugene Wigner and all the other scholars who make that argument. It is bizarre! Bizarre!

Deductive problem of evil: there is no response to this argument, certainly not Alvin Plantinga's free will defense. The deductive argument from evil has not been entirely abandoned at all! It's not like arch-atheist J.L. Mackie himself admits that the deductive problem of evil doesn't lead to a logical inconsistency between evil and God.

Dr. Craig has to tell me why God allows evil or God doesn't exist.

It is offensive that Dr. Craig cannot tell me why God allows every evil and suffering that occurs.

He literally said this: "I will become a Christian if Dr. Craig can tell me why God allowed EVERY EVIL THAT OCCURRED IN THE LAST 3.5 BILLION YEARS"

**Dr. Craig's second rebuttal**

We are not in a position to know why God allows specific instances of evil and suffering.

God cannot force people to freely do anything – freedom is not compatible with determinism. Freedom is a good, but freedom opens up the possibility of moral evil. You cannot have the good of free will without allowing people to choose to do morally evil things.

God can permit evil and suffering in order to bring more people into a relationship with him.

The atheist has to show that God could allow less evil and achieve more knowledge of God in order to say there is too much evil.

The purpose of life is not happiness, but knowledge of God.

Dr. Craig quotes agnostic Paul Draper (Purdue) and Peter Van Inwagen (Notre Dame) to state that the deductive problem of evil is dead because of free will and morally sufficient reasons for permitting evil.

1. Contingency: no response.

2. Cosmological: QM does not apply, because the universe came from nothing, not a vacuum, and QM only works in a vacuum.

3. Mathematics: He mentions alternatives like non-Euclidean geometry, but we have to explain the structure of THIS universe.

4. Fine-tuning: ???

5. Intentional states: intentional mental states proves that minds exist, which fits with theism better than it fits with

atheism.

6. Moral argument: You need God to ground morality, and Dr. Rosenberg believes in morality. He needs God to ground objective moral values and duties.

7. Historical argument: He has to respond to the minimal facts supported by the consensus of ancient historians across the ideological spectrum.

8. The problems of naturalism: He says that you can't have science without naturalism, but you can have science with EPISTEMOLOGICAL NATURALISM, and theists accept science and methodological naturalism. We don't accept METAPHYSCIAL NATURALISM because of the eight problems Craig presented, like intentionality, first-person, persistence of self, etc. You can believe in both science and theism, by embracing epistemological naturalism, while rejecting methaphysical naturalism.

**Dr. Rosenberg's second rebuttal**

Dr. Craig hasn't answered many of my points, I won't say which ones though.

Debates don't work as a way of deciding what's true, so we should overturn the entire criminal justice system.

The principle of sufficient reason is false because it is disconfirmed by quantum mechanics. And quantum mechanics (vacuum and virtual particles that exist for a short time) is similar to the origin of the universe (nothing and entire universe and 14 billion years).

We know that alpha particles come into being without cause all the time from a quantum vacuum for a tiny sub-second duration before going out of existence, so we can say that the entire physical universe came into being for 14 billion years from absolute nothing which is not a quantum vacuum.

Peter Van Inwagen is the best metaphysician working today, and he says that my deductive argument from evil is not decisive, it's not a successful argument. (Why is he undermining his own problem of evil argument????!)

Dr. Craig invoked Plantinga's free will defense to the deductive POE. Freedom allows us to do evil. God could have given us free will without evil and suffering. I won't show how, but I'll just assert it, because debates are such a bad forum for supplying evidence for my speculative assertions.

If you answer the question 3 + 5 as being 8, then you don't have free will – you are biologically determined if you answer 8, because everyone answers 8, and that means everyone is biologically determined with no free will.

Why can't God give us free will and then prevent us from making a free choice?

No scholars date the gospels earlier than 60-70 AD, especially not atheists like James Crossley who dates Mark to 40 AD. Therefore Jesus' burial isn't historical, like the majority of scholars across the broad spectrum of scholarship agree it is.

The original New Testament documents were written in Aramaic.

All New Testament scholars are orthodox Christians, like atheist Robert Funk for example.

**Dr. Craig's concluding speech**

In order to sustain the deductive argument from evil, Dr. Rosenberg must show that God could create a world of free creatures with less evil.

Principle of Sufficient Reason: not using the general principle of sufficient reason, but a more modest version of this states that contingent things should have an explanation for their existence. And we know that the universe is a contingent.

The New Testament was not written in Aramaic, they were written in Greek. Dr. Rosenberg is wrong there too.

(Dr. Craig spends the rest of his concluding speech giving his testimony and urging people to investigate the New

testament).

**Dr. Rosenberg's concluding speech**

Some long-dead French guy named Laplace said that he has no need of that (God) hypothesis. He did not know about any of Dr. Craig's arguments made in this debate tonight when he said that, though.

There is no need to explain how the universe began or how the universe is finely-tuned if you just assume metaphysical naturalism on faith.

The Easter Bunny, therefore atheism.

Most scientists are atheists, therefore atheism.

You can do a lot of science without God, just don't look at the origin of the universe, the fine-tuning of the universe, or the other parts of science that Craig mentioned, as well as the origin of life, the Cambrian explosion, the habitability argument, and so on.

You can be a Christian, but good Christians should not use arguments and evidence.

Good Christians should be irrational and ignorant. Bad Christians look for arguments and evidence from science and history.

Good Christians should embrace the absurd. Bad Christians want to search for truth and use logic and evidence.

# Thirteen cases where the Obama administration has acted outside the law

**Wintery Knight** · 19 August 2013 · Archived copy · Original

This is the most popular article on Investors Business Daily.

Excerpt:

1. Aug. 14, 2013: The Obama administration delayed the provision in ObamaCare to cap out-of-pocket health care costs, picking and choosing parts of the law to enforce, which is to exceed its authority.
2. July 17, 2013: The 4th Circuit Court of Appeals joined the federal appeals courts in D.C. and Philadelphia in ruling President Obama's National Labor Relations Board recess appointments — who by law must be approved by Congress — were unconstitutional. Thus far, the president has ignored the ruling.
3. July 1, 2013: The Obama administration unilaterally decided to delay the employer mandate provision of ObamaCare for a year, which is to provide information to the feds about the extent of an applicant's insurance. Never mind that the law states the mandate must go into effect on Jan. 1, 2014 — they are now relying on the "honor system" from applicants to determine if they are qualified for subsidies.
4. June 25, 2013: The Supreme Court ruled in Shelby County v. Eric Holder that Section 4 of the Voting Rights Act is "unconstitutional" and that "the formula can no longer be used as a basis for subjecting jurisdiction to preclearance." Instead of complying with the ruling, Holder filed suit to order Texas to submit to preclearance, in defiance of Congress' authority to legislate and the Supreme Court's authority to rule on the constitutionality of the law.
5. June 15, 2012: The Obama administration announced it will stop deporting illegal immigrants under the age of 30 in a "deferred action" policy to circumvent immigration laws. This comes after Congress rejected a similar measure about a year ago. Since then, more than 500,000 illegals have received the deferment and only 20,000 have been rejected. As for the law-abiding applicants who have been waiting in line, well, that's Obama's idea of "lawfulness."
6. May 20, 2013: A Washington Post article revealed that Fox News reporter James Rosen was investigated by the DOJ, which subpoenaed his phone records and emails in direct contravention of the First Amendment under the pretense of a leak investigation.
7. May 13, 2013: AP reported the DOJ secretly collected phone records of AP reporters and editors, a move completely outside the realm of law. Even the AP — which up until then had been pretty submissive to the Obama agenda — was appalled by the breach.
8. May 10, 2013: The IRS revealed it targeted conservative groups applying for tax-exempt status beginning in March 2010, a direct targeting of political opponents through the tax laws. It's one of the crimes that led Congress to impeach President Nixon.
9. May 3, 2011: When asked when he first heard of Operation Fast and Furious, Attorney General Eric Holder falsely testified, "I'm not sure of the exact date, but I probably heard about Fast and Furious for the first time over the last few weeks." Head of the National Drug Intelligence Center Michael Walther told Holder about Fast and Furious in a July 2010 memo. Subsequent revelations showed he knew all along.
10. March 27, 2012: EPA issued final rules regulating greenhouse gas emissions on electric utilities that require power plants to use nonexisting carbon capture-and-control technology to meet new emission standards, in defiance of the Congress' rejection of cap-and-trade legislation.
11. April 23, 2012: The administration postponed Medicare Advantage cuts by calling them a "demonstration project" and used funds not approved by Congress to delay effects of those cuts before the election.
12. March 1, 2011: Attorney General Holder lied to Congress, saying "decisions made in the New Black Panther Party case were made by career attorneys in the department." Associate A.G. Thomas Perrelli, an Obama

political appointee, overruled a unanimous recommendation for prosecution by DOJ attorneys.

13. Feb. 3, 2010: Judge Martin Feldman held the Obama administration in contempt for re-imposing an offshore drilling moratorium that was struck down by the courts.

Thomas Sowell talks about the political left in his books “The Vision of the Anointed” and “A Conflict of Visions”. He presents the view that the left believes that they are the “anointed”. They are morally superior, and therefore they do not have to care about the rule of law or consequences or the criticisms of the opposition, when they are implementing their policies. When the policies fail, they never blame themselves, they just go outside the law even more. You can see this in socialist regimes in other times and places. It can never be the case that the schemes of the anointed are wrong-headed. The solution is always to act more and more lawlessly, and to silence, coerce and purge all opposition until the policies work.

# Mainstream media silent as Muslim Brotherhood targets Christians in Egypt

**Wintery Knight** · 19 August 2013 · Archived copy · Original

Investors Business Daily reports.

Excerpt:

> Christians in Egypt are again the target of Islamist Muslim Brotherhood supporters using the new violence as a cover for ongoing persecution. If Christians were burning mosques, the world would be outraged.
>
> Amid the raging violence in Egypt, a less-publicized war is being waged against Egypt's long-persecuted Coptic Christians, this time using the excuse that they were somehow involved in the military's ouster of the Muslim Brotherhood's Mohammed Morsi from power.
>
> Coptic Christians comprise up to 10% of Egypt's 84 million people.
>
> Ishaq Ibrahim from the Egyptian Initiative for Personal Rights group has documented as many as 39 incidents of violence against churches, monasteries, Coptic schools and shops in different parts of the country within the past few days. They include Thursday's torching of the Prince Tadros Church in the province of Fayoum, where three similar attacks occurred on other churches the day before.
>
> Islamists firebombed the Mar Gergiss Church in Sohag, a city with a large community of Coptic Christians, burning it to the ground. Islamists previously raised an al-Qaida flag over the church.
>
> Another two places of worship, the Churches of Abraham and the Virgin Mary, were attacked in El-Menia province, leaving them partially damaged by fire. St. Theresa Church in Assiut in Upper Egypt was also burned.
>
> […]In a terrorist attack one minute after midnight on Jan. 1, 2011, 21 Christians attending a New Year's mass were killed, and 97 people, mostly Christians, were injured as worshipers were leaving a New Year's mass at the Saints Church in Alexandria.
>
> On April 7, two Copts were killed and 84 injured by a mob using guns, wielding machetes, throwing stones and possibly hurling Molotov cocktails at mourners exiting St. Mark's Coptic Orthodox Cathedral in Cairo. The worshippers were mourning the deaths of four Copts in an April 4 attack in Khossus in which a nursery and church were burned.
>
> An investigation into the October 2011 attack on Coptic Christians in Cairo's Maspero district, leaving 30 dead and more than 500 wounded, was shut down by the Morsi regime. In the Egypt of the Muslim Brotherhood, Christian lives mean little.
>
> As the administration quibbles over the definition of a "coup" regarding Egypt's military aid, we are reminded the U.S. and NATO went to war over the "ethnic cleansing" of Muslims in Bosnia. What will be our response to the ethnic cleansing of 10% of Egypt's population?

One of the troubling things that I've noticed with younger evangelicals and libertarians is that they don't understand that wars start when bad people believe that they can behave aggressively and no one will stop them. Being nice doesn't work on bad people, it just makes them act that more more aggressively.

Here's an article from Townhall by famous economist Thomas Sowell, in which he explains how tyrants respond to weak foreign policy.

Excerpt:

> On the international scene, trying to assuage aggressors' feelings and look at the world from their point of view

> has had an even more catastrophic track record. A typical sample of this kind of thinking can be found in a speech to the British Parliament by Prime Minister Neville Chamberlain in 1938: “It has always seemed to me that in dealing with foreign countries we do not give ourselves a chance of success unless we try to understand their mentality, which is not always the same as our own, and it really is astonishing to contemplate how the identically same facts are regarded from two different angles.”
>
> Like our former ambassador from the Carter era, Chamberlain sought to “remove the causes of strife or war.” He wanted “a general settlement of the grievances of the world without war.” In other words, the British prime minister approached Hitler with the attitude of someone negotiating a labor contract, where each side gives a little and everything gets worked out in the end. What Chamberlain did not understand was that all his concessions simply led to new demands from Hitler — and contempt for him by Hitler.
>
> What Winston Churchill understood at the time, and Chamberlain did not, was that Hitler was driven by what Churchill called “currents of hatred so intense as to sear the souls of those who swim upon them.” That was also what drove the men who drove the planes into the World Trade Center.
>
> Pacifists of the 20th century had a lot of blood on their hands for weakening the Western democracies in the face of rising belligerence and military might in aggressor nations like Nazi Germany and imperial Japan. In Britain during the 1930s, Labor Party members of Parliament voted repeatedly against military spending, while Hitler built up the most powerful military machine in Europe. Students at leading British universities signed pledges to refuse to fight in the event of war.
>
> All of this encouraged the Nazis and the Japanese toward war against countries that they knew had greater military potential than their own. Military potential only counts when there is the will to develop it and use it, and the fortitude to continue with a bloody war when it comes. This is what they did not believe the West had. And it was Western pacifists who led them to that belief.
>
> Then as now, pacifism was a “statement” about one’s ideals that paid little attention to actual consequences. At a Labor Party rally where Britain was being urged to disarm “as an example to others,” economist Roy Harrod asked one of the pacifists: “You think our example will cause Hitler and Mussolini to disarm?”
>
> The reply was: “Oh, Roy, have you lost all your idealism?” In other words, the issue was about making a “statement” — that is, posturing on the edge of a volcano, with World War II threatening to erupt at any time. When disarmament advocate George Bernard Shaw was asked what Britons should do if the Nazis crossed the channel into Britain, the playwright replied, “Welcome them as tourists.”

Ronald Reagan and Margaret Thatcher called this view “peace through strength”. There is only one reason why evil people do not attack – because they think that good people have the firepower tomake them pay dearly for their aggression, and – and this is very important – the will to use it.

The important thing to realize is that without a powerful military, there is nothing that we can do when the Muslim Brotherhood goes after Coptic Christians in Egypt. Happy talk isn’t going to solve anything. To deter aggression, you need to have a credible threat of military force deployed in the region. Even if you don’t go to war, the other guy has to believe that you can and that you will. That’s what stops bad people from being aggressive. What Benghzi showed the Islamists is that they could do anything they wanted, and no one is going to stop them. That’s why Christians are dying by the bushel in Egypt today.

# William Lane Craig answers challenges to Christianity in Australia

**Wintery Knight** · 19 August 2013 · Archived copy · Original

Here's the video: (34 minutes)

Questions:

- How do you reconcile a good God with animal death before the Fall?
- If Paul never even met Jesus, then why should we care about his opinion of homosexuality?
- In the parable of the prodigal son, the prodigal got forgiveness without any atoning death – so why did Jesus have to die an atoning death?
- If Herod could believe that John the Baptist rose from the dead without evidence, couldn't the other disciples have believed in Jesus' resurrection without evidence?
- If Jesus is God, then was God dead for 3 days in the grave?
- Was it justified when God commanded the Israelites to conquer Canaan?
- How can you reconcile the failure of Christians to live according to what they proclaim, especially when God is supposedly santifying them?
- If a person already has a happy life they like, then why should they give that up to believe in Christianity?
- Re: cosmological argument, did the physical laws come into being? Doesn't quantum mechanics show that things can come into being out of nothing without a cause?
- If Jesus' resurrection body is physical, then does that mean that Heaven is a physical place?
- Should people spend time thinking about ultimate questions? What if they don't feel that ultimate questions are important?

These challenges from Australians are not the same as the ones I hear in North America, so it's good to hear how Dr. Craig responds to these questions.

# New study from the Federal Reserve finds that QE stimulus doesn't grow the economy

**Wintery Knight** · 20 August 2013 · Archived copy · Original

Investors Business Daily reports on our incompetent government's policies.

Excerpt:

> For four years now, we've heard policymakers and pundits alike defend the Federal Reserve's quantitative easing based on the idea that, without it, the nation's economy would have imploded.
>
> Now, a new study from the Fed itself suggests that's not the case.
>
> The study, by San Francisco Federal Reserve economist Vasco Curdia and New York Fed economist Andrea Ferrero, suggests that quantitative easing (QE) has done little to boost the economy's trajectory.
>
> "Asset purchase programs like QE2 appear to have, at best, moderate effects on economic growth and inflation," the economists wrote in a special research note that was released last week.
>
> In their study, Curdia and Ferrero looked specifically at the impact of the Fed's QE2 program, which totaled $600 billion.
>
> Assuming the $600 billion program lasts for five years — with the Fed buying bonds the first year, holding them for two, then selling them off for the remaining two — the spending turns out largely to have been a waste.
>
> That level of QE stimulus, even when coupled with the Fed's promise to hold interest rates at zero, likely boosted GDP by a mere 0.13 percentage point, the study found. It added just 0.03 percentage point to inflation.
>
> Bottom line: $600 billion in QE2 spending boosted GDP by less than $200 billion.
>
> […]And even that minor amount of growth was due in large part to the Fed's explicit vow to hold official interest rates at close to 0% until the unemployment rate reaches 6.5% or lower, Curdia and Ferrero said.
>
> Take away that promise, and QE2 added just 0.04 percentage point to GDP and 0.02 percentage point to inflation.

What caused it?

> With $17 trillion in total U.S. debt — an amount that's now growing at a rate of $1 trillion a year — the authors argue that the Fed is essentially trapped into printing money through QE.
>
> If QE — which now pushes $85 billion a month into U.S. Treasury and agency debt — stops, interest rates will soar, dragging the economy down.
>
> Fed Chairman Ben Bernanke has been sanguine about this, suggesting this enormous pile of debt can all be sold off with little disruption.
>
> We're not so sure. Once the Fed begins selling off its massive $3.6 trillion in assets acquired under the QE program (see chart), it will send interest rates surging and tank the economy.
>
> Even more troubling is what it says about current politics.
>
> The White House and a Democrat-led Senate have boosted spending dramatically — outlays as a share of GDP rose initially by 25% under President Obama
>
> The Fed, by buying up much of the newly issued federal debt, has become the No. 1 enabler of a spendthrift government that's pushing us to the brink of fiscal disaster.
>
> At $85 billion a month, QE2 spending is roughly equal to the amount of federal debt we add each month.

We elected a Keynesian who thought that government could create economic growth (jobs!) by *borrowing money and printing money*. The countries of the world largely cheered our decision to elect him. He failed to grow the economy and he failed to create jobs. Eventually, the money he's been spending to keep a sinking ship afloat is going to run out.

# Christina Hoff Sommers: school has become hostile to boys

**Wintery Knight** · 20 August 2013 · Archived copy · Original

Christina Hoff Sommers

In the leftist Time magazine, of all places.

Excerpt:

> As school begins in the coming weeks, parents of boys should ask themselves a question: Is my son really welcome? A flurry of incidents last spring suggests that the answer is no. In May, Christopher Marshall, age 7, was suspended from his Virginia school for picking up a pencil and using it to "shoot" a "bad guy" — his friend, who was also suspended. A few months earlier, Josh Welch, also 7, was sent home from his Maryland school for nibbling off the corners of a strawberry Pop-Tart to shape it into a gun. At about the same time, Colorado's Alex Evans, age 7, was suspended for throwing an imaginary hand grenade at "bad guys" in order to "save the world."
>
> In all these cases, school officials found the children to be in violation of the school's zero-tolerance policies for firearms, which is clearly a ludicrous application of the rule. But common sense isn't the only thing at stake here. In the name of zero tolerance, our schools are becoming hostile environments for young boys.
>
> […]Boys are nearly five times more likely to be expelled from preschool than girls. In grades K-12, boys account for nearly 70% of suspensions, often for minor acts of insubordination and defiance. In the cases of Christopher, Josh and Alex, there was no insubordination or defiance whatsoever. They were guilty of nothing more than being typical 7-year-old boys. But in today's school environment, that can be a punishable offense.
>
> […][M]illions of boys *are* struggling academically. A large and growing male cohort is falling behind in grades and disengaged from school. College has never been more important to a young person's life prospects, and today boys are far less likely than girls to pursue education beyond high school. As our schools become more risk averse, the gender gap favoring girls is threatening to become a chasm.
>
> […]Across the country, schools are policing and punishing the distinctive, assertive sociability of boys. Many much-loved games have vanished from school playgrounds. At some schools, tug of war has been replaced with "tug of peace." Since the 1990s, elimination games like dodgeball, red rover and tag have been under a cloud — too damaging to self-esteem and too violent, say certain experts. Young boys, with few exceptions, love action narratives. These usually involve heroes, bad guys, rescues and shoot-ups. As boys' play proceeds,

> plots become more elaborate and the boys more transfixed. When researchers ask boys why they do it, the standard reply is, “Because it’s fun.”
>
> According to at least one study, such play rarely escalates into real aggression — only about 1% of the time. But when two researchers, Mary Ellin Logue and Hattie Harvey, surveyed classroom practices of 98 teachers of 4-year-olds, they found that this style of play was the least tolerated. Nearly half of teachers stopped or redirected boys’ dramatic play *daily* or *several times* a week — whereas less than a third reported stopping or redirecting girls’ dramatic play weekly.
>
> Play is a critical basis for learning. And boys’ heroic play is no exception. Logue and Harvey found that “bad guy” play improved children’s conversation and imaginative writing. Such play, say the authors, also builds moral imagination, social competence and imparts critical lessons about personal limits and self-restraint. Logue and Harvey worry that the growing intolerance for boys’ action-narrative–play choices may be undermining their early language development and weakening their attachment to school. Imagine the harm done to boys like Christopher, Josh and Alex who are not merely discouraged from their choice of play, but are punished, publicly shamed and ostracized.

So what’s the problem? Well, here’s some data to help us fix the problem.

Excerpt:

> A lack of male role models at home and school is turning boys off reading at a young age as they increasingly reject books as “feminine”, it is claimed.
>
> Large numbers of boys are failing to develop a love of reading during primary education because of a shortage of male teachers combined with an anti-book culture among many fathers, an inquiry has found.
>
> Gavin Barwell, chairman of the All-Party Parliamentary Group on Literacy, said reading was not seen as a “masculine thing” by boys – leaving them lagging behind girls from the age of four onwards.
>
> In many cases, schools failed to equip them with a selection of adventure and action novels by authors such as Enid Blyton, Roald Dahl and J.R.R Tolkien that are significantly more likely to appeal to boys at a young age, he suggested.
>
> It is claimed that a failure to read properly as an infant has a serious impact on standards across the curriculum, with children struggling to grasp the basics in all other major academic subjects.

> According to Government figures, boys are less likely to read basic words or recite the alphabet by the age of five and the gap widens throughout compulsory education.
>
> By the age of 16, fewer than 59 per cent of boys gained a good GCSE in English last year compared with 72.5 per cent of girls.
>
> […]On Monday, the cross-party committee of MPs and peers – along with the National Literacy Trust – will publish the findings of a six-month inquiry into reading failure among boys.
>
> It is expected to make a series of sweeping recommendations designed to get boys interested in books at home and school, including more gender-specific books and the introduction of reading mentors.
>
> Speaking before the launch, Mr Barwell, the Conservative MP for Croydon Central, said boys were currently held back because of a “number of gender stereotypes which seem to kick in early”.
>
> “Dads are much less likely to read with their sons and they are also much less likely than mum to be seen reading themselves, so from a very young age boys will clearly pick up in a home environment that reading is not a masculine thing,” he said.
>
> He added: “The primary school workforce is also very feminised and it is now rare to have more than one male

> teacher.
>
> “I have boys of my own and when I want to recommend books for them I think of what I read when I was their age; The Hobbit, The Famous Five books or something by Roald Dahl.
>
> “It may well be that schools – with the workforce being all female – are going to struggle to pick up on the stuff that appeals to boys because they’ve not read it themselves.”
>
> The report is likely to conclude that boys are struggling to read in the majority of schools and most have no plan in place to tackle the gender gap.

You can read about a couple more studies here that also argue that the problem is a lack of male teachers in the classroom. The Canadians are already looking into how to solve the problem. But that isn’t likely to happen here. I also wrote previously about a study showing that female teachers were grading boys more harshly than girls.

So boys aren’t reading as well as girls are. You can’t do well in school if you can’t read. But boys have no interest in reading girly nonsense books. Boys like war, monsters and adventures. But girly nonsense is what female teachers and female administrators and female education bureaucrats pick as classroom texts. So the boys are stuck reading boring books. The only way out of this mess for boys is homeschooling or private schools, which are hard to do since their parents are already paying for these useless, underperforming public schools. And the educational bureaucracy resist any attempts to give parents more choice. Their goal is to maintain their inflated salaries and job security, not to educate boys.

So we need more male teachers in the classroom – why don’t we have them? There are many reasons why men are discouraged from becoming teachers. Discrimination, unionization, political correctness, being forced to teach left-wing propaganda to children, etc. Don’t look for the performance of boys to improve any time soon unless we get serious at changing education policy to attract more men. Of course, the people in charge have a vested interest in preventing that. They’ll just keep blaming boys for underperforming and refuse to solve the real problem.

# Percentage of single mothers who have never married 11 times higher than in 1960

**Wintery Knight** · 20 August 2013 · Archived copy · Original

The Heritage Foundation reports.

Excerpt:

> **Forty-four percent of single mothers have never been married. This is 11 times the percent of never-married single mothers in 1960.**
>
> The Pew Research Center reports:
>
> In 1960, of all single mothers, more than eight-in-ten (82%) were divorced, separated or widowed. An additional 14% were married, but their spouses were not living in the household. Only 4% of all single mothers had never been married.
>
> The percent of unwed births also grew dramatically over the same period. Today, over 40 percent of all children are born to single women, compared with less than 10 percent in 1960.
>
> Children raised in single-parent homes are much more likely to live in poverty or struggle with other problems that take a toll on their ability to thrive.
>
> Of course, other trends such as a high divorce rate—although the divorce rate has declined since its peak in the 1980s—have implications for children's and society's well-being.
>
> Today, less than half (46 percent) of American children who reach age 17 have been raised by their continuously married, biological parents. This is taking a toll. Children do best when raised by their married mother and father. They are at lower risk of engaging in substance abuse, delinquent behavior, and early sexual activity, and they are less likely to drop out of high school or suffer abuse.

Michael Tanner of the Cato Institute explains how welfare provides an incentive to women to have babies without getting married.

Cato Institute economist Dr. Michael Tanner explains:

> At the same time, the evidence of a link between the availability of welfare and out-of-wedlock births is overwhelming. There have been 13 major studies of the relationship between the availability of welfare benefits and out-of-wedlock birth. Of these, 11 found a statistically significant correlation. Among the best of these studies is the work done by June O'Neill for the U.S. Department of Health and Human Services. Holding constant a wide range of variables, including income, education, and urban vs. suburban setting, the study found that a 50 percent increase in the value of AFDC and foodstamp payments led to a 43 percent increase in the number of out-of-wedlock births.(7) Likewise, research by Shelley Lundberg and Robert Plotnick of the University of Washington showed that an increase in welfare benefits of $200 per month per family increased the rate of out-of-wedlock births among teenagers by 150 percent.(8)
>
> The same results can be seen from welfare systems in other countries. For example, a recent study of the impact of Canada's social-welfare system on family structure concluded that "providing additional benefits to single parents encourages births of children to unwed women."(9)
>
> Of course women do not get pregnant just to get welfare benefits. It is also true that a wide array of other social factors has contributed to the growth in out-of-wedlock births. But, by removing the economic consequences of a out-of-wedlock birth, welfare has removed a major incentive to avoid such pregnancies. A teenager looking around at her friends and neighbors is liable to see several who have given birth out of wedlock. When she sees that they have suffered few visible immediate consequences (the very real consequences of such

> behavior are often not immediately apparent), she is less inclined to modify her own behavior to prevent pregnancy.
>
> Proof of this can be found in a study by Professor Ellen Freeman of the University of Pennsylvania, who surveyed black, never-pregnant females age 17 or younger. Only 40% of those surveyed said that they thought becoming pregnant in the next year "would make their situation worse."(10) Likewise, a study by Professor Laurie Schwab Zabin for the Journal of Research on Adolescence found that: "in a sample of inner-city black teens presenting for pregnancy tests, we reported that more than 31 percent of those who elected to carry their pregnancy to term told us, before their pregnancy was diagnosed, that they believed a baby would present a problem…"(11) In other words, 69 percent either did not believe having a baby out-of-wedlock would present a problem or were unsure.
>
> Until teenage girls, particularly those living in relative poverty, can be made to see real consequences from pregnancy, it will be impossible to gain control over the problem of out-of- wedlock births. By disguising those consequences, welfare makes it easier for these girls to make the decisions that will lead to unwed motherhood.
>
> Current welfare policies seem to be designed with an appallingly lack of concern for their impact on out-of-wedlock births. Indeed, Medicaid programs in 11 states actually provide infertility treatments to single women on welfare.(12)
>
> I should also point out that, once the child is born, welfare also appears to discourage the mother from marrying in the future. Research by Robert Hutchins of Cornell University shows that a 10 percent increase in AFDC benefits leads to an eight percent decrease in the marriage rate of single mothers.(13)

What is this story about welfare and single mothers doing in the 6 PM "Christian apologetics" time slot?

Well, it turns out that without a father in the home, children are far more likely to lose their faith.

Here is some statistical evidence that should have Christians everywhere concerned.

Excerpt:

> In 1994 the Swiss carried out an extra survey that the researchers for our masters in Europe (I write from England) were happy to record. The question was asked to determine whether a person's religion carried through to the next generation, and if so, why, or if not, why not. The result is dynamite. There is one critical factor. It is overwhelming, and it is this: It is the religious practice of the father of the family that, above all, determines the future attendance at or absence from church of the children.
>
> If both father and mother attend regularly, 33 percent of their children will end up as regular churchgoers, and 41 percent will end up attending irregularly. Only a quarter of their children will end up not practicing at all. If the father is irregular and mother regular, only 3 percent of the children will subsequently become regulars themselves, while a further 59 percent will become irregulars. Thirty-eight percent will be lost.
>
> If the father is non-practicing and mother regular, only 2 percent of children will become regular worshippers, and 37 percent will attend irregularly. Over 60 percent of their children will be lost completely to the church.
>
> Let us look at the figures the other way round. What happens if the father is regular but the mother irregular or non-practicing? Extraordinarily, the percentage of children becoming regular goes*up*from 33 percent to 38 percent with the irregular mother and to 44 percent with the non-practicing, as if loyalty to father's commitment grows in proportion to mother's laxity, indifference, or hostility.
>
> […]In short, if a father does not go to church, no matter how faithful his wife's devotions, only one child in 50 will become a regular worshipper. If a father does go regularly, regardless of the practice of the mother, between two-thirds and three-quarters of their children will become churchgoers (regular and irregular). If a father goes but irregularly to church, regardless of his wife's devotion, between a half and two-thirds of their

> offspring will find themselves coming to church regularly or occasionally.
>
> A non-practicing mother with a regular father will see a minimum of two-thirds of her children ending up at church. In contrast, a non-practicing father with a regular mother will see two-thirds of his children never darken the church door. If his wife is similarly negligent that figure rises to 80 percent!
>
> The results are shocking, but they should not be surprising. They are about as politically incorrect as it is possible to be; but they simply confirm what psychologists, criminologists, educationalists, and traditional Christians know. You cannot buck the biology of the created order. Father's influence, from the determination of a child's sex by the implantation of his seed to the funerary rites surrounding his passing, is out of all proportion to his allotted, and severely diminished role, in Western liberal society.

Here's an interesting post about a new book by Mary Eberstadt which makes the same point with even more data.

Excerpt:

> The French Revolution gave the West the first self-consciously secular government at the end of the 1700s, and one of its first revolutionary acts was to liberalize its marriage laws. But what people may not realize, was that France was the first country in Europe to experience a decline in fertility rates within marriage, and an increase in cohabitation and illegitimacy, decades *before* the French Revolution. In the early 1700s, over a half century before the Revolution, illegitimacy was only at 1%, but by the storming of the Bastille, which ushered in the Revolution, France's illegitimacy rate had climbed to 20% overall, with a 30% rate in the boiling pot of Paris. The French Revolution's successful attack on Christianity, and the consequent secularization of France, was, in part, the result of the prior erosion of the family.
>
> We see the same pattern in the UK, argues Eberstadt. "In Britain…the decline in births started a century later [than in France] at the very height of Victorian England,…Bit by bit…the same family trends already established in France—fewer births, more divorces, more out-of-wedlock births—also began reshaping the world of Britain. By our own time, over half of all children in Britain are born to unmarried people, and the fertility rate stands at 1.91 children per woman." Not surprisingly, Britain's churches are, like those of France, largely empty.
>
> In the Scandinavian countries, like Sweden, where marriage rates are lowest, and divorce, cohabitation, and single-family households, and out-of-wedlock births are the highest, we find the greatest degree of secularization.
>
> The obvious lesson we must draw, says Eberstadt, is "Vibrant families and vibrant religion go hand in hand."

I get annoyed when I hear people talk about how they are socially conservative, but not fiscally conservative. If you are socially conservative, and you believe in faith, marriage and family, then you need to think about what policies do to encourage people to either get married or not get married. Single mother welfare is nothing more than paying people to have children before they are married. Not only is it bad for them to be dependent on government, but that money has to come from somewhere else – probably from some hard-working man who is now taxed so much that his wife has to go to work to make ends meet, weakening the family and potentially exposing the child to more unfiltered influence from secular schools and secular culture. Think about fiscal policy, because it matters.

# Judge bars prosecution from introducing evidence of Nidal Hasan's jihadi motives

**Wintery Knight** · 21 August 2013 · Archived copy · Original

From ABC News.

Excerpt:

> Lawyers representing the family members of those killed and injured in the Ft. Hood shooting rampage were outraged today when an Army judge limited prosecutors from introducing evidence, including emails to a known Al Qaeda operative, that would establish accused shooter Maj. Nidal Hasan's "jihadi" motives.
>
> The judge's rulings could inhibit the ability of the victims' families to claim in a civil suit that the shootings were an act of terror. Federal lawyers involved in the civil suit claim that the people shot during Hasan's murderous rage were victims of workplace violence, a designation that could sharply limit the damages in a civil suit.
>
> "This is first degree mass murder case and motive is absolutely relevant to prove premeditation," said Neal Sher, a lawyer representing many of the victims and their family members in a separate civil suit against the government.
>
> Prosecutors have sought to portray Hasan as a Muslim extremist, motivated by Islamist ideology and in touch with known al Qaeda member Anwar Alwaki.
>
> "He didn't want to deploy and he came to believe he had a jihad duty to murder soldiers," lead prosecutor Col. Steve Henricks said in his opening statements. He wanted to "kill as many soldiers as he could."
>
> The judge, Col. Tara Osborn, ruled today that prosecutors could not mention Hasan's correspondence with Alwaki, an American born al Qaeda recruiter and organizer. Osborn also barred prosecutors from mentioning Hassan's interest in seeking conscientious objector status and drawing parallels to a 2003 incident in which another Muslim American soldier attacked U.S. troops in Kuwait, according to the Associated Press.
>
> […]Many of the victims and their family members have filed a civil suit against the government, arguing that the attack should be classified as a terrorist attack, allowing victims to receive combat medals, like the Purple Heart, and receive better benefits.
>
> The government maintains that the attack was an incidence of "workplace violence."

Wow. Maybe this explains why our foreign policy has basically set the entire Middle East on fire. If we can't identify radical Islam as a threat, then what hope do we have of winning a war against them?

# Wisconsin abortions decline again by 4.4% after Governor Walker's pro-life laws

**Wintery Knight** · 21 August 2013 · Archived copy · Original

Wisconsin Governor Scott Walker

Life News reports.

Excerpt:

> Abortion are on the decline in Wisconsin and they are poised to drop further thanks to new pro-life laws signed by Governor Scott Walker. Abortions dropped 7.4 percent in Wisconsin in the prior report.
>
> Last year, Walker added to his pro-life list of accomplishments today by signing bills the pro-life movement supported, including measures to stop abortion funding in Obamacare and webcam abortions.
>
> Wisconsin Right to Life officials told LifeNews Wisconsin abortions have decreased 68% from their all-time high in 1980 and 60% since Wisconsin began requiring abortion reporting in 1987.
>
> […]According to an AP report, abortions declined 4.4 percent from 2011-2012:
>
> The Department of Health Services reported Monday that there were 6,927 abortions in 2012. That is down from 7,249 in 2011 for a drop of 4.4 percent.
>
> It marks the third year in a row that abortions have gone down. Prior to an increase between 2008 and 2009, abortions had dropped for five straight years.
>
> The rate of women aged 15-44 who had an abortion in 2012 was 6.1 per 1,000, down from 6.3 per 1,000 the year before. That is well below the national rate of 15.1 per 1,000 as of the most recent data available from 2009.
>
> State law requires any facility that provides abortions to report statistics to the state.
>
> In July, Walker signed Senate Bill 206 (Sonya's Law) into law. This important new law requires that women seeking abortions in Wisconsin be given the opportunity to see their unborn children through ultrasound.
>
> Just hours before Walker signed the law, the Planned Parenthood abortion business announced it would file a lawsuit seeking to stop women from seeing these ultrasounds.
>
> […]After Walker signed the bill, the Planned Parenthood abortion business shut down one clinic in Appleton and another facility end abortions at another center in Green Bay.

But he's not just a social conservative, but a fiscal conservative, too.

Excerpt:

> Wisconsin is living proof that elections have consequences. The last 10 years of public policy in the state proves this, providing a sharp contrast between Republicans and Democrats and highlighting the positive results of Republican leadership.
>
> The previous Governor left Wisconsin with a $3.6 billion budget deficit and a bleak economic outlook. In fact, during Governor Jim Doyle's last term, Wisconsin lost over 133,000 jobs, and only 10% of employers thought our state was headed in the right direction.
>
> At the polls in 2010, Wisconsinites elected Scott Walker and Republican majorities in the Assembly and Senate. Since taking office, Republicans have turned things around. Unlike the Democrats, who in 2009 were debating over $3 billion in tax hikes, State Republicans have been cutting taxes and eliminating regulations to foster a pro-growth environment in Wisconsin. In fact, the current budget provides nearly $1 billion in tax relief for hard-working middle class families.
>
> In a stunning reversal of Doyle-era job loss, Wisconsin created over 14,000 jobs in June alone. The budget is balanced, and 94% of employers say our state is headed in the right direction. Furthermore, a leading economic indicator from the Federal Reserve Bank of Philadelphia just ranked Wisconsin second in the nation in jobs outlook for the next six months.

What if he were to run in 2016? Well, Scott Walker is a favorite of social conservatives, but remember that this is the same Scott Walker who took on the labor unions to limit collective bargaining and he won. His law, which has produced an economic boom in Wisconsin, is still standing. He's showing leadership on social AND fiscal issues. It's not just talk, it's action. I think he should be considered in 2016, along with governors Bobby Jindal (LA), Rick Perry (TX), John Kasich (OH), and Mike Pence (IN).

# Alexander Pruss answers an objection to mind-body dualism

**Wintery Knight** · 21 August 2013 · Archived copy · Original

I found this post on the Biola University Christian Thought blog. It's by famous philosopher Alexander Pruss. In it, he considers 3 arguments against non-physical souls.

Here is the third objection:

> **The third objection** is based on the Closure Principle: The physical world is explanatorily closed—the explanations of physical states of affairs are always physical in nature. The closure principle would let one be confident that scientists don't need to look for miracles—that explanations of physical events will never go beyond science. If the Closure Principle is true, then no physical event in the brain has an explanation by means of a soul.

And here is his reponse:

> I'm going to argue that the Closure Principle is more likely to be false than true.
>
> My argument has two parts. The first part will be to establish the No Physical Explanation Thesis:
>
> *No Physical Explanation Thesis*: Whether or not the Closure Principle is true, some physical states of affairs have no physical explanations.
>
> The second part will argue that if the above thesis is true, then the Closure Principle is more likely to be false than true.

Sounds to me like he is just talking about the assumption of metaphysical naturalism, which some people accept because of the success of explaining nature using natural explanations. But can you really explain everything with only natural explanations?

Let's see:

> So, first, I need to argue that some physical states of affairs have no physical explanations. A quick argument for this thesis is to consider all of physical reality as a whole. This constitutes a gigantic physical state of affairs. This gigantic physical state of affairs cannot have a physical explanation. For if it had a physical explanation, that physical explanation would be a part of the gigantic physical state of affairs, since that gigantic state contained all of physical reality. But then the explanation, in explaining that gigantic state, would also explain itself, since it itself is a part of the gigantic state. But no physical state of affairs can explain itself—that would be like the absurdity of being one's own parent.
>
> A second (related) argument is that if every physical state of affairs has a physical explanation, we end up with a vicious infinite regress of physical states of affairs. Physical state #1 is explained by physical state #2 (maybe, my existence is explained by my parents' existence), which then must be explained by physical state #3, and so on. So we have an infinite regress of physical states of affairs. But the regress does not stop there. For the whole infinite regress will be a physical state of affairs, and hence will need an explanation. So we will have another regress, and another, and so on. This is really absurd.
>
> A third argument is that current science gives us good reason to think that physical reality is not infinitely old, that it came into existence some finite amount of time ago, maybe in a Big Bang. If so, then the state of affairs of physical reality *coming into existence* won't have a physical explanation.
>
> These three arguments for the No Physical Explanation Thesis are basically adaptations of the Cosmological Argument for the existence of God, but I am not concluding from them that there is a God—just that something physical has no physical explanation.

> So now we've learned that some physical state of affairs has no physical explanation.
>
> Let's give a name to some such physical state of affairs—call it "Blob." Blob, then, has no physical explanation. There are now two possibilities. Either (1) Blob has no explanation at all, or (2) Blob has a non-physical explanation.
>
> If Blob has a non-physical explanation, then the Closure Principle is false, since the Closure Principle said that no physical state of affairs has a non-physical explanation, and here is Blob—a physical state of affairs with a non-physical explanation.
>
> Of the two options, which is more likely? Blob having no explanation at all? Or Blob having a non-physical explanation? I will argue that think the likelier option is the latter—that Blob has a non-physical explanation.
>
> For physical states of affairs are *contingent*—they don't have to be there. Blob, thus, doesn't have to be there. The idea of something contingent having no explanation is like the idea of something coming into existence out of nothing. It is intuitively absurd. Much more absurd than the alternative, namely that it has a non-physical explanation. Maybe it's hard for something physical to happen because of a non-physical cause—but it should be far harder for something physical to happen for no cause at all. If we think that that something contingent could happen for no cause at all, it should be *even easier* for it to happen due to a non-physical cause. So it is more likely that Blob has a non-physical explanation than that it has no explanation at all. But if it has a non-physical explanation, then the Closure Principle is false. So, most likely, the Closure Principle is false.
>
> Moreover, if we admitted that a physical state of affairs, namely Blob, could take place for no reason at all, with no explanation, then it would be a wonder why all sorts of other physical things don't happen for no reason at all. Why doesn't a dog-headed person suddenly pop into existence for no cause at all in front of me? Why doesn't a golden mountain materialize in the middle of the Pacific Ocean out of nowhere? I can give a very simple explanation of why all these infinitely many strange things don't happen: *all physical states of affairs have to have explanations*. But this explanation also implies that the Closure Principle is false. For we know that Blob has no physical explanation, and so Blob's explanation must be non-physical.
>
> The Closure Principle was introduced in large part to save science from giving up on physical explanations and looking for supernatural ones. But if we accept the Closure Principle, then we have to say that some physical states of affairs have no explanation at all. And it is much worse to be willing to give up *completely*on a search for explanation than to be willing to give up on a search for *physical* explanation.
>
> We should thus think that most likely the Closure Principle is false, and hence this argument against interaction between the soul and the body fails as much as the previous ones did.

This sounds a lot like William Lane Craig's contingency argument, and I think that it is particularly mean (to the naturalists) to invoke science to smash their naturalism. I certainly accept non-physical causation when it comes to the origin of the universe – nothing too mysterious about that. And I think he's right to say that this shows that it's at least possible, then, that a non-physical entity could effect material things like our bodies. In fact, I've heard J.P. Moreland argue that this is what God actually is – a non-physical mind.

# Unionized UPS to drop health insurance for 15,000 spouses because of Obamacare

**Wintery Knight** · 22 August 2013 · Archived copy · Original

The Washington Times reports. (H/T Letitia)

Excerpt:

> Citing Obamacare, the United Parcel Service plans to remove 15,000 spouses from its health care plan because they are eligible for coverage elsewhere.
>
> Rising medical costs, "combined with the costs associated with the Affordable Care Act, have made it increasingly difficult to continue providing the same level of health care benefits to our employees at an affordable cost," UPS said in a memo to employees, Kaiser Health News reported.
>
> UPS expects the move will save about $60 million a year, company spokesman Andy McGowan said.
>
> The health law requires large employers to cover employees and dependent children, but not spouses or domestic partners, Kaiserreported.
>
> On Tuesday, Forever 21 Inc. became the latest national company to cut employee hours to counter the impact of Obamacare, the Atlanta Business Chronicle reported.

The Heritage Foundation has more on that Forever 21 story.

Excerpt:

> A leaked memo shared last week on social media with the hashtag #Never21 proves the company capped some full-time workers at 29.5 hours a week as of August 18, resulting in a loss of the health coverage and other benefits offered to full-time workers.
>
> Conservatives have warned that the provision under Obamacare defining a full-time worker as one who works 30 hours a week or more incentivizes businesses to drastically cut workers' hours to avoid the heavy financial burden of mandatory insurance requirements under the bill.
>
> Forever 21 joins **several fast food chains** that have cut workers' hours to less than 30 in the past few months, ahead of the provision taking effect.

I've blogged about several of these companies who are having to adjust to Obamacare, but actually, this is not happening to a company here and a company there.

Reuters explains:

> U.S. businesses are hiring at a robust rate. **The only problem is that three out of four of the nearly 1 million hires this year are part-time and many of the jobs are low-paid.**
>
> Faltering economic growth at home and abroad and concern that President Barack Obama's signature health care law will drive up business costs are behind the wariness about taking on full-time staff, executives at staffing and payroll firms say.
>
> Employers say part-timers offer them flexibility. If the economy picks up, they can quickly offer full-time work. If orders dry up, they know costs are under control. It also helps them to curb costs they might face under the Affordable Care Act, also known as Obamacare.

Now on first glance, it would seem that conservatives should be *happy* because the leftists who voted for Obama are finally getting what they deserve.

However, my conservative deist friend ECM says “not so fast”:

> This would be entertaining, but this is a feature, not a bug.
>
> Remember: they passed the present Ocare on the premise that 44-million were uninsured (never mind how bogus that stat was/is)–now that the ranks are being swelled by the self-same act, there will be tens of millions more which, as the left is wont to do, will be used as ‘proof’ that we need single-payer, not that Ocare wrecked a working market for healthcare.
>
> (No, it doesn’t matter that everyone against this law said *exactly* this would happen, because, to the left, cause and effect and accurate predictions–despite their pretensions at being scientifically-minded–are never valid unless it confirms their biases, so they’ll just blame ‘big business’ and the bogeyman for why it’s going in exactly the direction the sane said it would. The media will reinforce this and, pow, single-payer.)
>
> So laugh while you can–it won’t be funny for long.

I think that this could go either way. If the media covers up for Obama because they want single payer, and the conservatives pick someone like Mitt Romney instead of Bobby Jindal or Paul Ryan or Ted Cruz, then we are going to lose. We are going to lose because people will blame the decisions of private businesses instead of the Obamacare that forced them to make those decisions.

We still have the 2014 elections coming up. The public needs to have a good taste of what Obamacare does in order to understand what they’re getting. If they still choose to elect Democrats after seeing the effects of socialism, then they’ll have to live with socialism. I’m fine with it. I don’t plan to be working when the bill comes due, and I’m not going to be paying for big houses and college tuition, either.

# Grindr for heterosexuals: new Pure mobile app facilitates hooking up

**Wintery Knight** · 22 August 2013 · Archived copy · Original

Dina sent me this disturbing article from the UK Daily Mail.

Excerpt:

> Young people looking for no-strings-attached sex who don't want to go through the rigmarole of chit-chat online are looking forward to the launch of a new app next week.
>
> Pure, which has been described as 'bringing Seamless to the bedroom', offers sex on-demand by simply asking users their gender and the gender of their preference, whether they can host and then shows them potential partners who answer 'Okay' or 'No Way'.
>
> Pending approval by Apple's App Store, Pure's intentionally soul-less and potentially dangerous approach to hook-ups has no profiles, no chat sessions before-hand and deletes unfulfilled requests after an hour.
>
> Markedly different from more traditional internet dating sites such as Match.Com and OkCupid, Pure is also a departure from newer apps for anonymous sex hook-ups such as Tinder and Bang With Friends.
>
> All these apps and sites require some kind of profile and online conversation to get to know the potential date better.
>
> However, Pure, created by Roman Sidorenko and Alexander Kukhtenko removes all of that and simply provides two people who want to have sex **based on their image online** the ability to arrange a meet-up.

I see this story as the final conclusion of a trend I say when I was in my 20s where men and women were unable to evaluate the opposite sex for the responsibilities of marriage. Although young people said they wanted to get married, the way they did it was by choosing the best looking person available. There was no concept of courting, which is putting a person through their paces to see if they can actually do the job that marriage requires of them. I have literally been told by women that they can tell if a man is a good provider based on his appearance. If he is good looking then there is no need to investigate his academic credentials, his resume, his savings and so on. The tingles and peer approval, according to the criteria seen in the culture, are everything she needs to know his balance sheet. This app is the next phase of that, with pleasurable sex taking the place of slow, steady evaluation.

Now it is so bad that people actually want to have sex with people based on a photo. Honestly, this is so far from where I am and what my plans are that I think that it is pointless to even consider marriage at this point. The rules of this society are going to be made by people like the Bro-Choice man and the Duke University athlete hook-up woman. As women keep choosing men based on appearance, government is going to grow and grow to subsidize their behavior with free condoms, free breast enlargements, free abortions, free single mother welfare, and (for the feminists), free IVF. Why would I get involved with an enterprise like marriage where half the women are Sandra Fluke and the other half disagrees with Sandra Fluke, but is too cowardly to say anything about it for fear of "judging" and being seen as "divisive". If no one is standing up for courtship and marriage, then why should I feel obligated to risk what I have? It seems like people are just not serious about *real marriage.* Bills, duties, obligations, intimacy, faithfulness.

There is never going to be evidence that shows that anonymous recreational sex is good for marriage or parenting. People can do it if they want to, but it doesn't help anyone like me who really wants marriage and parenting done right. The truth is that premarital sex is bad for marriage and parenting. It reduces marital stability and quality. It puts children at risk for many dangerous thing, for example child neglect, child abuse and poverty. If I lowered my standards and married someone in her 30s after she had lived a life of binge-drinking and hooking-up, it would put the quality of my marriage and children in jeopardy. I would not be able to trust such a woman like that with the

responsibilities of wife and mother. I would be paying for a marriage and children, but not getting the kind of marriage and parenting that counts for God.

I don't mind if a woman wants to go on the "photo-only hook-ups" path through her 20s and early 30s, but I'm not obligated to make those choices (WRONG choices) work out for her. Chivalry means picking a good woman who is struggling while doing good things, and helping her to do good things. Chivalry does not mean picking an immoral woman and trying to make her happy. That's not chivalry, it's stupidity. Marriage is not something you do with someone who chooses recreational premarital sex partners based on photographs. Period. Marriage is not compatible with that level of stupidity.

# Average public school teacher paid more than median household income

**Wintery Knight** · 22 August 2013 · Archived copy · Original

CNS News reports.

Excerpt:

> The average public school teacher in the United States is paid more in base salary alone for just the work he or she does during the school year than the median U.S. household earns in an entire year.
>
> In the 2011-2012 school year, according to a newly released report by the Department of Education's National Center for Education Statistics, the average base salary for a full-time public school teacher in the United States was $53,100 for the regular school year—not counting any earnings made for summer work.
>
> In 2011, the latest year estimated by the Census Bureau, median household income in the United States was $50,054.
>
> Thus, the average base salary paid to a public school teacher for the regular school year was $3,064 more than the income the median household made in an entire year.
>
> According to the NCES, many public school teachers are paid additional money—over and above their base salaries—by the public school systems that employ them. For example, 41.8 percent are paid an average of $2,500 during the school year to work in extracurricular activities; 4.4 percent get an average of $1,400 during the school year in compensation based on their students' performance; and 7.9 percent get an average of $2,100 during the school year from other school-system sources.
>
> Also, 16.1 percent of public school teachers have a second job outside the school system that employs them as a teacher. These teachers earn an average of $4,800 during the school year from those outside jobs.
>
> When all sources of teacher income are taken into account, according to the NCES, the average teacher income during the 2011-2012 school year was $55,100.
>
> If two public school teachers were married to one another, and each earned only a public school teacher's average base salary of $53,100; their combined income would be $106,200. That is 212 percent of the nation's median household income.

And what are you paying for, exactly?

One of the reasons why I think that teachers should not be paid so much is because they are not accountable when they do wrong. Thanks to teachers unions, it's almost impossible to fire them. I can understand paying people less when they have more job security, but we are paying teachers more and they have tons of job security. How much job security? Well, consider this story about a public school teacher who molested one of his students and was convicted of rape. That part is not surprising. What is surprising is how seven of his female colleagues wrote letters on his behalf to try to get him a lighter sentence. Do you think that those seven teachers will be fired for doing that? Guess again.

One of the character witnesses is the rapist's own wife:

> High school teacher Toni Erickson is the wife of child rapist Neal Erickson. Clearly, Mrs. Erickson has exhibited loyalty toward her husband and is willing to overlook that he molested an eighth grade boy for three years, and that is very touching. But what's scary is that from Toni's lopsided perspective, the child is less a victim than the rapist.
>
> In her letter to the judge on Neal's behalf, Mrs. Erickson said this:

> As for punishment, because I know that is something the community expects, hasn't he been punished enough? He is losing a job he has held for 17 years [during three of which he was raping a child] and losing all future career potential as a teacher.
>
> It's clear that Toni seems more upset about the damage to her husband's future than the physical and psychological damage he imposed on a child. Mrs. Erickson also blames the community for demanding what she apparently feels is a disproportionate level of punishment, and deems herself qualified to determine how much penance for a child rapist is penance enough.
>
> Toni's moral position that statutory rape is not harmful to children was further exposed when she said,
>
> I have seen many delightful students who have been damaged by horrible events in their lives. While I acknowledge that Neal's conduct with [a victim he found 'delightful'] was wrong, I do not believe [the 14-year-old] was damaged by Neal's action[s].
>
> Furthermore, she said,
>
> "I base my opinion on my personal interaction with [the boy], both before and after Neal's actions. However [my daughter] very likely could be [damaged]. Please don't punish her by [her father's] absence in her life."
>
> So according to a woman who has overseen a high school classroom for 15 years, jailing a dangerous predator is cruel, because when he's not molesting boys, Neal is needed to father their daughter?

Would you like to get your money back from the public school system and send your child to a school that is accountable to you? Well, tough. You can't. You can't even have them fired when they condone raping children. If they're not going to be accountable, then I don't see why they should be paid so much.

# Obama administration sues state of Texas for passing laws to prevent voter fraud

**Wintery Knight** · 23 August 2013 · Archived copy · Original

From the Hill.

Excerpt:

> The Justice Department will file a lawsuit against Texas on Thursday, arguing that the state's voter ID law violates the Voting Rights Act.
>
> Attorney General Eric Holder vowed to fight state voting laws that the DOJ views as unfair or in violation of federal law, despite a recent Supreme Court decision striking down a key part of the Voting Rights Act (VRA).
>
> […]The Texas law requires voters to produce one of the following before casting a ballot: a driver's license, a personal ID card, a military ID card, a citizenship certificate with a photograph, a U.S. passport or a license to carry a concealed handgun.
>
> Opponents of the law argue that it unfairly discriminates against minority voters who might not have a photo ID and might not able to obtain one easily.
>
> Many Republicans, especially the Texas delegation, have balked at the possibility of the DOJ's lawsuit against Texas.
>
> Rep. Jim Sensenbrenner (R-Wis.), the former chairman of the House Judiciary Committee, blasted the DOJ's decision to move against Texas.
>
> The congressman said he talked with Holder and asked him to withdraw the lawsuit, arguing Congress should be the one to resolve discrepancies within the Voting Rights Act.
>
> "I regret that the Department of Justice announced its intent to file a lawsuit against Texas' Voter ID law citing Section 2 to the Voting Rights Act," said Sensenbrenner in a statement. "Voter ID laws are an essential element in protecting the integrity of our electoral process and do not have a discriminatory intent or effect.

Some of my readers in other countries often ask me – "if Obama is such a bad President, then how come the majority of Americans voted for him". Well, first of all, a lot of these people are simply voting for Obama in order to get a share of what their working neighbors earn. They want the government to give them money, in short. But a lot of the votes for Democrats are simply fraudulent votes. People voting twice in two different states, dead people's names being used by fraudulent voters, etc. Voter fraud is a Democrat specialty. It's so sacred to them that even Attorney General Eric Holder is suing anyone who tries to take away voter fraud. This is about what you would expect from an administration that facilitated the sale of weapons to drug cartels and covered up Benghazi by blaming a Youtube video.

# If you want to annoy the left, then raise your children to be like Texas senator Ted Cruz

**Wintery Knight** · 23 August 2013 · Archived copy · Original

Texas Republican senator Ted Cruz

Here's a profile in National Review of my one of my favorite senators.

Excerpt:

> The party's highest-profile Texans, George W. Bush and Rick Perry, tended to match inarticulateness with cowboy swagger and lend themselves to mockery as intellectual lightweights. Bush went to Yale and Harvard Business School, yet no one naturally thinks of him as an Ivy Leaguer. The two Lone Star State governors played into the Left's stereotypes so nicely that if they didn't exist, the *New York Times* editorial board would have had to invent them.
>
> Cruz is different — a Princeton and Harvard man who not only matriculated at those fine institutions but excelled at them. Champion debater at Princeton. Magna cum laude graduate at Harvard. Supreme Court clerkship, on the way to Texas solicitor general and dozens of cases before the U.S. Supreme Court.
>
> Cruz is from the intellectual elite, but not of it, a tea-party conservative whose politics are considered gauche at best at the storied universities where he studied. He is, to borrow the words of the 2008 H.W. Brands biography of Franklin D. Roosevelt, a traitor to his class.
>
> Democrats and liberal pundits would surely dislike Cruz no matter where he went to school, but his pedigree adds an element of shocked disbelief to the disdain. "Princeton and Harvard should be disgraced," former Pennsylvania governor Ed Rendell exclaimed on MSNBC, as if graduating a constitutionalist conservative who rises to national prominence is a violation of the schools' mission statements.
>
> […]In a *Washington Post* column a year ago, Dana Milbank noted Cruz's schooling and concluded that his tea-party politics must be a put-on, that he is, underneath it all, an "intellectually curious, liberal-arts conservative." Note the insulting assumption that an interest in books and ideas immunizes someone from a certain kind of conservative politics.
>
> **One of the Left's deepest prejudices is that its opponents are stupid, and Cruz tramples on it. At hearings, Cruz has the prosecutorial instincts of a . . . Harvard-trained lawyer. Watching Attorney General Eric Holder try to fend off Cruz's questioning on the administration's drone policy a few**

> **months ago was like seeing a mouse cornered by a very large cat.**
>
> Cruz hasn't played by the Senate rules that freshmen should initially be seen and not heard. In fact, he joined the upper chamber with all the subtlety of a SWAT team knocking down a drug suspect's front door.
>
> For people who care about such things — almost all of them are senators — this is an unforgivable offense. At another hearing, as Cruz says that the highest commitment of senators should be to the Constitution, another senator can be heard muttering that he doesn't like being lectured. Chairman Pat Leahy (probably the mutterer) eventually cuts him off and informs him he hasn't been in the Senate very long.
>
> Cruz lacks all defensiveness about his positions, another source of annoyance to his opponents, who are used to donning the mantle of both intellectual and moral superiority.

And here's a quick review of where Ted Cruz came from:

> Rafael Cruz, the father of Texas Sen. Ted Cruz, invigorated the crowd during tonight's FreedomWorks Free the People event.
>
> Describing his own personal journey escaping Cuba and working hard to build a life for himself in the U.S., the elder Cruz noted comparisons that he believes exist between Fidel Castro's governance and President Barack Obama's executive actions.
>
> Upon rising to power, he said that Castro, like Obama, spoke about hope and change. While the message sounded good at the time, it didn't take long for socialism to take root in his home country. And he paid the price.
>
> For his part in the revolution — one that many originally assumed would yield a more vibrant country — Cruz was punished while in Cuba.
>
> "I was in prison," he said. "I was tortured, but by the grace of God I was able to leave Cuba on a student VISA and came to the greatest country on the face of the earth."
>
> Cruz described his efforts working as a dishwasher in America and paying his own way through the University of Texas. From there, he built a life for himself — one that was filled with experiences that caused him to greatly appreciate the country that had given him so much.
>
> His plight in Cuba colored his American experience
>
> "You can't understand a loss of rights unless you've experienced it," Cruz told TheBlaze following the speech.
>
> His unique perspective leaves Cruz with the ability, he argues, to see the troubling signs surrounding socialism. Young people in America today, he told TheBlaze, take for granted the rights and privileges that the U.S. has afforded them.

Fascinating.

Now people always complain when I say that I am trying to find a wife with the background, education, experience and temperment to raise effective, influential children. I have a whole list of influential people I want to clone, in fact. I want a William Lane Craig, a Wayne Grudem, a Michael Licona, a Guillermo Gonzales, an Ann Gauger, a Jennifer Roback Morse, a Scott Klusendorf, a Mark Regnerus, and… a Ted Cruz. And I've saved the money to be able to get at least a few of those, too. The truth is that I had some of the experiences that Cruz's father had, and if he can make a Ted Cruz, then so should I be able to. They have to come from somewhere!

Now of course it's hard to guarantee outcomes when it comes to raising children, but there are some things you can prepare for. You can study things you hate that are hard, and save your money for Ph.D tuition. You can go to grad school yourself and publish research. You can look for a wife who shows the ability to nurture people so that they get better and rise higher. And maybe, you might just raise the next Ted Cruz. I think the old adage "if you aim at nothing, then you will surely hit it" is a good saying for marriage. If you are going to put hundreds of thousands of

dollars and decades of your life into a marriage, then you should aim at something. You might hit it. You're not just there to make another person feel good – you're there to make the marriage serve God. Raising influential, effective children is *one way* of doing that. But it doesn't happen by accident. And it isn't necessarily going to be "fun".

By the way, my Canadian readers might like to know that Cruz was born in Calgary, Alberta – the most conservative city in Canada. And it shows. You guys up north still have your Stephen Harper and your Ezra Levant, but we took your Ted Cruz and your Mark Steyn. We need them more than you do!

# New Mexico Supreme Court rules that Christian photographer must affirm gay marriage

**Wintery Knight** · 23 August 2013 · Archived copy · Original

Pastor Matt tweeted about this story from the Alliance Defending Freedom, a pro-religious liberty group.

Excerpt:

> In 2006, Vanessa Willock asked Elaine Huguenin—co-owner with her husband, Jonathan, of Elane Photography in Albuquerque—to photograph a "commitment ceremony" that Willock and another woman wanted to hold in the town of Taos. Neither marriage nor civil unions are legal between members of the same sex in New Mexico. Huguenin declined because her and her husband's Christian beliefs are in conflict with the message communicated by the ceremony, which Willock asked Huguenin to help her "celebrate." Willock found another photographer for her ceremony, but nevertheless filed a complaint with the New Mexico Human Rights Commission accusing Elane Photography of discrimination based on "sexual orientation." The commission held a one-day trial in January 2008 and then issued an order several months later finding that Elane Photography engaged in "sexual orientation" discrimination prohibited under state law. The commission ordered Elane Photography to pay $6,637.94 in attorneys' fees to the two women who filed the complaint. Alliance Defending Freedom attorneys took the case to the New Mexico court system to appeal the commission's ruling. The state's Court of Appeals upheld the commission's ruling, and Alliance Defending Freedom attorneys appealed it to the New Mexico Supreme Court.
>
> The New Mexico Supreme Court ruled Thursday against a photographer who declined to use her artistic expression to communicate the story of a same-sex ceremony. In a concurrence accompanying the opinion, one of the justices wrote that the photographer and her husband, Elaine and Jonathan Huguenin, "now are compelled by law to compromise the very religious beliefs that inspire their lives," adding "it is the price of citizenship."
>
> "The idea that free people can be 'compelled by law to compromise the very religious beliefs that inspire their lives' as the 'price of citizenship' is a chilling and unprecedented attack on freedom," said Senior Counsel Jordan Lorence. "Americans are now on notice that the price of doing business is their freedom. We are considering our next steps, including asking the U.S. Supreme Court to right this wrong."
>
> A Rasmussen poll last month found that "If a Christian wedding photographer who has deeply held religious beliefs opposing same-sex marriage is asked to work a same-sex wedding ceremony, 85% of American adults believe he has the right to say no."
>
> **In other statements in the concurrence, Justice Richard C. Bosson wrote, "At its heart, this case teaches that at some point in our lives all of us must compromise, if only a little, to accommodate the contrasting values of others…. That compromise is part of the glue that holds us together as a nation, the tolerance that lubricates the varied moving parts of us as a people…. In short, I would say to the Huguenins, with the utmost respect: it is the price of citizenship."**

Compromising your beliefs to avoid offending unstable people who think that the world revolves around them is "the price of citizenship".

I was always surprised, during the Supreme Court trial on gay marriage, to find lots of Christians who had changed their Facebook profile image to an equal sign, indicating their support for redefining the definition of marriage. I suspect that they did this because they imagined that Christianity had nothing to do with what the Bible said, but was instead about telling non-Christians nice things in order to be liked by them. Just tell people that God is anything they want God to be. Just tell them that God isn't holy and doesn't care how they act. Just tell them that whatever they do in order to feel happy is fine with God.

I wonder what the people who supported the redefinition of marriage will say to Christians who were prosecuted by gay rights activists on Judgement Day? Here's a pro-tip for non-Christians. You want to avoid making it harder for other people to know God and to follow him. When you make it harder for other people to know God and follow him God is not happy with you for doing that. In fact, making it harder for Christians to know God and follow him is about the worst thing you can do to offend God. It's a bad idea to use the government to take away someone's basic human right to religious liberty just because they disagreed with you. Feeling offended is not a good justification for you to force your views on other people using the power of government.

# Mike Licona debates Bart Ehrman on the Unbelievable radio show

**Wintery Knight** · 24 August 2013 · Archived copy · Original

From the Unbelievable radio show.

Details:

> Bart Ehrman is well known as a US New Testament Scholar who lost his Christian faith and now questions many core precepts of Christianity, including the Resurrection of Jesus. When Mike Licona had doubts he devoted himself to investigating the evidence and became convinced that Jesus resurrection is the only rational explanation for the facts.
>
> They debate key historical facts about the resurrection – are the letters of Paul that report the resurrection and the Gospel accounts trustworthy or theologised and changed with time? What about apparent contradictions between the Gospels? Does the consensus of scholars count as evidence, or is there a Christian bias? Can a miracle count as an explanation for historical data?

The MP3 file is here.

**Snarky summary of the radio debate:** (items with * are my made-up paraphrases/clarifications)

Ehrman:
– Bart's new book is about forgeries in the ancient world
– some books were falsely attributed to prominent Christian figures
– there are mistakes in the Bible
– there are mistakes in the resurrection narratives
– the defeat of inerrancy led to his conversion to liberal Christianity
– the problem of evil and suffering caused him to become a non-Christian

Licona:
– there are minimal facts that are agreed to by a broad spectrum of scholars
– the minimal facts are accepted because they pass standard historical criteria
– Fact 1: Jesus died by crucifixion
– Fact 2: Individuals and groups had visions of Jesus after his death
– Fact 3: Paul, a skeptic and an enemy, had an appearance of Jesus that converted him
– these facts are agreed to atheist scholars, liberal scholars, etc.
– virtually 100% of scholars agree with these three facts
– there is no naturalistic explanation of these three facts
– therefore, the best explanation of these three facts is that God raised Jesus from the dead

Ehrman:
– all historians would accept these three facts, except for maybe the group appearances
– the death of Jesus is irrelevant to the resurrection
– the second and third point can be collapsed together
– so really there is only one fact

Moderator:
– the crucifixion is relevant because Muslims don't admit that fact
– the crucifixion important because it establishes a resurrection, not a resuscitation

Ehrman:
– well, if the point is that he died, then yes, this does require a resurrection

Licona:
– the crucifixion refutes Muslims who deny that Jesus died
– the crucifixion refutes the apparent death theory (swoon theory)
– the death is required for a bodily resurrection
– it's important to know what facts most scholars, regardless of worldview, agree on
– it's important to emphasize that Licona is working from historical bedrock facts
– the resurrection is the best explanation for the historical bedrock facts

Ehrman:
– you are trying to list 3 things, but really it is just one thing – the appearances
– and not ALL scholars agree that the group visions occurred

Licona:
– name one prominent scholar who denies the group appearances

Ehrman:
– the radically leftist atheist nutcase John Dominic Crossan denies the group appearances
* Crossan is so far on the left that I look like a nutcase for even citing him
* Crossan believes in the Secret Gospel of Mark, which is a hoax – but I still cite Crossan
* Crossan believes that the synoptics are LATER than gnostic forged gospels – but I still cite Crossan
* Crossan presupposes atheism, so he cannot admit to miracle stories as a pre-supposition – but I still cite Crossan
* Crossan pre-supposes religious pluralism, so he cannot allow any exclusive claims Christians make – but I still cite Crossan
* Crossan is a good historian, it's just that he is so far to the left that no one – NO ONE – agrees with his all of crazy theories
* I think it is a good idea to cite historians who pre-suppose atheism and political correctness before they sit down to do history

Licona:
– let me explain why most scholars accept the individual and group post-mortem appearances
– the best source for the appearances is the early creed recorded by Paul in 1 Cor 15:3-8
– Paul himself had an appearance of Jesus after Jesus' death
– Paul received this material from a source very soon after the appearances – within 1-3 years
– we know that Paul met with Jesus disciples multiple times prior to writing
– Paul probably received it from Peter and James, who were themselves eyewitnesses

Moderator:
– this early dating presumably rules out legend

Licona:
– well legends CAN start quickly
– it does show that Paul was an eyewitness
– it does show that Paul was in contact with reliable eyewitnesses

Ehrman:
– 1 Corinthians is written around 55 AD, twenty-five years after Jesus died
– it is not implausible that Paul got the creed from the disciples, who were eyewitnesses
– but you don't need a long time for legends to emerge, so that is a possibility

Licona:
– only about 3% of people could read and write back them
– instead, people had enormous capacity for memorization
– the Pharisees were particularly good at memorization

– Jews were very serious about passing along traditions accurately
– Paul, a prominent Pharisee, would have been capable of passing on early creeds accurately
– Paul, in 1 Cor 7, shows that he is willing to separate his opinions from authentic tradition
– Paul had an opportunity in 1 Cor 7 to put words into Jesus' mouth, but he wouldn't do it

Ehrman:
– cultural anthropologists show that things do get changed in some oral cultures
– in these oral cultures, it is assumed that the story teller will change the story
– only in written cultures are they careful to avoid changing the story
– in the New Testament, you can compare the same story in two different gospels, there are differences

Licona:
– Ehrman is right that the gospel writers pick and choose things from the oral tradition that they want to include in their gospels
– different oral tradition transmission schemes have more or less embellishment
– african tribes embellish more, rabbinic teaching embellishes less
* Jesus' followers would have viewed him as a rabbi, and been careful about adding to his teachings
– Paul, an eyewitness, probably received the creed in 1 Cor 15 from other eyewitnesses
– Paul speaks about going twice to Jerusalem in Galatians
– he is meeting with Peter and James to check his facts

Ehrman:
– when you look at Mark and John, there are lots of differences in the narrative

Licona:
– I agree that the gospels have differences, but the oral tradition is likely fixed

Ehrman:
– but Mark and John have different sayings
– why doesn't Mark have the same explicit high Christology that John has?

Licona:
– first, John is trying to weave the oral tradition into a compelling story
– and second, when you look in Mark, the high Christology is there in the Son of Man sayings
– the apocalyptic Son of Man is in Mark, and everywhere in the New Testament

Ehrman:
– the "apocalyptic Son of Man" isn't in John

Licona:
– what about in John 9 with the man who was born blind

Ehrman:
– where is the apocalyptic part?

Licona:
– the healed man worships Jesus because he is the Son of Man
– that links to the apocalypic passages in the Old Testament

Moderator:
– what about the differences between the gospels?

Ehrman:
* well, now is the time for me to set up an inerrantist straw man and then knock it down!
* who was at the empty tomb: one angel or two angels? we don't know, so the whole Bible is false!
* I used to be an inerrantist, so one minor difference is enough for me to dump the whole Bible

* I'll kill you, you stupid straw man! I hate you, Moody Bible Institute! You lied to me!

Licona:
– many of these problems can be solved by realizing that the gospel writers compress time
– the stories don't have to list ALL the characters in every scene
– you don't have to force the Bible to meet some sort of wooden chronology
– the main thing is that the events happened, not that the descriptions match word for word across sources

Ehrman:
– you can't infer a miracle from history, David Hume says so
* extraordinary claims require extraordinary evidence, David Hume says so
* no I don't know what begging the question is, I'm not a philosopher
* no I don't remember when Bill Craig kicked my ass on this Hume objection in our debate
– the New Testament gospels contradict each other at every point, they are not reliable at all!
* they cannot even agree what Jesus' name is! There are 1 trillion variants of Jesus' name!
* "one angel vs two angels" proves that the gospels contradict each other at every point
* my expansive list of FOUR theologically insignificant variants proves that the gospels contradict each other at every point

Licona:
– um, the gospels agree on the central narrative and disagree on the peripherals
– and they agree on the minimal facts I presented, even if they disagree about the number of angels

Ehrman:
* they have to agree on everything and be inerrant! The Moody Straw Man Bible Institute says so!
* I really really really need to have the number of angels be the same, or Jesus didn't die on the cross

Licona:
– but you don't deny any of the three minimal facts I presented (crucifixion, appearances, Paul)

Ehrman:
– well, I don't know if the group appearances occurred – maybe they did
– i think Jesus died on the cross, and I think that people said they saw him alive afterward

Licona:
– if you deny the minimal facts, then you are outside the majority of scholars

Ehrman:
– the majority of scholars who agree to the minimal facts you presented are Christians
* Gerd Ludemann is an atheist Christian
* James Crossley is an atheist Christian
* Hector Avalos is an atheist Christian
* the majority of the atheist scholars are all Christians!
– VIRTUALLY EVERYBODY IN THE SOCIETY OF BIBLICAL LITERATURE IS A CHRISTIAN!!! (Yes, he said that)

Licona:
– you really think so?

Ehrman
– you name one non-Christian in the SBL

Licona:
– (incredulous) um, John Dominic Crossan is an atheist

Ehrman:

– but he CLAIMS TO BE A CHRISTIAN so that means HE IS A CHRISTIAN
* all you have to do to be a Christian is claim to be one
* you can even deny the existence of God and the divinity of Christ and still be one, you bigot!

Licona:
– would Jesus or the apostles recognize a Christian as being someone who doubts God's existence

Ehrman:
– my view is that Jesus and the apostles would not recognize evangelical Christians as Christians
* a non-theist can be a Christian just by claiming to be one, but evangelical Christians are not Christians even if they claim to be Christians
– Christians can't record accurate history about the resurrection because they are biased

Licona:
– on your view, if a person is a Christian then he can't write about the evidence for the resurrection
– so then similarly, you would not allow Jews to write about the historicity of the Holocaust
– because you think that if people have an interest in what they are recording then they can't be objective
– but you have to consider the evidence we have, taking the biases of the sources into account

Ehrman:
– but the only people who believe in the resurrection are Christians!

Licona:
– well, people can consider the evidence for the resurrection as non-Christians
– and then if they accept it they can become Christians

Moderator:
– what about your bias? you don't believe in God – doesn't that pre-supposition affect how you do history?

Ehrman:
– well, I presuppose naturalism, so I can't admit to anything in history that implicates supernatural causes
* no I have never heard of the arguments for the Big Bang, fine-tuning, origin of life, Cambrian explosion, irreducible complexity, limits on mutations creating information, habitability and so on – I never heard about that stuff from my atheist university professors and even if I had I would have been expelled for talking about it because that would make people feel bad about their sinning

Licona:
– so it's not bias you are concerned about, it's that you don't want history to contradict your untested religion of naturalism?
– why not just do the history without pre-suppositions to gather the minimal facts and then see what the best explanation is?

Ehrman:
* well God is out of bounds as an explanation because I could not have got my PhD if I mentioned God
* I really needed my smart atheist professors to like me and give me good grades so God is RIGHT OUT
* ideas like a real God and moral laws and Hell makes my atheist professors uncomfortable and that means low grades for me
* I'm not really interested in butting heads with professors – it's easier to just agree with them and move on to selling books to the gullible
* My books are much more sensational than Dan Brown books, so please buy lots of them!

Licona:
– what if the historical evidence is good enough to show that Jesus rose from the dead?

Ehrman:

– well I would not call someone rising from the dead a miracle – I would call it weird
* I also think that the Big Bang is “weird” but that doesn’t prove that God created the universe out of nothing
* if it’s a miracle then I’m going to have to not sin, and maybe even go to Hell, and we can’t have that

Licona:
– well, you accept the three minimal facts
– what if we try all the naturalistic explanations for those three facts and there are problems with all of them?
– what if the resurrection is the best explanation for the three minimal facts?

Ehrman:
– but I want to arbitrarily rule God put because I want to pre-suppose naturalism
– there is not historical reason I have to rule put supernatural explanations a priori

Licona:
– I think you are struggling with the theological implications of a historical conclusion

Ehrman:
– well when you do theology, you have to avoid grounding your theology on science or history
– theology has to be completely made up or it’s not good theology

Licona:
– I think you are letting your dislike of the implications of the resurrection determine your historical conclusions
– you have to use historical methods to gather the minimal facts that every scholar accepts, regardless of worldview
– then you weigh ALL the hypotheses, natural and supernatural, that could account for these minimal facts
– then you choose the hypothesis that best explains the minimal facts

# Audio, summary and review of William Lane Craig vs. Stephen Law debate

**Wintery Knight** · 24 August 2013 · Archived copy · Original

You can also download the audio at Apologetics 315.

**Scorecard:**

Craig's case:

- The origin of the universe: Law had no response.
- The moral argument: Law denied that there are objective moral values.
- The resurrection argument: Law told a story about a UFO sighting.

Law's case:

- The evidential argument from evil: Law later denied that evil existed, thus undermining his entire argument. Christian theists DON'T consider it evil when people suffer, if that suffering is necessary in order to get people to know God. We don't agree with Law's definition of evil that "people suffering" is automatically evil – because there can be a morally sufficient reason why that suffering is allowed by God to happen, since his goal is not our happiness but for us to know him. Law was not able to show how we know that God doesn't have a morally sufficient reason to permit the evils we do see. And he has to prove that in order to assert (in his premise 1) that gratuitous evil exists. How does he know that? How does he know that some specific instance of evil is pointless for the purpose of improve the knowledge of God overall? The one good thing that Law did was to press Craig to defend his premise that if God doesn't exist, then objective moral values also don't exist. Craig did talk about how if there is no God, then morality is just a herd morality that evolves by accident, though.

Final score: 3 to 0 for Craig. Law was better than Craig's average opponent though, for all the snarky things I might say about him, below.

Below is the snarky summary of the debate. I sometimes paraphrase entire sentences and insert commentary in order to explain what's going on without the spin.

**William Lane Craig opening speech:**

Two contentions:

C1) There are good reasons to think that God exists.
C2) There are no good reasons to think that God does not exist.

Arguments for the existence of God.

A1) The origin of the universe

1. Whatever begins to exist requires a cause.
2. The universe began to exist.
3. Therefore, the universe requires a cause.

The beginning of the universe is confirmed by philosophy and science.

An actual infinite number of past events is impossible. The concept of an actual infinite is mathematically unintelligible for the operations of subtraction and division.

Cosmologists have now proven that any universe that is now in a state of expansion must have begun to exist, independent of any physical description of the model. Even speculative alternatives to the current Big Bang model require a beginning at some point.

The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

A2) The moral argument.

1. If God does not exist, then objective moral values do not exist.
2. Objective morality does exist.
3. Therefore, God exists.

Michael Ruse, an atheist philosopher agrees that if God does not exist, then there is only a “herd morality” that is determined by biological evolution and social evolution. There no objective moral standard, just different customs and conventions that vary by time and place. Anyone who acts against the herd morality is merely being unfashionable and unconventional.

Dr. Law affirms objective morality in his written work (but can he ground it on atheism?).

In order to be able to make a distinction between good and evil that is objective, there has to be a God to determine a standard of good and evil that is binding regardless of the varying customs and conventions of different people groups. Even when a person argues against God’s existence by pointing to the “evil” in the world, they must assume objective moral values, and a God who grounds those objective moral values, in order to make the charge. Therefore, it is impossible to complain about the evil in the world without assuming the existence of God.

A3) The resurrection of Jesus.

1. There are certain minimal facts that are admitted by the majority of historians, across the ideological spectrum; the empty tomb, the post-mortem appearances of Jesus, the early belief in the resurrection of Jesus.
2. Naturalistic attempts to explain these minimal facts fail.
3. The best explanation of these facts is that Jesus rose from the dead.

Craig’s opponent thinks that Jesus never existed, a position that virtually no historian holds.

**Stephen Law’s opening statement:**

A1) The evidential argument from evil

1. Gratuitous evil exists.
2. God would be able to remove evil, would know about the evil, and would want to remove gratuitous evil.
3. It is implausible that God exists.

There are moral evil actions committed by agents
There are natural evils like earthquake.

Animals suffer. e.g. – from being eaten by other animals.
Humans suffer, e.g. – from disease.

Craig’s cosmological argument does prove that a Creator exists, but the evidential argument from evil proves that this Creator is not good.

If the Creator really were good, then we would all be spared from all suffering, both physical and mental, because God has no morally sufficient reason for allowing anyone to suffer. God, if he existed, would prevent humans from committing moral evil by removing our free will. God would also prevent us from having any unhappy feelings caused by natural evil.

A2) Theodicies offered by Christians fail

Freedom Will Theodicy: An evil God might like to allow humans to have free will.

Laws of Nature: An evil God might like to have laws of nature to allow predictable consequences.

Afterlife compensation: An evil God might like an evil afterlife to make us suffer more.

**Craig's first rebuttal:**

RA1) Law's evidential argument from evil fails

The mere presence of evil is not a problem if God has morally sufficient reasons for permitting instances of evil. Since Dr. Law is making the claim that God would not allow the evil, then he has to bear the burden of proof for showing that there is no morally sufficient reason for God to permit evil and sufering.

The purpose of life on the Christian view is not merely to have happy feelings. The purpose of life on the Christian view is coming to know God and having a relationship with him. Many evils that are not good for giving us happy feelings may be good for getting us to think seriously about whether God is there and what to do to have a relationship with him.

Theists don't infer the goodness of God because they survey the universe and find lots of good things. They infer the goodness of God based on the mere fact that they are aware of an objective moral standard of good and evil, and inalienable human rights, and they identify God as the source of that standard of Good and evil. Those things cannot exist unless there is a God to ground an objective standard of right and wrong. Since the source of the standard is God's own unchanging nature, he cannot act in a way that is evil.

Moral evil actually proves the existence of God. If Dr. Law claims that there is moral evil, then he has to have an objective moral standard that allows the distinction between good and evil. The only way to make an objective distinction between good and evil is if there is a Design for the universe that determines what is good and evil. And a design for the universe requires a Designer of the universe.

With respect to animal suffering, any ecosystem require predators in order to control population. For example, in Canada, Canadians have had to reintroduce wolves into the ecosystem in order to cull the populations of caribou, which was de-stabilizing the ecosystem. Since humans depend on the existence of these animals, God has to allow these predators in order to balance the ecosystem.

Animals do not suffer pain the same way as humans do, research shows that although they suffer pain, they are not aware of that suffering in the way that humans are. Once you understand the biology of animals, you understand that they do not experience pain the same way as humans.

**Law's first rebuttal:**

Craig thinks that you need an objective standard in order to judge things as objectively good or evil. But that's false. I can use my subjective opinions to claim that some things are objective evil. If God doesn't do what I like (prevent moral and natural evil), then he isn't objectively good. I don't need to buy into the notion of objective good and evil in order to say that something is good or evil. I can say that something is good or evil while denying the existence of objective good and evil. (IMPORTANT NOTE: DR. LAW HAS AT THIS POINT RETRACTED HIS SUPPORT FOR OBJECTIVE MORAL VALUES, WHICH MAKES IT IMPOSSIBLE TO EMPLOY THE EVIDENTIAL ARGUMENT FROM EVIL)

Dr. Craig says that I think that people determine the goodness or evilness of God by counting good things and evil things. But that's false. My argument is that people determine the goodness or evilness of God by counting good things and evil things. It's completely different!The presence of good things undermines the existence of evil God, and the existence of evil things undermines the existence of good God.

**Craig's second rebuttal:**

Dr. Law has not yet responded to any of the 3 arguments for God's existence.

A1) No response to the argument from the origin of the universe. How can you admit to a Creator of the universe

and still be an atheist? His argument from evil doesn't refute a supernatural cause of the universe.

A2) Dr. Law is now denying that objective moral values exist, contrary to his written work. This means that he is not able to use the terms "good" and "evil" intelligibly. He is merely expressing his subjective opinions, and therefore he cannot press the evidential argument from evil, because there is no such thing as evil, objectively speaking, on his view. It's just his personal preference.

A3) No response to the argument concerning the resurrection.

RA1) He has to show that God doesn't have morally sufficient reasons for permitting the evils we see. He admits that he can't.

He says that the world is morally ambiguous and you can't infer the goodness of God by counting the amount of evil and good in the world, just like you can't infer the evilness of God by counting the amount of evil and good in the world. And that's correct, and theists don't infer God's goodness by counting good and evil instances. The point is that if you can't infer God's goodness or evilness by counting instances of good or evil, then you can't infer that God isn't good, because you don't know whether God has a morally sufficient reason for permitting the evils that we see. And it's the atheist's burden of proof to show that God DOESN'T have a morally sufficient reason, and Dr. Law is unable to do that.

Dr. Law says that you don't need to have a standard of good and evil to press the problem of pain and suffering. But if you deny that there is any good or evil independent of pain and suffering, then you can't impugn God's goodness because you don't have a standard in place to say that gratuitous pain and suffering is evil.

Any event that occurs in history can have effects far into the future or in another country. Physicists understand that small effects can trigger results that cannot be foreseen. And what this means is that humans are simply not in a position to know whether God has a moral sufficient reason for permitting specific instances of evil.

Finally, the purpose of life on the Christian view is not to have happy feelings and be free from suffering. God's purpose for us is to know him and to be rightly related to him. Many instances of evil may be pointless for making people feel good, but may be effective for drawing people towards God.

**Law's second rebuttal:**

RA2) The vast majority of philosophers reject the moral argument, for example Richard Swinburne. (No reasoning for the denial is explained, just the denial of the argument's effectiveness by citing Richard Swinburne as an authority). This is a fallacy of arguing from an authority.

Dr. Craig has to prove that no atheistic account of morality can be given. He has disprove them all, even the ones that no one has thought of yet. It's not my job, AS THE ATHEIST, to prove that I can give an account of objective truth of moral claims can be given ON ATHEISM. I don't have to do anything except stand here and speculate about some possible account of morality on atheism and I win.

The existence of objective moral values is not obvious to me. I.e. – I don't see anything objectively wrong with torturing babies for fun, it's a matter of opinion. I also don't see anything evil about those things that I said were evil in my first speech. I was just kidding, people, can't you take a joke? It just seems to some people like Dr. Craig that there are objective moral values, but actually there aren't. Dr. Craig merely wants to believe that evil is real, but actually it isn't. Except when I want to argue that it is in in my evidential argument FROM EVIL.

RA3) Although the majority of ancient historians accept the historicity of the empty tomb because of the early sources, multiple attestation, enemy attestation etc., the tomb was not empty because of this story I'm going to tell about a UFO.

Although virtually all ancient historians accept the post-mortem appearances because of the early sources, multiple attestation, etc., the post-mortem appearances did not occur because of this story I'm going to tell about a UFO.

Although virtually all ancient historians accept the early belief that Jesus was bodily resurrected because of the

early sources, multiple attestation, etc., the early belief that Jesus was bodily resurrected did not occur because of this story I'm going to tell about a UFO.

**Craig's final rebuttal:**

A1) Dr. Law accepts that the universe was created by an eternal, non-material, uncaused being. What a strange sort of atheist, who admits that there exists a supernatural Creator of the universe.

A2) Dr. Law employed the fallacy of arguing from authority. But Dr. Craig can cite a much longer list of atheists who agree that if God does not exist, then objective moral values do not exist, e.g. – Nietzche, Russell, Sartre, Mackie, etc. Consistent atheists understand that if there is no God, there is no design for how the universe ought to be (natural evil), or how we ought to be (moral evil).

A3) We have to be careful when inferring a supernatural explanation and use objective criteria. All natural explanations fail to explain the full set of minimal facts that virtually all historians accept. In addition, the resurrection takes place within a religio-historical context where one might expect God to intervene if what Jesus was saying was true.

RA1) You can't disprove God's goodness by appealing to instances of evil, nor can you disprove God's evilness by appealing to instances of good. This is because humans are not in a position to assess the ripple effects of permitting any instance of evil (good). It is therefore possible and inscrutable as to whether God has a morally sufficient reason for permitting any and all instances of apparent evil (good).

**Dr. Law's final rebuttal:**

A2) There is a lot of pain and suffering in the history of the world. This is a challenge to God's goodness because God's purpose for us is to make us happy, and not at all for us to know him or for us to be related to him, as the Bible says.

Here's my argument. Craig thinks that you can determine God's goodness by counting instances of good and evil in the world, although he explicitly denies that. And I've actually done the counting and found that you can't determine God's goodness because there's too much gratuitous evil. Never mind what Craig said about the ripple effect through time and space, or about chaos theory, or about morally sufficient reasons. These instances of gratuitous evil I'm telling you about have no morally sufficient reasons, in any time or in any place. Trust me, I looked everywhere and in the future, using my time machine.

Now, in my argument, when I said the word evil, I don't really mean evil, because to use an objective standard of good and evil, I would have to have a moral lawgiver to ground that objective standard. So when I say moral and natural evil, I don't mean moral and natural evil, I actually mean things that I don't personally like. So I'm going to change my argument's name to the Evidential Argument From Things That I Find Yucky.

Dr. Craig provided no justification for his premise that "if there is no God, there there are no objective moral values". And it's not my job to produce an atheistic theory about how objective moral values could exist, especially since my argument from evil relies on objective moral values.

A3) UFOs.

# UK business owner on trial for tackling burglars on his own property

**Wintery Knight** · 25 August 2013 · Archived copy · Original

From the UK Daily Mail. (H/T Dina)

Excerpt:

> A businessman who confronted a burglar raiding his premises appeared in court yesterday accused of attacking him.
>
> Andrew Woodhouse, 43, was chasing thieves off his property when he claims one of them 'came at' him with a wooden stick.
>
> Father-of-five Woodhouse allegedly used the stick to injure the man's legs before holding him down while his wife called the police.
>
> But when officers arrived they arrested Woodhouse and held him in a cell for 18 hours.
>
> **He appeared at Newport Crown Court yesterday charged with grievous bodily harm with intent which has a maximum sentence of life imprisonment.**
>
> Andrew Taylor, defending, said: 'Mr Woodhouse apprehended two of the burglars at his tyre depot.
>
> 'It happened after two or three men decided they were going to remove a large quantity of diesel from his premises.
>
> 'Mr Woodhouse has been interviewed by police and has provided a full explanation about what happened.
>
> 'There is a CCTV recording of the incident and we are waiting to see the footage.'
>
> […]Woodhouse was in bed with his wife Lisa at their detached home in the village of Govilon, near Abergavenny, when his burglar alarm went off at about 12.30am.
>
> […]Woodhouse drove to his business premises where the alleged assault happened.
>
> […]His wife Lisa said her husband was prepared to go through the legal process to clear his name.
>
> She said: 'But I fail to see where there was any intent on Andrew's part.
>
> 'He didn't intend to get up in the middle of the night to assault anyone. All he did was protect his property.
>
> 'People may think he took the law into his own hands but what was he supposed to do, stand by and watch?'
>
> Woodhouse employs six staff including two of his sons at the family business, which was set up 20 years ago.
>
> **The firm has lost £15,000 in recent years to thefts of diesel and tools.**
>
> Two fuel thieves who stole £50 worth of diesel from Woodhouse's premises on the night of the alleged assault have been dealt with in court.
>
> Timothy Cross, 31, and Kevin Green, 52, took two jerry cans of diesel from Woodhouse's tyre depot in Abergavenny.
>
> **Cross and Green both admitted theft and were fined £75 by Cwmbran magistrates.**

People sometimes wonder why I think that the UK is the most wussified country in the world. This is not an arbitrary opinion that I hold. The UK is a nanny state, where the people in charge treat men as if they are toddlers in day care. This country has the least respect for men and male nature of any country that I am aware of at this time. I don't see how you could be a man and be comfortable living in a society that basically criminalizes the righteous use of force against evil. It's so strange to me when I hear complaints from UK women about how men are not taking responsibility any more, or making commitments, or being ambitious. Well, here's a little newsflash

for you. If you treat men like children and resent them using force to defend their homes and businesses, then you are discouraging manliness. The kinds of men you will get then are wussified, feminized men who attempt nothing and defend nothing.

I was having a conversation with a friend of mine who lives in the UK recently. She was explaining to me how women who are under a certain age are *given* government housing if they have babies out-wedlock. What kind of message is that sending? It is telling young women that men are optional, and that they don't have to choose men wisely in order to get one who can do the provider role. So on the one hand, men are punished by the state for protecting, and on the other, they are punished by the state for providing. The state taxes men with jobs to subsidize the losers who get sex without having to commit first. And I know that young women often prefer these men because they don't want a man who has authority from having a job to tell them what to do. (See here for some examples)

The UK has been trying to undermine and replace men who perform the traditional male roles for decades. The role of protecting has been demonized by punishing men who protect their families and businesses. The role of providing has been marginalized through higher taxes, socialized medicine and welfare benefits. And moral and spiritual leadership have been dismantled with pervasive moral relativism, multicultaralism and secularism. Everything that a strong, virtuous man could do to be recognized has been marginalized and discredited by the socialist, feminist government of the UK. UK women have no right to complain now when men act like children – they caused it by punishing men who were only doing what good men are supposed to do in any good society.

Just 70 years ago we lived in the time of British heroes like Eric "Digger" Dowling, Guy Gibson, Douglas Bader, Patrick Reid and Tommy McPherson. I learned from watching World War 2 movies as a child that British men were courageous and fierce, and able to defend Western civilization from tyranny with force, if necessary. Now all that is going, going, gone thanks to the British socialist welfare state. Men do understand what messages the feminist welfare state is sending by subsidizing single motherhood, taxing men more when their wives stay home, criminalizing self-defense and capitalism, arresting military heroes for owning handguns, discriminating against boys in schools that are dominated by women, and so on. Men understand the message that's being sent there, and they do adjust.

# What happened to the economy after Democrats won the House and Senate in 2007?

**Wintery Knight** · 25 August 2013 · Archived copy · Original

Labor Force Participation Rate from 2007 (Pelosi/Reid) to 2013

Three data points explain what happens when government gets bigger, and job creators get smaller.

First from Investors Business Daily, Obama's failure to reduce health insurance premiums with his big government takeover of health care.

Excerpt:

> The average employer-provided family health insurance premiums have climbed $2,976 since 2009, according to an annual Kaiser Family Foundation survey released this week. They're up $3,671 compared with the year before President Obama took office. That's despite Obama's repeated promises that the health care reform law he championed would cut premiums by $2,500 in his first term.
>
> And while annual premium increases have moderated over the past two years, that's due to trends in the insurance market largely unrelated to ObamaCare, and trends the law could actually reverse.
>
> The Kaiser survey found that the average family premium this year is $16,351, up 4% over last year, and up 22% since 2009. After adjusting for inflation, premiums climbed an average 3.2% a year in Obama's first term, higher than the 2.7% average during President Bush's last four years in office.
>
> During his first campaign for president, Obama repeatedly claimed that his health reform plan would, as he said at a Virginia rally in 2008 "lower premiums by up to $2,500 for a typical family per year."

Now, let's take a look the second failure, as reported by the Weekly Standard.

Excerpt:

> President Obama likes to talk about income inequality, but what matters far more is the actual income of the typical American. And how has the typical American household income fared on Obama's watch? Well, the economic "recovery" has now spanned an Olympiad, and during that time the typical American household income has not only dropped—it has dropped more than twice as much as it did during the recession.
>
> New estimates derived from the Census Bureau's Current Population Survey by Sentier Research indicate that the real (inflation-adjusted) median annual household income in America has fallen by 4.4 percent during the "recovery," after having fallen by 1.8 during the recession. During the recession, the median American household income fell by $1,002 (from $55,480 to $54,478). During the recovery—that is, from the officially defined end of the recession (in June 2009) to the most recent month for which figures are available (June

> 2013)—the median American household income has fallen by $2,380 (from $54,478 to $52,098). So the typical American household is making almost $2,400 less per year (in constant 2013 dollars) than it was four years ago, when the Obama "recovery" began.

> Importantly, these income tallies include government payouts such as unemployment compensation and cash welfare. So Obama's method of funneling ever-more money and power to Washington, and then selectively divvying some of it back out, clearly isn't working for the typical American family.

And finally, the third example, from the Daily Caller.

Excerpt:

> In 35 states, welfare benefits pay more than a minimum wage job, according to a new study by the libertarian Cato Institute, and in 13 states welfare pays more than $15 per hour.
>
> "One of the single best ways to climb out of poverty is taking a job, but as long as welfare provides a better standard of living than an entry-level job, recipients will continue to choose it over work," said Michael Tanner, senior policy analyst and co-author of the study.
>
> The study is an updated version of one Tanner put out in 1995 that estimated the full value of welfare benefits packages across the states. The 1995 study found that such tax-free welfare benefits greatly exceeded the poverty level and "their dollar value was greater than the amount of take-home income a worker would receive from an entry-level job."
>
> Despite efforts to curb welfare spending, many welfare programs and benefits have continued to outpace the income that many workers can receive for working an entry-level job, which disincentivizes work, according to the study.
>
> "The current welfare system provides such a high level of benefits that it acts as a disincentive for work," reads the study. "Welfare currently pays more than a minimum-wage job in 35 states, even after accounting for the Earned Income Tax Credit, and in 13 states it pays more than $15 per hour."
>
> According to the study, the federal government funds 126 separate programs designed to support low-income earners. Seventy-two of these programs provide cash or in-kind benefits to recipients. This is on top of additional welfare programs operated by state and local governments.
>
> Welfare recipients in Hawaii get the most benefits, according to Tanner, at $29.13 per hour — or $60,590 pre-tax income annually. However, the state's minimum wage is only $7.25 per hour, according to the Labor Department. Hawaiians on welfare also earn 167 percent of the median salary in the state, which is only $36,275.

What if a fireman showed up in front of your house on your birthday and claimed that he wanted to put out the candles on your birthday cake because they were a fire hazard? What if he read out a long, passionate, prepared speech about how much he wanted to put out fires? What if he then dumped a bucket of gasoline on your cake? What if your house caught fire and he claimed that you should let him keep throwing gas on the fire to put it out? What if you found out that this person was a lawyer and a community organizer, and knew nothing at all about putting fires out? Obama was not prepared to run the economy, and, as expected, he spent a ton of money without getting the results he said he was going to get. He gave speeches about jobs and poverty and everything he's done has been to increase unemployment and increase poverty – and now we are $17 trillion dollars in debt. Speeches about achieving objective X during a campaign don't necessarily translate into achieving objective X. You actually have to know what you are doing in order to achieve objectives, preferably because you've done it before in real life.

# The Mysterious Drew lectures on Christianity and the culture war in Defenders

**Wintery Knight** · 25 August 2013 · Archived copy · Original

Drew's blog is here. He taught Dr. William Lane Craig's Defenders class for two weeks in a row while Dr. Craig was in Australia. He chose to focus on secularism.

Note: Drew has some problems with the microphone for the first 2.5 minutes of part 1. Be patient.

Part 1 deals with how Europe and America became secular in different ways. (You can read his essay for part 1 here)

Part 1 topics:

- Secularism: the attempt to take values based on religion (e.g. – Judeo-Christian values) out of the public square
- Television programs that are targeted to more thoughtful viewers favor secular or liberal worldviews
- Consider the sexual revolution – a new set of beliefs about sex are being pushed into the culture
- Sex revolution includes: same-sex marriage, pornography, hookup culture, no-fault divorce
- The effect of the sexual revolution has been to introduce widespread fatherlessness, which is very bad for children
- The sexual revolution is being pushed in the popular culture, but also in the school sexual education programs
- You can see where secularism has led to by looking at Europe, which has largely rejected its Christian roots
- For example, Germany and Sweden are very aggressive about stamping out homeschooling
- They do this because they are trying to push a government-approved set of beliefs and meanings onto children
- How bad could it get? You can look at how Orthodox Judaism was persecuted in Russia after the communist revolution
- How did Europe become so secular?
- Wars in Europe between Protestants and Catholics caused people to think that theistic religion was bad
- Secularists first attacked theism philosophically by trying to replace it with deism – the view that miracles do not occur
- Secularists then pushed a radical empirism which attempted to reduce religious claims to meaningless irrationality
- The Christian church responded by retreating from philosophical and theological claims and focusing on moral claims
- That's how Europe became secular, but how did America become secular?
- America became secular because Christianity was transformed from a knowledge tradition to an emotional tradition
- Pastors started to move away from presenting Christianity as *true* and instead presented it as *emotionally fulfilling*
- Pastors emphasized personal experiences instead of philosophical theology and apologetics
- European ideas arrived: deism, Darwinism, Bible criticism, etc.
- Christianity responded to this by abandoning the centers of learning it had founded (universities) into pious isolation
- As the universities became more secular, they turned out the next generation of influencers, including the media
- This retreat from intellectual engagement was augmented by a fixation on end-times speculation (e.g. Left Behind)

- (Drew talks to Jeremy, a philosophy student at Georgia State University, about whether Christianity is respected in his classes)
- How politicians and the media used the Scopes Monkey Trial to marginalize Christianity as anti-science
- The perception of Christians in the public square changed – they were viewed as ignorant, irrational and anti-science
- Instead of causing Christians to work harder at science, they became even *more* fundamentalist, and less influential
- Christians today are a tiny minority of influential groups, e.g. – scientists, media, etc.
- In contrast, secular Jews, who tend to grow up in a culture that values learning, have a much greater influence
- Even if Christians try to retreat to the country where they can homeschool, there is no hiding from the Internet
- Which organizations are working against secularism today?
- Example of what Christians can do: Plantinga's refutation of the problem of evil
- Example of what Christians can do: widespread use of ultrasound to move people to the pro-life view
- Example of what Christians can do: Liberty University's effort to produce Christians who can work in media
- A story about William Lane Craig and a secular physicist who had lost her faith

People must have liked what they heard and saw in the first week, because he got a big turnout in the second week.

Part 2 deals with practical tips for engaging in the culture. (You can read his essay for part 2 here)

Topics in Part 2:

- The real root cause of opposition to Christianity is from the sexual revolution
- For example, moral relativism is so popular in the university, but it is almost entirely driven by sexual liberation
- Evangelism and culture-shaping are not the same thing – each requires a different set of skills
- Where do people get their information? Public school, news media, late night comedy shows, etc.
- Two things for every Christian need to do: 1) Get informed, and 2) Get involved
- First: you do not need to be smarter than average. Dr. Craig is a leading scholar because he studies 9 hours a day
- Implying that people with influence are "smart" just provides us with an excuse not to try if we are not "smart"
- Ordinary Christians need to be willing to give up fun more than they need to be naturally "smart"
- Asks Cody: what about that Christian apologist who hung out mostly with internet atheists and then became one
- Famous quantum chemist: you're right, I am not much smarter than most people, I just work a lot harder at it
- Drew: to get informed, you should follow good Christian blogs like Apologetics 315 and Wintery Knight
- Drew knows Wintery Knight personally and WK is someone who knows apologetics but he also knows other things
- WK connects the Christian worldview to lots different things, e.g. = marriage – he can find you the right people and books
- (Drew holds up "What is Marriage?" book) This is the best book to argue the same-sex marriage issue
- (Drew hold up "The Case for Life" book) This is the best book to argue the pro-life position
- Slacktivism: don't just send people links that you find on the Internet – read the articles and books and then talk about them
- (Drew holds up the Lee Strobel "Case for" books) These are the best introductory books on basic Christian apologetics
- Audio books are a great way for people to take in the information, and you can get them for free from the library
- The Internet is not the best place for arguing about the things you learn – face to face conversations are much

better

- Biola's apologetics certificate program is an excellent resource, and it's all audio lectures so you just listen to them
- You can get free apologetics audio from Apologetics 315 and Phil Fernandes
- We also need to learn how to how to change the culture and how the other side changes the culture
- To really make a difference, then a graduate degree might be for you – especially the M.A. in apologetics from Biola
- The university is also very important – Christianity needs to be represented in the university
- Influential people like Supreme Court justices come out of the university, which is why we need to be there
- The Discovery Institute is doing the most to provide a credible rival to naturalistic science
- They have a budget of $4 million dollars and they are punching way above their weight
- If every evangelical sent them $20, they'd have a budget of $1.2 billion – what could they do with that?
- (Drew puts a check for $20 for Discovery Institute in an envelope and seals it, to show how it's done)
- The Truth Project, which is put out by Focus on the Family – it's another excellent training resource
- When it comes to politics, focus on discussing policy issues, not on pushing particular candidates
- If every evangelical Christian just *pulled their own weight*, it would make a big difference
- It all starts by making the decision to take some leisure time to do things that really work

You can also find the list of recommended resources for both weeks here. This was the handout that he mentioned.

I could not agree with him more on his selections on the marriage debate and the abortion debate. I have bought at least a half-dozen of each of those for people. And I highly recommend getting the Strobel books on audio, especially the Case for a Creator. *Love that book.* Listen to it a bunch a times and you will start to talk like Lee Strobel.

I listened to all the Biola University lectures before they even had the certificate program, along with the Stand to Reason Masters Series in Christian Thought and about 60 Veritas Forum leture sets. Those things probably did the most for me in terms of turning me from engineer to apologetics-enabled engineer. It's funny because what I do these days is listen to Apologetics 315 interviews and Phil Fernandes lectures. I was listening to the Fernandes lectures on Roman Catholicism that he mentioned on a recent long drive to visit my parents (Dina recommended them to me).

He mentions the Biola M.A. in apologetics, but I want to do the Biola M.A. in Science and Religion. That's my "mid-life crisis" plan. A new roadster and the Biola M.A. in Science and Religion.

The point he made about giving money to the Discovery Institute is important. This week I am sending $300 to bring a scholar to a major university (total for this effort is $900) and another $300 for pro-life training and debates. Money matters. If you are going to college, study something that pays well and be generous. It's one way to make a difference.

I think he's right when he talks about everyone pulling their own weight. I spend about 2-3 hours a day reading and blogging. I donate a portion of my earnings to Christian scholars who study and/or speak at the university. I support Christian students who are doing degrees in philosophy, science and engineering. In church, I don't do anything, because they don't even know about me there, but I have a network of friends who are more sociable who do things in church, like organize lectures, debates and apologetics book studies.

I got started on this by putting in the time on some of the things he mentioned in part 2 of his talk. The basic things to do are reading introductory books on apologetics, especially the ones on philosophy of religion, historical Jesus and physical sciences. If you can't read, then at least get hold of lectures from Biola University and listen to those, along with Lee Strobel audio books, Brian Auten interviews, Phil Fernandes lectures and William Lane Craig

debates. Just put them in the car and listen, and soon you'll be sounding just like them.

# New study finds that many young people won't purchase Obamacare plans

**Wintery Knight** · 26 August 2013 · Archived copy · Original

Dr. David Hogberg of the National Center for Public Policy Research explains how Obamacare affects young people.

Here's the executive summary:

> If the ObamaCare health insurance exchanges are to function properly, it is crucial that a substantial number of people ages 18-34 join them. This age group that is young and relatively healthy must purchase health insurance on the exchanges in order to "cross-subsidize" people who are older and sicker. Without the young and healthy, the exchanges will enter a "death spiral" where only the older and sicker participate and price of insurance premiums will increase precipitously.
>
> This study finds that in 2014 many single people aged 18-34 who do not have children will have a substantial financial incentive to forego insurance on the exchanges and instead pay the individual mandate penalty of $95 or one percent of income. About 3.7 million of those ages 18-34 will be at least $500 better off if they forgo insurance and pay the penalty. More than 3 million will be $1,000 better off if they go the same route. This raises the likelihood that an insufficient number of young and healthy people will participate in the exchanges, thereby leading to a death spiral.

The design of the plan is to tax younger, healthier people – especially men – in order to obtain the money to pay for heavy users of health care.

> To compel the young and healthy to purchase insurance, the architects of ObamaCare included an individual mandate that requires individuals to either buy insurance or pay a penalty. The penalty, which increases over time, is whichever is greater: $95 or one percent of income in 2014, $325 or two percent of income in 2015, and $695 or 2.5 percent of income in 2016 and thereafter.
>
> […]The gender breakdown of these individuals presents another problem. Women have higher rates of health utilization than men, including more visits to primary-care physicians and greater use of diagnostic tests and emergency care. However, as Table 3 shows, **roughly two-thirds of the individuals for whom insurance will cost at least $1,000 more than the fine are men.**

Hard to see why any young man would have voted Democrat, and yet many did. Did they know that they were voting for a tax on themselves at a time when many of them are poorly educated by government-run schools, and can't even find jobs? How can you pay a fine for not having health care when you don't have a proper education or a proper job?

The net effect of the "community rating" and "guaranteed issue" provisions of Obamacare will be to raise health insurance premiums and force private companies to stop offering plans:

> If the exchanges do not attract a sufficient number of people in the 18-34 age demographic, they will eventually enter an insurance "death spiral." This occurs when the young and healthy drop out of the "insurance pool." This leads to "adverse selection" in which insurance is only attractive to those who are generally older and sicker. If the insurance pool is comprised largely of people who are older and sicker, then insurance prices will rise to cover their costs. That rate increase causes even more young and healthy people drop their insurance, leaving the pools even older and sicker than before, and so on. Eventually, all but a few insurers will be forced to discontinue their business on the exchanges because they can no longer make a profit. Fewer insurers means less competition, resulting in even higher insurance premiums.

> Community rating and guaranteed issue are catalysts for a death spiral. In its strictest form, community rating means that insurers must charge everyone the same premium, regardless of factors such as health status and age. Guaranteed issue means that an insurer must sell a policy to a consumer anytime.
>
> Under ObamaCare, the exchanges use a modified version of both of these regulations. Its form of community rating doesn't allow insurers to vary rates based on health status. It does allow, however, for modification of premiums if one smokes and to compensate for age (although in a more restricted manner than the market currently does). Regarding guaranteed issue, insurers must sell policies to all comers but (with a few exceptions) only during the annual open enrollment period from October to December.
>
> Both of these rules give young and healthy people big incentives to forgo insurance coverage altogether. Community rating means young people have a reduced incentive to buy insurance since they will pay a premium that is above the market rate. Many who are currently purchasing insurance in the individual market, for example, will see a substantial premium increase if they switch to the exchange.
>
> In a market without guaranteed issue, consumers run the risk of insurers not selling them policies when they get seriously ill. But that risk is largely gone under the exchanges. For instance, a young person who gets a serious illness in June only has to wait until October to sign up for insurance and then wait until January 1 of the next year to receive coverage. Combined, community rating and guaranteed issue give the young and healthy big incentives to forgo insurance until they are sick.

"Community rating" and "guaranteed issue" have actually already been tried at the state level. What happened then?

This:

> The late Conrad Meier, then a senior fellow in health care policy for the Heartland Institute, examined what happened when these two regulations were instituted on the state level in his 2005 monograph "Destroying Insurance Markets." In the early 1990s eight states — Kentucky, Maine, Massachusetts, New Hampshire, New Jersey, New York, Vermont and Washington — imposed community rating and guaranteed issue on their individual insurance markets. The result, according to Meier, was the above-described death spiral.
>
> **For example, in 1992 the New Jersey legislature adopted community rating and guaranteed issue rules for its individual insurance market with the passage of the "Individual Health Coverage Program." The monthly premium for family coverage from Aetna rose from $769 in 1994 to $6,005 in 2005, a whopping increase of 683 percent! Other insurers saw similar increases.**
>
> **Before the reforms began, there were about 28 insurers covering the New Jersey individual market. By 2007 there were only seven. According to the Census Bureau, the number of people in New Jersey's individual market fell from about 998,000 in 1994 to 630,000 in 2005, a decline of 37 percent.**

It's pretty clear that Obamacare was designed to replicate this same effect that's been observed in states at a national level, paving the way for single payer health care. What will Americans think when their healthcare is controlled by the kind of people who run USPS, Amtrak, the Bureau of Motor Vehicles and the IRS?

# Obama administration blocks Louisiana school voucher program

**Wintery Knight** · 26 August 2013 · Archived copy · Original

Fox News reports.

Excerpt:

> The Justice Department is trying to stop a school vouchers program in Louisiana that attempts to help families send their children to independent schools instead of under-performing public schools.
>
> The agency wants to stop the program, led by Republican Gov. Bobby Jindal, in any school district that remains under a desegregation court order.
>
> In papers filed in U.S. District Court in New Orleans, the agency said Louisiana distributed vouchers in 2012-13 to roughly 570 public school students in districts that are still under such orders and that "many of those vouchers impeded the desegregation process."
>
> The federal government argues that allowing students to attend independent schools under the voucher system could create a racial imbalance in public school systems protected by desegregation orders.
>
> Jindal — who last year expanded the program that started in 2008 — said this weekend that the department's action is "shameful" and said President Obama and Attorney General Eric Holder "are trying to keep kids trapped in failing public schools against the wishes of their parents."
>
> The Justice Department says Louisiana has given vouchers this school year to students in at least 22 of 34 districts remaining under desegregation orders.
>
> Jindal called school choice "a moral imperative."

Vouchers are a way of helping poor, minority students to get a quality education by letting them choose to attend better schools – any school the parents choose.

This lady from the Cato Institute explains in a 5-minute video why vouchers are a good thing.

A longer video featuring John Stossel is here:

# Brian Auten interviews pro-life debater Scott Klusendorf on pro-life apologetics

**Wintery Knight** · 26 August 2013 · Archived copy · Original

Unborn baby scheming about pro-life apologetics

Scott Klusendorf is the director of the excellent Life Training Institute, and he's been interviewed by Brian Auten on Apologetics 315.

Details of the interview:

> Today's interview is with Scott Klusendorf, president of Life Training Institute. LTI is the first place to look for excellent resources to get better equipped to defend the pro-life position. Scott talks about defining abortion and its terms, the issue of the debate, the legal history of abortion, defending the pro-life view using science and philosophy, the four pillars of the pro-life argument, answering a litany of objections to the pro-life position, the right and wrong use of emotional appeals, taking on the right tone in the debate, how to get better equipped, and more.

Grab the MP3 file here at Apologetics 315.

The article Scott mentions "How to Defend Your Pro-Life Views in 5 Minutes or Less" is worth the read, and it's a good summary of some of the points he makes in the lecture.

If you like this interview, please be sure and buy the best *basic* book on pro-life apologetics – Scott Klusendorf's "The Case for Life".

And there is actually a full transcript, and here's an excerpt:

> **BA**: Great stuff. Now I want you to go into these pillars if you will of defending the pro-life position with science and philosophy, and in your web site prolifetraining.com one of the things that you provide is sort of a four point acronym, some would say sled S-L-E-D. Can you lay out what those main pillars are and their

> relevance to the issue?
>
> **SK**: Well as I mentioned a moment ago, pro-life advocates argue that elective abortion unjustly takes the life of a developing human being, and we defend that claim using science and philosophy. We use science to determine what kind of thing the unborn is, and we use philosophy to show that there's no relevant deference between the embryos we once were and the adults we are today that would justify killing us at that earlier stage of development. Scientifically, as I mentioned just moments ago embryology text books worldwide indicate that from the very beginning you and I were distinct living whole human beings. You can't see that I'm doing this right now, Brian, but at the moment I'm picking cells off the back of my hand. These cells, which we call somatic cells, contain my entire DNA and coding. But you don't thing I just committed mass murder by sending a couple hundred of those puppies hurling to their deaths on the floor in front of me. And the reason is, you know that these cells though they contain my DNA and coding are merely part of a larger human being, me. They are not distinct whole living organisms the way that you were when you were an embryo. The way I was when I was an embryo. In other words, there is a difference in kind between each of our bodily cells and the embryonic human beings we once were. That's what science teaches us; that's what the science of embryology lays down for us.Philosophically, we argue using that SLED acronym that you mentioned a moment ago that there's no difference between that embryo we once were and the adult we are today. The adults we are today that justify killing us at that earlier stage of development and as Steven Schwarz points out, the differences between that embryo and the adult that you are today are one of size, level of development, environment and degree of dependency. Think of the acronym SLED and you will remember those four differences. Size, yeah you were smaller as an embryo, but since when does body size determine the rights that you have. Shaquille O'Neal, the seven foot two basketball star with the Boston Celtics, is a foot taller than I am, but he doesn't have a greater right to life simply because he's bigger.
>
> Level development? Sure, we were less developed as embryos but since when is a matter of principal does that mean we can kill you? Two-year-old girls are less developed than twenty-year-old young women. We don't think though the two year old girl has less to a right to life simply because she can't function at the level that the twenty year old can. Level of size, I should say level of development. What about environment; where you are located there is the letter "E" in that SLED acronym. You were once in the womb now you're out but sense when does were you are determine what you are? When you walk from your living room into the studio to do this interview. You changed location but you didn't stop being you. When I jump on an airplane and fly from Atlanta to London's Heathrow airport. I get off the plane I'm in a new location, but I'm the same being as I was when I left Atlanta. If that's true how does a journey of eight inches down the birth canal suddenly change me from non-human, non-valuable thing that we can kill? To a valuable human being that we can't kill. And the answer is, if I wasn't already human and valuable I'm not going to get there by changing my address. And then finally, degree of dependency—yes we depended on our mother for survival but sense when does dependency on another human being mean we can kill you? Conjoined twins depend on each other for survival and unless one of the twins is killing its partner we don't go ahead and slit the throat of both twins simply because they can't live independent of each other. Size, level of development, environment, degree of dependency, think "SLED" those are the only four differences between that embryo you once were and the adult you are today. And the pro-lifer would argue that not one of those four differences justifies killing you at that earlier stage.

You can see Scott in a debate about abortion right here.

And if you like that interview, I have some more things for you to read from Dr. Francis Beckwith.

**Learn more by reading**

Frank Beckwith is the author of "Defending Life: A Moral and Legal Case Against Abortion Choice". He wrote that book for Cambridge University Press, a top academic press. But before Cambridge University Press, Beckwith wrote easy-to-understand essays for the Christian Research Journal.

Here are four essays that answer common arguments in favor of legalized abortion.

- Part I. The Appeal to Pity
- Part II. Arguments from Pity, Tolerance, and Ad Hominem
- Part III. Is The Unborn Human Less Than Human?
- Part IV. When Does a Human Become a Person?

I have a copy of Dr. Beckwith's previous book "Politically Correct Death", which I read bit-by-bit on my lunch hours 10 years ago. Excellent stuff.

# Department of Defense training manual labels Founding Fathers as "extremists"

**Wintery Knight** · 27 August 2013 · Archived copy · Original

The Daily Caller reports. (H/T Dad)

Excerpt:

> A Department of Defense teaching guide meant to fight extremism advises students that rather than "dressing in sheets" modern-day radicals "will talk of individual liberties, states' rights, and how to make the world a better place," and describes 18th-century American patriots seeking freedom from the British as belonging to "extremist ideologies."
>
> The guide comes from documents obtained by Judicial Watch and is authored by the Defense Equal Opportunity Management Institute, a DoD-funded diversity training center.
>
> Under a section titled "extremist ideologies," the document states, "In U.S. history, there are many examples of extremist ideologies and movements. The colonists who sought to free themselves from British rule and the Confederate states who sought to secede from the Northern states are just two examples."
>
> Besides a brief reference to 9/11 and another to the Sudanese civil war, the guide makes no mention of Islamic extremism.
>
> **The guide also repeatedly tells readers to use the Southern Poverty Law Center as a resource in identifying hate groups. The SPLC has previously come under fire for its leftist bias and tendency to identify conservative organizations such as the American Family Association as hate groups.**
>
> **In August 2012, an attempted terrorist attack occurred at the Family Research Council, another conservative organization the SPLC has branded a hate group. FRC president Tony Perkins said the SPLC's designation prompted the attack, stating the gunman "was given a license to shoot … by organizations like the Southern Poverty Law Center."**
>
> In a statement, Judicial Watch president Tom Fitton slammed the Department of Defense documents for what he described as their bias against conservatives.
>
> "The Obama administration has a nasty habit of equating basic conservative values with terrorism. And now, in a document full of claptrap, its Defense Department suggests that the Founding Fathers, and many conservative Americans, would not be welcome in today's military," said Fitton. "And it is striking that some the language in this new document echoes the IRS targeting language of conservative and Tea Party investigations. After reviewing this document, one can't help but worry for the future and morale of our nation's armed forces."

The Elusive Wapiti lists some of the factors in the document which are linked to extremists like the Founding Fathers, and then comments:

> I suppose it's a marker of my supposed extremism that the Left exhibits most or all of these so-called "extremist traits". For isn't it the very operative definition of a Liberalist as one who engages in Alinskyite fix-it-freeze-it-polarize-it *ad hominem* attacks against his/her opponents, who makes sweeping generalizations of their ideological adversaries, who makes repeated assertions unsupported by facts, sometimes long after their assertions have been debunked, who view their adversaries as evil rather than merely misinformed, who'd readily resort to intimidation and sloganeering rather than rational discourse, who assume they're morally superior to all those unevolved knuckle-draggers in flyover territory, and who themselves are in thrall to Malthusian apocalyptic dogma (overpopulation, environmentalism, anthropogenic global warming)?

> If I didn't know any better, I'd say this training manual joins other documents shown to DoD personnel, characteristic of a consistent, maybe even extremist, anti-Right worldview, as little more than a cynical attempt at projection…to deflect criticism away from one's behaviors by accusing your opponents of doing exactly what you yourself do.

Todd Starnes, who follows the persecution of Christians in the military, commented on this story over at Fox News.

Excerpt:

> It's not the first time the military has been caught using training materials that depict conservatives and Christians as extremists.
>
> In April Fox News obtained an email sent by a lieutenant colonel at Fort Campbell to three dozen subordinates warning them to be on the lookout for any soldiers who might be members of "domestic hate groups" like the FRC and the American Family Association.
>
> "When we see behaviors that are inconsistent with Army Values – don't just walk by – do the right thing and address the concern before it becomes a problem," the email advised.
>
> At the time the Army denied there was any attack on Christians or those who hold religious beliefs.
>
> "The notion that the Army is taking an anti-religion or anti-Christian stance is contrary to any of our policies, doctrines and regulations," an Army spokesman told Fox News at the time.
>
> However, in a separate incident, an Army training instructor listed Evangelical Christianity and Catholicism as examples of religious extremism – along with Al Qaeda and Hamas.
>
> The same Army spokesman said the training session was an "isolated incident not condoned by the Department of the Army."
>
> Fitton told Fox News the military seems to be having a lot of isolated incidents and it appears the Pentagon is sending a message to Christians.
>
> "They are putting out the not-welcome sign to conservative Christians," Fitton said. "They are trying to make the military an unwelcome place for conservative Christians."

So the person who wrote this is citing the Southern Poverty Law Center, which was a source of information for the homosexual activist Floyd Lee Corkins II who tried to shoot up the Family Research Council think tank. Isn't it ironic that the author of an anti-conservative document is citing the same source that supplied the information used by a convicted domestic terrorist who attacked a conservative organization with guns? I find that ironic. I also find it ironic that the military is so politically correct that it is trying to label what a real domestic terrorist like Nidal Hasan did as "workplace violence". I find that ironic. Ironic and perplexing. So, Congressman Paul Ryan advocates for small government, and he's an extremist domestic terrorist, but Floyd Corkins and Nidal Hasan don't even get a mention in a DOD training manual.

Do you think this person has ever read a book by someone like Thomas Sowell or a Robert George or a Mark Levin? I think that they probably went through their entire education without ever reading a single thing written by an intelligent conservative. They probably can't even name an intelligent conservative. But they still got a job in the government, working at taxpayers' expense. I think that we should really reform the government-run public school system that produces people like this DOD writer, so that we can get students graduating with a higher degree of open-mindedness, tolerance and critical thinking. It probably wouldn't hurt if we steered more students toward math and science instead of the liberal arts areas, which are more vulnerable to this sort of fact-free demonization of conservatives.

# What factors are contributing to the higher education bubble?

**Wintery Knight** · 27 August 2013 · Archived copy · Original

This article from the Wall Street Journal was discussed at length by Dennis Prager on his radio show yesterday.

Excerpt:

> College costs have continued to explode despite 50 years of ostensibly benevolent government interventions, according to Mr. Vedder, and the president's new plan could exacerbate the trend. By Mr. Vedder's lights, the cost conundrum started with the Higher Education Act of 1965, a Great Society program that created federal scholarships and low-interest loans aimed at making college more accessible.
>
> In 1964, federal student aid was a mere $231 million. By 1981, the feds were spending $7 billion on loans alone, an amount that doubled during the 1980s and nearly tripled in each of the following two decades, and is about $105 billion today. Taxpayers now stand behind nearly $1 trillion in student loans.
>
> Meanwhile, grants have increased to $49 billion from $6.4 billion in 1981. By expanding eligibility and boosting the maximum Pell Grant by $500 to $5,350, the 2009 stimulus bill accelerated higher ed's evolution into a middle-class entitlement. Fewer than 2% of Pell Grant recipients came from families making between $60,000 and $80,000 a year in 2007. Now roughly 18% do.
>
> This growth in subsidies, Mr. Vedder argues, has fueled rising prices: "It gives every incentive and every opportunity for colleges to raise their fees."
>
> Many colleges, he notes, are using federal largess to finance Hilton-like dorms and Club Med amenities. Stanford offers more classes in yoga than Shakespeare. A warning to parents whose kids sign up for "Core Training": The course isn't a rigorous study of the classics, but rather involves rigorous exercise to strengthen the glutes and abs.
>
> Or consider Princeton, which recently built a resplendent $136 million student residence with leaded glass windows and a cavernous oak dining hall (paid for in part with a $30 million tax-deductible donation by Hewlett-Packard CEO Meg Whitman). The dorm's cost approached $300,000 per bed.
>
> […]Some college officials are also compensated more handsomely than CEOs. Since 2000, New York University has provided $90 million in loans, many of them zero-interest and forgivable, to administrators and faculty to buy houses and summer homes on Fire Island and the Hamptons.
>
> Former Ohio State President Gordon Gee (who resigned in June after making defamatory remarks about Catholics) earned nearly $2 million in compensation last year while living in a 9,630 square-foot Tudor mansion on a 1.3-acre estate. The Columbus Camelot includes $673,000 in art decor and a $532 shower curtain in a guest bathroom. Ohio State also paid roughly $23,000 per month for Mr. Gee's soirees and half a million for him to travel the country on a private jet.
>
> […]Colleges have also used the gusher of taxpayer dollars to hire more administrators to manage their bloated bureaucracies and proliferating multicultural programs. The University of California system employs 2,358 administrative staff in just its president's office.
>
> "Every college today practically has a secretary of state, a vice provost for international studies, a zillion public relations specialists," Mr. Vedder says. "My university has a sustainability coordinator whose main message, as far as I can tell, is to go out and tell people to buy food grown locally. . . . Why? What's bad about tomatoes from Pennsylvania as opposed to Ohio?"
>
> […]Today, only about 7% of recent college grads come from the bottom-income quartile compared with 12% in 1970 when federal aid was scarce. All the government subsidies intended to make college more accessible haven't done much for this population, says Mr. Vedder. They also haven't much improved student outcomes or graduation rates, which are around 55% at most universities (over six years).

> […]"Thirty-percent of the adult population has college degrees," he notes. "The Department of Labor tells us that only 20% or so of jobs require college degrees. We have 115,520 janitors in the United States with bachelor's degrees or more. Why are we encouraging more kids to go to college?"
>
> Mr. Vedder sees similarities between the government's higher education and housing policies, which created a bubble and precipitated the last financial crisis. "In housing, we had artificially low interest rates. The government encouraged people with low qualifications to buy a house. Today, we have low interest rates on student loans. The government is encouraging kids to go to school who are unqualified just as it encouraged people to buy a home who are unqualified."
>
> The higher-ed bubble, he says, is "already in the process of bursting," which is reflected by all of the "unemployed or underemployed college graduates with big debts." The average student loan debt is $26,000, but many graduates, especially those with professional degrees, have six-figure balances.
>
> Mr. Obama wants to help more students discharge their debts by capping their monthly payments at 10% of their discretionary income and forgiving their outstanding balances after 20 years. Grads who take jobs in government or at nonprofits already can discharge their debt after a decade.
>
> "Somehow working for the private sector is bad and working for the public sector is good? I don't see on what basis one would make that conclusion," Mr. Vedder says. "If I had to make some judgment, I would do just the opposite."
>
> He adds that the president's approach "creates a moral hazard problem. What it signals to current and future loan borrowers is that I don't have to take these repayment of loans very seriously. . . . I don't have to worry too much about getting a high-paying job." It encourages "sociology and anthropology majors compared with math and engineering majors."

The most trouble thing for me is that we are taxing money away from current earners, and borrowing money from future earners, in order to subsidize many, many degrees that will never pay back the initial investment we are making to send them to college. The more that government jumps in to pay people to do useless degrees and then doesn't get the money back, the more students are going choose useless degrees. Other countries like New Zealand and Canada have major problems right now because these loans are not being paid back. That's what happens when government takes over student loan administration – they aren't as concerned about being paid back.

What's also troubling to me is that people who choose not to go to college but instead to go to trade school or start their own businesses are subsidizing the worthless degrees that so many people choose to pursue today. Why would the government waste taxpayer money on these worthless degrees? Well, because college is four years of liberal indoctrination. Students are so stupid that they will actually accept the propaganda pushed by professors as if it were true, even though these professors often have no experience in the private sector themselves. And these students will have the illusion of being educated as they vote for the secular left come election time. They don't even realize that they are voting to harm their prospective employers and increase the national debt which they will have to pay back. When I try to talk to them about it, they seem to fall back on name-calling instead of making any kind of factual case. This seems to be the result of college as well. They've learned to demonize their opponents rather than debate them with evidence.

# Michael Behe and Keith Fox debate theistic evolution vs intelligent design

**Wintery Knight** · 27 August 2013 · Archived copy · Original

Michael Behe and Keith Fox debate evolution and intelligent design. (See below for link to MP3 file)

Details:

> Michael Behe is professor of biochemistry at Lehigh University, Pennsylvania and the founder of the modern Intelligent Design movement. His book "Darwin's Black Box" ignited the controversy 14 years ago when it claimed that certain molecular machines and biological processes are "irreducibly complex" and cannot be explained by Darwinian evolution.
>
> His new book "The Edge of Evolution" takes his conclusions further, arguing that the Darwinian processes of random mutation and natural selection are incapable of producing the variation and complexity we see in most of life.
>
> So can we conclude that life was intelligently designed by a creator?
>
> Keith Fox is Professor of biochemistry at the University of Southampton and chairman of Christians in Science. As a theistic evolutionist he believes that Evolution is the best explanation going for the complexity we see and that ID is a blind scientific alley and theologically unappealing to boot.
>
> They debate whether micromachines in the cell such as the "bacterial flagellum" could have evolved by a Darwinian process of evolution. When inference to design is and isn't acceptable in science. Whether random mutation can mathematically stack up to complex life, and whether God is reduced to a divine "tinkerer" by ID.

I get the impression that Fox learned everything he knows about ID by reading Darwinists.

The MP3 file is here.

The summary below is rated VERY SNARKY.

**Summary**

Michael Behe:

- ID is not Biblical creationism
- ID is not religion
- ID is a scientific research program
- People refuse to discuss ID because of personal philosophical assumptions
- ID is like the Big Bang – it is based on evidence, but it has broad religious implications

Keith Fox:

- ID is not Biblical creationism, but it isn't science

Michael Behe:

- ID is compatible with common descent
- ID is only opposed to unplanned, unguided evolution (Darwinism)
- ID is not necessarily opposed to long periods of time

**Behe's first book – the bacterial flagellum**

Keith Fox:

- Here are a couple of papers that show how parts of the flagellum evolved
- They are possible pathways

Michael Behe

- No, those are studies that show that there are similarities between bacterial flagella in multiple organisms
- Similarities of proteins between different organisms do not necessarily imply a developmental pathway
- The problem of having the instructions to BUILD the flagellum still remains

Keith Fox:

- Maybe parts of the flagellum had other functions before they were used in the flagellum
- Maybe you can use the parts of the flagellum for other purposes
- Maybe, one can imagine, it's possible that!

Michael Behe:

- No, parts have to be modified and re-purposed in order to be used for other functions

Keith Fox:

- But maybe the proteins can be used in other systems for other things
- I re-purpose parts from of designed things to other purposes in my house when I do maintenance

Michael Behe

- Uh, yeah – but aren't you an intelligent designer? What does your home maintenance have to do with Darwinian evolution?

**Is ID another God-of-the-gaps argument?**

Michael Behe:

- Well consider the Big Bang… there was a build-up of scientific evidence for that theory
- Just because a theory has religious implications, doesn't mean that it isn't true
- You really have to look at the specific evidence for a theory, and not decide in advance

Keith Fox: (I'm paraphrasing/inventing/mocking from now on)

- But the Big Bang is based on discoveries, and intelligent design is based on gaps in our scientific knowledge
- What if I did have evidence of a step by step pathway (which I don't right now)? Then I would win the argument – what would you do then?

Michael Behe:

- Well, if tomorrow you do manage to find expiremental evidence of a pathway, which you don't have today, then I would be wrong
- ID is falsifiable by experimental evidence
- But what about your your view? Is that falsifiable by experimental evidence?
- What if someone goes into a lab (someone like Scott Minnich?) and performs gene knockout experiments, and publishes the results
- You knock out a gene from the bacterial flagellum, you wait for a large number of generations, and it never develops the missing gene

- You repeat this with every one of the 50 genes in the bacterial flagellum and it never recovers for any of the 50 genes
- There is no pathway to build up even one of the 50 genes – according to actual experiments
- What do Darwinists do with experimental evidence that falsifies Darwinism?

Keith Fox:

- No, I would not accept that experimental evidence could falsify Darwinism
- Just because known published experimental evidence that we have today falsifies Darwinism, it doesn't mean Darwinism is false because it's not falsifiable
- We don't know how Darwinism even works – it happened so long ago, and it's not repeatable or testable, so how could lab ,experiments falsify it?
- Darwinism is science and intelligent design is faith, though

**Which side has the experimental evidence?**

Michael Behe:

- Consider the largest longest-running lab experiment of evolution, Richard Lenski's experiments on e. coli
- Lenski has presided over 50,000 generations, (millions of years of evolution)
- The bacterium *did evolve* and they *did get better* but not by *evolving* features, but by *disabling* features

Keith Fox:

- But those are just LAB EXPERIMENTS! What do lab experiments prove?
- What if? What if? What if? You don't know, it happened so long ago, and you weren't there! You weren't there!
- (clutches Flying Spaghetti Monster idol tighter and sobs pitifully)

Michael Behe:

- See, the thing is that I have actual experiements, and here's some more evidence that just got published last week
- So I've got evidence and then some more evidence and them some other evidence – experimental evidence
- And all the evidence shows that adaptation is done *losing traits* not by *gaining traits*
- And the published observations are what we see in nature as well

Keith Fox:

- But doesn't Darwinism explain some things that we observe?

Michael Behe:

- Well, I am not saying that micro-evolution doesn't explain *some things* – it explains bacterial resistance, and other micro-evolution
- it just doesn't explain macro-evolution, and that's what the experiments show

Keith Fox:

- But ID is a science stopper! It stops science! You can't produce *experimental evidence* to falsify Darwinism – that would stop science!

Michael Behe:

- Well, you have to understand that the Big Bang postulated a non-material cause to the entire physical universe

and yet the experimental evidence was allowed to stand because it was testable and verifiable evidence, even if the theory does have religious implications
- All explanations in science are design to settle a question and it stops rival explanations that are not as good at explaining the observations
- Finding the best explanation stops further study because it is better than rival explanations

Keith Fox:

- Well you have to come up with a materialist explanation because that's the only kind that a functional atheist like me will allow

Michael Behe:

- Well, what if the best explanation for an observed effect in nature is non-material, as with the Big Bang?

Keith Fox:

- But I have to have a material explanation because I am a functional atheist! (i.e. – a theistic evolutionist = functional atheist)

Michael Behe:

- Well what about the cosmic fine-tuning argument? Do you accept that?
- That's an inference to design based on the latest scientific discoveries

Keith Fox:

- Well I do accept that argument, but I don't accept design in biology
- When you apply it to biology, somehow it's bad and you can't do that or you losing research money and get fired
- Anyway, your argument is based on a gap in our current knowledge

Michael Behe:

- No, back in Darwin's time we had a gap in our knowledge – we didn't know what the cell was – we thought it was jello
- Now, we know what the cell is *really* like, it's irreducibly complex, and you can't build up those molecular machines in a step-wise manner
- The inference to design is based on the progress of science revealing the increasing levels of complexity
- In experiments, Darwinian mechanisms cannot build anything useful, instead genes are disabled or dropped
- You guys don't have the evidence to prove your view that naturalistic mechanisms can do the creating
- You keep issuing promissory notes

Keith Fox:

- Well, you're just seeing design subjectively, because you are a non-scientist
- I'm being objective when I tell you that we will discover a materialist explanation later on – really really soon now, maybe even tomorrow, yeah
- You won't accept my speculations and you insist on these published experiments
- You're subjective and I'm objective
- Just give me more research money so I can hide the decline better

Michael Behe:

- Uh, you're the one who is subjective – I cited evidence, and you are the one who is speculating
- You have arguments from credulity, and I've got the lab experiments
- You refuse to be skeptical, I am the one who is being skeptical

Keith Fox:

- Maybe, maybe, maybe! Maybe tomorrow! Maybe in a parallel universe! Maybe aliens from Planet X!
- Who knows! I certainly don't know! And that somehow means you don't know either! See?

Michael Behe:

- Well, to prove me wrong, go into the lab, and run experiments and evolve some new genes (using Darwinian mechanisms) that have new useful functionality

**Are there limits to what evolution can do?**

Michael Behe:

- You need multiple changes in the genome to get a new helpful feature (let's say two specific mutations)
- One specific change is possible
- the odds are against getting multiple beneficial changes are really really small – you need two SPECIFIC changes to occur in order

Keith Fox:

- Well, lots of things are really unlikely – any permutation of dice rolls is as unlikely as any other

Michael Behe:

- Well, we are talking about TWO SPECIFIC mutations that are needed to get a beneficial function – lots of other mutations are possible, but we are looking for a specific outcome that requires two SPECIFIC mutations out of the whole genome
- You aren't going to get useful outcomes unless you direct the mutations

Keith Fox:

- *But then why does God allow evil!!!!1!1!!one!!!*

# How the weak Democrat foreign policy caused the Syria crisis, and what to do now

**Wintery Knight** · 28 August 2013 · Archived copy · Original

Map of the Middle East

The UK Telegraph's Nile Gardiner explains how Democrat foreign policy made the current crisis in Syria worse.

Excerpt:

> Bashar al-Assad's regime in Syria is monstrous. A hundred thousand civilians have died at its hands in the last two years, and more than a million Syrians have fled the country since it began its war of attrition against rebel groups. It is almost certainly responsible for the massacre of up to 1,300 people in a suburb of Damascus last week through the use of chemical weapons. Many of the victims included women and children. Assad is a Baathist thug of the highest order, a figure of unremitting evil with few parallels in the modern world. The downfall of his dictatorship cannot come soon enough, and no peace can be realistically achieved in Syria until Assad goes.
>
> In the face of Assad's brutality, however, Washington and the West as a whole have been largely impotent. The White House's strategy has been one of abject confusion, with no clear leadership from the president. Barack Obama's approach has been one of "leading from behind," a phrase first coined by one of his own advisers. He has been content to farm out US foreign policy to a feckless United Nations, and has kowtowed to a ruthless Moscow, which views Syria as a client state, a useful bulwark against American influence in the Middle East, and a thorn in the side of the world's superpower.
>
> The Russian "reset," pioneered by Hillary Clinton as Secretary of State, has been one of the biggest foreign policy flops of the modern era, involving an extraordinary degree of deference towards a major strategic adversary. Clinton, it should be recalled, referred to Assad as "a reformer" as recently as April 2011, while former House Speaker Nancy Pelosi, as well as former Senate Foreign Relations Committee chairman John Kerry, made a number of trips to Damascus to meet with Assad prior to the civil war.
>
> Similarly, the Obama administration has been content to allow the Iranians to plough money, arms and military personnel into Syria in support of Assad, providing a vital lifeline for the pariah state. Washington's engagement strategy with Tehran has been a massive folly, simply emboldening the Mullahs with no consequences.

My Dad and I were talking about what the United States should do now to deter the use of chemical weapons, and we came up with two alternatives. Use our covert operations capability (such as it is) to kill Assad or go with a tactical military strike against the top of the Assad regime – either surface-to-surface missiles or standoff air strike. I think that Obama has weakened the clandestine services so much over the years by exposing their methods, exposing their sources, prosecuting them for doing their jobs, etc. that they are not strong enough to do the job. So it's going to have to be a more messy military strike against the top level of the Assad regime, if the goal is to solve the problem.

Foreign policy expert Bret Stephens writes about that option in the Wall Street Journal.

Excerpt:

> Should President Obama decide to order a military strike against Syria, his main order of business must be to kill Bashar Assad. Also, Bashar's brother and principal henchman, Maher. Also, everyone else in the Assad family with a claim on political power. Also, all of the political symbols of the Assad family's power, including all of their official or unofficial residences. The use of chemical weapons against one's own citizens plumbs depths of barbarity matched in recent history only by Saddam Hussein. A civilized world cannot tolerate it. It must demonstrate that the penalty for it will be acutely personal and inescapably fatal.
>
> […]As it is, a strike directed straight at the Syrian dictator and his family is the only military option that will not run afoul of the only red line Mr. Obama is adamant about: not getting drawn into a protracted Syrian conflict. And it is the one option that has a chance to pay strategic dividends from what will inevitably be a symbolic action.
>
> […]On Monday John Kerry spoke with remarkable passion about the "moral obscenity" of using chemical weapons, and about the need to enforce "accountability for those who would use the world's most heinous weapons against the world's most vulnerable people." Amen, Mr. Secretary, especially considering that you used to be Bashar's best friend in Washington.
>
> […]The world can ill-afford a reprise of the 1930s, when the barbarians were given free rein by a West that had lost its will to enforce global order. Yes, a Tomahawk aimed at Assad could miss, just as the missiles aimed at Saddam did. But there's also a chance it could hit and hasten the end of the civil war. And there's both a moral and deterrent value in putting Bashar and Maher on the same list that once contained the names of bin Laden and Anwar al-Awlaki.

The rest of the article evaluates alternatives like striking Syria's chemical weapons dumps, but concludes that a strike against the top of the Assad regime as the best option, *if the goal is to solve the problem*. I am not even sure if it is possible to get the top of the Assad regime this way, since we need intelligence to know where they are, and maybe even to point LTIDs at the targets. That can't be done with the push of a button. These options require intelligence work to have been done up front, and we haven't done it. Now we are stuck with the need to deter chemical weapon use, but we have few options and fewer capabilities.

There are two problems with Bret Stephens' preferred scenario. First, the Assad regime has the backing of the Russians and the Iranians. They might not like it if we took out their puppet and his helpers. Second, the influence of the moderates in the Syrian opposition is uncertain. We don't have a clear ally in the Syrian opposition, like we do in Egypt with the Egyptian army. From what I am hearing, the rebels are significantly Al Qaeda. We could have been cultivating those relationships with the moderate faction, but we were not doing that. So the whole thing is very risky. It didn't need to be this bad, but we elected the pacificist multiculturalist moral relativist CYA Democrats in charge, and they've made a mess of the Middle East. Instead of elevating the Muslim Brotherhood in Libya and Egypt, we should have been focused like a laser beam on Syria. We weren't engaged like we should have been.

To quote again from Nile Gardiner's UK Telegraph article:

> Syria is not Iraq or Afghanistan, where the United States had clear-cut military objectives and national interests at stake when it went to war. The conflict in Syria is further complicated by the rise of Islamist groups with links to al-Qaeda, who have thrived amidst the chaos, and in some cases have targeted the Christian minority in the country. The Obama administration has made little serious effort to cultivate pro-Western, non-Islamist rebels in Syria, whose influence has waned, while the Islamists have gained strength.
>
> Ultimately, the Syrian debacle has exposed the emptiness of the Obama doctrine, one that is based upon hand-wringing, appeasement, and the scaling back of American power. President Obama has been content to weaken US influence, while playing a back seat role on the world stage. There are many things the White House could have done to erode Assad's regime over the past two years while strengthening the hand of pro-Western rebels, including aggressively challenging Iranian support for Damascus, forcefully standing up to Moscow at the UN Security Council, coordinating support for the Free Syrian Army among the Gulf States and Turkey, and pressuring the Saudis to crack down on Islamist networks fueling al-Qaeda-tied groups in Syria.

But, of course, the Obama administration did none of those things, because those things would require leadership and vision.

By the way, in case you are wondering where Syria's chemical weapons came from, the most likely scenario is that they were moved from Iraq. We had reliable intelligence before the Iraq war that Saddam had chemical weapons, and evidence emerged later that Iraq's WMDs were moved to Syria.

UPDATE: Ralph Peters who is an expert in foreign policy is saying no to the strike idea. He prefers do nothing to an effective strike (the Bret Stephens option). But Peters doesn't think that Obama will do an effective strike. So I am not sure what to do now. I am hearing that the opposition is not moderate in any way, and we shouldn't be helping them at all by attacking Assad.

# Harvard Journal of Law & Public Policy paper: gun control doesn't lower murder rate

**Wintery Knight** · 28 August 2013 · Archived copy · Original

Doug Ross linked to this study published in the Harvard Journal of Law & Public Policy.

He writes:

> The Harvard study attempts to answer the question of whether or not banning firearms would reduce murders and suicides. Researchers looked at crime data from several European countries and found that countries with **HIGHER** gun ownership often had **LOWER** murder rates.
>
> Russia, for example, enforces very strict gun control on its people, but its murder rate remains quite high. In fact, the murder rate in Russia is **four times higher**tahn in the "gun-ridden" United States, cites the study. "Homicide results suggest that where guns are scarce other weapons are substituted in killings." In other words, the elimination of guns does not eliminate murder, and in the case of gun-controlled Russia, murder rates are quite high.
>
> The study revealed several European countries with significant gun ownership, like Norway, Finland, Germany and France – had remarkably low murder rates. Contrast that with Luxembourg, "where handguns are totally banned and ownership of any kind of gun is minimal, had a murder rate **nine times higher** than Germany in 2002.
>
> The study found no evidence to suggest that the availability of guns contributes to higher murder rates anywhere in the world. "Of course, it may be speculated that murder rates around the world would be higher if guns were more available. But there is simply no evidence to support this."
>
> The authors also took a look at the effect of gun control laws in various U.S. states, gun ownership in rural and urban areas, and across racial lines. The long and short of it is that a small number of extremely active criminals with lengthy criminal records are responsible for the overwhelming super-majority of all gun crimes, and these criminals are psychopaths that ignore all laws.
>
> The study also cited a previous report that was unable to find a single gun control law implemented in the United States that is proven to have reduced violent crime.

This is not the first time that a study in a presitigious journal has challenged the liberal gun control narrative. People who oppose guns oppose them because of feelings. Guns are scary and guns are loud, they say. That's their reasoning. But if you actually look at the data, you'll find that guns do reduce crime rates.

**The peer-reviewed research**

Whenever I get into discussions about gun control, I always mention two academic books by John R. Lott and Joyce Lee Malcolm.

- The Lott book was published by the University of Chicago Press (now in its 3rd edition)
- The Malcolm book was published by Harvard University Press

Here is a paper by Dr. Malcolm that summarizes one of the key points of her book.

Excerpt:

> Tracing the history of gun control in the United Kingdom since the late 19th century, this article details how the government has arrogated to itself a monopoly on the right to use force. The consequence has been a tremendous increase in violent crime, and harsh punishment for crime victims who dare to fight back. The article is based on the author's most recent book, Guns and Violence: The English Experience (Harvard

> University Press, 2002). Joyce Malcom is professor of history at Bentley College, in Waltham, Massachusetts. She is also author of To Keep and Bear Arms: The Origins of an AngloAmerican Right (Harvard University Press, 1994).
>
> Upon the passage of The Firearms Act (No. 2) in 1997, British Deputy Home Secretary Alun Michael boasted: "Britain now has some of the toughest gun laws in the world." The Act was second handgun control measure passed that year, imposed a near-complete ban on private ownership of handguns, capping nearly eighty years of increasing firearms restrictions. Driven by an intense public campaign in the wake of the shooting of schoolchildren in Dunblane, Scotland, Parliament had been so zealous to outlaw all privately owned handguns that it rejected proposals to exempt Britain's Olympic target-shooting team and handicapped target-shooters from the ban.

And the result of the 1997 gun ban:

> The result of the ban has been costly. Thousands of weapons were confiscated at great financial cost to the public. Hundreds of thousands of police hours were devoted to the task. But in the six years since the 1997 handgun ban, crimes with the very weapons banned have more than doubled, and firearm crime has increased markedly. In 2002, for the fourth consecutive year, gun crime in England and Wales rose—by 35 percent for all firearms, and by a whopping 46 percent for the banned handguns. Nearly 10,000 firearms offences were committed.
>
> […]**According to Scotland Yard, in the four years from 1991 to 1995 crimes against the person in England"s inner cities increased by 91 percent. In the four years from 1997 to 2001 the rate of violent crime more than doubled. The UK murder rate for 2002 was the highest for a century.**

I think that peer-reviewed studies – from Harvard University, no less – should be useful to those of us who believe in the right of self-defense for law-abiding people. The book by economist John Lott, linked above,compares the crime rates of all U.S. states that have enacted concealed carry laws, and concludes that violent crime rates *dropped* after law-abiding citizens were allowed to carry legally-owned firearms. That's the mirror image of Dr. Malcolm's Harvard study, but both studies affirm the same conclusion – more legal firearm ownership means less crime.

If you still think that guns are somehow bad for reducing crime, why not check out a formal academic debate featuring 3 people on each side of the debate?

# Stephen C. Meyer debates Michael Ruse about intelligent design and evolution on NPR

**Wintery Knight** · 28 August 2013 · Archived copy · Original

Details: (from evil NPR web site)

> About one third of Americans believe in intelligent design, according to a recent Gallup poll. That's the idea that humans evolved over time from lesser life forms – with the process guided by God. It's added a new dimension to the old debate over where humans come from and raised serious concern in the scientific world about mixing faith with science.
>
> - Stephen C. Meyer, author of Darwin's Doubt: The Explosive Origin of Animal Life and the Case for Intelligent Design
> - Michael Ruse, Director of the History and Philosophy of Science Program at Florida State University

The MP3 file is here. (28 minutes)

The following summary is rated S for Slightly Snarky. Reader discretion is advised.

Topics:

- Moderator: (to Meyer) define creationism, evolution, and intelligent design
- Meyer: creationism is based on an interpretation of the Bible
- Meyer: evolution is an unguided process of mutation and selection that produces organisms
- Meyer: intelligent design is the idea that the best explanation for certain features of life
- Moderator: (to Ruse) Where do you disagree?
- Ruse: Intelligent design is similar to creationism, but I won't say how exactly
- Meyer: ID is a good explanation for the sudden origin of animal body plans in the Cambrian era
- Moderator: (to Meyer) Is the designer God? Is the designer the Christian God?
- Meyer: No, ID theory is an inference that is rooted in scientific evidence, not in a religious text
- Meyer: ID can be inferred from the origin of biological information and from molecular machines
- Moderator: (to Ruse) Where do you disagree?
- Ruse: Meyer is disingenuous because ID requires the designer to be God
- Meyer: The biological evidence for intelligent design by itself does not implicate God
- Meyer: The fine-tuning of the cosmos is intelligent design in physics, and that *would* require God
- Moderator: (to Meyer) Explain what the Cambrian explosion is
- Meyer: sudden origin of 36 body plans in 10 million years 530 million years ago
- Moderator: So you think that 36 body plans in 10 million years is too sudden for Darwinian mechanisms to produce?
- Meyer: Yes, for two reasons. One, there are no precursors prior to the start of the explosion in complexity
- Meyer: And two, the complexity of animal life includes code, circuitry, hierarchies – best explained by a designer
- Moderator: (to Ruse) Is it a problem for you?
- Ruse: There is no peer-reviewed paper that denies that the Ediacaran fauna are precursors to the Cambrian animals
- Ruse: There is no peer-reviewed paper that denies that microfossils are precursors to the Cambrian animals

- Ruse: There is no peer-reviewed paper that denies that animal complexity goes from simple to complex in the fossil record
- Ruse: There is no peer-reviewed paper that shows that the Cambrian explosion took place over a few million years
- Ruse: There is no peer-reviewed paper that shows that there were complex organ types at the start of the Cambrian explosion
- Ruse: There is no peer-reviewed paper that denies that we already have a materialist explanation for the Cambrian explosion
- Ruse: everything is solved! nothing to see here! (folds arms and beams) I trust that my unsupported assertions have relieved your doubts, yes?
- Moderator: Is intelligent design undermined by more recent science?
- Meyer: no, there is an absence of precursor fossils in the period before the Cambrian explosion
- Meyer: there are other things that make the problem even worse for naturalism, like information from epigenetics
- Moderator: (to Ruse) Answer that
- Ruse: He is just pulling out passages out of context because he is a creationist!
- Moderator: The leftist New Yorker reviewer Gareth Cook says that the Cambrian explosion took tens of millions of years
- Meyer: Actually, the peer-reviewed science is clear that the standard date is at most 10 million nears
- Moderator: (to Ruse) Deny the mainstream date
- Ruse: Well, Prothero says no! Ho ho ho! (folds arms) He just says it. No it's not published in peer-reviewed research
- Ruse: We know so much more than Darwin did, how could the progress of science disprove my materialist pre-supposition? It's unpossible!
- Moderator: (to Meyer) Isn't ID pseudo-science?
- Meyer: If we limit ourselves to materialist explanations only, then we cannot infer intelligence when we see artifacts like the Rosetta Stone
- Meyer: wind and erosion is not an adequate explanation for certain systems – systems that are rich in information
- Meyer: the best explanation is the explanation that relies on known causes – we know that intelligence produces information
- Moderator: (to Meyer) so the intelligence is the best explanation of systems that have information?
- Meyer: yes, think about software code – the best explanation of new computer instructions is an intelligence
- Meyer: we have uniform and repeated experience of intelligence bringing new information into being, and new animals need new information
- Moderator: (to Ruse) must science only work with natural explanations?
- Ruse: intelligent design is religion! Ho ho ho ho! (folds arms)
- Ruse: there is no a priori way of ruling out supernatural causes in order to explain nature
- Ruse: We don't need to introduce supernatural causes to explain information in living systems or in software code
- Ruse: Steve is asking me to explain the Cambrian explosion, but why does he want me to explain that?
- Ruse: How did anything start to fly? How did whales come? There, those questions explain the Cambrian explosion naturalistically
- Ruse: Steve's answer to explain new information is to bring in miracles, like when he said that new computer

code requires God

- Ruse: inferring intelligence as an explanation for information like the computer code is religion! God! Creationism! Prayer in schools!
- Ruse: we have to keep looking for naturalistic explanations for the Big Bang, the DNA, the fine-tuning, the Cambrian fossils, etc.
- Ruse: we are never justified in inferring an intelligence to explain information, because that would deny my religion of materialism
- Moderator: (to Ruse) what are the requirements for a theory to be scientific?
- Ruse: any explanation has to be naturalistic, because I am an atheist and that's my religion, and we can't go against my religion
- Ruse: it's "really stupid" to infer God as the explanation of the creation of the entire physical universe or the cosmic fine-tuning
- Moderator: (to Meyer) why is intelligent design so popular when we have court cases saying it is not science?
- Meyer: the Discovery Institute does not have an agenda to teach intelligent design in public schools
- Meyer: intelligent design is about inferring intelligence as a causal explanation for information in living systems, and elsewhere
- Moderator: (to Ruse) are evolutionists unwilling to entertain the possibility of intelligence being the best explanation?
- Ruse: scientists have to make sure that that all their explanations don't go outside of the materialist reservation
- Ruse: intelligent design is evangelical Christianity dressed up to look like science, the Dover judge said so
- Ruse: Meyer is disingenuous! Ho ho ho ho ho! (folds arms contentedly)
- Meyer: first, judges don't decide science, evidence decides science
- Meyer: the Dover people made a mistake by trying to go to the courts to get things into the schools
- Meyer: intelligent design is about research, writing books and papers based on what we learn from science
- Moderator: (to Ruse) is intelligent design dangerous?
- Ruse: yes, intelligent design is not about cosmic fine-tuning, origin of life, molecular machines or Cambrian explosion
- Ruse: intelligent design is about abstinence, prayer in schools, pro-life and man-woman marriage
- Ruse: my reason for opposing ID is the socially conservate agenda which emerges from protein folding calculations
- Ruse: I don't want to be drafted to fight in Vietnam, I don't want them to take away my drugs, etc. so that's why I believe Darwinism
- Moderator: (to Meyer) why do you want to take abortion away, you meany?
- Meyer: actually, intelligent design is about science, and in any case National Review gave my book a bad review
- Moderator: (to Ruse) are science and religion in conflict?
- Ruse: well religion can just abstain from making any claims about the physical world, and just stick to subjective nonsense – that's fair
- Moderator: (to Meyer) isn't all opposition to evolution rooted in fundamentalist religion?
- Meyer: you can believe in Darwinism and be a theist, but the real reason for doubting Darwinism is scientific evidence, not religion

Tell me how you think Dr. Meyer did in the comments. I think that Ruse is a bloviating boffin – a buffoon who blows smoke and has no idea what the science shows. He admits his motivations are political in the debate. And that's as far as it goes. Evolution, because I don't like that my girlfriend is making me wait for sex until we're married. That's the whole breadth of his opposition to the science. All the science was cited by Meyer, and Ruse

had *nothing* to say in response. No evidence, certainly. But he's a nice guy, and I appreciate him debating the issue. Things are tough right now for his side.

# Columbia University School of Journalism gets $9.7 million from George Soros

**Wintery Knight** · 29 August 2013 · Archived copy · Original

The Media Research Center reports.

Excerpt:

> The Media Research Center's Business and Media Institute has extensively researched Columbia University School of Journalism, including its faculty, alumni, student publications, funding, guest lecturers, endorsements and awards. BMI found that there was a significant left-wing bias prevalent at the school – a bias that then migrates with its graduates to permeate the daily operations of news organizations across the United States. These results include the following:
>
> - **68 Percent of the Professors Work for Liberal Outlets**: The faculty list of the Columbia University School of Journalism reads like a Who's Who of liberal organizations. Of the 40 full-time members of the faculty, 27 work at left-wing news outlets and organizations including The Huffington Post, Slate, Mother Jones, Salon, The Nation and Greenpeace. Adjunct faculty work at Al Jazeera, Alternet, The Daily Beast, Salon and The Nation. These professors are also cited as experts by major news outlets, such as The New York Times, ABC, CBS, The Washington Post and USA Today, thanks to their status as Columbia faculty.
>
> - **More than $9.7 Million in Soros Funding**: Columbia University has received $9,708,486 from liberal billionaire George Soros's Open Society Foundation. That makes it the third-most Soros-funded school in the world, and the second-most in the U.S. The school also received an additional $1.63 million from the liberal Tides Foundation, which Soros also supports.
>
> - **Soros-funded Liberal Leadership**: Incoming dean Steve Coll has his own left-wing rap sheet. Coll, who will take over as dean of Columbia University Graduate School of Journalism in July 2013 is currently the president of the New America Foundation, a left-leaning public policy organization which has received more than $4.2 million in Soros funding since 2001. Before working at New America Foundation, Coll was managing editor at The Washington Post.
> - **Ties to Terror-Friendly Al Jazeera**: Al Jazeera English was awarded more than just the Columbia Award, the highest honor that Columbia could give. It was also granted a fellowship, and allowed to host its show, "Empire," with a guest panel of full-time Columbia University School of Journalism professors. Al Jazeera employees work as adjunct faculty and guest lecturers, and the journalism school also listed Al Jazeera English and Current TV (which has been bought by Al Jazeera) as potential vendors at its upcoming jobs fair for 2013. Both were in attendance for the 2012 jobs fair. This is the same "news" organization that, in 2008, threw a birthday party for a Lebanese terrorist who had previously killed a police officer, a civilian and a 4-year-old girl.

But what do academic studies say about media bias? Is it real, or is it just a subjective judgment made by angry conservatives?

The Baltimore Sun reports on a new Pew Research study. (H/T WGB)

Excerpt:

> In writing about the Pew study released today, I was struck by the big story of how negative coverage on several levels of presidential politics had become.
>
> […]**On MSNBC, the ratio of negative to positive stories on GOP candidate Mitt Romney was 71 to 3.**

> […]**The ratio of negative to positive stories in Fox's coverage of President Obama was 46 to 6.**
>
> Check out the full Pew study here. It's a good one, and there is much food for thought in its findings as we approach the end of an election cycle marked by poor media performance.

Pew Research is a left-of-center organization, so the finding is even more striking.

**Peer-reviewed academic studies of media bias**

Let's take a look at peer-reviewed academic studies of media bias, and see if they confirm or falsify what Pew Research found.

Here's a UCLA study on media bias.

Excerpt:

> Of the 20 major media outlets studied, 18 scored left of center, with CBS' "Evening News," The New York Times and the Los Angeles Times ranking second, third and fourth most liberal behind the news pages of The Wall Street Journal.
>
> Only Fox News' "Special Report With Brit Hume" and The Washington Times scored right of the average U.S. voter.
>
> The most centrist outlet proved to be the "NewsHour With Jim Lehrer." CNN's "NewsNight With Aaron Brown" and ABC's "Good Morning America" were a close second and third.
>
> "Our estimates for these outlets, we feel, give particular credibility to our efforts, as three of the four moderators for the 2004 presidential and vice-presidential debates came from these three news outlets — Jim Lehrer, Charlie Gibson and Gwen Ifill," Groseclose said. "If these newscasters weren't centrist, staffers for one of the campaign teams would have objected and insisted on other moderators."
>
> The fourth most centrist outlet was "Special Report With Brit Hume" on Fox News, which often is cited by liberals as an egregious example of a right-wing outlet. While this news program proved to be right of center, the study found ABC's "World News Tonight" and NBC's "Nightly News" to be left of center. All three outlets were approximately equidistant from the center, the report found.
>
> "If viewers spent an equal amount of time watching Fox's 'Special Report' as ABC's 'World News' and NBC's 'Nightly News,' then they would receive a nearly perfectly balanced version of the news," said Milyo, an associate professor of economics and public affairs at the University of Missouri at Columbia."

Here's a Harvard University study on media bias.

Excerpt:

> The programming studied on Fox News offered a somewhat more positive picture… of Republicans and more negative one of Democrats compared with other media outlets. Fox News stories about a Republican candidate were most likely to be neutral (47%), with the remainder more positive than negative (32% vs. 21% negative). The bulk of that positive coverage went to Giuliani (44% positive), while McCain still suffered from unflattering coverage (20% positive vs. 35% negative).
>
> When it came to Democratic candidates, the picture was more negative. Again, neutral stories had a slight edge (39%), followed by 37% negative and 24% positive. And, in marked contrast from the rest of the media, coverage of Obama was twice as negative as positive: 32% negative vs. 16% positive and 52% neutral.
>
> But any sense here that the news channel was uniformly positive about Republicans or negative about Democrats is not manifest in the data."

From the Washington Examiner, a study of the political contributions made by the mainstream media.

Excerpt:

> Senior executives, on-air personalities, producers, reporters, editors, writers and other self-identifying employees of ABC, CBS and NBC contributed more than $1 million to Democratic candidates and campaign committees in 2008, according to an analysis by *The Examiner* of data compiled by the Center for Responsive Politics.
>
> The Democratic total of $1,020,816 was given by 1,160 employees of the three major broadcast television networks, with an average contribution of $880.
>
> By contrast, only 193 of the employees contributed to Republican candidates and campaign committees, for a total of $142,863. The average Republican contribution was $744.
>
> […]The data on contributions by broadcast network employees was compiled by CRP at the request of *The Examiner* and included all 2008 contributions by individuals who identified their employer as one of the three networks or subsidiaries. The data does not include contributions by employees of the three networks who did not identify their employer.
>
> The CRP is the organization behind OpenSecrets.org, the web site that for more than a decade has put campaign finance data within reach of anybody with an Internet connection.
>
> President Obama received 710 such contributions worth a total of $461,898, for an average contribution of $651 from the network employees. Republican presidential nominee Sen. John McCain received only 39 contributions totaling $26,926, for an average donation of $709.

And more from a study done by the radically leftist MSNBC.

Excerpt:

> MSNBC.com identified 143 journalists who made political contributions from 2004 through the start of the 2008 campaign, according to the public records of the Federal Election Commission. Most of the newsroom checkbooks leaned to the left: 125 journalists gave to Democrats and liberal causes. Only 16 gave to Republicans. Two gave to both parties.
>
> The donors include CNN's Guy Raz, now covering the Pentagon for NPR, who gave to Kerry the same month he was embedded with U.S. troops in Iraq; New Yorker war correspondent George Packer; a producer for Bill O'Reilly at Fox; MSNBC TV host Joe Scarborough; political writers at Vanity Fair; the editor of The Wall Street Journal's weekend edition; local TV anchors in Washington, Minneapolis, Memphis and Wichita; the ethics columnist at The New York Times; and even MTV's former presidential campaign correspondent.

Those are the facts.

**So what?**

Now consider this column from Brent Bozell, which explains the difference media bias makes to political intelligence.

Excerpt:

> **A 2008 survey by the Pew Research Center asked media consumers three questions: which party was in control of Congress (Democrats), who was the secretary of state (Condi Rice) and who was the prime minister of Britain (Gordon Brown).**
>
> **Let's document how the viewers of "Hannity &Colmes" were better informed than Stewart's "Daily Show" gigglers on basic political facts. Hannity viewers beat Stewart's on the Democratic majority (84**

> **percent to 65 percent correct answers), Condi Rice (a dramatic 73 percent to 48 percent gap) and Gordon Brown (49 percent to 36). Overall, as a percentage getting all three questions right, Hannity won 42-30.**

Just keep that in mind when you are watching the mainstream media news shows. A very good site to bookmark and read is Newsbusters, which documents mainstream media bias daily. I even have an RSS feed of their latest stories on the front page on this blog.

# Heritage Foundation recommends no military action in Syria

**Wintery Knight** · 29 August 2013 · Archived copy · Original

Map of Middle East

I posted earlier in the week about how our best option was a targeted strike (SSM or standoff) to the top level of the Assad regime, but it looks like there is another viable conservative view on what to do about Syria.

Here's the post from the Heritage Foundation, my favorite conservative think tank.

Five reasons:

1. The Responsibility to Protect (R2P) doctrine is not adequate justification for direct military intervention.
2. A vital U.S. interest is not at stake.
3. It would not be a wise use of military force.
4. Missile attacks would only make President Obama look weaker.
5. It would distract from what the U.S. should be doing.

Here's the detail on Number 4:

**4. Missile attacks would only make President Obama look weaker.** Much like President Clinton's ineffective cruise missile strikes on Osama bin Laden's terrorist camps, strikes would only be seen as a sign that the U.S. is lacking a clear, decisive course of action. The Middle East would see this as another effort from the Obama Administration to look for an "easy button" and lead from behind rather than exercise real, constructive leadership.

The other concern that people have is the opposition is even more penetrated by Al Qaeda than I first thought.

More Heritage Foundation:

> **What should America be doing?**
>
> We should not be doing missile strikes, as many reports have indicated could be a possibility.
>
> Al-Qaeda and other Islamist groups have been the principal beneficiaries of Obama's passive, "hands-off"

> approach to the worsening Syria crisis. The Obama Administration urgently needs to develop a strategy not only to counter Assad's use of chemical weapons but prevent those weapons from falling into the hands of al-Qaeda, Hezbollah, or other Islamist terrorist groups that have flocked to Syria.
>
> Rather than attempting to intervene directly in the conflict, the U.S. should be working with other countries in the region to hasten the end of the Assad regime and deal with the refugee crisis and terrorist strongholds.

I don't think that Heritage is responding to the idea of a targeted strike against the key people in the Assad regime as much as they are opposed to a general military strike against military targets. Everyone agrees on that, though. The strike option I presented (from Bret Stephens of the Wall Street Journal) was aimed at Assad and his henchmen.

The other concern that's emerged (in the Associated Press, no less) is that it's not 100% certain that the Assad regime was responsible for the use of chemical weapons. (H/T ECM)

Excerpt:

> The intelligence linking Syrian President Bashar Assad or his inner circle to an alleged chemical weapons attack is no "slam dunk," with questions remaining about who actually controls some of Syria's chemical weapons stores and doubts about whether Assad himself ordered the strike, U.S. intelligence officials say.
>
> […]A report by the Office of the Director for National Intelligence outlining that evidence against Syria includes a few key caveats — including acknowledging that the U.S. intelligence community no longer has the certainty it did six months ago of where the regime's chemical weapons are stored, nor does it have proof Assad ordered chemical weapons use, according to two intelligence officials and two more U.S. officials.
>
> […]A three-page report released Thursday by the British government said there was "a limited but growing body of intelligence" blaming the Syrian government for the attacks. And though the British were not sure why Assad would have carried out such an attack, the report said there was "no credible intelligence" that the rebels had obtained or used chemical weapons.
>
> Like the British report, the yet-to-be-released U.S. report assesses with "high confidence" that the Syrian government was responsible for the attacks that hit suburbs east and west of Damascus, filled with a chemical weapon, according to a senior U.S. official who read the report.
>
> The official conceded there are caveats in the report and there is no proof saying Assad personally ordered the attack. There was no mention in the report of the possibility that a rogue element inside Assad's government or military could have been responsible, the senior official said.

ECM wonders why the Assad regime would try to hasten their own demise by using chemical weapons, especially when they are winning. Still, I think it's more likely than not right now that Assad is responsible for using the chemical weapons.

Ed Morrissey at Hot Air notes that Obama has not presented a comprehensive case for intervention in Syria. Who says? Donald Rumsfeld! Morrissey says that Bush administration's case for war was much more thorough and had more support than Obama's case against Syria.

My reasons for initially supporting the strike at the top level of the regime was to *deter the future use of chemical weapons.* I still favor that course of action, but on the condition that we clear up these uncertainties *first* and get Congressional approval *first*. You can't just do these things willy-nilly, especially when there are uncertainties.

# Four ways that the progress of science conflicts with naturalistic speculations

**Wintery Knight** · 29 August 2013 · Archived copy · Original

When people ask me whether the progress of science is more compatible with theism or atheism, I offer the follow four basic pieces of scientific evidence that are more compatible with theism than atheism.

Here are the four pieces of evidence best explained by a Creator/Designer:

1. the kalam argument from the origin of the universe
2. the cosmic fine-tuning (habitability) argument
3. the biological information in the first replicator (origin of life)
4. the sudden origin of all of the different body plans in the fossil record (Cambrian explosion)

And I point to specific examples of recent discoveries that confirm those four arguments. Here are just a few of them:

1. An explanation of 3 of the 6 experimental evidences for the Big Bang cosmology (From an article from Caltech)
2. Examples of cosmic fine-tuning (there at least 40 examples of cosmic fine-tuning), (From the New Scientist)
3. Evidence that functional protein sequences are beyond the reach of chance, (from Doug Axe's JMB article)
4. Evidence showing that Ediacaran fauna are not precursors to the Cambrian fossils, (from the journal Nature)

Atheists will typically reply to the recent scientific discoveries that overturned their speculations like this:

1. Maybe the Big Bang cosmology will be overturned by the Big Crunch/Bounce so that the universe is eternal and has no cause
2. Maybe there is a multiverse: an infinite number of unobservable, untestable universes which makes our finely-tuned one more probable
3. Maybe the origin of life could be the result of chance and natural processes
4. Maybe we will find a seamless chain of fossils that explain how the Cambrian explosion occurred slowly, over a long period time

Ever heard any of these responses?

Below I list some resources to help you to respond to the four responses of atheists to the experimental data.

**1) The Big Crunch/Bounce has been disproved theoretically and experimentally.**

Theoretically:

> Nature 302, 505 – 506 (07 April 1983); doi:10.1038/302505a0
>
> The impossibility of a bouncing universe
>
> ALAN H. GUTH* & MARC SHER†
>
> *Center for Theoretical Physics, Laboratory for Nuclear Science and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139, USA
>
> †Department of Physics, University of California, Irvine, California 92717, USA
>
> Petrosian1 has recently discussed the possibility that the restoration of symmetry at grand unification in a closed contracting Robertson–Walker universe could slow down and halt the contraction, causing the universe to bounce. He then went on to discuss the possibility that our universe has undergone a series of such bounces.

> We disagree with this analysis. One of us (M.S.) has already shown2 that if a contracting universe is dominated by radiation, then a bounce is impossible. We will show here two further results: (1) entropy considerations imply that the quantity S (defined in ref. 1 and below), which must decrease by ~1075 to allow the present Universe to bounce, can in fact decrease by no more than a factor of ~2; (2) if the true vacuum state has zero energy density, then a universe which is contracting in its low temperature phase can never complete a phase transition soon enough to cause a bounce.

Experimentally:

> The universe is not only expanding, but that expansion appears to be speeding up. And as if that discovery alone weren't strange enough, it implies that most of the energy in the cosmos is contained in empty space — a concept that Albert Einstein considered but discarded as his "biggest blunder." The new findings have been recognized as 1998's top scientific breakthrough by Science magazine.
>
> […]The flood of findings about the universe's expansion rate is the result of about 10 years of study, said Saul Perlmutter, team leader of the Supernova Cosmology Project at Lawrence Berkeley National Laboratory.
>
> Perlmutter and others found such a yardstick in a particular kind of exploding star known as a Type 1A supernova. Over the course of several years, the astronomers developed a model to predict how bright such a supernova would appear at any given distance. Astronomers recorded dozens of Type 1A supernovae and anxiously matched them up with redshifts to find out how much the universe's expansion was slowing down.
>
> To their surprise, the redshift readings indicated that the expansion rate for distant supernovae was lower than the expansion rate for closer supernovae, Perlmutter said. On the largest scale imaginable, the universe's galaxies appear to be flying away from each other faster and faster as time goes on.
>
> "What we have found is that there is a 'dark force' that permeates the universe and that has overcome the force of gravity," said Nicholas Suntzeff of the Cerro Tololo Inter-American Observatory, who is the co-founder of another group called the High-z Supernova Search Team. "This result is so strange and unexpected that it perhaps is only believable because two independent international groups have found the same effect in their data."

There has only been one creation of the universe, and the universe will never reverse its expansion, so that it could oscillate eternally. That view is popular, perhaps in part because many people watched videos of Carl Sagan speculating about it in public school classrooms, but all it was was idle naturalistic speculation, (Sagan was a naturalist, and held out hope that science would vindicate naturalism), and has been contradicted by good experimental science. You should be familiar with the 3 evidences for the Big Bang (redshift, light element abundances (helium/hydrogen) and the cosmic microwave background radiation. There are others, (radioactive element abundances, second law of thermodynamics, stellar lifecycle), but those are the big three. Point out how the experimental evidence for the Big Bang has piled up, making the problem even worse for the eternal-universe naturalists. Leave no doubt.

**2) The multiverse has not been tested experimentally, it's pure speculation.**

Speculation:

> Multiverse thinking or the belief in the existence of parallel universes is more philosophy or science fiction than science. "Cosmology must seem odd to scientists in other fields".
>
> George Ellis, a well-known mathematician and cosmologist, who for instance has written a book with Stephen Hawking, is sceptical of the idea that our universe is just another universe among many others.
>
> A few weeks ago, Ellis, professor emeritus of applied mathematics at the University of Cape Town, reviewed Brian Greene's book The Hidden Reality: Parallel Universes and the Deep Laws of the Cosmos (Knopf/Allen

> Lane, 2011) in the journal Nature. He is not at all convinced that the multiverse hypothesis is credible: ”Greene is not presenting aspects of a known reality; he is telling of unproven theoretical possibilities.”
>
> According to professor Ellis, there is no evidence of multiverses, they cannot be tested and they are not science.
>
> Ellis is not the only multiverse sceptic in this universe. A few months ago, science writer John Horgan wrote a column in Scientific American, expressing his doubt in multiverses.

When you get into a debate, you must never ever let the other side get away with asserting something they have no evidence for. Call them on it – point out that they have no evidence, and then hammer them with evidence for your point. Pile up cases of fine-tuning on top of each other and continuously point out that they have no experimental evidence for their speculations. Point out that more evidence we get, the more cases of fine-tuning we find, and the tougher the problem gets for naturalists. Leave no doubt.

**3) Naturalistic theories for the origin of life have two problems: can’t make the amino acids in an oxydized atmosphere and can’t make protein and DNA sequences by chance in the time available.**

Building blocks:

> The oxidation state of Hadean magmas and implications for early Earth’s atmosphere
>
> Dustin Trail, E. Bruce Watson & Nicholas D. Tailby
>
> Nature 480, 79–82 (01 December 2011) doi:10.1038/nature10655
>
> […]These results suggest that outgassing of Earth’s interior later than ~200?Myr into the history of Solar System formation would not have resulted in a reducing atmosphere.

Functional protein sequences:

> J Mol Biol. 2004 Aug 27;341(5):1295-315.
>
> Estimating the prevalence of protein sequences adopting functional enzyme folds.
>
> Axe DD.
>
> The Babraham Institute, Structural Biology Unit, Babraham Research Campus, Cambridge CB2 4AT, UK. doug.axe@bbsrc.ac.uk
>
> Proteins employ a wide variety of folds to perform their biological functions. How are these folds first acquired? An important step toward answering this is to obtain an estimate of the overall prevalence of sequences adopting functional folds.
>
> […]Starting with a weakly functional sequence carrying this signature, clusters of ten side-chains within the fold are replaced randomly, within the boundaries of the signature, and tested for function. The prevalence of low-level function in four such experiments indicates that roughly one in 10(64) signature-consistent sequences forms a working domain. Combined with the estimated prevalence of plausible hydropathic patterns (for any fold) and of relevant folds for particular functions, this implies the overall prevalence of sequences performing a specific function by any domain-sized fold may be as low as 1 in 10(77), adding to the body of evidence that functional folds require highly extraordinary sequences.

So atheists are in double jeopardy here. They don’t have a way to build the Scrabble letters needed for life, and they don’t have a way to form the Scrabble letters into words and sentences. Point out that the more research we do, the tougher the problem gets to solve for naturalists, and the more it looks like an effect of intelligence. Write out the calculations for them. Leave no doubt.

**4) The best candidate to explain the sudden origin of the Cambrian era fossils was the Ediacaran fauna,**

**but those are now recognized as not being precursors to the Cambrian fossils.**

Science Daily reports on a paper from the peer-reviewed journal Science:

> Evidence of the single-celled ancestors of animals, dating from the interval in Earth's history just before multicellular animals appeared, has been discovered in 570 million-year-old rocks from South China by researchers from the University of Bristol, the Swedish Museum of Natural History, the Paul Scherrer Institut and the Chinese Academy of Geological Sciences.
>
> […]This X-ray microscopy revealed that the fossils had features that multicellular embryos do not, and this led the researchers to the conclusion that the fossils were neither animals nor embryos but rather the reproductive spore bodies of single-celled ancestors of animals.
>
> Professor Philip Donoghue said: "We were very surprised by our results — we've been convinced for so long that these fossils represented the embryos of the earliest animals — much of what has been written about the fossils for the last ten years is flat wrong. Our colleagues are not going to like the result."
>
> Professor Stefan Bengtson said: "These fossils force us to rethink our ideas of how animals learned to make large bodies out of cells."

The trend is that there is no evolutionary explanation for the body plans that emerged in the Cambrian era. If you want to make the claim that "evolution did it", then you have to produce the data *today*. Not speculations about the future. The data we have today says no to naturalism. The only way to affirm naturalistic explanations for the evidence we have is *by faith*. We need to minimize our leaps of faith, though, and go with the simplest and most reasonable explanation – an intelligence is the best explanation responsible for rapid generation of biological information.

**Conclusion**

I do think it's important for Christians to focus more on scientific apologetics and to focus their academic careers in scientific fields. So often I look at Christian blogs, and I see way too much G. K. Chesterton, Francis Chan and other untestable, ineffective jibber-jabber. We need to bring the *hard* science, and stop making excuses about not being able to understand it because it's too hard. It's not too hard. Everyone can understand "Who Made God?" by Edgar Andrews – start with that! Then get Lee Strobel's "The Case for a Creator". That's more than enough for the average Christian on science apologetics. We all have to do our best to learn what works. You don't want to be anti-science like atheists are. I recommend reading Uncommon Descent and Evolution News every day for a start.

UPDATE: Jeffery Jay Lowder (a naturalist) replies here.

# New study finds that unborn babies can recognize spoken words

**Wintery Knight** · 30 August 2013 · Archived copy · Original

Scheming unborn baby can hear what you're saying, potty-mouth

The study was published in the prestigious peer-reviewed journal *Science.*

Excerpt:

> As a fetus grows inside a mother's belly, it can hear sounds from the outside world—and can understand them well enough to retain memories of them after birth, according to new research.
>
> It may seem implausible that fetuses can listen to speech within the womb, but the sound-processing parts of their brain become active in the last trimester of pregnancy, and sound carries fairly well through the mother's abdomen. "If you put your hand over your mouth and speak, that's very similar to the situation the fetus is in," says cognitive neuroscientist Eino Partanen of the University of Helsinki. "You can hear the rhythm of speech, rhythm of music, and so on."
>
> A 1988 study suggested that newborns recognize the theme song from their mother's favorite soap opera. More recent studies have expanded on the idea of fetal learning, indicating that newborns already familiarized themselves with sounds of their parent's native language; one showed that American newborns seem to perceive Swedish vowel sounds as unfamiliar, sucking on a high-tech pacifier to hear more of the new sounds. Swedish infants showed the same response to English vowels.
>
> But those studies were based on babies' behaviors, which can be tricky to test. Partanen and his team decided instead to outfit babies with EEG sensors to look for neural traces of memories from the womb. "Once we learn a sound, if it's repeated to us often enough, we form a memory of it, which is activated when we hear the sound again," he explains. This memory speeds up recognition of sounds in the learner's native language and can be detected as a pattern of brain waves, even in a sleeping baby.
>
> The team gave expectant women a recording to play several times a week during their last few months of pregnancy, which included a made-up word, "tatata," repeated many times and interspersed with music.

> Sometimes the middle syllable was varied, with a different pitch or vowel sound. By the time the babies were born, they had heard the made-up word, on average, more than 25,000 times. And when they were tested after birth,these infants' brains recognized the word and its variations, while infants in a control group did not, Partanen and colleagues report online today in the *Proceedings of the National Academy of Sciences*.
>
> Babies who had heard the recordings showed the neural signal for recognizing vowel and pitch changes in the pseudoword, and the signal was strongest for the infants whose mothers played the recording most often. They were also better than the control babies at detecting other differences in the syllables, such as vowel length. "This leads us to believe that the fetus can learn much more detailed information than we previously thought," Partanen says, and that the memory traces are detectable after birth.
>
> "This is a well-respected group and the effects are really convincing," says Patricia Kuhl, a neuroscientist at the University of Washington in Seattle. Combined with previous work, she says, these results suggest "that language learning begins in the womb."

More evidence that unborn babies are not just blobs of tissue. Every one is precious, and we need to be more careful with our decisions so that we welcome them into the world and look after them as they grow up. Not just giving them protection and sustenance, but a mother and a father close by, too. That's what they need.

# Why has New York City been able to avoid another terrorist attack?

**Wintery Knight** · 30 August 2013 · Archived copy · Original

Investors Business Daily praises the NYPD.

Excerpt:

> Now we know why New York City has avoided another terror attack: The police there treat radical mosques as the terror enterprises they are and investigate accordingly.
>
> The New York Police Department uses pro-active counterterror tactics, while the FBI's approach is reactive. Guess which one has a better record preventing terror attacks?
>
> NYPD has disrupted a whopping 16 major terror plots since Manhattan was attacked on Sept. 11, 2001. The department's intelligence unit has foiled attacks on the Brooklyn Bridge, the New York City subway system, New York Stock Exchange, Manhattan and Bronx synagogues, the Federal Reserve Bank and returning U.S. military service members, among other targets.
>
> The FBI's success? Not so good. Since 9/11, the federal agency has missed the Boston bombings and the Fort Hood massacre, among other jihadi attacks.
>
> We knew the CIA-trained NYPD was good. But we didn't know how good until now.
>
> According to the Associated Press, which has obtained secret police documents, the NYPD has been labeling entire radical mosques as "terrorism organizations," a designation that allows detectives to use informants to record violent sermons and spy on mosque clerics suspected of inciting jihad or recruiting terrorists. The tactic also makes anyone attending the mosques fair game for surveillance.
>
> The FBI has shunned this wildly effective tool in the war on Islamic terrorists as too invasive and politically incorrect.
>
> "As a tactic, opening an enterprise investigation on a mosque is so potentially invasive that while the NYPD conducted at least a dozen, the FBI never did one," the AP reported.
>
> […]Studies show some 80% of American mosques preach jihad or distribute violent literature. Many raise money for terrorists. Some even store caches of weapons inside their buildings. One investigated by the NYPD set up a martial arts training center in its basement.
>
> If Washington really wanted to protect Americans from Islamic terrorists, it would adopt the NYPD's counterterrorism tactics.

The article takes a look at why the FBI is unable to have the same kind of success as the NYPD and concludes that political correctness hampers their ability to their jobs.

# Is the Bible's definition of faith opposed to logic and evidence?

**Wintery Knight** · 30 August 2013 · Archived copy · Original

Probably the biggest misconception that I encounter when defending the faith is the mistaken notion of what faith is. Today we are going to get to the bottom of what the Bible says faith is, once and for all. This post will be useful to Christians and atheists, alike.

**What is faith according to the Bible?**

I am going to reference this article from apologist Greg Koukl of Stand to Reason in my explanation.

Koukl cites three Biblical examples to support the idea that faith is not blind leap-of-faith wishing, but is based on evidence.

1. Moses went out into the wilderness and he had that first encounter with the burning bush, and God gave him the directive to go back to Egypt and let his people go. Moses said, Yeah, right. What's going to happen when they say, why should we believe you, Moses?God said, See that staff? Throw it down.Moses threw it down and it turned into a serpent.God said, See that serpent? Pick it up.And he picked it up and it turned back into a staff.God said, Now you take that and do that before the Jewish people and you do that before Pharaoh. And you do this number with the hail, and the frogs, and turning the Nile River into blood. You put the sun out. You do a bunch of other tricks to get their attention.And then comes this phrase: "So that they might know that there is a God in Israel."
2. [I]n Mark 2 you see Jesus preaching in a house, and you know the story where they take the roof off and let the paralytic down through the roof. Jesus said, "Your sins are forgiven." And people get bugged because how can anyone forgive sins but God alone?Jesus understood what they were thinking and He said this: What's harder to say, your sins are forgiven, or to rise, take up your pallet and go home?Now, I'll tell you what would be harder for me to say : Arise, take up your pallet and go home. I can walk into any Bible study and say your sins are forgiven and nobody is going to know if I know what I am talking about or not. But if I lay hands on somebody in a wheelchair and I say, Take up your wheelchair and go home, and they sit there, I look pretty dumb because everyone knows nothing happened.But Jesus adds this. He says, "In order that you may know that the Son of Man has the power and authority to forgive sins, I say to you, arise, take up your pallet and go home." And he got up and he got out. Notice the phrase "In order that you may know". Same message, right?
3. Move over to the Book of Acts. First sermon after Pentecost. Peter was up in front of this massive crowd. He was talking about the resurrection to which he was an eyewitness. He talked about fulfilled prophecy. He talked about the miraculous tongues and the miraculous manifestation of being able to speak in a language you don't know. Do you think this is physical evidence to those people? I think so. Pretty powerful.Peter tells them, These men are not drunk as it seems, but rather this is a fulfillment of prophecy. David spoke of this. Jesus got out of the grave, and we saw him, and we proclaim this to you.Do you know how he ends his sermon? It's really great. Acts 2:36. I've been a Christian 20 years and I didn't see this until about a year ago. This is for all of those who think that if you can know it for sure, you can't exercise faith in it. Here is what Peter said. Acts 2:36, "Therefore let all the house of Israel know for certain that God has made him both Lord and Christ, Messiah, this Jesus whom you crucified." There it is again. "Know for certain."

**What is faith according to Bible-based theologians?**

I am going to reference this article from theologian C. Michael Patton of Parchment and Pen in my explanation.

Patton explains that according to Reformation (conservative, Bible-based) theologians, faith has 3 parts:

1. **notitia –** This is the basic informational foundation of our faith. It is best expressed by the word content. Faith, according to the Reformers must have content. You cannot have faith in nothing. There must be some referential propositional truth to which the faith points. The proposition "Christ rose from the grave," for

example, is a necessary information base that Christians must have.

2. **assensus –** This is the assent or confidence that we have that the *notitia* is correct… This involves evidence which leads to the conviction of the truthfulness of the proposition… This involves intellectual assent and persuasion based upon critical thought… *assensus*… says, "I am persuaded to believe that Christ rose from the grave."
3. **fiducia –** This is the "resting" in the information based upon a conviction of its truthfulness. *Fiducia* is best expressed by the English word "trust."… Fiducia is the personal subjective act of the will to take the final step. It is important to note that while *fiducia* goes beyond or transcends the intellect, it is built upon its foundation.

So, Biblical faith is really trust. Trust(3) can only occur *after* intellectual assent(2), based on evidence and thought. Intellectual assent(2) can only occur *after* the propositional information(1) is known.

The church today accepts 1 and 3, but denies 2. I call this "fideism" or "blind faith". Ironically, activist atheists, (the New Atheists), also believe that faith is blind. The postmodern "emergent church" denies 1 and 2. A person could accept 1 and 2 but deny 3 by not re-prioritizing their life based on what they know to be true.

**How do beliefs form, according to Christian philosophers?**

I am going to reference a portion of chapter 3 of J.P. Moreland's "Love Your God With All Your Mind" (i.e. – LYGWYM).

J.P. Moreland explains how beliefs form and how you can change them.

1. Today, people are inclined to think that the sincerity and fervency of one's beliefs are more important than the content… Nothing could be further from the truth… As far as reality is concerned, what matters is not whether I like a belief or how sincere I am in believing it but whether or not the belief is true. I am responsible for what I believe and, I might add, for what I refuse to believe because the content of what I do or do not believe makes a tremendous difference to what I become and how I act.
2. A belief's strength is the degree to which you are convinced the belief is true. As you gain ,evidence and support for a belief, its strength grows for you… The more certain you are of a belief… the more you rely on it as a basis for action.

But the most important point of the article is that *your beliefs are not under the control of your will.*

> …Scripture holds us responsible for our beliefs since it commands us to embrace certain beliefs and warns us of the consequences of accepting other beliefs. On the other hand, experience teaches us that we cannot choose or change our beliefs by direct effort.
>
> For example, if someone offered you $10,000 to believe right now that a pink elephant was sitting next to you, you could not really choose to believe this… If I want to change my beliefs about something, I can embark on a course of study in which I choose to think regularly about certain things, read certain pieces of evidence and argument, and try to find problems with evidence raised against the belief in question.
>
> …by choosing to undertake a course of study… I can put myself in a position to undergo a change in… my beliefs… And… my character and behavior… will be transformed by these belief changes.

The article goes on to make some very informative comments on the relationship between apologetics and belief.

# Conservative coalition leader Tony Abbott leads by 6 points in latest Australia election poll

**Wintery Knight** · 31 August 2013 · Archived copy · Original

Tony Abbott, future Prime Minister of Australia

First the latest Nielsen poll results from the Australian Broadcasting Corporation (ABC).

Excerpt:

> Latest opinion polls show a further drop in support for Labor two weeks out from an election, with one indicating the Prime Minister may struggle to hold his own seat.
>
> The Nielsen poll, published on Fairfax websites, shows Labor's primary vote has fallen two points to 35 per cent.
>
> After preferences, that gives the Coalition a six-point lead – 53 per cent to 47 per cent.
>
> If the results were replicated evenly across the country on election day, Labor would lose 10 seats.
>
> The poll of 2,500 respondents has a margin of error of 2.6 per cent.
>
> Meanwhile, a Newspoll published in The Australian newspaper, shows Prime Minister Kevin Rudd is behind the Coalition candidate, Bill Glasson, in his Brisbane seat of Griffith.
>
> The poll of 500 voters shows Mr Rudd trails his opponent 52 per cent to 48 per cent on a two-party preferred basis. The margin of error is 4.4 per cent.
>
> Another Newspoll of almost 1,400 voters in the Coalition's eight most marginal seats in Queensland shows the Coalition's primary vote has surged eight points to 54 per cent, while the ALP's primary vote has slipped to 32 per cent.
>
> It shows the Coalition has a commanding two-party preferred lead of 60 per cent to Labor's 40 per cent.
>
> Mr Rudd's personal support has also fallen to 39 per cent, with 49 per cent of voters across the marginal seats preferring Opposition Leader Tony Abbott.

The Coalition is is composed of the Liberal party (which is actually the conservative party) and the National party (which is also conservative).

I found an interview with Tony Abbott posted on India Today, when I searched for some keywords related to his policies. I searched for a detailed policy-oriented interview in the mainstream media, but couldn't find much. Strangely enough, the Australian media seemed to be more concerned with gaffes and fear-mongering about Abbott's socially conservative views. It's as if the mainstream media is aiming for some sort of Jon Stewart coverage of the election, instead of telling us about each candidate's plans and proposals.

Here's some of the interview:

> **1. What are your plans to grow the economy?**
> The Liberal Party understands that successful businesses generate prosperity for the entire community by creating jobs, investing in growth and earning important export income.
>
> We will lower costs for Australian businesses by removing Labor's carbon tax. We will take the shackles off Australian businesses by cutting $1 billion in red tape every year. And we will boost productivity by encouraging more people into the workforce with better child care and a paid parental leave scheme and we will build 21st century infrastructure.
>
> The economy will be strengthened by a new lowered company tax rate of 28.5% from 1 July 2015. This builds on the Coalition's track record of delivering real tax reform focussed on cutting and simplifying taxation in Australia. Our fully funded tax cut will restore confidence in the management of Australia's economy and boost job creation and investment.
>
> The Coalition will also build a more diverse, world-class economy – a 5 pillar economy – to unleash Australia's real economic potential. In particular, we will build on our strengths in manufacturing innovation, agriculture exports, advanced services, world class education and research as well as boosting mining exports.
>
> **2. The cost of living has gone up in the recent years, how will the Liberals help families cope with the rising costs?**
> We will start reducing cost of living pressures for families by immediately scrapping Labor's carbon tax, taking the pressure off rapidly rising electricity and gas prices.
>
> The average family will be $500 better off next year alone and seniors will still keep their fortnightly pension and benefit increases- all without a carbon tax. We will not proceed with Labor's FBT changes on cars. And we will restore the Private Health Insurance Rebate as soon as we responsibly can.
>
> **3. We have a lot of small businesses in our community, how will Liberals help them?**
> The Liberal Party understands the small businesses are the real job creators in the economy, employing almost half of the workforce in Australia. We will reduce costs for every business by abolishing the carbon tax, directly reducing electricity, gas and transport costs. By removing $1 billion of red tape each year, small businesses will be able to put more time, effort and resources in their 'real' work, rather than complying with complex and unnecessary government requirements.
>
> The Coalition's paid parental leave scheme will mean small businesses would no longer be disadvantaged in the 'war for talent', attracting and keeping quality staff.
>
> We will also ease expense pressures on small businesses by delaying the increase of compulsory superannuation contributions to 12 per cent by a further two years.
>
> **8. Do you have a view about same-sex marriage?**
> There are very strong feelings on both sides of this particular issue right now. I take a conservative position on it myself. I think that we should not lightly change something which has been this way since time immemorial. But I don't believe that I can necessarily impose my view on society for all time, all I can do is candidly and honestly tell people what my view is. I support the traditional definition of marriage as between a man and a woman. Now I know that others dispute this, because I have lots of arguments inside my own family on this

> subject now. But my position, it's always been clear, it's always been consistent, and as long as I'm in the Parliament if the issue comes up that's the way I will vote. Whether it remains for all time the Liberal Party, and the Coalition's position, well that will be a matter for our party, for our Coalition if it were to come up in a future Parliament.
>
> **11. Everyone is talking about the Asian Century, what does this mean for the Liberals? What are your plans?**
> An important element of our economic plan for Australia is to strengthen our trading relationships with Asia, welcome investment from the region, boost our exports and deepen Australia's knowledge of and engagement with countries in Asia. We recognise the rapid emergence of both China and India and the opportunities this will afford Australia in the future.
>
> Specifically, we will take real action to increase economic activity by fast-tracking Free Trade Agreements with China and India amongst others.
>
> We will strengthen our diplomatic relationship and trade ties with India and boost mining exports by exporting uranium to that country.
>
> We will help Australians gain study and work experience, strengthen the ties with the region, learn to adapt behaviour to Asian contexts and work more effectively with Asian governments.
>
> The Coalition's new Colombo Plan would encourage and support Australian undergraduates to study for part of their degrees in a university in the Asia-Pacific region, so promoting Australia's deeper engagement with the region to the benefit of both.

It's nice to see what policies a conservative would propose. We haven't had much of that around here for a long time, have we?

The Australian election will be held on September 7th. I would appreciate it if my Australian readers can keep me informed about stories related to the election campaign.

# J. Warner Wallace on the importance of engaging young people with training

**Wintery Knight** · 31 August 2013 · Archived copy · Original

This post by J. Warner Wallace made it onto Pastor Matt's three must-read posts of the week.

Excerpt: (links removed)

> I've been writing this week about my recent experience at Summit Worldview Academy and the nature of student training. There are a number of similar worldview programs around the country (including the Centurions Program and the Worldview Academy), and I'm always impressed to see how many students are interested in this kind of intensive preparation. To be sure, there are always some students at these conferences who are present because their parents demanded their attendance, but these young people are always in the vast minority. Most students come (and put themselves through the rigorous material) because they heard about it through a friend who highly recommended the experience. And while there are some fun opportunities to hike, relax and play games along the way, these activities (commonly associated with youth group retreats) are typically few and far between at worldview camps. Students are here to roll up their sleeves and get to work. They're far more interested in learning than lounging. Youth pastors can glean somethingfrom worldview academies.
>
> I have to confess: When I was a new youth pastor, I was more likely to provide my students with pizza than preparation. I thought the only way to attract students in the first place was to satisfy their desire for entertainment and social interaction. I simply tried to wedge in the important stuff (theological and apologetics training, Spiritual formation and Biblical literacy) along the way. It took me a year or so to find a better approach. I eventually realized my students would willingly delay their *desire for fun* if I could effectively show them their *need for truth*. I began to take them to places where their worldview was tested and I did my best to demonstrate their deficiencies. As a result, the Utah and Berkeley trips became a regular offering of my ministry. It wasn't long before my students were ready to do whatever it took to better defend themselves. They were more than willing to delay their desire for what they used to think of as fun to achieve a greater goal. Along the way, they discovered how satisfying it is to learn the truth, articulate it effectively, and engage the world.
>
> It turns out that students are willing to raise the bar and do much more than we expect of them in most youth groups across the country. If you're a youth pastor or are serving in a youth ministry, think about what your students are typically willing to do in order to succeed on their club sports team or to prepare for their next academic AP test. Our students are already working hard to prepare themselves in some area of their young lives; why aren't we willing to ask them to prepare this rigorously as Christians? It's time to show students why it's so important to equip themselves as Christian ambassadors. It's time to stop teaching and start training.

Wallace has also posted a new podcast on this very topic.

The Please Convince Me podcast is my favorite podcast. There is just something about the way he speaks about Christian topics that is so practical and real-world. I even like it better than all the political and policy podcasts that I listen to. This particular episode is *so good.* I never had parents and youth pastors and pastors that sounded like this.

I blogged before about another podcast that he did about training a group of students to defend the faith at the University of California at Berkeley . That's what our youth pastors should be doing instead of working to hard at entertaining the young adults. He really knows what it is like to deal with young people, and he has a real passion for teaching high school students about how to defend their worldview before they get to university. I would really like to see more pastors looking at young people in this way – as people in need of training who will be facing

challenges in college. Without the training, our young people will be the ones who are changed. I don’t think that a lot of pastors and parents are working on projects like this the way that Wallace is. That needs to change.

# Labor Force Participation hits 34-year record low

**Wintery Knight** · 1 September 2013 · Archived copy · Original

Labor Force Participation Rate from 2007 (Pelosi/Reid) to 2013

Power Line blog reports on a disturbing new white paper about unemployment in America.

Excerpt:

> A comprehensive disaster like the Obama administration can't be summed up in one statistic, but the one that comes closest is labor force participation. The combined effect of many misguided policies–Obamacare, ballooning spending, massive debt, tax increases, subsidizing of inefficient energy, anti-growth regulation, encouragement of food stamp fraud, and many more–has been to drive many millions of Americans out of the labor force. Express Employment Professionals has produced a white paper that illuminates this human tragedy:
>
> The labor force participation rate is currently at a level not seen since the 1970s – 63.4 percent.
>
> While the unemployment rate has steadily decreased from its high of 10.0 percent in October of 2009 to 7.4 percent in July of 2013, the percentage of Americans in the labor force has not risen. It has fallen about 2.7 percentage points since the onset of the latest recession.
>
> This is a tragedy in the making, and its impact on the country has been underestimated. When Americans quit looking for work because they conclude not working beats working, America faces a significant problem.
>
> […]President Obama's policies have devastated all age groups, but the most heartbreaking impact is on the young:
>
> Gallup reports that, "The lack of new hiring over the past several years…seems to have disproportionately reduced younger Americans' ability to obtain full-time jobs."
>
> According to Gallup's "Payroll to Population" measure, **fewer Millennials were working full time in June of 2013 than in June of 2012, 2011, or 2010**.
>
> A recent 2012 Pew Research Center study found that 36 percent of the nation's Millennials were still living with their parents.

And massive growth in the number of people collecting disability, too:

> Fourteen million Americans on disability–that is more than the populations of Wyoming, Vermont, North Dakota, Alaska, South Dakota, Delaware, Rhode Island, Montana, New Hampshire, Maine, Hawaii, Idaho and West Virginia, combined: every man, woman and child in 13 states. The exploding ranks of the "disabled" are due to the absence of jobs in Barack Obama's economy.

Keep in mind that we are blowing through over a trillion dollars in deficits for EACH of Obama's 4 years in office. Shouldn't we be getting a higher level of labor force participation? If you took out a loan to expand your business, you would certainly expect to be able to hire more people and get more sales and make more products, wouldn't you? But it seems as if we took out a HUGE loan as a nation and we are actually contracting our business.

# How the research of Jeffrey M. Schwartz on mindfulness confirms free will

**Wintery Knight** · 1 September 2013 · Archived copy · Original

Here's a summary of the research of UCLA professor Jeffrey Schwartz which appeared in First Things.

Excerpt:

> Schwartz provides a nonmaterialist interpretation of neuroscience and argues that this interpretation is more compelling than the standard materialist interpretation. He arrived at this position as a psychiatrist specializing in the treatment of obsessive-compulsive disorder (OCD). OCD sufferers recognize obsessive-compulsive thoughts and urges as separate from their intrinsic selves. For instance, after a few washings, the compulsive hand-washer realizes that his hands are clean and yet feels driven to keep washing them. It was reflection on this difference between the obvious truth (the hands are clean) and the irrational doubts (they might still be dirty) that prompted Schwartz to reassess the philosophical underpinnings of neuroscience.
>
> From brain scans, Schwartz found that certain regions in the brain of OCD patients (the caudate nucleus in particular) exhibited abnormal patterns of activity. By itself this finding is consistent with a materialist view of mind (if, as materialism requires, the brain enables the mind, then abnormal patterns of brain activity are likely to be correlated with dysfunctional mental states). Nonetheless, having found abnormal patterns of brain activity, Schwartz then had OCD patients engage in intensive mental effort through what he called relabeling, reattributing, refocusing, and revaluing (the 4 Rs). In the case of compulsive hand-washing, this involved a patient acknowledging that his hands were in fact clean (relabeling); attributing anxieties and doubts about his hands being dirty to a misfunctioning brain (reattributing); directing his thoughts and actions away from handwashing and toward productive ends (refocusing); and, lastly, understanding at a deep level the senselessness of OCD messages (revaluing).
>
> **Schwartz documents not only that patients who undertook this therapy experienced considerable relief from OCD symptoms, but also that their brain scans indicated a lasting realignment of brain-activity patterns.** Thus, without any intervention directly affecting their brains, OCD patients were able to reorganize their brains by intentionally modifying their thoughts and behaviors. The important point for Schwartz here is not simply that modified thoughts and behaviors permanently altered patterns of brain activity, but that such modifications resulted from, as he calls it, "mindful attention"-conscious and purposive thoughts or actions in which the agent adopts the stance of a detached observer.

So mind-brain interaction is not a one-way street. Everyone knows that you can alter your consciousness, beliefs, moods, sensations, etc. by changing your brain. But it turns out that you can also will to focus your thoughts on certain things in order to change your brain chemistry. So the causation is not just bottom-up, but top-down.

Now mindfulness therapies – which are documented in the research papers published by Schwartz (like this one and this one and this one)- assume the existence of *free will*. Naturalists don't like these scientific publications because naturalists don't believe in free will, as the famous naturalist philosopher Alex Rosenberg explained in his debate with William Lane Craig.

This post from Uncommon Descent explains the naturalist conundrum. (H/T J. Warner Wallace tweet)

Excerpt:

> The issue, for Schwartz, turns on whether or not there is such a thing as free will. The assumption of free will is critical to mindfulness therapies *for practical purposes*.
>
> Philosophies and religions have various opinions about ultimate free will. **The therapist must ask, is my patient capable of carrying out a program that requires that he choose to focus his attention on A and**

> **not B? In practice, this turns out to be true for many patients, which makes the therapy useful. There is neuroscience evidence for brain reorganization as a result, showing that it is not merely an imagined effect.**
>
> **Now, if someone wishes to claim, as many outspoken advocates of Darwinian evolution have, for example, that free will is impossible, the only thing that a mindfulness therapist can say is, go away. Either they are mistaken or the research results from mindfulness therapies are.**

By the way, if you like this topic, and want a resource to show your friends, be sure and get a hold of the debate on mind vs. brain between Jeffrey M. Schwartz and Michael Shermer.

# Police invade home of homeschooling family and seize four children

**Wintery Knight** · 2 September 2013 · Archived copy · Original

The UK Daily Mail reports.

Excerpt:

> Armed police in Germany launched a terrifying raid on a family's home to seize their four children after they defied the country's ban on home schooling.
>
> A team of 20 social workers, police officers, and special agents stormed the home of Dirk and Petra Wunderlich because they refused to send their children to state schools.
>
> The youngsters were taken to unknown locations after officials allegedly ominously promised the parents that they would not be seeing them again 'any time soon'.
>
> The only legal grounds for the removal of the children, aged from seven to 14, were the family's insistence on home schooling their children, with no other allegations of abuse or neglect.
>
> According to court documents obtained and translated by the Home Schooling Legal Defense Association (HSLDA), officials did not even allege that the parents had failed to provide an adequate education.
>
> The raid took place on Thursday morning at 8am at the Wunderlichs' home near Darmstadt, 25 miles south of Frankfurt, in south-west Germany.
>
> Citing the parents' failure to cooperate 'with the authorities to send the children to school', the judge even authorised the use of force 'against the children' if necessary, according to court documents cited by the HSLDA.
>
> […]Mr Wunderlich said that he and his wife had been left devastated by the authorities' decision to take their children. He said that his 14-year-old daughter Machsejah had to be forcibly taken out of the home.
>
> 'When I went outside, our neighbour was crying as she watched. I turned around to see my daughter being escorted as if she were a criminal by two big policemen,' he said.
>
> 'They weren't being nice at all. When my wife tried to give my daughter a kiss and a hug goodbye, one of the special agents roughly elbowed her out of the way and said — "It's too late for that".
>
> 'What kind of government acts like this?'

Funny that you would ask that, Mr. Wunderlich, because here's a story about a German homeschooling family that is being ejected from the United States.

Excerpt:

> The White House has posted a response to the petition to stop the deportation of the Romeikes, a homeschooling family from Germany. The White House does not respond to issues before the courts, the response said, but they understand why parents would value the freedom to homeschool.
>
> […]Though the White House says it understands why parents would value the freedom to homeschool, the administration, through the Justice Department, has been trying to deport the Romeikes back to Germany, where they could lose custody of their children if they were to continue to homeschool. In the various court cases, the Justice Department has argued that the right of parents to decide their children's education is not a fundamental right, and it agreed with a German court's opinion that banning homeschooling teaches tolerance of diverse views.
>
> The Romeikes lost their last appeal in the U.S. Sixth Circuit Court of Appeals. The Home School Legal

> Defense Association, which represents the Romeikes, has now appealed the case to the Supreme Court.
>
> In a blog post on the HSLDA website, HSLDA Chairman Michael Farris criticized the administration for taking so long say that it could not respond, and for allowing certain current unauthorized immigrants, the so-called "dreamers," to stay in the country while going out of its way to try to deport one family.
>
> "No one can understand why the White House is showing so much leniency to millions of immigrants who have come here illegally in hopes of securing better jobs, but is so determined to deport this one family who has come to America in search of freedom for themselves and their children," Farris declared. "This petition was the perfect opportunity for the White House to explain why this administration appealed the original grant of asylum. This was a perfect opportunity for the White House to explain the blatantly unequal treatment being received by the Romeike family. But the White House stalled for four months and said absolutely nothing."

Isn't that interesting? The same administration that is pushing for amnesty for 20 million illegal immigrants wants to deport one family for homeschooling their children. What is it that causes people on the left to want to drive a wedge between parents and their own children? Why are they so anxious to raise taxes so that both parents are forced to work, and the children will be raised in government-run public schools? What is their goal in doing that? What pleasure do they get out of separating mothers from their 1-year olds? What pleasure do they get in taking a man's child away and teaching the child things that are opposed to the father's values – while taking his salary to pay for it?

I know that there are a lot of people who are very passionate about public education, and making everyone equal, and pushing left-wing ideologies onto children against the will of their parents. Every Democrat votes for it when they vote to tax families more to pay for higher pay and benefits for public school teachers. Still, you would think that a story like this might cause them to think twice about what their support for state-run education really means. Make no mistake, Democrats are opposed to homeschooling, and even private schooling. They don't want parents to have a say – they just want them to pay for whatever the government decides to do with their children.

# Six reasons why people reject Christianity

**Wintery Knight** · 2 September 2013 · Archived copy · Original

Here's a post on practical evangelism by Christian scholar Don Johnson.

His list of reasons why people often reject Christianity:

1. Christians behaving badly
2. Disappointment with God
3. Weak or absent father
4. Social pressure
5. Cost of discipleship
6. Immorality (especially sexual immorality)

And here's the detail on #6:

> Of all the motivations and reasons for skepticism that I encounter, immorality is easily the most common. In particular, sexual sin seems to be the largest single factor driving disbelief in our culture. Brant Hanson calls sex "The Big But" because he so often hears this from unbelievers: "'I like Jesus, BUT…' and the 'but' is usually followed, one way or the other, with an objection about the Bible and… sex. People think something's deeply messed-up with a belief system that says two consenting, unmarried adults should refrain from sex." In other words, people simply do not want to follow the Christian teaching that sexual intercourse should take place only between and man and woman who are married, so they throw the whole religion out.
>
> The easiest way to justify sin is to deny that there is a creator to provide reality with a nature, thereby denying that there is any inherent order and purpose in the universe.
>
> Aldous Huxley admitted that this is a common reason for skepticism:
>
> I had motives for not wanting the world to have a meaning; consequently I assumed that it had none and was able without any difficulty to find satisfying reasons for this assumption…. Those who detect no meaning in the world generally do so because, for one reason or another, it suits their books that the world should be meaningless. …
>
> For myself as, no doubt, for most of my contemporaries, the philosophy of meaninglessness was essentially an instrument of liberation. The liberation we desired was …liberation from … a certain system of morality. We objected to the morality because it interfered with our sexual freedom…. There was one admirably simple method in our political and erotic revolt: We could deny that the world had any meaning whatsoever. Similar tactics had been adopted during the eighteenth century and for the same reasons. (Ends and Means, 270-273)
>
> Indeed, similar tactics have been used extensively up to the present day. If you are looking for two great resources that document the extent to which the work of the world's "great" atheistic thinkers has been "calculated to justify or minimize the shame of their own debauchery," (Spiegel, 72) I recommend *Intellectuals* by Paul Johnson and *Degenerate Moderns: Modernity as Rationalized Sexual Misbehavior* by E. Michael Jones. The bottom line is that these skeptical scholars didn't reach their conclusions by following the evidence where it led. They didn't "discover" that the world was meaningless and then proceed to live accordingly. They lived sinful lives (usually involving some type of sexual deviancy) and then produced theories that justified their actions.
>
> This connection between immorality and unsound thought is clearly scriptural. Paul tells the Ephesians that they "must no longer live as the Gentiles do, in the futility of their thinking. They are darkened in their understanding and separated from the life of God because of the ignorance that is in them due to the hardening of their hearts. Having lost all sensitivity, they have given themselves over to sensuality so as to indulge in

> every kind of impurity, with a continual lust for more" (Eph. 4:17-19) Paul blames futile thinking and a lack of understanding on hard hearts. When we compare this passage with Romans 1, it seems that immorality and bad ideas work together in a vicious cycle that spirals downward. Sin leads to false philosophies which then lead to more sin.
>
> The wrath of God is being revealed from heaven against all the godlessness and wickedness of men who suppress the truth by their wickedness, since what may be known about God is plain to them, because God has made it plain to them. For since the creation of the world God's invisible qualities—his eternal power and divine nature—have been clearly seen, being understood from what has been made, so that men are without excuse.
>
> For although they knew God, they neither glorified him as God nor gave thanks to him, but their thinking became futile and their foolish hearts were darkened. Although they claimed to be wise, they became fools and exchanged the glory of the immortal God for images made to look like mortal man and birds and animals and reptiles.
>
> Therefore God gave them over in the sinful desires of their hearts to sexual impurity for the degrading of their bodies with one another. They exchanged the truth of God for a lie, and worshiped and served created things rather than the Creator—who is forever praised (Rom. 1:18-25)
>
> So Paul argues that the nature of reality is clear to everyone but people *suppress the truth by their wickedness*. Rebellious people become fools as they deny the obvious meaning of creation because of their sin. Their foolishness leads them to indulge in more immorality. Thus immorality is very closely linked to skepticism and we need to be aware that sin will almost always be at least an underlying issue in our conversations.

This post is of such high quality and has such practical wisdom in it that I really want everyone reading to click through and read it. I'm sure you'll really like it. I recognize every one of these types of people in non-Christians that I have known.

Mr. Johnson's bio seems to suggest that he has a lot of experience as a pastor, but he's not like many pastors that I've known. If all pastors could interact with so many different sources like and weave together an argument like this, we wouldn't be in the mess we're in.

**Caveat:**

People have been asking me about whether this undermines the need for evidential apologetics. Not at all. Let me explain.

Since about 30-40 percent of my posts are on evidential apologetics, and maybe 1-2 a year are on psychological issues, I think that evidence is important. I think that when people say they are atheists, then evidential apologetics is what I focus on. But if they say "I was a Christian once, then I gave it up" then I still work the evidential apologetics in public, but in my mind I am thinking "what's your number?". And if there is a break in the debating of the evidence, I ask about it.

# Scott Klusendorf responds to atheist P.Z. Myers on the Issues, Etc. show

**Wintery Knight** · 2 September 2013 · Archived copy · Original

Scott Klusendorf, Life Training Institute

About Scott:

> Scott Klusendorf travels throughout the United States and Canada training pro-life advocates to persuasively defend their views in the public square. He contends that the pro-life message can compete in the marketplace of ideas if properly understood and properly articulated.
>
> […]Scott has participated in numerous debates at the collegiate level. His debate opponents have included Nadine Strossen, President of the ACLU (1991-2008) – Kathyrn Kolbert, an attorney that has argued for abortion rights in a United States Supreme Court case – and Kathy Kneer, President of Planned Parenthood of California.
>
> Scott has debated or lectured to student groups at over 70 colleges and universities, including Stanford, USC, UCLA, Johns Hopkins, Loyola Marymount Law School, West Virginia Medical School, MIT, U.S. Air Force Academy, Cal-Tech, and University of North Carolina.
>
> Each year thousands of students at Protestant and Catholic high schools are trained by Scott to make a persuasive case for life as part of their worldview training prior to college. He's provided that same training to students at Summit Ministries and Focus on the Family Institute.
>
> Scott is the author of *The Case for Life: Equipping Christians to Engage the Culture*, released in March 2009 by Crossway Books. Scott has also published articles on pro-life apologetics in *The Christian Research Journal*, Clear Thinking, Focus on the Family*Citizen*, and *The Conservative Theological Journal*.
>
> Chuck Colson, founder and Chairman of the Board of Prison Fellowship, says: "Scott first grabbed my attention when Focus on the Family featured one of his presentations on its national broadcast. I was struck by his ability to communicate truth so clearly and insightfully. I've heard many speakers who deliver excellent content, but few who can actually equip people to communicate their pro-life convictions to a secular culture. In fact, I was so impressed with Scott's talk that I phoned him directly to learn more about his work. After that,

> I scheduled him as a keynote speaker for our own Breakpoint conference."
>
> Scott is a graduate of UCLA with honors and holds a Masters Degree in Christian Apologetics from Biola University.

The MP3 file is here.

Topics:

- Myers: I could imagine a culture where a child doesn't have the right to life until they are 5-years old
- Moderator: Myers is an atheist. He believes that standards of conduct are variable depending on what is dominant in a culture. Since cultures vary by time and place, and none is objectively right or wrong, then a 5-year limit for personhood is as valid as any other standard that might evolve. There is no way to judge between cultures against some objective standard
- Moderator (to Klusendorf): Myers says that the unborn is a "piece of meat". It's not a person until well after birth. Do only atheists believe this?
- Klusendorf: No others hold them. But what is more interesting is that he just asserts his views, he never argues for them. He says that pro-lifers lie when debating this issue
- Moderator: (to Myers) What is the unborn?
- Myers: It's a piece of tissue that will develop into a human being over time
- Moderator: (to Myers) What is it 5 minutes before it's born?
- Myers: It's fetus, it's not a baby
- Klusendorf: The development stages of a human are all stages of development of the same entity, as even Peter Singer and David Boonin admit
- Moderator: He made a distinction between before birth and after birth
- Klusendorf: Yes, and that contradicts what he says later when he says there are no sharp boundaries
- Klusendorf: Myers is confusing parts with wholes. The skin cells on my hand are part of a larger human being. The embryo is not part of a larger human being, they are a whole human being, directing its own development
- Klusendorf: Myers also makes the claim that embryos are constructed piece by piece from the outside. But the science of embryology is clear – the embryo develops itself.
- Moderator (to Myers): Is the unborn a person?
- Myers: Personhood develops gradually. A newborn baby is not a person. A baby's brain is still forming so it's not a person. There is no specific moment when a baby becomes a person. It is culturally determined. Our society says it's birth. Some people say viability. Either of those are acceptable to me
- Moderator: (to Myers): So drawing the line between unborn and born is arbitrary?
- Myers: Yes it is
- Klusendorf: He is separating human beings into classes: persons and non-persons. This has resulted in injustices, historically speaking. E.g. – with American Indians

(Break until 15:00)

- Klusendorf: He says that a human being becomes a person when their brain is fully developed, but even teens don't have fully developed brains
- Klusendorf: Look at this scientific evidence from PBS about NIH research which shows that brains still developing in teens and it causes them to make poor decisions
- Klusendorf: If development gives us value, then those with more of it have more of a right to life than those with less
- Klusendorf: This point was made by Lincoln in his debates about slavery, when he warned his opponent that

someone with lighter skin could enslave him

- Moderator (to Myers): How do you decide these life issues?
- Myers: We use the notion of “greater good”
- Moderator (to Myers): that’s a culturally determined notion?
- Myers: Yes. The greater good here is that we maximize the security and happiness of most people in the society. Women are persons, so we favor their rights.
- Klusendorf: His response begs the question. He is assuming that the unborn are not human persons. He talks about the need for women’s rights. Are unborn women included in those who have rights?
- Klusendorf: If cultures decide who is and who is not a person, then he cannot oppose cultures that say that Jews are not persons, or that women are not persons
- Klusendorf: He admits that he cannot oppose cultures that think that children of age 5 are not persons, and can be killed
- Moderator (to Myers): You call that kind of society “brutal”, why do you say that?
- Myers: It’s my personal preference because I like my own kids
- Moderator (to Klusendorf): Respond to that
- Klusendorf: He has no argument, just his own opinion. He cannot oppose any society that things that it is OK to traffic, kill, etc. 5-year-olds
- Klusendorf: He says that he has a personal preference. That is an interesting fact about his psychology, but he has no argument
- Klusendorf: In an atheistic worldview, human beings at any stage are cosmic accidents
- Klusendorf: How do we get any kind of intrinsic value and human rights out of an atheist worldview? I don’t see how you can
- Klusendorf: Even a woman’s absolute right to an abortion is not grounded by atheism
- Moderator (to Myers): What do you think of the pro-life movement?
- Myers: I’m a developmental biologist. The pro-life movement is lying to people. An embryo is not a person. “Personhood implies much more than being a piece of meat with the right number of chromosomes in it”. The primary issue in abortion is women’s autonomy. It is entirely the woman’s decision
- Klusendorf: You have to present arguments to prove that pro-lifers are lying. There are pro-abortion scholars who have arguments, he isn’t one. He only has assertions, opinions and preferences.
- Klusendorf: What if a woman gets pregnant solely in order to take a drug during pregnancy in order to have a deformed child. Myers has no argument against that

Myers also has no argument against sex-selection abortions. So much for “women’s rights”.

I just want to mention that the Life Training Institute is one of the ministries I recommend to people. They are the only pro-life group I support, because they are apologists all the way. If they’re not debating, they’re training others to debate. If you like Christians who have battlefield experience on the pro-life issue, this is your organization.

You can get Scott’s book on pro-life apologetics here on Amazon.com. It’s the best introductory book on pro-life apologetics out there. And he has another book about making a pro-life case on campus.

UPDATE: P.Z. Myers responds to this post here. Reader discretion is advised.

# IRS hindered efforts to stop illegal immigrants from using fake Social Security numbers

**Wintery Knight** · 3 September 2013 · Archived copy · Original

From CNS News.

Excerpt:

> An audit report published this month by the inspector general for the Social Security Administration says that the Internal Revenue Service's reluctance to penalize employers who consistently file W-2s on which the Social Security Number and name do not match has "hindered" the SSA's efforts to stop "unauthorized noncitizens" from using Social Security Numbers that are fake or belong to someone else.
>
> The audit report looked at "inaccurate wage reporting"—or the filing of W-2 forms on which the name and the Social Security Number do not match. The SSA has long said these no-match W-2s are frequently filed on behalf of illegal aliens. According to the IG audit report released earlier this month, a senior IRS official admitted to the IG that the service knows this is the case.
>
> "Furthermore," said the report, "a senior employment tax official at the IRS acknowledged that unauthorized noncitizens accounted for a high percentage of inaccurate wage reporting."
>
> […]The IG's audit report said SSA staff believed employers had an incentive to file bad W-2s because they were not worried about the IRS doing anything about it.
>
> […]"SSA senior staff did not believe employers had an incentive to submit accurate annual wage reports because the IRS rarely enforced existing penalties," said the report. "SSA staff believed applying penalties would deter SSN misuse. Furthermore, SSA senior staff believed the Agency could provide the IRS with sufficient evidence to show an employer knew or should have known its employees' SSNs were incorrect. For example, a reasonable person should recognize that hundreds of workers could not have the same or consecutively numbered SSNs."

The IRS is commonly known as one of the most left-wing, socialist departments in the government – these are the guys who punished Tea Party groups in order to get Obama re-elected.

# Feminist Hanna Rosin debunks the myth of a gender pay gap caused by discrimination

**Wintery Knight** · 3 September 2013 · Archived copy · Original

In the far-left Slate, of all places.

Excerpt:

> The official Bureau of Labor Department statistics show that the median earnings of full-time female workers is 77 percent of the median earnings of full-time male workers. But that is very different than "77 cents on the dollar for doing the same work as men." The latter gives the impression that a man and a woman standing next to each other doing the same job for the same number of hours get paid different salaries. That's not at all the case. "Full time" officially means 35 hours, but men work more hours than women. That's the first problem: We could be comparing men working 40 hours to women working 35.

> How to get a more accurate measure? First, instead of comparing annual wages, start by comparing average weekly wages. This is considered a slightly more accurate measure because it eliminates variables like time off during the year or annual bonuses (and yes, men get higher bonuses, but let's shelve that for a moment in our quest for a pure wage gap number). By this measure, women earn 81 percent of what men earn, although it varies widely by race. African-American women, for example, earn 94 percent of what African-American men earn in a typical week. Then, when you restrict the comparison to men and women working 40 hours a week, the gap narrows to 87 percent.

> But we're still not close to measuring women "doing the same work as men." For that, we'd have to adjust for many other factors that go into determining salary. Economists Francine Blau and Lawrence Kahn did that in a recent paper, "The Gender Pay Gap.".”They first accounted for education and experience. That didn't shift the gap very much, because women generally have at least as much and usually more education than men, and since the 1980s they have been gaining the experience. The fact that men are more likely to be in unions and have their salaries protected accounts for about 4 percent of the gap. The big differences are in occupation and industry. Women congregate in different professions than men do, and the largely male professions tend to be higher-paying. If you account for those differences, and then compare a woman and a man doing the same job, the pay gap narrows to 91 percent. So, you could accurately say in that Obama ad that, "women get paid 91 cents on the dollar for doing the same work as men."

I believe that the remainder of the gap can be accounted for by looking at other *voluntary* factors that differentiate men and women.

The Heritage Foundation says that a recent study puts the number at 95 cents per dollar.

Excerpt:

> Women are more likely than men to work in industries with more flexible schedules. Women are also more likely to spend time outside the labor force to care for children. These choices have benefits, but they also reduce pay—for both men and women. When economists control for such factors, they find the gender gap largely disappears.
>
> A 2009 study commissioned by the Department of Labor found that after controlling for occupation, experience, and other choices, women earn 95 percent as much as men do. In 2005, June O'Neil, the former

> director of the Congressional Budget Office, found that “There is no gender gap in wages among men and women with similar family roles.” Different choices—not discrimination—account for different employment and wage outcomes.

A popular article by Carrie Lukas in the Wall Street Journal agrees.

Excerpt:

> The Department of Labor’s Time Use survey shows that full-time working women spend an average of 8.01 hours per day on the job, compared to 8.75 hours for full-time working men. One would expect that someone who works 9% more would also earn more. This one fact alone accounts for more than a third of the wage gap.
>
> […]Recent studies have shown that the wage gap shrinks—or even reverses—when relevant factors are taken into account and comparisons are made between men and women in similar circumstances. In a 2010 study of single, childless urban workers between the ages of 22 and 30, the research firm Reach Advisors found that women earned an average of 8% more than their male counterparts. Given that women are outpacing men in educational attainment, and that our economy is increasingly geared toward knowledge-based jobs, it makes sense that women’s earnings are going up compared to men’s.

When women make different choices about education and labor that are more like what men choose, they earn just as much or more than men. What does it mean that people on the left keep pushing pseudo-science on us to try to punish men and reward women? Why are men so awful that they need to be denigrated like this? And how will men respond to social expectations when they have to face being told that they are “bad”? It seems to me that putting men down is going to lower their level of engagement.

# William Lane Craig debates Lawrence Krauss in Melbourne, Australia: Does God Exist?

**Wintery Knight** · 3 September 2013 · Archived copy · Original

Here is the video from the third debate from Dr. William Lane Craig's speaking tour in Australia.

Format:

- William Lane Craig (15 min)
- Lawrence Krauss (15 min, but was actually 21:40)
- Moderated discussion
- Question and answer

Dr. Graham Oppy, the moderator, is a well-known atheist philosopher. He let Dr. Krauss speak for 21 minutes and 40 seconds, which is why my summary of Krauss is so long.

The video:

**Summary**

After careful consideration, I decided not to be snarky at all in this summary. What you read below is what happened. There may be some small mistakes, but I will fix those if people tell me about them. I also included some quotes and timestamps for the more striking things that Dr. Krauss said.

The debate itself starts at 4:50 with Dr. Craig's opening speech. He does use slides to show the structure of his arguments.

**Dr. Craig's opening speech.** (4:50)

1. The kalam cosmological argument:
    - God is the best explanation of the origin of the universe
    - The Borde Guth Vilenkin theorem supports the absolute beginning of the universe
    - Even if our universe is part of a multiverse, the multiverse itself would have to have an absolute beginning
    - Speculative cosmologies try to challenge the Big Bang theory, but none of them – even if true – can establish that the past is eternal
    - Only two types of things could explain the origin of spece, time, matter and energy – either abstract objects or minds
    - Abstract objects do not cause effects, but minds do cause effects (we do it ourselves)
    - A mind is the best explanation for the origin of the universe
2. The unreasonable effectiveness of mathematics:
    - The underlying structure of nature is mathematical – mathematics is *applicable* to nature
    - Mathematical objects can either be abstract objects or useful fiction
    - Either way, there is no reason to expect that nature should be linked to abstract objects or fictions
    - But a divine mind that wants humans to understand nature is a better explanation for what we see
3. The cosmic fine-tuning for the existence of intelligent life
    - There are two kinds of finely-tuned initial conditions: 1) cosmological constants and 2) quantities
    - These constants and quantities have to be set within a narrow range in order to permit intelligent life
    - There are three explanations for this observation: law, chance or design
    - Law is rejected because they are put in at the beginning or matter – they don't emerge from matter

- Chance must be rejected, because they odds are just too long unless you appeal to a world-ensemble
- We do not observe what the world ensemble hypothesis predicts that we should observe
- Design is the best explanation for finely-tuned constants and quantities

4. The existence of objective moral values and duties
   - Our experience of morality (values and duties) is that it is objectively real and incumbent on us
   - When someone goes into a classroom and shoots at innocent children, that is objectively wrong
   - On naturalism, moral values and moral duties do not exist – they are conventional and variable by time and place
   - The best explanation for the existence of objective moral values and duties is that God exists
5. The historicity of the resurrection of Jesus
   - There are three widely-accepted facts that are best explained by the resurrection hypothesis
   - 1) the empty tomb, 2) the post-mortem appearances, 3) the early church's belief in the resurrection
   - Naturalistic attempts to explain these 3 boilerplate facts fail
   - The best explanation of the 3 minimal facts is that God raised Jesus from the dead
6. The immediate experience of God
   - Belief in God is a "properly basic" belief – rational even without arguments because of experience of God

**Dr. Krauss' opening speech.** (21:12)

Slides: (1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14)

1. Religious pluralism I
   - There have been lots of different gods created by people through history
   - We've gotten rid of all of them by understanding how the universe works by doing science
   - Religion is just stories, and the stories are inconsistent with how the universe works
2. Progress of naturalistic science I
   - Newtonian physics refutes the idea that angels push planets around
   - Darwinian evolution refutes design arguments, including the one that Dr. Craig presented (24:10)
   - Biochemistry hasn't explained how life originated, but we will have the solution soon
   - Physics shows us that matter can be created and destroyed without need a God
   - Physics shows us that universes can be created and destroyed "no problem"
3. Religious pluralism II
   - Since we have been able to disprove all the gods we've invented, why hang on to the last one
   - It's unlikely that the God that Dr. Craig presented exists, because we disproved all the others he didn't present
4. Hiddenness of God
   - There is a complete lack of evidence for the other 999 gods, so how likely is it that the God Dr. Craig presented exists
5. Religious pluralism III
   - There are inconsistencies between various religions, so therefore there can be no religion that is right
6. Progress of naturalistic science II
   - Peasants had a very low level of knowledge about the world and they believed in God
   - But our level of knowledge has increased over time, so we shouldn't believe in God now
   - Peasants thought that the Earth orbited the Sun, but this is now known to be false

- The Scriptures said that the Earth orbited the Sun, but now we know that's false from science

7. Christianity plagiarizes from other religions I
   - There is nothing new or special about Jesus
   - He's just as unpleasant as all the other gods
   - Everything particular to Jesus occurs in other religions
8. Catholics are inconsistent about what they believe
   - I'll bet most Catholics don't really believe in transubstantiation
   - I'll bet most Catholics don't really believe in the virgin birth
9. The resurrection is copied from many other religions
   - Dionysus, Osiris, etc.
10. There is no evidence for the resurrection
    - The stories about Jesus were written "decades or hundreds of years after the fact"
    - The stories are inconsistent with each other
    - Dr. Craig tells me that historical Jesus scholars all accept that the resurrection happened
    - That's like saying that all alien abductions experts agree that alien abductions happened
    - It's unreasonable to think that the resurrection happened because no one saw it happen
    - I accept that people reported on appearances, but hallucination theory can explain that
11. The timeline for the creation and incarnation are all wrong
    - The creation, planet formation, hominids, incarnation, etc. all take place in the wrong times
    - If God knew what he was doing, he would done everything at better times to be more efficient
12. David Hume's argument against miracles is sound
    - Extraordinary claims require extraordinary evidence – nothing wrong with this argument
    - Miracles are really just coincidences
    - Catholic apparitions at Lourdes disprove the historical argument that Dr. Craig made for the resurrection
13. God is petty and jealous
    - God shouldn't demand that we trust him, esteem him and consider his character when we make decisions
    - The atoning death of Jesus for the sins of the world also makes no sense
14. Belief is based on geography
    - What you believe is clearly correlated with where you are born
    - There is even an Islamic clone of Dr. Craig who "uses the exact same arguments" that he does to prove Islam
    - Belief in God is decreasing in the Internet-accessible world
15. Science can develop morals without God
    - Reason is able to guide our actions to be moral
    - Morality evolves over time, so there is no objective morality
    - Catholicism teaches things that are immoral
    - Some things are prohibited by biological revulsion, such as incest
    - But if a brother and sister have sex using condoms "is that morally wrong? I can't say it is frankly" (37:24)
16. Dr. Craig is irrational
    - "I came here convinced based on my past interactions and his writing that Dr. Craig was a dishonest Charlatan"
    - "Any argument that validates God is reasonable to him"
    - "And any argument against it is not only unreasonable but wrong and worth distorting"

    - “Because it must be wrong – he’s decided the answer in advance”
17. Dr. Craig is immoral
    - Dr. Craig thinks it is OK for God to command that Canaanite children are killed
    - “So in fact if they were Canaanite children in that schoolroom that he talked about then it would be OK”
    - It’s not reasonable to justify genocide in that way, but Dr. Craig is willing to go to those lengths
18. The cause of the origin of the space time universe need not be God
    - Dr. Craig says that if there is an explanation for the origin or space, time, matter and energy it must be God
    - But it could just as easily be turtles or Zeus
19. Dr. Craig misrepresents the Borde Guth Vilenkin theorem
    - Alexander Vilenkin wrote me an e-mail that says that the theorem doesn’t work in all cases
    - “Dr. Craig is so convinced that these arguments must be true that he won’t listen to the fact that they’re not”
20. Darwinian evolution explains the fine-tuning
    - “Life was fine tuned – we got rid of it with Darwin”
    - Mutation and natural selection explain the cosmic fine-tuning argument that Dr. Craig presented
21. Suboptimal design disproves the fine-tuning argument
    - “We get back aches” therefore “This argument that [the universe] is fine-tuned for life is nonsense”
22. William Lane Craig can be proven to exhibit homosexual behavior using logical arguments
    - Look, you can construct arguments that are clearly wrong
    - Premise 1: “All mammals exhibit homosexual behavior”
    - Premise 2: “William Lane Craig is a mammal”
    - Seems to be saying that logical arguments can prove false things “it’s nonsense”
23. Dr. Craig distorted a podcast that some group made on pain receptors
    - Dr. Craig’s faith is so strong that it causes him to distort what this group said

**Discussion:** (44:35)

I will not be summarizing everything that was said, just a few main points.

***The segment from 52:18 to 57:12 about the Vilenkin e-mail on the BVG theorem is a must-see.*** Krauss is standing up and gesticulating while Craig is calmly trying to quote a paper by Vilenkin that shows that Krauss is misrepresenting Vilenkin. Krauss constantly interrupts him. After a while, when Craig exposes him as having misrepresented Vilenkin and gets him to admit that all current eternal models of the universe are probably wrong, he quietens down and can’t even look at Craig in the face.

Cosmological argument:

- Craig: The e-mail says any universe that is expanding, on average, requires a beginning
- Craig: There are two models – Aguirre & Gratton and Carroll & Chen – where there is a period of contraction before the expansion
- Craig: The two models are the ones cited in the e-mail that Dr. Krauss showed
- Craig: In the very paper by Vilenkin that I cited, he says that both of those models don’t work
- Krauss: (agitated and interrupting) Vilenkin said that they have to make an assumption about entropy that they have no rationale for
- (as Craig starts to talk Krauss makes an exaggerated, disrespectful gesture and sits down in a huff)
- Craig: Yes, an unwarranted assumption means that they don’t have EVIDENCE for their theories being correct
- Krauss: (agitated and interrupting) “All the evidence suggests that the universe had a beginning but WE DON’T

KNOW!!!!!!!" (raising his voice)

- Craig: I'm not saying that we know that the universe had a beginning with certainty
- Craig: I am saying that the beginning of the universe is more probably true than false based on the evidence we have
- Craig: And you  agree with me about that – you think the universe had a beginning
- Krauss: (agitated and interrupting) (Unintelligible)
- Moderator: One at a time
- Craig: In your Vilenkin e-mail slide, at the end of the paragraph where the two models are mentioned that Vilenkin specifically shows…
- (I am guessing that Craig is going to ask why so much of what Vilenkin wrote has been cut out of the e-mail that Krauss showed)
- Krauss: (agitated and interrupting) Because it was technical…
- Moderator: Lawrence! Hang on a sec!
- Craig: He specifically shows that these models are not past eternal, and that they require a beginning just like the others…
- Krauss: (agitated and interrupting) We can do the math if you want
- Craig: Now wait. I couldn't help notice that there on your slide there was a series of ellipsis points indicating missing text…
- Krauss: (agitated and interrupting) "Yeah, because it was technical!"
- Craig: "I wonder what you deleted from the original letter"
- Krauss: (agitated and interrupting) "I just told you!"
- Craig: "Now wait. Could it have been something like this:  (reads a quote from Vilenkin) 'You can evade the theorem by postulating that the universe was contracting prior to some time. This sounds as if there is nothing wrong with having contraction prior to expansion. But the problem is that a contracting universe is highly unstable. Small perturbations would cause it to develop all sorts of messy singularities, so it would never make it to the expanding phase.'
- Craig: "That's Vilenkin."
- Krauss: "In this paper, that's absolutely right"
- Krauss: But it's ok for theories to assume things that we know are wrong – they are still good theories – it's unknown
- (Craig turns away and looks through his papers)
- Craig: "Isn't it true that the only viable quantum gravity models on order today involve a beginning – have a finite past?"
- Krauss: "No"
- Craig: "Well, can you give us one then"
- Krauss: (talks about a variety of possible eternal models) "In my experience in science, all of them are probably wrong"
- Krauss: "You know most theories are wrong, which is why, you know, it's hard"
- Craig: "Right"

I noticed that a huge number of atheist web sites are taking the Vilenkin quote that Krauss used out of context, like this one and this one. There are probably a lot more of them like that, which I think is interesting. That's why we have these debates, I guess. To set the record straight about who accuses people of being dishonest, and who is actually dishonest.

Fine-tuning:

- Krauss tried to argue that he had explained the fine-tuning with the Higgs particle, but Dr. Craig said that only applied to the cosmological constant, not all the other examples of fine-tuning. Krauss said that it wasn't impressive that this universe permitted life and that "It would have been much more surprising if we evolved in a universe in which we couldn't live". Krauss argued the fine-tuning was only for "Life like us". But Dr. Craig explained that the fine-tuning is what allows us to have the basics of any kind of life, like slow-burning stars, chemical diversity, etc. – things that are required for basic minimal life functions in any living system. Craig said that he was working with the current physical laws of this universe (F = ma, etc.) and that he was looking at what changed if we changed those even slightly. Krauss tried to say that if he changed things like the mass of particles then the strength of forces would change. (But the forces aren't laws!) Krauss argued that the cosmological constant would be even better for life if it was zero, and Craig said that the life permitting range did include zero, but that the range of life-permitting values was narrow.

Jesus' existence:

- Craig reponded to the mystery religions charge, the charge that the evidence for the minimal facts is too late/too weak, the charge that grief visions explained the evidence better, and Hume's argument against miracles. Craig brought up the early creed from 1 Cor 15:3-7 and explained to Krauss that it was 5 years after the events, and that Jewish standards of oral transmission were strong enough to ensure that the creed was reliable, and most of the eyewitnesses would still have been alive.

**Audience Q and A:** (1:21:09)

The first topic is the grounding of morality. Krauss agrees that there is no objective morality and no objective moral oughts. He also said that that standards of behavior are arbitrary, and that they change over time and they are adopted for promoting social order. Dr. Craig pressed the point that science itself would collapse without ethical values. It assumes them, but cannot ground them.

The next topic was free will. Krauss is a determinist. Craig asked him how he could reconcile moral responsibility with determinism.

The next topic was the effectiveness of mathematics. Krauss didn't have an explanation for it and didn't think it needed one. Then they got into whether the Genesis has been verified by science and whether it is meant to be taken literally.

The next topic was whether philosophy makes any progress. Craig gave the example of verificationism being rejected as too narrow, and self-refuting. Krauss: "I'm going to come to the defense of philosophy for the first time". Craig: "That's amazing!" Krauss said that science provides new knowledge. Craig said there were some things that could be known apart from science.

# Christian-owned bakery closes after threats and harassment by gay activists

**Wintery Knight** · 4 September 2013 · Archived copy · Original

Todd Starnes reports on a troubling at Fox News.

Excerpt:

> A family-owned Christian bakery, under investigation for refusing to bake a wedding cake for a lesbian couple, has been forced to close its doors after a vicious boycott by militant homosexual activists.
>
> […]Last January, Aaron and Melissa Klein made national headlines when they refused to bake a wedding cake for a lesbian couple.
>
> Klein tells me he has nothing against homosexuals — but because of their religious faith, the family simply cannot take part in gay wedding events.
>
> "I believe marriage is between a man and a woman," he said. "I don't want to help somebody celebrate a commitment to a lifetime of sin."
>
> The lesbian couple filed a discrimination with the Oregon Bureau of Labor and Industries and told their story to local newspapers and television statements.
>
> Within days, militant homosexuals groups launched protests and boycotts. Klein told me he received messages threatening to kill his family. They hoped his children would die.
>
> The LGBT protestors then turned on other wedding vendors around the community. They threatened to boycott any florists, wedding planners or other vendors that did business with Sweet Cakes By Melissa.
>
> "That tipped the scales," Klein said. "The LGBT activists inundated them with phone calls and threatened them. They would tell our vendors, 'If you don't stop doing business with Sweet Cakes By Melissa, we will shut you down.'"

The actions of the diversity activists were augmented with an inquisition by state government.

More:

> To make matters worse, the Oregon's Bureau of Labor and Industries announced last month they had launched a formal discrimination investigation against the Christian family.
>
> Commissioner Brad Avakian told The Oregonian that he was committed to a fair and thorough investigation to determine whether the bakery discriminated against the lesbians.
>
> "Everybody is entitled to their own beliefs, but that doesn't mean that folks have the right to discriminate," he told the newspaper. "The goal is to rehabilitate. For those who do violate the law, we want them to learn from that experience and have a good, successful business in Oregon."

Let's hope that those intolerant bigoted Christians learned their lesson not to offend anyone else by disagreeing with them and refusing to celebrate things that they disagree with. After all, Christians should be forced by the state to act like non-Christians in public.

# Sociologist Rodney Stark discusses whether religion is good for society

**Wintery Knight** · 4 September 2013 · Archived copy · Original

Mysterious Chris S. posted this interview with Baylor University sociologist / historian Rodney Stark.

About Rodney Stark:

> Rodney Stark grew up in Jamestown, North Dakota, and began his career as a newspaper reporter. Following a tour of duty in the U.S. Army, he received his Ph.D. from the University of California, Berkeley, where he held appointments as a research sociologist at the Survey Research Center and at the Center for the Study of Law and Society. He left Berkeley to become Professor of Sociology and of Comparative Religion at the University of Washington. In 2004 he joined the faculty of Baylor University. He has published 30 books and more than 140 scholarly articles on subjects as diverse as prejudice, crime, suicide, and city life in ancient Rome. However, the greater part of his work has been on religion. He is past president of the Society for the Scientific Study of Religion and of the Association for the Sociology of Religion. He also has won a number of national and international awards for distinguished scholarship. Many of his books and articles have been translated and published in foreign languages, including Chinese, Dutch, French, German, Greek, Indonesian, Italian, Japanese, Polish, Portuguese, Romanian, Spanish, and Turkish.

> - M.A. University of California, Berkeley, 1965, Sociology.
> - Ph.D. University of California, Berkeley, 1971, Sociology.

Excerpt:

> **Q: After examining hundreds of relevant studies, what's the biggest misconception you've found about the typical religious believer?**
>
> **Rodney Stark:** Even some leading evangelical scholars take it for granted that religious Americans are lacking in appreciation for "high culture," for music, art, literature, and the like. Nothing could be further from the truth. The more often Americans attend religious services, the more likely they are to read newspapers, poetry, novels, and to admire writers. The same applies to liking classical music, to attending symphony concerts, operas, and stage plays, and to dislike rock 'n roll.
>
> **Q: Some recent books, like Christopher Hitchens' *God Is Not Great*, suggest that "religion poisons everything." But your book indicates that religious belief offers society many tangible benefits. What are some of these benefits?**
>
> **Rodney Stark:** Religious Americans are more law abiding, have superior mental and physical health, are far more generous vis-à-vis charities, have much better family life, are more successful, and religious couples even have more satisfactory sex lives!
>
> **Q: In the book's Conclusion you look at religion's effect on many areas of society—crime, schooling, health, employment, welfare—and you determine that, by a conservative estimate, religion saves America over $2.6 trillion each year. What are some of the biggest contributors to this savings?**
>
> **Rodney Stark:** The biggest by far has to do with the criminal justice system. If all Americans committed crimes at the same level as those who do not attend religious services, the costs of the criminal justice system would about double to, perhaps, $2 trillion annually. Second is health costs. The more often people attend religious services, the healthier they are. However, the net savings involved is reduced somewhat by the fact

> that religious Americans live, on average, seven years longer than those who never attend religious services.

Previously, I noted how people who attend church or synagogue have much better marriage stability than atheists.

Let's just review that with some research done by W. Bradford Wilcox:

> Married couples who attend church together tend to be happier than couples who rarely or never attend services, according to sociologist W. Bradford Wilcox of the University of Virginia.
>
> Using three nationally representative surveys – the General Social Survey (GSS), the National Survey of Families and Households (NSFH), and the National Survey of Family Growth (NSFG) – Wilcox found that married church-going Americans across denominational and racial classifications were more likely to describe themselves as "very happy" than their non-religious counterparts.
>
> Couples who attended church regularly were also less likely to divorce than couples who seldom attended church services, Wilcox found.
>
> "Attending church only seems to help couples when they attend together," Wilcox told **Cybercast News Service**. "But when they do, they are significantly happier in their marriages, and they are much less likely to divorce, compared to couples who do not attend church. I would say that church attendance is a beneficial component of marriage when it is done together."
>
> Wilcox explained that regular church attendance offers certain positive benefits to a married couple: "Churches supply moral norms like sexual fidelity and forgiveness, family-friendly social networks that lend support to couples facing the ordinary joys and challenges of married life, and a faith that helps couples make sense of the difficulties in their lives-from unemployment to illness-that can harm their marriages."
>
> "So, in a word, the couple that prays together stays together," said Wilcox.
>
> […]"Men and women who hold a religious faith and put that faith into practice by attending church on a regular basis do look different in the marital realm," Wilcox said.
>
> "At least in the marriage arena, faith alone doesn't work. You've got to combine faith and works to enjoy a happy and stable marriage. You need the consistent message, the accountability, and the support a church community can provide to really benefit from religious faith," he added.

This Wall Street Journal article from a while back, entitled "Look Who's Irrational Now" argues that atheists are less skeptical than believers.

Excerpt:

> The reality is that the New Atheist campaign, by discouraging religion, won't create a new group of intelligent, skeptical, enlightened beings. Far from it: It might actually encourage new levels of mass superstition. And that's not a conclusion to take on faith — it's what the empirical data tell us.
>
> "What Americans Really Believe," a comprehensive new study released by Baylor University yesterday, shows that traditional Christian religion greatly decreases belief in everything from the efficacy of palm readers to the usefulness of astrology. It also shows that the irreligious and the members of more liberal Protestant denominations, far from being resistant to superstition, tend to be much more likely to believe in the paranormal and in pseudoscience than evangelical Christians.
>
> The Gallup Organization, under contract to Baylor's Institute for Studies of Religion, asked American adults a series of questions to gauge credulity. Do dreams foretell the future? Did ancient advanced civilizations such as Atlantis exist? Can places be haunted? Is it possible to communicate with the dead? Will creatures like Bigfoot and the Loch Ness Monster someday be discovered by science?
>
> The answers were added up to create an index of belief in occult and the paranormal. While 31% of people

> who never worship expressed strong belief in these things, only 8% of people who attend a house of worship more than once a week did.
>
> Even among Christians, there were disparities. While 36% of those belonging to the United Church of Christ, Sen. Barack Obama's former denomination, expressed strong beliefs in the paranormal, only 14% of those belonging to the Assemblies of God, Sarah Palin's former denomination, did. In fact, the more traditional and evangelical the respondent, the less likely he was to believe in, for instance, the possibility of communicating with people who are dead.
>
> […]Surprisingly, while increased church attendance and membership in a conservative denomination has a powerful negative effect on paranormal beliefs, higher education doesn't. Two years ago two professors published another study in Skeptical Inquirer showing that, while less than one-quarter of college freshmen surveyed expressed a general belief in such superstitions as ghosts, psychic healing, haunted houses, demonic possession, clairvoyance and witches, the figure jumped to 31% of college seniors and 34% of graduate students.

And naturally, studies show that religious people are both more generous than their secular counterparts.

# Why does God allow so much natural evil from phenomena like earthquakes?

**Wintery Knight** · 4 September 2013 · Archived copy · Original

My friend Eric Chabot of Ratio Christi shared this video with me, which features chemist Fazale Rana.

The video runs under 4 minutes:

Basically, there was an atheist who challenged the idea that nature is designed because there are things in nature which cause suffering, like earthquakes and volcanoes.

Now the first thing to note is that atheists commonly think that God's job is to make humans happy. If he doesn't make humans feel happy – regardless of their knowledge of him and relationship with him – then he is a big failure. Many atheists think that, it is one of the most common reasons why people become atheists. But of course anyone who reads the Bible and reads the story of Jesus knows that the purpose of life on God's view is for humans to know him and to be disciples of a *suffering* Messiah who sacrifices himself in order to obey God the Father. So that's the first thing to say – purpose of life *not* happiness, but knowledge of God and being a disciple of Jesus. This may involve all kinds of suffering, and that's to be expected.

Second, there is a response to the problem of evil based on the necessity of natural laws. The argument goes that you can't have genuine morality without a predictable, knowable system of natural laws.

But I want to talk about something different in this post. In the video, Dr. Rana thinks that many of the things that cause suffering in the natural world are actually necessary for life to exist at all. He provides the example of plate tectonics in his video above, and I want to take that one and add to it the example of heavy element production and the stellar lifecycle. These are both from a book called "Rare Earth", which is written by two non-Christians – Peter Ward and Donald Brownlee, but I'll link to web sites to make the case.

**Plate tectonics.**

Here's an article from Reasons to Believe by Dr. David Rogstad, who has a PhD in physics from Caltech – the top school for experimental science. The article not only goes over the basic plate tectonics to carbonate-silicate cycle connection, but it adds a newer discovery to boot.

Excerpt:

> Earthquakes are a byproduct of plate tectonics, a theory in geology developed in recent years for explaining motions near the surface of the Earth. One of the benefits from plate tectonics is that Earth maintains the right levels of carbon dioxide ($CO_2$) in the atmosphere to compensate for the Sun's increasing luminosity. This is accomplished by what is called the carbonate-silicate cycle. $CO_2$ is removed from the atmosphere through weathering. The weathered products are eventually drawn into the Earth's interior via plate tectonics. Processes inside the Earth's interior release the $CO_2$ back into the atmosphere via volcanoes. While all aspects of this mechanism are not yet fully understood, it has been instrumental in providing a stable environment for life on the Earth for billions of years.
>
> New research provides yet another component that appears fine-tuned for life. In a letter in the September 27, 2007 issue of Nature together with a corresponding news release from the University of Bonn, Arno Rohrbach and his colleagues have discussed another mechanism similar to the carbonate-silicate cycle. It also depends on plate tectonics but, in this case, the mechanism controls the amount of oxygen on the surface of the Earth.
>
> Oxygen becomes bound up in various oxides which are then drawn into the Earth's interior, where various processes result in its being incorporated into an exotic mineral called majorite. The results reported in this letter established that majorite functions as a kind of "reservoir" for oxygen, and when the majorite ascends nearer to the surface of the Earth it breaks down and releases its oxygen. Some of this oxygen also binds with

> hydrogen released from the interior of the Earth to form water. The authors have referred to the whole process as an "oxygen elevator."
>
> They go on to say that "without the 'oxygen elevator' in its mantle the Earth would probably be a barren planet hostile to life. According to our findings, planets below a certain size hardly have any chance of forming a stable atmosphere with a high water content."
>
> This research confirms the existence of one more finely tuned mechanism that depends on plate tectonics and contributes to an environment that can support life. It also gives humans one more reason to be appreciative rather than dismayed when we experience an earthquake that breaks some precious possessions beyond repair.

Astronomer Dr. Hugh Ross who has a PhD in Astronomy from the University of Toronto and did a 5-year post-doctoral work at Caltech, adds to this with another discovery.

Excerpt:

> In the December 2007 issue of *Astrobiology* Stanford University geophysicists Norman H. Sleep and Mark D. Zoback note that the higher tectonic activity during Earth's early history could have played a key role in cycling critically important nutrients and energy sources for life. The production of numerous small faults in the brittle primordial crust released trapped nutrients. Such faults could also release pockets of methane gas and molecular hydrogen. The methane and hydrogen could then provide crucial energy sources for nonphotosynthetic life. Finally, the production of faults could bring water to otherwise arid habitats, such as rocks far below Earth's surface.
>
> Faulting, generated by active and widespread tectonics, allowed a youthful Earth to support diverse and abundant life. This enhanced diversity and abundance of life quickly transformed Earth's surface into an environment safe for advanced life. Also, the buildup of biodeposits for the support of human civilization occurred more rapidly due to active tectonics.
>
> The more rapid preparation of Earth for humanity is critical. Without such rapid preparation, humans could not come upon the terrestrial scene before the Sun's increasing luminosity would make their presence impossible (due to excessive heat).

So that's the science behind earthquakes. So that's a brief look at why we need plate tectonics for life, and we just have to buck up and take the earthquakes with it. It's not God's job to give us happiness and health. That's not his plan. People who complain about earthquakes have to show how God could get the life-permitting effects of earthquakes without wrecking his ability to succeed in his plan to make people know him and follow him. But how can an atheist do that? They can't. I think that people just need to realize that humans are not in charge here and we have to live with that. We have to accept that we didn't make the universe, and we don't get to decide what purpose it has. God decides.

On to star formation.

**Star formation**

Atheists often complain that the universe is too big or too old (which is actually the same thing, since the more time passes, the more it expands). The fact of the matter is that life appeared the earliest it could appear – we needed the universe to be a certain age before it could support life.

Dr. Hugh Ross explains in this article.

Excerpt:

> The second parameter of the universe to be measured was its age. For many decades astronomers and others have wondered why, given God exists, He would wait so many billions of years to make life. Why did He not

> do it right away? The answer is that, given the laws and constants of physics God chose to create, it takes about ten to twelve billion years just to fuse enough heavy elements in the nuclear furnaces of several generations of giant stars to make life chemistry possible.
>
> Life could not happen any earlier in the universe than it did on Earth. Nor could it happen much later. As the universe ages, stars like the sun located in the right part of the galaxy for life (see chapter 15) and in a stable nuclear burning phase become increasingly rare. If the universe were just a few billion years older, such stars would no longer exist.

The Rare Earth book explains the details on p. 40-4:

> The trick for getting from helium to the generation of planets, and ultimately to life, was the formation of carbon, the key element for the success of life and for the production of heavy elements in stars. Carbon could not form in the early moments following the Big Bang, because the density of the expanding mass was too low for the necessary collisions to occur. Carbon formation had to await the creation of giant red stars, whose dense interiors are massive enough to allow such collisions. Because stars become red giants only in the last 10% of their lifetimes (when they have used up much of the hydrogen in their cores), there was no carbon in the Universe for hundreds of millions to several billion years after the Big Bang—and hence no life as we know it for that interval of time.
>
> […]The sequence of element production in the Big Bang and in stars provided not only the elements necessary for the formation of Earth and the other terrestrial planets but also all of the elements critical for life—those actually needed to form living organisms and their habitats.

> […]The processes that occurred during the billions of years of Earth's "prehistory" when its elements were produced are generally well understood. Elements are produced within stars; some are released back into space and are recycled into and out of generations of new stars. When the sun and its planets formed, they were just a random sampling of this generated and reprocessed material. Nevertheless, it is believed that the "cosmic abundance" mix of the chemical elements—the elemental composition of the sun—is representative of the building material of most stars and planets, with the major variation being the ratio of hydrogen to heavy elements.
>
> […]Many stars are similar in composition, but there is variation, mainly in the abundance of the heavier Earth-forming elements relative to hydrogen and helium. The sun is in fact somewhat peculiar in that it contains about 25% more heavy elements than typical nearby stars of similar mass. In extremely old stars, the abundance of heavy elements, may be as low as a thousandth of that in the sun. Abundance of heavy elements is roughly correlated with age. As time passed, the heavy-element content of the Universe as a whole increased, so newly formed stars are on the average more "enriched" in heavy elements than older ones.
>
> […]The matter produced in the Big Bang was enriched in heavier elements by cycling in and out of stars. Like biological entities, stars form, evolve, and die. In the process of their death, stars ultimately become compact objects such as white dwarfs, neutron stars, or even black holes. On their evolutionary paths to these ends, they eject matter back into space, where it is recycled and further enriched in heavy elements. New stars rise from the ashes of the old. This is why we say that each of the individual atoms in Earth and in all of its creatures—including us—has occupied the interior of at least a few different stars.

What he's saying is that heavy elements are created gradually because of the star formation lifecycle. The first generation of stars are metal-poor. The next generation of stars is better. And so on until we get to stars that can support life by providing a steady, stable amount of energy – as well as other benefits like planets with an atmosphere. Our planet is 4.5 billion years old, and the universe is about 14 billion years old. Simple life appears about 4 billion years ago on Earth. That means we got life practically immediately, given that we had to develop the

heavy elements needed to make a life-supporting star, a life-supporting planet and *us.*

UPDATE: Sean from ReligioPolitical Talk pointed out this related post out to me:

> Another examples is that hurricanes help to regulate the earths temperature, and cause "sea deserts" to bloom… assisting in many ways earth's climate:
>
> "Some parts of the ocean are like deserts, because there isn't enough food for many plants to grow. A hurricane's high winds stir up the ocean waters and help bring nutrients and phytoplankton to the surface, where they get more sunlight, allowing the plants to bloom," Babin said. (**NASA**)
>
> To support the above, via **The Columbia Tribune**:
>
> …."Most certainly," says Steve DiMarco, a Texas A&M University oceanography professor who for 16 years has studied the Gulf of Mexico, which has a "dead zone" where oxygen-depleted water can kill marine life.
>
> In early July, most of the Texas-Louisiana shelf from Freeport, Texas, to the Mississippi River Delta was hypoxic – meaning the salt water has lost large amounts of oxygen. Later in July, Hurricane Dolly disrupted the dead zone and re-oxygenated the shallow waters south of Louisiana and the entire shelf off Texas. Oxygen levels started to drop again within days after the storm.
>
> In early August, Hurricane Eduard re-oxygenated the Louisiana shelf, but by mid-August oxygen concentrations dropped to hypoxic levels.
>
> And guess what?
>
> Hurricane Ike re-oxygenated the shelf when it made landfall Sept. 12 in Texas. The latest data collected in October showed oxygen concentrations nearly all at normal levels, DiMarco said….

Now that's good blogging.

# Stephen Moore: Obama's failing economy has hit his supporters the hardest

**Wintery Knight** · 5 September 2013 · Archived copy · Original

From the Wall Street Journal, a must-read.

Excerpt:

> Each month the consultants at Sentier analyze the numbers from the Census Bureau's Current Population Survey and estimate the trend in median annual household income adjusted for inflation. On Aug. 21, Sentier released "Household Income on the Fourth Anniversary of the Economic Recovery: June 2009 to June 2013." The finding that grabbed headlines was that real median household income "has fallen by 4.4 percent since the 'economic recovery' began in June 2009." In dollar terms, median household income fell to $52,098 from $54,478, a loss of $2,380.
>
> What was largely overlooked, however, is that those who were most likely to vote for Barack Obama in 2012 were members of demographic groups most likely to have suffered the steepest income declines. Mr. Obama was re-elected with 51% of the vote. Five demographic groups were crucial to his victory: young voters, single women, those with only a high-school diploma or less, blacks and Hispanics. He cleaned up with 60% of the youth vote, 67% of single women, 93% of blacks, 71% of Hispanics, and 64% of those without a high-school diploma, according to exit polls.
>
> According to the Sentier research, households headed by single women, with and without children present, saw their incomes fall by roughly 7%. Those under age 25 experienced an income decline of 9.6%. Black heads of households saw their income tumble by 10.9%, while Hispanic heads-of-households' income fell 4.5%, slightly more than the national average. The incomes of workers with a high-school diploma or less fell by about 8% (-6.9% for those with less than a high-school diploma and -9.3% for those with only a high-school diploma).
>
> To put that into dollar terms, in the four years between the time the Obama recovery began in June 2009 and June of this year, median black household income fell by just over $4,000, Hispanic households lost $2,000 and female-headed households lost $2,300.
>
> The unemployment numbers show pretty much the same pattern. July's Bureau of Labor Statistics data (the most recent available) show a national unemployment rate of 7.4%. The highest jobless rates by far are for key components of the Obama voter bloc: blacks (12.6%), Hispanics (9.4%), those with less than a high-school diploma (11%) and teens (23.7%).

> This is a stunning reversal of the progress for these groups during the expansions of the 1980s and 1990s, and even through the start of the 2008 recession. Census data reveal that from 1981-2008 the biggest income gains were for black women, 81%; followed by white women, 67%; followed by black men, 31%; and white males at 8%.
>
> […]Mr. Obama has often contemptuously, and wrongly, branded the quarter-century period of prosperity beginning with the presidency of Ronald Reagan as a "trickle down" era. For many in the groups that Mr. Obama set out to help, a return to the prosperity of that era would be a vast improvement.
>
> The Census Bureau data on incomes include cash government benefits, such as unemployment insurance, disability payments and the earned-income tax credit (but excludes Medicaid and food stamps). Most of the cash programs have surged in cost during the Obama presidency, yet incomes have still declined for the lowest-income eligible groups. This suggests that wages and salaries from employment have shrunk at an even faster pace than the Census data show. The shrinking paychecks of the past four years are consistent with two unwelcome anomalies of the recovery: a swift decline in labor-force participation to 63.4% from 65.5% during that period and a rise in part-time employment.

> What all of this means is that the stimulus-led economic revival that began officially in June 2009—Vice President Joe Biden's famous "summer of recovery"—has only resulted in lower incomes for at least half of Americans, the very ones who were instrumental in electing Mr. Obama twice.

Guess what? Borrowing trillions from future generations to spend on Democrat-run sham companies like Solyndra doesn't stimulate the economy. Shocking, I know. And yet that's what we voted for.

Investors Business Daily explains how the President's *own policies* are causing the troubles that his supporters are facing.

Look:

> More than 250 employers have cut work hours, jobs or taken other steps to avoid ObamaCare costs, according to a new IBD analysis.
>
> Mind the data have been the refrain from the White House as it downplays anecdotal reports of employers limiting workers to fewer than 30 hours per week.
>
> But the anecdotes are piling high enough that they now constitute a body of data that can help gauge the impact of the Affordable Care Act's employer mandate.
>
> IBD is introducing ObamaCare Employer Mandate: A List Of Cuts To Work Hours, Jobs — a compilation of employers who have opted to restrict work hours to limit new liability for employee health coverage.
>
> As of Sept. 3, this list has reached 258 — including more than 200 public-sector employers.
>
> Almost all of those employers have cut the hours of part-time workers to below 30 per week — the point at which ObamaCare's insurance mandate kicks in.
>
> A few have cut payrolls to steer clear of ObamaCare's 50 full-time-equivalent-worker definition of a large employer subject to employer fines. A few others have reduced staff while contracting with employment services firms to limit their ObamaCare exposure.

The Wall Street Journal explains how health care premiums, which Obama promised to LOWER by $2500, are up $3000.

Excerpt:

> Central to ObamaCare are requirements that health insurers (1) accept everyone who applies (guaranteed issue), (2) cannot charge more based on serious medical conditions (modified community rating), and (3) include numerous coverage mandates that force insurance to pay for many often uncovered medical conditions.
>
> […]We compared the average premiums in states that already have ObamaCare-like provisions in their laws and found that consumers in New Jersey, New York and Vermont already pay well over twice what citizens in many other states pay. Consumers in Maine and Massachusetts aren't far behind. Those states will likely see a small increase.
>
> By contrast, Arizona, Arkansas, Georgia, Idaho, Iowa, Kentucky, Missouri, Ohio, Oklahoma, Tennessee, Utah, Wyoming and Virginia will likely see the largest increases—somewhere between 65% and 100%. Another 18 states, including Texas and Michigan, could see their rates rise between 35% and 65%.
>
> While ObamaCare won't take full effect until 2014, health-insurance premiums in the individual market are already rising, and not just because of routine increases in medical costs. Insurers are adjusting premiums now in anticipation of the guaranteed-issue and community-rating mandates starting next year. There are newly imposed mandates, such as the coverage for children up to age 26, and what qualifies as coverage is much more comprehensive and expensive. Consolidation in the hospital system has been accelerated by ObamaCare

> and its push for Accountable Care Organizations. This means insurers must negotiate in a less competitive hospital market.
>
> **Although President Obama repeatedly claimed that health-insurance premiums for a family would be $2,500 lower by the end of his first term, they are actually about $3,000 higher—a spread of about $5,500 per family.**

So, every cloud has a silver lining, and the silver lining to this Obama-cloud is that at least the people who voted for socialism are facing the consequences of their own economic illiteracy. I hope they learn. But if they don't learn now, then they'll learn when the welfare and entitlements run out. I hope that the people who voted for our American Idol president will take a Thomas Sowell book out of the library and learn something about economics for a change.

UPDATE: From Ian B.: 40,000 Longshoremen (union workers) quit the AFL-CIO union. Socialism hurts employers? It's all so unexpected! How could reality not match honeyed words and good intentions?

# How early are the doctrines of the Incarnation and the Trinity?

**Wintery Knight** · 5 September 2013 · Archived copy · Original

Here's a great post from Tough Questions Answered. They find evidence for the Incarnation and the Trinity in the writings of Ignatius, who was the third Bishop of Antioch from 70 AD to 107 AD.

Here's the raw quote from Ignatius' "Epistle to the Ephesians":

> But our Physician is the only true God, the Father and Begetter of the only-begotten Son. We have also as a Physician the Lord our God, Jesus the Christ, the only-begotten Son and Word, before time began, but who afterwards became also man, of Mary the virgin. For "the Word was made flesh." Being incorporeal, He was in a body; being impassible, He was in a passible body; being immortal, He was in a mortal body; being life, He became subject to corruption, that He might free our souls from death and corruption, and heal them, and might restore them to health, when they were diseased with ungodliness and wicked lusts.

And TQA discusses the passage:

> There are several aspects of this passage which demonstrate that Saint Ignatius held beliefs consistent with the Doctrines of the Trinity and the Dual Nature of Christ. First, he refers to two separate Persons, God the Father and Jesus Christ, yet he calls both of them God.
>
> […]Second, Ignatius refers to Jesus Christ as begotten "before time began". This is almost word for word identical to the Nicene Creed, which says, "I believe in. . . one Lord, Jesus Christ, the Son of God, the only-begotten, begotten of the Father before all ages. . ." Some today claim that the Early Church believed Christ's being "begotten" of the Father was in relation to His birth from Mary (specifically, this is an LDS claim). However, Ignatius' comment here demonstrates that the Early Church's understanding of Christ's nature as "only-begotten" was a relationship with the Father that was "before time began" and has nothing to do with His earthly incarnation. It is interesting to note that the Greek word translated as "only-begotten" both here and in the New Testament is "monogenes". Monogenes literally means "one of a kind," and to the Church Fathers it connoted Christ being of the same nature as the Father. . . something that was entirely unique to Him.
>
> In addition to calling Christ God and claiming Him to be the "only-begotten" of the Father "before time began", Ignatius tells us that "afterwards" Christ "became man". Ignatius then goes on to point out some aspects that Christ's becoming man added to His nature. He says that although Christ was incorporeal, He was in a body; although He was impassible, He was in a passible body; although He was immortal, He was in a mortal body; although He was life, He became subject to corruption. These differing aspects of Christ's nature, aspects that are polar opposites to one another, speak to Christ having two natures, one as God and one as man, and demonstrate that Saint Ignatius understood Christ in this manner. As God, Christ was incorporeal, impassible, immortal, and life itself. However, as man He was corporeal, passible, mortal, and subject to corruption.

Now I think you can pull the Incarnation and the Trinity right out the Bible, but it's still nice to see such a prominent church father writing about it decades after the events.

# Chris Sinkinson debates John Hick on religious pluralism and salvation

**Wintery Knight** · 5 September 2013 · Archived copy · Original

Looks like Justin Brierley on the Unbelievable radio show found a pastor with a Ph.D in philosophy, and he can really whip some ass.

The players:

> John Hick is a noted philosopher and theologian who is a proponent of a pluralist view of religion – that there is one light (God) but many lampshades (religious expressions).
>
> Chris Sinkinson is a pastor and Bible tutor who has critiqued Hick's work. He says that pluralism empties Christianity of any content and in its own way disrespects other religions more than his own exclusivist stance.

The MP3 file is here.

Justin does a great job as moderator of this debate. He said what I was thinking of saying a number of times during the debate.

Anyway, here is my snarky summary. I creatively paraphrase some of the things that Hick says to make it more clear. And funny.

—-

Hick:
– had an experience looking at the buildings of other religions
– other religions have buildings, so all religions are equal
– I spent some time in the East, and met nice Eastern people
– since Eastern people are nice that means all religions are equal

Justin:
– isn't Jesus' claim to be the exclusive path to salvation offensive?

Sinkinson:
– all religions that are exclusive and have to deal with religious pluralism
– even John Hick writes polemically in favor of his own view
– even John Hick thinks that religions that are exclusive are false

Justin:
– what about the blind man and the elephant?
– the story seems to say that other people have a partial grasp?
– but the story-teller himself has the privileged view
– so isn't the religious pluralist just as arrogant as exclusivists?

Hick:
– well, it's not arrogant to claim to have the right answer
– Jesus never made the claim to be God incarnate
– Jesus never made the claim to be the exclusive path to God
– historians don't think that John's gospel is reliable because it is late
– the proclamation of exclusivity was added by evangelists much later

Sinkinson:
– the historians who doubt the high Christology are radical skeptics

– the mainstream of historical scholarship accepts a high Christology
– the EARLIEST history about Jesus has the highest Christology

Hick:
– the moderate scholars do think Jesus was divine but that he didn't think he was divine
– the phrase "Son of God" was used to describe any remarkable person
– only later did the early church turn the generic term into "God the Son"

Sinkinson:
– there is reflection on Jesus' identity and developments, but not invention
– Jesus and his followers were in trouble precisely for linking him to deity
– why else would Jesus get into trouble and get crucified?

Hick:
– the Romans crucified him because people were saying he was the Messiah
– but the Messiah was not identified as being divine, but political
– and that's why the Romans crucified him

Justin:
– do you (Sinkinson) think that people in other religions can be saved?

Sinkinson:
– the traditional view is exclusivism
– the other world religions are logically contradictory with Christianity
– you have to respect their differences – they are not the same as Christianity
– exclusivists allow that people can be saved by responding to natural theology
– and there are also other cases where non-Christians are saved, like old testament saints and babies who die in infancy

Hick:
– but people's religions are based on where they are born
– so it's not fair for God to expect people to be saved in one religion only

Sinkinson:
– the plurality of religions grouped by location doesn't make christianity false
– that would be the genetic fallacy – rejecting an idea because of its origin
– the real question to consider is whether it is true
– and even the objection assumes that God is a God of love, who should be fair
– but how do you know that God is loving? that is an exclusive view
– how can the "blob" ultimate of religious pluralism be "loving" and "fair"

Hick:
– the ultimate reality is loving or not loving depending on each person's religion

Sinkinson:
– but some religions and theistic and some are atheistic
– how can those God exist and not exist?

Hick:
– God is beyond everyone's understanding, except mine
– God is beyond all definitions, except mine
– God is beyond all human understanding, except mine
– i'm not contradicting myself, it's a mystery! a mystery!
– as long as you don't look to closely, they're all the same!

– allow me to tell you about God, which no one can do but me

Justin:
– doesn't your religious pluralism mean that Christianity is false?

Hick:
– well, Christianity can't be true, because it disagrees with other religions
– Christianity can't falsify other religions, that would be mean to them
– other religions are just as "profound" as Christianity – and that's what matters – not whether a religion makes true claims
– some religions are older than Christianity, that means they can't be disagreed with
– we can't let Christianity be true, because then some people will feel bad
– if people feel bad, then they don't like me and then I feel bad
– if there's one thing I know about the unknowable ultimate reality, it's that it wants me to be liked by lots of people

Sinkinson:
– your view seems to be agnosticism – that nothing can be known about the "ultimate real"
– if we can't express in words what God is like, then why are you saying what God is like?

Hick:
– the indescribable ultimate is described (falsely, but interestingly) by various tradition

Sinkinson:
– does the "ultimate real" exist?

Hick:
– no

Justin:
– are all the exclusive religions wrong, and only you are right?

Hick:
– all propositions about God in all the religions are false
– the experience of being deluded and having feelings about your delusions is "valid" in all religions
– all religions are equally good ways to believe false things and to have feelings about your false beliefs
– only my propositions about God are true
– everyone who disagrees with me is wrong

Sinkinson:
– so all the propositions of all the religions are wrong
– but all the experiences and feelings are "right"

Hick:
– yes
– all propositions about God are humanly constructed, and so false
– except mine – mine are true!

Sinkinson:
– so everything distinctive about Christianity are literally false?

Hick:
– yes, Christian doctrines are all false
– because if they were true, other religions would be false, and they would feel bad
– and we can't have that, because everyone has to like me
– only things that don't offend people in other religions can be true

Sinkinson:
– so do we have to then treat all religions as non-propositional?

Hick:
– well just don't ask people about the content of their beliefs
– just treat their religion as non-cognitive rituals, feelings and experiences
– don't inquire too deeply into it, because all religions are all nonsense
– i'm very respectful and tolerant of different religions!

Sinkinson:
– but Muslims, for example, think their religion is making truth claims

Hick:
– but there can be tolerance as long as you treat religions as non-propositional nonsense

Sinkinson:
– um, I have a higher respect for religions than you do
– I actually consider that the claims of other religions could be true
– I think that other religions make truth claims and not nonsense claims

Hick:
– well they are all useful because they are all false
– I don't emphasize beliefs, I emphasize living, experiences and feelings
– as long as everyone accepts my view and rejects their religion, we'll all be tolerant

Justin:
– erm, isn't that an exclusive claim?
– you're trying to say that your view of what religion is is right, and everyone else is wrong

Hick:
– I'm not arrogant, I just think that all the religions of the worlds are false
– only my statements about religion are true – everyone else is wrong
– I'm tolerant, and Christians are arrogant

Justin:
– but you think Sinkinson's view is wrong
– why should we accept your view and deny his view?

Hick:
– His view of salvation is false, and mine is true

Sinkinson:
– you use words with set meanings, but you mean completely different things
– when I say salvation, I mean deliverance from sins through Jesus

Hick:
– I get to decide what salvation means for everyone, you intolerant bigot

Sinkinson:
– but that word has a specific meaning that has held true in all of Christian history
– but what you mean by salvation is people having subjective delusions that are not true

Hick:
– I don't like using the word salvation

Sinkinson:
– but you just used it!

– and you think that it is present in different world religions, but it isn't

Hick:
– God is unknowable and indescribable
– God isn't a wrathful God though
– and the Christian description of God is false
– Evangelical Christians are mean
– I had experiences with people of other faiths
– and these experiences taught me that religions that think that the universe is eternal are true
– as long as you reduce religion to behaviors and not truth, then religions are all good at producing behaviors
– if you just treat all religions as clothing fashion and food customs, they are all valid
– the main point of religion is for people to agree on cultural conventions and stick to them
– never mind the propositional statements of religions… who cares about truth? not me!
– but Christianity is definitely false

Sinkinson:
– the Judeo-Christian God is different – he reveals himself to humans
– he is distinct from the other religions
– he is personal, and is loving but also angry at sin

Hick:
– But God isn't a person, and he isn't a non-person
– I can't say what he is – I'll offend someone if I say anything at all!
– except Christians – I can offend them because they are arrogant bigots
– I'm also very spiritual – I meditate on my breathing

Sinkinson:
– you can't assess a religion by the experiences that people have
– people who have weird experiences do all kinds of evil things
– so the real question has to be about truth – is the New Testament reliable?, etc.

# Convergence detected in the genetic structure of bats and dolphins

**Wintery Knight** · 6 September 2013 · Archived copy · Original

We have to start this post with the definition of convergence in biology.

> In evolutionary biology, convergent evolution is the process whereby organisms not closely related (not monophyletic), independently evolve similar traits as a result of having to adapt to similar environments or ecological niches.
>
> It is the opposite of divergent evolution, where related species evolve different traits.
>
> On a molecular level, this can happen due to random mutation unrelated to adaptive changes; see long branch attraction. In cultural evolution, convergent evolution is the development of similar cultural adaptations to similar environmental conditions by different peoples with different ancestral cultures. An example of convergent evolution is the similar nature of the flight/wings of insects, birds, pterosaurs, and bats.
>
> All four serve the same function and are similar in structure, but each evolved independently.

Jonathan Wells explains the problem that convergence poses for naturalistic evolution:

> Human designers reuse designs that work well. Life forms also reuse certain structures (the camera eye, for example, appears in humans and octopuses). How well does this evidence support Darwinian evolution? Does it support intelligent design more strongly?
>
> Evolutionary biologists attribute similar biological structures to either common descent or convergence. Structures are said to result from convergence if they evolved independently from distinct lines of organisms. Darwinian explanations of convergence strain credulity because they must account for how trial-and-error tinkering (natural selection acting on random variations) could produce strikingly similar structures in widely different organisms and environments. It's one thing for evolution to explain similarity by common descent—the same structure is then just carried along in different lineages. It's another to explain it as the result of blind tinkering that happened to hit on the same structure multiple times. Design proponents attribute such similar structures to common design (just as an engineer may use the same parts in different machines). If human designers frequently reuse successful designs, the designer of nature can surely do the same.

I'm a software engineer, and we re-use components all the time for different programs that have no "common ancestor". E.g. – I can develop my String function library and use it in my web application and my Eclipse IDE plug-in, and those two Java programs have nothing in common. So you find the same bits in two different programs because I am the developer of both programs. But the two programs don't extend from a common program that was used for some other purpose – they have no "common ancestor" program.

Now with that in mind, take a look at this recent article from Science Daily, which Mysterious Micah sent me.

Excerpt:

> The evolution of similar traits in different species, a process known as convergent evolution, is widespread not only at the physical level, but also at the genetic level, according to new research led by scientists at Queen Mary University of London and published in Nature this week.
>
> The scientists investigated the genomic basis for echolocation, one of the most well-known examples of convergent evolution to examine the frequency of the process at a genomic level.
>
> Echolocation is a complex physical trait that involves the production, reception and auditory processing of ultrasonic pulses for detecting unseen obstacles or tracking down prey, and has **evolved separately** in different

> groups of bats and cetaceans (including dolphins).
>
> The scientists carried out one of the largest genome-wide surveys of its type to discover the extent to which convergent evolution of a physical feature involves the same genes.
>
> They compared genomic sequences of 22 mammals, including the genomes of bats and dolphins, which independently evolved echolocation, and found genetic signatures consistent with convergence in nearly 200 different genomic regions concentrated in several 'hearing genes'.
>
> […]Consistent with an involvement in echolocation, signs of convergence among bats and the bottlenose dolphin were seen in many genes previously implicated in hearing or deafness.
>
> **"We had expected to find identical changes in maybe a dozen or so genes but to see nearly 200 is incredible," explains Dr Joe Parker, from Queen Mary's School of Biological and Chemical Sciences and first author on the paper.**
>
> **"We know natural selection is a potent driver of gene sequence evolution, but identifying so many examples where it produces nearly identical results in the genetic sequences of totally unrelated animals is astonishing."**

Nature is the most prestigious peer-reviewed science journal. This is solid material.

There is an earlier article from 2010 in New Scientist that talked about one of the previous genes that matched for hearing capability.

Excerpt:

> Bats and dolphins trod an identical genetic path to evolve a vital component of the complex sonar systems they use to pursue and catch prey.
>
> The finding is unusual, because although many creatures have independently evolved characteristics such as eyes, tusks or wings, they usually took diverse genetic routes to get there.
>
> Analysis of a specific gene has now demonstrated that although bats live in air and dolphins in water, where sound travels five times faster, they independently evolved a near-identical gene that allows them to accept high-frequency sound in the ear – vital for sonar.
>
> The gene makes prestin, a protein in hair cells of the cochlea, which is the organ in the inner ear where sonar signals are accepted and amplified. Prestin changes shape when exposed to high-frequency sound, and this in turn deforms the fine hair cells, setting off an electrical impulse to the brain. So the protein has the important jobs of detecting and selecting high-frequency sounds for amplification.
>
> **When researchers examined the molecular structure of the prestin gene from a range of animals, they found that the variants in echolocating bats and dolphins were virtually indistinguishable.**

Indistinguishable genes in animals that don't share a common ancestor? Maybe a better explanation for the evidence we have is – *common designer.*

# Intelligence reports show Islamic extremists dominate Syrian opposition

**Wintery Knight** · 6 September 2013 · Archived copy · Original

Reuters reports on it with the headline "Kerry portrait of Syria rebels at odds with intelligence reports".

Excerpt:

> Secretary of State John Kerry's public assertions that moderate Syrian opposition groups are growing in influence appear to be at odds with estimates by U.S. and European intelligence sources and nongovernmental experts, who say Islamic extremists remain by far the fiercest and best-organized rebel elements.
>
> At congressional hearings this week, while making the case for President Barack Obama's plan for limited military action in Syria, Kerry asserted that the armed opposition to Syrian President Bashar al-Assad "has increasingly become more defined by its moderation, more defined by the breadth of its membership, and more defined by its adherence to some, you know, democratic process and to an all-inclusive, minority-protecting constitution.
>
> "And the opposition is getting stronger by the day," Kerry told the Senate Foreign Relations Committee on Tuesday.
>
> U.S. and allied intelligence sources and private experts on the Syrian conflict suggest that assessment is optimistic.
>
> While the radical Islamists among the rebels may not be numerically superior to more moderate fighters, they say, Islamist groups like the al Qaeda-aligned Nusra Front are better organized, armed and trained.
>
> Kerry's remarks represented a change in tone by the Obama administration, which for more than two years has been wary of sending U.S. arms to the rebels, citing fears they could fall into radical Islamists' hands.
>
> As recently as late July, at a security conference in Aspen, Colorado, the deputy director of the Pentagon's Defense Intelligence Agency, David Shedd, estimated that there were at least 1,200 different Syrian rebel groups and that Islamic extremists, notably the Nusra Front, were well-placed to expand their influence.
>
> "Left unchecked, I'm very concerned that the most radical elements will take over larger segments" of the opposition groups, Shedd said. He added that the conflict could drag on anywhere "from many, many months to multiple years" and that a prolonged stalemate could leave open parts of Syria to potential control by radical fighters.
>
> U.S. and allied intelligence sources said that such assessments have not changed.

As an aside, the mainstream media has not been reporting on these intelligence reports.

Excerpt:

> A new survey of the coverage of the Syrian civil war and the U.S. response to it by the big three networks, ABC, CBS, and NBC, shows that 94 percent of their stories have not mentioned that some of the rebel forces include America's enemy, al Qaeda.
>
> The survey, reported by the Media Research Center's Dan Gainor, finds that since August 21, 171 stories about the conflict have aired on the networks. Of those, only 11 stories mentioned the al Qaeda element of the war.
>
> ABC, for instance, has aired 51 stories about the Syrian conflagration but only mentioned al Qaeda in 3 of those reports. NBC was worse: out of its 64 stories, only 3 mentioned the notorious terrorist group. NBC was a little better, mentioning al Qaeda 5 times in its 56 stories.
>
> Al Qaeda is not yet ubiquitous among the rebel forces, but its presence is growing, something the networks

> should be warning their viewers about.

Now, I was initially in favor of a targeted strike aimed at the leadership of the Syrian regime, assuming two things were cleared up first. 1) We had to be sure that Assad was responsible for the use of the chemical weapons. Despite what the Obama administration says, we are still not sure who used the chemical weapons. 2) We had to be sure that there were moderate elements in the leadership of the Syrian opposition. Well, we now know that this is not the case. So, my position has changed, and now I am in favor of *not* launching a strike at the leaders of the Assad regime. (Note: this option was not what Obama was suggesting, anyway – his strike was not targeted at the leaders).

I do think that it is important to deter the use of chemical weapons. That is a valid concern, and a strike at leaders who use chemical weapons is a valid way of achieving that goal of saving civilians from future attacks. But we have to be sure that we don't do more harm, and right now it doesn't look like that will happen.

# Satire: The end of moral duties

**Wintery Knight** · 6 September 2013 · Archived copy · Original

New Zealand philosopher Matt Flannagan wrote a satirical piece on moral duties from a naturalistic perspective: (H/T Michael's Theology)

> Some people claim we have a duty to not rape women, or that religious people have a duty to not engage in wars or acts of terrorism, conduct inquisitions and so on. I think this is nonsense as it assumes there is such a thing as a moral duty and this is false and here's why:
>
> First, the burden of proof is on he who makes a claim, as an amoralist I am not making a claim I am simply not affirming that moral duties exist, so I don't have to justify my non-belief in duties. Instead those who believe in duties have to come up with compelling proof they exist.
>
> Second, one cannot empirically verify the claim duties exist so it's meaningless incoherent nonsense until such verification is given.
>
> Third, no one has yet to provide a proof that duties of any sort exist. Such things if they can be decided at all must be shown to exist by the methods of natural science and to date no one has shown that belief in moral duties is necessary to any scientific theory. Neither physics or chemistry or biology has need of that hypothesis to explain the world.
>
> Fourth, think of all the evil done in the name of duties, almost every war fought through out history has been justified by those who did it claiming they were doing the right thing. Inquisitions, crusades and the suppression of science were all done in the name of doing the right thing and avoiding the wrong thing.
>
> Fifth, if you claim you believe we have duties such as a duty to not rape, I'll ask you to explain "which duty" do you follow. There are so many different "duties" appealed to. Some people claim there is one fundamental duty, but those who do disagree as to what it is or exactly how to conceive of it. Others claim there are many duties and a small number of people claim there are none. Everyone rejects some concept or account of duty; us 'adutyists' just deny one more duty than everyone else.
>
> Sixth – Think of how degrading and contrary to human autonomy the belief in duties is, duties are things we are supposed to live our lives in allegiance to. Rational people can figure out what to do for themselves using reason, we don't need moral duties to tell us what to do, it stifles human autonomy and is childish to believe in duties.
>
> Seventh – Evolutionary psychology shows us that small children from a very young age have evolved a disposition to believe certain things are right and wrong. The fact we can explain this belief entirely in evolutionary terms shows duties don't exist.
>
> Eight – What duties you believe is determined largely by your family and cultural background. If you were raised in Iran you would believe you had a duty to execute homosexuals. If you were raised in secular western Europe you would believe you had a duty to support same sex marriage. Clearly therefore, belief in duties is the result of parental and cultural brainwashing and up bringing.
>
> Ninth – We should treat all our beliefs from the perspective of a sceptical outsider, hence we should treat our belief in moral duties from the perspective of moral skeptics.
>
> Tenth – Extraordinary claims require extraordinary evidence. The claim there are moral duties is extraordinary. It claims that there are things that tell us what to do and that we have to do it and this trumps every other reason or desire we have in favour of the action and that failure to do it makes us guilty or blameworthy. No other thing in reality has these features, hence those who believe in duties must provide us with extraordinary evidence.
>
> Eleventh – No-one has ever seen a duty. Duties have no colour, shape or smell, or sound hence they are

> invisible to sensory perception.

Michael's blog post on this added two more to the list:

> 12. Duties were developed by bronze age, desert dwelling peoples and we should grow out of such myths.
>
> 13. Those who argue for moral duties use metaethical reasoning and metaethics is not an academic subject.

I think that it's possible – but not rational – for naturalists to treat moral duties as objective. And that's good, because otherwise you couldn't trust them further than you could throw them for even little things. However, I wouldn't put naturalists into situations of extreme temptation where they felt were not being monitored. I don't think that they have what it takes in their worldview to do the right thing when no one is watching, especially when it goes against their own self-interest. It's just not rational for them to care about moral duties, on their worldview – they think that they are just accidents and they think that moral duties are just arbitrary conventions that vary arbitrarily in different places at different times. They are really up front about this view, and I think that we should take them at their word and understand that there are limits to their "moral" behavior. Certainly you don't want to be in a cloe relationship like a business partnership or a marriage with someone who thinks there is no free will, and therefore no moral duties and no moral responsibility. You might get lucky with them for a while, but eventually, they are going to break down.

For a more detailed look on what a typical non-theist might mean by "morality", take a look at this post on Uncommon Descent about the famous progressive lawyer Clarence Darrow.

Excerpt:

> In 1912, in Los Angeles, for example, Darrow himself went through two trials where he was both the defense lawyer and the defendant – **on two counts of attempting to bribe jurors in the union-related murder case**in which he had been, as usual, counsel for the defense. In response to the first charge Darrow told the jury:
>
> "I have committed one crime: I have stood for the weak and the poor."
>
> And at that first trial the verdict was in Darrow's favour, **though it is now generally accepted – even by Darrowphiles – that he was in fact guilty on both counts, plus other similar activities that he was never charged with.** At the second trial Darrow proved less able to "soft soap" his way out of trouble, and the proceedings ended with a hung jury. But although Darrow escaped being convicted, he certainly didn't escape the consequences of his actions.
>
> Firstly he was made to leave California after undertaking never to practice law again in that state.
>
> Secondly he was dropped by the unions as one of their regular attorneys – **which is why he spent the last part of his career practising criminal law.**
>
> And thirdly, he reportedly suffered what would nowadays be described as a "nervous breakdown" and became, if it were possible, even more pessimistic and morose than had previously been the case.

Clarence Darrow is a hero for atheists like Jerry Coyne, and it's interesting to see what this Darrow's "morality" amounted to in practice. When a person denies free will, as Coyne and Darrow do, you can be sure of one thing – nothing evil that they do will be viewed by them as their responsibility. It was the fault of their genes, they'll say. They will never admit that they are wrong, and their resistance to temptation will be lower than someone who believes in free will – and personal responsibility. I think that at the very core of atheism is this desperate, overarching desire to dispense with moral obligations – or at least to make them optional so that they are only binding if they don't require any self-sacrifice. That's why atheists are always celebrating each fresh assault on traditional morality, like gay marriage. They celebrate the breakdown of morality even for things they themselves

don’t do, because they just want to be rid of moral duties and accountability entirely. I think there are some exceptions to this, but definitely it’s true of the rank-and-file atheist.

# Portland bar owner fined $400,000 for offending transexuals

**Wintery Knight** · 7 September 2013 · Archived copy · Original

Wow. Fresh on the heels of the Portland bakery closing comes this new story about a Portland bar closing.

Excerpt:

> A North Portland bar owner is facing a $400,000 fine for discriminating against a transgender woman's group.
>
> The Bureau of Labor and Industries handed down the fine yesterday to Chris Penner, the owner of the bar formerly known as the "P Club."
>
> Last summer, one woman said they received a voicemail from Penner, who said they were not allowed to return because he didn't want people to think he ran a "tranny bar." In the voicemail, Penner claimed the group was hurting business.
>
> "People think that A.) we're a tranny bar, or B.) that we're a gay bar. We are neither. People are not coming in because they just don't want to be here on a Friday night now," he said.
>
> Under Oregon law, Oregonians may not be denied full and equal service based on sexual orientation. The law provides an exemption for religious organizations and schools, but does not allow private business owners to discriminate based on sexual orientation, just as they cannot legally deny service based on race, sex, age, disability or religion.
>
> The fine is the first imposed under the 2007 Oregon Equality Act.
>
> Since 2007, Oregonians have filed 11 complaints of unlawful discrimination in public places.
>
> In addition to the massive fine, Penner also has to pay a $5,000 civil penalty.

The argument by radical gay activists is that free speech is less important their feelings of being offended. They don't want to be offended by your disagreement/disapproval. And if they are offended then they have to threaten you and attack you and hurt you and hurt your business and hurt your career until you stop offending them. And everyone on the left thinks that this is fine.

I would expect moderate gays to be speaking out to defend the right of individuals to disagree and disapprove of behaviors that they don't agree with, but I'm not seeing a lot of that.

# How to subscribe to and download the Wintery Knight's favorite podcasts

**Wintery Knight** · 7 September 2013 · Archived copy · Original

I thought it might be a good idea to explain podcasts and RSS feeds to my readers and then list out the podcasts I like best.

So here is a quick introduction to RSS feeds:

> RSS stands for "Really Simple Syndication". It is a way to easily distribute a list of headlines, update notices, and sometimes content to a wide number of people. It is used by computer programs that organize those headlines and notices for easy reading.
>
> Most people are interested in many websites whose content changes on an unpredictable schedule. Examples of such websites are news sites, community and religious organization information pages, product information pages, medical websites, and weblogs. Repeatedly checking each website to see if there is any new content can be very tedious.
>
> Email notification of changes was an early solution to this problem. Unfortunately, when you receive email notifications from multiple websites they are usually disorganized and can get overwhelming, and are often mistaken for spam.
>
> RSS is a better way to be notified of new and changed content. Notifications of changes to multiple websites are handled easily, and the results are presented to you well organized and distinct from email.
> RSS works by having the website author maintain a list of notifications on their website in a standard way. This list of notifications is called an "RSS Feed". People who are interested in finding out the latest headlines or changes can check this list. Special computer programs called "RSS aggregators" have been developed that automatically access the RSS feeds of websites you care about on your behalf and organize the results for you.
>
> (RSS feeds and aggregators are also sometimes called "RSS Channels" and "RSS Readers".)

For the more technical people, RSS is an implementation of the Observer design pattern. When used in a distributed or enterprise environment, it is called Publish/Subscribe design pattern. You can implement it with technologies like message queues, and that's one of the things I do at work (sometimes).

So, if you look at the front page of my blog right now, you can see some little item lists from sources like Reasonable Faith and Investors Business Daily. Those are RSS feeds supplied by those people. My blog is subscribing to those feeds and display the last 5 items from each feed. And whenever those sources publish something new, then the content of what is displayed on my blog's front page changes to show the new item.

On my home computer, I subscribe to lots of RSS news feeds, which is one way of finding news stories for my blog. The software I use for this at home is my Chrome browser pointed to the Feedly RSS aggregator web site. You have to have a gMail account to use Feedly. You can read about how to add RSS feeds to Feedly here. If you don't want to have a gMail account, then you can use a desktop application like RSS Owl and add feeds to that. On my Android phone, I use a application called gReader and add feeds to that.

I also have RSS feeds for podcasts so that I can see the new ones that people make and then download them and listen to them. I use an Android application called Podkicker for subscribing to podcasts. It also downloads them and plays them. Usually, I download them when I am at home and listen to them on the road.

Anyway, without further ado, here is my list of favorite podcasts:

# Conservative Christian Tony Abbott wins majority in Australia

**Wintery Knight** · 7 September 2013 · Archived copy · Original

Tony Abbott, future Prime Minister of Australia

Timothy Stanley of the UK Telegraph reports that Australia has elected a Stephen Harper of their own.

Excerpt:

> Tony Abbott has won the Australian election – a blow not only to the Australian Labor Party but to Left-wingers everywhere who presumed that he was too "Neanderthal" to win. Well, us Neanderthals will be having a barbie tonight and sculling some beers to celebrate. "Good on yer, mate!"
>
> Abbott won for two reasons. First, the Australian Labor Party is going through a long-term identity crisis. The ALP was once the party of the working man (and Sheila) but in recent years it's succumbed to the worst aspects of factional politics, becoming a magnet for liberal pressure groups desperate for their slice of the taxpayers' pie. The party contained plenty of factions in the past but it always managed to steer a sensible middle course between them – so while it was the ALP in the 1970s that established Australia as an outward-looking, Pacific power it was also the ALP in the 1980s that recognised the need for economic reform and rejected protectionism. It's the party of both Gough Whitlam and Les Patterson.
>
> However, in recent years the Left gained an ascendance over the Right that undid that delicate balance. Under Gillard and Rudd, the ALP "bought" off Australia's metropolitan elites by embracing issues like gay marriage and the green agenda – the latter threatening the livelihoods of ordinary Australians trying to drill, mine and log their way through the global recession. It invested in silly, expensive projects that turned into giveaways to client companies and unions. And it displayed all of its internal bickering in public, reducing national politics to student union shenanigans. The ALP is now severed from the base that it once represented so well, leaving the ordinary blokes and blokesses looking around for something new.
>
> […]**On the quiet, Abbott has picked up some of the politics that the ALP abandoned. He is said to be a devotee of BA Santamaria, the Catholic thinker who tried to build a Christian Democratic movement that combined social justice and social conservatism. Abbott's conservatism is plain to see: he rejects**

> **doctrinaire environmentalism and favours a far freer and competitive market than the ALP's clients would ever tolerate.** But he also has Santamaria's concern for social justice: Abbott wants to introduce a scheme that would pay for parental leave to encourage mothers and fathers not only to spend more time with their children but to have more of them, too. Dig beneath that hard man image and you'll find a politician who is considerably softer and complex. Whereas some Western conservatives seem to be entirely motivated by the desire to win (Romney, Cameron), Abbott has a philosophy and – almost unique in our materialist age – a theology.
>
> **This puts him in the George W Bush, Stephen Harper compassionate conservative tradition – the tradition that tends to attract the most votes.** For while British Tories might look at Abbott's politics and language and sneer, they would do well to remember this important distinction. Tony Abbott wins elections; David Cameron has yet to do even that.

Congratulations, Conservative Coalition!

My previous post on Tony Abbott is here, if you want to know more about his policies.

# Poland seizes bond investments in private pension plans

**Wintery Knight** · 8 September 2013 · Archived copy · Original

Amy sent me this story from Reuters.

Excerpt:

> Poland said on Wednesday it will transfer to the state many of the assets held by private pension funds, slashing public debt but putting in doubt the future of the multi-billion-euro funds, many of them foreign-owned.
>
> The changes went deeper than many in the market expected and could fuel investor concerns that the government is ditching some business-friendly policies to try to improve its flagging popularity with voters.
>
> The Polish pension funds' organisation said the changes may be unconstitutional because the government is taking private assets away from them without offering any compensation.
>
> Announcing the long-awaited overhaul of state-guaranteed pensions, Prime Minister Donald Tusk said private funds within the state-guaranteed system would have their bond holdings transferred to a state pension vehicle, but keep their equity holdings.
>
> He said that what remained in citizens' pension pots in the private funds will be gradually transferred into the state vehicle over the last 10 years before savers hit retirement age.
>
> The reform is "a decimation of the …(private pension fund) system to open up fiscal space for an easier life now for the government," said Peter Attard Montalto of Nomura. "The government has an odd definition of private property given it claims this is not nationalisation."

I was looking for someone who could take the spin off of this and found this article on Zero Hedge.

Excerpt:

> While the world was glued to the developments in the Mediterranean in the past week, Poland took a page straight out of Rahm Emanuel's playbook and in order to not let a crisis go to waste, announced quietly that it would transfer to the state – i.e., confiscate – the bulk of assets owned by the country's private pension funds (many of them owned by such foreign firms as PIMCO parent Allianz, AXA, Generali, ING and Aviva), *without offering any compensation.* In effect, the state just nationalized roughly half of the private sector pension fund assets, although it had a more politically correct name for it: *pension overhaul*.
>
> […]By shifting some assets from the private funds into ZUS, **the government can book those assets on the state balance sheet to offset public debt, giving it more scope to borrow and spend**.

It is nationalization, and we should expect to see a lot more of it as spendthrift governments start to run of road to kick the can down. Maybe even here at home, some day. The United States is already up against the debt limit now, and our credit has been downgraded twice already. How soon until IRAs are nationalized into Social Security to prop it up?

# Why Christian parents get nervous about evidence

**Wintery Knight** · 8 September 2013 · Archived copy · Original

Homeschooling mother Dr. Lydia McGrew explains why Bible-believing Christians are uneasy with the use of evidence on her blog What's Wrong With The World. (H/T Eric Chabot)

Excerpt:

> 4) The idea that, if a young person gets deeply interested in Christian evidence, he will go out on the Internet (or at his public high school or secular college) seeking giants to slay and will get overwhelmed. Again, this worry has merit as a sociological matter. That can certainly happen.
>
> That is why we should say loud and clear to Christians interested in this topic: **Don't do that!** What do I mean? Just this: Being committed to investigating the evidence for Christianity does not mean that one has to find out *every possible thing* that anyone has ever said about or against Christianity and know the answer to it. That would be impossible because of the sheer bulk of (ultimately unpersuasive) objections which skeptics can bring up as though they were real problems.
>
> In this context the words of George Horne, an 18th century bishop, from his *Letters on Infidelity*, are wise and helpful. (Emphasis added.)
>
> In the thirty sections of their pamphlet, they have produced a list of difficulties to be met with in reading the Old and New Testament. Had I been aware of their design, I could have enriched the collection with many more, at least as good, if not a little better. But they have compiled, I dare say, what they deemed the best, and, in their own opinion, presented us with the essence of infidelity in a thumb-phial, the very fumes of which, on drawing the cork, are to strike the bench of bishops dead at once. Let not the unlearned Christian be alarmed, "as though some strange thing had happened to him," and modern philosophy had discovered arguments to demolish religion, never heard of before. The old ornaments of deism have been "broken off" upon this occasion, "and cast into the fire, and there came out this calf." These same difficulties have been again and again urged and discussed in public; again and again weighed and considered by learned and sensible men, of the laity as well as the clergy, who have by no means been induced by them to renounce their faith.
>
> [snip]
>
> Many and painful are the researches sometimes necessary to be made, for settling points of that kind. **Pertness and ignorance may ask a question in three lines, which it will cost learning and ingenuity thirty pages to answer. When this is done, the same question shall be triumphantly asked again the next year, as if nothing had ever been written upon the subject.**

And a bit later:

> 5) The unspoken fear that Christianity cannot stand up to scrutiny and doesn't really have good evidential support.
>
> Here I do not blame the parents, but not because I share the unspoken fear. I do not blame them, because in most cases no one has ever taught them otherwise. How many pastors and priests have really taught apologetics to their congregations, or even offered such studies as an option? Too few. How many courses on sharing your faith have explicitly taught people not to get involved in responding to questions and objections but just to "share their experience" because "no one can argue with that"? Too many. It's no wonder then that the congregation comes away with the sneaking suspicion that our Christian faith is no better grounded than Mormonism and that we, like they, must depend chiefly on the burning in the bosom.
>
> And one can always push the blame further back. Perhaps the pastors weren't taught Christian evidences at their seminaries.

> In fact, I would not be surprised if all too many theologians who give high-falutin' rationalizations for being anti-evidentialist are actually making a virtue out of what they deem to be a necessity. Since they don't think Christian faith *is* founded on fact, they might as well make up some profound-sounding theological theory that tells us that it shouldn't be.
>
> When Nathanael asks Philip, "Can any good thing come out of Nazareth?" Philip simply says, "Come and see." (John 1:46) And he brings him to Jesus. If you as a parent or mentor to the young are opposed to the study of Christian evidences partly because deep down you suspect that they aren't very good, I can only say to you as well, "Come and see."

I blogged about this tendency of church leaders to make a virtue out of laziness and ignorance before.

Here's a snip:

> Suppose a pastor or campus group leader wants to avoid having to learn physics and cosmology, or the minimum facts case for the resurrection, or how to respond to apparently gratuitous suffering, or the problem of religious pluralism. Suppose he thinks that Christianity, if it is about anything, is about his feeling happy and comfortable with a minimum of effort and work. So, he diligently avoids reading apologetics, because learning evidence is hard work. He avoids watching debates on God's existence and the resurrection, because this is hard work. He avoids conversations with people who do study these things, and implies that there is something wrong with them for studying these things. He endeavors to conceal his laziness and ignorance and cowardice from his flock with much pious God-talk and fervent praise-hymn-singing.
>
> Eventually, some member of his church asks him to go for lunch with an actual non-Christian family member. The pastor agrees and when he meets the unbelieving family member, he has nothing at all to say about typical challenges that unbelievers face. He has no knowledge of evolution, the problem of evil, the hiddenness of God, or the hallucination theory. He has never read a single atheist, and never read a single piece of evidence to refute them from Christian scholars. He lacks humility, refusing to admit that other Christian scholars may know more than he does because they have studied other areas. Needless to say, he fails to defend God's reputation to the non-Christian. What will he say to the members of his flock about his failure? How will he justify his obstinate refusal to do what everyone else in the Bible does when confronting non-believers?
>
> Well, consider this review of a recent book that defends the Gospels and the historicity of the resurrection by one such fideist pastor.
>
> He writes:
>
> There are, however, two significant shortcomings to the book.
>
> First, *Cold-Case Christianity* places far too much emphasis on the role of extrabiblical sources. No doubt there is a legitimate role for biblical archaeology and extrabiblical writing from antiquity. Christianity is, after all, a faith firmly rooted in human history. But there is a grave danger when truth is suspended because of an apparent lack of corroboration from extrabiblical sources. And Wallace, I'm afraid, wanders too close to this dark side of apologetics.
>
> All of chapter 12, for instance, is devoted to proving the Gospels have external corroborative evidence—"evidence that are independent of the Gospel documents yet verify the claims of the text" (183). Wallace then addresses the historicity of the pool of Bethesda and makes another worrying statement: "For many years, there was no evidence for such a place outside of John's Gospel. Because Christianity makes historical claims, archaeology ought to be a tool we can use to see *if these claims are, in fact, true*" (201-202, emphasis added).
>
> In other words, Wallace seems to suggest we cannot affirm the truth of the Gospel accounts without the stamp of approval from archaeology and other extrabiblical sources. Such reasoning is dangerous, not least because it cannot affirm the inerrancy of the Bible. But also, it places the final court of appeal in the realm of extrabiblical

> sources rather than of God's all-sufficient, all-powerful Word.
>
> That is a textbook definition of fideism – that belief is somehow more pious and praiseworthy the less evidence we have. And the best way to have less evidence is to study nothing at all, but to just make a leap-of-faith in the dark. Of course, a leap-of-faith can land you anywhere – Islam, Mormonism. Presumably this pastor is like the Mormons who eschew all evidence and prefer to detect the truth of Mormonism by "the burning of the bosom" which happens when people read the all-sufficient, all-powerful Book of Mormon. His view of faith is identical to theirs, and 180 degrees opposed to the Bible. He has made his leap-of-faith, and that leap-of-faith is not accountable to arguments and evidence. His faith is private and personal, based on his own feelings. He considers it blasphemous to have to demonstrate what he believes to those who disagree with him. Where is this in the Bible? It's nowhere. But it is everywhere in anti-intellectual Christian circles.
>
> […]I think that Christians are much better off following the example of authentic Christian pastors like R.C. Sproul, who, in a conference on evangelism, invited Dr. Stephen C. Meyer to present multiple lines of evidence from mainstream science to establish the existence of God. The only reason not to take this approach is laziness, which leads to ignorance, which leads to cowardice. And failure. It is pastors like Pastor Bungle above who are responsible for the great falling away from Christianity that we are seeing when we look at young people. Pastors who pride themselves in refusing to connecting the Bible to the real world, with evidence and with policy analysis, are causing young people to abandon the faith.

I think that many people who reject Christianity can point to a general impression that they got from Pastor Bungle and his ilk that faith is somehow *different from other areas of knowledge* and that it was *morally praise worthy to insulate faith from critical thinking and evidence*. Pastor Bungle could never justify his view by using the Bible, but a lot of church leaders have that view regardless of whether it's Biblical or not.

The really troubling thing that I see again and again in the church is when pastors base all of their opposition to behaviors like abortion and gay marriage on Christianity. This effectively makes it impossible to do anything about these issues in the public square, because Christians are then taught to have nothing persuasive to say on these issues to non-Christians. It's like pastors are more interested in striking a pious pose with their congregations instead of studying secular arguments and evidence so they can equip Christians to actually solve the problem.

# Should college students be allowed to opt out of graphic sex education?

**Wintery Knight** · 8 September 2013 · Archived copy · Original

Life News reports.

Excerpt:

> When 18-year-old twins Bella and Angelica Ayala found out that the sexual harassment session in their freshman orientation program included a graphic sex-ed presentation, they decided to opt out. The pro-life Catholic students respectfully voiced their desire to not partake in the program prior to its start.
>
> Bella told the pro-life group Survivors, "My sister actually contacted the orientation program beforehand to request that we be exempt from attending this part of orientation, but was given an ambiguous answer."
>
> A week after Angelica called the orientation program, a mass e-mail was sent out from the New Student & Transition Programs citing UCLA's policy codes and federal/state laws saying the presentation was mandated. Regardless, the Ayalas later received permission from their counselors to leave the program. The option to not partake in the sex-ed part of the program was not given to any other students.
>
> Angelica was told she wouldn't have to be present during the sex ed portion, but after she walked out, she was later reprimanded and told she'd have to make up the session. If she refused to make up the session, she was informed that the university would put a hold on her academic records.
>
> Before the session, the twins distributed literature to their peers that discussed STDs and risks of having sex prior to marriage. A counselor seeing the students reading the literature said, "This is not the message we want to communicate." The counselor told Angelica she knew she was responsible for passing out the literature and it wasn't allowed because the talk was a private event and she'd need permission from the dean's office to hand out information. A counselor took the pamphlets from the students by demanding they pass back the materials.

Jewish radio show host Dennis Prager often calls universities and colleges "left-wing seminaries", and stories like this help us to see why. More examples can be found in Prager's story on Florida Atlantic University and Prager's story on the University of Southern California.

If you are going to college, I really recommend that you try to focus on STEM areas (science, technology, engineering and mathematics). You do not want left-wing radicals taking your money and using the power of grading to indoctrinate you in false views. University is not the place for you to critically examine the views of leftists. There is no critical thinking in a left-wing seminary. It's better to get your degree in computer science, get a job, and then work on the big questions on your own without having to face coercion and narrow-mindedness.

# UK scientists predict global cooling after record Arctic ice growth

**Wintery Knight** · 9 September 2013 · Archived copy · Original

No significant global warming in 15 years
From the UK Telegraph.

Excerpt:

> **A cold Arctic summer has led to a record increase in the ice cap, leading experts to predict a period of global cooling.**
>
> **There has been a 60 per cent increase in the amount of ocean covered with ice compared to this time last year, they equivalent of almost a million square miles.**
>
> In a rebound from 2012's record low an unbroken ice sheet more than half the size of Europe already stretches from the Canadian islands to Russia's northern shores, days before the annual re-freeze is even set to begin.
>
> The Northwest Passage from the Atlantic to the Pacific has remained blocked by pack-ice all year, forcing some ships to change their routes.
>
> A leaked report to the UN Intergovernmental Panel on Climate Change (IPCC) seen by the Mail on Sunday, has led some scientists to claim that the world is heading for a period of cooling that will not end until the middle of this century.

> If correct, it would contradict computer forecasts of imminent catastrophic warming. The news comes several years after the BBC predicted that the arctic would be ice-free by 2013.
>
> Despite the original forecasts, major climate research centres now accept that there has been a "pause" in global warming since 1997.
>
> **The original predictions led to billions being invested in green measures to combat the effects of climate change.**

Yes, well. The BBC is run by the British government. It should be no surprise to anyone that they are going to say anything that results in bigger government. That is how they get paid. Of course the BBC thinks that government needs to control individual consumption and energy production – they want bigger government because bigger

government means bigger salaries for the BBC.

I, for one, cannot wait to hear the leftists journalists who marveled at the stupidity of Republican voters who denied global warming complain that it really was global cooling that was the problem all along. And the solution is never going to be lower taxes and free market capitalism. The solution will always be more government control of business, families and individuals.

You know, I like to make fun of Christians who read end-of-the-world fiction, but I think even they know that what they are reading is fiction. The really scary thing about left-wing journalists, college professors, Hollywood celebrities, etc. is that they really believe their own nonsense. They see a picture of a polar bear on a small ice floe, and they think “The planet is on fire! It’s the end of the world!”. That’s scary. It’s scary that people who don’t understand science can vote.

# Quebec citizens dissatisfied with expensive government-run daycare

**Wintery Knight** · 9 September 2013 · Archived copy · Original

IMFC researcher Andrea Mrozek writes about a new survey in the Montreal Gazette.

Excerpt:

> For 16 years, the Quebec government has been providing highly subsidized daycare. Canada-wide and indeed internationally, this $7-a-day system is praised as a leading example and the path to follow.
>
> The question is whether Quebecers actually feel that way.
>
> Our recent poll about Canadians' daycare desires shows some interesting results in Quebec (imfcanada.org/daycaredesires/Quebec). When asked what Quebecers ideally prefer for children under age 6, a competent caregiver or a parent, 70 per cent of Quebecers say a parent.
>
> In short, a clear majority of Quebecers believe that the best place for children under 6 is with a parent — in spite of having a provincially funded system that gives preference to daycare centres.
>
> A second surprising result also emerged. When given options about how governments should help parents with child care, almost half of Quebecers polled (45 per cent) said money should go directly to parents. This option was placed next to other options like subsidies to childcare centres, child-tax deductions or providing funding exclusively for families in need, among others.
>
> Surprisingly, more Quebecers believed that money should go directly to parents; by way of contrast, 25 per cent of Canadians outside Quebec said governments should provide cash payments directly to parents.
>
> These poll results leave us with a lot to think about with regard to how governments enact childcare policy. Seven in 10 Quebecers believe the best place for a child under six is with a parent. Yet the government's public policy on that point does not remotely reflect this desire.
>
> In fact, when the government introduced its policy of subsidized daycare, other family funding and programs were cut. Scholars have shown how other family benefits were cancelled as Quebec ramped up spending on institutional daycare.
>
> Some may think the Quebec program is very popular simply because so many parents use it. That may not be the case. Anytime a government provides a service at lower-than-market costs, it provides an incentive to use that service. The reality is that child care is actually very expensive, regardless of who provides it. When the government provides it, we are all paying for it through increased taxes.
>
> In our poll, we asked simple and somewhat idealistic questions as to where children under 6 are better off. "What is best for children" is not necessarily the same as asking about what is possible for families. The two ought not be confused, of course. There might be many parents who think their presence would be better for their kids, but they simply cannot afford to stay home. Personal circumstances are just that, personal, and they vary from family to family.
>
> Still, there should still be a place for idealism — for a blue-sky view of how we would like things to go. And public policy should assess opportunity costs and unintended consequences. Where public policy is divorced from citizens' desires, it does taxpayers a disservice. In effect, it means taxpayers are paying for something they would rather not use.

Quebec is the most liberal province in Canada, and it only survives because it receives *massive* transfers of wealth from the other business-friendly provinces. But that doesn't stop them from sneering at their enablers, or from passive expensive socialist programs. But they do serve as a lesson to us – government doesn't do child care better than moms and dads. And we shouldn't be paying them massive amounts of money them to do things that they don't

do well. The ideology of feminism isn't more important than the needs of children.

# Air Force sergeant who disagreed with homosexuality faces court martial

**Wintery Knight** · 9 September 2013 · Archived copy · Original

Todd Starnes of Fox News reports.

Excerpt:

> A 19-year Air Force veteran who was relieved of his duties because he disagreed with his openly gay commander over gay marriage is now facing a formal investigation after he told me his story.
>
> Senior Master Sgt. Phillip Monk found himself at odds with his Lackland Air Force Base commander after he objected to her plans to severely punish an instructor who had expressed religious objections to homosexuality. During the conversation, his commander ordered him to share his personal views on homosexuality.
>
> "I was relieved of my position because I don't agree with my commander's position on gay marriage," he told me. "We've been told that if you publicly say that homosexuality is wrong, you are in violation of Air Force policy."
>
> In one of her first meetings with Monk, the commander expressed concern about the chaplain who would deliver the benediction at her promotion ceremony.
>
> "She said she wanted a chaplain but objected to one particular chaplain that she called a bigot because he preached that homosexuality is a sin," Monk said.
>
> After he was relieved of his duties, the Liberty Institute filed a religious discrimination complaint on his behalf.
>
> Last week, Monk was supposed to meet with an Air Force investigator tasked with gathering facts about the complaint. But when he arrived, Monk was immediately read his Miranda Rights and accused of providing false statements in a conversation Monk had with me.
>
> "I immediately got the sense that this was retaliation against me for coming forward with my religious discrimination complaint," he said.
>
> The accusations against Monk are a court-martial offense in the Air Force – and it's quite possible that the 19-year veteran with a spotless record could be booted out of the military because of his Christian beliefs.

That's why I found it so strange when I heard that people who called themselves Christians voted for Obama in 2008 or 2012. Anyone with a brain in their head who claimed to be Christian knew that they were voting for abortion, gay marriage and reduced religious liberty. That's what we have now – there is no denying it. Democrats are not the party of religious liberty. They are against it. They view religious expression as something they have to destroy – by any means necessary. It should make us think about what we are doing by celebrating and affirming sin.

There is a reason why sin is called sin. Part of it is that the people who do it tend to be the kind of people who are willing to use force to get others to affirm them in what they are doing. Part of it is that it causes harm to others, often to unborn or born children – depriving them of what they need and treating them like commodities. That's why Christians should be diligent about what behaviors they affirm and who they vote for. Christianity is not a religion that has celebrating and condoning of immorality at its core.

# How governor Rick Scott created jobs and eliminated a $3.5 billion debt in Florida

**Wintery Knight** · 10 September 2013 · Archived copy · Original

This post at A View From The Right had the full transcript of the Florida governor's recent speech at the recent "Defending the American Dream Summit". I thought it was interesting to see what he was doing, since I have sort of been neglecting him and concentrating my attention on other Republican governors like Scott Walker, John Kasich, Bobby Jindal and Mike Pence.

He inherited a bad situation from his predecessor:

> In 2010, our state was in a free fall. We had lost more than 800,000 jobs during the four years before I took office. Our real estate market had collapsed. Our state debt had grown by about a billion dollars a year for two decades. And, thousands of government regulations were killing job creation.
>
> […]DC's spending addiction had spread to Florida. Hard decisions had been delayed and replaced with the shortsighted policies of more debt and more spending. Florida was in a hole, and for about four years the state just kept digging.
>
> When I took office, the bill had come due.
>
> It was time to stop digging and climb out of the hole. We knew the only way out was to create jobs. Taxes are primarily paid by successful companies and people with jobs. In Florida, it was time to make the hard decisions to: Right-size government. Reduce spending. And pay down debt.

Here's some of what the Scott administration has done:

> I took office with a projected $3.6 billion budget gap. As we made the hard decisions to live within our means during my first year in office, there was plenty of criticism to go around. We streamlined services and targeted reforms to help businesses compete. But, we heard from the critics when we turned down stimulus funds and balanced the budget. They said, federal money was "free." I was told to grab all the free federal money I could.
>
> As part of our effort to reduce fraud and help families, we also passed legislation requiring drug testing for welfare recipients. The critics were mad. They said that drug testing someone applying for welfare was a violation of their rights. I disagree. Welfare is designed to support children, and parents receiving government assistance should be drug free. Illegal drug use has no place in any family. Unfortunately, this reform is still stuck in the courts. But, we will keep fighting.
>
> To further reduce government waste, we reformed our unemployment assistance program. Federal unemployment money was pouring out of DC, but there wasn't enough oversight in place to limit waste and abuse. We passed a law to require people on unemployment to show they were actively seeking a job every week.

And more:

> I have now been in office for more than two years and we are beginning to see the results of conservative, pro-growth solutions in Florida:
>
> * We have turned around a four-year record of 800,000 lost jobs before I took office, and the private sector in Florida has now created nearly 370,000 jobs over the last 2 1/2 years.
>
> * Our unemployment rate has dropped below the national average, and Florida's rate has had the second biggest improvement in the country.
>
> * We have paid off $3.5 billion in state debt.

> * We have downsized our state government workforce to the lowest level in the history of Florida. Why? Because the private sector is the engine to job creation -– not government.
>
> * We have eliminated more than 2,600 state regulations on job creators.
>
> * We paid back $3.5 billion in federal loans for re-employment assistance.
>
> * And, we did all this while also cutting taxes five times in three years, including: The elimination of the sales tax on manufacturing equipment to help jump-start manufacturing investment. Continuing to roll back the business tax, so that today around 70 percent of our businesses no longer pay it. And, we cut property taxes for homeowners and businesses.
>
> […]* After right-sizing government and cutting taxes, this year, we had our first budget surplus in six years. But, it gets better.
>
> * Just a few weeks ago, our State Revenue Estimating Conference announced that the general revenue now forecasted for 2014-2015 in Florida will be the highest ever. The highest ever.

How are they doing it? With big government spending on “stimulus” programs? No:

> Working with the Florida Legislature, we have cut taxes year after year, even while forcing government to live within its means. This year, we are committed to returning even more money to the hard-working Florida families who earn it. I look forward to working with our friends in the Florida Legislature to make these tax cuts a reality.

They are cutting government spending and returning the taxes to the taxpayers. This is a good state to be in now, especially if you want to run your own business. What I liked about the speech is that he is passionate about pro-growth policies. While others seemed to be ashamed of low taxes and small government, Governor Scott is producing results and linking those good results to his conservative policies. I think that the next time we have an election, it should be about choosing the person who has proven that they know how to run an economy. Governor Scott should be in the mix. The best stimulus program is a job, and we should be picking people who have proven that they know how to create jobs.

# Governor Bobby Jindal's fight to give poor, minority children quality education

**Wintery Knight** · 10 September 2013 · Archived copy · Original

Here's an update on the Democrat war on vouchers in Louisiana, posted by governor Bobby Jindal in the left-leaning Washington Post. In it, he explains how is trying to reform education in his home state of Louisiana, and how the federal government is trying to stop him for doing that.

Excerpt:

> We all know the harsh cycle of poverty that exists in the United States and that a disproportionate share of those in poverty are minorities. Studies of health-care outcomes, incarceration levels and economic opportunity all show that education is key to improving quality of life.
>
> Millions of single parents in this country work two jobs to make ends meet, hoping that their children won't have the same struggles. Hope is their only option because they live in neighborhoods with chronically failing public schools and lack the means to move to better school districts or to send their children to private schools.
>
> Obama and Holder think this should continue to be the reality. In Louisiana, we think the opposite is true. We believe every child deserves the opportunity to get a great education.
>
> That's why we started a school choice program in 2008 in New Orleans and expanded it statewide in 2012. Low-income families with children in schools graded C, D or F by the state are eligible to apply for a scholarship and send their children to schools of their choice.
>
> The program works. From 2011 to 2013, students who had been trapped in failing schools and now attend scholarship schools showed improvement on literacy and math tests. The share of students performing at grade level rose 7 percent, state data show, even though in 2013, 60 percent of students taking the test had been in their new schools for only eight months. More than 90 percent of parents of students participating in the program reported satisfaction with their children's schools.
>
> This opportunity is perhaps these children's best chance to escape the cycle of poverty. No one in their right mind could argue that the Justice Department's efforts to block the scholarship program will help these kids. This can only be an attempt to curry favor with the government unions that provide financial largess and political power.
>
> President Obama should do the right thing and order the Justice Department to drop the lawsuit. Not because I am asking, but because the parents and children in the scholarship program deserve an opportunity. For generations, the government has forced these families to hope for the best from failing schools. Shame on all of us for standing by and watching generations of children stay in failing schools that may have led them to lives of poverty.
>
> We in Louisiana are rejecting the status quo because we believe every child should have the opportunity to succeed. A scholarship program is not a silver bullet for student success. Maybe a student will perform well in a traditional public school, or a charter school, or a virtual school, but the point is that parents should be able to decide, not bureaucrats in Baton Rouge or Washington.
>
> If the president and the attorney general believe their path is right, I invite them to come to Louisiana and look these parents and children in the eyes and explain why they believe every child shouldn't have a fair shake.
>
> If the administration does not drop this lawsuit, we will fight every step of the way until the children prevail. Giving every child — no matter race or income — the opportunity to get a great education is a moral imperative.

You might remember that the Obama administration previously went after the D.C. voucher program, which was

also for helping poor, minority students. Why are the Democrats doing this? The answer is simple. Come election time, the Democrats rely heavily on the fundraising and activism of the teacher unions. The teacher unions have more money if they have more children trapped in their failing public schools. Therefore, Obama has every incentive to make sure that no child is allowed to leave a failing school. He needs the help of the teacher unions at election time more than he needs to help children who cannot even vote. That's what is really going on here. Bobby Jindal would love to have the support of teacher unions, but given the choice between helping the unions and helping the children, he's choosing the children.

The main point here is that the politicians who talk the most about spending more money on education may not be thinking about what is best for children at all. They might be thinking about paying their union supporters more, so that they will do more at election time. An alternative to just giving more money to the unions would be Jindal's plan of giving money directly to parents and letting parents choose. Parents might not be as politically connected as teacher unions, but if your goal is to help children get an education, then maybe unions and elections don't matter as much.

# Near-death experiences and mental effort: evidence for the soul

**Wintery Knight** · 10 September 2013 · Archived copy · Original

I was listening to J. Warner Wallace's latest podcast on the mind and the brain last night and he mentioned 6 philosophical arguments for the existence of a non-physical mind. But he also said that science didn't have much to say on this question of mind/brain and body/soul. I think that there is some evidence for the the soul.

In this post, I wanted to link to a previous post the research of Dr. Jeffrey Schwartz. That research on "mental effort" is my first piece of evidence. Below, there is a second piece of evidence from "corroborated near-death experiences". This should help boost Wallace's case for the mind. I will do a separate post on Wallace's podcast later in the week. It was a great podcast.

**Near-death experiences**

Dr. Mario Beauregard writes about out of body experiences and near death experiences in the leftist Salon.com, of all places.

NDE number one:

> Pam was brought into the operating room at 7:15 a.m., she was given general anesthesia, and she quickly lost conscious awareness. At this point, Spetzler and his team of more than 20 physicians, nurses, and technicians went to work. They lubricated Pam's eyes to prevent drying, and taped them shut. They attached EEG electrodes to monitor the electrical activity of her cerebral cortex. They inserted small, molded speakers into her ears and secured them with gauze and tape. The speakers would emit repeated 100-decibel clicks—approximately the noise produced by a speeding express train—eliminating outside sounds and measuring the activity of her brainstem.
>
> At 8:40 a.m., the tray of surgical instruments was uncovered, and Robert Spetzler began cutting through Pam's skull with a special surgical saw that produced a noise similar to a dental drill. At this moment, Pam later said, she felt herself "pop" out of her body and hover above it, watching as doctors worked on her body.

> Although she no longer had use of her eyes and ears, she described her observations in terms of her senses and perceptions. "I thought the way they had my head shaved was very peculiar," she said. "I expected them to take all of the hair, but they did not." She also described the Midas Rex bone saw ("The saw thing that I hated the sound of looked like an electric toothbrush and it had a dent in it … ") and the dental-drill sound it made with considerable accuracy.
>
> Meanwhile, Spetzler was removing the outermost membrane of Pamela's brain, cutting it open with scissors. At about the same time, a female cardiac surgeon was attempting to locate the femoral artery in Pam's right groin. Remarkably, Pam later claimed to remember a female voice saying, "We have a problem. Her arteries are too small." And then a male voice: "Try the other side." Medical records confirm this conversation, yet Pam could not have heard them.

I like the second one even better than the first.

NDE number two:

> Maria was a migrant worker who had a severe heart attack while visiting friends in Seattle. She was rushed to Harborview Hospital and placed in the coronary care unit. A few days later, she had a cardiac arrest but was rapidly resuscitated. The following day, Clark visited her. Maria told Clark that during her cardiac arrest she was able to look down from the ceiling and watch the medical team at work on her body. At one point in this experience, said Maria, she found herself outside the hospital and spotted a tennis shoe on the ledge of the

> north side of the third floor of the building. She was able to provide several details regarding its appearance, including the observations that one of its laces was stuck underneath the heel and that the little toe area was worn. Maria wanted to know for sure whether she had “really” seen that shoe, and she begged Clark to try to locate it.
>
> Quite skeptical, Clark went to the location described by Maria—and found the tennis shoe. From the window of her hospital room, the details that Maria had recounted could not be discerned. But upon retrieval of the shoe, Clark confirmed Maria’s observations. “The only way she could have had such a perspective,” said Clark, “was if she had been floating right outside and at very close range to the tennis shoe. I retrieved the shoe and brought it back to Maria; it was very concrete evidence for me.”
>
> This case is particularly impressive given that during cardiac arrest, the flow of blood to the brain is interrupted. When this happens, the brain’s electrical activity (as measured with EEG) disappears after 10 to 20 seconds. In this state, a patient is deeply comatose. Because the brain structures mediating higher mental functions are severely impaired, such patients are expected to have no clear and lucid mental experiences that will be remembered. Nonetheless, studies conducted in the Netherlands, United Kingdom, and United States have revealed that approximately 15 percent of cardiac arrest survivors do report some recollection from the time when they were clinically dead. These studies indicate that consciousness, perceptions, thoughts, and feelings can be experienced during a period when the brain shows no measurable activity.

Here’s the author bio:

> Mario Beauregard is associate research professor at the Departments of Psychology and Radiology and the Neuroscience Research Center at the University of Montreal. He is the coauthor of “The Spiritual Brain” and more than one hundred publications in neuroscience, psychology and psychiatry.

It’s a helpful article, and one you might want to share or tweet to get a discussion started.

# Fox Sports fires commentator Craig James for expressing disapproval of homosexuality

**Wintery Knight** · 11 September 2013 · Archived copy · Original

Mysterious Chris S. posted this article by Tony Perkins of the Family Research Council.

Excerpt:

> As a former quarterback, Craig James isn't used to being on the defensive. But unfortunately, that's exactly where Fox Sports is putting him in a story that should rock the football world. The retired Pro-Bowler became the latest face of the war on religious liberty, when — after one day on the job — Fox Sports gave James the boot for his conservative views on marriage. And here's the kicker: he made the comments, not at the sports desk, but during last year's Senate campaign!
>
> Apart from being a popular analyst, Craig also had political aspirations — aspirations he followed to Texas in an unsuccessful bid against Ted Cruz during the primary. In the course of the campaign, Craig was asked — as all candidates are — about his views on marriage and sexuality. James's opinion happens to coincide with the research, which is that no one is born gay. And, as an orthodox Christian, he didn't shy away from the eternal consequences of this sin or any other. "…[T]hey are going to have to answer to the Lord for their actions," he said before pledging not to support same-sex unions.
>
> According to *Sports Illustrated*, the regional affiliate of Fox hired Craig without involving upper management. "Fox Sports executives were not happy with the hire by the regional network," sources explain. High level executives felt he hadn't been properly vetted (or, properly excluded, depending on how you look at it). When the news broke, a Fox Sports spokesman tried to explain away the network's religious profiling. "We just asked ourselves how Craig's statements would play in our human resources department. He couldn't say those things here."
>
> First off, Craig *didn't* say them there — or anywhere in his commentating capacity. He stated his position as a candidate for public office — in response to legitimate constituent questions. To suggest that having an opinion on cultural issues disqualifies you from breaking down football plays is outrageous — especially when that opinion is shared by the majority of Americans! Is the grip of religious hostility so tight that Americans can't even have an open debate for fear it'll cost them their jobs?
>
> Dr. Angela McCaskill, Jerry Buell, Julea Ward, Damian Goddard, Senior Master Sergeant Phillip Monk, Crystal Dixon, and Air National Guardsman Layne Wilson certainly think so. To a man, they were all suspended, fired, or sued by their employers for their views on marriage — whether or not they expressed them at work! Like them, Craig James's ousting had nothing to do with his job performance — and everything to do with this new climate of Christian persecution.
>
> From the military to Fox Sports to city halls like San Antonio's, the overwhelming message seems to be that when it comes to the public arena, conservative Christians need not apply. Let the network know what a disappointment their political correctness is by contacting Fox Sports and protesting Craig James's dismissal.

By the way, I never miss the FRC podcasts and I mentioned both their daily and weekend podcast feeds in my recent post about my favorite podcasts. I start my day every morning with the Al Mohler Daily Briefing and the Family Research Council Daily Podcast during my morning commute. Take a look at my podcast post and see if there are any shows that you didn't know about. There are good podcasts in there on fiscal issues, foreign policy issues, social issues and lots of science and Christian apologetics, too.

# MIT physicist explains the fine-tuning argument and the naturalistic response to it

**Wintery Knight** · 11 September 2013 · Archived copy · Original

Here's the article from Harper's magazine. The MIT physicist says that the fine-tuning is real, and is best explained by positing the existence of an infinite number of universes that are not fine-tuned – the so-called multiverse.

Excerpt:

> While challenging the Platonic dream of theoretical physicists, the multiverse idea does explain one aspect of our universe that has unsettled some scientists for years: according to various calculations, if the values of some of the fundamental parameters of our universe were a little larger or a little smaller, life could not have arisen. For example, if the nuclear force were a few percentage points stronger than it actually is, then all the hydrogen atoms in the infant universe would have fused with other hydrogen atoms to make helium, and there would be no hydrogen left. No hydrogen means no water. Although we are far from certain about what conditions are necessary for life, most biologists believe that water is necessary. On the other hand, if the nuclear force were substantially weaker than what it actually is, then the complex atoms needed for biology could not hold together. As another example, if the relationship between the strengths of the gravitational force and the electromagnetic force were not close to what it is, then the cosmos would not harbor any stars that explode and spew out life-supporting chemical elements into space or any other stars that form planets. Both kinds of stars are required for the emergence of life. The strengths of the basic forces and certain other fundamental parameters in our universe appear to be "fine-tuned" to allow the existence of life. The recognition of this finetuning led British physicist Brandon Carter to articulate what he called the anthropic principle, which states that the universe must have the parameters it does because we are here to observe it. Actually, the word *anthropic*, from the Greek for "man," is a misnomer: if these fundamental parameters were much different from what they are, it is not only human beings who would not exist. No life of any kind would exist.

It's very important to note that life has certain minimum requirements, like stable stars, chemical diversity, universal solvent, etc. If we change the value of the finely-tuned constants and quantities, it's not that we will get a different kinds of life instead of life that we have now. Changing the quantities and constants means that we have no life *of any kind.* Maybe we are in a universe that has re-collapsed, or contains only hydrogen, or contains no hydrogen. We don't have the minimum requirements for the minimal functions of any living system. That's what the fine-tuning argument argues for – conditions for life *of any kind.* Not conditions for *human beings as we currently observe them.* To find out more about this important point, check out this previous post featuring Dr. Walter Bradley.

More from the article:

> If such conclusions are correct, the great question, of course, is *why* these fundamental parameters happen to lie within the range needed for life. Does the universe care about life? Intelligent design is one answer. Indeed, a fair number of theologians, philosophers, and even some scientists have used fine-tuning and the anthropic principle as evidence of the existence of God. For example, at the 2011 Christian Scholars' Conference at Pepperdine University, Francis Collins, a leading geneticist and director of the National Institutes of Health, said, "To get our universe, with all of its potential for complexities or any kind of potential for any kind of life-form, everything has to be precisely defined on this knife edge of improbability…. [Y]ou have to see the hands of a creator who set the parameters to be just so because the creator was interested in something a little more complicated than random particles."
>
> Intelligent design, however, is an answer to fine-tuning that does not appeal to most scientists. The multiverse

> offers another explanation. If there are countless different universes with different properties—for example, some with nuclear forces much stronger than in our universe and some with nuclear forces much weaker—then some of those universes will allow the emergence of life and some will not. Some of those universes will be dead, lifeless hulks of matter and energy, and others will permit the emergence of cells, plants and animals, minds. From the huge range of possible universes predicted by the theories, the fraction of universes with life is undoubtedly small. But that doesn't matter. We live in one of the universes that permits life because otherwise we wouldn't be here to ask the question.

I thought I was going to have to go outside this article to refute the multiverse, but Lightman is honest enough to refute it himself:

> The… conjecture that there are many other worlds… [T]here is no way they can prove this conjecture. That same uncertainty disturbs many physicists who are adjusting to the idea of the multiverse. Not only must we accept that basic properties of our universe are accidental and uncalculable. In addition, we must believe in the existence of many other universes. But we have no conceivable way of observing these other universes and cannot prove their existence. Thus, to explain what we see in the world and in our mental deductions, we must believe in what we cannot prove.
>
> Sound familiar? Theologians are accustomed to taking some beliefs on faith. Scientists are not. All we can do is hope that the same theories that predict the multiverse also produce many other predictions that we can test here in our own universe. But the other universes themselves will almost certainly remain a conjecture.

The multiverse is not pure nonsense, it is theoretically possible. The problem is that the multiverse generator itself would require fine-tuning, and, as Lightman indicates, we have no independent experimental evidence for the existence of the multiverse. So if you want to believe in the multiverse, then you are stuck waiting for evidence to confirm it. Meanwhile, the fine-tuning that we know about today is based on current evidence, and that evidence is best explained today by postulating a Designer.

Within the last 100 years, we have discovered that the physical universe came into being out of nothing 15 billion years ago, and we have discovered that this one universe is fine-tuned for intelligent life. Atheists are 100 years out of date, and they are hoping that all of this 100 years of progress will be overturned, so that they can go back to their comfortable belief that the universe is eternal and that the parameters of this universe are undesigned.

**See it tested in a debate**

To see the fine-tuning argument examined in a debate with a famous atheist, simply watch the debate between William Lane Craig and Christopher Hitchens, and judge which debater is willing to form his beliefs on scientific progress, and which debater is forming his beliefs *against* the science we have today, and hoping that the good science we have today based on experiments will be overturned by speculative theories at some point in the future. When you watch that debate, it becomes very clear that Christian theists are interested in conforming their beliefs to science, and atheists are very interested in speculating against what science has shown.

# J. Warner Wallace: six reasons why you should believe in non-physical minds

**Wintery Knight** · 11 September 2013 · Archived copy · Original

(Podcast uploaded, with permission, by ReligioPolitical Talk)

This podcast is a must-listen. Please take the time to download this podcast and listen to it. I guarantee that you will love this podcast. I even recommended it to my *Dad* and I almost never do that.

Details:

> In this podcast, J. Warner examines the evidence for the existence of the mind (and inferentially, the soul) as he looks at six classic philosophical arguments. Jim also briefly discusses Thomas Nagel's book, Mind and Cosmos and discusses the limitations of physicalism.

The MP3 file is here. (67 MB, 72 minutes)

Topics:

- Atheist Thomas Nagel's latest book "Mind and Cosmos" makes the case that materialism cannot account for the evidence of mental phenomena
- Nagel writes in this recent New York Times article that materialism cannot account for the reality of consciousness, meaning, intention and purpose
- Quote from the Nagel article:

> Even though the theistic outlook, in some versions, is consistent with the available scientific evidence, I don't believe it, and am drawn instead to a naturalistic, though non-materialist, alternative. Mind, I suspect, is not an inexplicable accident or a divine and anomalous gift but a basic aspect of nature that we will not understand until we transcend the built-in limits of contemporary scientific orthodoxy.

- When looking at this question, it's important to not have our conclusions pre-determined by presupposing materialism or atheism
- If your mind/soul doesn't exist and you are a purely physical being then that is a defeater for Christianity, so we need to respond
- Traditionally, Christians have been committed to a view of human nature called "dualism" – human beings are souls who *have* bodies
- The best way* to argue for the existence of the soul is using philosophical arguments

The case:

- The law of identity says that if A = B' if A and B have the exact same properties
- If A = the mind and B = the brain, then is A identical to B?
- Wallace will present 6 arguments to show that A is not identical to B because they have different properties

Not everyone of the arguments below might make sense to you, but you will probably find one or two that strike you as correct. Some of the points are more illustrative than persuasive, like #2. However, I do find #3, #5 and #6 persuasive.

1) First-person access to mental properties

- Thought experiment: Imagine your dream car, and picture it clearly in your mind

- If we invited an artist to come and sketch out your dream car, then we could see your dream car's shape on paper
- This concept of your dream car is not something that people can see by looking at your brain structure
- Physical properties can be physically accessed, but the properties of your dream care and privately accessed

2) Our experience of consciousness implies that we are not our bodies

- Common sense notion of personhood is that we own our bodies, but we are not our bodies

3) Persistent self-identity through time

- Thought experiment: replacing a new car with an old car one piece at a time
- When you change even the smallest part of a physical object, it changes the identity of that object
- Similarly, your body is undergoing changes constantly over time
- Every cell in your body is different from the body you had 10 years ago
- Even your brain cells undergo changes (see this from New Scientist – WK)
- If you are the same person you were 10 years ago, then you are not your physical body

4) Mental properties cannot be measured like physical objects

- Physical objects can be measured (e.g. – use physical measurements to measure weight, size, etc.)
- Mental properties cannot be measured

5) Intentionality or About-ness

- Mental entities can refer to realities that are physical, something outside of themselves
- A tree is not about anything, it just is a physical object
- But you can have thoughts about the tree out there in the garden that needs water

6) Free will and personal responsibility

- If humans are purely physical, then all our actions are determined by sensory inputs and genetic programming
- Biological determinism is not compatible with free will, and free will is required for personal responsibility
- Our experience of moral choices and moral responsibility requires free will, and free will requires minds/souls

He spends the last 10 minutes of the podcast responding to naturalistic objections to the mind/soul hypothesis.

*Now in the podcast, Wallace does say that scientific evidence is not the best kind of evidence to use when discussing this issue of body/soul and mind/brain. But I did blog yesterday about two pieces of evidence that I think are relevant to this discussion: corroborated near-death experiences and mental effort.

You might remember that Dr. Craig brought up the issue of substance dualism, and the argument from intentionality ("aboutness"), in his debate with the naturalist philosopher Alex Rosenberg, so this argument about dualism is battle-ready. You can add it to your list of arguments for Christian theism along with all the other arguments like the Big Bang, the fine-tuning, the origin of life, stellar habitability, galactic habitability, irreducible complexity, molecular machines, the Cambrian explosion, the moral argument, the resurrection, biological convergence, and so on.

# Surprise! New Stanford University study finds costs of Obamacare higher than estimated

**Wintery Knight** · 12 September 2013 · Archived copy · Original

I'm just kidding. I'm not surprised. Here's the story from Reason magazine.

Excerpt:

> Obamacare could cost a lot more than the official estimates, according to a new study by researchers at Stanford University.
>
> That's because the law will create big incentives for employers to drop worker health coverage so that employees can get health insurance through the law's insurance exchanges. Anyone who buys insurance through an exchange and has a household income between 133 and 400 percent of the poverty line is eligible for publicly funded subsidies. So if a lot more people than expected end up in the exchanges, that means a lot more subsidies — and a much higher total cost for the law.
>
> The study, published this week in the journal *Health Affairs*, estimates that some 37 million people would benefit from shifting out of employer coverage and into exchanges. What "benefit" means, in this case, is that those people would be better off getting cash from their employer instead of coverage, and then buying subsidized coverage on the exchanges.
>
> If all 37 million people in this category were to switch into exchange-based coverage, it would result in a dramatic increase in the law's cost: about $132 billion annually in additional federal outlays, according to the study.
>
> […]The paper concludes with a warning: policy makers "should plan for the possibility that the exchange subsidies may end up costing the federal government much more than currently projected."
>
> It's a warning they should take seriously. It's also one they ought to have heard before. Former Congressional Budget Office director Douglas Holtz-Eakin and James Capretta of the Ethics and Public Policy Center have been sounding this alarm for years. Back in 2010, they estimated that, because of the law's incentives to drop coverage, 35 million more Americans than expected could end up in subsidized coverage through the exchanges.

On election day in 2012, I wrote this post that quoted Investors Business Daily's warning about Obamacare:

> Despite repeated promises that the more we knew about ObamaCare, the more we'd like it, the law has never been less popular. Just 38% now approve of it, down from 46% when it passed in March 2010, according to the latest Kaiser Family Foundation survey.
>
> But unless voters defeat Obama on Tuesday, they'll never get rid of his disastrous "reform." Even before ObamaCare takes full effect, its damage is evident.
>
> Insurance premiums, which Obama promised to slash $2,500 by the end of his first term, have climbed 14% since the law went into effect. Nearly six in 10 doctors say ObamaCare has made them less positive about the future of health care in America, and almost two-thirds say they'd retire today if they could, according to a Physicians Foundation survey.
>
> Businesses are holding back on hiring, or are shifting workers to part time because of ObamaCare's looming coverage mandate. Darden Restaurants, for example, has stopped offering full-time schedules at several of its popular eateries "to help us address the cost implications of health care reform."
>
> This is only one of the horrors ObamaCare will unleash if fully implemented in 2014. Among others:
>
> - **ObamaCare will force as many as 20 million workers into government-run insurance exchanges**

> **after their employers drop coverage, according to the Congressional Budget Office.**
> - More companies will follow Darden's example, refusing to schedule workers more than 30 hours wherever they can to avoid the coverage mandate.
> - Insurance costs will explode. Even ObamaCare's fans admit that its benefit mandates, marketplace rules and bans on coverage caps will force premiums to skyrocket. Jonathan Gruber, who helped design ObamaCare, says the law will add 30% to premiums in the individual market in the states he's studied.
> - Doctor shortages will reach 90,000 in about a decade, according to the Association of American Medical Colleges.
> - Seniors will find it increasingly difficult to get treatments, as ObamaCare's deep Medicare payment cuts cause one in six hospitals to become unprofitable and still more doctors to refuse to see Medicare patients.
> - Even when a patient does get to see a doctor, ObamaCare will intrude, using the law's "Patient-Centered Outcomes Research Institute" to create top-down rules for what doctors can prescribe for any given ailment.
> - ObamaCare's vast new taxes — including a crippling $20 billion surtax on the medical device industry and a $123 billion surtax on investors — will slow down medical innovation.
> - And when these and dozens of other new taxes fail to cover ObamaCare's massive 10-year $1.76 trillion price tag, everyone will suffer a bigger tax bite.
>
> Not to mention the fact that ObamaCare will, for the first time in our nation's history, force people to buy a government-approved product, setting a frightening new precedent for federal intrusiveness.

That's a warning that we should have heeded as voters in the 2012 election. But we didn't. And 2014 is almost here.

Look, even when a person means well and wants to help others, if they don't know what to do to help others, then we shouldn't put them in charge. The best way to tell if someone knows how to do what they say they want to do is to look at their record and see if they have been able to do what they say they want to do in the past. That's what a job interview is – it's when the people doing the hiring look at the candidate's record – not his rhetoric – and decide whether to hire him to do certain specific tasks. The requirements of the job should be key to the decision of whether to hire or not. Obama had no experience passing health care laws that lowered costs, improved access, and so on. He had never done anything remotely like that in all of his life. If we wanted to fix health care, then we should hire people like Bobby Jindal. People who know how to do the work because they've actually done the work before.

# J.P. Moreland asks: does truth matter when choosing a religion?

**Wintery Knight** · 12 September 2013 · Archived copy · Original

Dr. J.P. Moreland

This lecture contains Moreland's famous "Wonmug" illustration. Ah, memories! If you don't know who Wonmug is, you can find out in this lecture.

The MP3 file is here.

Topics:

- Is it intolerant to think that one religion is true?
- Is it more important to be loving and accepting of people regardless of worldview?
- How should Christians approach the question of religious pluralism?
- How does a person choose a religion anyway?
- Who is Wonmug, and would you like to be like Wonmug?
- Is it enough that a belief "works for you", or do you want to believe the truth?
- Can all the religions in the world be true?
- Is it wise to pick and choose what you like from all the different religions?
- Is it possible to investigate which religion is true? How?
- Which religions are testable for being true or false?
- How you can test Christianity historically (very brief)

This is the most fun lecture to listen to, you should listen to it, if you like fun.

# J.P. Moreland lectures on “Love Your God With All Your Mind”

**Wintery Knight** · 12 September 2013 · Archived copy · Original

Dr. J.P. Moreland

If I had to pick a few lectures that really changed my life, then this lecture by J.P. Moreland would definitely be on that list.

The MP3 file.

Topics:

- How J.P. Moreland become a Christian
- How evangelism drove his efforts to answer skeptics
- How can evangelicals be so numerous, and yet have so little influence?
- When did the church stop being able to out-think her critics?
- How studying and thinking can be a way of worshiping God
- Romans 12:1-2 – what does this passage mean?
- Are your beliefs under the control of your will?
- Can you “try” to believe something by an act of will?
- If not, then how can you change your beliefs?
- Changing your mind is the only way to change your life
- Matthew 22:37 – what is this passage saying?
- How can you love God by using your intellect?
- How can you defend God’s honor, when it is called into question?
- In a debate, should you quote sources that your opponent doesn’t accept?
- Should you only study the Bible, or should you study rival worldviews?
- 1 Pet 3:15 – what does this passage mean?
- If you knew you were going to be in a debate, what should you do?
- How can you be bold in witnessing? Where does boldness come from?
- What should the church do to make bold evangelists?
- 2 Cor 10:5 – what is this passage talking about?

- The passage talks about destroying fortresses – what are the fortresses?
- List of some of the speculations that we are supposed to be destroying
- What does the phrase “spiritual warfare” really mean?

And here is a longer version of the same lecture (MP3) presented to an audience of university students and faculty.

By the way, the title of his lecture comes from a book that he wrote, which is now in its second edition.

# First mechanical gear discovered in a living creature

**Wintery Knight** · 13 September 2013 · Archived copy · Original

A scanning electron micrograph image of the issus gears

This article from Popular Mechanics will astonish you. (H/T Uncommon Descent via a tweet from J. Warner Wallace)

Excerpt:

> **With two diminutive legs locked into a leap-ready position**, the tiny jumper bends its body taut like an archer drawing a bow. At the top of its legs, a minuscule pair of gears engage—their strange, shark-fin teeth interlocking cleanly like a zipper. And then, faster than you can blink, think, or see with the naked eye, the entire thing is gone. In 2 milliseconds it has bulleted skyward, accelerating at nearly 400 g's—a rate more than 20 times what a human body can withstand. At top speed the jumper breaks 8 mph—quite a feat considering its body is less than one-tenth of an inch long.
>
> This miniature marvel is an adolescent issus, a kind of planthopper insect and one of the fastest accelerators in the animal kingdom. As a duo of researchers in the U.K. report today in the journal *Science*, the issus also the first living creature ever discovered to sport a functioning gear.
>
> […]The gears themselves are an oddity. With gear teeth shaped like cresting waves, they look nothing like what you'd find in your car or in a fancy watch. (The style that you're most likely familiar with is called an involute gear, and it was designed by the Swiss mathematician Leonhard Euler in the 18th century.) There could be two reasons for this. Through a mathematical oddity, there is a limitless number of ways to design intermeshing gears. So, either nature evolved one solution at random, or, as Gregory Sutton, coauthor of the paper and insect researcher at the University of Bristol, suspects, the shape of the issus's gear is particularly apt for the job it does. It's built for "high precision and speed in one direction," he says. "It's a prototype for a new type of gear."
>
> Another odd thing about this discovery is that although there are many jumping insects like the issus—including ones that are even faster and better jumpers—the issus is apparently the only one with natural gears. Most other bugs synchronize the quick jolt of their leaping legs through friction, using bumpy or grippy surfaces to press the top of their legs together, says Duke University biomechanics expert Steve Vogel, who

> was not involved in this study. Like gears, this ensures the legs move at the same rate, but without requiring a complicated interlocking mechanism. “There are a lot of friction pads around, and they accomplish pretty much of the same thing,” he says. “So I wonder what extra capacity these gears confer. They’re rather specialized, and there are lots of other jumpers that don’t have them, so there must be some kind of advantage.”
>
> Even stranger is that the issus doesn’t keep these gears throughout its life cycle. As the adolescent insect grows, it molts half a dozen times, upgrading its exoskeleton (gears included) for larger and larger versions. But after its final molt into adulthood—poof, the gears are gone. The adult syncs its legs by friction like all the other planthoppers. “I’m gobsmacked,” says Sutton. “We have a hypothesis as to why this is the case, but we can’t tell you for sure.”

These gears remind me of the parts of the bacterial flagellum, which also correspond to machine parts, as Dr. Fazale Rana of Reasons to Believe has argued. But if you’re a naturalist, then this all happened by chance.

# Why would a good God allow people to suffer?

**Wintery Knight** · 13 September 2013 · Archived copy · Original

This 4 page essay by Joe Manzari is the best summary of the state of the art on the problems of evil and suffering I have seen.

There are two kinds of problem of evil.

**The Logical/Deductive Problem of Evil:**

The first kind is called "the deductive problem of evil" or "the logical problem of evil". An example of evil would be Saddam Hussein murdering some journalist who told the truth about him. This version of the problem of evil tries to introduce a logical contradiction between the attributes of God and the presence of evil, like this:

(1) God exists.
(2) God is omnipotent.
(3) God is omniscient.
(4) God is omni-benevolent.
(5) Evil exists.
(6) A good being always eliminates evil as far as it can.
(7) There are no limits to what an omnipotent being can do.

In order to avoid a contradiction, we need to explain how there could still be evil, since the conclusion of this argument is that there should not be any evil!So how are we going to get out of this mess? The solution is to attack premises 6 and 7.

Premise 6 is false because in order to eliminate human evil, you would have to eliminate free will. But eliminating free will is worse than allowing it, because good things like love are impossible without free will.

> It is in response to this proposition that the Free Will Theodicy of G. W. Leibniz applies. God, valuing man's freedom, decided to provide him with a will that was free to choose good over evil, rather than constraining his will, allowing him to choose only good.

Premise 7 is false because there *are* limits on what an omnipotent being can do. God *cannot* perform contradictory things, because contradictory things are impossible. God cannot make a married bachelor. Similarly, God cannot force free creatures to do his will.

> In the same manner that God cannot create a square circle, he cannot make someone freely choose to do something. Thus, if God grants people genuine freedom, then it is impossible for him to determine what they will do. All that God can do is create the circumstances in which a person can make free choices and then stand back and let them make the choices.

One last point. In order to solve the problem of natural evil for this argument, you can point out that free will requires predictable and regular natural laws in order to make free will meaningful. Natural laws mean that individuals can predict what will happen when they act, allowing for moral responsibility. More on that next time.

**Inductive/Probabilistic Problem of Evil**

There is a second version of the problem of evil, though, which is more dangerous than the first. This is the one you see being argued in debates, whereas the first version is not used because it has been defused as seen above. Here is the second one:

(1) If God exists, gratuitous evil does not exist.

(2) Gratuitous evil exists.
(3) Therefore, God does not exist.

This argument tries to argue that while God may have some reason for allowing free will, there are other evils in the world that are not the result of human action that God has *no reason* for permitting. Theists usually like to argue that God has morally-sufficient reasons for allowing some evil in the world, in order for the character of humans to develop through suffering and endurance. But what about gratuitous evil, which doesn't have any point?

Consider the case of a fawn running in the forest, who falls and breaks his leg. Ouch! Then a forest fire starts and the poor fawn suffocates to death in the smoke. Why would God allow this poor small animal suffer like that? And notice that there is no morally sufficient reason for allowing it, because no human knows about this and so no human's character or relationship with God is impacted by it.

The solution to this problem is to deny premise 2. (You can also deny 1 if you want). The problem with premise 2 is that the atheist is claiming to know that some instance of evil really is gratuitous. But since they are making the claim *to know*, they have to be able *to show* that God's permission of that evil achieves nothing. But how do they know 2 is true?

The problem with 2 is that the atheist is not in a position to know that the permission of some evil X really doesn't achieve anything. This is because the atheist cannot look forward into the future, or see into other places, in order to know for certain that there is no morally sufficient reason for allowing God's allowing evil X to occur. But since the atheist argues based on premise 2, he must be able to show that premise 2 is more probable than not.

Manzari's article also argues why apparently gratuitous evil is less problematic for Christians in particular, because of certain Christian doctrines. He lists four doctrines that make the apparently gratuitous evil that we observe more compatible with an all-good, all-powerful God.

1. The chief purpose of life is not happiness, but the knowledge of God.
   Some of the things that we experience may wreck our feelings of contentment, but we need to remember that God may be permitting those troubles in order to remind us not to get too comfortable with life on earth, and to think ahead to the after-life. And remember, even Jesus learned endurance through suffering. His suffering was not pointless and neither is ours.
2. Mankind is in a state of rebellion against God and God's purposes.
   We humans seem to be on a dead run away from God, trying to keep our autonomy by knowing as little about him as possible. Part of knowing God is knowing what he designed us to do – to love him and to love others. And so, the less we know about God, the more we stray from his design for our lives.
3. God's purpose is not restricted to this life but spills over beyond the grave into eternity.
   Sometimes it seems as if our sufferings really are catastrophic, but when you realize that you are offered eternal life without any suffering after you die, the sufferings of this life are a lot less upsetting than they would be if this life was all we had.
4. The knowledge of God is an incommensurable good.
   This one is the biggest for me. Knowing God and knowing his actual character by studying the historical Jesus is a wonderful counterbalance for all the problems and sufferings of this life. A little bit of historical study reveals that Jesus was not spared the worst kind of suffering in his life, making it is a lot easier for us to bear with whatever God allows us to face.

In section 3, Manzari shows how you can also argue against this version of the problem by supplying evidence for God, such as from the big bang, the fine-tuning, the origin of life, the origin of free will, the origin of the first living organism, the origin of the mind, the sudden emergence of phyla in the fossil record, molecular machines, irreducible complexity, the resurrection miracle, and the objective morality argument.

The argument goes like this:

(1) If God exists, gratuitous evil does not exist.
(2) God exists.
(3) Therefore, gratuitous evil does not exist.

Just support 2 with some evidence, and you win, especially when they can't support their claim to know that gratuitous evil exists.

**The Argument for God from Evil**

In the paper, Manzari actually makes an argument for God from evil. That's right. Far from disproving God, the presence of evil (a departure from the way things out to be), actually affirms God's existence. How?

(1) If God does not exist, then objective moral values do not exist.
(2) Evil exists.
(3) Therefore, objective moral values do exist.
(4) Therefore, God exists.

That's right. If evil exists in any sense such that it is not a personal or cultural preference, then objective morality exists. If objective morality exists, then there is an objective moral lawgiver. Game over. If the atheist backtracks and says that the existence of evil is just his opinion or his cultural preference, then this standard does not apply to God, and you win again. Game over again. More on this argument for God's existence *from evil* here.

So, although the problems of evil look pretty tough, they are actually easy. The toughest part of evil and suffering is the emotional problem. I could tell you stories about what I've been through… but then, that's why the arguments matter. You can hold your position under tremendous fire when you have the arguments and evidence to ground you.

For more on the problem of evil, listen to this lecture by Douglas Geivett, professor of philosophy at Biola University. Then you *must listen* to this debate between William Lane Craig and Walter Sinnott-Armstrong (with summary by me). Another debate transcript is here, with William Lane Craig and Kai Nielsen. Here's a book debate between William Lane Craig and Walter Sinnott-Armstrong, published by Oxford University Press, 2004.

# N.T. Wright lectures on the resurrection of Jesus: did Jesus rise from the dead?

**Wintery Knight** · 13 September 2013 · Archived copy · Original

Here's a lecture from N.T. Wright, whose multi-volume case for the historicity of the bodily resurrection of Jesus seems to be getting a lot of respect from the other side, (although I strongly disagree with his economic and political views, which are naive at best). Wright has taught at Cambridge University, Oxford University, Duke University, McGill University, and lectured on dozens of prestigious campuses around the world. He's published 40 books.

Here's a video of his case for the resurrection:

**N.T. Wright's historical case for the bodily resurrection of Jesus**

Wright basically argues that the resurrection cannot have been a myth invented by the early Christian community, because the idea of the Messiah dying and being bodily resurrected to eternal life was completely unexpected in Jewish theology, and therefore would not have been fabricated.

In Judaism, when people die, they stay dead. At the most, they might re-appear as apparitions, or be resuscitated to life for a while, but then die again later. *There was no concept of the bodily resurrection to eternal life of a single person, especially of the Messiah, prior to the general resurrection of all the righteous dead on judgment day.*

Wright's case for the resurrection has 3 parts:

- The Jewish theological beliefs of the early Christian community underwent 7 mutations that are *inexplicable*apart from the bodily resurrection of Jesus
- The empty tomb
- The post-mortem appearances of Jesus to individuals and groups, friends and foes

Here's the outline of Wright's case:

> …the foundation of my argument for what happened at Easter is the reflection that this Jewish hope has undergone remarkable modifications or mutations within early Christianity, which can be plotted consistently right across the first two centuries. And these mutations are so striking, in an area of human experience where societies tend to be very conservative, that they force the historian… to ask, Why did they occur?
>
> The mutations occur within a strictly Jewish context. The early Christians held firmly, like most of their Jewish contemporaries, to a two-step belief about the future: first, death and whatever lies immediately beyond; second, a new bodily existence in a newly remade world. 'Resurrection' is not a fancy word for 'life after death'; it denotes life after 'life after death'.

And here are the 7 mutations:

1. Christian theology of the afterlife mutates from multiples views (Judaism) to a single view: resurrection (Christianity). When you die, your soul goes off to wait in Sheol. On judgment day, the righteous dead get new resurrection bodies, identical to Jesus' resurrection body.
2. The relative importance of the doctrine of resurrection changes from being peripheral (Judaism) to central (Christianity).
3. The idea of what the resurrection would be like goes from multiple views (Judaism) to a single view: an incorruptible, spiritually-oriented body composed of the material of the previous corruptible body (Christianity).
4. The timing of the resurrection changes from judgment day (Judaism) to a split between the resurrection of the

Messiah *right now* and the resurrection of the rest of the righteous *on judgment day* (Christianity).

5. There is a new view of eschatology as collaboration with God to transform the world.
6. There is a new *metaphorical* concept of resurrection, referred to as being "born-again".
7. There is a new association of the concept of resurrection to the Messiah. (The Messiah was not even supposed to die, and he certainly wasn't supposed to rise again from the dead in a resurrected body!)

There are also other historical puzzles that are solved by postulating a bodily resurrection of Jesus.

1. Jewish people thought that the Messiah was not supposed to die. Although there were lots of (warrior) Messiahs running around at the time, whenever they got killed, their followers would abandon them. Why didn't Jesus' followers abandon him when he died?
2. If the early Christian church wanted to communicate that Jesus was special, despite his shameful death on the cross, they would have made up a story using the existing Jewish concept of *exaltation*. Applying the concept of bodily resurrection to a dead Messiah would be a radical departure from Jewish theology, when an invented exaltation was already available to do the job.
3. The early church became extremely reckless about sickness and death, taking care of people with communicable diseases and testifying about their faith in the face of torture and execution. Why did they scorn sickness and death?
4. The gospels, especially Mark, do not contain any embellishments and "theology historicized". If they were made-up, there would have been events that had some connection to theological concepts. But the narratives are instead bare-bones: "Guy dies public death. People encounter same guy alive later." Plain vanilla narrative.
5. The story of the women who were the first witnesses to the empty tomb cannot have been invented, because the testimony of women was inadmissible under almost all circumstances at that time. If the story were invented, they would have invented male discoverers of the tomb. Female discovers would have hampered conversion efforts.
6. There are almost no legendary embellishments in the gospels, while there are plenty in the later gnostic forgeries. No crowds of singing angels, no talking crosses, and no booming voices from the clouds.
7. There is no mention of the future hope of the general resurrection, which I guess they thought was imminent anyway.

To conclude, Wright makes the argument that the best explanation of all of these changes in theology and practice is that God raised Jesus (bodily) from the dead. There is simply no way that this community would have made up the single resurrection of the Messiah – who wasn't even supposed to die – and then put themselves on the line for that belief.

And remember, the belief in a resurrected Jesus was something that the earliest witnesses could really assess, because they were the ones who saw him killed and then walking around again after his death. They were able to confirm or deny their belief in the resurrection of Jesus based on their own *personal experiences* with the object of those beliefs.

# Greg Koukl debates Michael Shermer on God, atheism, meaning and morality

**Wintery Knight** · 13 September 2013 · Archived copy · Original

The full transcript of a debate between Michael Shermer, editor of Skeptic magazine, and Greg Koukl, president of Stand to Reason. This debate occurred on Hugh Hewitt's radio show, and was moderated by Hugh Hewitt.

**HH = Hugh Hewitt**
**GK = Greg Koukl**
**MS = Michael Shermer**

**HH:** Special edition of the Hugh Hewitt Show. As we come to the end of what I call the decade of the atheists, I am taking a day here at the end of the year to look back at what that has been about, and what progress or lack thereof has been made in that conversation, what it meant, and what it ought to mean, and whether or not those of you who are just finished celebrating Christmas were in fact simply involving yourself in a pagan kind of ritual that grew up over the years, or whether you're worshipping the one, true God. All that and more, because this has been the decade of the atheists, Richard Dawkins, Christopher Hitchens, Sam Harris, many others, but today, I want to ask did they make a difference at all, or is in fact faith in God generally stronger than ever. To join me in this all day special conversation in studio, two guests. Greg Koukl is the founder and the president of Stand To Reason, http://www.str.org. He is a leading Christian apologist. He's an author most recently of Tactics: A Gameplan For Discussing Your Christian Convictions from Zondervan Press. Before that, Relativism, he's got a lot of other books and pamphlets as well at Amazon.com. But you can find out most about Greg at http://www.str.org. Michael Shermer is the editor of Skeptic Magazine. He is the founder of the Skeptic Society, author of a number of books, including The Mind Of The Market: How Biology And Psychology Shape Our Economic Minds, and Why Darwin Matters: The Case Against Intelligent Design. Both Michael and Greg have been guests on the Hugh Hewitt Show before. They're both very generous with their time to spend an entire day doing this, and so welcome to you both. Gentlemen, I believe in biography before everything. Greg Koukl, K comes before S. Give people a little bit of a rundown on who you are and how you ended up doing this.

**GK:** Well, just a broad background here. I approach the issue that we're talking about today not as a philosopher or a theologian, though I have advanced degrees in both, but really as a human being that's trying to make sense out of my world. What worldview, what picture of reality does the best job of answering the questions? That wasn't always my perspective. I was raised in a religious home, nominally religious. And then in the 60s, during the counterculture, like a whole bunch of other young people, I went crazy. You know, you abandon the views of the establishment, you embrace all these new things that are invading the world in the 60s, and I did that. I was at Michigan State University in their Honors College there as a prelaw student, as it turned out. I had thought I had tried Christianity because of my background. I thought I was too smart to be a Christian. And so I just didn't give real serious consideration to that until I went to the West Coast, and went, I was a student at UCLA. And at that time, I began to give fresh consideration to the claims that Jesus of Nazareth was making on my life. And in 1973, I made a commitment to follow Him. And that began to change everything. In 1976, I spent three months in Europe, five weeks of that behind the Iron Curtain working with Christians who are suffering there as a result of their own convictions as Christians, back when they had an Iron Curtain. A number of years later, in 1982, I went to Thailand to work with Cambodian refugees. My job was to feed 18,500 people in Sakeo refugee camp, which the result of the Cambodian holocaust of 1975-1976, and then in 1993, I decided to kind of focus my efforts and start an organization with some other people, particularly Melinda Penner, who many who are listening know as The Enforcer. And that organization is called Stand To Reason. And Hugh, I had two basic goals with starting Stand To Reason. One is to train Christians to think more carefully about their convictions. There just was a lot of nonsense being spewed by Christians who I think had the right ideas, but were not communicating them well, and were not thinking well about those ideas. And secondly, I wanted to develop some tools to show that Christianity is actually worth thinking about. Some of these were tools of engagement. There was too much of a bellicose atmosphere

between those who believed in Jesus and the Christian worldview and those who don't. And I wanted to see that engagement look more like diplomacy than D-Day. And so there's kind of a general attitude thing that I wanted to see happen, building ambassadors for Christ. Secondly, I wanted to help them with the new tools of evidence, and the information that has been coming out in the last ten or fifteen years that have been very, very powerful, I think, to commend the Christian worldview to the rest of the world – things about big bang cosmology, for example, the design inferences that we find in the universe, the evidence for the existence of the soul, the evidence from the primary source documents about Jesus of Nazareth and his resurrection. All of these things, there's been a lot of work done in the last fifteen or twenty years. And so our goal is to try to bring these things down to a level where people can understand them, throw the ball so that they can catch it, for believers in Christ to do so, but without having a bunch of religious language attached to it, one, and two, using an external approach. In other words, using the philosophy and the science to demonstrate that their views are worth thinking about, instead of simply throwing Bible verses at them, and in the process, I've written a number of books, one of them on abortion called Precious Unborn Human Persons. It's basically a small monograph. The next one, Relativism: Feet Firmly Planted In Mid-Air that I co-authored with Frank Beckwith, who you know. And the one most recently is the one you just mentioned, Tactics: A Game Plan For Discussing Your Christian Convictions.

**HH:** With that introduction, Mike Shermer, how about you?

**MS:** Well, I was born and raised in the Southern California area, and my home was, neither of my homes, as my parents were divorced, neither of them were religious, but neither were they anti-religious. They were just not religious. But in the nascent Jesus movement of the early 70s, I became a born again when I was in high school, 1971. And I remember it was a, my best friend, he was a Presbyterian, so on a Saturday night, I accepted Christ into my heart. And then Sunday, I went to the local Presbyterian church with his family, and went up to the alter and all that with the other people that were called forward. And then on Monday, I remember returning back to high school to tell my buddy, Frank, that I had finally become religious and accepted Jesus like he had been telling me about, and hoping I would. And instead of being excited, he was disappointed, because he was a Jehovah's Witness, and that I had gone to the wrong church, the Presbyterians. Anyway, so that always stuck in the back of my mind like wow, aren't we all on the same bus together in the same journey? Well, not always. Anyway, so…but I took it pretty seriously. I went to Bible study classes. There was a little place in La Crescenta called the Barn, where Christians met and had Bible study classes, things like that. And then I went to Pepperdine University in Malibu there to, really to matriculate initially into theology, but then I switched to psychology, really for logistical reasons. I just wanted to be a college professor, because it's, you know, it's a great gig that you hardly have to work and you get good pay. Don't ever listen to those professors complain about their pay. It's the best gig going. And I wanted in on that. And theology was my field, but to get a PhD, you have to do Hebrew, Greek, Aramaic and Latin. And I could barely get through Spanish, so I realized okay, I have to do something I'm actually good at, which was science, which was experimental psychology. And so I switched fields. But while I was at Pepperdine, I took courses in the New Testament, the Old Testament, the life of Jesus. I took an entire semester course in the writings of C.S. Lewis. We read everything that Lewis wrote, and I really loved C.S. Lewis. I still like C.S. Lewis. I think he's a great writer. But then eventually, when I went to graduate school, when I was in a different environment, not surrounded by Christians, and getting different perspectives. And for a number of reasons, I ultimately lost my faith, and let go of God, and became essentially a secularist, or a non-believer, whatever. I never really call myself an atheist. I mean, I don't like to identify myself or define myself by what I don't believe, because atheism doesn't really stand for anything. There's no principles behind it. There's no platform or set of planks that we live our lives by. We just simply don't believe in God. So then I got into, well, actually I had a ten year span where I was a bike racer living here in Orange County, and did Race Across America five times, and I was the assistant director, and the executive director of the race. And so I spent quite a bit of time in a completely different profession, but teaching part time psychology. Then after ten years of bike racing, I realized my body wasn't going to hold out forever, and I might have to use my brain again. So I went back and got a PhD in the history of science at Claremont, and then became a fulltime professor at Occidental College in L.A. But on the side, we just started the Skeptics thing as just sort of a hobby in my garage. It was nothing, really, just for fun, and a lecture series at Cal

Tech. And it just got bigger and bigger, and by 1997-98, when my first book, Why People Believe Weird Things did really well, I had a literary agent that got me a big advance for my next book, and a lecture agent, and so on, and I realized you know, I think I could actually make a living as a writer and an editor and a public intellectual, and actually teach more people than I can teach in a classroom, that is just reach more people. And so I've been doing that every since. I quit teaching at Oxy in 98, and returned to teaching just two years ago at Claremont Graduate University, just one class a year, Evolution, Economics & the Brain. It's a PhD level course. So it's just for fun. So my main job, my day job, is editing and writing.

**HH:** We've got a minute and a half to the break, so I'll let you go first, Greg. What's your first question for Michael? I'll lead most of this conversation, but in between, I'll let you pose each other questions. Do you have a question or anything that you're curious about his background?

**GK:** Well, about his background?

**HH:** Just anything.

**GK:** Well, I think, and this is just going to seed further conversation, Michael, but I think the biggest, one of the biggest problems, it's not the only big problem, but one of the biggest problems that atheists have to deal with is the problem of morality. Listen, if you have a guy who drags a woman into an alley, and then molests her, and then…that's our music. Okay, I'll finish my illustration in just a few moments. But I want to raise the nature of morality, is the question, or how best to explain the existence of real morality.

– – – –

**HH:** When we went to break, I began just the first opportunity to ask each other a question. So Greg, you were bringing up the…rephrase it for the audience who just tuned in for Michael.

**GK:** Right. Actually, the big question here, Hugh, is whether it's possible to be good without God. Now I'm not talking about whether it's possible to be good without a belief in God. I certainly think that's possible, but be good without God. And the answer to that question hinges entirely on precisely what you mean by good. And so I was going to give an illustration. So a man drags a young girl into the alley, he sexually abuses her, strangles here, and tosses her into the dustbin. Is that act wrong? Now I think everybody listening is going to admit it is wrong. But here is the real question. What do we mean when we say that that act of rape and abuse and murder is wrong? Are we describing the action itself, the object? Are we saying that the object, the rape, the murder, has a quality of being wrong, and therefore, wherever that rape goes, the wrongness follows it, just like your height, 6' 2", or whatever it is, is an objective quality of you. Wherever you go, your height follows you in the same way. Does the wrongness follow the rape? Well, if it's a quality of the rape, if it's an objective quality of the rape, then it does. And it doesn't matter what people think about it, or what cultures decides, or what your evolutionary conditioning is. The rape is still wrong. The other alternative is that you're not talking about the rape. You're talking about yourself. You're talking about your genetic conditioning. You're talking about your culture's decision about that kind of thing. And if that's the case, then the truth of the wrongness of the rape is simply in the individual or the subject. And this is why philosophers distinguish between ethical objectivism and ethical subjectivism. Now there's lots of different subjectivisms in ethics. But simply put, if you're an ethical subjectivist, you're a relativist. And actual ethics don't exist. Ethics are an illusion. If you conclude that ethics are an illusion, there's lots of different ways to explain it. Michael's written a really great book, I think, called The Science Of Good And Evil. I've read most of it, and it's well written, and it's very compelling. But it's a description about how the illusion of ethics has taken place. If you want to go that route, you're welcome to go that route. But what you can't do is you can't then talk about morality as if it's objective when your explanations are subjective. So this is a problem that I think all atheists, including Michael, have to solve. Are ethics objective or relative? And if they're relative, then how can we make moral judgments that are meaningful on other people?

**HH:** Michael Shermer?

**MS:** Wow, let's just get right into it. Well, I don't think it's quite so black and white. That is to say I think there are

provisional moral truths that exist whether there's a God or not. In other words, it's wrong, morally, absolutely morally wrong to rape and murder. And that would be true whether there was a God or not. In other words, if…is God saying that it's wrong because it's really wrong, and He's instructing us in his Holy Scripture that it's wrong? Or is it only wrong because He said so? And if it turned out there wasn't a God, would that make it okay? And my answer is no, it really is wrong, whether God says it's wrong or not. That is to say I think it really exists, a real, moral standard like that. Why? Well, because first, you could ask the person who is being affected, we should always ask the moral recipient of the act, how do you feel about being raped or murdered or stolen from or lied to. And the moral actor will tell you, it doesn't matter whether, if I could use a current example, I haven't any idea if Tiger Woods and his wife are religious or not. But you can just ask his wife whether it was morally right or wrong, and she'll tell you. It doesn't matter whether there's a God or not. It's wrong. And so that's the first principle. Just ask. Ask the moral recipient of whether it's right or wrong. But I think Greg's after something deeper, that is to say is there something even deeper still behind the moral actor's feelings about how they're treated. And the answer is yes, I think so. We're a social species. We don't live in isolation. We live as members of a group. And as such, there's no possible way our group could survive, be cohesive, be a unit of any kind of solidarity against other groups, or against a harsh environment. If there were too much violations of social norms, that is if there were constant lying and cheating and raping and murdering, there's no way a social group could hang together. And as such, as we all know, we're very tribal. We're tribal against other groups, but within our groups, we're very pro-social, altruistic, cooperative. We have a good and evil in our nature. So to this extent, I find myself interesting often in agreement with my conservative friends on most of the things they consider morally, moral truths. That is, we share the same moral values, even though I come at it from a different perspective.

**HH:** Greg?

**GK:** Yeah, I'm actually not after something deeper here, Michael. At least to start out the discussion, I'm trying to be as simple and clear and precise as possible, because it's very easy to weave together a bunch of things that sound persuasive, but turn out to be different things. Like for example, Darwinian evolution, which is a materialistic process, and here I mean the blind watchmaker thesis, the neo-Darwinian synthesis, natural selection working on mutations, and a kind of a cultural evolution that Michael has just referred to as we work together as a group to survive as a group. Those are two entirely different things. One is materialistic, Darwinian, the other one is intelligent design, quite frankly, where the group gets together and makes some determinations to encourage some behavior and discourage others. What I'm trying to do is to be able to answer the question that came up initially, is God necessary for morality, which Michael denies. It's to say well, what is it that morality, that we're trying to describe? It is either objective, and therefore an immaterial obligation that applies to certain behaviors, or it is subjective. The things that Michael described were variously subjective, evolutionary elements, subjective cultural elements, but then he affirmed that we all have good and evil in our nature, or an awareness of that. I agree with that entirely. We all are aware of those things. That's why even if we don't believe in God, we can still know morality and follow it. The question is what accounts for real, genuine objective morality?

**HH:** One minute to the break, Michael Shermer.

**MS:** I'm not arguing for cultural evolution. I'm actually arguing as part of our, what you described as materialistic, natural selection, Darwinian evolution, that it's not enough to just pretend or fake being a good group member. You actually have to believe it, feel it, and live it. So what I'm arguing is that natural selected certain moral sentiments, as Adam Smith called them, moral feelings, an actual empathy, Adam Smith talked about, we actually empathize with somebody else, we can put ourselves into their shoes and feel their pain, I'm arguing that's very real. It's every bit as real a part of our evolutionary heritage as our eyes and our hands.

– – – –

**HH:** Michael Shermer, when we went to break, you were saying that evolutionary biology has produced a real morality.

**MS:** Yeah, I think really, Adam Smith had it right in his very first book, The Theory Of Moral Sentiments, long

before Darwin, that we actually have in our biological nature, our human nature, the capacity to feel other people's pain. He called it empathy, we think of it often either as empathy or sympathy. That is, we really do connect to other people. A lot of good research on this now, brain scans, you can show somebody a little video of somebody they know, or have feelings for, getting pricked with a pin, and the same areas of their brain light up, the pain receptors, as in the person getting the pin prick. In other words, we have an evolved tendency to really be deeply, emotionally connected to our fellow group members. And that's why I say groups like World Vision, where you want to adopt a child, it doesn't help to show a picture of 10,000 starving African kids. What does affect us is one child, a picture of one child with a little biography. That's how you get people to adopt a child to donate. The reason for that is because essentially they're tricking the brain, our brains into making that stranger an honorary family member, an honorary within group member, which is why I argue that free trade is one of the best ways of defusing normal tribal tensions between people. It makes them honorary friends, honorary members. Well, what's going on there is we're tricking the brain into sort of this evolutionary rule of thumb – be nice to people that are like you and that are related to you, and that you know, and that are fellow group members, and don't do what our natural tendency is, is to be tribal and xenophobic against those other guys. And free trade is one of the best things you can do for that. So I'm arguing that's actually tapping something deep within us.

**HH:** Greg Koukl?

**GK:** Yeah, basically, I agree with Mike completely here. We do have this tendency, and it seems to be universal among humankind. The question is, what is that tendency, actually? And what is the best way to explain it? And I see like a handful of significant problems with using evolution to explain morality. The first one is that evolution is a materialistic process. And here, I'm going back to an original point, and I don't want people to lose it. There is no way that you can take molecules, and reorganize them in any fashion, over any length of time, and have pop out of the mixture an objective moral principle that's immaterial, and that applies to human beings. All you're going to get is a reorganization of the molecules. And what they can produce, and this is what Mike has done in his book, and he mentioned just s few moments ago, they can produce sentiments. They can produce feelings. They can produce behavior. But this leads us to the second problem of using evolution to explain morality, is that morality is more than sentiments, feelings and behavior. Morality entails things like motive and intention. I mean, you could have a guy walk into a garage, walk out with a hose, and is that wrong? Well, it depends. Is it his hose or somebody else's hose? Did he intend to take the other person's hose? Is he borrowing the hose? So we can see here are elements that are part of the moral thing that needs to be explained, that are immaterial, and therefore the Darwinian explanation can't even in principle go there. It can't do that job. But here's the worst problem. Regardless of what our sentiments happen to be regarding moral actions, we can feel good or feel bad or whatever, the problem is that morality is prescriptive, not merely descriptive. That is it tells us not just what we did, but what we ought to have done in the past, and what we ought to do in the future. That is not something that any Darwinian mechanism can describe, because nothing about my biology can inveigh upon me to act a certain way for moral reasons in the future. It doesn't tell me why I should be good tomorrow. This is a huge difference between these two views, the descriptive and the prescriptive. Prescriptive is part of morality, and can't even, in principle, be explained by an evolutionary materialistic system.

**HH:** Michael Shermer, I'll give you a start on that. We have about 45 seconds to the break, so you may want to…we'll come back after the break and pick up. But what's your start to that?

**MS:** Well, the start would be that again, let's not think of evolution just as nature red and tooth and claw, and it's nasty, brutish and short, but that in fact, we have this whole other social evolution. And I'm not talking about cultural evolution where we consciously make decisions, but subconsciously, because it's in part of our nature to actually, seriously, deeply feel for other people and their actions, and the consequences of our actions, so that we actually have a sense of right and wrong that we're born with, but then culture taps into and tweaks, one way or the other.

– – – –

**HH:** Michael Shermer, when we went to break, Greg had made the argument that the Darwinian model simply cannot explain immaterial concepts like morality, that there's just no way you can rearrange the molecules to get there. You're saying well, yes you can.

**MS:** Yeah, I think so, because if we think of morality as another suite of emotions that are involved with other people's behaviors, the consequences of our actions, how we feel about them, how people feel about us when we do these things, that's as every bit as important a biological part of our nature as anything else we talk about. So let's take a real simple emotion. When you're hungry, nobody does any calculations about the caloric input/output ratios of eating an apple versus an ice cream, although now it's posted on the walls for us to see. But we just feel hungry, and we feel hungry for certain kinds of foods. The feeling of hunger is a proxy for something else. Evolution's done the calculating for us. You need food, so we're going to, your hypothalamus is going to secrete these certain chemicals that causes your stomach to rumble and so on. When you're attracted to somebody else, a member of the opposite sex, nobody does the calculation by, let's say, a man finds a woman attractive who has a .67 hip to waist ratio, and an hourglass figure, although that is pretty much universal. Nobody walks about with calipers taking measurements of who they're going to want to date or ask out. You just look around, and you just go wow, I really find this woman attractive. It's a feeling you have, okay? So those are kind of simple emotions, but sliding up the scale, the moral emotions are really no different. When I lie to somebody, I've violated a social norm, and they respond in a very angry, hostile way. So those emotions that we both share, guilt, shame, anger, disgust, involved a social relationship that whether it was a norm violation, those are the kinds of emotions that are just like hunger and sexual attraction that are built into us by nature, by evolution. Or, if you wish, this is how God created the moral sentiments, just like He created everything else in the universe, through a process of nature. I think that's equally reasonable to argue. So I don't see that it has to be an atheistic viewpoint versus a theistic viewpoint to get to our moral sentiments. Why couldn't God have used evolution to create the moral sentiments as I've described them?

**GK:** Yeah, well, you don't actually believe that, I know, Mike, so this is kind of like adding God to the soup, you know, if it makes people feel better. But the basic argument is that evolution all by itself can do the trick. And I think if your listeners are listening carefully, what they're going to hear is Mike has just described, and if I'm being unfair to your assessment here, let me know, Mike, that moral feelings are simply that. They are sophisticated emotions that do some work for us for survival, and even on a group level. Now there's a name for this. It's called emotivism. A.J. Ayer, the famous atheist, offered this description of morality. It's a relativistic scheme of morality. Morality doesn't actually exist, Ayer argued. There is no objective right or wrong. Rape isn't wrong itself. What happens is, we have feelings about it, and we express it in moral language, but rape isn't really wrong. So your listeners are going to have to ask themselves the questions. When they just survey their own moral senses, and we all have access to this, do we want to believe that scientists have figured out that really what we're doing is feeling sophisticated, complicated emotions, and that the emotions are in us, and we are not seeing anything about the action? Or does it seem like rape is wrong? Look, when I say rape is wrong, I'm talking about the rape. When I say liver is awful, I'm talking about me. I'm talking about my own tastes and preferences. It's interesting, as Michael has given his explanation, though, that he's doing, and I don't know if you are aware of this, Michael, but you're doing the very thing that I kind of warned against. You give a description of the foundations of morality that turn out to be relativistic, but then there's a smuggling of a more objectivistic morality in the back door, like when Michael says you don't have to do what your nature tells you to do, in other words, what you've been programmed by evolution to do. You can kind of rise above that. Well, now we're talking about a morality that isn't dictated by evolution, but a morality that we can employ through our acts of will, to rise above this kind of brutish evolutionary morality. And that sounds suspiciously like the very thing that I'm talking about here.

**MS:** But I don't mean, there's nothing to rise above by itself. Yes, we have to say rise above our tribal instincts to be xenophobic when we meet somebody who's a stranger, who's different from us. We all struggle against that, particularly in a black and white America, where there's always been this underlying tension. Indeed, so culture helps us do that – education, travel, diversity of exposure to different people. That makes you a little more tolerant. Okay, but I'm not talking about that. What I'm talking about is tapping into the good part of our nature, the fact that in addition to that xenophobic tribalism we have, we also have this other side that almost never gets discussed in

evolutionary…even in evolutionary circles, you'll still hear evolutionary biologists talking about, in a way that Huxley did, and Herbert Spencer did in Darwin's own time, that we have to somehow struggle mightily against our genes to overcome that nasty tendency we have to want to rape, kill, pillage and destroy. Well no, actually, we have this whole other side that's just as genetically programmed into our nature. And the point of culture – education, politics, economics and so on, is to tap into the better angels of our nature as Lincoln said.

**GK:** Okay, here's the question I have for you, Michael, then. You've identified that really, we have good and we have bad. That's part of, under your terms, that's part of our genetic nature, and we can choose to tap into what you call the good side. Why ever should we do such a thing if there is not a higher standard that directs our action to the better side, your words, than the bad side, your words, if really, ultimately, they are both the result of a genetic evolution, and from outside terms, neither is better than the other. Why should we do that, Michael?

**MS:** Yeah, well I don't see how entering God into the equation changes that problem at all.

**GK:** Well, that's the next step. What I'm trying to show is that the should comes from the outside, and if we can demonstrate that, then we can ask…

**MS:** But there's no outside.

**GK:** That's my point. On your view, morals are relative, and there is no difference.

**MS:** No, but I don't think even in your view, there's an outside.

**GK:** Well, we can get to that in the next step.

**MS:** …because adding God doesn't add anything.

– – – –

**HH:** Greg, reset the debate. What just happened there?

**GK:** Well, what I'm arguing is basically, you have two choices. You have objective morality, or subjective morality. Subjective morality means that when we say something's wrong, we're not talking about the action itself, we're talking about ourselves. Now there are sophisticated ways of characterizing how we're talking about ourselves, whether it's culture, whether it's evolution. But ultimately, you end up with no morality. I think that's false. I think people know there is objective morality. And if evolution, no materialistic system can explain it, given the discovery of objective morality, then we have to take the next step and ask what is the best explanation for objective morality. Michael, I think, wants to deny objective morality, but I think he's been smuggling the notion in subtly, as many times happens in these kinds of discussions. And he's, I'm not sure if he's denied that or not.

**MS:** Well, I think there's only two kinds of people – those who think there's only two types of morality, objective and subjective, and those that don't, which is the rest of us.

**GK:** Okay.

**MS:** Seriously, I mean, I reject your dichotomy of there's either objective reality or it's all subjective relativism and anything goes, and what Hitler did is perfectly fine. No, I don't believe that. I don't think anybody, hardly anybody actually really believes that, except for maybe a few academic philosophers who've never been in the real world. Really, I think we all recognize that there are deep, provisional truths, moral truths, that we recognize as real. And so what you want to get at is what's the outside source? And as you know, since you read my book, this is an old problem that everybody's familiar with in your business anyway, and that is Plato's Euthyphro's dilemma, in which Socrates asks his student, Euthyphro, the point which I should first wish to understand is whether the pious, or holy, is beloved by the gods because it is holy, or holy because it is beloved of the gods. In other words, which comes first, that the moral principle really exists out there in sort of an ideational world, and the gods say hey, look…

**GK:** They're beholden to that.

**MS:** …that's a real, moral principle…

**GK:** Right.

**MS:** …and we're going to instruct you through the holy book that's what you should do.

**GK:** And that makes the gods contingent…

**MS:** Or do they not really exist other than in the mind of God, who says listen, I've decided that killing is wrong, and I'm telling you in this particular book, and ignore those other holy books, because they're wrong. And so now we get to the problem of which is, which do you believe, for example?

**GK:** Okay, this is a famous dilemma you actually mentioned at one of the earlier segments, and it has been answered very carefully. I'll give a possible answer for it.

**HH:** One minute to the break.

**GK:** Okay, one minute. One answer is to say that God says something is right because it's, the rightness of it is grounded in His nature. It's not an arbitrary act of His will, voluntarism, it isn't that he has some external standard that makes him now contingent, but that God is good in Himself, and that His commands flow forth from His nature. That's a possible solution for it. What you can't do is you can't jump from evolution and say well, if you go your way, I see a difficulty there, so I can ignore the evidence that's facing me right now for moral objectivism. That, I think, is a false move. So I can answer the objection, but also I think it's a false move.

**HH:** But you'll do it after the break.

– – – –

**HH:** But I want to go back and pick up the thread that we were at right before the end of the break. And Michael Shermer, I'm going to have you reset the debate for people wandered in off the street in the middle of this. Where are we in the conversation right now between you and Greg Koukl?

**MS:** Okay, just in case anybody's just checking on online, it's http://www.skeptic.com instead of…

**HH:** I'm sorry.

**MS:** No big deal. Anyway, so, well, is there an outside source to these moral principles that God then recognizes and says yeah, this is part of the universe, it really is wrong to kill other people, and I as the Deity am telling you this is what I know as part of nature? Or, do no such moral principles actually exist anywhere outside of the Deity Himself, and then He tells us through His Holy books? Okay, so which is the right answer to that question? And two, assuming that…well, you did say something about it's in God's nature. Well, if we're made in God's image, wouldn't that also put the moral principles in our nature as well?

**GK:** It does…

**MS:** So then we're tapping into those principles that really exist in us. And how is that any different from what I've been arguing already?

**GK:** No, the difference there, just on that particular issue, is I agreed earlier when you said it's part of our nature. The source is what's different. What's part of our nature is the knowledge of external things. In my case, these things are external. They are external like math principles are external to my mind. I don't invent them in my mind. In your case, the way you account for them being universal, in the sense that they're part of all humankind, is that evolution has created this. These are two entirely different things. In my case, I'm talking about an object of reality, and in your case, you're talking about a subjective reality. And I know you want to jump in. Just one more point here. I am not complicating things at all, or oversimplifying things. The issue is quite simple if you start at the bottom. Either moral obligations are objects, or they're part of the object, or they're part of the subject. They are objectively true, or they're not. There are no other options. Now if you agree that morality is not objective, then it's a crap shoot, really. It's not whatever you want, if what you mean your society isn't going to allow you to do whatever you want. It's not whatever you want if you meant that well, evolution is going to determine certain things

for you, that aids the species. But it is whatever you want. What is is right, if there is no outside objective moral standard that's governing you. Now how you want to ground that, that has it's own…that's another issue. And grounding it in God makes a lot of sense, and it even, I'm not even subject to the kind of problems that you Euthyphro dilemma that was just offered there. There is an answer to that, that avoids that problem. But it seems to me if there are objective moral laws, then that suggests an objective moral law giver. And if it's not, then it's just deterministic biology, or it's whatever the group says. And then we could be all over the map.

**MS:** Well, then you have the problem, it seems to me, of determining which moral values in the Holy book that you embrace, the Bible, which not everybody embraces as the source, other people have different holy books and sources, so…but anyway, granting yours, which of the moral principles are you going to adhere to, and which not? So for example, I presume you would reject slavery, as everybody would today. And yet Christians of centuries past embraced slavery, and used Biblical references as political support for slavery, as you well know. And William Wilberforce, who over, you know, sort of single-handedly, against all his fellow Christians who were standing up against him, said no, this is a bad idea. And so I think you have the problem of, like, which moral principles are you going obey, and which not?

**GK:** Oh, no, you're absolutely right, Michael. We have the problem as human beings, actually, regardless of our understanding about where morality comes from, of trying to figure out which is the appropriate applicable principle in this given situation. Your system suggests that we're basically kind of following an evolutionary impulse, and that's what we're obeying, and so we're not really obeying goodness itself, where I'm suggesting that the problem of moral decision making is difficult, because there are a lot of competing moral goods. But there is an answer to the problem if we think through it carefully. And you don't have to have a Bible, and I think you understand this, Michael. People…my view isn't that people have to have a Bible to know right and wrong. The Bible itself, in Romans Chapter 2, teaches that that is on everybody's heart in some fashion that allows him to have access to it, which is what you said earlier. It's in all of our natures. We agree on that particular point. So you don't need to have the Bible. But if you do, then you have a problem with interpretation. That's true of everything. We don't make the issue simpler in a sense by saying oh, well, morals are objective, because now we have to ask which objective moral principles apply in this circumstance.

**MS:** Well, so…right…

**GK:** So I readily agree that there's a challenge there in moral decision making.

**MS:** So how do you know what's right and wrong? How do you personally know? Is it from the Bible? Do you listen to the still, small voice within? Do you pray?

**GK:** I reflect on my moral nature, on my moral intuitions. Just like I know how math principles are right and wrong, I reflect on those things as well.

**MS:** Well, me, too. So how is it any different, because I do the same thing.

**GK:** And I have a…well, the difference is, well, I just described. You are reflecting on a nature that you're compelled by certain evolutionary things to do something, and it could just as well have been that evolution pushed you in an entirely different direction, so that rape or child molesting, or something like that, is wrong. I mean, we're not even talking now so far, Hugh, about the details of how evolution accomplishes this, which is another issue. We're just talking about it conceptually right now.

**MS:** Actually, I don't do that. I don't even think about evolution or Darwinism or anything like that when I'm thinking about right and wrong.

**GK:** Right, I know.

**MS:** Like when I interact with other people…

**GK:** …in the explanation, you do.

**MS:** Yeah, in my explanation. Yeah, but when I think about well, what should I do in this situation, how should I treat this other person, is this really right or wrong, I just try to put myself in their shoes, and think well, how would I feel?

**GK:** Fair enough.

**MS:** And I think you do, too. I think that's what we all do.

**GK:** We are both drawing on the same faculties.

**MS:** Right.

**GK:** That isn't the question whether we have the faculties. The question is where do the faculties come from, and what ground them? What makes these things good or bad? You just told me a few moments ago, Michael, that you can go either direction. You could obey your baser nature, which is evolutionary determined, or the higher nature. Well, what is higher and lower in evolution?

**MS:** Well, this is a good question. Say…take the slavery issue, for example. How do you know that's wrong?

**GK:** Actually, you raised the question of xenophobia earlier. We could do our tribal instinct thing, which we're by nature dictated to follow, but we can rise above that. So I don't know why…what's above that, unless you're importing some external standard of morality?

**MS:** Right, so where does it come from?

**GK:** How do you adjudicate between the two on an evolutionary basis?

**MS:** I think…yeah, I think that there is a long term trend over the last, maybe, couple of thousand years, to expanding the circle of moral sentiments of who we're going to count as fellow group members that we do not rape, pillage, destroy and kill. And the question is why has that happened, let's say, since the Enlightenment, where we no longer want to treat blacks like we used to, and we want to give women the right to vote, and so on, and now gay marriage is up on the table for discussion and so on. We keep sort of expanding the circle of sentiments. Why would that be? I actually think that it's possible there is sort of a built-in to maybe the universe or something, a tendency toward, well, Robert Wright calls this playing more nonzero games, more win-win games, that is all of us benefit if we have more positive moral exchanges between us. This is why I promote free trade. I think it's one of these mechanisms of generating not just more wealth, but more goodwill between people. And I think that may be very well built into the system, whether there's a God or not. I think it might actually be there.

**GK:** Well, this is a very important juncture in our conversation, because what Michael has appealed to is something very much like a universal mind, that is this perspective over the whole enterprise, looking down saying as all the things fit together, this would be better for everyone, and that somehow directs the process.

**MS:** I'm not quite committed to that, by the way. I just think it's an interesting idea…

**GK:** But if…okay, now fair enough…

**MS:** And I'm not sure if it's a bottom up process, or a top down process, so…

**GK:** Well, this is the question then. If it is a bottom up process, if it's in the genes, how is it that the genes, then, in any of their working, can anticipate, in a sense, the greater good for all mankind? That strikes me as completely con…

**MS:** Not just the genes, no, something a higher order than that, that in the species itself, I mean, we're not talking just about natural selection of individuals, where the organism is the target of selection. But here, I'm talking about group selection. I think group selection has a reasonable case to be built around social organizations, that they themselves are the target of selection. So religion, for example, is a great unifying social force. It brings people together, it unifies them for both good and evil actions, and it's, I think, also part of our nature.

**GK:** Okay, very good, group selection. There's natural selection, which is on the genes, and then there is group selection. Natural selection is materialistic, and it's unguided. Group selection entails intelligent design, because the group is involved there, encouraging or discouraging the behaviors. And when you form your group, it's kind of a social contract thing, that's fine as an explanation, but just keep in mind that both of them are relativistic. And if one group thinks that their group will do better by destroying other groups, it is certainly "morally" within their rights to do so.

– – – –

**HH:** Gentlemen, for people who have just walked in on the middle of this, we've been not going around in circles, we've been actually moving towards a very sharply defined disagreement. But I want you both to state what that disagreement is in one minute or less, not to each other, but for the audience who just walked in. If you had to summarize for them in a minute, or in 90 seconds each, what they missed, Greg Koukl, how would you say that?

**GK:** You have to make a decision, listener, as to whether morality is objective in some sense, or merely subjective. Is it a quality of the action, so when we say rape is wrong, we're talking about rape? Or are we just talking about our feelings or our emotions, or maybe our biological conditioning? As far as I'm concerned, you can go either direction with it at this particular point, but if you decide to go with a subjectivist view, a relativistic view, which is what the evolutionary explanation offers, then you have to be consistent with that to be fair. You can't start then smuggling what sounds like objective morality in the back door, because now you've got another morality that is not accounted for by your evolutionary scheme. And you've got to find another accounting for that, and I think this turns out to be one of the best arguments in favor of theism of some sort, the moral argument. But this is the essence of it, what we're discussing right now.

**HH:** Michael Shermer?

**MS:** Well, I reject what I consider to be a false alternative between objective and subjective morality. I reject subjective morality, I reject relativistic morality. I believe there are objective moral standards. I prefer, I slightly prefer the word transcendent moral values. I don't believe in God, but I could be wrong. If there's a God, it seems to me that the moral standards, moral principles should exist anyway, whether there's a God or not, and that what God is doing, if He's doing anything, is He's telling us what those are. And here, I see a serious problem you have of interpreting what those are, because there's more than one holy book. People have many claims about moral values based on God, of which we vehemently disagree with. So when I asked you earlier about how do you know what's right and wrong, you said I reflect upon it, and I used the expression the still, small voice within. And so okay, so we all do that. I think it all begins with the Golden Rule. Everything else is commentary after that, as the great rabbi said, that is how do you feel, how would you feel if I did this, how would I feel if you did this to me? Well, maybe I should put myself in your shoes, and that's where morality begins, and I think that's absolute, whether there's a God or not.

**HH:** Okay, gentlemen, I had a lot to cover that is not related to this, but I don't want to move on too expeditiously. Do you think we have covered this issue?

**GK:** Yeah, I think we've done a pretty good job, and I think the differences are fairly clear in the, what, hour or so we've been talking about this issue. And I mean, I can take another shot here, then I'd get the last word on it, but I think we've summed up our views fairly accurately.

**HH:** All right, then let me ask you one question before we move to my second set. Michael, you've referred a few times to the presence of many holy books as though that somehow diminishes the idea that one may or may not have more authority than the other. Is that necessarily true, just that there are many holy books, there may be a hierarchy of authority among them, correct?

**MS:** Just take the current events of Islam. Clearly, they have a very different view of morality of how women should be treated than we do, and yet they're basing it on similar holy texts, and some different holy texts. And so how are people of goodwill, who genuinely believe to get along in the world? Clearly, appeals to God is not going to

solve our problem, is it?

**HH:** Okay, I didn't state it very well, then. What I was asking is just does the fact there are many holy books in any way diminish the authority of any one in particular? Just because there are many of them, you've said it a few times, and it's usually as an aside that…it's kind of …

**MS:** Oh, okay. There could be one, yeah, there could be one that's really right, and the rest are wrong.

**HH:** You know, there's kind of an implied, and I don't want to put words in your mouth, but when I'm a believer, as I am, in Scripture, and I hear you say that, I hear a sneer, oh, many holy books, but not an argument that one of them can't be right. Do you see what I'm getting at?

**MS:** Oh, yes, one of them could be right, and the rest wrong, but how do you know which one?

**GK:** Well, that's a different question.

**MS:** Because people of genuine belief in faith like you, who are Islamic, believe just as strongly as you do that women should be treated certain ways, and you would disagree. So how are we to settle this?

**GK:** I'm so glad he put it that way, because that point has absolutely nothing to do with the discussion. You don't cancel out…

**MS:** But isn't it an interesting point, though?

**GK:** Wait, let me finish. No, it is an interesting point, maybe, for sociologists, but as to the issue at question, let me finish the thought, Mike, and then you can respond to it. You don't decide whether a book or revelation is true or false, or anything else for that matter, by looking at how strongly different people hold the views. You have to look at the reasons for the views. I mean, let's just talk about science for example. There are very strongly held views by scientists on a lot of different things, even opposing views about how the Darwinian project worked out. It wouldn't be fair of me to Michael to say well, your particular view, I don't know if you're a punctuated equilibrium guy, or you're a classical Darwinist, or whatever, but it would be unfair for me to say to Michael look, you couldn't be right, nor could they be right, because you both have equally strong beliefs that you are true. That is a non-issue in the discussion. Something else has to be focused on to try to break the tie.

**MS:** Okay, that's a good example, because in that example, at least in principle, it could be settled through more data collection, whether evolution moves along in fits and starts, as described by punctuated equilibrium, or it moves gradually by gradualism. We can at least in principle settle that dispute.

**GK:** Why can't the other one be settled in principle?

**MS:** How would you settle the dispute between a Muslim and a Christian on how women should be treated? How would you settle that? I mean, they go look, it says right here in the Scripture, and you say but it says in my Scripture, so how are we going to settle that?

**GK:** Well…the question here, yeah, well in principle, it can be settled in actually two different ways. One, based on the authority of the book, and so you can look at the books, and say do I have any good, independent reasons, not just leaps of faith, but any good reasons to believe that this is actually a communication of God over and against this one being a communication of God? And there are lots of different strategies to go about that. Or one could just look at the claims themselves, and say look, based on what seems to be a common sense of right and wrong and morality that we all seem to have, and using our best faculties to reflect on it, I have reasons to mistrust this one, and trust this one more. Those are two, at least in principle ways, that you can go about adjudicating between those claims.

**MS:** I have a better way to settle it. Ask the women. How do you feel being treated like this? Which would you prefer? I think you'll get a pretty straightforward answer there, unless the guy's behind the door with a shotgun, and she has to give a certain answer.

**GK:** Okay, this presumes that we ought to care what other people think about how they're treated, which presumes an objective morality, and now we're back into that thing again. So that plays into my hands, not his.

**MS:** And I agree, there's an objective morality.

**HH:** But I…when I come back from break, we've got to go to break, when I come back, and I'll ask you, Michael, when we start, is there a way to adjudicate between the reasonability of those books, because it seems to me that the audience driving around right now has on their mind, and I always try and put myself in the point of the audience, wait a minute, how do you decide between many books claiming to be the revealed wisdom of God, and if your answer is you can't, don't bother, fine. If your answer is you can, pick this one, fine. But let's get to that. Is there an objective way to pick between the books?

– – – –

**HH:** But I want to get back to the subject I was raising. As between the books that claim to be the revealed wisdom of God, is there an objective way to judge them on their merits? Greg Koukl, let me start with you.

**GK:** Well yes, let's say, for example, if the documents in question claim that God communicated in an historical way, penetrated history and certain, particular things happened, now you've got an historical test for that kind of thing. You can look at the details that are expressed. Maybe there's some prophecy that is proclaimed at one time, and you have reason to believe was fulfilled at another time. You ask me in principle how it could be done, this is a way in principle that it could be done. You could see whether the view of the world that the books portray seem to comport with one's deepest intuitions about the way the world really is. I actually think religion is a very messy and untidy business. And with my philosophical training, I like to have all the loose ends tied up. But the fact is, life is not tidy. And no matter what view you take, there are going to be problems and unanswered questions. So I take the perspective, as I mentioned at the beginning of the show, Hugh, as a man looking at my universe trying to make the most sense out of it. What picture of the world, what worldview does the best job of answering most of the questions? And I think this worldview-type analysis would be helpful here. If you have a book that gives a worldview that has a certain feature that seem to resonate with your deepest intuitions about the world, that seems to me a plus for the book. If you have another book that seems to indicate something entirely different, like the Vedas, for example, that suggest that the universe is just an illusion, that it's all Maya. Well this, to me, does not resonate with my deepest intuitions. So here's another way that in principle, at least, one could test one worldview against another with their religious books.

**HH:** Mike Shermer?

**MS:** That does seem problematic to me, even within your own Holy book, of how much we, how many of the Old Testament rules and laws we no longer obey – death penalty for disobedient children and adulterous people and so on. We would no longer practice that ever in our country. Why is that? I mean, that was once considered to be Holy Scripture, now it's rejected by most believers. So obviously, there are decisions being made in people's minds about what's right and wrong that is external to the source itself, that comes from, what, culture, parents, upbringing and so on.

**HH:** Okay, I'm going to recede from it, although my question was how would you choose between the books. I want to come back to that, Michael, but Greg has a response to that.

**GK:** Yeah, of course. Look, the Old Testament law was written for Jews. This is not like we're just making something up out here. It is a proper hermeneutic It was written to Jews under a very specific situation, and it was meant to be applied to them under the theocracy. There are some people who hold this, but certainly not the majority, that these same laws in the same way ought to be applied today. That's why we call it the Old Covenant and the New Covenant. Even within the Christian worldview, there is a place for that, and now there's a place for something new. So there's no contradiction there at all.

**HH:** Yeah, you know, Michael, that does seem to me, Hitchens has made that argument to me a number of times,

and it's just a silly argument.

**MS:** Which argument?

**HH:** The argument that the Old Testament rules that have been abandoned somehow indict the New Testament laws and morality. It's just a silly argument.

**MS:** Well wait. You still obey some of the Old Testament rules. So how do you…

**HH:** Yes.

**MS:** Which ones do you pick and choose from?

**HH:** I'll give you Al Mohler's book. Again, I'm not a participant. I don't want to answer. I want to ask you, though. To me, it was nonresponsive when I said as between the books, how do you judge which books?

**MS:** Okay, which books? I would just say…

**HH:** Of all the holy books that claim to have universal wisdom and knowledge about God, and I could name ten of them, is there a way to choose…

**MS:** I don't think so. I'm answering your question. I don't think there is any outside way to do that. Even in principle, because the ultimate, the original source of those books came through some human source, some revelatory experience that somebody had, that had to at some point put pen to paper and write down what the God said.

**HH:** Let me rephrase it, then. On the basis of human reason, there is no way to evaluate all those books as to which ones are at least more closely approximating the way that people ought to live or not?

**MS:** Oh, that's a different question. Maybe I misheard, because I think we could do that, but what's that standard of the way we ought to live? What are we using for that standard? I would argue there is such a standard, and it's not from religion.

**HH:** And so you would evaluate those books based upon your independently arrived at understanding of what is morality?

**MS:** I think we do do that.

**HH:** Greg Koukl?

**GK:** Yeah, I think we do do that to a degree, too, and here Mike and I have no debate about the existence of a moral sense in human beings. The difference is whether that moral sense is merely an expression of our subjective emotions, which it seems to me what he argues for, though he wants to ennoble that and call that kind of objective morality, or is it our ability to grasp moral realities that are outside of us that would not change, even if our own opinions about it happen to change. That's the difference between objective and subjective. And Mike, you appealed for a kind of third category, but either…I don't see where there is a third category. It's either in the object or in the subject, and that's pretty much the law of excluded middle there.

**HH:** Remember that thought. We'll come right back to Michael Shermer.

– – – –

**HH:** Michael Shermer, what were you going to say?

**MS:** Well, so let's take another current example of whether homosexuality is a sin, leaving aside marriage as a political question, but just is homosexuality a sin or not. Now I presume you would argue it is, and it's right there in the Old Testament, a man shall not sleep with another man, it's an abomination. But why stick with that one, which seems to me equally culturally dependent as some of the other Old Testament on small populations struggling in a harsh environment, in which you want lots of marriage, lots of children and so on. I could kind of see that rules

back then, but why bother now? I mean, why not abandon that one along with slavery and some of the other ones?

**HH:** Greg Koukl? Well, okay, this one goes to a matter of authority, because I think there are complicated, and for some, persuasive arguments that homosexuality is wrong, per se, because of natural law arguments or whatever, but those don't resonate with most people. I think what Michael's getting at here is how is it that the New Testament, or now why are you still holding over that from the Old Testament when things have changed? And the reason is, it's not just an incidental part of the Old Testament law. It seems to be indicated there that the behavior itself transcends, morally speaking, any local law. Some of the laws in the Old Testament were for local things, but some seemed to transcend, like it's wrong to kill, or rather, wrong the murder is the Hebrew word. And so in the New Testament, even though we're not in the Old Covenant situation, we have these same kinds of things, these more transcendent things that apply to all human beings, prohibited. And one of those that's spoken to is the homosexuality issue. And the reason that Paul gives in Romans Chapter 1 is that God made human beings for one purpose, the man for the woman, and the man, in the case of male homosexuality, abandoned the woman that God made for them and burned in their passion against someone else. So there's a violation of the natural order. Now this isn't something that I'm probably going to come up with all on my own just thinking about, and this is where I think Divine revelation is helpful to have us dial down on some of the moral things. And you're certainly free not to accept that, but this is what makes homosexuality durable as a sin, in a sense, from the Old Testament times to the New Testament, because of the reasons that God gives that it's wrong.

**MS:** But using that sort of a moral intuition, and the still, small voice or the reflective aspects of morality, given that we live in a modern world in which we have plenty of people, we don't need more, and somebody, the evidence seems to show people are just born this way, it's like asking a gay person when they chose to become homosexual would be like me asking you when you chose to become heterosexual. And you'd say well, I didn't choose. This is my nature. And that's what gay people say. This is my nature. I've always felt like this. So why would you care? Who cares if somebody finds love with a member of the same sex, and love and marriage leads to fidelity and more moral behavior that we all agree is good for society? Why block that?

**GK:** Okay, just as a matter of fact, it is not the case that science has shown that this is genetic. There is no gay gene. This has not been demonstrated.

**MS:** No, not a gay gene…

**GK:** Or anything like that.

**HH:** Okay, we're going way off the off-ramp, gentlemen.

**GK:** Okay, the answer is, why would any Christian object to that?

**MS:** Yeah.

**GK:** Because out of fidelity to their God, because they believe that God has said this is wrong, and so they're going to oppose it in principle, even though it is not within their purview, then, to bring persecution upon that person, because there's another value that they hold, and that is that all human beings are made in the image of God.

**MS:** Okay, here's my prediction.

**HH:** I don't want a prediction. I want to get back to my question, Michael Shermer.

**MS:** Yup.

**HH:** Based upon what I would say your evolutionarily-constructed moral law, what you consider to be the societal moral law, have you evaluated the various holy books, and given them a hierarchy, which is best, which is not so good, which is terrible?

**MS:** No, I guess I have not.

**HH:** And why not, if that matters so much?

**MS:** I don't, I'm not that interested. I love studying religion, though I have not read the Koran, for example.

**HH:** Greg Koukl, is it necessary for someone who's going to say there's an evolutionary moral law, and talk about God, to have that kind of assessment?

**GK:** I actually don't, I'm sympathetic to Mike. I mean, there's a lot of books to read, you can't read them all. And if he thinks he has come upon a cogent and powerful explanation for the world as he sees it, then he doesn't have a motivation to go outside of that. My argument has been that it's not adequate, and that's why some other kind of solution is going to be necessary.

**HH:** Okay, here's my objection. If there's a moral law, and there's a societal good, and one of these books is really bad for it, and one of these books generally support it, then you ought to, even as an agnostic, make a choice between that which is really horrific, a Hitlerian approach to, you know, a Nazi, Mein Kampf, don't read that one, that's horrible, versus the New Testament is pretty nice. I think…

**MS:** Yeah, I guess I would attest that the New Testament's better than the Old Testament. I guess I would agree. I think Jesus was a big step forward. I think the feminization of some of the morality in the book of Ruth toward the end of the Old Testament is a big improvement over the early books, so yeah, I guess I do evaluate.

**HH:** And where do you put the Koran in that? You haven't read it at all, it just doesn't matter?

**MS:** Oh, I've read it, of course since 9/11, I've read lots of parts of it that everybody quotes, which are all the, you know, the horrific parts. And that seems to me far beneath the Bible in terms of what we would consider moral values. But anyway…

**HH:** Do any of the books have a better grounding in natural science?

**MS:** No, I don't think so.

**HH:** Do any of the books have a better grounding in history?

**MS:** It depends on which books. I mean, parts of the Old Testament have some good grounding in history, and others don't.

**HH:** This is a transition. Greg Koukl, how is the historical evidence for the accounts of these various books?

**GK:** Well, it depends on which one you're talking about. Some of these books aren't history books. They're poetic books that are meant in poetic language, the Bhagavad Gita, for example, to tell something about reality. I think the unique thing about the Judeo-Christian revelation is that principally, the theological story is told through history, so the history is really important. The big event of the Old Testament is the exodus, you know, and this was the salvation event where God intervened. The big event in the New Testament is similar to that, parallel to that, is the resurrection of Christ. Now obviously, we have a lot more access to information about the life of Jesus of Nazareth than we do about the exodus. In fact, there's a kind of a big hole there in terms of archaeology for that period of time. But there's not a big hole when it comes to the life of Christ. And the documentary evidence is quite extensive. And not just the primary source documentation for the life of Jesus, which we call Matthew, Mark, Luke and John, which by the way, should not be simply dismissed because they were written by Christians. Historians don't dismiss them for that reason. But we have to look at these as historical documents. And when we do, we find a tremendous amount of powerful testimony from those documents about the person of Jesus, what He taught, and what He did, which also points to a literal time-history resurrection of Jesus of Nazareth. Now if that actually happened, that puts this worldview in a whole different category.

**HH:** Well, that's my transition, is to the person of Christ, because most of our audience is Christian. And a lot of this argument has been, as I've had with many of the new atheists, silly to believe in Jesus.

– – – –

**HH:** Mike Shermer, as I said at the end of last hour, last segment, is it silly to believe in the historical person of

Jesus Christ? And is it silly to believe in the claims and the accounts of him as recorded in the New Testament.

**MS:** I don't like the word silly, because it trivializes a serious issue. I think it's an empirical claim on one level, whether Christ rose from the dead or not, but on the other hand, I think it's an article of faith. You can show all 13 million Jews in the world that evidence for the risen Christ, and eyewitnesses, and the rock was rolled away or whatever, and they almost universally, except for the small population of Jews For Jesus, reject the evidence. So I don't think it's ultimately provable. I do think it's an article of faith, like many other articles of faith of religion. I don't like the word silly at all. I think that trivializes it unnecessarily.

**HH:** Greg Koukl?

**GK:** Yeah, a frustrating situation for atheists is that the vast majority of people in this country, the rank and file, don't believe in Darwinian evolution. But I wouldn't be free then to say well, this is just, evolution's obviously an article of faith, because look at all the people who look at the evidence that you provide so persuasively and don't believe it. This is an observation that leads to no conclusion about this issue at all.

**HH:** And so, and it's frustrating as well, because it seems to me central for agnostics, atheists, to answer the question about the empirical evidence, and whether it is of high quality…I had this conversation with Richard Dawkins. Dawkins likes to argue you know, I'm a Latin teacher, and I'm just arguing that Rome existed, and a lot of people are arguing Rome didn't exist. And it's the same with evolution. And I challenged him, I asked him the historical evidence for the personhood of Jesus is overwhelming, isn't it?

**MS:** Yes.

**HH:** And so, is the proof…

**MS:** Well, I don't know about overwhelming. I think Jesus existed.

**HH:** Well, is it overwhelming? Or just a guess?

**MS:** I think there's good enough evidence for us to conclude that somebody named Jesus of Nazareth existed.

**HH:** And on the basis of what we know generally about historical text, isn't there pretty good, and perhaps even overwhelming evidence that the Gospels are reliable, historically tested accounts about what this person did?

**MS:** Well now, it's getting a little fuzzier, because of the inconsistency of the accounts. And you could say well, okay, eyewitnesses saw things slightly differently. Yeah, but there's some important differences between the four Gospels. And what about the other Gospels that are not in the canonical books, the gospel of Thomas, for example? And there's legitimate, theological research on these other books, and why can't those be concluded?

**HH:** One minute, Greg.

**GK:** Well, there is legitimate, theological research, and not only on Thomas, but a whole bunch of other pseudepigrapha that come afterwards. There are all kinds of literary documents that make claims to write about Jesus that we know, because of their dating, couldn't possibly have the eyewitness accounts of the information that the Matthew, Mark, Luke and John canonical Gospels have. So just because there are other things that claim to be gospels, it doesn't mean that they're contenders as source of historical information. And the scholars in the field make this distinction. Now Thomas is one of those few documents where they seem to take seriously, but our documents of Thomas are like 3rd Century, and looks to have been written in the 2nd Century. So why is it that the 1st Century documents of the Gospels don't get preeminence there as historical documents? They should.

**HH:** When we come back, the third hour is given over to do the anti-God people have to put up with the same rigorous defense of their beliefs as they ask the theists to put up with theirs. Stay tuned.

– – – –

**HH:** And I want to spend this hour talking really about the debate over the debate. And it's occurring at an unusual time, because just a couple of weeks ago surfaced one of the greatest scandals in the history of modern science,

Climategate, in which incredibly unscientific behavior on the part of scientists has been revealed. The atheists have often in the past few years tried to position the debate as between reason and faith. But now we find the tactics that people of faith are often accused of, absolutely evident on the part of the behavior of scientists – data manipulation, witch hunts against scientists with whom they disagreed with, a refusal to confront contrary evidence. And I took that, and I applied it to this debate over intelligent design, Michael Shermer, and I'm wondering whether or not the opponents of intelligent design have been using the same tactics that the Climategate scientists, who are now deeply scandalized, embarrassed and discredited, have been using for the last, obviously, we just learned about it. But have the proponents of the anti-God view been just as intellectually dishonest as the Climategate scientists?

**MS:** Well, on the Climategate thing, I think the smoking guns are not what I thought they would be. I have some sympathy for the global warming skeptics. I was once one, and could be persuaded again. I think that's just a data question there. But what I think it revealed was how political scientists are. They're very liberal and very tribal, and like everybody else, they circle the wagons when they think they're being attacked from outside. And I think that's what we saw. So to that extent, do atheists, have atheists done that? Yes, they have. They've circled the wagons, they feel like they're under siege. At time, I think particularly since 9/11 with the fear of Islamic terrorism, and then since the Bush administration pushing an Evangelical agenda into politics, way more than Bush Sr., ever did as a Methodist, and certainly more than Reagan ever did, I think that's what caused non-believers to feel like they needed to push back somewhat. And then you just get specific cultural phenomenon like Dawkins' book takes off, or Hitchens' book takes off, something like that. I mean, the book sales on those books are more than cumulative all the other books they've ever written, plus all of a bunch of other books, so I think you get a combination of those events there.

**HH:** Greg Koukl, first your response, then I have a follow up.

**GK:** Well yeah, I think that there is kind of a shell game and a muscling going on, and we see it in the field. And I think what people don't realize, and I didn't realize this until maybe six or seven years ago when this was explained to me, and when explained, I really saw this, that there are actually two definitions of science that are in play here, Hugh. One of them is a methodological definition, the scientific method. You know, follow certain methods, and you come up with the right results. Now if you don't follow that method, then that's called bad science, and you can't trust the results you come up with. But there's more going on here. It isn't just a methodology. There is also a philosophical definition. This philosophical definition is metaphysical materialism, or called naturalism. A metaphysical view is a total view of reality, and on this view, nothing exists but the molecules in motion. That's materialism. That's also part of the definition. So currently, in the state of science, in order to be doing science, good science, you have to be doing the right methodology, but you also have to come to the right kinds of conclusions. You have to come to conclusions that comport with naturalism and materialism. And if you don't, you're accused of doing religion instead of science. I just want people to see that there's a difference here, and lots of times in this discussion, this metaphysical issue trumps the methodology. Notice that a lot of times, the arguments aren't against ID proper, that is the evidence that they've offered. It's a dismissal by saying you're not doing science, you're doing religion. This isn't real scientists at work like we are, these are phonies. And so it's a way of discrediting based on the kind of conclusions that they come up. Now this happens all the time, and you can see a bullying that's going on in the field, and a lot of people have identified this, Guillermo Gonzalez for example, a famous example from Iowa State University, denied tenure though very qualified. Francis Beckwith, for goodness sake, a philosopher, not a scientist, but the same kind of thing happened to him at Baylor before it got reversed, and a lot of other people. There's a political game going on here, and it seems to me that if the evidence for Darwinian evolution is so powerful, then why do you have to do these political moves that are driven not by the methodology, but largely by the metaphysics doing the magic? Why? And I think because the metaphysics are doing a large part of the work, and the method doesn't give the evidence that's necessary to convince the most people.

**HH:** Michael Shermer?

**MS:** Of course, other fields of science don't deal with these issues, like why are Christian groups not up in arms about the Krebs cycle being taught in biochemistry classes and biology classes. Why not? I mean, if you're going to

object to methodological naturalism, why pick on just one, particular little subfield?

**GK:** Because it doesn't have any ramifications for these other things.

**MS:** Yeah, of course. That's right.

**GK:** But it does…

**MS:** Because certain fields of science do bump up against political and religious implications.

**GK:** But it's not just that, Michael. It has to do with the evidence in question. Nobody has, even from my side of things, has any difficulty with the Krebs cycle, because methodological naturalism is the thing that governs day to day science.

**HH:** Why don't you explain the Krebs cycle for our audience.

**MS:** Oh, it's just a…

**GK:** I can, but he…

**HH:** I know, but don't use terms like that for the audience.

**MS:** It's just a biochemical process in cells of using energy.

**GK:** Yeah. And so at this point, to finish my thought, though…

**MS:** Yeah.

**GK:** What this points out is that these kinds of issues are not the kind of thing that affect day to day science. But when it comes to the issue of origins, then it's something entirely different. You have a different category that you're talking about, and this is where the muscling has been done, and that's why the complaints have been raised, muscling that is illegitimate considering what's at stake.

**MS:** Well, muscling on both sides. I mean, it's political on both sides, so the left and the right both push back against each other, all the way back to the Catholic Church and Galileo.

**GK:** Well, okay, I'm glad…

**MS:** I mean, that tension has always been there. Let's not…

**GK:** Great. And it was wrong with Galileo, and it should be wrong now. That's my point. If it was wrong then, and with the monkey trial and everything, now everything is in reverse, and I think this is what Hugh was getting at. If the power plays were wrong in the past, then they should be wrong now, and why don't we just let everybody lay their cards on the table and play fair, and then let the best idea win?

**MS:** I agree. So just put it out there. Like the Climategate? Yeah, let's get that original data. I agree. Sure. Now let me just back up for a second on an example not related to religion, but on another field that I deal with, extra sensory perception. Can we actually read the minds of other people? Okay, setting aside the TV psychics and all that silly stuff, there are some scientists who actually believe that mind exists separate from brain, and that we can connect to each other, and there's a famous physicist named Roger Penrose, who has this theory about that quantum mechanics explains how when neurons fire, the collapse of the wave function inside the atoms, inside the nerves, fire in a sequence that my cells can read your cells. They're actually communicating, somehow, across a distance, all right? I don't happen to think that's true, but let's say it turned out to be true, and that now we have a naturalistic explanation for extra sensory perception. Well, that would no longer be the paranormal, would it? Now it would be quantum neuroscience, or neurophysics, or something like that. So at some point, you need some kind of a natural explanation for the phenomenon in question that we can test. So for example, when somebody, when cosmologists talk about well, the galaxies are structured in this odd way where there must be more matter out there, we'll call it dark energy or dark matter, they don't actually mean that as an explanation. It isn't an explanation. It's just a word filler until we can figure out what's going on. So at some point, it's not that no one's allowing you to introduce the

supernatural, it's just that no different than calling it ESP, that doesn't explain it. We need some kind of a mechanism that causes it.

**GK:** Okay, to be fair, Michael, I was at the debate one week ago that you did with Professor Prothero and Steve Meyer, and the others from the ID thing. And you started out your presentation by saying this is all about religion, it's not about science. That's the first thing you said. And then you referred to the other guys as, you and your partner, as 'those guys,' and we are doing real science, and they're not. In fact, Steve Meyer raised a complaint at the personal attack there, because both of them have advanced degrees in their fields. Now I mean, this is an example of the kind of thing that I'm talking about. It's like, you didn't say to these guys well, you're real scientists, we're real scientists, but really, the facts matter, so let's look at the facts. There are all of these kind of subtle and sometimes not so subtle invectives, or shout across there. Now I've been in debates before. I know how that works. I'm just simply saying that your kind of tone of innocence here, it strikes me as disingenuous, because this is a game that you guys play all the time when in public circumstances. And sometimes, it's not just invectives, it's actually muscling, we won't publish your paper, we won't let people know about it, we're going to criticize you in front of all these people and try to discredit you.

**HH:** A response coming back from Michael Shermer when we return.

– – – –

**HH:** Michael Shermer, I was not at this debate. I have no idea what Greg just referenced. So I want to give you a chance to go back to what he was just talking about. Did you attack Steven Meyer's scientific credentials?

**MS:** Actually, I didn't. My partner did. Well, you know…

**HH:** Did you correct your partner at that point?

**MS:** Well…

**GK:** Steven Meyer corrected him, actually, is what happened.

**MS:** Yeah, I mean, this is a part of the format of debate, right? I mean, it's a contest. It's competitive. You're supposed to, you know, you're supposed to come out…like a lawyer, you're supposed to defend your position. You're not supposed to…if it's a panel discussion, that's different than a debate. This was a debate. I actually do think that it's perfectly fine for Steven Meyer to publish books like his new book on DNA, and put forth testable hypotheses. Okay, at least now we're getting somewhere, where if you give us something we can take back to the lab and test, then we're doing science. If it's just I infer that there's a designer behind this, okay, that's nice, but what am I supposed to do with that? So the analogy I made is that let's say it turns out life did not originate on Earth, that it was seeded here either through meteorites or comets, or maybe even extra-terrestrials brought it here and seeded it, and they are from the Planet Vega, a planet around the Star Vega. Let's say something like that.

**HH:** A dysfunctional GM car, okay.

**MS:** Yeah, exactly, yeah. Right. Good, we needed some humor there. And…but and let's say we found a little pod out in Blythe or something in the desert with the blueprints of how they made DNA. Well, that would be interesting, but we'd still want to know well, where did the Vegans come from? I mean, who made those guys? Did they evolve on this planet? Or were they seeded there from someplace else? Or did God do it? Or…in other words, at some point, we need some natural explanation for where life came from. And if you take this back far enough, you will end up at an infinite regress. Well, God, outside of space and time, came into our space and time, stirred the particles, and created life. Okay, but where did, if not God, the intelligent designer, where did He come from? Did he evolve? Or is he a standalone, the last causal link? And there, we bump up against the great unknown. I don't see how that's resolvable.

**GK:** I've got so much to say about this, I'm not sure where to begin. Let me just start with the power play. At that debate, Richard Sternberg was the other I.D. guy there, and Richard Sternberg used to be with the Smithsonian. But he had the audacity of publishing a paper by Steven Meyer in a journal, a peer review journal that was associated

with the Smithsonian, and he got bounced. This is the kind of thing that I'm talking about.

**MS:** You know, I just called them. He's still there. At least, he's still on their list.

**GK:** Okay, well, the firestorm…

**MS:** I don't think he got bounced.

**GK:** …surrounding that, you don't…okay, forget the bounce thing. The firestorm surrounding it you don't deny?

**MS:** Yes, of course. We're all emotional, yeah. Right.

**GK:** Well, it goes beyond that. And so the point to bringing up the debate, I understand that there is these things you do in debates, but this in the debate was the microcosm of the bigger issue, and that's why I pointed that out. Now with regards to, you know, life beginning on other planets, and then who designed the Designer and that kind of thing, it's a very odd question. And virtually all the guys on Mike's side of this debate ask the same question – who created God, or some variation of that. And what's curious is that Mike and none of these other guys believe that God was created, because they don't believe in God. I don't believe that God was created, because I think that God is eternal. So nobody in the discussion believes that God was created or designed. So why does the question come up that who designed the Designer, or who created God? Frankly, it's a distraction. It's a distraction from the evidence in front of us, for intelligent design. If I'm walking down the beach as we could here in Newport, Hugh, and I see a footprint in the sand, a shoeprint in the sand, I don't need to know who the manufacturer of the shoe is before I can properly conclude from the evidence that a shoe made the print. The same thing is true here. We're focusing on one issue, and that is whether the evidence suggests an intelligent designer. If we come to the conclusion that that's the case, much like forensic pathology, there's a dead man with five holes in his chest from bullets, gee, it doesn't look like natural causes, now let's go search for the person who did it. That's the next step. But we can't say, I think, vacuous challenges like who created God when none, all of these guys know that nothing about our view requires God's creation. They say this to, I think, distract from the main issue, the evidence for design itself, which is compelling, Hugh.

**MS:** Oh, I don't say it as a distraction. I think it's a really interesting question. Where did the universe come from in the first place. And if there were multiple universes, you still have the same problem – where did those come from.

**GK:** I agree. I agree.

**MS:** And I do think, Greg, at some point, we do bump up against limitations of our knowledge, of our language…

**GK:** Right.

**MS:** …of what our brains are capable of solving. And there is a leap of faith for all of us. You either decide to believe, or you decide not to believe. And I don't think it's ultimately provable one way or the other. Now on the other question positing a designer from the evidence of design, I think there is an inference there in which we have vast experience of people shooting each other, and we know what that is. And so you come across somebody with five bullet holes, okay, there's a natural inference there based on experience. And we've seen people make tennis shoes, so we know that they're made when we see the print. Okay, there's a natural inference there. But we've never seen any designer design DNA. We just have the product, the artifact, from which we infer what? And there, it isn't the same as an artifact that's made by us.

**HH:** All right. Now gentlemen, I want to switch for the last three segments of the show leading into a larger question about belief in God generally. Is it good or bad for people? And regardless of whether it's true, or the true true, to use Francis Schaeffer, but is it good or bad? Because that leads me to the second question, are the new atheists involved in an evil project or a good project? Because these are both obvious question. So Greg, you want to take a first pass?

**GK:** Yeah, I'll take a shot at it, and again, I want to go back to my earliest comment when we started talking about morality. It depends on what you mean by good. And I'm just weighing in now to say that when you're using the

word good, I'm taking this as good in the objective sense.

**HH:** Yes.

**GK:** Do objective goods, oughts that we should do and whatever, come to pass better when there is belief in God? There's a famous story of a Hassidic Jew that was standing in front of a German machine gun having just dug his own grave. And he said just before he was gunned down, he said God is watching. Now one thing that the German officer didn't believe at that point was that God was watching. Nor did Mao, nor did Lenin, nor did Stalin, nor did many other people who did great atrocities, did they believe that God was watching. As David Berlinski has pointed out, that's actually the definition of secularism. God is not watching. Now I don't think it takes, you know, a lot of deep thinking to realize, and Michael might call this a shallow motivation regardless, to realize that if people really believe that God is watching, their behavior is going to be better on balance than if they really believe that God is not watching.

**HH:** Michael Shermer?

**MS:** Well, I do think that religion and belief in God is good when it does good, and evil when it does evil. And we can make a laundry list of goods and evils that religion does. You have Hitchens' book here, and he's got a laundry list in there of all the evils.

**GK:** And we agree on that, by the way, Michael.

**MS:** And you could take David Brooks' book, Who Really Cares, and he documents how Republicans and conservatives and religious people give more money and more time, and donate more blood and so on then securalists, atheists, nonbelievers, and Democrats. So I would say that's great. I mean, I sponsor a child through World Vision, because I think they do the job. They put the boots on the ground, and they make things happen. And religion is really good for that. And so I think it's too simple to say is religion good or evil. I mean, come on, it's a big, complex, social, historical force that does lots of good things, and lots of bad things.

**HH:** When we come back, I'll follow up, because I don't think it's too simple. I think it's actually the question about whether or not the anti-God people are engaged in evil if they're destroying belief in God.

– – – –

**HH:** So Michael, I come back to this. You said yeah, religion's done a lot of good and a lot of bad, but generally speaking, and the utilitarian view, is belief in God good for the planet? And if it is good for the planet, have the anti-God people been involved in an evil project?

**MS:** I don't think they have been involved in an evil project. I think what it…it makes it okay to not believe in God. Remember, atheism isn't a thing. There's no, like, central set of tenets that we adhere to or believe in, or anything like that as you would a Republican or conservative, or something like that, or a Christian or a Jew or whatever. We don't have anything like that, because there is nothing. It's just simply we just don't believe. Now because we're social creatures, we like to feel like we belong to a family, an extended family, a group of friends, a bowling league, social capital, this is called. Everybody likes to feel like they belong. Because religion is so dominant in America, particularly the Christian religion, those of us who are either not Christian or not believers, we feel a little alienated, a little lonely, and a little left out. And we'd like to have our own group. So in part, what the new atheist movement is tapping into is that social feeling of wanting to belong to a group. And I don't think there's anything wrong with that. I think it's good that there are people out there, groups out there that make that okay.

**HH:** Greg Koukl?

**GK:** Yeah, your question was not whether religion does good, but whether belief in God does good, if I recall it correctly.

**HH:** Yup.

**GK:** And so I want to return specifically to that. The atheists do have a code. It's not very complicated. It's just that as Michael just put it, there is nothing. So what is the moral consequence on a people if they believe there is nothing? That's really the question. The 20th Century, which we just left, was the bloodiest century in the history of the world. And just a casual adding up of the numbers shows over 100 million that were dead at the hands of just three people – Lenin, Stalin, and Mao Tse Tung. Now these people had a particular ideology at which atheism was its foundation. Because they didn't believe in God, and there is a natural kinship here between worldviews and the actions that follow them, because they didn't believe in God, it was the state that was the greater power. And if the state is the greatest power, and they were the state, then they had no one to answer to. And consequently, they were able to do these things that everyone views as an atrocity. Now this, I think, is logical. This follows from that worldview. I'm not saying that atheists are all evil like that. They're not. Mike is a fine guy. What I'm saying is that given the atheistic worldview, you are allowed to do those kinds of things, because there is no transcendent rule that's keeping you from doing otherwise.

**HH:** Michael Shermer?

**MS:** Nobody kills or dies in the name of atheism, because there's nothing to kill or die for. People kill and die for causes, for ideologies, for beliefs. And communism is a faux religion. It is exactly like a religion, a set of tenets that people adhere to, and then we're going to go out and change people's minds, or impose our views on them and so on. That's what social groups do, whether they're political, ideological, economic, religious, whatever. And that's what communism is. And it's nothing more than that. Nobody killed in the name of that. In any case, Hitler's not a good example, because as we've seen now…

**GK:** I didn't use him.

**MS:** …with the indictment of the Catholic Church, they were very much involved in the whole Nazi process there…

**HH:** That's…time out, Michael. That's simply not true, but let's not go there. I would want to have an expert in the Vatican's many, many interventions to save lives, and then we'd have a long conversation…

**MS:** Oh, of course they did. Yes, yes.

**HH:** Let's just not throw it out there. Let's just not throw it out there.

**GK:** The real issue here is not whether people did it in the name of atheism or not. But it has to do with the kinship of behaviors to worldviews. Whether people are thinking of this as a rationale, gee, I'm an atheist, so I can go kill people, is not the issue. The issue is how is it that people actually live out the deep beliefs that they have about the world? And it seems obvious that when people have believed that there's nothing else but us and our rules, what we make, for whatever reasons we do, and we answer to no one, and there isn't going to be any final justice or final judgment or final reckoning, well, it seems very clear to see how this is going to have a deleterious effect on behaviors.

**MS:** Yeah, but if Torquemada had gas chambers, wow, what would the numbers have been in the Inquisition? I mean, in the name of God, Torquemada…

**GK:** So you're saying there is no relationship between the worldviews?

**MS:** Well, you brought up the numbers.

**GK:** Right.

**MS:** It isn't numbers that's important. It's what your capable of doing. And religious beliefs and political ideologies are no different as belief systems driving behavior that's moral or immoral. People kill in the name of religion just as much as they do in the name of a political ideology.

**GK:** This is false, just quantifiably, first of all.

**MS:** No, I disagree.

**GK:** But secondly, there is the idea…

**MS:** Not by the numbers.

**GK:** The idea is what's important. People just have to reflect in the idea. Which one is a better encourager to good behavior, that God exists. That was your question.

– – – –

**HH:** It seems that we're onto something very important here, and Michael, I sense defensiveness on your part, so I'm going to let you go first. If, in fact, the new atheists launch a series of responses that lead people to not believe in God, and those people in not believing in God act a certain way, that's causation. That's responsibility. Ought the new atheists ought to own their responsibility? If they kill God, ought they not to own the results of killing God?

**MS:** First of all, I don't think that's going to happen. It didn't happen at the turn of the 20th Century.

**HH:** Didn't ask that question, though.

**MS:** Yeah, yeah, I know. Sure, okay, I'll stand up and be responsible. Why not?

**HH:** Greg Koukl, have they been? It's a flippant response. That's okay. But…

**GK:** Yeah, well…

**MS:** No, it's a true response. Yes…

**GK:** What I was…okay, great. So what do we take away from that?

**HH:** Right.

**GK:** Listen, I'm arguing if there is no God, then everything is permitted. There is no objective morality.

**MS:** I don't agree with that. Come on.

**GK:** I understand that. I understand you don't, but you have ground objective morality…

**MS:** Yes, you can. We're back to where we began.

**GK:** Your morality is subjective.

**MS:** No, it's not.

**GK:** It's something that's in the subject. It's in the genes…

**MS:** That's objective.

**GK:** And it creates…yes, okay. Well, it is objective, but it's not objective in the way that I'm talking about it. It's objectively in the subject, and ethicists have made this distinction for a long time between objective and subjective. I'm not going to go there again. Let me just finish the equation here. If there is no God, then everything is permitted. If the new atheists are right, then there is no God. Therefore, if the new atheists are right, then everything is permitted. Now I think that follows. And I think this, then, creates a problem. Again, I don't think that all of the atheists are bad people in everything that they do. They're just as bad as the rest of us religious people. Let's face it. The question has to do with the impact of worldviews, and that is really what's in play here.

**HH:** I do agree, Michael, that's where I'm coming back down to. I take responsibility for it if in fact the people who allowed and facilitated the rise of the atheist monsters of the 20th Century were around today, they would deny responsibility for them, even though they facilitated it with the collapse of the orders that previously held back the monsters. It seems to me now that Dawkins, et cetera, your rhetoric is much milder than Dawkins, but that they were about unleashing the beast again, because the beast is eager. The most eager thing in the world for the Devil, the Christians have always said, is not to be believed in. And you guys are doing a good job.

**MS:** If they, if Dawkins and Hitchens and so on were promoting some kind of a political agenda hooked to the atheism, whereby you're supposed to go out and do this or do that, then yes, I'd think you have a point, and I'd be concerned about it. That is, is it leading to greater liberty, or greater tyranny? That's the question, liberty and tyranny, is at stake in terms of the boots on the ground, actual change.

**HH:** Greg Koukl, if you take down a dam when it's not raining, and nothing happens for give years, ten years, fifteen years, twenty years, and then the hundred year flood comes, which happens every hundred years, and you destroy everything in front of it…

**GK:** Then you're in trouble. Right.

**HH:** You're responsible.

**GK:** Well, you made the point. And actually, Sam Harris is very explicit about this in his book. He said that there are some beliefs that are so dangerous, and he's talking about theism here, that it's justified to even kill people for that belief. Now two things are in play here. Sam Harris acknowledges the relationship between worldviews. You believe certain things that have certain consequences, which I think is true and that's what I'm arguing, and then he exemplifies it himself with the danger of atheism. He thinks that they, atheists, not all believe this, and certainly Michael doesn't, he is not going to get involved in this, but he seems to suggest that some people should be killed for their beliefs. And whether Dawkins has a political agenda or not is irrelevant. If he is laying the foundation that justifies a certain political agenda, then the dominoes are going to fall. It's a logical slippery slope, and it's one to be concerned about.

**MS:** You see, I place at the feet of the monstrous evil of the 20th Century Marxism, Leninism. If Marx and Lenin just simply said we're atheists, and they wrote atheist books, nothing would have happened. It's that they hooked it to something else, which is the confiscation of private property, the confiscation of individual liberties, the ownership of productivity. That's what destroyed those societies and led to the monstrous problems.

**HH:** Greg Koukl?

**GK:** Well yeah, I agree with that as far as it goes, except to say that there was something else that was in place that allowed them to do such a thing, and that there was a, again, a kinship between the belief system and the results of that belief system, the particular things. Now could religious people have done that? Yes, but it's a lot harder to hang the behavior of Christians who say they're Christians that's evil, on Jesus Himself, because Jesus didn't teach that kind of thing. Instead, you have Christians that are acting contrary to Jesus' own behavior and teaching. In this case, you have behaviors that are fully consistent with an atheistic worldview.

**MS:** But you left out the first World War, which was Christian nations fighting Christian nations – Germany and France and England were all Christian nations. They all believed God was on their side. And they imposed just as much destruction as happened in World War II. They just didn't have any…

**HH:** I actually don't believe any of them believed God were on their side when they went into that war. I know the history of World War I fairly well. They did not march to war on the basis…

**MS:** Well, but you would call them Christian nations.

**HH:** But they did not, then went to war on the basis of economics…

**MS:** Well, okay…

**GK:** But even if they did, it's not the point.

**HH:** It had nothing to do with God.

**MS:** Okay, I would agree.

**GK:** The point is what is it that, does the worldview that they have justify what they did? And now we're back to Jesus again, which they can't put it on Jesus, but the atheists can put it on atheism.

**HH:** Very quickly, this segment and last, of the various world religions, which has contributed the most to human progress in the alleviation of suffering? It's an objective question. It's not a question about which is correct or which is true. Just if you look through of all the world religions, which has contributed the most to human progress and the alleviation of suffering? Michael Shermer, do you have an answer to that?

**MS:** I'd say probably Christianity.

**HH:** Greg Koukl?

**GK:** Yeah, this is well documented. Under The Influence, for example, is one of the books that has been written to show this is the case.

**MS:** Oh, that's a Judeo-Christian…

**HH:** Does that necessarily tell us anything about the truth claims of the religion, Greg Koukl?

**GK:** Well, when you look at the particular truth claims, I think it does. These things were done in a way that were consistent with the Christian worldview, and seem to resonate with the other people who didn't share their worldview as something that's good. This is why going back to worldview perspective is so valuable. I think these are outliving of a worldview that deeply resonates with our deepest intuitions about the way the world actually is.

**MS:** I'm in favor of any ideology that gives more people more freedom and liberty and individual power, whether that's religious or nonreligious.

**HH:** We'll be back. I'm going to give a minute to each of my guests to wrap this up. Don't go anywhere, America.

– – – –

**HH:** I want to thank Michael Shermer of Skeptic Society, http://www.skeptic.com, and Greg Koukl of Stand To Reason, http://www.str.org for their time and their patience. Greg Koukl, a minute, fifteen for you.

**GK:** Yeah, I started out talking about worldviews. And as a man trying to make sense of my world and finding a worldview that seems to fit reality as I experience it. I think atheism is way too austere for me, Hugh. It commits me to too many counterintuitive things – everything comes from nothing, like comes from nonlife, consciousness comes from matter, morality comes from a reorganization of molecules. None of this seems to make sense to me. There is another alternative that seems to make a lot more sense, that a big bang needs a big banger, that a moral law comes from a moral lawgiver, that design comes from a designer. These notions are captured well, I think, in the Biblical account of life. And the person of Jesus, especially, exemplifying these notions, and then giving us a way to live that makes sense. And this is why I'm a Christian and not an atheist. I think it makes the best sense of the world as we know it.

**HH:** Michael Shermer?

**MS:** I'm an atheist, because I don't believe in God, and there's nothing to follow from that. I think we have an absolute moral standard, we have objective moral truths, we all know what they are, we listen to our small inner voice within that comes from our evolutionary heritage as a social primate species, in which we care deeply about our fellow group members. We have empathy and sympathy, and that's where the moral emotions come from. In terms of religion, I think religion is good when it does good, it's bad when it does bad. In general, I'm in favor of anything that leads to greater freedom, greater liberty, greater autonomy for more people in more places. And that has been the trend for the last five hundred years, that I attribute to the general secular idea, from the Enlightenment, that people have value in and of themselves, and I think religion has fostered, after the fact, sort of just slightly behind the wave, reinforcing those good, human values, and attenuating the bad ones. And that's why they've discarded so many of the Old Testament values that we no longer adhere to. So I think that's the long term trend, and I think we should continue to count people, more and more people as part of our fellow in-groups, and I think free trade and travel and the internet is the best way to encourage that.

**HH:** Thank you, Michael Shermer of Skeptic Magazine, http://www.skeptic.org, Greg Koukl of Stand To Reason,

http://www.str.org. Once again, all their books I've been talking about are linked at Hughhewitt.com. I want to thank Adam and Generalissimo for all their work in producing today.

End of interview.

# Kenosha teachers vote to de-certify their teacher union, 63 – 37

**Wintery Knight** · 14 September 2013 · Archived copy · Original

The Competitive Enterprise Institute reports.

Excerpt:

> Today, teachers in Kenosha, Wis., voted to decertify their union, the Kenosha Education Association, by a margin of nearly two to one. Only 37 percent of the teachers opted to retain the union in an election made possible by the labor reforms enacted under Gov. Scott Walker (R). The result goes to show that when workers have a choice on whether to join a union instead of being forced into one by law, they often choose to vote down the union.
>
> Competitive Enterprise Institute labor policy analyst **Matt Patterson** said regarding the vote in Kenosha:
>
> "Gov. Walker's bold and effective reforms have loosened the grip of unions on Wisconsin's public purse, to the benefit of taxpayers and to the detriment of Big Labor bosses. The news today proves what unions have long feared – that when workers are actually given a free and fair choice, they will often choose opt out of union membership altogether.
>
> "The public at large—and an increasing number of union members—have become wise to the fact labor unions stifle innovation and burden governments and businesses with unsustainable costs and regulations."

What that means is that the union not only does not get automatic contributions from teachers, but that the the school district cannot even withhold funds from teacher pay checks. Teachers will have to come to some sort of arrangement with the union to give them money on their own, if they want to.

The Milwaukee Journal Sentinel added some more details.

Excerpt:

> Christina Brey, speaking for the Wisconsin Education Association Council, downplayed recertification, calling it just another hoop for local unions to jump through.
>
> Unions can exist without certification, but they cannot bargain for limited base-wage increases with the district. And there are fees involved with chasing recertification.
>
> "It seems like the majority of our affiliates in the state aren't seeking recertification, so I don't think the KEA is an outlier or unique in this," Brey said.
>
> She added that certification gives the union scant power over a limited number of issues they'd like a voice in.
>
> Sheronda Glass, the director of business services in Kenosha, said it's a new experience for the district to be under Act 10.
>
> She said that, without the union being certified, the district is not obligated to even sit down and hear the concerns of the union over issues such as base wages and working conditions, a clause known as "meet and confer orders."
>
> Also, she said the district can no longer hold wages for union dues if the union is not certified.
>
> Employees would have to pursue a different avenue if they want their wages withheld, she said.
>
> "We've heard all kinds of stories about what has happened in other districts that came under Act 10 and had no teachers' contract," Glass said. "It's interesting now that we're in it."

That comment "It seems like the majority of our affiliates in the state aren't seeking recertification" is good news.

# Images of unborn babies developing in the womb

**Wintery Knight** · 14 September 2013 · Archived copy · Original

This post from Life News has ten excellent pictures of life inside the womb.

Here's my favorite from 10 weeks:

Unborn Baby – 10 weeks old
This is a first trimester baby!

I decided to go hunting to see what is developed at this time, and found this list:

> - From this week until birth, the developing organism is called a fetus.
> - The fetus is now the size of a small strawberry.
> - The feet are 2mm long (one tenth of an inch).
> - The neck is beginning to take shape.
> - The body muscles are almost developed. Baby has begun movement.
> - While still too small for you to feel, your little one is wriggling and shifting.
> - The jaws are in place. The mouth cavity and the nose are joined.
> - The ears and nose can now be seen clearly.
> - Fingerprints are already evident in the skin.
> - Nipples and hair follicles begin to form.
>
> The unborn baby is now called a fetus. Though the fetus is constantly moving, you will not be able to actually feel fetal movement for several more weeks. All of the organs, muscles, and nerves are in place and beginning to function. As the hands and feet develop fingers and toes, they have lost their paddle like look. The touch pads on the fingers form and already have fingerprints.
>
> During this week of pregnancy the crown to rump length of the fetus is 0.9 inch to 1.2 inches (22 to 30mm),

> weight 0.07 ounce (2gm). They are now on the way to forming their testicles or ovaries, getting ready for the next generation. Until the ninth week of fetus development, the fetal reproductive apparatus is the same one for the both sexes. The head is still large and curves into chest.
>
> Each week your uterus grows larger with the baby growing inside it. You may begin to see your waistline growing thicker by this time. A pelvic exam will detect that your uterus has grown from it's normal, size of your fist, to a little bigger than a grapefruit.

Fascinating!

# North Korea reactivates nuclear reactor that was closed in 2007 deal

**Wintery Knight** · 15 September 2013 · Archived copy · Original

CNS News reports on a disturbing story.

Excerpt:

> While the international community has been focused on the crises in Syria and Egypt, North Korea evidently has been quietly preparing to resume operations at a nuclear reactor which it agreed under an international deal eight years ago to shut down, before warning amid heightened tensions last April that it would restart.
>
> Commercial satellite images captured in late August show columns of steam rising from a building alongside the five-megawatt plutonium-based reactor at Yongbyon, prompting experts at the U.S.-Korea Institute at the Johns Hopkins School of Advanced International Studies to say it will likely be operational shortly.
>
> "The white coloration and volume are consistent with steam being vented because the electrical generating system is about to come online, indicating that the reactor is in or nearing operation," said analysts Nick Hansen and Jeffrey Lewis.
>
> They said the reactor is capable of producing six kilograms of plutonium a year, which the North Korean regime can use "to slowly increase the size of its nuclear weapons stockpile."
>
> In a separate analysis, the Institute for Science and International Security (ISIS) noted in addition to the reactor developments that the North Koreans has also recently expanded a building housing a centrifuge plant for uranium-enrichment.
>
> Pyongyang has said this is to obtain low-enriched uranium to fuel a separate light-water reactor under construction at the complex, although one of many unknowns in the North Korean program is whether it has also produced weapons-grade uranium, and if so, how much.
>
> The Yongbyon complex, some 60 miles north of Pyongyang, houses both the five-megawatt, graphite-moderated reactor and an associated reprocessing plant and nuclear fuel rod fabrication facility.
>
> Under an agreement at China-hosted at "six-party" talks, first hammered together in Sept. 2005 and then formalized in Feb. 2007, North Korea pledged to shut the facilities in exchange for economic and diplomatic concessions. Among them, the Bush administration agreed to unfreeze $25 million in North Korean funds, frozen in its account at a Macao-based bank.
>
> In July 2007 the International Atomic Energy Agency (IAEA) confirmed that the Yongbyon shutdown was complete, and in 2008 the main cooling tower at the site was demolished in a dramatic supposed symbol of Pyongyang's commitment to the denuclearization deal.
>
> But after that the six-party talks – involving the U.S., the two Koreas, China, Japan and Russia – ran into more difficulties. In late 2008 they stalled amid disagreements over how to verify North Korean compliance with its commitments, and the talks have not reconvened since.
>
> Pyongyang tested a nuclear device for a second time in 2009, and again early this year.
>
> Last April, it announced plans to restart the Yongbyon reactor. It also vowed never to abandon its nuclear capability for political or economic benefits, and reiterated demands that the international community accept it as a nuclear weapons power.

Has our performance in Syria been a trigger for their decision?

> **Heritage Foundation scholar Bruce Klingner in an analysis Thursday said Pyongyang was likely encouraged by the Obama administration's policy on Syria and its chemical weapons use – "a dizzying**

> **array of contradictory U.S. statements, crossed redlines, and reticence to fulfill declarations of intent."**
>
> **"To the degree that North Korea can penetrate this confusing political morass, the regime is probably heartened by signs of a declining American willingness to intervene overseas even when confronted by evidence of the use of weapons of mass destruction (WMD)," he wrote.**
>
> **"Pyongyang will conclude that President Obama's bold rhetoric, including that directed against North Korea, was unlikely to be backed with significant military action," said Klingner, a senior research fellow for Northeast Asia at Heritage's Asian Studies Center.**
>
> **"The regime will incorporate this perceived American passivity into its decision-making in future confrontations with Washington and Seoul."**

The Heritage Foundation is against a strike, so I think what they are saying is that you don't make threats unless you intend to carry them out. If you say there's a red line, then don't follow up on that threat, you look weak. And when you look weak, bullies are emboldened to be aggressive. That's the way the world is.

# Russia to supply Iran with state-of-the-art surface-to-air missile systems

**Wintery Knight** · 15 September 2013 · Archived copy · Original

From the Jerusalem Post.

Excerpt:

> Russian President Vladimir Putin has approved the transfer of S-300 anti-aircraft missiles to Iran, according to the prestigious Russian daily newspaper Kommersant.
>
> The newspaper reported on Wednesday that the Russian government will revive the transfer three years after it canceled the original transaction.
>
> According to Kommersant, the Kremlin agreed to Tehran's request to complete the transaction, which will net the Russian treasury $800 million.
>
> In addition to the missile deal, Russia has also agreed to construct another nuclear reactor in Bushehr. According to the Kommersant report, the two sides are expected to finalize the details of the deal this coming Friday, when Putin is expected to meet his Iranian counterpart, Hassan Rouhani, in the central Asian republic of Kyrgyzstan.
>
> […]The Russian-manufactured anti-aircraft batteries have been a source of concern to Israeli officials who fear that their enemies' possession of them could have adverse strategic consequences.

The article reports the range of the surface-to-air missile system as 200 km.

The missiles can be used to shoot down incoming missiles or strike aircraft. It would probably make any Israeli strike on Iranian nuclear weapons facilities much more dangerous. If the system is supposed to come online in 2016 then that would mean that the Israelis would have to strike before then.

I blogged before about how missile systems sold to Iran made their way to Syria and then to Hezbollah, where they were used to sink an Israeli ship. Could that happen with these S-300 SAMs?

# Pro-gay web site “The Advocate” tells real story of the Matthew Shepard murder

**Wintery Knight** · 15 September 2013 · Archived copy · Original

A fascinating article the radically pro-gay The Advocate.

Excerpt:

> What if nearly everything you thought you knew about Matthew Shepard’s murder was wrong? What if our most fiercely held convictions about the circumstances of that fatal night of October 6, 1998, have obscured other, more critical, aspects of the case? How do people sold on one version of history react to being told that facts are slippery — that thinking of Shepard’s murder as a hate crime does not mean it was a hate crime? And how does it color our understanding of such a crime if the perpetrator and victim not only knew each other but also had sex together, bought drugs from one another, and partied together?
>
> None of this is idle speculation; it’s the fruit of years of dogged investigation by journalist Stephen Jimenez, himself gay. In the course of his reporting, Jimenez interviewed over 100 subjects, including friends of Shepard and of his convicted killers, Aaron McKinney and Russell Henderson, as well as the killers themselves (though by the book’s end you may have more questions than answers about the extent of Henderson’s complicity). In the process, he amassed enough anecdotal evidence to build a persuasive case that Shepard’s sexuality was, if not incidental, certainly less central than popular consensus has lead us to believe.

And here are the details:

> But in what circumstances does someone slam a seven-inch gun barrel into their victim’s head so violently as to crush his brain stem? That’s not just flipping out, that’s psychotic — literally psychotic, to anyone familiar with the long-term effects of methamphetamine. In court, both the prosecutor and the plaintiffs had compelling reasons to ignore this thread, but for Jimenez it is the central context for understanding not only the brutality of the crime but the milieu in which both Shepard and McKinney lived and operated.
>
> By several accounts, McKinney had been on a meth bender for five days prior to the murder, and spent much of October 6 trying to find more drugs. By the evening he was so wound up that he attacked three other men in addition to Shepard. Even Cal Rerucha, the prosecutor who had pushed for the death sentence for McKinney and Henderson, would later concede on ABC’s *20/20* that “it was a murder that was driven by drugs.”
> No one was talking much about meth abuse in 1998, though it was rapidly establishing itself in small-town America, as well as in metropolitan gay clubs, where it would leave a catastrophic legacy. In Wyoming in the late 1990s, eighth graders were using meth at a higher rate than 12th graders nationwide. It’s hardly surprising to learn from Jimenez that Shepard was also a routine drug user, and — according to some of his friends — an experienced dealer. (Although there is no real evidence for supposing that Shepard was using drugs himself on the night of his murder).
>
> Despite the many interviews, Jimenez does not entirely resolve the true nature of McKinney’s relationship to Shepard, partly because of his unreliable chief witness. McKinney presents himself as a “straight hustler” turning tricks for money or drugs, but others characterize him as bisexual. A former lover of Shepard’s confirms that Shepard and McKinney had sex while doing drugs in the back of a limo owned by a shady Laramie figure, Doc O’Connor. Another subject, Elaine Baker, tells Jimenez that Shepard and McKinney were friends who had been in sexual threesome with O’Connor. A manager of a gay bar in Denver recalls seeing photos of McKinney and Henderson in the papers and recognizing them as patrons of his bar. He recounts his shock at realizing “these guys who killed that kid came from inside our own community.”
>
> Not everyone is interested in hearing these alternative theories. When *20/20* engaged Jimenez to work on a segment revisiting the case in 2004, GLAAD bridled at what the organization saw as an attempt to undermine

> the notion that anti-gay bias was a factor; Moises Kaufman, the director and co-writer of *The Laramie Project,* denounced it as "terrible journalism," though the segment went on to win an award from the Writers Guild of America for best news analysis of the year.
>
> **There are valuable reasons for telling certain stories in a certain way at pivotal times, but that doesn't mean we have to hold on to them once they've outlived their usefulness. In his book, *Flagrant Conduct,* Dale Carpenter, a professor at the University of Minnesota Law School, similarly unpicks the notorious case of *Lawrence v. Texas,* in which the arrest of two men for having sex in their own bedroom became a vehicle for affirming the right of gay couples to have consensual sex in private. Except that the two men were not having sex, and were not even a couple. Yet this non-story, carefully edited and taken all the way to the Supreme Court, changed America.**
>
> **In different ways, the Shepard story we've come to embrace was just as necessary for shaping the history of gay rights as *Lawrence v. Texas;* it galvanized a generation of LGBT youth and stung lawmakers into action. President Obama, who signed the Hate Crimes Prevention Act, named for Shepard and James Byrd Jr., into law on October 28, 2009, credited Judy Shepard for making him "passionate" about LGBT equality.**

I think that it's good that The Advocate posted this correction to the story. I admire them for being willing to tell the truth about the story. However, note that the author is not sorry that a fake version of the case was used to push the gay agenda forward. Now what if the same willingness to twist the truth was shared by the gay activists who are redefining the issues in the culture as a whole? What if the people who are pushing the gay agenda in schools, in the media, in the workplace, and elsewhere, had the same willingness to twist the truth in order to advance their cause?

It's also helpful to understand the media bias angle of this story. Are they really interested in telling the truth? Or is there something else going on there? How much of a story was the attack on the Family Research Council building by a gun-wielding gay activist compared to the Matthew Shepard story? How much of a story is the persecution of Christians in the Middle East compared to the Matthew Shepard story? How much of a story is the loss of basic human rights like free speech and religious liberty here at home when compared to the Matthew Shepard story?

UPDATE: Mysterious Jack sends me this link from Breitbart News that has more about what really happened to Matthew Shepard.

# Baby elephant in China cries for 5 hours after being stomped by his mom

**Wintery Knight** · 16 September 2013 · Archived copy · Original

Baby elephant cries after being attacked by his own mother
From the New York Daily News. (Printable version linked)

Excerpt:

> Little Zhuangzhuang, a newborn elephant at a wildlife refuge in China, was inconsolable after his mother rejected him and then tried to stomp him to death.
>
> Tears streamed down his gray trunk for five hours as zookeepers struggled to comfort the baby elephant.
>
> They initially thought it was an accident when the mom stepped on him after giving birth, according to theCentral European News agency.
>
> Employees removed him, cleaned him up and treated his injuries, then reunited the baby with his momma.
>
> But she was having none of it, and began stomping him again.
>
> So the game keepers stepped in once more and permanently separated the two.
>
> “We don’t know why the mother turned on her calf but we couldn’t take a chance,” an employee told CEN.
>
> “The calf was very upset and he was crying for five hours before he could be consoled,” he said.
>
> “He couldn’t bear to be parted from his mother and it was his mother who was trying to kill him.”
>
> The petite pachyderm, born in August, is now doing well. The zookeeper who rescued him from his violent mother adopted him and helped him thrive at the Shendiaoshan wild animal reserve in Rong-cheng, China.

I found another photo of the baby elephant here:

A baby elephant's birthday is supposed to be happy
And Sun News added this:

> Elephants rejecting their young is not uncommon, either in captivity or in the wild. In 2004, baby elephant Keemaya died at the Calgary Zoo after its mother refused to care for it.

I am posting this because of the abortion issue (human abortion). I thought that by feeling sad for this baby elephant, it would remind us what abortion is really about. To me, abortion is about men and women having sex before they are able to take care of a child. When the child comes along "unexpectedly", then the child is viewed as an enemy who needs to be killed before she can interfere with the happiness of her parents. Yes, they are the child's parents. And yes, they are treating sex as recreational.

I guess a lot of my views on ethics are rooted in the obvious needs that children have. When I look at an unborn baby, I can tell what it needs. So, I am careful not to cause a pregnancy before I can supply its needs. The needs of the little unborn creature are driving these moral boundaries on me. And the same with born children. I oppose gay marriage because when I look at little children, I want them to have a stable environment to grow up in with a mother and father who are biologically related to them (in the best case). I permit lots of arrangements, but I promote one arrangement over the others because that's what's best for children. Anyone can look at unborn and born children and see that, just like anyone can look at a crying baby elephant and understand – "I have to govern my behavior so that I don't hurt you". If that means cutting off the premarital sex and making decisions that are likely to produce a stable marriage, then that's what we should do.

Children cry too, you know. They cry when we hurt them. They cry when we make bad decisions and then they don't get what they need. Children need mothers and fathers who care about them. Making a safe environment for a child isn't an accident. It isn't random and unpredictable. We have to control our desires before we have children, so that we provide children with what they need. It would be nice if men and women were more thoughtful and unselfish about *children* and *marriage* before they started in with sex.

# Christina Hoff Sommers: how to make school better for boys

**Wintery Knight** · 16 September 2013 · Archived copy · Original

Christina Hoff Sommers

One of the most troubling things I see in the modern church is the tendency of church people and pastors to blame men for not being more aggressive about marrying. Often, the blame is placed on men. Men are told that we need to do better in school, work harder at work, and that we need to be more aggressive about courting and marrying. Very often, you hear the slogan "man up" directed at men, and we are told to stop playing video games and looking at porn and grow up.

The first thing to note is that marriage is much less attractive to men these days. First, the value proposition of marriage changed – especially the problem of no-fault divorce and divorce courts. The economic situation facing men has changed as well – the economy is poor, but the debt is very very high. Those are two important factors.

Another problem is fatherlessness, which is caused by welfare incentives. A lot of the behavior of young men is based on whether there is a father present in the home. The fact of the matter is that single motherhood by choice has become commonplace, and the aggravating factor for this trend is support for welfare. Welfare is bad for two reasons. First, it encourages women to raise children without a father. Boys raised without a father are not as likely to pursue courtship and marriage as boys raised with a father, because fatherlessness harms a boy's ability to learn to do the things needed for marriage.

Another problem is the availability of pre-marital sex. When a man can get sex without marriage, then he doesn't feel the same desire to get married.

So there are a few examples of things that we can change to nudge men toward marriage. Just speaking slogans like "man up" to men doesn't really address these problems.

But in this post, I want to look at a problem that I haven't even mentioned yet – the problem of schools that don't produce men who can provide for a family.

**Education Reform**

Here is Christian equity-feminist Christina Hoff Sommers of the American Enterprise Institute to do that, writing in the left-leaning Atlantic about this problem.

Excerpt:

> Women in the United States now earn 62 percent of associate's degrees, 57 percent of bachelor's degrees, 60 percent of master's degrees, and 52 percent of doctorates.
>
> […]Boys in *all* ethnic groups and social classes are far less likely than their sisters to feel connected to school, to earn good grades, or to have high academic aspirations. A recent working paper from the National Bureau of Economic Research documents a remarkable trend among high-achieving students: In the 1980s, nearly the same number of top male and female high school students said they planned to pursue a postgraduate degree (13 percent of boys and 15 percent of girls). By the 2000s, 27 percent of girls expressed that ambition, compared with 16 percent of boys. During the same period, the gap between girls and boys earning mostly A's nearly doubled—from three to five percentage points.

I was a minority boy before I became a minority man – look at this:

> This gap in education engagement has dire economic consequences for boys. A 2011 Brookings Institution report quantifies the economic decline of the median male: For men ages 25 to 64 with no high school diploma, median annual earnings have declined 66 percent since 1969; for men with only a high school diploma, wages declined by 47 percent. Millions of male workers, say the Brookings authors, have been "unhitched from the engine of growth." The College Board delivered this disturbing message in a 2011 report about Hispanic and African-American boys and young adults: "Nearly half of young men of color age 15 to 24 who graduate from high school will end up unemployed, incarcerated or dead." Working-class white boys are faring only slightly better. When economist Andrew Sum and his colleagues at the Center for Labor Market Studies at Northeastern University examined gender disparities in the Boston Public Schools, they found that for the class of 2007, among blacks and Hispanics, there were 186 females for every 100 males attending a four-year college or university. For white students: 153 females to every 100 males.

Is this a U.S. – only problem? No. The problem exists in many places. But Dr. Sommers lists some of the initiatives those other countries are taking – trying to understand why boys are different and what needs to be done differently in order to get them to engage and succeed. But we are not doing anything here. Why not?

Well, first – let's see what works:

> In a rare example of the academic establishment taking note of boys' trouble in school, the Harvard Graduate School of Education recently published a major study, Pathways to Prosperity, that highlights the "yawning gender gap" in education favoring women: "Our system… clearly does not work well for many, especially young men." The authors call for a national revival of vocational education in secondary schools. They cite several existing programs that could serve as a model for national reform, including the Massachusetts system, sometimes called the "Cadillac of Career Training Education."
>
> Massachusetts has a network of 26 academically rigorous vocational-technical high schools serving 27,000 male and female students. Students in magnet schools such as Worcester Technical, Madison Park Technical Vocational, and Blackstone Valley Regional Vocational Technical take traditional academic courses but spend half their time apprenticing in a field of their choice. These include computer repair, telecommunications networking, carpentry, early childhood education, plumbing, heating, refrigeration, and cosmetology. As*Pathways* reports, these schools have some of the state's highest graduation and college matriculation rates, and close to 96 percent pass the states' rigorous high-stakes graduation test.
>
> Blackstone Valley Tech in Upton, Massachusetts, should be studied by anyone looking for solutions to the boy problem. It is working wonders with girls (who comprise 44 percent of the student body), but its success with boys is astonishing. According to a white paper on vocational education by the Commonwealth's Pioneer Institute, "One in four Valley Technical students enter their freshman year with a fourth-grade reading level." The school immerses these students in an intense, individualized remediation program until they read

> proficiently at grade level. These potentially disaffected students put up with remediation as well as a full load of college preparatory courses (including honors and Advanced Placement classes), because otherwise they could not spend half the semester apprenticing in diesel mechanics, computer repair, or automotive engineering.
>
> In former times, vocational high schools were often dumping grounds for low achievers. Today, in Massachusetts, they are launching pads into the middle class.

Who could possibly be opposed to turning boys into marriage-minded men? Look:

> Recent research shows that enrollment in high school vocational programs has dramatic effects on students' likelihood of graduating from high school—*especially boys*. But efforts to engage more boys in career and technical programs face a formidable challenge. In a series of scathing reports, the National Council on Women and Girls Education (NCWGE—a 38-year-old consortium that today includes heavy hitters such the AAUW, the National Women's Law Center, the ACLU, NOW, the Ms. Foundation, and the National Education Association) has condemned high school vocational training schools as hotbeds of "sex segregation."
>
> Because of decades of successful lobbying by NCWGE groups, high school and college career and technical training programs face government sanctions and loss of funds if they fail to recruit *and graduate* sufficient numbers of female students into "non-traditional" fields. Over the years, untold millions of state and federal dollars have been devoted to recruiting and retaining young women into fields like pipefitting, automotive repair, construction, drywall installing, manufacturing, and refrigeration mechanics. But according to *Statchat*, a University of Virginia workforce blog, these efforts at vocational equity "haven't had much of an impact." Despite an unfathomable number of girl-focused programs and interventions, "technical and manual occupations tend to be dominated by men, patterns that have held steady for many years."
>
> In March 2013 NCWGE released a report urging the need to fight even harder against "barriers girls and women face in entering nontraditional fields." Among its nine key recommendations to Congress: more federal funding and challenge grants to help states close the gender gaps in career and technical education (CTE); mandate every state to install a CTE gender equity coordinator; and impose harsher punishments on states that fail to meet "performance measures" –i.e. gender quotas.
>
> Instead of spending millions of dollars attempting to transform aspiring cosmetologists into welders, education officials should concentrate on helping young people, male and female, enter careers that interest them. And right now, boys are the underserved population requiring attention.

So. We know what works to make boys into marriage-ready men. And now we know who is standing in the way. What I'd like to see from the man-up crowd, especially the man-up crowd in the church, is a serious assessment of the research on this issue and some action.

But this is what we get from Mark Driscoll: (whom I almost always agree with)

> The number one consumer of online pornography is 12- to 17-year-old boys. What that means is he's home eating junk food, drinking Monster energy drinks, downloading porn, masturbating and screwing around with his friends. That really doesn't prepare you for responsible adulthood. That's a really sad picture, especially if you're a single gal hoping to get married someday. You're like: "Seriously, that's the candidate pool? You've got to be kidding me." **That's why 41 percent of births right now are to unmarried women. A lot of women have decided: "I'm never going to find a guy who is actually dependable and responsible to have a life with. So I'll just get a career and have a baby and just intentionally be a single mother because there are no guys worth spending life with."**

We really need better leadership – informed leadership – on these issues from prominent pastors. They need to start

to read some research (e.g. – what Dr. Sommers presented) on these issues. Maybe pastors need to affirm the *traditional* view of the Bible on sexual morality, and then take on the root cause of the disengaged boys problem: feminism in the schools. We don't want to take on these problems in a superficial way and then actually make the problem *worse* by making excuses for views of sexuality that are unBiblical.

By the way, you should subscribe to the AEI podcast, which is on my list of favorite podcasts. And Dr. Sommers has a new edition of her classic book defending young men. If you have ever wondered what is going wrong with men, that book is required reading. It is required reading for anyone who wants to comment on this issue, in fact.

# Video: compilation of interruptions by Lawrence Krauss from debates with William Lane Craig

**Wintery Knight** · 16 September 2013 · Archived copy · Original

Here is the video:

Now compare that video with this story about a professor who was denied tenure for being personally pro-ID:

> Internal e-mails and other documents obtained under the Iowa Open Records Act contradict public claims by Iowa State University (ISU) that denial of tenure to astronomer Guillermo Gonzalez was unrelated to his writing on the theory of intelligent design. According to these documents:
>
> - Dr. Gonzalez was subjected to a secret campaign of vilification and ridicule by colleagues in the Department of Physics and Astronomy who explicitly wanted to get rid of him because of his intelligent design views, not his scholarship.
> - Dr. Gonzalez's work and views on intelligent design were repeatedly attacked during department tenure deliberations.
> - Dr. Gonzalez's colleagues plotted to evade the law by suppressing evidence that could be used against them in court to supply proof of a hostile work environment.
> - One of Dr. Gonzalez's colleagues admitted to another faculty member that the Department of Physics and Astronomy had violated the principle of academic freedom "massively" when it came to Gonzalez, while other colleagues expressed qualms that their plotting against Gonzalez was unethical or dishonest.
> - Dr. Gonzalez's department chair misled the public after the denial of tenure by insisting that "intelligent design was not a major or even a big factor in this decision"–even though he had privately told colleagues that Gonzalez's support for intelligent design alone "disqualifies him from serving as a science educator."
> - In voting to reject tenure for Dr. Gonzalez, members of the Department of Physics and Astronomy all but ignored recommendations made by the majority of their own outside scientific reviewers, who thought Gonzalez clearly deserved tenure.
>
> The bottom line according to these documents is that Dr. Gonzalez's rights to academic freedom, free speech, and a fair tenure process were trampled on by colleagues who were driven by ideological zeal when they should have made an impartial evaluation of Gonzalez's notable accomplishments as a scientist.

I have noticed a troubling trend during the last few years as I have blogged about the secular left. It seems to me that people on the left tend to have a strong, intense intolerance for any opinions that are different from their own. And they act on this intense intolerance by aggressively attacking the free speech and religious liberty of others.

You can see examples of this in the public schools and especially in the universities. Students being denied degrees, students being charged with offensive speech, students having secular leftist propaganda rammed down their throats, professors being prevented from teaching anything critical of the secular left, professors being denied tenure, and so on. It's not a surprise either when you think that authoritarian regimes are typically atheistic, like in North Korea, Cambodia, the Soviet Union, etc. North Korea would be a paradise for an atheist like Lawrence Krauss. If anyone said anything about Jesus or even owned a Bible, then he could just have them killed. It's less work than interrupting us, and more permanent.

I'm not saying that every atheist is like Krauss, but there does seem to be this tendency to silence, coerce and intimidate anyone who says anything that disagrees with atheism. Especially in the rank and file of the atheist movement. The whole atheist political effort (e.g. – Freedom from Religion Foundation, etc.) seems to be about forcing Christians to act like atheists in public, so that atheists don't have to be offended by hearing views that disagree with their own views. They want to silence Christians by using the coercive power of big government. You

can see it in debates, you can see it in the universities, and you can see it in the courtroom. They're not trying to win arguments with evidence, they're trying to end the argument with threats and coercion.

You can see a video and summary of the third Craig-Krauss debate from Australia here.

You can read a statement of how militant atheists view Christians here. (Warning: reader discretion is advised)

# Obama administration pressuring banks to lower mortgage lending standards

**Wintery Knight** · 17 September 2013 · Archived copy · Original

Remember the housing bubble and the mortgage lending crisis of 2008? Well guess what – the Democrats want an encore.

Investors Business Daily explains.

> Bankers warn the administration's new "disparate impact" home-lending regulation will wreak havoc in credit markets, replacing merit standards with political correctness.
>
> The Department of Housing and Urban Development issued the controversial new anti-discrimination rule earlier this year. Now enforced by every federal regulator dealing with banks, it has the effect of criminalizing credit standards used to qualify borrowers for home loans.
>
> Last week, the Mortgage Bankers Association and Independent Community Bankers of America jointly filed a Supreme Court brief arguing that under the new HUD rule:
>
> "Virtually every lender in the United States could be sued for using non-discriminatory credit standards simply because variations in economic and credit characteristics produce different credit outcomes among racial and ethnic groups."
>
> In their 33-page brief, filed in support of a landmark housing case pending before the court, they complain that HUD recently launched 22 separate investigations against lenders alleging that their policies of requiring minimum credit scores "had a disparate impact on minorities in violation of the Fair Housing Act."
>
> Dozens of similar actions have been brought against lenders by Attorney General Eric Holder. He is basing claims of bias on statistics showing differences in loan outcomes by race while ignoring racially neutral credit-risk factors that explain those differences.
>
> Under disparate impact's low standard of proof, the government doesn't have to show lenders intentionally discriminated against borrowers.
>
> For the first time in history, businesses are being ordered to justify the necessity of a certain level of return on investment given the racial impact resulting from the use of credit-score thresholds.
>
> The mortgage trade groups argue the formalized disparate-impact rule also effectively criminalizes other legitimate business practices, including minimum down-payment requirements, sliding loan rates and the charging of brokers' fees.
>
> Banks today face increased litigation risk simply by complying with sensible lending standards for hedging against risk.
>
> […]The social engineers and race demagogues in this administration are trying to enforce a balance in financial outcomes that risks another collapse of the housing market. The Supreme Court must put an end to a scheme so reckless, unfair and unconstitutional.

Does that sound familiar? Yes. In the last recession, the government forced banks to make risky loans in order to increase home ownership. That is exactly what gave us the 2008 recession.

Excerpt:

> [Democrat] Congressman [Barney] Frank, of course, blamed the financial crisis on the failure adequately to regulate the banks. In this, he is following the traditional Washington practice of blaming others for his own mistakes. For most of his career, Barney Frank was the principal advocate in Congress for using the

> government's authority to force lower underwriting standards in the business of housing finance. Although he claims to have tried to reverse course as early as 2003, that was the year he made the oft-quoted remark, "I want to roll the dice a little bit more in this situation toward subsidized housing." Rather than reversing course, he was pressing on when others were beginning to have doubts.
>
> His most successful effort was to impose what were called "affordable housing" requirements on Fannie Mae and Freddie Mac in 1992. Before that time, these two government sponsored enterprises (GSEs) had been required to buy only mortgages that institutional investors would buy–in other words, prime mortgages–but Frank and others thought these standards made it too difficult for low income borrowers to buy homes. The affordable housing law required Fannie and Freddie to meet government quotas when they bought loans from banks and other mortgage originators.
>
> At first, this quota was 30%; that is, of all the loans they bought, 30% had to be made to people at or below the median income in their communities. HUD, however, was given authority to administer these quotas, and between 1992 and 2007, the quotas were raised from 30% to 50% under Clinton in 2000 and to 55% under Bush in 2007.
>
> […]It is certainly possible to find prime mortgages among borrowers below the median income, but when half or more of the mortgages the GSEs bought had to be made to people below that income level, it was inevitable that underwriting standards had to decline. And they did. By 2000, Fannie was offering no-downpayment loans. By 2002, Fannie and Freddie had bought well over $1 trillion of subprime and other low quality loans. Fannie and Freddie were by far the largest part of this effort, but the FHA, Federal Home Loan Banks, Veterans Administration and other agencies–all under congressional and HUD pressure–followed suit. This continued through the 1990s and 2000s until the housing bubble–created by all this government-backed spending–collapsed in 2007. As a result, in 2008, before the mortgage meltdown that triggered the crisis, there were 27 million subprime and other low quality mortgages in the US financial system. That was half of all mortgages. Of these, over 70% (19.2 million) were on the books of government agencies like Fannie and Freddie, so there is no doubt that the government created the demand for these weak loans; less than 30% (7.8 million) were held or distributed by the banks, which profited from the opportunity created by the government. When these mortgages failed in unprecedented numbers in 2008, driving down housing prices throughout the U.S., they weakened all financial institutions and caused the financial crisis.

Reduced lending standards caused the last recession, and now the same party that pushed for reduced lending standards are pushing for reduced lending standards again. Hold onto your hats, there's a storm coming.

# IPCC report: simulations drastically overestimated global warming

**Wintery Knight** · 17 September 2013 · Archived copy · Original

My good friend Andrew sent me this story from The Australian.

Excerpt:

> The Intergovernmental Panel on Climate Change's latest assessment reportedly admits its computer drastically overestimated rising temperatures, and over the past 60 years the world has in fact been warming at half the rate claimed in the previous IPCC report in 2007.

> More importantly, according to reports in British and US media, the draft report appears to suggest global temperatures were less sensitive to rising levels of atmospheric carbon dioxide than was previously thought.
>
> The 2007 assessment report said the planet was warming at a rate of 0.2C every decade, but according to Britain's The Daily Mail the draft update report says the true figure since 1951 has been 0.12C.
>
> […]Professor Judith Curry, head of climate science at the Georgia Institute of Technology in Atlanta, told The Daily Mail the leaked summary showed "the science is clearly not settled, and is in a state of flux".
>
> […]According to The Daily Mail, the draft report recognised the global warming "pause", with average temperatures not showing any statistically significant increase since 1997.
>
> Scientists admitted large parts of the world had been as warm as they were now for decades at a time between 950 and 1250, centuries before the Industrial Revolution.
>
> And, The Daily Mail said, a forecast in the 2007 report that hurricanes would become more intense had been dropped.

Looks like the Australians chose well when they chose Tony Abbott to repeal their carbon tax.

So it looks like the IPCC global warming simulations were misrepresented to push a socialist agenda. Shame on us for our scientific illiteracy in this country. But we can thank the naturalists in the schools for that, I suppose. They don't like debates about scientific theories. This is what we get from hearing one side of scientific controversies all the time, I guess.

Andrew also sent me this UK Telegraph article that shows how insulated from science global warming alarmism really is in Europe.

Excerpt:

> Regardless of whether or not scientists are wrong on global warming, the European Union is pursuing the correct energy policies even if they lead to higher prices, Europe's climate commissioner has said.
>
> Connie Hedegaard's comments come as the United Nations Intergovernmental Panel on Climate Change (IPCC) is expected to admit that previous scientific predictions for global warming and the effects of carbon emissions have been proved to be inaccurate.
>
> In an interview with the Telegraph, Europe's most senior climate change official argued that the current policies are the correct ones because a growing world population will put pressure on energy supplies regardless of the rate of global warming.
>
> "I personally have a very pragmatic view.
>
> "Say that 30 years from now, science came back and said, 'wow, we were mistaken then now we have some new information so we think it is something else'. In a world with nine billion people, even 10 billion at the

> middle of this century, where literally billions of global citizens will still have to get out of poverty and enter the consuming middle classes, don't you think that anyway it makes a lot of sense to get more energy and resource efficient," she said.

> "Let's say that science, some decades from now, said 'we were wrong, it was not about climate', would it not in any case have been good to do many of things you have to do in order to combat climate change?."
>
> The Danish commissioner also rejected public complaints over increases in electricity prices to subsidise renewable energies, such as wind farms, as unrealistic because, she said, increased competition over diminishing energy resources such as oil and gas will lead to higher bills.
>
> "I believe that in a world with still more people, wanting still more growth for good reasons, the demand for energy, raw materials and resources will increase and so, over time so, over time, will the prices," she said.
>
> "I think we have to realise that in the world of the 21st century for us to have the cheapest possible energy is not the answer."
>
> Mrs Hedegaard, and the European Commission, have not changed their position that the science that is currently used to justify EU climate change policy is "over 90 per cent" certain that global warming exists and that it is manmade.

This story is just like the Matthew Shepard story that was misrepresented by the media to push a gay rights agenda. The sad thing is that both of these factions of the secular left got what they wanted, and the truth is only becoming known more widely now when laws and policies have already changed.

Maybe we should remember this lesson for the next time there is a "crisis" that requires us to lurch to the left.

# Obama-supporter Aaron Alexis opens fire in Navy Yard gun-free zone

**Wintery Knight** · 18 September 2013 · Archived copy · Original

I want to make a few points about this latest multiple-victim public shooting, and I'll do it with several links.

My friend Conway posted this article from National Review showing that multiple-victim public shootings are common in gun-free zones.

Excerpt:

> Gun-free zones have been the most popular response to previous mass killings. But many law-enforcement officials say they are actually counterproductive. "Guns are already banned in schools. That is why the shootings happen in schools. A school is a 'helpless-victim zone,'" says Richard Mack, a former Arizona sheriff. "Preventing any adult at a school from having access to a firearm eliminates any chance the killer can be stopped in time to prevent a rampage," Jim Kouri, the public-information officer of the National Association of Chiefs of Police, told me earlier this year at the time of the Aurora, Colo., Batman-movie shooting. Indeed, there have been many instances — from the high-school shooting by Luke Woodham in Mississippi, to the New Life Church shooting in Colorado Springs, Colo. — where a killer has been stopped after someone got a gun from a parked car or elsewhere and confronted the shooter.
>
> Economists John Lott and William Landes conducted a groundbreaking study in 1999, and found that a common theme of mass shootings is that they occur in places where guns are banned and killers know everyone will be unarmed, such as shopping malls and schools.
>
> I spoke with Lott after the Newtown shooting, and he confirmed that nothing has changed to alter his findings. He noted that the Aurora shooter, who killed twelve people earlier this year, had a choice of seven movie theaters that were showing the Batman movie he was obsessed with. All were within a 20-minute drive of his home. The Cinemark Theater the killer ultimately chose wasn't the closest, but it was the only one that posted signs saying it banned concealed handguns carried by law-abiding individuals. All of the other theaters allowed the approximately 4 percent of Colorado adults who have a concealed-handgun permit to enter with their weapons.
>
> "Disarming law-abiding citizens leaves them as sitting ducks," Lott told me. "A couple hundred people were in the Cinemark Theater when the killer arrived. There is an extremely high probability that one or more of them would have had a legal concealed handgun with him if they had not been banned."
>
> Lott offers a final damning statistic: "With just one single exception, the attack on congresswoman Gabrielle Giffords in Tucson in 2011, every public shooting since at least 1950 in the U.S. in which more than three people have been killed has taken place where citizens are not allowed to carry guns."
>
> There is no evidence that private holders of concealed-carry permits (which are either easy to obtain or not even required in more than 40 states) are any more irresponsible with firearms than the police. According to a 2005 to 2007 study by researchers at the University of Wisconsin and Bowling Green State University, police nationwide were convicted of firearms violations at least at a 0.002 percent annual rate. That's about the same rate as holders of carry permits in the states with "shall issue" laws.

And another point to make is that the shooter was a liberal Democrat who opposed George W. Bush and supported Barack Obama.

**Shooter was a pro-Obama, anti-Bush leftist**

Here's the news clip from CNN:

And the story from center-right Breitbart News about the clip:

> Tuesday, on CNN's "The Lead with Jake Tapper," Michael Ritrovato spoke at length about his friend, suspected Navy Yard shooter Aaron Alexis. After expressing his condolences to the victims and their families, Ritrovato then expressed his shock over the actions of a man he described as being "like a brother to me" and a "good-natured guy."
>
> **Ritrovato went on to explain that two of them had a close relationship based in part on their differences, specifically race and politics. Alexis was black, Ritrovato is white. Ritrovato described himself as conservative and Alexis is "more of a liberal type" who supported Barack Obama:**
>
> **I would say things like, 'You know, you are my brother from another mother.' And he would say things like, 'You're my Italian mafia guy from New York.' So we had things we joked about: Aaron wasn't conservative like I am. He was more of a liberal type; he wasn't happy with the former [Bush] administration. He was more happy with this [the Obama] administration — as far as presidential administrations.**

So he is a leftist just like the Fort Hood shooter was a leftist. Just like Tsarnaev was a leftist. Just like the FRC shooter Corkins was a leftist. Just like the Gabby Giffords shooter was a leftist. Just like Jared Loughner was a leftist. These people are all Democrats. (See below for links). If gun control is for anyone, it should be for leftists. They are the crazy ones who prefer violence to debate. They aren't used to debate, because they aren't used to hearing other points of view.

**The non-existent AR-15**

Finally, the radically leftist Washington Post reports that the mainstream media invented an imaginary AR-15 semi-automatic rifle in their biased coverage, in a blatantly partisan attempt to push for more gun control.

Excerpt:

> **CNN correspondent Pamela Brown just reported on air that Aaron Alexis, the deceased suspect in the Navy Yard shootings, entered the facility yesterday armed with a shotgun. Citing the Bureau of Alcohol, Tobacco and Firearms as well as law enforcement sources, Brown reported that the gunman had tried to purchase an AR-15 at a gun shop in Northern Virginia but was turned down. Two pistols were also recovered.**

He had a shotgun and two handguns – no AR-15, because he was turned down for an AR-15.

But radically leftist CNN reported that he had an AR-15:

> This morning, CNN's John Berman said on the network's program "Early Start": "Alexis is the only gunman now, officials say. Yesterday, there was word that there was maybe a second, a third possible person involved in the attack. That is no longer the case. Officials say that Aaron Alexis was a lone gunman. This is what we know about him this morning. We know that he had an AR-15, a semi-automatic rifle. He also had a different rifle and a glock, that is a handgun with him. It's believed that the AR-15 was the main murder weapon used from the atrium above. That is also the weapon you'll remember used by Adam Lanza in the Newtown massacre and James Holmes in Aurora. That's the Colorado movie theater massacre."

Other leftist "news" sources kept the lie going:

> […]The Associated Press:
>
> > Alexis carried three weapons: an AR-15 assault rifle, a shotgun, and a handgun that he took from a police

> officer at the scene, according to two federal law enforcement officials who spoke on condition of anonymity because they were not authorized to discuss the investigation. The AR-15 is the same type of rifle used in last year's mass shooting at a Newtown, Conn., elementary school that killed 20 students and six women. The weapon was also used in the shooting at a Colorado movie theater that killed 12 and wounded 70.

The Washington Post notes that about a half-dozen leftist news sources reported on the fictitious AR-15, including the Los Angeles Times, the Washington Post and the New York Times.

You would think these left-wing media people would learn from previous retractions not to let their left-wing politics determine the narrative, but they don't. It's the same thing every day, over and over. This is what happens, though, when newsrooms are packed full of radical leftists. There is no diversity of opinion, no debate, no critical thinking. It's an echo chamber.

# Adult stem cell therapy saves man who was told he had 120 days to live

**Wintery Knight** · 18 September 2013 · Archived copy · Original

A striking story from Life News.

Excerpt:

> Tony Underhill lived a full, active life until Systemic Scleroderma ravaged his body and confined him to a wheelchair. The autoimmune disease slowly hardened his skin until he could hardly move.
>
> […]Tony went to the best doctors in Nashville and later to the Mayo Clinic in Jacksonville, Florida. They tried everything to treat him but nothing worked. Eventually they sent him home with devastating news.
>
> "They told me I had systemic scleroderma," said Tony. "They treated me for 10 days and the day I checked out of the hospital, on my release papers under prognosis, it said "unfortunate." I asked the doctor, you know, unfortunate, what does this mean? He told me that, what he told me was there was no cure for it. And that basically I had 120 days left. So I came home and all the things that I was doing last year was going to be gone – and I was gonna be gone too!"

But the story didn't end there:

> An acquaintance of Missy and Tony had read a story in Reader's Digest about a patient being treated for Scleroderma with Adult Stem Cells. Missy went to work researching and tracked down the patient featured in the story. The patient told her she had undergone an adult stem cell transplant several years ago in a clinical trial and that adult stem cells had saved her life.
>
> Tony applied and was accepted into a similar clinical trial underway with **Dr. Richard Burt at Northwestern University** in Chicago. Missy says it was miraculous to see the adult stem cells go to work: "When he received the adult stem cell transplant, the day after, I have it videoed on my phone, literally we felt like he could move his hands slightly better, he could open his mouth wider. It was pretty immediate that we started to see results."
>
> Tony says, "Every day after I got my transplant, every day was getting better. Every day was like getting a new shot of life in your arm every day."
>
> And as of today, Tony has his health back again and he continues to improve. He's running his construction business, working out at his exercise bike and says he's back to about 80% of his original mobility.
>
> "I'm a walking miracle. I'm lucky to be here, you know. Now, if I'm working with my guys, if they need me out there to work, run a machine for them to make the day better or something like that, I'll run the backhoe, track hoe, drive a dump truck, run a Bobcat, asphalt roller, whatever I need to do."

Adult stem cell therapies not only work, but they don't involve the destruction of human life, like embryonic stem cell therapies do.

# Fazale Rana responds to new paper claiming that rapid evolution explains Cambrian explosion

**Wintery Knight** · 18 September 2013 · Archived copy · Original

Dr. Fazale Rana of Reasons to Believe takes on a new paper that claims that the evolution can explain the Cambrian explosion.

They linked to this article from NBC News, showing how the paper was popularized.

Excerpt:

> The team found that the emergence of many sea creatures during the Cambrian explosion could be explained by an accelerated — but not unrealistic — evolution by way of natural selection, or the process in which organisms change over time due to changes in heritable physical or behavioral traits. (For instance, changes that give an organism a leg up will help it survive to pass down that trait to offspring.) The team focused its study on animals related to arthropods, the group that includes crustaceans and other insects.
>
> "In this study we've estimated that rates of both morphological and genetic evolution during the Cambrian explosion were five times faster than today – quite rapid, but perfectly consistent with Darwin's theory of evolution," Lee said.

That's the challenge. If you can't listen to the entire podcast, then let me say that the problem with the paper is the way that they are measuring the "rate of change". They are only measuring the rates of change in genes and phenotypic characters. They are not measuring other important requirements for the new body plans, like the network interactions and regulatory elements of the network. Also, they haven't demonstrated a mechanism for even the rapid change they do measure in the genes and phenotypic characters.

Here's is the MP3 file. (29 minutes)

The interviewer is Joe Aguirre and the scientist is Dr. Fazale Rana.

Summary:

- JA: Does this paper explain the sudden origin of the Cambrian era fossils without the need for an intelligent cause?
- FR: The paper claims that the rapid rate of change in the Cambrian explosion is within the capability of Darwinian mechanisms
- JA: What is the Cambrian explosion?
- FR: Sudden appearance in the geological record of 50-80 percent of the animal body plans that have ever existed
- FR: Prior to that there were single-celled organisms
- FR: The only multi-cell organisms (Ediacaran fauna, etc.) are not precursors to the new body plans
- FR: This is not a diversification of plans from existing plans, this is about 30 new body plans
- FR: Not just body plans, but complex organs like eyes appear suddenly
- FR: The paper focuses on one body plan – arthropods (crustaceans, arachnids and insects)
- FR: The paper looks at anatomical features as well as genes
- FR: Paper says the rate of evolutionary change needed would be about 5 to 6 times the normal rate of change
- JA: Has the rate been the same since that time
- FR: No the rate of change we see is a fifth of what is seen in the Cambrian explosion, and it is constant
- FR: The claim is that the rate of change of 5X is anomalous, but is reasonable

- FR: The researchers established that what happened in the Cambrian explosion is unusual
- FR: The researchers just assert that the faster rate of change is plausible
- FR: They have not provided a mechanism for this faster rate of change
- JA: Has anyone come up with a mechanism for the higher rate of change?
- FR: No. There are speculations, but no one has published a robust, defensible explanation
- FR: They are saying, if you embrace the evolutionary paradigm, then the rate of evolution *has to be* 5 to 6 times faster
- FR: But they haven't demonstrated a mechanism that can produce that rate of change, they just asserted that it's no big deal
- FR: To me, a requirement for an accelerated rate of evolution is an argument for intelligent design
- JA: Why aren't people working on the mechanism?
- FR: The Cambrian explosion happens at a time when Earth is exiting a frozen stage
- FR: The environment becomes hospitable to life as we exit this "snowball event"
- FR: But just because the environment is now hospitable, that does not mean that the genetic changes are automatic
- FR: On a Genesis creation account, the Cambrian explosion is described in the 5th day
- FR: God creates the new animal types when the environment can accommodate them
- JA: Can the naturalist explain how they go from single-celled organisms to compound eyes with 3000 lenses?
- JA: Why did evolution-agitator Eugenie Scott say that the Cambrian proceeded "at a leisurely pace"?
- FR: doing a calculation like from single cells to compound eyes is difficult
- FR: these visual systems are intricate and sophisticated, with respect to field of depth, resolution, etc.
- FR: additionally, the eye requires support systems in order to function
- FR: The Cambrian era goes from 540 mya to 490 mya
- FR: The two most important sites to study it are the Burgess Shale and the Chengjiang Valley
- FR: The Chengjiang site shows the earlier period of the Cambrian, and the animals are there in the first 5 million years
- FR: The period is at most 5 million years
- FR: We are talking about completely different body plans and architectures
- FR: It's been shown that you cannot go from one body plan to another body plan, it will kill the intermediate forms
- JA: You have to explain how ALL of the phyla came in together in a short period
- FR: Yes. When evolutionists just assert that higher rates of change are "plausible" without specifying a mechanism, that's not good science

Uncommon Descent had another response to the paper.

Excerpt:

> I'd like to make two very general observations here. First, measuring rates of change in *existing* traits is not the same thing as measuring the rate at which *new* traits appear.
>
> Second, the rapid appearance of new body traits that occurred during the Cambrian explosion could never have taken place without a host of underlying changes at the genetic level. It is these changes that we need to explain. How do we explain, for instance, the sudden increase in the number of new cell types that occurred during the early Cambrian period? Lee *et al.* do not even discuss this question in their paper: a search on the phrase "cell type" turns up empty.

> […]In a recent post over at Evolution News and Views, Casey Luskin drew readers' attention to a new book by paleobtologists Douglas Erwin and James Valentine, entitled, *The Cambrian Explosion: The Construction of Animal Biodiversity* (Roberts and Company, 2013). The authors, who are recognized authorities in their field, are no friends of Intelligent Design, but they firmly reject the standard neo-Darwinian explanations that have been put forward for the Cambrian explosion. In particular, they take issue with the claim that macroevolution is nothing more than an extrapolation of microevolution.

He then prints a few excerpts from the Erwin and Valentine book.

Here's one:

> **Increased genetic and developmental interactions were also critical to the formation of new animal body plans.** By the time a branch of advanced sponges gave rise to more complex animals, their genomes comprised genes whose products could interact with regulatory elements in a coordinated network. Network interactions were critical to the spatial and temporal patterning of gene expression, to the formation of new cell types, and to the generation of a hierarchical morphology of tissues and organs. The evolving lineages could begin to adapt to different regions within the rich mosaic of conditions they encountered across the environmental landscape, diverging and specializing to diversify into an array of body forms.

Like Dr. Rana said, the new paper never takes these factors into account.

UD continues:

> Reading through the introduction, it is readily apparent that Erwin and Valentine have thought long and hard about the issues relating to the Cambrian explosion, and that they truly appreciate the magnitude of the problem of explaining this seismic event in the history of life. By contrast, the new study by Lee *et al.* fails to grapple with the deeper issues: its aim is merely to defend Darwinism, and it "succeeds" only by shrinking the problem by focusing on minutiae such as rates of change in genes and phenotypic characters. No wonder, then, that the study's authors perceive no threat to Darwinian evolution in the Cambrian explosion.

So should we be concerned about this paper? I don't think so – not until they have a mechanism that can drive the required level of innovation. The paper pushes a naturalistic explanation, and so we are within our rights to ask for a naturalistic mechanism. Even if they had the mechanism, they still aren't taking into account everything that needs to be explained – like regulatory elements in the coordinated network that Erwin and Valentine mentioned.

UPDATE: Kylie asked me a question that caused me to update this post. She asked me what about Behe's work that shows that Darwinian mechanisms cannot even account for the NORMAL rate of change? I just want to be clear and say that I don't think that Darwinian mechanisms can even account for *that*. What the paper does is *assume* that Darwinian mechanisms can account for the 1X "rate of change" they see. Then they further assume that evolution is able to do the 5X change rate as well. All they did was measure the amount of change and then assert that it's not that far off of normal. But I don't accept that Darwinian mechanisms can even do the normal rate of change, because of Behe's book on the limits of Darwinian mechanisms to drive change.

# New PNAS study finds fracking emissions far lower than EPA estimates

**Wintery Knight** · 19 September 2013 · Archived copy · Original

From Investors Business Daily. Before you read the article, you should know that "fracking" is short for hydraulic fracturing. This is a technique for extracting shale oil by creating fractures in rocks.

Excerpt:

> Whether naturally occurring or not, environmentalists claim that fracking would release huge amounts of what they consider the most potent heat-trapping greenhouse gas, far outweighing the value of producing huge quantities of clean-burning natural gas.
>
> **Now comes a study, conducted by scientists at the University of Texas and published in the Proceedings of the National Academy of Sciences — and co-financed by one of the highest-profile environmentalists in the country — that shows much smaller amounts of methane emissions associated with fracking, far less than environmentalists and the Environmental Protection Agency have contended.**
>
> […]The study, billed as the first to measure the actual emissions of methane from natural gas wells, finds these emissions were, in some cases, only about 2% of the most recent national estimate by the EPA in 2011. An upcoming EPA rule, effective January 2015, requires all methane to be captured when liquids are removed after drilling.
>
> Seen by many as an attempt to stop fracking, which has boosted the economy through its ability to tap previously inaccessible oil and gas riches, the rule might be redundant. Two-thirds of the wells studied already were capturing or controlling the methane to reduce emissions.
>
> "For those wells with methane capture or control, 99% of the potential emissions were captured or controlled," the study notes.
>
> This proves once again there is no problem technology can't solve and that when decisions are made based on technology, rather than ideology, good things happen.
>
> A**n interesting aspect of the study is that it was funded in part by Tom Steyer, a billionaire environmentalist who has become highly active in national politics in the past year, backing environmentalist Democrats such as Massachusetts Sen. Ed Markey and Virginia gubernatorial candidate Terry McAuliffe.**
>
> **Steyer's support for the University of Texas came by way of the Environmental Defense Fund, which helped finance the study.** He and his wife Kat Taylor are listed among individuals who provided "major funding for the EDF's 30-month methane research series, including their portion of the University of Texas study."
>
> […]Thanks in large part to fracking, energy-related carbon dioxide emissions in 2012 were the lowest in the U.S. since 1994, at 5.3 billion metric tons. With the exception of 2010, emissions have declined every year since 2007.

Back in May 2013, Associated Press reported that the EPA had *already lowered their estimates* before this study completed.

Excerpt:

> The new EPA data is "kind of an earthquake" in the debate over drilling, said Michael Shellenberger, the president of the Breakthrough Institute, an environmental group based in Oakland, Calif. "This is great news

> for anybody concerned about the climate and strong proof that existing technologies can be deployed to reduce methane leaks."
>
> The scope of the EPA's revision was vast. In a mid-April report on greenhouse emissions, the agency now says that tighter pollution controls instituted by the industry resulted in an average annual decrease of 41.6 million metric tons of methane emissions from 1990 through 2010, or more than 850 million metric tons overall. That's about a 20 percent reduction from previous estimates. The agency converts the methane emissions into their equivalent in carbon dioxide, following standard scientific practice.

So there's no harm to the environment, but about the economics benefits of fracking? Well, when states have embraced fracking, their economies have greatly benefited.

Here's what happened when North Dakota lowered its regulatory barriers to energy development.

This:

> North Dakota had the highest payroll-to-population rate (P2P) and the lowest underemployment rate in 2012, thanks mostly to the state's booming oil & gas industry.
>
> According to Gallup's "State of the States" analysis released today, North Dakota ranked number one among the lower 48 states, with a payroll to population rate of 53.6 percent.
>
> Gallup said it measured each state's P2P rate by the percentage of the adult population aged 18 and older employed full-time by an employer for at least 30 hours per week.
>
> The analysis noted that the numbers are not seasonably adjusted and variations across states reflect a number of factors, including the overall employment situation for each state as well as the demographic composition of that state's population. P2P rates in Alaska, Hawaii, and the District of Columbia were not considered in the analysis.
>
> Factoring in the most recent unemployment data is key to the Gallup analysis. North Dakota reported just a 3.2 percent unemployment rate, well below the national average unemployment rate of 7.9 percent, according to the U.S. Bureau of Labor Statistics.
>
> The number one ranking should not come as much of a surprise given the Peace Garden state's rise in oil and gas production and the subsequent rise in jobs over the past few years.
>
> According to North Dakota Jobs Service data from 2011, the most recent available, the number of oil and gas jobs in North Dakota has risen 57.5 percent since 2010 – going from 10,660 jobs in 2010 to 16,786 jobs in 2011, with the oil and gas payroll nearly doubling — going from $852 million in 2010 up to $1.5 billion in 2011.
>
> North Dakota now produces more oil than any other state, including Alaska, which ranked number one in 2011, according to the U.S. Energy Information Administration.

In New York, Chesapeake Energy just decided to pull up stakes and leave the state.

Excerpt:

> After more than five years of a fracking moratorium, a leading energy company walks away from its leases, leaving New York, its natural gas riches — and the jobs and wealth they could generate — unrealized.
>
> In 2000, people from Chesapeake Energy began arriving in Broome County, New York, a few miles north of the Pennsylvania border. Broome had seen better economic days but was lucky to be sitting right atop the natural gas-rich Marcellus Shale formation, which stretches through much of the Northeast.
>
> […]Interestingly, New York's very own Department of Environmental Conservation website on Marcellus drilling says, "No known instances of groundwater contamination have occurred from previous horizontal

> drilling or hydraulic fracturing projects in New York."
>
> A recent Department of Energy study has concluded that fracking chemicals do not taint drinking water.
>
> After a year of monitoring wells in western Pennsylvania, researchers found these fluids stayed thousands of feet below the areas that supply drinking water.
>
> A 2010 Pennsylvania Department of Environmental Protection report concluded that "no groundwater pollution or disruption of underground sources of drinking water have been attributed to hydraulic fracturing of deep gas formations."

But Pennsylvania allows fracking, and they are seeing the same economic boom as North Dakota:

> A recent study by the Manhattan Institute highlighted the economic impact of fracking in New York's neighbor to the south, Pennsylvania, which has had 5,000 wells fracked since 2002.
>
> The data are compelling, as counties with more than 200 wells, drilled between 2007 and 2011, saw a 19% increase in per-capita incomes, versus just 8% income growth for those with no wells fracked.
>
> Further, the number of county jobs grew by 7% in those with more than 200 wells fracked, against a 3% contraction in counties with no wells drilled.
>
> According to the Manhattan Institute's Diana Furchtgott-Roth, "Income of residents in the 28 New York counties above the Marcellus Shale has the potential to expand by 15% or more over the next four years if the state's moratorium is lifted."
>
> In Pennsylvania, according to the report, each well in the Marcellus Shale formation creates $5.5 million in direct economic benefits and 62 jobs, and the wells endanger no one. Pennsylvania's Department of Labor and Industry estimates that fracking in its part of the Marcellus created 72,000 jobs from the fourth quarter of 2009 to the first quarter of 2011, as New York's job- and growth-killing moratorium got underway.

Now tell me again why progressives are supposedly smarter than conservatives.

# A simple explanation of middle knowledge by Dr. Craig Blomberg

**Wintery Knight** · 19 September 2013 · Archived copy · Original

This article is from Denver Seminary, where Dr. Blomberg and Dr. Groothuis both teach.

Excerpt:

> Middle knowledge is a proposed solution to predestination vs. free will, to divine sovereignty and human responsibility, going all the way back to the medieval Jesuit priest Molina (so sometimes it's also called Molinism).
>
> Classic Calvinists, properly concerned to safeguard divine sovereignty, have typically rejected any theological system that bases God's predestining activity on the basis merely of his foreknowledge of how humans will respond to the gospel, because they're convinced that makes human free choice the ultimate determiner. Romans 8:29, of course, *does*base predestination on God's foreknowledge, but the Calvinist typically argues that the Greek *prōginoskō* ("foreknow") there begins already to shade over into the idea of election because in the Old Testament the Hebrew *yādā'* ("know") often appears roughly synonymous with "choose." That would explain why Paul doesn't say just that those whom God foreknew he also predestined, which could be seen as tautologous, but "predestined to be conformed to the image of his Son."
>
> Classic Arminians and Wesleyans, properly concerned to safeguard human freedom and accountability, have typically rejected any theological system that bases God's predestining activity on the basis merely of his gratuitous election, because they're convinced that makes human free choice ultimately a chimera. They often point out that *prōginoskō* is not the same verb as just *ginoskō* (which the LXX uses to translate *yādā'* and that in Greek it most commonly means simple knowledge in advance. Thus predestination *is* based on God's foreknowledge.
>
> Middle knowledge argues for both! If open theism in recent years has diminished divine omniscience more than orthodoxy has classically permitted, middle knowledge magnifies or expands God's omniscience beyond what most people have thought about. But it makes good sense: middle knowledge claims that God's perfect, infinite knowledge must be able to know not only what sentient creatures *will* freely choose in all situations in their lives but what everyone *would* do in every possible situation that they could confront. Even more magnificently, divine and unlimited knowledge must be able to discern what all possibly created beings would do in all possible situations (or, as philosophers like to say, all possible worlds).
>
> So far so good, I hope. Now here's the rub. Because there will only ever have been a finite number of humans created before God brings this world as we know it to an end, that means there remain countless uncreated beings that he could have chosen to create but didn't. So God's very choice to create you and me and not various other people he could have is an act of his sovereign election utterly prior to our existence. Calvinists should be happy. But it is based on knowing what we will and would do in all actual and all possible situations. Arminians should be happy. Thus, William Lane Craig in *The Only Wise God* defends this view from a libertarian Arminian perspective; Alvin Plantinga in a chapel talk at Denver Seminary years ago did the same from a libertarian Calvinist perspective, and Terrance Tiessen in *Providence and Prayer* does so from a compatibilist Calvinist perspective.

Somebody in the comments mentions that even Paul Helm has written positively about middle knowledge. Middle Knowledge shows what is going on under the hood of classical Calvinism, which affirms both the sovereignty of God and the responsibility of man. Middle knowledge explains how God can achieve both goals simultaneously.

The apostle Paul has this to say in Acts 17:22-31:

> 22 So Paul stood in the midst of the Areopagus and said, "Men of Athens, I observe that you are very religious

> in all respects.
> 23 “For while I was passing through and examining the objects of your worship, I also found an altar with this inscription, ‘ N D ‘ Therefore what you worship in ignorance, this I proclaim to you.
> 24 “The God who made the world and all things in it, since He is Lord of heaven and earth, does not dwell in temples made with hands;
> 25 nor is He served by human hands, as though He needed anything, since He Himself gives to all people life and breath and all things;
> 26 and He made from one man every nation of mankind to live on all the face of the earth, **having determined their appointed times and the boundaries of their habitation,**
> **27 that they would seek God, if perhaps they might grope for Him and find Him, though He is not far from each one of us;**
> 28 for in Him we live and move and exist, as even some of your own poets have said, ‘For we also are His children.’
> 29 “Being then the children of God, we ought not to think that the Divine Nature is like gold or silver or stone, an image formed by the art and thought of man.
> 30 “Therefore having overlooked the times of ignorance, God is now declaring to men that all people everywhere should repent,
> 31 because He has fixed a day in which He will judge the world in righteousness through a Man whom He has appointed, having furnished proof to all men by raising Him from the dead.”

In this research paper, Craig explains in detail what middle knowledge is, and how it works to resolve problems, like “what about those who have never heard of Jesus?” and “how can we reconcile divine sovereignty and human freedom and responsibility?” Highly recommended tool for your tool chest.

# House introduces new legislation to protect defenders of traditional marriage

**Wintery Knight** · 20 September 2013 · Archived copy · Original

I would love to say that this new legislation was introduced only by Republicans, but there are Democrats co-sponsoring it, too!

Look:

> Rep. Raúl Labrador (R-ID), Rep. Steve Scalise, Chairman of the Republican Study Committee, Rep. Mike McIntyre (D-NC), and Rep. Dan Lipinski (D-IL) introduced a landmark bipartisan bill today to protect freedom of conscience on the issue of marriage. Their bill – H.R. 3133, the *Marriage and Religious Freedom Act* – would prohibit discrimination through the federal tax code against individuals or institutions that exercise religious conscience regarding marriage as the union of one man and one woman.
>
> "Regardless of your ideology, we can all agree about the importance of religious liberty in America," said Rep. Labrador. "Our bill will protect freedom of conscience for those who believe marriage is the union of one man and one woman. This is not a Republican or Democrat issue. As President Obama said, 'Americans hold a wide range of views' on marriage and 'maintaining our nation's commitment to religious freedom' is 'vital.' We agree.
>
> "Our bill will ensure tolerance for individuals and organizations that affirm traditional marriage, protecting them from adverse federal action. I'm proud to be joined by my colleagues in introducing this bill, and will strongly advocate for its passage."
>
> Most religious institutions fall within the 501(c) portion of the U.S. tax code, which allows for tax exemption. Under the *Marriage and Religious Freedom Act*, no individual or institution which celebrates and defines marriage as between one man and one woman would be denied or lose exemption from taxation provided for under federal law.

Ryan T. Anderson has an article on the Heritage Foundation web site that explains why this bill is needed.

Excerpt: (links removed)

> Last month, the New Mexico Supreme Court ruled that the First Amendment does not protect a photographer's right to decline to take pictures of a same-sex commitment ceremony—even though doing so would violate the photographer's deeply held religious beliefs as a Christian.
>
> Christian adoption and foster care agencies have been forced to stop providing those services because they object to placing children in same-sex households. Other cases include a baker, a florist, a bed-and-breakfast, a t-shirt company, a student counselor, the Salvation Army, andmore.
>
> California's legislature was poised to pass a bill that would have stripped tax-exempt status from groups such as the Boy Scouts because of policies on sexual orientation. Though it had passed the state Senate, 27–9, the bill was tabled in early September after criticism from surprising quarters—including the liberal *Los Angeles Times*.
>
> These and other laws are creating a climate of intolerance and even intimidation for citizens who believe that we are created male and female, that marriage is the union of a man and a woman, and that sexual relations are properly reserved for marriage. These state and local laws are used to trump fundamental civil liberties such as freedom of speech and the free exercise of religion.
>
> Given the bad ruling and disparaging tone of the recent Supreme Court decision on the Defense of Marriage Act, Congress has an opportunity to protect religious liberty and the rights of conscience at the federal level.

Now, what's going to happen to this new legislation? Hard to say, because the Democrats control the Senate and the White House. I think that all we can hope for is to have everyone vote on it to see where they stand, so that we know that going into the 2014 mid-term elections.

# Obama administration files papers to take Hobby Lobby to Supreme Court

**Wintery Knight** · 20 September 2013 · Archived copy · Original

From Life News.

Excerpt:

> The Obama administration today filed papers taking the Christian craft store Hobby Lobby to the Supreme Court to make it comply with the HHS mandate that compels religious companies to pay for birth control and abortion-causing drugs for their employees.
>
> In July, a federal court granted Hobby Lobby a preliminary injunction against the HHS abortion-drug mandate. The injunction prevented the Obama administration from enforcing the mandate against the Christian company, but the Obama administration appealed that ruling today. The government's appeal makes it highly likely that the Supreme Court will decide the issue in the upcoming term.
>
> "The United States government is taking the remarkable position that private individuals lose their religious freedom when they make a living," said Kyle Duncan, general counsel of the Becket Fund for Religious Liberty and lead lawyer for Hobby Lobby. "We're confident that the Supreme Court will reject the government's extreme position and hold that religious liberty is for everyone—including people who run a business."
>
> Duncan said the appeals court victory for Hobby Lobby this summer had the 10th Circuit Court of Appeals rejecting the Obama administration's argument that the Green family and their family-owned businesses, Hobby Lobby and a Christian bookstore chain named Mardel, could not legally exercise their religious views. The court further said the businesses were likely to win their challenge to the HHS mandate.
>
> The government's petition comes the same day as a petition in *Conestoga Wood Specialties v. Sebelius*, another case involving a challenge to the HHS mandate.
>
> The court will consider the government's petition in the next six weeks. If the petition is granted, the case would be argued and decided before the end of the Court's term in June.

So now you know what "pro-choice" really means. It means force Christians to pay for drugs that kill unborn babies, against their consciences. It means *fascism.* Using the power of government to compel people to act against their consciences.

# Five things to learn from “The Hobbit”

**Wintery Knight** · 20 September 2013 · Archived copy · Original

This is from the Art of Manliness blog.

The 5 things:

1. You can aspire to and achieve greatness no matter who you are and no matter your stage in life
2. A great leader knows when it’s time to step back and let go
3. There are some things in life we just have to accomplish on our own
4. To simply continue on is one of the bravest things that can be done
5. A great story always has conflict or hardship

And my favorite of the five – the one that had meaning for me – is #5:

> **5. A great story always has conflict or hardship.** Imagine your life as a story. Not too long ago, we even had a guest post about this — our life is a journey, and a heroic one at that. Imagine yourself sitting down with your grandkids and telling them the story of you. “Well, I made some money, bought a few cars, sat around and watched TV for a few hours every night, and that’s about it.” Pretty boring, isn’t it? Now imagine that you can start hours worth of stories with, “I explored…I traveled…I fell in love…I fought and won…I overcame…I sweated…” Not only would the story be better, but you likely would be far more satisfied with the course of your life.
>
> J.R.R. Tolkien agrees. “Now it is a strange thing, but things that are good to have and days that are good to spend are soon told about, and not much to listen to; palpitating, and even gruesome, may make a good tale, and take a deal of telling anyways.” He is saying that a life of good ease is a boring one. It’s often what the American dream aspires to, but the reality is that personal growth, and even enjoyment, are things that come out of some kind of challenge. Whether it’s huffing and puffing and groaning your way up a mountain for the view at the top, or getting laid off and finally realizing you don’t want to be in a cubicle anymore, joy is often found after a bit of trudging. Don’t shy away from challenge. Embrace it, and know that someday it’ll make for a great story.

The Hobbit was the first big book that I ever read as a child, and I think that it inspired me to move far away from home as soon as I completed graduate school, so I could make my fortune. An adventurous spirit isn’t free – it has to be put into a boy by what he reads. When I was young, I read “The Hobbit”. You should make your children read “The Hobbit”. Put into their minds at a young age the idea that life is an adventure, that dangers and hardships are normal, and that character counts. Put into their minds that all goodness requires sacrifice. I think that things are going to get harder for Christians going forward so it’s better that they be ready for it.

# Obamacare in action: 301 employers cut employee hours and/or jobs

**Wintery Knight** · 21 September 2013 · Archived copy · Original

Investors Business Daily reports on the job creator response to Obamacare mandates.

Excerpt:

> More than 300 employers have cut work hours or jobs, or otherwise shifted away from full-time staff, to limit liability under ObamaCare, according to a newly updated IBD analysis.
>
> The ObamaCare Employer Mandate: A List Of Cuts To Work Hours, Jobs now includes 62 private employers and 239 public-sector employers. The list includes 80 school districts that have cited Affordable Care Act costs as a reason for cutting work hours — or in several cases outsourcing functions — of part-time instructional aides, cafeteria workers, custodians and bus drivers.
>
> It also includes 46 universities and colleges — in some cases college systems — that have reduced teaching loads for adjunct faculty.
>
> The 43 entries added to the list in the past two weeks reflect numerous actions taken before the Obama administration announced a one-year delay ofObamaCare employer mandate penalties on July 2. But the list also includes actions taken more recently, such as SeaWorld Entertainment's decision to limit part-time workers to 28 hours per week, down from 32 hours previously.
>
> Although the mandate won't take effect until January 2015, fines will be based on employment levels beginning in the second half of 2014 — or earlier.
>
> […]In addition to SeaWorld (SEAS), 10 other private employers just added to the list include a group home for disabled adults; a YMCA; two private universities; the K-VA-T Food Stores regional supermarket; the Bealls regional department store ; and four restaurant operations.
>
> […]Workers in low-wage industries clocked the shortest average workweek on record in July, just 27.4 hours, an IBD analysis of the latest available Bureau of Labor Statistics industry data shows.
>
> This low-wage segment covers 29 million private-sector workers, 25% of the total, in about 40 industry groups where nonsupervisors make up to about $14.50 an hour.
>
> While the IBD list of private-sector hour-cutters is quite small to prove otherwise, it does offer clues that can be of help in interpreting official industry data on hours worked.
>
> For example, the workweek at general merchandise stores tumbled from 31.1 hours in December to 29.8 hours in July. The inclusion of Wal-Mart (WMT) and Bealls on IBD's list point to ObamaCare's employer mandate as a significant contributing factor.
>
> The average workweek in the hotel and accommodations industry hit a record low in July — lower than in the aftermath of 9/11 or at the bottom of the Great Recession.
>
> In July, the workweek for nonsupervisors fell to 28.8 hours, down from 30.7 hours in March 2010, when ObamaCare was signed into law.

I'm looking forward to the 2014 elections, when we will get to vote again on this after we've seen "what's in the bill". I don't think that the media's blatherings are going to be able to convince people who are working under 30 hours a week that Obamacare was the right way to reform health care policy.

# Jerry Walls lectures on the main problem with Calvinist theology

**Wintery Knight** · 21 September 2013 · Archived copy · Original

*WARNING: This lecture is a very sharp and pointed critique of Calvinist theology. Viewer discretion is advised.*

In Protestant Christianity, there is a division between people who accept Calvinist doctrines and those who don't. Both groups think that the other group are genuine Christians, but the debate has more to do with the human free will, human responsibility and who God loves.

About Dr. Jerry Walls:

- BA in Religion and Philosophy, Houghton College
- MDiv, Princeton Seminary
- STM, Yale Divinity School
- PhD in Philosophy, Notre Dame

He is a professor at Houston Baptist University. You can find a more detailed profile here.

Dr. Walls is Protestant (like me). He is a substance dualist (like me). And he believes in a real eternal Hell (like me). And he is very, very assertive. Definitely no confidence problems here. And you're not going to have a problem keeping your attention on this lecture!

Note that I do not agree with or endorse Dr. Walls on all of his views.

Here's the lecture: (64 minutes)

The MP3 file is here.

Summary:

- What are the main doctrines of Calvinism? (TULIP)
- A look at the Westminster Confession
- The nature of freedom and free will
- Calvinist doctrine of freedom: compatibilism
- The implications of compatibilism
- Who determines what each person will desire on Calvinism?
- Who does God love on Calvinism?
- The law of non-contradiction
- Does God make a genuine offer of salvation to all people on Calvinism?
- Does God love "the elect" differently than the "non-elect" on Calvinism?

He quotes at least a half-dozen Calvinist theologians in this lecture, including John Piper, J.I. Packer and D.A. Carson. And he also mentions 3 videos at the end of the lecture where he goes over specific Bible verses that seem to support Calvinism (part 4, part 5, part 6 are the ones he mentioned).

This lecture is very strong stuff, and I think that he could have been nicer when presenting it, but he hit on every single objection that I have to Calvinism, and he worked through my reasoning too! So I really liked that he validated all of my concerns about Calvinism. I'm not as bothered about the problems with Calvinism as he is, though. I don't think it's a big divisive issue. I almost always read Calvinist theologians when I am reading theology. I just conjoin Calvinism with middle knowledge and resistible grace, and it's fine. Calvinists are some of the best theologians, they are just wrong on the things he discusses in his lecture.

You may also be interested in these debates on salvation between a Calvinist and a non-Calvinist.

# Obama administration effectively bans construction of future coal plants

**Wintery Knight** · 22 September 2013 · Archived copy · Original

CNBC explains. (H/T Bad Blue)

Excerpt:

> The proposal would help reshape where Americans get electricity, away from a coal-dependent past into a future fired by cleaner sources of energy. It's also a key step in President Barack Obama's global warming plans, because it would help end what he called "the limitless dumping of carbon pollution" from power plants.
>
> Although the proposed rule won't immediately affect plants already operating, it eventually would force the government to limit emissions from the existing power plant fleet, which accounts for a third of all U.S. greenhouse gas emissions.
>
> […]Despite some tweaks, the rule packs the same punch as one announced last year, which was widely criticized by industry and Republicans as effectively banning any new coal projects in the U.S.
>
> That's because to meet the standard, new coal-fired power plants would need to install expensive technology to capture carbon dioxide and bury it underground. No coal-fired power plant has done that yet, in large part because of the cost.
>
> […]"EPA has set a dangerous and far-reaching precedent for the broader economy by failing to base environmental standards on reliable technology," said Hall Quinn, president and CEO of the National Mining Association. The EPA regulation "effectively bans coal from America's power portfolio," he said.

The first effect of this decision will be to put a lot of Americans out of work.

The second effect will be to cause electricity costs to skyrocket, exactly as Obama promised.

Excerpt:

> Wind and solar energy are dilute, intermittent, and more costly than traditional hydrocarbon energy sources. After atmospheric absorption and system losses, only a single 100-watt bulb can be powered from a square meter of solar cells, and this only at midday on a cloudless day. Wind towers must be spaced about 140 meters apart to capture energy from the wind. As a result, solar requires 75 to 100 times the land and wind requires 150 to 250 times the land of traditional power sources.
>
> Solar systems don't output energy at night or at low angles of incoming sunlight. Wind systems provide rated output less than 30% of the time and this output varies chaotically. Traditional gas or coal power plants must be running as an active backup to maintain continuity of electricity supply. Like a car driving in stop-and-go conditions, installation of a wind farm converts the power system into a stop-and-go electrical system. In measured real world conditions, combined wind and hydrocarbon systems use more fuel, output more sulfur and nitrogen oxides, and emit more carbon dioxide than hydrocarbon-only electrical systems.
>
> Total cost estimates show that wind and solar systems are significantly more costly than hydrocarbon energy sources. Since wind requires an active backup hydrocarbon facility, wind can only replace some of the variable cost of a coal or gas plant. Department of Energy 2011 estimates place the variable cost of coal at 3 cents per kW-hr and gas at 5 cents per kW-hr, compared to 9 cents for on-shore wind and 24 cents for offshore wind. Solar costs are 20 to 30 cents per kW-hr.

We're getting what we voted for. We've had no significant global warming for 15 years, but that won't stop the Democrats from saddling private industry with regulatory costs – costs that they will pass on to consumers. I would

not be surprised if consumers (who after all mostly voted for Obama) blame the energy companies and never identify the root cause of the rising costs.

# Ann Furedi, CEO of UK's largest abortion provider, endorses sex-selection abortion

**Wintery Knight** · 22 September 2013 · Archived copy · Original

An article from the UK Telegraph.

Excerpt:

> The chief executive of Britain's biggest abortion charity has said women are legally free to arrange an abortion because they are unhappy with the sex of their unborn baby.
>
> Ann Furedi, of BPAS, said the law does not prevent women from choosing a termination on the grounds of gender and she even compared it to abortion after rape.

> Mrs Furedi's comments come weeks after it was disclosed that the CPS had decided not to prosecute two doctors who were exposed by a Daily Telegraph investigation arranging terminations purely because the unborn baby was a girl.
>
> […]Writing for online magazine Spiked, she said: "A doctor agreeing to an abortion on grounds of rape would be breaking the law no more and no less than a doctor who agrees an abortion on grounds of sex selection," she said.
>
> "While it is true that the sex of the foetus is not a legal ground for abortion, nor is rape, or incest, or being 13 years old. Nor is being homeless, or abandoned, or just feeling there's no way you can bring a child into the world… yet they are all reasons why a doctor may believe a women has met the legal grounds of abortion."
>
> She added: "The woman gives her reasons, the doctor decides on the grounds as set out in the law … there is no legal requirement to deny a woman an abortion if she has a sex preference, providing that the legal grounds are still met.
>
> "The law is silent on the matter of gender selection, just as it is silent on rape."

The UK Guardian is probably the UK's best-known left-of-center newspaper. They responded to the story.

Excerpt:

> When you talk about being pro-choice, sex selective abortion is often slung at you as the triumphant gotcha.

> “You love women so much you want them to be in charge of what grows inside their bodies, but what about the women who *are* aborted, have a go at answering that? ZING!”
>
> The answer is actually remarkably simple, and it’s this: it doesn’t matter whether what’s growing inside you is liable to end up as a man or a woman. What matters is whether the person it’s growing inside – the person who is going to have to deliver the resulting baby, at not inconsiderable personal peril – actually wants to be pregnant and give birth to this child. In a world where it’s possible to end a pregnancy safely and legally, it seems like rank brutality to force anyone to carry to term against her will.
>
> And as far as I’m concerned, it doesn’t matter why any woman wants to end her pregnancy. As the conscious and legally competent entity in the conception set-up, it’s the woman’s say that counts, and even the most terrible reason for having an abortion holds more sway than the best imaginable reason for compelling a woman to carry to term.

The article goes on to accuse pro-lifers of “misogyny” for opposing the murder of unborn girls, just because they are girls.

# Bed and Breakfast owners forced to sell hotel after harassment by gay activists

**Wintery Knight** · 22 September 2013 · Archived copy · Original

Gay rights vs religious liberty

The Blaze reports.

> Christian bed and breakfast owners who once famously refused service to a gay couple in the U.K. now claim that they've been forced to sell their hotel following a contentious legal battle andongoing harassment.
>
> Hazelmary and Peter Bull insist that they have been the victims of vandalism, death threats and website attacks since the 2008 incident. As a result, in addition to the impending loss of the Chymorvah Hotel in Marazion, Cornwall, England, the couple has also grappled with intense anger from their ideological opponents.
>
> Since denying a room to Martyn Hall and Steven Preddy, a gay couple, they have been forced to pay for legal representation and to compensate Hall and Preddy, all-the-while attracting fewer guests as a result of their stance on homosexuality (the hotel only allows married adults to share a bed).
>
> "We were optimistic in the spring. Why wouldn't we be with the summer ahead of us?," Hazelmarytold the Daily Mail. "We have had a better summer than we thought but nowhere near good enough to pay our way. We were not even half-full. We must have been the only place in west Cornwall that had rooms left."
>
> […]In an interview with the outlet, the Bulls said that they also had a dead rabbit nailed to their fence and that someone even removed the bolts from the tires on their car. They have also reportedly encountered death threats.

The Blaze also had an article about the Oregon couple who had to sell their bakery because of harassment by gay activists.

Excerpt:

> But the harassment has also come in some very eerie forms, Melissa claims. In the early morning hours on Monday, the baker claims that someone broke into the Sweet Cakes truck, a vehicle the family uses to advance its business. The truck was parked in the Kleins' driveway. This was particularly nerve-wrecking for Melissa and Aaron, astheir home, where the truck was located, is in a highly secluded area — one that is nowhere near where their former shop.
>
> "Somebody came up into our driveway and rummaged through our truck and took stuff out," she said. "The really strange thing is, they didn't steal anything, they just made a mess. It kind of was a little creepy."

> The culprit didn't take any money, she said, which was also odd, as the truck contained cash. While she's definitely shaken by the incident, Melissa said that she feels safe, as her husband is a hunter who is trained to use a firearm. When he's home, she's fine, but when Aaron is out of the house, Melissa admitted that she does get a little scared.
>
> In addition to losing their business, the Klein family has been impacted in other ways. Their children are now homeschooled — a decision that Melissa said she made this year following the media firestorm that erupted. And in light of the bakery's closure, Aaron has gone back to work to help provide for the family.
>
> The harassing e-mails haven't stopped either. Melisa shared just a few of the messages she has received of late:
>
> - One message with the subject line "racist maggots" read, "People like you will burn in HELL, you racist pigs."
> - Another read, "Your homophobic rants will not be forgotten and you will go out of business. This is the 21st century, a**holes."
> - And another: "Do everyone a favor and fall off a cliff."
> - One individual made it very personal: "Honey it would take a lot to make your ugly a** look good! You are ugly inside and out!"
> - And finally: "Maybe your god will send you some cat food to eat when you are living on the street?"
>
> And those are just a few of the messages received over the past few days. Negative social media comments, too, have abounded.

This is what happens when cultural elites push the idea that their is only one side to the gay marriage debate. It probably doesn't help that most Christians have not bothered to prepare a secular case against policies that we disagree with.  It's very easy for the secular left to dehumanize their opponents when they think that our position is based on religion only. We have to find arguments that appeal to moral non-Christians in order to build a coalition that will defend basic human rights from gay activists.

# At least 75 Christians killed by Muslim suicide bombers in Pakistan

**Wintery Knight** · 23 September 2013 · Archived copy · Original

Map of the Middle East

Fox News reports. (H/T Letitia)

Excerpt:

> A pair of suicide bombers detonated their explosives outside a historic church in northwestern Pakistan on Sunday, killing 75 people in the deadliest-ever attack on the country's Christian minority, officials said.
>
> […]The attack on the All Saints Church, which also wounded 110 people, underlines the threat posed by the Pakistani Taliban at a time when the government is seeking a peace deal with the militants. It will likely intensify criticism from those who believe that negotiating peace with the Taliban is a mistake.
>
> The attack occurred as hundreds of worshippers were coming out of the church in the city's Kohati Gate district after services to get a free meal of rice offered on the front lawn, said a top government administrator, Sahibzada Anees.
>
> "There were blasts and there was hell for all of us," said Nazir John, who was at the church with at least 400 other worshippers. "When I got my senses back, I found nothing but smoke, dust, blood and screaming people. I saw severed body parts and blood all around."
>
> Survivors wailed and hugged each other in the wake of the blasts. The white walls of the church, which first opened in the late 1800s, were pockmarked with holes caused by ball bearings or other metal objects contained in the bombs to cause maximum damage. Blood stained the floor and was splashed on the walls. Plates filled with rice were scattered across the ground.
>
> The attack was carried out by a pair of suicide bombers who detonated their explosives almost simultaneously, said police officer Shafqat Malik. Authorities found their body parts and were trying to determine their age, he said.
>
> The blasts killed 75 people and wounded another 110, said Jamil Shah, a spokesman at the hospital in Peshawar where the victims were being treated. The dead included women and children, said Sher Ali Khan, another doctor at the hospital.
>
> The number of casualties from the blasts was so high that the hospital was running out of caskets for the dead and beds for the wounded, said Mian Iftikhar Hussain, a former information minister of surrounding Khyber Pakhtunkhwa province who was on the scene.

> “This is the deadliest attack against Christians in our country,” said Irfan Jamil, the bishop of the eastern city of Lahore.
>
> One of the wounded, John Tariq, who lost his father in the attack, asked of the attackers, “What have we done wrong to these people? Why are we being killed?”
>
> Ahmad Marwat, who identified himself as the spokesman for the Jundullah wing of the Pakistani Taliban, claimed responsibility for the attack.

Strangely, the terrorist group claims that they attacked civilians because of U.S. drone attacks against other terrorists. Let me make sense of this for you. When a person targets innocent people directly, that’s terrorism. Insofar as Muslims carry out attacks that target civilians, they are terrorists. The United States *never* targets civilians. Civilians may be killed because they are near to terrorists, or because terrorists use civilians as human shields. There is no moral equivalency here, regardless of what the mainstream media tries to make people believe.

UPDATE: There was also a massive terrorist attack in Kenya on the weekend.

# William Lane Craig posts full Vilenkin e-mail misrepresented by Krauss in their debate

**Wintery Knight** · 23 September 2013 · Archived copy · Original

First, Dr. Craig posted the e-mail from Vilenkin to Krauss, which Krauss used in his debate with Craig, with the parts Krauss omitted in bold:

> Hi Lawrence,
>
> Any theorem is only as good as its assumptions. The BGV theorem says that if the universe is on average expanding along a given worldline, this worldline cannot be infinite to the past.
>
> A possible loophole is that there might be an epoch of contraction prior to the expansion. Models of this sort have been discussed by Aguirre & Gratton and by Carroll & Chen. **They had to assume though that the minimum of entropy was reached at the bounce and offered no mechanism to enforce this condition. It seems to me that it is essentially equivalent to a beginning.**
>
> **On the other hand,** Jaume Garriga and I are now exploring a picture of the multiverse where the BGV theorem may not apply. In bubbles of negative vacuum energy, expansion is followed by cocntraction, **and it is usually assumed that this ends in a big crunch singularity.** However, it is conceivable (and many people think likely) that singularities will be resolved in the theory of quantum gravity, so the internal collapse of the bubbles will be followed by an expansion. In this scenario, **a typical worldline will go through a succession of expanding and contracting regions, and** it is not at all clear that the BGV assumption (expansion on average) will be satisfied.
>
> **I suspect that the theorem can be extended to this case, maybe with some additional assumptions. But** of course there is no such thing as absolute certainty in science, especially in matters like the creation of the universe. Note for example that the BGV theorem uses a classical picture of spacetime. In the regime where gravity becomes essentially quantum, we may not even know the right questions to ask.
>
> Alex

Now recall that Krauss excuses the selective editing of the e-mail in the debate by saying that it was “too technical” to include. Judge for yourself if the omitted lines are “too technical” or whether they were omitted in order to mislead people about the evidence for the beginning of the universe.

Dr. Craig comments:

> Whoa! That puts a very different face on the matter, doesn’t it? Why didn’t Krauss read the sentence, “It seems to me that it is essentially equivalent to a beginning”? Because it was too technical? Is this the transparency, honesty, and forthrightness that Krauss extols? (By the way, Vilenkin’s criticism of these models is the same one that Vilenkin makes in his Cambridge paper: far from showing an eternal past, these models actually feature a universe with a common beginning point for two arrows of time.)
>
> And why did Krauss delete Vilenkin’s caveat that the BGV theorem can, in his estimation, be extended to cover the case of an expanding and contracting model such as Garriga and Vilenkin are exploring? And why delete the remark that such a model is usually assumed to be incorrect? It’s evident that Vilenkin’s email was selectively edited to give it the spin Krauss wanted.

Some people told me that they thought that Dr. Craig needed to be a little less gracious with Krauss in the debate, but that comment takes Krauss on directly. Too bad most of the people who watch the debate will never know unless they see the original e-mail from Vilenkin that Craig posted.

Dr. Craig then wrote to Dr. Vilenkin about this misrepresentation and here is part of the reply:

> The Aguirre-Gratton model can avoide singularities by postulating a small "initial" closed universe and then allowing it to evolve in both directions of time. I put "initial" in quotation marks, because Aguirre and Gratton do not think of it that way. But this model requires that a very special condition is enforced at some moment in the history of the universe. At that moment, the universe should be very small and have very low entropy. Aguirre and Gratton do not specify a physical mechanism that could enforce such a condition.
>
> Carroll and Chen claim that the universe did not have to be small at that special moment. But in my recent paper I show that in this case singularities are unavoidable.
>
> […]I think you represented what I wrote about the BGV theorem in my papers and to you personally very accurately.

Now I don't want anyone to get the idea that all atheists are like Krauss. I distinctly remember another atheist named Anthony Flew debating Dr. Craig and a questioner from the audience asked him why not prefer speculative cosmologies like the eternally oscillating model. Dr. Flew (unlike Dr. Krauss) was honest – he said that we have to accept the science we have today based on the evidence we have today. Dr. Krauss is not willing to accept the science we have today and the evidence we have today. That's the difference. This is a failing of Dr. Krauss' will and intellect. He simply cannot bring himself to accept what science has shown, if it impacts his autonomy in any way. He would rather mislead himself and others with speculations rather than face reality.

**Watch the whole debate – see for yourself**

I'll re-state the relevant part of my Craig-Krauss debate summary below. The summary has the full video.

*The segment from 52:18 to 57:12 about the Vilenkin e-mail on the BVG theorem is a must-see.* Krauss is standing up and gesticulating while Craig is calmly trying to quote a paper by Vilenkin that shows that Krauss is misrepresenting Vilenkin. Krauss constantly interrupts him. After a while, when Craig exposes him as having misrepresented Vilenkin and gets him to admit that all current eternal models of the universe are probably wrong, he quietens down and can't even look at Craig in the face.

Cosmological argument:

- Craig: The e-mail says any universe that is expanding, on average, requires a beginning
- Craig: There are two models – Aguirre & Gratton and Carroll & Chen – where there is a period of contraction before the expansion
- Craig: The two models are the ones cited in the e-mail that Dr. Krauss showed
- Craig: In the very paper by Vilenkin that I cited, he says that both of those models don't work
- Krauss: (agitated and interrupting) Vilenkin said that they have to make an assumption about entropy that they have no rationale for
- (as Craig starts to talk Krauss makes an exaggerated, disrespectful gesture and sits down in a huff)
- Craig: Yes, an unwarranted assumption means that they don't have EVIDENCE for their theories being correct
- Krauss: (agitated and interrupting) "All the evidence suggests that the universe had a beginning but WE DON'T KNOW!!!!!!!" (raising his voice)
- Craig: I'm not saying that we know that the universe had a beginning with certainty
- Craig: I am saying that the beginning of the universe is more probably true than false based on the evidence we have
- Craig: And you  agree with me about that – you think the universe had a beginning
- Krauss: (agitated and interrupting) (Unintelligible)
- Moderator: One at a time

- Craig: In your Vilenkin e-mail slide, at the end of the paragraph where the two models are mentioned that Vilenkin specifically shows…
- (I am guessing that Craig is going to ask why so much of what Vilenkin wrote has been cut out of the e-mail that Krauss showed)
- Krauss: (agitated and interrupting) Because it was technical…
- Moderator: Lawrence! Hang on a sec!
- Craig: He specifically shows that these models are not past eternal, and that they require a beginning just like the others…
- Krauss: (agitated and interrupting) We can do the math if you want
- Craig: Now wait. I couldn't help notice that there on your slide there was a series of ellipsis points indicating missing text…
- Krauss: (agitated and interrupting) "Yeah, because it was technical!"
- Craig: "I wonder what you deleted from the original letter"
- Krauss: (agitated and interrupting) "I just told you!"
- Craig: "Now wait. Could it have been something like this: (reads a quote from Vilenkin) 'You can evade the theorem by postulating that the universe was contracting prior to some time. This sounds as if there is nothing wrong with having contraction prior to expansion. But the problem is that a contracting universe is highly unstable. Small perturbations would cause it to develop all sorts of messy singularities, so it would never make it to the expanding phase.'
- Craig: "That's Vilenkin."
- Krauss: "In this paper, that's absolutely right"
- Krauss: But it's ok for theories to assume things that we know are wrong – they are still good theories – it's unknown
- (Craig turns away and looks through his papers)
- Craig: "Isn't it true that the only viable quantum gravity models on order today involve a beginning – have a finite past?"
- Krauss: "No"
- Craig: "Well, can you give us one then"
- Krauss: (talks about a variety of possible eternal models) "In my experience in science, all of them are probably wrong"
- Krauss: "You know most theories are wrong, which is why, you know, it's hard"
- Craig: "Right"

Krauss accused Dr. Craig of misrepresenting science many times in his three Australia debates, but now we know the truth about who misrepresented science.

UPDATE: This whole episode made me think of a lecture by famous physicist Richard Feynman.

Excerpt:

> The first principle is that you must not fool yourself–and you are the easiest person to fool. So you have to be very careful about that. After you've not fooled yourself, it's easy not to fool other scientists. You just have to be honest in a conventional way after that.
>
> I would like to add something that's not essential to the science, but something I kind of believe, which is that you should not fool the layman when you're talking as a scientist. I am not trying to tell you what to do about cheating on your wife, or fooling your girlfriend, or something like that, when you're not trying to be a scientist, but just trying to be an ordinary human being. We'll leave those problems up to you and your rabbi.

> I'm talking about a specific, extra type of integrity that is not lying, but bending over backwards to show how you are maybe wrong, that you ought to have when acting as a scientist. And this is our responsibility as scientists, certainly to other scientists, and I think to laymen.

Now given what Krauss did in the debate, it seems to me that he is not in agreement with Feynman.

UPDATE: Dr. Craig reports that Dr. Krauss refused to let the organizers live-stream the three Australia debates, as well as refusing to let the Australian Broadcasting Corporation live-broadcast the three debates.

# How well is government promotion wind and solar power working out in Germany?

**Wintery Knight** · 23 September 2013 · Archived copy · Original

Surcharge paid by German households and SMEs

First, let's hear from the ultra-leftist New York Times. (H/T Dennis Prager)

Excerpt:

> It is an audacious undertaking with wide and deep support in Germany: shut down the nation's nuclear power plants, wean the country from coal and promote a wholesale shift to renewable energy sources.
>
> But the plan, backed by Chancellor Angela Merkel and opposition parties alike, is running into problems in execution that are forcing Germans to come face to face with the costs and complexities of sticking to their principles.
>
> German families are being hit by rapidly increasing electricity rates, to the point where growing numbers of them can no longer afford to pay the bill. Businesses are more and more worried that their energy costs will put them at a disadvantage to competitors in nations with lower energy costs, and some energy-intensive industries have begun to shun the country because they fear steeper costs ahead.
>
> Newly constructed offshore wind farms churn unconnected to an energy grid still in need of expansion. And despite all the costs, carbon emissions actually rose last year as reserve coal-burning plants were fired up to close gaps in energy supplies.
>
> A new phrase, "energy poverty," has entered the lexicon.
>
> "Often, I don't go into my living room in order to save electricity," said Olaf Taeuber, 55, who manages a fleet of vehicles for a social services provider in Berlin. "You feel the pain in your pocketbook."
>
> Mr. Taeuber relies on just a single five-watt bulb that gives off what he calls a "cozy" glow to light his kitchen when he comes home at night. If in real need, he switches on a neon tube, which uses all of 25 watts.
>
> Even so, with his bill growing rapidly, he found himself seeking help last week to fend off a threat from Berlin's main power company to cut off his electricity. He is one of a growing number of Germans confronting the realities of trying to carry out Ms. Merkel's most ambitious domestic project and one of the most sweeping energy transformation efforts undertaken by an industrialized country.
>
> […]The cost of the plan is expected to be about $735 billion, according to government estimates, and may eventually surpass even that of the euro zone bailouts that have received far more attention during Ms. Merkel's tenure. Yet as the transition's unknowns have grown, so have costs for the state, major companies and consumers.

> […]With consumers having to pay about $270 each in surcharges this year to subsidize new operators of renewable power, the hardest hit are low-wage earners, retirees and people on welfare, Mr. Gärtner said. Government subsidies for the plan amounted to $22.7 billion in 2012 and could reach $40.5 billion by 2020, according to John Musk, a power analyst at RBC Capital Markets.
>
> […]**Part of the reason consumer prices have risen so sharply is that, for now, the government has shielded about 700 companies from increased energy costs, to protect their competitive position in the global economy.**
>
> **Industrial users still pay substantially more for electricity here than do their counterparts in Britain or France, and almost three times as much as those in the United States, according to a study by the German industrial giant Siemens. The Cologne Institute for Economic Research said there had been a marked decline in the willingness of industrial companies to invest in Germany since 2000.**

Note that German industry has been EXEMPT from paying the green energy surcharge. Households and small-to-medium-size enterprises are paying it.

The key part of the article, I think, is this:

> **One of the first obstacles encountered involves the vagaries of electrical power generation that is dependent on sources as inconsistent and unpredictable as the wind and the sun.**
>
> **And no one has invented a means of storing that energy for very long, which means overwhelming gluts on some days and crippling shortages on others that require firing up old oil- and coal-burning power plants. That, in turn, undercuts the goal of reducing fossil-fuel emissions that have been linked to climate change.**
>
> **Last year, wind, solar and other nonfossil-fuel sources provided 22 percent of the power for Germany, but the country increased its carbon emissions over 2011 as oil- and coal-burning power plants had to close gaps in the evolving system, according to the German electricity association BDEW.**

Didn't anyone think of that problem before starting out this crazy plan? No. Because they important thing was feelings – politicians had to feel good about solving a made-up crisis.

Cost of renewable wind and solar energy

**Why can't leftists learn from the failed experiments of others?**

Government-subsidized green energy scams have been tried before in Spain and Denmark. Did they work?

Well, we know that in Spain, the green jobs programs failed. (H/T ECM)

Excerpt:

> Subsidizing renewable energy in the U.S. may destroy two jobs for every one created if Spain's experience with windmills and solar farms is any guide.
>
> For every new position that depends on energy price supports, at least 2.2 jobs in other industries will disappear, according to a study from King Juan Carlos University in Madrid.
>
> U.S. President Barack Obama's 2010 budget proposal contains about $20 billion in tax incentives for clean-energy programs. In Spain, where wind turbines provided 11 percent of power demand last year, generators earn rates as much as 11 times more for renewable energy compared with burning fossil fuels.
>
> **The premiums paid for solar, biomass, wave and wind power – – which are charged to consumers in their bills — translated into a $774,000 cost for each Spanish "green job" created since 2000, said Gabriel Calzada, an economics professor at the university and author of the report.**
>
> **"The loss of jobs could be greater if you account for the amount of lost industry that moves out of the country due to higher energy prices," he said in an interview.**
>
> The Heritage Foundation cites a study from Denmark, which shows that wind power has also failed.

Excerpt:

> But according to a new study from the Danish Centre for Political Studies (CEPOS), commissioned by the Institute for Energy Research, the road to increased wind power is less traveled for a reason. The study refutes the claim that Denmark generates 20 percent of its power from wind stating that its high intermittency not only leads to new challenges to balance the supply and demand of electricity, but also provides less electricity consumption than assumed. The new study says, "wind power has recently (2006) met as little as 5% of Denmark's annual electricity consumption with an average over the last five years of 9.7%." Furthermore, the wind energy Denmark exports to its northern neighbors, Sweden and Norway, does little to reduce carbon dioxide emissions because the energy it replaces is carbon neutral.
>
> The study goes on to say that the only reason wind power exists in Denmark is "through substantial subsidies supporting the wind turbine owners. Exactly how the subsidies have been shared between land, wind turbine owners, labor, capital and its shareholders is opaque, but it is fair to assess that no Danish wind industry to speak of would exist if it had to compete on market terms."
>
> **But there's a cost involved. When government spends more money, it necessarily diverts labor, capital and materials from the private sector. Just like promises are made in the United States about green jobs creation, the heavily subsidized Danish program created 28,400 jobs. But "this does not, however, constitute the net employment effect of the wind mill subsidy. In the long run, creating additional employment in one sector through subsidies will detract labor from other sectors, resulting in no increase in net employment but only in a shift from the non-subsidized sectors to the subsidized sector."**
>
> And because these resources are being diverted away from more productive uses (in terms of value added, the energy technology underperforms compared to industrial average), "Danish GDP is approximately $270 million lower than it would have been if the wind sector work force was employed elsewhere."

Why do people keep voting in leaders who don't know what they are doing? Why are people surprised when

emotional craziness and moral preening doesn't work out financially?

Previously, I blogged about how Obama was causing our electricity prices to skyrocket by effectively banning coal power. Not to mention blocking the Keystone XL pipeline. Keep that in mind when you are lighting your house with 5 Watt light bulbs. This doesn't happen by accident – you need politicians to wage war on the free market system in order for this to happen. And that's what we've been voting for in the last two elections.

# Thomas Aquinas on law, economics and government

**Wintery Knight** · 23 September 2013 · Archived copy · Original

I found three posts at the AEI Values and Capitalism blog authored by a recent graduate of Grove City College.

Here the 3 posts:

- Thomas Aquinas on Private Property
- Thomas Aquinas on the Role of Government
- Thomas Aquinas on Helping the Poor

I'm going to snip the most interesting parts from each of the 3 posts.

First post talks about the Bible and private property:

> What, if any, role does government play in defining, bestowing and taking private property? This question underlies many modern-day political debates, but it's actually an issue scholars have debated for centuries. At the heart of this debate is the tension between private property and government confiscation: Does private property exist? If so, does government have the authority to take it from the citizens it governs?
>
> […]"It is false to say that human beings are not permitted to possess their own property," he writes, implying that individual human beings have a right to the external goods they own and no one else may possess ownership over their goods. The eighth commandment—"Thou Shalt Not Steal"—assumes the principle of private property. God, by commanding man to refrain from stealing from his neighbor, assumes that man can and does own material goods.
>
> […]In his book "Foundations of Economics: A Christian View," Dr. Shawn Ritenour of Grove City College puts it quite simply: "Our property is God's gift." The socialist idea that property rights come from government is false. Property rights come from our Creator.

So that's the first thing to get clear. The Bible assumes the concept of private property.

Second post talks about when the government is justified in taking the property of citizens:

> Theft is not justified on an individual level or a state level. Stealing is stealing. But if this is true, does government commit theft when it taxes its citizens? According to Aquinas, not quite. "If rulers exact from their subjects what is due them in **justice** in order to maintain the **common good**," he writes, "there is no robbery" (emphasis mine). Government may justly take from its citizens their God-given property only if it promotes justice for the common good of society.
>
> But this criterion is vague. The common good may be defined in a variety of ways. But Aquinas does not leave the reader without qualifying his statement:
>
> But public authority is committed to rulers in order that they may safeguard justice. And so they are permitted to use force and coercion only in the course of justice, whether in **wars against enemies** or in **punishing civilian criminals**. (emphasis mine)
>
> Government may take from its citizens, i.e. taxes, for the two-fold purpose of defended them from foreign enemies and convicting domestic criminals.

So the government can take money from citizens for defending them from external threats and internal threats. But what about helping the poor? Who is going to help the poor, if it's not government's job?

Third post talks about whose job it is to help the poor:

> We must help those in need directly, through private institutions and through the church, not allowing government to become a substitute for our individual responsibility of loving our neighbor. Aquinas writes:
>
> But because many persons are in need, and the same things cannot assist everybody, the dispensing of one's own goods is committed to each **individual**, so that each may out of them assist those in need. (emphasis mine)
>
> Because of the magnitude and specificity of each individual's needs, the government cannot adequately provide for every one of its citizens. As Christians, we must work to provide for our neighbors in accordance with the command in Scripture to love our neighbor as ourselves.
>
> Property is a gift from God—not government—to his people for the purposes of self-preservation and assisting those in need. When private institutions, churches and individuals fulfill their mandate to love our neighbors as ourselves, no need for government involvement exists.

Just a helpful reminder to everyone about what one of the pillars of the Christian faith thought about fiscal policy and the role of government. By the way, if you're thinking about studying economics and you're a Christian, I recommend Grove City College.

**Christianity and economics**

Here's an interview with Dr. Shawn Ritenour, economics professor at Grove City College. The interview is conducted by Dr. Paul Kengor.

Excerpt:

> **Kengor**: …it seems that the very foundation of economics, not to mention the American republic in some respects, is the right to private property. Do you agree? If so, is that Scriptural?
>
> **Ritenour**: The foundation of economic activity and policy is private property. All action requires the use of property and all economic policy is about how people can legally use their property. To benefit from the division of labor, we must be able to exchange our products, which requires private property. Private property is definitely Scriptural. The Bible explicitly prohibits theft, fraud, moving property barriers, debasing money, violating labor contracts, as well as coveting. These prohibitions apply to both citizens and rulers. In my text, I apply this conclusion to issues such as confiscatory taxation, government subsidies, business regulation, and monetary inflation.
>
> **Kengor**: I find it very telling that Karl Marx was first and foremost against private property, not to mention against God as well. In the "Communist Manifesto," he wrote plainly: "the theory of the Communists may be summed up in a single sentence: Abolition of private property." And yet, there are some religious left Christians who claim that the Bible, especially in certain Old Testament passages, preaches a form of socialism and even communism. A student of mine had a teacher at a private Christian school in Ohio who instructed the class that as Christians they should be communists. Can you address this argument?
>
> **Ritenour**: Communism can be condemned strictly on the basis of the Christian ethic of property (among other reasons). Nothing in Scripture either commands or implies that the means of production should be controlled by the state. There are passages in the early chapters of Acts that are often cited as promoting "Christian communism," but, in fact, actually illustrate Christian sharing. The various Christians still owned their property, but were generous in sharing whenever they saw a need. When Peter rebukes Ananias in Acts 5, he explicitly says that both the property that Ananias and Sapphira sold and the monetary proceeds from selling it were theirs to do with what they wanted. That is not the gospel according to Marx.
>
> **Kengor**: I like the way you turn the religious left's thinking on private property on its head. You note that "God prohibits our coveting the property of others." With that being the case, isn't it wrong for the government to use the mighty arm of the state to forcibly remove property from one person to give it to another?

> **Ritenour**: I see no other way around that conclusion, especially when we realize that, in our day of mass democracy, the state usually accomplishes policies of wealth redistribution by inciting envy and covetousness among the populace.
>
> **Kengor**: What about profits? Reconcile the profit motive with the God of Scripture. We have people in this society who portray profits as greedy or unjust.
>
> **Ritenour**: Profit is the reward entrepreneurs receive for more successfully producing what people want. This is no easy thing to do. Entrepreneurs must invest in present production of goods they sell in the future. Neither entrepreneurs nor government bureaucrats know exactly what future demand will be. Therefore, production necessitates bearing risk. If the entrepreneur forecasts future demand incorrectly, he will waste resources and reap losses. If he forecasts the future correctly, he serves his fellow man by producing goods people want. It seems only right that such producers are rewarded with profit. In a free market, the only way entrepreneurs earn profits is to serve customers better than anyone else.

If you would like to learn more about the relationship between Christianity and economics, then I recommend "Money, Greed and God" and "Indivisible" by Jay Richards. The former is about what the Bible says about economics, the latter is about developing a Christian worldview of fiscal and social issues. If you really want a comprehensive assessment of the Bible and politics, then I recommend Wayne Grudem's "Politics According to the Bible".

# Which policies have caused our low labor force participation rate?

**Wintery Knight** · 24 September 2013 · Archived copy · Original

Labor Force Participation Rate from 2007 (Pelosi/Reid) to 2013

Jay Richards tweeted this article from the Wall Street Journal. The article is an interview with a business owner named Bob Funk whose job it is to match job seekers to job creators.

Hiring is down because of increased regulation of employers and fear of interventionism:

> Here's something you don't often see in Washington: a businessman trying to repeal a law that *helps* his company. That's Bob Funk's latest mission in life. He's the president and founder of Express Employment Services, the fifth-largest employment agency in America, with annual sales of $2.5 billion and more than 600 franchises across the country. This year he will place nearly half a million workers in jobs.
>
> "ObamaCare has been an absolute boon for my business," he says as we sit in his new office headquarters near downtown Oklahoma City. "I'm making a lot of money thanks to that law. We're up 8% this year. But it's just terrible for the country. I see that firsthand every day."
>
> Why is the health-care law good for Express but bad for the country? "Firms are just very reluctant to hire full-time workers," Mr. Funk says. "So they are taking on more temporary help, which is what we do." ObamaCare imposes new mandates and penalties on companies with more than 50 full-time employees—and even those working 30 hours a week are considered full-time.
>
> He quickly adds: "The problem isn't just ObamaCare, though. It's the entire regulatory assault on employers coming out of Washington—everything from the EEOC"—the Equal Employment Opportunity Commission hits companies hard when employees claim age, race or sex discrimination—"to the Dodd-Frank monstrosity. Employers are living in a state of fear."

So let's take a look at what is causing a record low labor force participation rate.

The younger generation does not have a good work ethic:

> The primary jobs problem today, Mr. Funk says, is that too many workers are functionally unemployable because of attitude, behavior or lack of the most basic work skills. One discouraging statistic is that only about one of six workers who comes to Express seeking employment makes the cut. He recites a company statistic that about one in four applicants can't even pass a drug test.
>
> "In my 40-some years in this business, the biggest change I've witnessed is the erosion of the American work ethic. It just isn't there today like it used to be," Mr. Funk says. Asked to define "work ethic," he replies that it's fairly simple but vital on-the-job behavior, such as showing up on time, being conscientious and productive in every task, showing a willingness to get your hands dirty and at times working extra hours. These attributes

> are essential, he says, because if low-level employees show a willingness to work hard, “most employers will gladly train them with the skills to fill higher-paying jobs.”
>
> He fears that too many of the young millennials who come knocking on his door view a paycheck as a kind of entitlement, not something to be earned. He is also concerned that the trendy concept of “life-balancing” is putting work second behind leisure.

Welfare spending discourages people from working:

> When pressed to explain what Washington can do to get Americans back on the job, Mr. Funk says the first step would be to start shrinking the “vast social welfare state programs that have become a substitute for work. There’s a prevalent attitude of a lot of this generation of workers that the government will always be there to take care of them. It’s hard to get people to take entry-level jobs when they can get unemployment benefits, health care, food stamps and the rest.”
>
> This week during the food-stamp debate in Congress, Democrats voted unanimously against work requirements and ridiculed Republicans who suggested that the expansion of food stamps to 47 million Americans has discouraged working. The Democrats are living in a fantasy world, according to Mr. Funk. He points to Congress’s decision in 2009 to increase unemployment-insurance benefits to 90 weeks or more as “a policy that held a lot of people out of the workforce until the checks stopped coming. We saw that here very clearly.”

Disability makes people less inclined to get a job:

> The most abused government program, he says, is disability insurance and the 14 million Americans who now collect these benefits. Express has found that over half of the disability claims brought by its workers have turned out to be fraudulent. “We win 90% of the disability cases that we challenge in court,” Mr. Funk says.

Skills deficit makes people less employable:

> Another big hurdle is the widening skills deficit. At any given time, Mr. Funk says, Express has as many as 20,000 jobs the company can’t fill because workers don’t have the skills required. His advice to young people who are looking for a solid career is to get training in accounting (thanks to Dodd-Frank’s huge expansion of paperwork), information technology, manufacturing-robotics programming, welding and engineering. He’s mystified why Express has so much trouble filling thousands of information-technology jobs when so many young, working-age adults are computer literate.

Public schools and universities don’t prepare people for work:

> He blames public schools and universities for the skills mismatch. Young people looking for a financially secure future might want to heed one of his favorite pieces of cautionary advice: “If you’ve got a college degree in psych, poly-sci or sociology, sorry, I can’t help you find a job.” He urges greater emphasis on vocational and practical skills training in schools, universities and junior colleges.
>
> With so many ideas about how to help get the country on track, Mr. Funk might seem ripe to enter politics, but he already made one electoral foray—he was a local school-board member for 11 years—and found it an exercise in pure frustration. Bringing his pay-for-performance values to the board, he spent years futilely trying to get rid of bad teachers and to reward “the 30% that are really good.”
>
> He says “teacher tenure is by far the most corrupt social institution in our time, because it doesn’t reward excellence or weed out bad teachers.” The teachers union had operational control of the school board, and Mr. Funk couldn’t get them to budge. He says the union celebrated when he left the board.

I think that this shows the important of having private sector experience in a President. When you are looking to hire a President, you want to hire someone who has already done what he claims he wants to do, at a smaller level. If you want someone to fix health care, pick someone like Bobby Jindal who has already done it in his state. If you want someone to make schools accountable, pick Scott Walker. If you want someone to cut spending, pick Rick Scott. If you want someone to create jobs, pick Rick Perry. If you want someone to balance the budget, pick John Kasich. Pick a candidate who can do the work. Not someone who passionately speaks about how *he wants to do the work.* Pick someone who has been fabulously successful at actually doing what he says he wants to do.

Our current President knew nothing about running a business or how jobs are created when he was elected. He was just a community organizer. Never did a thing in the private sector. Maybe he could get lucky at making policies that would create jobs, but “lucky” our best option? Next time, let’s not take chances. Pick someone who has proved that he can do the work based on past performance. Not speeches.

# Why does the cause of the origin of the universe have to be God?

**Wintery Knight** · 24 September 2013 · Archived copy · Original

The cause of all the stuff is not itself stuff

Here's an excellent post by J. Warner Wallace to help us understand the cosmological argument. He asks why the cause of the universe has to be God.

Excerpt:

> **It's Reasonable to Believe God Is the Uncaused, "First Cause"**
>
> Rationality dictates the ultimate cause of the universe, (even if it isn't God), must have certain characteristics. In addition to being non-spatial, a temporal, immaterial and eternal (uncaused), it must also be powerful enough to bring everything into existence from nothing. Finally, there is good reason to believe the cause of the universe is *personal.* Impersonal forces cannot cause (or refuse to cause) *at will*. The minute an impersonal force exists, its effect is experienced. When the impersonal force of gravity is introduced into an environment, for example, its effect (the gravitational attraction) is felt immediately. If the cause of the universe is simply an impersonal force, its effect (the beginning of the universe) would occur simultaneous with its existence. In other words, the cause of the universe would only be as old as the universe itself. Yet we accept the reasonable existence of an *uncaused* first cause (one that is not finite like the universe it caused). For this reason, a personal force, capable of willing the beginning of the universe, is the best explanation for the first cause of the cosmos. This cause can be reasonably described as non-spatial, a temporal, immaterial, eternal, all-powerful and *personal*: descriptive characteristics commonly reserved for the Being we identify as God.
>
> All of us, whether we are atheists or theists, are trying to identify the first cause of the universe. The eternal nature of this non-spatial, a temporal, immaterial cause is required in order to avoid the problem of infinite regress. It is, therefore, irrational to ask "What caused the uncaused first cause?" It is far more reasonable to simply recognize the attributes of this cause as an accurate description of God.

If you are talking about the beginning of space, the cause of the beginning of space is not itself in space.

If you are talking about the beginning of time, the cause of the beginning of time is not itself in time.

If you are talking about the beginning of matter, the cause of the beginning of matter is not itself composed of matter.

If you are talking about an event without any physical antecedent conditions to cause it in a deterministic way (e.g. – water boiling when heated), then the cause is a free choice by a free agent.

The type of effect (new universe) determines the characteristics of the cause of the effect. Whatever has these properties of being non-material, eternal and personal is not something that atheists are going to like. A cause like this has no place in their naturalistic view.

# Report: Krauss blocked ABC TV channel from broadcasting Australia debates

**Wintery Knight** · 24 September 2013 · Archived copy · Original

Kevin Harris of Reasonable Faith interviews Dr. Craig about his recent speaking tour in Australia.

The MP3 file is here.

I pick up the recording at 02:30 in.

Summary:

- After the first debate at North Carolina State, Krauss was very angry at Dr. Craig
- He insisted that the three Australia debates be discussion without set speeches
- Dr. Craig insisted on opening speeches, followed by a discussion
- Dr. Craig also dialogged with his old debate partner Dr. Peter Slezak
- Dr. Slezak got Dr. Craig's paper in advance, and sent him his response in advance
- They read out the paper and the response in Sydney at a local university and it went well
- Australia is a post-Christian country, and many Australians are naturalists
- The audiences of the tour events were 40-50% non-Christian, Dr. Craig estimates
- There is a shortage of good, well-known Christian scholars in Australia
- Dr. Craig met many young philosophy students in Australia
- The organization who arranged the debates did not secure permission to record and distribute them
- The organization who arranged the debates intended to live stream the three debates
- Australian Broadcasting Corporation was supposed to show all three of the debates
- Dr. Krauss had not given his permission to record the debates
- Dr. Krauss had not given his permission to distribute recordings of the debates (e.g. – post them to YouTube)
- He later gave permission to record the first debate
- He would not allow the distribution of that first debate until it was over and he could decide whether to allow it to be posted
- He wanted to wait until the first debate ended before deciding whether to allow the second two to be recorded much less released
- Dr. Krauss blocked the live-streaming of the three debates on the Internet
- Dr. Krauss blocked the broadcast of the three debates on TV via the Australia Broadcast Corporation
- LESSON FOR PEOPLE WHO ARRANGE DEBATES: Get written permission from both speakers to record and distribute the recording FIRST
- Clearly, Dr. Krauss wanted to wait and see if he did well in the debates before allowing the recordings to be distributed (even on YouTube)
- Dr. Craig was warned not to say anything about Dr. Krauss' censorship, until all the events were finished
- Kevin Harris: we will be doing a series of podcasts on each of the three debates on Reasonable Faith

Check out my previous post on how Krauss misrepresented scientific evidence in his third debate. The full video and summary of the third debate is here.

I have not watched or summarized the first two debates.

# Global warming: antarctic sea ice extents hits 35-year record high

**Wintery Knight** · 25 September 2013 · Archived copy · Original

No significant global warming in 15 years
About two weeks ago, I blogged about record ice extents in the ARCTIC (north pole).

Now, here's a new story about record ice extents in the ANTARCTIC (south pole) – and from the radically leftist Washington Post, no less.

Excerpt:

> Antarctic sea ice has grown to a record large extent for a second straight year, baffling scientists seeking to understand why this ice is expanding rather than shrinking in a warming world.
>
> On Saturday, the ice extent reached 19.51 million square kilometers, according to data posted on the National Snow and Ice Data Center Web site. That number bested record high levels set earlier this month and in 2012 (of 19.48 million square kilometers). Records date back to October 1978.
>
> […]In a new study in the Journal of Climate, Zhang finds both strengthening and converging winds around the South Pole can explain 80 percent of the increase in ice volume which has been observed.
>
> "The polar vortex that swirls around the South Pole is not just stronger than it was when satellite records began in the 1970s, it has more convergence, meaning it shoves the sea ice together to cause ridging," the study's press release explains. "Stronger winds also drive ice faster, which leads to still more deformation and ridging. This creates thicker, longer-lasting ice, while exposing surrounding water and thin ice to the blistering cold winds that cause more ice growth."
>
> But no one seems to have a conclusive answer as to why winds are behaving this way.
>
> "I haven't seen a clear explanation yet of why the winds have gotten stronger," Zhang told Michael Lemonick of Climate Central.
>
> **Some point to stratospheric ozone depletion, but a new study published in the Journal of Climate notes that computer models simulate declining – not increasing – Antarctic sea ice in recent decades due to this phenomenon (aka the ozone "hole").**
>
> **"This modeled Antarctic sea ice decrease in the last three decades is at odds with observations, which show a small yet statistically significant increase in sea ice extent,"says the study, led by Colorado State University atmospheric scientist Elizabeth Barnes.**

It's a mystery. How could global warming be false?

**Two weeks ago it was Arctic ice extents**

Let's review my previous post about how ARCTIC ice extents had increased 60% from last year, despite predictions by the socialist BBC.

From the UK Telegraph.

Excerpt:

> **A cold Arctic summer has led to a record increase in the ice cap, leading experts to predict a period of global cooling.**
>
> **There has been a 60 per cent increase in the amount of ocean covered with ice compared to this time last year, they equivalent of almost a million square miles.**
>
> In a rebound from 2012′s record low an unbroken ice sheet more than half the size of Europe already stretches from the Canadian islands to Russia's northern shores, days before the annual re-freeze is even set to begin.
>
> The Northwest Passage from the Atlantic to the Pacific has remained blocked by pack-ice all year, forcing some ships to change their routes.
>
> A leaked report to the UN Intergovernmental Panel on Climate Change (IPCC) seen by the Mail on Sunday, has led some scientists to claim that the world is heading for a period of cooling that will not end until the middle of this century.

> If correct, it would contradict computer forecasts of imminent catastrophic warming. The news comes several years after the BBC predicted that the arctic would be ice-free by 2013.
>
> Despite the original forecasts, major climate research centres now accept that there has been a "pause" in global warming since 1997.
>
> **The original predictions led to billions being invested in green measures to combat the effects of climate change.**

It's so bad that environmentalists who thought there wouldn't be any ice are trapped!

Not only have we had 15 years with no significant global warming, but now we have record ice extents in both the north pole and the south pole. Global warming alarmism is nothing but mythology dressed in a cheap tuxedo. When is the anti-science hysteria of the left going to end? What evidence will it take to convince them not to believe in fairies and leprechauns? I know they get a lot of brainwashing in public schools and universities, but eventually, they get out and they can look through telescopes and microscopes and see for themselves what is real. When experimental science has spoken about observations, then secularist doomsday fiction must give way. Mustn't it?

# Basic economics: what's wrong with raising minimum wage rates?

**Wintery Knight** · 25 September 2013 · Archived copy · Original

Economist Thomas Sowell

From Investors Business Daily, an article by famous economist Thomas Sowell.

Excerpt:

> Political crusades for raising the minimum wage are back again. Advocates of minimum-wage laws often give themselves credit for being more "compassionate" towards "the poor."
>
> But they seldom bother to check what are the actual consequences of such laws.
>
> One of the simplest and most fundamental economic principles is that people tend to buy more when the price is lower and less when the price is higher.
>
> Yet advocates of minimum-wage laws seem to think that the government can raise the price of labor without reducing the amount of labor that will be hired.
>
> […]Switzerland is one of the few modern nations without a minimum-wage law. In 2003, the Economist magazine reported: "Switzerland's unemployment neared a five-year high of 3.9% in February."
>
> In February of this year, Switzerland's unemployment rate was 3.1%. A recent issue of the Economist showed Switzerland's unemployment rate as 2.1%.
>
> Most Americans today have never seen unemployment rates that low. However, there was a time when there was no federal minimum-wage law in the United States.
>
> The last time was during the Coolidge administration, when the annual unemployment rate went as low as 1.8%. When Hong Kong was a British colony, it had no minimum-wage law. In 1991 its unemployment rate was under 2%.
>
> […]Most people in the lower income brackets are not an enduring class. Most working people in the bottom 20% in income at a given time do not stay there over time. More of them end up in the top 20% than remain behind in the bottom 20%.
>
> There is nothing mysterious about the fact that most people start off in entry-level jobs that pay much less than

> they will earn after they get some work experience.
>
> But when minimum-wage levels are set without regard to their initial productivity, young people are disproportionately unemployed — priced out of jobs.
>
> In European welfare states where minimum wages, and mandated job benefits to be paid for by employers, are more generous than in the United States, unemployment rates for younger workers are often 20% or higher, even when there is no recession.
>
> Unemployed young people lose not only the pay they could have earned but, at least equally important, the work experience that would enable them to earn higher rates of pay later on.
>
> Minorities, like young people, can also be priced out of jobs. In the United States, the last year in which the black unemployment rate was lower than the white unemployment rate — 1930 — was also the last year when there was no federal minimum-wage law.
>
> Inflation in the 1940s raised the pay of even unskilled workers above the minimum wage set in 1938. Economically, it was the same as if there were no minimum-wage law by the late 1940s.
>
> In 1948 the unemployment rate of black 16-year-old and 17-year-old males was 9.4%. This was a fraction of what it would become in even the most prosperous years from 1958 on, as the minimum wage was raised repeatedly to keep up with inflation.
>
> **A survey of American economists found that 90% of them regarded minimum-wage laws as increasing the rate of unemployment among low-skilled workers.**

Harvard University economist Greg Mankiw puts the agreement level at 79%. This is not controversial. This is one of the most widely-accepted facts in economics. Generally, if you raise the price of domestic labor, without any increase in worker productivity, then it reduces demand for domestic labor and causes companies to reduce hiring and retention, possibly looking elsewhere for labor. Compassionate-sounding policies actually *cause* negative results like outsourcing and layoffs. The very people who agitate the most for a "living wage" *cause* higher unemployment – *especially* among youth and minorities.

The only sure way to help workers is to give them marketable skills and job experience – that's what really draws higher salaries and better benefits. And that means advocating for smarter policies: fewer regulations on job creators, lowering the employer portion of payroll taxes, merit pay for teachers, vouchers to encourage competition between schools, making work pay more than collecting welfare for doing nothing. And so on. That would actually solve the problem of people not having work.

# William Lane Craig debates Victor Stenger: Does God Exist?

**Wintery Knight** · 25 September 2013 · Archived copy · Original

This debate took place on March 1, 2010 at Oregon State University.

In this debate, Victor Stenger does affirm his belief that the universe could be eternal in his second rebuttal (1:02:30), thus denying the standard Big Bang cosmology. He also denies the law of conservation of energy and asserts that something can come from nothing in his concluding speech (1:33:50). He also caused the audience to start laughing when he said that Jesus was not moral and supported slavery. There is almost no snark in this summary. Instead, I quoted Dr. Stenger *verbatim* in many places. I still think that it is very entertaining even without the snarky paraphrasing.

The debate includes 30 minutes of Q&A with the students.

Here is the MP3 file for the audio.

Here's the video of the debate:

**Dr. Craig's opening speech:**

- The ontological argument
- The contingency argument
- The cosmological argument
- The moral argument
- The resurrection of Jesus (3-fact version)
- Religious experience

**Dr. Stenger's opening speech:**

- There is no scientific evidence for God's existence in the textbooks
- There is no scientific evidence for God acting in the universe
- God doesn't talk to people and tell them things they couldn't possibly know
- The Bible says that the Earth is flat, etc.
- There is no scientific evidence that God answers prayers
- God doesn't exist because people who believe in him are ignorant
- Human life is not optimally designed and appears to be the result of a blind, ad hoc evolutionary process
- The beginning of the universe is not ordered (low entropy) but random and chaotic
- It's theoretically possible that quantum tunneling explains the origin of the universe
- The laws of physics are not objectively real, they are "our inventions"
- Regarding the beginning of the universe, the explanation is that something came from nothing*
- Nothing* isn't really nothing, it is "the total chaos that we project existed just before the big bang"
- If something has no structure, then "it is as much nothing as nothing can be"
- Consciousness is explainable solely on the basis of material processes
- There are well-informed, rational non-believers in the world and God would not allow that

**Dr. Craig's first rebuttal:**

Stenger's argument that there is no objective evidence for God's existence:

- First, it is not required that God rely only on objective evidence in order to draw people to himself (Alvin Plantinga)

- Second, God is not required to provide evidence to everyone, only to the people who he knows would respond to him
- Third, Craig gave lots of objective evidence, from science, history and philosophy
- Stenger asks for certain evidence (answered prayers, prophecy, etc.), but Craig presented the evidence we have

Stenger's argument that the balance of energy is zero so "nothing" exists:

- if you have the same amount of assets and liabilities, it doesn't mean that nothing exists – your assets and liabilities exist
- Christopher Isham says that there needs to be a cause to create the positive and negative energy even if they balance
- the quantum gravity model contradicts observations
- the vacuum is not the same as nothing, it contains energy and matter
- the BVG theorem proves that *any* universe that is expanding must have a beginning

Stenger's argument that mental operations can be reduced to physical operations:

- mental properties are not reducible to physical properties
- epiphenomenalism: is incompatible with self-identity over time
- epiphenomenalism: is incompatible with thoughts about other things
- epiphenomenalism: is incompatible with free will
- substance dualism (mind/body dualism) is a better explanation for our mental experience
- God is a soul without a body

**Dr. Stenger's first rebuttal:**
Craig's cosmological argument:

- Craig's premise is "everything has a cause", but quantum mechanics has causeless events
- There are speculative theories about how something could have come into being uncaused out of nothing
- "I don't know of a single working cosmologist today who believes there was a singularity prior to the Big Bang"
- "If there wasn't a singularity then there's no basis for arguing that time began at that point"
- "There's no reason from cosmology that we know of that the universe can't be eternal"
- "When I talk about an eternal universe, I mean a universe that has no beginning or end"
- The Hartle-Hawking model doesn't have a beginning
- "There was no violation of energy conservation by having a universe coming from nothing"
- "The universe *could have* come from a previous universe for example or even just from a region of chaos"
- The paper by Vilenkin is counteracted by other papers (he doesn't specify which ones)

Craig's moral argument:

- Dr. Craig is arguing from ignorance
- But morality can be decided by humanity just like governments pass laws, and that's objective
- Dr. Craig has too little respect for the human intellect
- I don't need to tell me that slavery is wrong
- The Bible supports slavery
- Atheists can behave as good as theists
- Morality just evolved naturally as an aid to survival

Craig's resurrection argument:

- No Roman historians wrote about the execution of Jesus but none of them did
- The empty tomb is doubtful because it is only mentioned in the gospels, not by Paul
- John Dominic Crossan says there was no empty tomb
- Christianity only survived because the Roman empire thought that they were useful

**Dr. Craig's second rebuttal:**

Craig's cosmological argument:

- There is no reason to prefer an indeterministic interpretation of quantum mechanics
- Dr. Stenger himself wrote that deterministic interpretations of quantum mechanics are possible
- The vacuum in quantum mechanics is not nothing
- The quantum vacuum he proposes cannot be eternal
- The cosmological argument does not require a singularity
- The Hartle-Hawking model is from 1983
- Hawking says that there is a beginning of space and time *after* that model
- The Hartle-Hawking model *does still have a beginning of time* – the model is not eternal
- The BVG theorem that requires a beginning for expanding universes is widely accepted among cosmologists

Craig's moral argument:

- Stenger redefined objective to mean that most people agree with it – but that's not what objective means
- Objective means right and wrong whether anyone accepts it or not
- Richard Dawkins himself says that on atheism there is "no evil and no good" – why is he wrong?
- Even Dr. Stenger says that morality is the same as passing laws – it's arbitrary and varies by time and place
- But on his view, right and wrong are the same as deciding which side of the road to drive on
- But somethings really are right and some things are really wrong

Craig's resurrection argument:

- Josephus is a Roman historian and he wrote about Jesus, for example
- There were four biographies of Jesus are the best sources for his life
- The scholars that Stenger mentioned are on the radical fringe

**Dr. Stenger's second rebuttal:**

Knowledge and the burden of proof:

- Dr. Craig has to bear the burden of proof, not me – because his claim is more "extravagant"
- "I don't have to prove that a God was not necessary to create the universe"
- "I don't have to prove that a God did not design the universe and life"
- "I don't have to prove that the universe did not have a beginning"
- "I don't have to prove that God did not provide us with our moral sense"
- There are a lot of books written about how morality evolved naturally
- "I don't have to prove that the events surrounding the supposed resurrection of Jesus did not take place"
- Bart Ehrman says that the gospels are generally unreliable (Note: Ehrman accepts all 3 of Craig's minimal facts)
- Just because people are willing to die for a cause, does not make their leader God, e.g. – the Emperor of Japan

Aesthetic concerns about the universe:

- I don't like dark matter and I wouldn't have made the universe with dark matter
- I don't like the doctrine of penal substitution
- I don't like the doctrine of original sin
- I don't like the heat death of the universe

**Dr. Craig's conclusion:**

The case for atheism:

- Dr. Stenger had two arguments and he has to support his premises
- Dr. Craig addressed his two arguments and each premise and Dr. Stenger never came back on it

The contingency argument:

- Dr. Stenger has dropped the refutation of this argument

The cosmological argument:

- The theoretical vacuum he proposes cannot be eternal

The moral argument:

- He asserts that things are wrong, but there is no grounding for that to be objective on atheism

The resurrection of Jesus:

- There are surveys of scholars on the empty tomb and 75% of them agree with it
- Bart Ehrman agrees with all 3 of the minimal facts that Dr. Craig presented
- Ehrman's objection to the resurrection is not historical: he's an atheist – he thinks miracles are impossible

Religious experience:

- No response from Dr. Stenger

**Dr. Stenger's conclusion**

The cosmological argument:

- "I argued that we have very good physical reasons to understand how something can come from nothing"
- "There is a natural tendency in the universe… to go from.. simpler thing to the more complicated thing"
- The transition from a vapor to a liquid to ice shows how something could come from nothing
- "It cannot be proven that the universe had a beginning"

The moral argument:

- Objective morality, which is independent of what people think, could be developed based on what people think
- "Jesus himself was not a tremendously moral person… he had no particular regard for the poor… he certainly supported slavery… he was for the subjugation of women" (audience laughter)

The resurrection argument:

- Bart Ehrman says that the majority of the gospels are unreliable

Religious experience:

- I don't see any evidence that there is anything more to religious experience than just stuff in their heads

God’s purpose of the world should be to make people feel happy:

- God could have made people feel happier
- God could have made people not die
- God could could have made the universe smaller: it’s too big
- God could have made it possible for humans to live anywhere “even in space”

# Obamacare will increase average individual-market premiums by 99% for men

**Wintery Knight** · 26 September 2013 · Archived copy · Original

Percent increase in average health insurance premium after Obamacare
What will you be paying for the privilege of electing a socialist who made you feel good about yourself?

Avik Roy counts the cost in Forbes magazine.

Excerpt:

> For months now, we've been waiting to hear how much Obamacare will drive up the cost of health insurance for people who purchase coverage on their own. Last night, the U.S. Department of Health and Human Services finally began to provide some data on how Americans will fare on Obamacare's federally-sponsored insurance exchanges. HHS' press release is full of happy talk about how premiums will be "lower than originally expected." But the reality is starkly different.
>
> Based on a Manhattan Institute analysis of the HHS numbers, Obamacare will increase underlying insurance rates for younger men by an average of 97 to 99 percent, and for younger women by an average of 55 to 62 percent. Worst off is North Carolina, which will see individual-market rates triple for women, and ***quadruple*** for men.
>
> […][M]any 27-year-olds will face steep increases in the underlying cost of individually-purchased insurance under Obamacare. For the states where we have data—the 36 reported by HHS, plus nine others that we had compiled for our map that HHS didn't report—rates will go up for men by an average of 97 percent; for women, 55 percent. (In the few cases where HHS reported on states that our map includes, we went with HHS' numbers.)
>
> Worst off was Nebraska, where the difference between the cheapest plan under the old system and under Obamacare was 279 percent for men, and 227 percent for women: more than triple the old rate. Faring best was Colorado, where rates will decline for both 27-year-old men and women by 36 percent. The only other state to see a rate decline in this analysis was New Hampshire: 8 percent for both men and women.
>
> (Still missing are data from Hawaii, Kentucky, Massachusetts, Maryland, Minnesota, and Nevada. The data from New York and New Jersey should be taken with a grain of salt, as their individual insurance markets are not like those of other states.)
>
> […]40-year-olds, surprisingly, will face a similar picture. The cheapest exchange plan for the average enrollee, compared to what a 40-year-old would pay today, will cost an average of 99 percent more for men, and 62 percent for women.

You might be asking why men have to pay more than women for Obamacare premiums, and the answer is simple. Even though women use a lot more health care, companies are now forbidden from making women pay more because they use more. Women will be paying less because men will be picking up the cost. That's called "equality". The same thing happened with the stimulus, which also favored women, because they are more likely than men to support big government Democrats at election time.

What about the subsidies that are being offered by the government to ease the transition to government-controlled health care?

> However, the overall results make clear that most people will not receive enough in subsidies to counteract the degree to which Obamacare drives premiums upward. Remember that nearly two-thirds of the uninsured are under the age of 40. And that young and healthy people are essential to Obamacare; unless these individuals are willing to pay more for health insurance to subsidize everyone else, the exchanges will not serve the goal of providing coverage to the uninsured.

Democrats like to make much of the subsidies that they are offering to offset these skyrocketing premiums, but that money is being *borrowed* from the children of today. They are the ones who will have to pay the money back. In effect, we are borrowing money from the next generation of workers to pay off the health care of the retirees of today. Obamacare is a massive transfer of wealth from young people to older people. Young people are still very much under the influence of the brainwashing they got from their teachers in government-run public schools. They have been taught that in order to be good people, they need to vote for socialism. And they do. It's only much later that the bill comes due – for now they are blissfully unaware of what they are doing to themselves.

**Health insurance premiums have been going up since 2008**

Remember, premium shave already gone up $3,000 on average since Obamacare was passed, despite Obama promising they would drop by $2,500. That's a $5,500 difference.

From Investors Business Daily.

Excerpt:

> During his first run for president, Barack Obama made one very specific promise to voters: He would cut health insurance premiums for families by $2,500, and do so in his first term.
>
> But it turns out that family premiums have increased by more than $3,000 since Obama's vow, according to the latest annual Kaiser Family Foundation employee health benefits survey.
>
> **Premiums for employer-provided family coverage rose $3,065 — 24% — from 2008 to 2012, the Kaiser survey found.** Even if you start counting in 2009, premiums have climbed $2,370.
>
> What's more, premiums climbed faster in Obama's four years than they did in the previous four under President Bush, the survey data show.
>
> There's no question about what Obama was promising the country, since he repeated it constantly during his 2008 campaign.
>
> **In a debate with Sen. John McCain, for example, Obama said "the only thing we're going to try to do is lower costs so that those cost savings are passed onto you. And we estimate we can cut the average family's premium by about $2,500 per year."**
>
> **At a campaign stop in Columbus, Ohio, in February 2008, Obama promised that "We are going to work with you to lower your premiums by $2,500. We will not wait 20 years from now to do it, or 10 years from now to do it. We will do it by the end of my first term as president."**

A $5,500 difference doesn't mean a lot to Obama. But maybe it means a lot to you. We're going to find out exactly

what we voted for very soon now.

# Senator David Vitter's amendment to revoke Obamacare exemption for Congress

**Wintery Knight** · 26 September 2013 · Archived copy · Original

Republican Senator David Vitter is trying to revoke the exemption from Obamacare for members of Congress and their staff.

The Heritage Foundation explains what the Vitter amendment would do.

Excerpt:

> President Obama, the White House staff, Cabinet secretaries, and all of the Administration's political appointees are *exempt* from any legal requirement to enroll in Obamacare's health insurance exchanges. While Members of Congress and their personal staffs are required to enroll in Obamacare's exchanges, the White House, through questionable administrative action, is providing them hefty taxpayer subsidies to offset the resultant increase in their personal health care costs. In other words, Washington's arrogant political class is getting exemptions or special treatment denied to ordinary Americans.
>
> […]During Senate floor debate on energy legislation last week, Louisiana Senator David Vitter (R) proposed an amendment that would end Obamacare exemptions and special taxpayer subsidies for Congress. His amendment is cosponsored by Senators Mike Enzi (R-WY), Mike Lee (R-UT), Ron Johnson (R- WI), Dean Heller (R-NV), and Jim Inhofe (R-OK). The prospect of having to vote on Vitter's amendment shut down floor debate on the bill last week.
>
> Vitter's amendment would do two things. First, the President, Vice President, Cabinet secretaries, and all political appointees—the policymaking agents of the executive branch—would be enrolled in the health insurance exchanges, just like millions of other Americans. Second, Members of Congress and their staffs—including all committee and leadership office staff—would also be enrolled in the health insurance exchanges under the same terms and conditions as other Americans. In other words, Congress and its staff would not get any special subsidies at taxpayer expense for their health insurance.
>
> […]The Vitter Amendment is equitable. It targets only Washington's political class, those who make policy for the national government. Federal employees, all career civil servants, would not be deprived of their current private health insurance plans through the Federal Employees Health Benefits Program (FEHBP). Vitter's approach is only fair: Capitol Hill cops, National Park Rangers, and Secret Service agents and their families are *not* responsible for Obamacare. Washington's political class and allied big special interest lobbyists are responsible. And until this bad law is fully repealed, the President's team and Congress should submit fully to its multiple and costly requirements, just like everybody else.
>
> […]Because of hasty legislative maneuvering, sloppy drafting, and an inability or unwillingness to focus on the consequences of what they were doing, Members of Congress who voted for Obamacare managed to dump themselves out of their existing coverage. Under Section 1312 of the law, they are to be enrolled in health insurance exchange plans, and will lose existing coverage in the popular and successful Federal Employees Health Benefits Program (FEHBP). And just like millions of other Americans dumped out of their existing coverage, they lose their employer's subsidy for insurance plus the generous federal and state tax breaks that accompany employer-based coverage. **But the Obama Administration recently "fixed" that for them by providing special subsidies for Members and congressional staff to reduce their premium costs in the Obamacare exchanges.**
>
> **Vitter's amendment would overturn this recent action. T**hat would be appropriate because there is no statutory authority, either in Obamacare or in Title V of the U.S Code, for the U.S. Office of Personnel Management to make government insurance contributions on behalf of federal employees to any plan other than an FEHBP plan. Curiously, the original health care law provided for employers to make a defined

> contribution for workers in the exchanges (a “free choice voucher”), but Congress scrapped it.
>
> Millions of Americans are going to be losing their existing coverage and paying more for health insurance. Under the Vitter Amendment, so would the Obama Administration’s appointees, Congress, and congressional staff. They baked that cake. Now they can eat it, too.

If you don’t like what Obamacare is doing to your health care, only a few people in the Republican Party are trying to help you. David Vitter is one of them. Ted Cruz and Mike Lee are two others. But don’t expect the Democrat legislators to lift a finger to help, because this law doesn’t apply to them. It doesn’t apply to many of their union supporters, who also got exemptions. It doesn’t apply to big corporations who support the Democrats – they got exemptions, too.

# Does God's omniscience conflict with human free will?

**Wintery Knight** · 26 September 2013 · Archived copy · Original

Here's the question from Come Reason Ministries.

Excerpt:

> Hello,
>
> Christian doctrine holds that God is all knowing (1 John 3:20), and humans have free will (Deuteronomy 30:19 is my favorite example). however, at my favorite apologetics debate board, I have seen skeptics raise an objection to these points several times. the basic logic behind their arguments is this:
>
> 1. A being with free will, given two options A and B, can freely choose between A and B.
> 2. God is omniscient (all-knowing).
> 3. God knows I will choose A.
> 4. God cannot be wrong, since an omniscient being cannot have false knowledge.
> 5. From 3 and 4, I will choose A and cannot choose B.
> 6. From 1 and 5, omniscience and free will cannot co-exist.
>
> I have read many counter-arguments from apologetics sites, but they were either too technical (I couldn't understand them), or not satisfying. so, I was wondering what would your input be on this issue?
>
> Thank you,
>
> Justin

Ever heard that one? Here's Lenny Eposito's answer:

> Hi Justin,
>
> Thanks for writing. This is a great question as it shows how even those who appeal to logic can have biases that blind them. Let's examine this argument and see if it follows logically.
>
> Premises 1 and 2 in your outline above are the main premises to the argument and are not disputed. The Christian worldview argues that every human being is a free moral agent and is capable of making choices simply by exercising their will, not under compulsion or because of instinct. Also, it is a long held doctrine of Christianity that God is all-knowing. The Bible says that God knows "the end from the beginning (Isaiah 46:10)." For omniscience to be truly knowledgeable it must be correct knowledge, so premise number 4 is also granted.
>
> However, point number 5 is where the logic falters. Those who argue in this manner make the mistake of thinking that because God possesses knowledge about a specific matter, then he has influenced it. That does not follow at all. Just because God can foresee which choice you will make, it does not mean you couldn't still freely choose the other option.
>
> Let me give you an example. I have a five year old son. If I were to leave a chocolate chip cookie on the table about a hour before dinner time and my son was to walk by and see it, I know that he would pick up the cookie and eat it. I did not force him to make that decision. In fact, I don't even have to be in the room at all. I think I know my son well enough, though, to tell you that if I come back into the kitchen the cookie will be gone. His act was made completely free of my influence, but I knew what his actions would be.
>
> In examining the argument, the assumption is made in premise 3 that because God knows I will choose A somehow denies me the choice of B. That is the premise that Christianity rejects. Omniscience and free will

> are not incompatible and it is a non-sequitor to claim otherwise.
>
> Thank you Justin for this interesting question. I pray that you will continue to defend the gospel of our Lord and may He continue to bless you as you seek to grow in Him.

That's a great answer and should work in ordinary conversations.

**More technical**

J.W. Wartick maps out the arguments more fully with symbolic logic here on his Always Have A Reason blog. But I'll just excerpt the gist of it.

Excerpt:

> It is necessarily true that if God knows x will happen, then x will happen. But then if one takes these terms, God knowing x will happen only means that x will happen, not that x will happen *necessarily.* Certainly, God's foreknowledge of an event means that that event will happen, but it does *not* mean that the event could not have happened otherwise. If an event happens necessarily, that means the event could not have happened otherwise, but God's foreknowledge of an event doesn't somehow transfer necessity to the event, it only means that the event will happen. It could have been otherwise, in which case, God's knowledge would have been different.
>
> […]Perhaps I could take an example. Let's say that I'm going to go to classes tomorrow (and I do hope I will, I don't like missing classes!). God knows in advance that I'm going to go to classes tomorrow. His knowledge of this event means that it will happen, but it doesn't mean that I couldn't choose to stay in and sleep for a while, or play my new copy of Final Fantasy XIII, or do something more useless with my time. If I chose to, say, play Final Fantasy XIII (a strong temptation!), then God simply would have known that I would play FFXIII. His knowledge does not *determine* the outcome, His knowledge is simply *of the outcome*.

If we choose A, God would foreknow A. If we choose B, God would foreknow B. His foreknowledge of our choices is contingent on our making free choices.

I had to learn symbolic logic and Bayes' theorem in college for my computers science degrees, and it's pretty useful for understanding these philosophers. Philosophy is a lot like computer science, at least for analytical philosophy.

# Nancy Pelosi: forcing workers to work fewer hours gives them "freedom"

**Wintery Knight** · 27 September 2013 · Archived copy · Original

The video above shows a typical Democrat reaction to Obamacare's side-effect of forcing workers from full-time to part-time work. Let them eat cake!

You don't need to get paid for 40 hours per week, do you? It's freedom to follow your passion – you don't really need the money and work experience, do you?

The College Fix explains how students working their way through college feel about having their workers hours cut to comply with Obamacare.

Here's an example from their article:

> Emily Klug, 22, a psychology and sociology major at the College of the Ozarks in Branson, Mo., is another Obamacare victim.
>
> Klug's university offered her a work-study program over the summer, which she turned down in order to accept a full-time summer job for a national retailer. This would have allowed her to pay for the coming year of college, as well as save for grad school. Shortly thereafter, Klug learned that her employer had modified their policies: she would only be allowed to work part-time.
>
> "Their maximum limit *happened* to be the same one as the Obamacare classification for full-time," she told *The Fix*.
>
> She spent the summer working 20 to 25 hours weekly, unable to save for grad school.
>
> "I'm not happy with it," Klug added, regarding the Affordable Care Act. "I feel that it's unconstitutional, and an infringement on my rights. I'm not looking forward to either buying insurance or paying the fine. I will probably be paying the fine. It's my personal choice. That's what I object to most in Obamacare – my personal choice is removed."

Yes, but you get *free* condoms!!1! It's so worth it! Maybe you could find another job. A job that uses a lot of free condoms!!! You're free to pursue your passion. It's about wellness! And if you have an unplanned pregnancy, then abortions and single mother welfare are *free!* Just follow your heart.

OK. And it's not just off-campus work that's being affected, it's on-campus work, too.

Investors Business Daily explains.

Excerpt:

> If one job category stands out for bearing a heavy price from ObamaCare-related cuts to work hours, it might be adjunct college faculty.
>
> Among 313 employers now on IBD's ObamaCare Employer Mandate List Of Cuts To Hours, Jobs that have cut work hours or permanent staff, or shifted to part-time hiring, there are 54 colleges and universities that have scaled back the hours adjunct faculty may teach.
>
> The list also includes 80 public school districts that have cut hours or outsourced the job functions of teacher aides, cafeteria workers and other employees.
>
> Still, the inclusion of a number of community college systems such as Maricopa, Ivy Techand Dallas County means that cuts in adjunct faculty hours now extend to nearly 200 college and university campuses attended by about 1.6 million students.

> All over the country, adjunct teaching loads are being limited to nine credit hours — just below the 30-hour threshold at which Affordable Care Act employer penalties hit. That's the equivalent of nine hours per week in the classroom and 18 hours of work preparing, grading, etc.
>
> In lean budget times, many schools became heavily dependent upon modestly paid, part-time faculty members who were ineligible for health benefits. Now, faced with providing the same type of generous coverage offered tenured professors or cutting hours, many see little choice but to cut.
>
> Of a dozen employers added to IBD's list on Sept. 25, nine are colleges and universities. Of those, eight put new restrictions on adjunct hours. Several also cut work hours for students, a step backward for helping future grads emerge with manageable levels of student loan debt.

They told me if I didn't vote for Obama, then college students would have a harder time paying for college. And they were right!

# Republican senator Mike Lee introduces bill to cut taxes on parents

**Wintery Knight** · 27 September 2013 · Archived copy · Original

National Review reports on a new tax cut plan from Republican senator Mike Lee.

Excerpt:

> Today at AEI, Senator Mike Lee of Utah introduced an idea that's been missing in Congress for a long time: A conservative tax-reform plan that aims to improve opportunity and reduce the bias against families inherent in the U.S. tax code.
>
> It would significantly simplify how individual income taxes work, and result in a large tax cut on families with children, especially married ones: The system would be reduced to just two brackets — 15 percent on all income below $87,850 (at which the rate currently jumps from 25 percent to 28 percent) and 35 percent on all income above that. Most interestingly, though, it would provide much more compensation in the tax code for raising children: "The centerpiece" of the plan, as Lee put it, is a $2,500 tax credit per child under the age of 16, which would reduce what parents owe in income taxes dollar-for-dollar, and if that's reduced to zero, what they owe in payroll taxes, too. (The tax code currently provides a combination of a tax deduction for children, which only reduces the amount of one's income that's subject to the income tax and isn't, for most couples, nearly as valuable per dollar, and a smaller tax credit.)
>
> That represents a significant tax cut on a lot of middle-income earners, but a number of tax expenditures (deductions and credits) would be eliminated, and some would be smartly restricted — the mortgage-interest deduction, for instance, would be capped at $300,000 in principal, as Lee says, "focusing the deduction on the families and communities who need it the most." He highlights a "new charitable deduction that would be available to all taxpayers," which would be available to people who don't currently itemize their deductions (lower-income Americans, for one). The "marriage penalty" would be eliminated, because the bracket sizes would now just be doubled for married couples (preserving a "marriage bonus" for many couples).
>
> […]The plan hasn't been scored for its revenue effects, but it seems likely, overall, to reduce the receipts of the federal income tax slightly. Over the long term, though, while this isn't the main intent, a rise in fertility and increased investment in raising children should go a ways to reducing America's long-term fiscal gap (AEI's Jim Pethokoukis likes to refer to such an idea as a "human-capital tax cut" — while, again, it's about fixing a distortion in the tax code and not adding one, at the margins it's a big tax cut for having children).

So often on this blog, I post articles critical of Democrats, but not much about what Republicans want to do. Here's an example of what Republicans want to do.

# Atheist philosopher of science Bradley Monton discusses intelligent design

**Wintery Knight** · 27 September 2013 · Archived copy · Original

Philosopher Bradley Monton

About Bradley Monton:

> I'm a philosophy professor at the University of Colorado at Boulder. I work in philosophy of time, philosophy of religion, philosophy of science (especially physics), and probabilistic epistemology.

There's an interview with Dr. Monton in Salvo magazine's new issue, which is on science and faith.

The interview has more about his credentials:

> ***Bradley Monton*** • Associate Professor of the Philosophy of Science at the University of Colorado • BA in Physics and Philosophy from Rice University • PhD in Philosophy from Princeton University • Author of *Seeking God in Science: An Atheist Defends Intelligent Design*

And here are the interview questions:

1. What makes you take intelligent design (ID) seriously?
2. Why do you think some scientists refuse to take intelligent design seriously?
3. You write in your book that you don't fully endorse intelligent design. In your opinion, what are some of the weaknesses of ID?
4. Then why can't you fully support intelligent design?
5. So what are the strengths of intelligent design?
6. What do you think about the multiverse theory—this belief that there are actually an infinite number of universes out there, making the complexity of our own universe more likely and less special?
7. Do you think intelligent design should be taught in public schools?
8. Do you teach your own students about intelligent design?
9. Do you think academic freedom is limited for *non*-tenured proponents of intelligent design?
10. How have other academics responded to your writings and statements on intelligent design?

11. You've written that intelligent-design arguments have made you less certain of your atheism. What would it take to make you abandon it altogether?
12. So what sort of scientific evidence would be compelling enough to change your mind?
13. Are there other atheist scientists out there who believe that intelligent-design arguments hold some merit?

Here's my favorite question (#12) and the answer:

> **So what sort of scientific evidence would be compelling enough to change your mind?**
>
> It would be evidence for mind as a fundamental feature of the universe. As far as I'm concerned, God would have to be a purely mental entity, not connected to physical reality in the way that we are through our bodies. So if we could discover some kind of evidence that mind is fundamental, then that would go a long way toward making me a believer. And if we could find evidence that the physical world isn't causally closed—that not only is mind a fundamental entity, but it likewise plays a causal role in the structure of the world—then that would also be compelling evidence for the existence of God. Now, if it is found that mind plays a role in our brain processes alone, that by itself wouldn't make me believe in God, though it would certainly make me more open to the idea. But if we were to discover that mind is intervening in other places in the world besides our brain processes, then that would pretty much be the smoking gun.

Yeah, I think there is good evidence for a non-physical mind, both from science and philosophy.

I think a lot of Christians who grew up with young-Earth creationism are startled to find that there are non-theistic, non-Christians scholars who take ID seriously. I think if I were a smart young-Earth creationist like Paul Nelson or Marcus Ross, I would try to create common ground with scholars by discussing intelligent design with them.

# What does the word happiness mean on the Christian worldview?

**Wintery Knight** · 28 September 2013 · Archived copy · Original

From happiness expert and Christian philosopher J.P. Moreland.

Excerpt:

> According to ancient thought, happiness is a life well lived, a life that manifests wisdom, kindness and goodness. For the ancients, the happy life — the life we should dream about — is a life of virtue and character. Not only did Plato, Aristotle, the Church Fathers and medieval theologians embrace this definition, but Moses, Solomon and (most importantly) Jesus did, too. Sadly their understanding is widely displaced by the contemporary understanding of happiness defined as pleasure and satisfaction, a subjective emotional state associated with fleeting, egocentric feelings.
>
> Consider the differences:

| **Contemporary Understanding** | **Classical Understanding** |
|---|---|
| Happiness is: | Happiness is: |
| **1.** Pleasure and satisfaction | **1.** Virtue and character |
| **2.** An intense feeling | **2.** A settled tone |
| **3.** Dependent on external circumstances | **3.** Depends on internal state; springs from within |
| **4.** Transitory and fleeting | **4.** Fixed and stable |
| **5.** Addictive and enslaving | **5.** Empowering and liberating |
| **6.** Irrelevant to one's identity, doesn't color the rest of life and creates false/empty self | **6.** Integrated with one's identity, colors rest of life and creates true/fulfilled self |
| **7.** Achieved by self-absorbed narcissism; success produces a celebrity | **7.** Achieved by self-denying apprenticeship to Jesus; success produces a hero |

> How can we be certain Jesus is inviting us to a classical understanding of happiness in Matthew 16:24-26? He isn't talking about going to heaven rather than hell, nor is He telling his followers how to avoid premature death. Where Matthew writes, "what will a man be profited, if he gains the whole world, and forfeits *his soul*" (emphasis added), Luke clarifies Jesus' teaching by replacing "his soul" with the word "himself" (Luke 9:25). The issue is finding one's self vs. losing one's self. More specifically, to find one's self is to find out how life *ought* to look like and learn to live that way; it's to become like Jesus, with character that manifests the fruit of the Spirit and the radical nature of Kingdom living; it's to find out God's purposes for one's life and to fulfill those purposes in a Christ-honoring way.

In one of his lectures, he says, and I quote: "Happiness is the freedom to do what we ought to do". Indeed. When a person is free to comply with God's design for human flourishing, then he/she is happy.

# Gregg Cunningham will debate Ann Furedi on abortion in London on October 3rd

**Wintery Knight** · 28 September 2013 · Archived copy · Original

Scheming unborn baby thinks that Gregg will win
A debate on abortion in London, England.

Details:

> *Join us for what is anticipated to be one of the most significant abortion debates of the decade.*
>
> *Ann Furedi, CEO of the UK's largest private abortion provider, BPAS, will be going head to head with Gregg Cunningham, the founder and director of the Center for Bio-Ethical Reform, a group that makes pictures of aborted babies available for public education projects across the globe.*
>
> *The point of contention is the use of graphic abortion images outside of abortion clinics in the UK.*
>
> **The Resolution:** *"This house believes that it is morally wrong for groups to approach women and display abortion imagery outside facilities which provide abortion services."*
>
> *The event will be charied by Brendan O'Neill, Editor of Spiked Online. It will take place at 18:30 on 3rd of October at the Emmanuel Centre, Marsham Street, Westminster, SW1P 3DW.*

Admission is free.

# Ryan T. Anderson defends traditional marriage at Boston College

**Wintery Knight** · 28 September 2013 · Archived copy · Original

Marriage and family

The Boston College student newspaper reports. I won't go over Anderson's case for traditional marriage, because you all know that from reading my previous posts. I want to highlight what went on at the lecture itself.

Excerpt:

> Students sat on the floor, wedged between backpacks and pressed back against the walls. Brightly colored "Support Love" t-shirts were sprinkled liberally throughout the audience in Cushing 001 on Thursday night, as students gathered to hear—and question—Ryan T. Anderson, the William E. Simon Fellow in Religion and a Free Society at the Heritage Foundation.
>
> Titled "A Case Against Gay Marriage," Anderson's presentation was arranged by the St. Thomas More Society (STM), a student-run group at Boston College. Rev. Ronald Tacelli, S.J., the group's faculty advisor and a professor in the philosophy department, introduced Anderson, stating that the event would be more question-and-answer based, as opposed to the panel that had originally been planned. "When I see the size of the crowd, I think it was a better idea," he said, eliciting laughter.
>
> The large turnout for the talk can be attributed in part to a Facebook event created earlier in the week by BC Students for Sexual Health (BCSSH). The event, formed in opposition to Anderson's talk after an email about it was sent out to students on the philosophy and theology departments' listservs, encouraged students to show up wearing Support Love shirts and to participate in the discussion. "This is not the type of programming that fosters an accepting environment for students," the event description read. "This event is going to have to rely on the audience for any hope of a balancing opinion presence."
>
> After Tacelli's introduction, Anderson began by running down a list of things upon which he would not be basing his argument: morality, sexual orientation/homosexuality, religion, tradition. "I think frequently people have an expectation of what they're going to hear," he said. "I make a philosophical and policy argument about marriage."
>
> He then asked a question of the crowd. "From the looks of the t-shirts, this is probably a challenge for most of the audience," he said. "I want to know what you think marriage is … that's actually the question that people in favor of redefining marriage refuse to answer. And they refuse to answer that question by hiding behind what I think is a rather sloppy slogan: marriage equality."
>
> Anderson said that everyone involved in the debate over marriage is ultimately in favor of equality. "We all want the government to treat all real marriages in the same way. The question is, what type of relationship is a marriage?"

Eventually, they had to move to a bigger room and then they continued:

> Tacelli interrupted to inform the crowd that BCPD had requested that the event be moved to a larger auditorium, McGuinn 121. The audience left Cushing slightly before 8 p.m., and Anderson resumed his point on government interest in marriage less than 10 minutes later.
>
> […]Anderson then concluded his talk and commenced nearly an hour of question and answer, with Tacellimoderating.
>
> Nine students asked questions, with many challenging Anderson on various aspects of his argument, to applause from much of the audience. Most questions focused on his central point—that children who were raised by a heterosexual, married couple were better off than those raised by same-sex couples.

And the Q&A was interesting – it shows that even liberal Boston College students could be civil:

> "If further studies came out that show these children are fine—they're healthy, they grow up to be responsible adults and members of society—would you change your mind?" asked one student
>
> Anderson replied that if the studies showed that there was no difference based on family arrangement, then he would not think that government should be in the marriage business. "I don't think the government should be recognizing consenting adult love if ultimately it doesn't make a difference one way or another to the common good," he said. "If the science came back saying, actually, it's a wash … then yeah, I wouldn't care what the law or public policy would be about marriage. I would be surprised—and let me say that it wouldn't change my opinion about what marriage is, that would just be a study of parenting arrangements."
>
> Brandon Stone, A&S '14, asked whether, if the end goal was providing the best environment in which to raise children, that would also necessitate defining marriage along economic or class lines.
>
> "The idea here is not that we should only recognize marriages that are socially valuable," Anderson said. "The idea here is that marriage as an institution is a socially valuable institution, therefore the state tries to promote it. But when the state promotes marriage, it has to promote the truth about marriage. Poor people can get married, right—they can form the reality of that comprehensive unit. So it would be unjust to deny poor people the opportunity if they're actually capable of forming a marriage."
>
> Further questions centered around legal rights, such as the transferal of property after death; the specific definitions of "mothering" and "fathering"; and whether a non-child-producing heterosexual relationship could be considered a marriage.

Post-lecture discussion organized by the campus gay student group:

> After Tacelli ended the question and answer period, Alex Taratuta, chair of the GLBTQ Leadership Council (GLC) and A&S '14, stood up to announce that GLC would be hosting an after-event discussion for any students who wanted to keep talking.
>
> "Going into the event, GLC's main priority was the mental health and safety of the students," Taratuta said in an email. "This is one of the reasons that we held a post-event discussion afterwards; we wanted people to have some time to digest the conversation before going back to their dorms … I think it went better than I expected. I knew it would be well attended, but the amount of support from the student body for the GLBTQ community on campus and even the community as a whole, exceeded my expectations."
>
> Mike Villafranca, co-president of STM and A&S '14, stopped by the GLC discussion to speak with the students there.
>
> "I was concerned going into tonight's talk because I knew nothing about Mr. Anderson, and I was worried that the student reaction would be visceral and angry," Villafranca said later in an email. "Instead of that, I was impressed by the way that the students from GLC and BCSSH reacted to what Mr. Anderson said. It was clear

> that they came with ideas about what they wanted to ask, but that they listened to what he had to say, and they challenged him in terms of what he said rather than what they came expecting to hear. I'm glad that the Q&A stayed on an intellectual level and didn't descend into emotional outbursts, which it easily and justifiably could have done."

I think if you are going to discuss marriage face-to-face with people who are pro-SSM, then it's probably a good idea to just stick with the Anderson script. I don't think it's safe to discuss this issue unless you are careful about who you talk to and how you talk to them. That's why I am posting about this lecture – to show you how it's done in hostile environments. We've had a whole slew of people from photographers, to sportscasters, to bakers getting into trouble for telling gay peope directly that they disagree with gay marriage. I don't think you want to take a chance on that approach of "The Bible says…" because it doesn't work. Ryan Anderson's approach seems to work a lot better. The people who get hammered are the ones who don't take the time to study anything except the Bible, who discriminate by appealing to the Bible, and who are not talking to people who have chosen to hear what they have to say – especially in an academic setting where they are there to learn. "The Bible says" ought to be perfectly legitimate in the United States, but thanks to the people in government, it's not working any more, and we have to adapt.

If you're going to discuss marriage with a pro-SSM person, then you should do it like Ryan Anderson does it. An academic setting is best. Talking about principles and policies instead of specific people is best. And a *secular* case for marriage is best. It's better if your employer won't be pressured to fire you. It's best to stick with public policy and secular reasons for marriage, instead of quoting the Bible to non-Christians – that just makes them angry. When you base your position in facts and arguments, they are less likely to get angry because they can disagree with you more easily by arguing against your facts and arguments. Be ready to show the public, peer-reviewed data that supports your view of marriage. So again, if you insist on doing it, do it like Ryan.

Warning: your comment is probably not going to be approved, so don't even bother, regardless of what side you're on.

# Kirsten Powers: American churches silent as Christians in Middle East face persecution

**Wintery Knight** · 29 September 2013 · Archived copy · Original

Moderate Kirsten Powers writes about the persecution of Christians by Muslims in the left-leaning Daily Beast. (H/T Mysterious Chris S.)

Excerpt: (links removed)

> Christians in the Middle East and Africa are being slaughtered, tortured, raped, kidnapped, beheaded, and forced to flee the birthplace of Christianity. One would think this horror might be consuming the pulpits and pews of American churches. Not so. The silence has been nearly deafening.
>
> As Egypt's Copts have battled the worst attacks on the Christian minority since the 14th century, the bad news for Christians in the region keeps coming. On Sunday, Taliban suicide bombers killed at least 85 worshippers at All Saints' church, which has stood since 1883 in the city of Peshawar, Pakistan. Christians were also the target of Islamic fanatics in the attack on a shopping center in Nairobi, Kenya, this week that killed more than 70 people. The Associated Press reported that the Somali Islamic militant group al-Shabab "confirmed witness accounts that gunmen separated Muslims from other people and let the Muslims go free." The captives were asked questions about Islam. If they couldn't answer, they were shot.
>
> In Syria, Christians are under attack by Islamist rebels and fear extinction if Bashar al-Assad falls. This month, rebels overran the historic Christian town of Maalula, where many of its inhabitants speak Aramaic, the language of Jesus. The AFP reported that a resident of Maalula called her fiancé's cell and was told by member of the Free Syrian Army that they gave him a chance to convert to Islam and he refused. So they slit his throat.

> Nina Shea, an international human-rights lawyer and expert on religious persecution,testified in 2011 before Congress regarding the fate of Iraqi Christians, two-thirds of whom have vanished from the country. They have either been murdered or fled in fear for their lives. Said Shea: "[I]n August 2004 … five churches were bombed in Baghdad and Mosul. On a single day in July 2009, seven churches were bombed in Baghdad … The archbishop of Mosul, was kidnapped and killed in early 2008. A bus convoy of Christian students were violently assaulted. Christians … have been raped, tortured, kidnapped, beheaded, and evicted from their homes …"

Well, we are pulling out of Iraq, so there is nothing we can do to protect anyone once we are gone.

Has anyone done anything about this?

> Yet so many Western Christians are silent. In January, Rep. Frank Wolf (R-VA) penned a letter to 300 Catholic and Protestant leaders complaining about their lack of engagement. "Can you, as a leader in the church, help?" he wrote. "Are you pained by these accounts of persecution? Will you use your sphere of influence to raise the profile of this issue—be it through a sermon, writing or media interview?"
> There have been far too few takers.
>
> Wolf and Rep. Anna Eshoo (D-CA) sponsored legislation last year to create a special envoy at the State Department to advocate for religious minorities in the Middle East and South-Central Asia. It passed in the House overwhelmingly, but died in the Senate. Imagine the difference an outcry from constituents might have made. The legislation was reintroduced in January and again passed the House easily. It now sits in the Senate. According to the office of Sen. Roy Blunt (R-MO), the sponsor of the bill there, there is no date set for it to be taken up.

> Wolf has complained loudly of the State Department's lack of attention to religious persecution, but is anybody listening? When American leaders meet with the Saudi government, where is the public outcry demanding they confront the Saudis for fomenting hatred of Christians, Jews, and even Muslim minorities through their propagandistic tracts and textbooks? In the debate on Syria, why has the fate of Christians and other religious minorities been almost completely ignored?

The House passed the bill, the Senate is blocking it. The House is controlled by Republicans, the Senate is controlled by Democrats. You might think that the United States would be concerned about Christians – there are so many of us who claim to be Christians. But not everyone who claims to be a Christian has thought about how foreign policy affects the lives of Christians in other countries. Sometimes, they are more concerned about empowering the government to steal from their neighbor and give it to them. It really is that simple.

# Republicans introduce Obamacare alternative: American Health Care Reform Act

**Wintery Knight** · 29 September 2013 · Archived copy · Original

Endorsements for the American Healthcare Reform Act

The Daily Caller has an overview of what the bill would do.

There are 6 main sections:

1. Repeal of Obamacare
2. Increasing Access to Portable, Affordable Health Insurance
3. Improving Access to Insurance for Vulnerable Americans
4. Encouraging a More Competitive Health Care Market
5. Reforming Medical Liability Law
6. Respecting Human Life

I am a big supporter of making healthcare more consumer driven and less expensive, and of not violating conscience rights of medical workers. Does this bill do any of these things?

Section 4 addresses the need to make health care consumer-driven:

> Our bill would take steps toward creating a competitive health care marketplace. This legislation would take steps to address this problem by, most notably, allowing Americans to purchase health insurance products across state lines and by permitting small businesses to pool together to negotiate better rates.
>
> Other pro-patient reforms include amending the McCarran-Ferguson Act to ensure that federal anti-trust law applies to health insurance, making Medicare claims and payment data publicly available so that patients and taxpayers alike can better understand what they are being charged, helping states develop transparency portals with useful information on insurance plans, and stopping the federal government from denying coverage for health care services based upon comparative effectiveness data.

Just like with any area of the free market, increasing competition among sellers reduces prices and increases quality.

Section 5 caps non-economic damages in medical liability lawsuits at $250,000:

> This bill attempts to address the medical liability crisis that has played a role in the escalating cost of health care by implementing meaningful legal reforms that include caps on non- economic damages and limits to attorneys' fees. These provisions set no caps on economic damages, which are often the largest component of liability awards, thus patients will continue to have their rights to economic damages protected.

Why didn't Obamacare take that step? Because trial lawyers pressured them not to do it.

Section 6 should be of interest to anyone who believes in protecting the unborn:

> Provides that nothing in this act requires health plans to provide coverage of abortion services, or permits any government official to require coverage of abortion. Prohibits federal funds authorized or appropriated by this act from covering abortion, except in the case of rape, incest, or when the life of the mother is jeopardized. Ensures that no state pro-life or conscience protection laws will be preempted.

Pro-abortion groups made sure that Obamacare would offer free condoms and free abortion-causing drugs. That needs to be fixed.

So that's what health care reform would look like if Republicans did it. You can click here to find out more about the bill.

**Where I found out about this**

I found out about this bill from the Family Research Council Washington Watch Weekly podcast.

Details:

> On this week's edition of Washington Watch Weekly, I will be joined by veteran sportscaster, Craig James, who will tell us why he was sacked by Fox Sports and why he is fighting back, not only for himself, but for all Christians. The media continues to say that Republicans and Conservatives who are against Obamacare are ignoring the problems in our health care system and really don't care about the uninsured. Short response: they're wrong. Rep. Phil Roe (R-Tenn.) tells us why. Also, Tom Fitton with Judicial Watch tells us about the latest lawsuit against the Obama administration, who tries to say they are transparent. Well, this time, Tom and his team are suing the Pentagon over their relationship with the anti-Christian crusader, Mikey Weinstein.

Here is my full list of favorite podcasts.

# Ethics week 2013: Five universities. Five nights. Five moral issues

**Wintery Knight** · 29 September 2013 · Archived copy · Original

Details:

> DOING THE RIGHT THING Week 2013 is a nation wide university initiative to focus on a discussion of the foundation of morality, how do we determine what is right and wrong, and what it means to live ethically. These are questions that every college student, indeed every person on the planet, must grapple with as the answers affect government, society, our families, and ourselves.

Monday:

> SEPT. 30, 2013 | 6:30 PM EDT
>
> TRUTH, JUSTICE, & THE RESTORATION OF REASON | GEORGIA TECH
>
> DR. MICHAEL MILLER, Acton Institute
>
> PHYSICAL LOCATION: Student Center Theater

Tuesday:

> OCT. 1, 2013 | 8:00 PM EDT
>
> SEXUALITY & MARRIAGE: WHAT'S ETHICS GOT TO DO WITH IT? | RUTGERS UNIVERSITY
>
> KELLIE FIEDOREK, Alliance Defending Freedom | RYAN T. ANDERSON, Heritage Foundation
>
> PHYSICAL LOCATION: Cook Campus Center Multipurpose Room

Wednesday:

> OCT. 2, 2013 | 8:00PM EDT
>
> The History of American Eugenics: Lessons for the Second Genetic Century | OHIO UNIVERSITY
>
> DR. CHRISTOPHER HOOK, Mayo Clinic
>
> PHYSICAL LOCATION: Baker University Center, Ballroom A (8 PM EDT)
>
> **Noon Panel Discussion:**
>
> OCT. 2, 2013 | 12:00PM EDT
>
> Can We Safely and Successfully Re-Engineer Humanity?
>
> DR. CHRISTOPHER HOOK, Mayo Clinic; Scott Carson, Professor of Philosophy, Ohio University; & Scott Robe, Attorney, Athens, Ohio; TIM SHARP , News Director of WOUB, will facilitate
>
> PHYSICAL LOCATION: WOUB Studio A (Noon – 1:30 EDT)

Thursday:

> OCT. 3, 2013 | 8:00PM EDT
>
> DOES NATURAL LAW REQUIRE A MORAL LAW GIVER? | TEXAS A&M
>
> DR. FRANCIS BECKWITH, Baylor University

# Obamacare health insurance exchanges impose massive penalties on married couples

**Wintery Knight** · 30 September 2013 · Archived copy · Original

Hans Bader explains on the Competitive Enterprise Institute blog.

Excerpt: (links removed)

> On the Obamacare health insurance exchanges, being married can cost you a lot. Get divorced (or avoid getting married, if you live together), and you save $7,230 per year if you are a fairly typical 40-year-old couple with kids (example: the husband working full-time, and the wife working part time, with the husband making $70,000, and the wife making $23,000). If you are a 60-year-old couple with equal incomes and no kids, and you make $62,041 a year, you save $11,028 a year by getting divorced or remaining unmarried. These are the amounts of money you will lose if you get married, since you will lose this amount of taxpayer subsidies due to Obamacare's discriminatory treatment of married versus unmarried couples. That's the reality confirmed by an Obamacare "calculator" provided by the pro-Obamacare Kaiser Family Foundation showing how Obamacare's "tax credits" work.

It's not the first time that the Democrats have introduced additional marriage penalties:

> The tax increases Obama demanded in the fiscal cliff deal also contain a "marriage penalty," although only for upper-income households (since the maximum rate kicks in at $450,000 for married couples — that is, $225,000 for each spouse — versus $400,000 for singles). Obamacare's new tax on investment income, which applies to married couples making above $250,000 per year, also contains marriage penalties (for example, if an unmarried couple makes $390,000 — $195,000 for each partner — they owe no investment tax, even if all of their income is investment income, and even if a married couple with the same income would pay the Obamacare investment tax on a significant portion of their income).
>
> Historically, the effect of marriage penalties has been most profound for working-class people, who are punished severely for getting married by the welfare state. As Rep. Thomas Petri (R-Wisc.) has noted, "The decline in marriage and the rise in the number of children born to unmarried mothers are concentrated among lower-income families. One reason is that lower-income couples will often lose money if they get married. Many federal benefits such as food stamps and the earned income tax credit phase out as income rises. Under federal law, if two individuals earning the minimum wage choose to marry, combining their incomes results in the loss of some $7,000 in federal benefits. The result: Fewer marriages, more births outside marriage and reduced prospects for rising into the middle class."

The article goes on to explain why Obamacare penalizes does who work, but I want to stick with the Democrat antipathy to marriage.

**Radical feminism opposes marriage**

Why do Democrats want traditional marriage to go away? Well, because Democrats are radical feminists, and radical feminists want marriage to go away.

Here's a research paper written in 2003 from the Heritage Foundation.

Excerpt: (footnote numbering and links removed)

> In her 1996 book In the Name of the Family: Rethinking Family Values in the Postmodern Age, Judith Stacey, Professor of Gender Studies and Sociology at the University of Southern California, consigned traditional marriage to the dustbin of history. Stacey contended that "Inequity and coercion…always lay at the vortex of

that supposedly voluntary `compassionate marriage' of the traditional nuclear family." She welcomed the fact that traditional married-couple families (which she terms "The Family") are being replaced by single-mother families (which she terms the postmodern "family of woman"):

> Perhaps the postmodern "family of woman" will take the lead in burying The Family at long last. The [married nuclear] Family is a concept derived from faulty theoretical premises and an imperialistic logic, which even at its height never served the best interests of women, their children, or even many men…. The [nuclear married] family is dead. Long live our families!

Stacey urged policymakers to abandon their concern with restoring marital commitment between mothers and fathers and instead "move forward toward the postmodern family regime," characterized by single parenthood and transitory relationships.

In 1996, Claudia Card, professor of Philosophy at the University of Wisconsin-Madison, continued the attack:

> The legal rights of access that married partners have to each other's persons, property, and lives makes it all but impossible for a spouse to defend herself (or himself), or to be protected against torture, rape, battery, stalking, mayhem, or murder by the other spouse…. Legal marriage thus enlists state support for conditions conducive to murder and mayhem.

Other radical feminists suggested that a culture of self-sufficiency and high turnover in intimate relationships is the key to independence and protection from hostile home life. Activist Fran Peavey, in a 1997 Harvard article ironically titled "A Celebration of Love and Commitment," suggested that "Instead of getting married for life, men and women (in whatever combination suits their sexual orientation) should sign up for a seven-year hitch. If they want to reenlist for another seven, they may, but after that, the marriage is over." Also in 1997, radical feminist author Ashton Applewhite, in her book Cutting Loose–Why Women Who End Their Marriages Do So Well proclaimed: "Women who end their marriages are far better off afterward."

Another feminist widely read during the 1990s was Barbara Ehrenreich, a former columnist with Time magazine who now writes for The Nation. Throughout her work, Ehrenreich extols single parenthood and disparages marriage. Divorce, she argues, produces "no lasting psychological damage" for children. What America needs is not fewer divorces but more "good divorces." Rather than seeking to strengthen marriage, policymakers "should concentrate on improving the quality of divorce." In general, Ehrenreich concludes that single parenthood presents no problems that cannot be solved by much larger government subsidies to single parents.

Ehrenreich writes enthusiastically about efforts to move beyond the narrow limits of the nuclear married family toward more rational forms of human relationship:

> There is a long and honorable tradition of "anti-family" thought. The French philosopher Charles Fourier taught that the family was a barrier to human progress; early feminists saw a degrading parallel between marriage and prostitution. More recently, the renowned British anthropologist Edmund Leach stated, "far from being the basis of the good society, the family with its narrow privacy and tawdry secrets, is the source of all discontents."

While Ehrenreich recognizes that men and women are inevitably drawn to one another, she believes male-female relationships should be ad hoc, provisional, and transitory. She particularly disparages the idea of long-term marital commitment between fathers and mothers. In the future, children will be raised increasingly by communal groups of adults. These children apparently will fare far better than those raised within the tight constraints of the nuclear married family "with its deep impacted tensions."

The paper goes on to explain how these messages have entered into college textbooks. College textbooks used in classes where young women are expected to agree with the textbooks in order to get their good grades. This is what your children will learn. It's not what you think feminism is that matters – it's what they think feminism is. And what they think is what the textbooks tell them to think – or else they get drummed out of the university. This is where the 42% out-of-wedlock birth rate *came from*. And why our children are growing up without fathers, and as a consequence of that, growing further and further away from God. Marriage is bad, feminists tell us, because husbands and their traditional roles are bad. So what are men for? To donate sperm and to pay taxes for welfare programs that make men and marriage superfluous. In the past, men married because they wanted the responsibility of the traditional male roles of protector, provider and moral/spiritual leader. If you want to know why men aren't marrying now, look to the policies that have removed the respect and responsibility that men enjoyed within their family and from society for taking on these traditional roles. We have been replaced by government, and radical feminism is to blame.

You can read more about what radical feminists think about marriage here, and realize that this is animating Democrat policy-making. If you want marriage, make sure you don't vote for a party that is trying to destroy it by every means possible – from redefinition, to divorce, to welfare, to exaggerations about domestic violence, to punitive taxation policies – and beyond. If you are a child of divorce, thank a Democrat. That was their intention – to deprive you of the stability you needed when you were growing up. One last point: it doesn't really address the policy issue when pro-marriage conservatives think that the solution to the decline of marriage is to tell men to "man up". That's an easy solution for empty-headed church leaders, but it doesn't reflect the real incentives that exist, thanks to policies pushed by the left.

# What is theistic evolution? Can a person believe in God and evolution at the same time?

**Wintery Knight** · 30 September 2013 · Archived copy · Original

Was Mount Rushmore designed?

Here's a post on Evolution News that explains what theistic evolution is:

> Three geologists stand at the foot of Mt. Rushmore. The first geologist says, "This mountain depicts perfectly the faces of four U.S. Presidents, it must be the work of a master sculptor." The second says, "You are a geologist, you should know that all mountains were created by natural forces, such as volcanoes and plate movements, the details were then sculpted by erosion from water and wind. How could you possibly think this was the work of an intelligent sculptor? Only a person completely ignorant of geophysics could think those faces were designed."
>
> The third geologist says to himself, "I don't want to be seen as ignorant, but the faces in this mountain sure do look like they were designed." So he thinks a moment and says to the second geologist, "Of course you are right, these faces were sculpted by natural forces such as erosion. Only an ignorant person would think they were designed." Then he turns to the first and says, "But what a magnificent result, there obviously must have been a master sculptor standing by and watching."

The third geologist is a theistic evolutionist. Someone who thinks that God did nothing detectable by science in the whole history of the universe, but who also loves to talk about their religious experience and what hymns they like to sing in church. Synonyms for this definition of theistic evolution are "supernaturalist naturalism" and "theistic atheism". I like the latter, myself. Theistic atheism. Atheism at work for my colleagues on Monday, and theism in the church for my pastor on Sundays.

Now if you call yourself a theistic evolutionist, but you think that intelligent design is *detectable in nature by non-theists doing ordinary science with ordinary scientific methods*, then you are not a theistic evolutionist according to this definition. This post is not describing you.

You can listen to a debate on theistic evolution between Michael Behe and theistic evolutionist Keith Fox right here to decide if theistic evolution is *true.* A summary is provided for those who prefer to read instead of listen.

# Philip E. Johnson lectures on science, evolution and religion

**Wintery Knight** · 30 September 2013 · Archived copy · Original

I found this fun lecture by the grandfather of the big-tent intelligent design movement, Berkeley law professor Philip E. Johnson.

I'll bet you guys have all heard of him, but you've never heard him speak, right? Well, I was a young man, I used to listen to Phil's lectures and his debates with Eugenie Scott quite a bit. This is one of my favorite lectures. Very easy to understand, and boilerplate for anything else in the origins debate. This is a great lecture – funny, engaging and useful. You will definitely listen to this lecture several times if you listen to it once.

The MP3 is here. (91 minutes, 62 megabytes)

**The Inherit the Wind stereotype**

- Many people get their understanding of origins by watching movies like "Inherit the Wind" (or reading science fiction)
- The actual events of the Scopes trial are nothing like what the movie portrays
- The law forbidding the teaching of evolution was symbolic, not meant to be enforced
- The actual Scopes trial was a publicity stunt to attract attention to Dayton, TN to bring business to the town
- The ACLU advertised for a teacher who would be willing to be sued
- They found a substitute physical education teacher who would be willing to "break" the law
- The movie is nothing like the actual events the movie is a morality play
- The religious people are evil and stupid and ignorant and bigoted
- The scientists and lawyers are all intelligent, romantic, and honest seekers of the truth
- The religious people think that the Bible trumps science and science is not as reliable as the Bible
- The movie argues that the reason why there is ANY dissent to evolution is because of Biblical fundamentalism
- The movie presents the idea that there are no scientific problems with evolution
- The movie says that ONLY Biblical fundamentalists who believe in 6 day, 24-hour creation doubt evolution
- The movie says that Biblical fundamentalism are close-minded, and not open to scientific truth
- The movie says that people who read the Bible as making factual claims are misinterpreting the Bible
- The movie says that smart people read the Bible for comfort and feelings and arbitrary values, not for truth

**Guided evolution and methodological naturalism**

- What scientists mean by evolution is that fully naturalistic, unguided, materialistic mechanisms caused the diversity of life
- Scientists do not allow that God had any real objective effect on how life was created
- Scientists think that nature did all the creating, and any mention of God is unnecessary opinion – God didn't DO ANYTHING
- Scientists operate with one overriding rule – you can only explain the physical world with physical and material causes
- Scientists DO NOT allow that God could have done anything detectable by the sciences
- Scientists WILL NOT consider the idea that natural, material processes might be INSUFFICIENT for explaining everything in nature
- You cannot even ask the question about whether natural laws, matter and chance can explain something in nature

- Intelligent causes can NEVER be the explanation for anything in nature, and you can't even test experimentally to check that
- Scientists ASSUME that everything can be explained with natural laws, matter and chance – no questioning of natural causes is allowed
- Where no natural explanation of a natural phenomenon is available, scientists SPECULATE about undiscovered natural explanations
- The assumption of naturalistic sufficiency is called "methodological naturalism"
- To question the assumptions that natural is all there is, and that nature has to do its own creating, makes you an "enemy of science"
- But Johnson says that *naturalists* are the enemies of science, because they are like the Biblical fundamentalists
- Naturalists have a presumption that prevents them from being willing to follow the evidence where it is leading
- Experiments are not even needed, because the presumption of naturalism overrides any experimental finding that falsifies the sufficiency of natural causes to explain some natural phenomenon

**What can natural selection and mutation actually do?**

- what evolution has actually been observed to do is explain changing populations of moths and finches
- finches with smaller or larger beaks are observed to have differential survival rates when there are droughts or floods
- no new body plan or new organ type has been observed to emerge from these environmental pressures
- the only kind of evolution that has been observed is evolution *within types* – no new genetic instructions are created
- in textbooks, only confirming examples are presented – but what is required is a broad pattern of gradual development of species
- if you look at the fossil record, what you see in most cases is variation within types based on changing environments
- the real question is: can natural law and chance *be observed* to be doing any creating of body plans and organ types?

**What kind of effect requires an intelligent cause?**

- the thing to be explained in the history of life is the functional information sequences
- you need to have a sequence of symbols or characters that is sufficiently long
- your long sequence of characters has to be sequenced in the right order to have biological function
- the only thing that can create long sequences of functional information is an intelligent cause
- intelligent design people accept micro-evolution – changes within types – because that's been observed
- the real thing to be explained is the first living cell's functional information, and the creation of new functional information

**Critical response**

The next 15 minutes of the lecture contain a critical response from a philosophy professor who thinks that there have been no developments in design arguments since Aquinas and Paley. He basically confirms the stereotypes that Johnson outlined in the first part of the lecture. I recommend listening to this to see what opposition to intelligent design really looks like. It's not concerned with answering scientific questions – they want to talk about God, the Bible and Noah's ark. It's our job to get people like this critic to focus on the science.

Here's my snarky rendition of what he said:

1) Don't take the Bible literally, even if the genre is literal.

- all opposition to evolution is based on an ignorant, fundamentalist, literal reading of the Bible
- the Bible really doesn't communicate anything about the way the world really is
- the Bible is just meant to suggest certain opinions and experiences which you may find fetching, or not, depending on your feelings and community
- if Christians would just interpret the Bible as myths and opinions on par with other personal preferences, then evolution is no threat to religious belief

2) As long as you treat the design argument as divorced from evidence, it's not very effective

- the latest and best version of the design argument is the old Paley argument which involves no experimental data, so I'll critique that
- this 200-year old argument which doesn't rely on science has serious problems, and unnamed Christians agree with me!
- Christians should NOT try to prove God's existence using evidence from the natural world (as Romans 1 says), and in fact it's "Pelagianism" to even try
- Christians should divorce their faith from logic and evidence even though the Bible presents faith as being rooted in reason and evidence
- Christians should not tie their faith to the science of today, because science is always changing and the theism-friendly evidence of today might be overturned tomorrow
- It's a good idea for me to critique the arguments of 1000-year old people who did not know anything about the cosmic fine-tuning argument – that's fair!
- I find it very useful to tell people that the argument from design is false without mentioning any design arguments from DNA or cosmic fine-tuning
- We need to assume that the natural world is explainable using only natural causes before we look at any evidence
- We should assume that natural causes create all life, and then rule out all experimental evidence for intelligent causes that we have today
- As long as you accept that God is a personal opinion that has nothing to do with reality, then you can do science
- The non-Christian process theologian Teilhard de Chardin accepts evolution, and therefore so should you
- Remember when theists said God caused thunder because he was bowling in the clouds and then we found out he didn't? Yeah well – maybe tomorrow we'll find out that functional sequences of amino acids and proteins have natural causes! What would you do then?

3) What the Bible really says is that you should be a political liberal

**Q&A time**

The lecture concludes with 13 minutes of questions.

# House Republicans offer deal: delay Obamacare for a year, no government shutdown

**Wintery Knight** · 1 October 2013 · Archived copy · Original

This new House bill is a good compromise – even Tea Party stalwart Ted Cruz has endorsed it.

Excerpt:

> During a speech on the Senate floor Monday afternoon, Texas senator Ted Cruz endorsed the latest House bill to fund the government. This continuing resolution would not defund Obamacare, as Cruz has demanded for months, but it would delay Obamacare's individual mandate by one year and end employer subsidies for members of Congress and their staff.
>
> During his speech, Cruz praised the House of Represenatives for trying to compromise and criticized Senate majority leader Harry Reid for refusing to negotiate. Senator John Cornyn, Cruz's Republican colleague from Texas, then pointed out that the House will reportedly pass a continuing resolution that will include a delay the individual mandate and the Vitter amendment.
>
> Cruz said that the Senate should pass "whatever" the House passes this evening.
>
> "If the House of Representatives asks tonight I believe this Senate should come back immediately and pass the continuing resolution the House–whatever the House passes," Cruz said. "I don't know what it will be, but it will be yet another good faith effort to keep the government running and to address the trainwreck of a law that is Obamacare. And I very much hope that this body begins to listen to the people."
>
> Cruz's comments mark an apparent shift in his position on defunding Obamacare. During his 22-hour speech on Obamacare last week, Cruz said he could not support a compromise.
>
> […]Monday evening, the Club for Growth endorsed the House compromise but Heritage Action opposed it.

Not sure how I feel about this compromise, because this Wall Street Journal article makes it sound like a *good* deal.

Excerpt:

> Air traffic control will continue, in addition to airport and airplane safety inspections. All Federal Highway Administration activities will also continue.
>
> […]The IRS will cancel audit appointments.
>
> […]The Department of Education could have to delay its issuing of competitive and formula grant awards later this year.
>
> […]Workplace dispute cases would not be resolved until after the shutdown, as the National Labor Relations Board would halt all case handling.
>
> […]Agency functions that protect national security and ensure human safety are exempt from the shutdown. Military operations, border security, coastal protection (including the Coast Guard), law enforcement, criminal investigations, counter-terrorism efforts and care of prisoners are all expected to continue. The Federal Bureau of Investigation, the Drug Enforcement Agency, the U.S. Secret Service, and the U.S. Marshals Service will all continue to function. The Transportation Security Administration will continue to staff airports.
>
> On Friday, the Pentagon warned that a government shutdown could force the Defense Department to furlough about 400,000 civilian workers, delay military contracts and defer training.
>
> The move would impact about half the department's 800,000 civilian employees, most of whom were required to take six unpaid days off earlier this year as a result of the automatic spending cuts imposed under so-called sequestration.

> Because of the unique role the Pentagon plays in protecting the country, defense officials are planning to exempt large numbers of people and projects. All active duty military personnel will not be furloughed – and large numbers of civilians supporting the war in Afghanistan and other essential military initiatives will stay on the job.
>
> Pentagon leaders created a long list of exemptions, including counseling services for sexual assault victims, some child care facilities, and some base cafeterias.
>
> […] The U.S. Postal Service will continue to function as usual.
>
> Social Security payments will continue to go out, and the administration is expected to continue taking applications for benefits, as in plans released Friday. In that plan, the agency said it will furlough 18,006 of its 62,343 workers.
>
> Medicare and Medicaid payments will also continue, although the programs could encounter difficulty if the shutdown stretches into weeks.
>
> […]Food and Drugs: The Food and Drug Administration will continue its review of imports into the U.S., according to the Department of Health and Human Services' plan released Friday.
>
> Inspection of meat, poultry and egg products will continue, as these functions fall under the category of human safety. The HHS will furlough 40,512 workers, 52% of its staff.
>
> Disease: The Centers for Disease Control and Prevention will cease disease surveillance, which could be particularly problematic as flu season approaches.
>
> Medical care of inpatients and emergency outpatient care will continue.
>
> The National Institutes of Health clinical center will not accept new patients into clinical research, but it will continue to provide medical services for current patients. In the 1995-96 shutdowns, calls placed to NIH's disease hotline were not answered, according to the CRS report.
>
> Obamacare: The Affordable Care Act will continue to be funded.
>
> Other: Handling of hazardous waste, disaster assistance and power grid maintenance will continue.

On balance, it doesn't sound like the catastrophe that the left-wing media make it out to be, at least for a couple of weeks.

Meanwhile, Senate Democrats are refusing to negotiate.

# Do people go to Hell just because they don't accept Jesus?

**Wintery Knight** · 1 October 2013 · Archived copy · Original

From J. Warner Wallace at Please Convince Me.

Excerpt:

> A "just" God does justice, which means to punish or reward appropriately. In the Western tradition, we punish people for the actions they commit, but the extent of punishment is dependent also on the person's mental state, and a person's mental state is reflective of his or her beliefs. Premeditated murder is worse than manslaughter, and is punished more severely, and a hate crime is a sentencing enhancement that adds more punishment to the underlying crime. In both examples, a person's beliefs are at play: the premeditated murderer has reflected on his choices and wants the victim dead; a hate crime reflects a belief that the rights of a member of the protected group are especially unworthy of respect. So, considering a person's beliefs may well be relevant, especially if those beliefs have motivated the criminal behavior.
>
> But the challenger's mistake is even more fundamental. He is wrong to assert that people are condemned for not accepting the gospel. Christians believe that people are condemned for their sinful behavior – the "wages of sin is death" – not for what they fail to do. The quoted challenge is like saying that the sick man died of "not going to the doctor." No, the person died of a specific condition – perhaps cancer or a heart attack – which a doctor might have been able to cure. So too with eternal punishment. No one is condemned for refusing to believe in Jesus. While Jesus can – and does – provide salvation for those who seek it, there is nothing unjust about not providing salvation to those who refuse to seek it. After all, we don't normally feel obliged to help someone who has not asked for, and does not want, our assistance. So too the Creator has the right to withhold a gift – i.e. eternity spent in His presence – from those who would trample on the gift, and on the gift-giver.
>
> The quoted assertion also demonstrates an unspoken belief that we can impress God with our "kind" or "generous" behavior. This fails to grasp what God is – a perfect being. We cannot impress Him. What we do right we should do. We don't drag people into court and reward them for not committing crimes. This is expected of them. They can't commit a murder and then claim that punishment is unfair, because they had been kind and generous in the past. When a person gets his mind around the idea of what perfection entails, trying to impress a perfect Creator with our "basic goodness" no longer seems like such a good option.

Here's a related answer from CARM. This one answers the question about degrees of punishment in Hell.

Excerpt:

> Yes, there are different degrees of punishment in hell.
>
> […]But, not all people are equally bad. Though all deserve damnation because all are sinners, different people have committed different degrees of sin.
>
> - Mt. 11:20-22, "Then He began to reproach the cities in which most of His miracles were done, because they did not repent. 21 "Woe to you, Chorazin! Woe to you, Bethsaida! For if the miracles had occurred in Tyre and Sidon which occurred in you, they would have repented long ago in sackcloth and ashes. 22 "Nevertheless I say to you, it shall be more tolerable for Tyre and Sidon in the day of judgment, than for you…I say to you that it shall be more tolerable for the land of Sodom in the day of judgment, than for you."
> - Luke 12:47-48, "And that slave who knew his master's will and did not get ready or act in accord with his will, shall receive many lashes, 48 but the one who did not know it, and committed deeds worthy of a flogging, will receive but few. And from everyone who has been given much shall much be required; and to

> whom they entrusted much, of him they will ask all the more."
>
> - John 19:11, "Jesus answered [Pilate], 'You would have no authority over Me, unless it had been given you from above; for this reason he who delivered Me up to you has the greater sin.' "
> - Heb. 10:29, "How much severer punishment do you think he will deserve who has trampled under foot the Son of God, and has regarded as unclean the blood of the covenant by which he was sanctified, and has insulted the Spirit of grace?"
>
> So, if Jesus speaks of greater condemnation for Chorazin and Bethsaida than Tyre and Sidon (Matt. 11:21-22), one slave received more punishment than another (Luke 12:47-48), the one who delivered Jesus to Pilate has the greater sin (John 19:11), and a more severe punishment is reserved for those who trample underfoot the Son of God, then does not greater sin mean that greater punishment will also happen in hell? Yes it does.

Not only are there degrees of punishment in Hell, but there are degrees of reward in Heaven, based on what you do on Earth and what strengths you start out with.

Philippians 4:10-18:

[10] I rejoiced greatly in the Lord that at last you renewed your concern for me. Indeed, you were concerned, but you had no opportunity to show it.

[11] I am not saying this because I am in need, for I have learned to be content whatever the circumstances.

[12] I know what it is to be in need, and I know what it is to have plenty. I have learned the secret of being content in any and every situation, whether well fed or hungry, whether living in plenty or in want.

[13] I can do all this through him who gives me strength.

[14] Yet it was good of you to share in my troubles.

[15] Moreover, as you Philippians know, in the early days of your acquaintance with the gospel, when I set out from Macedonia, not one church shared with me in the matter of giving and receiving, except you only;

[16] for even when I was in Thessalonica, you sent me aid more than once when I was in need.

[17] Not that I desire your gifts; what I desire is that more be credited to your account.

[18] I have received full payment and have more than enough. I am amply supplied, now that I have received from Epaphroditus the gifts you sent. They are a fragrant offering, an acceptable sacrifice, pleasing to God.

Everyone who believes in Jesus gets salvation, but your experience in Heaven will be different based on what you do while you are alive. And that's also the answer to another common question – about deathbed conversions. Both deathbed converts and William Lane Craig will get the same experience of being in the presence of God, but there are completely different levels of reward. One person has an empty account, and the other person has huge massive amounts of virtuous action on deposit. But I think the real reason that Christians are trying to do good things here on Earth is that they like God, and they want to be his friend. They want to work on the relationship, even if it means a little self-denial, and a little sacrifice. We all have things that we would rather be doing for ourselves, but sometimes we have to things that work – things that are effective – for someone else. My values are not his values. Sometimes it is good to do something based on what He values. I don't always have to get my way, because then it wouldn't be a real relationship.

I enjoy thinking about Bible puzzles like this… so often in church we just make Christianity a checklist of things that we are supposed to believe somehow, by brute force willpower. I think reflecting on these problems, asking questions, and making sense of them on our own, is a much better approach.

# Dr. George Yancey lectures on anti-Christian bias in academia, and beyond

**Wintery Knight** · 1 October 2013 · Archived copy · Original

My good friend Wes posted this 28-minute lecture.

If you watch 5 minutes, then you'll definitely stay and watch the whole thing. It's fascinating.

Details:

> Join Dr. George Yancey in an in depth discussion of the bias taking place within academia against religion in general, but more specifically Christianity. Within the discussion Dr.Yancey uses brief explanations of his previous book, Compromising Scholarship and many other excerpts of his past research as well as his forthcoming research to give us a new viewpoint on academia and religion.

I found a quick description of Dr. Yancey's work in this New York Times article from July 2011.

It says:

> Republican scholars are more likely than Democrats to end up working outside academia,as documented by Daniel Klein, an economist at George Mason University. Dr. Klein, who calls himself a classical liberal (a k a libertarian), says that the university promotes groupthink because its system of "departmental majoritarianism" empowers the dominant faction to keep hiring like-minded colleagues. And when a faculty committee is looking to hire or award tenure, political ideology seems to make a difference, according to a "collegiality survey" conducted by George Yancey.
>
> Dr. Yancey, a professor of sociology at the University of North Texas, asked more than 400 sociologists which nonacademic factors might influence their willingness to vote for hiring a new colleague. You might expect professors to at least *claim* to be immune to bias in academic hiring decisions.
>
> But as Dr. Yancey reports in his new book, "Compromising Scholarship: Religious and Political Bias in American Higher Education," more than a quarter of the sociologists said they would be swayed favorably toward a Democrat or an A.C.L.U. member and unfavorably toward a Republican. About 40 percent said they would be less inclined to vote for hiring someone who belonged to the National Rifle Association or who was an evangelical. Similar results were obtained in a subsequent survey of professors in other social sciences and the humanities.
>
> Dr. Yancey, who describes himself as a political independent with traditional Christian beliefs and progressive social values, advises nonliberal graduate students to be discreet during job interviews. "The information in this research," he wrote, "indicates that revealing one's political and religious conservatism will, on average, negatively influence about half of the search committee one is attempting to impress."
>
> Dr. Yancey's research was a survey, not a field experiment, so it's impossible to know how many of those academics who confessed to hypothetical bias would let it sway an actual decision. Perhaps they'd try to behave as impartially as the directors of graduate studies in Dr. Gross's experiment.

The lecture is a real eye-opener. It turns out that in academia, you are likely to be viewed the same way as blacks were viewed by slave-owners, and Jews were viewed by Nazis. Stereotypes, ignorance and hatred abound.

We have a lot of work to do to correct these perceptions, and unfortunately nothing that Christians see and hear in church is likely to change this. Until we get serious about prodding our young people to think and achieve, this is what people on the secular left will think of us. Not because they really are smarter, but because we are not capable of pointing out the nonsense on their side of the aisle, e.g. – eternal universes, aliens seeding the Earth with life,

fatherlessness is good for children, and so on. If we don’t study the evidence, then their stupidity will rule the day, and they are the ones who are entrenched in academia.

# Democrats refuse another offer from Republicans to avoid government shutdown

**Wintery Knight** · 2 October 2013 · Archived copy · Original

As expected, the Senate Democrats rejected the compromise on Tuesday.

> **Last Night, Senate Democrats Voted Along Party Lines To Shut Down The Government Rather Than Agree To Delay Obamacare's Individual Mandate And Surrender Their Special Insurance Subsidies.** "In an extraordinary back-and-forth between the House and Senate that extended late into the night, Democrats beat back attempt after attempt to gut President Barack Obama's signature health care law. After Senate Democrats rejected the House's year-long delay of Obamacare and a repeal of the medical device tax on Monday afternoon, Democrats returned to the floor after 9 p.m. to kill another House GOP proposal. The second measure would have kept the government open in exchange for delaying the health care law's individual mandate and eliminating federal health care contributions for lawmakers and Capitol Hill aides. (Burgess Everett and Manu Raju, "Government Shutdown Update: Senate Rejects House Plan – Again," *Politico*, 9/30/13)
>
> **According To The Congressional Budget Office, Delaying The Individual Mandate By One Year Would Reduce The Federal Budget Deficit By $35 Billion.** "CBO and the staff of the Joint Committee on Taxation (JCT) estimate that enacting H.R. 2668 would reduce federal deficits by roughly $36 billion over the 2014-2018 period and by roughly $35 billion over the 2014-2023 period." (Cost Estimate Of H.R. 2668: An Act To Delay The Application Of The Individual Health Insurance Mandate, To Delay The Application Of The Employer Health Insurance Mandate, And For Other Purposes, Congressional Budget Office, 9/6/13)
>
> **A July Poll Found That 77 Percent Of Registered Voters Support Delaying The Individual Mandate Or Repealing It Entirely.** (Morning Consult Poll, 2,076 RV, MOE 2%, 7/24-26/13)
>
> **Member of Congress And Their Staff Are Required To Enroll In ObamaCare's Exchanges.** "Sen. Charles Grassley, R-Iowa, then succeeded in adding a measure to Obama's health care bill three years ago requiring members of Congress and employees in their offices to leave the Federal Employee Health Benefits program and start buying their insurance through the state exchanges that open Tuesday under the Obamacare law." (Laurie Kellman, "GOP demanded lawmakers pay more for health care," *The Associated Press*, 10/1/13)
>
> **But OPM Granted Congress The Ability To Provide Subsidies, Which Are Not Available For Other Americans, To Help Purchase Insurance Though The Exchanges.** "But the statute means that about 11,000 Members and Congressional staff will lose the generous coverage they now have as part of the Federal Employees Health Benefits Program (FEHBP). Instead they will get the lower-quality, low-choice "Medicaid Plus" of the exchanges. The Members-annual salary: $174,000-and their better paid aides also wouldn't qualify for ObamaCare subsidies. That means they could be exposed to thousands of dollars a year in out-of-pocket insurance costs…And now the White House is suspending the law to create a double standard. The Office of Personnel Management (OPM) that runs federal benefits will release regulatory details this week, but leaks to the press suggest that Congress will receive extra payments based on the FEHBP defined-contribution formula, which covers about 75% of the cost of the average insurance plan. For 2013, that's about $4,900 for individuals and $10,000 for families." (Editorial, "Congress's ObamaCare Exemption," *The Wall Street Journal*, 8/5/13)

I listened to a recent episode of the Weekly Standard podcast, and guest Bill Kristol was advising the GOP to make exactly this proposal, saying that it was a strong move by the Republicans. I agree. We now have vulnerable Democrats going on record in favor of special perks for themselves and their staff, as well as the hated individual mandate. As soon as people see the sticker shock of being forced to buy insurance, or pay a fine, we are going to have a valuable tool in the 2014 elections. The left-wing media isn't going to be able to protect the Democrats from

their own votes.

UPDATE: The Weekly Standard approves of what the GOP is doing.

# Women earned more doctoral and Master's degrees than men in 2012

**Wintery Knight** · 2 October 2013 · Archived copy · Original

**Master's Degrees, By Field and Gender, 2012**

| | Male | Female | Females per 100 Males |
|---|---|---|---|
| Arts and Humanities | 41.2% | **58.8%** | **142.7** |
| Biological, Agricultural Sciences | 44.5% | **55.5%** | **124.7** |
| Business | 57.3% | 42.7% | 74.5 |
| Education | 23.8% | **76.2%** | **320.2** |
| Engineering | 76.9% | 23.1% | 30.0 |
| Health Sciences | 19.3% | **80.7%** | **418.1** |
| Mathematics and Computer Sciences | 69.1% | 30.9% | 44.7 |
| Physical Sciences | 58.5% | 41.5% | 70.9 |

| **Total** | **40.5%** | **59.5%** | **146.9** |

*Source: Council of Graduate Schools*

Women now earning majority of graduate degrees
From the American Enterprise Institute Ideas blog.

Excerpt:

> The Council of Graduate Schools (CGS) released its annual report recently on U.S. graduate school enrollment and degrees for 2012, and here are some of the more interesting findings in this year's report:
>
> 1. **For the fourth year in a row, women in 2012 earned a majority of doctoral degrees**. Of the 67,220 doctoral degrees awarded in 2012 at U.S. universities, women earned 34,761 of those degrees and 52.2% of the total, compared to 31,830 degrees awarded to men who earned 47.8% of the total (see top chart above).
>
> […]2. **By field of study, women earning doctoral degrees in 2012 outnumbered men in 7 of the 11 graduate fields** tracked by the CGS (see top chart above)
>
> […]3. The middle chart above shows the **gender breakdown for master's degrees awarded in 2012**, and the gender disparity in favor of females is significant – women earned just under 60% of all master's degrees in 2012, which would also mean that women earned 146.9 master's degrees last year for every 100 degrees earned by men.
>
> […]Women represent 58.5% of all graduate students in the U.S., meaning that **there are now 141 women enrolled in graduate school for every 100 men.**

Click here for the charts.

The author of the post, Dr. Mark Perry, concludes this:

> **MP:** Here's my prediction – the facts that: a) men are underrepresented in graduate school enrollment overall (100 men were enrolled in 2012 for every 141 women), b) men received fewer master's (40.5% of the total) and doctoral degrees (47.8% of the total) than women in 2012, and c) men were underrepresented in 7 out of 11 graduate fields of study at both the master's and doctoral levels last year will get no attention at all from the media, universities and anybody in the higher education industry.
>
> Additionally, there will be no calls for government studies, or increased government funding to address the

> significant gender disparities in graduate schools, and nobody will refer to the gender graduate school enrollment and degree gaps favoring women as a problem or a "crisis." Further, neither President Obama nor Congress will address the gender graduate enrollment and degree gaps by invoking the Title IX gender-equity law, like they have threatened to do for the gender gap in some college math and science programs. And there won't be any executive orders to address the huge gender disparity in graduate schools by creating a White House Council on Boys and Men like the executive order issued by President Obama in 2009 to create the "White House Council on Women and Girls." Finally, despite their stated commitment to "gender equity," the hundreds of university women's centers around the country are unlikely to show any concern about the significant gender inequities in graduate school enrollment and degrees, and universities will not be allocating funding to set up men's centers or create graduate scholarships for men.
>
> **Bottom Line**: If there is any attention about gender differences in the CGS annual report, it will likely be about the fact that women are a minority in 4 of the 11 fields of graduate study including engineering and computer science (a gender gap which some consider to be a "national crisis"), with calls for greater awareness of female under-representation in STEM graduate fields of study and careers (except for the STEM field of biology, where women are*over-represented*). But don't expect any concern about the fact that men have increasingly become the second sex in higher education. The concern about gender imbalances will remain extremely selective, and will only focus on cases when women, not men, are underrepresented and in the minority.

Men outnumber women in business, computer science, engineering and physical sciences.

I echo Dr. Perry's point, and want to add this. In traditional Christianity, men are responsible for providing for their families. One of the ways that we men prepare for this is by getting advanced degrees in STEM-related fields, since these fields are the hardest and also pay the best. So with that in mind, what does it mean for men who want to prepare for this provider role that there is this obvious discrimination against men in graduate schools and doctoral programs? Is anyone going to do anything to change policies and incentives to favor men, like they did when women were under-represented? *Of course not.* The only thing that will be done is to ignorantly urge men to "man up", while ignoring the real problems, e.g. – a lack of male teachers, schools that are not geared to male learning styles, and so on.

# 30% of gorilla genome contradicts Darwinian prediction of human and ape phylogeny

**Wintery Knight** · 2 October 2013 · Archived copy · Original

The latest episode of ID the Future discusses a recent (March 2012) paper about the gorilla genome.

Details:

> On this episode of **ID The Future**, Casey Luskin discusses how the recent complete sequencing of the gorilla genome has challenged conventional thinking about human ancestry and explains what neo-Darwinists are doing to try to minimize the impact of this new information. Says Luskin: "There is not a clear signal of ancestral relationships that is coming out of the gorilla genome once you add it into the mix." Tune in to hear about this interesting development!

The MP3 file is here.

Rather than summarize this short 10-minute podcast, I wanted to excerpt a post of Evolution News about it.

Excerpt: (links removed)

> A whopping 30% of the gorilla genome — amounting to hundreds of millions of base pairs of gorilla DNA — *contradicts* the standard supposed evolutionary phylogeny of great apes and humans. That's the big news revealed last week with the publication of the sequence of the full gorilla genome. But there's a lot more to this story.
>
> Eugenie Scott once taught us that when some evolutionary scientist claims some discovery "sheds light" on some aspect of evolution, we might suspect that's evolution-speak for 'this find really messed up our evolutionary theory.' That seems to be the case here. Aylwyn Scally, the lead author of the gorilla genome report, was quoted saying, "The gorilla genome is important because it sheds light on the time when our ancestors diverged from our closest evolutionary cousins around six to 10 million years ago." NPR titled its story similarly: "Gorilla Genome Sheds Light On Human Evolution." What evolutionary hypothesis did the gorilla genome mess up?
>
> The standard evolutionary phylogeny of primates holds that humans and chimps are more closely related to one-another than to other great apes like gorillas. In practice, all that really means is that when we sequence human, chimp, and gorilla genes, human and chimp genes have a DNA sequence that is more similar to one-another's genes than to the gorilla's genes. But huge portions of the gorilla genome contradict that nice, neat tidy phylogeny. That's because these gorilla genes are more similar to the human or chimp version than the human or chimp versions are to one-another. **In fact, it seems that *some 30% of the gorilla genome contradicts the standard primate phylogeny* in this manner.**

The Evolution News post then cites New Scientist and Nature's comments on the study.

This isn't the first time we've heard about a study like this – the last time was about the chimpanzee genome and the paper was published in Nature – the most prestigious peer-reviewed journal.

# Harry Reid: government-controlled health care is more important than curing cancer

**Wintery Knight** · 3 October 2013 · Archived copy · Original

That's a video of Democrat Senate Majority Leader Harry Reid at a Democrat press conference. The Republicans in the House have passed a multitude of bills to fund critical areas of government, but the Democrats have rejected them all. This time, a CNN journalist asks about one bill that funds NIH research to cure cancer. Watch the video!

Washington Free Beacon has the transcript for those who can't see the video: (H/T Letitia)

> DANA BASH: You all talked about children with cancer unable to go to clinical trials. The House is presumably going to pass a bill that funds at least the NIH. Given what you've said, will you at least pass that? And if not, aren't you playing the same political games that Republicans are?
>
> HARRY REID: Listen, Sen. Durbin explained that very well, and he did it here, did it on the floor earlier, as did Sen. Schumer. What right did they have to pick and choose what part of government is going to be funded? It's obvious what's going on here. You talk about reckless and irresponsible. Wow. What this is all about is Obamacare. They are obsessed. I don't know what other word I can use. They're obsessed with this Obamacare. It's working now and it will continue to work and people will love it more than they do now by far. So they have no right to pick and choose.
>
> BASH: But if you can help one child who has cancer, why wouldn't you do it?
>
> REID: Why would we want to do that? I have 1,100 people at Nellis Air Force base that are sitting home. They have a few problems of their own. This is — to have someone of your intelligence to suggest such a thing maybe means you're irresponsible and reckless –
>
> BASH: I'm just asking a question.

So Harry Reid must be in charge of health care, and that it is worth letting children die of cancer. He can't trust you and I to earn our own money and buy our own health care in a free market – he has to choose how much much we can earn and how much health care we can pay for. And if a few hundred or a few thousand or a few million children have to die in order for him to get that control over our lives, then so be it. It's a very telling glimpse into the mind of a socialist. How dare you question his authority to control your life? You're irresponsible and reckless to demand answers from your betters, you peon. You should be grateful for Harry Reid's wise oversight.

But you know what the government does have money for during a shutdown? $2,163 for a "massage chair".

**Shutdown doesn't hurt you? Then they'll make it hurt you**

In fact, the Democrats are so worried that none of us will care about their stupid shutdown of government that actually have barricaded off public memorial monuments to keep world war II veterans from visiting them!

Obama barricades open-area war memorial to keep veterans out

Fortunately, Republican legislators like Michele Bachmann and Louie Gohmert intervened to make sure that veterans who had traveled to Washington to visit the monument were allowed in. They smashed the barricades down and let the veterans inside.

Michele Bachmann:

Republican congressman Pete King even distracted police to sneak some of the veterans in.  The “Park Police” explained that they might press charges against the Republican legislators for breaking down the barricades to let the vets in. That all happened on Monday, but on Tuesday, the Democrats decided to pay union members to *protest* against the world war II veterans for breaking into the memorial area. I wouldn’t believe that this happened, except that there is a video.

# Obama lied, health care died: 10 states where Obamacare killed existing health care plans

**Wintery Knight** · 3 October 2013 · Archived copy · Original

From the Daily Caller.

Excerpt:

> President Barack Obama famously promised, “If you like your health care plan, you can keep your health care plan.” He later got even more specific.
>
> “If you are among the hundreds of millions of Americans who already have health insurance through your job, or Medicare, or Medicaid, or the VA, nothing in this plan will require you or your employer to change the coverage or the doctor you have,” Obama said.
>
> But as Obamacare’s rollout approaches, we have learned this is not true. Here are the ten states where consumers may like their health care plans, but they won’t be able to keep them.

I’ll pick just three of the states:

> **1) California:**58,000 will lose their plans under Obamacare. The first bomb dropped in California with a mass exodus from the most populated state’s Obamacare exchange. Aetna, the country’s third largest insurer, left first in July and was closely followed by UnitedHealth. Anthem Blue Cross pulled out of California’s Obamacare exchange for small businesses as well.
>
> Fifty-four percent of Californians expect to lose their coverage, according to an August poll.
>
> **3) Connecticut:** Aetna, the third largest insurer in the nation, won’t offer insurance on the Obamacare exchange in its own home state, where it was founded in 1850. The reason? “We believe the modification to the rates filed by Aetna will not allow us to collect enough premiums to cover the cost of the plans and meet the service expectations of our customers,” said Aetna spokesman Susan Millerick.
>
> **5) South Carolina:**28,000 people were insured by Medical Mutual of Ohio, SC’s second-largest insurance company, until it decided to leave the state entirely in July due to Obamacare’s “vast and quite complex” new regulations. Company spokesman Ed Byers said Medical Mutual’s patients would be switched over to United Healthcare plans instead.

When Obama said that people could keep their health care plans if they liked them, what *evidence* did we have to believe him? What reason did we have to believe that he actually knew what he was talking about, instead of just reading a teleprompter-assisted speech that someone else wrote for him? Had he been governor of a state where he put in a similar program and people kept their health plans? Did he commission a study that showed that people would be able to keep their health plans? What evidence did we have to believe him?

# Why do so many people oppose Obamacare and why isn't Obama willing to fix it?

**Wintery Knight** · 3 October 2013 · Archived copy · Original

This article from National Review provides a simple overview of a few of the main problems with Obamacare.

I'll just highlight a few of the points in the article.

Higher health care costs, higher health insurance costs, higher taxes:

> Under ACA, health-care spending is expected to rise significantly, even beyond the usual inflation in medical prices. President Obama's economic advisers originally had calculated that the bill would reduce health-care spending by $200 billion a year, from whence the president derived his intellectually indefensible conclusion that the bill would save the average family of four some $2,500 a year. Recently, the Centers for Medicare and Medicaid Services calculated that ACA will not reduce health-care spending at all and will instead add about $70 billion per year in the immediate future. Estimates of the program's expense keep growing. It will spend more than originally estimated, it will tax more than originally estimated, and its vaunted deficit-reduction benefits have been evaporating at a pace suggesting that, as many predicted, they will never come to pass. In 2010, CBO projected that ACA would reduce the deficit by $140 billion through 2019; today that projection is a mere $4 billion. The estimated tax increases in the bill have doubled.

It discriminates against men by forcing them to subsidize women's health care:

> The difference between the increase in men's rates and those in women's rates is one of the more naked bits of ideology apparent in the bill. Women spend considerably more on health care than men do, and hence have paid higher health-insurance premiums. The architects of the ACA decided that this was not permissible, and so by fiat eliminated the difference, meaning a disproportionate increase in men's rates. Likewise, because there can be only so much difference permitted in prices paid by the young and the old, the young will pay much higher rates.

Employers are forced to make full-time employees work part-time:

> [The employer mandate creates a] powerful economic preferences for part-time workers. By mandating coverage for those working 30 hours or more, the employer mandate makes part-time workers that much more attractive to businesses, a fact not lost on President Obama's erstwhile supporters in organized labor. "The ACA will shatter not only our hard-earned health benefits, but destroy the foundation of the 40-hour work week that is the backbone of the American middle class," reads a joint letter from the major labor unions.

It creates incentives to not marry and to not work:

> And in an especially clumsy move, the program's architects have designed the income limits on its subsidies as hard cutoffs rather than gradual phaseouts. For example, as Ed Driscoll points out, a married couple earning $62,040 would face a $10,000 penalty for earning $1 extra — unless they get divorced. That's a very high effective marginal tax rate. Likewise, a married couple with two children with $93,000 in joint income would pay far more for insurance than they would if they divorced and custody were granted to the lower-earning spouse. So while the employer mandate creates a disincentive to hire, the high penalties for extra income create a disincentive to work — hardly the thing that's called for in a period of high joblessness and record welfare dependency.

That's enough – read the article for many, many more. And the article doesn't even cover all the problems, although some of my previous posts (like this one) have talked about these other problems that weren't mentioned in the National Review article. And there are even ethical problems, like the abortion drugs coverage mandate and the fact that pro-life taxpayers will be subsidizing abortions from day one. I could go on, but I'll try to keep this post short.

So what is Obama doing about the problems in his policy? The Republicans have asked him to delay the individual mandate for a year, and to make Congress give up their exemption from Obamacare – a law they passed themselves!

The Wall Street Journal explains Obama's response to the problems in his health care policy.

Excerpt:

> President Obama is sitting out one of the most important policy struggles since he entered the White House. With the government shutdown, it has reached the crisis stage. His statement about the shutdown on Tuesday from the White House Rose Garden was more a case of kibitzing than leading. He still refuses to take charge. He won't negotiate with Republicans, though the fate of ObamaCare, funding of the government and the future of the economic recovery are at stake. He insists on staying on the sidelines—well, almost.
>
> Mr. Obama has rejected conciliation and compromise with Republicans. Instead, he attacks them in sharp, partisan language in speech after speech. His approach—dealing with a deadlock by not dealing with it—is unprecedented. He has gone where no president has gone before.
>
> […][A]s he was predicting widespread suffering, Mr. Obama steadfastly refused to negotiate with Republicans. He told House Speaker John Boehner in a phone call that he wouldn't be talking to him anymore. With the shutdown hours away, he called Mr. Boehner again. He still didn't negotiate and said he wouldn't on the debt limit either.
>
> Mr. Obama has made Senate Majority Leader Harry Reid his surrogate in the conflict with Republicans. Mr. Reid has also declined to negotiate. In fact, Politico reported that when the president considered meeting with Mr. Boehner and Mr. McConnell, along with the two Democratic congressional leaders, Mr. Reid said he wouldn't attend and urged Mr. Obama to abandon the idea. The president did just that.
>
> […]The president's tactic of attacking Republicans during a crisis while spurning negotiations bodes for a season of discord and animosity in the final three-and-one-quarter years of the Obama presidency. That he has alienated Republicans doesn't seem to trouble Mr. Obama.

The important lesson we must all learn from this is that Barack Obama had no experience in health care policy. He didn't surround himself with people who understood health care policy, either. The next time that we have the opportunity to elect a President, we need to realize that we are not picking a favorite celebrity or an American Idol. The President's job is not to dance and sing and act to amuse us. The President's job is to *solve problems*. Part of being a problem solver is also being a good negotiator. We need to pick someone who has experience successfully solving the problems that are facing us as a nation. Speeches are no substitute for past performance.

# Why sexual permissiveness is not compatible with the welfare of children

**Wintery Knight** · 3 October 2013 · Archived copy · Original

Here is a striking essay from the Public Discourse. It talks about how we, as a society, have generally taken on an anything-goes approach with respect to sex. The one exception (for now) is pedophilia, which is the sexual abuse of children by adults. The essay points out that there is no moral reason for having this one exception, on secularism. The exception exists because of a sort of "ick" factor – not because we have a moral framework that makes anything right or wrong objectively. The essay argues that we are not shy about harming children in a million other ways, and lists some examples. I just want to quote a few and then I'll comment about my own moral views around sexuality.

Quick summary of his argument:

> The moral structure of pedophilia is simply this: the welfare of children is subordinate to the sexual gratification of adults.
>
> […]We should be thankful that the Sanduskys and Laheys are still considered monstrous. But in contemporary America that condemnation rests on sentiment and not on moral reasoning. No one can simultaneously explain *why* their actions were so vile and uphold the first commandment of the sexual revolution: fulfill thy desires.
>
> […]No, it isn't *how* Sandusky and Lahey did what they did, or under what circumstances, that explains the disgust. It's *what* they did—but nobody wants to acknowledge that.
>
> The reason for that reluctance becomes clear, if we keep in mind the moral structure of pedophilia. Sexual gratification trumps. Thank goodness that for now, there aren't many men who are sexually attracted to youngsters. In that single case, we raise the banner for the children. But in no other case.

That's his argument.

Now, a quick excerpt:

> If we altered the question, and asked not how many people have done sexually abusive things with children, but how many people have done sexual things that redounded to the suffering of children, then we might confess that the only thing that separates millions of people from Jerry Sandusky is inclination. Everything that was once considered a sexual evil and that is now winked at or cheered, everything without exception, has served to hurt children, and badly.
>
> We might point here to divorce. Unless it is necessary to remove oneself and one's children from physical danger and moral corruption, the old wisdom regarding divorce should hold, if children themselves have anything to say about it. Parents will say, "My children can never be happy unless I am happy," but they should not lay that narcissistic unction to their souls. Children need parents who love them, not parents who are happy; they are too young to be asked to lay down their lives for someone else. It is not the job of the child to suffer for the parent, but the job of the parent to endure, to make the best of a poor situation, to swallow his pride, to bend her knees, for the sake of the child.
>
> We might point to births out of wedlock. The child has a right to enter more than a little nursery decorated with presents from a baby shower. He should enter a human world, a story, a people. He should be born of a mother and a father among uncles and aunts and cousins and grandparents, stretching into the distant past, with all their interrelated histories, with his very *being* reflected in all those mirrors of relation, not to mention his eyes and his hair, the talents in his fingers and the cleverness in his mind. This *belonging* to a big and dependable world can be secured only in the context of the *permanent* love of his mother and father, declared

> by a vow before the community and before the One in whom there is no shadow of alteration.

And now my comments about this article.

So pretty much all my regular readers know that I take extremely conservative views on social issues, since I am an evangelical Protestant Christian. But I don't just have conservative views – I am also chaste at a personal level. I am not one of these re-virgins – I have never had sex. Not once. And I don't mean I have never had sexual intercourse only, I mean that I have never even kissed a woman on the lips. I am a radical on the issue of chastity. I don't view chastity as depriving oneself of something good, I view it is as a thing that serious Christian men do when we want to enable and develop other capabilities. It's my conviction that chastity enables the capability to see women as God sees them, which is a precursor to growing them up to serve him. That's what women are for, on my view – exactly like men are for knowing and serving God. It's my belief that once a man has premarital sex, it becomes much harder for him to view women that way.

So, I am really really really against any kind of sexual activity of any kind prior to marriage. I think that if a man wants to show affection to a woman, then sex before marriage is not the way to do that. There are other ways, and men ought to know how to speak the language of love to a woman in many different ways apart from sex, assuming that this is his goal for her. A man needs to create a context for sex before he can have it. Marriage is how a man provides a context for sex. Not just by giving a woman safety, but by specifying a shared vision which the woman agrees to support when she agrees to marriage. Men shouldn't have intimate experiences with women who are not committed to a constructive partnership with specific goals, e.g. – birthing or adopting children in order to give them a stable, loving *sane* environment to grow up in. That is so rare nowadays, especially on college campuses which are inundated with sexual liberalism, thanks to radical feminism. My conviction that sex is not something that should be done before marriage emerges partly from a concern that children should have the best opportunity for that stable environment. And that's what I want to focus on – sexual restraint as a means of providing for children and protecting children.

First, premarital sex creates a situations where abortion happens. Men and women should not engage in activities for recreational reasons that could possibility lead to the death of another human being, period. I am not one of these people who thinks "oh, poor woman who is pregnant, what a beastly man who did that to her – but she can do the right thing and keep the baby". I think that women are equally to blame with men for even having sex before marriage – the mistake was having sex in the first place. So getting pregnant and keeping the baby is good, but preventing fatherlessness and not putting burdens on taxpayers is much, much better. People who engage in premarital sex are not only selfish, immature and irresponsible, but they are actually acting in a *negligent* fashion towards the child that may result from their *choices*. We should not make choices that put innocent children at risk. Premarital sex can be compared with driving while drunk in that regard. You might think it's fun, but it's not a good, moral thing to do because of the harm that may result. Saying "but I didn't mean to" after the fact doesn't change the harm.

Second, I've blogged before about many studies (like this one) that show that premarital sex reduces relationship stability, duration, and quality. Another study I blogged about showed that the number of sexual partners that a man or woman has before marriage directly affects the probability that the relationship will provide a stable environment for raising children. So one of my reasons for being chaste is to maximize the probability of giving my future children that stable environment. Another reason to be chaste is to give my future wife that gift of fidelity. When a man has proven that he has the ability to restrain himself with his wife during the courtship, that is a signal to her that he is good at self-control. The ability to court without premarital sex shows her that he is able to think about her as a person, and that he is able to evaluate her objectively for the purpose of filling the roles of wife and mother. And that this is, in fact, his whole purpose for her. A purpose that will survive the decline of her appearance and youth. Security is another gift that a chaste man gives his wife, so that she can age confidently.

Thirdly, I have in the past blogged about research on gay unions showing how various factors that are more probable in gay relationships, (e.g. – elevated rates of domestic violence, low relationship stability, drug abuse, high

rates of promiscuity, etc.), undermine the stability of the environment in which children grow up. More here. Dr. Ryan Anderson has argued that the norms present in gay relationships will undermine the norms of traditional marriage, (permanence, sexual exclusivity, etc.), if marriage is redefined to eliminate the gender requirement. I think we need to keep the traditional definition of marriage because it's better for children if we do (and there are other reasons to prefer natural marriage, as I've written about before).

I think I've said enough here to show that very often when it comes to sexual activity what is driving my conservative views is concern for others. Concern not just for the future children, but for the future wife. And not just for them, but for society as a whole, who would have to pay the social costs of things like divorce, and the social costs of children of divorce, etc. And not just for society, but also for God, who intends sexuality for a very specific purpose – it is a form of communication for two people who have been bonded to each other for life. Marriage has to count for God and achieve his goals. One of those goals is raising up children well for his sake. And adults need to control themselves in order to provide children with what they need.

# New study: premiums for young people to rise in all 50 states under Obamacare

**Wintery Knight** · 4 October 2013 · Archived copy · Original

The Washington Free Beacon reports on a new study.

Excerpt:

> Health insurance premiums for young people will rise in all 50 states under Obamacare, with an average increase of 260 percent, according to a study released Thursday.
>
> The young and healthy segment of the uninsured is considered crucial for the Affordable Care Act to succeed. Former President Bill Clinton suggested last week that Obamacare only works "if young people show up."
>
> However, an analysis of premiums both before and after the implementation of Obamacare shows that 18- to 35-year-olds are likely to opt out of high rates in the exchanges in favor of cheaper penalties for not having insurance.
>
> According to a study released by the American Action Forum, post-Obamacare premiums will average $187.08 per month, up from $62 per month in 2013, a 202 percent increase. Overall, states averaged an increase of 260 percent.
>
> Forty-four out of 50 states saw a three-digit percent increase, and in Vermont the cheapest available premium for a 30 year-old male nonsmoker will increase by $332.69, or 600 percent.
>
> […]Massachusetts had the lowest increase at 9 percent, though the state is considered an "outlier" since it already had similar health care reforms put in place under former Republican Gov. Mitt Romney.
>
> "[T]hat state's insurance market has been subject to ACA-like reforms since 2006, bloating the premium for the lowest-cost pre-ACA policy to nearly $214, making it the highest of the 2013 premiums analyzed in this study," the report said.

But what about the subsidies, won't they help cover the cost of all the free condoms and birth control pills and abortion drugs?

No:

> Given the high costs of the premiums, the study predicts that even with subsidies, most of the young uninsured will opt to pay the penalty rather than sign up for health care.
>
> Individuals between 100 and 400 percent of the federal poverty line are eligible for subsidies under the law.
>
> Only those who earn up to 133 percent of the poverty line will have a financial incentive to join the health exchange. An individual with an income of $15,281.70 would receive a subsidy to cover 100 percent of their health care premiums.
>
> Moving up the income bracket creates disincentives for the young to enroll. Those making $20,107.50, or 175 percent of the poverty line, will still face a $449 premium, which is three times higher than the penalty they would incur in 2014 ($103.57) if they did not purchase insurance.
>
> An individual earning $37,342.50 will receive no subsidy at all and will face a minimum premium of $2,839, as opposed to a $275.92 penalty in 2014.

I'm pretty sure that most people who get jobs out of college will make more than $37,342.50. Petroleum engineers start at around double that income.

So, I'm thinking that the young people – especially college-educated people with jobs – shouldn't have voted for

Obama. Do you think that their teachers and professors explained to them what would happen to them if they voted for Obama? I think not. I think that their teachers and professors wanted their little wide-eyed charges to vote for more funding of education, with no performance checking, so that they could be paid more money. And the children believed their teachers and voted accordingly. This is a particularly bad deal for bright young men – the kind you might expect to be interested in marriage. Now not only have they inherited massive amounts of debt and a crappy socialist economy with no jobs, but they are being forced to buy expensive health care coverage that they don't need and won't use. Why? To subsidize the health care claims made by women and the elderly, who use more health care products and services.

# Moshe Averick: the origin of life and atheism-of-the-gaps

**Wintery Knight** · 4 October 2013 · Archived copy · Original

Can atheism explain the origin of life?
An amazing must-read article from a Jewish scholar named Moshe Averick, published in the Times of Israel. (H/T Mysterious Jacob via Mysterious Chris)

This is literally the greatest thing you will read all day, so everyone reading this sentence – please click the link, after you read my excerpts and snarky comments below.

His thesis:

> The history of scientific endeavor to discover a naturalistic origin of life reads like a laboratory version of a demolition derby. A researcher roars into the arena to propose a new theory and is summarily rammed and demolished by another theory driven by its respective theoretician who in turn is rammed and demolished by the next eager contestant.

Here are some of the naturalistic theories that have been proposed and demolished… frequently by other naturalists!

RNA-world theory:

- Dr. Robert Shapiro, Professor Emeritus of Chemistry at NYU on the popular RNA-World theory: "Picture a gorilla at an immense keyboard [that] contains not only the symbols used in English and European languages but also…from every other known language and all of the symbol sets stored in a typical computer. The chances [of functional RNA molecules forming by themselves] can be compared to those of the gorilla composing, in English, a coherent recipe for the preparation of chili con carne…the spontaneous appearance of RNA chains on the lifeless Earth would have been a near miracle."

Shapiro is a naturalist himself.

Metabolism First theory:

- Dr. Leslie Orgel – a proponent of the RNA-World theory – on the Metabolism First theory proposed by the aforementioned Dr. Shapiro: "Theories of the origin of life based on metabolic cycles cannot be justified by the inadequacy of competing theories: they must stand on their own…solutions offered by supporters of …metabolist scenarios that are dependent on 'if pigs could fly' chemistry are unlikely to help." Dr. George Whitesides of Harvard University, one of the world's greatest living chemists, made the following comment on the Metabolism First theory: "It seems to me to be astonishingly improbable."

For details on why these naturalistic theories are dismissed by naturalists, you should read Stephen C. Meyer's absolutely amazing book "Signature in the Cell" will recognize much in this article. Please if you don't have Dr. Meyer's two books on the origin of life and the Cambrian explosion ("Darwin's Doubt"), you really need to get them.

The article continues smashing a few more lame naturalistic scenarios, and then this tour-de-force:

> The present state of Origin of Life research is best summed up by Dr. Eugene Koonin, a highly respected microbiologist and veteran researcher in the field. From his 2011 book, *The Logic of Chance*:*The Nature and Origin of Biological Evolution*: "The origin of life is one of the hardest problems in all of science…Origin of Life research has evolved into a lively, interdisciplinary field, but other scientists often view it with skepticism and even derision. This attitude is understandable and, in a sense, perhaps justified, given the "dirty" rarely mentioned secret: Despite many interesting results to its credit, when judged by the straightforward criterion of reaching (or even approaching) the ultimate goal, *the origin of life field is a failure* – we still do not have even a plausible coherent model, let alone a validated scenario, for the emergence of life on Earth. Certainly, this is due not to a lack of experimental and theoretical effort, but to the extraordinary intrinsic difficulty and complexity of the problem. A succession of exceedingly unlikely steps is essential for the origin of life…these make the final outcome seem almost like a miracle." Dr. Paul Davies, Origin of Life expert and physicist at Arizona State University concurs: "You might get the impression from what I have written not only that the origin of life is virtually impossible, but that life itself is impossible…so what is the answer? Is life a miracle after all?"
>
> Put quite simply: The proposition that the gaping chasm between non-living, inorganic chemicals and a living bacterium could be bridged by an unguided naturalistic process is so patently absurd that it can be rejected out of hand. Despite the abundant availability of raw materials such as mud, stones, straw and rocks in a rain forest, one does not need to "prove" that a mud hut in a clearing in that forest is the product of intelligent intervention. An appropriate metaphor for a bacterium would be more like finding Buckingham Palace.
>
> It is obvious that life was created by an intelligent designer outside of the natural world and the reason why the origin of life "seems almost like a miracle," is because it*is a miracle.*
>
> However, atheist/materialist scientists refuse to give up so easily. Dr. Koonin himself has proposed a possible solution and escape hatch from having to accept a Creator of life: "The Many Worlds in One version of the cosmological model of eternal inflation might suggest a way out of the origin of life conundrum because, in an infinite multiverse with a finite number of macroscopic histories (each repeated an infinite number of times), the emergence of even highly complex systems by chance is not just possible, but inevitable." *(The Logic of Chance)*
>
> "The way out of the origin of life conundrum [is that] in an infinite multiverse…the emergence of even highly complex systems by chance is not just possible, but inevitable."
>
> Translation: The odds of rolling a six a thousand times in a row with a single die is 1 in 6 to the 1000th power, or 1 chance in 6 x 10 to the 999th power. The size of this number is beyond our comprehension but to provide some kind of baseline keep in mind that the number of atoms in the entire universe is roughly 10 to the 80th power. Despite this, as Koonin points out, if I am able to roll the die an infinite number of times, it is

> not only possible, but *inevitable* that it will happen. Although reason and scientific investigation have informed us of the virtual impossibility of life having formed on our planet by an undirected naturalistic process, the "way out of the origin of life conundrum" – that is to say, the way to avoid the obvious answer that life was created – is to propose a multiverse. With an infinite number of trials and errors available, it is not only possible but inevitable that life will form no matter how fantastic the odds against.
>
> He is right of course. With an infinite number of trials and errors not only is the formation of life inevitable but it is *just as inevitable* that at least one of each of the following has formed by *pure chance* and can be found on our planet today: iPhone 5, Toshiba Satellite Laptop Computer, Schwinn Discover Men's Hybrid Bike, full color poster of Jimmy Hendrix playing at Woodstock, Martin D-35 Acoustic Guitar, Mylec Eclipse Jet-Flow Hockey Stick, Revell 1:48 scale P-51D Mustang model airplane, and last but not least, a 2013 Rolls Royce Phantom Sedan (retail price- $465,000). I don't believe it, no one reading this article believes it, Eugene Koonin does not believe it, and even Richard Dawkins doesn't believe it.

Read the whole thing.

In my opinion, all of this loud worship of science from people like Dawkins, Atkins and Krauss is just a smokescreen. Atheism is first and foremost about dispensing with cosmic authority and moral accountability. If they have to believe in eternal universes, unseen aliens, untestable multiverses, undiscovered Cambrian precursor fossils, and even the freaking Flying Spaghetti Monster in order to see God's handiwork in nature, then they will do it.

Note: this concluding rant applies to village atheists like Christopher Hitchens, Lawrence Krauss and Richard Dawkins, not to exceptional academic non-theists like Peter Millican and Graham Oppy.

If you want to read a really good article on exactly how improbable the simplest living organism is, click here.

The really astonishing about the case for theism is that we have a half-dozen scientific arguments like this… this isn't even our best one! It's so strange because I find myself living in a world filled with atheists who basically believe in the Easter bunny even as they profess this great affection for the very thing that is exposing their madness – science! Like a person jealously hugging a chunk of radioactive material to himself and then claiming that it protects him from radiation sickness. *So surreal.*

Shabbat shalom, Moshe Averick, and Mazel Tov!

# Can the worldview of naturalism rationally ground mind, meaning and morality?

**Wintery Knight** · 4 October 2013 · Archived copy · Original

J. Warner Wallace, author of "Cold Case Christianity", explains why it can't.

Here's just one of the three troubles with naturalism:

> **Morality**
>
> If naturalism is true, morality is nothing more than a matter of opinion. All of us, as humans, have simply come to embrace those cultural or personal mores that best promote the survival of the species. There is no transcendent, objective moral truth. Instead, cultures merely embrace the values and moral principles that "work" for them and have resulted in the flourishing of their particular people group. If this is the case, one group of evolved humans has no business trying to tell another evolved group what is truly right or wrong from a moral perspective. After all, each group has successfully arrived at their particular level of development by embracing their own accepted moral standards. Arguments over which moral truths provide for greater human flourishing are simply subjective disagreements; there is no transcendent, objective standard that can adjudicate such disagreements from a naturalistic perspective.

Click the link to read the other two!

I think that the most odd thing about naturalism is that they think that all moral statements are true or false depending on personal preferences. For example, slavery. On naturalism, owning slaves or not owning slaves are both equally moral options, depending on whether most people decide that it's right in a particular time and place. Some societies in some places and times allow it, and others don't. And that's what makes it right or wrong. Naturalism has nothing at all to say about which view is correct, because there is no objective design for humans on naturalism – no way we ought to be. Every view is as good as any other, because there is no one to decide. If Richard Dawkins lived in a time where slavery was accepted, then Richard Dawkins would be perfectly justified, on atheism, with owning slaves. He has no source of objective moral values that can judge slavery as wrong. Right and wrong, for an atheist, is "whatever my colleagues will let me get away with". Perhaps Dawkins next book will be entitled "The Morality Delusion" – because morality *is* a delusion on atheism. It's just cultural conventions and personal preferences.

Anybody can be good when it's easy. Being good when it's hard requires that being good is *reasonable. N*aturalists don't have that in their worldview. After all if morality is basically like traffic laws and taste in food, then why would you "do the right thing" – comply with arbitrary customs that vary by time and place – when it goes against your self-interest? It makes no sense. It only makes sense to do the right thing when it goes against your self-interest if it is part of your objective design as a human being – if there is a plan for how you ought to be.

When a naturalist says "I'm a good person without God", you have to understand that they are making that statement as a statement of preference. On their view, there is nothing right or wrong with anything, *as a matter of fact*. They have determined themselves what counts as good *for them*, based on the arbitrary conventions of the society they live in and their own personal preferences. And they are in compliance with those conventions and preferences, then they are "good". That's what they mean by saying "I'm good" – they mean "I file my tax return every year and I don't eat broccoli because I don't like broccoli". So you can have an atheist defending infanticide or adultery in one breath and then in the next breath claiming that he is a good person because he drives at the speed limit, recycles cans and doesn't eat veal. The standard of morality is *their* standard of morality. It's just made up. And yet they expect you to give them respect for this.

It's very important to make clear to atheists when you are talking about morality that they believe that there is no objective truth about slavery. Make that clear. They love to tell you how good they are because of this position or

that position, but it's your job to say "the real issue isn't your personal preference, it's that you think that a person in a different time and place who practiced slavery could be as justified, morally speaking, as you are now in opposing it". That's the point you've got to make clear to them. They think that morality is like picking what to have for desert. If the action required by the moral law was difficult or dangerous to them, and their own self-interest, you can bet your bottom dollar that they won't risk a thing to do the "right" thing. On their view, right and wrong are illusions.

# Catholic chaplains face arrest for performing mass during shutdown

**Wintery Knight** · 5 October 2013 · Archived copy · Original

Todd Starnes of Fox News does a good job of covering the how the secular left infringes on religious liberty in the military.

Check out his latest story. (H/T ECM)

Excerpt:

> The U.S. military has furloughed as many as 50 Catholic chaplains due to the partial suspension of government services, banning them from celebrating weekend Mass. At least one chaplain was told that if he engaged in any ministry activity, he would be subjected to disciplinary action.
>
> "In very practical terms it means Sunday Mass won't be offered," Archbishop Timothy Broglio of the Archdiocese for the Military Services told me. "If someone has a baptism scheduled, it won't be celebrated."
>
> The Archdiocese for the Military Services tells me the military installations impacted are served by non-active-duty priests who were hired as government contractors. As a result of a shortage of active duty Catholic chaplains, the government hires contract priests.
>
> Broglio said some military bases have forbidden the contract priests from volunteering to celebrate Mass without pay.
>
> "They were told they cannot function because those are contracted services and since there's no funding they can't do it – even if they volunteer," he said.
>
> John Schlageter, general counsel for the archdiocese, said any furloughed priests volunteering their services could face big trouble.
>
> "During the shutdown, it is illegal for them to minister on base and they risk being arrested if they attempt to do so," he said in a written statement.
>
> A well-placed source told me that a furloughed Air Force chaplain was threatened after he offered to forgo pay. The chaplain was told he could not go on base or enter his chapel offices. He was also barred from engaging in any ministry activity.
>
> The source told me the chaplain was told that if he violated those orders he and his supervisor would be subjected to disciplinary action – with the possibility of being fired.

I don't think anyone should be surprised that the Democrats are hostile to freedom of religion. They are, after all, socialists. Government is more important than religion, and if they conflict, government wins.

# Pastor Matt: five books Christians should read to understand politics and public policy

**Wintery Knight** · 5 October 2013 · Archived copy · Original

I agree with this list by Pastor Matt.

About Pastor Matt:

> Hello, my name is Matt and I am a book addict (i.e., well read, sophisticated, sad and lonely here is evidence). But I want my sickness to help you. I have been a political junkie since 1992 when I was recruited by my then Congressman to work for him. I then ran several campaigns including helping a businessman win a seat in the U.S. House in 1994. I spent two years working in the House during the Gingrich years of 1995-1997. I then attended seminary and law school but have remained a political and public policy junkie. During this week's political dust-ups, I read a lot of statements from Christians that qualify as "bumper sticker" logic at best. So, for those interested, here are five books every Christian leader should read if they want to truly understand politics and public policy.

The list:

1. A Patriot's History of the United States: From Columbus's Great Discovery to the War on Terror by Larry Schweikart and Michael Allen
2. The Heritage Guide to the Constitution by Ed Meese, Ed. (Regnery 2005)
3. Basic Economics by Thomas Sowell (Basic Books 2010)
4. Politics According to the Bible by Wayne Grudem (Zondervan 2010)
5. The Poverty of Nations: A Sustainable Solution by Wayne Grudem and Barry Asmus (Crossway 2013)

I think it's nice to see that pastor Wayne Grudem appears twice in the list. He has a PhD from Cambridge University and is the best theologian who writes books about economic and political issues. (Notice how I left room for Pastor Matt to be the best overall on economics and political issues!)

Here's the detail on number three:

> Basic Economics by Thomas Sowell (Basic Books 2010). Most Christian leaders (and apparently most Americans) have a poor understanding of economics. Most seem to believe wealth is fixed (it isn't), incentives and effectiveness are secondary to fairness (they aren't), etc. Sowell, a long time professor of economics who has taught at Cornell and UCLA, has penned a long but very reader friendly work that you should take chapter-by-chapter.

On this blog, I feature Thomas Sowell a lot. The good thing about him is that even if you can't buy his book, you can read lots of his current events stuff for free. In fact, he wrote a great column recently explaining the government shutdown that I think everyone should read. You can also get great sermons on politics and public policy from Wayne Grudem's "Essentials" class.

# Are House Republicans doing anything wrong by refusing to fund Obamacare?

**Wintery Knight** · 6 October 2013 · Archived copy · Original

Economist Thomas Sowell

Thomas Sowell explains separation of powers.

Excerpt:

> The Republican-controlled House of Representatives voted all the money required to keep all government activities going — except for ObamaCare.
>
> This is not a matter of opinion. You can check the Congressional Record.
>
> As for the House of Representatives' right to grant or withhold money, that is not a matter of opinion either. You can check the Constitution of the United States. All spending bills must originate in the House of Representatives, which means that Congressmen there have a right to decide whether or not they want to spend money on a particular government activity.
>
> Whether ObamaCare is good, bad or indifferent is a matter of opinion. But it is a matter of fact that members of the House of Representatives have a right to make spending decisions based on their opinion.
>
> ObamaCare is indeed "the law of the land," as its supporters keep saying, and the Supreme Court has upheld its Constitutionality.
>
> But the whole point of having a division of powers within the federal government is that each branch can decide independently what it wants to do or not do, regardless of what the other branches do, when exercising the powers specifically granted to that branch by the Constitution.
>
> […]When Barack Obama keeps claiming that it is some new outrage for those who control the money to try to change government policy by granting or withholding money, that is simply a bald-faced lie. You can check the history of other examples of "legislation by appropriation" as it used to be called.
>
> Whether legislation by appropriation is a good idea or a bad idea is a matter of opinion. But whether it is both legal and not unprecedented is a matter of fact.

> Perhaps the biggest of the big lies is that the government will not be able to pay what it owes on the national debt, creating a danger of default. Tax money keeps coming into the Treasury during the shutdown, and it vastly exceeds the interest that has to be paid on the national debt.
>
> Even if the debt ceiling is not lifted, that only means that government is not allowed to run up new debt. But that does not mean that it is unable to pay the interest on existing debt.

The House Republicans have been passing bill after bill in order to fund essential responsibilities of government. It's their decision to fund whatever they want, because that's what the House does. But the Senate has been rejecting most of these bills. If parts of the government are "shut down" it's the fault of the Senate Democrats. But then again, they are no more obligated to approve whatever the House wants than the House is obligated to approve what the Senate wants. Or what the President wants. That's why there is a separation of powers: checks and balances.

# What Christians can learn about morality from “Breaking Bad”

**Wintery Knight** · 6 October 2013 · Archived copy · Original

I found this post about the TV series “Breaking Bad” through J.W. Wartick’s “Really Recommended Posts“.

The author of the post argues that most of what you see in the arts and entertainment field tries to give us the idea that there is a dichotomy between small choices and big choices. But Breaking Bad rejects this by trying to show how small choices add up to your character.

Take a look:

> I think *Breaking Bad* is a great show because it rejects this line of thinking [small vs big choices], because its running time is a five-season rebuttal to the idea that there are choices that matter and choices that don’t. Walt’s pride at a dinner table is ultimately as important to the villain he becomes as his murder, his lying as corruptive as his violence. In Gilligan’s eyes, there’s no differentiating between Walt’s pride and his rage and his enviousness and his determination to succeed at all costs, to be *the* Kingpin, the only one. Telling the story of how Walt chose to become the villain takes every minute of all 67 episodes aired so far.
>
> **You do not accidentally end up a drug kingpin, says the show.** And the story is a five season long *a fortiori* argument whose conclusion is that you, viewer, also have a choice, in what to watch, or say, in how to treat people, in who to be. To echo James K.A. Smith, there are very few, if any, “morally neutral” practices. We get shaped by the things we do, or don’t do, even unintentionally, even if you’re not paying attention.
>
> *Breaking Bad* echoes that not only in content, but in form. In the critical importance of little decisions (Walt’s wined-up boasting in front of Hank; his lying to his wife, Skyler; Marie’s shoplifting; Hank’s pride and arrogance affecting his job) that all compound in the direction of calamity.
>
> “I just feel like I never had a choice in any of this,” Walt argues early on in season one, after he’s declined cancer treatment. “I want a say, for once.” When you first watch the scene, not knowing the kind of person Walt is going to choose to be, it’s a poignant moment. Walt wants to spend his last months with his wife on *his* own terms, rather than as a powerless and weak and hollowed out shell of who he used to be.
>
> But as flashbacks inform the choices Walt made in the past, and as time and time again Walt refuses to stop cooking meth, to stop feeding his own pride, the scene is recontextualized as an ironic echo—as just another excuse for Walt’s behavior. The paradox central to Walt’s nature is that if you deny him a choice, he becomes furious. Because of this, most every conflict in the show stems from the interplay of Walt’s staggering intelligence and his equally impressive capacity for stupid, pride-motivated decisions.
>
> But if you empower Walt, when he comes into real responsibility, he shirks it, he self-sabotages; he pretends he doesn’t have a choice, or never did have a choice. He becomes paranoid, and self-aggrandizing, and manipulative, until he’s relaxed from the tension of having responsibility—and as soon as that happens, he’s out looking for it again.
>
> When all Walt has are *choices*, he demands a CHOICE; and as soon as it is presented to him, as soon as the danger of responsibility is there and real and able to hurt him, he denies it, labels it meaningless, and continues to victimize himself.
>
> Walter is us. And that is a dangerous message, and it hurts. It hurts to be awakened to choices you didn’t know you were failing to make, or making poorly. It is always, always easier to deny choice than to accept it, to want to brush things off until it’s *really* important, until it’s a choice, and then perform well, and go back to the status quo of being a-volitional. We want to be fully ourselves *already*, and for our actions to be extrinsic, non-reflective. To keep separate who we are, our identities, and what we do in our everyday life.
>
> But that’s not what it means to have character. And it’s not what it means to be a human being, created to shift and change dynamically. The tragedy of Walter White makes for a great narrative, and for really compelling

> TV. But the lesson of *Breaking Bad* is invaluable, especially in a culture like ours, that's so allergic to prescriptive statements, to generalizations that aren't platitudes, to Truth Claims about the nature of humanity. *Breaking Bad* doesn't just make those claims—it does it with gusto. It confronts you with the ugliness of humanity like a Flannery O'Connor story, begging you to look and to look away, to see the outer extreme of an idea so that you'll kick back and respond and fight with it, because engaging is just as much of a choice as anything else.

That reminds me of this well-known saying:

> Sow a thought, reap an action; sow an action; reap a habit; sow a habit, reap a character; sow a character reap a destiny

Something to think about when we are making the decisions about "how far is too far?". The best way to avoid becoming a bad person is by not trying to walk on a dramatic line, but by making a million decisions every day to consciously get away from evil.

I find that in the church there is this strange and ridiculous idea everywhere that you can just do whatever you want and that God will give you the strength to be courageous and effective in these dramatic moments when you are tested – perhaps by being asked to deny Jesus or die. That will *probably never happen* for most of us. We overestimate how much an "act of God" can really do compared to the long, slow hum-drum day-to-day work towards a goal. A person has to die a million little deaths in order to achieve big things, like marry well and raise Christian kids, or keep a job to support a home, to get an MS or a PhD, etc. It's the million little sacrifices that lead to making a big impact in the end.

Think abut it another way. How do the Armed Forces train soldiers in order to fight as a team and be brave? Do they just say "go about your lives, and when the time comes God will tell you what to do"? Hell, no. They drill and train and prepare for war because they know that this is what works. They have obstacle courses with live-fire machine guns and explosions to get soldiers used to making decisions under fire. They have classroom instruction and reading lists to share knowledge that will be useful in battle. All of this is to get the soldiers into the habit of making tiny brave decisions under controlled conditions. God doesn't throw ordinary Christians out in a university auditorium and say "now perform like Bill Craig". Bill Craig is Bill Craig because he chose to pass over fun things a million times and to instead focus on hard things like advanced degrees, reading advanced books and practicing debate. He isn't debating in front of thousands of people because he made one "big" choice, but because he has a million little choices.

This lie about service being something that God has to lead you to is one of the biggest lies in the church today. That you don't have to build the kind of life that honors God one self-sacrificial decision at a time. That you don't have to have a long-term plan to be effective, but instead just do what you "feel led" to do moment by moment. That you can have as much impact as a Jim Demint or a William Lane Craig or a Ryan Anderson without having to train and prepare for it. It's a lie to think that making an impact is a one-decision affair. We over-spiritualize the idea of serving God to give ourselves maximum autonomy and tell ourselves that "if it comes to that, I'll be faithful", while living ordinary lives the rest of the time. It's probably never going to come to that, so shouldn't you have some sort of day-to-day long-term self-sacrificial plan to achieve something for God instead?

# How many people have signed up for Obamacare?

**Wintery Knight** · 6 October 2013 · Archived copy · Original

The Weekly Standard reports.

Excerpt:

> Treasury Secretary Jack Lew refused to answer Fox host Chris Wallace's simple question this morning: How many people have signed up for Obamacare?
>
> "I'm going to ask you one last time," said Wallace, "because, forgive me sir, you haven't answered it: do you not know how many people signed up, which would seem to indicate another major software glitch, or is it that the numbers are embarrassingly small?"
>
> "Chris, our metric for this week was, could people get online, get the information they need to make an informed," said Lew, sidestepping the straightforward question. "They have been getting that information. We are confident that they are going to make the decision — they have 6 months to make the decision."
>
> Wallace tried again: "So do you not know or is that the number is –"
>
> "Well, it's obviously not my primary area of responsibility," said the treasury secretary.

I have a more important question. Why did we elect a community organizer to make health care policy?

Reuters says that the IT architecture for the web application stinks.

Excerpt:

> Days after the launch of the federal government's Obamacare website, millions of Americans looking for information on new health insurance plans were still locked out of the system even though its designers scrambled to add capacity.
>
> […]Five outside technology experts interviewed by Reuters, however, say they believe flaws in system architecture, not traffic alone, contributed to the problems.
>
> […]"Adding capacity sounds great until you realize that if you didn't design it right that won't help," said Bill Curtis, chief scientist at CAST, a software quality analysis firm, and director of the Consortium for IT Software Quality. "The architecture of the software may limit how much you can add on to it. I suspect they'll have to reconfigure a lot of it."
>
> […]One possible cause of the problems is that hitting "apply" on HealthCare.gov causes 92 separate files, plug-ins and other mammoth swarms of data to stream between the user's computer and the servers powering the government website, said Matthew Hancock, an independent expert in website design. He was able to track the files being requested through a feature in the Firefox browser.
>
> […]"They set up the website in such a way that too many requests to the server arrived at the same time," Hancock said.
>
> He said because so much traffic was going back and forth between the users' computers and the server hosting the government website, it was as if the system was attacking itself.
>
> Hancock described the situation as similar to what happens when hackers conduct a distributed denial of service, or DDOS, attack on a website: they get large numbers of computers to simultaneously request information from the server that runs a website, overwhelming it and causing it to crash or otherwise stumble. "The site basically DDOS'd itself," he said.
>
> […]The government official blamed the glitch on massive traffic, but outside experts said it likely reflected programming choices as well.

Obama doesn't know anything about software engineering. And all his appointees are radical leftist political hacks. Obama's administration has the least private sector experience of any recent administration. These people have no idea how to design large-scale web applications. They outsourced the whole thing and it blew up in their faces.

But do you know who does understand information technology? Someone with a Bachelor's degree in mathematics and a Master's degree in computer science from Purdue University would.

Presidential candidate Herman Cain

A while back, we had an opportunity to elect a software engineer who is also one of the country's *most successful* businessmen – Herman Cain. His massive company had a huge IT infrastructure. But we didn't vote for Herman Cain, we voted for Obama. If we had voted for Herman Cain, then IT would be leveraged successfully to support whatever government involvement in health care was appropriate. If you want software done right, then elect a software engineer. If you want to run the country like a successful business, elect a successful businessman.

# John Boehner to leftist George Stephanopolous: no clean debt limit increase

**Wintery Knight** · 7 October 2013 · Archived copy · Original

John Boehner says that the Republicans are not going to be bullied by Barack Obama and Harry Reid.

Here's a rush transcript for the video above.

And here is the interesting part:

> STEPHANOPOULOS: How is this going to end? You're clearly not budging right now, even though you are taking — even though polls show that most Americans blame Republicans for the shutdown right now. How long is it going to go on? Is the government going to stay shut down until we reach the debt limit deadline of October 17th?
>
> BOEHNER: Listen, the debt limit is right around the corner. The president is saying, I won't negotiate. I won't have a conversation. Even though, President Reagan negotiated with Democrats who controlled the Congress back then. Even though President George Herbert Walker Bush had a conversation about raising the debt limit. During the Clinton administration, there were three fights over the debt limit. You and I participated in several of those. And even President Obama himself in 2011, went through a negotiation.
>
> Now, he's saying no. I'm not going to do this.
>
> I'm going to tell you what, George. The nation's credit is at risk because of the administration's refusal to sit down and have a conversation.
>
> STEPHANOPOULOS: They're saying it's at risk because of your refusal to pass a clean debt limit. There have been some reports–
>
> BOEHNER: We're not going to pass a clean debt limit increase.
>
> STEPHANOPOULOS: Under no circumstances?
>
> BOEHNER: I told the president, there's no way we're going to pass one. The votes are not in the House to pass a clean debt limit. And the president is risking default by not having a conversation with us.
>
> STEPHANOPOULOS: So under no circumstances will you pass a clean debt limit?
>
> **BOEHNER: We're not going down that path. It is time to deal with America's problems. How can you raise the debt limit and do nothing about the underlying problem?**
>
> **George, we've spent more than what we've brought in for 55 of the last 60 years. This year, the federal government will have more revenue than any year in the history of our country, and yet we're still going to have a nearly $700 billion budget deficit. We're squandering the future for our kids and our grandkids, by not dealing with this problem.**
>
> STEPHANOPOULOS: The deficit, as you know, has been coming down this year, but I want to press you on this issue of the risks of not passing a clean debt limit. The Treasury Department put out a report just the other day, where they said it would be unprecedented and catastrophic, that would be the impact of failing to pass a debt limit. They're going to say, credit markets could freeze. The value of the dollar could plummet. U.S. interest rates could skyrocket. The negative spillovers could reverberate around the world, and there might be a financial crisis and recession that could echo the events of 2008 or worse.
>
> Do you agree with that assessment?
>
> BOEHNER: I do. And the president is putting the nation at risk by his refusal to sit down and have a conversation.
>
> STEPHANOPOULOS: As — we're going to go back on this. He says you're putting it at risk by refusing to

> pass a clean debt limit, so just let me — let me press that, because there have been some reports that you have told your own members that you would be willing to put a debt limit on the floor that would pass with Democratic votes, even if it didn't get a majority of the Republican caucus. Is that no longer true?
>
> **BOEHNER: My goal here is not to have the United States default on their debt. My goal here is to have a serious conversation about those things that are driving the deficit and driving the debt up. And the president's refusal to sit down and have a conversation about this is putting our nation at risk of default.**
>
> STEPHANOPOULOS: So are you saying that if he continues to refuse to negotiate, the country is going to default?
>
> BOEHNER: That's the path we're on. The president canceled his trip to Asia. I assumed — well, maybe he wants to have a conversation. I decided to stay here in Washington this weekend. He knows what my phone number is. All he has to do is call.
>
> STEPHANOPOULOS: So it's October 17th, 8:00 p.m. The clock is ticking towards midnight. The country is scheduled to run out of money, won't be able to pay its bills anymore. What do you do in that moment?
>
> BOEHNER: No family in America can spend more than what it brings in for 55 of the last 60 years. No family or business in America can survive a $700 billion budget deficit in one year. It is time for us to deal with our underlying spending problems.
>
> I'm willing to sit down and have a conversation with the president. But his refusal to negotiate is putting our country at risk.
>
> STEPHANOPOULOS: So the clock is ticking on October 17th. You're not going to put that bill on the floor?
>
> BOEHNER: I want to deal with our underlying problem.
>
> STEPHANOPOULOS: Yes or no, would you put that bill on the floor?
>
> BOEHNER: I don't want the United States to default on its debt. But I'm not going to raise the debt limit without a serious conversation about dealing with problems that are driving the debt up. It would be irresponsible of me to do this.
>
> STEPHANOPOULOS: It's also been reported that you're going to guarantee that we do not default. It sounds like you're not prepared to offer that guarantee, you're not prepared to promise you would actually put the bill on the floor.
>
> BOEHNER: I've been willing to sit down with the president and have this conversation. His refusal to negotiate is what's putting the government at risk of default.

What is Boehner talking about having a conversation about debt?

This:

What Drives Our Debt

That's what Boehner is talking about. He doesn't want to keep raising the debt ceiling over and over when it looks like the entitlement programs are going to be consuming a greater share of government revenues, leaving no money left over for other programs. It looks like the Republicans in the House are serious about trying to stop our runaway spending problem. The Democrats? They just want a blank check to keep spending on Solyndra, and then they'll send your kids (and grandkids) the bill.

# Democrats try to block whistleblower's Fast and Furious expose

**Wintery Knight** · 7 October 2013 · Archived copy · Original

Fox News reports on the latest Democrat cover-up scandal. (H/T Dad)

Excerpt:

> The ATF agent who blew the whistle on Operation Fast and Furious has been denied permission to write a book on the botched anti-gun trafficking sting "because it would have a negative impact on morale," according to the very agency responsible for the scandal.
>
> After first trying to stop the operation internally, ATF Agent John Dodson went to Congress and eventually the media following the death of Border Patrol Agent Brian Terry in December 2010. Two guns found at the murder scene were sold through the ATF operation.
>
> Dodson's book, titled "The Unarmed Truth," provides the first inside account of how the federal government permitted and helped sell some 2,000 guns to Mexican drug cartels, despite evidence the guns killed innocent people.
>
> Dodson, who is working with publisher Simon & Schuster, submitted his manuscript to the department for review, per federal rules. However, it was denied.
>
> Greg Serres, an ATF ethics official, told Dodson that any of his supervisors at any level could disapprove outside employment "for any reason."
>
> […]Dodson says "The Unarmed Truth" will come out in January, with or without the ATF's permission.

I hope this book sells a lot of copies.

# How early can you start to teach children about Christian apologetics?

**Wintery Knight** · 7 October 2013 · Archived copy · Original

Here's a post from a new blog called Beyond Teachable Moments, which offers best practices for Christian parents who want to prepare their children for a world that doesn't always support Christian convictions – and that's putting it mildly. In this post, the author explains how she is able to prepare her two boys for a pretty common objection to Christianity.

The challenge:

> I think all kids, and adults, have a curiosity about where the Bible came from, how it was put together, and how it was passed down. That is why my husband and I wanted to teach our kids some of the basics about this topic early on in their lives. We have found our kids to be really receptive to this material.
>
> […]Do these differences in the gospel accounts mean that the disciples made up the story about Jesus, or that they are at least unreliable eyewitnesses, as some conclude? If the eyewitnesses to the gospel accounts can't get their story straight, should we believe their testimony at all?

So the mom planned out an activity to teach her kids to defend against this objection: (how old do you think kids have to be for this to work?)

> The gist of this activity is to set up a scenario where your kids act as eyewitnesses to an event, and then help them to discover that they each will remember and report on different aspects of that event.
>
> There are many ways to do this activity. I chose to create my own scenario, which I detail below. You could alternatively have your kids, or one child and a different adult, watch a video clip together on YouTube or on a DVD. Just make sure to watch the clip on your own in advance so you that have the details straight in your own head first. Then ask similar pointed questions to the ones listed in the activity outlined below.
>
> I arranged for our kids to meet me in the living room at an appointed time. I told them that I had something special to show them. I didn't give them any further preparation.
>
> Then I dressed up in a strange and elaborate costume. I put on various pieces of my kid's dress up costumes (a hat, a mask, ponytails in my hair, a cape, a shirt with a picture on it, gloves, a scarf, and various things sticking out of my front and back pockets, and I had a stuffed animal tucked in somewhere to boot).
>
> At the appointed time, I came into the room where my kids were seated and announced with a strange accent: "Welcome everyone. I am Mommy the Magnificent and I have a magic show to perform for you!"
>
> I then explained how I was going to make something disappear in my magic hat. I put a small toy in my hat; I waved a fancy cloth over top of it that I had taken out of one of my pockets, turned around a bunch of times (mainly so they could see the back of my costume), and said some magic sounding words. I did some fancy dancing moves and made the toy disappear (by concealing it in my hand). I then bowed and left the room.
>
> The kids were amused, but also confused.
>
> I told the kids to stay where they were, and quickly took off all of my costume and hid it out of sight. I re-entered the room where my kids were bouncing off the walls, re-gathered them onto the couch and told them that that they were just eyewitnesses to what I had performed for them.
>
> Then I asked: What is an eyewitness? (Answer: Someone who sees something with their own eyes. As they also heard something, our kids coined the term 'earwitness' as well!)
>
> I told them that I was going to interview each of them to find out what they saw in my performance. I took

> them one by one into a different room where our conversation could not be overheard by their brother, and interviewed them individually.  I told the one waiting to be interviewed to think hard about what he had just seen in preparation for his interview.

Click through to read how the kids responded. I don't have any kids of my own, but I am reading this blog to see how it's done. Each post is showing a completely new creative technique for teaching apologetics to these two young boys. If you have any techniques like this, post an example in the comments.

Do you think that it is worth it to have a stay-at-home mom doing these sorts of activities with kids? Do you think that a government-run daycare would do similar activities? What sort of policies should a liberty-minded government enact in order to free up mothers to stay home and nurture their children like this? Which political party do you think is pushing for those policies? Which party is trying to make it harder for moms to stay home and do these sorts of activities?

# Obamacare supporters shocked that they have to pay for Obamacare

**Wintery Knight** · 8 October 2013 · Archived copy · Original

I thought that everything that the Democrats promise was free? Or at least, that only greedy rich employers would pay for it all.

Ooops:

> **Cindy Vinson and Tom Waschura are big believers in the Affordable Care Act. They vote independent and are proud to say they helped elect and re-elect President Barack Obama.**
>
> **Yet, like many other Bay Area residents who pay for their own medical insurance, they were floored last week when they opened their bills: Their policies were being replaced with pricier plans that conform to all the requirements of the new health care law.**
>
> **Vinson, of San Jose, will pay $1,800 more a year for an individual policy, while Waschura, of Portola Valley, will cough up almost $10,000 more for insurance for his family of four.**
>
> […]As state- and federal-run health insurance exchanges debuted across the country offering a range of prices for different tiers of insurance coverage, the new online marketplaces — which represent the centerpiece of Obamacare — could greatly benefit more than 40 million Americans who now lack coverage. But an additional 16 million — who buy individual health insurance policies on the open market — are finding out that their plans may not comply with the new law, which requires 10 essential benefits such as maternity care, mental health care and prescription drug coverage.
>
> In California, 1.9 million people buy plans on the open market, according to officials with Covered California, the state's new health insurance exchange. And many of them are steaming mad.
>
> "There's going to be a number of people surprised" by their bills, said Jonathan Wu, a co-founder of ValuePenguin, a consumer finance website. "The upper-middle class are the people who are essentially being asked to foot the bill, and that's true across the country."

But what about covering pre-exisitng conditions? Isn't that free at least?

Apparently not:

> Even those who don't qualify for the tax subsidies could see their rates drop because Obamacare doesn't allow insurers to charge people more if they have pre-existing conditions such as diabetes and cancer, he said.
>
> […]But people with no pre-existing conditions like Vinson, a 60-year-old retired teacher, and Waschura, a 52-year-old self-employed engineer, are making up the difference.
>
> "I was laughing at Boehner — until the mail came today," Waschura said, referring to House Speaker John Boehner, who is leading the Republican charge to defund Obamacare.
>
> "I really don't like the Republican tactics, but at least now I can understand why they are so pissed about this. When you take $10,000 out of my family's pocket each year, that's otherwise disposable income or retirement savings that will not be going into our local economy."
>
> Both Vinson and Waschura have adjusted gross incomes greater than four times the federal poverty level — the cutoff for a tax credit. And while both said they anticipated their rates would go up, they didn't realize they would rise so much.
>
> **"Of course, I want people to have health care," Vinson said. "I just didn't realize I would be the one who was going to pay for it personally."**

This is especially bad for young male Obama supporters, who are basically being forced to pay for things they will never use in order to pay for the votes that Obama bought to win the election. (Which is all that wealth redistribution is – it's vote buying)

Excerpt:

> Young men will be the biggest losers in the transition to Obamacare, according to a new report by the actuarial and consulting firm Milliman. The report estimates that males as a whole will see an 11 percent increase in insurance premiums, while females as a whole will see a nine percent decrease. Men under 40 will face insurance hikes of 18 to 31 percent; females under 40 will benefit from 13 to 19 percent decreases.
>
> But here's the real kicker: premiums for young men ages 25-36 could increase by more than 50 percent, and females 25-29 will face a 4 percent increase. In other words, if you're young, you lose. If you're a man, you lose. If you're a young man, you really lose.
>
> Recent news about Obamacare premium costs has tended to focus on whether the premiums will go up or down on average. What this data shows is that these broader national or state averages hide scarier changes in the group-by-group breakdowns. Young people are already the hardest hit by the recession and by the plethora of other entitlement programs that subsidize the boomers. Young men, in particular, are especially hurt by some of the country's current economic shifts. Passing a law that forces them to shoulder an even greater economic burden and then spending tons of money to convince them to sign up for this raw deal is both cruel and irresponsible.

Oh well, it's not like young men needed the money for anything. Like marriage and fatherhood. In any case, I am sure that they'll continue to marry and have children the same as they did before if we just get pastors to tell them to "man up".

# How much more are people paying for health insurance under Obamacare?

**Wintery Knight** · 8 October 2013 · Archived copy · Original

Here's a story from the Charlotte Observer that explains how expensive Obamacare really is.

Excerpt:

> Across North Carolina, thousands of people have been shocked in recent weeks to find out their health insurance plans will be canceled at the end of the year – and premiums for comparable coverage could increase sharply.
>
> One of them is George Schwab of Charlotte, who pays $228 a month for his family's $10,000 deductible plan from Blue Cross and Blue Shield of North Carolina.
>
> In a Sept. 23 letter, Blue Cross notified him that his current plan doesn't meet benefit requirements outlined in the Affordable Care Act and suggested a comparable plan for $1,208 a month – $980 more than he now pays.
>
> "I'm 62 and retired," Schwab said. "This creates a tremendous financial burden for our family.
>
> **"The President told the American people numerous times that… 'If you like your coverage, you can keep it,'" Schwab said. "How can we keep it if it has been eliminated? How can we keep it if the premium has been increased 430 percent in one year?"**

And another:

> Michael Hood, 46, who lives near Winston-Salem, is another of the Blue Cross customers who is suffering sticker shock after receiving a recent renewal letter.
>
> He and his wife, who is expecting their third child, now pay $324 per month for a plan with a $10,000 family deductible. The comparable plan suggested by Blue Cross for next year would cost $895.27 per month with an $11,000 family deductible. Their annual payment would rise from $14,000 to $24,000.
>
> Self-employed as part owner of a medical device distributorship, Hood said he and his wife "try to live a healthy lifestyle and keep our medical costs down." They chose the high-deductible plan to keep their premium low.
>
> Hood said his income is about $85,000 a year, which would mean he might be able to qualify for a subsidy. He said he checked the online marketplace, which has been operating only sporadically this week, and didn't think it looked like his family would be eligible.
>
> One of the pluses of any new plan is that it will cover maternity care, which his current plan doesn't. But "is that really worth paying $1,000 a month more for?"
>
> "I'm angry that legislation has been passed that is forcing me to purchase something that otherwise I would not have to purchase," Hood said.
>
> **"The President told us Obamacare would make health insurance affordable and reduce costs. It is now impossible for our family to afford private health insurance."**

I keep hearing from my friends in other countries how their media is reporting that Obamacare is enormously popular, and that Republicans are trying to hold up this great policy that Americans all want out of meanness and spite. I doubt that these foreign journalists are actually reporting the facts about this health care policy. The facts show a completely different picture.

# New study: children of same-sex couples do less well than those of married couples

**Wintery Knight** · 8 October 2013 · Archived copy · Original

The Public Discourse reports on a new study out of Canada.

Excerpt:

> A new academic study based on the Canadian census suggests that a married mom and dad matter for children. Children of same-sex coupled households do not fare as well.
>
> There is a new and significant piece of evidence in the social science debate about gay parenting and the unique contributions that mothers and fathers make to their children's flourishing. A study published last week in the journal *Review of the Economics of the Household*—analyzing data from a very large, population-based sample—reveals that the children of gay and lesbian couples are only about 65 percent as likely to have graduated from high school as the children of married, opposite-sex couples. And gender matters, too: girls are more apt to struggle than boys, with daughters of gay parents displaying dramatically low graduation rates.
>
> Unlike US-based studies, this one evaluates a 20 percent sample of the Canadian census, where same-sex couples have had access to all taxation and government benefits since 1997 and to marriage since 2005.
>
> While in the US Census same-sex households have to be guessed at based on the gender and number of self-reported heads-of-household, young adults in the Canadian census were asked, "Are you the child of a male or female same-sex married or common law couple?" While study author and economist Douglas Allen noted that very many children in Canada who live with a gay or lesbian parent are actually living with a single mother—a finding consonant with that detected in the 2012 New Family Structures Study—he was able to isolate and analyze hundreds of children living with a gay or lesbian *couple* (either married or in a "common law" relationship akin to cohabitation).
>
> So the study is able to compare—side by side—the young-adult children of same-sex couples and opposite-sex couples, as well as children growing up in single-parent homes and other types of households. Three key findings stood out to Allen:
>
> children of married opposite-sex families have a high graduation rate compared to the others; children of lesbian families have a very low graduation rate compared to the others; and the other four types [common law, gay, single mother, single father] are similar to each other and lie in between the married/lesbian extremes.
>
> Employing regression models and series of control variables, Allen concludes that the substandard performance *cannot* be attributed to lower school attendance or the more modest education of gay or lesbian parents. Indeed, same-sex parents were characterized by higher levels of education, and their children were more likely to be enrolled in school than even those of married, opposite-sex couples. And yet their children are notably more likely to lag in finishing their own schooling.
>
> […]The truly unique aspect of Allen's study, however, may be its ability to distinguish gender-specific effects of same-sex households on children. He writes:
>
> the particular gender mix of a same-sex household has a dramatic difference in the association with child graduation. Consider the case of girls. . . . Regardless of the controls and whether or not girls are currently living in a gay or lesbian household, the odds of graduating from high school are considerably lower than any other household type. Indeed, girls living in gay households are only 15 percent as likely to graduate compared to girls from opposite sex married homes.
>
> Thus although the children of same-sex couples fare worse overall, the disparity is unequally shared, but is instead based on the combination of the gender of child and gender of parents. Boys fare better—that is,

> they're more likely to have finished high school—in gay households than in lesbian households. For girls, the opposite is true. Thus the study undermines not only claims about "no differences" but also assertions that moms and dads are interchangeable. *They're not.*

With a little digging, I found the abstract of the study:

> Almost all studies of same-sex parenting have concluded there is "no difference" in a range of outcome measures for children who live in a household with same-sex parents compared to children living with married opposite-sex parents. Recently, some work based on the US census has suggested otherwise, but those studies have considerable drawbacks. Here, a 20% sample of the 2006 Canada census is used to identify self-reported children living with same-sex parents, and to examine the association of household type with children's high school graduation rates. This large random sample allows for control of parental marital status, distinguishes between gay and lesbian families, and is large enough to evaluate differences in gender between parents and children. Children living with gay and lesbian families in 2006 were about 65 % as likely to graduate compared to children living in opposite sex marriage families. Daughters of same-sex parents do considerably worse than sons.

The author of the study is a professor of economics at Simon Fraser University in British Columbia. His PhD in economics is from the University of Washington.

# New study: IVF babies are one third more likely to contract cancer

**Wintery Knight** · 9 October 2013 · Archived copy · Original

The UK Daily Mail reports.

Excerpt: (links removed)

> Children born as a result of IVF are a third more likely to get cancer, a major study found.
>
> Scientists said those born after fertility treatments were 33 per cent more likely to have childhood cancer.
>
> They were 65 per cent more likely to develop leukaemia and 88 per cent more likely to develop cancers of the brain and central nervous system.
>
> […]The research, in the journal Fertility and Sterility, reviewed 25 studies from 12 developed countries, including the US, the UK, Denmark, France and Israel, from 1990 to 2010.
>
> 'The results of the largest meta-analysis on this topic to date indicate an association between fertility treatment and cancer in offspring,' wrote author Dr Marie Hargreave, of the Danish Cancer Society research centre, Copenhagen.
>
> 'The etiology [origin] of childhood cancer is still largely unknown, but it has been hypothesized that fertility treatment may play a role.'

In addition, IVF often results in abortions because unused embryos are discarded. And even worse, in countries like the UK, IVF is taxpayer-funded. I know that liberal groups in Canada and the U.S. would love to have taxpayer-funded IVF, as well.

**Biological Colonialism**

There's also a story about the "colonialism" of IVF by Wesley J. Smith in First Things.

Excerpt: (links removed)

> We already know that children born of IVF have poorer health outcomes than those conceived naturally. Yet, in the rush to allow these women to bear children, significant potential safety risks are being ignored.
>
> Indeed, a study published in *Science* just revealed that three-parent mice and other organisms *have significant health problems, including with "individual development, cognitive behavior, and [other] key health parameters."* The *Science*authors strongly recommend more studies, but go on to suggest that despite safety concerns, families with "offspring that were severely afflicted" by mitochondrial diseases could decide "take the risk" anyway.
>
> The willingness of some to do *anything* to have a baby has also spurred IVF biological colonialism, by which the fertility industry exploits the gestational capacities of destitute women in developing countries to fulfill the procreative desires of the well-off.
>
> "Outsourcing a Life," a recent investigative report published by the *San Francisco Chronicle* into India's surrogacy industry, revealed the high cost paid by women so poor they are willing to gestate other people's babies for pay. According to the story:
>
> - Women sign contracts requiring them to abort on demand of the biological parents;
> - Women are forced to leave their families for months and live in crowded dormitories with other pregnant surrogates;
> - Women are maneuvered into having medically unnecessary caesarean sections. Seventy-five percent of the surrogates in the clinic discussed in the story deliver surgically.
> - There may be adverse social consequences for the surrogate, who may become isolated by a disapproving

> family or culture.
>
> An Indian study revealed other profound wrongs associated with commercial surrogacy—including sex selection, parents refusing to take the child after birth, and surrogates being paid a pittance, with most money going to so-called baby brokers. The report also found that surrogate mothers sometimes “feel attached to the babies even they were not biologically their own children.” Of course they do. Such feelings are a natural biological process associated with gestation. That’s part of biological colonialism’s cruelty.
>
> […]Indian surrogates have died giving birth to other people’s babies, orphaning their own children.

I found that article very distrurbing. Maybe if people want babies, then they should focus on preparing themselves for marriage EARLIER, finding a marriage-capable man EARLIER, and then having babies the natural way. It would be better for the babies, and cost taxpayers (at least in the UK) a lot less. I don’t understand why people are so selfish. You can’t focus on other things until you are 40 and then wreck everyone else’s life trying to fix your own choices at the last minute. It’s scary to me that people do this.

# New study: NHS patients are 45 percent more likely to die than US health care patients

**Wintery Knight** · 9 October 2013 · Archived copy · Original

Wes sent me this article from the UK Telegraph.

Excerpt:

> Patients are 45% more likely to die in NHS hospitals than in US ones, according to figures revealing how badly England's health service compares with those of other countries.
>
> Previously unpublished data collated by Professor Sir Brian Jarman over more than 10 years found NHS mortality rates were among the worst of those in seven developed countries.
>
> A patient in England was five times as likely to die of pneumonia and twice as likely to die of septicaemia compared to similar patients in the US, the leading country in the study, the data suggested.
>
> The elderly were found to be particularly at risk in English hospitals compared with those in the other countries.
>
> The figures showed that the situation had improved since 2004, when the death rate in English hospitals was 58% higher than that in the best performing country.
>
> But NHS institutions still lagged behind in the most recent data, from 2012, despite reforms of the health service and increased funding.
>
> Of the other six countries studied, only the US was named because of the sensitivity of the data.
>
> Prof Sir Brian, who adjusted the data to take account of differences in the countries' health services, did not initially release his figures because he was so shocked by them he at first assumed there must be a flaw in his methodology.
>
> There was, however, "no means of denying the results," he said.
>
> "I expected us to do well and was very surprised when we didn't," the Imperial College London medic told Channel 4 News.
>
> "If you go to the States, doctors can talk about problems, nurses can raise problems and listen to patient complaints.
>
> "We have a system whereby for written hospital complaints only one in 375 is actually formally investigated. That is absolutely appalling."

Previously, I had posted a summary of a book by Scott Atlas, a medical doctor at the Hoover Institute at Stanford University. In that article, he laid out the reasons why the U.S. healthcare system was the best in the world.

# IRS exchanged confidential taxpayer information with White House

**Wintery Knight** · 10 October 2013 · Archived copy · Original

ECM sent me this article from The Daily Caller.

Excerpt:

> Top Internal Revenue Service Obamacare official Sarah Hall Ingram discussed confidential taxpayer information with senior Obama White House officials, according to 2012 emails obtained by the House Oversight and Government Reform Committee and provided to The Daily Caller.
>
> Lois Lerner, then head of the IRS Tax Exempt Organizations division, also received an email alongside White House officials that contained confidential information.
>
> Ingram attempted to counsel the White House on a lawsuit from religious organizations opposing Obamacare's contraception mandate. Email exchanges involving Ingram and White House officials — including White House health policy advisor Ellen Montz and deputy assistant to the president for health policy Jeanne Lambrew — contained confidential taxpayer information, according to Oversight.
>
> […]Federal employees who illegally disclose confidential taxpayer information could face five years in prison.
>
> […]Ingram appeared before Rep. Darrell Issa's House Oversight Committee Wednesday and claimed she could not recall a document that contained confidential taxpayer information.
>
> […]Issa has requested unredacted copies of the emails, citing a prohibition from misusing Section 6103 "for the purpose of concealing information from a congressional inquiry."
>
> Ingram headed the scandal-ridden IRS office responsible for overseeing tax-exempt nonprofit groups before leaving to head the agency's office in charge of Obamacare implementation.

I am not confident that any of the people responsible will face justice. Unless the Republicans are elected, all of this is going to be swept under the rug. Certainly, the media has no interest in holding the government accountable.

# How one woman decided to have an abortion... then another... then another

**Wintery Knight** · 10 October 2013 · Archived copy · Original

Dina said me this astonishing article from the UK Daily Mail, which shows one case where a woman chose abortion over and over.

Excerpt:

> **Her first abortion came when she was 17, following a bitterly regretted drunken encounter with a colleague at an office party.**
>
> […]Her bold decision to speak out about her abortions comes after it was revealed that the NHS spends more than £50 million a year on repeat terminations.
>
> One third of the 189,000 abortions carried out in England and Wales in 2010 involved women who'd had at least one before. In some cases, a staggering seven abortions had previously been carried out on the same woman.

Abortion one:

> The first one… was when she… got pregnant when she ended up in bed with a 22-year-old colleague called Brian.
>
> **'Although I knew I could get pregnant, we didn't use contraception. I just didn't think it would happen to me…**
>
> […]**Michelle visited her GP and found out she was entitled to a free NHS abortion at her local hospital.**

Abortion two:

> **[S]he met John, 35, an Irish soldier stationed at barracks near her home, and they embarked on a three-week fling. It left her with another unplanned, and unwanted, pregnancy.**
>
> […]**Michelle was once again granted an NHS abortion at nine weeks — this time at a private London clinic, in July 2000.**

Abortion three:

> Then, a year later, **she met her current partner, Paul, at a local pub.**
>
> […]Michelle says she was open about her abortions, and told Paul, 36 — who is an estates manager — that she didn't want any more children.
>
> […][I]n July, **Michelle was going through a rocky period with Paul when she discovered she was pregnant again.**
>
> She says: 'At the time we were barely speaking, as we were both so stressed out. We hadn't been intimate for months, but one night relations thawed and we had sex.
>
> **'Until then, we'd been using condoms but this time we didn't. Although I thought about getting the morning-after pill, I ended up leaving it to chance.'**
>
> […]**At nine weeks, Michelle was granted a third NHS abortion, at another London clinic.**

Three taxpayer-funded abortions for three pregnancies brought on by this woman's own free decisions.

In the UK, abortions, IVF and single motherhood are all taxpayer-funded. If women had to pay for their own abortions, their own IVF, their own out-of-wedlock births, then maybe they would not be making decisions like this woman has. When you pay people to do something, you mustn't be surprised when they do that thing more. Lowering the cost of anything means that more people will buy it. And making it free makes even more people do it.

The first step to ending abortion is that society needs to understand that virtually every woman who has one is at least partly responsible for her own decision-making. Very often, when it comes to abortion, we seem to place blame on men and assume that women can do no wrong – that they are victims of men. But clearly that is not always true. We seem to have a real problem in this society holding women accountable for making poor decisions. Maybe that needs to change? Pregnancy does not happen by accident – both the man and the woman have to make a choice to have recreational sex when they aren't ready to welcome a baby into the world. We have to stop looking at people who have recreational sex as victims and expect *more* from them.

# How do children end up fatherless? One woman's story

**Wintery Knight** · 10 October 2013 · Archived copy · Original

Dina sent me this revealing article from the UK Daily Mail. It tells the story of a woman whose children are fatherless.

Excerpt:

> My marriage ended, without rancour or argument, 18 months after it had begun. There was no recrimination, just a realisation, as sharp as physical pain, that we would never — could never — agree on one fundamental point.
>
> I wanted children; my husband Anthony did not. You may think we should have resolved this crucial issue long before we bought a house and vowed to spend the rest of our lives together, but love had a way of blinding us to the depth of our disagreement.
>
> […]Today, I am 37 and a single mum to gorgeous three-month-old twin boys Charlie and William. They were conceived through IVF, using my eggs and sperm from an anonymous donor, and the love I feel for them is all-consuming.

> […]**Anthony, a policeman, was easy and fun**; we chatted comfortably together, and when we started dating I was impressed by his integrity. He had passionate views about fairness and loyalty. **He was attractive, too — tall, dark hair, blue eyes — and I felt we could build a loving relationship together.**

It seems to me that many women tend to prefer the wrong kind of men these days when it comes to marriage and parenting. Marriage requires a man to have a strong moral compass. That way, he can be expected to behave morally, himself. A man with a strong moral compass fuldills his moral obligations, but he also makes moral judgments. And women need to *prefer* men who make these moral judgments. The woman's phrase "Easy and fun" tells me that her choice of man was not a good one. A man who is easy and fun does not make divisive truth claims, does not make moral judgments, and does not set up moral boundaries. He can't be trusted to honor moral obligations. He can only be trusted to be "easy and fun". But marriage is not for men who want an easy life, nor a fun life. Marry requires self-sacrificial service. She should not have chosen an "easy and fun" man to have children with. That would be like me choosing a Paris Hilton and expecting her to be frugal and homeschool our kids. It's not going to happen. But many women these days are so clouded by "tall, dark hair, blue eyes" that they cannot connect what a man can do to what a man is supposed to do in a marriage. So long as he looks good, then he is good.

More:

> **After a month or so, our physical relationship began, but we did not rush things. It was a couple of years before he moved into my flat in Crawley, West Sussex, and I expected we'd eventually marry and have kids.**
>
> **Looking back, I suppose I should have heeded the warning signals. When I broached the subject of children, he stalled. His stock reply was: 'We'll have them later.'**
>
> **So although he was non-committal, I loved him and assumed that his paternal instinct would kick in as he grew older.** But the years passed and I was not reassured.

She thinks that a man who agrees to recreational sex after a month and then agrees to cohabitation after two years is the kind of man who is capable of making a lifelong commitment to be faithful to her and to raise children. That strikes me as equivalent to saying that a man whose favorite movie is Top Gun would also make a good airline pilot.

More:

> And then I reached 30. My friends were marrying; settling into comfortable domesticity, preparing for parenthood, and Anthony and I were still in this limbo.
>
> […]Then my best friend announced she was pregnant and the joy I felt for her was tainted by Anthony's absence of commitment to the idea of having children with me. So we had another discussion — this time, it was a passionate one. 'It's a deal-breaker,' I said. 'Much as I love you, if you don't want children we can't carry on.'
>
> But, again, he assured me that it would all happen. I just had to bide my time.
>
> So I waited until Anthony was 30, an age when I felt he was old enough to settle down. We loved each other whole-heartedly; we'd bought two successive homes together and the understanding was implicit: my future was bound up in his.
>
> […]**I wanted so much to believe he would warm to the idea**, but Anthony equivocated. He still wasn't ready, he protested.
>
> […]But then Anthony demonstrated just how strong his aversion to babies was. We were visiting a friend who'd recently given birth and, when her baby cried, Anthony made his excuses and went home.
>
> 'I just can't stand the sound of that crying,' he said testily when I confronted him later. 'If we had a baby, I'd have to move out for the first six weeks.'
>
> It wasn't a propitious sign, but eventually he seemed to soften.
>
> 'If we're going to have children, we'll have to get married first,' he said the next time I raised the subject, and for once I agreed absolutely. We should get married; by making a public commitment to stay together for the rest of our lives, we would be taking the first step towards establishing a secure home for our future babies.
>
> […]After six months as man and wife, there had been no mention from Anthony of children. So one day, as we walked home from town, I broached the subject again.
>
> 'We can't afford to have children,' he responded sharply and, rather than discuss the topic further, he marched off ahead of me.
>
> […]**This was not the life I had planned for myself: for the first time I started to feel anger towards Anthony. I felt he had forced this situation onto me.**

The woman went on to have fatherless children using taxpayer-funded IVF.

What I find troubling about this story is that the first instinct of women – Christian women – and Christian pastors – is to blame men. Those rotten, no-good men. With their tallness, blue-eyes and dark hair! They are "easy and fun" one minute, and then the next minute they are… easy and fun. Yeah. Good-looking men who are easy and fun cannot be assumed to be good at marriage and parenting. They cannot be assumed to be good providers. They can't be assumed to be good protectors. They can't be assumed to be moral leaders. They can't be assumed to be spiritual leaders. The faster that we learn to judge women who make poor decisions with men, the better it will be for children who need to 1) not be killed in the womb and 2) not grow up fatherless. The loving thing to do is to hold women accountable for making decisions about men with their eyes, instead of with their minds.

# UK prosecutors refuse to charge doctors who perform sex-selection abortions

**Wintery Knight** · 11 October 2013 · Archived copy · Original

From the UK Telegraph.

Excerpt:

> Britain's top law officer is to come under pressure in the House of Commons this week to say why the Crown Prosecution Service decided not to prosecute over the gender selection abortion scandal.
>
> Dominic Grieve, the attorney general, will face questions from Tory MPs who want the Government to tighten up the 1967 Abortion Act in the wake of the scandal.

> The comments come as Britain's most senior prosecutor prepares to release a paper justifying his decision not to prosecute two doctors over an abortion scandal.

The Tory party is the conservative party of the UK, although they aren't very conservative. Still, sex-selection abortion is such a heinous crime that even they are shocked by it. To kill a person simply because she is female and not male? That's that real war on women right there. A war on women by leftists, where conservatives take the side of the women.

More:

> Two doctors were exposed by an undercover *Daily Telegraph* investigation offering to abort babies because of their gender.
>
> The Telegraph's probe prompted a 19 month investigation. However prosecutors told the doctors that they will not be charged even though there was enough evidence, because it did not consider the issue to be in the public interest.
>
> Mr Starmer has not commented on his reasons not to prosecute and is due to issue his reasons in the coming days, before he stands down as DPP at the end of this month.
>
> The CPS said the key reason for the decision was that the doctors would still be investigated by the General Medical Council.
>
> Mr Starmer was criticised by his predecessor as DPP Lord Macdonald of River Glaven, who said the decision had been "very dubious".
>
> Lord Macdonald said this amounted to letting them "avoid criminal action" because of their professional status – undermining the basic principle that "everyone is equal under the law".
>
> The two doctors, Dr Prabha Sivaraman and Dr Palaniappan Rajmohan, have had restrictions placed on their work while they are investigated by the GMC.

Meanwhile, in Australia, doctors are being persecuted for *not performing* sex-selection abortions.

# New study: gambling hurts the poorest people in society

**Wintery Knight** · 11 October 2013 · Archived copy · Original

The Albany Times-Union reports on a new study on gambling. (H/T Al Mohler podcast)

Excerpt:

> Few things are clear about the expansion of casinos in New York, but additional slot machines will add significantly to problem gambling and may not be economically rewarding for the state, according to a fresh study by the Institute for American Values.

Note, the IAV's president is a pro-gay-marriage moderate. Don't be fooled by the conservative name.

More:

> The institute's new report, "Why Casinos Matter," is based on several government and academic studies here and abroad. The authors arrived at several conclusions:
>
> The new American casino is mostly a center filled with slot machines — essentially sophisticated computers designed to addict players. The machines figure out betting patterns and provide just enough in rewards to keep a person hooked for hours. "The more you play, the more you lose," the report says, backing up the statement with findings by MIT anthropologist Natasha Schull. Schull details her observations in the 2012 book "Addiction by Design: Machine Gambling in Las Vegas."
>
> Modern slot machines "engineer the psychological experience of being in the 'zone' — a trancelike state that numbs feeling and blots out time/space. For some heavy slot players, the goal is not winning money," the study said.
>
> Casinos depend on problem gamblers for their revenue base, drawing 40 to 60 percent of slot machine revenues from these people, many of whom are low rollers.
>
> Living near a casino or working at a casino increases the chance of becoming problem gambler. Those who live within 10 miles of a casino are twice as likely to be a problem gambler than those who do not.
>
> Problem gambling is more widespread than many casino industry leaders claim. The problem gamblers frequently go to a casino, and their lives and livelihoods may be adversely affected by their betting. They are not necessarily the heavy gamblers who are pathological and who suffer from increasing preoccupations to gamble and a loss of control.
>
> The benefits of casinos are short-term and easy to measure, but many costs pop up during the longer term that are harder to quantify. Economic stimulus fades after the casino becomes a dominant business that drives out established local businesses, such as restaurants, replacing them with pawnshops, auto title lenders and check-cashing stores. And since problem gambling develops over four to seven years, the stress on families and finances may gradually become apparent.
>
> State regulation of casinos creates a conflict of interest. Government is supposed to protect people from harmful business practices, but the state is a partner with casinos or is co-sponsoring gambling. In New York, the Cuomo administration announced last week that it anticipates $430 million a year in annual revenues — $192 million for local governments and $238 million for schools or property tax relief — from four new upstate casinos. The New York Division of the Lottery reported almost $9 billion in revenues last year, a record, with more than $3 billion of that going to public education.

Although people on the left, like Mario Cuomo, like to talk about helping the poor, they actually favor policies that hurt the poor. It's very important to separate what people say in front of cameras with what effects their policies

actually cause. Good effects are more important than good intentions.

# Do people become Christians because they are born in Christian countries?

**Wintery Knight** · 11 October 2013 · Archived copy · Original

J. Warner Wallace takes on a textbook case of the genetic fallacy.

Excerpt:

> **The History of the Ancient World**
> Christianity emerged in a largely Jewish or Pagan culture (a polytheistic mix of religious beliefs within the Roman Empire) completely hostile to the claims of Christianity. History records the hardship faced by 1st Century Christians who concluded Christianity was true and devoted their lives to Jesus. These believers did not become Christians because Christianity was the default religion of the time.
>
> **The History of China**
> China also has a history of religious suppression related to Christianity. The native culture of China has historically embraced some version of Shenism or Taoism. While Christian missionaries labored in China for centuries, their efforts were often suppressed by governmental regimes (like the Communist Party of China). In spite of this suppression and the cultural inclination toward Shenism or Taoism, Christianity has continued to grow as an underground movement, with some reporting as many as 130 million Christians now living in China. These believers did not become Christians because Christianity was the default religion of their region or culture.
>
> **The History of Persecution**
> History has demonstrated Christianity continues to grow in spite of intense persecution. Christians have historically come to faith in regions where Christianity is *not* the default religion. For this reason, Christians are still the most persecuted religious group in the world, particularly in places like North Korea, Muslim countries, India, China, Vietnam, and the Philippines. These suffering believers did not become Christians because Christianity was the default religion of their region or culture.

And he concludes with this:

> Millions of Christians have historically demonstrated a willingness to embrace the Christian worldview simply because they found it to be true. In many of these situations, Christianity was not the default position of their family, culture, region or era in history. I was not raised in a Christian home. The one man I respected more than anyone else (my father) has always been a committed atheist. I didn't know any outspoken Christians growing up, and I was hostile to the claims of Christianity until the age of thirty-five. While I had examined a number of eastern religions, Mormonism, Islam and the Bahá'í Faith, I was eventually persuaded by the evidence of the New Testament gospel eyewitness accounts. On the basis of those accounts, I began an investigation of Christianity and the existence of God. Like so many others, I came to believe Christianity is true, not because of my surrounding influences, but on the strength of the case itself.

I remember Wallace saying in one of his podcasts or in the audio book how he didn't need anything when he became a Christian. He had a wife and family and a job he loved, which he excelled at. Sometimes, people just investigate things and then go where the evidence leads. My entire family on my mother's side is Muslim and atheist, and on my father's side it's Hindu and some Catholic. No one pressured me into becoming a Christian – I didn't even go to church until 5 years after my conversion. I am the first evangelical Protestant in my family. No one tries to deter me from it, because they lose the debate. They just haven't looked into it as much as I have. Usually, what happens is that it all ends up as "do it because we're your family". Well, that doesn't work on me.

Protestant Christianity is what you settle on when you investigate these things seriously, and are willing to live with

what you find out. Most people don't want to live with what they find out. I have Hindus in my family who reject Christianity because of pride in their Indian culture. Others reject it for community reasons – they want to please their parents and relatives. Some in my family reject it because they wont let anything come between them and their pursuit of success, health and wealth. Others simply believe what their professors tell them in order to get good grades. I wasn't born into Christianity and even as a Christian, I've received no mentoring or support, even from people I look up to. I'm very much a lone wolf Christian – the kind that William Lane Craig warns everyone about. Sometimes, you just go where the evidence leads, whether people support you or not. I've never cared what people thought of me, or felt pressure to believe as others believe. I think that desire to fit in is a non-Christian trait.

# James Crossley compares Joseph Atwill's Jesus conspiracy theory to Dan Brown fiction

**Wintery Knight** · 12 October 2013 · Archived copy · Original

J. Warner Wallace tweeted this article from the UK Daily Mail featuring comments by atheist historian James Crossley. The article responds to a sensational story that came out in the past week about an alleged conspiracy by ancient Romans to "invent" Jesus. Naturally, this was reported far and wide in the press. But this article by Dr. Crossley offers a more sober assessment.

Here's the introduction:

> An American scholar claims to have made a controversial discovery that proves the entire story of Jesus was made up by Roman aristocrats.
>
> Joseph Atwill asserts that Christianity did not start as a religion, but was instead created as a sophisticated propaganda tool to pacify subjects of the Roman Empire.
>
> He says he noticed a pattern forming when he was studying the only surviving account of first-century Judea, which he claims contains dozens of parallels between the life of a Roman emperor and that of Jesus in the New Testament.
>
> Mr Atwill argues that these ancient 'confessions' provide 'clear evidence' that the biography of Jesus is 'actually constructed, tip to stern, on prior stories, but especially on the biography of a Roman Caesar'.

The theory itself seems to be based on finding parallels between the New Testament sources and other ancient sources:

> [Atwill] says he stumbled upon his discovery while studying War of the Jews by Josephus – the only remain first-person account of first-century Judea – alongside the New Testament.
>
> He said: 'I started to notice a sequence of parallels between the two texts.
>
> 'Although it's been recognised by Christian scholars for centuries that the prophesies of Jesus appear to be fulfilled by what Josephus wrote about in the First Jewish-Roman war, I was seeing dozens more.
>
> 'What seems to have eluded many scholars is that the sequence of events and locations of Jesus ministry are more or less the same as the sequence of events and locations of the military campaign of [Emperor] Titus Flavius as described by Josephus.'
>
> […]Atwill maintains he can demonstrate that 'the Roman Caesars left us a kind of puzzle literature that was meant to be solved by future generations, and that the solution to that puzzle is "We invented Jesus Christ and we're proud of it".'

I'm not very optimistic about these Jesus-parallels approaches to history, but maybe there is something to it this time.

But Dr. Crossley doesn't think that there is:

> But bible academic Professor James Crossley, from the University of Sheffield, compared Mr Atwill's theory to a Dan Brown fiction book.
>
> He told Mail Online: 'These types of theories are very common outside the academic world and are usually reserved for sensationalist literature.
>
> 'They are virtually non-existent in the academic world.'
>
> He also suggested the theories are not taken seriously by experts.

> Mr Crossley said: ‘People do debate about how much we can know about Jesus, but the idea that Romans invented stories about Jesus is outside of the academic world.’
>
> He added that this sort of theory can be ‘irritating’ to religion academics.

Dr. Crossley has debated against evangelical scholars, in particular Dr. Michael Bird and Dr. William Lane Craig. Although he is on the other side, he is aware of the reasons why people believe in a more traditional picture of the historical Jesus.  It’s good to see experts on the other side weighing in on these sensational stories.

# How to falsify a religion using scientific or historical evidence

**Wintery Knight** · 12 October 2013 · Archived copy · Original

I notice that a lot of new atheists seem to think that "I don't like it" can refute a religion. What I often see among atheists is this tendency to set up expectations of how God would have acted and then complain that he doesn't met those expectations. I don't think that this is a good way to argue against a religion, because it's subjective. God isn't obligated to comport with atheist expectations.

So in this post, I wanted to show how a reasonable person can evaluate and reject different worldviews using evidence.

**Falsifying a religion using science**

Consider this argument:

1. Hindu cosmology teaches that the universe cycles between creation and destruction, through infinite time.
2. The closest cosmological model conforming to Hindu Scriptures is the eternally "oscillating" model of the universe.
3. The "oscillating" model requires that the universe exist eternally into the past.
4. But the evidence today shows the the universe, and time itself, had a beginning at the big bang.
5. The "oscillating" model requires that the expansion of the universe reverse into a collapse, (= crunch).
6. In 1998, the discovery of the year was that the universe would expand forever. There will be no crunch.
7. Therefore, the oscillating model is disconfirmed by observations.
8. The oscillating model also faces theoretical problems with the "bounce" mechanism.

Notice how I falsified the oscillating model with theoretical and experimental reasons.

The absolute origin of the universe out of nothing is also incompatible with atheism, Buddhism, Mormonism, etc. because they also require an eternally existing universe.

**Falsifying a religion using history**

Consider this argument:

1. To be a Muslim, you must believe that the Koran is without error.
2. The Koran claims that Jesus did not die on a cross. (Qur'an, 4: 157-158)
3. The crucifixion of Jesus is undisputed among non-Muslim historians, including atheist historians.
4. Therefore, it is not rational for me to become a Muslim.

I'm going to support the premise that Jesus was crucified by citing historians from all backgrounds.

Consider some quotes from the (mostly) non-Christian scholars below:

> "Jesus' death as a consequence of crucifixion is indisputable." Gert Lüdemann
>
> "That he was crucified is as sure as anything historical can ever be." J.D. Crossan
>
> "The passion of Jesus is part of history." Geza Vermes
>
> Jesus' death by crucifixion is "historically certain". Pinchas Lapide
>
> "The single most solid fact about Jesus' life is his death: he was executed by the Roman prefect Pilate, on or around Passover, in the manner Rome reserved particularly for political insurrectionists, namely, crucifixion." Paula Fredriksen
>
> "The support for the mode of his death, its agents, and perhaps its co-agents, is overwhelming: Jesus faced a

> trial before his death, was condemned, and was executed by crucifixion." L.T. Johnson
>
> "One of the most certain facts of history is that Jesus was crucified on orders of the Roman prefect of Judea, Ponitus Pilate." Bart Ehrman

That's 7 famous historians: 3 atheists, 3 Jews and 1 moderate Catholic. The atheists, Ludemann, Crossan and Ehrman, have all debated against the resurrection of Jesus with William Lane Craig. Johnson is the moderate Catholic, the rest are Jewish historians. The Koran was written in the 7th century. That is why no professional historian accepts the Koran as more authoritative than the many earlier Christian and non-Christian sources for the crucifixion story. Many of the sources for the crucifixion are dated to the 1st century. It's not faith. It's history.

I have seen debates with Muslim scholars, and I have never once heard them cite a non-Muslim historian to the effect that Jesus was not crucified. To my knowledge, there is no historian who denies the crucifixion of Jesus in his published work.

**Can Christianity be falsified by science or history?**

Yes. If you prove that the universe is eternal than would falsify the Bible's claim that God created the universe out of nothing. That would be a scientific disproof. If you could find the body of Jesus still inside a tomb, that would falsify the Bible's claim about a resurrection. That would be a historical disproof. The nice thing about Christianity is that we make lots of testable claims. Christianity is about forming beliefs that are in line with the available evidence.

# Stephen C. Meyer and Peter Atkins debate intelligent design

**Wintery Knight** · 13 October 2013 · Archived copy · Original

This dialog occurred in 2010 on the Unbelievable radio show.

I made a rough transcript, so please see below for that.

The MP3 file is here. (60 minutes)

Details:

> The documentary film "Expelled" is presented by US Actor Ben Stein and makes the case that scientists who question Darwinian orthodoxy and support Intelligent Design are being "expelled" from academia.
>
> As the UK edition of the DVD is released we ask "Is freedom of thought at stake or is Intelligent Design out of bounds when it comes to biological science?"
>
> Stephen C Meyer is co founder of the Discovery Institute in the USA and a major proponent of Intelligent Design.
>
> Peter Atkins is Professor of Chemistry at Oxford University and an outspoken atheist.
>
> They both feature in "Expelled" and join Justin to debate the pros and cons of Intelligent Design theory.
>
> Mark Haville who is bringing the film to the UK also joins the discussion.

Note: The transcript below is quite snarky and may include paraphrases of Dr. Atkins for the sake of humor.

**My rough transcript of the Meyer-Atkins debate**

Stephen Meyer:
– started researching on ID while doing his PhD at Cambridge
– the question is whether the information-bearing properties in DNA require a designer
– what cause is adequate to explain the digital code that in the simplest living cell
– alternative explanations like self-organization and RNA-first have failed
– so the best explanation for functional sequences of parts is an intelligent designer
– Darwinists have responded to this argument with insults and suppression of dissent

Peter Atkins:
– intelligent design is creationism
– there is no science at all in it
– information can emerge without an intelligent designer
– structures emerge spontaneously, no agent is needed to generate the structure
– information in DNA is also a structure

Stephen Meyer:
– structure and information are two different things
– many structures emerge spontaneously
– structure may be like the vortex that occurs when water goes down a drain

Peter Atkins:
– the vortex is information

Stephen Meyer:
– structures are different from functionally-specified digital information
– in DNA, there is a 4-digit alphabet that is used to create code sequences
– the thing to be explained is where do the functional sequences come from

Peter Atkins:
– information can grow without an agent
– the second law of thermodynamics
– the universe is falling into disorder
– but there are local abatements of chaos that create information
– evolution can cause the amount of information to grow

Stephen Meyer:
– that's just an assertion
– I agree that energy flow through a system can produce spontaneous order
– but spontaneous order is not the same thing as information

Peter Atkins:
– spontaneous order is the same as information

Stephen Meyer:
– it's not order that needs to be explained it's specified complexity

Peter Atkins:
– what do you mean by specified complexity?

Stephen Meyer:
– the chemical bonds that connect to each letter do not determine the letter
– the chemical bonding sites will accept any letter as easily as any other
– any one of the 4 bases (letters) can attach at any place along the backbone

Peter Atkins:
– the selection of which letter comes next is determined by evolution

Stephen Meyer:
– that is just an assertion
– there is no physical process that sequences the letters to have a function

Peter Atkins:
– do you believe in evolution? YES OR NO!

Mark Haville:
– for him to answer the question you have to define the word
– do you mean macro or micro? biological or stellar? directed or undirected?

Peter Atkins:
– undirected molecules to man evolution by natural processes

Stephen Meyer:
– but even Dawkins doesn't believe in evolution then
– you're including the origin of life from non-living matter in evolution
– Dawkins says that there is no known naturalistic explanation for that

Mark Haville:
– you need to define your terms

[They discuss of the movie Expelled and the case of Richard Sternberg]

Stephen Meyer:
– the problem is people don't want to talk about the science
– they denounce dissent as unscientific
– they will not debate about whther natural causes can explain the information

– I want to talk about the science

Peter Atkins:
– ID people raise interesting questions for naturalists to work on
– but you want to tell us what the answer is (intelligence) before we begin
– you start from the idea that an intelligence was involved

Justin Brierley:
– but you start with the idea that natural mechanisms can explain everything!

Stephen Meyer:
– for Dr. Atkins, only explanations based on material processes are valid

Peter Atkins:
– that is correct

Stephen Meyer:
– but we think that the activities of mind can explain some effects
– e.g. – the best explanation of the Rosetta stone is a mind

Peter Atkins:
– but we naturalists think of minds as material as well

Stephen Meyer:
– that's a materialist pre-supposition on your part
– we would have to have a debate about mind and body

Mark Haville:
– I think that the materialist position is socially dangerous
– the problem with naturalism is that it is an ideology
– the ideology pushes absurdities, e.g. – the universe came from nothing uncaused
– and naturalists exert power over others to force them to believe nonsense

Stephen Meyer:
– science progresses as the result of scientists disagreeing
– both sides agree to the facts
– the debate is about the interpretation of those facts
– and one side is being ruled out a priori based on the pre-supposition of materialism

Peter Atkins:
– why do you say that an intelligence is involved in DNA but not general relativity

Stephen Meyer:
– it is always logically possible that intelligence can be invlved in any effect
– the main thing is that explanations based on intelligence should not be ruled out

Peter Atkins:
= well you can't appeal to any non-material process in expaining anything
– those are the rules

Moderator:
– what does intelligent design have to do with religion?

Stephen Meyer:
– creationism is about understanding the istory of life using the Bible
– intelligent design is about using the same method of inquiry as Darwin
– we know that information arises from intelligent causes

– humans create information all the time by using intelligence to sequence parts

Moderator:
– are intelligent design proponents disreputable?

Stephen Meyer:
– what's disreputable is shutting down debate by setting arbitrary rules

Peter Atkins:
– we are both interested in the same questions

Moderator:
– why won't you let Stephen publish his papers then?

Peter Atkins:
– because it breaks the pre-suppositions of naturalism and materialism

Stephen Meyer:
– you're shutting down inquiry by using an arbitrary definition of science

Mark Haville:
– we need to define the word science
– science should be based on what we can observe empirically
– we can observe micro-evolution empirically
– but Darwinism goes beyond what is observable to postulate macro-evolution

Peter Atkins:
– but paleobiology is replete with evidence

Stephen Meyer:
– paleobiology uses a method of inference that I think is valid
– but intelligent design uses the same mode of reasoning which is also valid

Peter Atkins:
= you're intellectually lazy
– we're smart, we're using our brains

Moderator:
– you're saying that appeals to intelligent causes ends science?
– is ID the view that some things are too complex to be explained with naturalism?

Peter Atkins:
– yes, and to teach children that materialism is false is child abuse

Stephen Meyer:
– let's drop the insults and the rhetoric and focus on the arguments
– the ID argument is not based on what we don't know, it's based on what we DO know
– first, we can ask what undirected natural processes can and cannot do
– second, we can ask what we know about intelligent causes from our own experience
– what we do know seems to me to require an intelligent agent as a cause

Peter Atkins:
– GOD! Do you mean God!? Do you mean God!?

Stephen Meyer:
– I personally mean God, but all that the arguments proves is a generic intelligent cause
– and I am using the same method of investigation that Darwin used to get there

– what we know from our experience is that a mind is needed to create information

Peter Atkins:
– NONSENSE! ABSOLUTE NONSENSE!

Stephen Meyer:
– in my book, I list 10 predictions made by ID, so it's not a science-stopper
– furthermore, the enterprise of science began with th goal of understanding God
– consider the earliest scientists, people like James Boyler and Johannes Kepler

Peter Atkins:
– that was 300 years ago, we've moved on

Mark Haville:
– what about Max Planck then?

Stephen Meyer:
– how about James Clark Maxwell?

Mark Haville:
– we need to focus on the facts

Peter Atkins:
– what do you mean by the facts?

Mark Haville:
– well the fact is that Darwinism has no mechanism to produce new information

Peter Atkins:
– well copying errors introduces beneficial mutations

Stephen Meyer:
– let's focus on where we get the first information from the simplest organism
– you can't account for the first organism by appealing to copying errors
– to add functionality to a program, you need new lines codes from an intelligence
– once you have life, you can generate some new information
– but you can't generate macro-evolution either

Peter Atkins:
– if we give you your explanation for teh origin of life, will you give this up

Stephen Meyer:
– of course! I'm a former theistic evolutionist
– but right now the evidence is not there for it
– we have to decide these questions based on what we see with our own eyes today

Peter Atkins:
– but I pre-suppose materialism as the starting point of all explanations
– you're just intellectually lazy to abandon my pre-supposition

Stephen Meyer:
– why is it is less intellectually lazy to insist that materialism is true
– we are making plenty of predictions, and isn't that what science is about?
– consider Junk DNA – you guys said it had no use
– now we know it has a use

Peter Atkins:

– naturalists were open to the idea that junk DNA might have a use before ID

Moderator:
– Dr. Meyer, what about the wall that locks out intelligence as an explanation?

Stephen Meyer:
– if these are interesting questions, then we should allow freedom of inquiry
– that's how science advances

Peter Atkins:
– for all their science-talk really they are just saying God did it
– people who don't agree with me are not using their brains, like I do
– to give up on my pre-supposition of materialism is a denial of humanity

Mark Haville:
– there are important issues that are affected by our view of origins
– everyone who hasn't seen Expelled movie should definitely see it

# Astronomer Guillermo Gonzalez lectures on intelligent design and habitability

**Wintery Knight** · 13 October 2013 · Archived copy · Original

The 5 video clips that make up the full lecture.

The playlist for all 5 clips is here.

**About the speaker**

> Guillermo Gonzalez is an Associate Professor of Physics at Grove City College. He received his Ph.D. in Astronomy in 1993 from the University of Washington. He has done post-doctoral work at the University of Texas, Austin and at the University of Washington and has received fellowships, grants and awards from such institutions as NASA, the University of Washington, the Templeton Foundation, Sigma Xi (scientific research society) and the National Science Foundation.

Learn more about the speaker here.

**The lecture**

Here's part 1 of 5:

And the rest are here:

- Part 2 of 5
- Part 3 of 5
- Part 4 of 5
- Part 5 of 5

**Topics:**

- What is the Copernican Principle?
- Is the Earth's suitability for hosting life rare in the universe?
- Does the Earth have to be the center of the universe to be special?
- How similar to the Earth does a planet have to be to support life?
- What is the definition of life?
- What are the three minimal requirements for life of any kind?
- Requirement 1: A molecule that can store information (carbon)
- Requirement 2: A medium in which chemicals can interact (liquid water)
- Requirement 3: A diverse set of chemical elements
- What is the best environment for life to exist?
- Our place in the solar system: the circumstellar habitable zone
- Our place in the galaxy: the galactic habitable zones
- Our time in the universe's history: the cosmic habitable age
- Other habitability requirements (e.g. – metal-rich star, massive moon, etc.)
- The orchestration needed to create a habitable planet
- How different factors depend on one another through time
- How tweaking one factor can adversely affect other factors
- How many possible places are there in the universe where life could emerge?

- Given these probabilistic resources, should we expect that there is life elsewhere?
- How to calculate probabilities using the “Product Rule”
- Can we infer that there is a Designer just because life is rare? Or do we need more?

The corelation between habitability and measurability.

- Are the habitable places in the universe also the best places to do science?
- Do the factors that make Earth habitable also make it good for doing science?
- Some places and times in the history of the universe are more habitable than others
- Those exact places and times also allow us to make scientific discoveries
- Observing solar eclipses and structure of our star, the Sun
- Observing stars and galaxies
- Observing the cosmic microwave background radiation
- Observing the acceleration of the universe caused by dark matter and energy
- Observing the abundances of light elements like helium of hydrogen
- These observations support the big bang and fine-tuning arguments for God’s existence
- It is exactly like placing observatories on the tops of mountains
- There are observers existing in the best places to observe things
- This is EXACTLY how the universe has been *designed for making scientific discoveries*

This lecture was delivered by Guillermo Gonzalez in 2007 at the University of California at Davis.

# Video, audio and summary: Jim Wallis debates Jay Richards on Christianity and economics

**Wintery Knight** · 13 October 2013 · Archived copy · Original

I had to re-post this post again because Facebook decided to mark it as SPAM. This is the same post I put out 4 hours ago.

The video recording:

- The organizers of the debate tell me that the video will be posted shortly after the debate, and I will link to it in this very post.

The audio recording:

- Click here to download the low quality MP3 audio recording (32 kbps, 29 MB)
- Click here to download the high quality MP3 audio recording (64 kbps, 58 MB)

**The debaters**

Jay Richards:

> Jay Richards, Ph.D., is a Senior Fellow of the Discovery Institute where he directs the Center on Wealth, Poverty and Morality, and is a Visiting Scholar at the Institute for Faith, Work & Economics. Most recently he is the co-author with James Robison of the best-selling *Indivisible: Restoring Faith, Family, and Freedom Before It's Too Late".*
>
> In addition to writing many academic articles, books, and popular essays on a wide variety of subjects, he recently edited the new award winning anthology, *God & Evolution: Protestants, Catholics and Jews Explore Darwin's Challenge to Faith* . His previous book was *Money, Greed, and God: Why Capitalism Is the Solution and Not the Problem* (HarperOne, May 2009), for which he received a Templeton Enterprise Award in 2010.
>
> […]In recent years, he has been a Contributing Editor of The American at the American Enterprise Institute, a Visiting Fellow at the Heritage Foundation, and a Research Fellow and Director of Acton Media at the Acton Institute. Richards has a B.A. with majors in Political Science and Religion, an M.Div. (Master of Divinity) and a Th.M. (Master of Theology), and a Ph.D. (with honors) in philosophy and theology from Princeton Theological Seminary.

Jim Wallis:

> Jim Wallis (born June 4, 1948) is a Christian writer and political activist. He is best known as the founder and editor of *Sojourners* magazine and as the founder of the Washington, D.C.-based Christian community of the same name. Wallis is well known for his advocacy on issues of peace and social justice. Although Wallis actively eschews political labels, he describes himself as an evangelical and is often associated with the evangelical left and the wider Christian left. He works as a spiritual advisor to President Barack Obama. He is married to the Rev. Joy Carroll, who was one of the first female priests in the Church of England. He is also a leader in the Red-Letter Christian movement.
>
> […]In 2010, Wallis admitted to accepting money for Sojourners from philanthropist George Soros after initially denying having done so. When conservative writer Marvin Olasky pointed this out, and that Soros also financed groups supporting abortion, atheism, and same-sex marriage, in a WORLD magazine column, Wallis said Olasky "lies for a living"; he subsequently apologized to Olasky for the comments. In 2011, Wallis acknowledged that Sojourners had received another $150,000.00 from Soros' Open Society Foundation.
>
> […]In regard to the 2011 United States budget proposal, Wallis described Congressman Paul Ryan and his

> congressional allies as “bullies” and “hypocrites.”

Wallis just came out this month in favor of gay marriage. He is also a strong supporter of Barack Obama, who is radically pro-abortion. Some pro-lifers have argued that Barack Obama has the same views on abortion as Kermit Gosnell.

**The format of the debate**

- 20 minute opening speeches
- 10 minute rebuttals
- 10 minutes of discussion
- Q&A for the remainder

**SUMMARY**

I use italics below to denote my own observations.

**Jim Wallis’ opening speech:**

My goal is to spark a national conversation on the “common good”.

A story about my son who plays baseball.

The central goal of Christianity is to promote the “common good”.

Quotes “Catholic social teaching” which values “human flourishing”.

The “common good” is “human flourishing”.

*Is the purpose of Christianity is to make sure that everyone has enough material stuff or to preach the gospel?*

When Christians go on mission trips, it’s good that they focus on things like human trafficking.

Democrat John Lewis is the “conscience of the U.S. Congress”.

*John Lewis gets a 0% rating from the American Conservative Union in 2012.*

*John Lewis gets a 8% rating from the American Conservative Union in 2011.*

*John Lewis gets a 2.29% lifetime rating from the American Conservative Union.*

Nothing is going well in Washington right now except comprehensive immigration reform.

*Does he think that Christianity means giving 12-20 million illegal immigrants a path to citizenship, while skilled engineers cannot even get green cards, even though there is a shortage of them? Does he think that the other people in society who earn more than they receive from the government ought to be taxed more in order to provide more services and benefits to those who earn less than they take from the government?*

**Jay Richards’ opening speech:**

Two topics: 1) what is the common good? 2) what should Christians do to promote the common good?

Catholicism defines the “common good” as “Indeed, the common good embraces the sum of those conditions of the social life whereby men, families and associations more adequately and readily may attain their own perfection.”

We have natural ends that we are supposed to be achieving and some places, like South Korea, are better for allowing that to happen.

The common good is broader and prior to any sort of political specification.

It’s not the political good or what the state is supposed to do.

It's not about the communal good, as in Soviet Russia, where the communal good was above individual and familial good.

The common good is the social conditions that promote the things that we humans have in common as individuals and members of family.

The common good takes account of who we are as individuals and in associations with other individuals, e.g. – families.

Christians don't have to be doing the same things to promote the common good, e.g. – pastors, entrepreneurs, etc.

The church, as the church, has as its primary goal making disciples of all nations.

But even in that capacity, the church should be interested in more than just conversions and saving souls.

We also have to care about God's created reality including things like physics, education, etc.

How should Christians promote the common good in politics?

Question: when is coercion warranted?

In Romans 13, Paul says that the state does have power to coerce to achieve certain ends, like justice.

Most Christians think that there are some things where the state can use coercion, for example, to prevent/punish murder.

It is OK for the police to use coercive force to maintain public order and the rule of law.

But we need to ask whether other things are legitimate areas for the state to use coercive force.

We should only give the state power to coerce when there is no other way to achieve a goal.

We need to leverage the science of economics in order to know how to achieve the common good.

Jay Richards' main point in the debate
Henry Hazlitt: "The art of economics consists in looking not merely at the immediate but at the longer effects of any act or policy; it consists in tracing the consequences of that policy not merely for one group but for all groups."

For example, what happens if we raise the federal minimum wage to $50. What happens next for all groups? That's what we need to ask in order to know which policies achieve the common good.

When it comes to economics a lot of things have been tried in other places and times.

We can know what works and doesn't work by studying what was tried before and in other places.

Many things are counter-intuitive – things that sound good don't work, things that sound bad do work.

Principle: "We are our brother's keeper". Christians have an obligation to care for their neighbors.

We all agree on the goal. But how do we do things that will achieve that goal?

We have to distinguish aspirations from principles and prudential judgment.

Principle: We should provide for the material needs of the poor.

Prudence: Seeing the world as it is, and acting accordingly.

Example policies: which minimum wage is best? None? $10? $20?

We decide based on seeing how different economic policies achieve the goal of helping the poor.

**Jim Wallis' first rebuttal:**

Jesus commanded us to "care for the poor and help to end poverty".

*Actually, Jesus thought that acknowledging him and giving him sacrificial worship was more important than giving money to the poor, see Matthew 26:6-13:*

*[6] While Jesus was in Bethany in the home of Simon the Leper,*

*[7] a woman came to him with an alabaster jar of very expensive perfume, which she poured on his head as he was reclining at the table.*

*[8] When the disciples saw this, they were indignant. "Why this waste?" they asked.*

*[9] "This perfume could have been sold at a high price and the money given to the poor."*

*[10] Aware of this, Jesus said to them, "Why are you bothering this woman? She has done a beautiful thing to me.*

*[11] The poor you will always have with you, but you will not always have me.*

*[12] When she poured this perfume on my body, she did it to prepare me for burial.*

*[13] Truly I tell you, wherever this gospel is preached throughout the world, what she has done will also be told, in memory of her."*

*It's not clear to me whether Jim Wallis thinks that preaching is more important than redistributing wealth to address material inequality.*

I like what Jesus said in a TV series, even though it's not in the Bible when an actor playing Jesus said to "change the world".

*Jesus never said to "change the world" in the Bible. Should we be concerned that he is quoting a TV actor playing Jesus instead of Jesus.*

Here is a terrific story about Bill Bright.

I love Catholic social teaching.

Quote: "All are responsible for all".

I go to the World Economic Forum at Davos, Switzerland every year. I spoke once at 7 AM on the 4th floor.

*It's a funny place for a Christian to be if they care about the poor – rubbing shoulders with leftist elites. He must have named a dozen high-profile people that he spoke with during the debate, as if he could win the debate by some sort of argument from name-dropping. He mentioned the Davos thing several times!*

The greatest beneficiary of government actions to deal with the economic crisis was Wall Street banks.

I'm going to tell you a story about what a Washington lawyer says to Jesus.

I've had conversations with business leaders where I tell them to integrate moral truths.

I talk about the Good Samaritan parable.

Quote: “Do you love your undocumented neighbor?”

Quote: “Do you love your Muslim neighbor?”

**Jay Richards’ first rebuttal:**

Who is responsible for your own children? Who knows the most about them?

Parents should have more discretion over their children because they have more knowledge about their child and what’s best for them.

The Good Samaritan doesn’t show that government should confiscate wealth through taxation and redistribute it.

The Good Samaritan emphasizes voluntarily charity to help people who are not necessarily your immediate neighbor.

Some of the things we do should be for the good of other people in other countries.

But then we are back to leveraging economics to know what policies are good for those other people in other countries.

The principle of subsidiarity: if a problem can be addressed by a lower level of society (family) then we shouldn’t make higher levels (government) address it.

The best place to take care of children is within the family.

Only if the family fails should wider and wider spheres get involved.

Although we want to think of the common good in a global sense, we don’t want to lose sight of the fact

The financial crisis: we need to integrate moral truths, but also economic truths.

We don’t want to assume policies based on intuitions, we want to check our intuitions using economic principles.

Why did we have a financial crisis in mortgages, but not in commodities futures or technology, etc.?

Greed is a contributing factor in all areas of business.

Something more was going on in the mortgage markets than just greed.

There were specific policies that caused the mortgage lending crisis.

The root cause of the problem were “affordable housing policies” that lowered lending restrictions on low income people.

The policy ended up degrading the underwriting standards on loans.

Government intruded into the market and undermined the normal ways of

People were getting massive loans with no income, no jobs, no assets and no down payment.

The federal government created a market for risk loans by guaranteeing

There was a government imposed quota on mortgage lenders such that 50% of their loans had to be given to high-risk borrowers.

That is what led to the financial crisis. Not the free market, but intrusions into the free market.

These policies were well-meaning and implemented by people from both parties. But they had bad effects.

# Advice for atheists who want to appear to value reason

**Wintery Knight** · 14 October 2013 · Archived copy · Original

Tom Gilson writes about how an atheist professor committed the straw man fallacy, and what it means.

Excerpt:

> We need to turn to his PSU talk, wherein he speaks (after about 29:00) of "three core reasons for why one believes one's faith tradition is true…. Reason number one: Miracles. We're going to examine a few miracles."
>
> Let me pause and ask you to consider which faith-truth-convincing miracles he might want to examine and debunk. The resurrection? Healings? Visions? No, none of these. Ladies and gentlemen, for the safety of your clothing, lower your drinks. The miracles he chooses to debunk, and thereby to destroy the faith-enhancing credibility of miracles, are:

1. **Transubstantiation**: the substantial change of the Eucharist elements into the body and blood of Jesus, according to Catholic doctrine…. and
2. **Tongues**, or glossolalia.

So this atheist philosophy professor thinks that Christians argue for God's existence using transubstantiation and tongues.

Have you ever seen any Christian scholar talk about that in a debate? I haven't even seen it in blog posts, much less books or papers.

Now if I were going to give arguments for God's existence, I would offer arguments like these:

- origin of the universe
- cosmic fine-tuning
- origin of life's building blocks
- origin of biological information
- convergence
- epigenetics
- molecular machines, like the ribosome
- limits on mutation-driven change
- Cambrian explosion
- galactic habitability
- stellar habitability
- the effectiveness/applicability of mathematics to nature
- consciousness
- free will
- rationality
- objective moral values and duties
- the minimal facts case for the resurrection

Dear atheists: those are the kinds of arguments that you see in actual debates and read in actual apologetics books. And those are the arguments that need a response. But before responding to those arguments, they have to be understood properly by reading the primary sources where those arguments are laid out in a rigorous way, e.g. – *The Design Inference*. And when you respond to them, you should cite the original texts, with page numbers, to

show that you understand them.

What I really find disturbing about this Boghossian fellow is how the audience reacts:

> His performance in both these lectures amounts to a parade of fallacies.
>
> Yet if you watch these two lectures through to the end, you'll find that the audiences eat it up; or many of the people do, at any rate. They're being taught by a distinguished looking university professor. They like what they're hearing. It agrees with their prejudices. And — in the role of an educator, mind you — he's leading them on with *obviously fallacious thinking.* There's something seriously wrong about that tactic.

I'm really not sure why anyone would applaud someone like Boghossian who is clearly more interested in ridicule than debate. What does this say about atheism? I mean – these people are applauding something that could be corrected by reading a short, introductory book like Lee Strobel's "Case for a Creator". Yet they don't appear to be educated enough to even do that. Worse, the atheist professor is actually encouraging them to persist in their ignorance. Either the professor hasn't read introductory books on apologetics or he just finds pleasure in hearing the sneers and jeers of the mob, as he feeds them lies and propaganda.

Here's my suspicion about atheism. I don't think that most rank and file atheists really are interested in truth at all. They are more interested puffing themselves up and in putting other people down. This Boghossian episode is not an isolated case. You can see this in action with the 1-star reviews of books like Darwin's Doubt. The negative reviewers don't reference page numbers or cite passages, because the reviewers haven't actually read the book. And they don't feel that they need to read it in order to insult it. In their view, proper atheism is about mocking – not about informed reasoning. For them, the less that is known about what the opposition really believes, the better. Should we take this forced ignorance to be a central tenet of the atheist worldview, then? What is a good name for this predilection they have for preferring stand-up comedy to rational thought?

# New study: Y-chromosome Adam and mitochondrial-Eve dating tightens up

**Wintery Knight** · 14 October 2013 · Archived copy · Original

Mysterious Melissa brought this interesting new study to my attention. It was published in the peer-reviewed journal *Science*. It was reported on Science Daily.

Excerpt:

> More than 7 billion people live on this planet — members of a single species that originated in one place and migrated all over Earth over tens of thousands of years.
>
> But even though we all trace our family lineage to a few common ancestors, scientists still don't know exactly when and how those few ancestors started to give rise to the incredible diversity of today's population.
>
> A brand-new finding, made using advanced analysis of DNA from all over the world, sheds new light on this mystery. By studying the DNA sequence of Y chromosomes of men from many different populations, scientists have determined that their male most recent common ancestor (MRCA) lived sometime between 120,000 and 156,000 years ago.
>
> It's the first time the human ancestry has been traced back through the male line by sequencing the DNA of many entire Y chromosomes.
>
> And, it agrees reasonably well with previous findings about our female most recent common ancestor, made by studying DNA carried down through the human race's female line. Such studies used DNA from mitochrondria — structures inside cells — and placed that time of the most recent common ancestor between 99,000 and 148,000 years ago.
>
> […]**The reconciliation of the timing of "Adam" and "Eve," however, may be this study's most important immediate implication.**
>
> **"This has been a conundrum in human genetics for a long time," said Carlos D. Bustamante, PhD, a professor of genetics at Stanford and senior author of the study. "Previous research has indicated that the male MRCA lived much more recently than the female MRCA. But now our research shows that there's no discrepancy. In fact, if anything, the Y chromosome may be a bit older."**

So the new dates for Adam and Eve would allow them to actually date. Ha ha!

Now those dates are still too far in the past to satisfy an old-Earth creationist like me, but it solves that problem about them existing durring completely different dates. I've been waiting for that one to be solves for a decade! It's progress.

# Simon Brace on the nature of spiritual warfare and a plea to the Church

**Wintery Knight** · 14 October 2013 · Archived copy · Original

This passionate, challenging lecture has been getting shared a lot on Facebook, so I thought that I would do a summary of it.

First, you can grab the MP3 file here.

Note that this talk is given by a very conservative evangelical Christian who is speaking to Christians. So this is not intended for a non-Christian audience. However, non-Christians are free to tune in if you want to hear a really passionate, fire-breathing conservative evangelical go non-linear over the superficial turn that the evangelical church has taken. If you are familiar with J.P. Moreland's view that spiritual warfare is really about disputing speculations and falsehoods using logic and evidence, then you'll know the meaning of the term "spiritual warfare" he has in mind. When he says spiritual warfare, he means apologetics: knowledge and preparation.

I would really caution you not to listen to this if you are not passionate about defending God's honor. It will overwhelm and upset you. Having said that, this lecture reflects my convictions about the churches need to drop anti-intellectualism and take up apologetics. And not pre-suppositional apologetics, which I think is ineffective, but *evidential* apologetics. Evidential apologetics is effective, which is why everyone in the Bible used it.

About the speaker:

> **Simon Brace** is the Director of Evangelism of Southern Evangelical Seminary. Simon was born in Zimbabwe and grew up in South Africa. Simon has a construction background and has lived in a number of countries and travelled extensively. He has a MA in Apologetics and BA in Religious Studies and is currently working on an MA in Philosophy at SES. Simon leads TEAM which is the missions program of SES on local, national, and international trips. In addition, Simon has worked with Ratio Christi at SES, and has an extensive knowledge of Ratio Christi's history and operation. Simon currently resides in North Carolina with his wife Nel and children, Eva and Olivia.

I liked the second part of the lecture more than the first part, so there is less summarizing of the first part.

Topics:

- What does the New Testament say about spiritual warfare in Ephesians?
- Christian slogans about spiritual warfare sound pious, but they are mistaken
- Today, Christianity is focused on piety and zeal, not on study and knowledge
- The result is that Christianity in the West is in a state of erosion and decline
- What we are doing about spiritual warfare is not working to stop the decline
- Preaching, publishing, programs, retreats, etc. are not very useful for spiritual warfare
- Enthusiasm and passion without knowledge  are not very useful for spiritual warfare
- The Church has a theoretical understanding of spiritual warfare, but no real capability
- Doesn't work: trying to make Christianity seem popular and cool
- Doesn't work: making Christian music and art that non-Christians will like
- Doesn't work: pastors trying to be relevant by having cool clothes and cool haircuts
- Doesn't work: fundamentalists getting angry about peripheral issues
- Doesn't work: not read things apart from the Bible and sound foolish when speaking in the public square
- Doesn't work: church leaders think that careful exegesis and expository preaching is a good answer to skeptics

- What works: we need to train people who are prepared and willing to defend the truth of the Christian faith
- Evangelicalism has a deep suspicion of reading things outside the Bible, so they are unable to refute anything
- Evangelicals are hyper-spiritualized and hysterical, focusing on demons, prophecy and end-times, etc.
- Evangelicals have a pagan view of using their minds to alter reality, which is irrational and superstitious
- Evangelicals like conservative celebrity preachers who do *nothing* to correct anti-intellectualism in the church
- Evangelicals are focused on their personal relationships with Jesus instead of their whole worldview
- Evangelicals focus too much on homeschooling and not enough on how to impact the secular universities
- Church programs for youth are about "strumming guitars and eating pizza once a week", not apologetics
- Evangelicals have an over-inflated view of the effectiveness of their (non-intellectual) evangelism methods
- The primary focus and primary responsibility in spiritual warfare is not dealing with supernatural evil
- The real focus and responsibility in spiritual warfare is specified in 2 Cor 10:3-5
- What we ought to be doing is defeating speculations (false ideas), using logical arguments and evidence
- Defending the faith is not memorizing Bible verses and throwing them out randomly
- Defending the faith is not just preaching the gospel
- Demolishing an argument requires understanding arguments: premises, conclusions, the laws of logic
- We should exchange our pious Bible memorizing skills and the like for a class in critical thinking
- The New Testament requires that elders be capable of *refuting* those who oppose sound doctrine (Titus 1:9)
- It is not enough to preach a good sermon, elders have to be able to defend the Christian faith as well
- People who run conservative seminaries do not mandate that M.Div graduates study apologetics
- Famous pastors like Driscoll, Begg, etc. need to teach other pastors to emphasize apologetics in church
- People in church won't engage the culture unless they have reasons and evidence to believe Christianity is true
- We need a balance of both piety and intellectual engagement
- We need to make our evangelism rooted in the intellect in order to have an influence at the university
- Mission organizations also have a responsibility to defend the faith and not merely preach (1 Peter 3:15)

And here is his closing quote from C.S. Lewis:

> To be ignorant and simple now not to be able to meet the enemies on their own ground would be to throw down our weapons and to betray our uneducated brethren who have, under God, no defense but us against the intellectual attacks of the heathen. Good philosophy must exist, if for no other reason, because bad philosophy needs to be answered.

I was really humbled by this, because I sort of knew that the church was anti-intellectual, but I didn't really reflect on how everyone else in society thinks that we are anti-intellectual. It's troubling. The quickest way to make Biblical Christianity respectable again is to hit the books and defeat all comers in intellectual disputations. Are we ready to make the sacrifices to do that?

UPDATE: A friend of mine who blogs at Think Apologetics has written a post on this same issue of anti-intellectualism in the church.

# U.S. Army tells troops that Christian pro-family group is a hate group

**Wintery Knight** · 15 October 2013 · Archived copy · Original

Letitia the Damsel notified me about this story from Todd Starnes of Fox News.

Excerpt:

> Several dozen U.S. Army active duty and reserve troops were told last week that the American Family Association, a well-respected Christian ministry, should be classified as a domestic hate group because the group advocates for traditional family values.
>
> The briefing was held at Camp Shelby in Mississippi and listed the AFA alongside domestic hate groups like the Ku Klux Klan, Neo-Nazis, the Black Panthers and the Nation of Islam.
>
> […]"The instructor said AFA could be considered a hate group because they don't like gays," the soldier told me. "The slide was talking about how AFA refers to gays as sinners and heathens and derogatory terms."
>
> […]Later in the briefing, the soldiers were reportedly told that they could face punishment for participating in organizations that are considered hate groups.
>
> […]Earlier this year, I exposed Army briefings that classified evangelical Christians and Catholics as examples of religious extremism.
>
> Another briefing told officers to pay close attention to troops who supported groups like AFA and the Family Research Council.
>
> One officer said the two Christian ministries did not "share our Army Values."
>
> "When we see behaviors that are inconsistent with Army Values – don't just walk by – do the right thing and address the concern before it becomes a problem," the officer wrote in an email to his subordinates.
>
> […]"The American Family Association has received numerous accounts of military installations as well as law enforcement agencies using a list compiled by the **Southern Poverty Law Center**, which wrongfully identifies and defames AFA," reads a statement they sent me.

Letitia the Damsel commented on her blog about this story and the SPLC:

> This is a "Strike two!" occasion because, as Todd Starnes pointed out, this briefing by the Army is itself a dangerous hate move not unlike how the Family Research Council was also labeled by the Southern Poverty Law Center as a potential target for a truly hateful fascist to attack, which then happened. In fact, Army officers have come to see themselves as idealogues and the mechanism of the Army as a force for activism.

She quote from the Fox News article:

> One officer said the two Christian ministries did not "share our Army Values."
>
> "When we see behaviors that are inconsistent with Army Values – don't just walk by – do the right thing and address the concern before it becomes a problem," the officer wrote in an email to his subordinates.

And comments:

> The US Army has values? And it is incumbent upon the American public to conform to those "Army Values?" Call me hog-tied to the text (or paranoid!), but I'm certain that whatever Army Values exist are supposed to be reflective of the US Constitution which in no way acknowledges that one must campaign to "address concerns"

> of average American citizens that are “inconsistent with (so-called) Army Values.”
>
> So if the Army is going to fling open that door, then I’m not paranoid, and it’s safe again to trod out Hitler references to things I find smack of fascism. I ask that our government root out the Nazi dictator who compiled this briefing and jack him/her up for conspiracy to deprive the people of the AFA of their First Amendment rights and for putting them in potential physical harm.

Previously, the Southern Poverty Law Center (SPLC) labeled the Family Research Council a “hate group” because they are also pro-family and pro-marriage. A gay activist found the FRC listed as a hate group on the SPLC web site, and charged into the FRC building armed with guns. His intent was mass murder. Is that what the U.S. Army was trying to achieve by telling soldiers that the AFA is a hate group? It seems we should avoid using words to encourage people to commit acts of domestic terrorism, like the attack by the anti-FRC gay activist. I certainly never expected the U.S. Army to imitate the SPLC in demonizing pro-family groups – and at taxpayer expense. If this anti-Christian hate speech by the U.S. Army results in actual violence, can the victims then sue the U.S. Army? That seems fair to me.

# Readers vote: who is to blame for this problematic marriage? The wife or the husband?

**Wintery Knight** · 15 October 2013 · Archived copy · Original

***Please read the excerpt from the article BEFORE you vote in the poll at the bottom of the post! Thanks.***

Letitia the Damsel posted this article from the UK Daily Mail on my Facebook page. The article is written by a woman who rejects the traditional roles and responsibilities of women in marriage.

She writes:

> My husband is the kindest, most considerate man in the world. During the seven years we've been married, Ben has done most of the cooking, cleaning and ironing without ever being asked.
>
> He brings me an organic buffalo milk cappuccino every morning in bed and once spent hours making fresh syrup from rhubarb to add to my favourite champagne after I'd given birth. And yes, he works full-time.
>
> But for all he does for me, anxious to make everything in my life better, he gets a raw deal in return.
>
> I am shamefully neglectful of my wifely duties. In fact, I am the anti-wife.
>
> The trouble is that I just can't do the subservient partner thing. Ben is more likely to arrive at our home in Twickenham, South-West London, after a hard day's work and find me having a manicure or checking Facebook than slaving over a hot stove.
>
> This may make me sound selfish, but I'm just being honest. At 39, I've never ironed a single item of my husband's clothing. I rarely cook for him either. Why would I bother when he's so much better at it than I am?
>
> Last Christmas, he produced a lavish three-course lunch and booked a 15th-century cottage for our whole family to eat it in. All I did was hold out my champagne glass for him to refill while saying: 'Well done, darling.'
>
> And if you think I reward his sterling domestic efforts with treats in the bedroom, I'm afraid I fail in that department, too. Intimacy is reserved only for his birthdays – and then just the ones with a zero.
>
> I felt occasional pangs of guilt about our unusual dynamic during the first year of our marriage, but now I find it liberating. He even refers to me as the 'household manager' because I'm an expert in the art of delegation.
>
> Recently, Ben's job for an organic fruit and vegetable box delivery scheme meant he was away on business for three weeks.
>
> Before he left, I found him packing the freezer with organic ready meals and ringing round for short-term nannies to take care of our children, Ronnie, six, and Stanley, two.
>
> The truth is that I'm just too busy and involved in my career as a writer to be a traditional, caring wife.
>
> I work from home and, like most self-employed people in a recession, I push myself to the limit. I set my alarm for 6am so I can squeeze in an hour of work before the school run and I often write until midnight.
>
> My job often means being away from home during the evenings and weekends, which means the lion's share of the childcare falls to Ben. Even when I am home, I keep one eye glued to my iPhone for fear of missing a work call.
>
> **Ben bemoans my inability to achieve a work/life balance.** He sees the word 'driven' as a negative, while I think I'm aspirational and ambitious. Now, I know what you're thinking – that I must earn more than Ben. But no, I don't.
>
> He's the breadwinner and a domestic god. But my work is so all-consuming there's little of me left to go round by the time I switch off my laptop. Don't get me wrong – I love Ben very much and regard our marriage as happy. **And he could never claim breach of contract because he always knew I was a workaholic.**

> […]When we began dating in 2003, I was helping to launch a woman's magazine, which required me to be at work from 8am until 11pm.
>
> It was Ben's touching gesture of sending boxes of Krispy Kreme doughnuts to the office that made me realise what an excellent husband he'd make.
>
> **But when, in the early throes of our relationship, he mooted the idea I might one day be a 'stay-at-home mum', I bristled. 'But my mum stayed at home for the first five years of my life,' he said.**
>
> **'That's never going to happen,' I replied sharply. The matter was never raised again.**
>
> […]It's my fault that he returns home to find no dinner and our children running amok.
>
> But I work hard, too, and that changes everything. While I love my children deeply, wiping noses, bottoms and encrusted beans off the floor doesn't inspire me in the way my work does.
>
> I'm too busy to share the chores. After a day of writing, I feel happy and complete; after a day with the children, I am frazzled.
>
> After the birth of our first son, I went back to my £60,000-a-year job as deputy editor of a national magazine and put Ronnie full-time into an eye-wateringly expensive nursery.
>
> I felt guilty about it, and working 8am to 6pm every day and barely seeing my son just compounded that guilt. But I didn't want to give up work.
>
> **You might think me self-obsessed, but that's a price I'm willing to pay for my happiness.**
>
> Just before the birth of our second son, I decided to leave my job and pursue a career as a writer after being offered a generous redundancy package.
>
> But instead of relaxing into my new job, I allowed work to seep into all areas of my life.
>
> That is why I ignored cripplingly painful contractions ten minutes apart and carried on writing to meet a deadline.
>
> I was back at work just two weeks after giving birth to Stanley, breast-feeding while conducting tricky phone interviews.

Now that you read the excerpt, please vote in the poll:

I'll vote and comment later tonight to say how I voted.

By the way, if you like the articles that Letitia finds, you can hear her on her Visible Conservative podcasts on Fridays. Here's the most recent one and the opening monologue transcript is here on Letitia's blog. If you're like me, and you like hearing conservative women talk passionately about issues that matter, you'll love this podcast. I never miss it.

**UPDATE:** I voted and my vote was to blame the man entirely. He chose this woman to marry and to mother his children. He knew she was unqualified to be a wife and mother and married her anyway. It's ALL HIS FAULT. She is completely innocent because she was bad BEFORE the marriage and he knew it.

You cannot blame a bad woman for continuing to act badly after you marry her. If she is bad before, she'll be bad after. If she has no moral standard for marriage before, then she'll have no moral standard after. She doesn't BELIEVE that she is doing anything wrong – either before or after marriage. You can't blame her for acting according to her own feminist worldview. It's the MAN who is to blame for choosing her.

The man shouldn't even be opening his mouth to complain about her after he chose her. He chose her, and he has no right now to blame her or complain about it. You can't expect traditional wife and mother behavior when you marry someone who explicitly repudiates those roles. Blame the man 100%. And what's more he is EVIL to have inflicted this on his children.

You can’t go to the pet store and pass by all the cats, dogs and birds and buy an alligator then complain when you get the thing home and it bites your arms off. It’s a freaking alligator, and you knew that when you bought it. It’s your fault.

# Brian Auten interviews Dr. Angus Menuge on philosophy of mind

**Wintery Knight** · 15 October 2013 · Archived copy · Original

Click here for the interview. It's up at Apologetics 315!

Details:

> Today's interview is with Dr. Angus Menuge, Professor of Philosophy at Concordia University, and author of *Agents Under Fire: Materialism and the Rationality of Science*. He talks about his background and work, the philosophy of mind, what reason (or reasoning) is, what materialism is as a worldview, things excluded from a materialistic worldview, methodological naturalism and materialism, accounting for free will, materialistic accounts of reason, the epistemological argument from reason, the ontological argument from reason, finding the best explanation for reason, problems with methodological naturalism, implications of materialism, practical application of the argument from reason, advice for apologists, the International Academy of Apologetics, and more.

If what Dr. Menuge says in this interview is true, and I think it is, then a person who believes in materialism can neither ground free will nor rationality! So atheism wouldn't really be freethought so much as it would be… un-free… non-thought.

In case people don't want to listen to the podcast, then I've got some things for you to read below.

**The ontological argument from reason**

Dr. Menuge presented a paper at the real Evangelical Philosophical Society conference for students and professors of philosophy, and you can download the paper here in Word format. (here's a PDF version I made)

Here is the introduction to the paper that Dr. Menuge read at the EPS conference:

> The argument from reason is really a family of arguments to show that reasoning is incompatible with naturalism. Here, naturalism is understood as the idea that foundationally, there are only physical objects, properties and relations, and anything else reduces to, supervenes on, or emerges from that. For our purposes, one of the most important claims of naturalism is that all causation is passive, automatic, event causation (an earthquake automatically causes a tidal wave; the tidal wave responds passively): there are no agent causes, where something does not happen automatically but only because the agent exerts his active power by choosing to do it. The most famous version of the argument from reason is *epistemological*: if naturalism were true, we could not be justified in believing it. Today, I want to focus on the *ontological* argument from reason, which asserts that there cannot be reasoning in a naturalistic world, because reasoning requires libertarian free will, and this in turn requires a unified, enduring self with active power.
>
> The two most promising ways out of this argument are: (1) Compatibilism—even in a deterministic, naturalistic world, humans are capable of free acts of reason if their minds are responsive to rational causes; (2) Libertarian Naturalism—a self with libertarian free will emerges from the brain. I argue that neither of these moves works, and so, unless someone has a better idea, the ontological argument from reason stands.

The paper is 11 pages long, and it is helpful for those of you looking for some good discussion of one of the issues in the area of philosophy of mind.

You may also be interested in Alvin Plantinga's epistemological argument from reason, which is related to this argument. It shows that even to have the ability to think, you have to have a certain anthropology and you have to have mental faculties that are designed for reason, not survival.

**Methodological naturalism**

Dr. Menuge also wrote an article entitled "Is methodological materialism good for science?".

Intro:

> Should science by governed by methodological materialism? That is, should scientists assume that only undirected causes can figure in their theories and explanations? If the answer to these questions is yes, then there can be no such thing as teleological science or intelligent design. But is methodological materialism a defensible approach to science, or might it prevent scientists from discovering important truths about the natural world? In my contribution to The Waning of Materialism (Oxford University Press, 2010), edited by Robert Koons and George Bealer, I consider twelve of the most common arguments in favor of methodological materialism and show that none of them is convincing.
>
> Of these arguments, perhaps the most prevalent is the "God of the gaps" charge, according to which invoking something other than a material cause is an argument from ignorance which, like a bad script writer, cites a *deus ex machina* to save our account from difficulty. Not only materialists, but also many Christian thinkers, like Francis Collins, worry that appeal to intelligent design commits the God of the gaps fallacy.
>
> As I argue, however, not only is an inference to an intelligent cause not the same as an inference to the supernatural, it is a mistake to assume that all gap arguments are bad, or that only theists make them. If a gap argument is based solely on ignorance of what might explain some phenomenon, then indeed it is a bad argument. But there are many good gap arguments which are made both by scientific materialists and proponents of intelligent design.

So how do you make an argument like that?

> As Stephen Meyer has argued in his *Signature in the Cell*, intelligent design argues in just the same way, claiming not merely that the material categories of chance and necessity (singly or in combination) are unable to explain the complex specified information in DNA, but also that in our experience, intelligent agents are the only known causes of such information. The argument is based on what we know about causal powers, not on what we do not know about them.
>
> Since the inference is based on known causal powers, we learn that the cause is intelligent, but only further assumptions or data can tell us whether that intelligence is immanent in nature or supernatural. It is a serious mistake to confuse intelligent design with theistic science, and the argument that since some proponents of design believe that the designer is God, that is what they are claiming can be inferred from the data, is a sophomoric intensional fallacy.

If you think this is interesting, then do have a listen to the podcast. Dr. Menuge is not an ordinary academic – he is very direct. He calls materialism "a catastrophe" in the podcast!

# Two girls charged with aggravated stalking after 12-year old victim commits suicide

**Wintery Knight** · 16 October 2013 · Archived copy · Original

From the NY Daily News.

Excerpt:

> Guadalupe Shaw, 14, and another girl were charged with felony aggravated stalking in the suicide death of 12-year-old Rebecca Sedwick, who jumped off a tower last month. Sedwick's tormentors were relentless in their bullying, police said, and Shaw even wrote a heartless message on Facebook after the girl died.
>
> […]Sedwick was bullied relentlessly for several months before she jumped to her death from a tower at a nearby abandoned concrete plant in Lakeland, the Polk County Sheriff's Office said.
>
> The 14-year-old, identified as Guadalupe Shaw, reportedly posted a coldhearted message on Facebook after Sedwick's suicide — prompting cops to arrest her.
>
> The implicating post said, "Yes ik [I know] I bullied Rebecca nd she killed her self but IDGAF [I don't give a (expletive)]."
>
> As many as 15 girls "terrorized" Sedwick for several months with messages such as "You should die" and "Why don't you go kill yourself," but Shaw and a 12-year-old girl are the only ones that have been charged so far. The sheriff's office released the name of the 12-year-old, but it is the Daily News' policy not to identify minors.
>
> "Detectives have determined that on Sept. 10, 2013, Rebecca Sedwick committed suicide by jumping from a concrete silo tower to her death, and that the malicious harassment by (the 12-year-old girl) and Shaw was likely a contributing factor in Rebecca's decision to commit suicide," the sheriff's office said in a statement.
>
> Witnesses told investigators that Shaw harassed Sedwick by calling her ugly, told her to "drink bleach and die," and suggested that she should kill herself. Shaw's animosity may have stemmed from the fact that a boyfriend of hers had previously dated Sedwick.

I always thought that only boys could be bullies, and not girls, so I find this story surprising. However, it does sort of make sense since studies have shown that women commit domestic violence at almost the same rates as men do. Let's take a look at those studies.

**Studies on domestic violence**

Let's see what's happening with domestic violence rates in the UK.

Excerpt:

> Data from Home Office statistical bulletins and the British Crime Survey show that men made up about 40% of domestic violence victims each year between 2004-05 and 2008-09, the last year for which figures are available. In 2006-07 men made up 43.4% of all those who had suffered partner abuse in the previous year, which rose to 45.5% in 2007-08 but fell to 37.7% in 2008-09.
>
> Similar or slightly larger numbers of men were subjected to severe force in an incident with their partner, according to the same documents. The figure stood at 48.6% in 2006-07, 48.3% the next year and 37.5% in 2008-09, Home Office statistics show.
>
> The 2008-09 bulletin states: "More than one in four women (28%) and around one in six men (16%) had experienced domestic abuse since the age of 16. These figures are equivalent to an estimated 4.5 million female victims of domestic abuse and 2.6 million male victims."

> In addition, “6% of women and 4% of men reported having experienced domestic abuse in the past year, equivalent to an estimated one million female victims of domestic abuse and 600,000 male victims”.

And the numbers from the government of Canada are the same.

Canada numbers:

> An estimated 7% of women and 6% of men in a current or previous spousal relationship encountered spousal violence during the five years up to and including 2004, according to a comprehensive new report on family violence.

So it’s pretty even. Women are about as likely to commit violence as men are. And in lesbian relationships, the rate of domestic violence is extremely high, from 17% to 45%, depending on the study. I think in general, women are more violent when there is no man present, because they have more difficulty restraining their emotions and resolving disagreements with rational arguments instead of fist, feet and weapons. It would be interesting to know more about which of the girls in the Florida stalking story – predators and prey – had fathers in the home. I think that the presence of fathers would have helped everyone concerned. Fathers are a stabilizing influence in the home.

# Obamacare web site hides health insurance costs until users apply for subsidies

**Wintery Knight** · 16 October 2013 · Archived copy · Original

Another article from health care policy expert Avik Roy in Forbes magazine.

Excerpt:

> A growing consensus of IT experts, outside and inside the government, have figured out a principal reason why the website for Obamacare's federally-sponsored insurance exchange is crashing. Healthcare.gov forces you to create an account and enter detailed personal information before you can start shopping. This, in turn, creates a massive traffic bottleneck, as the government verifies your information and decides whether or not you're eligible for subsidies. HHS bureaucrats knew this would make the website run more slowly. But they were more afraid that letting people see the underlying cost of Obamacare's insurance plans would scare people away.
>
> "Healthcare.gov was initially going to include an option to browse before registering," report Christopher Weaver and Louise Radnofsky in the *Wall Street Journal*. "But that tool was delayed, people familiar with the situation said." Why was it delayed? "An HHS spokeswoman said the agency wanted to ensure that users were aware of their eligibility for subsidies that could help pay for coverage, *before they started seeing the prices of policies*." (Emphasis added.)
>
> As you know if you've been following this space, Obamacare's bevy of mandates, regulations, taxes, and fees drives up the cost of the insurance plans that are offered under the law's public exchanges. AManhattan Institute analysis I helped conduct found that, on average, the cheapest plan offered in a given state, under Obamacare, will be 99 percent more expensive for men, and 62 percent more expensive for women, than the cheapest plan offered under the old system. And those disparities are even wider for healthy people.
>
> That raises an obvious question. If 50 million people are uninsured today, mainly because insurance is too expensive, why is it better to make coverage even costlier?
>
> The answer is that Obamacare wasn't designed to help healthy people with average incomes get health insurance. It was designed to force those people to pay *more* for coverage, in order to subsidize insurance for people with incomes near the poverty line, and those with chronic or costly medical conditions.
>
> But the laws' supporters and enforcers don't want you to know that, because it would violate the President's incessantly repeated promise that nothing would change for the people that Obamacare doesn't directly help. If you shop for Obamacare-based coverage without knowing if you qualify for subsidies, you might be discouraged by the law's steep costs.
>
> So, by analyzing your income first, if you qualify for heavy subsidies, the website can advertise those subsidies to you instead of just hitting you with Obamacare's steep premiums. For example, the site could advertise plans that cost "$0″ or "$30″ instead of explaining that the plan really costs $200, and that you're getting a subsidy of $200 or $170. But you'll have to be at or near the poverty line to gain subsidies of that size; most people will either not qualify for a subsidy, or qualify for a small one that, net-net, doesn't make up for the law's cost hikes.
>
> This political objective—masking the true underlying cost of Obamacare's insurance plans—far outweighed the operational objective of making the federal website work properly. Think about it the other way around. If the "Affordable Care Act" truly did make health insurance more affordable, there would be no need to hide these prices from the public.

The plain truth of the matter is that you can't lower the costs of health care by covering more people or by covering more treatments or by regulating more doctors. All of those things don't lower the cost of health insurance – they

raise it. The subsidies that the Democrats are offering are costs that are being added to the deficit. They will have to be paid by job creators and their employees through higher taxes later. Obamacare didn't solve a thing. It just adds costs and complexity. It's the equivalent of shuffling deck chairs on the Titanic.

# Can the worldview of atheism rationally ground moral judgements?

**Wintery Knight** · 16 October 2013 · Archived copy · Original

Philosopher Chad Meister takes a look at the attempts of some prominent atheists to make rational sense of morality within their worldviews.

Here is the abstract:

> Atheists often argue that they can make moral claims and live good moral lives without believing in God. Many theists agree, but the real issue is whether atheism can provide a justification for morality. A number of leading atheists currently writing on this issue are opposed to moral relativism, given its obvious and horrific ramifications, and have attempted to provide a justification for a nonrelative morality. Three such attempts are discussed in this article: Walter Sinnott-Armstrong's position that objective morality simply "is"; Richard Dawkins's position that morality is based on the selfish gene; and Michael Ruse and Edward Wilson's position that morality is an evolutionary illusion. Each of these positions, it turns out, is problematic. Sinnott-Armstrong affirms an objective morality, but affirming something and justifying it are two very different matters. Dawkins spells out his selfish gene approach by including four fundamental criteria, but his approach has virtually nothing to do with morality—with real right and wrong, good and evil. Finally, Ruse and Wilson disagree with Dawkins and maintain that belief in morality is just an adaptation put in place by evolution to further our reproductive ends. On their view, morality is simply an illusion foisted on us by our genes to get us to cooperate and to advance the species. But have they considered the ramifications of such a view? Each of these positions fails to provide the justification necessary for a universal, objective morality—the kind of morality in which good and evil are clearly understood and delineated.
>
> […]We can get to the heart of the atheist's dilemma with a graphic but true example. Some years ago serial killer Ted Bundy, who confessed to over thirty murders, was interviewed about his gruesome activities. Consider the frightening words to his victim as he describes them:
>
> *Then I learned that all moral judgments are "value judgments," that all value judgments are subjective, and that none can be proved to be either "right" or "wrong"….I discovered that to become truly free, truly unfettered, I had to become truly uninhibited. And I quickly discovered that the greatest obstacle to my freedom, the greatest block and limitation to it, consists in the insupportable "value judgment" that I was bound to respect the rights of others. I asked myself, who were these "others"? Other human beings, with human rights? Why is it more wrong to kill a human animal than any other animal, a pig or a sheep or a steer? Is your life more to you than a hog's life to a hog? Why should I be willing to sacrifice my pleasure more for the one than for the other? Surely, you would not, in this age of scientific enlightenment, declare that God or nature has marked some pleasures as "moral" or "good" and others as "immoral" or "bad"? In any case, let me assure you, my dear young lady, that there is absolutely no comparison between the pleasure I might take in eating ham and the pleasure I anticipate in raping and murdering you. That is the honest conclusion to which my education has led me—after the most conscientious examination of my spontaneous and uninhibited self.*
>
> While I am in no way accusing atheists in general of being Ted Bundy-like, the question I have for the atheist is simply this: *On what moral grounds can you provide a response to Bundy?* The atheistic options are limited. If morality has nothing to do with God, as atheists suppose, what does it have to do with? One response the atheist could offer is moral relativism, either personal or cultural. The personal moral relativist affirms that morality is an individual matter; you decide for yourself what is morally right and wrong. But on this view, what could one say to Bundy? Not much, other than "I don't like what you believe; it offends me how you brutalize women." For the personal relativist, however, who really cares (other than you) that you are offended by someone else's actions? On this view we each decide our own morality, and when my morality clashes with yours, there is no final arbiter other than perhaps that the stronger of us *forces* the other to agree. But this kind of Nietzschean "might makes right" ethic has horrific consequences, and one need only be reminded of the

> Nazi reign of terror to see it in full bloom. This is one reason why thoughtful atheists, such as Christopher Hitchens, Walter Sinnott-Armstrong, Richard Dawkins, Sam Harris, Daniel Dennett, and others don't go there.
>
> But what about cultural moral relativism—the view that moral claims are the inventions of a given culture? Most thoughtful atheists don't tread here either, and this is one reason why: If right and wrong are cultural inventions, then it would always be wrong for someone within that culture to speak out against them. If culture defines right and wrong, then who are you to challenge it? For example, to speak out against slavery in Great Britain in the seventeenth century would have been morally wrong, for it was culturally acceptable. But surely it was a morally good thing for William Wilberforce and others to strive against the prevailing currents of their time and place to abolish the slave trade. For the cultural moral relativist, all moral reformers—Wilberforce, Martin Luther King, Jr., even Jesus and Gandhi, to name a few—would be in the wrong. But who would agree with this conclusion? Thankfully, most leading atheists agree that moral relativism is doomed.

The rest of Dr. Meister's article deals with three atheistic attempts to get out of this problem.

# New Oxford University study links non-family day care to anti-social behavior

**Wintery Knight** · 17 October 2013 · Archived copy · Original

From the UK Telegraph. (H/T Dina)

Excerpt:

> Academics at Oxford University discovered that exposure to some forms of early education contributed to bad behaviour and could be linked to emotional problems.

> The study, based on an analysis of infants from almost 1,000 families, showed that the strongest influence on children came from within the home itself.
>
> Children raised in poor families with high levels of parental stress or mental health problems were most at risk of developing emotional problems by the time they started school, it emerged.
>
> The research also uncovered trends relating to children who were in formal child care — away from their parents.

> The disclosure will revive debate over the best way to raise children amid a surge in the number of under-fives enrolled in nurseries and with childminders in the past 20 years. Figures from the Department for Education show that 441,000 children under five are in day nurseries while another 272,000 are being looked after by childminders.
>
> […]In the Oxford study, researchers recruited 991 families with children aged three months. Mothers had an average age of 30.
>
> Researchers assessed children at the age of four through questionnaires about their behaviour and emotions completed by teachers and parents. They also observed care provided by mothers and observed non-parental care for at least 90 minutes for those children placed in formal childcare settings.
>
> The report, published in the journal Child: Care, Health and Development, said that "children who spent more time in group care, mainly nursery care, were more likely to have behavioural problems, particularly hyperactivity".
>
> The study, led by Prof Alan Stein, of Oxford's Department of Child and Adolescent Psychiatry, found that "spending more time in day care centres, over the total period was a predictor of total problem scores".
>
> "Children who spent more time in day care centres were more likely to be hyperactive," it said. "Children receiving more care by childminders were more likely to have peer problems."
>
> The authors added: "The findings in relation to childminding suggest that it might be out of home care rather than group care that raises the risk of behavioural difficulties."
>
> The researchers also tracked other forms of early years care and found benefits to different approaches.
>
> They found that children who spent more time in pre-school playgroups – normally for a few hours a day, rather than a full-time nursery – had fewer problems.
>
> More time with a nanny in parents' own home predicted higher levels of "pro-social behaviour", showing willingness to help others, it emerged.
>
> The study said: "These findings suggest that interventions to enhance children's emotional and behavioural development might best focus on supporting families and augmenting the quality of care in the home."

A study like this will be useful when debating people with open minds, but hardcore feminists and socialists, who want women to work in order to fund bigger government, will not be moved. Because for them, it's not about evidence. It's about ideology. That's why we have to be careful about letting people like that get elected.

# An orphan who lived his whole life in foster care goes to church and asks to be adopted

**Wintery Knight** · 17 October 2013 · Archived copy · Original

Here's a very sad story that I hope will help us all to think about making better decisions that respect the needs of children. (H/T Mary)

Excerpt:

> As soon as they pulled into the church lot, Davion changed his mind.
>
> "Miss! Hey, Miss!" he called to his caseworker, who was driving. "I don't want to do this anymore."
>
> In the back seat, he hugged the Bible someone had given him at the foster home. "You're going to be great," Connie Going said.
>
> Outside St. Mark Missionary Baptist Church, she straightened his tie. Like his too-big black suit, the white tie had been donated. It zipped up around the neck, which helped. No one had ever taught Davion, 15, how to tie one.
>
> "Are you ready?" Going asked. Hanging his head, he followed her into the sanctuary.
>
> This had been his idea. He'd heard something about God helping people who help themselves. So here he was, on a Sunday in September, surrounded by strangers, taking his future into his own sweaty hands.
>
> Davion Navar Henry Only loves all of his names. He has memorized the meaning of each one: beloved, brown, ruler of the home, the one and only.
>
> But he has never had a home or felt beloved. His name is the last thing his parents gave him.
>
> He was born while his mom was in jail. He can't count all of the places he has lived.
>
> In June, Davion sat at a library computer, unfolded his birth certificate and, for the first time, searched for his mother's name. Up came her mug shot: 6-foot-1, 270 pounds — tall, big and dark, like him. Petty theft, cocaine.
>
> Next he saw the obituary: La-Dwina Ilene "Big Dust" McCloud, 55, of Clearwater, died June 5, 2013. Just a few weeks before.
>
> In church, Davion scanned the crowd. More than 300 people packed the pews. Men in bright suits, grandmoms in sequined hats, moms hugging toddlers on their laps. Everyone seemed to have a family except him.
>
> In church, Davion scanned the crowd. More than 300 people packed the pews. Men in bright suits, grandmoms in sequined hats, moms hugging toddlers on their laps. Everyone seemed to have a family except him.
>
> Davion sat beside Going, his caseworker from Eckerd, and struggled to follow the sermon: something about a letter Paul wrote. "He was in prison," said the Rev. Brian Brown. "Awaiting an uncertain future … "
>
> Sometimes Davion felt like that, holed up at Eckerd's Carlton Manor residential group home with 12 teenage boys, all with problems. All those rules, cameras recording everything.
>
> Davion wants to play football, but there's no one to drive him to practice. He wants to use the bathroom without having to ask someone to unlock the door.
>
> More than anything, he wants someone to tell him he matters. To understand when he begs to leave the light on.
>
> "You may be in a dark place," said the preacher. "But look for the joyful moments when you can praise God."
>
> Picking at his fingers, Davion wondered what to say. And whether anyone would hear him.

It's the saddest thing in the world for a child to not grow up with the two people who chose to engage in activities that would make him. Yet we as a society seem to be hell-bent on celebrating behaviors that cause children to be without their mothers or fathers. Or both. We push for policies that make it easier for people to have babies out of wedlock (because we are paying them to do it). We educate children to believe that premarital sex is OK, that hooking up is OK, that moral relativism is OK, that cohabitation is OK, that no fault divorce is OK, and now… that gay marriage is OK. But this isn't what children need.

We have to look at these situations with motherless/fatherless children and decide that what we promote has some effect on this. It doesn't happen by accident. Many of the things we support that make us feel "compassionate" are actually causing these problems. The solution is to start pushing for chastity, marriage and parenting. We need to shame behaviors and policies that deprive children of the safety and security that they obviously need. We need to name and shame the forces that cause these problems – secularism, feminism, socialism, relativism, and so on.

# Does intelligent design commit the “God-of-the-gaps” fallacy?

**Wintery Knight** · 17 October 2013 · Archived copy · Original

Stephen C. Meyer explains, with reference to his newest book “Darwin’s Doubt”. He is responding to a critical review of the book published in *Science*.

Here’s the relevant part of the review:

> **Meyer’s scientific approach is purely negative. He argues that paleontologists are unable to explain the Cambrian explosion, thus opening the door to the possibility of a designer’s intervention. This, despite his protest to the contrary, is a (sophisticated) “god of the gaps” approach, an approach that is problematic in part because future developments often provide solutions to once apparently difficult problems.**

And here’s part of Meyer’s response:

> [B]y claiming that my approach is a purely negative one based solely upon “gaps” in our knowledge or in the evolutionary account of the Cambrian explosion, Marshall implies that *Darwin’s Doubt* makes a fallacious kind of argument known to logicians as an “argument from ignorance.” Arguments from ignorance occur when evidence against a proposition X is offered as the sole (and conclusive) grounds for accepting some alternative proposition Y. Arguments from ignorance make an obvious logical error. They omit a necessary kind of premise, a premise providing positive support for the conclusion, not just negative evidence against an alternative conclusion. In an explanatory context, arguments from ignorance have the form:
>
> **Premise One:** Cause X cannot produce or explain evidence E.
>
> **Conclusion:** Therefore, cause Y produced or explains E.
>
> Critics of intelligent design often claim that the case for intelligent design commits this fallacy. They claim that design advocates use our present ignorance of any materialistic cause of specified or functional information (for example) as the sole basis for inferring an intelligent cause for the origin of such information in biological systems. For example, Michael Shermer represents the case for intelligent design as follows: “Intelligent design … argues that life is too specifically complex (complex structures like DNA) … to have evolved by natural forces. Therefore, life must have been created by. . . an intelligent designer.” In short, Shermer claims that ID proponents argue as follows:
>
> **Premise:** Materialistic causes or evolutionary mechanisms cannot produce novel biological information.
>
> **Conclusion:** Therefore, an intelligent cause produced specified biological information.
>
> Marshall echoes Shermer’s criticism. But the inference to design as developed in *Darwin’s Doubt* does not commit this fallacy.

Why not? Because it argues that the best explanation of an effect in nature – new information -is an intelligent cause, and that we are familiar with how these intelligent causes operate already.

More:

> [T]he book makes a *positive* case for intelligent design as an inference to the best explanation for the origin of the genetic (and epigenetic) information necessary to produce the first forms of animal life (as well as other features of the Cambrian animals such as the presence of genetic regulatory networks that function as integrated circuits during animal development). It advances intelligent design as the best explanation not only because many lines of evidence now cast doubt on the creative power of unguided evolutionary mechanisms, but also because of our *positive*, experience-based knowledge of the powers that intelligent agents have to

> produce as digital and other forms of information as well as integrated circuitry. As I argue in Chapter 18 of *Darwin's Doubt*:
>
> Intelligent agents, due to their rationality and consciousness, have demonstrated the power to produce specified or functional information in the form of linear sequence-specific arrangements of characters. Digital and alphabetic forms of information routinely arise from intelligent agents. A computer user who traces the information on a screen back to its source invariably comes to a mind — a software engineer or programmer. The information in a book or inscription ultimately derives from a writer or scribe. Our experience-based knowledge of information flow confirms that systems with large amounts of specified or functional information invariably originate from an intelligent source. The generation of functional information is "habitually associated with conscious activity." Our uniform experience confirms this obvious truth.
>
> Thus, the inadequacy of proposed materialistic evolutionary causes or mechanisms forms only part of the basis of the argument *for* intelligent design. We also *know* from broad and repeated experience that intelligent agents can and do produce information-rich systems and integrated circuitry. We have positive experience-based knowledge of a cause sufficient to generate new specified information and integrated circuitry, namely, intelligence. We are not ignorant of how information or circuitry arises. We know from experience that conscious, rational agents can create such information-rich structures and systems. To again quote information theorist Henry Quastler: "creation of new information is *habitually associated* with conscious activity." Indeed, whenever large amounts of specified or functional information are present in an artifact or entity whose causal story is known, invariably creative intelligence — intelligent design — played a role in the origin of that entity. Thus, when we encounter a large discontinuous increase in the functional information content of the biosphere as we do in the Cambrian explosion, we may infer — based on our *knowledge* of established cause-effect relationships — that a purposive intelligence operated in the history of life to produce the functional information necessary to generate those forms of animal life.
>
> Instead of exemplifying a fallacious form of argument in which design is inferred solely from a negative premise, the argument for intelligent design formulated in *Darwin's Doubt* takes the following form:
>
> **Premise One:** Despite a thorough search and evaluation, no materialistic causes or evolutionary mechanisms have demonstrated the power to produce large amounts of specified or functional information (or integrated circuitry).
>
> **Premise Two:** Intelligent causes have demonstrated the power to produce large amounts of specified/functional information (and integrated circuitry).
>
> **Conclusion:** Intelligent design constitutes the best, most causally adequate, explanation for the specified/functional information (and circuitry) that was necessary to produce the Cambrian animals.

I do think it's very important for Christians to make their case for God based on the *progress* of science.

If you are going to argue for God, you want to use arguments like these:

1. origin of the universe
2. cosmic fine-tuning
3. origin of life building blocks
4. biological information at origin of life
5. biological information at Cambrian explosion
6. galactic fine-tuning
7. stellar fine-tuning
8. observed limits to mutation-driven change
9. mental effort studies
10. corroborated NDEs

And so on.

Each of these arguments is based on what we know about nature. They are not based on gaps in our knowledge at all. The more we do science, the more evidence we get for each argument. For example, at one point we only had redshift for the beginning of the universe (#1), but then we added light element abundance predictions and the cosmic microwave background radiation. For the cosmic fine-tuning (#2), we started with the fine-tuning of gravity, and then added more examples, like the cosmological constant. In each case, the continuous progress of science *strengthened* the need for a Creator/Designer. The more we know from science about how nature works, the stronger the case for Christian theism gets.

It's the atheists who are now taking refuge in the gaps and holding out speculations as a way of maintaining their atheism against the science. It's the atheists who are hoping for aliens, multiverses, undiscovered fossils, and so on. There is no God-of-the-Gaps anymore. There's only Atheism-of-the-Gaps.

# Leftist Slate to college women: stop binge drinking to avoid being sexually assaulted

**Wintery Knight** · 18 October 2013 · Archived copy · Original

Absolutely shocking common sense from the radically leftist Slate.

Excerpt: (links removed)

> A 2009 study of campus sexual assaultfound that by the time they are seniors, almost 20 percent of college women will become victims, overwhelmingly of a fellow classmate. Very few will ever report it to authorities. The same study states that more than 80 percent of campus sexual assaults involve alcohol. Frequently both the man and the woman have been drinking. The men tend to use the drinking to justify their behavior, as this survey of research on alcohol-related campus sexual assault by Antonia Abbey, professor of psychology at Wayne State University, illustrates, while for many of the women, having been drunk becomes a source of guilt and shame. Sometimes the woman is the only one drunk and runs into a particular type of shrewd—and sober—sexual predator who lurks where women drink like a lion at a watering hole. For these kinds of men, the rise of female binge drinking has made campuses a prey-rich environment. I've spoken to three recent college graduates who were the victims of such assailants, and their stories are chilling.

> Let's be totally clear: Perpetrators are the ones responsible for committing their crimes, and they should be brought to justice. But we are failing to let women know that when they render themselves defenseless, terrible things can be done to them. Young women are getting a distorted message that their right to match men drink for drink is a feminist issue. The real feminist message should be that when you lose the ability to be responsible for yourself, you drastically increase the chances that you will attract the kinds of people who, shall we say, don't have your best interest at heart. That's not blaming the victim; that's trying to prevent more victims.
>
> Experts I spoke to who wanted young women to get this information said they were aware of how loaded it has become to give warnings to women about their behavior. "I'm always feeling defensive that my main advice is: 'Protect yourself. Don't make yourself vulnerable to the point of losing your cognitive faculties,' " says Anne Coughlin, a professor at the University of Virginia School of Law, who has written on rape and teaches feminist jurisprudence. She adds that by not telling them the truth—that they are responsible for keeping their wits about them—she worries that we are "infantilizing women."
>
> The "Campus Sexual Assault Study" of 2007, undertaken for the Department of Justice, found that the popular belief that many young rape victims have been slipped "date rape" drugs is false. "Most sexual assaults occur after voluntary consumption of alcohol by the victim and assailant," the report states. But the researchers noted that this crucial point is not being articulated to young and naïve women: "Despite the link between substance abuse and sexual assault it appears that few sexual assault and/or risk reduction programs address the relationship between substance use and sexual assault." The report added, somewhat plaintively, "Students may also be unaware of the image of vulnerability projected by a visibly intoxicated individual."
>
> "I'm not saying a woman is responsible for being sexually victimized," saysChristopher Krebs, one of the authors of that study and others on campus sexual assault. "But when your judgment is compromised, your risk is elevated of having sexual violence perpetrated against you."

Stuart Schneiderman surveyed feminist responses to this article.

Excerpt: (links removed)

> Before you knew it, Yoffe's example of responsible parental advice had produced a feminist freak out. From Katie Baker to Amanda Hess to Erin Gloria Ryan to Ann Friedman to Emma Gray the voices of contemporary feminism rose up to denounce Yoffe for, they seemed all to believe, blaming the victim and going easy on the male perpetrators of these heinous crimes.
>
> If I may summarize it, they seemed to be reasoning that when a woman is raped it is not her fault. True enough. Thus, any suggestion that she might have avoided placing herself in a dangerous situation can make her feel that she was at fault, and thus will impede her recovery.
>
> Yoffe was saying that she wants her daughter to do everything in her power, as an individual with free choice, to avoid being raped. Feminists believe that her message circumscribes the freedom of young women and tends to blame them when they are victims of sexual assault.
>
> Feminists want to focus the maximum of outrage against rapists. Any suggestion that a woman might have knowingly herself in harms' way diminishes their outrage.
>
> […]True enough, none of the feminists mentioned above says that young women should go out and binge drink. Yet, they are in such high dudgeon over Yoffe's recommendation that one would easily forgive a young woman for coming away believing that binge drinking was a way to assert her independence and her liberation.
>
> Apparently, feminists believe that liberation means that a woman should be free to do as she pleases when she pleases how she pleases and not to have to suffer any ill-effects. They fail to see that freedom for responsibility is not the same as freedom from responsibility.
>
> Worse yet, Yoffe was suggesting that women, far more than men, possess a specific vulnerability to sexual assault. It inheres in the biology of sex. And she was taking account of the fact that women are generally, significantly weaker then men.
>
> If you take these realities into account, you will be advising your daughter to exercise caution when imbibing alcohol. You will be telling her to act responsibly.
>
> For decades now, feminism has been telling women that they are strong and empowered. Yet, when you tell women that they are strong and powerful you are suggesting that they are invulnerable.
>
> Yoffe's feminist detractors did not specifically say it, but they must have been seriously incommoded by her willingness to accept the fact that a young woman is weaker and more vulnerable than a young man.
>
> Let us not forget that some feminists, one of them Tufts professor Nancy Bauer have publicly said that equality means matching a man drink for drink and hookup for hookup.
>
> If women are drinking more than ever it's not because they are following advice given them by men. Most young women today refuse to accept any advice from any man.
>
> While it is well known, as Yoffe documents, that women who get very drunk are more likely to be sexually assaulted, it is also true that women who choose to hook up, that is to perform consensual sexual acts with men they barely know often use alcohol as a psychic lubricant.

This is not surprising. In a previous post, I blogged about feminist professor Nancy Bauer urged women to act more like men in every way, including binge-drinking.
Look at this New York Times article by Ms. Bauer.

Excerpt:

> If there's anything that feminism has bequeathed to young women of means, it's that power is their birthright. Visit an American college campus on a Monday morning and you'll find any number of amazingly ambitious and talented young women wielding their brain power, determined not to let anything — including a relationship with some needy, dependent man — get in their way. **Come back on a party night, and you'll find many of these same girls (they stopped calling themselves "women" years ago) wielding their**

> **sexual power, dressed as provocatively as they dare, matching the guys drink for drink — and then hook-up for hook-up.**

I think that quote is a pretty good summary of what radical feminism amounts to, in practice. Women avoiding the traditional roles of wife and mother by destroying their own ability to marry and raise children with alcohol and promiscuity. This is very much the design of feminism – it is the goal. That's why they push for taxpayer-funded contraceptions and taxpayer-funded abortions. Women who choose recreational sex over and over make lousy wives and mothers. This is what feminists want – they want marriage and at-home motherhood to disappear.

Here's Ms. Bauer's bio:

> *Nancy Bauer is associate professor and chair of philosophy at Tufts University. She is the author of "Simone de Beauvoir, Philosophy, and Feminism," and is currently completing a new book, "How to Do Things With Pornography."*

It's very important to understand that older feminist women are deliberately pushing young women into situations where they are likely to be raped. If there were no radical feminism, there would be much less rape. Older feminist women will do and say anything to create enmity between younger women and men. It furthers their feminist agenda when young women have this deep suspicion of men – a suspicion that is confirmed by their own poor decisions with alcohol and sex. Old feminists want young women to choose men based on shallow criteria that have nothing to do with marriage, and break themselves up against them like ships on icebergs. That way, women will throw themselves into their careers instead of marriages – at least until they reach a certain age and then determine to have fatherless children. But that suits radical feminists just fine, too.

# Public school teachers and Democrat politicians send their own kids to private schools

**Wintery Knight** · 18 October 2013 · Archived copy · Original

Black commentator Larry Elder writes about it in Investors Business Daily.

Excerpt:

> About 11% of all parents — nationwide, rural and urban — send their children to private schools. The numbers are much higher in urban areas. One study found that in Philadelphia a staggering 44% of public school teachers send their own kids to private schools.
>
> In Cincinnati and Chicago, 41% and 39% of public school teachers pay for a private school education for their children. In Rochester, N.Y., it's 38%, in Baltimore 35%, in San Francisco 34% and in New York-northeastern New Jersey 33%.
>
> In Los Angeles nearly 25% of public school teachers send their kids to private school versus 16% of Angelenos who do so.
>
> The 2004 study by the Fordham Institute said its findings "are apt to be embarrassing for teacher unions, considering those organizations' political animus toward assisting families to select among schools. But these results do not surprise most practicing teachers to whom we speak."
>
> "The data have shown the same basic pattern since we first happened upon them two decades ago: Urban public school teachers are more apt to send their own children to private schools than is the general public. One might say this shows how conservative teachers are. They continue doing what they've always done. Or it might indicate that they have long been discerning connoisseurs of education …
>
> "The middle class will tolerate a lot — disorder, decay and dismay, an unwholesome environment, petty crime, potholes, chicanery and rudeness. One thing, however, that middle class parents will not tolerate is bad schools for their children. To escape them, they will pay out-of-pocket or vote with their feet. That is what discerning teachers do."
>
> What about members of Congress? Where do they send their own children? A 2007 Heritage Foundation study found that 37% of representatives and 45% of senators with school-age children sent their own kids to private school.
>
> Of the members of the Congressional Hispanic Caucus with school-age children, 38% sent them to private school. Of the members of the Congressional Black Caucus with school-age children, 52% sent them to private school.
>
> The ex-mayor of Los Angeles, Antonio Villaraigosa, was asked why he didn't have his own kids in public school despite his strong advocacy of public education. Villaraigosa, whose wife was a public school teacher, said:
>
> "I'm doing like every parent does. I'm going to put my kids in the best school I can. My kids were in a neighborhood public school until just this year. We've decided to put them in a Catholic school. We've done that because we want our kids to have the best education they can.
>
> "If I can get that education in a public school, I'll do it, but I won't sacrifice (emphasis added) my children any more than I could ask you to do the same."
>
> When he got elected president, Barack Obama and his wife made a big display of looking into Washington, D.C., public schools for his two daughters to attend. But the Obamas chose Sidwell Friends, the elite private school whose alums include Chelsea Clinton.
>
> Obama's own mother sent her then-10-year-old to live with her parents — so he could attend Punahou

> Academy, the most exclusive prep school in Honolulu. In fact, from Punahou to Occidental (a private college in Los Angeles) to Columbia (where he completed college) to Harvard Law, Obama is a product of private education.
>
> So how does this square with Obama's opposition to the D.C. Opportunity Scholarship Program that offered a voucher for the children of participating parents? It doesn't.

The best way to help all children – especially poor and minority children – get ahead in life is by giving their parent(s) vouchers and letting them choose public or private schools. But Democrats can't do that – they want their supporters in the teacher unions to have a captive audience. That way, come election time, the Democrats can count on an army of big-government supporters. It's very important to understand that Democrats don't want what's best for children. They don't want them to have a choice. They don't want them to have a quality education. They want to bribe public school teachers to help them get elected.

# John Searle and the Chinese room illustration

**Wintery Knight** · 18 October 2013 · Archived copy · Original

There is a very famous thought experiment from UC Berkeley philosopher John Searle that all Christian apologists should know about. And now everyone who reads the Wall Street Journal knows about it, because of this article.

In that article, Searle is writing about the IBM computer that was programmed to play Jeopardy. People have been talking about how this Jeopardy-playing computer seems human. But Searle disagrees. And his famous Chinese room example (discussed in the article) shows why no one should be concerned about computers acting like humans.

Excerpt:

> Imagine that a person—me, for example—knows no Chinese and is locked in a room with boxes full of Chinese symbols and an instruction book written in English for manipulating the symbols. Unknown to me, the boxes are called "the database" and the instruction book is called "the program." I am called "the computer."
>
> People outside the room pass in bunches of Chinese symbols that, unknown to me, are questions. I look up in the instruction book what I am supposed to do and I give back answers in Chinese symbols.
>
> Suppose I get so good at shuffling the symbols and passing out the answers that my answers are indistinguishable from a native Chinese speaker's. I give every indication of understanding the language despite the fact that I actually don't understand a word of Chinese.
>
> And if I do not, neither does any digital computer, because no computer, qua computer, has anything I do not have. It has stocks of symbols, rules for manipulating symbols, a system that allows it to rapidly transition from zeros to ones, and the ability to process inputs and outputs. That is it. There is nothing else.

By the way, Searle is a naturalist – not a theist, not a Christian. But he does oppose postmodernism. So he isn't all bad. But let's hear from a Christian scholar who can make more sense of this for us.

Here is a link to the full article by John Searle.

Here's an article by Christian philosopher Jay Richards.

Excerpt:

> Popular discussions of AI often suggest that if you keep increasing weak AI, at some point, you'll get strong AI. That is, if you get enough computation, you'll eventually get consciousness.
>
> The reasoning goes something like this: There will be a moment at which a computer will be indistinguishable from a human intelligent agent in a blind test. At that point, we will have intelligent, conscious machines.
>
> This does not follow. A computer may pass the Turing test, but that doesn't mean that it will actually be a self-conscious, free agent.
>
> The point seems obvious, but we can easily be beguiled by the way we speak of computers: We talk about computers learning, making mistakes, becoming more intelligent, and so forth. We need to remember that we are speaking metaphorically.
>
> We can also be led astray by unexamined metaphysical assumptions. If we're just computers made of meat, and we happened to become conscious at some point, what's to stop computers from doing the same? That makes sense if you accept the premise—as many AI researchers do. If you don't accept the premise, though, you don't have to accept the conclusion.
>
> In fact, there's no good reason to assume that consciousness and agency emerge by accident at some threshold of speed and computational power in computers. We know by introspection that we are conscious, free

> beings—though we really don't know how this works. So we naturally attribute consciousness to other humans. We also know generally what's going on inside a computer, since we build them, and it has nothing to do with consciousness. It's quite likely that consciousness is qualitatively different from the type of computation that we have developed in computers (as the "Chinese Room" argument, by philosopher John Searle, seems to show). Remember that, and you'll suffer less anxiety as computers become more powerful.
>
> Even if computer technology provides accelerating returns for the foreseeable future, it doesn't follow that we'll be replacing ourselves anytime soon. AI enthusiasts often make highly simplistic assumptions about human nature and biology. Rather than marveling at the ways in which computation illuminates our understanding of the microscopic biological world, many treat biological systems as nothing but clunky, soon-to-be-obsolete conglomerations of hardware and software. Fanciful speculations about uploading ourselves onto the Internet and transcending our biology rest on these simplistic assumptions. This is a common philosophical blind spot in the AI community, but it's not a danger of AI research itself, which primarily involves programming and computers.
>
> AI researchers often mix topics from different disciplines—biology, physics, computer science, robotics—and this causes critics to do the same. For instance, many critics worry that AI research leads inevitably to tampering with human nature. But different types of research raise different concerns. There are serious ethical questions when we're dealing with human cloning and research that destroys human embryos. But AI research in itself does not raise these concerns. It normally involves computers, machines, and programming. While all technology raises ethical issues, we should be less worried about AI research—which has many benign applications—than research that treats human life as a means rather than an end.

When I am playing a game on the computer, I know exactly why what I am doing is fun – I am conscious of it. But the computer has no idea what I am doing. It is just matter in motion, acting on it's programming and the inputs I supply to it. And that's all computers will ever do. Trust me, this is my field. I have the BS and MS in computer science, and I have studied this area. AI has applications for machine learning and search problems, but consciousness is not on the radar. You can't get there from here.

# Dennis Prager explains what feminism has achieved for women

**Wintery Knight** · 19 October 2013 · Archived copy · Original

Dennis Prager has summarized many of my viewpoints on this blog in a tiny, tiny little article. He calls it "Four Legacies of Feminism".

Read the whole glorious thing and bask in its wisdom!

Full text:

> As we approach the 50th anniversary of the publication of Betty Friedan's feminist magnum opus, *The Feminine Mystique*, we can have a perspective on feminism that was largely unavailable heretofore.
>
> And that perspective doesn't make feminism look good. Yes, women have more opportunities to achieve career success; they are now members of most Jewish and Christian clergy; women's college sports teams are given huge amounts of money; and there are far more women in political positions of power. But the prices paid for these changes — four in particular — have been great, and outweigh the gains *for women*, let alone for men and for society.
>
> 1) The first was the feminist message to young women to have sex just as men do. There is no reason for them to lead a different sexual life than men, they were told. Just as men can have sex with any woman solely for the sake of physical pleasure, so, too, women ought to enjoy sex with any man just for the fun of it. The notion that the nature of women is to hope for at least the possibility of a long-term commitment from a man they sleep with has been dismissed as sexist nonsense.
>
> As a result, vast numbers of young American women had, and continue to have, what are called "hookups"; and for some of them it is quite possible that no psychological or emotional price has been paid. But the majority of women who are promiscuous do pay prices. One is depression. *New York Times* columnist Ross Douthat recently summarized an academic study on the subject: "A young woman's likelihood of depression rose steadily as her number of partners climbed and the present stability of her sex life diminished."
>
> Long before this study, I had learned from women callers to my radio show (an hour each week — the "Male-Female Hour" — is devoted to very honest discussion of sexual and other man-woman issues) that not only did female promiscuity coincide with depression, it also often had lasting effects on women's ability to enjoy sex. Many married women told me that in order to have a normal sexual relationship with their husband, they had to work through the negative aftereffects of early promiscuity — not trusting men, feeling used, seeing sex as unrelated to love, and disdaining their husband's sexual overtures. And many said they still couldn't have a normal sex life with their husband.
>
> 2) The second awful legacy of feminism has been the belief among women that they could and should postpone marriage until they developed their careers. Only then should they seriously consider looking for a husband. Thus, the decade or more during which women have the best chance to attract men is spent being preoccupied with developing a career. Again, I cite woman callers to my radio show over the past 20 years who have sadly looked back at what they now, at age 40, regard as 20 wasted years. Sure, these frequently bright and talented women have a fine career. But most women are not programmed to prefer a great career to a great man and a family. They feel they were sold a bill of goods at college and by the media. And they were. It turns out that most women without a man do worse in life than fish without bicycles.
>
> 3) The third sad feminist legacy is that so many women — and men — have bought the notion that women should work outside the home that for the first time in American history, and perhaps world history, vast numbers of children are not primarily raised by their mothers or even by an extended family member. Instead they are raised for a significant part of their childhood by nannies and by workers at daycare centers. Whatever feminists may say about their only advocating choices, everyone knows the truth: Feminism regards work outside the home as more elevating, honorable, and personally productive than full-time mothering and making

> a home.
>
> 4) And the fourth awful legacy of feminism has been the demasculinization of men. For all of higher civilization's recorded history, becoming a man was defined overwhelmingly as taking responsibility for a family. That notion — indeed the notion of masculinity itself — is regarded by feminism as the worst of sins: patriarchy.
>
> Men need a role, or they become, as the title of George Gilder's classic book on single men describes them: *Naked Nomads*. In little more than a generation, feminism has obliterated roles. If you wonder why so many men choose not to get married, the answer lies in large part in the contemporary devaluation of the husband and of the father — of men as men, in other words. Most men want to be honored in some way — as a husband, a father, a provider, as an accomplished something; they don't want merely to be "equal partners" with a wife.
>
> In sum, thanks to feminism, very many women slept with too many men for their own happiness; postponed marriage too long to find the right man to marry; are having hired hands do much of the raising of their children; and find they are dating boy-men because manly men are so rare.
>
> Feminism exemplifies the truth of the saying, "Be careful what you wish for — you may get it."

I wish I could add something to this, but I can't because every time I think of something to add, he says it in the next sentence.

If you like this short essay, then this medium essay arguing against feminism authored by Barbara Kay would be nice follow-up.

It might be worth forwarding these articles along to your friends. And I highly recommend books on male-female relationships and roles by George Gilder, especially "Men and Marriage".

# Is there a smooth pathway from micro-evolution to macro-evolution?

**Wintery Knight** · 19 October 2013 · Archived copy · Original

From Luke Nix who blogs at Faithful Thinkers.

Excerpt:

> Macroevolutionary changes **are** a lot of microevolutionary changes, but they are in a specific series that follow a specific pathway. The missing premise in this argument is that the pathway from ancestor to claimed offspring (many generations down the road) is clear of obstacles.
>
> In his book, "The Edge of Evolution" Michael Behe shows that scientists have observed such an obstacle in the lab. The obstacle was **not** time, it is in the genetic pathway that must be traversed if macroevolutionary changes are to take place in reality. Since an obstacle has been observed, we now have a false premise in the argument. Since there is a false premise, the argument fails. There **is** a difference between micro- and macro-evolutionary changes. A lot of microevolutionary changes **are necessary** for macroevolution, but they **are not sufficient**. The other sufficient condition (a clear genetic pathway) still has yet to be met. Since both sufficient conditions for macroevolution have not been met, it **has not** been demonstrated. And since changes over time **has** been demonstrated, there is a need to distinguish between the two. To prevent confusion about what we know to be true and what we don't, this distinction **must** be made.
>
> There is only one way that this can be overcome by the naturalist: find a pathway that would be clear by default in nature. Notice that I have added one more piece to the missing premise above: "…clear by default in nature". I have to add that last qualification because as scientists are looking for a way to overcome this obstacle, they are introducing their own intelligence- fine-tuning the process, then "allowing nature to take its course". Their conclusion of naturalistic macroevolution will depend on a premise that is founded on intelligence. That would undermine the **whole** argument for naturalistic (macro)evolution.

This is one of the ways to show that evolution is true – by showing a pathway to macro-evolutionary change in the lab. If people expect me to believe in the grandiose claims of fully naturalistic evolution through a stepwise process, then why can't I see the pathway myself? If you make the claim that it happened, then I want to see the evidence for the claim.

# What criteria do historians use to get to the minimal facts about the historical Jesus?

**Wintery Knight** · 20 October 2013 · Archived copy · Original

Have you ever heard Gary Habermas, Michael Licona or William Lane Craig defend the resurrection of Jesus as the best explanation for the "minimal facts" about Jesus? The lists of minimal facts that they use are typically agreed to by their opponents during the debates.

For example, in his debate with Bart Ehrman, Craig was able to quote Ehrman's own writings where he agreed that all four facts were probably true.

Excerpt:

> Now in his early published work Dr. Ehrman expressed skepticism about these facts. He insisted that we cannot really affirm these facts.
>
> […]Dr. Ehrman has himself come to re-think his position on these issues. Inconsistencies in the details notwithstanding, he now recognizes that we have "solid traditions," not only for Jesus' burial, but also for the women's discovery of the empty tomb, and therefore, he says, we can conclude with "some certainty" that Jesus was in fact buried by Joseph of Arimathea in a tomb and that three days later the tomb was found empty. 8
>
> When I discovered that Professor Ehrman had reversed himself on this question, my admiration for his honesty and scholarly objectivity shot up. Very few scholars, once they've gone into print on an issue, have the courage to re-think that issue and admit that they were wrong. Dr. Ehrman's reversal of his opinion on these matters is testimony, not merely to the force of the evidence for these four facts, but also to his determination to follow the evidence wherever it leads. What this means is that my first contention is not an issue of disagreement in tonight's debate.

So what are the criteria that historians use to derive a list of minimal facts about Jesus?

Dr. Craig explains them in this article.

Excerpt:

> The other way, more influential in contemporary New Testament scholarship, is to establish specific facts about Jesus without assuming the general reliability of the Gospels. The key here are the so-called "Criteria of Authenticity" which enable us to establish specific sayings or events in Jesus' life as historical. Scholars involved in the quest of the historical Jesus have enunciated a number of these critieria for detecting historically authentic features of Jesus, such as dissimilarity to Christian teaching, multiple attestation, linguistic semitisms, traces of Palestinian milieu, retention of embarrassing material, coherence with other authentic material, and so forth.
>
> It is somewhat misleading to call these "criteria," for they aim at stating sufficient, not necessary, conditions of historicity. This is easy to see: suppose a saying is multiply attested and dissimilar but not embarrassing. If embarrassment were a necessary condition of authenticity, then the saying would have to be deemed inauthentic, which is wrong-headed, since its multiple attestation and dissimilarity are sufficient for authenticity. Of course, the criteria are defeasible, meaning that they are not infallible guides to authenticity. They might be better called "Indications of Authenticity" or "Signs of Credibility."
>
> In point of fact, what the criteria really amount to are statements about the effect of certain types of evidence upon the probability of various sayings or events in Jesus' life. For some saying or event S and evidence of a certain type E, the criteria would state that, all things being equal, the probability of S given E is greater than

> the probability of S on our background knowledge alone. So, for example, all else being equal, the probability of some event or saying is greater given its multiple attestation than it would have been without it.
>
> What are some of the factors that might serve the role of E in increasing the probability of some saying or event S? The following are some of the most important:
>
> (1) Historical congruence: S fits in with known historical facts concerning the context in which S is said to have occurred.
>
> (2) Independent, early attestation: S appears in multiple sources which are near to the time at which S is alleged to have occurred and which depend neither upon each other nor a common source.
>
> (3) Embarrassment: S is awkward or counter-productive for the persons who serve as the source of information for S.
>
> (4) Dissimilarity: S is unlike antecedent Jewish thought-forms and/or unlike subsequent Christian thought-forms.
>
> (5) Semitisms: traces in the narrative of Aramaic or Hebrew linguistic forms.
>
> (6) Coherence: S is consistent with already established facts about Jesus.
>
> For a good discussion of these factors see Robert Stein, "The 'Criteria' for Authenticity," in *Gospel Perspectives I*, ed. R. T. France and David Wenham (Sheffield, England: JSOT Press, 1980), pp. 225-63.
>
> Notice that these "criteria" do not presuppose the general reliability of the Gospels. Rather they focus on a particular saying or event and give evidence for thinking that specific element of Jesus' life to be historical, regardless of the general reliability of the document in which the particular saying or event is reported. These same "criteria" are thus applicable to reports of Jesus found in the apocryphal Gospels, or rabbinical writings, or even the Qur'an. Of course, if the Gospels can be shown to be generally reliable documents, so much the better! But the "criteria" do not depend on any such presupposition. They serve to help spot historical kernels even in the midst of historical chaff. Thus we need not concern ourselves with defending the Gospels' every claim attributed to Jesus in the gospels; the question will be whether we can establish enough about Jesus to make faith in him reasonable.

And you can see Dr. Craig using these criteria to defend minimal facts in his debates. For example, in his debate with Ehrman, he alludes to the criteria when making his case for the empty tomb.

Here, he uses multiple attestation and the criteria of embarrassment:

> Among the reasons which have led most scholars to this conclusion are the following:
>
> 1. The empty tomb is also multiply attested by independent, early sources.
>
> Mark's source didn't end with the burial, but with the story of the empty tomb, which is tied to the burial story verbally and grammatically. Moreover, Matthew and John have independent sources about the empty tomb; it's also mentioned in the sermons in the Acts of the Apostles (2.29; 13.36); and it's implied by Paul in his first letter to the Corinthian church (I Cor. 15.4). Thus, we have again multiple, early, independent attestation of the fact of the empty tomb.
>
> 2. The tomb was discovered empty by women.
>
> In patriarchal Jewish society the testimony of women was not highly regarded. In fact, the Jewish historian Josephus says that women weren't even permitted to serve as witnesses in a Jewish court of law. Now in light of this fact, how remarkable it is that it is women who are the discoverers of Jesus' empty tomb. Any later legendary account would certainly have made male disciples like Peter and John discover the empty tomb. The fact that it is women, rather than men, who are the discoverers of the empty tomb is best explained by the fact that they were the chief witnesses to the fact of the empty tomb, and the Gospel writers faithfully record what, for them, was an awkward and embarrassing fact.

There are actually a few more reasons for believing in the empty tomb that he doesn't go into in the debate, but you can find them in his written work. For example, in his essay on Gerd Ludemann's "vision" hypothesis. That essay covers the reasons for all four of his minimal facts.

So, if you are going to talk about the resurrection with a skeptic, you don't want to invoke the Bible as some sort of inerrant/inspired Holy Book.

Try this approach instead:

1. Explain the criteria that historians use to get their lists of minimal facts
2. Explain your list of minimal facts
3. Defend your list of minimal facts using the criteria
4. Cite skeptics who admit to each of your minimal facts, to show that they are widely accepted
5. List some parts of the Bible that don't pass the criteria (e.g. – guard at the tomb, Matthew earthquake)
6. Explain why those parts don't pass the criteria, and explain that they are not part of your case
7. Challenge your opponent to either deny some or all the facts, or propose a naturalistic alternative that explains the facts better than the resurrection
8. Don't let your opponent attack any of your minimal facts by attacking other parts of the Bible (e.g. – the number of angels being one or two, etc.)

And just keep in mind that there is no good case for the resurrection that does not make heavy use of the early creed in 1 Corinthians 15:3-8. You have to use that – it's the law.

Back to the minimal facts criteria. The best essay on the minimal facts criteria that I've read is the one by Robert H. Stein in "Contending with Christianity's Critics". It's a good short essay that goes over all the historical criteria that are used to derive the short list of facts from which we infer the conclusion "God raised Jesus from the dead". That whole book is really very, very good.

# William Lane Craig talks about the book “Contending With Christianity’s Critics”

**Wintery Knight** · 20 October 2013 · Archived copy · Original

A series of three interviews from the “Reasonable Faith” podcast about the essay collection “Contending with Christianity’s Critics: Answering New Atheists and Other Objectors”.

Here is the first MP3 file.

Topics:

- About the editor Paul Copan, (the nicest Christian apologist)
- 1: Responding to Dawkins’ argument “Who designed the designer?”
- 2: Responding to the multiverse counter to the fine-tuning argument
- 3: The argument that rationality and consciouness require theism
- 4: The evidence for humans being hard-wired for belief in God
- 5: Responding to naturalism’s claim to rationally ground morality
- 6: Responding to Dawkins’ idea that the universe looks undesigned

Here is the second MP3 file.

Topics:

- 7: The criteria that historians use to establish historical reliability
- 8: Did Jesus think that he was the Son of Man in Daniel
- 9: A time line for the resurrection of Jesus from the early sources
- 10: Responding to scholarly distortions of the historical Jesus
- 11: Responding to Bart Ehrman’s claim that the NT text is corrupted
- 12: The evidence for Jesus divine self-understanding

Here is the third MP3 file.

Topics:

- 13: The logical coherence of the concept of God
- 14: The logical coherence of the doctrine of the Trinity
- 15: The logical coherence of the doctrine of the Incarnation
- 16: The logical coherence of the doctrine of the Atonement
- 17: The logical coherence of the doctrine of the Hell
- 18: Responding to objections to God’s knowledge of the future

I have this book, and I highly recommend this book and “Passionate Conviction: Contemporary Discourses on Christian Apologetics”, along with Lee Strobel’s “Case for…” books, as the basic building blocks of an amateur apologists’s arsenal.

You may also be interested in a new book offering a detailed response to the New Atheists, called “God Is Great, God Is Good: Why Believing in God Is Reasonable & Responsible”.

# Book review of the book “Contending with Christianity’s Critics”

**Wintery Knight** · 20 October 2013 · Archived copy · Original

Apologetics 315 posted a review of the book “Contending with Christianity’s Critics“, which I discussed in posts earlier today. I wanted to excerpt a few chapter summaries for chapters that you may not find in any other apologetics book.

Here they are:

> Part 3, *The Coherence of Christian Doctrine*, begins with chapter thirteen: “The Coherence of Theism” by Charles Taliaferro and Elsa J. Marty. Here the authors seek to defend the coherence of the concept of God. They address six attributes: “necessary existence, incorporeality, essential goodness, omnipotence, omniscience, and eternity.”(26) They point out: “The attributes of God are therefore not a patchwork of arbitrary characteristics. Each one is, rather, interconnected, and together they form a coherent whole. Appreciating this helps one avoid the more crude depiction of God one finds in Dawkins’s work.”(27)
>
> Chapter fourteen: “Is the Trinity a Logical Blunder? God as Three and One” by Paul Copan covers the concept and difficulties of the Trinity. Copan discusses some common problems to avoid in our understanding of the trinity: overemphasizing threeness, overemphasizing oneness, rejecting equality.(28) He then lays out six considerations that will make the understanding the trinity clearer. Finally, Copan shows the philosophical and practical relevance of the Trinity.
>
> Chapter fifteen: “Did God Become a Jew? A Defense of the Incarnation” by Paul Copan aims “to show that the incarnation, though a mystery, is a *coherent* one.” Copan’s task: “(1) briefly review the scriptural affirmations of Jesus’ humanity and divinity, (2) highlight three important distinctions to help us understand the incarnation, and (3) examine the question of Jesus’ temptation in light of His divinity.”(29)
>
> Chapter sixteen is entitled: “Dostoyevsky, Woody Allen, and the Doctrine of Penal Substitution” by Steve L. Porter. The title refers to the two contrasting characters in the works of these men, as Porter explains:

> The difference between these two stories [*Crime and Punishment* and *Crimes and Misdemeanors*] is extremely relevant when it comes to the doctrine of penal substitution, for it seems that most of the contemporary objections to the view that Christ suffered the punitive consequences of human sin on behalf of sinners are fueled by the fact that we in the West find ourselves more in the world of Dr. Rosenthal than Raskolnikov. The doctrine of penal substitution does not make sense to many of us because, unlike Raskolnikov, punishment in general no longer makes sense to us.(30)

> Porter describes the goal of his essay “the first goal … is to clarify and defend the plausibility of the moral framework required to ground penal substitution.” … “the second goal … is to offer an argument that penal substitution is the best explanation of why Christ voluntarily went to His death.”(31) Porter sheds light on the misconceptions of our understanding of punishment, while pointing out the coherence of the doctrine as it relates to the Biblical narrative as a whole.
>
> Chapter seventeen: “Hell: Getting What’s Good My Own Way” by Stewart Goetz was the most challenging for this reviewer. Not because of the difficulty of the concept so much as the angle the author takes in exploring it. Goetz discusses the doctrine of hell and the particular philosophical issues that it raises He asks questions about how hell relates to the good, free will, and choices. For Goetz, “heaven and hell must ultimately be understood in terms of how a person chooses to live his life in pursuit of what is good.”(32)The author raises and explores important questions – but his responses could have been presented with more clarity.
>
> The book ends with chapter eighteen: “What Does God Know? The Problems of Open Theism” by David P. Hunt. While not addressed to atheists or non-Christians, this chapter does deal with the significant issue of the

> Open Theism view. This is the view that God does not have complete knowledge of the future. Hunt provides an overview of what Openists teach, followed by a critical response and survey of the scriptural data.

I think these chapters are a little off the beaten path of apologetics books, which is why you should get this book. Philosophical theology is an important part of your apologetics toolkit.

If you're looking for an even more scholarly take on some of these doctrinal and theological issues, then look no further than the recently published Oxford University Press book "Debating Christian Theism". The book features two scholarly points of view for about twenty or so issues related to Christianity. The topics range from science to philosophy to history to theology.

This is a great book to put on your desk at work for three reasons. First, it is published by Oxford University Press, and that right there has a prestige factor that will defuse the arrogant attitude that so many non-theists have from their vast experience of reading Dan Brown novels and watching the Discovery channel. Second, it features world-class scholars for each of the twenty or so topics under debate, so you can show that these issues are debated by people at the highest levels. Third, the book doesn't mark you out as being a Christian, so you can just feign neutrality when the tolerance and diversity police come by to tell you that they have to fire you for having different views than they do. This is *the* book that you need to put on your desk to get the debate started (or not) depending on who happens to ask about it.

Now, if these books look to be a bit too complicated, then I recommend this easy-to-understand introduction to Christian apologetics entitled "Is God Just a Human Invention?". That book is suitable for anyone who finished high school. It's my favorite book to buy for beginners to apologetics. Even simpler than the Lee Strobel books, if you can believe that.

# Is it time to start thinking of an exit strategy for the quagmire of Obamacare?

**Wintery Knight** · 21 October 2013 · Archived copy · Original

Baghdad Obama says: "No one will lose their health care plan!"
Letitia posted this article from the pro-Obama NBC News.

Excerpt:

> Health plans are sending hundreds of thousands of cancellation letters to people who buy their own coverage, frustrating some consumers who want to keep what they have and forcing others to buy more costly policies.
>
> The main reason insurers offer is that the policies fall short of what the Affordable Care Act requires starting Jan. 1. Most are ending policies sold after the law passed in March 2010. At least a few are canceling plans sold to people with pre-existing medical conditions.
>
> […][T]he cancellation notices, which began arriving in August, have shocked many consumers in light of President Barack Obama's promise that people could keep their plans if they liked them.
>
> "I don't feel like I need to change, but I have to," said Jeff Learned, a television editor in Los Angeles, who must find a new plan for his teenage daughter, who has a health condition that has required multiple surgeries.
>
> An estimated 14 million people purchase their own coverage because they don't get it through their jobs. Calls to insurers in several states showed that many have sent notices.
>
> Florida Blue, for example, is terminating about 300,000 policies, about 80 percent of its individual policies in the state. Kaiser Permanente in California has sent notices to 160,000 people – about half of its individual business in the state. Insurer Highmark in Pittsburgh is dropping about 20 percent of its individual market customers, while Independence Blue Cross, the major insurer in Philadelphia, is dropping about 45 percent.
>
> […]Some receiving cancellations say it looks like their costs will go up, despite studies projecting that about half of all enrollees will get income-based subsidies.
>
> Kris Malean, 56, lives outside Seattle, and has a health policy that costs $390 a month with a $2,500 deductible and a $10,000 in potential out-of-pocket costs for such things as doctor visits, drug costs or hospital care.
>
> As a replacement, Regence BlueShield is offering her a plan for $79 more a month with a deductible twice as large as what she pays now, but which limits her potential out-of-pocket costs to $6,250 a year, including the deductible.
>
> "My impression was …there would be a lot more choice, driving some of the rates down," said Malean, who does not believe she is eligible for a subsidy.
>
> Regence spokeswoman Rachelle Cunningham said the new plans offer consumers broader benefits, which "in

> many cases translate into higher costs."
>
> "The arithmetic is inescapable," said Patrick Johnston, chief executive officer of the California Association of Health Plans. Costs must be spread, so while some consumers will see their premiums drop, others will pay more — "no matter what people in Washington say."
>
> Health insurance experts say new prices will vary and much depends on where a person lives, their age and the type of policy they decide to buy. Some, including young people and those with skimpy or high-deductible plans, may see an increase. Others, including those with health problems or who buy coverage with higher deductibles than they have now, may see lower premiums.
>
> Blue Shield of California sent roughly 119,000 cancellation notices out in mid-September, about 60 percent of its individual business. About two-thirds of those policyholders will see rate increases in their new policies, said spokesman Steve Shivinsky.

But the media told me that Obamacare was affordable! It's even called the Affordable Care Act. Would a bunch of doped-up leftists  who dropped math in junior high school mislead me about how health insurance works? Inconceivable!

# Girl smuggled into England for the purpose of organ harvesting

**Wintery Knight** · 21 October 2013 · Archived copy · Original

From the UK Telegraph.

Excerpt:

> The first case of a child being trafficked to Britain in order to have their organs harvested has been uncovered.
>
> The unnamed girl was brought to the UK from Somalia with the intention of removing her organs and selling them on to those desperate for a transplant.
>
> Child protection charities warned that the case was unlikely to be an isolated incident as traffickers were likely to have smuggled a group of children into the country.
>
> The case emerged in a government report which showed that the number of human trafficking victims in the UK has risen by more than 50 per cent last year and reached record levels.
>
> A total of 371 children were exploited, with the majority of them being used as slaves or sexually abused. They included 95 children from Vietnam, 67 from Nigeria and 25 from China. Others hailed from Romania and Bangladesh.

> The figures also detail how 20 British girls have been victims of human trafficking. It comes after a series of court cases in which British girls were raped and exploited by gangs of Asian [i.e. – Muslim] men.
>
> Child protection charities warned last night that criminal gangs were attempting to exploit the demand for organ transplants in Britain.
>
> Bharti Patel, the chief executive of Ecpat UK, the child protection charity, said: "Traffickers are exploiting the demand for organs and the vulnerability of children. It's unlikely that a trafficker is going to take this risk and bring just one child into the UK. It is likely there was a group."
>
> According to the World Health Organisation as many as 7,000 kidneys are illegally obtained by traffickers each year around the world.
>
> While there is a black market for organs such as hearts, lungs and livers, kidneys are the most sought after organs because one can be removed from a patient without any ill effects.
>
> The process involves a number of people including the recruiter who identifies the victim, the person who arranges their transport, the medical professionals who perform the operation and the salesman who trades the organ.
>
> The government's report also found that there has been a rise in the number of adults trafficked to the UK, with the number of women rising by 12 per cent to 786 and the number of men by almost a third to 400. They include growing numbers of British men are being exploited for "paving or ground works" in this country or abroad.

I think that the problem of organ harvesting is an extension of the selfishness of the pro-abortion view.

Right now, we have a situation where a large number of people believe that it is OK to murder innocent unborn children so that their happiness in this world is not impacted by the needs of others. I believe that this pro-abortion position can easily be extrapolated to child-trafficking and organ-harvesting. After all, once you say that innocent unborn children can be murdered for your happiness, then what's to prevent you from harvesting organs for less-innocent born children for your happiness? The logic of the pro-abortion view is "a grown person has more rights than an unborn person, because the grown person is bigger and stronger". Well, a grown person is also bigger and stronger than a small born person. This is the pro-abortion view: bigger = "has more rights than". It's about

exploiting weaker people who get in the way of your happiness.

# Three reasons why scientism should be rejected

**Wintery Knight** · 21 October 2013 · Archived copy · Original

Scientism is the view that the only things that can be known are things that can be discovered through science. That's a very popular view, but there are at least three things wrong with it.

First, Tough Questions Answered quotes philosopher Ed Feser, who says that the enterprise of science makes assumptions that cannot be justified by science itself.

Feser writes:

> Of its very nature, scientific investigation takes for granted such assumptions as that: there is a physical world existing independently of our minds; this world is characterized by various objective patterns and regularities; our senses are at least partially reliable sources of information about this world; there are objective laws of logic and mathematics that apply to the objective world outside our minds; our cognitive powers – of concept-formation, reasoning from premises to a conclusion, and so forth – afford us a grasp of these laws and can reliably take us from evidence derived from the senses to conclusions about the physical world; the language we use can adequately express truths about these laws and about the external world; and so on and so on.

Science assumes that those things are true, it cannot discover them.

Second, scientism cannot account for things we know apart from science.

William Lane Craig explains:

> First, *scientism is too restrictive a theory of knowledge*. It would, if adopted, compel us to abandon wide swaths of what most of us take to be fields of human knowledge. Your friend admits this with regard to moral and aesthetic truths. On his view there is nothing good or evil, right or wrong, beautiful or ugly. But is it plausible to think that there are no aesthetic or moral truths? On your friend's view there's nothing wrong with torturing a little girl to death. Why should we accept such a conclusion simply because of a epistemological restriction? Isn't this a signal that we need rather to broaden the scope of our theory so as to encompass other types of knowledge? Your friend says he will treat logical and mathematical truths as merely empirical truths. Good luck! Truths like "If $p$ implies $q$, and $p$, then $q$" or "2 + 2 = 4" are to all appearances necessary truths, not merely empirical generalizations.

Third, scientism is self-refuting.

William Lane Craig explains:

> Secondly, *scientism is self-refuting*. Scientism tells us that we should not believe any proposition that cannot be scientifically proven. But what about that very proposition itself? It cannot itself be scientifically proven. Therefore we should not believe it. Scientism thus defeats itself.

You can't prove scientism (a theory of what we can know) using science. It refutes itself.

So, there are three reasons to reject scientism. Nothing I have said here should be taken as criticism of science, though. On the contrary – the progress of science is one of the best friends of Christian theists. We have gained a lot from the advances made by science in areas like cosmology, cosmic fine-tuning, the origin of life, the fossil record, and astrobiology. We love *science*. But *scientism* is false.

# New study: Half of children born last year will see their parents split by age 15

**Wintery Knight** · 22 October 2013 · Archived copy · Original

Dina tweeted this post from the UK Daily Mail.

Excerpt:

> Children born last year are more likely than any previous generation to see their parents split up, research suggests.
>
> Nearly half will experience family breakdown, according to a report by the Marriage Foundation think tank.
>
> Its researchers estimate that 354,000 out of the 729,674 children born in England and Wales in 2012 will have parents who are separated by the time they reach the age of 15.
>
> The report also suggests that married couples are much more likely to stay together than those who are unmarried.
>
> The vast majority of children whose parents will still be together by their mid-teens will have a mother and father who are married, the report said. Only 5 per cent will have unmarried parents.
>
> Harry Benson, of the Marriage Foundation, said: 'We continually hear about divorce rates shooting up and causing the exponential rise in family breakdown, but this is demonstrably not the case.
>
> 'The percentage of marriages ending in divorce has actually fallen since 2005 to 42 per cent. For all marriages lasting over ten years, the divorce rate has barely changed since the 1960s.
>
> 'It is the declining rates of marriage which provide the only conceivable explanation of the doubling of family breakdown since the 1980s.
>
> 'Of the teenagers not living with both parents, just 32 per cent of cases involved divorce.'
>
> Last week a report by the chief inspector of schools Sir Michael Wilshaw linked social problems in Britain to bad parenting. He criticised 'hollowed-out and fragmented families' where parents suffer a 'poverty of accountability'.
>
> Sir Michael said many children were 'alienated' from their fathers, and warned of social problems resulting from 'making excuses' for bad parents.
>
> 'Some people will tell you that social breakdown is the result of material poverty – it's more than this,' he said.
>
> 'These children lack more than money: They lack parents who take responsibility for seeing them raised well. It is this poverty of accountability which costs them.
>
> 'These children suffer because they are not given clear rules or boundaries, have few secure or safe attachments at home, and little understanding of the difference between right and wrong behaviour.'
>
> Findings from the Centre for Social Justice have shown as many as one million children are growing up without a father.

I think that if we really want children to have what they need, then we have to take a very strong position on the tolerance and non-judgmentalism that is so popular among the social left today. Because we are tolerant and non-judgmental, 53 million unborn children are dead. Because we are tolerant and non-judgmental, a record number of children are being raised without their mother or their father (or both). Because we are tolerant and non-judgmental, children are being saddled with the costs of fixing the results of irresponsibility decisions made by adults. Because we are tolerant and non-judgmental, we have run up a $17 trillion dollar debt so that the President can congratulate himself on how generous he is by spending money that other people earned (or will have to earn).

Maybe we need to stop thinking about being liked by our peers and start thinking about doing what's right for children – born and unborn. A good first step would be to view anyone who espouses moral relativism as an evil, destructive, selfish and foolish person. When a woman brags to you about how she doesn't judge anyone, you should look at her as someone immoral who cannot see the difference between policies/choices that harm children, and policies/choices that help them. At the very least, you should never marry someone who supports redefining marriage to include no-fault divorce and same-sex marriage. You should never marry someone who supports paying people taxpayer money to have children out of wedlock.

If a person cannot see how natural marriage protects children, then don't marry them. We need to shame people who don't protect children. It doesn't matter what they *say* to you in order to sound nice. It only matters that they won't condemn things that are clearly wrong. That makes them a threat to children, and unsuitable for marriage.

# New study: a divorce of a friend or close relative dramatically increases odds of divorce

**Wintery Knight** · 22 October 2013 · Archived copy · Original

From the left-leaning Pew Research.

Excerpt:

> As if married people don't have enough to worry about, a new study suggests that the divorce of a friend or close relative dramatically increases the chances that you too will divorce.
>
> A research team headed by Rose McDermott of Brown University analyzed three decades of data on marriage, divorce and remarriage collected from thousands of residents of Framingham, Massachusetts.
>
> McDermott and her colleagues found that study participants were 75% more likely to become divorced if a friend is divorced and 33% more likely to end their marriage if a friend of a friend is divorced.
>
> So divorce is contagious…and you can catch the divorce bug from your friends—even from a friend of a friend?
>
> […]Examples of social contagion run the gamut from adolescent sexual behavior to the spread of phantom diseases in a workplace. Economist Ilyana Kuziemko reported in a 2006 paper titled "Is Having Babies Contagious?" that brothers and sisters are significantly more likely to have a child soon after a sibling gives birth. A research team in Arkansas tracked how obesity appeared to spread in elementary school classrooms.
>
> […]Overall, they found that the divorce of a friend or close relative significantly increased the probability of divorce. For example, about 9% of the adult children of the 1948 study group were divorced at least once. The findings suggest that the chances of divorcing increase to approximately 16% if a friend or close family member has been divorced — an increase of 75% over the overall divorce rate. The probability of divorce rises to roughly 12% if friends and relatives of the participant's friends and relatives divorces. But the effect then vanishes, and the divorce of someone three degrees removed—a friend of a friend of a friend—does not significantly change the likelihood that a couple will separate.
>
> **"We suggest that attending to the health of one's friends' marriages might serve to support and enhance the durability of one's own relationship," they conclude. "Although the evidence we present here is limited to a single network…marriages endure within the context of communities of healthy relationships and within the context of social networks that encourage and support such unions."**
>
> Other insights from the study:
>
> - People in the study group who have been divorced are more likely to marry someone else who has been divorced, particularly those who re-couple relatively soon after they end their previous marriage. Compared to others, those who remarried since the last study period were four times more likely to marry a divorcee.
> - Divorced participant became less popular, in part because they may lose as friends members of their former spouse's friends network. "In addition, newly single people may be perceived as social threats by married friends who worry about marital poaching."
> - **More popular people—participants with more friends in their social network—were less likely to divorce than those with fewer friendships. Part of the reason may be that "a strong, supportive friendship network" protects a couple's marriage by "mak[ing] it easier for individuals to weather inevitable marital stresses."**

I think there's a lot of good tips in that study about how to safeguard your own marriage (or future marriage). For one thing, marry someone who has solidly married friends. Nurture the marriages of your friends. If you're like me, then you're diligent enough to teach your friends how to get married and even suggest sensible mates for them.

There's nothing that annoys me more than women choosing men who can't be good protectors, providers and moral/spiritual leaders. Why not give them a helping hand before they make a poor decision? That's what parents should be doing, especially – minimizing the influence of culture and peers on their children and helping young people take a long-term view of marriage.

I think that the importance of peer-pressure in decision making is very widespread among young people, and especially among young women. It doesn't just work for bad things, but also for good things. I spoke to one woman recently who sounded nearly crazy with envy over her friends who were getting married and having children. Now this particular woman had excellent skills and a pretty good idea of what she wanted to achieve with a marriage. But imagine what it is like for women who have no idea how marriage works and basically just getting into a "monkey see, monkey do" situation.

The scariest thing for me is how people see movies and TV shows where things that are potentially very harmful (e.g. – the gay lifestyle, divorce, single motherhood) are made to appear normal and healthy, and so people are tempted to actually do these things. A better way to make decisions is to turn off the TV and the movies and derive a set of goals of your own. Then look to better sources of wisdom (the Bible, parents, older people, great literature, empirical studies) in order to figure out how to reach those goals.

# The long war: a history of the conflict between religion and science

**Wintery Knight** · 22 October 2013 · Archived copy · Original

Let's start with an example of a famous battle in the long war between science and religion.

Canadian science writer Denyse O'Leary writes about the history of cosmology at Evolution News.

Excerpt:

> What help has materialism been in understanding the universe's beginnings?
>
> Many in cosmology have never made any secret of their dislike of the Big Bang, the generally accepted start to our universe first suggested by Belgian priest Georges Lemaître (1894-1966).
>
> On the face of it, that is odd. The theory accounts well enough for the evidence. Nothing ever completely accounts for all the evidence, of course, because evidence is always changing a bit. But the Big Bang has enabled accurate prediction.
>
> In which case, its hostile reception might surprise you. British astronomer Fred Hoyle (1915-2001) gave the theory its name in one of his papers — as a joke. Another noted astronomer, Arthur Eddington (1882-1944), exclaimed in 1933, "I feel almost an indignation that anyone should believe in it — except myself." Why? Because "The beginning seems to present insuperable difficulties unless we agree to look on it as frankly supernatural."
>
> One team of astrophysicists (1973) opined that it "involves a certain metaphysical aspect which may be either appealing or revolting." Robert Jastrow (1925-2008), head of NASA's Goddard Institute for Space Studies, initially remarked, "On both scientific and philosophical grounds, the concept of an eternal Universe seems more acceptable than the concept of a transient Universe that springs into being suddenly, and then fades slowly into darkness." And Templeton Prize winner (2011) Martin Rees recalls his mentor Dennis Sciama's dogged commitment to an eternal universe, no-Big Bang model:

> For him, as for its inventors, it had a deep philosophical appeal — the universe existed, from everlasting to everlasting, in a uniquely self-consistent state. When conflicting evidence emerged, Sciama therefore sought a loophole (even an unlikely seeming one) rather as a defense lawyer clutches at any argument to rebut the prosecution case.

> Evidence forced theorists to abandon their preferred eternal-universe model. From the mid 1940s, Hoyle attempted to disprove the theory he named. Until 1964, when his preferred theory, the Steady State, lost an evidence test.

Here is a a quick summary of some of the experimental evidence that emerged in the last few decades that caused naturalists to abandon the eternal universe that they loved so much when they were younger.

**The importance of having a narrative**

Now I want to make a very, very important point about Christianity and the progress of science. And that point is that it is very important that Christians present the evidence in exactly the way that Denyse presented it in that article – in its historical context, featuring the conflict between naturalists and the experimental evidence.

All Christians should be familiar with the following basic pieces of evidence which fit the war between science and naturalism narrative:

1. The origin of the universe

2. The cosmic fine-tuning
3. The origin of life (biological information)
4. The sudden origin of the Cambrian phyla
5. The habitability/observability correlation

When you talk about these evidences as a Christian theist to non-Christians, you have to have cultivated a genuine interest in reconciling your beliefs with science. You have to accept that there are two books that reveal God's character and attributes. The book of nature, and the book of Scripture. And you need to be flexible about getting these two books to fit together. The book of nature gives us natural theology (see Romans 1). It tells us that God is Creator and Designer. The book of Scripture tells us that God stepped into history as a man to save us by taking the punishment for our headlong rush away from God, which the Bible calls sin. Science is one way that humans can recover some of basic knowledge about God. Knowledge that is only possible because God created and designed the universe (and us) in such a way that we are capable of making discoveries, and that the universe is capable of being explored and understood.

It's very important to present these five basic evidences to non-Christians in the historical context. And here is the story you must tell: "In the beginning, there was the naturalism, and the naturalism tried to argue from ignorance that God was not Creator and God was not Designer. And then came the science, and now people have to give up their naturalism in order to not be crazy and irrational". That's the narrative you use when talking to non-Christians about science.

In the beginning was the naturalism:

1. In pre-scientific times, atheists maintained that the universe was eternal
2. In pre-scientific times, atheists maintained that a life-permitting universe was as likely as a life-prohibiting universe
3. In pre-scientific times, atheists maintained that the cell was a simple blob of jello that could spontaneously emerge in some warm pond
4. In pre-scientific times, atheists maintained that the sudden origin of the Cambrian phyla would be explained by subsequent fossil discoveries
5. In pre-scientific times, atheists maintained that there was nothing special about our galaxy, solar system, planet or moon

But then science progressed by doing experiments and making observations:

1. Scientists discovered redshift and the cosmic microwave background radiation and more!
2. Scientists discovered the fine-tuning of gravity and of the cosmological constant and more!
3. Scientists discovered protein sequencing and exposed the myth of "junk DNA" and more!
4. Scientists discovered an even shorter Cambrian explosion period and the absence of precursor fossils and more!
5. Scientists discovered galactic habitable zones and circumstellar habitable zones and more!

And now rational people – people who want to have true beliefs about reality – need to abandon a false religion (naturalism).

Now naturally, science is in a state of flux and things change. But you have to look at the trend of discoveries, and those trends are clearly going against naturalism, and in favor of Christian theism. No one is arguing for a deductive proof here, we are simply looking at the evidence we have *today* and proportioning our belief to the concrete evidence we have *today*. People who are guided by reason should not seek to construct a worldview by leveraging speculations about future discoveries and mere possibilities. We should instead believe what is more probable than not. That's what a *rational* seeker of truth ought to do. Proportion belief to probabilities based on current, concrete knowledge.

It is very important that Christians keep abreast of the progress of science, and give proper respect to science when forming our worldviews, and keep in mind what is really going on with atheism. There is a lot of loud worshiping of science by people like Dawkins and Atkins and Krauss, but if you dig into things a little, you'll find that they are actually filled with rage and enmity against what science has revealed about nature. And not just in one area, but in many, many areas.

Atheism, as a worldview, is not rooted in an honest assessment about what science tells us about reality. Atheism is rooted in a religion: naturalism. And the troubling thing we learn from looking at the history of science is that this religion of naturalism is insulated from correction from the progress of science. Nothing that science reveals about nature seems to be able to put a dent in the religion of naturalism, at least for most atheists. Their belief in naturalism is so strong that it repels all scientific evidence that falsifies it. Atheists simply don't let science inform and correct their worldview.

It falls to us Christian theists, then, to hold them accountable for their abuse and misrepresentation of science. And that means telling the story of the progress of science accurately, and accurately calling out the religion of naturalism for what it is – *a religion rooted in blind faith and ignorance that has been repeatedly and convincingly falsified by the progress of science in the modern era*.

# Concealed-carry permit holder uses legal firearm to prevent mass shooting in Arizona

**Wintery Knight** · 23 October 2013 · Archived copy · Original

Letitia shared this article from Arizona Central.

Excerpt:

> A man was taken to the hospital with life-threatening injuries early Sunday morning after a shooting broke out at a Glendale house party, authorities said.
>
> Glendale police officers responded about 1:30 a.m. to a house near 51st and Olive avenues where they found a 27-year-old man who had been shot, Glendale Police Department spokeswoman Officer Tracey Breeden said. He was treated at the scene and taken to the hospital, where he remained Sunday afternoon.
>
> Investigators determined an argument started between individuals at the party and the 27-year-old, and he was asked to leave, she said. The man left for a short time, then returned with a rifle and began firing off rounds outside the house.
>
> **The man pointed the rifle at partygoers and a 39-year-old partygoer pulled out a handgun and shot the 27 year old before police arrived, Breeden said. The shooter did not try to leave and waited for officers to arrive.**
>
> The shooter has been cooperative with investigators, she said. He was questioned and released by detectives.
>
> "This is standard procedure under these type of circumstances," Breeden said. "Information and evidence detectives have gathered leads them to believe the 27-year-old was not only firing his rifle, endangering partygoers, but also pointed the weapon at other partygoers, endangering them, prior to the 39-year-old displaying a weapon and shooting the 27-year-old."

In self-defense cases, shots only connect with the suspects about 2% of the time. Most of the time, just brandishing the weapon is enough to deter the criminal. The goal is to prevent the crime, not to hurt people.

Wikipedia has a summary of the research of Dr. John Lott and his co-authors, which shows that defensive gun use is a lot more common than most people think.

Look:

> Researcher John Lott argues in both *More Guns, Less Crime* and *The Bias Against Guns* that media coverage of defensive gun use is rare, noting that in general, only shootings ending in fatalities are discussed in news stories. In *More Guns, Less Crime*, Lott writes that "[s]ince in many defensive cases a handgun is simply brandished, and no one is harmed, many defensive uses are never even reported to the police".
>
> Attempting to quantify this phenomenon, in the first edition of the book, published in May 1998, Lott wrote that "national surveys" suggested that "98 percent of the time that people use guns defensively, they merely have to brandish a weapon to break off an attack." The higher the rate of defensive gun uses that do not end in the attacker being killed or wounded, the easier it is to explain why defensive gun uses are not covered by the media without reference to media bias. Lott cited the figure frequently in the media, including publications like the *Wall Street Journal* and the *Los Angeles Times*.
>
> In 2002, he repeated the survey, and reported that brandishing a weapon was sufficient to stop an attack 95% of the time. Other researchers criticized his methodology, saying that his sample size of 1,015 respondents was too small for the study to be accurate and that the majority of similar studies suggest a value between 70 and 80 percent brandishment-only. Gary Kleck and Marc Gertz's 1994 estimate rises to 92 percent when brandishing and warning shots are added together.

Even the leftist MSNBC agrees that legal gun ownership reduces crime.

Excerpt:

> Americans overall are far less likely to be killed with a firearm than they were when it was much more difficult to obtain a concealed-weapons permit, according to statistics collected by the federal Centers for Disease Control. But researchers have not been able to establish a cause-and-effect relationship.

> In the 1980s and '90s, as the concealed-carry movement gained steam, Americans were killed by others with guns at the rate of about 5.66 per 100,000 population. In this decade, the rate has fallen to just over 4.07 per 100,000, a 28 percent drop. The decline follows a fivefold increase in the number of "shall-issue" and unrestricted concealed-carry states from 1986 to 2006.The highest gun homicide rate is in Washington, D.C., which has had the nation's strictest gun-control laws for years and bans concealed carry: 20.50 deaths per 100,000 population, five times the general rate. The lowest rate, 1.12, is in Utah, which has such a liberal concealed weapons policy that most American adults can get a permit to carry a gun in Utah without even visiting the state.
>
> The decline in gun homicides also comes as U.S. firearm sales are skyrocketing, according to federal background checks that are required for most gun sales. After holding stable at 8.5 to 9 million checks from 1999 to 2005, the FBI reported a surge to 10 million in 2006, 11 million in 2007, nearly 13 million in 2008 and more than 14 million last year, a 55 percent increase in just four years.

That's been confirmed by peer-reviewed, published research as well.

**The peer-reviewed research**

Whenever I get into discussions about gun control, I always mention two academic books by John R. Lott and Joyce Lee Malcolm.

- The Lott book was published by the University of Chicago Press (now in its 3rd edition)
- The Malcolm book was published by Harvard University Press

Here is a paper by Dr. Malcolm that summarizes one of the key points of her book.

Excerpt:

> Tracing the history of gun control in the United Kingdom since the late 19th century, this article details how the government has arrogated to itself a monopoly on the right to use force. The consequence has been a tremendous increase in violent crime, and harsh punishment for crime victims who dare to fight back. The article is based on the author's most recent book, Guns and Violence: The English Experience (Harvard University Press, 2002). Joyce Malcom is professor of history at Bentley College, in Waltham, Massachusetts. She is also author of To Keep and Bear Arms: The Origins of an AngloAmerican Right (Harvard University Press, 1994).
>
> Upon the passage of The Firearms Act (No. 2) in 1997, British Deputy Home Secretary Alun Michael boasted: "Britain now has some of the toughest gun laws in the world." The Act was second handgun control measure passed that year, imposed a near-complete ban on private ownership of handguns, capping nearly eighty years of increasing firearms restrictions. Driven by an intense public campaign in the wake of the shooting of schoolchildren in Dunblane, Scotland, Parliament had been so zealous to outlaw all privately owned handguns that it rejected proposals to exempt Britain's Olympic target-shooting team and handicapped target-shooters from the ban.

And the result of the 1997 gun ban:

> The result of the ban has been costly. Thousands of weapons were confiscated at great financial cost to the public. Hundreds of thousands of police hours were devoted to the task. But in the six years since the 1997 handgun ban, crimes with the very weapons banned have more than doubled, and firearm crime has increased markedly. In 2002, for the fourth consecutive year, gun crime in England and Wales rose—by 35 percent for all firearms, and by a whopping 46 percent for the banned handguns. Nearly 10,000 firearms offences were committed.
>
> […]**According to Scotland Yard, in the four years from 1991 to 1995 crimes against the person in England‟s inner cities increased by 91 percent. In the four years from 1997 to 2001 the rate of violent crime more than doubled. The UK murder rate for 2002 was the highest for a century.**

I think that peer-reviewed studies – from Harvard University, no less – should be useful to those of us who believe in the right of self-defense for law-abiding people. The book by economist John Lott, linked above,compares the crime rates of all U.S. states that have enacted concealed carry laws, and concludes that violent crime rates *dropped* after law-abiding citizens were allowed to carry legally-owned firearms. That's the mirror image of Dr. Malcolm's Harvard study, but both studies affirm the same conclusion – more legal firearm ownership means less crime.

If you still think that guns are somehow bad for reducing crime, why not check out a formal academic debate featuring 3 people on each side of the debate?

# New study: lesbian women twice as likely to “divorce” their partners as gay men

**Wintery Knight** · 23 October 2013 · Archived copy · Original

There’s a myth going around that women are fond of commitment and that men are beastly commitment-phobes. But what does science say?

Here’s a new study that’s been reported in the leftist UK Independent. (H/T The Elusive Wapiti)

Excerpt:

> Lesbian couples are nearly twice as likely as gay men to end a civil partnership, according to the latest government figures.

> The number of same-sex couples ending their civil unions leapt by 20 per cent last year, seven years after their introduction in 2005. Overall there were 794 dissolutions in 2012, almost 60 per cent of which were female couples, figures from the Office for National Statistics (ONS) show.
>
> In the seven years since gay couples were able to have civil partnerships, 3.2 per cent of male unions ended in dissolution, compared to 6.1 per cent of female couples.
>
> Sociologists believe the lower rates of ‘divorces’ among gay men may reflect a trend of women committing sooner and having higher expectations for a relationship. Women in civil partnerships tie the knot at an average age of 37.6, compared to men, for whom the average age is 40. Erzsebet Bukodim, sociologist at the University of Oxford, said: “In heterosexual marriage the divorce rate is higher if you enter marriage at a very young age. That might be one of the reasons we’re seeing this [high dissolution rate for women] in civil partnerships.”
>
> Gunnar Andersson, professor of demography at Stockholm University, has found in successive studies that women in Norway, Sweden and Denmark are twice as likely to dissolve their civil partnerships than men. He said: “This reflects trends in a heterosexual marriage because women are more prone to say they want to marry – but they’re also more likely to initiate a divorce. Women usually have higher demands on relationship quality, that’s often been said in studies. Even if you control for age there is still a trend of more women ending partnerships than men.”
>
> Previous figures show British women in heterosexual relationships are more likely to file for divorce than men. Women initiated the divorce in two thirds of cases in the UK in 2011.

The Elusive Wapiti comments on the new study:

> I used to frequent the once-defunct-now-rebooted “Family Scholars” blog ten years ago. In that forum, whenever I mentioned the now well-accepted fact of a 2:1 ratio of female/male initiation in divorce, I was repeatedly, reliably, and indignantly informed by the liberalists and anti-traditionalists in the crowd that the problem wasn’t with women’s trigger-happy dissolutive behaviors, but with straight men, whose insufferable and abusive natures all but forced their women to divorce them and take their kids, half their stuff, and 1/3 of their paycheck for 20 years. Men sucked so bad at being husbands, it was contended, that women had little choice but to kick them to the curb. They deserved all the divorce-rape they got, the bastards.
>
> So imagine my surprise to see the same ratio between female and male divorce initiation that we’ve observed in straights for decades now, mirrored in the homosexual community. This has gotta be bad news for the fish-bicycle set that loves to blame masculine misbehavior for, well, everything, including female-initiated divorce. Instead, we now see that when woman is paired with woman, the dissolution rate is twice that of male-male

> couplings, just like it is with straight couples.

Just to support his assertions, here is a quotation from p. 340 of "Handbook of Interpersonal Commitment and Relationship Stability", edited by Jeffrey M. Adams and Warren H. Jones, published by the academic press Springer in 1999:

> The differential breakup rates of married versus same-sex couples point to the role of marital institutions, but male and female couples exhibit differences in stability as well, suggesting that the influence of gender needs to be explained. With a small cross-sectional sample of 25 gay men and lesbians each, Duffy and Rusbult (1986) found that lesbians had longer relationships. But in the only two studies ever conducted with large samples of same-sex relationships (over 1,000 couples in each), consistent differences have been found between gay men and lesbians in breakup rates, both in the late 1970s and the late 1980s: Lesbian relationships, whether measured longitudinally (Blumstein & Schwartz, 1983) or retrospectively (Bryant & Demian, 1994), were of shorter duration than gay male relationships. The gay men in couples surveyed by Bryant and Demian (1994) reported a mean duration of their current relationships of 6.9 years, compared to 4.9 years for lesbians (p. 104). Furthermore, though both gay men and lesbians reported spending roughly the same total amount of time in their lives in major same-sex relationships, the women reported more past relationships, suggesting that those relationships as well had been of shorter duration. Finally, there was a small but potentially meaningful difference in the proportion of lesbians (92%) as opposed to the pro-portion of gay men (96%) reporting commitment to their current partner for a lifetime or "a long time." These findings run counter to general expectations (Blumstein & Schwartz, 1983; Eskridge, 1996) based on beliefs about women's greater desires and capabilities compared to men in creating and maintaining intimacy and connection in intimate relationships.

Lesbian couples also have the highest rates of domestic violence. Higher than gay males, and much higher than married couples.

Excerpt:

> - A study in the *Journal of Interpersonal Violence* examined conflict and violence in lesbian relationships. The researchers found that 90 percent of the lesbians surveyed had been recipients of one or more acts of verbal aggression from their intimate partners during the year prior to this study, with 31 percent reporting one or more incidents of physical abuse.[46]
> - In a survey of 1,099 lesbians, the *Journal of Social Service Research* found that slightly more than half of the lesbians reported that they had been abused by a female lover/partner. The researchers found that "the most frequently indicated forms of abuse were verbal/emotional/psychological abuse and combined physical-psychological abuse."[47]
> - A study of lesbian couples reported in the *Handbook of Family Development and Intervention*"indicates that 54 percent had experienced 10 or more abusive incidents, 74 percent had experienced six or more incidents, 60 percent reported a pattern to the abuse, and 71 percent said it grew worse over time."[48]

This is not even to mention the concept of "lesbian bed death", which is the frequently occurring cessation of sexual activity in lesbian relationships. A recent study on that is here.

**Liberal women and fear of commitment**

So what causes liberal women do break commitments more than men, whether they are straight or gay? I think there is a reason and it is gender-specific, but it can be mitigated by male leadership and influence in the relationship. And here it is: liberal women think of relationships as being more about emotions and peer-approval than about planning, hard work and results. Liberal women have a notion about marriage being something that will

allow them to live happily ever after – and be approved of (or envied) by their peers. Liberal women believe that it is their partner's job to give them that, and if they don't get it, then the relationship isn't working, and can get jettisoned.

Studies have shown that liberal women have difficulty evaluating men to see if a man is suitable to perform traditional male duties in marriage. Typically, liberal women try to judge men based on how the man makes them feel. Having been raised to be feminists, they just don't believe that men have any distinct "male" capabilities that they need to evaluate. Liberal women tend to believe that they can tell a man's suitability for marriage by looking at his appearance, or by asking their liberal female friends what they think of the man. These standards are heavily influenced by the culture, as well – movies, TV, music, and so on.

Liberal women also don't generally view marriage as a long-term enterprise that has definite goals that may differ from their own personal goals. Liberal women tend to rebel against strict moral boundaries and exclusive religious truth claims, because they restrain them from making relationships (with men or children) all about themselves. They have to be convinced to see the value of moral boundaries and religious truth claims, and they usually haven't done the work themselves to have that capability. A strong male leader who is focused on moral and religious issues can mitigate the liberal female tendency towards narcissism, but liberal women tend to avoid such men as being "too strict" or "too controlling" – even if the leadership is to make the woman grow and get better.

Any structure or plan to the relationship is viewed with suspicion because it distracts from the goals of liberal women: feeling good and having social acceptance. That's why young, unmarried liberal women marry people like Bill Clinton, John Edwards and Tiger Woods who know nothing about morality and religion. It's not rational, but the lack of moral standards and religious truth claims makes them feel safe and autonomous. And that is more important than being led and having the safety of a man who takes morality and religion seriously. One lesbian I know recently told me that discussing morality and religion objectively should not be done because people with strong views on morality and religion are "too mean".

It's up to sensible, moral, religious men to come along and civilize these young, unmarried feminist-influenced liberal women. We need to cause them to think about what marriage really is, what marriage really requires from each partner, and what children really require from marriage. We need to push the engineering approach to marriage during the courtship phase, and wean them off of the crazy emotional vain selfish view of marriage. If men don't lead liberal women during the courtship to think deeply and rationally about marriage, then liberal women will not be prepared or capable of commitment over the long-term. If a man doesn't take the time during the courtship to lead and grow a woman before the wedding, he is taking chances with his future and the future of his children. Not to mention his service to God, which will be negatively impacted by a divorce. At the very least, there will be a financial loss that cuts off charitable giving. At the worst, the potential impact that a good marriage and good Christian children have for the Kingdom will be lost.

# Common atheist objections to Christianity and questions for pro-choice friends

**Wintery Knight** · 23 October 2013 · Archived copy · Original

This post on Well Spent Journey got 73 likes from bloggers.

Here's the first one:

> I'm writing this post primarily for my own convenience. During my online journeys to r/atheism, "freethought" blogs, and beyond, I encounter the following arguments so frequently that it seems sensible to fact-check them all at once.
>
> **The Claim:** *"Religion has been the primary cause of war and oppression throughout the history of mankind."*
>
> **The Truth:** In their comprehensive Encyclopedia of Wars, Phillips and Axelrod document the recorded history of warfare. Of the 1,763 wars presented, a mere 7% involved a religious cause. When Islam is subtracted from the equation, that number drops to 3.2%.
>
> In terms of casualties, religious wars account for only 2% of all people killed by warfare. This pales in comparison to the number of people who have been killed by secular dictators in the 20th century alone.

I'm surprised that these Internet atheists have never heard of The Black Book of Communism, published by Harvard University Press, either. 100 million deaths were caused by atheistic regimes in the last century. One Hundred Million Deaths.

Anyway, here are the other challenges in post:

- **The Claim:** *"Thanks to modern science, the days of religion are numbered. Humanity's superstitious belief in miracles and sky gods will soon be replaced by an era of atheism and rationalism."*
- **The Claim:** *"The dark ages were a time of ignorance and superstition, thanks to religion's negative influence on scientific progress."*
- **The Claim:** *"Jesus was a mythical figure. The New Testament stole most of its stories from other ancient sources."*

All are dealt with in the post on Well Spent Journey. When I look at these arguments, and compare them to our good, deductive, science-based arguments for theism, it does make me feel sorry for atheism.

**Questions for pro-abortion people**

This post was too short, so I thought I would link to Well Spent Journey's "Twelve Questions to Ask Your Pro-Choice Friends".

He's got a list of twelve in the post, but I like these ones because they really put the pro-abortion person on the defensive:

> 3. Pro-choice philosophers typically define the value of a human life in terms of *utility* (development of brainwaves, consciousness, etc.). If this is true, then why is it morally acceptable to sacrifice pigs and dogs for the purpose of medical/scientific research, but not human infants? Neurologically speaking, it's not at all controversial to say that pigs and dogs are in many ways "more advanced" than human infants. Yet society only accepts sacrificing the former for experimental purposes. Do you? If so, why?
>
> 4. Do you support paternal child support laws? (Consider this quote from Dr. Michael Pakaluk: *"[Suppose] that the reason the woman has sole right to decide to have an abortion is that the status of the fetus somehow depends upon how she chooses to regard it: thus, the fetus is not a child until the mother decides that it is, say, at some point later in pregnancy. But then a consequence of this is that the man, through having intercourse with the*

> *woman, does not conceive a child. Rather, he conceives only a fetus, and the fetus at some later point becomes a child, only because of the woman's deciding that it is. But then the man's role in intercourse is not a cause of a child. He brought into existence only a fetus, and it was the woman's decision to 'continue the pregnancy through term' that made it a child. But if so, it is not clear why the man should have any responsibility for the child. How could the woman bring a claim for paternity support against him? After all, he could rightly reply: 'You decided to regard the fetus as a child; so the child is your responsibility.'"*)
>
> 7. What is your position on "two-minus-one" abortions? Are they ethical? Should they be legal?
>
> 8. Many of those who identify as "pro-choice" are particularly concerned with issues of inequality and discrimination. Are discriminatory abortions (such as sex-selective abortions) legally or morally defensible? Suppose that scientists developed a prenatal test to determine whether or not one's child will be homosexual. Would you support a woman's legal right to abort her fetus solely because of his homosexuality?

By the way, I added Well Spent Journey to my blogroll. For some reason, it was not already there!

# UC Berkeley paleontologist Charles Marshall's dishonest review of "Darwin's Doubt"

**Wintery Knight** · 24 October 2013 · Archived copy · Original

There have been a series of Evolution News posts responding to a critical review of Darwin's Doubt, published in the journal Science. I have been keeping up with them, but when I read this post by Casey Luskin about a challenge from Charles Marshall against Meyer's book, I really felt that I had to blog about it.

You have to read this to believe it:

> In his review of *Darwin's Doubt* in the journal *Science*, UC Berkeley paleontologist Charles Marshall claims that Stephen Meyer "completely omits mention of the Early Cambrian small shelly fossils," which he claims causes Meyer "to exaggerate the apparent suddenness of the Cambrian explosion." Yet both of Marshall's claims are false. Meyer does not fail to mention the small shelly fossils and he does not exaggerate the brevity of the Cambrian explosion.
>
> In the first place, Marshall has his facts wrong. Meyer does discuss the small shelly fossils on page 425 of *Darwin's Doubt*. Meyer writes as follows:

> The Cambrian period 543 mya is marked by the appearance of small shelly fossils consisting of tubes, cones, and possibly spines and scales of larger animals. These fossils, together with trace fossils, gradually become more abundant and diverse as one moves upward in the earliest Cambrian strata (the Manykaian Stage, 543-530 mya).

> Nevertheless, although Meyer discusses the small shelly fossils, he does not treat them as a solution to the problem of the explosion of morphological novelty that arises later in in the Cambrian period. The small shelly fossils appear in the fossil record at the base of the Cambrian period about 542-543 million years ago. The main pulse of morphological innovation that Cambrian paleontologists commonly refer to as the "Cambrian explosion" first begins about 530 million years ago and then lasts about 10 years through the Tommotian and Adtabanian stages of the Cambrian period. During the first 5-6 million year stage (the Tommotian) of the explosion, between 14-16 novel phyla first appear in the fossil record. Without actually asserting that the small shelly fossils somehow explain the subsequent explosion of all these novel forms of animal life (or even that the small shelly fossils represent ancestors to all, or some, of these forms), Marshall faults Meyer for not treating them as part of the Cambrian explosion.

Now from this, you might expect that other biologists who do not believe in intelligent design think two things. One, that these fossils are important to explaining the Cambrian explosion. And two, that these fossils count as part of the Cambrian explosion – extending the period of innovation from 10 million years (at the most!) to 23 million years. In fact, you might expect that Marshall thinks that the small, shelly fossils DO explain the Cambrian explosion, and that the Cambrian explosion DID last 23 million years, and not 10 million.

But you'd be wrong – all of this nonsense about SSF is just a mendacious smokescreen to smear Meyer:

> **For example, in a 2006 paper in *Annual Reviews of Earth and Planetary Sciences*, Marshall acknowledges that these fossils are of unclear evolutionary affinities and importance. He calls them "largely problematic fossils" that are "hard to diagnose, even at the phylum level." Figure 1 of his paper portrays them as apparently disconnected to the later radiation of Cambrian animals. This impression is reinforced in the text of his article where he notes that the small shelly fossils for the most part are "problematic" organisms of unknown classification…**

Marshall himself does not think that the SSF are an explanation for the Cambrian explosion – he only insinuated that in his review in order to smear Meyer.

In fact, other naturalists agree with Meyer (and Marshall!) that these SSFs are not part of the explanation for the explosion in new information:

> Other authorities agree that these small shelly fossils [SSFs] are of unclear evolutionary significance and affinity. In his book *On the Origin of Phyla*, James Valentine argues that the SSFs "are very difficult indeed to interpret." Valentine's 2013 book, *The Cambrian Explosion*, co-written with Douglas Erwin, notes that "many SSFs are still poorly understood." Simon Conway Morris found them so unimportant that he does not mention them in either of his authoritative books on the Cambrian explosion (*Crucible of Creation* or *Life's Solution*).

Valentine and Conway Morris are two of the top experts on the Cambrian explosion. Neither is a proponent of intelligent design.

But wait! There's still more dishonesty from Marshall!

Marshall also argues that Meyer is mistating the length of the Cambrian explosion:

> But what about the claim that *Darwin's Doubt* exaggerated the brevity of the Cambrian explosion? Should Meyer have included the appearance of the early Cambrian small shelly fossils as part of the explosion when he estimated the length of that event? Not according to a very recent paper by Marshall himself. In 2010, Marshall co-wrote with James Valentine in the journal *Evolution* (emphases added):

> By the beginning of the Cambrian Period, near 543 million years ago, a few kinds of "small shelly" fossils are found, <2mm in largest dimension. The small shellys rose to a peak in abundance and diversity during the period from 530 to 520 million years ago, when representatives of living phyla are found among them. During that same period, a *chiefly larger-bodied invertebrate fauna* of up to a dozen phyla, and including many soft-bodied forms, is also first represented by fossils. This geologically abrupt appearance of fossils representing *quite disparate bodyplans* of many living metazoan phyla is termed the Cambrian explosion…

> Let's unpack the construction of this paragraph, in which Marshall explains the length of the Cambrian explosion in relation to the small shelly fossils. Starting at the end of the quote, Marshall and Valentine equate "the Cambrian explosion" with the "geologically abrupt appearance of fossils representing quite disparate body plans." They further identify this period with "that same period" wherein "a chiefly larger-bodied invertebrate fauna of up to a dozen phyla, and including many soft-bodied forms, is also first represented by fossils." Marshall and Valentine also equate that period of time with "the period from 530 to 520 million years ago" and distinguish it from the earlier time in which the first small shelly fossils arose. **Thus, according to Marshall — in a co-authored technical paper written in 2010 — the Cambrian explosion does not begin with the first appearance of the small shelly fossils 543 million years ago, or during the earliest part of the Cambrian period. Rather, he and fellow paleontologist James Valentine affirm that the explosion begins about 530 million years ago and lasted to about 520 million years — a date consistent with what Valentine has written elsewhere, including in his recent book with Erwin that Marshall cites approvingly in his review of Meyer.**
>
> **Thus, by Marshall's own admission, (a) the appearance of small shelly fossils around 543 million years ago does *not* mark the beginning of the Cambrian explosion, and (b) the Cambrian explosion should be dated to 530 to 520 million years when we see the "abrupt appearance" of many disparate body plans, long after the small shellies appear. This means that Marshall has acknowledged in print that the "Cambrian explosion" itself lasted only about 10 million years — just as Meyer affirmed in *Darwin's Doubt*. Indeed, Marshall and Valentine affirm that SSFs appear long before the primary explosive**

> **radiation of Cambrian animals and they affirm a 10-million year duration for the Cambrian explosion.**

So here you have a naturalist who is so desperate to smear a proponent of intelligent design that he has to resort to outright deception – deceptions which he knows are false from his own writings!

This reminds me of how Lawrence Krauss misrepresented that e-mail from Vilenkin during his debate with William Lane Craig. Apparently, naturalists just aren't bound by the same sense of morality as theists. Should we be surprised that people who repudiate the idea of objective morality would then proceed to act dishonestly like this? In an accidental universe, anything goes – and truth is not as important as getting ahead in your career by any means necessary.

So the take away lesson for the rest of us is this: Sometimes you don't need to understand all the scientific details exhaustively in order to know what to think about a controversial issue. You just have to spot the liar.

By the way, Dr. Meyer has some comments of his own about these small, shelly fossils in this post.

# Does atheism mean “a lack of belief in God”?

**Wintery Knight** · 24 October 2013 · Archived copy · Original

First, let’s see check with the Stanford University Encyclopedia of Philosophy.

Excerpt:

> ‘Atheism’ means the negation of theism, the denial of the existence of God.

Stanford University is one of the top 5 universities in the United States, so that’s a solid definition. To be an atheist is to be a person who makes the claim that, as a matter of FACT, there is no intelligent agent who created the universe. Atheists think that there is no God, and theists think that there is a God. Both claims are objective claims about the way the world is out there, and so both sides must furnish forth arguments and evidence as to how they are able to *know* what they are each claiming.

Philosopher William Lane Craig has some thoughts on atheism, atheists and lacking belief in God in this reply to a questioner.

Question:

> In my discussions with atheists, they  are using the term that they “lack belief in God”. They claim that this is different from not believing in God or from saying that God does not exist. I’m not sure how to respond to this. It seems to me that its a silly word-play and is logically the same as saying that you do not believe in God. What would be a good response to this?
> Thank you for your time,
>
> Steven

And here is Dr. Craig’s full response:

> Your atheist friends are right that there is an important logical difference between believing that there is no God and not believing that there is a God.  Compare my saying, “I believe that there is no gold on Mars” with my saying “I do not believe that there is gold on Mars.”  If I have no opinion on the matter, then I do not believe that there is gold on Mars, and I do not believe that there is no gold on Mars.  There’s a difference between saying, “I do not believe (p)” and “I believe (not-p).”  Logically where you place the negation makes a world of difference.
>
> But where your atheist friends err is in claiming that atheism involves only not believing that there is a God rather than believing that there is no God.
>
> There’s a history behind this.  Certain atheists in the mid-twentieth century were promoting the so-called “presumption of atheism.” At face value, this would appear to be the claim that in the absence of evidence for the existence of God, we should presume that God does not exist.  Atheism is a sort of default position, and the theist bears a special burden of proof with regard to his belief that God exists.
>
> So understood, such an alleged presumption is clearly mistaken.  **For the assertion that “There is no God” is just as much a claim to knowledge as is the assertion that “There is a God.”  Therefore, the former assertion requires justification just as the latter does.  It is the agnostic who makes no knowledge claim at all with respect to God’s existence.  He confesses that he doesn’t know whether there is a God or whether there is no God.**
>
> But when you look more closely at how protagonists of the presumption of atheism used the term “atheist,” you discover that they were defining the word in a non-standard way, synonymous with “non-theist.”  So understood the term would encompass agnostics and traditional atheists, along with those who think the

> question meaningless (verificationists). As Antony Flew confesses,
>
> the word 'atheist' has in the present context *to be construed in an unusual way*. Nowadays it is normally taken to mean someone who explicitly denies the existence . . . of God . . . But here it has to be understood not positively but negatively, with the originally Greek prefix 'a-' being read in this same way in 'atheist' as it customarily is in . . . words as 'amoral' . . . . In this interpretation an atheist becomes not someone who positively asserts the non-existence of God, but someone who is simply not a theist. (*A Companion to Philosophy of Religion,* ed. Philip Quinn and Charles Taliaferro [Oxford: Blackwell, 1997], s.v. "The Presumption of Atheism," by Antony Flew)
>
> **Such a re-definition of the word "atheist" trivializes the claim of the presumption of atheism, for on this definition, atheism ceases to be a view. It is merely a psychological state which is shared by people who hold various views or no view at all. On this re-definition, even babies, who hold no opinion at all on the matter, count as atheists! In fact, our cat Muff counts as an atheist on this definition, since she has (to my knowledge) no belief in God.**
>
> **One would still require justification in order to know either that God exists or that He does not exist, which is the question we're really interested in.**
>
> So why, you might wonder, would atheists be anxious to so trivialize their position? Here I agree with you that a deceptive game is being played by many atheists. If atheism is taken to be a view, namely the view that there is no God, then atheists must shoulder their share of the burden of proof to support this view. But many atheists admit freely that they cannot sustain such a burden of proof. So they try to shirk their epistemic responsibility by re-defining atheism so that it is no longer a view but just a psychological condition which as such makes no assertions. They are really closet agnostics who want to claim the mantle of atheism without shouldering its responsibilities.
>
> This is disingenuous and still leaves us asking, "So is there a God or not?"

So there you have it. We are interested in what both sides *know* and *what reasons and evidence they have to justify their claim to know.* We are interested in talking to people who make claims *about objective reality*, not about themselves, and who then go on to give reasons and evidence to support their claims *about objective reality*. There are atheists out there that do make an objective claim that God does not exist, and then support that claim with arguments and evidence. Those are good atheists, and we should engage in rational conversations with them. But clearly there are some atheists who are not like that. How should we deal with these "subjective atheists"?

**Dealing with subjective atheists**

How should theists respond to people who just want to talk about their psychological state? Well, my advice is to avoid them. They are approaching religion irrationally and non-cognitively – like the person who enters a physics class and says "I lack a belief in the gravitational force!". When you engage in serious discussions with people about God's existence, you only care about what people know and what they can show to be true. We don't care about a person's psychology.

**Dealing with persistent subjective atheists**

What happens when you explain all of that to a subjective atheist who continues to insist that you listen to them repeat over and over "I lack a belief in God, I lack a belief in God"? What if you tell them to make the claim that God does not exist, and then support it with arguments and evidence, but instead they keep leaving comments on your blog telling you again and again about their subjective state of mind: "I lack a belief in cupcakes! I lack a belief in icebergs!" What if they keep e-mailing you and threatening to expose you on Twitter for refusing to listen to them, or denounce you via skywriting: "Wintery Knight won't listen to me! I lack a belief in crickets!". I think at this point you have to give up and stop talking to such a person.

And that's why I moderate and filter comments on this blog. There are uneducated people out there with access to

the Internet who want attention, but I am not obligated to give it to them. And neither are you. We are not obligated to listen to abusive people who don't *know* what they are talking about. I do post comments from objective atheists who make *factual* claims about the objective world, and who support those claims with *arguments and evidence*. I am not obligated to post comments from people who refuse to make objective claims or who refuse to support objective claims with arguments and evidence. And I'm not obligated to engage in discussions with them, either.

# The meaning of marriage: a lecture at Google by Tim Keller

**Wintery Knight** · 24 October 2013 · Archived copy · Original

*Disclaimer: I have reservations about Tim Keller. I consider him to be too liberal for my tastes, especially on scientific (intelligent design) and political/economic issues. However, I think he did a good job explaining marriage in the lecture below.*

Here's the the video:

Details:

> Timothy Keller visits Google's New York, NY office to discuss his book "The Meaning of Marriage." This event took place on November 14, 2011, as part of the Authors@Google series.
>
> Timothy J. Keller is an American author, speaker, preacher, and the founding pastor of Redeemer Presbyterian Church in New York City. He is the author of several books, including "The Reason for God: Belief in an Age of Skepticism."
>
> "The Meaning of Marriage" touches on topics that all readers can relate to, starting with the role of marriage in our culture, its history and the pessimism that is often associated with it. The Kellers also discuss the feelings of and acts of love, romantic relationships, gender roles, singleness, and the role of sex in a marriage.

I saw a lot of things in his lecture that echo my own views. One point where we agree is on not just looking for traits and virtues in the other person, but in seeing how they handle conflict and solve problems with you. You have to give the other person things to do and see if they make progress and work cooperatively with you. Wes, who linked me the lecture, introduced the link by saying that this is the way that Christians should explain marriage to non-Christians. I agree, and I've added the book to my cart.

Here's an article entitled "You Never Marry the Right Person", that discusses one of the points in the lecture.

Excerpt:

> In generations past, there was far less talk about "compatibility" and finding the ideal soul-mate. Today we are looking for someone who accepts us as we are *and* fulfills our desires, and this creates an unrealistic set of expectations that frustrates both the searchers and the searched for.
>
> […]The Bible explains why the quest for compatibility seems to be so impossible. As a pastor I have spoken to thousands of couples, some working on marriage-seeking, some working on marriage-sustaining and some working on marriage-saving. I've heard them say over and over, "Love shouldn't be this hard, it should come naturally." In response I always say something like: "Why believe that? Would someone who wants to play professional baseball say, 'It shouldn't be so hard to hit a fastball'? Would someone who wants to write the greatest American novel of her generation say, 'It shouldn't be hard to create believable characters and compelling narrative'?" The understandable retort is: "But this is not baseball or literature. This is love. Love should just come naturally if two people are compatible, if they are truly soul-mates. "
>
> The Christian answer to this is that no two people are compatible. Duke University Ethics professor Stanley Hauerwas has famously made this point:
>
> Destructive to marriage is the self-fulfillment ethic that assumes marriage and the family are primarily institutions of personal fulfillment, necessary for us to become "whole" and happy. The assumption is that there is someone just right for us to marry and that if we look closely enough we will find the right person. This moral assumption overlooks a crucial aspect to marriage. It fails to appreciate the fact that we always marry the wrong person.We never know whom we marry; we just think we do. Or even if we first marry the right person, just give it a while and he or she will change. For marriage, being [the enormous thing it is]

> means we are not the same person after we have entered it. The primary challenge of marriage is learning how to love and care for the stranger to whom you find yourself married.
>
> Hauerwas gives us the first reason that no two people are compatible for marriage, namely, that marriage profoundly changes us. But there is another reason. Any two people who enter into marriage are spiritually broken by sin, which among other things means to be self-centered—living life*incurvatus in se*. As author Denis de Rougemont said, "Why should neurotic, selfish, immature people suddenly become angels when they fall in love … ?" That is why a good marriage is more painfully hard to achieve than athletic or artistic prowess. Raw, natural talent does not enable you to play baseball as a pro or write great literature without enduring discipline and enormous work. Why would it be easy to live lovingly and well with another human being in light of what is profoundly wrong within our human nature? Indeed, many people who have mastered athletics and art have failed miserably at marriage. So the biblical doctrine of sin explains why marriage—more than anything else that is good and important in this fallen world—is so painful and hard.

When you are courting, don't worry about appearances and feelings and passion so much, because that is all subject to change over time, and those things won't help you with the real challenges you'll face in a marriage. Worry about whether they are the kind of person who can make commitments and love other people self-sacrificially – even if they are unlovable. In the long run, their ability to read and understand issues, to care for others and serve them, to keep promises, to be respectful and supportive, to argue respectfully and reasonably, and to solve problems constructively, will all be far more important than appearances and feelings and passion.

And let me be clear again: give them things to do that challenge them during the courtship and see how they handle being given responsibilities – giving a person hard things to do is a much better way to test a person than recreational nights out with recreational drinking, recreational dancing and recreational sex. Marriage means commitment and hard work, not recreation. And that's what you should test for – the ability to work hard at the relationship and to keep promises and commitments and to communicate reasonably and to work through difficulties fairly.

# Study: abortion more than doubles the risk of child abuse

**Wintery Knight** · 25 October 2013 · Archived copy · Original

Here's a report from Life News about a new study out of Bowling Green State University.

Excerpt:

> For decades, evidence has existed showing abortion contributes to a rise in child abuse. Now a new study by a post-abortion research institute and Bowling Green State University professors finds that women who have abortions are more likely to abuse their children.
>
> **Published in the medical journal Acta Paediatrica, the study found that women who have had abortions are 2.4 times more likely to physically abuse their children.** Pro-life advocates say it proves the need for providing women with post-abortion counseling to help deal with the emotional trauma of the abortion.
>
> Led by Priscilla Coleman, a professor at Bowling Green, researchers looked at data taken from a survey of 518 low-income women in Baltimore who were receiving Aid to Families with Dependent Children and who had at least one child aged 12 years or younger.
>
> The data compared rates of child abuse and neglect among women who had experienced either an involuntary (miscarriage or stillbirth) or voluntary (induced abortion) pregnancy loss.
>
> Women who had a miscarriage or stillbirth were more likely to physically abuse their children as well, but the increase was much less significant than for women who had abortions.
>
> The authors suggested that "emotional difficulties and unresolved grief responses" from pregnancy loss, whether voluntary or involuntary, could have a negative impact on women's mental health and lead to unhealthy parenting responses.
>
> According to the Illinois-based Elliot Institute, which released information about the study's findings, prior surveys "have linked pregnancy loss to an increase in grief reactions, anxiety, depression, sleep disturbances, and symptoms of post-traumatic stress disorder, all of which can have a negative impact on parent/child relationships."
>
> The post-abortion research group also points to a 2002 study published in the Journal of Child Psychiatry and Psychology that found abortion has been linked to an increase in substance abuse and thoughts of suicide, which could also contribute to child abuse.
>
> The new study also found that women who had more than one miscarriage or stillbirth were more likely to engage in child abuse than women who had just one. However, women who had abortions were more likely to abuse their children whether they had one or more than one abortion.
>
> "Regardless of the specific mechanisms at play, maternal history of one induced abortion does appear to be a marker for increased risk of physical abuse," the authors concluded.

In legalizing abortion, we have changed the way that adults view sex and the way adults view children. Instead of thinking that sex is something that is reserved for marriage, we now think that it is OK for women to have sex for fun with men who have *no intention* and *no capability* to take on the traditional male roles of protector, provider and moral/spiritual leader. And when those irresponsible choices produce other human beings, we have taught ourselves that murder is a morally permissible option. What does it mean? It means that children have no rights. It means that we can kill things we create if they annoy us. And that attitude spills over from unborn children to born children. It is going to result in *more* child abuse, when more people accept these views about what sex is supposed to be for, and what our obligations are to children.

But this is not the only study that shows the harm that abortion does.

Life News reports on the latest studies confirming the link between abortion and breast cancer.

Excerpt:

> A newly-published study shows the highest-ever abortion-breast cancer risk for women of any previously-published study on the link between the two.
>
> A Bangladesh study published in the Journal of Dhaka Medical College on risk factors for breast cancer, led by Dr. Suraiya Jabeen, found a statistically significant 20.62-fold increased risk among women with abortion histories. The new study on the abortion-breast cancer link is by far the highest risk elevation reported among 73 published abortion-breast cancer studies.
>
> Physical inactivity, being menopause, positive family history of breast cancer and history of induced abortion were found important risk factors," the authors wrote.
>
> Professor Joel Brind, a professor at Baruch College, City University of New York who is an expert on the abortion-breast cancer link, said the reason why the risk elevation is so high is because it's "a measure of relative risk."
>
> Observing that women in Bangladesh have very traditional childbearing patterns that reduce breast cancer risk, he explained: "Almost all the women are married (97% currently married; the rest widowed) and with child by the time they are 20, and all of the kids are breastfed. Ninety percent had their first child at age 21 or younger (99% of controls did). They typically neither take contraceptive steroids nor have any abortions. Nulliparity (childlessness) or abortion before first full term pregnancy (both of which mean no breastfeeding) in a population in which breast cancer is almost unheard of, makes the relative risk very high."
>
> Brind continued: "Although the authors did not include a measure of their abortion link's statistical significance, their raw data was complete enough to calculate a 95% confidence interval of 12.85-32.51, making abortion by far the strongest and most significant risk factor observed in these Bengali women. In plain English, women in this population who had any induced abortions were more than 20 times as likely to get breast cancer, compared to women with no abortions."
>
> According to the study, additional minor reproductive factors influencing breast cancer risk included: use of oral contraceptives (1.47-fold increased risk); early first birth at or before age 21 (0.35-fold reduced risk); having two or more children (0.29-fold reduced risk); and increased number of months spent breastfeeding (0.30-fold reduced risk).

But that's not all.

Life News reports.

Excerpt:

> A study in the Asian Pacific Journal of Cancer Prevention shows abortion increases the risk of breast cancer for women.
>
> C. Yanhua of the First Peoples' Hospital of Kunming in Yunnan province and his colleagues found the abortion-breast cancer association after comparing data from 263 cases of breast cancer and 457 controls without the disease. Their analysis covers the years 2009-2011.
>
> The authors examined information on disease diagnosis, demographics, medical history, and reproductive characteristics of the patients involved and also looked at short menstrual cycle, old age at first live birth, never breastfeeding, history of oral contraceptive use, postmenopausal status and nulliparity to determine in abortion-breast cancer link exists.
>
> They write that "multivariate model analysis revealed the significant independent positive associations with breast cancer of shorter menstrual cycle, older age at first live birth, never breastfeeding, history of oral

> contraception experience, increased number of abortion, menopause status, and nulliparities."
>
> "Number of abortion showed an increasing higher risk of breast cancer," they added, while saying that women who had one live birth lowered their risk. "As far as women who had once a live birth, it showed decreased the risk of breast cancer compared to nulliparous."
>
> "This study showed an increased risk of breast cancer with times of abortion. The association between abortion and risk of breast cancer in a study in China showed that the risk factors of female breast cancer included abortion times more than two (Li et al., 2006)," they continued. "Another study found that risk was raised among women reporting at least one abortion, but no trend was seen with number of abortions (Heuch et al., 2008). In a meta-analysis study, pooled odds ratio for number of abortions greater than and equal three was statistically significant (95%CI:1.68-5.36) (Tao et al.,2011)."
>
> "In conclusion, in this study the estrogen related risk factors of breast cancer included woman who had longer menstrual cycle, older age of first live birth, never breastfeeding, nulliparity, and number of abortions more than one. Therefore, it is recommended to women with these risk factors perform breast cancer screening tests earlier and regularly," they said.

Previously, another study was published in Oxford University's European Journal of Public Health, and the abstract is posted on PubMed.

Here are the results:

> With statistical controls for number of pregnancies, birth year and age at last pregnancy, the combination of induced abortion(s) and natural loss(es) was associated with more than three times higher mortality rate than only birth(s). Moderate risks were identified with only induced abortion, only natural loss and having experienced all outcomes compared with only birth(s). Risk of death was more than six times greater among women who had never been pregnant compared with those who only had birth(s). Increased risks of death were 45%, 114% and 191% for 1, 2 and 3 abortions, respectively, compared with no abortions after controlling for other reproductive outcomes and last pregnancy age. Increased risks of death were equal to 44%, 86% and 150% for 1, 2 and 3 natural losses, respectively, compared with none after including statistical controls. Finally, decreased mortality risks were observed for women who had experienced two and three or more births compared with no births.

Life Site News adds more:

> A single induced abortion increases the risk of maternal death by 45 percent compared to women with no history of abortion, according to a new study of all women of reproductive age in Denmark over a 25 year period.
>
> The study found that each additional abortion is associated with an even higher death rate. Women who had two abortions were 114 percent more likely to die during the period examined, and women had three or more abortions had a 192 percent increased risk of death.
>
> Elevated rates of death were also observed among women who experienced miscarriages, ectopic pregnancies or other natural losses. Among women with a history of multiple pregnancies, women with a history of both abortions and natural losses, but no live births, had the highest mortality rate.
>
> Women who had never been pregnant had the highest mortality rate overall.
>
> However, women with a history of successful deliveries were the least likely to die during the 25 years examined.
>
> The study is the second record linkage analysis of Danish mortality data to be published this month.
>
> The earlier study was limited to comparing mortality rates following only the first pregnancy outcome. It found

> that abortion of a first pregnancy was associated with a higher rate of death compared to death rates among women who delivered a first pregnancy. The higher death rate among women who had abortions persisted for each of the first ten years following the first pregnancy outcome.
>
> […]Dr. Reardon is the director of the Elliot Institute, which funds research related to abortion. He believes further research is needed to explore how the outcomes observed in this latest study may be influenced by abortion's impact on natural pregnancy losses. A new population study from Finland, for example, has found that abortion is associated with higher rates of preterm delivery, low birth weight delivery, and perinatal deaths in subsequent pregnancies.

And another from Life News.

Excerpt:

> A new study published in the *Asian Pacific Journal of Cancer Prevention* in February reported a very statistically significant increased risk of breast cancer for women with previous abortions as opposed to women who have never had one.
>
> The study, consisting of 1,351 women and led by researcher Ai-Ren Jiang, reported a statistically significant 1.52-fold elevation in risk for women with induced abortions and a "significant dose-response relationship between (the risk) for breast cancer and number of induced abortions," meaning the risk climbed with a higher number of previous abortions.
>
> For premenopausal women who have had abortions, the numbers were relatively small, and the observed 16% risk elevation was not statistically significant. However, for those with three or more abortions, the risk climbed to a statistically significant 1.55-fold elevation.
>
> "The results have revealed that induced abortion was related to increased risk of breast caner. Premenopausal women who had ≥3 times of induced abortion were at increased crude odds ratio (OR) (2.41, 95%CI: 1.09-5.42) and adjusted-OR (1.55, 95%CI: 1.15-5.68)," they wrote. "Postmenopausal women with a previous induced abortion were at increased crude OR (2.04, 95%CI: 1.48-2.81) and adjusted-OR (1.82, 95%CI: 1.30-2.54), and there was a significant increase trend in OR with number of induced abortions (p for trend: 0.0001)."
>
> […][A] Chinese study in 1995 by L. Bu and colleagues, including Janet Daling of the Fred Hutchinson Cancer Research Center, reported a statistically significant 4.5-fold elevated risk among women with previous induced abortions who developed breast cancer at or before age 35, compared to older women (who experienced a statistically significant 2.5-fold elevated risk)

Here's another study from the Journal of the American Medical Association (JAMA), showing that excessive consumption of alcohol is a rish factor for breast cancer.

Excerpt:

> Consumption of 3 to 6 alcoholic drinks per week is associated with a small increase in the risk of breast cancer, and consumption in both earlier and later adult life is also associated with an increased risk, according to a study in the November 2 issue of JAMA.
>
> "In many studies, higher consumption of alcohol has been associated with an increased risk of breast cancer. However, the effect of low levels of drinking as is common in the United States has not been well quantified," according to background information in the article. "In addition, the role of drinking patterns (i.e., frequency of drinking and 'binge' drinking) and consumption at different times of adult life are not well understood."
>
> Wendy Y. Chen, M.D., M.P.H., of Brigham and Women's Hospital and Harvard Medical School, Boston, and colleagues examined the association of breast cancer with alcohol consumption during adult life, including

> quantity, frequency, and age at consumption. The study included 105,986 women enrolled in the Nurses' Health Study who were followed up from 1980 until 2008 with an early adult alcohol assessment and 8 updated alcohol assessments. The primary outcome the researchers measured was the risk of developing invasive breast cancer.
>
> During the follow-up period, there were 7,690 cases of invasive breast cancer diagnosed among the study participants. Analyses of data indicated that a low level of alcohol consumption (5.0 to 9.9 grams per day, equivalent to 3-6 glasses of wine per week) was modestly but statistically significantly associated with a 15 percent increased risk of breast cancer. In addition, women who consumed at least 30 grams of alcohol daily on average (at least 2 drinks per day) had a 51 percent increased risk of breast cancer compared with women who never consumed alcohol.
>
> The researchers also found that when examined separately, alcohol consumption levels at ages 18 to 40 years and after age 40 years were both strongly associated with breast cancer risk. The association with drinking in early adult life still persisted even after controlling for alcohol intake after age 40 years.
>
> Binge drinking, but not frequency of drinking, was also associated with breast cancer risk after controlling for cumulative alcohol intake.

Now let's take a look at some other factors that raise the risk of breast cancer.

**Abortion and breast cancer**

Many studies show a link between abortion and breast cancer.

Study 1: (September 2010)

> Based on the expression of estrogen receptor (ER), progesterone receptor (PR) and HER2/neu (HER2), breast cancer is classified into several subtypes: luminal A (ER+ and/or PR+, HER2-), luminal B (ER+ and/or PR+, HER2+), HER2-overexpressing (ER-, PR-, and HER2+) and triple-negative (ER-, PR-, and HER2-). The aim of this case-control study is to determine reproductive factors associated with breast cancer subtypes in Chinese women. A total of 1,417 patients diagnosed with breast cancer in the First Affiliated Hospital, China Medical University, Shenyang, China between 2001 and 2009 and 1,587 matched controls without a prior breast cancer were enrolled.
>
> […]Postmenopause and spontaneous abortion were inversely associated with the risk of luminal tumors. By contrast, multiparity, family history of breast cancer and **induced abortion increased the risk of breast cancer**.

Study 2: (March 2010)

> OBJECTIVE: To explore the risk factors of breast cancer for better control and prevention of the malignancy.
>
> METHODS: The clinical data of 232 patients with pathologically established breast cancer were investigated in this 1:1 case-control study to identify the risk factors of breast cancer.
>
> RESULTS: The history of benign breast diseases, family history of carcinoma and**multiple abortions were the statistically significant risk factors of breast cancer**, while breast feeding was the protective factor.
>
> CONCLUSION: A history of benign breast diseases, family history of carcinoma and multiple abortions are all risk factors of breast cancer.

But wait, there's more.

**Birth control pills**

Many studies showed that taking birth control pills caused an increased risk of breast cancer.

Study 1: (March 2003)

> RESULTS: Among the youngest age group (<35 years, n = 545), significant predictors of risk included African-American race (RR = 2.66: 95% CI 1.4-4.9) and **recent use of oral contraceptives** (RR = 2.26; 95% CI 1.4-3.6). Although these relationships were strongest for estrogen receptor-negative (ER-) tumors (RRs of 3.30 for race and 3.56 for recent oral contraceptive use), these associations were also apparent for young women with ER+ tumors. Delayed childbearing was a risk factor for ER+ tumors among the older premenopausal women (Ptrend < 0.01), but not for women <35 years in whom early childbearing was associated with an increased risk, reflecting a short-term increase in risk immediately following a birth.

Study 2: (October 2008)

> **Oral contraceptive use ≥1 year was associated with a 2.5-fold increased risk for triple-negative breast cancer** (95% confidence interval, 1.4-4.3) and no significantly increased risk for non-triple-negative breast cancer ($P_{heterogeneity}$ = 0.008). Furthermore, the risk among oral contraceptive users conferred by longer oral contraceptive duration and by more recent use was significantly greater for triple-negative breast cancer than non-triple-negative breast cancer ($P_{heterogeneity}$ = 0.02 and 0.01, respectively).

All of this research shows that abortion is bad for women, but I also should mention that abortion is always bad for the unborn child, especially sex-selection abortions, which target women more than men.

**Conclusion**

The total cost for breast cancer treatment, which raises medical insurance premiums (private health care) or taxes (single-payer health care), has been estimated to be between $1.8 billion and $3.8 billion dollars. In addition, the government spends billions of dollars each year on breast cancer research. All of this spending is costing taxpayers a lot of money, as people demand more and more government funding of breast cancer research and breast cancer treatment (with either private or single-payer health care).

# Obamacare death spiral is already happening in states like New York and Washington

**Wintery Knight** · 25 October 2013 · Archived copy · Original

Amy H. tweeted this this article from Reason, which talks about what happened to private health insurance in states that already implemented Obamacare-like policies.

Excerpt:

> Delaying the individual mandate might seem like an obvious response to the ongoing failure of the federal exchange system. But it's a rather drastic step. And, in isolation, a potentially problematic one.
>
> That's because the premiums that health insurers calculated for the exchanges this year were determined based on the assumption that the penalty for remaining uninsured would be in effect, and would encourage people to buy into the market.
>
> If you change the enrollment requirements—by, for example, ditching the mandate—while leaving the law's preexisting condition rules in place, health plan participation will likely be lower. The result, as one insurance official told NPR yesterday, is that insurers will want to change their premiums. And in this case, "change" means "raise."
>
> That's where the real trouble starts. Insurers raising prices as a result of lower than anticipated enrollment is an early step toward an insurance death spiral, in which premiums spike and enrollment figures drop until the only participants who remain in the market are very people paying very high premiums. We know because we've seen it before—in New York, Washington, and handful of other states that enacted preexisting condition regulations similar to Obamacare's but without an individual mandate.
>
> New York state's guaranteed issue and community rating rules—the two regulations that limit how insurers can charge based on health history and require them to sell policies to all comers—took effect in 1994. At the time, there were about 752,000 policyholders in the state's individual market, or about 4.7 percent of the non-Medicare population. But by 2009, according to a Manhattan Institute report by Stephen Parente and Tarren Bragdon, the state's individual market had practically disappeared, leaving just 34,000 participants, or about 0.2 percent of the non-elderly population. Individual insurance premiums, meanwhile, were among the highest in the nation—about $388 on average in 2007, compared with just $151 in California, another big Democratic-leaning state. In New York City, the annualized premium cost for individuals was more than $9,300 and more than $26,400 for a family.
>
> The result, in other words, was a combination of sky-high premiums and far fewer insured individuals.
>
> Around the same time that New York was overhauling its insurance market, Washington state was implementing a similar set of health plan rules. Insurers faced new regulations regarding plans sold to individuals with preexisting conditions, and the requirement that they sell to everyone. For a brief period, there was a coverage mandate, but that never went into effect. The state's individual market deteriorated. One insurer raised premiums by 78 percent in a three year period. As premiums rose, relatively healthier people left the market, and insurers were left covering a lot of very sick, very expensive individuals. In the end, many insurers simply dropped out of the market rather than lose money. According to a report on the reforms commissioned by the insurance industry, there were 19 carriers in the individual market in 1993. By 1999, there were just two—and they weren't taking new applicants.
>
> The individual market was effectively killed off by the reforms.

Why do these policies of "community rating" and "guaranteed issue" cause the death spiral?

Investors Business Daily has a look at the chain of causation.

Excerpt:

> For years, ObamaCare critics focused on its least popular feature — the mandate that everyone buy insurance — taking their fight all the way to the Supreme Court.
>
> But as ObamaCare's official launch date approaches, even its backers are beginning to admit that the law could actually create powerful incentives for millions of people and thousands of businesses to drop their coverage, despite the mandate.
>
> There is growing concern, for example, that the law's market reforms will cause a huge "rate shock," particularly for those young and healthy.
>
> **A February survey of major health insurance companies in five cities across the country found that they expect premiums for this group to climb an average 169%.**
>
> **The cause of this rate shock is simple: ObamaCare imposes what is called "community rating" on insurance companies, effectively forcing them to charge the young and healthy more so they can charge older and sicker consumers less.**
>
> The five-city survey, for example, found that while the law will jack up rates for the young, it will lower them an average 22% for older and sicker customers.
>
> At the same time, ObamaCare also forbids insurance companies from turning anyone down — a reform called "guaranteed issue" — which also will provide an incentive for some to drop coverage, knowing they can get it back any time.
>
> "Even with the tax penalty … some healthy people would avoid purchasing coverage until they are sick," Howard Shapiro, director of public policy at the Alliance of Community Health Plans, told regulators .
>
> **The problem is that if the young and healthy drop coverage, the result would be what the industry calls a "death spiral." Premiums will climb as the pool of insured gets sicker, causing still more to cancel their policies.**
>
> This is just what happened in states that imposed strict community rating and guaranteed issue reforms in the past. In fact, of the eight states that did so, most ended up either dropping the reforms or loosening the rules after they saw enrollment decline and premiums climb.

It's very important to understand that what Obama did with his health care plan will not cause premiums to go down. On the contrary, they have gone up and they will go up.

# How pro-life apologetics helps strengthen your evangelism

**Wintery Knight** · 25 October 2013 · Archived copy · Original

From Scott Klusendorf's Life Training Institute.

Excerpt:

> Beyond the obvious obligation we have as thinking human beings to clarify the status, and defend the value, of innocent, unborn human life, engaging in the pro-life project is also a way to make the case for the truth of Christianity in general. It stands to reason that if the scientific, philosophical, and moral arguments we offer in defense of the humanity of the unborn also happen to align exactly with the biblical notion of what it means to be a human being made "in the image of God," then the Bible might also have something to say about other things of importance.
>
> This is a point Scott makes repeatedly but it was recently driven home in a very concrete way by, of all people, a hard core atheist in the most recent issue of ***Salvo*** magazine. A secular skeptic, law school professor, renowned blogger, and mocker of deluded "Godiots," the "Raving Atheist" attended a blogger party where he serendipitously sat next to a Catholic blogger named Benjamin. As the "Raving Atheist" explains:

> At one point the conversation turned to abortion, and I asked Benjamin's opinion of the practice. I was stunned. Here was a kind, affable, and cogently reasonable human being who nonetheless believed that abortion was murder. To the limited extent I had previously considered the issue, I believed abortion to be completely acceptable, the mere disposal of a lump of cells, perhaps akin to clipping fingernails.

> This unsettling exchange spurred me to further investigate the issue on Benjamin's blog. I noticed that pro-choice Christians did not employ scientific or rational arguments but relied on a confused set of "spiritual" platitudes. More significantly, the pro-choice atheistic blogosphere also fell short in its analysis of abortion. ***The supposedly "reality-based" community either dismissed abortion as a "religious issue" or paradoxically claimed that pro-life principles were contrary to religious doctrine. Having formerly equated atheism with reason, I was slowly growing uncertain of the value of godlessness in the search for truth.***

> Though the "Raving Atheist" continued to rave, there was now a stone in his God-rejecting shoe, placed there by a reasoned defense of the pro-life view. He couldn't disconnect himself from it and later admitted that the "selfless dedication [of pro-life advocates] to their cause moved [him] deeply." Later, he met a woman named Ashli whose work in pregnancy care drew him to further consider the pro-life position. Soon thereafter, the "Raving Atheist" became, in part, a pro-life blogsite …

Click here to read the astonishing conclusion. Then come back here.

Back? Ok, so what did we learn from this? Well, the moral of this story is that it is *very* important for Christians to have a good understanding of moral issues like abortion and same-sex marriage so that they can talk about these issues based on what they know. When someone can stake out a *moral* position on these kinds of issues, using science and history and other hard evidence – *not just the Bible* – then it helps non-Christians to take us seriously *as thinkers*.

Unless we demonstrate the ability to reason out there in the real world – outside the church – then we are not going to be viewed as authoritative on any subject – *especially* on spiritual subjects. We really need to study up on other issues, and show that we care about the unborn (abortion issue) and children (same-sex marriage issue). We have to show that there is more to us than just doing what feels good. We have to show that we are smart and that we are

willing to be unpopular in order to do the right thing. That we didn't just inherit these views from our parents, or from our culture. That we have actually thought things through more than just reading the Bible, and that it makes a difference in how we view the world, and in how we live.

And I also think that it is just as important to read about economics, because we care about the poor. Socialists don't know anything about economics. Whenever their wealth redistribution policies are tried, people get poorer and are less likely to be employed. If we really cared about the poor, we would study economics. Entrepreneurs stop hiring workers when they think that there is no profit to be made from undertaking an enterprise.

We also need to read about military and foreign policy issues, because we care about peace. Pacifists don't know anything about military affairs and terrorism. Whenever their appeasement policies are tried, wars start and innocent people die. If we really cared about preventing wars and terrorism, we would study military history, counter-terorism and foreign policy. Bad men become aggressive when they think there is no cost to bear for it.

Ignorance is never a good idea when you are trying to do good – and you can't know what is really good just by your feelings and intuitions. If you want to do good, you need to be 1) convincing and 2) effective. And that takes study. Don't choose policies based on what makes you feel good and what sounds good to others. Push for *effective* policies – what actually *does* good – and then have your arguments and evidence ready to convince people, using evidence from authorities *that they accept as non-Christians*. If you have the will to study a little, you can be passionate *and* convincing. Non-Christians respect passion and knowledge. They don't respect fideism and mysticism. They can spot a fake a mile away.

The best book to read on Christian worldview is Wayne Grudem's "Politics According to the Bible".

If you want to see Scott in a good debate against an ACLU spokeswoman, click here. He is also the author of the best introductory book on pro-life apologetics, entitled "The Case for Life".

# More Americans collecting welfare than working full-time

**Wintery Knight** · 26 October 2013 · Archived copy · Original

Posted at Investors Business Daily.

Excerpt:

> At the end of 2011, the last year for which data are available, some 108.6 million people received one or more means-tested government benefit programs — bureaucratese for welfare.
>
> Meanwhile, there were just 101.7 million people with full-time jobs, the Census data show, including both the private and government sectors.
>
> This is a real danger for the U.S. — the danger of dependency. Anytime more people are being paid not to work than to work, it imperils our democracy. No one votes to cut his own welfare benefits. So welfare grows.
>
> […]According to official data from the government, 46.5 million people live in poverty in the U.S. Doing the quick math, that means just 43% of all those on welfare are officially considered poor.
>
> When you add in other government programs with a check attached — Social Security, Medicare, veterans benefits, unemployment and other non-means-tested benefits — you find a whopping 151 million Americans get a check from the government other than an income-tax refund.
>
> […]A Cato Institute study in August found that welfare now pays more than minimum-wage work in 35 states. Indeed, the federal government has 126 separate programs to help low-income earners.
>
> "The current welfare system provides such a high level of benefits that it acts as a disincentive for work," the study said. "Welfare currently pays more than a minimum-wage job in 35 states, even after accounting for the Earned Income Tax Credit, and in 13 states it pays more than $15 per hour."
>
> Given all the disincentives, it seems as if the government doesn't even want people to work. But why would that be?
>
> Perhaps it's in the interest of those on the so-called progressive left — those most responsible for the uncontrolled growth of the welfare state — to keep Americans out of work and dependent on government.
>
> Sure looks that way. After all, for Democrats, dependent voters are reliable voters.

In fact, we've spent $3.7 trillion on welfare over the last 5 years.

Where did the money come from? Well, all this subsidized dependency has been going on, we have been adding 6.5 trillion to the national debt. Our national debt is now up to $17 trillion – more than our entire Gross Domestic Product! The national debt will have to be paid back by future generations of Americans. So what we are really doing here is transferring money from children who can't vote to adults who can vote. That's what the Democrat Party is doing with all of this spending.

This program of inter-generational theft amounts to enslaving the next generation. You could even view the public schools as complicit in it, since they are teaching young people to value giving the public schools more money. It's like brainwashing a victim of abuse to believe that the abuse is normal. By the time the young people wake up and realize that they are eating grass while their "educators" dine on caviar, it will be too late. This is not surprising since the Democrats are the part of slavery, historically speaking. Maybe we need to start using rhetoric like that so that people understand what is really going on.

# Washington Post and Daily Beast: Obamacare woes go beyond web site

**Wintery Knight** · 26 October 2013 · Archived copy · Original

Leftist Ezra Klein writes about the Obamacare problems in the leftist Washington Post.

Excerpt: (links removed)

> As Sarah Kliff and I wrote in our overview of the health-care launch's technical issues, the challenges right now can be grouped into three broad categories: problems with the consumer experience on the HealthCare.gov Web site, problems with the eligibility system, and problems with the hand-off to insurers.
>
> The problems with the Web site are the difficulties consumers are facing when they try to log on and shop for insurance coverage. These problems — error messages, site timeouts, difficulty logging in to an account — make it hard for an individual to buy coverage through the marketplace. They are the reason why some people have made upward of 20 attempts at purchasing a plan. These are the problems that are being fixed fastest and that are the least serious.
>
> The eligibility problems strike when consumers send in their information and the government's computer systems tell them whether they're eligible for Medicaid, health insurance subsidies or nothing at all. The system is returning incorrect data for many applicants — meaning they might be eligible for Medicaid and not know it, or they might think they have subsidies that will later be revoked.
>
> The insurance problems are seen by the insurance companies. Health plans are supposed to get a report when someone uses HealthCare.gov to buy their health insurance policy. Those reports are full of inaccurate data, such as the wrong address, or are being sent in duplicate. (One insurance company reported getting one of these reports, known as an "834 transmission," that said one individual had three spouses. This person was not, for the record, a polygamist.) And it's not just private insurers: The federal system is also failing to sign people up for Medicaid.

And here's moderate leftist Kirsten Powers on the leftist Daily Beast.

Excerpt:

> The Associated Press reported that "Website builders saw red flags for months." *The Washington Post* recounted, "Days before the launch of President Obama's online health insurance marketplace, government officials and contractors tested a key part of the Web site to see whether it could handle tens of thousands of consumers at the same time. It crashed after a simulation in which just a few hundred people tried to log on simultaneously. Despite the failed test, federal health officials plowed ahead." Sebelius admitted Monday that the website "didn't have enough testing, specifically for high volumes, for a complicated project."
>
> What have they been doing for the last few years? The administration has claimed that it can't be helped that setting up an insurance exchange is so complex. Sebelius even lamented that she wished she had "five years" to finish this project. Who needs five years to build a website? This isn't a search for the cure for cancer.
>
> In the week leading up to the launch of the exchanges, Obama assured Americansthat using the health insurance hub would be as easy as buying a plane ticket online.  Apparently he wasn't in on what was happening behind the scenes. Sebelius told CNN that the first the president heard of problems was in "the first couple of days" after the site went live October 1. If this is true, then either the president didn't ask about the site's capabilities or someone lied to him. If the former is true, then he has an incredible lack of imagination and curiosity. If the latter is the case, then why hasn't anyone been fired?
>
> True to form, the Most Transparent Administration in History has not been particularly forthcoming about the problems the site faces. At first, it claimed these were just minor glitches caused by unexpectedly high traffic.

> The president famously compared these glitches to those that Apple has experienced in the past. He might be interested to know that Apple fired the manager responsible for the last major snafu the company encountered.
>
> Obamacare supporter Sen. Richard Blumenthal (D-CT) complained Thursday on MSNBC that the administration "[hasn't] leveled with the United States Senate. They haven't briefed us on what they think are the underlying problems. They were supposed to do so yesterday, and canceled the meeting."
>
> He called for a consideration of a one-year delay of the individual mandate and demanded: "The administration needs to tell us what is going on…[they need] to level with the American people. There needs to be fuller, fairer, more straightforward, and complete accounting for what's going on."

It's the most transparent administration ever! And this non-functional web site only cost $400 million taxpayer dollars. Why so much? Well it was a no-bid contract, so there were no competitive bids. Why? Because a former Princeton University classmate of Michelle Obama works for the company that got the no-bid contract.

I fully expect Obama to come out and blame George W. Bush for this. And many people will believe him, too.

# Alvin Plantinga's evolutionary argument against naturalism

**Wintery Knight** · 27 October 2013 · Archived copy · Original

Here's the link at First Things.

Excerpt:

> Although Darwin admits he wasn't much of an abstract thinker, he could not shake the "inward conviction" that "the Universe is not the result of chance." Unlike many who followed after him, he appears to have intuitively understood the paradox of combining naturalism with evolutionary theory: If evolution is a non-teleological process, it undercuts our ability to trust that we can form true beliefs and convictions.
>
> To have trustworthy convictions, we have to have properly functioning noetic equipment (i.e., a brain, spinal cord, sensory apparatus, etc., that recognize reality). But can a strictly materialistic, non-teleological, evolutionary process produce such reliable equipment? The philosopher Alvin Plantinga, one of the greatest thinkers of our era, thinks the answer is "no." Although his argument is too complex and tightly argued to be adequately summarized, the basic outline of his case shows his point to be all but incontrovertible.
>
> Plantinga claims, not that evolution is untrue, but that the truth of evolution is incompatible with the truth of naturalism. "As far as I can see, God certainly could have used Darwinian processes to create the living world and direct it as he wanted to go," he argues. "Hence evolution as such does not imply that there is no direction in the history of life."
>
> What does imply that life is not directed, he adds, is not evolutionary theory itself, but the theory of *unguided* evolution: the idea that "neither God nor any other person has taken a hand in guiding, directing, or orchestrating the course of evolution." For our purposes, we'll call this view "evolutionary naturalism."
>
> Evolutionary naturalism assumes that our noetic equipment developed as it did because it had some survival value or reproductive advantage. Unguided evolution does not select for belief except insofar as the belief improves the chances of survival. The truth of a belief is irrelevant, as long as it produces an evolutionary advantage.

If you want to hear Plantinga giving a lecture on this same argument live on a university campus, click here.

Summary:

> In a talk given at The Veritas Forum at Oregon State University in January 1996, Professor Alvin Plantinga presents an evolutionary argument *against* naturalism. In a complex, but important philosophical argument, he argues that it is not rational to accept belief in naturalism and evolution, because such beliefs provide no rational basis for trusting our cognitive faculties.

I think it's a great challenge to naturalism that we should all be aware of.

# Americans choosing not to purchase Obamacare exchange plans

**Wintery Knight** · 27 October 2013 · Archived copy · Original

On Fox News Sunday, Brit Hume talked about how the majority of the new enrollees are signing up for Medicaid, not Obamacare, and how young people are refusing to sign up for Obamacare plans on the exchanges.

And more discussion from the same panel:

For those who can't watch, here's an article from Fox News about how the majority of new enrollees are choosing Medicaid, not Obamacare plans.

Excerpt:

> While virtually all the ObamaCare focus is trained on the program's dysfunctional website, another problem could be emerging — in states where individuals are able to sign up, far more are enrolling in Medicaid than private plans.
>
> For now, the statistics are spotty. The Obama administration still hasn't provided figures on how many people have successfully enrolled through the federally run exchanges. Some, but not all, states have provided their own relatively up-to-date figures.
>
> But for those that have, the lopsided numbers show Medicaid is getting the lion's share of enrollees.
>
> In Washington state, more than 35,000 people have signed up for coverage since Oct. 1. Of them, just 4,500 went into private plans. Roughly 31,000 signed up for Medicaid — with coverage kicking in sometime between now and Jan. 1.
>
> The director of the state's Health Care Authority said they were "pleased by the strong response of Medicaid-eligible residents."
>
> But the imbalance — if it does not even out in the months to come — could create problems for private insurance companies which are relying on a major influx of new and healthy customers to make the system hum.
>
> "There are a lot of elements of this law that have to work, that must work — otherwise the whole thing collapses," the Cato Institute's Michael Cannon said. "They need — need — lots of healthy people to sign up for insurance through the exchanges."
>
> The fact that people are flocking to Medicaid isn't necessarily a problem — but a lack of healthy enrollees on private plans would be.
>
> The main reason the Affordable Care Act mandated that individuals buy insurance was so that private insurers would get enough young, healthy people in the system who could offset the costs of covering older and sicker patients. Otherwise, at the very least, costs will skyrocket for those in the system.
>
> […]The Democrat and Chronicle newspaper reports that in New York, nearly 24,000 of the 37,000 newly enrolled residents are going into Medicaid, which millions of New Yorkers are already on. Just 13,313 chose private plans.

Medicaid is fully taxpayer-funded, so this is not going to help the deficit/debt situation at all. That money will have to be borrowed and paid back by taxpayers. Making things worse is the fact that young people are not signing up to purchase the overpriced health insurance plans on Obamacare exchanges.

Excerpt:

> As Nick Gillespie and Veronique de Rugy have pointed out for *Reason* magazine, the concept of today's older generation as impoverished is simply wrong. In fact, today's seniors are far wealthier than today's young adults.

> Looking at rates of homeownership, 83% of elderly households own a home. Meanwhile, 36% of millennials are still living under their parents' roof. Those over 65 years of age have much lower poverty rates than most other demographic groups. Households headed by people 65 or older have 22 times the wealth of households headed by people under 35.
>
> Not only are many young people either unemployed or underemployed, the Consumer Financial Protection Bureau estimates that people under 40 owe 67% of the roughly $1.4 trillion that Americans owe on school loans. That's on top of an average of several thousand dollars of credit card debt.
>
> ObamaCare forces people who can scarcely afford the extra cost to subsidize care for people who absolutely can afford to pay for their own health services.
>
> In the exchanges, a young person will have to pay an estimated $250 per month for basic insurance. Again, this cost is so high because these premiums are expected to pay for older people's healthcare costs. These costs now include covering a plethora of expensive drugs, services and procedures thanks to ObamaCare's requirements for insurance plans.

Buying plans on insurance exchanges costs money, and many young people don't have any money to spend these days. Young people have not done particularly well at finding jobs lately, especially since they have acquired precious few marketable skills in the public schools. (Most people can't get a job calling people racist and sexist and homophobic, because there are only so many journalism jobs to go around).

So what Obama has really done is promised lots of goodies to all of his supporters, but there is no one signing on to pay for it. And that's what I would expect from someone with no marketable degrees or skills who has very very limited experience working in the private sector. Many of the people in the Obama administration just haven't done anything productive in the private sector, and that lack of experience is now showing. We have elected a government that believes in making policy based on feelings, not facts.

# U.S. Army: Christians and Tea Party conservatives are potential terrorists

**Wintery Knight** · 28 October 2013 · Archived copy · Original

Todd Starnes from Fox News reports.

Excerpt:

> Soldiers attending a pre-deployment briefing at Fort Hood say they were told that evangelical Christians and members of the Tea Party were a threat to the nation and that any soldier donating to those groups would be subjected to punishment under the Uniform Code of Military Justice.
>
> A soldier who attended the Oct. 17th briefing told me the counter-intelligence agent in charge of the meeting spent nearly a half hour discussing how evangelical Christians and groups like the American Family Association were "tearing the country apart."
>
> The soldier told me he fears reprisals and asked not to be identified. He said there was a blanket statement that donating to any groups that were considered a threat to the military and government was punishable under military regulations.
>
> "My first concern was if I was going to be in trouble going to church," the evangelical Christian soldier told me. "Can I tithe? Can I donate to Christian charities? What if I donate to a politician who is a part of the Tea Party movement?"
>
> Another soldier who attended the briefing alerted the Chaplain Alliance for Religious Liberty. That individual's recollections of the briefing matched the soldier who reached out to me.
>
> "I was very shocked and couldn't believe what I was hearing," the soldier said. "I felt like my religious liberties, that I risk my life and sacrifice time away from family to fight for, were being taken away."
>
> And while a large portion of the briefing dealt with the threat evangelicals and the Tea Party pose to the nation, barely a word was said about Islamic extremism, the soldier said.
>
> "Our community is still healing from the act of terrorism brought on by Nidal Hasan – who really is a terrorist," the soldier said. "This is a slap in the face. "The military is supposed to defend freedom and to classify the vast majority of the military that claim to be Christian as terrorists is sick."
>
> […]The soldier said they were also told that the pro-life movement is another example of "radicalization."
>
> "They said that evangelical Christians protesting abortions are the mobilization stage and that leads to the bombing of abortion clinics," he said, recalling the discussion.
>
> […]But this is not the first time an Army briefing has labeled evangelicals as extremists. Last April an Army Reserve briefing classified Evangelical Christianity and Catholicism as "religious extremism."
>
> […]Two weeks ago, several dozen active duty troops at Camp Shelby in Mississippi, were told the American Family Association, a well-respected Christian ministry, should be classified as a domestic hate group because it advocates for traditional family values.

Fort Hood was the site of the attack by Muslim terrorist Major Nidal Hasan, an incident which the Democrats labeled "workplace violence". They can't call real terrorism what it is, but they cant teach that Christians and Tea Party conservatives terrorists. If you believe in natural marriage and the Constitution, then you're a terrorist. If you wage jihad against civilians then it's "workplace violence". And this stupidity is all taxpayer-funded. The U.S. Army works for us – we pay for them to teach hatred against us.

So who are the real domestic terrorists? Why don't we look at actual acts of domestic terrorism. The most recent incident of domestic terrorism is the Southern Poverty Law Center assisted attack on the Family Research Council

building. The SPLC, you remember, is the group that labels pro-family groups as “hate groups”. And yet I suspect that the Army is relying on the SPLC to tell them who they should be concerned about. Talk about the fox guarding the hen house!

# Critical Obamacare data center crashes, affecting all 50 states

**Wintery Knight** · 28 October 2013 · Archived copy · Original

What happens when you elect a President who has no experience in computer science or even in the private sector? What if the President appoints someone to lead HHS who has no experience in information technology? What happens when an administration has the least private sector experience in decades?

This:

> A data center critical for allowing uninsured Americans to buy health coverage under President Barack Obama's healthcare law went down on Sunday, the U.S. government said, in the latest problem for the "Obamacare" rollout.
>
> Verizon's Terremark operates the data center behind a federal system for determining eligibility for government subsidies to buy insurance nationwide and hosts HealthCare.gov, the website that makes insurance available in 36 of the 50 states.
>
> The data center experienced a failure on Sunday that led it to lose network connectivity, Health and Human Services Department spokeswoman Joanne Peters said.
>
> Online insurance exchanges opened on October 1 under the law to offer health insurance plans to millions of uninsured Americans. But it has been marred by technical glitches and delays as would-be customers encounter error messages and long waits, often failing to make it through the system despite repeated tries.
>
> "We are working with Terremark to get their timeline for addressing the issue," Peters said in an email. "We understand that this issue is affecting other customers in addition to HealthCare.gov, and Terremark is working (to) resolve the issue as quickly as possible."
>
> Peters said the newest glitch also affected a data services hub – an electronic traffic roundabout that connects numerous federal agencies and can verify people's identity, citizenship, and other facts.
>
> Problems with the data services hub affect customers of both HealthCare.gov and the state-run exchanges. State exchanges had been running smoothly.
>
> The verification is necessary to determine eligibility for tax credits that reduce the cost of monthly insurance premiums, a key provision of the law.
>
> […]The U.S. Centers for Medicare and Medicaid Services told Connecticut officials about the outage and gave no indication of when the data services hub would be functioning again, said a spokeswoman for Access Health CT, the Connecticut exchange.
>
> The problems with the rollout of the law have become a political liability for Obama. The White House has said Obama still has "full confidence" in HHS Secretary Kathleen Sebelius, whose department is responsible for implementing the law. Sebelius has faced Republicans calls for her resignation.

I'm sorry but creating web sites is not the same as giving speeches with a teleprompter where you blame other people and talk about good you are at doing things that you have never done before – at any level, before. When you elect a moron with a history of drug use, you get moron quality work. I had to take a drug test and pass a background check before I could work in the information technology field for a private company, but obviously you don't have to do that in order to be President.

# Should wives refuse / deny their husbands regular sex?

**Wintery Knight** · 28 October 2013 · Archived copy · Original

Dennis Prager features a lot of discussions about male-female relationships on his show, particularly during the male-female hour. I think this is one of the parts of his show that I really like best, because he knows what he is talking about.

He did a two part series a while back on 1) male sexuality and 2) what women should do about it within a marriage.

Part 1 is here.

Excerpt:

> It is an axiom of contemporary marital life that if a wife is not in the mood, she need not have sex with her husband. Here are some arguments why a woman who loves her husband might want to rethink this axiom.
>
> First, women need to recognize how a man understands a wife's refusal to have sex with him: A husband knows that his wife loves him first and foremost by her willingness to give her body to him. This is rarely the case for women. Few women know their husband loves them because he gives her his body (the idea sounds almost funny). This is, therefore, usually a revelation to a woman. Many women think men's natures are similar to theirs, and this is so different from a woman's nature, that few women know this about men unless told about it.
>
> This is a major reason many husbands clam up. A man whose wife frequently denies him sex will first be hurt, then sad, then angry, then quiet. And most men will never tell their wives why they have become quiet and distant. They are afraid to tell their wives. They are often made to feel ashamed of their male sexual nature, and they are humiliated (indeed emasculated) by feeling that they are reduced to having to beg for sex.
>
> When first told this about men, women generally react in one or more of five ways…

He then explains the 5 ways that women respond to this.

Here's one:

> 1. You have to be kidding. That certainly isn't my way of knowing if he loves me. There have to be deeper ways than sex for me to show my husband that I love him.

I think that this is a common mistake that liberal women make because they think that men are just hairy women. But men are not women, we are different and sex means something different to men than it does to women. In the past, *most* women understood how men are different than women, but younger women have been taught that there are no differences between the sexes. To think any different is "sexism".

Here's another from the list:

> 4. You have it backwards. If he truly loved me, he wouldn't expect sex when I'm not in the mood.

Again, this is the common mistake that many younger women today make in thinking that love is a one-way street – flowing from men and children to the woman. If men and children DON'T do what the woman wants, or if they make demands on her, then they don't "love" her and she is justified in ignoring them.

Liberal women have been taught to believe that they are always victims or some group of oppressors, such as men and children or corporations. It makes them rebel against having to do anything for anyone else, because they don't want to be "oppressed". That makes them unable to accept that relationships are give-and-take, Once a commitment to love another person permanently has been made, then each person has responsibilities to provide for the needs of

the other.

I actually had a conversation with a Christian woman once who said that women should not be obligated to do things that they didn't feel like doing. I asked her if men were obligated to go to work when they didn't feel like going. She said yes, and acted as though I were crazy for asking. I just laughed, because she didn't even see the inconsistency. The truth is that men often don't feel like working, but they get up and go to work anyway, whether they like it or not (in most cases). Similarly, a women should feel obligated to have sex with her husband, even if she is not in a perfect mood for it (in most cases). Sometimes, a man stays home from work, and it's OK. And sometimes a woman says no to sex, and it's OK. But it's not OK to stop doing it for months and months with no good reason.

Part 2 is here.

Excerpt:

> Here are eight reasons for a woman not to allow not being in the mood for sex to determine whether she denies her husband sex.

He then explains the eight reasons.

Here's one of them:

> 7. Many contemporary women have an almost exclusively romantic notion of sex: It should always be mutually desired and equally satisfying or one should not engage in it. Therefore, if a couple engages in sexual relations when he wants it and she does not, the act is "dehumanizing" and "mechanical." Now, ideally, every time a husband and wife have sex, they would equally desire it and equally enjoy it. But, given the different sexual natures of men and women, this cannot always be the case. If it is romance a woman seeks — and she has every reason to seek it — it would help her to realize how much more romantic her husband and her marriage are likely to be if he is not regularly denied sex, even of the non-romantic variety.

Women have to engage their husbands if they expect their husbands to engage in the marriage as a husband and father. Men can't do their protector, provider and spiritual leader roles forever unless their needs are met at some point. Performance of these male duties is not free. Wives have to love their husbands in the way that men expect to be loved. That's what they vowed to do in the wedding, isn't it?

At the end of the article, Prager makes a general point about women that I think needs to be emphasized over and over and over:

> That solution is for a wife who loves her husband — if she doesn't love him, mood is not the problem — to be guided by her mind, not her mood, in deciding whether to deny her husband sex.

This problem of sex-withholding is so widespread, that it really makes me (although I am a virgin) wonder what women think that marriage is about anyway. When a woman vows to love her husband, what do they think that word really means? Why do women think that men marry? What do men want that marriage provides for them? Which of those needs are the women's responsibility to provide for? I think these are questions that men should ask women. I think women should be prepared to answer them. Men should expect that women be reading books on men and marriage, and that she has relationships with men where she is giving support, respect, affirmation, affection and approval. You can learn a lot about a woman by how she treats her father, for example.

I think that the best place to learn about the needs and feelings of husbands is in Dr. Laura's book "The Proper Care and Feeding of Husbands". Women can learn what (good) men need in order to function as husbands and fathers in that book. A smart man will choose a woman who has read books like that, so that she can support and affirm him

as he does his husband responsibilities.

Unfortunately, many men today haven't thought through what they need from wives in a marriage. They spend their young years chasing women who are fun and sexually permissive. Every husband I asked about what they need has told me that respect, affirmation, affection and regular sex are more important than appearance and fun. Pre-marital sex, having fun, getting drunk, and going out, etc. are not the right foundation for marriage – which requires mutual self-sacrifice in order to work. Men need to be testing women during the courtship to see if women understand the differences between men and women, and whether they are prepared to handle the needs and feelings of a husband.

# NBC News: “Obama administration knew millions could not keep their health insurance”

**Wintery Knight** · 29 October 2013 · Archived copy · Original

That’s the headline from the actual NBC News article.

Here’s the thesis:

> President Obama repeatedly assured Americans that after the Affordable Care Act became law, people who liked their health insurance would be able to keep it. But millions of Americans are getting or are about to get cancellation letters for their health insurance under Obamacare, say experts, and the Obama administration has known that for at least three years.

According to recent estimates, it’s 16 million. A previous estimate by CBO in 2012 said that up to 20 million could lose their employer-based coverage.

More:

> **Four sources deeply involved in the Affordable Care Act tell NBC News that 50 to 75 percent of the 14 million consumers who buy their insurance individually can expect to receive a “cancellation” letter or the equivalent over the next year because their existing policies don’t meet the standards mandated by the new health care law. One expert predicts that number could reach as high as 80 percent. And all say that many of those forced to buy pricier new policies will experience “sticker shock.”**
>
> **None of this should come as a shock to the Obama administration. The law states that policies in effect as of March 23, 2010 will be “grandfathered,” meaning consumers can keep those policies even though they don’t meet requirements of the new health care law. But the Department of Health and Human Services then wrote regulations that narrowed that provision, by saying that if any part of a policy was significantly changed since that date — the deductible, co-pay, or benefits, for example — the policy would not be grandfathered.**

It’s the HHS regulations that make it so that “grandfathered” plans cannot be kept – and those are part of this Obamacare project, because the regulations deal with how it is implemented.

More:

> Buried in Obamacare regulations from July 2010 is an estimate that because of normal turnover in the individual insurance market, “40 to 67 percent” of customers will not be able to keep their policy. And because many policies will have been changed since the key date, “the percentage of individual market policies losing grandfather status in a given year exceeds the 40 to 67 percent range.”
>
> That means the administration knew that more than 40 to 67 percent of those in the individual market would not be able to keep their plans, even if they liked them.
>
> Yet President Obama, who had promised in 2009, “if you like your health plan, you will be able to keep your health plan,” was still saying in 2012, “If [you] already have health insurance, you will keep your health insurance.”
>
> “This says that when they made the promise, they knew half the people in this market outright couldn’t keep what they had and then they wrote the rules so that others couldn’t make it either,” said Robert Laszewski, of Health Policy and Strategy Associates, a consultant who works for health industry firms. Laszewski estimates that 80 percent of those in the individual market will not be able to keep their current policies and will have to buy insurance that meets requirements of the new law, which generally requires a richer package of benefits

> than most policies today.

Obama knew, when he said those famous words, that they were not true. He's a liar.

# Texas judge rules that it is OK for Planned Parenthood to put women's lives at risk

**Wintery Knight** · 29 October 2013 · Archived copy · Original

Some bad news from Life News.

Excerpt:

> A Texas judge today issued an opinion striking down two parts of a Texas pro-life law that protects women from dangerous abortions.
>
> **The judge blocked part of the law that required its doctors to have the right to admit patients to local hospitals. Texas became one of several states that require abortion doctors to have admitting privileges at local hospitals so women can be treated when they are victimized by botched abortions.**
>
> The admitting privileges statute "does not bear a rational relationship to the legitimate right of the State in preserving and promoting fetal life or a woman's health and, in any event, places a substantial obstacle in the path of a woman seeking an abortion of a nonviable fetus and is thus an undue burden to her," Yeakel wrote. "The court concludes that admitting privileges have no rational relationship to improved patient care."
>
> […]The judge also ruled that the part of the law that requires abortion businesses to follow FDA protocol, by only dispensing the dangerous RU 486 abortion drug in person, can apply except when the life or health of the mother is in danger — even though abortions routinely put women's lives and health at risk.
>
> Texas legislated in part because Planned Parenthood's off-label usage of the drug led to numerous deaths and injuries to women.

The (Republican) Attorney General of Texas will appeal the decision.

# Mike Licona explains the As, Bs, Cs, Ds and Es of New Testament reliability

**Wintery Knight** · 29 October 2013 · Archived copy · Original

Mike Licona is one of my favorite Christian apologists, and here is an excellent lecture to show you why.

In the lecture, he explains why the four biographies in the New Testament should be accepted as historically accurate: (55 minutes)

(UPDATE: Video changed from Vimeo to Youtube)

Summary:

- What a Baltimore Ravens helmet teaches us about the importance of truth
- What happens to Christians when they go off to university?
- The 2007 study on attitudes of American professors to evangelical Christians
- Authors: Who wrote the gospels?
- Bias: Did the bias of the authors cause them to distort history?
- Contradictions: What about the different descriptions of events in the gospels?
- Dating: When were the gospels written?
- Eyewitnesses: Do the gospel accounts go back to eyewitness testimony?

This is basic training for Christians. They ought to show this lecture whenever new people show up, because pastors should not quote the Bible until everyone listening has this information straight.

# How the Obama administration made sure people would lose their health insurance plans

**Wintery Knight** · 30 October 2013 · Archived copy · Original

Patrick Brennan writes about the NBC News bombshell from yesterday in National Review.

Excerpt:

> Much derision has been heaped on White House consigliere Valerie Jarrett's tweet last night claiming that "nothing in #Obamacare forces people out of their health plans. No change is required unless insurance companies change existing plans" (this is a "FACT," she noted). There's actually a little truth to this: Technically, individual-market plans that qualify as grandfathered under the ACA are exempt from some of the law's mandates — but not all of them. As long as a grandfathered plan doesn't undergo any "material changes" after 2010, it maintains its grandfathered status, so it doesn't have to comply with all of the law's strictures as other plans do on January 1. But those material changes are almost inevitable, in large part because of the ACA — meaning the plan will almost certainly be cancelled and replaced with a more expensive, more comprehensive plan, as millions of Americans have learned and continued to learn.
>
> […][I]nsurers lose their grandfathered status if the plan has a "material change," defined as "(1) eliminating or significantly reducing benefits; (2) raising co-insurance or co-payments; (3) raising deductibles; (4) reducing employer contributions; or, (5) adding or increasing an annual limit"…

That sounds benign. It sounds as if the plans are only going to be changed if insurance companies change them voluntarily. But actually insurance companies *must* change the plans because Obamacare requires the plans to cover a whole bunch of new treatments, which will necessarily cause the plans to go up in price, as well.

Look:

> **[E]ven these grandfathered plans have to comply with a number of new Obamacare mandates — most important, they have to accept applicants regardless of preexisting conditions and charge them the same premiums, they have to eliminate lifetime-spending caps, and they have to cover dependents under 26 for free (there are other rules that also apply to grandfathered group plans). How, exactly, were health insurers supposed to comply with these new mandates (and other ways the ACA is raising costs) without raising customers' contributions in the way the law says means losing grandfathered status? Obviously, they could have chosen to raise premiums alone — but then customers who don't expect to use a lot of health care would switch to plans with higher cost-sharing, which ruins an insurance pool.**
>
> **In other words, the ACA did make it incredibly hard for insurers to continue plans for the millions of Americans who don't want comprehensive insurance — financially, insurers almost certainly had to adjust them in such a way that they would lose grandfathered status. This isn't "normal turnover in the insurance market" (though there is plenty of that in the individual market); there's a reason why an exceptionally large number of Americans are getting cancellation notices this fall.**

The bottom line is that you can't keep the vast majority of the plans that Obama said you could keep. He lied.

Newsbusters notes that the major news networks are not even talking about the NBC News revelation that the Obama administration knew that their law would cause people to lose their health care. I think the lesson here is that Democrats lie, and the media, being an extension of the Democrat Party, covers up for them. That's why the Democrats win elections.

# Christina Hoff Sommers: helping boys succeed in school

**Wintery Knight** · 30 October 2013 · Archived copy · Original

An article from the leftist Time magazine by feminist Christina Hoff Sommers. (H/T Independent Women's Forum)

Excerpt:

> Being a boy can be a serious liability in today's classroom. As a group, boys are noisy, rowdy and hard to manage. Many are messy, disorganized and won't sit still. Young male rambunctiousness, according to a recent study, leads teachers to underestimate their intellectual and academic abilities. "Girl behavior is the gold standard in schools," says psychologist Michael Thompson. "Boys are treated like defective girls."
>
> These "defective girls" are not faring well academically. Compared with girls, boys earn lower grades, win fewer honors and are less likely to go to college. One education expert has quipped that if current trends continue, the last male will graduate from college in 2068. In today's knowledge-based economy, success in the classroom has never been more crucial to a young person's life prospects. Women are adapting; men are not.
>
> Some may say, "Too bad for the boys." The ability to regulate one's impulses, sit still and pay attention are building blocks of success in school and in life. As one critic told me, the classroom is no more rigged against boys than workplaces are rigged against lazy or unfocused workers. That is absurd: unproductive workers are adults — not 5- and 6-year-old children who depend on us to learn how to become adults. If boys are restive and unfocused, we must look for ways to help them do better.

She introduces three ideas to fix the problem, and here's the third one:

> In his delightful *Boy Writers: Reclaiming their Voices*, celebrated author and writing instructor Ralph Fletcher advises teachers to consider their assignments from the point of view of boys. Too many writing teachers, he says, take the "confessional poet" as the classroom ideal. Personal narratives full of emotion and self-disclosure are prized; stories describing video games, skateboard competitions or a monster devouring a city are not.
>
> Peg Tyre's *The Trouble With Boys* illustrates the point. She tells the story of a third-grader in Southern Californianamed Justin who loved *Star Wars*, pirates, wars and weapons. An alarmed teacher summoned his parents to school to discuss a picture the 8-year-old had drawn of a sword fight — which included several decapitated heads. The teacher expressed "concern" about Justin's "values." **The father, astonished by the teacher's repugnance for a typical boy drawing, wondered if his son could ever win the approval of someone who had so little sympathy for the child's imagination.**
>
> Teachers have to come to terms with the young male spirit. As Fletcher urges, if we want boys to flourish, we are going to have to encourage their distinctive reading, writing, drawing and even joke-telling propensities. Along with personal "reflection journals," Fletcher suggests teachers permit fantasy, horror, spoofs, humor, war, conflict and, yes, even lurid sword fights.

> **If boys are constantly subject to disapproval for their interests and enthusiasms, they are likely to become disengaged and lag further behind. Our schools need to work with, not against, the kinetic imaginations of boys to move them toward becoming educated young men.**

Dr. Sommers participated in a recent debate where she argued in favor of allowing all-male schools against a radical feminist. That page has audio and a transcript as well.

**My thoughts**

I do think that women need to realize that boys have to be encouraged to do the different things that boys do, if we want boys to be engaged. The good things that boys do in society are not free – they need to be encouraged and not dismissed. Playing a wargame or an adventurous boardgame with a boy is good. Firing real guns with a boy is good. Playing adventurous role-playing games with a boy is good. Going to a war museum or on a camping trip with a boy is good. Watching patriotic war movies or adventurous movies with a boy is good. Reading military history and military biographies is good. Reading classical adventure novels with a boy is good. Listening to adventurous music with a boy is good. Even watching the news with a boy is good.

Nothing is free. We have to create the boys we want, and encourage them to be aggressive, active and righteous.

# Michael Licona on ancient biography and harmonizing Bible contradictions

**Wintery Knight** · 30 October 2013 · Archived copy · Original

Brian Auten posted the latest lecture by Dr. Michael Licona at Apologetics 315. Brian's site has the MP3 file (48 minutes, 44.5 Mb). I can make a smaller version for anyone who wants it.

Here is the video and my point-form summary.

The topic:

- Contradictions do not affect the minimum facts case for the resurrection, although they are troubling
- Most people respond to alleged contradictions by trying to harmonize them
- Most verses that appear contradictory can be harmonized successfully
- Some verses cannot be harmonized successfully without really damaging the texts
- Christians should not gloss over these few real contradictions nor pretend that they don't exist
- How should we respond to the verses that cannot easily be harmonized?

Genre considerations:

- The genre of the gospels is "ancient biography"
- Ancient biography is not the same genre as modern biography

**Insignificant differences**
1. Contradictions vs. Differences:

- In ancient biography, if a source mentions one person's name, it does not mean that other people were not present
- Example: one woman versus two women at the tomb, an account may only mention one woman when there are two
- That is a difference, not a contradiction

2. Time compression:

- in ancient biography, writers are allowed to leave out events in order to compress time
- Some gospels omit details (guy version) and other gospels give more details (girl version)
- For example, the cursing of the fig tree in Mark and Matthew

3. Narrative flow:

- the ancient biographer's style was to link together events into a narrative, even if they are slightly out of order
- This means that the ordering matters less to ancient biographers than forming a coherent narrative
- For example, the prediction by Jesus that Peter would deny him

**Significant differences:**

1. Biography allows for portrait painting

- When people paint portraits, they sometimes use illustrations or imagery to convey the person's character
- For example, Shakespeare adds things to his history of Julius Caesar to make it more dramatic
- For example, the genealogies in Matthew, the portrait of Jesus in the garden in John

2. Even if there are contradictions in an account it doesn't mean that the basic facts are undermined

- For example, even if we don't know for sure if one thief or two thieves cursed Jesus, no one doubts that he was crucified
- The basic details of the story are not affected by apparent contradictions

Then there is a period of Questions and Answers.

# The scariest old time radio shows for Hallowe'en

**Wintery Knight** · 31 October 2013 · Archived copy · Original

Arrrr! Lobster Pirate is pleased that it is Hallowe'en!
Here are some of the scariest old time radio shows EVER! These are MP3 files. Be careful, they are SCARY!

- The House in Cypress Canyon (Suspense)
- The Thing on the Fourble Board (Quiet, Please)
- Three Skeleton Key (Escape)
- Donovan's Brain – part1, part 2 (Suspense)
- Sorry, Wrong Number (Suspense)
- The Country of the Blind (Escape)
- Ghost Hunt (Suspense)

The House in Cypress Canyon is the scariest one, in my opinion. If you can't download MP3s, then you can read the transcript here.

# CNN: Obama administration bullying insurance companies to not criticize Obamacare

**Wintery Knight** · 31 October 2013 · Archived copy · Original

From the (normally) radically leftist CNN, of all places.

Excerpt:

> White House officials have pressured insurance industry executives to keep quiet amid mounting criticism over Obamacare's rollout, insurance industry sources told CNN.
>
> **After insurance officials publicly criticized the implementation, White House staffers contacted insurers to express their displeasure, industry insiders said.**
>
> **Multiple sources declined to speak publicly about the push back because they fear retribution.**
>
> But Bob Laszewski, who heads a consulting firm for big insurance companies, did talk on the record.
>
> "The White House is exerting massive pressure on the industry, including the trade associations, to keep quiet," he said.
>
> Laszewski, who's been a vocal critic of Obamacare, said he's been asked by insurance executives to speak out because they feel defenseless against an administration that is regulating their business — and a big customer.
>
> […]Insurers, he said, warned the White House that the regulations would lead to discontinued policies.
>
> "One of the things I think is clear here is the Obama administration has no trust in anything the health insurance industry is telling them about how to run a health plan," Laszewski said.

Newsbusters has the video and transcript from CNN.

# Reformation Day celebrates the supremacy of Scripture and reason in theology

**Wintery Knight** · 31 October 2013 · Archived copy · Original

The Ligonier Ministries web site has a summary of the event that kicked off the Reformation.

Excerpt:

> On October 31, 1517, Martin Luther tacked up 95 theses on the church door at Wittenberg. With this act, he hoped to provoke a discussion among the scholars about the abuses of the indulgences by the Roman Catholic Church. He was not trying to create a public furor by any means, but within a fortnight, these theses had spread through the country like wildfire. The last thing Luther had in mind was to start some kind of major controversy, but nevertheless major controversy did begin.
>
> From the discussions at Wittenberg, the disputations began to accelerate and escalate. Copies of the theses reached Rome and critical meetings were scheduled with the young monk. In these debates, Luther was maneuvered into proclaiming publicly that he had questions about the infallibility of church councils and also that he thought that it was possible that the pope could err. In 1520 a papal encyclical was issued which condemned Martin Luther as a heretic. Luther burned the document in a public bonfire and his defiance before the church was now a matter of record.
>
> In response, Martin Luther picked up his pen to challenge the entire penitential system of the Roman Catholic Church, which undermined in principle the free remission of sins that is ours in the gospel. By doing so, he was unswervingly advocating his commitment to *sola fide*, the doctrine of justification by faith alone.
>
> In 1521, Luther was summoned to the Imperial Diet, an authoritative meeting that involved the princes of the church, called by the Emperor of the Holy Roman Empire to be held in the city of Worms in Germany. Luther was an outlaw. For him to appear at the Diet was to risk his very life; therefore, he was given safe conduct by the Emperor to attend. With a few friends, Luther traveled from Wittenberg to Worms. The eyewitnesses of that episode tell us that when Luther's little covered wagon appeared around the corner of the bend, there were lookouts posted in the church tower at Worms. All the people were agog waiting for the arrival of this notorious person. When Luther's caravan was sighted, people were throwing their hats in the air, blowing trumpets, and creating all the fanfare of the arrival of the hero. It was the 16th century answer to a ticker-tape parade.
>
> Things, however, became very solemn in a hurry because the next day he appeared before the Diet. His books were stacked on a table in the room, and he was asked and ordered to recant of his writings. This surprised Luther because he thought he was going to have an opportunity to defend his writings; but the only question really of any importance that was asked of him was this: "Are these your writings?" And when he said yes, they said, "Are you ready to recant of them?"
>
> Hollywood has their version of Luther standing there boldly with his fist in the air saying, "Here I stand!" and so on. But instead he dropped his chin on his chest and muttered something that nobody could understand, so they asked him to speak up. "What did you say?" He said, "May I have 24 hours to think about it." And so Luther was granted a reprieve of 24 hours to return to his room to contemplate the seriousness of this occasion.
>
> The prayer that Luther wrote in that ensuing 24-hour period was one of the most moving prayers I have ever read in my life. In that prayer, Luther cried out for God in his sense of total loneliness fearing that God had abandoned him, and proclaimed, "O Lord, I am Thine, and the cause is Thine, give me the courage to stand."
>
> And on the morrow, Luther was called once again back to the court and was told to reply to the question. He said to the Diet, "Unless I am convinced by sacred Scripture or by evident reason, I cannot recant, for my conscience is held captive by the Word of God, and to act against conscience is neither right nor safe. Here I stand. I can do no other. God help me." And with that there was an instant uproar.

The Protestant Reformation emphasizes the responsibility of each person to become familiar with what the Bible teaches for themselves and to make sense of it using the laws of logic for themselves. There is an enormous focus on the individual and individual's responsibility to puzzle theology out for himself, using the tools available to him: reason, science, Scripture, history. The Reformation put forward the famous five Solas: "Sola Scriptura" (Scripture Alone); "Sola Gratia" (Grace Alone); "Sola Fide" (Faith Alone); "Solus Christus" (Christ Alone); and "Soli Deo Gloria" (To God Alone Be Glory).

My friend J.W. Wartick has a post about the effects of the Reformation on society as a whole.

Here's one of the effects: (links removed)

> Capitalism had already begun before the European Reformations, having its renewal start in Italian city states in the 12th Century (for a detailed and extremely interesting discussion of this, see Rodney Stark, *The Victory of Reason,* 71ff). The Reformation, however, provided a place for capitalism to flourish. John Calvin's thought touched upon nearly every contemporary problem, and one of these was usury (money lending at interest). Focusing upon the cultural context of the prohibition of usury in the Hebrew Scriptures, Calvin argued that his contemporary cultural context provided a way for usury to work without being necessarily wrong. Lending money in such a fashion was essential for the later development of capitalism (Alister McGrath, *Reformation Thought: An Introduction*, 259-260).
>
> The Reformation also paved the way for a "Protestant Work Ethic." Martin Luther's notion of the "priesthood of all believers" demolished the hard distinction between the "temporal" and "spiritual" realm which dominated the thought of the church at the time. By breaking down this barrier, hard labor was elevated. It was no longer seen as an inferior life to that of monastic withdrawal; rather, any type of work could be pleasing to God (McGrath, 256-258). In contemporary churches, one can often hear about how the engineer, the retail worker, the auto worker, and the like should all utilize their skills to the glory of God. Such thinking came directly from the Reformation.

The Reformation also kick-started science, because nature held secrets about God's existence and character.

Excerpt:

> Without the Reformation, modern science would probably have developed in any event because of the ethos of rationality and the doctrine of creation conducive to it. The Reformation, however, hastened the development by criticizing scholasticism and by putting emphasis on the direct observation of nature. Luther has been called the Copernicus of theology while, on the other hand, Copernicus has been called the Luther of astronomy. Indeed, Thomas Sprat, an Anglican clergyman and an early member of the Royal Society, emphasized that there was a reformation, some would say revolution, in both philosophy and theology [3]. In natural philosophy or science, questions about nature were no longer answered primarily by quoting Aristotle and the Scholastics, but by turning to observation of and experimentation on nature itself. Similarly, after the Reformation, Protestants no longer answered questions in theology primarily by quoting scholastic philosophers and theologians, but by turning directly to the Bible. Luther interpreted Scripture by asking: what is the clear and straightforward meaning of the text? Scientists interpret nature in the simplest way using the minimum number of hypotheses.
>
> Luther believed that the world was beginning a new age, which would bring not only a reform of religion but a new appreciation of nature. In his informal "Table Talk" he said,
>
> We are at the dawn of a new era, for we are beginning to recover the knowledge of the external world that was lost through the fall of Adam. We now observe creatures properly …. But by the grace of God we already recognize in the most delicate flower the wonders of divine goodness and omnipotence [4].
>
> In the last part of this statement, Luther paraphrased the words of the Apostle Paul in his letter to the Romans (Rom. 1:20).

> Luther was open to the authentic scientific advances of his age [5]. He appreciated the mechanical inventions of his day.
>
> He accepted the use of medicine in treating disease and is quoted as having said [6],
>
> It's our Lord God who created all things and they are good. Wherefore it's permissible to use medicine, for it is a creature of God.
>
> To someone who said that it is not permissible for a Christian to use medicine, Luther replied rhetorically, "Do you eat when you are hungry?" According to Andrew White [7], this attitude of Luther made the Protestant cities of Germany more ready than others to admit anatomical investigation and dissection.
>
> Luther accepted astronomy as a science, but rejected astrology as a superstition because it cannot be confirmed by demonstration. Astrology, according to Luther, is idolatry and violates the first commandment. He was both amused and distressed by Melanchthon's interest in astrology, a belief system that was widely accepted at the time [8].

The Reformation means good economics and good science, as well as good theology.

But theology still had some growing to do.

The challenges of the Reformers led to the development of the doctrine of middle knowledge, which reconciles divine sovereignty with human freedom and responsibility, solving a major problem with Reformed theology.

A very good book on middle knowledge is "Salvation and Sovereignty" by Kenneth Heathley. Highly recommended by Paul Gould.

# William Lane Craig writes on “The Feminization of Christianity”

**Wintery Knight** · 31 October 2013 · Archived copy · Original

Look, here is a question on the Reasonable Faith web site from a feminist from Canada who objects to the idea of sex differences:

> Dear Dr. Craig,
>
> I have usually found your words to be a source of information and reassurance in my Christian faith, and have often sought out your writings and videos in times of doubt or questioning.
>
> So I was really disappointed, almost shocked, when I read your newsletter of April of this year in which you casually stereotypes men and women, and complain that the church is becoming increasingly feminized, and has difficulties in attracting men.
>
> Your compared the audiences at a couple of your speaking engagements to the audience from a clip of a Downton Abbey Q&A at another location – concluding that they were all men at the former and almost all women at the latter “simply because the Downton Abbey program is highly relational, which is more appealing to women, whereas my talks were principally intellectually oriented, which is more appealing to men.”
>
> I believe that you are using stereotypes here, which you justify by making a ridiculous comparison that holds zero statistical significance. Not only is your statement unreasonable, it is potentially damaging – especially when made so carelessly. Stereotypes are shortcuts in classifying people. They can, and often do, limit and distort the way we perceive others and the world. Stereotypes are a lazy way of thinking that can lead to discrimination, and their use should not be encouraged.
>
> I’m also a little disturbed by your claim regarding the feminisation of the church. What do you mean by that, and how do you support that statement?
>
> I’m curious because the church has historically been a largely male-dominated institution (sometimes criminally so), and the bible’s instructions to and about women are often difficult to swallow. If anything, the church has had difficulty in attracting women. And if we are truly seeing more women in leadership roles at the church (I have to assume this is what you meant by feminizing), I believe this is not something to fear and resist. It would be a welcome change, and has every opportunity to challenge how we think about each other – allowing us to love each other better and see each other more clearly.
>
> This newsletter called your expertise in some areas into question for me. Could you help to rebuild some of the faith I’ve lost in your words? I would very much appreciate it.
>
> Sincerely,
>
> Alexandra (Canada)

Canadians are sooooo liberal, especially on social issues like feminism, abortion and marriage. I’m sure this woman has been influenced by feminist ideology so much that she just can’t deal with the fact that men are women are very different.

Anyway, here’s a snip of Dr. Craig’s response:

> Third is my claim that the church is becoming increasingly feminized. What I mean by this is that church services and programs are increasingly based on emotional and relational factors that appeal more to women than to men. The problem of the church’s lack of appeal to men has been recognized by men’s movements like Promise Keepers and books like John Eldredge’s *Wild at Heart*. Nowhere is this feminization more evident than in contemporary worship music. Someone aptly remarked that if you were to replace references to God in many praise songs with “Baby,” they would sound just like romantic songs between a man and a woman! This

> is not true of classic hymns like “A Mighty Fortress” or “And Can It be?” Talking with young men, I find that many of them are just turned off by these touchy-feely worship services and would rather not go.
>
> We see this same feminization though relational factors in network coverage of sports, traditionally a male bastion. Coverage of Olympic Games has deliberately targeted women in order to increase viewership by the addition of personal stories about athletes’ lives, rather than simply televising the events themselves. In professional sports have you noticed how in recent years television networks have engaged female reporters to go down on the field and interview baseball or football players, usually about how they *felt* about this or that? Jan and I had to laugh when, following the Broncos’ recent blowout of the Ravens, the female reporter asked Peyton Manning, “Didn’t you feel bad for the other team when you looked up at the scoreboard?” Uh, I don’t think so!
>
> You’re right that the predominance of women in Christianity is a relatively new phenomenon. It is only over the last 200 years that Christianity has become increasingly female in its demographics. I’m very worried that the church is on a course that will end in relatively few men’s being active Christians.
>
> Fourth is my claim that apologetics is a key to making the church and Christian faith relevant to men once more. People think that by having sports programs or men’s barbecues the church will draw in more men. But I’m convinced that the best kept secret to drawing in men is apologetics. Men need to see that Jesus of Nazareth was not only a tough guy but a smart guy. I never suspected that apologetics would have this special effect on men. I had no intention of ministering particularly to men in this ministry. But the appeal of apologetics to men is just undeniable. In my Defenders class we’ve got guys who don’t even attend church but who regularly come for my lectures on Christian doctrine and apologetics. One woman in the class told me, “I don’t understand a lot of what you say. But I’m glad to come because this is the only spiritual activity that my husband will participate in with me.” Wow!

Wow, indeed. Apologetics gets men to engage more in Christianity, and the church should leverage that to bring men in. That’s a fact. So, I’m glad Dr Craig didn’t give an inch to this fact-averse feminist from Canada.

My own post critical of the feminized church can be read here. Keep in mind that this is from two months after I started blogging – very raw stuff.

By the way, Dr. Craig’s ministry Reasonable Faith has a huge matching grant again this year, so if you’re looking for a great ministry to donate to, Reasonable Faith should be on your list!

# The Economist: some problems with the peer-review process

**Wintery Knight** · 31 October 2013 · Archived copy · Original

From The Economist, of all places.

Excerpt:

> The idea that the same experiments always get the same results, no matter who performs them, is one of the cornerstones of science's claim to objective truth. If a systematic campaign of replication does not lead to the same results, then either the original research is flawed (as the replicators claim) or the replications are (as many of the original researchers on priming contend). Either way, something is awry.
>
> It is tempting to see the priming fracas as an isolated case in an area of science—psychology—easily marginalised as soft and wayward. But irreproducibility is much more widespread. A few years ago scientists at Amgen, an American drug company, tried to replicate 53 studies that they considered landmarks in the basic science of cancer, often co-operating closely with the original researchers to ensure that their experimental technique matched the one used first time round. According to a piece they wrote last year in *Nature*, a leading scientific journal, they were able to reproduce the original results in just six. Months earlier Florian Prinz and his colleagues at Bayer HealthCare, a German pharmaceutical giant, reported in *Nature Reviews Drug Discovery*, a sister journal, that they had successfully reproduced the published results in just a quarter of 67 seminal studies.

Let's take a look at some of the problems from the article.

Problems with researcher bias:

> Other data-heavy disciplines face similar challenges. Models which can be "tuned" in many different ways give researchers more scope to perceive a pattern where none exists. According to some estimates, three-quarters of published scientific papers in the field of machine learning are bunk because of this "overfitting", says Sandy Pentland, a computer scientist at the Massachusetts Institute of Technology.

Problems with journal referees:

> Another experiment at the *BMJ* showed that reviewers did no better when more clearly instructed on the problems they might encounter. They also seem to get worse with experience. Charles McCulloch and Michael Callaham, of the University of California, San Francisco, looked at how 1,500 referees were rated by editors at leading journals over a 14-year period and found that 92% showed a slow but steady drop in their scores.
>
> As well as not spotting things they ought to spot, there is a lot that peer reviewers do not even try to check. They do not typically re-analyse the data presented from scratch, contenting themselves with a sense that the authors' analysis is properly conceived. And they cannot be expected to spot deliberate falsifications if they are carried out with a modicum of subtlety.

Problems with fraud:

> Fraud is very likely second to incompetence in generating erroneous results, though it is hard to tell for certain. Dr Fanelli has looked at 21 different surveys of academics (mostly in the biomedical sciences but also in civil engineering, chemistry and economics) carried out between 1987 and 2008. Only 2% of respondents admitted falsifying or fabricating data, but 28% of respondents claimed to know of colleagues who engaged in questionable research practices.

Problems releasing data:

> Reproducing research done by others often requires access to their original methods and data. A study published last month in*PeerJ* by Melissa Haendel, of the Oregon Health and Science University, and colleagues found that more than half of 238 biomedical papers published in 84 journals failed to identify all the resources (such as chemical reagents) necessary to reproduce the results. On data, Christine Laine, the editor of the *Annals of Internal Medicine*, told the peer-review congress in Chicago that five years ago about 60% of researchers said they would share their raw data if asked; now just 45% do. Journals' growing insistence that at least some raw data be made available seems to count for little: a recent review by Dr Ioannidis which showed that only 143 of 351 randomly selected papers published in the world's 50 leading journals and covered by some data-sharing policy actually complied.

Critics of global warming have had problems getting at data before, as Nature reported here:

> Since 2002, McIntyre has repeatedly asked Phil Jones, director of CRU, for access to the HadCRU data. Although the data are made available in a processed gridded format that shows the global temperature trend, the raw station data are currently restricted to academics. While Jones has made data available to some academics, he has refused to supply McIntyre with the data. Between 24 July and 29 July of this year, CRUreceived 58 freedom of information act requests from McIntyre and people affiliated with Climate Audit. In the past month, the UK Met Office, which receives a cleaned-up version of the raw data from CRU, has received ten requests of its own.

Why would scientists hide their data? Well, recall that the Climategate scandal resulted from unauthorized release of the code used to generate the data used to promote global warming alarmism. The leaked code showed that the scientists had been generating faked data using a "fudge factor".

Elsewhere, leaked e-mailed from global warmists revealed that they do indeed suppress articles that are critical of global warming alarmism:

> As noted previously, the Climategate letters and documents show Jones and the Team using the peer review process to prevent publication of adverse papers, while giving softball reviews to friends and associates in situations fraught with conflict of interest. Today I'll report on the spectacle of Jones reviewing a submission by Mann et al.
>
> Let's recall some of the reviews of articles daring to criticize CRU or dendro:
>
> I am really sorry but I have to nag about that review – Confidentially I now need a hard and if required extensive case for rejecting (Briffa to Cook)
> …
> If published as is, this paper could really do some damage. It is also an ugly paper to review because it is rather mathematical, with a lot of Box-Jenkins stuff in it. It won't be easy to dismiss out of hand as the math appears to be correct theoretically, (Cook to Briffa)
> …
> Recently rejected two papers (one for JGR and for GRL) from people saying CRU has it wrong over Siberia. Went to town in both reviews, hopefully successfully. (Jones to Mann)

One last quote from the Economist article. One researcher submitted a completely bogus paper to many journals, and many of them accepted it:

> John Bohannon, a biologist at Harvard, recently submitted a pseudonymous paper on the effects of a chemical derived from lichen on cancer cells to 304 journals describing themselves as using peer review. An unusual

> move; but it was an unusual paper, concocted wholesale and stuffed with clangers in study design, analysis and interpretation of results. Receiving this dog's dinner from a fictitious researcher at a made up university, 157 of the journals accepted it for publication.
>
> Dr Bohannon's sting was directed at the lower tier of academic journals. But in a classic 1998 study Fiona Godlee, editor of the prestigious *British Medical Journal*, sent an article containing eight deliberate mistakes in study design, analysis and interpretation to more than 200 of the *BMJ*'s regular reviewers. Not one picked out all the mistakes. On average, they reported fewer than two; some did not spot any.

The Economist article did not go into the problem of bias due to worldview presuppositions, though. So let me say something about that.

A while back Casey Luskin posted a list of problems with peer review.

Here was one that stuck out to me:

> **Point 5: The peer-review system is often biased against non-majority viewpoints.**
> The peer-review system is largely devoted to maintaining the *status quo*. As a new scientific theory that challenges much conventional wisdom, intelligent design faces political opposition that has nothing to do with the evidence. In one case, pro-ID biochemist Michael Behe submitted an article for publication in a scientific journal but was told it could not be published because "your unorthodox theory would have to displace something that would be extending the current paradigm." Denyse O'Leary puts it this way: "The overwhelming flaw in the traditional peer review system is that it listed so heavily toward consensus that it showed little tolerance for genuinely new findings and interpretations."

Recently, I summarized a podcast on the reviewer bias problem featuring physcist Frank Tipler. His concern in that podcast was that peer-review would suppress new ideas, even if they were correct. He gave examples of this happening. Even a paper by Albert Einstein was rejected by a peer-reviewed journal. Elsewhere, Tipler was explicitly told to remove positive references to intelligent design in order to get his papers published. Tipler's advice was for people with new ideas to bypass the peer-reviewed journal system entirely.

Speaking about the need to bypass peer-review, you might remember that the Darwinian hierarchy is not afraid to have people sanctioned if they criticize Darwinism in peer-reviewed literature.

Recall the case of Richard Sternberg.

Excerpt:

> In 2004, in my capacity as editor of The Proceedings of the Biological Society of Washington, I authorized "The Origin of Biological Information and the Higher Taxonomic Categories" by Dr. Stephen Meyer to be published in the journal after passing peer-review. Because Dr. Meyer's article presented scientific evidence for intelligent design in biology, I faced retaliation, defamation, harassment, and a hostile work environment at the Smithsonian's National Museum of Natural History that was designed to force me out as a Research Associate there. These actions were taken by federal government employees acting in concert with an outside advocacy group, the National Center for Science Education. Efforts were also made to get me fired from my job as a staff scientist at the National Center for Biotechnology Information.

So those are some of the issues to consider when thinking about the peer-review process. My view is that peer-reviewed evidence does count for something in a debate situation, but as you can see from the Economist article, it may not count for as much as it used to. I think my view of science in general has been harmed by what I saw from physicist Lawrence Krauss in his third debate with William Lane Craig. If a scientist can misrepresent another scientist and not get fired by his employer, then I think we really need to be careful about the level of honesty in the

academy.

# Charles Krauthammer: what Obamacare is really about, and why Obama lied about it

**Wintery Knight** · 1 November 2013 · Archived copy · Original

This column from Investors Business Daily is a must-read. It's by respected moderate conservative Charles Krauthammer. In it, he explains why Obama lied about people being able to keep their existing plans.

Krauthammer explains:

> ObamaCare renders illegal (with exceedingly narrow "grandfathered" exceptions) the continuation of any insurance plan deemed by Washington regulators not to meet their arbitrary standards for adequacy.
>
> Example: No maternity care? You are terminated.
>
> So a law designed to cover the uninsured is now throwing far more people off their insurance than it can possibly be signing up on the nonfunctioning insurance exchanges.
>
> Indeed, most of the 19 million people with individual insurance will have to find new and likely more expensive coverage. And that doesn't even include the additional millions who are sure to lose their employer-provided coverage.
>
> […]**Beyond mendacity, there is liberal paternalism, of which these forced cancellations are a classic case. We canceled your plan, explained Jay Carney, because it was substandard. We have a better idea.**
>
> **Translation: Sure, you freely chose the policy, paid for the policy, renewed the policy, liked the policy. But you're too primitive to know what you need. We do. Your policy is canceled.**
>
> **Because what you really need is what our experts have determined must be in every plan. So a couple in their 60s must buy maternity care. A teetotaler must buy substance abuse treatment. And a healthy 28-year-old with perfectly appropriate catastrophic insurance must pay for bells and whistles for which he has no use.**
>
> […]**As for subterfuge, these required bells and whistles aren't just there to festoon the health care Christmas tree with voter-pleasing freebies. The planners knew all along that if you force insurance buyers to overpay for stuff they don't need, that money can subsidize other people.**
>
> ObamaCare is the largest transfer of wealth in recent American history. But you can't say that openly lest you lose elections. So you do it by subterfuge: hidden taxes, penalties, mandates and coverage requirements that yield a surplus of overpayments.
>
> So that your president can promise to cover 30 million uninsured without costing the government a dime. Which from the beginning was the biggest falsehood of them all. And yet the free lunch is the essence of modern liberalism. Free mammograms, free preventative care, free contraceptives for Sandra Fluke. Come and get it.
>
> **And then when you find your policy canceled, your premium raised and your deductible outrageously increased, you've learned the real meaning of "free" in the liberal lexicon: something paid for by your neighbor — best, by subterfuge.**

That's the point I really wanted to get clear – the paternalism and the redistribution of wealth. I don't need any of the new required minimum coverages every health insurance plan must now have. It won't make my coverage "better" if I have coverage for things like pregnancies and mammograms and drug addiction counseling and contraceptives and abortions and sex changes and breast implants and in vitro fertilization and tobacco cessation. I don't need those things because I don't have that lifestyle. But I'll have to pay more for health insurance, so that other people can have those things. And those other people will be voting Democrat in 2014. That's what this is really about. The Democrats can't raise taxes to buy votes, but they buy votes in other ways – by redistributing

wealth under the rubric of “health care”. We often hear a lot of complaints that men don’t want to marry and have children, but maybe that’s because so many people keep voting to waste the money they earn on other things.

**Some good news**

One interesting piece of news did come out that might help to reverse this mess. Although the administration is saying now that it has no idea how many plans were sold, it turns out that this is another lie. CBS News reports that in the first three days of Obamacare being activated, less than 300 policies were sold.

Excerpt:

> For 31 days now, the Obama administration has been telling us that Americans by the millions are visiting the new health insurance website, despite all its problems.
>
> But no one in the administration has been willing to tell us how many policies have been purchased, and this may be the reason: CBS News has learned enrollments got off to an incredibly slow start.
>
> Early enrollment figures are contained in notes from twice-a-day “war room” meetings convened within the Centers for Medicare and Medicaid Services after the website failed on Oct. 1. They were turned over in response to a document request from the House Oversight Committee.
>
> The website launched on a Tuesday. **Publicly, the government said there were 4.7 million unique visits in the first 24 hours. But at a meeting Wednesday morning, the war room notes say “six enrollments have occurred so far.”**
>
> **They were with BlueCross BlueShield North Carolina and Kansas City, CareSource and Healthcare Service Corporation.**
>
> **By Wednesday afternoon, enrollments were up to “approximately 100.” By the end of Wednesday, the notes reflect “248 enrollments” nationwide.**
>
> **The health care exchanges need to average 39,000 enrollees a day to meet the goal of seven million by March 1.**

It doesn’t sound like they are going to make their target. If Obamacare fails fast and fails loud, then we might be able to do something about it in the 2014 elections. But we would need people to stop listening to the blaming coming from the President and stop listening to the liberal media and start thinking about what is really going on.

# Can you fix fatherlessness with generous social programs and male role models?

**Wintery Knight** · 1 November 2013 · Archived copy · Original

From the radically leftist Los Angeles Times. I am not a fan of Kay Hymowitz at all, because she is a man-blamer, but this article was re-tweeted by a whole slew of pro-marriage people who I follow on Twitter, so I thought I should post something about it here.

Excerpt:

> [Boys'] high school grades and college attendance rates have remained stalled for decades. Among poor and working-class boys, the chances of climbing out of the low-end labor market — and of becoming reliable husbands and fathers — are looking worse and worse.

> This spring, MIT economist David Autor and coauthor Melanie Wasserman suggested a reason for this: the growing number of fatherless homes. Boys and young men weren't behaving rationally, they suggested, because their family situations had left them without the necessary attitudes and skills to adapt to changing social and economic conditions. Anyone interested in the plight of poor and working-class men — and, more broadly, mobility and the American dream — should hope this research, and the considerable biological and psychological evidence behind it, become part of the public debate.

> […]Autor and Wasserman cite a large study by University of Chicago sociologists Marianne Bertrand and Jessica Pan, which shows that, by fifth grade, fatherless boys were more disruptive than peers from two-parent families, and by eighth grade, they had a substantially greater likelihood of getting suspended. And justice experts have long known that juvenile facilities and adult jails overflow with sons from broken families.

This part is interesting because the data contradicts the liberal narrative:

> Liberals often assume that these kinds of social problems result from our stingy support system for single mothers and their children. Provide more maternity leave, quality daycare and healthcare, goes the thinking, and a lot of the disadvantages of single-parent homes would vanish. But the link between criminality and fatherlessness holds even in countries with lavish social welfare systems. A 2006 Finnish study of 2,700 boys, for instance, concluded that living in a non-intact family at age 8 predicted a variety of criminal offenses.

But maybe fathers can be substituted for with "male role models", like liberals say? NOPE:

> Professors Cynthia Harper and Sara McLanahan found that among boys they studied, the ones without fathers were more likely to be incarcerated, but they also found that those who lived with stepfathers were at even higher risk of incarceration than the single-mom cohort.

So fathers really do matter to boys, and they can't be replaced with money or stepfathers or live-in boyfriends. Now I asked some liberal women about children needing mothers and fathers and they replied that adults should be allowed to do anything they want, and then let children adjust. I think in those conversations we really need to be armed with evidence and work through the evidence with people who want to assert that they are an exception to the evidence because they are "good mothers" or "good fathers" and don't need a spouse to raise a child. It seems to me that if you are denying a child one parent, then you are not a good parent yourself.

We really need to hammer into the heads of grown-ups that these moral boundaries are in place for a reason – to protect children. A lot of people who support arrangements that deprive children of their biological mother or their biological father might like to *think* that they are good parents and care about children, but they don't. And it's our job to hold them accountable for harming children. Ask them: are you for no-fault divorce? are you for gay marriage? are you for single-mother welfare? And so on. If the answers come back yes, then hold them accountable for harming children. We have to be brave in order to protect children.

# Does God's omniscience conflict with human free will?

**Wintery Knight** · 1 November 2013 · Archived copy · Original

Here's the question from Come Reason Ministries.

Excerpt:

> Hello,
>
> Christian doctrine holds that God is all knowing (1 John 3:20), and humans have free will (Deuteronomy 30:19 is my favorite example). however, at my favorite apologetics debate board, I have seen skeptics raise an objection to these points several times. the basic logic behind their arguments is this:
>
> 1. A being with free will, given two options A and B, can freely choose between A and B.
> 2. God is omniscient (all-knowing).
> 3. God knows I will choose A.
> 4. God cannot be wrong, since an omniscient being cannot have false knowledge.
> 5. From 3 and 4, I will choose A and cannot choose B.
> 6. From 1 and 5, omniscience and free will cannot co-exist.
>
> I have read many counter-arguments from apologetics sites, but they were either too technical (I couldn't understand them), or not satisfying. so, I was wondering what would your input be on this issue?
>
> Thank you,
>
> Justin

Ever heard that one? Here's Lenny Eposito's answer:

> Hi Justin,
>
> Thanks for writing. This is a great question as it shows how even those who appeal to logic can have biases that blind them. Let's examine this argument and see if it follows logically.
>
> Premises 1 and 2 in your outline above are the main premises to the argument and are not disputed. The Christian worldview argues that every human being is a free moral agent and is capable of making choices simply by exercising their will, not under compulsion or because of instinct. Also, it is a long held doctrine of Christianity that God is all-knowing. The Bible says that God knows "the end from the beginning (Isaiah 46:10)." For omniscience to be truly knowledgeable it must be correct knowledge, so premise number 4 is also granted.
>
> However, point number 5 is where the logic falters. Those who argue in this manner make the mistake of thinking that because God possesses knowledge about a specific matter, then he has influenced it. That does not follow at all. Just because God can foresee which choice you will make, it does not mean you couldn't still freely choose the other option.
>
> Let me give you an example. I have a five year old son. If I were to leave a chocolate chip cookie on the table about a hour before dinner time and my son was to walk by and see it, I know that he would pick up the cookie and eat it. I did not force him to make that decision. In fact, I don't even have to be in the room at all. I think I know my son well enough, though, to tell you that if I come back into the kitchen the cookie will be gone. His act was made completely free of my influence, but I knew what his actions would be.
>
> In examining the argument, the assumption is made in premise 3 that because God knows I will choose A somehow denies me the choice of B. That is the premise that Christianity rejects. Omniscience and free will

> are not incompatible and it is a non-sequitor to claim otherwise.
>
> Thank you Justin for this interesting question. I pray that you will continue to defend the gospel of our Lord and may He continue to bless you as you seek to grow in Him.

That's a great answer and should work in ordinary conversations.

**More technical**

J.W. Wartick maps out the arguments more fully with symbolic logic here on his Always Have A Reason blog. But I'll just excerpt the gist of it.

Excerpt:

> It is necessarily true that if God knows x will happen, then x will happen. But then if one takes these terms, God knowing x will happen only means that x will happen, not that x will happen *necessarily.* Certainly, God's foreknowledge of an event means that that event will happen, but it does *not* mean that the event could not have happened otherwise. If an event happens necessarily, that means the event could not have happened otherwise, but God's foreknowledge of an event doesn't somehow transfer necessity to the event, it only means that the event will happen. It could have been otherwise, in which case, God's knowledge would have been different.
>
> […]Perhaps I could take an example. Let's say that I'm going to go to classes tomorrow (and I do hope I will, I don't like missing classes!). God knows in advance that I'm going to go to classes tomorrow. His knowledge of this event means that it will happen, but it doesn't mean that I couldn't choose to stay in and sleep for a while, or play my new copy of Final Fantasy XIII, or do something more useless with my time. If I chose to, say, play Final Fantasy XIII (a strong temptation!), then God simply would have known that I would play FFXIII. His knowledge does not *determine* the outcome, His knowledge is simply *of the outcome*.

If we choose A, God would foreknow A. If we choose B, God would foreknow B. His foreknowledge of our choices is contingent on our making free choices.

I had to learn symbolic logic and Bayes' theorem in college for my computers science degrees, and it's pretty useful for understanding these philosophers. Philosophy is a lot like computer science, at least for analytical philosophy.

# Solar energy firm leaves behind toxic mess after wasting millions in stimulus funding

**Wintery Knight** · 2 November 2013 · Archived copy · Original

Dad sent me this article about the Democrat energy policy from Fox News.

Excerpt:

> A Colorado-based solar company that got hundreds of millions of dollars in federal loan guarantees before going belly-up didn't just empty taxpayers' wallets – it left behind a toxic mess of carcinogens, broken glass and contaminated water, according to a new report.
>
> The Abound Solar plant, which got $400 million in federal loan guarantees in 2010, when the Obama administration sought to use stimulus funds to promote green energy, filed for bankruptcy two years later. Now its Longmont, Colo., facility sits unoccupied, its 37,000 square feet littered with hazardous waste, broken glass and contaminated water. The Northern Colorado Business Report estimates it will cost up to $3.7 million to clean and repair the building so it can again be leased.
>
> "As lawyers, regulators, bankruptcy officials and the landlord spar over the case, the building lies in disrepair, too contaminated to lease," the report stated.
>
> […]One of the hazards is the presence of cadmium, a cancer-causing agent that is used to produce the film on the solar panels, the report said.
>
> […]"If a coal, oil or gas company pulled something like that the EPA would send out SWAT teams and the U.S. Marshals to track down the offenders, bankrupt or not," the center said in a report of its own.
>
> President Obama touted Abound in a July 3, 2010 announcement of a $2 billion "investment" in green energy projects.

Here's another trustworthy promise from Dear Leader:

> "The second company is Abound Solar Manufacturing, which will manufacture advanced solar panels at two new plants, creating more than 2,000 construction jobs and 1,500 permanent jobs," Obama said. "A Colorado plant is already underway, and an Indiana plant will be built in what's now an empty Chrysler factory. When fully operational, these plants will produce millions of state-of-the-art solar panels each year."
>
> But less than two years later, the company laid off half of its 400 workers, and then, in the summer of 2012, filed for bankruptcy. It became the third clean-energy company to seek bankruptcy protection after receiving a loan from the Energy Department under the economic stimulus law. California solar panel maker Solyndra and Beacon Power, a Massachusetts energy-storage firm, also declared bankruptcy. Solyndra received a $528 million federal loan, while Beacon Power got a $43 million loan guarantee.

Why did Abound Solar get these loans? Because they had connections in the Democrat Party – that's why.

Excerpt:

> Abound Solar further claims $260 million in private investments, part of which came from billionaire medical heiress Pat Stryker's Bohemian Companies.  This is where the story gets interesting.
>
> Thanks to Independence Institute investigative reporter Todd Shepherd, we still have access to the Web page that lists Bohemian as an investor even though it does not appear on the company's current Web site. The exact amount that Stryker has given is not public at this time.
>
> […]Forbes lists medical heiress and founder of Bohemian Companies/Foundation Pat Stryker as number

> 331 of its top “400 Richest People in America.” Worth $1.3 billion, the Fort Collins resident could single-handedly fund Abound Solar and still be well above the poverty line.
>
> While some of her fortune has gone to Abound Solar, she also has chosen to donate more than $2.2 million (probably a low figure) to Democrats and their causes over the last several election cycles. Beneficiaries include Barack Obama, one-term Congresswoman and Fort Collins resident Betsy Markey, and Interior Secretary Ken Salazar when he successfully ran for U.S. Senate in Colorado.

The Washington Examiner published e-mails showing that the White House was directly involved in granting loans.

Excerpt:

> Previously undisclosed emails made public today by the House Oversight and Government Reform Committee describe multiple instances of White House pressure on career Department of Energy officials to speed up approval of government loans to clean energy firms like Solyndra and Abound Solar.
>
> President Obama is described in one of the emails as having personally approved “moving it ahead,” thus reversing a prior decision by DOE career officials not to extend $2 billion in tax-funded help to AREVA, a French nuclear power company, on an Idaho project.
>
> […]In another email made public today by the House panel, Silver instructed McCrea to tell a Treasury Department official of White House support for DOE help to Abound Solar.
>
> “You better let him know that WH wants to move Abound forward. Policy will have to wait unless they have a specific policy problem with abound,” Silver said in the June 25, 2010, email.
>
> Abound Solar is a Colorado-based solar panel manufacturer that had used $68 million of a $400 million DOE loan guarantee before filing for bankruptcy earlier this year.

Obama had to pay back his friends who got him elected. He used YOUR MONEY and YOUR CHILDREN’S MONEY to do it. Doesn’t that cause you any alarm? And this was done under the rubric of “stimulating” the economy.

You can see a list of other Obama administration green energy failures here.

# Was the resurrection of one individual alone a widespread belief in the ancient world?

**Wintery Knight** · 2 November 2013 · Archived copy · Original

Why did the early church apply the word resurrection to Jesus? If they wanted to say that Jesus was alive and had triumphed over his enemies and was exalted by God, then why not say that? Why not say that he had been bodily assumed into Heaven and was now with the Father? The early proclamation that Jesus rose from the dead is a puzzle for naturalists, because it seems unexpected given what most Jews believed about the concept of resurrection. Jews didn't have any concept of an individual resurrection before the day of judgment. Resurrection was something that happened to all the righteous at the end of the world. Not to one person.

Here's a post from Tough Questions Answered to explain.

He quotes Tim Keller's "The Reason for God" so:

> The report of Jesus's resurrection would have also have been unthinkable to the Jews. Unlike the Greeks, the Jews saw the material and physical world as good. Death was not seen as liberation from the material world but as a tragedy. By Jesus's day many Jews had come to hope that some day in the future there would be a bodily resurrection of all the righteous, when God renewed the entire world and removed all suffering and death. The resurrection, however, was merely one part of the complete renewal of the whole world, according to Jewish teaching. The idea of an individual being resurrected, in the middle of history, while the rest of the world continued on burdened by sickness, decay, and death, was inconceivable.

> […]If someone had said to any first-century Jew, "So-and-so has been resurrected from the dead!" the response would be, "Are you crazy? How could that be? Has disease and death ended? Is true justice established in the world? Has the wolf lain down with the lamb? Ridiculous!" The very idea of an individual resurrection would have been as impossible to imagine to a Jew as to a Greek.

And there's more in a second post (this is Keller quoting N.T. Wright):

> Over the years, skeptics about the resurrection have proposed that the followers of Jesus may have had hallucinations, that they may have imagined him appearing to them and speaking to them. This assumes that their master's resurrection was imaginable for his Jewish followers, that it was an option in their worldview. It was not.
>
> Others have put forth the conspiracy theory, that the disciples stole the body and claimed he was alive to others. This assumes that the disciples would expect other Jews to be open to the belief that an individual could be raised from the dead. But none of this is possible. The people of that time would have considered a bodily resurrection to be as impossible as the people of our own time, though for different reasons.

Another reason to question whether the concept of resurrection could be applied to Jesus is because there is no expectation that the Messiah was even supposed to die, much less be resurrected.

Dr. William Lane Craig explains:

> *The original disciples believed that Jesus was risen from the dead despite almost every predisposition to the contrary.* Three aspects of the disciples' disposition following Jesus's crucifixion put a question mark behind the faith and hope they had placed in Jesus:
>
> 1. Jesus was dead, and Jews had no anticipation of a dying, much less rising, Messiah.

> 2. According to Jewish law, Jesus's execution as a criminal showed him out to be a heretic, a man literally under the curse of God.
> 3. Jewish beliefs about the afterlife precluded anyone's rising from the dead before the general, eschatological resurrection of the dead.
>
> **It is important to appreciate, with respect to the first aspect of their situation, that in Jewish expectation Messiah would conquer Israel's enemies and restore the throne of David, not be shamefully executed by them.** Jesus's ignominious execution at the hands of Rome was as decisive a disproof as anything could be to a first century Jew that Jesus was not Israel's awaited Messiah, but another failed pretender. Failed Messianic movements were nothing new in Judaism, and they left their followers with basically two alternatives: either go home or else find a new Messiah. These were no doubt hard choices, but nevertheless they were the choices one had. After surveying such failed Messianic movements before and after Jesus, N. T. Wright remarks,
>
> So far as we know, all the followers of these first century Messianic movements were fanatically committed to the cause. They, if anybody, might be expected to suffer from this blessed twentieth century disease called 'cognitive dissonance' when their expectations failed to materialize. But in no case, right across the century before Jesus and the century after him, do we hear of any Jewish group saying that their executed leader had been raised from the dead and he really was the Messiah after all.

And here's more support for the no individual resurrection point:

> Finally, Jewish hope in the resurrection of the dead was invariably a corporate and eschatological hope. The resurrection of all the righteous dead would take place after God had brought the world as we know it to an end. Surveying the Jewish literature, Joachim Jeremias concluded,
>
> Ancient Judaism did not know of an anticipated resurrection as an event of history. Nowhere does one find in the literature anything comparable to the resurrection of Jesus. Certainly resurrections of the dead were known, but these always concerned resuscitations, the return to the earthly life. In no place in the later Judaic literature does it concern a resurrection to d o x aas an event of history.41
>
> Even if the disciples' faith in Jesus had somehow managed to survive the crucifixion, they would at most have looked forward to their reunion with him at the final resurrection and would perhaps have preserved his tomb as a shrine, where Jesus's bones might rest until the eschatological resurrection. That was the Jewish hope.
>
> But we know that that did not happen. Despite their having most every predisposition to the contrary, it is an indisputable fact that the earliest disciples suddenly and sincerely came to believe that God had raised Jesus of Nazareth from the dead.

So I hope that enough has been said there for you to realize that talking about resurrection with respect to Jesus is a *very weird thing for the early church to do* – that is, unless it actually happened.

# CNN: Senate Democrats unanimously voted for rule that kills private health care plans

**Wintery Knight** · 3 November 2013 · Archived copy · Original

Why didn't CNN report on this in 2010, when the vote happened? Oh well, better late than never.

Excerpt:

> Senate Democrats voted unanimously three years ago to support the Obamacare rule that is largely responsible for some of the health insurance cancellation letters that are going out.
>
> In September 2010, Senate Republicans brought a resolution to the floor to block implementation of the grandfather rule, warning that it would result in canceled policies and violate President Barack Obama's promise that people could keep their insurance if they liked it.
>
> "The District of Columbia is an island surrounded by reality. Only in the District of Columbia could you get away with telling the people if you like what you have you can keep it, and then pass regulations six months later that do just the opposite and figure that people are going to ignore it. But common sense is eventually going to prevail in this town and common sense is going to have to prevail on this piece of legislation as well," Iowa Sen. Chuck Grassley said at the time.
>
> "The administration's own regulations prove this is not the case. Under the grandfathering regulation, according to the White House's own economic impact analysis, as many as 69 percent of businesses will lose their grandfathered status by 2013 and be forced to buy government-approved plans," the Iowa Republican said.
>
> On a party line vote, Democrats killed the resolution, which could come back to haunt vulnerable Democrats up for re-election this year.

So those evil Republicans were actually trying to protect the American people from losing their health insurance, but the Democrats stopped them. This reminds me of when Bush was trying to regulate Fannie Mae and Freddie Mac ahead of the housing crisis, and the Democrats blocked him because they claimed there was no mortgage lending crisis. Then later, they claimed that the mortgage lending crisis was caused by insufficient regulation.

Here is economist Larry Kudlow of CNBC to make sense of these policies at a higher level.

Excerpt:

> Charles Krauthammer and the *Wall Street Journal*'s Dan Henninger noted in excellent recent columns that this whole Obamacare business represents the greatest-ever expansion of the liberal entitlement-state dream. But I don't want that dream. And you shouldn't either.
>
> Here's what else I don't want: As a 60-something, relatively healthy person, I don't want lactation and maternity services, abortion services, speech therapy, mammograms, fertility treatments or Viagra. I don't want it. So why should I have to tear up my existing health-care plan, and then buy a plan with far more expensive premiums and deductibles, and with services I don't need or want?
>
> Why? Because Team Obama says I have to. And that's not much of a reason. It's not freedom.

It's especially not freedom for thirty-something chaste single males like me. I don't want it, I don't need it, and if you force me to pay for it for other people, then don't expect me to marry and have children, because I can't afford to pay for the wards of the welfare state and a family. It has to be one or the other. Either I keep what I earn, or the government takes what I earn. Period.

So far I am exempt from this, but my turn is coming next year, as Kudlow notes:

> Incidentally, equally punitive regulations will hit more than 90 million employer-sponsored health plans next year. It's the same problem as the individual plan. Grandfathering won't work. Moreover, replacing these plans with much more expensive products will constitute a major tax hike on the entire economy. This point shouldn't be lost as Americans worry about being kicked from their plans. Obamacare is not only anti-freedom but anti-growth.

I had not read the Daniel Henninger column linked above before, but here's a sobering snippet from that column:

> What made ObamaCare an exemplar of progressive politics and policy is precisely what has been on view this week in news stories and the Sebelius hearing. It's not that the health program was to be administered by the state or that it promised benefits to all. Liberalism did that for decades. What made it peculiarly progressive were the*mandates*. And not just the law's individual and business mandates to purchase their insurance. The essence of modern Democratic progressivism is: "You *will* participate in what we have created for you, and you *will* comply with the law's demands."
>
> […]American progressivism is politics by cramdown. Ask Jamie Dimon. Ask the coal miners the EPA is putting out of business. Ask the union workers waiting for jobs on the Keystone XL pipeline. Ask Boeing in South Carolina or the harmless tea party groups from towns no one has ever heard of that were shut down by the IRS, or the 20,000 inner-city parents and students who marched across the Brooklyn Bridge to protest obliteration of their charter schools by New York's progressive mayoral candidate, Bill de Blasio.

I had blogged before about the Charles Krauthammer column that Kudlow mentioned. Check it out if you missed it.

# A basic case for the pro-life position by Scott Klusendorf

**Wintery Knight** · 3 November 2013 · Archived copy · Original

Are you able to make a basic case for the pro-life view?

Here's a short 35-lecture by Scott Klusendorf, president of the Life Training Institute.

This is a long treatment that talks about the challenge of moral relativism and the case for the pro-life view. He does show a clip of abortion in the video to the audience.

There's also a 35-minute audio recording of Scott on the LTI web site. (H/T Apologetics 315) You can put that on your podcast player and listen to it. Listen to it a lot and soon you'll sound like Scott.

Scott also has an article posted on the LTI web site for those who don't have time for the video or the audio.

In the article makes three points:

1. **Clarify the issue**
2. **Defend your pro-life position with science and philosophy**
3. **Challenge your listeners to be intellectually honest**

Here's the second point:

> Scientifically, we know that from the earliest stages of development, the unborn are distinct, living, and whole human beings. Leading embryology books confirm this.[2] For example, Keith L. Moore & T.V.N. Persaud write, "A zygote is the beginning of a new human being. Human development begins at fertilization, the process during which a male gamete or sperm … unites with a female gamete or oocyte … to form a single cell called a zygote. This highly specialized, totipotent cell marks the beginning of each of us as a unique individual."[3] Prior to his abortion advocacy, former Planned Parenthood President Dr. Alan Guttmacher was perplexed that anyone, much less a medical doctor, would question this. "This all seems so simple and evident that it is difficult to picture a time when it wasn't part of the common knowledge," he wrote in his book *Life in the Making*.[4]
>
> Philosophically, we can say that embryos are less developed than newborns (or, for that matter, toddlers) but this difference is not morally significant in the way abortion advocates need it to be. Consider the claim that the immediate capacity for self-awareness bestows value on human beings. Notice that this is not an argument, but an arbitrary assertion. Why is some development needed? And why is this particular degree of development (i.e., higher brain function) decisive rather than another? These are questions that abortion advocates do not adequately address.
>
> As Stephen Schwarz points out, there is no morally significant difference between the embryo that you once were and the adult that you are today. Differences of size, level of development, environment, and degree of dependency are not relevant such that we can say that you had no rights as an embryo but you do have rights today. Think of the acronym **SLED** as a helpful reminder of these non-essential differences:[5]
>
> **S**ize: True, embryos are smaller than newborns and adults, but why is that relevant? Do we really want to say that large people are more human than small ones? Men are generally larger than women, but that doesn't mean that they deserve more rights. Size doesn't equal value.
>
> **L**evel of development: True, embryos and fetuses are less developed than the adults they'll one day become. But again, why is this relevant? Four year-old girls are less developed than 14 year-old ones. Should older children have more rights than their younger siblings? Some people say that self-awareness makes one human. But if that is true, newborns do not qualify as valuable human beings. Six-week old infants lack the immediate capacity for performing human mental functions, as do the reversibly comatose, the sleeping, and those with

> Alzheimer's Disease.
>
> **E**nvironment: Where you are has no bearing on who you are. Does your value change when you cross the street or roll over in bed? If not, how can a journey of eight inches down the birth-canal suddenly change the essential nature of the unborn from non-human to human? If the unborn are not already human, merely changing their location can't make them valuable.
>
> **D**egree of Dependency: If viability makes us human, then all those who depend on insulin or kidney medication are not valuable and we may kill them. Conjoined twins who share blood type and bodily systems also have no right to life.
>
> In short, it's far more reasonable to argue that although humans differ immensely with respect to talents, accomplishments, and degrees of development, they are nonetheless equal because they share a common human nature.

That's the core of the basic pro-life case right there. There's also a good interview of Mr. Klusendorf that I blogged about.

**Advanced Objections**

You can learn more by reading basic pro-life apologetics… from Francis Beckwith. You might recognize Frank Beckwith as the author of "Defending Life: A Moral and Legal Case Against Abortion Choice". He wrote that book for Cambridge University Press, a top academic press. But before Cambridge University Press, Beckwith wrote easy-to-understand essays for the Christian Research Journal.

Here are four essays that answer common arguments in favor of legalized abortion.

- Part I. The Appeal to Pity
- Part II. Arguments from Pity, Tolerance, and Ad Hominem
- Part III. Is The Unborn Human Less Than Human?
- Part IV. When Does a Human Become a Person?

Here's an excerpt from Part II:

Excerpt:

> A woman who becomes pregnant due to an act of either rape or incest is the victim of a horribly violent and morally reprehensible crime. Although pregnancy as a result of either rape or incest is extremely rare, **[1]** there is no getting around the fact that pregnancy does occur in some instances.
>
> […]Despite its forceful appeal to our sympathies, there are several problems with this argument. First, it is not relevant to the case for abortion on demand, the position defended by the popular pro-choice movement. This position states that a woman has a **right** to have an abortion for **any** reason she prefers during the entire nine months of pregnancy, whether it be for gender-selection, convenience, or rape. **[3]** To argue for abortion on demand from the hard cases of rape and incest is like trying to argue for the elimination of traffic laws from the fact that one might have to violate some of them in rare circumstances, such as when one's spouse or child needs to be rushed to the hospital. Proving an exception does not establish a general rule.
>
> […]Fourth, this argument begs the question by assuming that the unborn is not fully human. For if the unborn is fully human, then we must weigh the relieving of the woman's mental suffering against the right-to-life of an innocent human being. **And homicide of another is never justified to relieve one of emotional distress**. Although such a judgment is indeed anguishing, we must not forget that the same innocent unborn entity that the career-oriented woman will abort in order to avoid interference with a job promotion is biologically and morally indistinguishable from the unborn entity that results from an act of rape or incest. And since abortion for career advancement cannot be justified if the unborn entity is fully human, abortion cannot be justified in

> the cases of rape and incest. In both cases abortion results in the death of an innocent human life. As Dr. Bernard Nathanson has written, “The unwanted pregnancy flows biologically from the sexual act, but not morally from it.” **[5]**Hence, this argument, like the ones we have already covered in this series, is successful only if the unborn are not fully human.

Scott Klusendorf wrote the The Case for Life, which is the best book for beginners on the pro-life view. For those looking for advanced resources, Francis Beckwith, a professor at Baylor University, published the book Defending Life, with Cambridge University Press, 2007.

Finally, if you want to see Scott Klusendorf in a debate with a former ACLU executive, you can see it right here.

UPDATE: My friend Papa Georgio sent me a post that features THREE talks by Scott Klusendorf. (H/T Religio-Political Talk)

**Learn about the pro-life case**

- How to take an incremental approach to the abortion problem
- Videos from academic debate on abortion at the University of Victoria
- Audio: Scott Klusendorf’s 35-minute case for the pro-life position
- Audio: A 55-minute discussion featuring Greg Koukl and Scott Klusendorf
- A comparison of embryonic and adult stem cell research
- Video: 12-year old girl makes the pro-life case in a short speech
- Video:10-year old girl makes the pro-life case in a short speech
- Objective truth in the abortion debate – a pro-life training video
- Alan Shlemon explains a classification system for pro-abortion arguments
- What is the best single book on the pro-life position?

And some posts motivating Christians and conservatives to take abortion seriously:

- Why Christians should focus on cultural issues as well as evangelism
- Republicans introduce House and Senate bills to establish that life begins at conception
- House Republicans introduce ban on taxpayer funding of abortion
- Are Christians too involved in politics?
- What did the early church fathers think about abortion?

# D.C. Court of Appeals strikes down HHS abortion / birth control mandate

**Wintery Knight** · 4 November 2013 · Archived copy · Original

The Hill reports.

Excerpt:

> A federal appeals court on Friday struck down the birth control mandate in ObamaCare, concluding the requirement trammels religious freedom.
>
> The D.C. Circuit Court of Appeals — the second most influential bench in the land behind the Supreme Court — ruled 2-1 in favor of business owners who are fighting the requirement that they provide their employees with health insurance that covers birth control.
>
> Requiring companies to cover their employees' contraception, the court ruled, is unduly burdensome for business owners who oppose birth control on religious grounds, even if they are not purchasing the contraception directly.
>
> "The burden on religious exercise does not occur at the point of contraceptive purchase; instead, it occurs when a company's owners fill the basket of goods and services that constitute a healthcare plan," Judge Janice Rogers Brown wrote on behalf of the court.
>
> Legal analysts expect the Supreme Court to ultimately pick up an appeal on the birth-control requirement and make a final decision on its constitutionality.

Hey, there's Janice Rogers Brown – she was my second favorite pick for Supreme Court justices back when Bush chose that squish John Roberts. At least Alito was a good pick. My favorite two choices would be Edith H. Jones and Janice Rogers Brown.

More from the article:

> In the meantime, Republicans in Congress have pushed for a conscience clause that would allow employers to opt out of providing contraception coverage for moral or religious reasons.
>
> The measure emerged most recently during negotiations to fund the federal government. Some House Republicans wanted to include the conscience clause in a legislative package ending the government shutdown.
>
> The split ruling against the government on Friday was the latest in a string of court cases challenging the healthcare law's mandate.
>
> Friday's ruling centered on two Catholic brothers, Francis and Philip Gilardi, who own a 400-person produce company based in Ohio.
>
> The brothers oppose contraception as part of their religion and challenged the Affordable Care Act provision requiring them to provide insurance that covers their employees' birth control.
>
> Refusing to abide by the letter of the law, they said, would result in a $14 million fine.
>
> "They can either abide by the sacred tenets of their faith, pay a penalty of over $14 million, and cripple the companies they have spent a lifetime building, or they become complicit in a grave moral wrong," Brown wrote.
>
> The Obama administration said that the requirement is necessary to protect women's right to decide whether and when to have children.
>
> The judges were unconvinced, however, that forcing companies to cover contraception protected that right.
>
> Brown wrote that "it is clear the government has failed to demonstrate how such a right — whether described

> as noninterference, privacy, or autonomy — can extend to the compelled subsidization of a woman's procreative practices."
>
> She added that denying coverage of contraception would not undermine the Affordable Care Act's requirements that health insurance provide preventative care.

It's very important that people who favor big government solutions understand that a secular government is never going to recognize the rights of Christians as they take over more and more of the private sector economy. I am in favor of real care for people who have unexpected health care costs – like rare diseases and drunk drivers. We should give every citizen a voucher to purchase insurance that protects them from conditions that are not related to their own choices. But contraceptives and abortions are not unexpected – they are deliberate choices. People should have to pay for their own choices – not shove the costs on the rest of us who don't even agree with those behaviors. You can see how far this goes in countries like Canada – which covers IVF, sex changes and abortions. And the UK, which covers IVF, sex changes and breast enlargements. Is that health care? Shouldn't we have the right to opt out of paying for that for other people?

If liberals are so keen on paying for other people's condoms and abortions, then why don't they do it with their own money? I'm chaste. Why should I have to pay for these things for other people and give up my own plans and dreams?

# Doctor shortage: how Obamacare makes Americans lose their doctors

**Wintery Knight** · 4 November 2013 · Archived copy · Original

Mysterious Tim sent me this article from the Wall Street Journal.

Excerpt:

> Everyone now is clamoring about Affordable Care Act winners and losers. I am one of the losers.
>
> My grievance is not political; all my energies are directed to enjoying life and staying alive, and I have no time for politics. For almost seven years I have fought and survived stage-4 gallbladder cancer, with a five-year survival rate of less than 2% after diagnosis. I am a determined fighter and extremely lucky. But this luck may have just run out: My affordable, lifesaving medical insurance policy has been canceled effective Dec. 31.
>
> My choice is to get coverage through the government health exchange and lose access to my cancer doctors, or pay much more for insurance outside the exchange (the quotes average 40% to 50% more) for the privilege of starting over with an unfamiliar insurance company and impaired benefits.
>
> Countless hours searching for non-exchange plans have uncovered nothing that compares well with my existing coverage. But the greatest source of frustration is Covered California, the state's Affordable Care Act health-insurance exchange and, by some reports, one of the best such exchanges in the country. After four weeks of researching plans on the website, talking directly to government exchange counselors, insurance companies and medical providers, my insurance broker and I are as confused as ever. Time is running out and we still don't have a clue how to best proceed.

Here previous private health insurance plan was doing a good job of honoring her policy:

> Since March 2007 United Healthcare has paid $1.2 million to help keep me alive, and it has never once questioned any treatment or procedure recommended by my medical team. The company pays a fair price to the doctors and hospitals, on time, and is responsive to the emergency treatment requirements of late-stage cancer. Its caring people in the claims office have been readily available to talk to me and my providers.

I think that this is what Obama was talking about when he cautioned people about insurance companies that "screw you". Yeah, private companies always screw people, Obama, never the government. What does this man know about how anything actually works in the real world, anyway?

More:

> What happened to the president's promise, "You can keep your health plan"? Or to the promise that "You can keep your doctor"? Thanks to the law, I have been forced to give up a world-class health plan. The exchange would force me to give up a world-class physician.
>
> For a cancer patient, medical coverage is a matter of life and death. Take away people's ability to control their medical-coverage choices and they may die. I guess that's a highly effective way to control medical costs. Perhaps that's the point.

Another factor that is going to make this situation worse is the widespread decline in the number of doctors caused by Obamacare.

Investors Business Daily reports on a recent poll of doctors by Deloitte.

Excerpt:

> When our polling showed four years ago that doctors planned to leave the profession if the Democrats' interpretation of health care reform became law, we were ridiculed mercilessly. But, as a new poll shows, we were right.
>
> In 2009, our IBD/TIPP Poll asked 1,376 randomly chosen practicing physicians from across the country what they thought about the health care "reform" being considered at that time.
>
> It found that 45% of doctors "would consider leaving their practice or taking an early retirement" if Congress passed the plan the White House and the Democratic majority in Congress had in mind.
>
> […]But almost a year later, we were vindicated. An August 2010 Merritt Hawkins survey of 2,379 doctors conducted for the Physicians Foundation revealed that 40% of doctors said they would "retire, seek a nonclinical job in health care, or seek a job or business unrelated to health care" over the next three years as the overhaul was phased in.
>
> Those three years are up, the country has found out what's in ObamaCare, and the story remains the same.
>
> The Deloitte 2013 Survey of U.S. Physicians found that six in 10 doctors say "it is likely that many physicians will retire earlier than planned in the next one to three years" — that is, in the age of ObamaCare — "while more than half believe that physicians will retire (62%) or scale back practice hours (55%) based on how the future of medicine is changing."

The problem is that when government controls health care, they spend the money on things that will buy them more votes. People who need expensive care like this definitely do not get treated. In government-run health care, government takes control of the money being spent by individuals on actual health care in the private sector. They then redirect that money into public sector spending on "health-related" services. Instead of helping people who are really sick, government-run systems cut lose those sick people and concentrate on buying *perfectly healthy people* things like condoms, abortions, IVF and sex changes. They spread the money around to more people in order to buy more votes. The main goal is to get the majority of people dependent on government so that they continue to vote for bigger government. The few people who need expensive health care? *They can just go die in a ditch.*

The really sick thing is when a person works their entire lives, paying into a government-run health care system, and then when it is their turn at the end to finally get some treatment, they find out that they are denied treatment, and their money has all been spent on elective treatments for favored (liberal) minority groups. I'm sorry, but you can't have treatment for prostate cancer, because we used the money we got from you to provide IVF to a professor of women's studies who spent her fertile years advocating for abortion and against marriage. We should never be letting government control health care. Never.

# Does a commitment to naturalism undermine rational thought and textual meaning?

**Wintery Knight** · 4 November 2013 · Archived copy · Original

Dr. William Lane Craig had a formal debate with an atheist philosopher named Alex Rosenberg a few months back that brought up an interesting idea. Rosenberg is a strong naturalist and he suggests all kinds of counterintuitive outworkings of naturalism in his book. Dr. Craig brought up a bunch of those strange views in his debate, and I listed them out in my summary of the debate as follows:

1. The argument from the intentionality (aboutness) of mental states implies non-physical minds (dualism), which is incompatible with naturalism
2. The existence of meaning in language is incompatible with naturalism, Rosenberg even says that all the sentences in his own book are meaningless
3. The existence of truth is incompatible with naturalism
4. The argument from moral praise and blame is incompatible with naturalism
5. Libertarian freedom (free will) is incompatible with naturalism
6. Purpose is incompatible with naturalism
7. The enduring concept of self is incompatible with naturalism
8. The experience of first-person subjectivity ("I") is incompatible with naturalism

We are concerned with #1 and #2 in this post.

Now I was visiting my parents last week in my home town and Dad and I went to church on Sunday. He wanted to listen to some weird sing-song-voiced pastor on the drive there, but I plugged in my smartphone and we listened to these three podcasts by William Lane Craig instead.

- Arguments in the Debate "Is Faith in God Reasonable?" Part 1
- Arguments in the Debate "Is Faith in God Reasonable?" Part 2
- Arguments in the Debate "Is Faith in God Reasonable?" Part 3

Dr. Craig was explaining in part 3 (I think) about how he went on the offensive with the 8 points, and Dad asked me why Dr. Rosenberg wrote that if naturalism is true, then nothing written down is meaningful. He also wanted to know why Dr. Rosenberg would write a book if his worldview entailed that nothing written down is meaningful.

The solution has to do with Rosenberg's denial of "intentionality", which is the idea that something can be about something else. For example, I can think about what I had for breakfast today on the way to church (two apples and coffee) or I can think about the sermon today in my home church and how good it was. A naturalist believes that the whole universe is made up of pure matter alone, and matter cannot be about anything. So Rosenberg denies this common sense view of "intentionality" or "aboutness" because there is no room for it on his naturalistic / materialistic / physicalist view of reality.

Here is a post by Bill Valicella on Maverick Philosopher blog that answers Dad's questions.

First, Rosenberg's own view from his book.

> A single still photograph doesn't convey movement the way a motion picture does. Watching a sequence of slightly different photos one photo per hour, or per minute, or even one every 6 seconds won't do it either. But looking at the right sequence of still pictures succeeding each other every one-twentieth of a second produces the illusion that the images in each still photo are moving. Increasing the rate enhances the illusion, though beyond a certain rate the illusion gets no better for creatures like us. But it's still an illusion. There is noting to it but the succession of still pictures. That's how movies perpetrate their illusion. The large set of still pictures

> is organized together in a way that produces in creatures like us the illusion that the images are moving. In creatures with different brains and eyes, ones that work faster, the trick might not work. In ones that work slower, changing the still pictures at the rate of one every hour (as in time-lapse photography) could work. But there is no movement of any of the images in any of the pictures, nor does anything move from one photo onto the next. Of course, the projector is moving, and the photons are moving, and the actors were moving. But all the movement that the movie watcher detects is in the eye of the beholder. That is why the movement is illusory.
>
> The notion that thoughts are about stuff is illusory in roughly the same way. Think of each input/output neural circuit as a single still photo. Now, put together a huge number of input/output circuits in the right way. None of them is about anything; each is just an input/output circuit firing or not. But when they act together, they "project" the illusion that there are thoughts about stuff. They do that through the behavior and the conscious experience (if any) that they produce. (Alex Rosenberg,The Atheists' Guide to Reality: Enjoying Life Without Illusions. The quotation was copied from here.)

And here is what Bill says about that:

> Rosenberg is not saying, as an emergentist might, that the synergy of sufficiently many neural circuits gives rise to genuine object-directed thoughts. He is saying something far worse, something literally nonsensical, namely, that the object-directed thought that thoughts are object-directed is an illusion. The absurdity of Rosenberg's position can be seen as follows.
>
> 1. Either the words "The notion that thoughts are about stuff is illusory" express a thought — the thought that there are no object-directed thoughts — or they do not.
> 2. If the latter, then the words are meaningless.
> 3. If the former, then the thought is either true or false.
> 4. If the thought is true, then there there are no object-directed thoughts, including the one expressed by Rosenberg's words, and so his words are once again meaningless.
> 5. If the thought is false, then there are object-directed thoughts, and Rosenberg's claim is false.
>
> Therefore:
>
> - Rosenberg's claim is either meaningless or false. His position is self-refuting.
>
> As for the analogy, it is perfectly hopeless, presupposing as it does genuine intrinsic intentionality. If I am watching a movie of a man running, then I am under an illusion in that there is nothing moving on the movie screen: there is just a series of stills. But the experience I am undergoing is a perfectly good experience that exhibits genuine intrinsic intentionality: it is a visual experiencing of a man running, or to be perfectly punctilious about it: a visual experiencing AS OF a man running. Whether or not the man depicted exists, as would be the case if the movie were a newsreel, the experience exists, and so cannot be illusory.
>
> To understand the analogy one must understand that there are intentional experiences, experiences that take an accusative. But if you understand that, then you ought to be able to understand that the analogy cannot be used to render intelligible how it might that it is illusory that there are intentional experiences.
>
> What alone remains of interest here is how a seemingly intelligent fellow could adopt a position so manifestly absurd. I suspect the answer is that he has stupefied himself by his blind adherence to scientistic/naturalistic ideology.

If you want to sort of double check the details, then go ahead and watch the debate or read my summary or listen to the debate audio, and then listen to Dr. Craig's three podcasts that I linked above.

I know a lot of you are thinking right now "Hey! You cheater! That's a presuppositional argument! You said they

were bad!" Well, I didn't say they were bad, I said that the epistemological view of presuppositionalism was bad. Presuppositional arguments are *good.* See below for a few posts about them. Use them all you can, but use the good scientific and historical evidence, too.

**Positive arguments for Christian theism**

# Gay activist inside IRS leaked names of pro-marriage donors to Human Rights Campaign

**Wintery Knight** · 5 November 2013 · Archived copy · Original

The American Spectator reports. (H/T Robert Stacy McCain)

Excerpt:

> Last year's illegal leak of confidential non-profit donor information by the Internal Revenue Service has been linked to a 2007 Harvard University graduate who was a member of a gay activist group within Bain and Co.
>
> IRS rules prevent congressional investigators from publicly naming the tax agency employee who leaked the information about donors to the National Organization for Marriage (NOM),Eliana Johnson of *National Review* reports, however, that the person to whom the information was leaked was former Bain and Co. employee Matthew Meisel. A 2007 graduate of Harvard, Meisel was active in an employee organization called Bain Gay and Lesbian Association for Diversity (BGLAD), Meisel's activism on behalf of gay-oriented diversity hiring programs has been trumpeted in the *Harvard Crimson* and *Yale Herald*.
>
> Johnson's *National Review* report cites investigators with the House Ways and Means Committee for how the information about donors to NOM (which opposes the legalization of same-sex marriage) was leaked from the IRS, revealing GOP presidential candidate Mitt Romney's private contributions to the organization:
>
> [A]n IRS agent working in the Exempt Organizations Division — the same division that, until May, was under the direction of Lois Lerner, who retired under duress last month — leaked NOM's Schedule B to Matthew Meisel, a former employee of Bain & Company… . After he obtained NOM's donor list from the IRS employee, the committee says, Meisel then turned it over to the Human Rights Campaign. Neither Meisel nor the Human Rights Campaign returned calls seeking comment.

So what you have here is a gay activist giving information to the Human Rights Campaign. The Human Rights Campaign is a group that had previously condemned the Family Research Council as a hate group. This is the same Family Research Council that was later attacked by a convicted domestic terrorist / gay activist. After the attack, the HRC continued to denounce the FRC as a hate group.

**Not the first time**

Remember Private Bradley Manning, who leaked top secret military information? He was also a gay activist.

Here's the story from the UK Telegraph.

Excerpt:

> Bradley Manning, the prime suspect in the leaking of the Afghan war files, raged against his US Army employers and "society at large" on his Facebook page in the days before he allegedly downloaded thousands of secret memos, The Daily Telegraph has learnt.
>
> The US Army intelligence analyst, who is half British and went to school in Wales, appeared to sink into depression after a relationship break-up, saying he didn't "have anything left" and was "beyond frustrated".
>
> In an apparent swipe at the army, he also wrote: "Bradley Manning is not a piece of equipment," and quoted a joke about "military intelligence" being an oxymoron.
>
> Mr Manning, 22, who is currently awaiting court martial, is suspected of leaking more than 90,000 secret military documents to the Wikileaks website in a security breach which US officials claim has endangered the lives of serving soldiers and Afghan informers.
>
> […]Mr Manning, who is openly homosexual, began his gloomy postings on January 12, saying: "Bradley

> Manning didn't want this fight. Too much to lose, too fast."
>
> […]Pictures on Mr Manning's Facebook page include photos of him on school trips during his time in Wales and at a gay rights rally, where he is holding up a placard demanding equality on "the battlefield".

The story a detailed look at his family history, and his troubled relationship with his father after his parents divorced.

**Why is this interesting?**

The troubling thing about abortion activists and gay activists is how easy they find it to overrule and destroy the basic human rights of those who disagree with them about sexual morality. That's the real concern that traditional religious people have about abortion rights and gay rights activists. Some of them seem very willing to break the law and infringe on the rights of others in their crusades.

See below for some more examples of radical left-wing activists breaking laws in order to push their socially liberal agenda.

# Climate change: is global cooling the emerging consensus view of scientists?

**Wintery Knight** · 5 November 2013 · Archived copy · Original

Graph of solar activity (Source: GSU.edu)
Source: Department of Geosciences, Georgia State University

Global temperature (Source: USC.edu)
Source: Department of Earth Sciences, University of Southern California

Now, the consensus view among skeptics of global warming has generally been that naturally-occurring solar cycles are responsible for cooling and warming trends. In the medieval era, global temperatures were higher than today, and that cannot have been caused by the emission of greenhouse gases. It makes more sense to attribute that warming period to the sun than to human behaviors. If that's the case, then it's possible that solar cycles could also cause us to go into a cooling period.

Here's an article about global cooling from the Financial Post, a Canadian newspaper that is part of the National Post.

Excerpt:

> In the 1960s and 1970s, a growing scientific consensus held that the Earth was entering a period of global cooling. The CIA announced that the "Western world's leading climatologists have confirmed recent reports of detrimental global climatic change" akin to the Little Ice Age of the 17th and 18th centuries, "an era of drought, famine and political unrest in the western world." President Jimmy Carter signed the National Climate Program Act to deal with the coming global cooling crisis. Newsweek magazine published a chilling article entitled "The Cooling World."
>
> In the decades that followed, as temperatures rose, climate skeptics mocked the global cooling hypothesis and a new theory emerged — that Earth was in fact entering a period of global warming.
>
> Now an increasing number of scientists are swinging back to the thinking of the 1960s and 1970s. The global cooling hypothesis may have been right after all, they say. Earth may be entering a new Little Ice Age.

> "Real risk of a Maunder Minimum 'Little Ice Age,'" announced the BBC this week, in reporting startling findings by Professor Mike Lockwood of Reading University. "Professor Lockwood believes solar activity is now falling more rapidly than at any time in the last 10,000 years [raising the risk of a new Little Ice Age] from less than 10% just a few years ago to 25-30%," explained Paul Hudson, the BBC's climate correspondent. If Earth is spared a new Little Ice Age, a severe cooling as "occurred in the early 1800s, which also had its fair share of cold winters and poor summers, is, according to him, 'more likely than not' to happen."
>
> […]Scientists at the Climate and Environmental Physics and Oeschger Centre for Climate Change Research at the University of Berne in Switzerland back up theories that support the Sun's importance in determining the climate on Earth. In a paper published this month by the American Meteorological Society, the authors demolish the claims by IPCC scientists that the Sun couldn't be responsible for major shifts in climate. In a post on her website this month, Judith Curry, Chair of the School of Earth and Atmospheric Sciences at the Georgia Institute of Technology, all-but mocked the IPCC assertions that solar variations don't matter. Among the many studies and authorities she cited: the National Research Council's recent report, "The Effects of Solar Variability on Earth's Climate," and NASA, former home of global warming guru James Hansen.

The Daily Caller picked up on this article and added more: (H/T Letitia)

> Earlier this year, Professor Cliff Ollier of the School of Earth and Environmental Studies at the University of Western Australia presented a study that posited that the sun was a major controller of the climate.
>
> "There is a very good correlation of sunspots and climate," Ollier wrote. "Solar cycles provide a basis for prediction. Solar Cycle 24 has started and we can expect serious cooling. Many think that political decisions about climate are based on scientific predictions but what politicians get are projections based on computer models."
>
> Last year, Russian scientists also posited that from next year onward the world could expect the start of the another Little Ice Age.
>
> "After the maximum of solar cycle 24, from approximately 2014 we can expect the start of deep cooling with a Little Ice Age in 2055," wrote Habibullo Abdussamatov of the Russian Academy of Science.
>
> The "Little Ice Age" occurred during the 1600s when winters were harsh all across Europe. The continent-wide cold weather coincided with an inactive sun, called the Maunder solar minimum.

You're not likely to hear about the Medieval Warming Period or the Maunder minimum in public schools, but they are there in the data.

Of course, if the majority of people begin to understand that the sun is causing cycles of warming and cooling, then we don't really need government to regulate job creators and control our consumption. What would happen then? So my suspicion is that the government-funded scientific consensus will try to get us to believe that we have always been fighting against global cooling, not global warming. That way, the massive taxation and regulation of private companies and private individuals can continue.

This reminds me of Oceania's war with Eastasia or Eurasia in the famous distopian novel 1984: (description from leftist Wikipedia)

> In 1984, there is a perpetual war among Oceania, Eurasia and Eastasia, the super-states which emerged from the atomic global war. "The book", *The Theory and Practice of Oligarchical Collectivism* by Emmanuel Goldstein, explains that each state is so strong it cannot be defeated, even with the combined forces of two super-states—despite changing alliances. To hide such contradictions, history is re-written to explain that the (new) alliance always was so; the populaces accustomed to doublethink accept it. The war is not fought in Oceanian, Eurasian or Eastasian territory but in the arctic wastes and a disputed zone comprising the sea and land from Tangiers (northern Africa) to Darwin (Australia). At the start, Oceania and Eastasia are allies

> combatting Eurasia in northern Africa and the Malabar Coast.
>
> That alliance ends and Oceania allied with Eurasia fights Eastasia, a change which occurred during the Hate Week dedicated to creating patriotic fervour for the Party's perpetual war. The public are blind to the change; in mid-sentence an orator changes the name of the enemy from "Eurasia" to "Eastasia" without pause. When the public are enraged at noticing that the wrong flags and posters are displayed they tear them down—thus the origin of the idiom "We've always been at war with Eastasia"…

I wonder if we are coming to the point when the global warming alarmists will switch their pro-socialism narrative so that the threat we face is global cooling.

The neat thing about that article is that it's the *Canadians* who are among the most skeptical of global warming. Previously, officials in the Canadian government have been extremely critical of the man-made global warming hypothesis. Consider the comments of Conservative MP Joe Oliver and Conservative MP Peter Kent – they are all for developing energy resources and creating jobs. Canadians are practical on the issue of climate change – they would rather have jobs than feelings of moral superiority. But down here in Obamaland, there's no critical thinking at all on the issue. If you doubt global warming, then you need to be called names, intimidated, fired or worse.

# What is ENDA? The Employment Non-Discrimination Act and religious liberty

**Wintery Knight** · 5 November 2013 · Archived copy · Original

Here are two assessments of the Democrat-sponsored ENDA legislation, the first conservative, the second libertarian.

Here's Ryan Anderson from the Heritage Foundation, a conservative D.C. think tank.

Excerpt:

> ENDA would impose liability on employers for alleged "discrimination" based not on objective employee traits but on subjective and unverifiable identities. It would create new protected classes—based on an "individual's actual or perceived sexual orientation or gender identity"—that would expose employers to unimaginable liability. ENDA could require employment policies that undermine common sense about a host of workplace conditions, especially regarding issues surrounding gender identity.
>
> The bill defines "gender identity" as "the gender-related identity, appearance, or mannerisms…of an individual, with or without regard to the individual's designated sex at birth." In other words, it creates special rights for transgendered individuals—males who dress and act as females, and females who dress and act as males—and forbids employers from considering the consequences of such behavior in the workplace.
>
> Issues concerning gender identity are difficult. All ought to agree that young children should be protected from having to sort through questions about gender identity before an age-appropriate introduction. ENDA, however, would bar employers from making certain decisions about transgendered employees.
>
> Although ENDA includes some exemptions for religious education, it provides no protection for students in other schools who could be prematurely exposed to questions about gender identity if, for example, a male teacher returned to school identifying as a woman.
>
> Moreover, we can't deny the relevance of biological sex in many contexts. An employer would be negligent to ignore the concerns of female employees about having to share bathrooms with a biological male who identifies as female. Failing to consider these repercussions raises a host of concerns about privacy rights. But ENDA would prevent taking these concerns into account.

And here is a post from Hans Bader of the Competitive Enterprise Institute, a libertarian D.C. think tank.

Meritless lawsuits that favor the plaintiff:

> ENDA would harm even businesses that hire and fire based on merit, not sexual orientation. It would also erode free speech in the workplace about sexual-orientation-related political and religious issues.
>
> Since ENDA is modeled on other employment laws that have produced many meritless discrimination lawsuits (through one-way fee shifting), ENDA, too, is likely to result in wasteful litigation and settlements paid out by employers that are actually innocent of discrimination (most employment discrimination claims turn out to be meritless). ENDA's attorney fee provision, Section 12, uses the same language as other federal employment laws that incorporate the *Christiansburg Garment* standard for awarding attorneys fees — a sort of "heads I win, tails you lose" scheme under which the plaintiff gets his attorneys fees paid for by the other side if he wins, but the employer has to pay its own attorneys fees even if it wins (a win at trial typically costs an employer at least $250,000). While the language of ENDA's attorney-fee provision is seemingly neutral on its face, similar provisions in other federal employment laws have consistently been interpreted by the courts as favoring plaintiffs under the Supreme Court's 1978 *Christiansburg Garment* decision. Moreover, even if the plaintiff's case is so insubstantial that the plaintiff only wins $1 at trial, the employer can still be ordered to pay

> tens of thousands of dollars in attorneys fees. For example, an appeals court ruling awarded $42,000 in attorneys fees to a plaintiff who suffered only $1 in damages. (*See Brandau v. Kansas*, 168 F.3d 1179 (10th Cir.1999).) These attorney fee provisions will lead to some employers paying thousands of dollars to plaintiffs just to settle weak or meritless discrimination claims.

Censoring employees who might create a "hostile environment":

> While the typical private employer has no reason to hire or fire based on sexual orientation (and few do), ENDA'sSection 4(a)(1) reaches beyond hiring and firing to vaguely defined "terms, conditions, or privileges of employment," which courts interpret as requiring certain restrictions on speech. In *Meritor Savings Bank v. Vinson*, 477 U.S. 57 (1986), the Supreme Court interpreted the same vague "terms or conditions" language in another statute, Title VII of the Civil Rights Act, as requiring employers to prohibit employee speech or conduct that creates a "hostile or offensive work environment" for women or blacks. The employer is liable for damages and attorneys fees if a court decides that it was negligent in failing to detect, prevent, or punish such speech or conduct. Such "hostile work environment" liability applies to each and every protected class covered by federal law, such as race, religion, national origin, and disability, not just gender. *See, e.g., Amirmokri v. Baltimore Gas and Electric Co.*, 60 F.3d 1126 (4th Cir. 1995) (employer was liable for national-origin based taunts and harassment by plaintiff's co-workers).
>
> If ENDA were enacted, such liability would also cover "sexual orientation"-based hostile work environments, meaning that a company would potentially be liable for a "hostile work environment" resulting from anti-gay things its employees say (even if those employees' sentiments are at odds with the company's own views or policies). Thus, to avoid liability, an employer might have to silence employees with political opinions that are perceived as anti-gay, and prevent such employees from expressing political views such as opposition to gay marriage or gays in the military that could contribute to a "hostile work environment."

Quotas in hiring:

> It is conceivable that if ENDA is passed, a civil-rights agency could use it to pressure some employers to adopt sexual-orientation-based hiring goals or veiled quotas, notwithstanding the language of Section 4(f) of ENDA. Activists have already pressured President Obama to mandate sexual-orientation-based hiring goals for government contractors.

Bathroom privacy:

> Finally, in addition to banning sexual-orientation discrimination, ENDA also contains "transgender rights" provisions that ban discrimination based on "gender identity." Similar prohibitions in state laws created legal headaches for some businesses.

I have to admit, I have been operating for the last decade as if this law was already in effect, since I don't want to be singled out for reprisals by management if a law like this is enacted. If you already have a reputation as being pro-marriage and pro-chastity in your workplace and this law gets enacted, you will become a target for censorship and even termination. It would be much easier for your employer to pre-emptively fire you under some pretext than to have to get stuck with millions of dollars in legal fees and penalties for one of these "hostile work environment" lawsuits. I can envision scenarios in which people on the left will solicit your opinion openly in the workplace on controversial issues like gay marriage, etc. and then prosecute you for anything less than full affirmation and enthusiastic celebration of their views. It's already happening in the military now.

It's very important for Christians to consider who they talk to and what they talk about in the workplace. You might think that you have free speech rights in America, but you don't. That is all going away now because of the gay

agenda and the judicial activism in the courts. This is especially true for men who have to provide for their families. If you are going to say anything critical of the secular left, understand that they are fascists, and they will hurt you any way they can. These are not people who believe in human rights. They believe in using power to destroy anyone who offends them by mere disagreement.

# What makes a planet suitable for supporting complex life?

**Wintery Knight** · 5 November 2013 · Archived copy · Original

**The Circumstellar Habitable Zone (CHZ)**

What do you need in order to have a planet that supports complex life? First, you need liquid water at the surface of the planet. But there is only a narrow range of temperatures that can support liquid water. It turns out that the size of the star that your planet orbits around has a lot to do with whether you get liquid water or not. A heavy, metal-rich star allows you to have a habitable planet far enough from the star so the planet can support liquid water on the planet's surface while still being able to spin on its axis. The zone where a planet can have liquid water at the surface is called the circumstellar habitable zone (CHZ). A metal-rich star like our Sun is very massive, which moves the habitable zone out further away from the star. If our star were smaller, we would have to orbit much closer to the star in order to have liquid water at the surface. Unfortunately, if you go too close to the star, then your planet becomes tidally locked, like the moon is tidally locked to Earth. Tidally locked planets are inhospitable to life.

Circumstellar Habitable Zone
Here, watch a clip from The Privileged Planet: (Clip 4 of 12, full playlist here)

But there's more.

**The Galactic Habitable Zone (GHZ)**

So, where do you get the heavy elements you need for your heavy metal-rich star?

You have to get the heavy elements for your star from supernova explosions – explosions that occur when certain types of stars die. That's where heavy elements come from. But you can't be TOO CLOSE to the dying stars, because you will get hit by nasty radiation and explosions. So to get the heavy elements from the dying stars, your solar system needs to be in the galactic habitable zone (GHZ) – the zone where you can pickup the heavy elements you need but not get hit by radiation and explosions. The GHZ lies between the spiral arms of a spiral galaxy. Not only do you have to be in between the arms of the spiral galaxy, but you also cannot be too close to the center of the galaxy. The center of the galaxy is too dense and you will get hit with massive radiation that will break down your life chemistry. But you also can't be too far from the center, because you won't get enough heavy elements because there are fewer dying stars the further out you go. You need to be in between the spiral arms, a medium distance from the center of the galaxy.

Like this:

Galactic Habitable Zone and Solar Habitable Zone
Here, watch a clip from The Privileged Planet: (Clip 10 of 12, full playlist here)

The GHZ is based on a discovery made by astronomer Guillermo Gonzalez, which made the front cover of Scientific American in 2001. That's right, the cover of Scientific American. I actually stole the image above of the GHZ and CHZ (aka solar habitable zone) from his Scientific American article (linked above).

These are just a few of the things you need in order to get a planet that supports life.

Here are a few of the more well-known ones:

- a solar system with a single massive Sun than can serve as a long-lived, stable source of energy
- a terrestrial planet (non-gaseous)
- the planet must be the right distance from the sun in order to preserve liquid water at the surface – if it's too close, the water is burnt off in a runaway greenhouse effect, if it's too far, the water is permanently frozen in a runaway glaciation
- the solar system must be placed at the right place in the galaxy – not too near dangerous radiation, but close enough to other stars to be able to absorb heavy elements after neighboring stars die
- a moon of sufficient mass to stabilize the tilt of the planet's rotation
- plate tectonics
- an oxygen-rich atmosphere
- a sweeper planet to deflect comets, etc.
- planetary neighbors must have non-eccentric orbits

By the way, you can watch a lecture with Guillermo Gonzalez explaining his ideas further. This lecture was delivered at UC Davis in 2007. That link has a link to the playlist of the lecture, a bio of the speaker, and a summary of all the topics he discussed in the lecture. An excellent place to learn the requirements for a suitable habitat for life.

# Obama administration decides to exempt Obamacare from fraud prevention rules

**Wintery Knight** · 6 November 2013 · Archived copy · Original

From the radically left-wing New York Times, of all places.

Excerpt:

> The Affordable Care Act is the biggest new health care program in decades, but the Obama administration has ruled that neither the federal insurance exchange nor the federal subsidies paid to insurance companies on behalf of low-income people are "federal health care programs."
>
> The surprise decision, disclosed last week, exempts subsidized health insurance from a law that bans rebates, kickbacks, bribes and certain other financial arrangements in federal health programs, stripping law enforcement of a powerful tool used to fight fraud in other health care programs, like Medicare.
>
> The main purpose of the anti-kickback law, as described by federal courts in scores of Medicare cases, is to protect patients and taxpayers against the undue influence of money on medical decisions.
>
> Kathleen Sebelius, the secretary of health and human services, disclosed her interpretation of the law in a letter to Representative Jim McDermott, Democrat of Washington, who had asked her views. She did not explain the legal rationale for her decision, which followed a spirited debate within the administration.

It's all exempt from oversight laws:

> Most of the buyers are expected to be eligible for subsidies to make insurance more affordable. The subsidies, paid directly to insurers from the United States Treasury, start in January and are expected to total more than $1 trillion over 10 years.
>
> Ms. Sebelius said the Health and Human Services Department "does not consider" the subsidies to be federal health care programs. She reached the same conclusion with respect to federal and state exchanges, built with federal money, and with respect to "federally funded consumer assistance programs," including the counselors, known as navigators, who help people shop for insurance and enroll in coverage through the exchanges.

What could go wrong? What could go wrong if the government hires "federal consumer assistants" like ACORN workers and other "community organizers" in order to administer federal subsidies? I think it will be fine. It will all work out great.

Oh, wait. I suppose that it's *possible* that something like this might happen:

> The Centers for Medicare and Medicaid Services (CMS) spent almost $29 million to cover Medicare Part D prescription drugs for 4,139 individuals "unlawfully present" in the U.S. and thus ineligible to receive federal health care benefits, according to an audit by Daniel Levinson, inspector general of the Department of Health & Human Services.
>
> […]CMS "inappropriately accepted 279,056 PDE [prescription drug event] records with unallowable gross drug costs totaling $28,990,718" between 2009 and 2011, Levinson reported. Total federal expenditures under Medicare Part D during that same two-year time period came to $227 billion.
>
> Medicare Parts A and B cover hospitalization, skilled nursing care, doctor visits, and other medical services and supplies. The IG previously reported in January that CMS had also paid $91.6 million to health care providers to cover 2,600 ineligible illegal aliens.

Now failure like this could never take place in the private sector, because companies would go out of business. But

in the government, they just borrow a trillion or two more from your children and call it even. That's why we should never let the government get involved in things that are best handled by free trades between buyers and multiple sellers who must compete with each other. Health care is not something you hand off to a monopoly. At least, not if you expect transparency, affordability and quality.

# Democrats win Virginia governorship, aided by Democrat-funded Libertarian candidate

**Wintery Knight** · 6 November 2013 · Archived copy · Original

At the time of writing, it looks like the Libertarian candidate has succeeded in guaranteeing that Democrat policies will be implemented in Virginia.

Election results: (at time of writing)

- Terry McAuliffe (D) 47.4% 1,021,298 votes
- Ken Cuccinelli II (R) 46.0% 989,584 votes
- Robert Sarvis (L) 6.6% 142,338 votes

Libertarian candidates don't usually draw 7% of the vote – so what happened?

The Blaze explains in this article.

Excerpt:

> A major Democratic Party benefactor and Obama campaign bundler helped pay for professional petition circulators responsible for getting Virginia Libertarian gubernatorial candidate Robert C. Sarvis on the ballot — a move that could split conservative votes in a tight race.
>
> Campaign finance records show the Libertarian Booster PAC has made the largest independent contribution to Sarvis' campaign, helping to pay for professional petition circulators who collected signatures necessary to get Sarvis' name on Tuesday's statewide ballot.
>
> Austin, Texas, software billionaire Joe Liemandt is the Libertarian Booster PAC's major benefactor. He's also a top bundler for President Barack Obama. This revelation comes as Virginia voters head to the polls Tuesday in an election where some observers say the third-party gubernatorial candidate could be a spoiler for Republican Ken Cuccinelli.
>
> […]According to Virginia election filings posted by the Virginia Public Access Project, Liemandt contributed $150,000 of the Texas-based Libertarian Booster PAC's $229,000 revenue. The Libertarian Booster PAC reported providing $11,454 to pay for signature collection, yard signs and campaign materials for Sarvis and another $4,690 for four Libertarian candidates running for the Virginia state legislature.

I do think that it's OK to vote Libertarian when an election is not in doubt, but this election was close. Cuccinelli has an "A" rating from the NRA, but McAuliffe has an "F" rating from the NRA. He is very likely to put in stricter gun control measures in Virginia. I hope that people learn something about politics from this election. I would really like to see short and long guns banned completely in Virginia, and door-to-door confiscations by SWAT teams. Maybe then libertarians will learn the consequences of their voting from real life.

# Duke U. researcher: 129 million people will lose health insurance under Obamacare

**Wintery Knight** · 6 November 2013 · Archived copy · Original

From the Daily Caller.

Excerpt:

> If Obamacare is fully implemented, 68 percent of Americans with private health insurance will not be able to keep their plan, according to health care economist Christopher Conover.
>
> Conover is a research scholar in the Center for Health Policy & Inequalities Research at Duke University and an adjunct scholar at the American Enterprise Institute. In an interview with The Daily Caller, he laid out what he estimates the consequences of Obamacare's implementation will ultimately be.
>
> "Bottom line: of the 189 million Americans with private health insurance coverage, I estimate that if Obamacare is fully implemented, at least 129 million (68 percent) will not be able to keep their previous health care plan either because they already have lost or will lose that coverage by the end of 2014," he said in an email. "But of these, 'only' the 18 to 50 million will literally lose coverage, i.e., have their plans entirely taken away. This includes 9.2-15.4 million in the non-group market and 9-35 million in the employer-based market. The rest will retain their old plans but have to pay higher rates for Obamacare-mandated bells and whistles."
>
> Conover also says it is hard to imagine President Obama didn't know these statistics when he was flacking for his health care bill by promising Americans they could keep their health insurance if they liked it.
>
> "If President Obama himself believed this the first time he said it, he was poorly advised," Conover said.
>
> "The problem is that he said it at least 24 times, most of which occurred after his own rule-writers had estimated that 49-80 percent of small employer plans would have lost their grandfather status by 2013, along with 34-64 percent of large employer plans. The same rule estimated that each year 40 to 67 percent of non-group plans not already grandfathered would lose their grandfather status. Given how extensively presidential statements — especially to a joint session of Congress — are vetted and fact-checked, it is pretty inconceivable that President Obama was not aware that he was engaged in some degree of truth-twisting."

Surprise! It looks like what the Democrats wanted was to destroy private health insurance, after all. The nice thing about this is that *finally* the low-information voters who elected Obama are getting to see why it might be a good idea to get their political news from somewhere other than the Comedy Channel.

# Formation of life-permitting elements carbon and oxygen is fine-tuned

**Wintery Knight** · 6 November 2013 · Archived copy · Original

First, let's review the structure of the fine-tuning argument.

The argument goes like this:

1. The fine-tuning of the universe to support life is either due to law, chance or design
2. It is not due to law or chance
3. Therefore, the fine-tuning is due to design

Here are the facts on the fine-tuning:

- Life has certain minimal requirements; long-term stable source of energy, a large number of different chemical elements, an element that can serve as a hub for joining together other elements into compounds, a universal solvent, etc.
- In order to meet these minimal requirements, the physical constants, (such as the gravitational constant), and the ratios between physical constants, need to be withing a narrow range of values in order to support the minimal requirements for life of any kind.
- Slight changes to any of the physical constants, or to the ratios between the constants, will result in a universe inhospitable to life.
- The range of possible values spans 70 orders of magnitude.
- The constants are *selected* by whoever creates the universe. They are not determined by physical laws. And the extreme probabilities involved required put the fine-tuning beyond the reach of chance.
- Although each individual selection of constants and ratios is as unlikely as any other selection, the vast majority of these possibilities do not support the minimal requirements of life of any kind. (In the same way as any hand of 5 cards that is dealt is as likely as any other, but you are overwhelmingly likely NOT to get a royal flush. In our case, a royal flush is a life-permitting universe).

Carbon is that element that can serve as a hub, and oxygen is also a vital element, since it is a component of water, which is required for life. So both carbon (the hub of large molecules) and oxygen (a building block of water) are required for complex life of any imaginable kind.

Now for the study.

Mysterious Jen, who blogs at Victory Rolls and V8s sent me this amazing article on Science Daily about a new peer-reviewed study that supports the fine-tuning argument.

Here's an excerpt:

> Life as we know it is based upon the elements of carbon and oxygen. Now a team of physicists, including one from North Carolina State University, is looking at the conditions necessary to the formation of those two elements in the universe. They've found that when it comes to supporting life, the universe leaves very little margin for error.
>
> Both carbon and oxygen are produced when helium burns inside of giant red stars. Carbon-12, an essential element we're all made of, can only form when three alpha particles, or helium-4 nuclei, combine in a very specific way. The key to formation is an excited state of carbon-12 known as the Hoyle state, and it has a very specific energy — measured at 379 keV (or 379,000 electron volts) above the energy of three alpha particles. Oxygen is produced by the combination of another alpha particle and carbon.

> NC State physicist Dean Lee and German colleagues Evgeny Epelbaum, Hermann Krebs, Timo Laehde and Ulf-G. Meissner had previously confirmed the existence and structure of the Hoyle state with a numerical lattice that allowed the researchers to simulate how protons and neutrons interact. These protons and neutrons are made up of elementary particles called quarks. The light quark mass is one of the fundamental parameters of nature, and this mass affects particles' energies.
>
> **In new lattice calculations done at the Juelich Supercomputer Centre the physicists found that just a slight variation in the light quark mass will change the energy of the Hoyle state, and this in turn would affect the production of carbon and oxygen in such a way that life as we know it wouldn't exist.**
>
> […]The researchers' findings appear in *Physical Review Letters*.

So that's the latest research that supports the fine-tuning argument. But how effective is this argument really? Is it only admitted by theists, or do atheists accept the fine-tuning as well?

**Is the fine-tuning real?**

Yes, it's real and it is conceded by the top-rank of atheist physicists. Let me give you a citation from the best one of all, Martin Rees. Martin Rees is an atheist and a qualified astronomer. He wrote a book called "Just Six Numbers: The Deep Forces That Shape The Universe", (Basic Books: 2001). In it, he discusses 6 numbers that need to be fine-tuned in order to have a life-permitting universe.

Rees writes here:

> These six numbers constitute a 'recipe' for a universe. Moreover, the outcome is sensitive to their values: if any one of them were to be 'untuned', there would be no stars and no life. Is this tuning just a brute fact, a coincidence? Or is it the providence of a benign Creator?

There are some atheists who deny the fine-tuning, but these atheists are in firm opposition to the progress of science. The more science has progressed, the more constants, ratios and quantities we have discovered that need to be fine-tuned. Science is going in a theistic direction. Next, let's see how atheists try to account for the fine-tuning, on atheism.

**Atheistic responses to the fine-tuning argument**

There are two common responses among atheists to this argument.

The first is to speculate that there are actually an infinite number of other universes that are not fine-tuned, (i.e. – the gambler's fallacy). All these other universes don't support life. We just happen to be in the one universe is fine-tuned for life. The problem is that there *is no way of directly observing these other universes and no independent evidence that they exist.*

Here is an excerpt from an article in Discover magazine, (which is hostile to theism and Christianity).

> Short of invoking a benevolent creator, many physicists see only one possible explanation: Our universe may be but one of perhaps infinitely many universes in an inconceivably vast multiverse. Most of those universes are barren, but some, like ours, have conditions suitable for life.
>
> The idea is controversial. Critics say it doesn't even qualify as a scientific theory because the existence of other universes cannot be proved or disproved. Advocates argue that, like it or not, the multiverse may well be the only viable nonreligious explanation for what is often called the "fine-tuning problem"—the baffling observation that the laws of the universe seem custom-tailored to favor the emergence of life.

The second response by atheists is that the human observers that exist today, 14 billion years after the universe was created out of nothing, actually caused the fine-tuning. This solution would mean that although humans did not exist

at the time the of the big bang, they are going to be able to reach back in time at some point in the future and manually fine-tune the universe.

Here is an excerpt from and article in the New Scientist, (which is hostile to theism and Christianity).

> …maybe we should approach cosmic fine-tuning not as a problem but as a clue. Perhaps it is evidence that we somehow endow the universe with certain features by the mere act of observation… observers are creating the universe and its entire history right now. If we in some sense create the universe, it is not surprising that the universe is well suited to us.

So, there are two choices for atheists. Either an infinite number of unobservable universes that are not fine-tuned, or humans go back in time at some future point and fine-tune the beginning of the universe, billions of years in the past. I think I will prefer the design explanation to those alternatives.

# Gay activist Dan Savage: abortion should be mandatory for the next 30 years

**Wintery Knight** · 7 November 2013 · Archived copy · Original

Gay activist Dan Savage thinks that we should murder every single child born on the planet for the next 30 years, against the will of the parents, in every single country in the world.

The Daily Caller explains what happened. (H/T Mysterious Wes)

Excerpt:

> Self-styled anti-bullying advocate Dan Savage told a giggling and applauding audience in Australia that "abortion should be mandatory for 30 years" on Monday during a panel discussion on Christianity, marriage and sex.
>
> Savage made his remarks during a program titled "Q&A, Adventures in Democracy" broadcasted from the Sydney Opera House Concert Hall on Monday in response to the question: "Which so-called dangerous idea do you each think would have the greatest potential to change the world for the better if it were implemented?"
>
> "Population control: There's too many goddam people on the planet," Savage said as the audience burst into applause at his predictable response. "You know, I'm pro-choice. I believe that women should have a right to control their bodies. Sometimes in my darker moments, I'm anti-choice. I think abortion should be mandatory for about 30 years."
>
> Savage, creator of the "It Gets Better" viral video anti-suicide crusade on behalf of gay teens, takes a hateful, violent pro-death position toward everyone who irritates him, from unborn babies to hapless Green Party candidates standing in the way of total Democratic domination.
>
> "I wish [Republicans] were all f***ing dead," he said on liberal comedian Bill Maher's HBO show "Real Time" in 2011 during the debt-ceiling brouhaha.
>
> Back in 2006, Savage called for the barbaric murder of a Green Party candidate, angered by the threat of third-party candidates to spoil the Democratic Senate victory of Bob Casey.
>
> "Carl Romanelli should be dragged behind a pickup truck until there's nothing left but the rope," Savage told the Daily Pennsylvanian, alluding to the 1998 torture and death of hate crime victim James Byrd, Jr.
>
> Voters thinking of casting a ballot for Romanelli should be "beaten," said Savage, who had previously used the beating death of 21-year-old gay teen Matthew Shepard as blog post fodder.

Remember, this is just what he says in public. Can you imagine what his real views are?

The Obama administration is a big fan of Dan Savage:

> President Barack Obama himself supports Savage's "It Gets Better" campaign, devoting a page of WhiteHouse.gov to it as a civil rights issue.
>
> Obama appears to share Savage's view on abortion as well: During his tenure in the Illinois state legislature, Obama spoke and voted against a version of the "Born Alive Infants Protection Act," which would have made it illegal to kill a living, breathing, defenseless child that survived an abortion.

It's very important to take a close look at what gay activists say and do. Below are a couple of examples of what gay activists do.

From the leftist Washington Post.

Excerpt:

> A satellite church affiliated with controversial Seattle pastor Mark Driscoll was vandalized early Tuesday (April 24) and a group calling itself the "Angry Queers" has reportedly taken responsibility.
>
> Stained glass and other windows were broken at the Mars Hill Church, according to a post on the Facebook page of Pastor Tim Smith.
>
> "Neighbors of the church reported seeing several young adults in black masks throwing large rocks into the windows," a church news release said. "Police stated that a bank in the area was also vandalized in the same way and that they believe the vandalism was planned ahead of time, most likely by an activist group."
>
> On Tuesday, KPTV FOX 12 reported it had received an email from someone using the name "Angry Queers" and claiming responsibility.
>
> Mars Hill Portland opened last October. During the first service, protesters gathered in front of the church and yelled obscenities at worshipers to speak out against the church's stance on homosexuality.

Here's part of the e-mail written by the gay activists responsible for the attack:

> The e-mail, which is peppered with foul language, berates the Q Center, a local LGBT activist organization, for engaging in a dialogue with the Mars Hill's leadership. "What we have to say to the Q Center is this: F—K YOU, you don't represent us. You are disgusting traitors who prioritize social peace and the bourgeois aspirations of rich white cis gay people over the more pressing survival needs of more marginalized queers."
>
> "F—k dialog with people who want us dead," the e-mail read. "The only dialog we need with scum like Mars Hill is hammers through their windows."
>
> "We hope this small act of vengeance will strike some fear into the hearts of all of Mars Hill's pastors, and warm the hearts of our friends and comrades (known or unknown). It may not get better, but we can certainly get even," it concludes.

You can read about a few more examples of gay activism here and a more recent example of gay activism here.

And of course, we can't forget the prominent gay activist Floyd Corkins, who was convicted of domestic terrorism for his attack on the Family Research Council.

> The man accused of opening fire and shooting a security guard at the conservative Family Research Council headquarters last August plead guilty to three charges in a D.C. federal court Wednesday.
>
> Floyd Lee Corkins, II of Herndon, Virginia entered guilty pleas to a federal weapons charge as well as a local terrorism charge and a charge of assault with intent to kill, according to news reports.
>
> The Washington Post reports that, according to the plea agreement Corkins signed, he told FBI agents on the day of the shooting that he "intended to kill as many people as possible" and planned to "smother Chick-fil-A sandwiches in their faces."
>
> Investigators found additional magazines and 15 Chick-fil-A sandwiches in his backpack on the day of the shooting.
>
> Following the guilty plea the FRC issued a statement placing a large portion of the blame for the shooting at the feet of the liberal Southern Poverty Law Center, which had listed FRC as a hate group. FRC noted that prosecutors discovered Corkins identified his targets on the SPLC's website.
>
> "The day after Floyd Corkins came into the FRC headquarter and opened fire wounding one of our team members, I stated that while Corkins was responsible for the shooting, he had been given a license to perpetrate this act of violence by groups like the Southern Poverty Law Center which has systematically and recklessly labeled every organization with which they disagree as a 'hate group,'" FRC president Tony Perkins

> said in a statement, which went on to demand that SPLC stop attacking organizations that have a different opinion on gay rights.

The Human Rights Campaign, a very large and influential gay rights group favored by Democrats, joins the SPLC and the convicted domestic terrorist Floyd Corkins in condemning the FRC as a "hate group". Gay activists continued to condemn the FRC after the terrorist attack had occurred.

You can read more about the views of Floyd Corkins here, and note this:

> Corkins told the FBI he found the FRC building as his target using a "hate map" on the website of the Southern Poverty Law Center (SPLC). The SPLC refuses to acknowledge any responsibility for the shooting. SPLC still lists FRC as a hate group and continues to maintain a map to FRC's office building on the SPLC website.

Now read this quotation from Dan Savage:

> Dan Savage often speaks on college campuses and on television as a liberal commentator. He often makes controversial remarks, such as saying that Family Research Council President Tony Perkins, in opposing homosexual behavior, contributes to gay suicide.
>
> On Sept. 27, 2012, Savage told a student audience at Winona State University, "[E]very dead gay kid is a victory for the Family Research Council. They argue that the gay lifestyle is sick and sinful and dangerous and they point to the suicide rate, and then they turn around and do everything in their power to make sure that suicide rate does not come down and to drive it up."
>
> "Tony Perkins sits on a pile of dead gay kids every day when he goes to work — and he calls himself a Christian," said Savage. "I don't understand how real Christians let that little f–ker get away with that."

What does the FRC do? They put out research papers showing the importance of mothers *and* fathers to children. That's what gay activists consider to be "hate". It's very important to understand what gay activists actually say. I have no doubt that if you ask gay activists like Dan Savage and Floyd Corkins whether they are tolerant people, they would say "of course we are tolerant". So you have to look for yourself at what they say, and what they do, and judge for yourself whether they are as tolerant as they want you to believe.

# American health care: does it cause poor life-expectancy and high infant mortality?

**Wintery Knight** · 7 November 2013 · Archived copy · Original

Probably one of the best health care policy experts writing today is Avik Roy, who writes for Forbes magazine.

Here is his latest column, which I think is useful for helping us all get better at debating health care policy. (H/T Matt from Well Spent Journey)

Excerpt:

> It's one of the most oft-repeated justifications for socialized medicine: Americans spend more money than other developed countries on health care, but don't live as long. If we would just hop on the European health-care bandwagon, we'd live longer and healthier lives. The only problem is it's not true.
>
> […]If you really want to measure health outcomes, the best way to do it is at the point of medical intervention. If you have a heart attack, how long do you live in the U.S. vs. another country? If you're diagnosed with breast cancer? In 2008, a group of investigators conducted a worldwide study of cancer survival rates, called CONCORD. They looked at 5-year survival rates for breast cancer, colon and rectal cancer, and prostate cancer. I compiled their data for the U.S., Canada, Australia, Japan, and western Europe. Guess who came out number one?

Here is the raw data:

**5-Year Relative Survival Rates in Various Cancers, From the CONCORD Study (2008)**

| Country | Breast Women | Colorectal Men | Colorectal Women | Prostate | Average |
|---|---|---|---|---|---|
| United States | 83.9% | 59.1% | 60.2% | 91.9% | **73.8%** |
| Canada | 82.5% | 55.3% | 58.9% | 85.1% | **70.5%** |
| Australia | 80.7% | 56.7% | 58.2% | 77.4% | **68.3%** |
| Austria | 74.9% | 52.7% | 55.1% | 86.1% | **67.2%** |
| Germany | 75.5% | 50.1% | 55.0% | 76.4% | **64.3%** |
| Sweden | 82.0% | 52.8% | 56.2% | 66.0% | **64.3%** |
| Netherlands | 77.6% | 53.6% | 55.1% | 69.5% | **64.0%** |
| Iceland | 79.0% | 49.5% | 54.0% | 69.7% | **63.1%** |
| Japan | 81.6% | 61.1% | 57.3% | 50.4% | **62.6%** |
| Finland | 80.2% | 52.5% | 54.0% | 62.9% | **62.4%** |
| Italy | 79.5% | 50.7% | 52.7% | 65.4% | **62.1%** |
| Norway | 76.3% | 51.1% | 55.3% | 63.0% | **61.4%** |
| Spain | 77.7% | 52.5% | 54.7% | 60.5% | **61.4%** |
| Ireland | 69.6% | 46.0% | 50.0% | 62.8% | **57.1%** |
| Portugal | 72.2% | 46.5% | 44.7% | 47.7% | **52.8%** |
| UK | 69.7% | 42.3% | 44.7% | 51.1% | **52.0%** |
| Denmark | 73.6% | 44.2% | 47.7% | 38.4% | **51.0%** |
| Switzerland | 76.0% | N/A | N/A | N/A | **N/A** |

Health care outcomes by country and type of treatment
Click here to see the larger graph.

So, what explains this?

The article continues:

> Another point worth making is that people die for other reasons than health. For example, people die because of car accidents and violent crime. A few years back, Robert Ohsfeldt of Texas A&M and John Schneider of the University of Iowa asked the obvious question: what happens if you remove deaths from fatal injuries from the life expectancy tables? Among the 29 members of the OECD, the U.S. vaults from 19th place to…you guessed it…first. Japan, on the same adjustment, drops from first to ninth.
>
> It's great that the Japanese eat more sushi than we do, and that they settle their arguments more peaceably. But these things don't have anything to do with socialized medicine.

> Finally, U.S. life-expectancy statistics are skewed by the fact that the U.S. doesn't have one health-care system, but three: Medicaid, Medicare, and private insurance. (A fourth, the Obamacare exchanges, is supposed to go into effect in 2014.) As I have noted in the past, health outcomes for those on government-sponsored insurance are worse than for those on private insurance.
>
> To my knowledge, no one has attempted to segregate U.S. life-expectancy figures by insurance status. But based on the data we have, it's highly likely that those on private insurance have the best life expectancy, with Medicare patients in the middle, and the uninsured and Medicaid at the bottom.

I know that my readers who like to dig deep into economics and policy will love the links at the bottom of the article:

> For further reading on the topic of life expectancy, here are some recommendations. Harvard economist Greg Mankiw discusses some of the confounding factors with life expectancy statistics, citing this NBER study by June and Dave O'Neill comparing the U.S. and Canada. (Mankiw calls the misuse of U.S. life expectancy stats "schlocky.") Chicago economist Gary Becker makes note of the CONCORD study in this blog post. In 2009, Sam Preston and Jessica Ho of the University of Pennsylvania published a lengthy analysis of life expectancy statistics, concluding that "the low longevity ranking of the United States is not likely to be a result of a poorly functioning health care system."

The funniest thing I have found when talking to people from countries with socialized health care systems, like Canada and the UK, is that they are woefully uninformed about American health care. They literally do not know about free emergency room care, which is free for anyone regardless of insurance – including illegal aliens. They do not know about our expensive Medicaid program, which helps people who cannot afford health insurance. And our very very expensive Medicare program, which provides health care to the elderly – *including prescription drugs*. I get the feeling that foreign critics of American health care are getting their views from amateur documentaries produced by uneducated Hollywood propagandists, or maybe from TV shows on the Comedy Channel. They certainly are not getting their information from peer-reviewed studies by credentialed scholars from top universities, like the ones cited above.

I have literally spoken to Canadians who think that people in the USA without insurance do not get treatment and just *die in the streets from stab wounds.* They don't know about the emergency room rule, or about charity care, or about Medicaid and Medicare. There is a lot of ignorance up there – wilful ignorance, in some cases. And keep in mind that the average Canadian household is paying over $11,000 a year for this substandard health care! They are paying more for less, and that's not surprising since a large chunk of the taxes that are collected for health care go to overpaid unionized bureaucrats. Naturally, when their left-wing politicians need treatment, the first place they go is to the United States, where they pay out of pocket for the better health care. But that doesn't stop them from denouncing American health care when they are talking to voters.

**Higher infant mortality rates?**

One of the other common arguments you hear from uninformed people outside the USA is the higher infant mortality rates argument.

Here's an article by Stanford University professor Scott Atlas to explain why the argument fails.

Excerpt:

> Virtually every national and international agency involved in statistical assessments of health status, health care, and economic development uses the infant-mortality rate — the number of infants per 1,000 live births who die before reaching the age of one — as a fundamental indicator. America's high infant-mortality rate has been repeatedly put forth as evidence "proving" the substandard performance of the U.S. health-care system.

> […]n a 2008 study, Joy Lawn estimated that a full three-fourths of the world's neonatal deaths are counted only through highly unreliable five-yearly retrospective household surveys, instead of being reported at the time by hospitals and health-care professionals, as in the United States. Moreover, the most premature babies — those with the highest likelihood of dying — are the least likely to be recorded in infant and neonatal mortality statistics in other countries. Compounding that difficulty, in other countries the underreporting is greatest for deaths that occur very soon after birth.
>
> […]The United States strictly adheres to the WHO definition of live birth (any infant "irrespective of the duration of the pregnancy, which . . . breathes or shows any other evidence of life . . . whether or not the umbilical cord has been cut or the placenta is attached") and uses a strictly implemented linked birth and infant-death data set. On the contrary, many other nations, including highly developed countries in Western Europe, use far less strict definitions, all of which underreport the live births of more fragile infants who soon die. As a consequence, they falsely report more favorable neonatal- and infant-mortality rates.
>
> […]Neonatal deaths are mainly associated with prematurity and low birth weight. Therefore the fact that the percentage of preterm births in the U.S. is far higher than that in all other OECD countries — 65 percent higher than in Britain, and more than double the rate in Ireland, Finland, and Greece — further undermines the validity of neonatal-mortality comparisons.

You can listen to a podcast with Dr. Atlas here, from the Library of Economics web site.

If you want to read more about how American health care compares with health care in socialized systems, read this article by Stanford University professor of medicine Dr. Scott Atlas. And you can get his book "In Excellent Health: Setting the Record Straight on America's Health Care" from Amazon.

# How Earth-like are the 8.8 billion Earth-like planets from a recent estimate?

**Wintery Knight** · 7 November 2013 · Archived copy · Original

Previously, I blogged about a few of the minimum requirements that a planet must satisfy in order to support complex life.

Here they are:

- a solar system with a single massive Sun than can serve as a long-lived, stable source of energy
- a terrestrial planet (non-gaseous)
- the planet must be the right distance from the sun in order to preserve liquid water at the surface – if it's too close, the water is burnt off in a runaway greenhouse effect, if it's too far, the water is permanently frozen in a runaway glaciation
- the solar system must be placed at the right place in the galaxy – not too near dangerous radiation, but close enough to other stars to be able to absorb heavy elements after neighboring stars die
- a moon of sufficient mass to stabilize the tilt of the planet's rotation
- plate tectonics
- an oxygen-rich atmosphere
- a sweeper planet to deflect comets, etc.
- planetary neighbors must have non-eccentric orbits

Now what happens if we disregard all of that, and just classify an Earth-like planet as one which only has to *potentially* support liquid water at the surface? Well, you get a very high estimate of Earth-like planets.

Science journalist Denyse O'Leary responds to a recent estimate based on this questionable criterion, which placed the number of Earth-like planets at 8.8 billion.

Excerpt: (links removed)

> A current official definition of habitable planets is "in the zone around the star where liquid water could exist," but the ones discovered so far are unsuitable in many other ways.
>
> Then a new cosmology term hit the media, "super-Earths." It means "bigger than Earth," but smaller than gas giant Neptune. Super-Earths could be the most numerous type of planet, in tight orbits around their star — which is actually bad news for life.Nonetheless, some insist, they may be more attractive to life than Earth is. Indeed, the Copernican Principle allows us to assume that some are inhabited already.
>
> In reality, even the rocky exoplanets (known as of early 2013) that are Earth-sized are not Earth-like. For example, the Kepler mission's first rocky planet find is described as follows: "Although similar in size to Earth, its orbit lasts just 0.84 days, making it likely that the planet is a scorched, waterless world with a sea of lava on its starlit side." As space program physicist Rob Sheldon puts it, Earth is a rocky planet but so is a solid chunk of iron at 1300 degrees orbiting a few solar radii above the star. In any event, a planet may *look* Earth-like but have a very different internal structure and atmosphere."

David Klinghoffer notes that the study is estimating that 8.8 billion number, but the actual number of Earth-like planets *we can see* is much lower.

He writes:

> The study is supposed to be a major step forward because of its unprecedented accuracy:

> For the first time, scientists calculated — not estimated — what percent of stars that are just like our sun have planets similar to Earth: 22 percent, with a margin of error of plus or minus 8 percentage points.
>
> Oh! You see, they calculated. They didn't just estimate.
>
> Because there are probably hundreds of planets missed for every one found, the study did intricate extrapolations to come up with the 22 percent figure — a calculation that outside scientists say is fair.
>
> Oh. They calculated in the sense of "extrapolating" to "come up" with a figure. In other words, they estimated. The figure of "8.8 billion stars with Earth-size planets in the habitable temperature zone" comes down a bit too when you talk about actual planets that have been observed instead of being merely conjectured and "calculated."
>
> Scientists at a Kepler science conference Monday said they have found 833 new candidate planets with the space telescope, bringing the total of planets they've spotted to 3,538, but most aren't candidates for life.
>
> **Kepler has identified only 10 planets that are about Earth's size circling sun-like stars and are in the habitable zone, including one called Kepler 69-c.**
>
> Ah hah. So from the initial, trumpets-blaring figure of 8.8 billion we're down more realistically to 10. Not 10 billion, just 10. Meanwhile the silence from space continues absolutely unabated.
>
> That's the way it tends to go with stories like this, the blaring headline and the inevitable letdown.

One part of the AP press release makes the point that the estimate *does not* include all the minimum requirements for life. For example, you need an atmosphere, as I stated above. Do the estimated 8.8 billion Earth-like planets have an Earth-like atmosphere? How about an oxygen-rich atmosphere, do the 8.8 billion Earth-like planets have that?

NO:

> The next step, scientists say, is to look for atmospheres on these planets with powerful space telescopes that have yet to be launched. That would yield further clues to whether any of these planets do, in fact, harbor life.

You know, after the whole global warming hoax, you would think that these headline writers would have learned their lesson about sensationalizing wild-assed guesses in order to scare up more research money. But a lot of true-believing naturalists are just going to read the headline and not the rest of the article, and they will never know that they've been had. Again. I love experimental science, but I don't love the politicization of science.

# What happens when we die?

**Wintery Knight** · 8 November 2013 · Archived copy · Original

Pastor Matt has been reading again. This time it's a book on theology by Australian New Testament historian Michael Bird. In this recent blog post, Pastor Matt explains what people can expect to find after they die.

Excerpt:

> Luke 23:39-43 records the following:
>
> 39 One of the criminals who were hanged railed at him, saying, "Are you not the Christ? Save yourself and us!" 40 But the other rebuked him, saying, "Do you not fear God, since you are under the same sentence of condemnation? 41 And we indeed justly, for we are receiving the due reward of our deeds; but this man has done nothing wrong." 42 And he said, "Jesus, remember me when you come into your kingdom." 43 And he said to him, "Truly, I say to you, today you will be with me in Paradise."
>
> Is "Paradise" heaven? Michael Bird points out in his new book Evangelical Theology (Zondervan 2013), that while the Greek word translated as "Paradise" is used to describe heaven in 2 Cor. 12:4 and Rev. 2:7 it cannot mean heaven here. Why? According to John 20:17, which records Jesus' resurrection encounter with Mary Magdalene, He had not yet "ascended to the Father".
>
> So where is "Paradise"? Most likely it is an intermediate state for the dead known by ancients as Hades (see also Acts 2:27, 31 and 1 Peter 3:19-21). So, during the three days that Jesus' body lay in the tomb, He joined the dead in Hades. But after his resurrection and ascension, He goes to heaven to sit at the right hand of the Father (see Acts 7:55; Eph. 1:20-23, etc.).
>
> So do people still go to Hades? Christians don't. The Apostle Paul writes that when we die we go to be with Jesus who is in heaven (2 Cor. 5:1-10; Phil. 1:20-24, etc.) but we will not stay there forever. Jesus will return to create a "new heavens and new earth" (Rev. 21) where we will dwell in eternal physical bodies like Jesus' resurrected body that cannot decay or die (see 1 Cor. 15 and 1 John 3:2). The idea that we sit on a cloud for eternity while playing a harp and wearing a diaper is from Tom & Jerry cartoons, not the Bible.
>
> What about non-Christians? The Book of Revelation still speaks of the existence of Hades (20:14) and that it will one day be thrown into hell. Thus, it is implies that non-Christians do not go directly to hell but to Hades until the final judgment of all humankind.

The rest of the post has a helpful breakdown that summarizes what the Bible teaches about life after death. Recommended.

# Two things you can do to make your marriage last a lifetime

**Wintery Knight** · 8 November 2013 · Archived copy · Original

The first thing is obvious: don't have sex before you're married.

Life Site News explains.

Excerpt:

> Couples who reserve sex for marriage enjoy greater stability and communication in their relationships, say researchers at Brigham Young University.
>
> A new study from the Mormon college found that those couples who waited until marriage rated their relationship stability 22 percent higher than those who started having sex in the early part of their relationship. The relationship satisfaction was 20 percent higher for those who waited, the sexual quality of the relationship was 5 percent better, and communication was 12 percent better.
>
> The study, published in the American Psychological Association's Journal of Family Psychology, involved 2,035 married individuals who participated in a popular online marital assessment called "RELATE." From the assessment's database, researchers selected a sample designed to match the demographics of the married American population. The extensive questionnaire included the question "When did you become sexual in this relationship?"
>
> Couples that became sexually involved later in their relationship – but prior to marriage – reported benefits that were about half as strong as those who waited for marriage.
>
> […]Sociologist Mark Regnerus of the University of Texas at Austin, who was not involved in the study, responded to its findings, saying that "couples who hit the honeymoon too early – that is, prioritize sex promptly at the outset of a relationship – often find their relationships underdeveloped when it comes to the qualities that make relationships stable and spouses reliable and trustworthy." Regnerus is the author of *Premarital Sex in America*, a book forthcoming from Oxford University Press.
>
> Because religious belief often plays a role for couples who choose to wait, Busby and his co-authors controlled for the influence of religious involvement in their analysis.
>
> "Regardless of religiosity, waiting helps the relationship form better communication processes, and these help improve long-term stability and relationship satisfaction," Busby said.

Second, make sure you attend church regularly after you're married.

From Citizen Link.

Excerpt:

> It's a number that is trumpeted from the rooftops — and the pulpit: Half of marriages among Christians and non-Christians alike end in divorce.
>
> But the reality is that Christians who attend church regularly get divorced at a much lower rate.
>
> Professor Bradley Wright, a sociologist at the University of Connecticut, found that among people who identify as Christians but rarely attend church, 60 percent have been divorced. Of those who attend church regularly, 38 percent have been divorced.
>
> W. Bradford Wilcox, a leading sociologist at the University of Virginia and director of the National Marriage Project, found a nearly identical spread between "active conservative Protestants" who regularly attend church and people with no religious affiliation.
>
> Professor Scott Stanley from the University of Denver, who is working on the Oklahoma Marriage Initiative,

> said couples with a vibrant religious faith have more and higher levels of the qualities that marriages need to avoid divorce.
>
> “Whether young or old, male or female, low-income or not, those who said that they were more religious reported higher average levels of commitment to their partners, higher levels of marital satisfaction, less thinking and talking about divorce and lower levels of negative interaction,” he said. “These patterns held true when controlling for such important variables as income, education and age at first marriage.”

I think that young people who are serious about having a successful marriage also need to study research to find out what how to make a marraige that lasts (chastity, pre-marital counseling, church attendance, etc.). Being marriage-minded means developing those skills before the marriage, and working with your partner to the develop the skills that they will need when they take on their role in the marriage.

# William Lane Craig and atheist Daniel Dennett discuss cosmology and fine-tuning

**Wintery Knight** · 8 November 2013 · Archived copy · Original

This audio records a part of the Greer-Heard debate in 2007, between prominent atheist Daniel Dennett and lame theistic evolutionist Alister McGrath. Craig was one of the respondents, and this was the best part of the event. It is a little bit advanced, but I have found that if you listen to things like this over and over with your friends and family, and then try to explain it to non-Christians, you'll get it.

By the way, this is mostly original material from Craig, dated 2007, and he delivers the speech perfectly, so it's entertaining to listen to.

Craig presents three arguments for a Creator and Designer of the universe:

- the contingency argument
- the kalam cosmological argument
- the teleological argument

He also discusses Dennett's published responses to these arguments.

**Dennett's response to Craig's paper**

Here is my snarky paraphrase of Dennett's reponse: (this is very snarky, because Dennett was just awful)

- Craig's three arguments are bulletproof, the premises are plausible, and grounded by the best cutting edge science we know today.
- I cannot find anything wrong with his arguments right now, but maybe later when I go home it will come to me what's wrong with them.
- But atheism is true even if all the evidence is against it today. I know it's true by my blind faith.
- The world is so mysterious, and all the science of today will be overturned tomorrow so that atheism will be rational again. I have blind faith that this new evidence will be discovered any minute.
- Just because the cause of the beginning of time is eternal and the cause of the beginning of space is non-physical, the cause doesn't have to be God.
- "Maybe the cause of the universe is the idea of an apple, or the square root of 7". (HE LITERALLY SAID THAT!)
- The principle of triangulation might have brought the entire physical universe into being out of nothing.
- I don't understand anything about non-physical causation, even though I cannot even speak meaningful sentences unless I have a non-physical mind that is causing my body to emit the meaningful sentences in a non-determined manner.
- Alexander Vilenkin is much smarter than Craig and if he were here he would beat him up good with phantom arguments.
- Alan Guth is much smarter than Craig and if he were here he would beat him up good with phantom arguments.
- This science stuff is so complicated to me – so Craig can't be right about it even though he's published about it and debated it all with the best atheists on the planet.
- If God is outside of time, then this is just deism, not theism. (This part is correct, but Craig believes that God enters into time at the moment of creation – so that it is not a deistic God)
- If deism is true, then I can still be an atheist, because a Creator and Designer of the universe is compatible with atheism.
- I'm pretty sure that Craig doesn't have any good arguments that can argue for Christianity – certainly not an

> historical argument for the resurrection of Jesus based on minimal facts, that he's defended against the most prominent historians on the planet in public debates and in prestigous books and research journals.

This is a very careful treatment of the arguments that Dr. Craig goes over briefly during his debates. Recommended.

# Psychologist claims father is an unfit parent for refusing to yield to son's demands for fast food

**Wintery Knight** · 9 November 2013 · Archived copy · Original

Psychologist Marilyn Schiller
From ABC News.

Excerpt:

> Saying no to a toddler's demands for a McDonald's meal got a father branded an inept parent, he says in a lawsuit claiming a psychologist urged a judge to curtail his parental visits over the dinner debacle.
>
> David E. Schorr says psychologist Marilyn Schiller pronounced him incapable of caring for his nearly 5-year-old son after he offered a choice — dinner anywhere but McDonald's, or no dinner at all — and let the boy choose the latter. He then took his irate son home to the boy's mother's house early from their Oct 30 dinner date, according to a defamation suit Schorr filed Tuesday.
>
> […]"Normally not a very strict father who rarely refuses his child McDonald's," Schorr put his foot down Oct. 30 "because his son had been eating too much junk food," the suit said. Schorr himself didn't immediately return a call Friday.
>
> He quickly regretted his stance when his son threw a tantrum, but he felt that giving in would reward bad behavior, so he offered the elsewhere-or-nowhere "final offer," as his court papers put it.
>
> "The child, stubborn as a mule, chose the 'no dinner' option," the suit says. And the father promptly carted the boy back to Bari Schorr's building, still trying to entice the child into changing his mind as they waited in the lobby for her to get home from work, according to the suit.
>
> Schiller told a judge the fast food flap "raises concerns about the viability" of the father's weekend visits with his son and asked a judge to eliminate or limit them, his lawsuit says.

The NY Post reports that the brat's mother immediately took him to McDonald's.

Excerpt:

> Adding insult to injury, he said: "My wife immediately took him to McDonalds."

> […]But the son apparently tattled on his dad and his wife flipped out and called the shrink, according to the suit.
>
> Schorr claims that Dr. Schiller only interviewed the child and his mother and never asked for his side of the story before telling the court she was gravely concerned about Schorr's parenting.
>
> Bari Yunis Schorr sued her husband for a divorce in 2011, just four years after they married in a lavish ceremony at the St. Regis Hotel in Manhattan.

Now does this situation happen a lot? I mean a situation where a mother goes to the feminist authoritities (psychologists/social workers/lawyers/teachers/judges) in order to overrule the father's parenting authority?

**Another case from Canada**

Here is a story from Canada that shows why we need to be careful about enacting compassionate, non-judgmental, feminized social policies.The more you reduce the male role and male authority in the family, the fewer men will want to take on the responsibilities of being a Dad. We need to be careful not to replace husbands and fathers with big government social programs and intrusive, anti-male courts.

Excerpt:

> A Gatineau father lost an appeal Monday after a lower court ruled last June that he had issued a too severe punishment against his 12-year-old daughter.
>
> The case involves a divorced man who says that in 2008 he caught the girl, over whom he had custody, surfing websites he had forbidden and posting "inappropriate pictures of herself" online. The girl's father told her as a consequence that she would not be allowed to go on her class' graduation trip to Quebec City, even though her mother had already given permission for her to do so.
>
> The girl then contacted a legal-aid lawyer who was involved in the parents' custody battle, who convinced the court to order that the girl be allowed to go on the trip with her class.  The father appealed the decision on principle, although his daughter went on the trip in the meantime.
>
> The appeals court reportedly warned in its ruling that the case should not be seen as an open invitation for children to take legal action against their parents when grounded.
>
> The girl now lives with her mother.

You may think that this would be overturned on appeal, but the father LOST his appeal, too.

So, what the daughter, wife, prosecuting attorney and judge (all feminists?) are all telling this Dad that he can donate sperm, pay bills, and pay taxes for feminist social programs, but that he cannot PARENT his own children. He cannot have any moral authority to guide the child into becoming a man. That job is for child care workers, single mothers and public school teachers. Men need to butt out of parenting – except they can pay for all these experts through taxes, of course.

Questions:

- Does anyone care what men want from marriage and parenting, or should we just be ordered around like little boys?
- Do we really think that state coercion is going to make men be more involved with their marriages and children?

I think that marriage should allow men to express themselves as fathers, just as much as women can express themselves as mothers. Parenting should be an equally shared responsibility, and the father should have at least as much parental authority as the mother.

**Compassion vs standards**

Here is a pretty good article by Jewish scholar Dennis Prager that argues against compassion and for moral standards. He tells a story of a team losing a baseball game 24-7, when the scoreboard is reset to 0-0 DURING THE GAME. He then asks what beliefs would motivate this action.

> As is happening throughout America, compassion trumped all other values.
>
> Truth was the first value compassion trashed. In the name of compassion, the adults in charge decided to lie. The score was not 0-0; it was 24-7.
>
> Wisdom was the second value compassion obliterated. It is unwise to the point of imbecilic to believe that the losing boys were in any way helped by changing the score. On the contrary, they learned lessons that will hamper their ability to mature.

He lists the lessons that the winning and losing boys learned from this compassionate act, and how they will act in the future. Then he continues his list.

> Building character was the third value trumped by compassion. People build character far more through handling defeat than through winning. The human being grows up only when forced to deal with disappointment. We remain children until the day we take full responsibility for our lives.
>
> …The fourth value that compassion denied here was fairness. It is remarkable how often compassion-based liberals speak of “fairness” in formulating social policy given how unfair so many of their policies are. It was entirely unfair to the winning team to have their score expunged, all their work denied. But for the compassion-first crowd, the winning team is like “the rich” who earn “too much” and should therefore be penalized with a higher tax rate; the winning team scored “too many” runs to be allowed to keep them all.

The standards that are undermined by compassion can be moral standards or standards of rationality. The former is under attack from moral relativism, and the latter is under attach from postmodernism. But I guess parents don’t really care enough to teach their children about these ideas, and when the children grow up, they vote for the policies that follow from moral relativism and postmodernism: policies of the secular left.

# Israel PM calls Democrats' proposed deal with Iran "a very bad deal"

**Wintery Knight** · 9 November 2013 · Archived copy · Original

The Weekly Standard reports.

Here's what BB Netanyahu said about a U.S. proposal on Iran's nuclear ambitions:

> "I met Secretary Kerry right before he leaves to Geneva," said Netanyahu. "I reminded him that he said that no deal is better than a bad deal. That the deal that is being discussed in Geneva right now is a bad deal. It's a very bad deal. Iran is not required to take apart even one centrifuge. But the international community is relieving sanctions on Iran for the first time after many years. Iran gets everything that it wanted at this stage and it pays nothing. And this is when Iran is under severe pressure. I urge Secretary Kerry not to rush to sign, to wait, to reconsider, to get a good deal. But this is a bad deal–a very, very bad deal. It's the deal of a century for Iran; it's a very dangerous and bad deal for peace and the international community."

Foreign Policy Initiative says that the deal will weaken sanctions against Iran.

Excerpt:

> As the United States and other world powers resume nuclear talks with Iran this week, a senior official in the Obama administration recently told reporters in Geneva that they seek a short-term interim agreement that gives Iran partial and reversible relief from U.S.-led international sanctions, with the goal of getting a package of short-term Iranian concessions that "stops Iran's nuclear program from moving forward for the first time in decades" and "potentially rolls part of it back." While this is a laudable goal, the potential package of Iranian concessions that has been discussed in the media would fail to fully freeze Iran's nuclear program, let alone roll it back.
>
> […]If it costs the United States nothing to persuade Iran to implement the rumored package of short-term Iranian nuclear concessions, then we should welcome that outcome. But while U.S. diplomats have not publicly said what they will offer in Geneva, they reportedly are considering relaxing restrictions on Iran's oil revenues held in overseas accounts and perhaps also on trade in gold and petrochemicals. Given the difficulties faced at times by the United States in getting allies and partners to support the sanctions regime against Iran's nuclear program, the Obama administration's potential forms of sanctions relief could be too dear a price to pay for the rumored package of Iranian concessions.

I was listening to the latest episode of the Weekly Standard podcast this morning and Lee Smith said the real reason that the Obama administration is doing this is to justify an American withdrawal from the Middle East and to abandon our allies in the region – not just Israel, but Saudi Arabia as well.

The Republicans are moving to block the Democrats from lifting sanctions on Iran.

# Dr. Jennifer Roback Morse lectures on basic economics

**Wintery Knight** · 10 November 2013 · Archived copy · Original

Here is a podcast on basic economics from Dr. Jennifer Roback Morse.

About the speaker:

> Jennifer Roback Morse, Ph.D. is the founder and President of the Ruth Institute — a project of the National Organization for Marriage — which seeks to promote life-long married love to college students by creating an intellectual and social climate favorable to marriage.
>
> She is also the Senior Research Fellow in Economics at the Acton Institute for the Study of Religion and Liberty.
>
> She is the author of Smart Sex: Finding Life-long Love in a Hook-up World, (2005) and Love and Economics: Why the Laissez-Faire Family Doesn't Work (2001), recently reissued in paperback, as Love and Economics: It Takes a Family to Raise a Village.
>
> Dr. Morse served as a Research Fellow for Stanford University's Hoover Institution from 1997-2005. She received her Ph.D. in economics from the University of Rochester in 1980 and spent a postdoctoral year at the University of Chicago during 1979-80. She taught economics at Yale University and George Mason University for 15 years.

The MP3 file is here.

Topics:

- The study of economics is anti-postmodern – there is objective truth independent of what people think
- The study of economics believes in fixed principles of human nature
- Economics studies the allocation of scarce resources that have alternative uses
- Economics studies how people exchange resources
- How both people who engage in a voluntary trade always believe that they will be better off
- How both people who engage in a voluntary trade both benefit from the exchange
- How incentives motivate people to act
- Understanding supply and demand
- Understanding how "free" government services are rationed
- Understanding opportunity costs
- How prices signal producers to produce more or less, and consumers to buy or not buy
- Market-driven prices versus price controls
- The role of substitution
- The necessity of allowing failure in a free market

The requirements of economic growth:

- private property
- contracts
- the profit motive
- competition
- free trade
- entrepreneurship, creativity and innovation

- the rule of law

If you want to learn more about basic economics, I recommend picking up a book or two by Thomas Sowell – the first book I usually give away is “Intellectuals and Society”, and then next “Basic Economics”.

# Dr. Robin Collins explains two kinds of cosmic fine-tuning

**Wintery Knight** · 10 November 2013 · Archived copy · Original

I was busy working my way through "Debating Christian Theism", a book published by Oxford University Press in August 2013. It features about 20 different topics from science, to philosophy, to history. For each topic, there is an essay by a world-class scholar in favor, and one opposed. So you get both sides of many interesting issues, at a very advanced level. The section on cosmic fine-tuning features a chapter written by Dr. Robin Collins.

About Robin Collins:

> Robin Collins (PhD, University of Notre Dame, 1993), is professor of philosophy at Messiah College, Grantham, PA specializing in the area of science and religion. He has written over twenty-five articles and book chapters on a wide range of topics, such as the fine-tuning of the cosmos as evidence for the existence of God, evolution and original sin, the Doctrine of Atonement, Asian religions and Christianity, and Bohm's theory of quantum mechanics. Some of his most recent articles/book chapters are "Philosophy of Science and Religion" in The Oxford Handbook of Science and Religion, "Divine Action and Evolution" in The Oxford Handbook of Philosophical Theology (2009) "The Multiverse Hypothesis: A Theistic Perspective," in Universe or Multiverse? (Cambridge University Press), and "God and the Laws of Nature," in Theism or Naturalism: New Philosophical Perspectives (Oxford University Press, forthcoming). He recently received a grant from the John Templeton Foundation to finish a book that presents the case for design based on physics and cosmology, tentatively entitled The Well-Tempered Universe: God, Cosmic Fine-tuning, and the Laws of Nature.

**The fine-tuning argument**

Here's a short article where Collins gives TWO examples of the fine-tuning. He is very modest in his argument, merely asserting that the fine-tuning is more compatible with theism than it is with atheism.

Excerpt:

> Science is commonly thought to have undercut belief in God. As Nobel Prize winning physicist Steven Weinberg famously remarked, "the more we find out about the universe, the more meaningless it all seems." Yet, the discoveries of modern physics and cosmology in the last 50 years have shown that the structure of the universe is set in an extraordinarily precise way for the existence of life; if its structure were slightly different, even by an extraordinarily small degree, life would not be possible. In many people's minds, the most straightforward explanation of this remarkable fine-tuning is some sort of divine purpose behind our universe.

> This fine-tuning falls into three categories: the fine-tuning of the laws of nature, the fine-tuning of the constants of physics, and the fine-tuning of the initial conditions of the universe. "Fine-tuning of the laws of nature" refers to the fact that if the universe did not have precisely the right combination of laws, complex intelligent life would be impossible. If there were no universal attractive force (law of gravity), for example, matter would be dispersed throughout the universe and the energy sources (such as stars) needed for life would not exist. Without the strong nuclear force that binds protons and neutrons together in the nucleus, there would not be any atoms with an atomic number greater than hydrogen, and hence no complex molecules needed for life. And without the Pauli-exclusion principle, all electrons would fall to the lowest orbital of an atom, undercutting the kind of complex chemistry that life requires.

> Some fundamental physical numbers governing the structure of the universe—called the constants of physics—also must fall into an exceedingly narrow range for life to exist. For example, many have estimated

> that the cosmological constant—a fundamental number that governs the expansion rate of empty space—must be precisely set to one part in $10^{120}$ in order for life to occur; if it were too large, the universe would have expanded too rapidly for galaxies and stars to form, and if it were too small, the universe would have collapsed back on itself. As Stephen Hawking wrote in his book A Brief History of Time, "The remarkable fact is that the values of these numbers [i.e. the constants of physics] seem to have been very finely adjusted to make possible the development of life." Finally, the initial distribution of mass energy at the time of the big bang must have an enormously special configuration for life to occur, which Cambridge University mathematical physicist Roger Penrose has calculated to be on the order of one part in $10^{10^{123}}$. This is an unimaginably small number.

I know what you're thinking: How do we know that non-Christian scientists acknowledge the fine-tuning of gravity in the way that Collins describes?

Well, the New Scientist actually talks about the fine-tuning of the force of gravity. And they're not Christians.

Excerpt:

> The feebleness of gravity is something we should be grateful for. If it were a tiny bit stronger, none of us would be here to scoff at its puny nature.
>
> The moment of the universe's birth created both matter and an expanding space-time in which this matter could exist. While gravity pulled the matter together, the expansion of space drew particles of matter apart – and the further apart they drifted, the weaker their mutual attraction became.
>
> It turns out that the struggle between these two was balanced on a knife-edge. If the expansion of space had overwhelmed the pull of gravity in the newborn universe, stars, galaxies and humans would never have been able to form. If, on the other hand, gravity had been much stronger, stars and galaxies might have formed, but they would have quickly collapsed in on themselves and each other. What's more, the gravitational distortion of space-time would have folded up the universe in a big crunch. Our cosmic history could have been over by now.
>
> **Only the middle ground, where the expansion and the gravitational strength balance to within 1 part in $10^{15}$ at 1 second after the big bang, allows life to form.**

Here's a very long paper by Collins on the fine-tuning argument, where he answers several objections to the argument, including the multiverse/many-universe hypothesis. I normally make fun of the multiverse, (= the Flying Spaghetti Monster), but it actually does deserve a reasonable, fair response. (Unless Jerry asks, then it's Flying Spaghetti Monster all the way).

# In North Dakota, 35,000 lose their health care plan, but only 30 sign up for Obamacare

**Wintery Knight** · 11 November 2013 · Archived copy · Original

I know that Obama talked a lot about wanting to help people without insurance find insurance, but so far all he done is make a lot of people lost their insurance (and more to come in 2014!).

Here's a story from ABC News.

Excerpt:

> More than 35,000 customers in North Dakota face discontinued health coverage because their plans are being scrapped due to new requirements under the Affordable Care Act.
>
> The three major health insurers in North Dakota were asked to report to state regulators their enrollment figures and cancellations resulting from the health reform act, commonly known as Obamacare.
>
> The state's largest health insurer, Blue Cross Blue Shield of North Dakota, covers about 31,600 members – 17,000 in small groups and 14,600 individuals – whose insurance plans are being discontinued.
>
> That combined figure represents 8 percent of the North Dakota Blues' 400,000 membership total.
>
> […]The total number of North Dakota residents who must switch coverage is 35,585, according to the tally by the state Insurance Department.
>
> "You have almost 36,000 North Dakotans who either are or will be losing their health insurance policies, and this is after they and all Americans have been told they will be able to keep their health insurance," Insurance Commissioner Adam Hamm said Friday.

The premiums are all going up because Obamacare mandates new coverages, which people did not have on their old plans. They didn't have those coverages because they didn't need them. For example, people who weren't addicted to drugs didn't request treatments for drug addiction. But now we all have to pay for it, whether we use it or not. That makes prices go up!

More:

> Under the new requirements, deductibles for individuals or small groups are generally capped at $2,000, with an exception allowing caps of up to $5,000 for individuals and $3,000 for small groups.
>
> Total out-of-pocket expenses now cannot exceed $6,350 for an individual or $12,700 for a family.
>
> Nationally, estimates of the percentage of policies that will be discontinued under the new coverage requirements have ranged from 40 percent to 67 percent, Krystopolski said.
>
> In most cases, plans failed to meet the new requirements because they did not cover maternity care or because the deductibles were too high, she said.

So how many of those 35,585 people that the Democrats kicked out of their insurance plans have found new ones on the Obamacare exchanges?

Almost none:

> Besides collecting information on cancellations, Hamm's office asked the three major health insurers to report the number of enrollments under the new health insurance marketplace provided by the Affordable Care Act.
>
> As of Friday, the three insurers have logged 30 enrollments covering 37 people, a number Hamm called "concerning."

Remember that these figures only represent the effects of the *individual* mandate. Things are going to get a lot worse when the *employer* mandate takes effect in 2014. For those of us with health care through our employers, our day is coming.

# Veteran's Day re-post: Navy SEAL Michael Murphy awarded Medal of Honor

**Wintery Knight** · 11 November 2013 · Archived copy · Original

Navy SEAL Michael Murphy wins Medal of Honor

*For Veteran's Day, I am re-posting one of my favorite Medal of Honor stories.*

The Washington Examiner reports on the story of a brave Navy SEAL named Michael Murphy.

Excerpt:

> Engaged in a frenzied firefight and outnumbered by the Taliban, Navy Lt. Michael Murphy made a desperate decision as he and three fellow SEALs fought for their lives on a rocky mountainside in Afghanistan's Kunar Province in 2005.
>
> In a last-ditch effort to save his team, Murphy pulled out his satellite phone, walked into a clearing to get reception and called for reinforcements as a fusillade of bullets ricocheted around him. One of the bullets hit him, but he finished the call and even signed off, "Thank you."
>
> Then he continued the battle.
>
> Dan Murphy, the sailor's father, said it didn't surprise him that his slain son nicknamed "The Protector" put himself in harm's way. Nor was he surprised that in the heat of combat his son was courteous.
>
> "That was Michael. He was cool under fire. He had the ability to process information, even under the most difficult of circumstances. That's what made him such a good SEAL officer," Murphy said.
>
> A warship bearing the name of the Medal of Honor recipient will be christened Saturday — on what would have been Murphy's 35th birthday — at Bath Iron Works, where the destroyer is being built.
>
> Murphy, who was 29 when he died, graduated from Pennsylvania State University and was accepted to multiple law schools, but decided he could do more for his country as one of the Navy's elite SEALS — special forces trained to fight on sea, air and land — the same forces that killed Osama bin Laden this week in

> Pakistan.
>
> […]Murphy, of Patchogue, N.Y., earned his nickname after getting suspended in elementary school for fighting with bullies who tried to stuff a special-needs child into a locker and for intervening when some youths were picking on a homeless man, said Dan Murphy, a lawyer, former prosecutor and Army veteran who served in Vietnam.
>
> Maureen Murphy said he thought he was too young to take a desk job as a lawyer. Instead, he went to officer candidate school, the first step on his journey to become a SEAL officer. He was in training during the Sept. 11 attacks, which shaped his views.
>
> His view was that there are "bullies in the world and people who're oppressed in the world. And he said, 'Sometimes they have to be taken care of,'" she said.
>
> On June 28, 2005, the day he was killed, Murphy was leading a SEAL team in northeastern Afghanistan looking for the commander of a group of insurgents known as the Mountain Tigers.

What happened to Murphy?

> The Operation Red Wings reconnaissance team rappelled down from a helicopter at night and climbed through rain to a spot 10,000 feet high overlooking a village to keep a lookout. But the mission was compromised the following morning when three local goat herders happened upon their hiding spot.
>
> High in the Hindu Kush mountains, Murphy and Petty Officers Marcus Luttrell of Huntsville, Texas; Matthew Axelson of Cupertino, Calif.; and Danny Dietz of Littleton, Colo.; held a tense discussion of the rules of engagement and the fate of the three goat herders, who were being held at gunpoint.
>
> If they were Taliban sympathizers, then letting the herders go would allow them to alert the Taliban forces lurking in the area; killing them might ensure the team's safety, but there were issues of possible military charges and a media backlash, according to Luttrell, the lone survivor.
>
> Murphy, who favored letting the goat herders go, guided a discussion of military, political, safety and moral implications. A majority agreed with him.
>
> An hour after the herders were released, more than 100 Taliban armed with AK-47 assault rifles and rocket-propelled grenades opened fire, attacking from higher elevation, and maneuvering to outflank the SEALs, said Gary Williams, author of "Seal of Honor," a biography of Murphy.
>
> […]As the only survivor, Luttrell has pangs of regret for voting to go along with Murphy, his best friend; he now believes the team could've survived if the goat herders were killed.

He wasn't willing to kill unarmed civilians. That's the difference between the United States and the Muslim terrorists. It's a moral difference. Michael Murphy was a good man. He used guns and violence to protect others, and he was not willing to kill unarmed civilians.

Here are the requirements for the Army version of the Medal of Honor:

> The Medal of Honor is awarded by the President in the name of Congress to a person who, while a member of the Army, distinguishes himself or herself conspicuously by gallantry and intrepidity at the risk of his or her life above and beyond the call of duty while engaged in an action against an enemy of the United States; while engaged in military operations involving conflict with an opposing foreign force; or while serving with friendly foreign forces engaged in an armed conflict against an opposing armed force in which the United States is not a belligerent party. The deed performed must have been one of personal bravery or self-sacrifice so conspicuous as to clearly distinguish the individual above his comrades and must have involved risk of life. Incontestable proof of the performance of the service will be exacted and each recommendation for the award of this decoration will be considered on the standard of extraordinary merit.

I once read an entire book on Medal of Honor award winners in World War II. It's hard to read those stories, because these people who won the award did amazing acts of bravery, courage and self-sacrifice, but then most of them DIED. The stories almost always end in sadness and grief. Here's the one that really stuck with me as an example.

On a happier note, what kind of ship do you think would suit Michael Murphy?

USS Michael Murphy DDG 112 Arleigh Burke

Michael Murphy is getting a brand new Arleigh Burke guided missile destroyer! Arleigh Burke vessels have the AEGIS missile defense system and their role is to protect carrier strike groups from incoming SSMs and ASMs.

Excerpt:

> The Arleigh Burke Class destroyers are equipped with the Aegis combat system which integrates the ship's sensors and weapons systems to engage anti-ship missile threats.
>
> The Aegis system has a federated architecture with four subsystems – AN/SPY-1 multifunction radar, command and decision system (CDS), Aegis display system (ADS) and the weapon control system (WCS). The CDS receives data from ship and external sensors via satellite communications and provides command, control and threat assessment. The WCS receives engagement instruction from the CDS, selects weapons and interfaces with the weapon fire control systems.
>
> […]Lockheed Martin is developing the Aegis ballistic missile defence (BMD) capability for the Aegis combat system to engage ballistic missiles with the SM-3 missile. 15 Arleigh Burke destroyers have been fitted with the Aegis BMD system, which provides the capability for long-range surveillance, tracking and engagement of short and medium-range ballistic missiles. The system received US Navy certification for full deployment in September 2006. Work was completed on the 15 destroyers at the end of 2008 and the vessels, with three Ticonderoga cruisers, form the Aegis BMD fleet. On 30 July 2009 the Aegis BMD system was successfully tested by the US Navy on the USS Hopper (DDG 70).Aegis BMD is the main sea-based component of the US ballistic missile defence system.
>
> The weapons control systems include a SWG-1A for Harpoon, SWG-3 for Tomahawk, mk99 mod 3 missile fire control system, GWS34 mod 0 gun fire control system and mk116 mod 7 fire control system for anti-submarine systems.

Only two classes of warships that I know of have the AEGIS system. The DDG Arleigh Burke and the CG Ticonderoga.

Michael Murphy was a real hero. It makes me sad that he is gone. But his spirit will live on in the new warship that

bears his name.

# How the ADF kept nurses who wouldn't perform abortions from being fired

**Wintery Knight** · 11 November 2013 · Archived copy · Original

In 2011, a story came out about New Jersey nurses being forced to perform abortions (or be fired). I blogged about it, but we didn't really know the details. Well, now the details have emerged and the case has finally been decided. Here's a press release from the heroic Alliance Defending Freedom, which protected the nurses involved from violating their consciences.

Excerpt:

> Promoted from that team to a supervisory position over all the nurses, the new assistant manager announced that – since she and others had to help with abortions – she saw no reason why every nurse shouldn't help. Hospital officials agreed, and passed a new, mandatory policy to make it so. The assistant manager quickly set up a training program that would give each nurse on the unit hands-on experience in how to assist with and clean up after abortions.
>
> "As long as you work here," she told the 12 nurses who openly protested, "you're going to have to do it. If you don't, you're going to be fired or transferred out."
>
> "We were all shocked," Fe says. "All these years I've been a nurse, I was never told to help kill children."
>
> But the managers remained adamant. Hospital administrators supported them.
>
> […]"Our jobs were hanging by a string," Beryl says. "We were like, 'All right. If they're going to fire all 12 of us, fine. But this is against what we believe God wants us to do.' We didn't come into this profession to do [abortions]. We told them we weren't comfortable with it and didn't feel they should force us. And if that meant our jobs, well… God was going to provide."
>
> When even their own union declined to help them, Fe wrote a letter to hospital officials saying that she and her coworkers would not participate in abortions. She passed it around for the other nurses; 15 signed it. She gave the letter to her manager, who took it to the director of nursing.. Response was swift. A meeting was called for the next day, with each of the signing nurses, the labor board, a union official, the managers, and "an expert on ethics" scheduled to be on hand.

I think so often in this world today, Christians are on the defensive when it comes to acting on their convictions. My expectation is that we will never win when we do the right thing. The other side is so strong, and we have so few conservative Christians who are intentional about studying well, earning well, and reaching positions of influence. But sometimes we do win, because there are still some Christians left who have paid the price to get the education and training that allows them to *do something* when the freedoms of Christians are threatened.

This time, it was the Alliance Defending Freedom lawyers who saved the day:

> The day of that announcement, Pastor Terry Smith, of Life Christian Church in West Orange, New Jersey, returned from a trip. A staff member told him that one of his parishioners – Fe – had called, shared what was happening at the hospital, and asked for advice. The pastor immediately phoned Len Deo, president of the New Jersey Family Policy Council.
>
> "I'll be all over this," said Deo, who hung up and called Alliance Defending Freedom. Shortly afterward, staff attorney Matt Bowman was on the phone with a local allied attorney, Demetrios Stratis, enlisting him to help defend the nurses. The two immediately called Fe.
>
> […]Amid all the tension, threats, and growing media coverage, the judge in the case stunned everyone by suddenly announcing, in a preliminary hearing, that a settlement had been reached.

> “We had gotten everything [the 12 nurses] requested,” Stratis says. “We’d gotten the hospital to agree not to force them to perform these abortions. There would be no retaliatory measures against them, and they could feel free and sleep at night, knowing that the next day they would not have to be trained on the abortion process or help a woman kill an innocent child.”
>
> “I was crying – really crying,” says Lorna, who heard the news from one of the other nurses. “And very thankful. The next day, I went to work, and all of us were hugging and very happy.”
>
> “Before, I used to think that some prayers won’t be answered,” Fe says. “Sometimes, I’d feel very hopeless. But with this case, I saw how the Lord moves… providing the resources, the people who would help us out. It just strengthened my faith. I really thank God for Alliance Defending Freedom.”

Where does this desire to force people to commit murder come from? Well, it comes from the political left. In fact, the Obama administration actively opposes conscience protections for medical workers, and actively opposes conscience protections for military chaplains. This is to say nothing about the HHS mandate, which forces entire organizations and businesses to subsidize abortion-causing drugs.

I think that Christians need to be thoughtful, calculating and realistic about how we are going to deal with threats like this. Although some of us may prefer to study things that are easier, and do jobs that are comfortable, there is a real need for more of us to study hard things and do hard jobs. We need people with the right degrees in the right fields, and we need people who are good at earning and saving money. The truth is that this is the way the world works, and wisdom requires that we do what we have to do (not what we like to do) in order to be ready for the the challenges we are likely to face. The other side is certainly doing their job of getting the degrees and the money that they will use against us.

# Can naturalistic theories account for the minimal facts about Jesus' resurrection?

**Wintery Knight** · 11 November 2013 · Archived copy · Original

Here's a neat post from Ichtus77 on her blog of the same name. She lists 12 facts that are admitted by the majority of New Testament scholars across the broad spectrum of worldviews, including atheistic scholars.

Excerpt:

> I am studying "the twelve facts" and want to get down what I've got so far. After the facts are displayed, we're going to turn the whole thing into a logic puzzle.
>
> Here are the 12 Facts:
>
> 1. Jesus died by Roman crucifixion.
> 2. He was buried, most likely in a private tomb.
> 3. Soon afterwards the disciples were discouraged, bereaved and despondent, having lost hope.
> 4. Jesus' tomb was found empty very soon after his interment.
> 5. The disciples had experiences that they believed were the actual appearances of the risen Christ.
> 6. Due to these experiences, the disciples lives were thoroughly transformed. They were even willing to die for their belief.
> 7. The proclamation of the Resurrection took place very early, from the beginning of church history.
> 8. The disciple's public testimony and preaching of the Resurrection took place in the city of Jerusalem, where Jesus had been crucified and buried shortly before.
> 9. The gospel message centered on the preaching of the death and resurrection of Jesus.
> 10. Sunday was the primary day of worshiping and gathering.
> 11. James, the brother of Jesus and a skeptic before this time, became a follower of Jesus when he believed he also saw the risen Jesus.
> 12. Just a few years later, Paul became a believer, due to an experience that he also believed was an appearance of the risen Jesus.

These are the facts that you see admitted in debates by atheistic historians, like in the debate between James Crossley and William Lane Craig. These facts are admitted even by most atheist historians because they pass standard historical criteria, like early dating, embarrassing to the author, appears in multiple sources, and so on. Secular historians don't accept everything that the Bible says as historical, but they will give you a minimum list of facts that pass their historical tests.

The resurrection puzzle is like a Sherlock Holmes mystery. People deduce what happened from the evidence that is considered to be unimpeachable. The "minimal facts" that EVERYONE accepts. You can even see secular historians assenting to these facts in academic debates like the one I linked above.

So the approach is like this:

1) Use historical tests to get a small number of undeniable historical facts
2) Try to explain the undeniable historical facts with a hypothesis that accounts for all of them

Like Sherlock Holmes says: "…when you have eliminated the impossible, whatever remains, however improbable, must be the truth."

It's the Sherlock Holmes method of doing history.

So, Ichtus77 lists the minimal facts, and in the rest of the post she surveys the following naturalistic hypotheses to see how well they can account for the minimal facts listed above.

Here are the naturalistic theories:

- The Unknown Tomb theory
- The Wrong Tomb theory
- The Twin theory
- The Hallucination theory
- The Existential Resurrection and the Spiritual Resurrection theories
- The Disciples Stole Body theory
- The Authorities Hid Body theory
- The Swoon theory
- The Passover Plot theory

The main way that scholars argue for the resurrection is to list the minimal facts, and defend them on historical grounds, then show that there is no naturalistic hypothesis that explains them all. The naturalistic theories are impossible. Once you have eliminated them because they don't account for the minimal facts, you are left with the resurrection hypothesis. Elementary, Watson, elementary.

# Healthcare.gov enrollments fall far short of Democrat Party estimates

**Wintery Knight** · 12 November 2013 · Archived copy · Original

Can a bunch of pot-smoking socialists do math? The Wall Street Journal says no.

Excerpt:

> Fewer than 50,000 people had successfully navigated the troubled federal health-care website and enrolled in private insurance plans as of last week, two people familiar with the matter said, citing internal government data.
>
> The figure is a fraction of the Obama administration's target of 500,000 enrollees for October. The early tally for the HealthCare.gov site, which launched Oct. 1, worries health insurers that are counting on higher enrollment to make their plans profitable.
>
> The administration had estimated that nearly 500,000 people would enroll in October, according to internal memos cited last week by Rep. Dave Camp (R., Mich.). An estimated seven million people nationwide were expected to gain private coverage by the end of March, when the open-enrollment period is set to end.
>
> […]So far, private health plans have received enrollment data for 40,000 to 50,000 users of the federal marketplace, the people familiar with the figures said.
>
> HHS spokeswoman Erin Shields Britt said Monday she couldn't confirm the enrollment numbers.

Meanwhile, Breitbart is reporting that new web site is up that provides about 90% of the Healthcare.gov functionality:

> Even as President Obama has issued a constant refrain of how upset he is that his Obamacare website doesn't work and promises that he's on top of the fix, three 20-year-old website designers in San Francisco made a working Obamacare website using Healthcare.gov's own code. They did it in only three days.
>
> The three web developers who created the site, HealthSherpa.com, programmed it to do much of what Healthcare.gov, the Obamacare website, is supposed to do.
>
> The enterprising young men whipped up their version of Obamacare in just days working in their off time.
>
> Unlike the Obamacare website, Ning Liang, George Kalogeropoulous and Michael Wasser's new site shows Americans the info they really want to see. Signing onto their site will show visitors healthcare plans and pricing that is available. All you do is enter your zipcode, and there it is.
>
> The three are continuing to tweak their site to give visitors even more information, too. Just after their site went live, they added a section that will help visitors find out if they qualify for a tax subsidy.
>
> […]The only thing the site doesn't do is connect visitors directly to the insurance companies so that visitors can actually buy a policy.

Taxpayers spent $500 million dollars on the Healthcare.gov web site. Maybe we should have just let the private sector handle health care, instead of letting government take it over and kicking thousands of people out of their health care plans, with many millions more to come in 2014. I guess I don't see the point of politicians, who have no demonstrated capabilities in IT project management, software design or programming, take over a private sector health system that is the envy of the world.

# Venezuela orders soldiers armed with assault rifles to impose price controls

**Wintery Knight** · 12 November 2013 · Archived copy · Original

Assault weapons vs Amazon and Ebay: socialism in practice
From the left-leaning USA Today.

Excerpt:

> Thousands of Venezuelans lined up outside the country's equivalent of Best Buy, a chain of electronics stores known as Daka, hoping for a bargain after the socialist government forced the company to charge customers "fair" prices.
>
> President Nicolás Maduro ordered a military "occupation" of the company's five stores as he continues the government's crackdown on an "economic war" it says is being waged against the country, with the help of Washington.
>
> Members of Venezuela's National Guard, some of whom carried assault rifles, kept order at the stores as bargain hunters rushed to get inside.
>
> […]Images circulating online as well as reports by local media appeared to show one Daka store in the country's central city of Valencia being looted.
>
> "I have no love for this government," said Gabriela Campo, 33, a businesswoman, hoping to take home a cut-price television and fridge. "They're doing this for nothing but political reasons, in time for December's elections."
>
> Maduro faces municipal elections on Dec. 8. His popularity has dropped significantly in recent months, with shortages of basic items such as chicken, milk and toilet paper as well as soaring inflation, at 54.3% over the past 12 months.
>
> Economists are expecting a devaluation soon after the election, likely leading to even higher inflation.

This will surely encourage more businesses to come to Venezuela to create jobs, and compete with other businesses in order to lower prices and increase quality for consumers. Oh wait, no it won't. It's just going to causes businesses to scale back, expand in other countries, and go out of business entirely – taking jobs with them.

The real face of communism

Earlier, Venezuela nationalized some oil drilling plants, as well:

> Petroleos de Venezuela SA, the state oil company, seized about $1 million worth of equipment from Superior Energy Services Inc. (SPN:US), the Houston-based company said.
>
> PDVSA expropriated two hydraulic units that were idled after the Caracas-based company missed payments, Greg Rosenstein, head of corporate development, said by phone from New Orleans. The units operated in eastern Venezuela's Anzoategui state, Associated Press reported Nov. 1.
>
> […]Under President Hugo Chavez, who died of cancer in March, Venezuela initiated a nationalization process, seizing assets from companies including Exxon Mobil Corp. (XOM:US) and ConocoPhillips. (COP:US)
>
> **Schlumberger Ltd. (SLB:US), the world's largest oil-services company, said in March it would reduce work in Venezuela because of mounting overdue payments from PDVSA.** Schlumberger subsequently reached an agreement and announced on May 24 that it would provide a $1 billion rolling credit for a joint venture in Venezuela.

That will encourage oil companies to come to Venezuela and pay royalties to the government, and give jobs to more Venezuelans. Oh wait, no it won't. It's just going to cause companies to scale back their investments, expand in other countries, stop hiring, lay off more people, and pull out of Venezuela. I'm sorry but this is standard leftist economic policy.

Are Barack Obama and Hugo Chavez very different?

Remember the last time that Venezuela seized privately-owned oil companies? They eventually had a nice explosion at the oil drilling facility, because the government doesn't know how to run a business better than the people who created that business. You can see it today here, as Obama nationalizes the health care industry and tries to substitute his own web site. He thinks he knows how to create web sites. The man who has never run so much as a lemonade stand in his entire life, and is an authority on how to read a teleprompter and play golf. You do NOT put people like this is in charge of the economy.

Comparing Chile to Argentina and Venezuela

The strange thing is that the economies of Chile embraced free market capitalism, free trade, private property, and the rule of law. Unlike Venezuela and Argentina, they are doing vastly better economically. Look at that chart, which I got from libertarian economist Dan Mitchell. You can't refute that, because economics is real. No one can hide from the facts.

# Three evidential reasons why you should promote and support traditional marriage

**Wintery Knight** · 12 November 2013 · Archived copy · Original

People often question me about my strict rules of courting, according to which a man explains his plan for the marriage to the woman, and then evaluates her for the role over some period of time. The goal being to see if the woman will listen to the man's plan, grow her skills to work that plan, and then take steps to work on that plan. I advocate for no physical contact during that evaluation period so that the man is able to avoid being influenced by non-rational factors.

So why do I have this system? Well many reasons, but one the reasons is to do no harm to women or children. I have never had sex with a woman who regretted it. I have never murdered an unborn child. I have never divorced a woman. I have never been the cause of a fatherless child. It doesn't really matter to me if women pretend to be OK with premarital sex, breakups and divorce. My view is that it's not good for them and for children (unborn and born) and I am not going to inflict harm on women and children.

So that's one reason why I have this system. I would say that people who reject a rigorous, disciplined, structured view of relationships are vastly more likely cause harm to women and children (and men, in the case of no-fault divorce or false accusations of rape or false paternity claims). I guess I am open to any other system that causes less harm (although I have other reasons for choosing chastity/courting as my approach to relationships). But I don't find that my detractors want to prevent harm to others. So, I stick with what I have.

So in this post, I wanted to present a few reasons why we need to be careful to marry well, and select the right person for the job. This just reinforces why I would adopt these rules – because marriage matters, and when it comes to marriage, we don't rely on our feelings, we rely on facts and we rely on self-control.

**Smoking**

Here's a story from the left-leaning Globe and Mail.

Excerpt:

> Each year, Canadian taxpayers spend almost four and a half billion dollars on health care for smoking related illnesses. Governments, at all levels, have implemented policies designed to reduce tobacco consumption in the hope of lowering the excess burden placed on the health care system by smokers. So, it should be of interest to note that whether or not a person smokes has a lot to do with whether or not they are married.
>
> New research published this month, finds that Canadian men and women who are married are significantly less likely to smoke than their unmarried counterparts, and consume less alcohol as well. Divorced men and women not only smoke more than married men and women, but they smoke even more than unmarried men and women.
>
> Thirty-eight per cent of divorced men smoke, compared to 30 per cent of single men and 20 per cent of married men.
>
> Thirty-two per cent of divorced women smoke, compared to 26 per cent of single women and 15 per cent of married women.
>
> Husbands and wives, it seems, discourage each other from behaving in a way that is bad for their health suggesting that the more people who are married, and stay that way, the healthier we will be as a population.

You can read the abstract from the study here. It was published in the "Review of Economics of the Household" journal.

**Domestic violence**

Here's a publication from the Heritage Foundation think tank that shows that marriage is the safest arrangement for women and children. They use mainstream sources like the U.S. Department of Justice.

Excerpt:

> The institution that most strongly protects mothers and children from domestic abuse and violent crime is marriage. Analysis of ten years worth of findings from the National Crime Victimization Survey (NCVS), which the U.S. Department of Justice (DOJ) has conducted since 1973, demonstrates that mothers who are or ever have been married are far less likely to suffer from violent crime than are mothers who never marry.
>
> Specifically, data from the NCVS survey show that:
>
> - **Married women with children suffer far less abuse than single mothers.** In fact, the rate of spousal, boyfriend, or domestic partner abuse is twice as high among mothers who have never been married as it is among mothers who have ever married (including those separated or divorced).
> - **Married women with children are far less likely to suffer from violent crime in general or at the hands of intimate acquaintances or strangers.** Mothers who have never married–including those who are single and living either alone or with a boyfriend and those who are cohabiting with their child's father–are more than twice as likely to be victims of violent crime than are mothers who have ever married.
>
> Other social science surveys demonstrate that marriage is the safest place for children as well. For example:
>
> - **Children of divorced or never-married mothers are six to 30 times more likely to suffer from serious child abuse** than are children raised by both biological parents in marriage.2
>
> Without question, marriage is the safest place for a mother and her children to live, both at home and in the larger community. Nevertheless, current government policy is either indifferent to or actively hostile to the institution of marriage. The welfare system, for example, can penalize low-income parents who decide to marry. Such hostility toward marriage is poor public policy; government instead should foster healthy and enduring marriages, which would have many benefits for mothers and children, including reducing domestic violence.

Now it's important to keep in mind that women commit domestic violence at about the same rate as men, but the Heritage Foundation paper doesn't mention men. However, I think it's reasonable to think that marriage is safer for men as well.

**Poverty**

Here's another publication from the Heritage Foundation that shows that marriage is better for keeping kids out of poverty.

Here's the abstract:

> *Child poverty is an ongoing national concern, but few are aware that its principal cause is the absence of married fathers in the home. Marriage remains America's strongest anti-poverty weapon, yet it continues to decline. As husbands disappear from the home, poverty and welfare dependence will increase, and children and parents will suffer as a result. Since marital decline drives up child poverty and welfare dependence, and since the poor aspire to healthy marriage but lack the norms, understanding, and skills to achieve it, it is reasonable for government to take active steps to strengthen marriage. Just as government discourages youth from dropping out of school, it should provide information that will help people to form and maintain healthy marriages and delay childbearing until they are married and economically stable. In particular, clarifying the severe shortcomings of the "child first, marriage later" philosophy to potential parents in lower-income communities should be a priority.*

Again, the paper uses mainstream from neutral sources like the U.S. Census.

# Undercover video: Obamacare navigators tell applicants to lie and defraud taxpayers

**Wintery Knight** · 13 November 2013 · Archived copy · Original

Secret agent James O'Keefe is once again doing the work that the liberal media won't do.

The Heritage Foundation reports.

Excerpt:

> Lie and defraud taxpayers – that's what Obamacare "navigators" are telling some Americans trying to sign up for health insurance.
>
> James O'Keefe, whose Project Veritas helped expose ACORN with an undercover investigation, has a new video focusing on Obamacare "navigators" in Texas, who received grants to provide in-person assistance to Americans signing up for Obamacare.
>
> **For example, a navigator told an undercover Project Veritas Investigator that he did not have to quit smoking to lower his health insurance premiums—she said that all he had to do was lie.**
>
> **"You lie because your premiums will be higher," said an Obamacare navigator assistant at the NUL Irving Community Center. She also admitted that she always lies on her forms.**
>
> A Project Veritas investigator also posed as a college student asking for help filling out his insurance forms. He told the navigator that he is employed by his university but also performs side jobs like cutting hair and cleaning houses. He admitted that he never included his income from side jobs when filing taxes.
>
> **"Mrs. Dorothy," an Obamacare navigator at the National Urban League, told him that he is supposed to file a percentage of that income, but she added, "Don't get yourself in trouble by declaring it now."**
>
> **She told him to file only what the government can see.**
>
> **"Because if you show more than that then you open yourself up to an audit," she said. "Because the IRS will be – has access to this information. Because that's how they determine what your eligibility is for the [HHS] grants."**
>
> **Lakisha Williams, a navigator in Dorothy's office listening in on the conversation, said to act as though it never happened. "Never report it," she said.**
>
> These examples show that Obamacare navigators are encouraging applicants to lie and defraud the government to get access to more taxpayer money. As if that weren't bad enough, Heritage's Chris Jacobs has warned that navigators could pose a security risk.
>
> Jacobs wrote, "Because their job involves helping Americans figure out their insurance options, navigators will often have access to sensitive personal information—bank accounts, Social Security numbers, insurance identification, and more. Yet navigators will not be required to undergo background checks, and the process for filing complaints about unscrupulous navigators remains unclear at best."

In fact, even convicted felons are eligible to be Obamacare "navigators". I think that this is just Obama paying off all of the "community organizers" who helped get him elected. Recall that Obama has connections to the radical leftist ACORN organization, and they were exposed for voter fraud. So this isn't surprising at all. Obama is also connected to Planned Parenthood, the largest abortion provider in the nation, and they have also been exposed for urging people to commit crimes. This is not even to get started on Obama's campaign fundraisers who got rewarded with tax dollars for green energy companies that later went bankrupt.

UPDATE: Republicans move fast to call for a halt to these Obamacare "navigators", based on the video above.

# Big government spending is suffocating the next generation with debt

**Wintery Knight** · 13 November 2013 · Archived copy · Original

Youth unemployment by ethnicity (5/13)
Libertarian economist Veronique de Rugy writes about it in Reason magazine.

Excerpt:

> A word of caution for kids heading off to college this year: Your degree may be worth less and cost more than you think. Your job prospects will likely be grim, whether or not you get that sheepskin. Oh, and you're on the hook for trillions in federal debt racked up by your parents and grandparents.
>
> Washington has willfully ignored the looming crisis of entitlement spending, knowingly consigning young Americans to a future of crushing debt, persistent underemployment, and burdensome regulation. Politicians on both sides of the aisle share the blame.
>
> This summer, Congress made a big bipartisan show of cutting student loan rates to 3.4 percent from an already artificially low 6.8 percent. But even that seemingly helpful gesture will wind up hurting the Americans it claims to help. Federal student aid, whether in the form of grants or loans, is the main factor behind the runaway cost of higher education. Subsidies raise prices, leading to higher subsidies, which raise prices even more. This higher education bubble, like the housing bubble before it, will eventually pop. Meanwhile, large numbers of students will graduate with more debt than they would have in an unsubsidized market.
>
> And when those new, debt-laden graduates head out into the labor market with their overpriced diplomas, they may not be able to find a job. According to data provided to me by my Mercatus Center colleague, former Bureau of Labor Statistics (BLS) commissioner Keith Hall, fewer than half of Americans today between the ages of 18 and 25 are employed. For those in that cohort actively on the job market, the unemployment rate is 16 percent, versus 6 percent for job-seekers aged 25 and above.
>
> These young folks are also more likely to be long-term unemployed: While accounting for just 14 percent of the labor force, they make up 19 percent of the long-term unemployed, defined by the BLS as 27 weeks or longer.
>
> The lucky few young'uns with jobs of some kind also suffer from rampant underemployment. In a recent blog post, Diana Carew of the Progressive Policy Institute wrote: "In July 2013, just 36 percent of Americans age 16-24 not enrolled in school worked full-time, 10 percent less than in July 2007." In other words, of these 17 million young Americans, 5.6 million were working part-time, 3.2 million were unemployed, and 8.4 million were out of the labor force altogether.

I really recommend you read the rest of the article, especially if you aren't following what Obama's policies are doing to our economy. Special attention is given to the effects of Obamacare on job creation.

Just as a community service, I want to post for you young people (and your parents) a list of the majors that lead to higher paying jobs:

Top 10 highest-paid college majors

1. Petroleum Engineering: $120,000
2. Pharmacy Pharmaceutical Sciences and Administration: $105,000
3. Mathematics and Computer Science: $98,000
4. Aerospace Engineering: $87,000
5. Chemical Engineering: $86,000
6. Electrical Engineering: $85,000
7. Naval Architecture and Marine Engineering: $82,000
8. Mechanical Engineering: $80,000
9. Metallurgical Engineering: $80,000
10. Mining and Mineral Engineering: $80,000

And here are some majors that you should avoid at all costs:

1. Counseling Psychology: $29,000
2. Early Childhood Education: $36,000
3. Theology and Religious Vocations: $38,000
4. Human Services and Community Organization: $38,000
5. Social Work: $39,000
6. Drama and Theater Arts: $40,000
7. Studio Arts: $40,000
8. Communication Disorders Sciences and Service: $40,000
9. Visual and Performing Arts: $40,000
10. Health and Medical Preparatory Programs: $40,000

So young people need to be careful what they study in order to get a job that will allow them to pay off all the government debts that their teachers were busy running up. Their teachers taught them that government spending was good, but their teachers aren't going to be paying for the government spending. They are the beneficiaries of the increased government spending. The pupils are the ones who will have to work to pay for the spending on the social programs enjoyed by their teachers.

It's very important for young Christians to understand that degrees are getting more expensive, and it's important to choose a field that is going to produce a return on your investment. Not only do STEM (science, technology, engineering and math) degrees get you a job that pays, but it has other benefits. For example STEM degrees grind out every last bit of impracticality and entitlement-feeling out of you – because in a STEM program, no one cares about your "specialness". You solve problems or you fail the class. It's not a situation where you can just repeat what the professor says in order to get good grades, as is often (but not always) the case in the humanities.

# William Lane Craig on the unexpected applicability of mathematics to nature

**Wintery Knight** · 13 November 2013 · Archived copy · Original

You might remember that Dr. Craig used a new argument in his debate with Lawrence Krauss in Melbourne, Australia.

My notes on the debate record it thus:

> The unreasonable effectiveness of mathematics:
>
> - The underlying structure of nature is mathematical – mathematics is *applicable* to nature
> - Mathematical objects can either be abstract objects or useful fiction
> - Either way, there is no reason to expect that nature should be linked to abstract objects or fictions
> - But a divine mind that wants humans to understand nature is a better explanation for what we see

And now Dr. Craig has expanded on it in the Q&A section of his Reasonable Faith web site.

The question:

> Dear Dr Craig
>
> Firstly can I thank you for all your work. My faith in Christ has been enormously strengthened through studying your work in apologetics in particular and I have grown in confidence in my Christian witness.
>
> My question relates to numbers and mathematics as a whole. On the Defenders podcast you state that as God is the only self-existent, necessary being, numbers and mathematical objects, whilst being useful, don't actually exist as these too would exist necessarily and independently of God. If this is the case, how can it be that mathematics is so easily applied to the natural world? Surely if mathematics only existed in our minds, we would expect to see no correlation between it and how the physical world actually is?
>
> Michael
>
> United Kingdom

Excerpt from the answer:

> As philosopher of mathematics Mary Leng points out, for the non-theistic realist, the fact that physical reality behaves in line with the dictates of acausal mathematical entities existing beyond space and time is "a happy coincidence" (*Mathematics and Reality* [Oxford: Oxford University Press, 2010], p. 239). Think about it: If, *per impossibile*, all the abstract objects in the mathematical realm were to disappear overnight, there would be no effect on the physical world. This is simply to reiterate that abstract objects are causally inert. The idea that realism somehow accounts for the applicability of mathematics "is actually very counterintuitive," muses Mark Balaguer, a philosopher of mathematics. "The idea here is that in order to believe that the physical world has the nature that empirical science assigns to it, I have to believe that there are causally inert mathematical objects, existing outside of spacetime," an idea which is inherently implausible (*Platonism and Anti-Platonism in Mathematics* [New York: Oxford University Press, 1998], p. 136).
>
> By contrast, the theistic realist can argue that God has fashioned the world on the structure of the mathematical objects. This is essentially what Plato believed. The world has mathematical structure as a result.

This argument was also made by mechanical engineering professor Walter Bradley in a lecture he gave on scientific evidence for an intelligent designer. You can read an essay that covers some of the material in that lecture at

Leadership University.

Excerpt:

> The physical universe is surprising in the simple mathematical form it assumes. All the basic laws of physics and fundamental relationships can be described on one side of one sheet of paper because they are so few in number and so simple in form (see table 1.1).
>
> […]It has been widely recognized for some time that nature assumes a form that is elegantly described by a relatively small number of simple, mathematical relationships, as previously noted in table 1.1. None of the various proposals presented later in this chapter to explain the complexity of the universe address this issue. Albert Einstein in a letter to a friend expressed his amazement that the universe takes such a form (Einstein 1956), saying:
>
> You find it strange that I consider the comprehensibility of the world to the degree that we may speak of such comprehensibility as a miracle or an eternal mystery. Well, a priori one should expect a chaotic world which cannot be in any way grasped through thought. . . . The kind of order created, for example, by Newton's theory of gravity is of quite a different kind. Even if the axioms of the theory are posited by a human being, the success of such an enterprise presupposes an order in the objective world of a high degree which one has no a priori right to expect. That is the "miracle" which grows increasingly persuasive with the increasing development of knowledge.
>
> Alexander Polykov (1986), one of the top physicists in Russia, commenting on the mathematical character of the universe, said: "We know that nature is described by the best of all possible mathematics because God created it." Paul Davies, an astrophysicist from England, says, "The equations of physics have in them incredible simplicity, elegance and beauty. That in itself is sufficient to prove to me that there must be a God who is responsible for these laws and responsible for the universe" (Davies 1984). Successful development of a unified field theory in the future would only add to this remarkable situation, further reducing the number of equations required to describe nature, indicating even further unity and integration in the natural phenomena than have been observed to date.

The whole paper that started this off is called "The Unreasonable Effectiveness of Mathematics", and it is a must read for advanced Christian apologists. You can read the whole thing here.

UPDATE: Mysterious Tom posted this quote from David Berlinski on Facebook:

> Why should a limited and finite organ such as the human brain have the power to see into the heart of matter and mathematics? These are subjects that have nothing to do with the Darwinian business of scrabbling up the greasy pole of life. It is as if the liver, in addition to producing bile, were to demonstrate an unexpected ability to play the violin.

That's from David Berlinski's "The Devil's Delusion: Atheism and Its Scientific Pretensions", (Basic Books, 2009, p. 16-17). Dr. Berlinksi is not a Christian – he is an agnostic.

# How many people signed up for Obamacare?

**Wintery Knight** · 14 November 2013 · Archived copy · Original

NBC News reports on the number of people who have signed up for Obamacare. It's even lower than the estimate I reported earlier in the week.

Excerpt:

> In a new low point for President Barack Obama and another ding against his signature domestic achievement, only 26,000 Americans signed up for health insurance plans in the month that the federal government's troubled website has been open for business.
>
> When figures from state-run exchanges are included, more than 106,000 Americans selected plans during the Affordable Care Act's first month of open enrollment. Still, that number, combined with the administration's repeated warnings of low early-enrollment figures, won't mute the mounting political outcryfrom both sides of the aisle over the rocky rollout.
>
> […]Even the administration's Democratic allies have begun to exhibit signs of nervousness.
>
> Sen. Mary Landrieu, a Red State Democrat who's up for re-election in Louisiana next fall, has proposed a patch to Obamacare that would allow consumers to keep insurance plans threatened by cancellation. The tweak would, in essence, force Obama to make good on his once-stated promise that individuals who like their health care plan could keep it.
>
> The bill, passage of which would represent an embarrassment for Obama, has even won over some administration allies, including California Sen. Dianne Feinstein.  And former President Bill Clinton, whom Obama once dubbed his "explainer in chief," didn't help the White House on Tuesday when he endorsed a similar fix.
>
> […]Throughout it all, Obama's approval ratings have plummeted to new lows, suffering from successive crises involving a Republican-led government shutdown and near-default on the national debt, and then the struggles of Healthcare.gov.

Breitbart News has more on the revolt of the Democrats who are up for election in 2014.

Excerpt:

> On CNN's The Lead, host Jake Tapper said that Democrats had refused to come on the program to discuss the abysmal Obamacare enrollment numbers released on Wednesday afternoon.
>
> Dana Bash reported, "Republicans are tripping over themselves to come out and talk." She continued, "we're not hearing from Democrats so far, the sounds of silence, tells you everything you need to know."
>
> Tapper confirmed that Democrats were suddenly silent: "To be completely honest, we had difficult time booking Democrats to come on after those numbers were released, to have them come on and talk about fixing the problem."

And moderate leftists Kirsten Powers and David Frum are furious that that their health care plans have been canceled, and even more furious at the White House spin on the millions of Americans who are losing their health care.

Excerpt:

> On Tuesday, two prominent media personalities who support President Barack Obama's overhaul of America's health care system took to the airwaves to vent about their insurance plans which have been cancelled as a

> direct result of the Affordable Care Act.
>
> In an appearance on *Special Report* on Tuesday, Fox News Channel contributor and Daily Beast editorial writer Kirsten Powers lashed out at the White House – and, by extension, her Democratic cohorts – for implying that her consumer choices were poorly informed and insufficiently focused on the collective good.
>
> “My blood pressure goes up every time they say that they’re protecting us from substandard health insurance plans,” Powers told Bret Baier. “There is nothing to support what they’re saying.”
>
> “I have talked to about how I’m losing my health insurance,” she continued. “If I want to keep the same health insurance, it’s going to cost twice as much. There’s nothing substandard about my plan.”
>
> “All of the things they say that are not in my plan are in my plan,” Powers lamented. “All of the things they have listed — there’s no explanation for doubling my premiums other than the fact that it’s subsidizing other people. They need to be honest about that.”
>
> Powers, a committed Democrat, once supported the aims of the ACA, if not every mean designed to achieve a noble end. Today, it would seem, she is wavering on the virtue of that end as well.
>
> Powers is in good company. On CNN’s *The Situation Room* with Wolf Blitzer on Tuesday, former Daily Beast columnist David Frum hijacked a conversation about President Bill Clinton’s shocking admonition of President Barack Obama to discuss his own cancelled health plan.
>
> “I’m pulling rank,” Frum informed his fellow panel guests, “because I’m one of those who has had his plan canceled.”
>
> “I still have, but will not very much longer have, a plan in the District of Columbia, covered my wife and my children, which is canceled,” he reported. “I can buy on the exchange a plan that will cost $200 a month more and have a higher deductible. I can’t get back my old plan unless, as Ron [Brownstein] says, the administration drops the element of the law that requires the coverage of everybody.”
>
> “That’s why my coverage went up is because every insurer must now cover everybody,” Frum continued. “I think President Clinton should have the honesty to defend that.”

It’s all falling apart, but will it be in time? I have friends who are in the individual market who are losing their health care and being offered plans with higher deductibles AND higher co-payments,  that cost far more than what they had. We really need to see a push to repeal this monstrosity now before more people have to suffer from it.

# Why did unmarried women prefer a Democrat candidate by 42 points in Virginia?

**Wintery Knight** · 14 November 2013 · Archived copy · Original

First, the numbers from the recent Virginia gubernatorial election, courtesy of the leftist Washington Post.

> There were poll numbers floating around in the days leading up to the election that suggested McAuliffe would absolutely swamp Cuccinelli among female voters and, in so doing, win a convincing victory. But, according to exit polls, Cuccinelli only lost female voters by nine points — identical to the losing margin for Mitt Romney among women in Virginia in the 2012 presidential election. (Romney lost women nationally by 11 points to President Obama in 2012.)
>
> Where Cuccinelli did get swamped, however, was among non-married women where he lost by a massive 42-point(!) margin, according to preliminary exit polling. While Romney didn't fare that poorly in 2012, his 29-point loss among non-married women in Virginia was more than double his losing margin among women more broadly in the Commonwealth.
>
> Here's the two-pronged problem for Republicans: 1) They aren't winning married women by nearly enough to make up for their huge deficits among unmarried women and 2) There aren't that many more married women than single women in the electorate to make up the margins.
>
> So, the fact that married women accounted for 35 percent of the overall electorate and Cuccinelli won them by nine points was more than offset by the fact that single women comprised 18 percent of the electorate and he lost them by six touchdowns.
>
> (Worth noting: The married/unmarried divide isn't just among women. Cuccinelli won married men by six points but lost single men by 25.)

When you vote for a Democrat, you are voting for legalized abortion through all 9 months of pregnancy, gay marriage, banning guns, higher taxes and massive government spending. So how does the Democrat Party convince women to vote for those policies? Well, you can see how by looking at these official pro-Obamacare ads that are marketed to unmarried women. (H/T Amy)

OMG he's hot! Obama gives you condoms to have sex with him!
Who did this?

> Got Insurance is a project of the Thanks Obamacare campaign, created by the **Colorado Consumer Health Initiative** and **ProgressNow Colorado Education** to educate everyone about the benefits of the Affordable Care Act.

See, that man is good-looking, but he has no intention of marrying that woman. He has no STEM degree, no self-control, no earned income, and desire to raise children. But she wants to have sex with him because OMG he's hawt!!!1!, and thankfully her Obama is right there with the birth control pills and condoms to make this "work". She is so excited to have Obamacare-sex with the hot guy! And who knows, maybe he will call her the next day and ask her what her name was.

Now you might think that appealing to unmarried women like this would not work, but actually it does work. It works because this is how unmarried women see themselves. They want to binge drink. They want to prefer men based purely on appearance and fun. They don't want men who can protect, provide and lead morally and spiritually. They don't want men who are "sexist" (chivalrous) and judgmental (honorable). They want to be free to act on their feelings spontaneously and then kill unborn children who get in the way of that. And they want high-earning married men to pay for the condoms through taxes. And if things don't "work out" with the "hot guy" then they can just blame him for being a cad, and blame the alcohol they drank for making them choose that cad. It wasn't their fault, so thank socialism that taxpayers are going to pay for it.

The Democrat Party offers unmarried women free condoms and subsidized abortions, so they can more easily engage in recreational sex, and unmarried women respond to that by electing Democrats. According to exit polls, unmarried women like Sandra Fluke voted more than 70% for Obama in 2008 and 2012. This is not my opinion, this is fact. Feminists vote Democrat, and this is feminism in action. Drink like a man. Have sex like a man. Force pro-life doctors to kill the babies. Make pro-life taxpayers pay for the abortion. That's what unmarried women are voting for – in droves.

**Application for Christians**

And that's what is facing marriage-minded men today when they look at unmarried women. That's an attractive woman in that photo up there. Christian leaders and pastors look at a woman like that with a college degree and a job, and they say to Christian men "you need to man up and marry that fine Christian woman!". There is almost no expectation among Christian leaders that Christian women be informed about politics, economics, apologetics, and so on. If they look good, then they must be good. And they must vote good. Except they are not and they do not.

The fact is that unmarried Christian women are often very much like unmarried non-Christian women. They believe the same. They vote the same. They watch the same TV and movies. They read the same books. They have plenty of sexual experience – if not from hook-ups, then from preferring non-Christian men to Christian men. We really need to be training unmarried Christian women to be far better at morality, politics, economics, apologetics and so on. Right now, from what I have see in the church, they are woefully inadequate for marriage. We need to look beyond the winsome appearance of Christian women, and make a right judgment about what's underneath skin level. Instead of being guided by our eyes, and accepting a bare confession of faith, we need to look deeper – for an informed Christian worldview and actions that are consistent with that worldview.

It's good for Christian men to treat unmarried women nicely, but unless they are qualified to be treated nicely, it does more harm than good. When an unmarried woman is engaging in behaviors that are destroying the lives of born and unborn children, and tearing the fabric of society with government debt, no-fault divorce and single motherhood, then the good man has to make a stand and say "What you are doing is evil." Unfortunately, many Christian leaders don't want to do that, so it's up to regular rank-and-file Christian men to do it.

# Evidence from science, philosophy and history against Mormonism

**Wintery Knight** · 14 November 2013 · Archived copy · Original

This post presents evidence against Mormonism/LDS in three main areas. The first is in the area of science. The second is in the area of philosophy. And the third is in the area of history.

**The scientific evidence**

First, let's take a look at what the founder of Mormonism, Joseph Smith, believes about the origin of the universe:

> "The elements are eternal. That which had a beggining will surely have an end; take a ring, it is without beggining or end – cut it for a beggining place and at the same time you have an ending place." ("Scriptural Teachings of the Prophet Joseph Smith", p. 205)
>
> "Now, the word create came from the word baurau which does not mean to create out of nothing; it means to organize; the same as a man would organize materials and build a ship. Hence, we infer that God had materials to organize the world out of chaos – chaotic matter, which is element, and in which dwells all the glory. Element had an existance from the time he had. The pure principles of element are principles which can never be destroyed; they may be organized and re-organized, but not destroyed. They had no beggining, and can have no end."
> ("Scriptural Teachings of the Prophet Joseph Smith", p. 395)

A Mormon scholar named Blake Ostler summarizes the Mormon view in a Mormon theological journal:

> "In contrast to the self-sufficient and solitary absolute who creates *ex nihilo* (out of nothing), the Mormon God did not bring into being the ultimate constituents of the cosmos — neither its fundamental matter nor the space/time matrix which defines it. Hence, unlike the Necessary Being of classical theology who alone could not *not* exist and on which all else is contingent for existence, the personal God of Mormonism confronts uncreated realities which exist of metaphysical necessity. Such realities include inherently self-directing selves (intelligences), primordial elements (mass/energy), the natural laws which structure reality, and moral principles grounded in the intrinsic value of selves and the requirements for growth and happiness." (Blake Ostler, "The Mormon Concept of God," *Dialogue: A Journal of Mormon Thought 17* (Summer 1984):65-93)

So, Mormons believe in an eternally existing universe, such that matter was never created out of nothing, and will never be destroyed. But this is at odds with modern cosmology.

The Big Bang cosmology is the most widely accepted cosmology of the day. It is based on several lines of evidence, and is broadly compatible with Genesis. It denies the past eternality of the universe. This peer-reviewed paper in an astrophysics journal explains. (full text here)

Excerpt:

> The standard Big Bang model thus describes a universe which is not eternal in the past, but which came into being a finite time ago. Moreover,–and this deserves underscoring–the origin it posits is an absolute origin *ex nihilo*. For not only all matter and energy, but space and time themselves come into being at the initial cosmological singularity. As Barrow and Tipler emphasize, "At this singularity, space and time came into existence; literally nothing existed before the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo.*"
>
> […]On such a model the universe originates *ex nihilo* in the sense that at the initial singularity it is true that *There is no earlier space-time point* or it is false that *Something existed prior to the singularity.*

Christian cosmology requires such a creation out of nothing, but this is clearly incompatible with what Mormons believe about the universe. The claims about the universe made by the two religions are in disagreement, and we can test *empirically* to see who is right, using *science*.

**Philosophical problems**

Always Have a Reason contrasts two concepts of God in Mormonism: Monarchotheism and Polytheism. It turns out that although Mormonism is actually a polytheistic religion, like Hinduism. In Mormonism, humans can become God and then be God of their own planet. So there are many Gods in Mormonism, not just one.

Excerpt:

> [T]he notion that there are innumerable contingent "primal intelligences" is central to this Mormon concept of god (P+M, 201; Beckwith and Parrish, 101). That there is more than one god is attested in the *Pearl of Great Price*, particularly Abraham 4-5. This Mormon concept has the gods positioned to move "primal intelligences along the path to godhood" (Beckwith and Parrish, 114). Among these gods are other gods which were once humans, including God the Father. Brigham Young wrote, "our Father in Heaven was begotten on a previous heavenly world by His Father, and again, He was begotten by a still more ancient Father, and so on…" (Brigham Young, *The Seer*, 132, quoted in Beckwith and Parrish, 106).
>
> […]The logic of the Mormon polytheistic concept of God entails that there is an infinite number of gods. To see this, it must be noted that each god him/herself was helped on the path to godhood by another god. There is, therefore, an infinite regress of gods, each aided on his/her path to godhood by a previous god. There is no termination in this series. Now because this entails an actually infinite collection of gods, the Mormon polytheistic concept of deity must deal with all the paradoxes which come with actually existing infinities…

The idea of counting up to an actual infinite number of things by addition (it doesn't matter what kind of thing it is) is problematic. See here.

More:

> Finally, it seems polytheistic Mormonism has a difficulty at its heart–namely the infinite regress of deity.
>
> […]Each god relies upon a former god, which itself relies upon a former god, forever. Certainly, this is an incoherence at the core of this concept of deity, for it provides no explanation for the existence of the gods, nor does it explain the existence of the universe.

Now let's see the historical evidence against Mormonism.

**The historical evidence**

J. Warner Wallace explains how the "Book of Abraham", a part of the Mormon Scriptures, faces historical difficulties.

The Book of Abraham papyri are not as old as claimed:

> Mormon prophets and teachers have always maintained that the papyri that was purchased by Joseph Smith was the actual papyri that was created and written by Abraham. In fact, early believers were told that the papyri were the writings of Abraham.
>
> […]There is little doubt that the earliest of leaders and witnesses believed and maintained that these papyri were, in fact the very scrolls upon which Abraham and Joseph wrote. These papyri were considered to be the original scrolls until they were later recovered in 1966. After discovering the original papyri, scientists, linguists, archeologists and investigators (both Mormon and non-Mormon) examined them and came to agree that the papyri are far too young to have been written by Abraham. They are approximately 1500 to 2000 years

> too late, dating from anywhere between 500 B.C. (John A. Wilson, Dialogue: A Journal of Mormon Thought, Summer 1968, p. 70.) and 60 A.D. If they papyri had never been discovered, this truth would never have come to light. Today, however, we know the truth, and the truth contradicts the statements of the earliest Mormon leaders and witnesses.

The Book of Abraham papyri do not claim what Joseph Smith said:

> In addition to this, the existing papyri simply don't say anything that would place them in the era related to 2000BC in ancient Egypt. The content of the papyri would at least help verify the dating of the document, even if the content had been transcribed or copied from an earlier document. But the papyri simply tell us about an ancient burial ritual and prayers that are consistent with Egyptian culture in 500BC. Nothing in the papyri hints specifically or exclusively to a time in history in which Abraham would have lived.

So there is a clear difference hear between the Bible and Mormonism, when it comes to historical verification.

**Further study**

There is a very good podcast featuring J. Warner Wallace that summarizes some other theological problems with Mormonism that I blogged about before. And if you want a nice long PDF to print out and read at lunch (which is what I did with it) you can grab this PDF by Michael Licona, entitled "Behold, I Stand at the Door and Knock".

# Obama vows to veto Republican “Keep Your Health Plan Act” bill

**Wintery Knight** · 15 November 2013 · Archived copy · Original

Face a revolt among his own party, the President decided to delay the implementation of his own failed health care policy, until after the 2014 elections. He did this to help Democrat candidates in red states to not be thrown out for enacting a policy that will cancel the health care plans of millions of Americans. After the elections, Obamacare will take effect as planned and millions of Americans will lose their health care.

The Republicans have an alternate plan – let people keep their health care plans if they like them, just as Obama promised before he was re-elected.

Excerpt:

> House Republican leaders announced Wednesday the lower chamber will vote next week on a bill that would allow people to keep their health insurance plan if they like it.
>
> The vote hits at President Obama, who, during the debate over the Affordable Care Act, said people could keep their healthcare plans if they like them. Millions of people, however, have gotten cancelation notices because of ObamaCare’s new standards.
>
> Late Wednesday afternoon, House Majority Leader Eric Cantor (R-Va.) announced via Twitter that the bill would get a vote.
>
> The Keep Your Health Plan Act, H.R. 3350, was introduced last week by House Energy & Commerce Committee Chairman Fred Upton (R-Mich.) and more than two dozen Republicans. As of Wednesday, co-sponsorship had grown to 88 members.
>
> Upton’s bill authorizes insurance companies to keep offering plans that they have said need to be canceled because of ObamaCare’s new insurance standards. Since early October, companies have sent out millions of notices to enrollees saying their plans will be scrapped and, in many cases, replaced by more expensive plans.
>
> “Despite the president’s repeated promise of ‘if you like your plan, you can keep it,’ many Americans are now learning the sad reality that their current plan will no longer exist beginning on Jan. 1,” Upton said last week. “Instead they are forced to purchase healthcare that they cannot afford through a system that does not even work, and that’s just not fair.”

The Weekly Standard reports that the Obama administration has threatened to veto the Republican “Keep Your Health Plan Act”. Why? Because the true purpose of Obamacare requires that healthy people get kicked off their plans, and that they be forced to buy more expensive plans that subsidize the treatments of less healthy people.

The chief architect of Obamacare, Jonathan Gruber, explained in a recent interview:

> “We currently have a highly discriminatory system where if you’re sick, if you’ve been sick, if you are going to get sick, you cannot get health insurance,” Gruber told host Chuck Todd. “The only way to end that discriminatory system is to bring everyone into the system and pay one fair price. That means that the genetic winners, the lottery winners, who’ve been paying their artificially low price because of this discrimination, now will have to pay more in return. And that, by my estimate is about 4 million people. In return, we’ll have a fixed system where over 30 million people will now, for the first time, be able to access fairly priced and guaranteed health insurance.” Emphases added.
>
> This is monstrous. Gruber admits that “If you like your healthcare, you can keep your healthcare” was a lie from the start. They never even intended to keep this promise, as doing so would destroy their scheme. The system Gruber describes is the intentional demolition of the private insurance industry, which bases prices on risk. He is also defining “discrimination” so far that given the chance, he would abolish capitalism and private

> property ownership itself.

That's why Obama has to veto the bill – because he must accomplish his goal of making everyone's life "equal" regardless of their individual choices. People who aren't addicted to drugs must be forced to subsidize the drug addiction therapies of others. People who don't have a promiscuous sex life must subsidize the promiscuous sex lives of others. People who don't need abortion-inducing drugs must subsidize the abortion-inducing drugs of others. Wealth redistribution to equalize lifestyle outcomes. If you make good decisions in life, you must be punished. If you make bad decisions in life, you must be rewarded. If you earn money and save money because you have a plan of your own for marriage and family, then what you earn and save must be taken from you and given to others who earn nothing and save nothing and have no plans for marriage and family.

**Not enough time to make the changes**

James Pethokoukis explains that insurance companies don't have enough time to restore the plans that Obamacare canceled. So the only real effect of Obama's announcement is to give cover to Democrats who vote against the Keep Your Health Plan Act. That was the purpose of his press conference – to stop a revolt by people in his own party.

# Health insurance companies will raise rates to comply with Obamacare delay

**Wintery Knight** · 15 November 2013 · Archived copy · Original

CNS News explains how health insurance companies will respond to the last-minute attempt by Democrats to delay the implementation of Obamacare.

Excerpt:

> After President Obama unilaterally changed his health care law on Thursday, the insurance industry issued a warning.
>
> "Changing the rules after health plans have already met the requirements of the law could destabilize the market and result in higher premiums for consumers," said Karen Ignagni, president and CEO of America's Health Insurance Plans (AHIP).
>
> Here's Ignagni's full statement:
>
> *Making sure consumers have secure, affordable coverage is health plans' top priority. The only reason consumers are getting notices about their current coverage changing is because the ACA requires all policies to cover a broad range of benefits that go beyond what many people choose to purchase today.*
>
> *Premiums have already been set for next year based on an assumption of when consumers will be transitioning to the new marketplace. If due to these changes fewer younger and healthier people choose to purchase coverage in the exchange, premiums will increase in the marketplace and there will be fewer choices for consumers. Additional steps must be taken to stabilize the marketplace and mitigate the adverse impact on consumers.*

A recent Weekly Standard podcast predicts that the Democrats are going to come down hard on insurance companies, and blame them for the failure of Obamacare.

# Carson Weitnauer: putting atheism on the defensive

**Wintery Knight** · 15 November 2013 · Archived copy · Original

Here's an article at Reasons for God that explains a few simple questions that you can ask your atheist friends.

He writes:

> Though it has been persistently marketed to us as a worldview that stands for reason and science, the truth is that the atheistic worldview is riddled with contradictions and outlandish claims. And because most secular people haven't studied why atheism is true, an excellent evangelistic strategy for you and your church is to understand these five challenges for atheism.
>
> In my experience, it is only once people realize that their own worldview doesn't work that they become interested in seeking something that does. While some would suggest you just have to wait for people to hit rock bottom, I think a more gracious and effective approach is to humbly challenge their pretense to have a sensible worldview.
>
> By God's grace, studying these five holes in the atheistic worldview can create a powerful opportunity for you and your church to share the wisdom and love of Jesus Christ.
>
> […]Because of their fundamental commitment to impersonal matter and laws, the atheist faces very difficult problems in at least five unique areas:
>
> - Consciousness
> - Free will
> - Purpose
> - Reason, including mathematics and science
> - Objective moral facts, including universal human rights and the reality of evil

Here's my favorite of the 5:

> Leading atheists such as Sam Harris dismiss free will as a matter of course. Or as Tom Clark at Naturalism.org puts it, "Judged from a scientific and logical perspective, the belief that we stand outside the causal web in any respect is an absurdity, the height of human egoism and exceptionalism."
>
> Dr. Angus Menuge, the current President of the Evangelical Philosophical Society, explains the problem: "before we can talk of being responsible for our decisions, we need an account of why those decisions belong to us. But the trouble is, on a naturalistic view, there is no entity that can plausibly own any mental states, there is simply a plurality of parallel, impersonal processes in the brain."
>
> The denial of free will logically leads to the denial of personal responsibility for any of our behaviors or beliefs. But if everything about "you" is determined, then "you" could not have reasonably chosen to believe what you do. If a-rational things and laws determined your neurological structure, "you" literally cannot make any decisions about what you believe or why you believe it.

This article is worth a look if you want to start a discussion with an atheist.

# Humanists force school to cancel Christmas-themed charity that benefits children

**Wintery Knight** · 16 November 2013 · Archived copy · Original

Letitia posted this Fox News article on Facebook.

Excerpt:

> A South Carolina charter school has canceled its annual Christmas toy drive after a group of self-described humanists complained that the project violated the U.S. Constitution and accused them of bribing children to convert to Christianity.
>
> Renee Mathews, the principal of East Point Academy in West Columbia, S.C., said the annual Operation Christmas Child project was halted because the American Humanist Association threatened to sue the school.
>
> "We received a letter saying we had to cease and desist immediately or they would take legal action against us," Mathews told me.
>
> […]Mathews said their small school had no choice.
>
> "We have a very small budget and very small legal budget. We felt that we could not risk using our school funding for classrooms and teachers to fight a court case."
>
> […]The small charter school had been participating in Operation Christmas Child for the past two years without any controversy. The program is associated with Samaritan's Purse, an international Christian relief and evangelism organization.
>
> For the past several weeks, students had been working with their parents to decorate shoe boxes and fill them with toys. They were supposed to deliver the boxes to the school Friday morning.
>
> Even though Operation Christmas Child is connected to an evangelical Christian ministry, Mathews said there were no religious materials included in the boxes. She also pointed out the project was voluntary, non-religious, and not tied to any graded assignments.
>
> Nevertheless, the American Humanist Association decided to intervene on behalf of a perturbed parent.

I think this story serves as a reminder to everyone that humanists are essentially bullies who want to force others to act like humanists in public. They are so sensitive about hearing different points of view that they have to resort to the power of big government in order to silence and coerce anyone who disagrees with them.

# Students who voted for Obama react to losing their cheap private health care plan

**Wintery Knight** · 16 November 2013 · Archived copy · Original

Mysterious William sent me this story from Campus Reform.

Excerpt:

> Students at Bowie State University assailed the Affordable Care Act (ACA) on Thursday after administrators cancelled a low cost school-wide health care plan due to new regulations in the law.
>
> Many students told Campus Reform that the now cancelled plans, **which provided coverage** for just $50 per semester, were the only insurance they could afford.
>
> "I can't afford anything right now," one said. "I can't even afford my loans."
>
> "We don't have that money," said another. "We can barely afford books."
>
> Several students said that they felt they had been let down.
>
> "It's stupid and it's Obama's fault," one said. "You haven't done anything, Obama, and I'm disappointed in you."
>
> "What it was hyped up to be, was that it was supposed to solve a lot of problems and help a lot of people, and its not really doing that," said another.
>
> Many students had no idea the plans had been canceled, which was announced only in an email to their school addresses.

One of the students in the video rightly chastises Obama for not doing his homework on health care policy before putting through a law that doesn't make health care better. But honestly it's the students who haven't done their homework – at least the ones who voted for Obama in 2012. Because these things were all known at the time. I was blogging about them all the way through 2009 to election day in 2012. And not my opinions but studies showing what the impact would be on health care costs, job creation, and so on. There is no way this plan could work, and anyone who was paying attention knew that. It's sad for the students now, but maybe it's a good thing for them to learn their lesson early.

# Republicans introduce bill to impeach Attorney General Eric Holder

**Wintery Knight** · 17 November 2013 · Archived copy · Original

Breitbart News reports.

Excerpt:

> Rep. Pete Olson (R-TX) has introduced an Articles of Impeachment resolution against Attorney General Eric Holder for his role in Operation Fast and Furious and other scandals of President Barack Obama's administration.
>
> Seven congressman have signed onto the resolution thus far in addition to Olson. They are Reps. Larry Bucshon (R-IN), Blake Farenthold (R-TX), Phil Roe (R-TN), Lynn Westmoreland (R-GA), Roger Williams (R-TX), Ted Yoho (R-FL), and Randy Weber (R-TX).
>
> The Articles of Impeachment has four different sections. The first calls for Holder's official removal because of his failure to comply with congressional subpoenas relating to Operation Fast and Furious. Holder has been voted on a bipartisan basis into both criminal and civil contempt of Congress for his failure to comply with the Fast and Furious subpoenas from House Committee on Oversight and Government Reform Chairman Rep. Darrell Issa (R-CA).
>
> The second section of the Articles of Impeachment deals with Holder's refusal to enforce the Defense of Marriage Act (DOMA), the Controlled Substances Act, and the Anti-Drug Abuse Act of 1986. The third section calls for Holder's impeachment on the grounds that he has refused to prosecute any IRS officials involved in the "scandal of unauthorized disclosure of tax records belonging to political donors."
>
> The fourth section of the Articles of Impeachment goes after Holder for his involvement in the targeting of reporters. Holder testified under oath on May 15, 2013, the resolution states, that he "he was neither involved in nor had heard of a potential prosecution of the press." Three days later, though, Holder's Department of Justice (DOJ) "released documents naming journalist James Rosen as a co-conspirator in an alleged violation of the Espionage Act." Holder later confirmed to Congress that he had in fact "approved a search warrant on James Rosen."

See the links below for a review of Holder's many failures.

# Chad Meister: can atheists make sense of morality?

**Wintery Knight** · 17 November 2013 · Archived copy · Original

Philosopher Chad Meister takes a look at the attempts of some prominent atheists to make rational sense of morality within their worldviews.

Here is the abstract:

> Atheists often argue that they can make moral claims and live good moral lives without believing in God. Many theists agree, but the real issue is whether atheism can provide a justification for morality. A number of leading atheists currently writing on this issue are opposed to moral relativism, given its obvious and horrific ramifications, and have attempted to provide a justification for a nonrelative morality. Three such attempts are discussed in this article: Walter Sinnott-Armstrong's position that objective morality simply "is"; Richard Dawkins's position that morality is based on the selfish gene; and Michael Ruse and Edward Wilson's position that morality is an evolutionary illusion. Each of these positions, it turns out, is problematic. Sinnott-Armstrong affirms an objective morality, but affirming something and justifying it are two very different matters. Dawkins spells out his selfish gene approach by including four fundamental criteria, but his approach has virtually nothing to do with morality—with real right and wrong, good and evil. Finally, Ruse and Wilson disagree with Dawkins and maintain that belief in morality is just an adaptation put in place by evolution to further our reproductive ends. On their view, morality is simply an illusion foisted on us by our genes to get us to cooperate and to advance the species. But have they considered the ramifications of such a view? Each of these positions fails to provide the justification necessary for a universal, objective morality—the kind of morality in which good and evil are clearly understood and delineated.
>
> […]We can get to the heart of the atheist's dilemma with a graphic but true example. Some years ago serial killer Ted Bundy, who confessed to over thirty murders, was interviewed about his gruesome activities. Consider the frightening words to his victim as he describes them:
>
> *Then I learned that all moral judgments are "value judgments," that all value judgments are subjective, and that none can be proved to be either "right" or "wrong"….I discovered that to become truly free, truly unfettered, I had to become truly uninhibited. And I quickly discovered that the greatest obstacle to my freedom, the greatest block and limitation to it, consists in the insupportable "value judgment" that I was bound to respect the rights of others. I asked myself, who were these "others"? Other human beings, with human rights? Why is it more wrong to kill a human animal than any other animal, a pig or a sheep or a steer? Is your life more to you than a hog's life to a hog? Why should I be willing to sacrifice my pleasure more for the one than for the other? Surely, you would not, in this age of scientific enlightenment, declare that God or nature has marked some pleasures as "moral" or "good" and others as "immoral" or "bad"? In any case, let me assure you, my dear young lady, that there is absolutely no comparison between the pleasure I might take in eating ham and the pleasure I anticipate in raping and murdering you. That is the honest conclusion to which my education has led me—after the most conscientious examination of my spontaneous and uninhibited self.*
>
> While I am in no way accusing atheists in general of being Ted Bundy-like, the question I have for the atheist is simply this: *On what moral grounds can you provide a response to Bundy?* The atheistic options are limited. If morality has nothing to do with God, as atheists suppose, what does it have to do with? One response the atheist could offer is moral relativism, either personal or cultural. The personal moral relativist affirms that morality is an individual matter; you decide for yourself what is morally right and wrong. But on this view, what could one say to Bundy? Not much, other than "I don't like what you believe; it offends me how you brutalize women." For the personal relativist, however, who really cares (other than you) that you are offended by someone else's actions? On this view we each decide our own morality, and when my morality clashes with yours, there is no final arbiter other than perhaps that the stronger of us *forces* the other to agree. But this kind of Nietzschean "might makes right" ethic has horrific consequences, and one need only be reminded of the

> Nazi reign of terror to see it in full bloom. This is one reason why thoughtful atheists, such as Christopher Hitchens, Walter Sinnott-Armstrong, Richard Dawkins, Sam Harris, Daniel Dennett, and others don't go there.
>
> But what about cultural moral relativism—the view that moral claims are the inventions of a given culture? Most thoughtful atheists don't tread here either, and this is one reason why: If right and wrong are cultural inventions, then it would always be wrong for someone within that culture to speak out against them. If culture defines right and wrong, then who are you to challenge it? For example, to speak out against slavery in Great Britain in the seventeenth century would have been morally wrong, for it was culturally acceptable. But surely it was a morally good thing for William Wilberforce and others to strive against the prevailing currents of their time and place to abolish the slave trade. For the cultural moral relativist, all moral reformers—Wilberforce, Martin Luther King, Jr., even Jesus and Gandhi, to name a few—would be in the wrong. But who would agree with this conclusion? Thankfully, most leading atheists agree that moral relativism is doomed.
>
> So what do they affirm? Here are three accounts that recent atheists have defended: (1) objective morality simply "is," (2) morality is based on the selfish gene, and (3) morality is an evolutionary illusion. Let's take a brief look at each of them.

Have you ever heard any of these three categories of objections? If so, click on through and see Chad Meister's responses.

# Domestic violence rates are higher for homosexual couples than for heterosexual couples

**Wintery Knight** · 18 November 2013 · Archived copy · Original

From the left-leaning Atlantic Monthly. (H/T ECM)

Excerpt:

> Data on the rates of same-sex partner abuse have only become available in recent years. Even today, many of the statistics and materials on domestic violence put out by organizations like the Center for Disease Control and the Department of Justice still focus exclusively on heterosexual relationships, and specifically heterosexual women. While the CDC does provide some resources on its website for the LGBT population, the vast majority of the information is targeted at women. Materials provided by the CDC for violence prevention and survivor empowerment prominently feature women in their statistics and photographs.
>
> In 2013, the CDC released the results of a 2010 study on victimization by sexual orientation, and admitted that "little is known about the national prevalence of intimate partner violence, sexual violence, and stalking among lesbian, gay, and bisexual women and men in the United States." The report found that bisexual women had an overwhelming prevalence of violent partners in their lives: 75 percent had been with a violent partner, as opposed to 46 percent of lesbian women and 43 percent of straight women. For bisexual men, that number was 47 percent. For gay men, it was 40 percent, and 21 percent for straight men.
>
> The most recent statistics available on same-sex intimate partner violence from the National Coalition of Anti-Violence Programs, which focuses on LGBT relationships, reported 21 incidents of intimate partner homicides in the LGBT community, the highest ever. Nearly half of them were gay men and, for the second year in a row, the majority of survivors were people of color—62 percent.
>
> In 2012, NCAVP programs around the country received 2,679 reports of intimate partner violence, a decrease of around 32 percent from 2011. However the report noted that many of the NCAVP's member organizations were operating at decreased capacity due to limiting the number of cases they were able to take. The report said that excluding data from organizations, there was actually a 29 percent increase in reports of violence from 2011 to 2012.

That article comes from a source with a very clear pro-gay-agenda bias, so let's take a look at an article from the Family Research Council to balance it out. They rely on mainstream data sources as well, like the CDC, the DOJ, the US Census, etc.

Excerpt:

> A study in the Journal of Interpersonal Violence examined conflict and violence in lesbian relationships. The researchers found that 90 percent of the lesbians surveyed had been recipients of one or more acts of verbal aggression from their intimate partners during the year prior to this study, with 31 percent reporting one or more incidents of physical abuse.[69]
>
> In a survey of 1,099 lesbians, the Journal of Social Service Research found that "slightly more than half of the [lesbians] reported that they had been abused by a female lover/partner. The most frequently indicated forms of abuse were verbal/emotional/psychological abuse and combined physical-psychological abuse."[70]
>
> In their book Men Who Beat the Men Who Love Them: Battered Gay Men and Domestic Violence,D. Island and P. Letellier report that "the incidence of domestic violence among gay men is nearly double that in the heterosexual population."[71]
>
> […]Homosexual and lesbian relationships are far more violent than are traditional married households:

> The Bureau of Justice Statistics (U.S. Department of Justice) reports that married women in traditional families experience the lowest rate of violence compared with women in other types of relationships.[72]
>
> A report by the Medical Institute for Sexual Health concurred,
>
> It should be noted that most studies of family violence do not differentiate between married and unmarried partner status. Studies that do make these distinctions have found that marriage relationships tend to have the least intimate partner violence when compared to cohabiting or dating relationships.[73]

You can find more data comparing married heterosexuals to same-sex relationships in this FRC paper, which again uses mainstream data sources. Ask yourself: is this a lifestyle that you would recommend to someone you cared about? Is this is a lifestyle that we should celebrate if we are concerned about the good of others? Telling someone not to smoke cigarettes is a good thing. Telling someone not to bicycle without a helmet is a good thing. Telling someone not to get drunk and then drive a car is a good thing. When did we ever get to the point where telling people the facts about the consequences of their choices is considered a bad thing?

By the way, I have to mention this as often as possible, whenever I blog about domestic violence: women commit domestic violence at about the same rate as men.

**Rates of domestic violence for men vs women**

First of all, let's see what's happening with domestic violence rates in the UK, according to the UK government's own study.

Excerpt:

> Data from Home Office statistical bulletins and the British Crime Survey show that men made up about 40% of domestic violence victims each year between 2004-05 and 2008-09, the last year for which figures are available. In 2006-07 men made up 43.4% of all those who had suffered partner abuse in the previous year, which rose to 45.5% in 2007-08 but fell to 37.7% in 2008-09.
>
> Similar or slightly larger numbers of men were subjected to severe force in an incident with their partner, according to the same documents. The figure stood at 48.6% in 2006-07, 48.3% the next year and 37.5% in 2008-09, Home Office statistics show.

Canada numbers:

> An estimated 7% of women and 6% of men in a current or previous spousal relationship encountered spousal violence during the five years up to and including 2004, according to a comprehensive new report on family violence.

Sweden numbers:

> In two related studies, researchers surveyed 1,400 Swedes about domestic violence and found that 8 to 11 percent of men reported being victims of physical violence at the hands of their spouse in the past year.
>
> The corresponding figure for women was 8 percent.

In lesbian relationships, the rate of domestic violence is extremely high, from 17% to 45%, depending on the study. I do think that men exert a calming influence on women's emotions, helping them to channel their feelings into words and reasoned arguments. That short-circuits the tendency toward violent outbursts. That's why I urge men, if they must marry, to practice disagreeing and debating with women before the marriage is actualized. You need to find out what this other person does in a conflict situation before you commit to her for life.

You also see higher rates of violence by mothers against their own children, than with fathers. Mothers are more

than twice as likely to abuse children as fathers. Biological fathers are programmed to protect children – it's the stepfathers and live-in boyfriends who harm children.

Excerpt:

> Contrary to public perception, research shows that the most likely physical abuser of a young child will be that child's mother, not a male in the household, although the mother's plight often is complicated by her relationship with a cohabiting male. Abusive mothers frequently are isolated, and lack the parental and extended family or peer support that is necessary to maintain their self-esteem and to buffer the stress of raising children.[44] Without this support, they often seek care and comfort from their children, treating these children as if they were older than they really are. When children fail to provide this support, the mother can become impatient, angry, and sometimes abusive, even when the child is only a crying infant. Others find any social stimulation from their babies (whether smiling or crying) to be much more irritating than normal mothers do.[45] Their abuse in turn adds to their anxiety and feelings of helplessness.[46] If the woman is a second-generation or later generation out-of-wedlock mother, or if she is a teenager, she is less likely to know what the appropriate expectations of a young child should be.
>
> […]The most likely causes of child abuse by a mother, in fact, can be traced to the violence and substance abuse present in the mother's childhood, followed by the stress and discord in her current household. This is capped by her own victimization,[52] and leads to increased illness and a hypersensitivity to the annoyances that children cause.[53] In the period between her early experience with abusing parents and her later experiences with an abusing "mate," the future abusing mother frequently becomes more aggressive and deviant, developing a hostile and rebellious way of acting. She will associate more with men of similar hostility and eventually will "marry" them, becoming an abused spouse herself.[54]

This is not politically correct to say, but it's all properly researched and foot-noted – this is the way reality is.

**A recent study**

Consider this recent study on domestic violence. It surveyed 2,500 students at the University of Florida.

Excerpt:

> Women are more likely than men to stalk, attack and psychologically abuse their partners, according to a University of Florida study that finds college women have a new view of the dating scene.
>
> "We're seeing women in relationships acting differently nowadays than we have in the past," said Angela Gover, a UF criminologist who led the research. "The nature of criminality has been changing for females, and this change is reflected in intimate relationships as well."
>
> In a survey of 2,500 students at UF and the University of South Carolina between August and December 2005, more than a quarter (29 percent) reported physically assaulting their dates and 22 percent reported being the victims of attacks during the past year. Thirty-two percent of women reported being the perpetrators of this violence, compared with 24 percent of men. The students took selected liberal arts and sciences courses. Forty percent were men and 60 percent were women, reflecting the gender composition of these classes.
>
> In a separate survey of 1,490 UF students, one quarter (25 percent) said they had been stalked during the past year and 7 percent reported engaging in stalking, of whom a majority (58 percent) were female.

It's very important to have an understanding of the facts when talking about domestic violence. Trying to be too "nice" instead of telling the truth is exactly the wrong thing to do.

# J. Warner Wallace: why didn't Jesus reveal scientific facts to prove his divinity?

**Wintery Knight** · 18 November 2013 · Archived copy · Original

I was listening to J. Warner Wallace's latest podcast and he mentioned this Cold Case Christianity post because it is getting a lot of attention.

Excerpt:

> Last Wednesday I had the opportunity to defend the reliability of the New Testament Gospels to the students of San Jose State University. Jane Pantig (the director of the local Ratio Christi chapter) invited me, and I was delighted to come. I've been working with Ratio Christi across the country to defend the Christian worldview on college campuses. If you aren't acquainted with the work of this growing apologetics movement, you really ought to familiarize yourself with Ratio Christi and find a way to support their efforts. At the end of my presentation, during the question and answer period, a polite young skeptic asked why Jesus didn't reveal scientific facts in an effort to demonstrate His Deity. Why didn't Jesus describe something well beyond the scope and knowledge of His contemporaries as a prophetic proof? He could easily have described the role of DNA, the proper organization of the Solar System, or the biological complexity of cellular structures. The questioner believed this sort of knowledge would have been persuasive to him as a 21st Century skeptic, and without it, he remained unconvinced.
>
> I thought this was a great question, and one I often receive but seldom talk about on the podcast or here on the blog. There are a number of problems with this expectation of superior anachronistic scientific wisdom…

Here's one of the problems that he mentioned in the post (there are three):

> **The Nature of the Ancient Audience**
>
> The context of Jesus' ministry and message were defined by the nature (and limitations) of this ancient audience. Sometimes it's easy for us to approach the gospels from our 21st Century perspective (bringing our desires, needs and expectations to the text), rather than examining them from the perspective of the first hearers and readers. In order to illustrate this point, imagine yourself as Jesus. You've got three years to demonstrate your Divinity to those you live with in the 1st Century. Think about what approach you might take. You could reveal yet unknown scientific facts to your audience, but would this accomplish your goal? If you describe the role of DNA or the anatomy of the solar system, how would your 1st Century audience confirm your statements? Surely claims of this nature would be unimpressive to a world without the ability to assess their veracity. In fact, any combination of such claims with other demonstrations of Deity would only serve to dilute the power of your message. There are ways you could establish your Deity in front of such a 1st Century audience, but obscure, esoteric claims are perhaps the least effective approach.

What do you think? Do you think that Jesus should have explained scientific things? Would that work better than what he actually did?

One of the things that this post made me think of is the use of sledgehammer apologetics by Jesus. I know a lot of people who really resent the idea of apologetics, and want us to just read the Bible to people and hope they are magically convinced by just hearing Scripture. But Jesus was not willing to do that. He didn't just express opinions or give moral teachings or recite poetry. He was in the business of making his case to people, and for evidence he used miracles.

**The Sign of Jonah**

Professor Clay Jones of Biola University makes the case that the use of evidence when preaching the gospel

was *standard operating procedure* in the early church.

Intro:

> In 1993 I started working for Simon Greenleaf University (now Trinity Law School) which offered an M.A. in Christian apologetics (Craig Hazen was the director). Much of my job was to promote the school and although I had studied Christian apologetics since my sophomore year in high school, I decided I needed to see whether an apologetic witness had strong Biblical precedence.
>
> It does.
>
> As I poured through the Scripture I found that Jesus and the apostles preached the resurrection of Christ as the sign of the truth of Christianity.
>
> What follows are some of the passages which support the resurrection witness.

Here is my favorite verse from his massive list list of verses in favor of the evidential approach to Christian apologetics:

> Mat. 12:39-40: A wicked and adulterous generation asks for a miraculous sign! But none will be given it except the sign of the prophet Jonah. For as Jonah was three days and three nights in the belly of a huge fish, so the Son of Man will be three days and three nights in the heart of the earth.

Jesus is saying that the resurrection was deliberately given as a sign to unbelievers to convince them. ("The Sign of Jonah" = the resurrection)

**The healing of the paralytic**

Consider this article from apologist Greg Koukl of Stand to Reason.

Koukl cites three Biblical examples to support the idea that faith is not blind leap-of-faith wishing, but is based on evidence.

Here's number two:

> [I]n Mark 2 you see Jesus preaching in a house, and you know the story where they take the roof off and let the paralytic down through the roof. Jesus said, "Your sins are forgiven." And people get bugged because how can anyone forgive sins but God alone?Jesus understood what they were thinking and He said this: What's harder to say, your sins are forgiven, or to rise, take up your pallet and go home?Now, I'll tell you what would be harder for me to say : Arise, take up your pallet and go home. I can walk into any Bible study and say your sins are forgiven and nobody is going to know if I know what I am talking about or not. But if I lay hands on somebody in a wheelchair and I say, Take up your wheelchair and go home, and they sit there, I look pretty dumb because everyone knows nothing happened.But Jesus adds this. He says, "In order that you may know that the Son of Man has the power and authority to forgive sins, I say to you, arise, take up your pallet and go home." And he got up and he got out. Notice the phrase "In order that you may know".

So, I see that God uses nature and miracles to persuade, which can be assessed using scientific (e.g. – fine-tuning) and historical methods (minimal facts case for the resurrection). I think if Jesus had explained DNA and the Big Bang to the first century people, that would not have worked as well as the kinds of things he actually did.

I really want you guys to look through the Bible and see Jesus' approach to convincing people. You should read the gospel of John to see how Jesus uses miracles to get people to believe that he was who he said he was. This is was his whole *modus operandi.* Today, none of us can do miracles on demand to convince people – at least I can't. But that's why we can use the evidence from science for miracles in nature, like the cosmic fine-tuning and the origin of biological information. And the resurrection is still a good historical argument to make, as well.

I'm going to be summarizing the podcast where Wallace mentioned this question in my 6 PM post, and I urge you to listen to it with my summary at hand. When he was talking about this question, his response made me laugh out loud at what people would think if Jesus had started explaining the fine-tuning argument or the Cambrian explosion. He's very reserved in this post, but in the podcast he is pretty funny when he role-plays how the first-century people would respond.

# J. Warner Wallace: practical advice on becoming an effective one-dollar apologist

**Wintery Knight** · 18 November 2013 · Archived copy · Original

As promised, below is my summary of J. Warner Wallace's most recent Please Convince Me podcast, and my comments.

Details:

> J. Warner continues examining the Christian life in light of God's desire for all of us to become Christian Case Makers. Jim reads listener email highlighting some of the typical frustrations involved in starting an apologetics ministry and then provides a template to help you become the Case Maker you've always wanted to be. Jim also answers the question: Why Didn't Jesus Reveal Scientific Facts to Demonstrate His Deity?

You can grab the MP3 file here.

This episode is probably one of the best episodes of the Please Convince Me podcast I've ever heard, because it's practical. I like listening to the cold-case detective talk about practical things.

Summary:

- e-mail from someone trying to start an apologetics ministry for college students and facing difficulties
- the challenge of getting Christians to take an evidential approach to their faith
- tips for getting Christians exposed to apologetics materials
- there are a lot of Christians who are making a daily contribution to apologetics even with a full-time job
- Wallace himself started his apologetics ministry while working full-time
- Wallace, as an atheist, was initially skeptical of religion because he thought it was too focused on money
- His plan as an apologist was to take money right out of it – do it for free, and be self-funded
- 1 Cor 9: "But I have made no use of any of these rights, nor am I writing these things to secure any such provision."
- People in ministry deserve to be supported, but Paul dispensed with that right to raise support for his ministry
- Paul self-financed his ministry in order to avoid all appearance of doing his ministry for financial gain
- Similarly, Wallace's goal of being self-financed was to avoid the appearance of doing ministry for money
- If you plan your life carefully enough in the first half, you'll have the money you need to do ministry in the second half
- Wallace wanted the liberty to pursue things without any financial need, and he achieved this by working full-time
- The problem with money is that it often causes us to not cooperate well with other people
- Ministries and churches sometimes avoid working with other people, like scholars and apologists
- They do this because they are afraid of losing their own people to these scholars and apologists
- Wallace wants to get the money out of it and be able to serve anyone with a need
- Wallace: you need to work hard in the first half of life, in order to have freedom to serve in the second half
- First area: financial preparation – you need to escape financial needs so that it doesn't restrict your passion
- Wallace married well, to a woman who was a good saver, very frugal, and not materialistic – he saved 30% of his income
- Second area: need to prepare yourself educationally for being able to teach apologetics materially
- That doesn't always mean doing the MA in apologetics, but you do have master the material – continuous

learning
- Third area: try to focus on the parts of your career that might have some connection to apologetics
- You want to have experiences in your work where you learn something that can be used in your ministry
- Wallace actually made career choices to focus on evidence, case-making and teaching
- It's hard because men are naturally competitive – we focus on promotions, money and consumer goods
- It's not always the right move in your career to get promoted if it takes you away from skills related to apologetics
- Christian apologists need to not neglect to develop leadership skills and to develop influence
- He recommends a book called "Platform" by Michael Hyatt, which Doug Groothuis also recommended to me
- If you are financially independent, then if an unpaid opportunity arises, you have the freedom to take it
- You can volunteer for positions that you want to have, instead having to take what pays
- Wallace writes for Breakpoint, and he is able to dispense with the 1000-word limit that gets a fee
- Money opens up the danger of corruption, so it's another reason to just take it out of the picture
- You can be very effective in your apologetics ministry while still working full-time
- The second half is a good time to have even more freedom because your kids are grown up
- A good wife can really help you if she is picking up the slack so that you can work on your ministry
- Jane Pantig works for Ratio Christi, an organization that promotes apologetics on campus
- Jane's model: she is in full-time ministry, with a BS in biology and an MA in apologetics (Biola)
- Jane is able to get many high-quality speakers to speak for free/cheap at San Jose State University

The rest of the podcast deals a question that was asked at the San Jose State University event that Wallace did for Ratio Christi. I blogged about it this morning. I laughed my butt off while listening to that podcast, starting at around 62:50 and on. It's pretty funny when he does the role-pay between Jesus and the people listening to him.

**My comments:**

The reason I wanted to post this is because I think that a lot of people feel obligated to quit their jobs and raise support because they think that you have to do apologetics full time. It's not true. Wallace explains that he worked as a cold-case detective until just recently when he took his pension. His pension is now underwriting his ministry. Similarly with me, I work a full-time job and run the blog out of my income. In addition, I probably donate a few thousand dollars each year to people who are organizing apologetics lectures, debates and conferences – events featuring speakers I like best.

This blog gets about 1 million page views per year, depending on the year (election years are better), so that's not an insignificant impact. In addition, I meet a lot of young Christians in university in different countries who want advice or mentoring, so I spend a few hours here and there mentoring them, and sometimes sending them rewards (books) for doing difficult degrees at good universities and getting good grades. My full-time job helps me to do all of these things. And before I could have a full-time job in information technology, I had to put in the time and effort to get the Bachelor and Masters degree in computer science.

So I think that Christian men especially need to be thinking about how much the apologetics enterprise of a one-dollar apologist relies on money. We really need to be thinking about that early on, in high school, and choosing to study hard things and to do well in those hard subjects. The higher-paying jobs that are more secure tend to be in fields like science, math, technology and engineering. We need to be thinking of doing these courses in high school – especially the men, but also the women – in order to be able to pay for our apologetics ministry. In addition, my decision to not marry (unless I meet a woman who can support me in my plan) gives me even more freedom to work on my ministry while working full time.

I fully approve of what Wallace said about self-financing your apologetics ministry – and supporting other

apologetics ministries – in order to avoid all appearance of self-interest. In fact, I have long admired Wallace for his intentional, practical way of doing his ministry. He doesn't take donations, and he gives away tons of materials for free. I like that.

# Doctor shortage: how Obamacare makes it harder to find a doctor

**Wintery Knight** · 19 November 2013 · Archived copy · Original

Remember how Obama promised that if you liked your doctor, then you could keep your doctor? It turns out that there is more to making policies than just saying what you'd like to do in a scripted campaign speech. The truth is that some health care policies will make you lose your doctor, regardless of what the President reads off of a teleprompter. Is Obamacare one of these policies? Let's see.

Avik Roy writes about it in Forbes magazine.

Excerpt:

> On Saturday, the *Wall Street Journal* reported that, due to Obamacare's cuts to Medicare Advantage, among other factors, UnitedHealth expects its network of physicians "to be 85 percent to 90 percent of its current size by the end of 2014." The result? Some retirees enrolled in Medicare Advantage will need to find new doctors. And it's a trend that could accelerate in future years.
>
> […]Over the next ten years, Obamacare was designed to spend around $1.9 trillion on expanding health coverage to the uninsured. The law pays for this new spending with $1.2 trillion in new taxes, and $716 billion in cuts to Medicare, relative to prior law.
>
> […]**The private insurers who supply Medicare Advantage plans, like UnitedHealth and Humana, have been responding to the cuts by squeezing out inefficiencies in the way they deliver care. One obvious way to do that is to pay doctors and hospitals less—or kick out the providers who refuse to accept lower reimbursement rates.** And that's what United has done, according to the *WSJ* report from Melinda Beck.
>
> **"Doctors in at least 10 states have received termination letters, some citing 'significant changes and pressures in the health-care environment,'" writes Beck.**

Another one of my favorite health care policy experts is the ex-Canadian Sally C. Pipes, who knows all about the horrors of single-payer health care. It killed her mother! Here's what she had to say about the doctors shortage in a Forbes magazine article from earlier this year.

The first problem is that we have an aging doctor population and since we do such a poor job of educating our children (public school indoctrination centers) we aren't making any new ones:

> Right now, the United States is short some 20,000 doctors, according to the Association of American Medical Colleges. The shortage could quintuple over the next decade, thanks to the aging of the American population — and the aging and consequent retirement of many physicians. Nearly half of the 800,000-plus doctors in the United States are over the age of 50.

The second problem is that adding more regulations and burdensome paperwork makes a lot of people not want to be doctors any more:

> **Obamacare is further thinning the doctor corps. A Physicians Foundation survey of 13,000 doctors found that 60 percent of doctors would retire today if they could, up from 45 percent before the law passed.**

The third problem is that the government isn't reimbursing doctors as much as private insurance companies do, and it makes them refuse to take government-funded patients:

> They've long limited the number of Medicaid patients they'll treat, thanks to the program's low reimbursement

> rates. According to a study published in Health Affairs, only 69 percent of doctors accepted new Medicaid patients in 2011. In Florida, just 59 percent do so. And a survey by the Texas Medical Association of doctors in the Lone Star State found that 68 percent either limit or refuse to take new Medicaid patients.
>
> Medicaid pays about 60 percent as much as private insurance. For many doctors, the costs of treating someone on Medicaid are higher than what the government will pay them.
>
> These underpayments have grown worse over time, as cash-strapped states have tried to rein in spending on Medicaid. Ohio hasn't increased payments to doctors in three years; Kentucky hasn't raised them in two decades. Colorado, Nebraska, South Carolina, Arizona, Oregon, and Arizona all cut payments in 2011.
>
> By throwing nine million more people into the program without fixing this fatal flaw, Obamacare will make it even harder for Medicaid patients to find doctors.

It's not just Medicaid that's the problem, either. It's the government-controlled exchanges.

> Healthcare providers are signaling that they may turn away patients who purchase insurance through the exchanges, too.
>
> In California, for example, folks covered by Blue Shield's exchange plan will have access to about a third of its physician network. The UCLA Medical Center and its doctors are available to customers of just one plan for sale through the state exchange, Covered California. And the prestigious Cedars-Sinai Medical Center is not taking anyone with exchange insurance.

Now I know what you're thinking – why not just force doctors to work for lower wages, like a good socialist country might? Well, that actually makes the shortage worse, because people don't like to learn hard things and then work hard for little pay. And doctors work VERY hard – it's not an easy profession to get into. That will just make all the doctors leave the country for other countries where they can be paid fairly for the work they do.

And in fact that is exactly what happened in a 100% socialized health care system in Venezuela, according to this report from the left-leaning Associated Press.

Excerpt:

> Half the public health system's doctors quit under Chavez, and half of those moved abroad, Natera said.
>
> Now, support staff is leaving, too, victim of a wage crunch as wages across the economy fail to keep up with inflation.
>
> At the Caracas blood bank, Lopez said 62 nurses have quit so far this year along with half the lab staff. It now can take donations only on weekday mornings.

I recommend reading that entire article for a glimpse of where the Democrats are trying to take us. There is not a dime's worth of difference on policy between the Democrat party and the socialist party of Venezuela, except that the socialists have been in control in Venezuela for longer, and so they are further along the road to serfdom.

In other news, the Washington D.C. insurance commissioner was fired after raising concerns about the "fix" proposed by Obama in his speech last week. That's also something that you might expect to see in a country like Venezuela. That's what happens in authoritarian socialist countries. Whistleblowers and critics just disappear.

# Hillary Clinton, Huma Abedin, Elin Nordegren, Elizabeth Edwards and Maria Shriver

**Wintery Knight** · 19 November 2013 · Archived copy · Original

All of these women were cheated on, to some extent, by their spouses:

- Hillary Clinton is the wife of Bill Clinton.
- Huma Abedin is the wife of the Anthony Weiner.
- Elin Nordegren is the wife of Tiger Woods.
- Elizabeth Edwards is the wife of John Edwards.
- Maria Shriver is the wife of Arnold Schwarzenegger.

So what do they all have in common?

They all picked secular men with liberal views on social policy and they all got cheated on.

**So how should women test men for marriage?**

Here are some questions that the five women who chose these disgusting creeps for husbands SHOULD have asked:

1. What is the public purpose of marriage?
2. What are the expected public outcomes of a good marriage?
3. Does chastity before marriage provide any indication about a person's ability to stay faithful in a marriage?
4. What should men and women bring to a relationship so that they are able to perform expected marital behaviors?
5. Is marriage more about self-indulgence or about self-sacrifice? Can you get used to self-sacrifice by being self-indulgent?
6. If a person is pro-abortion, what do they believe about taking responsibility to avoid harming others with their poor decisions?
7. If a person is pro-same-sex marriage, what do they believe about the needs of children compared to the needs of adults?
8. If a person believes in wealth redistribution, do they have a correct understanding of working, saving and investing?
9. Does a person's superior appearance, wealth, or power determine whether they will be faithful in a marriage?
10. Can you cause your spouse to be faithful by spending a lot of money on a wedding?
11. Can you cause your spouse to be faithful by inviting famous people to your wedding?
12. Is it a good idea to choose someone to marry who your parents and elders disapprove of?
13. Is it a good idea to choose whether to have sex with someone using "the 180-second rule"?
14. Is it a good idea to choose someone to marry in order to impress your friends (or to make them jealous)?
15. Is it a good idea to marry someone because most of your friends are getting married?
16. Is it a good idea to avoid studying the effects of divorce on children prior to marrying?
17. Can you expect a spouse to adhere to objective moral obligations without a knowledge of God's existence, grounded on evidence?
18. Can you expect a spouse to adhere to objective moral obligations without a knowledge of God's character, grounded on evidence?
19. Does holding a Bible for a photo-op make someone into a William Lane Craig or a Wayne Grudem?
20. Does singing praise hymns in church make someone into a William Lane Craig or a Wayne Grudem?

Those last items are to show that you really cannot have a moral standard that is binding unless there is some way that the universe ought to be, because it was designed to be a certain way by a Designer. If a person is convinced that there is a Designer who made people, it rationally grounds the idea that there is a way that humans ought to act – independently of how we may feel individually, or even in different cultures in different places and times. The more a man knows whether God exists and knows what God is like as a person – based on evidence – the more seriously that man will try to incorporate God's personality into his decision making. A serious study of the evidence for God's existence and character helps people to take moral obligations to others more seriously – especially when they don't FEEL LIKE IT. That is why marriages where both spouses attend church regularly last. I can guarantee you that there are times when people don't feel like going to church, e.g. – bad weather days. But people who attend church regularly have trained themselves to take their relationship with God more seriously than their own comfort. That is a useful prerequisite for marriage, especially if the church attendance spills into even harder things like theology, philosophy of religion, ethics and apologetics. Women need to be asking men these worldview and morality questions, and insisting on seeing the behaviors that raise the probability of having a stable marriage to a faithful man.

Basically, instead of relying on feelings and peer approval to choose a man, women need to ask men questions to find out whether they are trustworthy and equal to the tasks that men perform as husbands and fathers. I don't think that women who were cheated on really asked questions about their chosen spouse's worldview, and how the man's worldview grounded moral obligations, such as the obligation NOT to cheat. It seems that today, a well-grounded worldview that grounds moral obligations is regarded by some women as being superfluous to marital stability. I guess they think that fidelity is basically random – that Elliot Spitzer is as likely to be a faithful spouse as James Dobson. They just don't ask men to explain what they believe and why, and why any particular man can be trusted to make moral decisions. And they shouldn't be satisfied with words – they should demand to see evidence that the man has studied these issues, written about them, debated with others about them, and acted on these convictions *personally*.

I think that women today are also giving up their responsibility to read about marriage and parenting, to read about risks and challenges that threaten stable marriages, like no-fault divorce laws and cohabitation, and to read about how important it is to stay married because of how divorce affects children. Women should not abdicate the responsibility to judge men, they should not say that "men are unpredictable", and they should not set themselves up as helpless victims. They need to keep men at arm's length, keep their wits about them and do the work of evaluating men for the roles that men play in marriage and family.

Character and knowledge count. Just because a man can put on a show for you, it doesn't mean that he is capable of producing the results of a thoughtful Christian worldview.

What does Dr. Laura say about marriage?

> "Commitment to marriage and child rearing was once viewed as the pinnacle of adulthood identity, so that women looked carefully for the "right" man for the job, and parents were consulted for opinions and blessings."
> Source: Dr. Laura Schlessinger, *The Proper Care and Feeding of Husbands*, page 53.

Find the right man for the job. You wouldn't resort to feelings to hire someone for your company, so why resort to feelings when it comes to picking a husband and father to your children?

- Why Christian men should be chaste

# If militant atheists could form a country, what would it look like?

**Wintery Knight** · 19 November 2013 · Archived copy · Original

Consider this story about North Korea from the UK Telegraph on Facebook, and I think it's well worth looking at, because we need to be thinking about how big government impacts our ability to do our jobs as Christians.

Excerpt:

> Christian missionaries have set up an extraordinary network of front companies – including tour agencies, bakeries, factories, farms, schools and orphanages – in order to spread the Gospel inside North Korea.
>
> For nearly two years, Kenneth Bae, a father of three and an American citizen, ran a successful travel company offering tours of North Korea.
>
> But as the 44-year-old passed through the Wonjong border crossing in November 2012, he was suddenly arrested. Convicted of "hostile acts" towards North Korea, he is currently serving 15 years in a labour camp.
>
> What exactly happened remains a mystery. Mr Bae had taken at least 15 other tour groups into North Korea without incident. However, it seems clear that his mission to spread the Christian gospel was at least one major factor that landed him in trouble.
>
> Mr Bae is not alone in using his company, Nations Tour, to evangelise inside North Korea. While precise numbers are impossible to pin down, the network of well-financed front companies, missions operating as businesses, is extensive.

> North Korea, the most hostile country in the world to organised religion, has a strong pull for a certain stripe of evangelical Christians, and the 288 sq mile "Special Economic Zone" outside the city of Rason, where Mr Bae was detained, is Ground Zero for these modern apostles.
>
> […]According to one American who once travelled with Mr Bae, but who asked to remain anonymous, their group was able to carry bibles with them into the zone. Possession of bibles by North Koreans can lead to imprisonment, torture and perhaps even death.
>
> The source said a delicate dance had played out on their arrival, with their bibles being counted by the border guards on their way in and then again when they left to make sure none had been distributed.
>
> At the final inspection, the guards even flipped through each copy to make sure no pages had been ripped out and left behind.
>
> Before arriving at the border, the 15-member group was told by Mr Bae not to discuss politics or carry out any overt proselytising. The two or three pastors travelling with them were not to be addressed by their titles.
>
> Once inside North Korea, they were accompanied by government minders at all times. On group hikes with these "tour guides", the source said they sang Christian songs, but hummed key verses to avoid saying "God" out loud.
>
> "That was our way of worshipping and praising in our hearts, even if we could not say it," the source said. "Talking about God directly, that would be asking for a death sentence."

North Korea has an official state religion of atheism. Is that a factor in their horrible record for human rights? Well, according to the The Black Book of Communism, published by Harvard University Press, over 100 million innocent people were killed in atheistic, communist regimes like North Korea in the last century.

I have been working on a theory about what militant atheists mean when they say that religion causes a lot of wars. My theory is that they are actually talking about themselves. They mean *their* religion. They are boasting that they are number one at killing innocent people. A person can justify killing very easily if you believe that no one is

watching you and no one will hold you accountable when you die for what you've done.

Of course there are lots of atheists in the Judeo-Christian West who live more peacefully, because they are living in a background of objective morality and human rights provided by Western religions. But in countries like North Korea, with a state religion that cannot ground free will or objective morality or human rights or judgment after death, there are fewer restraints.

Even here, we have already seen over 50 million unborn children killed since abortion became legal. And I can guarantee you that it's not authentic Christians who are having these abortions. As a group, atheists tend to be among the most radical in favor of abortion rights. The Secular Census of 2012 found that 97% of atheists vote for abortion.

The idea of the strong killing the weak for pleasure is the law of the jungle, and it's not surprising to me that those who think that humans are just animals would act this way with vulnerable children. If you only have 80 years to be happy in an accidental universe, then anything goes. No one is there to hold you accountable. If the weak get in your way, kill them all. That's atheist morality. You don't have to go to North Korea to see it.

# Great news: Supreme Court declines to hear appeal of Texas ban on late-term abortions

**Wintery Knight** · 20 November 2013 · Archived copy · Original

Life News reports.

Excerpt:

> Supreme Court Justice Antonin Scalia issued an opinion today indicating the Supreme Court will not get involved in a case out of Texas that has abortion facilities there appealing a law that has closed numerous abortion clinics that can't protect women's health.
>
> In a big victory for pro-life advocates in Texas earlier this month, the Fifth Circuit Court of Appeals overturned Judge Lee Yeakel of the Western District Court in Austin and restored key portions of a pro-life law in Texas that will ultimately stop abortions and could close abortion clinics. Abortion clinics appealed that decision to the Supreme Court and Justice Scalia issued a ruling today saying the high court will not get involved.
>
> "The underlying legal question — whether the new Texas statute is constitutional — is a difficult question. It is a question, I believe, that at least four members of this court will wish to consider irrespective of the 5th Circuit's ultimate decision," Justice Antonin Scalia wrote with Justices Clarence Thomas and Samuel Alito concurring. "I would maintain the status quo while the lower courts consider this difficult, sensitive, and controversial legal matter."
>
> **The justices voted 5-4 to leave Texas' pro-life provisions in place and the four Democrat-appointed pro-abortion justices all voted to overturn the pro-life measure. Justice Stephen Breyer write a dissenting opinion saying he expected the case to return to the Supreme Court.**
>
> **Chief Justice John Roberts and Justice Anthony Kennedy did not join an opinion or write their own, but they sided with Scalia, Thomas and Alito.**

So the pro-life side wins, for now. All five Republican-appointed judges sided with Texas. But that decision could change if we elect another Democrat to be President and the balance of the Supreme Court changes to be more pro-abortion. For example, Hillary Clinton is almost as pro-abortion as Obama is, and she would definitely appoint pro-abortion judges.

However there was some bad news in Texas to spoil the good news:

> A grant from the Obama administration is allowing the Planned Parenthood abortion business to reopen a clinic in Texas it closed after the passage of new pro-life laws there.
>
> Planned Parenthood has closed a number of clinics after Texas Governor Rick Perry signed into law a bill that bans abortions after 20 weeks and holds abortion facilities accountable for higher health and safety standards. Other clinics closed after Perry signed a bill to stop taxpayer funding for the abortion giant.
>
> But now, thanks to federal funding, a Planned Parenthood clinic will reopen in Mission, Texas that has been closed for two years.

The Obama administration is the most radically pro-abortion we've ever had. They have no qualms at all about about using the tax dollars of pro-lifers to fund organizations that provide abortions.

# White House and HHS were warned about Obamacare web site problems in April

**Wintery Knight** · 20 November 2013 · Archived copy · Original

NBC News reports.

Excerpt:

> The Obama administration, including Health and Human Services Secretary Kathleen Sebelius, was warned in April that there was insufficient time to complete testing before launching Healthcare.gov, according to a document released by a House committee investigating the website's botched rollout.
>
> The document, a 15-page slide show obtained by the Energy and Commerce Committee from the consulting firm McKinsey & Co., compares an ideal situation when rolling out a website such as Healthcare.gov with what developers were facing.
>
> According to the committee, the presentation was given April 4 to a group including Sebelius and Marilyn Tavenner, the administrator of the Centers for Medicare and Medicaid Services, the HHS agency responsible for the rollout.
>
> The document states that an ideal situation would be "end-to-end integrated operations and IT testing," but that the situation at the time was one with "insufficient time and scope of end-to-end testing." The document also says that a "limited initial launch" would be ideal, but that a "launch at full volume" was instead the plan.
>
> Republicans are questioning testimony Sebelius gave to the committee during a hearing two weeks after she got the briefing, when she said development of the site was "on track and on time."
>
> "At this point, our energy and resources are focused on getting it up and running, and we are on track and the contracts have been led and we are monitoring it every step along the way," Sebelius told the committee April 18. "I can tell you we are on track."
>
> **In a statement, the chairman of the committee, Rep. Fred Upton, R-Mich., said that Sebelius had "appeared before our committee, looked us in the eye, and repeatedly testified everything was 'on track and on time.'"**
>
> **"We now know that was not the case and the secretary was aware implementation was in trouble," he said.**

So you can put this latest Obamacare lie by HSS head Kathleen Sebelius on the pile along with the Benghazi lies and the IRS prosecution of the Tea Party lies and the gunrunning to Mexican drug cartels Fast and Furious lies. Lies, lies, lies.

In fact, CNBC is now reporting that the Obamacare web site is still not complete – it is lacking about a third of its functionality, including payment capabilities.

Excerpt:

> Another day, another big, bad black eye for HealthCare.gov.
>
> A crucial system for making payments to insurers from people who enroll in that federal Obamacare marketplace has yet to be built, a senior government IT official admitted Tuesday.
>
> The official, Henry Chao, visibly stunned Rep. Cory Gardner (R-Colo.) when he said under questioning before a House subcommittee that a significant fraction of HealthCare.gov—30 to 40 percent of it—has yet to be constructed.
>
> "We still need to build the payments system to make the payments [to insurance companies] in January,"

> testified Chao, deputy chief information officer of the Centers for Medicare and Medicaid Services, the federal agency that operates HealthCare.gov.
>
> That so-called financial management tool was originally supposed to be part of HealthCare.gov when it launched Oct. 1, but officials later suspended its launch as part of their effort to get the consumer interface part of the site ready. The tool will, when it works, transmit the subsidies that the government is kicking in for many enrollees to offset the costs of their monthly premiums.

This is not a defect in existing functionality, this is *missing functionality*. This project should never have been released to Production.

As someone who has worked on electronic payments extensively, let me just tell you that this is not a simple part of a web application. Billing and payment systems are some of the most difficult parts of an insurance application, requiring in depth knowledge of the business as well as technical knowledge. So don't expect this all to be fixed with a wave of a magic want.

# What are the arguments for the historicity of the empty tomb?

**Wintery Knight** · 20 November 2013 · Archived copy · Original

I wanted to go over this article by William Lane Craig which includes a discussion of the empty tomb, along with the other minimal facts that support the resurrection.

**The word resurrection means bodily resurrection**

The concept of resurrection in use among the first converts to Christianity was a *Jewish* concept of resurrection. And that concept of resurrection is unequivocally in favor of a *bodily resurrection*. The body (soma) that went into the grave is the body (soma) that came out.

Craig explains what this means with respect to the fast start of Christian belief:

> For a first century Jew the idea that a man might be raised from the dead while his body remained in the tomb was simply a contradiction in terms. In the words of E. E. Ellis, "It is very unlikely that the earliest Palestinian Christians could conceive of any distinction between resurrection and physical, 'grave emptying' resurrection. To them an *anastasis* without an empty grave would have been about as meaningful as a square circle."

And:

> Even if the disciples had believed in the resurrection of Jesus, it is doubtful they would have generated any following. So long as the body was interred in the tomb, a Christian movement founded on belief in the resurrection of the dead man would have been an impossible folly.

It's significant that the belief in the resurrection started off in the city where the tomb was located. Anyone, such as the Romans or Jewish high priests, who wanted to nip the movement in the bud could easily have produced the body to end it all. They did not do so, because they could not do so, although they had every reason to do so.

**There are multiple early, eyewitness sources for the empty tomb**

Paul's early creed from 1 Corinthians 15:3-7, dated to within 5 years of the crucifixion, implies the empty tomb.

Craig writes:

> In the formula cited by Paul the expression "he was raised" following the phrase "he was buried" implies the empty tomb. A first century Jew could not think otherwise. As E. L. Bode observes, the notion of the occurrence of a spiritual resurrection while the body remained in the tomb is a peculiarity of modern theology. For the Jews it was the remains of the man in the tomb which were raised; hence, they carefully preserved the bones of the dead in ossuaries until the eschatological resurrection. There can be no doubt that both Paul and the early Christian formula he cites pre-suppose the existence of the empty tomb.

The dating of the resurrection as having occurred "on the third day" implies the empty tomb. The date specified for the resurrection would have been the date that the tomb was discovered to be empty.

> The phrase "on the third day" probably points to the discovery of the empty tomb. Very briefly summarized, the point is that since no one actually witnessed the resurrection of Jesus, how did Christians come to date it "on the third day?" The most probable answer is that they did so because this was the day of the discovery of the empty tomb by Jesus' women followers. Hence, the resurrection itself came to be dated on that day. Thus, in the old Christian formula quoted by Paul we have extremely early evidence for the existence of Jesus' empty tomb.

The early pre-Markan burial narrative mentions the empty tomb. This source pre-dates Mark, the earliest gospel. The source has been dated by some scholars to the 40s. For example, the atheist scholar James Crossley dates Mark some time in the 40s. (See the debate below)

> *The empty tomb story is part of the pre-Markan passion story and is therefore very old*. The empty tomb story was probably the end of Mark's passion source. As Mark is the earliest of our gospels, this source is therefore itself quite old. In fact the commentator R. Pesch contends that it is an incredibly early source. He produces two lines of evidence for this conclusion:
>
> (a) Paul's account of the Last Supper in 1 Cor. 11:23-5 presupposes the Markan account. Since Paul's own traditions are themselves very old, the Markan source must be yet older.
>
> (b) The pre-Markan passion story never refers to the high priest by name. It is as when I say "The President is hosting a dinner at the White House" and everyone knows whom I am speaking of because it is the man currently in office. Similarly the pre-Markan passion story refers to the "high priest" as if he were still in power. Since Caiaphas held office from AD 18-37, this means at the latest the pre-Markan source must come from within seven years after Jesus' death. This source thus goes back to within the first few years of the Jerusalem fellowship and is therefore an ancient and reliable source of historical information.

**Lack of legendary embellishments**

The empty tomb narrative in the gospels lacks legendary embellishments, unlike later 2nd century forgeries that originated outside of Jerusalem.

**The eyewitness testimony of the women**

This is the evidence that has been the most convincing to skeptics, and to me as well.

> *The tomb was probably discovered empty by women*. To understand this point one has to recall two facts about the role of women in Jewish society.
>
> (a) Woman occupied a low rung on the Jewish social ladder. This is evident in such rabbinic expressions as "Sooner let the words of the law be burnt than delivered to women" and "Happy is he whose children are male, but woe to him whose children are female."
>
> (b) The testimony of women was regarded as so worthless that they were not even permitted to serve as legal witnesses in a court of law. In light of these facts, how remarkable must it seem that it is women who are the discoverers of Jesus' empty tomb. Any later legend would certainly have made the male disciples to discover the empty tomb. The fact that women, whose testimony was worthless, rather than men, are the chief witnesses to the empty tomb is most plausibly accounted for by the fact that, like it or not, they were the discoverers of the empty tomb and the gospels accurately record this.

**The earliest response from the Jewish high priests assumes the empty tomb**

This report from Matthew 28 fulfills the criteria of enemy attestation, although Matthew is not the earliest source we have. Oh, well.

> In Matthew 28, we find the Christian attempt to refute the earliest Jewish polemic against the resurrection. That polemic asserted that the disciples stole away the body. The Christians responded to this by reciting the story of the guard at the tomb, and the polemic in turn charged that the guard fell asleep. Now the noteworthy feature of this whole dispute is not the historicity of the guards but rather the presupposition of both parties that the body was missing. The earliest Jewish response to the proclamation of the resurrection was an attempt to explain away the empty tomb. Thus, the evidence of the adversaries of the disciples provides evidence in support of the empty tomb.

Note how careful Craig is not to imply that the guard tradition is historical, because we can't prove the guard as a "minimal fact", since it doesn't pass the standard historical criteria.

**See it used in a debate**

You can see the arguments made and defended from criticism in this debate with the atheist scholar James Crossley.

This my favorite resurrection debate.

# How well is government-run health care working out in socialist Venezuela?

**Wintery Knight** · 21 November 2013 · Archived copy · Original

Here is an article about government-run health care from the radically leftist New York Times, of all places.

Excerpt:

> Doctors not allied with the government say many patients began dying from easily treatable illnesses when Venezuela's downward economic slide accelerated after Chavez's death from cancer in March. Doctors say it's impossible to know how many have died, and the government doesn't keep such numbers, just as it hasn't published health statistics since 2010.
>
> Almost everything needed to mend and heal is in critically short supply: needles, syringes and paraffin used in biopsies to diagnose cancer; drugs to treat it; operating room equipment; X-ray film and imaging paper; blood and the reagents needed so it can be used for transfusions.
>
> Last month, the government suspended organ donations and transplants. At least 70 percent of radiotherapy machines, precisely what Gonzalez will need once her tumor is removed, are now inoperable in a country with 19,000 cancer patients — meaning fewer than 5,000 can be treated, said Dr. Douglas Natera, president of the Venezuelan Medical Federation.
>
> […]The country's 1999 constitution guarantees free universal health care to Venezuelans, who sit on the world's largest proven oil reserves. Maduro's government insists it's complying. Yet of the country's 100 fully functioning public hospitals, nine in 10 have just 7 percent of the supplies they need, Natera said.
>
> […]Venezuela's 400 private hospitals and clinics are overburdened and strapped for supplies, 95 percent of which must be imported, said Dr. Carlos Rosales, president of the association that represents them.
>
> The private system has just 8,000 of the country's more than 50,000 hospital beds but treats 53 percent of the country's patients, including the 10 million public employees with health insurance. Rosales said insurers, many state-owned, are four to six months behind in payments and it is nearly impossible to meet payrolls and pay suppliers.
>
> Worse, government price caps set in July for common procedures are impossible to meet, Rosales said. For example, dialysis treatment was set at 200 bolivars ($30 at the official exchange rate and less than $4 on the black market) for a procedure that costs 5,000 bolivars to administer.

> […]At Maracay's 433-bed Central Hospital, mattresses are missing, broken windows go unrepaired and the cafeteria has been closed for a year. Paint peels off walls and rusty pipes lie exposed. In the halls, patients on intravenous drips lie recovering on gurneys.
>
> […]Broken anesthesia machines and battered stainless-steel instrument tables, some held together with tape, filled one of five idled operating rooms. Foul odors and water from leaky pipes continue to seep into the rooms, doctors said.
>
> In August, cancer patients protested at the eight-month mark since the hospital's two radiotherapy machines broke down. The machines remain out of order.
>
> **Half the public health system's doctors quit under Chavez, and half of those moved abroad, Natera said.**
>
> **Now, support staff is leaving, too, victim of a wage crunch as wages across the economy fail to keep up with inflation.**
>
> **At the Caracas blood bank, Lopez said 62 nurses have quit so far this year along with half the lab staff. It now can take donations only on weekday mornings.**

And here is a comment about a Chavez supporter who has been waiting for years for care: "Gonzalez says she adored Chavez for his anti-poverty programs, always voted for him and constantly applied for government benefits, though she never received any." Yes. That's what causes problems like this. Low-information voters voting for a charismatic strong man who tells them what they want to hear, and seizes wealth from the most-educated, productive citizens in order to hand it out to his supporters. But eventually, you run out of other people's money to spend, and that's where Venezuela is now. But they keep on digging their hole.

If you're a big-government sort of person, then you would love the Venezuelan health care system. Price controls make sure that doctors and hospitals don't make any money by providing care. Everyone is equal and you have to wait your turn in line whether you pay taxes or not. The only problem is that it's capitalism – not communism – which cares about the needs of consumers. In a capitalist system, consumers buy what they like, and businesses compete with each other to lower prices and raise quality. Not so in a communist system, which forces the most talented people in the country to stop producing, or just leave the country completely.

# Democrats introduce bill to strike down state-level restrictions on abortion

**Wintery Knight** · 21 November 2013 · Archived copy · Original

The Weekly Standard reports.

Excerpt: (links removed)

> Is performing an abortion no different than pulling a tooth? The idea that there isn't a difference is the basis of a new federal bill that would wipe hundreds of state abortion laws off the books–striking down everything from late-term abortion limits to health and safety regulations in many states.
>
> **The Women's Health Protection Act, introduced by Democratic Connecticut senator Richard Blumenthal, would even invalidate a law used to convict Philadelphia abortionist Kermit Gosnell earlier this year, and it could potentially force taxpayers across the country to directly fund elective abortions for Medicaid recipients.**
>
> "The basic principle is that there can be no restriction that is not also imposed on a medically comparable procedure. If they single out abortion or reproductive rights, it's going to fall foul," Blumenthal said at a November 13 press conference. Blumenthal told THE WEEKLY STANDARD following his remarks that it's "for doctors to decide" what counts as a "medically comparable" procedure.
>
> Blumenthal specifically condemned health and safety regulations requiring that an abortion "doctor have admitting privileges" at a hospital "or that the hallways in a clinic be a certain width, which has no relation to health or safety."

> Top officials at leading abortion rights organizations joined Blumenthal on November 13 in denouncing such health and safety regulations, which states like Texas and Pennsylvania passed in response to the deaths of women in abortion clinics like the one run by Gosnell in Philadelphia.
>
> […] In addition to being convicted on three counts of murder for killing infants after they had been born, Gosnell was convicted under the Abortion Control Act for successfully killing 21 infants *in utero* past Pennsylvania's gestational limit on abortion (a limit that's just two weeks later in pregnancy than the limit established recently by Texas).

Republicans have passed huge numbers of restrictions on the abortion business since the 2011, when the Tea Party was so prominent in the 2010 mid-term elections.

Life News explains:

> During 2011, state legislators set a record by approving more pro-life laws stopping and limiting abortions than any other year since Roe v. Wade in 1973. A new report issued today shows that last year, legislatures approved the second highest number.
>
> Although some media outlets and abortion advocates say the November presidential election marked a defeat for the pro-life movement, the number of abortions is at its lowest level nationally and states are seeing historic low abortion figures thanks in large part to state pro-life laws. **These laws — ranging from parental notification and informed consent to banning abortions later in pregnancy and cutting of taxpayer funds for abortions or the Planned Parenthood abortion business — are saving lives every day.**
>
> […]**Many of those new pro-life laws included allowing women to see an ultrasound of their unborn baby before an abortion while others included ensuring abortion facilities follow the same health and**

> **safety laws that apply to legitimate medical centers performing outpatient surgeries. In addition, laws adopted in Louisiana and Oklahoma require abortion providers to make the fetal heartbeat audible to the woman prior to an abortion. Arizona, Michigan and Virginia approved such laws on abortion clinics — that have shut down many abortion centers that fail to comply.**

Can you imagine what would happen if the Democrats controlled the House of Representatives, like they control the Senate and the White House? All these state-level protections for unborn children would be rolled back. As it stands now, I don't expect that the Republican-controlled House is going to pass this bill, but it does give you something to think about ahead of the 2014 elections.

# New study finds that students who cheat prefer to work in government over private sector

**Wintery Knight** · 21 November 2013 · Archived copy · Original

What's in your government?

Phys.org reports on a new study that explains what kind of people prefer to work in a government monopoly.

Excerpt:

> College students who cheated on a simple task were more likely to want government jobs, researchers from Harvard University and the University of Pennsylvania found in a study of hundreds of students in Bangalore, India.
>
> Their results, recently released as a working paper by the National Bureau of Economic Research, suggest that one of the contributing forces behind government corruption could be who gets into government work in the first place.
>
> […]Researchers ran a series of experiments with more than 600 students finishing up college in India. In one task, students had to privately roll a die and report what number they got. The higher the number, the more they would get paid. Each student rolled the die 42 times.
>
> Although researchers do not know for sure if any one student lied, they could tell whether the numbers each person reported were wildly different from what would turn up randomly – in other words, whether there were a suspiciously high number of 5s and 6s in their results.
>
> Cheating seemed to be rampant: More than a third of students had scores that fell in the top 1 percent of the predicted distribution, researchers found. Students who apparently cheated were 6.3 percent more likely to say they wanted to work in government, the researchers found.
>
> "Overall, we find that dishonest individuals – as measured by the dice task – prefer to enter government service," wrote Hanna and co-author Shing-yi Wang, an assistant professor at the University of Pennsylvania's Wharton School.
>
> They added, "Importantly, we show that cheating on this task is also predictive of fraudulent behaviors by real government officials."
>
> The same test, given to a smaller set of government nurses, showed that those who appear to have cheated with the dice were also more likely to skip work. Previous studies suggest that the bulk of such absenteeism is fraudulent, Hanna said.

Aside from the armed forces, most people who go into government go there because they want to have a secure job that they cannot be fired from no matter how poorly they perform. They want to be insulated from market forces and free trade. They don't want to have to do a good job and please customers in order to get paid. Naturally, people who cheat on tests and lack qualifications are attracted to unionized industries like government for these reasons.

# Walt Russell explains how to read the Bible effectively

**Wintery Knight** · 21 November 2013 · Archived copy · Original

Below I go over two posts written by Biola University New Testament professor Walt Russell. The material below is almost the same talk he gave for the Stand to Reason Masters Series in Christian Thought. His book on the subject of interpreting the Bible is called "Playing With Fire: How the Bible Ignites Change in Your Soul". I highly recommend that you read the book, so you know how to read the Bible effectively. But these four articles will teach you most of what you need to know if you don't want to buy the book.

Here is part one which talks about how postmodern relativism is at odds with discovering the original intent of an author.

Excerpt:

> Twenty-four year-old "Janet" (not her real name) was angry at my emphasis on seeking to discover authors' intentions when we read their texts. She was an evangelical Christian and a second grade teacher in a public school. She prided herself in helping her 20 students learn to love literature. She would read them a story as they gathered around her, and then ask each child, "What does the story mean to you?" She prodded them to come up with their own unique meanings. With such strong encouragement, the class of 20 would eventually have 20 different meanings for the one story. Janet sensed that I was a naysayer about such "love of literature." Pouring a little emotional gasoline on the fire, I said, "Janet, you're certainly doing your part to insure that these 7 year-olds will never recover from a radically relativistic view of meaning!" Now I had her full attention.

Here is part two which talks about the importance of knowing the genre of a text before you try to interpret it.

Excerpt:

> "INDIANS SLAY TIGERS!" — the newspaper headline virtually screams out at you. The thought of something being slain is repulsive. You're gripped by a mental image of southern India's Bengal tiger. You imagine its beautiful face, its stripes and piercing eyes. Then your image is shattered by the sudden blast of a high-powered rifle. You see the exquisite creature writhe in pain, fall gracelessly in its tracks and die. Having read no further than the headline, you feel sick, as if you've witnessed something tragic.
>
> But *should* you feel this way? The slaughter of an endangered species — especially one as magnificent as the Bengal tiger — is horrifying, no doubt. But suppose you failed to notice that the headline "INDIANS SLAY TIGERS!" appeared in the *sports page* of the morning paper. Clearly enough, it now refers to different Indians, different Tigers and a different manner of slaying than you originally thought. And is it really that tragic that the Cleveland Indians badly beat the Detroit Tigers in a major league baseball game last night? Not unless you're a long-suffering Detroit Tigers' baseball fan. But how do you now know that the headline is about baseball and not tiger-slaying in India? You look at the words "INDIANS SLAY TIGERS" and you know exactly what each word means. When you combine these words, how can they not mean exactly what you first thought they did — that *Indians slay tigers*? Answer: because their meanings are communicated (as the meanings of *all* words are) through *genres*!

Here is part three which talks about the importance of reading the context of a verse before you try to interpret it.

Excerpt:

> "Never Read a Bible Verse!" That's the title of a little booklet my friend and Christian radio personality, Gregory Koukl, has written to help people read the Bible well. What great advice. "That's right, never read a Bible verse. Instead, always read a paragraph — at least." But the current is flowing the other way in our

> popular sound-bite culture. Not to be left out (or left behind!), the Church has its own version of sound-bite culture: *verse-bite culture*. In verse-bite culture we take a sentence or sentence-fragment from a biblical paragraph, memorize it out of context, write it on a little card, put it on a billboard, a plaque, a rock, etc. Somehow we think that just because this little chunk of Scripture has a verse number in front of it, it was meant to be a free-standing unit of thought. Nothing could be further from the truth.
>
> Apart from the fact that chapter and verse divisions weren't added to the New Testament text until 1560 — long after the New Testament's inspired authorship — there is a more important reason for never reading just a Bible verse, and instead reading at least the paragraph that contains it.

Here is part four which talks about the importance of applying the words of the Bible to your life.

One verse that is often misinterpreted is missing from the articles, but present in the STR lecture. It's Philippians 1:6 that says "6 being confident of this, that he who began a good work in you will carry it on to completion until the day of Christ Jesus". Russell says in the lecture that this promise is specifically intended for the church in Philippi, to whom Paul is writing, not necessarily to all Christians. He is giving them a promise just after directly referring to their good work in supporting him in his ministry. Some verses are just not meant for us, and the context reveals it.

# Eight years ago, Obama, Biden and Reid ALL opposed the nuclear option

**Wintery Knight** · 22 November 2013 · Archived copy · Original

Breitbart recalls what Senate Democrats said about the nuclear option just eight years ago, when they wanted to filibuster George Bush's pro-life judicial nominees.

President Obama in 2005:

> The American people want less partisanship in this town, but everyone in this chamber knows that if the majority chooses to end the filibuster, if they choose to change the rules and put an end to democratic debate, then the fighting, the bitterness, and the gridlock will only get worse.
>
> […]These are challenges we all want to meet and problems we all want to solve, even if we do not always agree on how to do it. But if the right of free and open debate is taken away from the minority party and the millions of Americans who ask us to be their voice, I fear the partisan atmosphere in Washington will be poisoned to the point where no one will be able to agree on anything. That does not serve anybody's best interest, and it certainly is not what the patriots who founded this democracy had in mind. We owe the people who sent us here more than that. We owe them much more.

Vice President Biden in 2005:

> This is the single most significant vote any one of us will cast in my 32 years in the Senate. I suspect the Senator would agree with that. We should make no mistake. This nuclear option is ultimately an example of the arrogance of power. It is a fundamental power grab by the majority party, propelled by its extreme right and designed to change the reading of the Constitution, particularly as it relates to individual rights and property rights. It is nothing more or nothing less.

Senate Majority Leader Reid in 2005:

> The filibuster is not a scheme and it certainly isn't new. The filibuster is far from a procedural gimmick…
>
> […]It's part of the fabric of this institution we call the Senate. It was well-known in colonial legislatures before we became a country, and it's an integral part of our country's 214-year history. The first filibuster in the United States Congress happened in 1790. It was used by lawmakers from Virginia and South Carolina who were trying to prevent Philadelphia from hosting the first Congress. Since then, the filibuster has been employed hundreds and hundreds and hundreds of times. It's been employed on legislative matters, it's been employed on procedural matters relating to the president's nominations for Cabinet and sub-Cabinet posts, and it's been used on judges for all those years. One scholar estimates that 20 percent of the judges nominated by presidents have fallen by the wayside, most of them as a result of filibusters. Senators have used the filibuster to stand up to popular presidents, to block legislation, and, yes, even, as I've stated, to stall executive nominees. The roots of the filibuster are found in the Constitution and in our own rules.

This is the same filibuster that the Democrats used to block qualified judicial nominees like Miguel Estrada and Janice Rogers Brown. Now that the tables are turned, they want to take it away from Republicans so they can get radical left-wingers appointed to the high courts. Let this be a lesson to Republicans who want to be nice and play by the rules: don't. Because rules mean nothing to Democrats. The next time we have the House, Senate and the White House, we should enact policies to de-fund and marginalize the Democrats down to the level of the Libertarian party.

# Study: abortion more than doubles the risk of child abuse

**Wintery Knight** · 22 November 2013 · Archived copy · Original

Here's a report from Life News about a new study out of Bowling Green State University.

Excerpt:

> For decades, evidence has existed showing abortion contributes to a rise in child abuse. Now a new study by a post-abortion research institute and Bowling Green State University professors finds that women who have abortions are more likely to abuse their children.
>
> **Published in the medical journal Acta Paediatrica, the study found that women who have had abortions are 2.4 times more likely to physically abuse their children.** Pro-life advocates say it proves the need for providing women with post-abortion counseling to help deal with the emotional trauma of the abortion.
>
> Led by Priscilla Coleman, a professor at Bowling Green, researchers looked at data taken from a survey of 518 low-income women in Baltimore who were receiving Aid to Families with Dependent Children and who had at least one child aged 12 years or younger.
>
> The data compared rates of child abuse and neglect among women who had experienced either an involuntary (miscarriage or stillbirth) or voluntary (induced abortion) pregnancy loss.
>
> Women who had a miscarriage or stillbirth were more likely to physically abuse their children as well, but the increase was much less significant than for women who had abortions.
>
> The authors suggested that "emotional difficulties and unresolved grief responses" from pregnancy loss, whether voluntary or involuntary, could have a negative impact on women's mental health and lead to unhealthy parenting responses.
>
> According to the Illinois-based Elliot Institute, which released information about the study's findings, prior surveys "have linked pregnancy loss to an increase in grief reactions, anxiety, depression, sleep disturbances, and symptoms of post-traumatic stress disorder, all of which can have a negative impact on parent/child relationships."
>
> The post-abortion research group also points to a 2002 study published in the Journal of Child Psychiatry and Psychology that found abortion has been linked to an increase in substance abuse and thoughts of suicide, which could also contribute to child abuse.
>
> The new study also found that women who had more than one miscarriage or stillbirth were more likely to engage in child abuse than women who had just one. However, women who had abortions were more likely to abuse their children whether they had one or more than one abortion.
>
> "Regardless of the specific mechanisms at play, maternal history of one induced abortion does appear to be a marker for increased risk of physical abuse," the authors concluded.

In legalizing abortion, we have changed the way that adults view sex and the way adults view children. Instead of thinking that sex is something that is reserved for marriage, we now think that it is OK for women to have sex for fun with men who have *no intention* and *no capability* to take on the traditional male roles of protector, provider and moral/spiritual leader. And when those irresponsible choices produce other human beings, we have taught ourselves that murder is a morally permissible option. What does it mean? It means that children have no rights. It means that we can kill things we create if they annoy us. And that attitude spills over from unborn children to born children. It is going to result in *more* child abuse, when more people accept these views about what sex is supposed to be for, and what our obligations are to children.

But this is not the only study that shows the harm that abortion does.

Life News reports on the latest studies confirming the link between abortion and breast cancer.

Excerpt:

> A newly-published study shows the highest-ever abortion-breast cancer risk for women of any previously-published study on the link between the two.
>
> A Bangladesh study published in the Journal of Dhaka Medical College on risk factors for breast cancer, led by Dr. Suraiya Jabeen, found a statistically significant 20.62-fold increased risk among women with abortion histories. The new study on the abortion-breast cancer link is by far the highest risk elevation reported among 73 published abortion-breast cancer studies.
>
> Physical inactivity, being menopause, positive family history of breast cancer and history of induced abortion were found important risk factors," the authors wrote.
>
> Professor Joel Brind, a professor at Baruch College, City University of New York who is an expert on the abortion-breast cancer link, said the reason why the risk elevation is so high is because it's "a measure of relative risk."
>
> Observing that women in Bangladesh have very traditional childbearing patterns that reduce breast cancer risk, he explained: "Almost all the women are married (97% currently married; the rest widowed) and with child by the time they are 20, and all of the kids are breastfed. Ninety percent had their first child at age 21 or younger (99% of controls did). They typically neither take contraceptive steroids nor have any abortions. Nulliparity (childlessness) or abortion before first full term pregnancy (both of which mean no breastfeeding) in a population in which breast cancer is almost unheard of, makes the relative risk very high."
>
> Brind continued: "Although the authors did not include a measure of their abortion link's statistical significance, their raw data was complete enough to calculate a 95% confidence interval of 12.85-32.51, making abortion by far the strongest and most significant risk factor observed in these Bengali women. In plain English, women in this population who had any induced abortions were more than 20 times as likely to get breast cancer, compared to women with no abortions."
>
> According to the study, additional minor reproductive factors influencing breast cancer risk included: use of oral contraceptives (1.47-fold increased risk); early first birth at or before age 21 (0.35-fold reduced risk); having two or more children (0.29-fold reduced risk); and increased number of months spent breastfeeding (0.30-fold reduced risk).

But that's not all.

Life News reports.

Excerpt:

> A study in the Asian Pacific Journal of Cancer Prevention shows abortion increases the risk of breast cancer for women.
>
> C. Yanhua of the First Peoples' Hospital of Kunming in Yunnan province and his colleagues found the abortion-breast cancer association after comparing data from 263 cases of breast cancer and 457 controls without the disease. Their analysis covers the years 2009-2011.
>
> The authors examined information on disease diagnosis, demographics, medical history, and reproductive characteristics of the patients involved and also looked at short menstrual cycle, old age at first live birth, never breastfeeding, history of oral contraceptive use, postmenopausal status and nulliparity to determine in abortion-breast cancer link exists.
>
> They write that "multivariate model analysis revealed the significant independent positive associations with breast cancer of shorter menstrual cycle, older age at first live birth, never breastfeeding, history of oral

> contraception experience, increased number of abortion, menopause status, and nulliparities."
>
> "Number of abortion showed an increasing higher risk of breast cancer," they added, while saying that women who had one live birth lowered their risk. "As far as women who had once a live birth, it showed decreased the risk of breast cancer compared to nulliparous."
>
> "This study showed an increased risk of breast cancer with times of abortion. The association between abortion and risk of breast cancer in a study in China showed that the risk factors of female breast cancer included abortion times more than two (Li et al., 2006)," they continued. "Another study found that risk was raised among women reporting at least one abortion, but no trend was seen with number of abortions (Heuch et al., 2008). In a meta-analysis study, pooled odds ratio for number of abortions greater than and equal three was statistically significant (95%CI:1.68-5.36) (Tao et al.,2011)."
>
> "In conclusion, in this study the estrogen related risk factors of breast cancer included woman who had longer menstrual cycle, older age of first live birth, never breastfeeding, nulliparity, and number of abortions more than one. Therefore, it is recommended to women with these risk factors perform breast cancer screening tests earlier and regularly," they said.

Previously, another study was published in Oxford University's European Journal of Public Health, and the abstract is posted on PubMed.

Here are the results:

> With statistical controls for number of pregnancies, birth year and age at last pregnancy, the combination of induced abortion(s) and natural loss(es) was associated with more than three times higher mortality rate than only birth(s). Moderate risks were identified with only induced abortion, only natural loss and having experienced all outcomes compared with only birth(s). Risk of death was more than six times greater among women who had never been pregnant compared with those who only had birth(s). Increased risks of death were 45%, 114% and 191% for 1, 2 and 3 abortions, respectively, compared with no abortions after controlling for other reproductive outcomes and last pregnancy age. Increased risks of death were equal to 44%, 86% and 150% for 1, 2 and 3 natural losses, respectively, compared with none after including statistical controls. Finally, decreased mortality risks were observed for women who had experienced two and three or more births compared with no births.

Life Site News adds more:

> A single induced abortion increases the risk of maternal death by 45 percent compared to women with no history of abortion, according to a new study of all women of reproductive age in Denmark over a 25 year period.
>
> The study found that each additional abortion is associated with an even higher death rate. Women who had two abortions were 114 percent more likely to die during the period examined, and women had three or more abortions had a 192 percent increased risk of death.
>
> Elevated rates of death were also observed among women who experienced miscarriages, ectopic pregnancies or other natural losses. Among women with a history of multiple pregnancies, women with a history of both abortions and natural losses, but no live births, had the highest mortality rate.
>
> Women who had never been pregnant had the highest mortality rate overall.
>
> However, women with a history of successful deliveries were the least likely to die during the 25 years examined.
>
> The study is the second record linkage analysis of Danish mortality data to be published this month.
>
> The earlier study was limited to comparing mortality rates following only the first pregnancy outcome. It found

> that abortion of a first pregnancy was associated with a higher rate of death compared to death rates among women who delivered a first pregnancy. The higher death rate among women who had abortions persisted for each of the first ten years following the first pregnancy outcome.
>
> […]Dr. Reardon is the director of the Elliot Institute, which funds research related to abortion. He believes further research is needed to explore how the outcomes observed in this latest study may be influenced by abortion's impact on natural pregnancy losses. A new population study from Finland, for example, has found that abortion is associated with higher rates of preterm delivery, low birth weight delivery, and perinatal deaths in subsequent pregnancies.

And another from Life News.

Excerpt:

> A new study published in the *Asian Pacific Journal of Cancer Prevention* in February reported a very statistically significant increased risk of breast cancer for women with previous abortions as opposed to women who have never had one.
>
> The study, consisting of 1,351 women and led by researcher Ai-Ren Jiang, reported a statistically significant 1.52-fold elevation in risk for women with induced abortions and a "significant dose-response relationship between (the risk) for breast cancer and number of induced abortions," meaning the risk climbed with a higher number of previous abortions.
>
> For premenopausal women who have had abortions, the numbers were relatively small, and the observed 16% risk elevation was not statistically significant. However, for those with three or more abortions, the risk climbed to a statistically significant 1.55-fold elevation.
>
> "The results have revealed that induced abortion was related to increased risk of breast caner. Premenopausal women who had ≥3 times of induced abortion were at increased crude odds ratio (OR) (2.41, 95%CI: 1.09-5.42) and adjusted-OR (1.55, 95%CI: 1.15-5.68)," they wrote. "Postmenopausal women with a previous induced abortion were at increased crude OR (2.04, 95%CI: 1.48-2.81) and adjusted-OR (1.82, 95%CI: 1.30-2.54), and there was a significant increase trend in OR with number of induced abortions (p for trend: 0.0001)."
>
> […][A] Chinese study in 1995 by L. Bu and colleagues, including Janet Daling of the Fred Hutchinson Cancer Research Center, reported a statistically significant 4.5-fold elevated risk among women with previous induced abortions who developed breast cancer at or before age 35, compared to older women (who experienced a statistically significant 2.5-fold elevated risk)

Here's another study from the Journal of the American Medical Association (JAMA), showing that excessive consumption of alcohol is a rish factor for breast cancer.

Excerpt:

> Consumption of 3 to 6 alcoholic drinks per week is associated with a small increase in the risk of breast cancer, and consumption in both earlier and later adult life is also associated with an increased risk, according to a study in the November 2 issue of JAMA.
>
> "In many studies, higher consumption of alcohol has been associated with an increased risk of breast cancer. However, the effect of low levels of drinking as is common in the United States has not been well quantified," according to background information in the article. "In addition, the role of drinking patterns (i.e., frequency of drinking and 'binge' drinking) and consumption at different times of adult life are not well understood."
>
> Wendy Y. Chen, M.D., M.P.H., of Brigham and Women's Hospital and Harvard Medical School, Boston, and colleagues examined the association of breast cancer with alcohol consumption during adult life, including

> quantity, frequency, and age at consumption. The study included 105,986 women enrolled in the Nurses' Health Study who were followed up from 1980 until 2008 with an early adult alcohol assessment and 8 updated alcohol assessments. The primary outcome the researchers measured was the risk of developing invasive breast cancer.
>
> During the follow-up period, there were 7,690 cases of invasive breast cancer diagnosed among the study participants. Analyses of data indicated that a low level of alcohol consumption (5.0 to 9.9 grams per day, equivalent to 3-6 glasses of wine per week) was modestly but statistically significantly associated with a 15 percent increased risk of breast cancer. In addition, women who consumed at least 30 grams of alcohol daily on average (at least 2 drinks per day) had a 51 percent increased risk of breast cancer compared with women who never consumed alcohol.
>
> The researchers also found that when examined separately, alcohol consumption levels at ages 18 to 40 years and after age 40 years were both strongly associated with breast cancer risk. The association with drinking in early adult life still persisted even after controlling for alcohol intake after age 40 years.
>
> Binge drinking, but not frequency of drinking, was also associated with breast cancer risk after controlling for cumulative alcohol intake.

Now let's take a look at some other factors that raise the risk of breast cancer.

**Abortion and breast cancer**

Many studies show a link between abortion and breast cancer.

Study 1: (September 2010)

> Based on the expression of estrogen receptor (ER), progesterone receptor (PR) and HER2/neu (HER2), breast cancer is classified into several subtypes: luminal A (ER+ and/or PR+, HER2-), luminal B (ER+ and/or PR+, HER2+), HER2-overexpressing (ER-, PR-, and HER2+) and triple-negative (ER-, PR-, and HER2-). The aim of this case-control study is to determine reproductive factors associated with breast cancer subtypes in Chinese women. A total of 1,417 patients diagnosed with breast cancer in the First Affiliated Hospital, China Medical University, Shenyang, China between 2001 and 2009 and 1,587 matched controls without a prior breast cancer were enrolled.
>
> […]Postmenopause and spontaneous abortion were inversely associated with the risk of luminal tumors. By contrast, multiparity, family history of breast cancer and **induced abortion increased the risk of breast cancer**.

Study 2: (March 2010)

> OBJECTIVE: To explore the risk factors of breast cancer for better control and prevention of the malignancy.
>
> METHODS: The clinical data of 232 patients with pathologically established breast cancer were investigated in this 1:1 case-control study to identify the risk factors of breast cancer.
>
> RESULTS: The history of benign breast diseases, family history of carcinoma and**multiple abortions were the statistically significant risk factors of breast cancer**, while breast feeding was the protective factor.
>
> CONCLUSION: A history of benign breast diseases, family history of carcinoma and multiple abortions are all risk factors of breast cancer.

But wait, there's more.

**Birth control pills**

Many studies showed that taking birth control pills caused an increased risk of breast cancer.

Study 1: (March 2003)

> RESULTS: Among the youngest age group (<35 years, n = 545), significant predictors of risk included African-American race (RR = 2.66: 95% CI 1.4-4.9) and **recent use of oral contraceptives** (RR = 2.26; 95% CI 1.4-3.6). Although these relationships were strongest for estrogen receptor-negative (ER-) tumors (RRs of 3.30 for race and 3.56 for recent oral contraceptive use), these associations were also apparent for young women with ER+ tumors. Delayed childbearing was a risk factor for ER+ tumors among the older premenopausal women (Ptrend < 0.01), but not for women <35 years in whom early childbearing was associated with an increased risk, reflecting a short-term increase in risk immediately following a birth.

Study 2: (October 2008)

> **Oral contraceptive use ≥1 year was associated with a 2.5-fold increased risk for triple-negative breast cancer** (95% confidence interval, 1.4-4.3) and no significantly increased risk for non-triple-negative breast cancer ($P_{heterogeneity}$ = 0.008). Furthermore, the risk among oral contraceptive users conferred by longer oral contraceptive duration and by more recent use was significantly greater for triple-negative breast cancer than non-triple-negative breast cancer ($P_{heterogeneity}$ = 0.02 and 0.01, respectively).

All of this research shows that abortion is bad for women, but I also should mention that abortion is always bad for the unborn child, especially sex-selection abortions, which target women more than men.

**Conclusion**

The total cost for breast cancer treatment, which raises medical insurance premiums (private health care) or taxes (single-payer health care), has been estimated to be between $1.8 billion and $3.8 billion dollars. In addition, the government spends billions of dollars each year on breast cancer research. All of this spending is costing taxpayers a lot of money, as people demand more and more government funding of breast cancer research and breast cancer treatment (with either private or single-payer health care).

# UK headmistress warns parents that child's refusal to attend Muslim field trip is "racism"

**Wintery Knight** · 22 November 2013 · Archived copy · Original

Dina send me this troubling article from the UK Daily Mail.

Excerpt:

> Parents were ordered to send their children to a workshop on Islam or have them labelled as racist for the rest of their school career.
>
> They were sent a letter warning that the primary school pupils would have a 'racial discrimination note' put on their records if they did not go.
>
> Families were told to pay £5 per child for the Explore Islam trip next Wednesday to Staffordshire University, which would involve Year 4 and Year 6 children being shown Islamic artefacts.
>
> **Mothers and fathers were warned: 'Refusal to allow your child to attend will result in a Racial Discrimination note being attached to your child's education record, which will remain on this file throughout their school career.**
>
> **'All absences on this day will be investigated for their credibility and will only be sanctioned with a GP sick note.'**
>
> […]According to the letter sent last Wednesday, the visit is part of the National Curriculum for religious education and also reflects 'the multi-cultural community in which we live'.

You might remember that the UK is not doing too well lately with their Islamic population, judging by recent terrorist attacks and general anti-Western radicalism. But that doesn't stop them from continuing these policies.

# Mark Steyn and Thomas Sowell on “the knockout game”

**Wintery Knight** · 23 November 2013 · Archived copy · Original

First, Mark Steyn writing in National Review. (H/T Jay Richards)

Excerpt:

> In his book *The Abolition of Man*, he writes of “men without chests” — the chest being “the indispensable liaison” between the head and the gut, between “cerebral man” and “visceral man.” In the chest beat what Lewis calls “the trained emotions.” Without them there is no honor or virtue, but only “intellect” and/or “appetite.”
>
> Speaking of appetite, have you played the “Knockout” game yet? Groups of black youths roam the streets looking for a solitary pedestrian, preferably white (hence the alternate name “polar-bearing”) but Asian or Hispanic will do. The trick is to knock him to the ground with a single punch. There’s a virtually limitless supply of targets: In New York, a 78-year-old woman was selected, and went down nice and easy, as near-octogenarian biddies tend to when sucker-punched. But, when you’re really rockin’, you can not only floor the unsuspecting sucker but kill him: That’s what happened to 46-year-old Ralph Santiago of Hoboken, N.J., whose head was slammed into an iron fence, whereupon he slumped to the sidewalk with his neck broken. And anyway the one-punch rule is flexible: In upstate New York, a 13-year-old boy socked 51-year-old Michael Daniels but with insufficient juice to down him. So his buddy threw a bonus punch, and the guy died from cerebral bleeding. Widely available video exists of almost all Knockout incidents, since the really cool thing is to have your buddies film it and upload it to YouTube. And it’s so simple to do in an age when every moronic savage has his own “smart phone.”
>
> There’s no economic motive. The 78-year-old in New York was laden with bags from department stores, but none were touched. You slug an elderly widow not for the 50 bucks in her purse but for the satisfaction of seeing her hit the pavement. In response, some commentators are calling for these attacks to be recategorized: As things stand, if white youths target a black guy it’s a hate crime, but vice versa is merely common assault. I doubt this would make very much difference. “No justification of virtue will enable a man to be virtuous,” wrote Lewis — and, likewise, no law can prevent a thug punching an old lady to the ground if the thug is minded to. “A society’s first line of defense is not the law but customs, traditions, and moral values,” wrote Professor Walter Williams a few years ago. “They include important thou-shalt-nots such as shalt not murder, shalt not steal, shalt not lie and cheat, but they also include all those courtesies one might call ladylike and gentlemanly conduct. Policemen and laws can never replace these restraints on personal conduct.”
>
> Restraint is an unfashionable concept these day, but it is the indispensable feature of civilized society. To paraphrase my compatriot George Jonas, punching a spinster’s lights out isn’t wrong because it’s illegal, it’s illegal because it’s wrong. But, in a world without restraints, what’s to stop you? If a certain percentage of your population feels no moral revulsion at randomly pulverizing fellow citizens for sport, a million laws will avail you naught: The societal safety lock is off.

Let’s hear from black economist Thomas Sowell about why this is not widely reported. (H/T Mysterious WGB)

Excerpt:

> The main reason for many people’s surprise is that the mainstream media have usually suppressed news about the “knockout game” or about other and larger forms of similar orchestrated racial violence in dozens of cities in every region of the country. Sometimes the attacks are reported, but only as isolated attacks by unspecified “teens” or “young people” against unspecified victims, without any reference to the racial makeup of the attackers or the victims — and with no mention of racial epithets by the young hoodlums exulting in their own “achievement.”

> Despite such pious phrases as “troubled youths,” the attackers are often in a merry, festive mood. In a sustained mass attack in Milwaukee, going far beyond the dimensions of a passing “knockout game,” the attackers were laughing and eating chips, as if it were a picnic.
>
> One of them observed casually, “white girl bleed a lot.”
>
> […]Some in the media, as well as in politics, may think that they are trying to avoid provoking a race war by ignoring or playing down these attacks. But the way to prevent a race war is by stopping these attacks, not trying to sanitize them.
>
> If these attacks continue, and continue to grow, more and more people are going to know about them, regardless of the media or the politicians. Responsible people of all races need to support a crackdown on these attacks, which can provoke a white backlash that can escalate into a race war. But political expediency leads in the opposite direction.
>
> What is politically expedient is to do what Attorney General Eric Holder is doing — launch campaigns against schools that discipline a “disproportionate” number of black male students. New York City’s newly elected liberal mayor is expected to put a stop to police “stop and frisk” policies that have reduced the murder rate to one-fourth of what it was under liberal mayors of the past.

I think that the biggest cause of crime in this society is fatherlessness, which we not only refuse to judge on moral grounds, but which we actually subsidize with our taxpayer dollars.

Dr. Michael Tanner of the libertarian Cato Institute explains one of the causes of fatherlessness in his testimony to Congress:

> Welfare contributes to crime in several ways. First, children from single-parent families are more likely to become involved in criminal activity. According to one study, children raised in single-parent families are one-third more likely to exhibit anti-social behavior.(3) Moreover, O’Neill found that, holding other variables constant, black children from single- parent households are twice as likely to commit crimes as black children from a family where the father is present. Nearly 70 percent of juveniles in state reform institutions come from fatherless homes, as do 43 percent of prison inmates.(4) Research indicates a direct correlation between crime rates and the number of single-parent families in a neighborhood.(5)
>
> As Barbara Dafoe Whitehead noted in her seminal article for The Atlantic Monthly:
>
> The relationship [between single-parent families and crime] is so strong that controlling for family configuration erases the relationship between race and crime and between low income and crime. This conclusion shows up time and again in the literature. The nation’s mayors, as well as police officers, social workers, probation officers, and court officials, consistently point to family break up as the most important source of rising rates of crime.(6)
>
> At the same time, the evidence of a link between the availability of welfare and out-of-wedlock births is overwhelming. There have been 13 major studies of the relationship between the availability of welfare benefits and out-of-wedlock birth. Of these, 11 found a statistically significant correlation. Among the best of these studies is the work done by June O’Neill for the U.S. Department of Health and Human Services. Holding constant a wide range of variables, including income, education, and urban vs. suburban setting, the study found that a 50 percent increase in the value of AFDC and foodstamp payments led to a 43 percent increase in the number of out-of-wedlock births.(7) Likewise, research by Shelley Lundberg and Robert Plotnick of the University of Washington showed that an increase in welfare benefits of $200 per month per family increased the rate of out-of-wedlock births among teenagers by 150 percent.(8)
>
> The same results can be seen from welfare systems in other countries. For example, a recent study of the impact of Canada’s social-welfare system on family structure concluded that “providing additional benefits to single parents encourages births of children to unwed women.”(9)

So what can we do? We can bring back moral judgments. I think that we have to get to the point in society where we realize that all of this permissiveness about “forgiving” people who fail to be responsible with sexuality and marriage actually does harm to society. When you refuse to pass judgment on premarital sex and divorce, and even make it financially lucrative for the people who engage in it (single mother welfare, alimony, child support) then you get more fatherless children, not less.

Although it is tempting to want to be liked for being “compassionate”, we have to look beyond our feelings and our vanity and start to think about the big picture. We need to shame people who are unchaste. We need to shame single mothers. We need to shame people who divorce and blame them for marrying badly. We need to cut off all the subsidies for people who make decisions that deprive children of their fathers. We need to stop the normalization of premarital sex that occurs in our schools. We need to shame women who choose men for sex when those men are not capable of being husbands and fathers.

# Obamacare success story revised to become Obamacare failure story

**Wintery Knight** · 24 November 2013 · Archived copy · Original

Investors Business Daily explains.

Excerpt:

> The woman who got a shoutout from President Obama last month for her fan letter for ObamaCare finds out her exchange quote was a computer mistake and she doesn't qualify for a tax credit after all.
>
> In one of his famous photo-ops in the Rose Garden last Oct. 21, with an array of touted beneficiaries of the Affordable Care Act behind him, President Obama read a letter from Jessica Sanford of Federal Way, Wash., to explain why the Affordable Care Act, with all its rollout flaws, was still needed.
>
> The letter told a sad tale of a grateful single mom with a son that had ADHD.
>
> But now, like so many of ObamaCare's false promises and outright lies, the safe and secure future which Sanford thought she had found and which the president boasted of has crumbled into dust — just like that health care Potemkin village called the Affordable Care Act.
>
> As the Washington State Wire reports, the Washington state exchange and enrollment website, like its national cousin, had problems. It had told Sanford originally she and her child would get a whopping tax credit that would reduce her total premium to $169 a month for an ObamaCare "gold" plan.
>
> Then she got letters from the state telling her — just like so many others who have had their plans canceled after being told they could keep them — what she had been promised was not true.
>
> Four days after President Obama made his address, the state health exchange publicly revealed a grievous error — its tax-credit calculations were all wrong.
>
> Washington state had been submitting monthly income information to the federal data hub when it was expecting yearly data. Oops!
>
> So everyone who bought a subsidized health insurance policy through the Washington state exchange prior to Oct. 23 was being quoted too low a rate.
>
> […]Brokers had been informing the state for three weeks that the calculations were screwy but the state, like the proverbial Department of Motor Vehicles, was slow to respond. When it informed Sanford of the mistake, knocking her tax credit down to $110 a month, she went back to her broker and signed up for a "silver" plan with higher deductibles and co-pays.
>
> Then she got another letter from the state saying it had goofed a second time and she didn't qualify for a tax credit at all. Her income was, in fact, too high.
>
> The website had told her that her income was low enough that she could enroll her son in the state Medicaid program for children of low-income families. That was no longer true, either.
>
> Her 14-year-old son Ryan requires a special prescription medication. Without a tax credit, she had to consider the cheapest "bronze" level plans, but the deductibles are so high that she couldn't afford to pay for her child's prescription medication.
>
> So now Sanford faces the prospect of having no insurance at all. Not only does she not get a tax credit, but she may have to pay an IRS-imposed penalty.

That's a bad situation, but at least no one is dying because of Obamacare. Oh wait, this 7-year old child is dying because of Obamacare. Well, I guess this is no big deal to our elite leaders. After all, what are a few lives lost in pursuit of equality? I suppose that once we switch entirely to a single payer system that little boys dying of cancer

can have free contraceptives and free abortions and free in vitro fertilizations and free breast enlargements and free maternity care and free sex changes and free hormone treatments to delay puberty until they decide if they want to be girls. Isn't that better for everyone?

# John Bolton: U.S. deal with Iran is an “abject surrender”

**Wintery Knight** · 24 November 2013 · Archived copy · Original

Neville Chamberlain Obama: peace in our time

The Weekly Standard featured a column by foreign policy heavyweight John Bolton.

Excerpt:

> Negotiations for an “interim” arrangement over Iran’s nuclear weapons program finally succeeded this past weekend, as Security Council foreign ministers (plus Germany) flew to Geneva to meet their Iranian counterpart. After raising expectations of a deal by first convening on November 8-10, it would have been beyond humiliating to gather again without result. So agreement was struck despite solemn incantations earlier that “no deal is better than a bad deal.”
>
> This interim agreement is badly skewed from America’s perspective. Iran retains its full capacity to enrich uranium, thus abandoning a decade of Western insistence and Security Council resolutions that Iran stop all uranium-enrichment activities. Allowing Iran to continue enriching, and despite modest (indeed, utterly inadequate) measures to prevent it from increasing its enriched-uranium stockpiles and its overall nuclear infrastructure, lays the predicate for Iran fully enjoying its “right” to enrichment in any “final” agreement. Indeed, the interim agreement itself acknowledges that a “comprehensive solution” will “involve a mutually defined enrichment program.” This is not, as the Obama administration leaked before the deal became public, a “compromise” on Iran’s claimed “right” to enrichment. This is abject surrender by the United States.
>
> In exchange for superficial concessions, Iran achieved three critical breakthroughs. **First, it bought time to continue all aspects of its nuclear-weapons program the agreement does not cover (centrifuge manufacturing and testing; weaponization research and fabrication; and its entire ballistic missile program). Indeed, given that the interim agreement contemplates periodic renewals, Iran may have gained all of the time it needs to achieve weaponization not of simply a handful of nuclear weapons, but of dozens or more.**
>
> Second, Iran has gained legitimacy. This central banker of international terrorism and flagrant nuclear

> proliferator is once again part of the international club. Much as the Syria chemical-weapons agreement buttressed Bashar al-Assad, the mullahs have escaped the political deep freezer.
>
> **Third, Iran has broken the psychological momentum and effect of the international economic sanctions. While estimates differ on Iran's precise gain, it is considerable ($7 billion is the lowest estimate), and presages much more.** Tehran correctly assessed that a mere six-months' easing of sanctions will make it extraordinarily hard for the West to reverse direction, even faced with systematic violations of Iran's nuclear pledges. Major oil-importing countries (China, India, South Korea, and others) were already chafing under U.S. sanctions, sensing President Obama had no stomach either to impose sanctions on them, or pay the domestic political price of granting further waivers.

Seven billion dollars in funding for a nation that is a known sponsor of anti-American terrorism. What kind of moron makes a deal with a regime that is on record for wanting to attack Israel with nuclear weapons? Some sort of reincarnation of Neville Chamberlain, that's who.

Previously, the Obama administration had been accuesed of leaking details of a strike plan by Israel against Iranian nuclear facilities.

From ABC News.

Excerpt:

> **Two reports today about Iran's nuclear program and the possibility of an Israeli military strike have analysts in Israel accusing the Obama administration leaking information to pressure Israel not to bomb Iran and for Iran to reach a compromise in upcoming nuclear talks.**
>
> The first report in Foreign Policy quotes anonymous American officials saying that Israel has been given access to airbases by Iran's northern neighbor Azerbaijan from which Israel could launch air strikes or at least drones and search and rescue aircraft.
>
> The second report from Bloomberg, based on a leaked congressional report, said that Iran's nuclear facilities are so dispersed that it is "unclear what the ultimate effect of a strike would be…" A strike could delay Iran as little as six months, a former official told the researchers.
>
> "It seems like a big campaign to prevent Israel from attacking," analyst Yoel Guzansky at the Institute for National Security Studies told ABC News. "I think the [Obama] administration is really worried Jerusalem will attack and attack soon. They're trying hard to prevent it in so many ways."
>
> […]**Thursday's reports come a week after the results of a classified war game was leaked to the New York Times which predicted that an Israeli strike could lead to a wider regional war and result in hundreds of American deaths. In a column this afternoon titled "Obama Betraying Israel?" longtime defense commentator Ron Ben-Yishai at Yedioth Ahronoth newspaper angrily denounced the leaks as a "targeted assassination campaign."**
>
> **"In recent weeks the administration shifted from persuasion efforts vis-à-vis decision-makers and Israel's public opinion to a practical, targeted assassination of potential Israeli operations in Iran," Ben-Yishai writes. "The campaign's aims are fully operational: To make it more difficult for Israeli decision-makers to order the IDF [Israeli Defense Forces] to carry out a strike, and what's even graver, to erode the IDF's capacity to launch such strike with minimal casualties."**

Maybe in the next election, Jewish-American voters will think a little more about who to vote for, in view of these facts. Or maybe it will take the actual nuclear destruction of Israel by Iran to get over their prejudices. As a supporter of peaceful democracies like Israel, I hope it doesn't come to that.

# Read Theodore Dalrymple's "Life at the Bottom" online for free

**Wintery Knight** · 24 November 2013 · Archived copy · Original

I want to recommend that you read a book that is available online for free.

The author  is a psychiatrist in a British hospital that deals with a lot of criminals and victims of crime. So he gets to see the worldview of the "underclass" up close, and to understand how the policies of the compassionate secular left are really working at the street level. The theme of the book is that the left advances policies in order to feel good about themselves, even though the policies actually hurt the poor and vulnerable far more than they help them. And the solution of the elites is more of the same.

The whole book is available ONLINE for free! From City Journal!

**Table of Contents**

The Knife Went In 5
Goodbye, Cruel World 15
Reader, She Married Him–Alas 26
Tough Love 36
It Hurts, Therefore I Am 48
Festivity, and Menace 58
We Don't Want No Education 68
Uncouth Chic 78
The Heart of a Heartless World 89
There's No Damned Merit in It 102
Choosing to Fail 114
Free to Choose 124
What Is Poverty? 134
Do Sties Make Pigs? 144
Lost in the Ghetto 155
And Dying Thus Around Us Every Day 167
The Rush from Judgment 181
What Causes Crime? 195
How Criminologists Foster Crime 208
Policemen in Wonderland 221
Zero Intolerance 233
Seeing Is Not Believing 244

Lots more essays are here, all from City Journal.

**My favorite passage**

The only bad thing about reading it online is that you miss one of the best quotes from the introduction. But I'll type it out for you.

> The disastrous pattern of human relationships that exists in the underclass is also becoming common higher up the social scale. With increasing frequency I am consulted by nurses, who for the most part come from and were themselves traditionally members of (at least after Florence Nightingale) the respectable lower middle class, who have illegitimate children by men who first abuse and then abandon them. This abuse and later abandonment is usually all too predictable from the man's previous history and character; but the nurses who have been treated in this way say they refrained from making a judgment about him because it is wrong to make judgments. But if they do not make a judgment about the man with whom they are going to live and by

> whom they are going to have a child, about what are they ever going to make a judgment?
>
> "It just didn't work out," they say, the "it" in question being the relationship that they conceive of having an existence independent of the two people who form it, and that exerts an influence on their on their lives rather like an astral projection. Life is fate.

This is something I run into myself. I think that young people today prefer moral relativists as mates, because they are afraid of being judged and rejected by people who are too serious about religion and morality. The problem is that if you choose someone who doesn't take religion and morality seriously, then you can't rely on them to behave morally and exercise spiritual leadership when raising children. And being sexually involved with someone who doesn't take morality seriously causes a lot of damage.

**An excerpt**

Here's one of my favorite passages from "Tough Love", in which he describes how easily he can detect whether a particular man has violent tendencies on sight, whereas female victims of domestic violence – and even the hospital nurses – *will not* recognize the same signs.

> All the more surprising is it to me, therefore, that the nurses perceive things differently. They do not see a man's violence in his face, his gestures, his deportment, and his bodily adornments, even though they have the same experience of the patients as I. They hear the same stories, they see the same signs, but they do not make the same judgments. What's more, they seem never to learn; for experience—like chance, in the famous dictum of Louis Pasteur—favors only the mind prepared. And when I guess at a glance that a man is an inveterate wife beater (I use the term "wife" loosely), they are appalled at the harshness of my judgment, even when it proves right once more.
>
> This is not a matter of merely theoretical interest to the nurses, for many of them in their private lives have themselves been the compliant victims of violent men. For example, the lover of one of the senior nurses, an attractive and lively young woman, recently held her at gunpoint and threatened her with death, after having repeatedly blacked her eye during the previous months. I met him once when he came looking for her in the hospital: he was just the kind of ferocious young egotist to whom I would give a wide berth in the broadest daylight.
>
> Why are the nurses so reluctant to come to the most inescapable of conclusions? Their training tells them, quite rightly, that it is their duty to care for everyone without regard for personal merit or deserts; but for them, there is no difference between suspending judgment for certain restricted purposes and making no judgment at all in any circumstances whatsoever. It is as if they were more afraid of passing an adverse verdict on someone than of getting a punch in the face—a likely enough consequence, incidentally, of their failure of discernment. Since it is scarcely possible to recognize a wife beater *without* inwardly condemning him, it is safer not to recognize him as one in the first place.
>
> This failure of recognition is almost universal among my violently abused women patients, but its function for them is somewhat different from what it is for the nurses. The nurses need to retain a certain positive regard for their patients in order to do their job. But for the abused women, the failure to perceive in advance the violence of their chosen men serves to absolve them of all responsibility for whatever happens thereafter, allowing them to think of themselves as victims alone rather than the victims and accomplices they are. Moreover, it licenses them to obey their impulses and whims, allowing them to suppose that sexual attractiveness is the measure of all things and that prudence in the selection of a male companion is neither possible nor desirable.
>
> Often, their imprudence would be laughable, were it not tragic: many times in my ward I've watched liaisons form between an abused female patient and an abusing male patient within half an hour of their striking up an acquaintance. By now, I can often predict the formation of such a liaison—and predict that it will as certainly end in violence as that the sun will rise tomorrow.

> At first, of course, my female patients deny that the violence of their men was foreseeable. But when I ask them whether they think I would have recognized it in advance, the great majority—nine out of ten—reply, yes, of course. And when asked *how* they think I would have done so, they enumerate precisely the factors that would have led me to that conclusion. So their blindness is willful.

# Obamacare health plan cancellations and premium increases delayed to just after 2014 election

**Wintery Knight** · 25 November 2013 · Archived copy · Original

Fox News reports.

Excerpt:

> Republican lawmakers are pushing back hard against the Obama administration's decision to delay next year's open enrollment season for health coverage under ObamaCare until after the 2014 midterm elections.
>
> The Department of Health and Human Services announced Friday it would allow consumers to start signing up for coverage under ObamaCare on Nov. 15, 2014, a month later than originally scheduled. The change does not affect those trying to enroll this year.
>
> Congressional Republicans accused the administration of shifting the dates for political reasons, to hide a spike in 2015 premiums, though information may already be available about 2015 premiums before the elections on Nov. 4.
>
> "That means that if premiums go through the roof in the first year of ObamaCare, no one will know about it until after the election," Sen. Chuck Grassley, R-Iowa, said in a statement. "This is clearly a cynical political move by the Obama administration to use extra-regulatory, by any means necessary tools to keep this program afloat and hide key information from voters."
>
> Sen. Lamar Alexander, R-Tenn., accused the White House of moving next year's open enrollment date to shield Democrats up for reelection next year who supported the law.
>
> "The only American consumers this change will help are Democratic politicians who voted for Obamacare, because it delays disclosure of some of the law's most insidious effects until after the election," Alexander said in a statement.
>
> He said he plans to introduce legislation that would require insurers to provide Americans with "proper notice" of premium increases before open enrollment period on the exchanges starts.

I don't think that the Democrats are doing this to sway conservative voters, because we know what to expect from round two of Obamacare – loss of health care plans and higher premiums for those with employer-based health insurance. The delay is being done to influence *low-information voters*, i.e. Democrats. People who don't follow politics because they are too busy watching Dancing With The Stars and Oprah Winfrey. They are the ones who cannot think beyond the moment, and sway their votes because of deliberately staged events, e.g. – Al Gore kissing his wife (whom he's now divorced) just before an election. Two weeks is far beyond the time horizons of most Democrat voters.

What the Republicans should do is pass a law requiring all cancellations and premium increases be communicated before the elections and have the Democrats in the House and Senate go on record voting against it. Then they can use that in the 2014 campaigns. Uncertainty will be even more effective when dealing with independent voters who are paying attention to policy issues instead of staged photo-ops.

# Obama administration betrays Christian pastor imprisoned in Iran

**Wintery Knight** · 25 November 2013 · Archived copy · Original

Letitia posted this article by Jay Sekulow from Fox News.

Excerpt:

> In its quest for a "deal" with the hostile, jihadist Iranian regime, The Obama administration has thrown an American Christian, Saeed Abedini, under the bus – the latest American victim in the administration's continual, naïve (at best) quest to bargain with Islamic radicals.
>
> […]Pastor Saeed Abedini, an Idaho resident, last year received permission to enter Iran to help build an orphanage.
>
> Shortly after his arrival, Iran's radical Revolutionary Guard arrested him, threw him in one of Iran's worst prisons, and tried and convicted him on trumped-up "national security" charges – charges that had nothing to do with national security and everything to do with his Christian faith.
>
> Even after President Obama raised Pastor Saeed's case directly to the Iranian President Hassan Rouhani, Iran responded not by releasing Saeed but by transferring him to an even worse prison — a prison full of murderers and rapists, where his life is in danger at every moment.
>
> The Iranian regime rebuked the president of the United States, and we're now supposed to believe it's acting in good faith?
>
> President Obama is now trying to spin our stunning act of weakness as a breakthrough for peace. In fact, we were so weak that (according to the administration) that the State Department did not even raise Pastor Saeed's during the nuclear negotiations.
>
> […]Iran's record of wrongdoing is long and sordid.
>
> Beginning with the 1979-1981 hostage crisis, moving through repeated terrorist attacks – from the deadly Marine Barracks bombing in 1983, to the Kobar Towers bombing in 1996, to the direct intervention of Iran's Quds force against American forces in Iraq – and including ongoing deadly support for terrorists fighting American forces in Afghanistan, Iran has proven by its deeds and words that it is America's enemy.
>
> If Iran had released Pastor Saeed we would have at least one concrete action to give Americans confidence that this deal was anything other than a disaster. Instead, we are left with nothing but "commitments" from a regime that has proven itself committed only to killing and imprisoning Americans.
>
> To make matters even worse, we have squandered a position of strength.
>
> Iran was suffering under sanctions that were finally beginning to truly bite — wrecking its economy and causing deep discontent within Iraq. This was our opportunity to drive a hard bargain, to reach a deal that didn't depend solely on Iranian "commitments."
>
> But we squandered that opportunity and left an American behind.
>
> The Obama administration has betrayed Pastor Saeed.

One country that's done a good job on promoting human rights and religious liberty is Canada, because they have a Conservative government led by Prime Minister Stephen Harper.

Here's what Canada said about the deal: (H/T Dennis Prager)

> The Canadian government was "deeply skeptical" on Sunday of Iran's agreement to temporarily freeze its nuclear program, saying Ottawa's sanctions against the regime would remain firmly in place until the new deal's words turned into actions.

> Foreign Affairs Minister John Baird appeared to take a stronger stance on the newly brokered deal than the United States and other allies, saying Canada would be watching Iran closely over the coming weeks and months.
>
> “We have made-in-Canada foreign policy,” he told reporters on Sunday.
>
> “We think past actions best predict future actions. And Iran has defied the United Nations Security Council, it has defied the International Atomic Energy Agency. Simply put Iran has not earned the right to have the benefit of the doubt.”

It’s striking to me that the American government is now to the left of Canada on foreign policy – making deals with dictators that actually set back the cause of freedom and universal human rights. I would not be surprised to see a full-scale war in the Middle East because of this deal. I guess that the Obama administration is so anxious to appear as if they are doing something that they don’t care if Iran nukes Israel in a few months. Because that’s what’s going to happen unless Israel attacks Iran first. Iran was threatening to nuke Israel as recently as last week. It’s hard to interpret the Democrat treaty with Iran as anything other than their stamp of approval on that plan.

# Thoughts on talking to non-Christian relatives and friends during the holidays

**Wintery Knight** · 25 November 2013 · Archived copy · Original

So, suppose you have a relative or friend who grew up as a Christian but now they've fallen away and they are in some sort of situation where they are in continuous rebellion against God – e.g. – regular hooking-up, cohabitation, same-sex lifestyle, etc.. Although you might not see this person regularly, you may see them during the holidays at family gatherings, so let's take some time to define goals and develop a strategy for those encounters.

I want to focus on two parts:

1. What are you trying to communicate to this person?
2. How much should you invoke Christian concepts with a non-Christian?

Let's take a look at the plan.

**Respect your opponent's dignity and value**

So for the first topic, I think that you need to accept the person as a person made in the image of God and therefore valuable and deserving of being treated equally. That does not mean you have to agree with them and celebrate their views when you disagree. They have equal dignity to you, but you don't have to agree that their ideas are equally correct. It means that they have value because God made them and because he cares about them and wants to be reconciled with them. Whatever you say and do cannot set back God's goal of being reconciled with them. When you speak, you don't want to push them away from God. When you act, you don't want to push them away from God. So you are striking a balance between respecting their dignity, but also not affirming them in their views. You can't affirm something that is immoral just because they will like you, because you have to think of what God wants you to say to that person. You are his ambassador and that means you do your job for him first and foremost.

Christians often talk about the slogan "hate the sin, but love the sinner", and I think that can be overused. You are obligated to love your family and your relatives. But the problem is knowing what the definition of love is. Love doesn't mean affirming whatever a person wants to do whether it is right or wrong. Love doesn't mean standing by silent while people do things when their beliefs about what they are doing are all false. To love someone means to tell them the truth, gently. And it means to be present and engaged in building them up in their relationship with God, however that might look given what stage they are at with God. Loving the sinner means investing in the sinner, and not wrecking the relationship by being unnecessarily hurtful while we can still have an influence. It's a good idea when you disagree with someone about what they are doing that you keep in mind all the ways that you have rebelled against God in the past, and continue to rebel now, and will continue to rebel. If you keep in mind your own struggles, it will be a lot easier for you to hit the right note when discussing lifestyle with someone else!

**Don't answer "demarcation questions"**

I was listening to the Dennis Prager show recently and he was talking about how people on the left are not really good at rational discussion because they are not able to state the views of people who disagree with them in a way that is respectful. He cited Jewish traditions on debate and argued that real debate requires that each side is able to outline the position that the other side holds and the reasons why they hold to it. And not in an insulting, straw-man sort of way, but in a way that the person on the other side can assent and say "that is my view, and those are the reasons for my view".

People on the secular left seem to like questions that are really more like ad-hominem arguments, so that they can shut down debate. Prager's example was "you do believe the Earth is warming, don't you?" This question is designed to stop the discussion of global warming socialism by labeling you a nutcase for denying something that the questioner thinks is obvious. This is despite the fact that the IPCC has now admitted that there has been no significant warming in 15 years. They don't want to hear your evidence, they want to humiliate you and dismiss you.

The one I hear around my office is “you believe in evolution don’t you?” This is how secularists in my office try to quickly dismiss me because I am not in their “tribe”, so they can cut short any serious critical thinking about their presupposition of naturalism. Thinking about the progress of science and questioning their assumptions is too much work for them, which is why they resort to these “demarcation” questions. Dividing the world up into “sensible us” and “crazy them” is very important to secular leftists – they would rather be divisive, dismissive and condescending so they can keep on sinning. After all, if you’re a total cretin, then they don’t even have to consider whether they are mistaken or not. If you believe in a flat Earth, then they don’t want to have to listen to the evidence for the Big Bang or the fine-tuning or the protein sequencing or the Cambrian explosion. They want to separate the world into black and white so that debate becomes unnecessary. Don’t fall for it.

**Free expression of intelligent disagreement**

My goal in dealing with an ex-Christian involved in a bad lifestyle is that I want to be their friend, but they must be aware of my view. That is a condition of me being their friend. And I want an opportunity to discuss these things should they come up naturally. I don’t want to be the initiator, but if the topic comes up, I want freedom to state my view, and respect to complete my thoughts and state my evidence. My goal with this person is not to give tacit approval to what they are doing by just acting like one of their normal friends and keeping my mouth shut so as not to offend them. My goal is to be present in their lives as someone who *they know for sure* disagrees with what they are doing and is intelligent and informed about his disagreement. In short, I am willing to *trade* spending time with them and doing activities with them (what they want) in order to get the freedom to *intelligently and respectfully disagree* with them about their lifestyle ( what God wants me to do with them, as his ambassador to them).

Moreover, if the opportunity never arises to state and defend my disagreement with their lifestyle, then I’m going to allocate less and less time to that relationship, since God is not being allowed into the relationship. I work for God, and I want him to be a factor in everything I do. In what I say, in how I spend my time and money, and so on. When I started my first job, the atheists used to offer to discuss spiritual things with me if I had a beer with them. I agreed to that, because they knew that I would only give them what they wanted – friendship – if I got what I wanted – the opportunity to be myself and be given time to explain my beliefs and my reasons for holding them without being interrupted or mocked. They were willing to let me do this, though, because they knew what I was talking about, so that’s on me to prepare to sound intelligent in order to *deserve the opportunity to be heard.* You have to decide if this person is going to allow you to be an ambassador. That is the criterion for deciding whether to have a relationship with them or not.

**Should you bring up the Bible and sin?**

It depends. I think if the person is claiming to be a Christian, and under the authority of the Bible on moral issues, then you should investigate how they square their views with the Bible. You might have to pull in Robert Gagnon or Scott Klusendorf or some other expert to make the case that their behavior is against the Bible. But in my view, their claiming of the Bible as support is likely to be a smokescreen. Sinful people choose their behavior first, and the Bible is not going to be relevant to their decision making once they are into the lifestyle of sin. Labeling their behavior as sin, citing Bible verses, citing Christian leaders… that’s all going to be as useful as you citing a Hindu or a Mormon to convince me of an eternal universe would be. I don’t care about religious opinions when it comes to the universe, because I have a prior commitment to science. A smart ambassador knows not to use authorities that are not accepted by their audience. People who are habitually sinning do not accept the Bible as an authority. You can clarify what the Bible says if they bring it up, but don’t rest on the Bible to make your case.

**The more you sweat in training, the less you bleed in battle**

So what can you do to make your case? Well, your goal is to be allowed to express your disagreement and to state your reasons for disagreeing without being silenced or sanctioned. When they give you your opportunity to speak, you need to have prepared to sound as intelligent and relevant as possible. That means that you need to hit the books before you are asked, and find the reasons and the evidence for your view first. If the issue is binge-drinking and hooking up, you need to hit the books so you can find the peer-reviewed papers to deal with that. You might

talk about oxytocin to counter casual sex, or you might talk about the cohabitation-instability link, or you might talk about how children are harmed by fatherlessness, etc. The point is that you want to have the perception among non-Christian peers that you are competent and informed apart from religion – which they don't even accept. I find it amazing that Christians seem content to invoke their supposed righteousness in debates with people who don't even accept the Bible. We need to not be so insulated in our own little Bible-cliques that we are no longer able to understand how to be persuasive to people who are outside the faith. You can't invoke superior piety (alone) as an argument to someone who isn't pious and doesn't want to be pious.

**Smoking is bad for your health**

Basically, you want to make a case using mainstream sources that is equivalent to the case that you might make against their smoking, if they took up smoking. Your approach should be along the lines of "you don't accept Christianity, and that's fine, because I have a million non-Christian reasons why you shouldn't be doing what you're doing, too". You want to get to the point where you can show them that it's not just a case of opinion against opinion, but a case of rebellion against evidence. Don't be afraid to encourage them to look at the long-term effects of what they are doing either.

For example, if they are in a same-sex relationship and they want to have or adopt kids later on, have them defend why it is right for them to intentionally deprive a child of a mother or a father. If they are in a cohabitating relationship and have not yet gotten pregnant, have them defend having an abortion or raising a child fatherless. It's amazing how people in these sorts of sinful lifestyles get blinded by their feelings and cannot think about what comes next. That's your job – to be the sober analyst who asks "what comes next?". And don't forget to consider whether what they are doing is not only bad for them, but bad for people around them, and society as a whole. For example, if society has to pay increased health care costs for sexually transmitted diseases or for social programs to deal with the breakdown of the family and fatherlessness.

Please leave your comments about how you are dealing with ex-Christians in rebellion in the comments, and what you think of my approach, too.

UPDATE: I got some advice from a well-known Christian apologist. His point was that if all you have is the family meal, then it's better to spend most of your time listening and just ask a few questions. That's a good defensive strategy suited to the situation you are in at a family meal.

# Gay activist honored by Barack Obama charged with sex crimes with a minor

**Wintery Knight** · 26 November 2013 · Archived copy · Original

From KTAR News in Arizona. (H/T Mysterious WGB)

Excerpt:

> A former LGBT youth and diversity liaison for Phoenix Mayor Greg Stanton has been charged with 13 counts of sex crimes with a minor.
>
> Caleb Michael Laieski is accused of having sex with a 14-year-old boy last year. He was 17 at the time, but Arizona law said children under the age of 15 can't legally consent to sex, even with another minor.
>
> […]Laieski gained national attention in 2011 when he appeared in a documentary about bullying and discussed issues involving gay youth with both President Barack Obama and Vice President Joe Biden.

Life Site News has some more details.

Excerpt:

> An openly homosexual teenager, who was given a position as an "adviser" to Phoenix Mayor Greg Stanton and honored by President Barack Obama at a White House "gay pride" dinner, has been indicted on more than a dozen counts of sexual misconduct with a minor under the age of 15.
>
> […]Laieski rose to national prominence after he and a 35-year-old friend, Casey Cameron, sent e-mails to 5,000 Arizona schools in 2011 demanding special protections for gay students and threatening legal action if they failed to bring their policies in line with his demands. The teen then dropped out of high school, got his GED, and traveled to Washington, D.C., to lobby for the Student Non-Discrimination Act.
>
> In 2012, Laieski was given a position in Mayor Stanton's office as a "youth and diversity liaison," advising the mayor on matters of policy having to do with youth, particularly gay youth. He was an "advocate on loan," meaning his salary was funded by an outside group, called "One in Ten."
>
> According to police records, part of his job was to represent the mayor's office at local homosexual protests, which is how he got to know Wilson, who was usually assigned as the officer in charge of policing such events.
>
> […]Initially, investigators saw Laieski only as a victim in the case, but police records show that Laieski actively pressured his young friend not to tell anyone about the abuse in order to protect his rising star from being tarnished, even after the younger boy became suicidal.
>
> […]When the younger boy begged Laieski to go with him to the police, Laieski told him no. He said he was negotiating with Department of Health and Human Services Secretary Kathleen Sebelius over a possible White House job, and he worried that if anyone found out he'd been involved in a crime, he'd lose the opportunity.
>
> […]"I have a phone call with the Secretary of HHS about me working at the White House," he added. "I am not going to allow this to get in my way. I don't think you understand that reporting this [to the police] doesn't only affect Chris [Wilson]. It defiantly [sic] would affect me as well."

I notice in the stories that there is no mention of the 14-year old having a father anywhere in his life, which would explain a lot. Fathers are the ones who normally look out for predators. Children really need women to do a better job of picking men who will commit before having sex, and stick around when the children appear, but that seems to clash with the need to be "feelings-led" that is valued to highly. Desire trumps reason, but there is a price to pay.

# FBI partners with anti-Christian hate group Southern Poverty Law Center

**Wintery Knight** · 26 November 2013 · Archived copy · Original

From Townhall.com. (H/T Gateway Pundit)

Excerpt:

> The magnitude of this Obama administration's "progressive" radicalism becomes more evident with each passing day. In recent months, there has been a drastic spike in acts of both anti-Christian and anti-conservative discrimination and intimidation on military bases across the country. This mounting harassment is not being carried out at the hands of regular enlisted folk but, rather, at the hands of high-ranking officials who, in their official capacity, are targeting Christian and conservative organizations and individuals in an effort to silence them.
>
> It has long been suspected that the Obama administration is using propaganda circulated by the roundly discredited Southern Poverty Law Center, or SPLC, a left-wing extremist group that, in recent years, has adopted two primary goals: 1) raising truckloads of money and 2) smearing as "domestic hate groups" dozens of mainstream Christian ministries like the Family Research Council, or FRC, and the American Family Association, or AFA.
>
> This suspicion has now been verified.
>
> The problem on military bases has gotten so bad, in fact, that the U.S. Congress is demanding answers from the Pentagon. Recently, the AFA-affiliated OneNewsNow.com newsgroup reported that "Congressman Alan Nunnelee (R-Mississippi) is 1 of 38 members of Congress signing off on a letter to the Secretary of the Army – especially about an incident last month at Camp Shelby, Mississippi, in which the Tupelo-based American Family Association was labeled in Army training material as a 'hate group.'
>
> […]I recently learned that on its official website, the FBI lists as one of its primary "hate crimes resources," the Southern Poverty Law Center.
>
> This is especially mysterious when you consider that the FBI's own verified hate crimes statistics are completely at odds with numbers put out by the SPLC in its fundraising propaganda.

You'll remember that SPLC is the hate group whose web site was used by the convicted domestic terrorist and gay activist Floyd Corkins in his recent attack on the Family Research Council building. The SPLC, the Human Rights Campaign and the convicted domestic terrorist all agree that the Family Research Council is a hate group. The FRC publishes research papers defending traditional marriage.

Life Site News explains.

Excerpt: (links removed)

> Last year, a disturbed gay activist stormed into FRC's national headquarters in Washington and opened fire with a gun, injuring a security officer. The shooter specifically cited the SPLC in a videotaped admission, saying he used the SPLC's "Hate Map" to find the FRC. SPLC called accusations it was culpable for the shooting "outrageous."
>
> The shooter planned to target other socially conservative groups after attacking the FRC, but was subdued by security at the FRC headquarters.
>
> The FBI started a partnership with the SPLC in February of 2007, under former President George W. Bush.
>
> Under federal law, according to the FBI, "[a] hate crime is a traditional offense like murder, arson, or vandalism with an added element of bias….Hate itself is not a crime—and the FBI is mindful of protecting

> freedom of speech and other civil liberties." However, the SPLC's definition of a hate group is far more expansive than the FBI's crime definition.
>
> […]The federal government's relationship with the SPLC has increased since its 2007 collaboration, including an invitation from the Department of Justice for a SPLC co-founder to present on diversity in 2012. The military has also used the SPLC for information and data on equal opportunity.

I guess what troubles me most about all this is that the FBI is taxpayer-funded. I'm paying government employees to label me as a hater, and expose me to domestic terrorism from gay activists like Floyd Lee Corkins – all because I am a public defender of traditional marriage. So, if a gay activist like Floyd Lee Corkins uses the FBI site to link to the SPLC site and then target me for domestic terrorism, will the FBI investigate itself for causing domestic terrorism? How would that work, exactly? "We have investigated ourselves for domestic terrorism and we are guilty! Now we will put ourselves in jail."

# Is the concept of moral responsibility compatible with physicalism / materialism?

**Wintery Knight** · 26 November 2013 · Archived copy · Original

I saw that Brian Auten of Apologetics 315 linked to this post by J. Warner Wallace.

Excerpt:

> When examining the causes for an event (such as a death) we can separate them into two categories: event causation and agent causation (prior physical events cause things to happen and free agents cause things to happen). It's important to recognize that free agents alone have the freedom to act or respond without a prior physical causal event. Physical objects, like dominoes, cannot cause themselves to fall over; they require a prior event to cause them to fall. But you and I have the ability to cause the first domino to fall as a simple matter of choice (we don't need a prior event to cause this action). You can't blame a car for running over a victim; the car is simply a physical object subject to a series of physical processes, none of which can be held morally culpable. But we *can* blame the*driver* of the car for driving the car over the victim. The driver is a free agent, and we recognize that his choices are just that: free choices. The driver is not like the car. His choice is not simply the result of a series of purely physical processes, like dominoes falling. He had the freedom to choose otherwise, and this is why we seek to arrest and prosecute him.
>
> Our recognition of the moral culpability of the driver (rather than the car) is an admission that materialism (physicalism) fails to explain who we are as humans. Consider the following argument:
>
> **No Physical System is a Free Agent**
> Physical systems are either "determined" (one event necessarily following the other) or "random"
>
> **Therefore No Physical System Has Moral Responsibility**
> Moral responsibility requires moral freedom of choice
>
> **Human Beings DO Have Moral Responsibility**
> We recognize that each of us has the responsibility *and choice* to act morally, and indeed, we seek to hold each other legally accountable for each other's free-will choices
>
> **Therefore, Human Beings Are NOT Simply Physical Systems**
> Our recognition of moral responsibility and our efforts to hold each other accountable are irrational and unwarranted if humans are merely physical systems
>
> If we, as humans, are only physical systems (merely matter), we ought to stop trying to hold each other accountable for misbehavior. In fact, there can be no *misbehavior* if we are only physical brains and bodies; there can only be *behavior*. Our actions have no moral content at all unless we truly have the freedom to choose and the ability to break the bondage of physical event causation.

I finally learned what the "Twinkie defense" was by reading that post. It's worth it for that reason alone.

This quote by JWW reminded me of a famous chapter in Theodore Dalrymple's famous book "Life at the Bottom", in which he explains the worldview of the lower classes in Britain. The chapter is called "The Knife Went In", and it shows how people in the underclass describe their crimes in a way that completely minimizes their own free choices and their own responsibilities.

Take a look:

> It is a mistake to suppose that all men, or at least all Englishmen, want to be free. On the contrary, if freedom entails responsibility, many of them want none of it. They would happily exchange their liberty for a modest (if illusory) security. Even those who claim to cherish their freedom are rather less enthusiastic about taking

> the consequences of their actions. The aim of untold millions is to be free to do exactly as they choose and for someone else to pay when things go wrong.
>
> In the past few decades, a peculiar and distinctive psychology has emerged in England. Gone are the civility, sturdy independence, and admirable stoicism that carried the English through the war years. It has been replaced by a constant whine of excuses, complaint, and special pleading. The collapse of the British character has been as swift and complete as the collapse of British power.
>
> Listening as I do every day to the accounts people give of their lives, I am struck by the very small part in them which they ascribe to their own efforts, choices, and actions. Implicitly, they disagree with Bacon's famous dictum that "chiefly the mould of a man's fortune is in his own hands." Instead, they experience themselves as putty in the hands of fate.
>
> It is instructive to listen to the language they use to describe their lives. The language of prisoners in particular teaches much about the dishonest fatalism with which people seek to explain themselves to others, especially when those others are in a position to help them in some way. As a doctor who sees patients in a prison once or twice a week, I am fascinated by prisoners' use of the passive mood and other modes of speech that are supposed to indicate their helplessness. They describe themselves as the marionettes of happenstance.
>
> Not long ago, a murderer entered my room in the prison shortly after his arrest to seek a prescription for the methadone to which he was addicted. I told him that I would prescribe a reducing dose, and that within a relatively short time my prescription would cease. I would not prescribe a maintenance dose for a man with a life sentence.
>
> "Yes," he said, "it's just my luck to be here on this charge."
>
> Luck? He had already served a dozen prison sentences, many of them for violence, and on the night in question had carried a knife with him, which he must have known from experience that he was inclined to use. But it was the victim of the stabbing who was the real author of the killer's action: if he hadn't been there, he wouldn't have been stabbed.
>
> My murderer was by no means alone in explaining his deed as due to circumstances beyond his control. As it happens, there are three stabbers (two of them unto death) at present in the prison who used precisely the same expression when describing to me what happened. "The knife went in," they said when pressed to recover their allegedly lost memories of the deed.
>
> The knife went in—unguided by human hand, apparently. That the long-hated victims were sought out, and the knives carried to the scene of the crimes, was as nothing compared with the willpower possessed by the inanimate knives themselves, which determined the unfortunate outcome.

I wonder how much the secularism and atheism of the Britain academics has now seeped down to the lower classes and caused them to view themselves as lumps of meat or animals, rather than responsible free agents. Britain is the country of Charles Darwin and the idea of unguided Darwinian evolution. If you believe that you are an animal who evolved by accident in an accidental universe, then you don't believe in free will, moral choices or moral obligations. The funniest thing in the world to me is how atheists go about their lives helping themselves to moral language that is not grounded by their worldview. Like parrots who have been trained to talk about the stock market. There is no realm of objective moral values and duties on atheism, so why are they using moral language and making moral judgments? On their view right and wrong are just social customs and conventions that vary by time and place, and human actions are biologically determined anyway. There are no choices. There is no responsibility.

You can read the whole Dalrymple book for free online, and I've linked to all the chapters in this one post.

# Supreme Court will rule on Obama administration persecution of Hobby Lobby

**Wintery Knight** · 27 November 2013 · Archived copy · Original

Life News reports.

Excerpt:

> Hobby Lobby's battle against the HHS mandate is headed to the Supreme Court, as the high court today agreed to hear its lawsuit against the controversial provision in Obamacare. The Obama administration is attempting to make it comply with the HHS mandate that compels religious companies to pay for birth control and abortion-causing drugs for their employees.
>
> However, the U.S. Supreme Court today agreed to take up *Sebelius v. Hobby Lobby Stores, Inc.*, a landmark case addressing the Constitutionally guaranteed rights of business owners to operate their family companies without violating their deeply held religious convictions. This is good news to the Green family, who own the store.
>
> "This is a major step for the Greens and their family businesses in an important fight for Americans' religious liberty," said Kyle Duncan, general counsel of the Becket Fund for Religious Liberty and lead lawyer for Hobby Lobby. "We are hopeful that the Supreme Court will clarify once and for all that religious freedom in our country should be protected for family business owners like the Greens."
>
> The Obama administration says it is confident it will prevail, saying, "We believe this requirement is lawful…and are confident the Supreme Court will agree."
>
> "My family and I are encouraged that the U.S. Supreme Court has agreed to decide our case," said Mr. Green, Hobby Lobby's founder and CEO. "This legal challenge has always remained about one thing and one thing only: the right of our family businesses to live out our sincere and deeply held religious convictions as guaranteed by the law and the Constitution. Business owners should not have to choose between violating their faith and violating the law."
>
> The Supreme Court is also taking the case of the Mennonite cabinet makers forced to pay for birth control and abortion-causing drugs.

I think many people throw around the word "fascism" without really understanding what the word means. But this HHS mandate is a textbook case of fascism.

Here is the Merriam-Webster definition:

> : a way of organizing a society in which a government ruled by a dictator controls the lives of the people and in which people are not allowed to disagree with the government
>
> : very harsh control or authority

Now, right away, it should be obvious that there is no such thing as right-wing fascism. If right-wing stands for anything, it stands for free-market capitalism, free trade, private property and individual rights (e.g. – free speech, right to life, etc.). Right-wing politics means the freedom to spend what you earn on what you choose to spend it on. Because it's your money – you earned it. Fascism requires the government to control your basic liberties, including what you earn, and how you spend what you earn. That's why fascism is solely a phenomenon of the political left. Only the political left wants to tell you how much of your earnings you can keep, and how much of your earnings must be spent on things you don't need. They have all kinds of reasons why they are justified in taking your money, but all their reasons amount to the same things: their values are higher than your values. Even if

you worked for the money, they know better than you do what to spend it on. And if it violates your conscience to spend it on abortion drugs, then you can either pay or go to jail. Fascism.

# Gay New Jersey waitress hate crime revealed to be a hoax

**Wintery Knight** · 27 November 2013 · Archived copy · Original

NBC News reports:

Excerpt:

> After a gay server at a New Jersey restaurant said a customer denied her a tip and wrote her a hateful note on the receipt, a local family contacted NBC 4 New York and said their receipt shows they paid a tip and didn't write any such note.
>
> Dayna Morales, a former Marine and a server at Gallop Asian Bistro in Bridgewater, posted a photo on Facebook earlier this month, showing the bill with a line through the space for a tip. The photo of the receipt showed someone had written, "I'm sorry but I cannot tip because I do not agree with your lifestyle."
>
> Morales indicated in her Facebook post, and in subsequent media interviews — including with NBC 4 New York — that the customer wrote that line.
>
> But a family contacted NBC 4 New York claiming their receipt from the restaurant shows they did leave a tip, and provided what they said was a credit card statement as proof.
>
> The husband and wife, who asked to remain anonymous, showed NBC 4 New York a receipt that appeared to be printed at the same minute, on the same date, for the same $93.55 total, except with an $18 tip.
>
> They also provided a document they said was a Visa bill, which appears to indicate their card was charged for the meal plus the tip, for a total of $111.55.
>
> The couple told NBC 4 New York that they believed their receipt was used for a hoax. The wife says she is left-handed and could not have made the slash in the tip line, which she said looks to be drawn from the right.
>
> "We've never not left a tip when someone gave good service, and we would never leave a note like that," the wife said.
>
> The husband said he and his wife have both worked in restaurants and believe in the value of tipping, and noted that he didn't vote for Gov. Chris Christie because the governor doesn't support gay marriage.
>
> "Never would a message like that come from us," he said.
>
> Morales told NBC 4 New York on Monday that she was certain she did not receive a tip, and insisted the handwriting on the receipt was not hers. When asked if there had been some sort of misunderstanding, she said, "I don't know, all I know is what I've been saying."
>
> A manager and the restaurant owner insisted they had the original ticket for the $93.55 charge, but would not produce the receipt for NBC 4 New York and could not explain why the family's credit card was charged for more.

This is actually not the first time that the left has faked hate crimes against itself. Here is a fairly recent article by respected writer David Freddoso that catalogs over a dozen recent hate crime hoaxes by the political left.

My favorites:

> **2013:** Award-winning liberal blogger and 28-year-old University of Wyoming student Meg Lanker Simons goes on trial in October for allegedly anonymously threatening herself with rape on Facebook, then lying to police about it.
>
> **2012:** A Montana man admitted he'd made up a story about being attacked because he was gay. He was embarrassed that he'd hurt himself doing a backflip outside a Missoula bar, so he made up an attack.
>
> **2012:** Aimee Whitchurch and Kristel Conklin threatened themselves by painting their home with anti-gay

> graffiti and hanging a noose on their door, then reported the incident and insinuated that their neighbors were responsible. They pleaded guilty and got off the hook with 12 months' probation and community service.
>
> **2012:** Olivia McRae and Tanasia Linton, two students at Montclair State University in New Jersey, reported that racist graffiti had been scrawled on their door. Days later, they were charged with making a false report, accused of writing the message themselves.
>
> **2012:** Alexandra Pennell, a student at Central Connecticut State University, claimed to have received threatening anti-gay messages. When it was discovered she'd sent them to herself, she was expelled and barred from all state universities for five years.
>
> **2011-12:** Khalilah Ford was expelled from the University of Wisconsin-Parkside for an especially frightening hoax that reportedly prompted some students to drop out of school from fear. She circulated an anonymously penned list of black students with a threat that they'd be dead soon, including herself on the hit-list. A second student, Janet Uppman, was also expelled for writing a racial epithet on a white board as part of the hoax. Both hoaxers got off easy — they were issued tickets for $400.
>
> **2011:** UNC-Chapel Hill freshman Quinn Matney claimed to have been branded with a hot object by someone who called him an anti-gay slur. In fact, the wound was self-inflicted. When friends noticed it, he made up the story out of embarrassment to explain the injury. A friend, believing he'd actually been attacked, urged him to report it to police, and he did.
>
> **2008:** Elmhurst College student Safia Jilani claimed to have been attacked in a bathroom by a masked gunman and to have had her locker marked with a swastika, both because of her Islamic faith. At the time, her report caused a campus lockdown. She was later indicted for making a false report.
>
> **2007:** Colorado University student Alta Rae Merkling claimed to have been attacked by a group of men who cut an "X" into her face, shouting, "X marks the f*ggot!" She was later charged with filing a false report.
>
> **2007:** Case Western Reserve statistics Prof Ramani Sri Pilla mailed hate letters to herself and then falsely accused her co-workers to the FBI — apparently an attempt to bolster a racial discrimination lawsuit she was bringing against her university. She got six months in prison and must pay the costs of the investigation — $66,000.
>
> **2004:** Claremont Professor Kerri Dunn slashed her own tires, and broke her own windows, and vandalized her own car with anti-semitic messages. An activist who constantly inveighed against hate, she had been seen vandalizing her own car by two random people in the parking lot. She ended up being sentenced to a year in prison for insurance fraud and was forced to repay $19,000.

He provides links to all the stories exposing the hate crimes as hoaxes.

The political left is always interested in lying in order to portray themselves as helpless victims, while normal, healthy, moral people are portrayed as evil, vindictive bigots. Famous cases like the Matthew Shepard murder and the Jamie Leigh Jones rape have been revealed to be misrepresented by the political left. The reason why these tactics work is because people on the political right still care about being good and just, and so they are easily bullied into acceptance of things we disagree with, like binge drinking and promiscuity. The hoaxes are always trumpeted loudly as fact by the liberal media. The retractions come months or years later, after the elections are done.

UPDATE: Linked by Blazing Cat Fur, who linked to this list of 32 hate crime hoaxes.

# Is belief in the Jesus of the Bible needed in order to be rightly related to God?
