**Wintery Knight** · 27 November 2013 · Archived copy · Original

Here's a good introductory lecture on the topic by Chad Gross, who blogs at Truthbomb Apologetics.

You can see the footnotes for his article on his blog.

The one criticism I have is that he seems to be quoting from John a lot, and he should have some sort of case for John being reliable. I would maybe cite the scholarly work of someone like Richard Bauckham, who thinks that John is not only based on eyewitness testimony, but was actually written by a disciple of Jesus named John. John is my favorite gospel, but skeptical NT critics critics are pretty hard on it. Of course, Chad was speaking in a church, so it's understandable why he might not take the time to do that.

For those who don't want to watch the video, here's a good thought from J. Warner Wallace at Please Convince Me.

Excerpt:

> A "just" God does justice, which means to punish or reward appropriately. In the Western tradition, we punish people for the actions they commit, but the extent of punishment is dependent also on the person's mental state, and a person's mental state is reflective of his or her beliefs. Premeditated murder is worse than manslaughter, and is punished more severely, and a hate crime is a sentencing enhancement that adds more punishment to the underlying crime. In both examples, a person's beliefs are at play: the premeditated murderer has reflected on his choices and wants the victim dead; a hate crime reflects a belief that the rights of a member of the protected group are especially unworthy of respect. So, considering a person's beliefs may well be relevant, especially if those beliefs have motivated the criminal behavior.
>
> But the challenger's mistake is even more fundamental. He is wrong to assert that people are condemned for not accepting the gospel. Christians believe that people are condemned for their sinful behavior – the "wages of sin is death" – not for what they fail to do. The quoted challenge is like saying that the sick man died of "not going to the doctor." No, the person died of a specific condition – perhaps cancer or a heart attack – which a doctor might have been able to cure. So too with eternal punishment. No one is condemned for refusing to believe in Jesus. While Jesus can – and does – provide salvation for those who seek it, there is nothing unjust about not providing salvation to those who refuse to seek it. After all, we don't normally feel obliged to help someone who has not asked for, and does not want, our assistance. So too the Creator has the right to withhold a gift – i.e. eternity spent in His presence – from those who would trample on the gift, and on the gift-giver.
>
> The quoted assertion also demonstrates an unspoken belief that we can impress God with our "kind" or "generous" behavior. This fails to grasp what God is – a perfect being. We cannot impress Him. What we do right we should do. We don't drag people into court and reward them for not committing crimes. This is expected of them. They can't commit a murder and then claim that punishment is unfair, because they had been kind and generous in the past. When a person gets his mind around the idea of what perfection entails, trying to impress a perfect Creator with our "basic goodness" no longer seems like such a good option.

If you want to hear a debate featuring exclusivists versus pluralists, I've got a podcast and a summary of a good debate on this issue between Chris Sinkinson and John Hick. You can't find a more prominent pluralist than John Hick, except for maybe Paul Knitter, who is featured in a debate with Harold Netland in the new "Debating Christian Theism" book that is just out with Oxford University Press.

# What was Thanksgiving Day really like in history?

**Wintery Knight** · 28 November 2013 · Archived copy · Original

The First Thanksgiving

A mysterious Dr. J (not that Dr. J, this one is Jewish) posted this article on Facebook.

Full text:

> The major similarity between the first Jamestown settlers and the first Plymouth settlers was great human suffering.
>
> November was too late to plant crops. Many settlers died of scurvy and malnutrition during that horrible first winter. Of the 102 original *Mayflower* passengers, only 44 survived. Again like in Jamestown, the kindness of the local Native Americans saved them from a frosty death.
>
> The Pilgrims' remarkable courage was displayed the following spring. When the *Mayflower* returned to Europe, not a single Pilgrim deserted Plymouth.
>
> Massasoit, chief of the Wampanoag tribe, signed a treaty with the Pilgrams in 1621, that was never broken. As a result, the two groups enjoyed a peaceful coexistence.
> By early 1621, the Pilgrims had built crude huts and a common house on the shores of Plymouth Bay. Soon neighboring Indians began to build relations with the Pilgrims. SQUANTO, a local Indian who had been kidnapped and taken to England nearly a decade before, served as an interpreter with the local tribes. Squanto taught the Pilgrims to fertilize the soil with dried fish remains to produce a stellar corn crop.
>
> MASSASOIT, the chief of the nearby Wampanoags, signed a treaty of alliance with the Pilgrims in the summer. In exchange for assistance with defense against the feared Narragansett tribe, Massasoit supplemented the food supply of the Pilgrims for the first few years.
>
> The modern conception of a Pilgrim might include a man in a black hat with a buckle, but not all of the original settlers of Plymouth County fit this description.
> Successful colonies require successful leadership. The man to step forward in Plymouth colony wasWILLIAM

> BRADFORD. After the first governor elected under the Mayflower Compact perished from the harsh winter, Bradford was elected governor for the next thirty years. In May of 1621, he performed the colony's first marriage ceremony.
>
> Under Bradford's guidance, Plymouth suffered less hardship than their English compatriots in Virginia. Relations with the local natives remained relatively smooth in Plymouth and the food supply grew with each passing year.
>
> By autumn of 1621, the Pilgrims had much for which to be thankful. After the harvest, Massasoit and about ninety other Indians joined the Pilgrims for the great English tradition of HARVEST FESTIVAL. The participants celebrated for several days, dining on venison, goose, duck, turkey, fish, and of course, cornbread, the result of a bountiful corn harvest. This tradition was repeated at harvest time in the following years.
>
> It was President Lincoln who declared Thanksgiving a national celebration in 1863. The Plymouth Pilgrims simply celebrated survival, as well as the hopes of good fortune in the years that lay ahead.

This might be a good thing to read out at the Thanksgiving table if you are looking for something meaningful to read.

# Study finds that attitude of gratitude has many health benefits

**Wintery Knight** · 28 November 2013 · Archived copy · Original

From the Harvard Mental Health Newsletter.

Excerpt:

> Two psychologists, Dr. Robert A. Emmons of the University of California, Davis, and Dr. Michael E. McCullough of the University of Miami, have done much of the research on gratitude. In one study, they asked all participants to write a few sentences each week, focusing on particular topics.
>
> One group wrote about things they were grateful for that had occurred during the week. A second group wrote about daily irritations or things that had displeased them, and the third wrote about events that had affected them (with no emphasis on them being positive or negative). After 10 weeks, those who wrote about gratitude were more optimistic and felt better about their lives. Surprisingly, they also exercised more and had fewer visits to physicians than those who focused on sources of aggravation.
>
> Another leading researcher in this field, Dr. Martin E. P. Seligman, a psychologist at the University of Pennsylvania, tested the impact of various positive psychology interventions on 411 people, each compared with a control assignment of writing about early memories. When their week's assignment was to write and personally deliver a letter of gratitude to someone who had never been properly thanked for his or her kindness, participants immediately exhibited a huge increase in happiness scores. This impact was greater than that from any other intervention, with benefits lasting for a month.
>
> Of course, studies such as this one cannot prove cause and effect. But most of the studies published on this topic support an association between gratitude and an individual's well-being.
>
> Other studies have looked at how gratitude can improve relationships. For example, a study of couples found that individuals who took time to express gratitude for their partner not only felt more positive toward the other person but also felt more comfortable expressing concerns about their relationship.
>
> Managers who remember to say "thank you" to people who work for them may find that those employees feel motivated to work harder. Researchers at the Wharton School at the University of Pennsylvania randomly divided university fund-raisers into two groups. One group made phone calls to solicit alumni donations in the same way they always had. The second group — assigned to work on a different day — received a pep talk from the director of annual giving, who told the fund-raisers she was grateful for their efforts. During the following week, the university employees who heard her message of gratitude made 50% more fund-raising calls than those who did not.

My editor Mary writes: *There is a health bonus to thankfulness but health isn't why we should be thankful. We should be thankful because we are the recipients of many good things and it is appropriate under such circumstances to express gratitude. It is also the overflow of a heart made happy by the generosity of another.*

To help us be thankful, here is a famous Thanksgiving day proclamation.

Here it is:

> PRESIDENTIAL THANKSGIVING PROCLAMATIONS
>
> 1789-1815 : George Washington, John Adams, James Madison
>
> THANKSGIVING DAY 1789
>
> BY THE PRESIDENT OF THE UNITED STATES OF AMERICA – A PROCLAMATION
>
> Whereas it is the duty of all Nations to acknowledge the providence of almighty God, to obey his will, to be grateful for his benefits, and humbly to implore his protection and favor – and Whereas both Houses of

> Congress have by their joint Committee requested me “to recommend to the People of the United States a day of public thanksgiving and prayer to be observed by acknowledging with grateful hearts the many signal favors of Almighty God, especially by affording them an opportunity peaceably to establish a form of government for their safety and happiness.”
>
> Now therefore I do recommend and assign Thursday the 26th day of November next to be devoted by the People of these States to the service of that great and glorious Being, who is the beneficent Author of all the good that was, that is, or that will be – That we may then all unite in rendering unto him our sincere and humble thanks – for his kind care and protection of the People of this country previous to their becoming a Nation – for the signal and manifold mercies, and the favorable interpositions of his providence, which we experienced in the course and conclusion of the late war –for the great degree of tranquillity, union, and plenty, which we have since enjoyed – for the peaceable and rational manner in which we have been enabled to establish constitutions of government for our safety and happiness, and particularly the national One now lately instituted, for the civil and religious liberty with which we are blessed, and the means we have of acquiring and diffusing useful knowledge; and in general for all the great and various favors which he hath been pleased to confer upon us.
>
> And also that we may then unite in most humbly offering our prayers and supplications to the great Lord and Ruler of Nations and beseech him to pardon our national and other transgressions – to enable us all, whether in public or private stations, to perform our several and relative duties properly and punctually – to render our national government a blessing to all the People, by constantly being a government of wise, just, and constitutional laws, discreetly and faithfully executed and obeyed – to protect and guide all Sovereigns and Nations (especially such as have shewn kindness unto us) and to bless them with good government, peace, and concord – To promote the knowledge and practice of true religion and virtue, and the increase of science among them and Us – and generally to grant unto all mankind such a degree of temporal prosperity as he alone knows to be best.
>
> Given under my hand at the City of New York the third day of October in the year of our Lord 1789.
>
> (signed) G. Washington

That’s from George Washington.

Happy Thanksgiving Day!

# Peter J. Williams lectures on the historical reliability of the gospel narratives

**Wintery Knight** · 28 November 2013 · Archived copy · Original

Peter J. Williams

This is a lecture I found from British historian Dr. Peter J. Williams.

Here's the main lecture: (54 minutes)

And here's the Q&A: (9 minutes)

About Peter Williams:

> **Peter J. Williams** is the Warden (CEO) of Tyndale House and a member of the Faculty of Divinity in the University of Cambridge. He received his MA, MPhil and PhD, in the study of ancient languages related to the Bible from Cambridge University. After his PhD, he was on staff in the Faculty of Divinity, Cambridge University (1997–1998), and thereafter taught Hebrew and Old Testament there as Affiliated Lecturer in Hebrew and Aramaic and as Research Fellow in Old Testament at Tyndale House, Cambridge (1998–2003). From 2003 to 2007 he was on the faculty of the University of Aberdeen, Scotland, where he became a Senior Lecturer in New Testament and Deputy Head of the School of Divinity, History and Philosophy. In July 2007 he became the youngest Warden in the history of Tyndale House. He also retains his position as an honorary Senior Lecturer in Biblical Studies at the University of Aberdeen.

Summary of the lecture:

- What if the stories about Jesus are legendary?
- were the gospels transmitted accurately?
- were the gospels written in the same place as where the events happened?
- do the gospel authors know the customs and locations where the events happened?
- do the gospels use the right names for the time and place where the events took place?
- do the gospels disambiguate people's names depending on how common those names were?
- how do the New Testament gospels compare to the later gnostic gospels?
- how do the gospels refer to the main character? How non-Biblical sources refer to Jesus?
- how does Jesus refer to himself in the gospels? do the later Christians refer to him that way?
- how does Jesus teach? do later Christians teach the same way?
- why didn't Jesus say anything about early conflicts in the church (the Gentiles, church services)?
- did the writers of the gospels know the places where the events took place?
- how many places are named in the gospels? how about in the later gnostic gospels?

- are the botanical details mentioned in the gospels accurate? how about the later gnostic gospels?

And here are the questions from the audience:

- how what about the discrepancies in the resurrection narratives that Bart Ehrman is obsessed with?
- what do you think of the new 2011 NIV translation (Peter is on the ESV translation committee)?
- how did untrained, ordinary men produce complex, sophisticated documents like the gospels?
- is oral tradition a strong enough bridge between the events and the writers who interviewed the eyewitnesses?
- what does the name John mean?
- why did the gospel writers wait so long before writing their gospels?
- do you think that Matthew and Luke used a hypothetical source which historians call "Q"?
- which gospel do critical historians trust the least and why?

I really enjoyed watching this lecture. He's getting some of this material from Richard Bauckham's awesome book "Jesus and the Eyewitnesses", so if you aren't familiar with it, you can get an idea of what's in it. Peter Williams is a lot of fun to listen to – an excellent speaker.

You can read an interview with Peter Williams here on Between Two Worlds.

And you can listen to the Peter Williams vs Bart Ehrman debate. That link contains a link to the audio of the debate as well as my snarky summary. It's very snarky.

And Apologetics 315 also posted Peter Williams' assessment of Bart Ehrman's "Misquoting Jesus".

# Peter J. Williams debates Bart Ehrman on his book “Misquoting Jesus”

**Wintery Knight** · 29 November 2013 · Archived copy · Original

The audio for this Unbelievable radio show debate is available from Apologetics 315.

**Details:**

> Bart Ehrman is the US author of the bestselling book “Misquoting Jesus” (In the UK “Whose word is it?”). He calls into question the authority of the New Testament as scribal changes over time have changed the documents.
>
> So can we trust the scripture? Bible scholar Peter Williams believes in the reliability of the New Testament and that Bart’s prognosis is far too pessimistic.

This post is a re-post from 2011. I have been listening to this lecture by Peter J. Williams on “Misquoting Jesus” this week, and it reminded me to re-post this debate.

**Summary of the Williams-Ehrman debate:**

Note: this summary is *snarky*. If you want an accurate view of the debate, then listen to it. My summary is meant to be humorous.

Ehrman:

- I had a mystical experience in childhood and became an evangelical Christian
- I went to Moody Bible Institute, and they told me that the Bible was inerrant
- For a while, I was committed to the view that there are no mistakes in the Bible
- At Princeton, I was taught *and graded* by professors who did not accept inerrancy
- By a strange coincidence, I began to see that the Bible did have errors after all!
- We don’t have the original documents written by the original authors, we only have thousands of copies
- if the words of the Bible are not completely inerrant, then none of it is historical
- if all of the words in the copies of the Bible are not identical, then none of it is historical

Williams:

- I would say the New and Old testaments are the Word of God
- We don’t need to have the original Greek writings in order to believe in the authority of the Bible
- I believe in inerrancy, but doesn’t mean there are no problems
- the doctrine of inerrancy has always referred to the original Greek copies, not the translations

Moderator:

- what are the main points of Misquoting Jesus?

Ehrman:

- we don’t have the originals of any of the books of the New Testament
- we have copies that are much later, sometimes even centuries later!!1!
- the copies we have all differ from one another – they were changed by scribes!!1!
- we have 5000 manuscripts in the original Greek language
- there are hundreds of thousands of differences!!1!

- most of the differences don't matter
- some differences are significant for meaning or doctrine
- errors are propagated because the next scribe inherits the mistake of their source copy
- a large gap between the time of writing and the first extant copy means more errors have crept in

Williams:

- the reason we have so many variants is because the number of manuscripts is large

Angry Jesus or compassionate Jesus in Mark

Ehrman:

- most manuscripts say that Jesus was compassionate when healing a leper, but one says he was angry
- it makes a huge huge huge really really big difference if Jesus is compassionate or angry
- the whole Bible needs to be thrown out because of this one word between different in one manuscript

Williams:

- this variant is important for understanding the passage, but it has no great meaning
- the change is probably just an accident – the two words are very similar visually in Greek
- it's just an accident – it emerged in one manuscript, and it impacted a few more
- the tiny number of manuscripts that have the error are geographically isolated
- I'm pretty sure that WK prefers the angry Jesus anyway – so who cares?

Ehrman:

- no! someone changed it deliberately! it's a conspiracy! you should buy my book! it's a *big deal*!!!!!1!!1!one!!eleventy-one!

The woman caught in adultery in John

Ehrman:

- it is isn't in any of the earliest manuscripts
- this is an apocryphical story that some scribe deliberately inserted into the text
- most people don't even know about this! it's a cover-up! you need to buy my scandalous book!

Williams:

- that's right, it's a late addition by some overzealous scribe
- and it's clearly marked as such in every modern Bible translation
- the only people who don't know about this are people who don't read footnotes in their Bible
- and in any case, this isn't a loss of the original words of the New Testament – it's an addition

Grace of God or apart from God in Hebrews

Ehrman:

- well this is just a one word difference, but it makes a huge huge really really big difference!
- the words are very similar, so it's could be an accident I guess
- but it wasn't! this was a deliberate change! it's a conspiracy! it's a cover-up! scandal!
- buy my book! It's almost as good as Dan Brown!

Moderator:

- hmmmn…. I kind of like “apart from God” – why is this such a big scandal again?

Ehrman:

- you don’t care? how can you not care? it has to be inerrant! or the whole thing is false!
- Moody Bible Institute says!

Williams:

- yeah Bart is always saying that every change is deliberate but it’s just an accident
- the words are very similar, just a few letters are different, this is clearly an accident
- I have no problem with apart from God, or by the Grace of God
- please move on and stop screaming and running around and knocking things over

Moderator:

- but what if pastors try to use this passage in a sermon?

Williams:

- well, one word doesn’t make a big different, the meaning that appears is fine for preaching
- it’s only a problem for people who treat the Bible as a magic book with magical incantations
- they get mad because if one word is out of place then the whole thing doesn’t work for their spell
- then they try to cast happiness spells but the spells don’t work and they experience suffering
- the suffering surprises them since they think that fundamentalism should guarantee them happiness
- then they become apostates and get on TV where they look wide-eyed and talk crazy

Ehrman:

- hey! are you talking about me? a lot of people buy my books! i am a big success!
- it is very important that people don’t feel bad about their sinning you know!

Is Misquoting Jesus an attack?

Williams:

- it’s rhetorically imbalanced and misleading
- it tries to highlight change and instability and ignore the majority of the text that is stable
- he makes a big deal out of 5 or so verses that are different from the mainstream text
- he says that scribes deliberately changed the scriptures, but he doesn’t prove that
- it’s just as likely that the differences are just scribal errors made by accident

Ehrman:

- well, maybe the variants aren’t a big deal, but what about one angel vs. two angels?
- that’s a significant issue! significant enough for me to become an apostate – a *rich* apostate
- if one word is different because of an accident, then the whole Bible cannot be trusted
- it has to be completely inerrant, so a one word difference means the whole thing is unreliable
- we don’t even know if Jesus was even named Jesus, because of one angel vs two angels!!!1!
- buy my book! you don’t have to read it, just put it on your shelf, then you’ll feel better about not having a relationships with God – because who’s to say what God really wants from you? Not the Bible!

# UK Supreme Court rules against Christian B&B couple's conscience rights

**Wintery Knight** · 29 November 2013 · Archived copy · Original

Dina sent me this article from the UK Telegraph about a recent Supreme Court decision from the UK.

Excerpt:

> The devoutly Christian owners of a Cornish hotel who refused to allow two gay men to take a double room have lost their final appeal to the Supreme Court. It ruled that Peter and Hazelmary Bull had discriminated against the couple, even though they had long operated a rule that unmarried guests had to sleep apart. One of the judges, Lady Hale, said such a case would have been unthinkable less than two decades ago, and it is a measure of how both the law and societal norms have changed that the Bulls should have found themselves in such a predicament.
>
> It is also a pity this matter was not settled amicably when the Bulls made an offer of redress; but campaigners were intent on making an example of them. The aggrieved men, Martyn Hall and Steven Preddy, who were in a civil partnership, were supported by the Equalities and Human Rights Commission (EHRC). The Bulls were perplexed as to why the EHRC should act against them, since their right to exercise their religious beliefs was being set against that of the men not to be discriminated against on the grounds of their sexual orientation.

Dina also sent me this article from the pro-gay Spiked Online.

Excerpt:

> [A]s the systematic unequal treatment of gays has ended, so another problem has grown. One pernicious social force has been replaced by another: the willingness of the state to outlaw minority or eccentric views and behaviours. State-backed oppression has yielded to state-backed intolerance.
>
> The Bulls have been hauled before the courts and told they can no longer practise what they preach. To deny a couple the right to make a living in a manner consistent with their Christian values is draconian. The Bulls' fate is similar to that of Lillian Ladele, an Islington marriage registrar, and Gary McFarlane, a Relate counsellor, who were both sacked after declining to provide their professional services to lesbians and gays. Equality laws did for them all.
>
> The problem here is not, as it appears, merely a slap in the face to Christians. It is a slap in the face to the right of *all* individuals to act free of state control absent a compelling reason for intervention. As John Stuart Mill put it in *On Liberty* (1859): 'The only purpose for which power can be rightfully exercised over any member of a civilised community, against his will, is to prevent harm to others.'
>
> As if to satisfy Mill's harm principle, the Supreme Court went in search of Preddy and Hall's 'harm'. What they found was that when the Bulls' house rules were explained to Preddy and Hall, they found it 'upsetting' and 'very hurtful'. Even in the touchy-feely twenty-first century, where self-esteem is seen as so important and so fragile, this is pretty lame.
>
> The Supreme Court judge, Lady Hale, may have been aware that this 'affront to their dignity', as she put it, was not the sort of harm, in the Mill sense, that should justify the state's coercive power. She bolstered her argument by linking Preddy and Hall's hurt feelings to a bigger historical picture. 'We should not underestimate', she said, 'the continuing legacy of those centuries of discrimination, persecution even, which is still going on in many parts of the world'.

Fascism happens when the normal desire for compassion is taken out of the family context and becomes the policy of a powerful feminist welfare state. And that's when it becomes a threat to the right of individuals to make moral

judgments and to exercise religious liberty.

The EHRC, you'll remember, was a project of the Labour Party of the UK, which is the socialist party in the UK. There is also a communist party called the Liberal Democrats. The striking thing is that many church-attending Christians not only vote for the Labour Party, but they also vote for the Liberal Democrats, which are even more liberal. A lot of this is because British Christians are so far to the left on economic issues that they sort of go along with the assault on their own religious liberty out of ignorance. They vote for bigger and bigger government, and then they are surprised when they actually get it.

The same thing happened in Canada with the Liberal Party and their introduction of Human Rights Commissions and Human Rights Tribunals, which criminalize offending people with free speech. The very Christians that voted for expanding government to reduce poverty were the ones who were then persecuted by the same big government they voted to create. This goes to show why we need to have better economics knowledge among Christians, because many of us are voting for left-wing parties because we think that private, voluntary charity can be replaced with government-controlled redistribution of wealth. Not only does that *not work* to reduce poverty, but in the end, we lose our liberties, too.

In the UK, you'll find a lot of Christians who think that rent control is a good thing, that price controls are a good thing, that raising minimum wage is a good thing, that tariffs on imported goods are a good thing – positions which are generally viewed as incorrect by academic economists across the ideological spectrum. That's why churches need to teach the Christian worldview, including economics. The UK church should be training Christians to undo this ignorant, patriotic confidence that UK Christians have in their welfare state. We all have a lot of work to do to educate ourselves on how the Bible applies to the real world (e.g. – economics), or else we will end up undermining our own liberties.

Additionally, I find it very frustrating that so many churches are so focused on providing emotional comfort and a sense of community to the people in the pews that they neglect to talk about these religious liberty issues. Pastors don't want to alert ordinary Christians about how dangerous it's becoming to take unpopular stands on issues like gay rights in public – it's scary and divisive and drives people away from church. You're not going to hear them trying to apply the Bible to moral issues or economic issues, etc. from the pulpit, because that spoils the "experience" and "the show" – the comfort and entertainment that people expect from church. We need to do better at helping Christians to be aware of threats to our liberties. They need to be trained to connect their faith to specific laws and policies in the real world.

# New study: prayer improves self-control and emotional stability

**Wintery Knight** · 30 November 2013 · Archived copy · Original

Mysterious WGB posted this article from the UK Daily Mail.

Excerpt:

> Praying helps people stay in control of their emotions and behaviour, according to a new study.
>
> People turn to prayer 'as a coping response to the high demands in life' and are rewarded with increased strength and ability to resist temptation, researchers said.
>
> Previous findings have shown that when people try hard to control their emotions and thoughts, the risk of aggressive outbursts and binge drinking or eating rises.
>
> But the latest study, by German psychologists at Saarland University and the University of Mannheim, found that praying helps people maintain self-control.
>
> 'A brief period of personal prayer buffered the self-control depletion effect', wrote the team, whose findings are published in the Journal of Experimental Social Psychology online.
>
> 'These results are consistent with and contribute to a growing body of work attesting to the beneficial effects of praying on self-control.'
>
> Praying has already been linked in the past to reduced levels of infidelity and alcohol consumption.

Also, I feel that I should mention this interesting study, if we are going to have a Twilight Zone post today. (H/T STR)

Excerpt:

> **Abstract**
>
> We examined whether atheists exhibit evidence of emotional arousal when they dare God to cause harm to themselves and their intimates. In Study 1, the participants (16 atheists, 13 religious individuals) read aloud 36 statements of three different types: God, offensive, and neutral. In Study 2 (N = 19 atheists), ten new stimulus statements were included in which atheists wished for negative events to occur. The atheists did not think the God statements were as unpleasant as the religious participants did in their verbal reports. However, the skin conductance level showed that asking God to do awful things was equally stressful to atheists as it was to religious people and that atheists were more affected by God statements than by wish or offensive statements. The results imply that atheists' attitudes towards God are ambivalent in that their explicit beliefs conflict with their affective response.

Now, I am blogging about this because it's interesting, but I would classify this as being in the camp of near-death experiences and the Shroud of Turin. It's interesting, but it's not something that I would use to prove anything in a debate. Ever since I read this article from Christianity Today a while back, I've been sort of cautious about using prayer studies to argue for anything. Take this prayer study with a grain of salt.

# New study: breast cancer rates in China skyrocketed because of one-child policy

**Wintery Knight** · 30 November 2013 · Archived copy · Original

Life Site News reports. (H/T WGB)

Excerpt:

> Pro-abortion advocates have relentlessly denied a link between abortion and breast cancer, but a new study has emerged from China that seems to show that such a link not only exists, but that the risk rises with each abortion a woman has.
>
> Dr. Joel Brind, professor of endocrinology at Baruch College, City University of New York and a director at the Breast Cancer Prevention Institute, called the findings a "real game changer" for deniers of the so-called ABC link.
>
> The study, titled "A meta-analysis of the association between induced abortion and breast cancer risk among Chinese females" was published this week in *Cancer Causes and Control*, a peer-reviewed international cancer journal.
>
> […]The researchers say they were initially puzzled by their findings, stating that Chinese women "historically" have had lower rates of breast cancer compared to women from western countries such as the US.
>
> They found, however, that incidences of breast cancer in China increased at an "alarming rate" over the past two decades, corresponding with the rise of the Chinese Communist Party's one-child policy.
>
> […]The overall risk of developing breast cancer among women having only one abortion increased by 44 percent.
>
> Calling it the "dose-response relationship" researchers also found that the risk of breast cancer increased as the number of abortions increased. Two abortions increased the risk by 76 percent, three by 89 percent.
>
> "In summary, the most important implication of this study is that IA was significantly associated with an increased risk of breast cancer among Chinese females, and the risk of breast cancer increases as the number of IA increases," concluded the researchers.

IA means "induced abortion".

More:

> The researchers called their findings "consistent" with those of Dr. Brind, who found in a 1996 meta-analysis that women had a 30 percent greater chance of developing breast cancer after aborting their child.
>
> "Not only does [the study] validate the earlier findings from 1996, but its findings are even stronger," Brind told LifeSiteNews.com.
>
> […]The Chinese research follows on the heels of two similar studies earlier this year. One study published in the *IndianJournal of Community Medicine* in May found a 6-fold greater risk of breast cancer among Indian women with a history of induced abortion when compared to the women with no such history. A similar study from Bangladesh published in the *Journal of the Dhaka Medical College*in April found that women with a history of induced abortion had a 20-fold increase in likelihood of developing breast cancer when compared to women with no such history.
>
> In a report last month, Brind called the findings of the two studies "of the sort of magnitude that has typified the link between cigarettes and lung cancer."

Here's the results and conclusion from the actual paper:

> **Results**
>
> A total of 36 articles (two cohort studies and 34 case–control studies) covering 14 provinces in China were included in this review. Compared to people without any history of IA, an increased risk of breast cancer was observed among females who had at least one IA (OR = 1.44, 95 % CI 1.29–1.59, $I^2 = 82.6$ %, $p < 0.001$, $n = 34$). No significant publication bias was found among the included studies (Egger test, $p = 0.176$). The risk increased to 1.76 (95 % CI 1.39–2.22) and 1.89 (95 % CI 1.40–2.55) for people who had at least two IAs and at least three IAs, respectively. Subgroup analyses showed similar results to the primary results. Meta-regression analysis of the included studies found that the association between IA and breast cancer risk attenuated with increasing percent of IA in the control group ($\beta = -0.022$, $p < 0.001$).
>
> **Conclusion**
>
> IA is significantly associated with an increased risk of breast cancer among Chinese females, and the risk of breast cancer increases as the number of IA increases. If IA were to be confirmed as a risk factor for breast cancer, high rates of IA in China may contribute to increasing breast cancer rates.

Gives a whole new meaning to the phrase "war on women", especially when you couple it with sex-selection abortion, which pro-abortion people favor. But I have to caution everyone about using studies like this as your whole case against abortion.

Pro-life debater Scott Klusendorf explains:

> First, I think it's wrong when we make how abortion impacts women our primary message. There is a place for that being a secondary message, but it should never be our primary message. Abortion is wrong not because it adversely affects women. It's primarily wrong because it intentionally takes the life of a defenseless human being. We've got to keep our focus clear on that.

I've summarized some of the previous studies on abortion/contraception in this recent post.

# Cancer victim who alerted media about dropped health plan draws IRS audit

**Wintery Knight** · 1 December 2013 · Archived copy · Original

Mark Steyn at National Review reports.

Excerpt: (links removed)

> A couple of weeks back, cancer patient Bill Elliot, in a defiant appearance on Fox News, discussed the cancelation of his insurance and what he intended to do about it. He's now being audited.
>
> Insurance agent C Steven Tucker, who quaintly insists that the whimsies of the hyper-regulatory bureaucracy do not trump your legal rights, saw the interview and reached out to Mr Elliot to help him. And he's now being audited.
>
> As the Instapundit likes to remind us, Barack Obama has "joked" publicly about siccing the IRS on his enemies. With all this coincidence about, we should be grateful the President is not (yet) doing prison-rape gags.
>
> Meanwhile, IRS chief counsel William Wilkins, in his testimony to the House Oversight Committee over the agency's systemic corruption, answers "I don't recall" no fewer than 80 times. Try giving that answer to Wilkins' colleagues and see where it gets you. Few persons are fond of their tax collectors, but, from my experience, America is the only developed nation in which the mass of the population is fearful of its revenue agency. This is unbecoming to a supposedly free people.

Elliot is being audited back to 2009. Tucker is being audited all the way back to 2003.

More from The Blaze.

Excerpt:

> Appearing this week on "Rocky D" on Charleston, S.C.'s WQSC, Elliott said that after a media frenzy, his insurance company worked it out with him to allow him to keep his coverage — but there's a new hitch.
>
> **"Monday I got a certified letter, I went down and got it and it's from the IRS and they are auditing my books from 2009," Elliott said.**
> He said he didn't own a business at that time, and in fact was working for the government. He said he's paid his taxes every year and is not any kind of a tax evader.
>
> There was one more part of the notice — Elliott said that "due to federal budget cuts," the meeting between him and the IRS won't take place until April 2014.
>
> "It doesn't matter. It could've been today if they wanted it to," he said.
>
> The radio host said, "you stood up and spoke out about how Obamacare screwed over your insurance and probably would kill you and what's the next thing that happened? You get audited by the IRS. That is not a coincidence."
>
> "No it's not," Elliott said.
>
> **And it might not just be Elliott: C. Steven Tucker, an insurance broker who contacted Elliott after his Fox News appearance, said that after he helped assist Elliott with his coverage, the IRS "are now coming after ME all the way back to 2003."**
>
> Elliott told Kelly that he actually voted for Obama over Mitt Romney last year specifically because he liked what Obama had promised about being able to keep your doctors and your insurance plans.

People sometimes complain at me for using the word fascism, but I don't know what else to call this. What do you call it when your government goes after you for speaking out against them? I call that fascism. It's government stepping in to impose their views on individuals by force.

Look, if you want big government to make everyone "equal" by redistributing wealth and nationalizing private industry, then you're a fascist. That's where your view leads. Fascism is the normal endpoint of destroying the free enterprise system under the guise of pursuing "equality". When government takes over industries from the private sector, you are going down the road to fascism. If you don't like private property, you're a fascist. If you don't like the rule of law, you're a fascist. If you don't like free trade, you're a fascist.

# New study: casual sex linked to poor mental health and suicidal thoughts

**Wintery Knight** · 1 December 2013 · Archived copy · Original

Dina messaged me about this new study reported at Ohio State University, and published in the Journal of Sex Research.

Excerpt:

> A new study suggests that poor mental health and casual sex feed off each other in teens and young adults, with each one contributing to the other over time.
>
> Researchers found that teens who showed depressive symptoms were more likely than others to engage in casual sex as young adults. In addition, those who engaged in casual sex were more likely to later seriously consider suicide.
>
> "Several studies have found a link between poor mental health and casual sex, but the nature of that association has been unclear," said Sara Sandberg-Thoma, lead author of the study and a doctoral student in human sciences at The Ohio State University.
>
> "There's always been a question about which one is the cause and which is the effect. This study provides evidence that poor mental health can lead to casual sex, but also that casual sex leads to additional declines in mental health."
>
> Sandberg-Thoma conducted the study with Claire Kamp Dush, assistant professor of human sciences at Ohio State. The research was published online recently in the *Journal of Sex Research* and will appear in a future print edition.
>
> One surprising finding was that the link between casual sex and mental health was the same for both men and women.
>
> "That was unexpected because there is still this sexual double standard in society that says it is OK for men to have casual sexual relationships, but it is not OK for women," Kamp Dush said.
>
> "But these results suggest that poor mental health and casual sex are linked, whether you're a man or a woman."
>
> The study used data from the National Longitudinal Study of Adolescent Health. Adolescents from 80 high schools and 52 middle schools were interviewed when they were in grades 7 through 12 and then again when they were aged 18 to 26.
>
> In all, this study involved about 10,000 people who were surveyed about their romantic relationship experiences across time, as well as depressive symptoms and thoughts of suicide.
>
> Overall, 29 percent of the respondents reported engaging in any casual sexual relationship. These were defined as any relationship in which the participant reported he or she was "only having sex with partner" as opposed to dating. This included 33 percent of men and 24 percent of women.
>
> The results showed that participants who reported serious thoughts of suicide or more depressive symptoms as teens were significantly more likely to report having casual sexual relationships when they were young adults.
>
> Casual sex, in turn, was linked to further declines in mental health. Specifically, those who had casual sex in their late teens and early 20s were significantly more likely to have serious thoughts of suicide as young adults, results showed. In fact, each additional casual sex relationship increased the odds of suicidal thoughts by 18 percent.
>
> However, casual sex in late teens and early 20s was not associated with changes in depression as a young adult.

I don't think that parents cannot rely on the schools and universities to tell their children the truth about research like this. You're more likely to get stuff like "Sex Week" at our institutions of higher education.

Here is what happens at Yale University's "Sex Week":

> Yale has a long history of hosting sex-themed events at the university that appear, on the whole, to be intended more to titillate students than to educate them. Sex Weekend is organized by students, but is overseen and approved by university administrators, who grant the use of classrooms and university facilities for the events.
>
> Numerous U.S. universities have begun to host "Sex Weeks" in recent years, a trend that was pioneered by Yale. Past events at Yale have included appearances by porn stars, live nudity, sex-toy giveaways, and screenings of a hard-core porn films, including one that reportedly depicted "fantasy rape."

And don't forget the workshops taught not by researchers, but by sex shop owners:

> The workshop was taught by Jill McDevitt, a 27-year-old "sexologist" who also owns a sex shop in West Chester, Pennsylvaina, which sells vibrators and various sex toys.
>
> She has posted videos of her educational workshops online, including one in which she demonstrates oral sex on a carrot.

So the university administration at Yale is presenting sex to students one way, but not really appealing to their minds with research studies. I think that they want to push young people to engage in premarital sex, especially hook-up sex, without telling them a thing about the consequences of doing so. Doing immoral things definitely breaks down your ability to be moral, and to make moral judgments. And that's what the left does in order to make sure that the next generation is not conservative. People who have been socialized to think that promiscuity is normal are going to have a much more difficult time transitioning into marriage and parenting. And people who are not married and not parenting typically vote for parties on the political left.If we want to do something to counter what kids are told on university campuses during "Sex Week", it's up to us to use evidence from studies like the one above to make a case to them before they get the propaganda.

# Is the healthcare.gov web site working?

**Wintery Knight** · 2 December 2013 · Archived copy · Original

No, still not working as of Sunday morning:

Transcript from that clip:

> GEORGE HOWELL, HOST: We know the first thing you have to do when you go to this website you have to select your state. Is that working?
>
> ALISON KOSIK, CNN BUSINESS CORRESPONDENT: And what's funny is I was talking with Matt, and, yeah, that seemed to work, right, when you logged on. But then came the road blocks. So tell me about what happened, because we're getting another error message here, and it's supposed to be running smoothly. We're just not seeing that.
>
> MATT SLOANE, CNN MEDICAL PRODUCER: Yeah, so, you know, we've been trying to get into the site since October 1 on and off again. I have to say it did work a lot more smoothly this morning. I got through. I picked my state. I put in all of my information and I got through the whole process in eight minutes. And then it said my status was in progress. So I went to refresh it and I got the error message.

There was some interesting discussion of how the web site was going on Fox News Sunday – specifically, this debate between Neera Tanden and James Capretta:

The key point here is that you need to understand that when the leftist says "better health plans", they do not mean that you will keep your doctors. They are not saying you will keep your hospitals. They are not saying your deductible will be lower. They are not saying your co-payment will be lower. They are not saying that your premium will be lower. Better is not a quantifiable term, and that's why she keeps saying "better" instead of talking about specific numbers. The specific numbers show that you are going to be paying a lot more for health care, assuming you are a middle-class working American. And that's why the progressive debater says "better" instead of being specific about numbers. The numbers are not on her side, so she says "better".

Now, if you ask her what better means, I would suspect that she means that everyone can now have free condoms or free sex changes or free IVF or free drug addiction therapy or free eco-therapy for depression about global warming or something that normal people don't even want or need. That's an example of what a progressive means by "better health care".

# New study: unmarried parents four times more likely to split up than married couples

**Wintery Knight** · 2 December 2013 · Archived copy · Original

Dina sent me this article from the UK Daily Mail.

Excerpt:

> Unmarried parents are four times more likely to split up than those who have wed, research revealed yesterday.
>
> It also indicated that co-habiting couples with children under 16 are now responsible for the majority of family breakdowns.
>
> On average, 5.3 per cent of these relationships ended each year from 2009-12, according to the study.
>
> But among those who had taken their vows, the average rate was only 1.3 per cent, said the Marriage Foundation think-tank and university academics.
>
> The high rate of co-habiting parents in family splits comes despite these couples making up only a fifth of those with children.
>
> The figures were gathered from the findings of a £50 million state-sponsored research project, the Understanding Society survey.
>
> Over the last 20 years, it has gathered information on the progress of families and now tracks events in 40,000 homes.

I have a friend who moved in with a non-Christian guy before she became a Christian and they broke up. She told me all about it. When I was listening to her, the thought occurred to me that women and men think that co-habitation is leading to different places. And it turns out that there is some evidence to support this intuition.

Consider this fascinating article from the Atlantic, authored by marriage researcher W. Bradford Wilcox. The article discusses the variances between cohabitating men and women regarding goals and expectations.

Excerpt:

> According to a new paper from RAND by sociologists Michael Pollard and Kathleen Mullan Harris, cohabiting young adults have significantly lower levels of commitment than their married peers. This aversion to commitment is particularly prevalent among young men who live with their partners.
>
> Pollard and Harris found that the majority of cohabiting young men do not endorse the maximum indicator of relationship permanence: 52 percent of cohabiting men between ages 18 and 26 are not “almost certain” that their relationship is permanent. Moreover, a large minority (41 percent) of men report that they are not “completely committed” to their live-in girlfriends. By contrast, only 39 percent of cohabiting women in the same age group are not “almost certain” their relationship will go the distance, and only 26 percent say they are not “completely committed”. Not surprisingly, the figures above and below also indicate that married women *and* men are much less likely to exhibit the low levels of commitment characteristic of many cohabiting relationships today.

Women are thinking that it is going to lead to some deeper commitment from the man, but men are thinking that they are getting what they want already (sex) and that they want to avoid the higher risks of making a more formal commitment.

# Did the divinity of Jesus emerge slowly after many years of embellishments?

**Wintery Knight** · 2 December 2013 · Archived copy · Original

How early is the doctrine of the divinity of Jesus?

When I answer this question, I only want to use the earliest, most reliable sources – so I can defend them *on historical grounds* using the standard rules of historiography.

The 4 sources that I would use are as follows:

- The early creed in 1 Corinthians 15:3-8, and 1 Corinthians 1
- A passage in Philippians 2
- Two passages from Mark, the earliest gospel
- A passage from Q, which is an early source of Matthew and Luke

So let's see the passages.

**1 Corinthians**

I've written before about the early creed in 1 Corinthians 15:3-8, which skeptical scholars date to 1-3 years after the death of Jesus, for a variety of reasons I covered in the previous post. Here's the creed which definitely makes Jesus out to be more than an ordinary man. Ordinary men don't get resurrection bodies after they die.

Here's the passage: (1 Cor 15:3-8)

[3]For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

[4]that he was buried, that he was raised on the third day according to the Scriptures,

[5]and that he appeared to Peter, and then to the Twelve.

[6]After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep.

[7]Then he appeared to James, then to all the apostles,

[8]and last of all he appeared to me also, as to one abnormally born.

Additionally, 1 Corinthians 1:21-25 talks about Jesus being "the power of God and the wisdom of God". Paul is identifying Jesus with the divine.

[21]For since in the wisdom of God the world through its wisdom did not know him, God was pleased through the foolishness of what was preached to save those who believe.

[22]Jews demand miraculous signs and Greeks look for wisdom,

[23]but we preach Christ crucified: a stumbling block to Jews and foolishness to Gentiles,

[24]but to those whom God has called, both Jews and Greeks, Christ the power of God and the wisdom of God.

[25]For the foolishness of God is wiser than man's wisdom, and the weakness of God is stronger than man's strength.

But it gets even stronger! You all probably already know that the most important passages in the Old Testament for Jews is the famous "Shema", which is found in Deuteronomy 6:4-9. The Shema is a strong statement of Jewish monotheism.

Here's the passage:

[4] Hear, O Israel: The LORD our God, the LORD is one.

[5] Love the LORD your God with all your heart and with all your soul and with all your strength.

[6] These commandments that I give you today are to be upon your hearts.

[7] Impress them on your children. Talk about them when you sit at home and when you walk along the road, when you lie down and when you get up.

[8] Tie them as symbols on your hands and bind them on your foreheads.

[9] Write them on the doorframes of your houses and on your gates.

So how does Paul fit Jesus in with this strong statement of Jewish monotheism?

Paul alludes to the Shema in 1 Corinthians 8:4-6.

[4]So then, about eating food sacrificed to idols: We know that an idol is nothing at all in the world and that there is no God but one.

[5]For even if there are so-called gods, whether in heaven or on earth (as indeed there are many "gods" and many "lords"),

[6]yet for us there is but one God, the Father, from whom all things came and for whom we live; and there is but one Lord, Jesus Christ, through whom all things came and through whom we live.

Holy mackerel! How did that get in there? Paul is splitting the roles of God in the the Shema and identifying Jesus in one of the divine roles! Jesus is not an ordinary man. That passage "through whom all things came" foreshadows John identifying Jesus as "the Word of God", which "became flesh and dwelt among us". Holy snark – did you guys know that was all in here so early?

The date for 1 Corinthians is 55 AD. It should be noted that skeptical scholars like James Crossley accept these passages, and you can check it out in the debate audio yourself.

**Philippians**

Check out Philippians 2:5-11.

[5]Your attitude should be the same as that of Christ Jesus:

[6]Who, being in very nature God, did not consider equality with God something to be grasped,

[7]but made himself nothing, taking the very nature of a servant, being made in human likeness.

[8]And being found in appearance as a man, he humbled himself and became obedient to death— even death on a cross!

[9]Therefore God exalted him to the highest place and gave him the name that is above every name,

[10]that at the name of Jesus every knee should bow, in heaven and on earth and under the earth,

[11]and every tongue confess that Jesus Christ is Lord, to the glory of God the Father.

The date for Philippians is 60-61 AD. Still within the lifetime of the eyewitnesses, and written by an eyewitness who was in contact with the other eyewitnesses, like Peter and James, whom Paul spoke with numerous times on his journeys to Jerusalem.

**Mark's gospel**

Mark's gospel is the earliest and atheists like James Crossley date it to less than 40 AD, which is 10 years after the

death of Jesus at most. When you read the gospel of Mark, you are getting the earliest and best information available about the historical Jesus, along with Paul's epistles. So what does Mark say about Jesus? Is Jesus just a man, or is he something more?

Check out Mark 12:1-9:

[1]He then began to speak to them in parables: "A man planted a vineyard. He put a wall around it, dug a pit for the winepress and built a watchtower. Then he rented the vineyard to some farmers and went away on a journey.

[2]At harvest time he sent a servant to the tenants to collect from them some of the fruit of the vineyard.

[3]But they seized him, beat him and sent him away empty-handed.

[4]Then he sent another servant to them; they struck this man on the head and treated him shamefully.

[5]He sent still another, and that one they killed. He sent many others; some of them they beat, others they killed.

[6]"He had one left to send, a son, whom he loved. He sent him last of all, saying, 'They will respect my son.'

[7]"But the tenants said to one another, 'This is the heir. Come, let's kill him, and the inheritance will be ours.'

[8]So they took him and killed him, and threw him out of the vineyard.

[9]"What then will the owner of the vineyard do? He will come and kill those tenants and give the vineyard to others.

And Mark 13:32, talking about the date of the final judgment.

[32]"No one knows about that day or hour, not even the angels in heaven, nor the Son, but only the Father.

And again, this passage is establishing a hierarchy such that Jesus is being exalted above all men and the angels, too. And the passage is embarrassing to the early church, because it makes Jesus look ignorant of something, so they would not have made this passage up. Jesus is not an ordinary man, he is *above* the angels – God's *unique* Son.

**The "Q" source for Matthew and Luke**

Here's Matthew 11:27, which is echoed in Luke 10:22:

[27]"All things have been committed to me by my Father. No one knows the Son except the Father, and no one knows the Father except the Son and those to whom the Son chooses to reveal him.

[22]"All things have been committed to me by my Father. No one knows who the Son is except the Father, and no one knows who the Father is except the Son and those to whom the Son chooses to reveal him."

Since this passage is in both of Matthew and Luke, but not in Mark, scholars believe that it is in the earlier "Q" source used by both Matthew and Luke. Q predates both Matthew and Luke, and so it is also fairly early (maybe 67-68), although not as early as Mark and Paul. Bill Craig writes that this passage is also embarrassing because it says that *no one* knows Jesus.

**Learn more**

You can learn more about the early belief in the divinity of Jesus by listening to a lecture by William Lane Craig and reading the related paper, and by listening to the debate between Richard Bauckham and James Crossley on that topic. The first link contains other scholarly debates on Jesus.

# Fast-food walk out ignores basic economics: minimum wage hike creates unemployment

**Wintery Knight** · 3 December 2013 · Archived copy · Original

Investors Business Daily explains what's wrong with the plan of fast-food industry workers to strike for higher wages.

Excerpt:

> Egged on by unions, fast-food workers plan to strike in dozens of U.S. cities for much higher wages. Sadly, they're being used to do something that's not in their own interests.
>
> Sensing the time is ripe, the Service Employees International Union and union-funded front groups are organizing a walkout of workers at fast-food joints in about 100 cities to protest how tough it is to live on the federal minimum wage of $7.25 an hour.
>
> They'd like that nearly doubled to $15 — and not just for fast food, but retailing and other industries too.
>
> Sounds great. But even by the loopy logic of the left, this is economic insanity and would lead to greater misery, fewer jobs and fewer opportunities for all.
>
> That's not just our opinion. Economists David Neumark and William Wascher, in their comprehensive book "Minimum Wages," looked at virtually all the scholarly and statistical evidence worldwide, digging up literally dozens of studies.
>
> Their finding: Minimum wage laws almost always result in a "reduction in employment opportunities for low-skilled" employees while limiting "skill acquisition by reducing educational attainment and perhaps training, resulting in lower adult wages and earnings."
>
> And, they said, it reduces the total amount of human capital — a huge cost to society.
>
> The minimum wage is so devastating that roughly 85% of all economists in a recent survey — from both the left and the right sides of the spectrum — said they think it's a bad idea.
>
> […]The idea that working families depend on these jobs is false. Most of those working for minimum wage are young, ages 16 to 24. They live in middle-class homes with above-average household incomes.
>
> And as James Sherk of the Heritage Foundation notes, two-thirds of minimum-wage earners get a raise in their first year. This is how they learn to show up, work hard and get along with others — valuable life skills young people acquire as they begin work and the very things that will make them a success later on.
>
> A higher minimum wage would cost young workers jobs and opportunities. They'd be wise to ignore the unions' siren song of higher wages for nothing.

From Investors Business Daily, an article by famous economist Thomas Sowell has more on this issue.

Excerpt:

> Switzerland is one of the few modern nations without a minimum-wage law. In 2003, the Economist magazine reported: "Switzerland's unemployment neared a five-year high of 3.9% in February."
>
> In February of this year, Switzerland's unemployment rate was 3.1%. A recent issue of the Economist showed Switzerland's unemployment rate as 2.1%.
>
> Most Americans today have never seen unemployment rates that low. However, there was a time when there was no federal minimum-wage law in the United States.
>
> The last time was during the Coolidge administration, when the annual unemployment rate went as low as 1.8%. When Hong Kong was a British colony, it had no minimum-wage law. In 1991 its unemployment rate

> was under 2%.
>
> […]Most people in the lower income brackets are not an enduring class. Most working people in the bottom 20% in income at a given time do not stay there over time. More of them end up in the top 20% than remain behind in the bottom 20%.
>
> There is nothing mysterious about the fact that most people start off in entry-level jobs that pay much less than they will earn after they get some work experience.
>
> But when minimum-wage levels are set without regard to their initial productivity, young people are disproportionately unemployed — priced out of jobs.
>
> In European welfare states where minimum wages, and mandated job benefits to be paid for by employers, are more generous than in the United States, unemployment rates for younger workers are often 20% or higher, even when there is no recession.
>
> Unemployed young people lose not only the pay they could have earned but, at least equally important, the work experience that would enable them to earn higher rates of pay later on.
>
> Minorities, like young people, can also be priced out of jobs. In the United States, the last year in which the black unemployment rate was lower than the white unemployment rate — 1930 — was also the last year when there was no federal minimum-wage law.
>
> Inflation in the 1940s raised the pay of even unskilled workers above the minimum wage set in 1938. Economically, it was the same as if there were no minimum-wage law by the late 1940s.
>
> In 1948 the unemployment rate of black 16-year-old and 17-year-old males was 9.4%. This was a fraction of what it would become in even the most prosperous years from 1958 on, as the minimum wage was raised repeatedly to keep up with inflation.
>
> **A survey of American economists found that 90% of them regarded minimum-wage laws as increasing the rate of unemployment among low-skilled workers.**

Harvard University economist Greg Mankiw puts the level of opposition to minimum wage hikes at 79% among professional economists across the ideological spectrum.

**Learn economics for Christmas**

By the way, if you're looking for a really good drama that shows the business-owner vs union-leader conflict, I really recommend the BBC production of North and South. It's a beautiful period drama that's based on a Christian woman's novel. The author of the book wrote in the time of Charles Dickens, and he even named the book for her. It's rated 8.7/10 on IMDB. It's $19.99 on Amazon, although it sometimes goes lower than that! A great way to communicate basic economics to your liberal spouse or significant other – especially on this minimum wage issue. Oh, apparently there is a love story in it, but I didn't really pay any attention to that part of it, other than to be pleased that there was no sex or nudity at all – not even kissing! Perfect! This DVD is WK-approved. It is also Dina-approved, because she was the one who suggested it to me.

Just to give you an idea of how much I liked it, I tried watching Downton Abbey and stopped after two episodes. It's boring nonsense. But North and South I rated 9.5/10 and could not stop watching it once I started. There are no wasted scenes, no fluff at all. Everything they did worked to develop the theme of the story. How different it is from the garbage they have in theaters today! The presentation of capitalism is absolutely heroic, and yet the union side is presented sympathetically as well. Of course, if you want to read an economics book instead, then just get Thomas Sowell's "Basic Economics". One of my friends (Letitia) is actually reading that now.

# George Will: Governor Scott Walker is a good pick for Republicans in 2016

**Wintery Knight** · 3 December 2013 · Archived copy · Original

Wisconsin Governor Scott Walker

I like Scott Walker because he is a man who defeats Democrats and gets things done, and I like Senator Ted Cruz because he is a brilliant debater. Both are tough conservatives. But if I had to pick one of them right now for 2016, I'd pick Scott Walker. And I'm not alone.

Here's an editorial from the St. Louis Dispatch that Dennis Prager discussed on Monday, authored by moderate conservative George Will.

Excerpt:

> In 2011, tens of thousands of government employees and others, enraged by Gov. Scott Walker's determination to break the ruinously expensive and paralyzing grip that government workers' unions had on Wisconsin, took over the Capitol building in Madison. With chanting, screaming and singing supplemented by bullhorns, bagpipes and drum circles, their cacophony shook the building that the squalor of their occupation made malodorous. They spat on Republican legislators and urinated on Walker's office door. They shouted, "This is what democracy looks like!"
>
> When they and Democratic legislators failed to prevent passage of Act 10, they tried to defeat — with a scurrilous smear campaign that backfired — an elected state Supreme Court justice. They hoped that changing the court's composition would get Walker's reforms overturned. When this failed, they tried to capture the state Senate by recalling six Republican senators. When this failed, they tried to recall Walker. On the night that failed — he won with a larger margin than he had received when elected 19 months earlier — he resisted the temptation to proclaim, "This is what democracy looks like!"
>
> […]Walker has long experience in the furnace of resistance to the looting of public funds by the public's employees. He was elected chief executive of heavily Democratic Milwaukee County after his predecessor collaborated with other officials in rewriting pension rules in a way that, if he had been re-elected instead of resigning, would have given him a lump-sum payment of $2.3 million and $136,000 a year for life.
>
> To fight the recall — during which opponents disrupted Walker's appearance at a Special Olympics event, and squeezed Super Glue into the locks of a school he was to visit — Walker raised more than $30 million, assembling a nationwide network of conservative donors that could come in handy if he is re-elected next year. Having become the first U.S. governor to survive a recall election, he is today serene as America's first governor to be, in effect, elected twice to a first term.

The radically leftist New Republic has this to say about Governor Walker.

Excerpt:

> Right now, the Republican Party is an increasingly factional place, divided between north and south, establishment and grassroots, Tea Party Conservatives and practical Conservatives, religious right and business, libertarians and populists.
>
> […]There's another potentially unifying mainline conservative, though, and he lurks in Madison. Scott Walker, the battle-hardened governor of Wisconsin, is the candidate that the factional candidates should fear. Not only does he seem poised to run—he released a book last week—but he possesses the tools and positions necessary to unite the traditional Republican coalition and marginalize its discontents.
>
> Walker has the irreproachable conservative credentials necessary to appease the Tea Party, and he speaks the language of the religious right. But he has the tone, temperament, and record of a capable and responsible establishment figure. That, combined with Walker's record as a reformist union-buster, will appeal to the party's donor base and appease the influential business wing. Walker's experience as an effective but conservative blue state governor makes him a credible presidential candidate, not just a vessel for the conservative message. **Equally important, his history of having faced down organized labor and beaten back a liberal recall effort is much more consistent with the sentiment of the modern Republican Party than Jeb Bush's compassionate conservatism.** Altogether, Walker has the assets to build the broad establishment support necessary for the fundraising, media attention, and organization to win the nomination. He could be a voter or a donor's first choice, not just a compromise candidate.
>
> The other mainline conservatives possess some of Walker's characteristics, but not all. He's more compelling and presidential, with more gravitas than Rubio or Jindal.
>
> […]But even though Walker's political skills remain an open question, there are reasons why he might be a stronger candidate on paper. For one, he's a more experienced politician—and the fact is that political skills and instincts are learned and honed under tough circumstances. By the time Walker's wins reelection—which I expect—he will have won three competitive statewide contests in a tilt-blue state, under three different circumstances. He will have done so while campaigning and governing as a conservative. There are very few politicians who can claim as much.

We need to have someone who is a non-Romney – someone who likes to fight with the Democrats, and is able to beat them.

I found this article that lists six of his accomplishments.

Here's are a couple:

> #2 He passed a killer budget. Over the summer, he signed into law a state budget thatslashed taxes as well as unnecessary spending, including a $650 million income tax cut (part of nearly $1 billion in total tax cuts), Medicaid reform (see #4), the introduction of work requirements for people on food stamps, a freeze in university tuition and limits on residential property tax increases.
>
> #3 He stands up to corruption. One of Walker's first actions as governor was to create the Commission on Government Waste, Fraud, and Abuse, which was projected to save taxpayers $300 million. He also passed a law that prevents unions from using members' dues to fund political campaigns.

I have placed his new book about his victories in Democrat-dominated Wisconsin on my wishlist. If you like politics, might be a good one for you as well.

# William Lane Craig lectures against naturalism at the University of St. Andrews, Scotland

**Wintery Knight** · 3 December 2013 · Archived copy · Original

Note: if you have heard Dr. Craig's arguments against naturalism before, then I recommend jumping right to the Q&A time, which starts 72 minutes in.

About Dr. William Lane Craig:

> William Lane Craig (born August 23, 1949) is an American analytic philosopher, philosophical theologian, and Christian apologist. He is known for his work on the philosophy of time and the philosophy of religion, specifically the existence of God and the defense of Christian theism. He has authored or edited over 30 books including *The Kalam Cosmological Argument* (1979), *Theism, Atheism and Big Bang Cosmology*(co-authored with Quentin Smith, 1993), *Time and Eternity: Exploring God's Relationship to Time* (2001), and *Einstein, Relativity and Absolute Simultaneity* (co-edited with Quentin Smith, 2007).
>
> Craig received a Bachelor of Arts degree in communications from Wheaton College, Illinois, in 1971 and two summa cum laudemaster's degrees from Trinity Evangelical Divinity School in Deerfield, Illinois, in 1975, in philosophy of religion and ecclesiastical history. He earned a Ph.D. in philosophy under John Hick at the University of Birmingham, England in 1977 and a Th.D. underWolfhart Pannenberg at the University of Munich, Germany in 1984.

Here is the full lecture with Q&A: (2 hours)

Summary:

- Naturalism defined: the physical world (matter, space and time) is all that exists
- Dr. Craig will present 7 reasons why naturalism is false
- 1) the contingency argument
- 2) the kalam cosmological argument
- 3) the fine-tuning of the universe for intelligent life
- 4) the moral argument
- 5) the ontological argument
- 6) the resurrection of Jesus
- 7) religious experience

The Q&A time starts around 1:12:00.

Dr. Craig does mention an 8th argument early in the Q&A – the argument from the non-physicality of mental states (substance dualism), which is an argument that I find convincing, because a materialist conception of mind is not compatible with rationality, consciousness and moral agency. He gets a couple of questions on the moral argument early on – one of them tries to put forward an evolutionary explanation for "moral" behaviors. There's another question the definition of naturalism. There is a bonehead question about the non-existence of Jesus based on a Youtube movie he saw – which Craig responds to with agnostic historian Bart Ehrman's book on that topic. There's a question about God as the ground for morality – does morality come from his will or nature. Then there is a question about the multiverse, which came up at the physics conference Dr. Craig attended the day before. There is a good question about the Big Bang theory and the initial singularity at time t=0. Another good question about transfinite arithmetic, cardinality and set theory. One questioner asks about the resurrection argument. The questioner asks if we can use the origin of the disciples belief as an argument when other religions have people who are willing to die for their claims. One of the questioners asks about whether the laws of nature break down at

10^-43 after the beginning of the universe. There is a question about the religious experience argument, and Craig has the opportunity to give his testimony.

I thought that the questions from the Scottish students and faculty were a lot more thoughtful and respectful than at American colleges and universities. Highly recommended.

# New study: parents who work nightshifts or weekends damage their children

**Wintery Knight** · 4 December 2013 · Archived copy · Original

The UK Telegraph reports on a new study.

Excerpt:

> The 24/7 economy is damaging children, a study has concluded, with youngsters more likely to suffer developmental and behavioural problems if their parents work unsociable hours.

> Children of parents who work nightshift and weekends were found to have poorer language, reading and mathematics skills and were more likely to be overweight or obese.
>
> By adolescence, they were also more likely to be depressed and to have abuse drugs and alcohol.
>
> The comprehensive review, led by Jianghong Li, a senior researcher from WZB Berlin Social Science Center, looked back at 30 years of research comparing parents' work schedules with their children's development.

> 21 out of 23 reviewed studies showed weekend and nightshifts damaged child development.
>
> Authors found that working unsociable hours: "has negative consequences for the developing child with regards to mental health and behavioural problems, cognitive development, being overweight and obesity."
>
> The impact was worse for pre-school children who were up to 35 per cent more likely to have developmental problems.

Why would parents have to work so much? Well, it might be materialism and consumerism. But it might also be caused by policies of the secular left, like high tax rates, the marriage penalty, etc. The secular left is very much against marriage and they do not like the idea that a man will be able to provide for a family and keep his wife home to raise them when they are very young.

It's not just nightshift and weekend shifts, either. Previously, I wrote about another Oxford University study on daycare that was featured in the UK Telegraph.

Excerpt:

> Academics at Oxford University discovered that exposure to some forms of early education contributed to bad behaviour and could be linked to emotional problems.

> The study, based on an analysis of infants from almost 1,000 families, showed that the strongest influence on children came from within the home itself.
>
> Children raised in poor families with high levels of parental stress or mental health problems were most at risk of developing emotional problems by the time they started school, it emerged.
>
> The research also uncovered trends relating to children who were in formal child care — away from their parents.

> […]The report, published in the journal Child: Care, Health and Development, said that "children who spent

> more time in group care, mainly nursery care, were more likely to have behavioural problems, particularly hyperactivity".
>
> The study, led by Prof Alan Stein, of Oxford's Department of Child and Adolescent Psychiatry, found that "spending more time in day care centres, over the total period was a predictor of total problem scores".
>
> "Children who spent more time in day care centres were more likely to be hyperactive," it said. "Children receiving more care by childminders were more likely to have peer problems."
>
> The authors added: "The findings in relation to childminding suggest that it might be out of home care rather than group care that raises the risk of behavioural difficulties."
>
> […]The study said: "These findings suggest that interventions to enhance children's emotional and behavioural development might best focus on supporting families and augmenting the quality of care in the home."

My point in posting these studies is to show that what what children really need in order to do well are their parents. They need time from their parents to talk to them and do activities with them. They need input and guidance from their parents. Any time you here left-wing feminist politicians talking about how we need to push to have children, especially very young children, educated by experts, you need to keep in mind that they don't have the facts to back up their idea. People who push these plans push them because they want women to behave like men and work outside the home. They also want to boost tax revenues by making bother parents work more.

Everyone knows that parents who are careful about who they marry and careful about staying married will have more successful children than those who don't marry before having kids, or who don't prepare for marriage themselves, or who don't marry someone with the skills to do their roles in the marriage. But people on the left want to reverse that – they want everyone's children to be "equal" regardless of what decisions the parents make. And they want to do this by redistributing wealth (not character) from parents who succeed to parents who fail. So when you hear this "equality" crowd talking about the need to replace incompetent parents with taxpayer-funded government bureaucrats, you need to keep studies like the ones above in mind.

# New CDC study: 62% of men who know they are HIV-positive have unprotected sex with men

**Wintery Knight** · 4 December 2013 · Archived copy · Original

CNS News reports on the latest numbers from the Center for Disease Control, which is a department within the U.S. Federal government.

Excerpt:

> Sixty-two percent of American men who know they are HIV positive continue to have unprotected anal sex, according to data released last week by the federal Centers for Disease Control.
>
> This data, which was published Friday, came from the federal government's National HIV Behavioral Surveillance System.
>
> The percentage of self-aware HIV-positive men who engage in unprotected anal sex has been increasing, according to the CDC. In 2005, 55 percent did so. In 2008, 57 percent did so. And, in 2011, 62 percent did so.
>
> "Unprotected anal sex is a high-risk practice for HIV infection, with receptive anal sex having the highest risk," said the CDC report. "Unprotected anal sex also places MSM at risk for other sexually transmitted infections such as syphilis, chlamydia, and gonorrhea. Although condoms can reduce the risk for HIV transmission, they do not eliminate risk and often are not used consistently. Some MSM attempt to decrease their HIV risk by engaging in unprotected sex only with partners perceived to have the same HIV status as their own. However, this practice is risky, especially for HIV-negative MSM, because MSM with HIV might not know or disclose that they are infected and men's assumptions about the HIV status of their partners can be wrong."

Now this is going to be contained if men who have sex with men are relatively monogamous, but are they?

The Family Research Council has published a paper that links to mainstream secular sources that notes that gay men tend to have a far more loose notion of monogamy than men in heterosexual relationships.

Look:

> Lest anyone suffer the illusion that any equivalency between the sexual practices of homosexual relationships and traditional marriage exists, the statistics regarding sexual fidelity within marriage are revealing:
>
> Married couples
>
> - A nationally representative survey of 884 men and 1,288 women published in the *Journal of Sex Research* found that 77 percent of married men and 88 percent of married women had remained faithful to their marriage vows.[9]
> - A 1997 national survey appearing in *The Social Organization of Sexuality: Sexual Practices in the United States* found that 75 percent of husbands and 85 percent of wives never had sexual relations outside of marriage.[10]
>
> […]Research indicates that the average male homosexual has hundreds of sex partners in his lifetime:
>
> - The Dutch study of partnered homosexuals, which was published in the journal *AIDS*, found that men with a steady partner had an average of eight sexual partners per year.[12]
> - Bell and Weinberg, in their classic study of male and female homosexuality, found that 43 percent of white male homosexuals had sex with 500 or more partners, with 28 percent having one thousand or more sex partners.[13]
> - In their study of the sexual profiles of 2,583 older homosexuals published in the *Journal of Sex Research*,

> Paul Van de Ven et al. found that "the modal range for number of sexual partners ever [of homosexuals] was 101-500." In addition, 10.2 percent to 15.7 percent had between 501 and 1,000 partners. A further 10.2 percent to 15.7 percent reported having had more than one thousand lifetime sexual partners.[14]
>
> Even in those homosexual relationships in which the partners consider themselves to be in a committed relationship, the meaning of "committed" or "monogamous" typically means something radically different than in heterosexual marriage.
>
> - A Canadian study of homosexual men who had been in committed relationships lasting longer than one year found that only 25 percent of those interviewed reported being monogamous." According to study author Barry Adam, "Gay culture allows men to explore different…forms of relationships besides the monogamy coveted by heterosexuals."[16]
> - The *Handbook of Family Diversity* reported a study in which "many self-described 'monogamous' couples reported an average of three to five partners in the past year. Blasband and Peplau (1985) observed a similar pattern."[17]
>
> […]In their *Journal of Sex Research* study of the sexual practices of older homosexual men, Paul Van de Ven et al. found that only 2.7 percent of older homosexuals had only one sexual partner in their lifetime.[19]

Now, all the footnotes in that quotation above go to mainstream sources, so it's no use complaining about the Family Research Council cataloguing them – they didn't publish those research papers, they're just citing them to make a point that everyone researching in the field already knows.

Take a closer look:

>
> 10. E. O. Laumann et al., The Social Organization of Sexuality: Sexual Practices in the United States (Chicago: **University of Chicago Press**, 1994 ): 216.
>
> 12. Maria Xiridou, et al, "The Contribution of Steady and Casual Partnerships to the Incidence of HIV Infection among Homosexual Men in Amsterdam," ***AIDS*** 17 (2003): 1031.
>
> 13. A. P. Bell and M. S. Weinberg, *Homosexualities: A Study of Diversity Among Men and Women* (New York: **Simon and Schuster**, 1978), pp. 308, 309; See also A. P. Bell, M. S. Weinberg, and S. K. Hammersmith, *Sexual Preference*(Bloomington: **Indiana University Press**, 1981).
>
> 14. Paul Van de Ven et al., "A Comparative Demographic and Sexual Profile of Older Homosexually Active Men," ***Journal of Sex Research*** 34 (1997): 354.
>
> 16. Ryan Lee, "Gay Couples Likely to Try Non-monogamy, Study Shows," ***Washington Blade*** (August 22, 2003): 18.
>
> 17. David H. Demo, et al., editors, *Handbook of Family Diversity* (New York: **Oxford University Press**, 2000): 73.

It's mostly peer-reviewed journals and academic presses. I'm counting the Washington Blade as a reputable source, even though it is only a newspaper, because it is one the nation's leading gay newspapers, and maybe the leading gay newspaper.

So let's get back to the study – 62% of men who know they are HIV-positive have unprotected sex with men. Now, imagine you have a gay son or a gay male friend. Given this data from the Center for Disease Control, do you think that it's reasonable for you to encourage them in this lifestyle? Or rather, should you prefer to disagree with them, for their own good? And it's not just for their good. The closer we move to socialized medicine, the more the costs

of behaviors that are likely to make people sick are going to be shared among people who don't even engage in those behaviors. We shouldn't be celebrating anything that hurts people or impoverishes people. We should disagree, but in a respectful, winsome way. Not with the intent to harm, but with the intent to inform and educate.

# MIT physicist explains the challenge of cosmic fine-tuning for naturalism

**Wintery Knight** · 4 December 2013 · Archived copy · Original

Here's the article from Harper's magazine. The MIT physicist says that the fine-tuning is real, and is best explained by positing the existence of an infinite number of universes that are not fine-tuned – the so-called multiverse.

Excerpt:

> While challenging the Platonic dream of theoretical physicists, the multiverse idea does explain one aspect of our universe that has unsettled some scientists for years: according to various calculations, if the values of some of the fundamental parameters of our universe were a little larger or a little smaller, life could not have arisen. For example, if the nuclear force were a few percentage points stronger than it actually is, then all the hydrogen atoms in the infant universe would have fused with other hydrogen atoms to make helium, and there would be no hydrogen left. No hydrogen means no water. Although we are far from certain about what conditions are necessary for life, most biologists believe that water is necessary. On the other hand, if the nuclear force were substantially weaker than what it actually is, then the complex atoms needed for biology could not hold together. As another example, if the relationship between the strengths of the gravitational force and the electromagnetic force were not close to what it is, then the cosmos would not harbor any stars that explode and spew out life-supporting chemical elements into space or any other stars that form planets. Both kinds of stars are required for the emergence of life. The strengths of the basic forces and certain other fundamental parameters in our universe appear to be "fine-tuned" to allow the existence of life. The recognition of this finetuning led British physicist Brandon Carter to articulate what he called the anthropic principle, which states that the universe must have the parameters it does because we are here to observe it. Actually, the word *anthropic*, from the Greek for "man," is a misnomer: if these fundamental parameters were much different from what they are, it is not only human beings who would not exist. No life of any kind would exist.
>
> If such conclusions are correct, the great question, of course, is *why* these fundamental parameters happen to lie within the range needed for life. Does the universe care about life? Intelligent design is one answer. Indeed, a fair number of theologians, philosophers, and even some scientists have used fine-tuning and the anthropic principle as evidence of the existence of God. For example, at the 2011 Christian Scholars' Conference at Pepperdine University, Francis Collins, a leading geneticist and director of the National Institutes of Health, said, "To get our universe, with all of its potential for complexities or any kind of potential for any kind of life-form, everything has to be precisely defined on this knife edge of improbability…. [Y]ou have to see the hands of a creator who set the parameters to be just so because the creator was interested in something a little more complicated than random particles."
>
> Intelligent design, however, is an answer to fine-tuning that does not appeal to most scientists. The multiverse offers another explanation. If there are countless different universes with different properties—for example, some with nuclear forces much stronger than in our universe and some with nuclear forces much weaker—then some of those universes will allow the emergence of life and some will not. Some of those universes will be dead, lifeless hulks of matter and energy, and others will permit the emergence of cells, plants and animals, minds. From the huge range of possible universes predicted by the theories, the fraction of universes with life is undoubtedly small. But that doesn't matter. We live in one of the universes that permits life because otherwise we wouldn't be here to ask the question.

I thought I was going to have to go outside this article to refute the multiverse, but Lightman is honest enough to refute it himself:

> The… conjecture that there are many other worlds… [T]here is no way they can prove this conjecture. That same uncertainty disturbs many physicists who are adjusting to the idea of the multiverse. Not only must we accept that basic properties of our universe are accidental and uncalculable. In addition, we must believe in the existence of many other universes. But we have no conceivable way of observing these other universes and cannot prove their existence. Thus, to explain what we see in the world and in our mental deductions, we must believe in what we cannot prove.
>
> Sound familiar? Theologians are accustomed to taking some beliefs on faith. Scientists are not. All we can do is hope that the same theories that predict the multiverse also produce many other predictions that we can test here in our own universe. But the other universes themselves will almost certainly remain a conjecture.

The multiverse is not pure nonsense, it is theoretically possible. The problem is that the multiverse generator itself would require fine-tuning, so the multiverse doesn't get rid of the problem. And, as Lightman indicates, we have no independent experimental evidence for the existence of the multiverse in any case. Atheists just have to take it on faith, and hope that their speculations will be proved right. Meanwhile, the fine-tuning is just as easily explained by postulating God, and we have independent evidence for God's existence, like the the origin of biological information, the sudden appearance of animal body plans, the argument from consciousness, and so on. Even if the naturalists could explain the fine-tuning, they would still have a lot of explaining to do. Theism (intelligent causation) is the simplest explanation for all of the things we learn from the progress of science.

We need to be frank about atheists and their objections to the progress of science. Within the last 100 years, we have discovered that the physical universe came into being out of nothing 15 billion years ago, and we have discovered that this one universe is fine-tuned for intelligent life. I don't think it's like that the last 100 years of scientific progress on the origins question are going to be overturned so that science once again affirms what atheists believe about the universe. Things are going the wrong way for atheists – at least with respect to science.

**See it in action**

To see these arguments examined in a debate with a famous atheist, simply watch the debate between William Lane Craig and Christopher Hitchens, and judge which debater is willing to form his beliefs on scientific progress, and which debater is forming his beliefs *against* the science we have today, and hoping that the good science we have today based on experiments will be overturned by speculative theories at some point in the future. When you watch that debate, it becomes very clear that Christian theists are interested in conforming their beliefs to science, and atheists are very interested in speculating against what science has shown in order to maintain their current pre-scientific view. That's not what rational people ought to do when confronted with evidence.

# New study: school anti-bullying programs actually increase bullying

**Wintery Knight** · 5 December 2013 · Archived copy · Original

From The College Fix.

Excerpt:

> Schools across the nation have implemented anti-bullying campaigns, complete with speakers, posters, slogans and more – but a recent study hailing from the University of Texas-Arlington claims such efforts may actually cause more bullying.
>
> Essentially researchers suggest anti-bullying campaigns, despite good intentions, teach students how to bully or may even plant the seed inside students who had not exhibited aggressive behavior previously.
>
> "One possible reason for this is the students who are victimizing their peers have learned the language from these anti-bullying campaigns and programs," Seokjin Jeong, an assistant professor of criminology and criminal justice at UT-Arlington and lead author of the study, said in a campus statement.
>
> Jeong did not respond to requests for comment by *The College Fix.* His research, titled "A Multilevel Examination of Peer Victimization and Bullying Preventions in Schools," was recently published in *The Journal of Criminology.*
>
> In an interview with CBS, he said his findings were a surprise – that his hypothesis going into the research was that anti-bullying programs would help curb the problem. Instead, he said he found the opposite was true, calling it "very disappointing."
>
> Today, 75 percent of schools report a violent incident to the police on a weekly basis and 25 percent of schools experience bullying on a daily basis, according to stats cited in the *Journal of Criminology.*
>
> "Our anti-bullying programs, either intervention or prevention does not work," Jeong said. "There is a possibility of negative impact from anti-bullying programs."
>
> […]The study's results state: "Surprisingly, bullying prevention had a negative effect on peer victimization. Contrary to our hypothesis, students attending schools with bullying prevention programs were more likely to have experienced peer victimization, compared to those attending schools without bullying prevention programs. It is possible that bullies have learned a variety of antibullying techniques but chose not to practice what they have learned from the program. Sometimes, bullies maintain their dominant social status among peers in school. As a result, the preventive strategies may become ineffective."

I think that the troubling thing with anti-bullying programs is that they can be abused to restrict free speech. I think that a better solution to the problem of violence in schools is the same as the problem of violence in society. We need to promote marriage and encourage people to stay married using pro-marriage tax breaks and other pro-family policies.

Here is Dr. Robert Rector of the Heritage Foundation to explain:

> Census data and the Fragile Families survey show that marriage can be extremely effective in reducing child poverty. But the positive effects of married fathers are not limited to income alone. Children raised by married parents have substantially better life outcomes compared to similar children raised in single-parent homes.
>
> When compared to children in intact married homes, children raised by single parents are more likely to have emotional and behavioral problems; be physically abused; smoke, drink, and use drugs; be aggressive; engage in violent, delinquent, and criminal behavior; have poor school performance; be expelled from school; and drop out of high school.[19] Many of these negative outcomes are associated with the higher poverty rates of

> single mothers. In many cases, however, the improvements in child well-being that are associated with marriage persist even after adjusting for differences in family income. This indicates that the father brings more to his home than just a paycheck.
>
> The effect of married fathers on child outcomes can be quite pronounced. For example, examination of families with the same race and same parental education shows that, when compared to intact married families, children from single-parent homes are:
>
> - More than twice as likely to be arrested for a juvenile crime;[20]
> - Twice as likely to be treated for emotional and behavioral problems;[21]
> - Roughly twice as likely to be suspended or expelled from school;[22] and
> - A third more likely to drop out before completing high school.[23]
>
> The effects of being raised in a single-parent home continue into adulthood. Comparing families of the same race and similar incomes, children from broken and single-parent homes are three times more likely to end up in jail by the time they reach age 30 than are children raised in intact married families. [24] Compared to girls raised in similar married families, girls from single-parent homes are more than twice as likely to have a child without being married, thereby repeating the negative cycle for another generation.[25]
>
> Finally, the decline of marriage generates poverty in future generations. Children living in single-parent homes are 50 percent more likely to experience poverty as adults when compared to children from intact married homes. This intergenerational poverty effect persists even after adjusting for the original differences in family income and poverty during childhood.[26]

People on the left claim that poverty causes crime, but they don't look for the root cause of poverty. The root cause of poverty is the decline of marriage, which produces fatherless children. People on the left always want to solve every social problem with bigger government and more wasteful spending. But the research is pretty clear that natural marriage and the traditional family help children to behave better. When your only tool is a hammer, then every problem looks like a nail. But this problem can't be solved from the top down, it has to be solved from the bottom up – with families.

# International tests show US children lagging despite record spending on education

**Wintery Knight** · 5 December 2013 · Archived copy · Original

Jay Richards tweeted this article from the Wall Street Journal.

Excerpt:

> Since 1998, the Program for International Student Assessment, or Pisa, has ranked 15-year-old kids around the world on common reading, math and science tests. The U.S. brings up the middle—again—among 65 education systems that make up fourth-fifths of the global economy. The triennial Pisa report also shows—again—that East Asian countries like Hong Kong, Japan and South Korea produce the best outcomes.
>
> U.S. performance hasn't budged in a decade. For 2012, U.S. students placed 26th in mathematics, a bit below the Organization for Economic Cooperation and Development average, and 17th in reading and 21st in science, close to the average. The U.S. slipped in all categories compared to international competitors, plunging from 11th in reading as recently as 2009.
>
> American teenagers seem especially weak in core academic subjects with high cognitive demands, such as translating concepts into solutions for real-world problems. A quarter never become proficient in math. In Shanghai and Korea, the comparable figure is 10% or fewer. Some 7% of U.S. students reached the top two scientific performance levels, compared with 17% in Finland and an amazing 27% in Shanghai. Is it tiger moms or tiger schools, or maybe both?
>
> The U.S. is way out front in one measure: per-student spending. Only Austria, Luxembourg, Norway and Switzerland spend more. Despite laying out $115,000 per head, the U.S. did no better than the Slovak Republic, which spends $53,000.
>
> Perhaps most depressingly, the data show no statistically significant U.S. achievement improvement over time. None. In an era when it pays to be thankful for small mercies, at least we're not getting worse, but America's relative standing is falling as other countries improve.
>
> […]Massachusetts has been running public schools since 1635 and today is home to some of the best performers in the nation. The state entered Pisa as if it was its own country—but students of the same age in Shanghai performed as if they had two more years of math instruction than those in the Bay State.
>
> […]**Pisa also adds another count to the bill of indictment for the Democrats who block reform to serve their teachers union patrons. Education Secretary Arne Duncan called the report "a picture of educational stagnation," but liberals are major impediments to more accountability, merit-based compensation and school-choice competition. The Justice Department has even gone so far as to sue Louisiana to block its modest voucher program, which is a moral crime against the students consigned to failing schools.**

There are a few areas of economics that I think that Christians really ought to understand, and education is one of them. We definitely need to be concerned about policies that make it harder for poor, minority students to get ahead. We keep throwing money at the unionized public school system, and we get no results. We need to think about making education more like online shopping. What makes online shopping great is choice and competition. If schools were allowed to compete with one another, then the customer would be assured of getting more quality for less money. The public school system is a monopoly, and it serves the teachers and the education bureaucrats – not the children.

# New study: religious communities have lower rates of crime

**Wintery Knight** · 5 December 2013 · Archived copy · Original

From the radically leftist Huffington Post, of all places.

Excerpt:

> As a crime stopper, faith may be particularly effective in setting moral norms, building social ties and investing communities with a sense of meaning and purpose, counteracting the "moral cynicism" and individualism that can foster criminal behavior, researchers Ulmer and Casey Harris of the University of Arkansas note in the latest issue of The Sociological Quarterly.
>
> Ulmer and Harris explored "Race and the Religious Contexts of Violence" in their study. They analyzed data from the U.S. Census, the Religious Congregations and Membership Study and crime reports from nearly 200 counties in New York California and Texas. All of the counties had substantial numbers of black, white and Latino residents.
>
> What they found was not only evidence that religion may exert a protective influence discouraging violent crime, but that there are also racial-ethnic differences in the role of faith communities.
>
> Consider these findings:
>
> • Black and white violence decreased significantly as the percentage rose of county residents who belonged to congregations or were regular attenders.
> • Black and Latino violence was lower in communities where residents belonged to similar types of religious institutions, indicating faith groups from similar traditions were able to exert greater influence on community values when they had a significant presence.
> • Religious homogeneity was not associated with overall rates of white violence, but further breakdowns showed communities with larger percentages of evangelicals had lower rates of white violence. Latino violence was significantly reduced in communities with large numbers of active Catholics.
> • Black violence dipped dramatically in counties with high levels of poverty, unemployment and low levels of education where large percentages of residents were active in congregations. This is a key finding, as communities with severe social and economic disadvantages are more likely to have high violent crime rates.
>
> The findings suggest that religious groups have the ability to cultivate moral attitudes "that counteract the code of the streets," Ulmer says.

The post also includes results from another study, this one featuring over 15,000 people between the ages of 18 and 28:

> Baylor researchers Sung Joon Jang and Aaron Franzen analyzed data from the National Longitudinal Study of Adolescent Health to examine differences in crime rates among young adults in four categories:
>
> • Religious and spiritual.
> • Spiritual but not religious.
> • Religious but not spiritual
> • Neither religious nor spiritual.
>
> Individuals who identified themselves as "religious" were less likely to be offenders.
>
> However, individuals who were "spiritual but not religious" were more prone to commit violent crime than their "religious and spiritual" counterparts and more likely to commit property crime than emerging adults who were "religious" or "neither religious nor spiritual."
>
> "Is being 'spiritual' enough to reduce criminal propensity without also being religious? Our study suggests the

> answer is no – at least during emerging adulthood," Jang and Franzen write in a recent issue of the journal Criminology.
>
> What both studies also suggest is that the role of religion should be considered as communities address issues of violent crime.
>
> Communities lose out when they marginalize or trivialize the potential pro-social influences of religion, Jang says.
>
> "And one of the areas where society suffers is in crime," he says

A long time ago, when I was just getting started with blogging, I wrote a series of posts that explained the minimal requirements for a robust moral system.

These were:

> 1) Objective moral values
>
> There needs to be a way to distinguish what is good from what is bad. For example, the moral standard might specify that being kind to children is good, but torturing them for fun is bad. If the standard is purely subjective, then people could believe anything and each person would be justified in doing right in their own eyes. Even a "social contract" is just based on people's opinions. So we need a standard that applies regardless of what people's individual and collective opinions are.
>
> 2) Objective moral duties
>
> Moral duties (moral obligations) refer to the actions that are obligatory based on the moral values defined in 1). Suppose we spot you 1) as an atheist. Why are you obligated to do the good thing, rather than the bad thing? To whom is this obligation owed? Why is rational for you to limit your actions based upon this obligation when it is against your self-interest? Why let other people's expectations decide what is good for you, especially if you can avoid the consequences of their disapproval?
>
> 3) Moral accountability
>
> Suppose we spot you 1) and 2) as an atheist. What difference does it make to you if you just go ahead and disregard your moral obligations to whomever? Is there any reward or punishment for your choice to do right or do wrong? What's in it for you?
>
> 4) Free will
>
> In order for agents to make free moral choices, they must be able to act or abstain from acting by exercising their free will. If there is no free will, then moral choices are impossible. If there are no moral choices, then no one can be held responsible for anything they do. If there is no moral responsibility, then there can be no praise and blame. But then it becomes impossible to praise any action as good or evil.
>
> 5) Ultimate significance
>
> Finally, beyond the concept of reward and punishment in 3), we can also ask the question "what does it matter?". Suppose you do live a good life and you get a reward: 1000 chocolate sundaes. And when you've finished eating them, you die for real and that's the end. In other words, the reward is satisfying, but not really meaningful, ultimately. It's hard to see how moral actions can be meaningful, ultimately, unless their consequences last on into the future.

I argued in other posts in that series that atheism does not ground *any* of those factors, but Christian theism (and Judaic theism) ground them all. Atheists aren't going to be able to behave morally in the face of temptation when doing the right thing (assuming there is such a thing on their view) involves risk or self-sacrifice. Doing the right thing when it goes against your self-interest makes no sense on atheism – it's not rational. And the studies above lend empirical support to that claim.

# New study: the presence of a father helps improves children's mental health

**Wintery Knight** · 6 December 2013 · Archived copy · Original

Science Daily reports on a new study from McGill University.

Excerpt:

> New findings from the Research Institute of the McGill University Health Centre (RI-MUHC) show that the absence of a father during critical growth periods, leads to impaired social and behavioral abilities in adults. This research, which was conducted using mice, was published today in the journal *Cerebral Cortex*. It is the first study to link father absenteeism with social attributes and to correlate these with physical changes in the brain.
>
> […]Dr. Gobbi and her colleagues compared the social behavior and brain anatomy of mice that had been raised with both parents to those that had been raised only by their mothers. Mice raised without a father had abnormal social interactions and were more aggressive than counterparts raised with both parents. These effects were stronger for female offspring than for their brothers. Females raised without fathers also had a greater sensitivity to the stimulant drug, amphetamine.
>
> "The behavioral deficits we observed are consistent with human studies of children raised without a father," says Dr. Gobbi, who is also a psychiatrist at the MUHC. "These children have been shown to have an increased risk for deviant behavior and in particular, girls have been shown to be at risk for substance abuse. This suggests that these mice are a good model for understanding how these effects arise in humans."
>
> In pups deprived of fathers, Dr. Gobbi's team also identified defects in the mouse prefrontal cortex, a part of the brain that helps control social and cognitive activity, which is linked to the behavioral deficits.
>
> "This is the first time research findings have shown that paternal deprivation during development affects the neurobiology of the offspring," says Dr. Gobbi. These results should incite researchers to look more deeply into the role of fathers during critical stages of growth and suggest that both parents are important in children's mental health development.

This study is important because although we have a lot of data showing that fatherlessness children exhibit many problem behaviors when compared to children in married households, corelation doesn't imply causation. Now we know about the causation that is behind the corelation. It's the progress of science. It might not fit with feminist ideology, which claims that men in the home are dangerous and harmful to children. But you can't argue with science – especially not with ideology.

Let's talk another look at some of the problems with fatherlessness.

Here is Dr. Robert Rector of the Heritage Foundation to explain:

> Census data and the Fragile Families survey show that marriage can be extremely effective in reducing child poverty. But the positive effects of married fathers are not limited to income alone. Children raised by married parents have substantially better life outcomes compared to similar children raised in single-parent homes.
>
> When compared to children in intact married homes, children raised by single parents are more likely to have emotional and behavioral problems; be physically abused; smoke, drink, and use drugs; be aggressive; engage in violent, delinquent, and criminal behavior; have poor school performance; be expelled from school; and drop out of high school.[19] Many of these negative outcomes are associated with the higher poverty rates of single mothers. In many cases, however, the improvements in child well-being that are associated with marriage persist even after adjusting for differences in family income. This indicates that the father brings

> more to his home than just a paycheck.
>
> The effect of married fathers on child outcomes can be quite pronounced. For example, examination of families with the same race and same parental education shows that, when compared to intact married families, children from single-parent homes are:
>
> - More than twice as likely to be arrested for a juvenile crime;[20]
> - Twice as likely to be treated for emotional and behavioral problems;[21]
> - Roughly twice as likely to be suspended or expelled from school;[22] and
> - A third more likely to drop out before completing high school.[23]
>
> The effects of being raised in a single-parent home continue into adulthood. Comparing families of the same race and similar incomes, children from broken and single-parent homes are three times more likely to end up in jail by the time they reach age 30 than are children raised in intact married families. [24] Compared to girls raised in similar married families, girls from single-parent homes are more than twice as likely to have a child without being married, thereby repeating the negative cycle for another generation.[25]
>
> Finally, the decline of marriage generates poverty in future generations. Children living in single-parent homes are 50 percent more likely to experience poverty as adults when compared to children from intact married homes. This intergenerational poverty effect persists even after adjusting for the original differences in family income and poverty during childhood.[26]

My next post talks about the rise of women-perpetrated domestic violence in the UK. Maybe the increase in fatherlessness in the UK is to blame for women becoming more violence? And what causes fatherlessness? Well, the main driver of it is social programs that literally pay women welfare money to have children before they are married. Maybe we should stop doing that, because that seems to be causing children to become more violent – especially the next generation of women, as we'll see in tomorrow's article. In the meantime, I would just urge men to be very very careful about getting involved with women who grew up without a father. It's something you need to account for.

# In UK, more married men suffer abuse from their spouse than married women

**Wintery Knight** · 6 December 2013 · Archived copy · Original

Dina send me this disturbing article from the UK Daily Mail.

Excerpt:

> The latest findings from the British Crime Survey reveal that 17 men were killed by their partners in England and Wales last year.
>
> Forty per cent of reported domestic abuse victims were male (although this includes assaults by male relatives and partners).
>
> Incredibly, if these figures are to be believed, more married men suffered abuse at the hands of their spouse than married women (2.3 per cent of married men were recorded to have complained about domestic abuse compared with 1.8 per cent of married women).
>
> Of course, it is easy to blame women's increased violence on their emancipation: they move more in men's worlds, earning and competing with as much aggression and vigour as their as male colleagues.
>
> They're drinking more, too: figures from the Office of National Statistics show that women are fast catching men up in the alcohol stakes. The proportion of women consuming more than the recommended limit of 14 units a week has grown by a fifth in a decade.
>
> 'Domestic abuse against men is one of Britain's last remaining taboos, but every year our helpline is seeing at least a 25 per cent increase in the number of men seeking help,' says Mark Brooks, chairman of Mankind, a charity for male victims.

Other Western countries have similar numbers to the UK numbers.

Canada numbers:

> An estimated 7% of women and 6% of men in a current or previous spousal relationship encountered spousal violence during the five years up to and including 2004, according to a comprehensive new report on family violence.

Sweden numbers:

> In two related studies, researchers surveyed 1,400 Swedes about domestic violence and found that 8 to 11 percent of men reported being victims of physical violence at the hands of their spouse in the past year.
>
> The corresponding figure for women was 8 percent.

Something to thing about for you young men – make sure you test your candidates to see if they have tempers. I do find it strange that here in the United States we have a "Violence Against Women Act" but no "Violence Against Men Act". From this, I deduce that the politicians of both parties don't care about male victims of domestic violence, in general.

# Stephen C. Meyer debates Charles Marshall on the Cambrian explosion

**Wintery Knight** · 6 December 2013 · Archived copy · Original

Here is a summary of recent podcast of Unbelievable between intelligent design proponent Stephen C. Meyer and UC Berkeley evolutionary biologist Charles Marshall. Dr. Marshall had previously reviewed Dr. meyer's new book "Darwin's Doubt" in the prestigious peer-reviewed journal "Science".

Details:

> Stephen C Meyer is the world's leading Intelligent Design proponent. His new book Darwin's Doubt claims that the Cambrian fossil record, which saw an "explosion" of new life forms in a short space of time, is evidence for ID.
>
> Evolutionary biologist Charles Marshall of the University of California, Berkeley has written a critical review of the book. He debates Meyer on whether Darwinian evolution can explain the diversity of life in the Cambrian rocks.
>
> For Meyer & Darwin's Doubt http://www.darwinsdoubt.com/
>
> For Charles Marshall's reviewhttp://www.sciencemag.org/content/341/6152/1344.1.full

You can get the MP3 file here.

The brief summary this time is not provided by me, it's from Evolution News.

Excerpt:

> This past weekend Britain's Premier radio network broadcast a debate between Stephen Meyer and UC Berkeley paleontologist Charles Marshall, recorded at the beginning of November. As David Klinghoffer noted yesterday, the subject of the debate was Meyer's book *Darwin's Doubt*. Yes, that's the same Charles Marshall who reviewed *Darwin's Doubt* in *Science* back in September. See here for our multiple responses.
>
> It was an excellent debate, with both participants offering important insights and good arguments, though in my opinion Meyer unquestionably had the better of it, especially concerning the key scientific question of the origin of the information necessary to build the Cambrian animals. Nevertheless, both parties came to the table ready to engage in serious, thoughtful, and civil discussion about the core issues raised in *Darwin's Doubt*, and we commend Marshall not only for participating, but for focusing his critique of the book on the central scientific issues, something other critics have conspicuously failed to do.
>
> The debate was consequently both constructive and civil. Both parties complimented, as well as critiqued, the work of the other. Marshall, for example, described the first third of *Darwin's Doubt* — the section that discusses the Cambrian and Precambrian fossil record, Marshall's own area of principle expertise — as "good scholarship." He also said it "looks like good science" and that Meyer "writes well," and that he (Marshall) "really enjoyed reading"*Darwin's Doubt*. Meyer, for his, part expressed his admiration for Marshall's many scientific papers in paleontology and noted that he had been looking forward to the conversation because he and Marshall clearly "shared a passion for the same subject," despite their different perspectives. Of course, Marshall is not pro-ID and both men expressed spirited disagreements, but they did so in a mostly respectful way that made the debate all the more interesting and engaging to listen to.

I was very impressed with Dr. Marshall's performance during the debate, although he did try to poison the well a bit against ID at the beginning, and he got nasty at the end. It's amazing how Dr. Meyer was able to get him to stop it with the politics and get serious, just by sticking to the science. Even when Marshall got insulting at the end, it was

still valuable to see how the other side has to abandon rational argument and scientific evidence once they see that they can't win on the merits. It's "Inherit the Wind" in reverse.

Evolution News also posted a more complete guide to the debate in this post, and I recommend that you read that post before listening to the debate if you are not familiar with the science.

This is a great debate, and you definitely ought to listen to it. I hope I've posted enough here to convince you. If you haven't yet bought "Signature in the Cell" and "Darwin's Doubt", then I urge you to get them, although they are intermediate/advanced level books. The two books are the state of the art in intelligent design research, good enough to be debated with a University of California, Berkeley professor of biology. Dr. Meyer is the real deal, and if you want to be convincing on these important scientific issues, you need to learn the scientific evidence from his books.

If you are not a regular reader of the Evolution News blog, you really should be. It's also a good idea to subscribe to the Intelligent Design: The Future podcast.

# Jennifer Roback Morse lectures on sex and sexuality at Harvard University

**Wintery Knight** · 7 December 2013 · Archived copy · Original

Dr. Jennifer Roback Morse

Dr. Morse delivers a talk based on her book "Smart Sex" at Harvard University.

The MP3 file is here. (30 Mb)

Topics:

- the hook-up culture and its effects on men and women
- cohabitation and its effect on marriage stability
- balancing marriage, family and career
- single motherhood by choice and IVF
- donor-conceived children
- modern sex: a sterile, recreation activity
- the real purposes of sex: procreation and spousal unity
- the hormone oxytocin: when it is secreted and what it does
- the hormone vassopressin: when it is secreted and what it does
- the sexual revolution and the commoditization of sex
- the consumer view of sex vs the organic view of sex
- fatherlessness and multi-partner fertility
- how the "sex-without-relationship" view harms children

52 minutes of lecture, 33 minutes of Q&A from the Harvard students. The Q&A is worth listening to – the first question is from a gay student, and Dr. Morse pulls a William Lane Craig to defeat her objection. It was awesome! I never get tired of listening to her talk, and especially on the topics of marriage and family. She is a debater, as well (see below).

And just so everyone knows, the Wintery Knight is pro-chastity and pro-marriage. I believe in chastity and I am chaste. I recommend chastity to men who are contemplating a stable, effective marriage. The research shows that you will have a better marriage by being chaste before marriage.

# Israel boosts navy with two guided missile destroyers from Germany

**Wintery Knight** · 7 December 2013 · Archived copy · Original

Big story from the Jerusalem Post.

Excerpt:

> Germany has agreed to sell Israel two destroyers in exchange for one billion euros, AFP reported on Saturday, citing a report in German daily Bild.
>
> According to the report, the torpedo-laden destroyers are intended to provide protection for Israel's natural gas installations.

I suspect that the primary role of these vessels will be to intercept surface-to-surface missiles and air-to-surface missiles. Israel's submarine force does not have this capability – they are primarily built for missile strike capability. Now why do you think that Israel is choosing to equip naval vessels with these capabilities? It's to convey a clear message to her enemies: "even if you are able to strike our mainland and destroy our land-based missile defense system (Iron Dome) we will still have a naval-based air defense capability".

This is a great deterrent against Israel's enemies. It's a second layer of defense to Israel's Iron Dome system, which is tested and ready to shoot down incoming missiles. In addition to this missile-defense capability, these DDGs also offer surface-to-surface strike capability, but I can't say what that would be without knowing what model they got. My suspicion is that they are older FFG Bremen class, which are being decommissioned and replaced by newer models. But they could also be FFG Brandenburg class, which are newer, but also scheduled for upgrades already. I wouldn't call either of those "destroyers" though – they displace only about 3,600 tonnes each.

So could they be these 5,800 tonne vessels?

F124 Saschen class guided missile frigate (FFG)

Germany doesn't have any real destroyers, although their new FFG Saschen class are as big as destroyers. If Israel somehow managed to get Saschen class FFGs, then I would really be thrilled and impressed. Those things are awesome and they excel at the air defense role. I noticed that the "file photos" being used in news releases *were* of FFG Saschen class vessels. But I just can't believe that, it would be so awesome. That would explain why they are being called "destroyers" in the press stories. One can hope! If anyone knows, please tell me.

UPDATE: I did get some feedback through a friend of a friend who is an expert in missile defense, and here is his

response:

> Good for Israel. The article is mainly correct. I would say it is wrong on three points. One, Iron Dome will not assist in defending against TBMs or longer range missiles…Israel has other systems for that. Two, the DDGs are not meant to provide BMD if Iron Dome is destroyed. Sea based BMD can allow layered defense against ballistic missiles. Ballistic missiles require multiple interceptors to give a high probability of kill. Three, that being said, none of the Frigates mentioned possess a BMD cape. The Netherlands is working on a BMD cape for a ship they use that is similar to the Saschen class. The Dutch however, have a seafaring history and a navy that is more advanced than the Deutsch.

BMD means Ballistic Missile Defense, and TBM means Tactical Ballistic Missile.

**And another SSK Dolphin submarine, too**

And more good news from YNet News.

Excerpt:

> Earlier this year, a significant deal between Germany and the Israeli security establishment was completed, as the Germans handed a fifth Dolphin-class submarine to Israel. The handover was marked in an official ceremony in Germany's city of Kiel.
>
> The vessel is considered one of the most advanced submarines in the world and is the most expensive war vessel the Defense Ministry has procured for the IDF. The diesel-powered submarines are widely regarded as an Israeli vanguard against foes like Iran. In total, Israel has purchased six Dolphin submarines from Germany.

There are two kinds of submarines that are used today: attack submarines, which are armed with torpedoes and anti-ship missiles, and ballistic missile submarines, which are armed with heavier missiles that can travel further. Although the SSK Dolphin class is an attack submarine on paper, my suspicion is that Israel will refit them to have long-range missile strike capability, including nuclear guided missiles. And in fact after doing a search, I found an article that confirmed my hopes.

Take a look at this article from NTI, a global security think tank based in Washington.

Excerpt:

> As previous conflicts involving Israel began with naval blockades, Israel views its submarine force as critical to national security. Israel's submarines are also intended to exercise sea control over the Eastern Mediterranean and secure sea lines of communication; Israel is dependent on imports of grain, crude oil, and raw materials. [4] There has been consistent speculation that Israel's submarines could be refitted to carry missiles armed with nuclear weapons in order for the country to maintain a survivable second-strike option. Acknowledging Israel's lack of strategic depth, officials have asserted that only submarines can provide a secure weapons platform in the future. [5]
>
> The arming of Israel's submarines has received a great deal of attention. While HDW has stated that Israel's Dolphin-class submarines were equipped with weapon systems similar to those installed on other diesel-electric submarines, various sources have alleged that upon their arrival in Israel, the submarines were modified, and fitted with cruise missiles armed with nuclear warheads. [6] The three initial Dolphin-class submarines were designed in accordance with Israeli demands, and include a "wet and dry" compartment for special operations, as well as four 650mm torpedo tubes, which could be used for Swimmer Delivery Vehicles (SDVs). [7] The German Defense Ministry has stated that these larger tubes were intended to fire Harpoons; upon delivery to Israel, liners were to be fitted to decrease the diameter of the tubes to accommodate the 533mm Harpoon containers. However, the Dolphin-class is equipped with six 533mm torpedo tubes as well, which are capable

> of launching Harpoons. [8] It seems possible, therefore, that the 650mm tubes might have been designed to accommodate indigenously built, long-range SLCMs.The German government has stated that it does not have information on whether Israel installed different equipment on the submarines after delivery, although former German officials have acknowledged that they assumed that Israel intended to equip the submarines with nuclear weapons. [9]
>
> Some reports suggest that Israel has adapted Harpoon cruise missiles, which have a range of 130 kilometers, to carry an indigenously developed nuclear warhead and guidance system, though other experts argue that such modifications to a Harpoon missile are not feasible. [10] Others believe that Israel has developed an indigenous cruise missile with a range of 320 kilometers that could be a version of Rafael Armament Development Authority's Popeye turbo cruise missile. [11] Still others believe that the missile may be a version of the Gabriel 4LR produced by Israel Aircraft Industries, which could be launched in 533mm torpedo tubes similar to the Harpoon. [12] Such speculation was further fueled by an unconfirmed test of a nuclear-capable, submarine-launched cruise missile (SLCM) in the Indian Ocean in 2000. Some reports claimed targets 1,500 kilometers away were hit. [13] Such a range, however, implies an entirely new type of missile. [14] In June 2002, former State Department and Pentagon officials confirmed that the U.S. Navy observed Israeli missile tests in the Indian Ocean in 2000, and that the Dolphin-class vessels have been fitted with nuclear-capable cruise missiles of a new design. [15] However, the Israeli Defense Forces have consistently denied any such missile tests. [16]
>
> […]The new boats will be equipped with 650mm torpedo tubes—again leading to much speculation that the Israelis intend to outfit the submarines with nuclear-armed cruise missiles.

These submarines are designed to protect Israel's supply lines in the Mediterranean Sea, and also to give them retaliation capabilities in the event of a large-scale missile strike. Iran and her allies will have a tough time detecting these submarines and destroying them – the subs have an extremely quiet propulsion system and can operate submerged for up to a week. These six submarines are a deterrent against any nation that would try to attack Israel, because they know that there is no hope for them to destroy all of their strike capability in the initial strike against Israel's land-based assets. Israel could also depend on ground-based missile launchers,some of which might be mobile, and their airborne strike platform.

This is an application of the principal of peace through strength – the stronger a nation's military, the less likely they are to be attacked, and the more capable they are of protecting their allies. The article above notes that the Clinton administration (Democrats) refused to sell Israel Tomahawk cruise missiles, which have a very long range. That's too bad. If I were in charge, I would sell those to Israel in a split-second.

It really is a terrible thing for the United States to be disarming thanks to Democrat policies, because all this does is encourage our enemies to strike us, and encourage our allies to abandon our alliances and ally with stronger nations. I hope that we are able to elect a Republican soon who will restore our lost military strength.

# Scientists troubled by lack of simple explanation for our life-permitting moon

**Wintery Knight** · 8 December 2013 · Archived copy · Original

This entire article from Evolution News is a must-read. It talks about a recent paper by a naturalist named Robin Canup which appeared in Nature, the most prestigious peer-reviewed science journal.

So, there's too much to quote here. I'll grab a few snippets to give you the gist of it, then you click through and read the whole thing.

The moon is important for the existence of a life permitting planet:

> Canup knows our moon is important for life:
>
> The Moon is more than just a familiar sight in our skies. It **dictates conditions on Earth.** The Moon is large enough **to stabilize our planet's rotation**, holding Earth's polar axis steady to within a few degrees. **Without it, the current Earth's tilt would vary chaotically by tens of degrees.** Such large variations**might not preclude life, but would lead to a vastly different climate.**

The moon requires an improbable sequence of events:

> Canup states that "No current impact model stands out as more compelling than the rest." All are equally improbable, in other words. Indeed, they are:
>
> **It remains troubling** that **all** of the current impact models invoke a process after the impact to **effectively erase a primary outcome** of the event — either by changing the disk's composition through mixing for the canonical impact, or by changing Earth's spin rate for the high-angular-momentum narratives.
>
> **Sequences of events do occur in nature, and yet we strive to avoid such complexity in our models. We seek the simplest possible solution**, as a matter of **scientific aesthetics** and because **simple solutions are often more probable**. As the **number of steps increases,** the **likelihood** of a particular sequence **decreases**. Current impact models are **more complex and seem less probable** than the **original** giant-impact concept.

This is a good challenge to naturalism, but it lends support to one part of the habitability argument.

Previously, I blogged about a few of the minimum requirements that a planet must satisfy in order to support complex life.

Here they are:

- a solar system with a single massive Sun than can serve as a long-lived, stable source of energy
- a terrestrial planet (non-gaseous)
- the planet must be the right distance from the sun in order to preserve liquid water at the surface – if it's too close, the water is burnt off in a runaway greenhouse effect, if it's too far, the water is permanently frozen in a runaway glaciation
- the solar system must be placed at the right place in the galaxy – not too near dangerous radiation, but close enough to other stars to be able to absorb heavy elements after neighboring stars die
- a moon of sufficient mass to stabilize the tilt of the planet's rotation
- plate tectonics
- an oxygen-rich atmosphere
- a sweeper planet to deflect comets, etc.
- planetary neighbors must have non-eccentric orbits

This is a good argument, so if you want to learn more about it, get the “The Privileged Planet” DVD, or the book of the same name.

# The kalam cosmological argument defended in a peer-reviewed science journal

**Wintery Knight** · 8 December 2013 · Archived copy · Original

Here's the peer-reviewed article. It appears in a scientific journal focused on astrophysics.

Here's the abstract:

> Both cosmology and philosophy trace their roots to the wonder felt by the ancient Greeks as they contemplated the universe. The ultimate question remains why the universe exists rather than nothing. This question led Leibniz to postulate the existence of a metaphysically necessary being, which he identified as God. Leibniz's critics, however, disputed this identification, claiming that the space-time universe itself may be the metaphysically necessary being. The discovery during this century that the universe began to exist, however, calls into question the universe's status as metaphysically necessary, since any necessary being must be eternal in its existence. Although various cosmogonic models claiming to avert the beginning of the universe predicted by the standard model have been and continue to be offered, no model involving an eternal universe has proved as plausible as the standard model. Unless we are to assert that the universe simply sprang into being uncaused out of nothing, we are thus led to Leibniz's conclusion. Several objections to inferring a supernatural cause of the origin of the universe are considered and found to be unsound.

The whole text of the article is posted online here.

Here's an excerpt in which the author, Dr. William Lane Craig, explains the Big Bang cosmology:

> The monumental significance of the Friedman-Lemaitre model lay in its historization of the universe. As one commentator has remarked, up to this time the idea of the expansion of the universe "was absolutely beyond comprehension. Throughout all of human history the universe was regarded as fixed and immutable and the idea that it might actually be changing was inconceivable."{8} But if the Friedman-Lemaitre model were correct, the universe could no longer be adequately treated as a static entity existing, in effect, timelessly. Rather the universe has a history, and time will not be matter of indifference for our investigation of the cosmos. In 1929 Edwin Hubble's measurements of the red-shift in the optical spectra of light from distant galaxies,{9} which was taken to indicate a universal recessional motion of the light sources in the line of sight, provided a dramatic verification of the Friedman-Lemaitre model. Incredibly, what Hubble had discovered was the isotropic expansion of the universe predicted by Friedman and Lemaitre. It marked a veritable turning point in the history of science. "Of all the great predictions that science has ever made over the centuries," exclaims John Wheeler, "was there ever one greater than this, to predict, and predict correctly, and predict against all expectation a phenomenon so fantastic as the expansion of the universe?"{10}
>
> As a GTR-based theory, the Friedman-Lemaitre model does not describe the expansion of the material content of the universe into a pre-existing, empty, Newtonian space, but rather the expansion of space itself. This has the astonishing implication that as one reverses the expansion and extrapolates back in time, space-time curvature becomes progressively greater until one finally arrives at a singular state at which space-time curvature becomes infinite. This state therefore constitutes an edge or boundary to space-time itself. P. C. W. Davies comments,
>
> > An initial cosmological singularity . . . forms a past temporal extremity to the universe. We cannot continue physical reasoning, or even the concept of spacetime, through such an extremity. . . . On this view the big bang represents the creation event; the creation not only of all the matter and energy in the universe, but also of spacetime itself.{11}

> The popular expression "Big Bang," originally a derisive term coined by Fred Hoyle to characterize the beginning of the universe predicted by the Friedman-Lemaitre model, is thus potentially misleading, since the expansion cannot be visualized from the outside (there being no "outside," just as there is no "before" with respect to the Big Bang).{12}
>
> The standard Big Bang model thus describes a universe which is not eternal in the past, but which came into being a finite time ago. Moreover,–and this deserves underscoring–the origin it posits is an absolute origin *ex nihilo*. For not only all matter and energy, but space and time themselves come into being at the initial cosmological singularity. As Barrow and Tipler emphasize, "At this singularity, space and time came into existence; literally nothing existed before the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo.*"{13}
>
> […]On such a model the universe originates *ex nihilo* in the sense that at the initial singularity it is true that *There is no earlier space-time point* or it is false that *Something existed prior to the singularity.*

Every theist should be able to understand and defend this argument. It is a scientific refutation of materialism, and it is supported by six lines of scientific evidence – all of which emerged as science has progressed.

Scientific evidence:

1. Einstein's theory of general relativity (GTR)
2. the red-shifting of light from distant galaxies implies an expanding universe
3. the cosmic background radiation (which also disproves the oscillating model of the universe)
4. the second law of thermodynamics applied to star formation theory
5. hydrogen-helium abundance predictions
6. radioactive element abundance predictions

Those are the scientific discoveries that have led us to the beginning of the universe, which support's Dr. Craig's argument.

Here's a re-cap of the three main evidences for the Big Bang cosmology from Caltech. (Numbers 2, 3 and 5 from the list above)

Excerpt:

> Until the early 1900s, most people had assumed that the universe was fixed in size. New possibilities opened up in 1915, when Einstein formulated his famous general relativity theory that describes the nature of space, time, and gravity. This theory allows for expansion or contraction of the fabric of space. In 1917, astronomer Willem de Sitter applied this theory to the entire universe and boldly went on to show that the universe could be expanding. Aleksandr Friedmann, a mathematician, reached the same conclusion in a more general way in 1922, as did Georges Lemaître, a cosmologist and a Jesuit, in 1927. This step was revolutionary since the accepted view at the time was that the universe was static in size. Tracing back this expanding universe, Lemaître imagined all matter initially contained in a tiny universe and then exploding. These thoughts introduced amazing new possibilities for the universe, but were independent of observation at that time.
>
> **Why Do We Think the Big Bang Happened?**
>
> Three main observational results over the past century led astronomers to become certain that the universe began with the big bang. First, they found out that the universe is expanding—meaning that the separations between galaxies are becoming larger and larger. This led them to deduce that everything used to be extremely close together before some kind of explosion. Second, the big bang perfectly explains the abundance of helium and other nuclei like deuterium (an isotope of hydrogen) in the universe. A hot, dense, and expanding environment at the beginning could produce these nuclei in the abundance we observe today. Third,

> astronomers could actually observe the cosmic background radiation—the afterglow of the explosion—from every direction in the universe. This last evidence so conclusively confirmed the theory of the universe's beginning that Stephen Hawking said, "It is the discovery of the century, if not of all time."

The article goes into detail about each of these three evidences.

This is the kind of evidence I expect all Christian theists to be using when discussing the question of whether God exists. Scientific evidence. When talking to non-Christians, we first need to show that we understand science, because science is a reliable and respected way of getting knowledge about the universe. Non-Christians do not accept the Bible, but they do accept science, so we begin evangelism with science. Science (experimental, testable, repeatable science) should set limits on what anyone can believe – including non-Christians, who might otherwise not be inclined to listen to Bible verses and theology.

**The Big Bang is not compatible with atheism**

According to the Secular Humanist Manifesto, atheism is committed to an eternally existing universe, (See the first item: "Religious humanists regard the universe as self-existing and not created."). If something non-material brought all existing matter into being, that would be a supernatural cause, and atheists deny that anything supernatural exists. The standard Big Bang theory requires that all the matter in the universe come into being *out of nothing.* This falsifies eternal models of the universe, which are *required* by the atheistic worldview.

You should definitely print out both articles and get familiar with the arguments and the evidence. I have tried this argument out on atheists, and the response I usually get is that scientific discoveries will soon emerge that falsifies all of these six scientific discoveries. That sounds more like faith than reason to me. And we have to make it clear to others who are still deciding that there is a conflict between science and religion. Just not the one they're expecting. Let's make our decisions about what to believe based on what science is telling us today. Let's hold accountable people who want to have a worldview that is based on speculations.

# Why is the unemployment rate for young people so high?

**Wintery Knight** · 9 December 2013 · Archived copy · Original

A few of the policies that are causing the problem are explained in this article from the American Enterprise Institute. I have highlighted the policies that discourage employers in the snippet I excerpted below.

Excerpt:

> If Washington is serious about helping this vulnerable population, it should focus on increasing workers' take home pay and lowering the business employment costs. Conventional wisdom preaches increasing minimum wages. But a far more effective policy would be to simply exempt younger workers and their employers from paying taxes related to their employment.
>
> People in the workforce typically get their start when they are young – beginning with some entry level job where they learn basic job skills, develop effective work habits, and earn a modest wage. This important first step gives them a chance at earning wages and achieving a level of success that facilitates advance up the economic ladder. Work habits and skills are generally learned early in life or unfortunately for too many, not learned at all.
>
> The long term damage caused by this lack of employment is very large. Income mobility has declined. The sad fact is the probability of people at the bottom moving up the income ladder is lower than it was 20 and 30 years ago. Many studies have demonstrated that three factors determine most of the difference between those who start in poverty and stay there and those who don't – finishing high school; avoiding becoming a teenage parent, and getting a full-time job. Those who do all three have only a 2 percent chance of living in poverty and a 75 percent chance of joining the middle class.
>
> Many economists and social scientists have suggested both demand and supply reasons why youth unemployment is so high. On the demand side, the national safety net – Food Stamps, Earned Income Tax, welfare and subsidy programs of all kinds – substantially reduce the relative benefit of working. In other words, the wage premium for working versus taking advantage of benefit programs on an after-tax basis is simply too small to encourage many people to work.
>
> If a young person enters the work force at the minimum wage, he grosses $7.25 per hour. From this, in a place like Los Angeles, he pays federal and state income taxes and Medicare and Social Security payroll taxes which total $1.11. So, out of the $7.25 earned, he keeps just over $6. If he is single and without children, he won't qualify for the Earned Income Tax Credit (EITC) or food stamps.
>
> **On the supply side, the cost of employing young people is high relative to their economic contribution to potential employers. An entry-level employee costs his employer much more than $7.25. In addition to his wages, the employer also pays Social Security and Medicare taxes, plus unemployment insurance, that add on an average of 92 cents. So today, the new employee costs the business $8.13 per hour, of which the young employee keeps only three-quarters.**
>
> **This cost will increase further when the Affordable Care Act kicks in. Beginning in 2015, if the employer has more than 50 employees, he will have to provide health insurance for full-time workers or pay a $2,000 fine – which comes to $.96 per hour. That will make an abysmal employment situation even worse.**
>
> Overall, public policy ought to be aimed at encouraging businesses to create entry level jobs. Perversely, attempts to increase the minimum wage and institute so-called living wages would do the exact opposite. If government wanted to help create a permanent economic underclass, it would implement exactly the policies that are in place. All of us who want people to enjoy earned success ought to be outraged at these government policies.

This is important, because very often the policies proposed by people on the left are not designed to solve the problem. Thomas Sowell argues that the real purpose of leftist policies is for leftist leaders to feel self-important by getting applause from those who are economically ignorant. They push policies that *sound good* but that *don't actually work.*

The good news is that young people are waking up. According to a Harvard University survey, 57% of young adults now disapprove of Obamacare. Even they are starting to think about what is happening to them. Maybe they can avoid the slavery that awaits them under the Democrat's massive program of intergenerational theft, but I'm not optimistic. They have really short attention spans, and you don't learn the fundamentals of economics on Instagram and Pinterest.

# UK woman stops man from seeing their daughter for 12 YEARS

**Wintery Knight** · 9 December 2013 · Archived copy · Original

Dina sent me this trouble article from the UK Daily Mail, that serves as a warning to men about getting involved with the wrong woman in a feminist welfare state.

Excerpt:

> A father yesterday spoke of his anguish over an extraordinary £100,000 12-year court battle for the right to see his daughter.
>
> The man, described as 'irreproachable' by a senior judge, has endured years of legal fighting with his ex-partner, who has refused to allow contact between him and their 14-year-old daughter.
>
> Incredibly, the family courts have made 82 orders that he be allowed to see the girl, known only as M. But none was enforced by a system which senior judges agreed had 'failed the whole family'.
>
> […]The Court of Appeal three months ago ordered that the case be resolved, saying the teenager's childhood had been 'irredeemably marred' by years of litigation.
>
> Lord Justice McFarlane, presenting a written judgment, said the mother had 'doggedly refused to allow M to develop and maintain a relationship with her father without any good reason'.
>
> He quoted the findings of a child psychiatrist, who said: 'The mother appears to want an unhealthy exclusive relationship with M. The mother hides her opposition to contact behind her daughter's stated "wishes and feelings".'
>
> But the father, a 61-year-old professional who cannot be named, has now been told the legal process faces more months of delays as the family courts seek expert advice.
>
> […]The father – who, unlike the child's mother, cannot claim legal aid – estimates he has spent more than £100,000 in legal costs trying to see his daughter.
>
> He said: 'It is financially penalistic, as a private individual, to fight for your rights through the family courts.'

I can't imagine what that would be like. I put a lot of effort into my mentoring relationships. My only pet lives with my parents, and I try to see him on Skype every night. He can't be moved, because he is so old. I can't imagine what I would do if the mother of my children took the children away from me. I'm not surprised at all that this man spent six figures trying to get access to parent his daughter. And I don't need to tell you that intentionally depriving a child of a relationship with her father is nothing less than child abuse. Yet that's what the system allows.

Now just to get this out of the way, I fully blame the man for this. There are plenty of clues in the article about bad decisions he made in choosing that woman. A smart man doesn't choose a woman who thinks that cohabitation is OK, and that having an out-of-wedlock child is OK. And when you take 10 years of a woman's life and then don't commit, she will do anything and everything she can to get revenge on you.

Men seem to be woefully oblivious to these laws affect them until it's too late. Maybe we need to be a bit more aware and politically engaged to keep these things from happening to us? These anti-male courts didn't come out of nowhere. The UK is well-known for its anti-male government. A lot of men voted the Labour Party and Harriet Harman into power. A lot of men voted for EHRCs, too. We need to be smarter when it's election time, and vote for smaller government, lower taxes, and less regulation. That's the only way to stop the state from doing this.

For young men, I recommend that you read Stephen Baskerville's "Taken Into Custody" before you get married. Find out from research what a woman does that makes her more likely to divorce you, and avoid those things. Some women have seen what the state does to men, or they've read about it, and they mind even have taken action to oppose it. That's the kind of woman you're looking for. The ones who don't blame men for everything, but who

are aware of the situation that men are facing under these laws and policies and are determined to act against it with their marriage and family.

# Jay Richards: eight common myths about wealth, poverty and free enterprise

**Wintery Knight** · 9 December 2013 · Archived copy · Original

Have you read Jay Richards' book "Money, Greed and God?" Because if you haven't, he's written a series of articles that summarize the main points of the book.

The index post is here.

Here are the posts in the series:

- Part 1: The Eight Most Common Myths about Wealth, Poverty, and Free Enterprise
- Part 2: Can't We Build A Just Society?
- Part 3: The Piety Myth
- Part 4: The Myth of the Zero Sum Game
- Part 5: Is Wealth Created or Transferred?
- Part 6: Is Free Enterprise Based on Greed?
- Part 7: Hasn't Christianity Always Opposed Free Enterprise?
- Part 8: Does Free Enterprise Lead to An Ugly Consumerist Culture?
- Part 9: Will We Use Up All Our Resources?
- Part 10: Are Markets An Example of Providence?

Parts 4 and 5 are my favorites. It's so hard to choose one to excerpt, but I must. I will choose… Part 4.

Here's the problem:

> **Myth #3: The Zero Sum Game Myth – believing that trade requires a winner and a loser.**
>
> One reason people believe this myth is because they misunderstand how economic value is determined. Economic thinkers with views as diverse as Adam Smith and Karl Marx believed economic value was determined by the labor theory of value. This theory stipulates that the cost to produce an object determines its economic value.
>
> According to this theory, if you build a house that costs you $500,000 to build, that house is worth $500,000. But what if no one can or wants to buy the house? Then what is it worth?
>
> Medieval church scholars put forth a very different theory, one derived from human nature: economic value is in the eye of the beholder. The economic value of an object is determined by how much someone is willing to give up to get that object. This is the subjective theory of value.

And here's an example of how to avoid the problem:

> How you determine economic value affects whether you view free enterprise as a zero-sum game, or a win-win game in which both participants benefit.
>
> Let's return to the example of the $500,000 house. As the developer of the house, you hire workers to build the house. You then sell it for more than $500,000. According to the labor theory of value, you have taken more than the good is actually worth. You've exploited the buyer and your workers by taking this surplus value. You win, they lose.
>
> Yet this situation looks different according to the subjective theory of value. Here, everybody wins. You market and sell the house for more than it cost to produce, but not more than customers will freely pay. The buyer is not forced to pay a cost he doesn't agree to. You are rewarded for your entrepreneurial effort. Your

> workers benefit, because you paid them the wages they agreed to when you hired them.
>
> This illustration brings up a couple important points about free enterprise that are often overlooked:
>
> **1. Free exchange is a win-win game**.
>
> In win-win games, some players may end up better off than others, but everyone ends up better off than they were at the beginning. As the developer, you might make more than your workers. Yet the workers determined they would be better off by freely exchanging their labor for wages, than if they didn't have the job at all.
>
> A free market doesn't guarantee that everyone wins in every competition. Rather, it allows many more win-win encounters than any other alternative.
>
> **2. The game is win-win because of rules set-up beforehand.**
>
> A free market is *not* a free-for-all in which everybody can do what they want. Any exchange must be free on both sides. Rule of law, contracts, and property rights are needed to ensure exchanges are conducted rightly. As the developer of the house, you'd be held accountable if you broke your contract and failed to pay workers what you promised.
>
> An exchange that is free on both sides, in which no one is forced or tricked into participating, is a win-win game.

On this view, what you really need to fear as a consumer is government intervention that restricts your choices in the marketplace.

**Free trade in the real world**

This is not a theoretical problem, either. Millions of people in the Ukraine are protesting against Vladimir Putin and his restrictive Russian policies in order to get more economic freedom by signing a free trade deal with the European Union.

Rick Pearcey posted about it on the Pearcey Report:

> France24.com reports:
>
> Hundreds of thousands of protesters swarmed Ukraine's capital Kiev on Sunday, where the country's opposition leaders urged them to continue heaping pressure on President Viktor Yanukovich to sack his government and abandon plans for closer ties with Russia.
>
> Many of the demonstrators who gathered at the city's central Independence Square are furious with the government over its decision to back out of a historic agreement with the European Union in favour of a possible trade deal with Russia, Ukraine's Soviet-era ruler.
>
> The protest . . . is just the latest sign of mounting tensions in Ukraine over the past two weeks, raising fears over the country's political and economic stability.

That's a real crisis: freedom-loving people fighting for their right to be prosperous by adopting the economic policies that produce wealth.

If you care about poverty, it's often tempting to think that it can only be solved one way – by transferring wealth from the rich to the poor. But that is a very mistaken view, as any economist will tell you. The right way to create prosperity is by creating laws and policies that unleash individual creativity. Letting individuals create innovative products and services, letting them keep what they earn, making sure that the law doesn't punish entrepreneurs – that incentivizes wealth creation. Fixing poverty does not mean transferring wealth, it means giving people more freedom to create wealth on their own. Free trade between nations is an important way that we encourage people to create better products and services that what they have available in their own countries.

**Economists agree on the benefits of free trade**

Who could possibly disagree with free trade? Well, many people on the left do. They favor imposing restrictions on free trade. For example, people on the left favor making those who import goods pay tariffs, which makes it harder to trade with other nations. People on the left want to pass rent control laws to block landlords and tenants from trading more freely. People on the left want to pass minimum wage laws that block employers and workers from trading wages for labor more freely. But economists generally don't agree with any of restrictions on free trade. In fact, *even across the ideological spectrum*, the majority of economists view free trade as a wealth creating policy, and restrictions on free trade as a wealth destroying policy.

Harvard economist Greg Mankiw explains what most professional economists agree on.

Excerpt:

> Here is the list, together with the percentage of economists who agree:
>
> 1. **A ceiling on rents reduces the quantity and quality of housing available. (93%)**
> 2. **Tariffs and import quotas usually reduce general economic welfare. (93%)**
> 3. Flexible and floating exchange rates offer an effective international monetary arrangement. (90%)
> 4. Fiscal policy (e.g., tax cut and/or government expenditure increase) has a significant stimulative impact on a less than fully employed economy. (90%)
> 5. The United States should not restrict employers from outsourcing work to foreign countries. (90%)
> 6. The United States should eliminate agricultural subsidies. (85%)
> 7. Local and state governments should eliminate subsidies to professional sports franchises. (85%)
> 8. If the federal budget is to be balanced, it should be done over the business cycle rather than yearly. (85%)
> 9. The gap between Social Security funds and expenditures will become unsustainably large within the next fifty years if current policies remain unchanged. (85%)
> 10. Cash payments increase the welfare of recipients to a greater degree than do transfers-in-kind of equal cash value. (84%)
> 11. A large federal budget deficit has an adverse effect on the economy. (83%)
> 12. **A minimum wage increases unemployment among young and unskilled workers. (79%)**
> 13. The government should restructure the welfare system along the lines of a "negative income tax." (79%)
> 14. Effluent taxes and marketable pollution permits represent a better approach to pollution control than imposition of pollution ceilings. (78%)

Now when you are talking to a Democrat, you are talking to someone who disagrees with most or all of those common sense economic policies. For example, Obama's backers in the labor movement inevitably endorse higher import tariffs, which discourage free trade between countries. No economist supports these tariffs on imports, because history has shown (e.g. – Smoot-Hawley Act) that tariffs destroy economic growth and reduce wealth creation. And that's what I mean when I talk about economic illiteracy – I mean ignoring what we know from economics and our own experience with bad policies when we make policy.

Democrat economic policies don't work because they are making policies that are based on economic myths. We know that these myths are myths because of economics is a mathematical science, and because we have tried good and bad policies in different times and places. We have calculations and we have experience to know what works and what doesn't work. If you want to help the poor, you have to respect what economists know about how wealth is created. The solution is not to "spread the wealth around", it's to encourage people to create more wealth by inventing things that people freely choose to buy.

# New CBO study: top 40% of earners paid 106.2% of net income taxes collected

**Wintery Knight** · 10 December 2013 · Archived copy · Original

CNS News reports on a new study by the Congressional Budget Office (CBO).

Excerpt:

> The top 40 percent of households by before-tax income actually paid 106.2 percent of the nation's net income taxes in 2010, according to a new study by the Congressional Budget Office.
>
> At the same time, households in the bottom 40 percent took in an average of $18,950 in what the CBO called "government transfers" in 2010.
>
> Taxpayers in the top 40 percent of households were able to pay more than 100 percent of net federal income taxes in 2010 because Americans in the bottom 40 percent actually paid negative income taxes, according to the CBO study entitled, "The Distribution of Household Income and Federal Taxes, 2010."
>
> […]When the the negative 9.1 percent in federal income taxes paid by those in the bottom 40 percent is subtracted from the 109.1 percent paid by those in the top 60 percent, federal tax revenues net out to an even 100 percent.
>
> […]The households in the bottom 40 percent of income—which on average paid negative federal income taxes—were on average receiving many thousands of dollars in what the report calls "government transfers." These transfers included, among other things, benefits from unemployment insurance, Medicare and Social Security, as well as from means-tested programs such as the Supplemental Nutrition Assistance Program (food stamps), and Medicaid.
>
> "Government transfers increase income in all groups, but those increases, both in dollars and as a percentage of market income, are larger for groups with lower market income," says the report.
>
> According to the CBO, households in the bottom quintile received an average of $22,700 in government transfers in 2010 (including $14,300 in payments from Medicare and Social Security and $8,500 in payments from other government programs); and households in the second quintile received an average of $15,200 in government transfers (including $10,300 in payments from Medicare and Social Security and $4,900 from other government programs).

Now I have been reading articles like this one in National Review by James Pethokoukis, which talk about Obama's rhetoric about "income inequality". And I think that when the President goes on a rant about how much he wants to fix "income inequality", you have to keep in mind what he is actually fixing. He thinks the people who earn the most need to be taxed *more* and he thinks that the people who earn the least need to be given *more benefits.* That's what he is trying to fix.

# Americans shocked by high deductibles of Obamacare health plans

**Wintery Knight** · 10 December 2013 · Archived copy · Original

The Wall Street Journal reports.

Excerpt:

> As enrollment picks up on the HealthCare.gov website, many people with modest incomes are encountering a troubling element of the federal health law: deductibles so steep they may not be able to afford the portion of medical expenses that insurance doesn't cover.
>
> The average individual deductible for what is called a bronze plan on the exchange—the lowest-priced coverage—is $5,081 a year, according to a new report on insurance offerings in 34 of the 36 states that rely on the federally run online marketplace.
>
> That is 42% higher than the average deductible of $3,589 for an individually purchased plan in 2013 before much of the federal law took effect, according to HealthPocket Inc., a company that compares health-insurance plans for consumers. A deductible is the annual amount people must spend on health care before their insurer starts making payments.
>
> […]That means some sick or injured people may avoid treatment so they don't rack up high bills their insurance won't cover, according to consumer activists, insurance brokers and public-policy analysts—subverting one of the health law's goals, which is to ensure more people receive needed health care. Hospitals, meantime, are bracing for a rise in unpaid bills from bronze-plan policyholders, said industry officials and public-policy analysts.

How high are the deductibles? The article says that "Total out-of-pocket expenses under bronze plans are capped at an annual $6,350 for individuals and $12,700 for families of four".

Is the government really helping people with a plan that has that high of a deductible?

More:

> "They're seeing sticker shock" in transitioning to the more-comprehensive coverage, and "once they start to use the policy, they will see a second sticker shock" of high deductibles, said Jamie Court, president of public-interest group Consumer Watchdog in California.
>
> **For example, the patient's typical share of the cost of having a baby through normal delivery—$6,150, according to one insurer's estimate—would be almost entirely an out-of-pocket expense for a person holding a bronze policy with the average $5,081 deductible.**
>
> "The anger is going to grow, because people are really stretched to buy these policies, then they're going to have to reach into their pocket for another five grand before it does anything for them," Mr. Court said.
>
> […]**The average insured American spent $1,241 on out-of-pocket health-care expenses in 2012, according to Truven Health Analytics Inc., which analyzed medical claims from employers.**

This article from the radically leftist New York Times explains that the Obamcare web site did not even DISPLAY the deductibles to the people who were shopping for plans.

Excerpt:

> For months, the Obama administration has heralded the low premiums of medical insurance policies on sale in the insurance exchanges created by the new health law. But as consumers dig into the details, they are finding

> that the deductibles and other out-of-pocket costs are often much higher than what is typical in employer-sponsored health plans.
>
> Until now, it was almost impossible for people using the federal health care website to see the deductible amounts, which consumers pay before coverage kicks in. But federal officials finally relented last week and added a “window shopping” feature that displays data on deductibles.
>
> […]In El Paso, Tex., for example, for a husband and wife both age 35, one of the cheapest plans on the federal exchange, offered by Blue Cross and Blue Shield, has a premium less than $300 a month, but the annual deductible is more than $12,000. For a 45-year-old couple seeking insurance on the federal exchange in Saginaw, Mich., a policy with a premium of $515 a month has a deductible of $10,000.
>
> In Santa Cruz, Calif., where the exchange is run by the state, Robert Aaron, a self-employed 56-year-old engineer, said he was looking for a low-cost plan. The best one he could find had a premium of $488 a month. But the annual deductible was $5,000, and that, he said, “sounds really high.”

My guess is that most of the people who have been buying plans would have been comparison shopping based on the premium. They have no idea about this high deductible. So what they’ve really signed up for is to pay $300 a month or so for what amounts to no health care coverage whatsoever – they will probably not reach the limit of the deductible. Is it any wonder that the Democrats voted to exempt themselves (and their political allies) from their own health care policy?

# Walter Bradley: three scientific evidences that point to a designed universe

**Wintery Knight** · 10 December 2013 · Archived copy · Original

Dr. Walter L. Bradley

Dr. Walter L. Bradley (C.V. here) is the Distinguished Professor of Engineering at Baylor.

Here's a bio:

> Walter Bradley (B.S., Ph.D. University of Texas at Austin) is Distinguished Professor of Engineering at Baylor. He comes to Baylor from Texas A&M University where he helped develop a nationally recognized program in polymeric composite materials. At Texas A&M, he served as director of the Polymer Technology Center for 10 years and as Department Head of Mechanical Engineering, a department of 67 professors that was ranked as high as 12th nationally during his tenure. Bradley has authored over 150 refereed research publications including book chapters, articles in archival journals such as the Journal of Material Science, Journal of Reinforced Plastics and Composites, Mechanics of Time-Dependent Materials, Journal of Composites Technology and Research, Composite Science and Technology, Journal of Metals, Polymer Engineering and Science, and Journal of Materials Science, and refereed conference proceedings.
>
> Dr. Bradley has secured over $5.0 million in research funding from NSF grants (15 yrs.), AFOSR (10 years), NASA grants (10 years), and DOE (3 years). He has also received research grants or contracts from many Fortune 500 companies, including Alcoa, Dow Chemical, DuPont, 3M, Shell, Exxon, Boeing, and Phillips.
>
> He co-authored The Mystery of Life Origin: Reassessing Current Theories and has written 10 book chapters dealing with various faith science issues, a topic on which he speaks widely.
>
> He has received 5 research awards at Texas A&M University and 1 national research award. He has also received two teaching awards. He is an Elected Fellow of the American Society for Materials and the American Scientific Affiliation (ASA), the largest organization of Christians in Science and Technology in the world. He is President elect of the ASA and will serve his term in 2008.

You can read more about his recent research in this article from Science Daily.

Below, I analyze a lecture entitled "Is There Scientific Evidence for an Intelligent Designer?". Dr. Bradley explains how the progress of science has made the idea of a Creator and Designer of the universe more acceptable than ever before.

The MP3 file is here.

**Evidence #1: The design of the universe**

1. The correspondence of natural phenomena to mathematical law

- All observations of physical phenomena in the universe, such as throwing a ball up in the air, are described by a few simple, elegant mathematical equations.

2. The fine-tuning of physical constants and rations between constants in order to provide a life-permitting universe

- Life has certain minimal requirements; long-term stable source of energy, a large number of different chemical elements, an element that can serve as a hub for joining together other elements into compounds, etc.
- In order to meet these minimal requirements, the physical constants, (such as the gravitational constant), and the ratios between physical constants, need to be withing a narrow range of values in order to support the minimal requirements for life of any kind.
- Slight changes to any of the physical constants, or to the rations between the constants, will result in a universe inhospitable to life.
- The range of possible ranges over 70 orders of magnitude.
- Although each individual selection of constants and ratios is as unlikely as any other selection, the vast majority of these possibilities do not support the minimal requirements of life of any kind. (In the same way as any hand of 5 cards that is dealt is as likely as any other, but you are overwhelmingly likely NOT to get a royal flush. In our case, a royal flush is a life-permitting universe).

Examples of finely-tuned constants and ratios: (there are more examples in the lecture)

a) The strong force: (the force that binds nucleons (= protons and neutrons) together in nucleus, by means of meson exchange)

- if the strong force constant were 2% stronger, there would be no stable hydrogen, no long-lived stars, no hydrogen containing compounds. This is because the single proton in hydrogen would want to stick to something else so badly that there would be no hydrogen left!
- if the strong force constant were 5% weaker, there would be no stable stars, few (if any) elements besides hydrogen. This is because you would NOT be able to build up the nuclei of the heavier elements, which contain more than 1 proton.
- So, whether you adjust the strong force up or down, you lose stars than can serve as long-term sources of stable energy, or you lose chemical diversity, which is necessary to make beings that can perform the minimal requirements of living beings. (see below)

b) The conversion of beryllium to carbon, and carbon to oxygen

- Life requires carbon in order to serve as the hub for complex molecules, but it also requires oxygen in order to create water.
- Carbon is like the hub wheel in a tinker toy set: you can bind other elements together to more complicated molecules (e.g. – “carbon-based life), but the bonds are not so tight that they can’t be broken down again later to make something else.
- The carbon resonance level is determined by two constants: the strong force and electromagnetic force.
- If you mess with these forces even slightly, you either lose the carbon or the oxygen.

3. Fine-tuning to allow a habitable planet

- A number of factors must be fine-tuned in order to have a planet that supports life
- Initial estimates predicted abundant life in the universe, but revised estimates now predict that life is almost certainly unique in the galaxy, and probably unique in the universe.
- Even though there are lots of stars in the universe, the odds are against *any* of them supporting complex life.
- Here are just a few of the minimal requirements for habitability: must be a single star solar system, in order to support stable planetary orbits, the planet must be the right distance from the sun in order to have liquid water at the surface, the planet must sufficient mass in order to retain an atmosphere, etc.

The best non-theistic response to this argument is to postulate a multiverse, but that is very speculative and there is

no experimental evidence that supports it.

**Evidence #2: The origin of the universe**

1. The progress of science has shown that the entire physical universe came into being out of nothing (= “the big bang”). It also shows that the cause of this creation event is non-physical and non-temporal. The cause is *supernatural*.

- Atheism prefers an eternal universe, to get around the problem of a Creator having to create the universe.
- Discovery #1: Observations of galaxies moving away from one another confirms that the universe expanded from a single point.
- Discovery #2: Measurements of the cosmic background radiation confirms that the universe exploding into being.
- Discovery #3: Predictions of elemental abundances prove that the universe is not eternal.
- Discovery #4:The atheism-friendly steady-state model and oscillating model were both falsified by the evidence.
- And there were other discoveries as well, mentioned in the lecture.

The best non-theistic response to this argument is to postulate a hyper-universe outside of ours, but that is very speculative and there is no experimental evidence that supports it.

**Evidence #3: The origin of life**

1. The progress of science has shown that the simplest living organism contains huge amounts of biological information, similar to the Java code I write all day at work. This is a problem for atheists, because the sequence of instructions in a living system has to come together all at once, it cannot have evolved by mutation and selection – because there was no replication in place prior to the formation of that first living system!

- Living systems must support certain minimum life functions: processing energy, storing information, and replicating.
- There needs to be a certain amount of complexity in the living system that can perform these minimum functions.
- But on atheism, the living system needs to be simple enough to form by accident in a pre-biotic soup, and in a reasonable amount of time.
- The minimal functionality in a living system is a achieved by DNA, RNA and enzymes. DNA and RNA are composed of sequences of proteins, which are in turn composed of sequences of amino acids.

Consider the problems of building a chain of 100 amino acids

- The amino acids must be left-handed only, but left and right kinds are equally abundant in nature. How do you sort out the right-handed ones?
- The amino acids must be bound together using peptide bonds. How do you prevent other types of bonds?
- Each link of the amino acid chain needs to be carefully chosen such that the completed chain with fold up into a protein. How do you choose the correct amino acid for each link from the pool of 20 different kinds found in living systems?
- In every case, a human or other intelligence could solve these problems by doing what intelligent agents do best: *making choices.*
- But who is there to make the choices on atheism?

The best current non-theistic response to this is to speculate that aliens may have seeded the Earth with life at some point in the past.

The problem of the origin of life is not a problem of chemistry, it is a problem of engineering. Every part of car

functionality can be understood and described using the laws of physics and chemistry. But an intelligence is still needed in order to assemble the components into a system that has the minimal requirements for a functioning vehicle.

# 10-year-old suspended for shooting imaginary arrow, threatened with expulsion

**Wintery Knight** · 11 December 2013 · Archived copy · Original

CNS News reports.

Excerpt:

> On Wednesday, the Rutherford Institute announced it has come to the defense of a 10-year-old boy who was suspended under a school zero tolerance policy for shooting an imaginary "arrow" at a fellow classmate, using nothing more than his hands and his imagination.
>
> Additionally, Rutherford Institute says the student has been threatened with expulsion for his make-believe actions, which were a response to another student "shooting" an imaginary gun at him:
>
> "Johnny Jones, a fifth grader at South Eastern Middle School, was suspended for a day and threatened with expulsion under the school's weapons policy after playfully using his hands to draw the bowstrings on a pretend 'bow' and 'shoot' an arrow at a classmate who had held his folder like an imaginary gun and 'shot' at Johnny. In coming to Jones' defense, Rutherford Institute attorneys have asked Rona Kaufmann, Superintendent of the South Eastern School District in Fawn Grove, Pennsylvania, to rescind the suspension and remove all references to the incident from Jones' permanent school record."

Reason #26,956 to not send your children (especially boys) to public school.

# Six ways for women to stamp out the risk of divorce

**Wintery Knight** · 11 December 2013 · Archived copy · Original

From the liberal Huffington Post, of all places.

First, here's the list of skills for women to develop to avoid divorce:

- Skill #1: Do at Least Three Things a Day for Your Own Pleasure
- Skill #2: Relinquish Control of People You Can't Control
- Skill #3: Receive Gifts, Compliments and Help Graciously
- Skill #4: Respect The Man You Chose
- Skill #5: Express Gratitude Three Times Daily
- Skill #6: Strive to be Vulnerable

And here's the detail on one that I think is the most important:

> Skill #4: Respect The Man You Chose
>
> Being respectful will resurrect the man you fell in love with. You're too smart to have married a dumb guy, so if he seems dumb now, it's because you're focused on his shortcomings. It's not that you made a mistake in marrying him, it's that you've been *focused* on his mistakes *since* you married him. A man who feels respected by the woman who knows him best also feels self-respect, which is far more attractive than cowering and hostility.
>
> Lack of respect causes more divorces than cheating does because for men, respect is like oxygen. They need it more than sex. Respect means that you don't dismiss, criticize, contradict or try to teach him anything. Of course he won't do things the same way you do; for that, you could have just married yourself. But with your respect, he will once again do the things that amazed and delighted you to begin with — so much so that you married him.

And here's the detail on the one that I think is the most neglected:

> Skill #6: Strive to be Vulnerable
>
> Intimacy and vulnerability are directly connected. If you want intimacy, then you'll need to take the risk of admitting that you're lonely, embarrassed or hurt. This is not the same as weakness; it actually requires great strength.
>
> When you're vulnerable you don't care about being right, you're just open and trusting enough to say "I miss you" instead of "you never spend time with me." It means you simply say, "ouch!" when he's insensitive instead of retaliating. That vulnerability completely changes the way he responds to you.
>
> Vulnerability is not only attractive, it's the only way to get to that incredible feeling of being loved just the way you are by someone who knows you well. There's nothing like the joy of intimacy that results from vulnerability. It really is worth dropping the burden of being an efficient, overscheduled superwoman to have it.

Before I get started,  a piece of advice for men. I really, really recommend that single men take the time to read ALL the comments by the women underneath that post before they even think about getting married. It's important for single men to realize that your old-fashioned ideas about marriage and what women should do in a marriage are often not accepted by modern women – even modern *Christian* women. Most churches don't emphasize the things in the list above, because they are trying to make women feel good, and not to tell them what needs doing and how to do it. When you read the comments by women blaming men and attacking the 6 points, that will help you to see

what you should be looking for, so you know how to make sound judgments about who to marry and whether to marry at all.

Right. Let's begin with the 6 points.

From that list above, the ones I have personally encountered are #1, #3, #4, #5 and #6.

For #1, many unmarried women think that relationships are more about being happy than achieving things. If the woman gets into a relationship for happiness, and is not happy, then she may blame the man for failing to make her happy. The solution is to have a more realistic balance between happiness and self-sacrificial service. An unmarried women should focus on finding out what the man's plans and goals are, and why he needs her. She has to focus on showing him that she wants to be informed and engaged in helping him. That is the best way for her to learn how to balance the need for happiness with the need to handle her relationship obligations (to children, as well as her spouse). Another way to lower the need for happiness provided by the man is for the woman to have her own interests. For example, my favorite single woman likes to spend time in the evening decompressing with stuff like cross-stitching, reading, playing with her cat, etc. before we do stuff together. She has her own sources of happiness and that means that I am not overburdened every day as the sole source of happiness. That can be overwhelming on days where she is stressed out from work.

For #3 and #5, I have to tell a funny story about what I have been doing lately with my favorite single woman. I have been busy trying to get her to tell me all about what her life is like from day to day and then buying her small things to help her out with her daily struggles. For example, I bought her an ice scraper so that she wouldn't have to scrape ice off her windshield with her gloves. I bought her kitchen shears so that she wouldn't have to fuss with raw chicken. I got her a new corded hand-vacuum for Christmas because she had to lug her heavy one up and down the stairs to clean them. Why am I fussing so much about this woman? Because she is the most grateful woman I know. Whenever I do anything for her, she tells everyone about it and I hear about how helpful I've been every time she uses whatever I bought her. Women, get it clear: men prefer to help grateful women.

For #4, I think the scariest thing for a woman is thinking that she will have to respect a bad men, even when he is bad. But women like that are looking at marriage wrong. The respect is *non-negotiable*. You will respect your husband or you will be cheated on or divorced. So with that in mind, *choose a man who you do respect*. That's the solution – test the men carefully and effectively and choose one who is easy to respect and then marry that man. Make the respectability of the man the main criteria. The time to make the decision is before the marriage, because divorce is out of the question. And women really need to work at this, in my experience, because they typically let feelings dominate their decision-making, instead of being practical about finding the right man to do the work that men do in a marriage. The appearance of the man tends to be their only criteria, these days. Instead of choosing on appearances, women should test men out during the courtship to see if they like the way he leads, persuades and makes decisions. Instead of letting feelings and peer-approval decide, just think of what a man does and prefer men who can do those things.

For #6, I think that women really need to realize the power of vulnerability. My view, which is controversial, is that the reason why women are focusing so much on their appearance and sexuality is because feminism has made it illegal for them to attract men with traditional femininity. Vulnerability, trust, modesty, nurturing, care, concern, attention, support, etc. are all viewed by unmarried women as prohibited by feminism – even though they work on men very well. Men treat women nicely when they see how sensitive women are to good treatment and bad treatment. Men are motivated by the desire to make a difference and to be appreciated by a woman who needs them. Women need to practice being vulnerable, and to protect their ability to *be vulnerable* by avoiding premarital sex and messy breakups. Women need to learn to control their feelings and not batter themselves up on a sequence of men who are not ready for marriage. The most common thing I am seeing with women these days, including Christian women, is that their ability to trust a man, and to let a good man lead them, have been completely wrecked because they've dashed themselves to pieces over and over on men who looked good and impressed their friends, but who were not qualified for marriage. Marriage, for a man, is a faithful, life-long self-sacrificial

commitment to provide for and serve a spouse and to train up children. *Pick the right man for that job.*

# How do you get a Christian man to marry you?

**Wintery Knight** · 11 December 2013 · Archived copy · Original

Here's a Bible verse that explains the number one thing that men are looking for from a potential wife.

Ephesians 5:21-33:

[21] Submit to one another out of reverence for Christ.

[22] Wives, submit yourselves to your own husbands as you do to the Lord.

[23] For the husband is the head of the wife as Christ is the head of the church, his body, of which he is the Savior.

[24] Now as the church submits to Christ, so also wives should submit to their husbands in everything.

[25] Husbands, love your wives, just as Christ loved the church and gave himself up for her

[26] to make her holy,cleansing her by the washing with water through the word,

[27] and to present her to himself as a radiant church, without stain or wrinkle or any other blemish, but holy and blameless.

[28] In this same way, husbands ought to love their wives as their own bodies. He who loves his wife loves himself.

[29] After all, no one ever hated their own body, but they feed and care for their body, just as Christ does the church—

[30] for we are members of his body.

[31] "For this reason a man will leave his father and mother and be united to his wife, and the two will become one flesh."

[32] This is a profound mystery—but I am talking about Christ and the church.

[33] However, each one of you also must love his wife as he loves himself, **and the wife must respect her husband.**

The Bible sometimes sets out rules and goals for expected behaviors, which become moral obligations for anyone for follows Christ. It is up to us to convince ourselves through study that the Bible has authority to speak to us. And it is also up to us to decide the most effective way to achieve the goals that the Bible sets out. This post proposes some tips for women who want to learn how to respect men, based on my experiences of what makes me feel respected as a man. I think this is beneficial for single women, as well, because it allows them to arouse the interest of a man *by performing good actions*.

**Things that women can do to make men feel respected**

Here are some things that signal "respect" to me.

1. Listen

The first thing that really works is listening. I really feel respected when a woman listens to me explain my thoughts and feelings. This is especially true when I am talking about my work and my work day. When it comes to my work, I feel respected when a woman listens to me explain what I am doing at work. The more she understands software engineering (what I do for money), the more supported I will feel. I like it when a woman is nearby when I am working, and asking about my progress. I know Dr. Craig also talks to his wife about his work as well. I feel a lot better making sacrifices (studying hard things, working weekends, volunteering at work) when those sacrifices are understood, encouraged and supported. That's why I think that women need take care to have a broad understanding of the way the world works, and never drop out of quantitative subjects like math, science, engineering and technology. The more you know about what a man is talking about, the better. Knowing more

about politics, economics, science, etc. is always a good thing for women. I think that women definitely need to work full time for at least a couple of years to develop a sympathetic understanding of what men do in an office in order to provide for a family.

2. Plan

Another area that is important to talk about is my plan. I like it when I can tell a woman the specific experiences that I had that cause me to have the plan that I have. For example, my struggles getting apologetics into the churches that I've attended have really soured me on church leaders. Another thing I like to talk about are the Christian scholars who are my role models, and how I try to emulate them, and I want my children to emulate them, too. One lady I was speaking to has been studying areas that I care about on her own through books, lectures and debates and then going out into the world and engaging with the people around her. Sometimes just a few people, and sometimes with large groups. Recently she told me that she would like to start a group in her church to study useful books with them. This made me feel very respected. My goals matter to her, and she is trying to help with them on her own initiative, and with her own strategies. Note that women who want to respect men may find that it is useful to learn certain skills in order to be more effective at helping men with their plans. For example, she might study science apologetics and then engage her co-workers and friends with scientific arguments for Christian theism. She should find out what areas matter to him with respect to serving God and then come alongside him and help him. I have a homeschooling mom friend who is busy doing a degree in nursing, which is a very useful skill set to have. Her children are able to see her struggling with hard subjects like chemistry, and that is good for them to see. It's valuable to a man to have a wife who has practical skills and who can shepherd the children through school and into careers. This same lady is reading Thomas Sowell's Basic Economics, as well.

3. Roles

A final area that is important is my roles as a man. According to the Bible, men are supposed to be the main provider for their families. So, I made the decision early in my life to prefer work to academics – so I have actually been earning money since the time I was 12 years old. My grades were As (and some Bs), but I was always working part-time, and in the summers. The money I earned went straight into investments, so that I would be able to afford two degrees in computer science (BS and MS) and have a nest egg saved for marriage. I had $9,000 before undergraduate school and $16,000 after, with no debts and a current model year used car. I chose computer science over English literature, because I knew that computer science was a more reliable way to earn a living. Marriages run more smoothly when money isn't a concern, so I did these things in order to make sure that the money to run the marriage would be there.

I think that women should *prefer men who take the provider obligation seriously*. I feel very respected when a woman takes the time to ask me about my education, research, work history, and investments. Our culture today doesn't value men taking their provider roles seriously. Instead, many women prefer *attractive, entertaining* men over men who can provide. I see a lot of Christian women going after men who don't have the ability to finance a marriage. That is disrespectful of the provider role, and I believe it stems from the desire to not acknowledge male leadership. I believe that some women (ones who struggle with trust issues) prefer men who don't earn a lot of money, so that the man will not have the authority in the home that comes from the provider role. But when a woman chooses a man with an inadequate education and resume, it also makes it much harder for her to respect him, which is what a man needs a woman to do.

To respect a man acting as a provider also requires voting for policies that support a man's ability to work (e.g. – less regulation on business, lower corporate taxes) to keep what he earns (lower income tax, lower inflation) and to spend it the way he sees fit (privatization of health care, education, etc.) – and these issues need to be studied, not checked off on a checklist as "we agree". Studying economics and politics in depth, and being political active, are ways for women to respect men in their provider role by promoting policies that help him to perform that provider role. Women should not be supporting policies that promote the redistribution of wealth via taxes. Women should not vote to reward irresponsibility and dependence, either. It is disrespectful to the man's provider role to vote for

leftist fiscal policy. If you want big government, then you get men who can't afford to marry. Women need to vote for laws and policies that create more of the hard-working, high-earning men they want to marry.

The provider role is not the only role a man plays, he also has to be experienced at leading others on moral and spiritual issues. In order to evaluate a man's ability in these areas, women must study these exact same issues so that they are able to prefer evaluate a man's ability in these areas. Christianity is not a checkbox. Bible reading and church attendance alone do not train a man to engage a secular culture on moral and spiritual issues. Bible reading and church attendance alone do not enable a man to intelligently apply the Bible to areas like economics and foreign policy, either. Yet economics and foreign policy issues do affect families (e.g. Obamacare or border security) , and that's why men need to be tested to see if they know those things. Marriage requires certain behaviors from men, and those behaviors require knowledge and experience. It's just like picking a man for a job in a workplace. In order to pick well, you need to know what the job is and what it requires.

# Study: brain of child neglected by mother is smaller and underdeveloped

**Wintery Knight** · 12 December 2013 · Archived copy · Original

Dina sent me this article from the UK Daily Mail.

Here is the scan:

Brain scans of 3-year old children: normal vs neglected

Excerpt:

> Both of these images are brain scans of a two three-year-old children, but the brain on the left is considerably larger, has fewer spots and less dark areas, compared to the one on the right.
>
> According to neurologists this sizeable difference has one primary cause – the way each child was treated by their mothers.
>
> The child with the larger and more fully developed brain was looked after by its mother – she was constantly responsive to her baby, reported The Sunday Telegraph.
>
> But the child with the shrunken brain was the victim of severe neglect and abuse.
>
> According to research reported by the newspaper, the brain on the right worryingly lacks some of the most fundamental areas present in the image on the left.
>
> The consequences of these deficits are pronounced – the child on the left with the larger brain will be more intelligent and more likely to develop the social ability to empathise with others.
>
> But in contrast, the child with the shrunken brain will be more likely to become addicted to drugs and involved in violent crimes, much more likely to be unemployed and to be dependent on state benefits.
>
> The child is also more likely to develop mental and other serious health problems.
>
> Professor Allan Schore, of UCLA, told The Sunday Telegraph that if a baby is not treated properly in the first two years of life, it can have a fundamental impact on development.
>
> He pointed out that the genes for several aspects of brain function, including intelligence, cannot function.

> […]The study correlates with research released earlier this year that found that children who are given love and affection from their mothers early in life are smarter with a better ability to learn.
>
> The study by child psychiatrists and neuroscientists at Washington University School of Medicine in St. Louis, found school-aged children whose mothers nurtured them early in life have brains with a larger hippocampus, a key structure important to learning, memory and response to stress.
>
> The research was the first to show that changes in this critical region of children's brain anatomy are linked to a mother's nurturing, Neurosciencenews.com reports.
>
> The research is published online in the Proceedings of the National Academy of Sciences Early Edition.
>
> Lead author Joan L. Luby, MD, professor of child psychiatry, said the study reinforces how important nurturing parents are to a child's development.

I have a very good feminist non-Christian friend who sometimes comments here. I once asked her about marriage and she said that her skills would be wasting on raising children. I explained to her my view that a mother needs to stay at home with the children, and that is more important work. I expect my future wife to read all kinds of books on child care and to give the child attention, nutrition, exercise and play so that the child will grow up to be an effective Christian. Maybe I need to be clear. I am not going to spend hundreds of thousands per child with just any woman. I need a woman who can produce influential and effective Christians who will engage in the public square. And we do not entrust that job to just anyone – we want a Michele Bachmann or a Jennifer Roback Morse. Professional women who are willing to be stay-at-home moms when it's necessary to do that.

I expect the woman I marry (if I marry) to have a college degree, and preferably a graduate degree, and a couple of years of employment. Then she has to stay home and invest in those children through the first five years at least. After that she can stay home or work as much as she thinks is beneficial to the family goals of impacting the university, the church and the public square – as well as continuing to raise those children. It's not a waste of her talent to make the next William Lane Craig, the next Marsha Blackburn, the next Doug Axe, or the next Edith Jones.

# Lydia McGrew: we need an army of tentmakers

**Wintery Knight** · 12 December 2013 · Archived copy · Original

Lydia McGrew has a post up at What's Wrong With the World blog that is just excellent. (H/T Apologetics315)

Excerpt:

> Apologetics is wonderful and incredibly important. It's a wonderful thing that a revival of specifically evidentialist apologetics is happening in the United States and even, to some extent, in the Anglophone world at large.
>
> Unfortunately, this revival of interest in apologetics and in being Christian philosophers is coming at a very bad time, economically. Even if you are a genius, your chances in 2013 and following of getting a stable job by the route of going to graduate school in philosophy (or almost any area of the humanities) are pretty darned slim. If you're not a genius, fuhgetaboutit. Nor were there ever all that many jobs in philosophy. It was always an iffy proposition, but it's much worse now than it was even twenty years ago.
>
> As for starting ministries, a poor economy makes it extremely hard to do that, too, because people don't have as much disposable income to donate. Moreover, even in a more robust economy, if all the eager young apologists were to flock to start apologetics and/or campus ministries, they would be competing among themselves for a finite number of available dollars from donors. So that's not the best idea either.
>
> Let me speak very bluntly here: In my opinion, God doesn't need a whole raft of impractical idealists out there getting themselves into debt or half starving (or really starving) with no idea of how in the world they are ever going to support even themselves, much less a family, out at the other end of their education. That just burdens the church with a large number of able-bodied but needy Christians who are in a seemingly unending stage of transition, "getting an education for the kingdom" or "hoping to do work for the kingdom" without a viable plan in mind or any fiscal light at the end of the tunnel.
>
> Instead, I believe that we need an army of tentmakers. If you have a job or a marketable skill, for heaven's sake (literally), don't quit that job and join the ranks of starving students. Keep your day job, but enrich your mind and prepare yourself to answer people's questions about Christianity by studying on your own time. If you have entrepreneurial abilities and the capital, start a business. That will support not only yourself but others you employ, and if successful, you will have more money to give to Christian ministries.
>
> But even if you aren't the entrepreneurial type or don't have that opportunity, at least make sure (to the extent that one can in today's world) that you can pay the rent and put food on your own table as well as supporting whatever number of additional people you plan to take on. (In other words, if you are a guy who would like to get married and have children, bear that in mind.) This will inevitably mean spending time at all that distasteful stuff like networking and making a resume. Bookish types don't enjoy that stuff, because it seems bogus, but it can't be helped. It will undoubtedly mean, for most people, not being full-time students beyond the undergraduate level, especially not in the humanities, not trying to become full-time academics as a life work, and not going into full-time ministry, even if you would ideally like to do one or more of those three things.
>
> In the end, if we can have this army of tentmakers, there will be (Lord willing) money to allow some people to work in full-time ministry. But it's going to be quite a small proportion of those who are interested or would ideally like to do so.
>
> […]Inevitably, the course of action I am suggesting will mean a bifurcation for many between their day job and what they are most passionately interested in. So be it. Indeed, so it has ever been in the world. What proportion of people at any moment in human history have been blessed enough to spend most of their time working on what they are most passionately interested in? The question answers itself. So I think that bifurcation has to be accepted by a great many people and that doing so will lead to what I might call a healthier "Christian economy" among committed Christians than what we could otherwise end up with.

So let's see her advice in bullet-point form:

- The job market for philosophers is very bad
- A bad economy means less support money is available
- It's important to have a plan to fund your ministry
- Leverage your full-time job to fund your ministry

I often find that when I talk to Christians, there is this sort of hyper-spiritualized way of deciding what to do. People read the Bible, which is good, but then they don't tend to also look at things like economics, science and public policy. The Bible doesn't say much about what to study or what job to get, but there is an example of Paul working at tent-making in order to fund his ministry. So there is precedent for the idea of learning a trade and working to earn enough money to support our families, our ministry and even other people's ministries. I think we have an obligation to take the Bible seriously when it tells us what we can do to please God, but coming up with a plan to please God most effectively is our job. We have to make the plans to serve God. Our plans must be within the bounds of Biblical morality, but they should also reflect our knowledge of how the world really works, too. We'll be more successful with a good plan and some hard work.

Be sure and listen to the podcast by J. Warner Wallace on this issue, and read my comments too (same post).

# Can atheists be moral? Sean McDowell and James Corbett debate

**Wintery Knight** · 12 December 2013 · Archived copy · Original

I got the audio for this debate from Apologetics 315, linked below.

Here is the MP3 file.

Sean's case is similar to the one I make, but he only has 3 minimal requirements for morality.

First, he explains the difference between objective and subjective truth claims, and points out that statements of a moral nature are meaningless unless morality is objective. Then he states 3 things that are needed in order to ground objective morality.

1. an objective moral standard
2. free will
3. objective moral value of humans

The question of the foundations of morality is without a doubt the easiest issue for beginning apologists to discuss with their neighbor. If you're new, then you need to *at least* listen to his opening speech. He's an excellent speaker, and his rebuttals are very, very smooth. The citations of atheist philosophers like Walter Sinnott-Armstrong, e.g. – to show that "religious" wars had *nothing* to do with religion, really hurt his opponent. He seems to cite prominent atheists like Thomas Nagel, Richard Taylor, Michael Shermer, etc., constantly in order to get support for his assertions. That took preparation. McDowell was very calm in this debate. It's very hard to stay calm when someone is disagreeing with you in front of a crowd, but McDowell did a great job at that. He also seemed to be really prepared, because his rebuttals were crisp and concise.

For those of you who want to understand how these things work, listen to the debate. There is a period of cross-examination if you like that sort of thing. I do!

# Judge Jean Boyd gives no jail time to drunk driver who murdered four people

**Wintery Knight** · 13 December 2013 · Archived copy · Original

State District Judge Jean Boyd

Here's the story from CBS News.

Excerpt:

> A Texas teenager killed four people while driving drunk in June. Prosecutors pushed for a 20-year sentence, but a judge sentenced the teen to 10 years probation and no jail time.
>
> […]A psychologist testified for the defense that the teen was a product of something he called "affluenza." He meant [Ethan] Couch doesn't link bad behavior with consequences because his parents taught him that wealth buys privilege.
>
> **That psychologist cited one instance when Couch, then 15, was caught in a parked pickup with a naked 14-year-old girl who was passed out. Couch was never punished, the psychologist said. He also testified the teenager was allowed to drink at a very young age and began driving at 13.**
>
> Investigators said surveillance tape showed Couch and his friends stealing beer from a Walmart store in June.
>
> After leaving a party, police said Couch had his pickup going nearly 70 mph in a 40 mph zone. About 400 yards down the street, he slammed into Holly and Shelby Boyles, who had stopped to help Breanna Mitchell fix a flat tire.
>
> Youth Pastor Brian Jennings was driving by and had also stopped to help. All of them were killed. Couch was charged with four counts of intoxication manslaughter and tried as a juvenile.
>
> […]Boyles said the verdict doesn't give victims' family the justice they need for closure.
>
> "My immediate reaction is I'm back to week one," he said. "We have accomplished nothing here. My healing process is out the window."

You can read more about State District Judge Jean Boyd here. I can't believe that this woman is a judge in *Texas*, of all places.

I was listening to Dennis Prager talk about this at lunch on Thursday, and I wanted to relay two points that came up. First, Prager noted that the judge was a woman, and that women tend to focus more on compassion and non-

judgmentalism than men. Men tend to focus more on justice and moral standards. Men tend to believe that punishing evil harshly is the right thing to do because it deters future crimes. Men also tend to believe that punishing evil sends a message to the rest of society about what is wrong, which deters future crimes. What message does this judge's sentence send to 16-year-old boys? It says "you can kill four innocent people and injure a fifth and get off Scot-free".

Second, a caller to the show said that if the murderer is deemed not responsible because of what his parents did to him, then why are the parents not being punished for it? That's a good question, and it prompts me to think about what real justice in the case might look like. Here is what real justice would look like, from someone who is not affected by the crime. First, disbar the judge so that she cannot practice law in Texas. Second, give the murderer the 20-year sentence sought by the prosecution. Third, confiscate every penny of the assets of the parents, and distribute it to the families of the victims. That is not lenient, but it would be *restitution*, which ought to be one of the functions of the law.

# Michigan House and Senate Republicans pass Abortion Insurance Opt-Out Act

**Wintery Knight** · 13 December 2013 · Archived copy · Original

Good news from Michigan, delivered by Live Action.

Excerpt:

> [On Wednesday,] Michigan won an important pro-life victory.
>
> It started this summer when over 315,000 registered voters, representing every county in Michigan, signed the NO Taxes for Abortion Insurance Petition, making it clear that the people of Michigan do not believe abortion is health care and we do not want to pay for it.
>
> On December 11th, both the Michigan House and Senate passed this petition as the Abortion Insurance Opt-Out Act, with the House voting 62-47 and the Senate voting 27-11. According to this act, elective abortion will no longer be a standard benefit in health plans. Abortion coverage will only be available by purchasing a separate rider. This act also ensures that our tax dollars and insurance premiums will not go toward funding abortions.
>
> Because the Abortion Insurance Opt-Out Act was initiated by citizens, as allowed by the Michigan Constitution, it does not require the governor's signature to become law.
>
> […]The Affordable Care Act requires all the states to have health care exchanges (also called marketplaces) available by 2014. The ACA allows states to exclude abortion as a covered benefit in these insurance exchanges through legislation like the Abortion Insurance Opt-Out Act. **Michigan is the 24th state to exclude abortion coverage from its insurance plans through this provision.**

But not everyone was pleased. HHS Secretary Kathleen Sebelius was not pleased. And when questioned by Republicans about whether they could see the list of plans that do not support abortion, she declined to provide that list.'

CNS News reports.

Excerpt:

> Although Health and Human Services Secretary Kathleen Sebelius said on Oct. 30 that she would provide Congress with a list of the Obamacare plans in the federal health exchange that do not cover abortion, she has yet to do so and, testifying on Dec. 11, backed away from that pledge and urged consumers to just look at the plan benefits on the exchange website.
>
> At the Oct. 30 hearing before the House Committee on Energy and Commerce , Rep. John Shimkus (R-Ill.) asked Seblius, "Can you provide for the committee the list of insurers in the federal exchange who do not offer, as part of their package, abortion coverage?"
>
> During a somewhat heated back-and-forth, Sebelis said, "I think we can do that, sir," and added, "I know that is the plan, I will get that information to you."
>
> Yet during a Dec. 11 House subcommittee hearing, Sebelius declined to say whether she would provide the list requested and instead urged lawmakers and consumers to just look at the benefits package for each plan on the Obamacare exchange websites.
>
> At Wednesday's hearing, Rep. Shimkus said, "Madam Secretary, you promised last time you were here that you would provide me a national list of those who cover and those who do not cover abortion and abortion services. We have yet to receive that list."

> […]In an earlier, fractious exchange with Sebelius, Rep. Shimkus expressed frustration, saying, “This is why we’re frustrated, because we just don’t get the truth out of you.”

Oh those Democrats. Always trying to make us pay for abortions even if we are pro-life.

# What is the best argument against intelligent design?

**Wintery Knight** · 13 December 2013 · Archived copy · Original

Here is an article on Evolution News which summarizes how opponents of intelligent design behave when confronted with intelligent design.

Here's the executive summary:

> The outline of the story is now, sadly, a familiar one. Professor wants to discuss intelligent design (ID). Intolerant atheists throw a fit. College quickly capitulates to the demands of the atheists. Professor is censored.
>
> The scenario played out again this past semester in Amarillo, Texas. I'll give the identities of the parties involved in just a moment, but for now, let's note some twists unique to the situation. According to internal communications, campus administrators feared that disgruntled atheists would *stage a "disruption"* if the ID class went forward. The atheist leader got so "intense" in arguing for Darwinian evolution over intelligent design that college staff called the police on him, apparently potentially concerned over their own safety. And get this: the intolerant atheists call themselves the "*Freethought Oasis*." You can't make this stuff up.

And the punchline:

> All told, in various e-mails [Freethought Oasis leader] Farren and his group were described as:
>
> - "VERY intense"
> - "obsessive"
> - "fanatical"
> - "aggressive," "verbally aggressive," and showing "aggressiveness"
> - "I don't know where the free thought comes in though, seems more like the lack of"
> - looking for a "fight"
> - showing a "desire to kill the class"
> - "representing a group of people, was disturbed by the class and **indicated his intent to enroll students who might potentially create a disruptive environment in the classroom**. — a 'protest' if you will"
> - "disruptives"
>
> That's a pretty telling list of words that came from multiple people in the [Amarillo College] administration.

The article documents all the things that anti-intelligent design people do. They celebrate successful bullying, and they don't want to engage different ideas with reasons and evidence. Even if you are not a scientist, it's very easy to get an idea of whether intelligent design is true or not by watching how opponents of intelligent design conduct themselves. How far do you think atheists would go to silence people who disagreed with them? In an atheistic universe, there is no design for how humans ought to behave. There are no human rights that need to be respected. Anything is permitted in an accidental universe.

# Stephen C. Meyer debates Peter D. Ward on intelligent design and evolution

**Wintery Knight** · 14 December 2013 · Archived copy · Original

**The speakers**

**Stephen C. Meyer** is director of the Discovery Institute's Center for Science and Culture (CSC) and a founder both of the intelligent design movement and of the CSC, intelligent design's primary intellectual and scientific headquarters. Dr. Meyer is a Cambridge University-trained philosopher of science, the author of peer-reviewed publications in technical, scientific, philosophical and other books and journals. His signal contribution to ID theory is given most fully in *Signature in the Cell: DNA and the Evidence for Intelligent Design*, published by HarperOne in June 2009.

Graduating from Whitworth College in Spokane, Washington, in 1981 with a degree in physics and earth science, he later became a geophysicist with Atlantic Richfield Company (ARCO) in Dallas, Texas. From 1981 to 1985, he worked for ARCO in digital signal processing and seismic survey interpretation. As a Rotary International Scholar, he received his training in the history and philosophy of science at Cambridge University, earning a PhD in 1991. His thesis offered a methodological interpretation of origin-of-life research.

**Peter D. Ward**, Ph.D., is a paleontologist and professor in the Departments of Geology and Biology at the University of Washington in Seattle. He also serves as an adjunct professor of zoology and astronomy. His research specialties include the Cretaceous–Tertiary extinction event and mass extinctions generally. His books include the best-selling "Rare Earth: Why Complex Life Is Uncommon in the Universe" (co-author Donald Brownlee, 2000), "Under a Green Sky: Global Warming, the Mass Extinctions of the Past, and What They Can Tell Us About Our Future" (2007), and "The Medea Hypothesis: Is Life on Earth Ultimately Self-Destructive?" (2009).

**The debate**

Here's the video of the debate:

The debate itself starts at around 8:19, after all the moderators have spoken.

The debate is focused on disagreements about scientific evidence.

Even though Peter Ward is an atheist, he has co-written a fabulous book that I own and have read called "Rare Earth: Why Complex Life is Uncommon in the Universe". I really recommend getting this book, as it is a great book by two non-theists on the habitability argument. It's sort of a secular precursor to Jay Richards' and Guillermo Gonzalez's "The Privileged Planet: How Our Place in the Cosmos is Designed for Discovery". The habitability argument is a really neglected argument, but it's a good one.

# William Lane Craig appears on Fox News to discuss Christian apologetics

**Wintery Knight** · 14 December 2013 · Archived copy · Original

And to go with that 8.5 minute clip, there is this opinion piece on Fox News authored by Dr. Craig.

Excerpt:

> For atheists, Christmas is a religious sham. For if God does not exist, then obviously Jesus' birth cannot represent the incarnation of God in human history, which Christians celebrate at this time of year.
>
> However, most atheists, in my experience, have no good reasons for their disbelief. Rather they've learned to simply repeat the slogan, "There's no good evidence for God's existence!"
>
> In the case of a Christian who has no good reasons for what he believes, this slogan serves as an effective conversation-stopper. But if we have good reasons for our beliefs, then this slogan serves rather as a conversation-starter.
>
> The atheist who merely repeats this slogan after having been presented with arguments for God's existence makes an empty assertion.
>
> So what reasons might be given in defense of Christian theism? In my publications and oral debates with some of the world's most notable atheists, I've defended the following five reasons why God exists…

What follows is a concise statement of Dr. Craig five favorite arguments. I noticed that this opinion piece was in the "most popular" list on the Fox News web site. I think it's a good thing to share because it's so compact.

# How the presence and quality of fathers affects belief in God

**Wintery Knight** · 15 December 2013 · Archived copy · Original

Here's an article by Paul Copan which points out how father presence/absence and father quality affects belief and disbelief in God.

Excerpt:

> *Seventh, the attempt to psychologize believers applies more readily to the hardened atheist.*It is interesting that while atheists and skeptics often psychoanalyze the religious believer, they regularly fail to psychoanalyze *their own*rejection of God. Why are believers subject to such scrutiny and not atheists? Remember *another* feature of Freud's psychoanalysis — namely, an underlying resentment that desires to kill the father figure.
>
> Why presume atheism is the rational, psychologically sound, and default position while theism is somehow psychologically deficient? New York University psychology professor Paul Vitz turns the tables on such thinking. He essentially says, "Let's look into the lives of leading atheists and skeptics in the past. What do they have in common?" The result is interesting: *virtually all of these leading figures lacked a positive fatherly role model — or had no father at all.*[11]
>
> ### Let's look at some of them.
>
> - *Voltaire*(1694–1778): This biting critic of religion, though not an atheist, strongly rejected his father and rejected his birth name of François-Marie Arouet.
> - *David Hume*(1711–76): The father of this Scottish skeptic died when Hume was only 2 years old. Hume's biographers mention no relatives or family friends who could have served as father figures.
> - *Baron d'Holbach*(1723–89): This French atheist became an orphan at age 13 and lived with his uncle.
> - *Ludwig Feuerbach* (1804–72): At age 13, his father left his family and took up living with another woman in a different town.
> - Karl Marx(1818–83): Marx's father, a Jew, converted to being a Lutheran under pressure — not out of any religious conviction. Marx, therefore, did not respect his father.
> - *Friedrich Nietzsche*(1844–1900): He was 4 when he lost his father.
> - *Sigmund Freud*(1856–1939): His father, Jacob, was a great disappointment to him; his father was passive and weak. Freud also mentioned that his father was a sexual pervert and that his children suffered for it.
> - *Bertrand Russell*(1872–1970): His father died when he was 4.
> - *Albert Camus*(1913–60): His father died when he was 1 year old, and in his autobiographical novel The First Man, his father is the central figure preoccupation of his work.
> - *Jean-Paul Sartre*(1905–80): The famous existentialist's father died before he was born.[12]
> - *Madeleine Murray-O'Hair* (1919–95): She hated her father and even tried to kill him with a butcher knife.
> - We could throw in a few more prominent contemporary atheists not mentioned by Vitz with similar childhood challenges:
> - *Daniel Dennett* (1942–): His father died when he was 5 years of age and had little influence on Dennett.[13]
> - *Christopher Hitchens* (1949–): His father ("the Commander") was a good man, according to Hitchens, but he and Hitchens "didn't hold much converse." Once having "a respectful distance," their relationship took on a "definite coolness" with an "occasional thaw." Hitchens adds: "I am rather barren of paternal recollections."[14]
> - *Richard Dawkins* (1941–): Though encouraged by his parents to study science, he mentions being molested as a child — no insignificant event, though Dawkins dismisses it as merely embarrassing.[15]

> Moreover, Vitz's study notes how many prominent *theists* in the past — such as Blaise Pascal, G.K. Chesterton, Karl Barth, and Dietrich Bonhoeffer — have had in common a loving, caring father in their lives.[16]

Not only is there that anecdotal evidence, but there is also statistical evidence.

Excerpt:

> In 1994 the Swiss carried out an extra survey that the researchers for our masters in Europe (I write from England) were happy to record. The question was asked to determine whether a person's religion carried through to the next generation, and if so, why, or if not, why not. The result is dynamite. There is one critical factor. It is overwhelming, and it is this: It is the religious practice of the father of the family that, above all, determines the future attendance at or absence from church of the children.
>
> If both father and mother attend regularly, 33 percent of their children will end up as regular churchgoers, and 41 percent will end up attending irregularly. Only a quarter of their children will end up not practicing at all. If the father is irregular and mother regular, only 3 percent of the children will subsequently become regulars themselves, while a further 59 percent will become irregulars. Thirty-eight percent will be lost.
>
> If the father is non-practicing and mother regular, only 2 percent of children will become regular worshippers, and 37 percent will attend irregularly. Over 60 percent of their children will be lost completely to the church.
>
> Let us look at the figures the other way round. What happens if the father is regular but the mother irregular or non-practicing? Extraordinarily, the percentage of children becoming regular goes*up*from 33 percent to 38 percent with the irregular mother and to 44 percent with the non-practicing, as if loyalty to father's commitment grows in proportion to mother's laxity, indifference, or hostility.
>
> […]In short, if a father does not go to church, no matter how faithful his wife's devotions, only one child in 50 will become a regular worshipper. If a father does go regularly, regardless of the practice of the mother, between two-thirds and three-quarters of their children will become churchgoers (regular and irregular). If a father goes but irregularly to church, regardless of his wife's devotion, between a half and two-thirds of their offspring will find themselves coming to church regularly or occasionally.
>
> A non-practicing mother with a regular father will see a minimum of two-thirds of her children ending up at church. In contrast, a non-practicing father with a regular mother will see two-thirds of his children never darken the church door. If his wife is similarly negligent that figure rises to 80 percent!
>
> The results are shocking, but they should not be surprising. They are about as politically incorrect as it is possible to be; but they simply confirm what psychologists, criminologists, educationalists, and traditional Christians know. You cannot buck the biology of the created order. Father's influence, from the determination of a child's sex by the implantation of his seed to the funerary rites surrounding his passing, is out of all proportion to his allotted, and severely diminished role, in Western liberal society.

Basically, anyone who doesn't have a benevolent, involved father is going to have an enormously difficult time believing that moral boundaries set by an authority are for the benefit of the person who is being bounded. The best way to make moral boundaries stick is to see that they apply to the person making the boundaries as well – and that these moral boundaries are rational, evidentially-grounded and not arbitrary. It is therefore very important to children to be shepherded by a man who studied moral issues (including evidence from outside the Bible) in order to know how to be persuasive to others. If you want your child to be religious and moral, you have to pick a man who is religious and moral. And it can't just be a faith commitment that he makes, he can just lie about that. Women ought to check whether men are bound to what they believe by checking what they've read. A man usually acts consistently with what he believes, and beliefs only get formed when a man informs himself through things like reading.

A child's relationship with God begins before he/she is even born. It begins with his/her mother's ability to control

herself and choose the right man for the job of being a father. Note that superficial qualities like “deep voice”, “broad shoulders”, “expensive shoes”, “likes dogs” and “makes me laugh” have no bearing on a man’s ability to commit and lead on moral/spiritual issues. Christians don’t really do a good job of showing the practical consequences of bad choices to women in the church. The ones I talk to impress on me how “unpredictable” men are, so that they are justified in choosing one that they like based on tingles, and hoping it will work out. We should be telling women that poor choices with men are wrong, and it leads to fatherlessness and abortion.

# New York Democrats object to having their wealth redistributed by Obamacare

**Wintery Knight** · 16 December 2013 · Archived copy · Original

From the radically leftist New York Times, of all places. (H/T Just One Minute via Ari)

Here's the problem:

> Many in New York's professional and cultural elite have long supported President Obama's health care plan. But now, to their surprise, thousands of writers, opera singers, music teachers, photographers, doctors, lawyers and others are learning that their health insurance plans are being canceled and they may have to pay more to get comparable coverage, if they can find it.
>
> They are part of an unusual, informal health insurance system that has developed in New York, in which independent practitioners were able to get lower insurance rates through group plans, typically set up by their professional associations or chambers of commerce. That allowed them to avoid the sky-high rates in New York's individual insurance market, historically among the most expensive in the country.
>
> But under the Affordable Care Act, they will be treated as individuals, responsible for their own insurance policies. For many of them, that is likely to mean they will no longer have access to a wide network of doctors and a range of plans tailored to their needs. And many of them are finding that if they want to keep their premiums from rising, they will have to accept higher deductible and co-pay costs or inferior coverage.

And here's the yummy, yummy schadenfreude:

> "I couldn't sleep because of it," said Barbara Meinwald, a solo practitioner lawyer in Manhattan.
>
> Ms. Meinwald, 61, has been paying $10,000 a year for her insurance through the New York City Bar. A broker told her that a new temporary plan with fewer doctors would cost $5,000 more, after factoring in the cost of her medications.
>
> Ms. Meinwald also looked on the state's health insurance exchange. But she said she found that those plans did not have a good choice of doctors, and that it was hard to even find out who the doctors were, and which hospitals were covered. "It's like you're blindfolded and you're told that you have to buy something," she said.
>
> […]"We are the Obama people," said Camille Sweeney, a New York writer and member of the Authors Guild. Her insurance is being canceled, and she is dismayed that neither her pediatrician nor her general practitioner appears to be on the exchange plans. What to do has become a hot topic on Facebook and at dinner parties frequented by her fellow writers and artists.
>
> "I'm for it," she said. "But what is the reality of it?"

Man, I love the taste of the liberal tears on a cold Monday morning. It tastes like… victory (in 2014). What is the reality of it? Maybe if you stopped reading the New York Times, you would know the reality of it.

Well why are healthy people with $10,000 New York policies losing their coverage? Did those policies not provide free contraceptives? Not at all:

> The predicament is similar to that of millions of Americans who discovered this fall that their existing policies were being canceled because of the Affordable Care Act.
>
> **[…]But while those policies, by and large, had been canceled because they did not meet the law's requirements for minimum coverage, many of the New York policies being canceled meet and often exceed the standards, brokers say. The rationale for disqualifying those policies, said Larry Levitt, a**

> **health policy expert at the Kaiser Family Foundation, was to prevent associations from selling insurance to healthy members who are needed to keep the new health exchanges financially viable.**
>
> **Siphoning those people, Mr. Levitt said, would leave the pool of health exchange customers "smaller and disproportionately sicker," and would drive up rates.**

I must have written over a 100 posts warning people about the effects of Obamacare from 2009 to November of 2012, and no Democrats would listen to me. Well, now they know what conservatives knew before the 2012 election. And just wait until the employer mandate hits and drives 129 million people of their existing health care plans by the end of 2014.

# Women selling their own virgin daughters into sex slavery in Cambodia

**Wintery Knight** · 16 December 2013 · Archived copy · Original

Nancy P. just posted this article from CNN on Facebook. I am working from home today while sick, so I'll leave it to you to reflect on this horror story.

Excerpt:

> When a poor family in Cambodia fell afoul of loan sharks, the mother asked her youngest daughter to take a job. But not just any job.
>
> The girl, Kieu, was taken to a hospital and examined by a doctor, who issued her a "certificate of virginity." She was then delivered to a hotel, where a man raped her for two days.
>
> Kieu was 12 years old.
>
> "I did not know what the job was," says Kieu, now 14 and living in a safehouse. She says she returned home from the experience "very heartbroken." But her ordeal was not over.
>
> After the sale of her virginity, her mother had Kieu taken to a brothel where, she says, "they held me like I was in prison."
>
> She was kept there for three days, raped by three to six men a day. When she returned home, her mother sent her away for stints in two other brothels, including one 400 kilometers away on the Thai border. When she learned her mother was planning to sell her again, this time for a six-month stretch, she realized she needed to flee her home.
>
> "Selling my daughter was heartbreaking, but what can I say?" says Kieu's mother, Neoung, in an interview with a CNN crew that travelled to Phnom Penh to hear her story.
>
> […]Kieu's relative, Sephak, who lives nearby, is another survivor. (CNN is naming the victims in this case at the request of the girls themselves, as they want to speak out against the practice of child sex trafficking.)
>
> Sephak was 13 when she was taken to a hospital, issued a certificate confirming her virginity, and delivered to a Chinese man in a Phnom Penh hotel room. She was returned after three nights. Sephak says her mother was paid $800.
>
> "When I had sex with him, I felt empty inside. I hurt and I felt very weak," she says. "It was very difficult. I thought about why I was doing this and why my mom did this to me." After her return, her mother began pressuring her daughter to work in a brothel.
>
> […]Not far away from Sephak's family home, connected to the shore via a haphazard walkway of planks that dip beneath the water with each footfall, is the houseboat where Toha grew up.
>
> The second of eight children, none of whom attend school, Toha was sold for sex by her mother when she was 14. The transaction followed the same routine: medical certificate, hotel, rape.
>
> About two weeks after she returned to Svay Pak, she says, the man who had bought her virginity began calling, requesting to see her again. Her mother urged her to go. The pressure drove her to despair.
>
> "I went to the bathroom and cut my arms. I cut my wrists because I wanted to kill myself," Toha says. A friend broke down the door to the bathroom and came to her aid.
>
> […]**On her houseboat, as squalls of rain lash the river, Toha's mother Ngao sits barefoot before the television taking pride of place in the main living area, and expresses similar regrets. On the wall hangs a row of digitally enhanced portraits of her husband and eight children. They are dressed in smart suits and dresses, superimposed before an array of fantasy backdrops: an expensive motorcycle, a tropical beach, an American-style McMansion.**

> Life with so many children is hard, she says, so she asked her daughter to go with the men.
>
> She would not do the same again, she says, as she now has access to better support; Agape International Missions offers interest-free loan refinancing to get families out of the debt trap, and factory jobs for rescued daughters and their mothers.

"Toha's mother Ngao sits barefoot before the television". Televeision? I have no words for this selfishness. Eight children? I don't have any children, and have not even had any sex! This catastrophe is a result of the decisions of that wife and husband. If you live in a poor country, you have to have self-control about sex. It's not too much to ask, I'm doing it myself, for goodness' sake. Agape International Missions sounds curiously like a Christian charity organization. I'm not surprised.

People sometimes ask me why people become atheists, and I think I can understand why the people who did this to their daughter, and the men who raped her, would not want to be held accountable by a just and Holy God in the afterlife. After all, if atheism is true, then the people who wronged this young woman won't be held accountable. On atheism, right and wrong are just cultural conventions that vary by time and place. If you can get away with doing these things in your society, because it's not forbidden or because you are clever and strong enough to not get caught, then there is nothing stopping you from doing that. If you feel like not doing it, fine. If you feel like doing it, fine. Other humans are just random collections of atoms coughed up accidentally by evolution in an accidental universe. They have no human rights, because there are no such things in a materialistic universe. Atheists who speak about morality are writing checks that will bounce when cashed against their worldview. They can't help themselves to notions that are not rationally grounded by their worldview, and we should hold them accountable.

That's the scary thing about atheists. They have no way to condemn what's going on here, because this is normal in that society. They think that raping little children is not objectively wrong. It is OK in some times and places, and not OK in others. There is no standard that exists objectively that they can appeal to to say how humans ought to behave. They look at something like this story and think to themselves "that might be OK for you in your society, but it's not OK for me. But I will have an abortion though, because that's ok for me when and where I am". I can't believe that there are people in the world who look around at things like this and cannot apprehend the objective moral law, but maybe, like the people who hurt that girl, they have reasons for not wanting to acknowledge it. I can guarantee you this. Neither that woman, nor her husband, nor the men who raped her want to see God in the face when they die. For them, this life is all there is, of necessity. Scary.

According to one page I looked at, 95% of Cambodians are Theravada Buddhists, which is atheistic. This place is an atheist paradise. This is what the Freedom From Religion Foundation dreams about. Funny that they don't move there and stop suing Christians for putting up nativity scenes here.

# Video, audio and summary of Wiliam Lane Craig vs Peter Millican debate

**Wintery Knight** · 16 December 2013 · Archived copy · Original

Video:

Audio:

Description from the Youtube upload:

> This debate on "Does God Exist?" took place in front of a capacity audience at the Great Hall, University of Birmingham. It was recorded on Friday 21st October 2011 as part of the UK Reasonable Faith Tour with William Lane Craig.
>
> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology, La Mirada, California and a leading philosopher of religion. Peter Millican is Gilbert Ryle Professor of Philosophy at Hertford College, University of Oxford and a noted scholar in studies of Hume.
>
> The debate was hosted by the University of Birmingham Student Philosophy Society, and the debate was moderated by Professor Carl Chinn.

Dr. Millican proved to be an amazing debater, and that allowed Dr. Craig to show the full range of his talents in a way that he has never done before. This was a great debate – right up there with Craig's two debates against Austin Dacey and Paul Draper. Dr. Millican is excellent at analytical philosophy, had studied cosmology and physics, and he came prepared to answer Craig's arguments. There is NO SNARK in my debate summary below, out of respect for Dr. Millican. However, I haven't proof-read it, so please do point out any errors. There is about 30 minutes of Q&A time at the end.

And if you like my summary, check out another summary by J.W. Wartick.

**Dr. Craig's opening speech:**

There are good reasons to believe that God exists.

There are no good reasons to believe that God does not exist.

A1) The origin of the universe

1. The universe began to exist
2. If the universe began to exist, then the universe has a transcendent cause.
3. The universe has a transcendent cause.

The origin of the universe is confirmed by philosophical arguments and scientific evidence.

There cannot be an actual infinite number of past events, because mathematical operations like subtraction and division cannot be applied to actual infinities.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, cannot be eternal into the past.

Even speculative alternative cosmologies do not escape the need for a beginning.

The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

A2) The fine-tuning of the universe

1. The fine-tuning of the universe is either due to law, chance or design.
2. It is not due to law or chance.
3. Therefore, it is due to design.

The progress of science has revealed that the Big Bang was fine-tuned to allow for the existence of intelligent life.

Type 1: Constants like the gravitational constant are finely-tuned, and are not dependent on the laws of physics.

Type 2: Quantities like the amount of entropy in the universe, are not dependent on the laws of physics.

The range of life-permitting values is incredibly small compared to the possible values of the constants and quantities. (Like having a lottery with a million black balls and one white ball, and you pick the white ball. Even though each individual ball has the same tiny chance of being picked, but the odds are overwhelming that the whichever ball you pick will be black, and not white).

Not only are the numbers not due to laws, but they are not due to chance either. It's not just that the settings are unlikely, it's that they are unlikely and they conform to an independent pattern – namely, the ability to support complex life.

A3) The moral argument

1. If God does not exist, then objective moral values do not exist.
2. Objective morality does exist.
3. Therefore, God exists.

Objective moral values are values that exist independently of whether any humans believe them or not.

Michael Ruse, an atheist philosopher agrees that if God does not exist, then there is only a "herd morality" that is determined by biological evolution and social evolution. There no objective moral standard, just different customs and conventions that vary by time and place. Anyone who acts against the herd morality is merely being unfashionable and unconventional. On the atheistic view, there is nothing objective and binding about this evolved "herd morality". However, people do experience objective moral values, and these cannot be grounded on atheism.

Furthermore, God must exist in order to argue that there is evil in the world. In order to be able to make a distinction between good and evil that is objective, there has to be a God to determine a standard of good and evil that is binding regardless of the varying customs and conventions of different people groups. Even when a person argues against God's existence by pointing to the "evil" in the world, they must assume objective moral values, and a God who grounds those objective moral values.

A4) The resurrection of Jesus.

1. There are certain minimal facts that are admitted by the majority of historians, across the ideological spectrum: the empty tomb, the appearances and the early belief in the resurrection.
2. Naturalistic attempts to explain these minimal facts fail.
3. The best explanation of these facts is that Jesus rose from the dead.

A5) Religious experience

People can know that God exists through experience. In the absence of defeaters for these experiences, these experiences constitute evidence for God's existence.

**Dr. Millican's opening speech:**

Dr. Craig has the burden of proof because he claims that God exists.

The Christian God hypothesis:

1. An omnipotent, omniscient, omnibenevolent God created the universe.
2. This God cares about humans.
3. This God has acted in history though the life of Jesus of Nazareth.

This is a factual claim, and we are discussing the evidence for whether these claims are true or false. We are not interested in religious practice, or the consolation of religious belief, nor any other religions.

A1) Religious pluralism and epistemology

Human beings are purpose-finding creatures – we are prone to prefer explanations that involve purpose.

Human beings are pattern-finding animals – we tend to find designs in states of affairs.

Human beings have an interest in maintaining religious hierarchies because of the power it gives them.

Religious beliefs are not determined by rational considerations, but are determined by geographic location.

The same non-scientific method of generating religious beliefs (purpose-finding, pattern-finding, geographic location, parental teaching, charismatic speakers, praise songs and worship, religious education, ancient holy books) is being used in several religions, and it leads to different, contradictory truth claims. So at least some of those conflicting claims are false. And if the method is generating some false claims, then it's not a good method, and it undermines all the religions that use those methods.

A2) Absence of evidence is evidence of absence

There is no scientific evidence for God.

A3) Mental processes depend on physical systems

There is no scientific evidence for a disembodied intelligence.

Our universal human experience is that intelligence and mental operations require a physical brain.

The quality of our thinking depends on physical conditions, like being tired or on drugs.

But Christian theists believe that mental processes can exist independently of an underlying physical reality, unimpaired by the death of the physical body and the brain.

R.A1) The origin of the universe

1. There is no evidence that whatever begins to exist requires a cause. All the evidence we have of things beginning to exist are when something is created from rearrangements of other things that already existed.

The closest analog we have to something coming into being from nothing is quantum particles coming into being from nothing, and that causation is random.

There is no evidence that thoughts can bring about physical effects, and Bill is arguing for a mental cause to the origin of the universe.

Even if things that begin to exist IN the universe have causes, it doesn't hold for the universe as a whole. Bill is committing the fallacy of composition.

Time begins with the universe, but our experience of causation is that it is a temporal process. So if there is no time "prior to" the universe's beginning, then how can there be a cause to the universe?

It's possible that there could be something outside our universe that is eternal.

It's also possible that the Big Bang could be wrong, and this universe could oscillate eternally and not require a beginning.

2. There are cosmological theories that avoid the beginning of the universe by positing a prior period of contraction prior to the Big Bang.

The beginning of this universe depends on general relativity, and that theory breaks down at the level of quantum mechanics.

3. There is no evidence that minds can exist without an underlying physical system. So even if there is a cause of the universe, then it is neither an abstract object nor a mind. It would have to be something else, and not something we are familiar with – we are just not in a position to speculate of what it could be.

R.A3) The moral argument

Atheists do believe in a standard of morality that is not based on what groups of humans believe.

Utilitarians think there is a standard of moral values that is objective, because the measure of human happiness (for the greatest number) is objective, even if people are mistaken about what promotes that happiness.

Kantians have a rational process for determining which moral imperatives should be universalized.

Humeans have a system that is rooted in natural human sentiment.

**Dr. Craig's first rebuttal:**

I do not have the only burden of proof. The topic is "Does God Exist?". If Dr. Millican answers "no" then he has a burden of proof, otherwise we are left with agnosticism.

R.A1) Religious pluralism and epistemology

First, there is no single common method of adopting a religion.

Second, MY method this evening is logic and evidence and personal experience – which is the same as his method. So his comments about how people in different religions adopt their religion through parents, church, singing, etc. have no bearing on the arguments I will be making.

R.A2) Absence of evidence is evidence of absence

Absence of evidence is only evidence of absence if we can reasonably expect that there should be some evidence that is not present. He would have to show that there should be more evidence for God's existence that the 5 arguments that I already presented – something that we should expect to see that we don't see.

R.A3) Mental processes depend on physical systems

No response by Dr. Craig. (but see below)

A1) The origin of the universe

1. He says that there are speculative cosmologies like the multiverse that escape the need for a beginning, but that's false, the BGV proof applies to them, and they do need a beginning.

He says that you can escape BGV by positing a contraction prior to the expansion. However Vilenkin says that any contraction phase is unstable and would introduce additional singularities that would hamper any later expansion phase.

He  says that we need a theory of quantum gravity in order to describe the early universe. But Vilenkin says that the BGV proof is independent of gravity as defined by general relativity.

He did not respond to the philosophical arguments for a beginning of the universe.

2. He says that we don't have experience of things coming into being except from material causes. However, it would be even more difficult to explain the universe coming into being on atheism since you can't appeal to a material cause nor to an efficient cause. Even Hume recognizes that things can't pop into being without causes.

He talks about how in quantum physics virtual particles appear out of nothing. But that's false, because the quantum vacuum in which virtual particles appear is not nothing, it is a sea of subatomic particles and energy. Quantum physics is not an exception to the idea that things that come into being require a cause.

He mentions the fallacy of composition. But I am not saying that everything in the universe has a cause, therefore the universe as a whole has a cause. I am saying that non-being has no capacity to bring something into being. Non-Being doesn't even have the potential to bring something into being.

3. He says that there are no unembodied minds, so the cause of the universe can't be an unembodied mind. But the argument concludes that there is a non-material cause, and it can't be an abstract object, so it would have to be a mind.

In addition, we ourselves are unembodied minds. This is because physical objects cannot have the properties that minds have, like the property of having feelings.

Material conceptions of mind don't explain identity over time.

Material conceptions of mind don't explain free will.

Material conceptions of mind don't explain intentional states (thinking about something).

Material conceptions of mind don't explain mental causation.

The best explanation for our own first person experience of the mental realm is a substance dualism. We are non-material minds, and we can cause effects in the physical world. And God does the same thing. He is a mind, and he causes physical effects.

A2) He gave no response.

A3) He says that there are atheistic theories of morality that don't depend on the opinions of groups. But these theories all depend on the idea that human beings have instrinsic value – that they are the sorts of things to which moral considerations apply. Naturalism cannot ground this moral value – human beings are no more valuable any other animal.

Also, there are no objective moral obligations in naturalist systems of morality, because there is no one in authority to command them. Moral prescriptions require moral prescribers.

A4) He gave no response.

A5) He gave no response.

**Dr. Millican's first rebuttal:**

R.A2) The fine-tuning argument

We have to be careful not to judge what counts as finely-tuned through our intuitions.

We have to be careful about reasoning for a sample size of this one observable universe.

We don't really know about the full range of possibilities for these constants and quantities.

There might be other universes that we can't observe that aren't fine-tuned, and we just happen to be in the one that is fine-tuned.

The fine-tuning might be solved by future discoveries, like the inflationary cosmology removed some of the fine-tuning.

There might be a multiverse that we don't have evidence for right now.

We need to be careful about using science to prove God because science might change in the future.

The universe is very big and mysterious.

This argument doesn't prove that God is good. He could be evil = anti-God.

God created the universe inefficiently if his goal was to produce life.

God created the universe too big.

God created the universe too old.

God created too many galaxies and stars that are not hospitable to life.

If the universe were fine-tuned for life, then there should be more aliens.

If the universe were fine-tuned for life, then there are probably lots of alien civilizations. But then Jesus would have to appear to all of the aliens too.

R.A1) The origin of the universe

2. It's not a big deal that you can get multiple solutions to equations involving subtraction of actual infinities. For example, the equation 0 x y = 0 has many solutions for y, but that doesn't mean that multiplication doesn't work in the real world.

A2) Absence of evidence is evidence of absence

I would expect that there would be more evidence than there is.

R.A1) The origin of the universe

2. The BVG proof might be overturned by future scientific discoveries. We have no reason to be confident in current physics.

I agree that the quantum vacuum is something and not nothing, but it's similar to nothing.

We don't have any reason to believe that things that come into being require causes – except for our universal experience that this is always the case.

3. As to the cause of the universe coming into being, you said that it could only be an abstract object or a mind, and it can't be an abstract object because they don't cause effects, so it must be a mind. But there are all sorts of things we've never thought of that it could be other than a mind.

I agree that mental properties are not physical properties and that epiphenomenalism is incorrect. Physical objects can have "algorithmic properties" as well as physical properties, it doesn't mean that computers have minds.

**Dr. Craig's second rebuttal:**

R.A2) Absence of evidence is evidence of absence

He expressed his personal opinion that there should be more evidence, but that's not an argument.

God knows how people will respond to getting more evidence or less evidence and he has to be careful not to take away their free will to disbelieve by piling them up with coercive evidence. God's goal is not just to convince people that he exists. God's goal is to have people respond to him and pursue him.

A1) The origin of the universe

2. He said that multiple answers to equations are no problem. But the problem is that you can't translate multiple answers into a real world context.

The problem is that you are subtracting an identical number from an identical number and getting contradictory results, and that cannot be translated into the real world, where subtraction always gives a definite single result.

He talks about how you can get multiple answers with multiplication by 0. But 0 is not a real quantity, it is just the absence of something, and that cannot translate into the real world, because it has no being.

He says that I am only using evidence from current physics. But that is the point – the evidence of current physics and cosmology supports the beginning of the universe.

3. He said that an umembodied mind can't be the cause, but we are minds and we cause effects on our physical bodies.

In addition, the design argument supports the idea that the cause of the universe is intelligent.

A2) The fine-tuning of the universe

He says we should be cautious. Of course.

He says the probabilities can't be assessed. But you can just take the current value and perturb it and see that the resulting universe loses its ability to support life, and you can test an entire range around the current value to see that that vast majority of values in the range don't permit life.

He says that the current physics is not well-established, but there are so many examples of fine-tuning across so many different areas of science that it is not likely that all of them will be overturned, and the number of finely-tuned constants and quantities has been growing, not shrinking.

He says it doesn't prove that God is good, and he's right – that's what the moral argument is for.

He says that God isn't efficient enough, but efficiency is only important for those who have limited time and/or limited resources. But God has unlimited time and resources.

He says that the universe is too old, but the large age of the universe is a requirement to support intelligent life – (i.e. – you need third generation stars to provide a stable source of energy to planets, and those stars require that two generations of stars are born and die).

He said what about aliens, and theists are open to that, and God can certainly provide for the salvation of those beings, if they have fallen into sin.

**Dr. Millican's second rebuttal:**

R.A1) The origin of the universe

3. Just because epiphenominalism is false, it doesn't mean that substance dualism is true.

The majority of philosophers of mind do not accept substance dualism.

R.A3) The moral argument

The majority of philosophers are moral realists, but a minority of philosophers are theists. So that means that there must be some way of justifying morality on atheism, which I will not describe right now.

Atheists can express their opinion that humans have intrinsic moral value.

He grants that atheists can perceive moral values. But if atheists can perceive moral values, then why is God needed to enable that?

Atheists can express their opinion that humans are special. We can be rational, and that makes us special.

Atheists can express their opinion that it is good to care about other humans because they are of the same species.

R.A4) The resurrection of Jesus

We don't have any reasons to believe i the supernatural.

The gospels are written late for the purposes of evangelism.

The gospels are not independent, e.g. Matthew and Luke depend on Q.

John is the latest gospel, and the Christology of John is the highest of all.

The four gospels agree because the early church rejected other (unnamed) gospels that didn't agree.

Matthew 27 – the earthquake and the raised saints – is not recorded in any other contemporary non-Christian source.

**Dr. Craig's final rebuttal:**

A3) The moral argument

He says that human beings are rational, and that gives them value. But atheists like Sam Harris prefer the flourishing of sentient life. He includes non-rational animals as having moral value. So without God, we see that the choice of who or what has moral value is arbitrary. And where would objective moral duties come from if there is no moral lawgiver?

The fact that most atheists accept objective moral values doesn't mean that they can rationally ground those values on their atheistic worldview. You can't provide a basis for moral values on atheism by counting the number of atheists who accept objective morality. It's not surprising that atheists can perceive objective moral values IF they are living in auniverse created by God who grounds these objective moral values and duties that atheists perceive.

A4) The resurrection of Jesus

He cites Geza Vermes and Bart Ehrman as authorities on the historical Jesus, but both of them accept all three of the facts that I presented as minimal facts. Ehrman doesn't accept the resurrection of Jesus because he presupposes naturalism. He rejects the resurrection on philosophical grounds, not historical grounds.

**Dr. Millican's final rebuttal:**

R.A5) Religious experience

Religious experience is an unreliable way to test the claims of a religion, because lots of religions have them and they make contradictory truth claims. In the future, we may discover naturalistic ways of explaining religious experience.

R.A4) The resurrection of Jesus

Even if you can make a case for the resurrection based on these3  minimal facts, there are other stories in the New Testament like Matthew 27 that are quite weird and they undermine the 3 minimal facts that even Geza Vermes and Bart Ehrman accept.

R.A1) The origin of the universe

Bill hasn't shown that there is any reason for thinking that things don't come into being, uncaused, out of nothing.

A4) The problem of evil

Theists can't explain what God's specific morally sufficient reasons are for permitting the apparently gratuitous evil that we see.

# EPA climate change expert defrauded government of nearly $1 million in salary and benefits

**Wintery Knight** · 17 December 2013 · Archived copy · Original

From NBC News.

Excerpt:

> The EPA's highest-paid employee and a leading expert on climate change deserves to go to prison for at least 30 months for lying to his bosses and saying he was a CIA spy working in Pakistan so he could avoid doing his real job, say federal prosecutors.
>
> John C. Beale, who pled guilty in September to bilking the government out of nearly $1 million in salary and other benefits over a decade, will be sentenced in a Washington, D.C., federal court on Wednesday. In a newly filed sentencing memo, prosecutors said that his lies were a "crime of massive proportion" that were "offensive" to those who actually do dangerous work for the CIA.
>
> […]Until he retired in April after learning he was under federal investigation, Beale, an NYU grad with a masters from Princeton, was earning a salary and bonuses of $206,000 a year, making him the highest paid official at the EPA. He earned more money than Gina McCarthy, the agency's administrator and, for years, his immediate boss, according to agency documents.
>
> In September, Beale, who served as a "senior policy adviser" in the agency's Office of Air and Radiation, pled guilty to defrauding the U.S. government out of nearly $900,000 since 2000. Beale perpetrated his fraud largely by failing to show up at the EPA for months at a time, including one 18-month stretch starting in June 2011 when he did "absolutely no work," as Kern, Beale's lawyer, acknowledged in his court filing.
>
> **To explain his long absences, Beale told agency officials — including McCarthy — that he was engaged in intelligence work for the CIA, either at agency headquarters or in Pakistan. At one point he claimed to be urgently needed in Pakistan because the Taliban was torturing his CIA replacement, according to Sullivan.**
>
> **"Due to recent events that you have probably read about, I am in Pakistan," he wrote McCarthy in a Dec. 18, 2010 email. "Got the call Thurs and left Fri. Hope to be back for Christmas ….Ho, ho, ho."**
>
> **In fact, Beale had no relationship with the CIA at all. Sullivan, the EPA investigator, said he confirmed Beale didn't even have a security clearance. He spent much of the time he was purportedly working for the CIA at his Northern Virginia home riding bikes, doing housework and reading books, or at a vacation house on Cape Cod.**
>
> "He's never been to Langley (the CIA's Virginia headquarters)," said Sullivan. "The CIA has no record of him ever walking through the door."
>
> Nor was that Beale's only deception, according to court documents. In 2008, Beale didn't show up at the EPA for six months, telling his boss that he was part of a special multi-agency election-year project relating to "candidate security." He billed the government $57,000 for five trips to California that were made purely "for personal reasons," his lawyer acknowledged. (His parents lived there.) He also claimed to be suffering from malaria that he got while serving in Vietnam. According to his lawyer's filing, he didn't have malaria and never served in Vietnam. He told the story to EPA officials so he could get special handicap parking at a garage near EPA headquarters.

To really eliminate this kind of fraud, waste and corruption, the best thing to do is to shrink government. If they didn't have the money to pay people like Beale, then this wouldn't have happened. The public sector is always spending other people's money – taxpayer money. Never their own money. No public sector employee will be as

careful about how they are spending taxpayer money as they would be if it were their own money, or their private company's money. In the business world, if you do something like this, you go under. Fast. Because you have competitors who are happy to capitalize on your mistakes. No business can survive million dollar losses like this for long. The government can, because it just borrows more from your children.

# New study: parents of daughters more likely to become conservative

**Wintery Knight** · 17 December 2013 · Archived copy · Original

First, let's take a look at the study from the left-leaning Pew Research.

Excerpt:

> Two sociologists have found that parents who have daughters are more inclined to support the GOP and turn a cold shoulder to Democrats.
>
> In newly published findings that challenge earlier research, Dalton Conley of New York University and Emily Rauscher of the University of Kansas found that having more daughters than sons and having a daughter first "significantly reduces the likelihood of Democratic identification and significantly increases the strength of Republican Party identification."
>
> Not only is the daughter effect statistically significant, it's substantively large. They found that overall, "compared to those with no daughters, parents with all daughters are 14% less likely to identify as a Democrat….[and] 11% more likely to identify as a Republican than parents with no daughters," they write in the journal Sociological Forum.
>
> The daughters effect is considerably stronger among better educated and wealthier parents, they find. But among those farther down the socioeconomic ladder, it weakens to statistical insignificance.
>
> Their startling conclusions are based on data collected two decades ago from 661 respondents with biological children interviewed for the 1994 General Social Survey conducted by the University of Chicago's National Opinion Research Center. Even though this national trend study has been administered regularly since 1972, the 1994 survey is the only one that included questions about the sex and birth order of a respondent's biological children. (Surveys typically measure only whether a respondent has any children, including step-children and adopted children.)
>
> […]But why would having a daughter cause parents to become more Republican? The authors speculate that men and women might want more socially conservative policies when they have daughters and thus be more attracted to the GOP.

Ross Douthat wrote a column on Sunday in the ultra-leftist New York Times where he took a stab at explaining these findings.

Excerpt:

> But let me make a more limited, more personal argument on the subject. The next round of research may "prove" something completely different about daughters and voting behavior. But as a father of girls and a parent whose adult social set still overlaps with the unmarried, I do have a sense of where a daughter-inspired conservatism *might* come from, whatever political form it takes.
>
> It comes from thinking about their future happiness, and about a young man named Nathaniel P.
>
> This character, Nate to his friends, doesn't technically exist: He's the protagonist in Adelle Waldman's recent novel of young-Brooklynite manners, "The Love Affairs of Nathaniel P."
>
> But his type does exist, in multitudinous forms, wherever successful young people congregate, socialize, pair off. He's not the worst sort of guy by any means — not a toxic bachelor or an obnoxious pick-up artist. He's well intentioned, sensitive, mildly idealistic. Yet he's also a source of immense misery — both short-term and potentially lifelong — for the young women in his circle.
>
> "Contrary to what these women seemed to think," Waldman writes of Nathaniel P.'s flings and semi-steady

> girlfriends, “he was not indifferent to their unhappiness. And yet he seemed, in spite of himself, to provoke it.”
>
> He provokes it by taking advantage of a social landscape in which sex has been decoupled from marriage but biology hasn’t been abolished, which means women still operate on a shorter time horizon for crucial life choices — marriage, kids — than do men. In this landscape, what Nate wants — sex, and the validation that comes with being wanted — he reliably gets. But what his lovers want, increasingly, as their cohort grows older — a more permanent commitment — he can afford to persistently withhold, feeling guilty but not *that* guilty about doing so.
>
> Waldman’s portrait of Nate’s romantic life is sympathetic enough to have earned her fan mail from young men. But it’s precisely because Nate is sympathetic rather than toxic that the “Nathaniel P.” phenomenon — or what Rebecca Traister has dubbed “the scourge of indecisive men” — is a hard problem to escape. Indeed, it seems like one of the hidden taproots of well-educated women’s work-life-balance angst, and one of the plausible explanations for declining female happiness in a world of expanded female opportunity.
>
> And lurking in Waldman’s novel, as in many portraits of the dating scene (ahem, Lena Dunham, ahem), is a kind of moral traditionalism that dare not speak its name — or that can be spoken of only in half-jest, as when the novelist Benjamin Kunkel told Traister that the solution was “some sort of a sexual strike against just such men.”
>
> Because Kunkel is right: **One obvious solution to the Nathaniel P. problem is a romantic culture in which more is required of young men before the women in their lives will sleep with them.**
>
> To the extent that parents tend to see the next generation’s world through their children’s eyes, that’s an insight that’s more immediately available through daughters than through sons.

Does what he says ring true for you?

When I reflect on the women I know today, I find that they many fight against having to do things that are good if they don’t feel like doing them. Even simple things like reading a good book or playing a game together or watching a debate or saving money or paying off their debt is met with skepticism and rebellion. And what ends up happening is that rather than do what I would like them to do (which is often for their own good, and nothing for my benefit), they instead procrastinate and then blow small things out of all proportion as a way of trying to rationalize why they didn’t do it. It’s very difficult, in my experience, to get women to do even good things – like read a Lee Strobel book. They just rebel in most cases, because they don’t want to do anything that isn’t fun, no matter how good it is. It’s so hard to lead them.

So women are really struggling today with letting men lead them, even when the men are leading them in a good direction. I suspect that it’s because most women tend to get involved with men too early and destroy their ability to trust men with these failed relationships with men who are not even close to being ready for marriage. So how does a woman get attention from men if she doesn’t trust men to lead her? Well, she gives him sex. And what does the man learn from getting sex without having to first be seen by her as trustworthy? He learns not to work hard to appear to be worthy of trust. Specifically, he learns not to bother doing well in school, or doing well in work, or saving money, or being conservative on moral issues, or good at apologetics, or good at mentoring others, or giving some of what he earns to charity. There is no need to appear to be a good trustworthy person – he gets the sex without having to be. He’s not being measured for fit with any role, he’s just handed sex on a platter.

# William Lane Craig debates James Crossley: Did Jesus rise from the dead?

**Wintery Knight** · 17 December 2013 · Archived copy · Original

This is my favorite debate on the resurrection.

You can watch the debate here:

The MP3 file can be obtained from Apologetics 315.

There is not much snark in this summary, because Crossley is a solid scholar, and very fair with the evidence. He's also done debates with Richard Bauckham and Michael Bird. You have to respect him for getting out there and defending his views in public.

SUMMARY

**William Lane Craig's opening speech**

Two contentions:

- There are four minimal facts that are accepted by most historians
- The best explanation of the four minimal facts is that God raised Jesus from the dead

Contention 1 of 2:

Fact 1: The burial

- The burial is multiply attested
  - The burial is based on the early source material that Mark used for his gospel
  - Scholars date this Markan source to within 10 years of the crucifixion
  - The burial is also in the early passage in 1 Cor 15:3-8
  - So you have 5 sources, some of which are very early
- The burial is credited to a member of the Sanhedrin
  - the burial is probable because shows an enemy of the church doing right
  - this makes it unlikely to to be an invention

Fact 2: The empty tomb

- The burial story supports the empty tomb
  - the site of Jesus' grave was known
  - the disciples could not proclaim a resurrection if the body were still in it
  - the antagonists to the early Christians could have produced the body
- The empty tomb is multiple attested
  - it's mentioned explicitly in Mark
  - it's in the separate sources used by Matthew and John
  - it's in the early sermons documented in Acts
  - it's implied by 1 Cor 15:3-8, because resurrection requires that the body is missing
- The empty tomb was discovered by women
  - the testimony of women of women was not normally allowed in courts of law
  - if this story was being made up, they would have chosen male disciples
- The empty tomb discover lacks legendary embellishment

    - there is no theological or apologetical reflection on the meaning of the tomb
- The early Jewish response implies that the tomb was empty
    - the response was that the disciples stole the body
    - that requires that the tomb was found empty

Fact 3: The appearances to individuals and groups, some of the them hostile

- The list of appearances is in 1 Cor 15:3-8
    - this material is extremely early, withing 1-3 years after the cross
    - James, the brother of Jesus, was not a believer when he got his appearance
    - Paul was hostile to the early church when he got his appearance
- Specific appearances are multiply attested
    - Peter: attested by Luke and Paul
    - The twelve: attested by Luke, John and Paul
    - The women: attested by Matthew and John

Fact 4: The early belief in the resurrection emerged in a hostile environment

- There was no background belief in a dying Messiah
- There was no background belief in a single person resurrecting before the general resurrection of all of the righteous at the end of the age
- The disciples were willing to die for their belief in the resurrection of Jesus
- The resurrection is the best explanation for the transformation of the disciples from frightened to reckless of death

Contention 2 of 2:

- The resurrection is the best explanation because it passes C.B. McCullough's six tests for historical explanations
- None of the naturalistic explanations accounts for the minimal facts as well as the resurrection

**James Crossley's opening speech**

Appeals to the majority of scholars doesn't prove anything

- the majority of people in the west are Christians so of course there are a majority of scholars that support the resurrection
- there are Christian schools where denial of the resurrection can result in termination

The best early sources (1 Cor 15:3-8 and Mark) are not that good

1 Cor 15:3-8 doesn't support the empty tomb

- verse 4 probably does imply a bodily resurrection
- the passage does have eyewitnesses to appearances of Jesus
- but there are no eyewitnesses to the empty tomb in this source
- appearances occur in other cultures in different times and places
- Jesus viewed himself as a martyr
- his followers may have had hallucinations

Mark 16:1-8

- Mark is dated to the late 30s and early 40s

- The women who discover the tomb tell no one about the empty tomb

The gospels show signs of having things added to them

- Jewish story telling practices allowed the teller to make things up to enhance their hero
- one example of this would be the story of the earthquake and the people coming out of their graves
- that story isn't in Mark, nor any external sources like Josephus
- if there really was a mass resurrection, where are these people today?
- so this passage in Matthew clearly shows that at least some parts of the New Testament could involve
- what about the contradiction between the women tell NO ONE and yet other people show up at the empty tomb
- the story about Jesus commissioning the early church to evangelize Gentiles was probably added
- there are also discrepancies in the timing of events and appearances
- why are there explicit statements of high Christology in John, but not in the earlier sources?

**William Lane Craig's first rebuttal**

Crossley's response to the burial: he accepts it

Crossley's response to the empty tomb: he thinks it was made up

- rabbinical stories are not comparable to the gospel accounts
- the rabbinical stories are just anecdotal creative story-telling
- the gospels are ancient biographies – the genre is completely different
- the rabbinic miracle stories are recorded much later than the gospels
- the rabbi's legal and moral ideas were written down right away
- the miracle stories were written down a century or two later
- in contrast, the miracle stories about Jesus are in the earliest sources, like Mark
- the rabbinical stories are intended as entertainment, not history
- the gospels are intended as biography
- just because there are some legendary/apocalyptic elements in Matthew, it doesn't undermine things like the crucfixion that are historically accurate

Crossley's response to the evidence for the empty tomb:

- no response to the burial
- the empty tomb cannot be made up, it was implied by Paul early on
- the women wouldn't have said nothing forever – they eventually talked after they arrived to where the disciples were
- no response to the lack of embellishment
- no response to the early Jewish polemic

Crossley's response to the appearances

- he agrees that the first followers of Jesus had experiences where they thought Jesus was still alive

Crossley's response to the early belief in the bodily resurrection:

- no response about how this belief in a resurrection could have emerged in the absence of background belief in the death of the Messiah and the resurrection of one man before the general resurrection of all the righteous at the end of the age

What about Crossley's hallucination theory?

- Crossley says that the followers of Jesus had visions, and they interpreted these visions against the story of the Maccabean martyrs who looked forward to their own resurrections
- but the hallucination hypothesis doesn't account for the empty tomb
- and the Maccabean martyrs were not expecting the resurrection of one man, and certainly not the Messiah – so that story doesn't provide the right background belief for a hallucination of a single resurrected person prior to the end of the age
- if the appearances were non-physical, the disciples would not have applied the word resurrection – it would just have been a vision
- the visions could easily be reconciled with the idea that somehow God was pleased with Jesus and that he had some glorified/vindicated non-corporeal existence – but not resurrection
- not only that, the hallucination hypothesis doesn't even explain the visions, because there were visions to groups, to skeptics and to enemies in several places

What about the argument that only Christians accept the resurrection?

- it's an ad hominem attack that avoids the arguments

**James Crossley's first rebuttal**

Regarding the burial:

- I could be persuaded of that the burial account is accurate

Regarding the non-expectation of a suffering/dying Messiah:

- Jesus thought he was going to die
- this thinking he was going to die overturned all previous Messianic expectations that the Messiah wouldn't suffer or die
- the early Jews could easily reconcile the idea of a suffering, dead man killed by the Romans with the power of the all-powerful Messiah who supposed to reign forever
- no actually bodily resurrection would have to happen to get them to continue to identify an executed corpse with the role of Messiah

Regarding the belief in the bodily resurrection:

- it would be natural for Jews, who believed in a general resurrection of all the rigtheous dead at the end of the age, to interpret a non-physical vision of one man after he died as a bodily resurrection, even though no Jew had ever considered the resurrection of one man before the general resurrection before Jesus

Regarding the testimony of the women:

- Just because women were not able to testify in courts of law (unless there were no male witnesses), the early church might still invent a story where the women are the first witnesses
- first, the disciples had fled the scene, so only the women were left
- and it would have been a good idea for the early church to invent women as the first witnesses – the fact that they could not testify in court makes them ideal witnesses and very persuasive
- also, it's a good idea to invent women as witnesses, because the Romans had a rule that said that they never killed women, so they wouldn't have killed these women – Romans only ever kill men
- in any case, the first witness to the empty tomb is angel, so as long as people could talk to the angel as being the first witness, that's the best story to invent

Regarding the consensus of Christian scholars:

- I am not saying that Craig's facts are wrong, just that appealing to consensus is not legitimate
- he has to appeal to the evidence, not the consensus

Regarding my naturalistic bias:

- I don't know or care if naturalism is true, let's look at the evidence

Regarding the genre of the gospels:

- the creative story-telling is common in all genres, it's not a genre in itself
- stuff about Roman emperors also has creative story-telling

Regarding the legendary nature of the empty tomb in Mark:

- First, Christians interpreted the visions as a bodily resurrection
- Second, they invented the story of the empty tomb to go with that interpretation
- Third, they died for their invention

**William Lane Craig's second rebuttal**

The burial:

- Bill's case doesn't need to know the specifics of the burial, only that the location was known
- the location is important because it supports the empty tomb
- to proclaim a resurrection, the tomb would have to be empty
- a tomb with a known location is easier to check

The empty tomb:

- creative story telling was common in Judaism: retelling OT stories (midrash), romances/novels, rabbinical anecdotes
- but the gospels are none of these genres – the gospels are ancient biographies
- Craig also gave five arguments as to why the tomb was empty
- the burial story supports the empty tomb
- there is multiple *independent* attestation, then it cannot be a creative fiction invented in Mark alone
- the witnesses were in Jerusalem, so they were in a position to know
- regarding the women, even though Jesus respected the women, their testimony would not be convincing to *others*, so why invent a story where they are the witnesses
- the male disciples did not flee the scene, for example, Peter was there to deny Jesus three times
- if the story is made up, who cares what the male disciples did, just invent them on the scene anyway
- the angel is not authoritative, because the angel cannot be questioned, but the women can be questioned
- there was no response on the lack of embellishment
- there was no response to the earliest Jewish response implying that the tomb was empty

The appearances:

- we agree on the appearances

The early belief in the resurrection:

- he says that Jesus predicted his own death

- yes, but that would only cause people to think that he was a martyr, not that he was the messiah – something else is needed for them to keep their believe that he was the Messiah even after he died, because the Messiah wasn't supposed to die
- and of course, there was no expectation of a single person rising from the dead before the general resurrection, and certainly not the Messiah

The consensus of scholars:

- Jewish scholars like Geza Vermes and Pinchas Lapide accept these minimal facts like the empty tomb, it's not just Christian scholars

Against Crossley's hallucination hypothesis:

- it doesn't explain the empty the tomb
- it doesn't explain the early belief in the resurrection
- hallucinations would only lead to the idea that God had exalted/glorified Jesus, not that he was bodily raised from the dead
- the hallucination theory cannot accommodate all of the different kinds of appearances; individual, group, skeptic, enemy, etc.

The pre-supposition of naturalism:

- if Crossley is not committed to naturalism, then he should be open to the minimal facts and to the best explanation of those facts
- the hallucination hypothesis has too many problems
- the resurrection hypothesis explains everything, and well

**James Crossley's second rebuttal**

Religious pluralism:

- well, there are lots of other religious books
- those other religious books have late sources, and are filled with legends and myths, and no eyewitness testimony
- so why should we trust 1 Cor 15 and the early source for Mark and the other early eyewitness testimony in the New Testament?
- if other religious books can be rejected for historical reasons, then surely the New Testament can be rejected for historical reasons

Genre:

- the genre of ancient biography *can* incorporate and commonly incorporates invented legendaryt story-telling
- this is common in Roman, Greek and Jewish literature and everyone accepts that

Empty tomb: multiple attestation

- ok, so maybe the empty tomb is multiply attested, but that just gets back to a belief, not to a fact
- multiple attestation is not the only criteria, and Craig needs to use the other criteria to make his case stronger

Empty tomb: invented

- if there is a belief in the resurrection caused by the visions, then the empty tomb would have to be invented
- why aren't there more reliable stories of people visiting the empty tomb in more sources?

Empty tomb: role of the women

- there are women who have an important role in the Bible, like Judith and Esther
- Mark's passage may have used women who then kept silent in order to explain why no one knew where the empty tomb was
- if the fleeing of the men is plausible to explain the women, then why not use that? why appeal to the supernatural?
- we should prefer any explanation that is naturalistic even if it is not as good as the supernatural explanation at explaining everything

Empty tomb: embellishment

- well there is an angel there, that's an embellishment
- anyway, when you say there is no embellishment, what are you comparing it to that makes you say that?

Appearances: anthropology

- I've read anthropology literature that has some cases where people have hallucinations as groups

Appearances: theology

- the hallucinations would not be interpreted against the background theological beliefs that ruled out the resurrection of one man before then general resurrection of all the righteous dead
- these hallucinations could have been so compelling that they made the earliest Christians, and skeptics like James, and enemies like the Pharisee Paul abandon all of their previous background beliefs, proclaim the new doctrine of a crucified and resurrected Messiah which no one had ever expected, and then gone on to die for that belief
- the hallucinations could have changed all of their theology and reversed all of their beliefs about the what the word resurrection meant

**William Lane Craig's conclusion**

Supernaturalism:

- None of the four facts are supernatural, they are natural, and ascertained by historians using normal historical methods
- the supernatural part only comes in after we decide on the facts when we are deciding which explanation is the best
- a tomb being found empty is not a miraculous fact

Genre:

- the gospels are not analagous to these rabbinical stories, the purpose and dating is different

Empty tomb:

- what multiple attestation shows is that it was not made-up by Mark
- and the argument was augmented with other criteria, like the criterion of embarrassment and the criterion of dissimilarity
- Judith and Esther are very rare exceptions, normally women were not viewed as reliable witnesses
- if the story was invented, whatever purpose the inventors had would have been better served by inventing male witnesses
- Craig grants that the angel may be an embellishment for the sake of argument, but there are no other embellishments

- the real embellishments occur in forged gnostic gospels in the second and third centuries, where there are theological motifs added to the bare fact of the empty tomb (e.g. – the talking cross in the Gospel of Peter)
- he had no response to the earliest jewish response which implied an empty tomb

Belief in the resurrection:

- there was no way for Jewish people to interpret an appearance as a bodily resurrection before the end of the world, they did not expect that
- they could have imagined exaltation, but not a bodily resurrection

**James Crossley's conclusion**

Supernatural explanation:

- as long as there is any other other possible naturalistic explanation, we should prefer that, no matter how unlikely

Creative stories:

- some of these creative stories appear within the lifetimes of the people connected to the events (none mentioned)

Embellishment:

- you should compare to earlier stories when looking for embellishments, not later
- and we don't have any earlier sources, so we just don't know the extent of the embellishment

Jewish response:

- they probably just heard about the empty tomb, and didn't check on it, then invented the stole-the-body explanation without ever checking to see if the tomb was empty or not

# Why did the Colorado shooting only last 80 seconds? Answer: ARMED GUARD

**Wintery Knight** · 18 December 2013 · Archived copy · Original

Only the Christian Science Monitor reported this part about the armed guard. (H/T IJReview)

Excerpt: (links removed)

> As they investigate the latest school shooting in the United States – Friday at Arapahoe High School in Centennial, Colo. – one thing is clear to law enforcement officials there: The presence of an armed deputy sheriff on regular duty at the school was the key factor in preventing more deaths and injuries.
>
> As soon as he heard the first of five gunshots, that officer and the two school administrators he was talking to raced toward the commotion shouting their presence and ordering students and staff to follow the school's lock-down protocol.
>
> As a result, Arapahoe County Sheriff Grayson Robinson said at a briefing Saturday afternoon, the heavily-armed shooter realized he was about to be confronted by an armed officer, and he took his own life.
>
> "We believe that that action was absolutely critical to the fact that we didn't have more deaths and injuries," Sheriff Robinson said. The whole episode – from the time the shooter entered the school until he shot himself – lasted just one minute and 20 seconds.

I didn't find any other mainstream sources that mentioned the ARMED GUARD. CNN mentioned deputy sheriff, but they couldn't bring themselves to say that he was armed. The way the article was written, merely running towards the shooter was enough to stop him from killing people.

# Karl Pierson was a pro-abortion, anti-gun, anti-war socialist Democrat

**Wintery Knight** · 18 December 2013 · Archived copy · Original

In other news, the shooter was a self-proclaimed socialist, as reported by the Denver Post.

Excerpt:

> **Pierson's parents divorced in late 2011, according to court records.** The divorce was finalized in August 2012.
>
> Thomas Conrad, who had an economics class with Pierson, described him as very opinionated.
>
> "He was exuberant, I guess," Conrad said. "A lot of people picked on him, but it didn't seem to bother him."
>
> **In one Facebook post, Pierson attacks the philosophies of economist Adam Smith, who through his invisible-hand theory pushed the notion that the free market was self-regulating. In another post, he describes himself as "Keynesian."**
>
> "I was wondering to all the neoclassicals and neoliberals, why isn't the market correcting itself?" he wrote. "If the invisible hand is so strong, shouldn't it be able to overpower regulations?"
>
> **Pierson also appears to mock Republicans on another Facebook post, writing "you republicans are so cute" and posting an image that reads: "The Republican Party: Health Care: Let 'em Die, Climate Change: Let 'em Die, Gun Violence: Let 'em Die, Women's Rights: Let 'em Die, More War: Let 'em Die. Is this really the side you want to be on?"**
>
> Carl Schmidt and Brendon Mendelson, both seniors at Arapahoe High, knew Pierson. They said he had political views that were "outside the mainstream," but they did not elaborate.

That might explain why the mainstream media in general didn't want to get into his motivations too much. Makes their own ideology look bad. It's hard for them to report on these things accurately, isn't it? Can't report on the armed guard. That makes self-defense look viable. Can't report on the socialism, because that makes Democrats look bad. Let's just say nothing and hope people think that he was a Tea Party person. That's journalism! Whatever fits, they print.

In fact, these shooters are almost always secularists, leftists or secular leftists. See below for past stories.

# Want to stop school shootings? Then strengthen the institution of marriage

**Wintery Knight** · 18 December 2013 · Archived copy · Original

I am sort of lukewarm on W. Bradford Wilcox, because I think he's a moderate to left person, but this article in National Review is pretty good.

Excerpt: (links removed)

> Another shooting, another son of divorce. From Adam Lanza, who killed 26 children and adults a year ago at Sandy Hook School in Newtown, Conn., to Karl Pierson, who shot a teenage girl and killed himself this past Friday at Arapahoe High in Centennial, Colo., one common and largely unremarked thread tying together most of the school shooters that have struck the nation in the last year is that they came from homes marked by divorce or an absent father. From shootings at MIT (i.e., the Tsarnaev brothers) to the University of Central Florida to the Ronald E. McNair Discovery Learning Academy in Decatur, Ga., nearly every shooting over the last year in Wikipedia's "list of U.S. school attacks" involved a young man whose parents divorced or never married in the first place.
>
> […]The social scientific evidence about the connection between violence and broken homes could not be clearer. My own research suggests that boys living in single mother homes are almost twice as likely to end up delinquent compared to boys who enjoy good relationships with their father. Harvard sociologist Robert Sampson has written that "Family structure is one of the strongest, if not the strongest, predictor of variations in urban violence across cities in the United States." His views are echoed by the eminent criminologists Michael Gottfredson and Travis Hirschi, who have written that "such family measures as the percentage of the population divorced, the percentage of households headed by women, and the percentage of unattached individuals in the community are among the most powerful predictors of crime rates."
>
> Why is fatherlessness such a big deal for our boys (almost all of these incidents involve boys)? Putting the argument positively, sociologist David Popenoe notesthat "fathers are important to their sons as role models. They are important for maintaining authority and discipline. And they are important in helping their sons to develop both self-control and feelings of empathy toward others, character traits that are found to be lacking in violent youth." Boys, then, who did not grow up with an engaged, attentive, and firm father are more vulnerable to getting swept up in the Sturm und Drang of adolescence and young adulthood, and in the worst possible way.

In previous posts, I have argued that it is women who need to be thinking about how children need fathers, and to be more careful about evaluating and selecting men who can do the jobs that men do in marriage. Protecting, providing, moral/spiritual leading.

It probably would also be a good idea to roll back policies that weaken and redefine marriage. I don't just mean same-sex marriage. I mean no-fault divorce, and the normalization of premarital sex. Basically, anything that weakens the stability of marriage and the male-female fit inherent in marriage ought to be shamed and opposed. Children need mothers and fathers. We shouldn't be promoting or subsidizing any behavior or lifestyle that encourages people to have children (on purpose or accidentally) outside of a carefully-considered marriage relationship.

# Kenosis and the doctrine of the Incarnation in Philippians 2:5-11

**Wintery Knight** · 19 December 2013 · Archived copy · Original

It's almost Christmas, so it's time to see what the Bible says about who Jesus was and what it tells us about the character of God.

Here are the relevant verses in Phil 2:5-11 [NASB]:

> [5] Have this attitude in yourselves which was also in Christ Jesus,
>
> [6] who, although He existed in the form of God, did not regard equality with God a thing to be grasped,
>
> [7] but emptied Himself, taking the form of a bond-servant, *and* being made in the likeness of men.
>
> [8] Being found in appearance as a man, He humbled Himself by becoming obedient to the point of death, even death on a cross.
>
> [9] For this reason also, God highly exalted Him, and bestowed on Him the name which is above every name,
>
> [10] so that at the name of Jesus every knee will bow, of those who are in heaven and on earth and under the earth,
>
> [11] and that every tongue will confess that Jesus Christ is Lord, to the glory of God the Father.

Here's respected New Testament scholar Ben Witherington to help us make sense of it:

> Incarnation refers to the choices and acts of a pre-existent divine being, namely the Son of God, that the Son took in order to become a human being. He took on flesh, and became fully, truly human without ceasing to be fully, truly divine. Divinity is not something Jesus acquired later in life, or even after his death and resurrection. According to the theology of Incarnation he had always been the divine Son of God, even before he became Jesus, a human being. Strictly speaking the name Jesus only applies to a human being. It is the name the Son of God acquired once he became a human being in the womb of Mary, a name which he maintains to this day as he continues to be a human being.
>
> […]When I try and explain the incarnation to my students I deliberately choose to use the phrase divine condescension. What do I mean by this? Put another way, if there is going to be a corporate merger between a divine being and a human nature, then the divine side of the equation must necessarily limit itself, take on certain limitations, in order to be truly and fully human. The next question is…. what does it mean to be fully human? It means to have limitations of time and space and knowledge and power, and of course being mortal. Jesus exhibited all these traits. He was even tempted like us in every respect, but he avoided sin. What we should deduce from this is sinning is not a necessary part of being truly human. Yes, it is a trait of all fallen humans, but no, it is not how God made us in the first place. It is not necessary to sin in order to be truly or fully human.
>
> […]While the hymn is clear that the Son was 'in very nature God' at the same time he chose before he became human not to take advantage of his divine prerogatives. What were those? I call them the omnis– omniscience, omnipotence, omnipresence.
>
> […]And here I think is what Paul is driving at when he says 'have this mind in yourselves that was also in Christ Jesus'. It says that he 'humbled himself'. Now contrary to what the world may think humility has nothing to do with feelings of low self-esteem. It has nothing to do with feelings of low self-worth. If Jesus is the model of true humility, it can't have anything to do with those things, because Jesus surely was the one person who walked this earth who did not have such feelings, did not have an identity crisis, and so on. Humility is the posture of a strong person who steps down to serve others, as Jesus did.

This IVP commentary on Bible Gateway talks more about what this "divine condescension" means to us, using that passage from Philippians:

> Christ's selflessness for the sake of others expressed itself in his emptying himself by taking the "form" of a slave. Historically, far too much has been made of the verb "emptied himself," as though in becoming incarnate he literally "emptied himself" of something. However, just as*harpagmos* requires no object for Christ to "seize" but rather points to what is the opposite of God's character, so Christ did not empty himself of anything; he simply "emptied himself," poured himself out, as it were. In keeping with Paul's ordinary usage, this is metaphor, pure and simple. What modifies it is expressed in the phrase that follows; he "poured himself out by taking on the 'form' of a slave."
>
> Elsewhere this verb regularly means to become powerless or to be emptied of significance (hence the NIV's *made himself nothing;* cf. KJV, "made himself of no reputation"). Here it stands in direct antithesis to the "empty glory" of verse 3 and functions in the same way as the metaphorical "he became poor" in 2 Corinthians 8:9. Thus, as in the "not" side of this clause (v. 6b), we are still dealing with the character of God as revealed in the mindset and resulting activity of the Son of God. The concern is with divine selflessness: God is not an acquisitive being, grasping and seizing, but self-giving for the sake of others.

I think it's important to be clear that Jesus didn't give up anything of his divine attributes by becoming a man. Rather, he added a human nature to his divine nature. The humility is because he came to serve others.

I think that it is important for us to emphasize the doctrine of the Incarnation at Christmas, in order to correct the grasping and seizing that is so widespread. The really interesting thing about Christmas is the Incarnation, and what it tells us about God and us. It tells us that we have value, because Jesus loved us. But it also says that following Jesus means being humble and being a servant to others. It means pouring yourself out to others in order to serve them. And these obligations are not metaphorical – they are rooted in the historical facts. This is the way the world is as a matter of fact, although certainly we have freedom to rebel against it.

For those looking for defenses to the doctrine of the Incarnation, you can find a chapter on it by Paul Copan in the book "Contending With Christianity's Critics". That's for intermediate readers. For advanced readers you can look for a chapter in "The Cambridge Companion to Christian Philosophical Theology", edited by Charles Taliaferro and Chad Meister, and published by Cambridge University Press. I just bought that latter book for one of the graduate students I sponsor. I know that Thomas V. Morris also has a couple of books out there on the Incarnation – one for intermediate readers and one for advanced readers. The latter book is published by Cornell University Press.

# Senate Democrats choose illegal immigrant welfare over veteran pensions

**Wintery Knight** · 19 December 2013 · Archived copy · Original

From the Daily Caller.

Excerpt:

> Senate Republicans were unable to stop military pension cuts when Senate Democrats blocked a vote on an amendment to prevent the cuts by closing a welfare loophole for illegal immigrants Tuesday evening.
>
> The two-year budget deal brokered by Senate Budget Committee Chairwoman Patty Murray and House Budget Committee Chairman Paul Ryan, would cut military pensions by $6 billion over ten years, leaving some Senate Republicans scrambling to stop the cuts.
>
> "Removing this unbalanced treatment of our military retirees ought to be one of the key actions we should take before this legislation moves forward. In fact, greater savings than this can be achieved by passing a legislative fix recommended by the Inspector General of the U.S. Treasury that would stop the IRS from improperly providing tax credits to illegal aliens," Alabama Republican Jeff Sessions said Monday, announcing his co-sponsorship of Mississippi Republican Sen. Roger Wicker's amendment to restore the military retirement benefits Monday.
>
> Additionally, the Alabama Republican offered his own amendment to restore the cuts by targeting a child tax credit loophole that illegal immigrants have used to unlawfully obtain welfare benefits.
>
> **In 2011, the Treasury Inspector General for Tax Administration found that "individuals who are not authorized to work in the United States" and therefore did not have a valid Social Security number were still able to obtain billions in Additional Child Tax Credits by filing returns with an Individual Taxpayer Identification Number.**
>
> **Specifically the Internal Revenue Service watchdog found that unauthorized individuals received $4.2 billion refundable credits in Processing Year 2010.**
>
> Tuesday evening, Sessions attempted to force Majority Leader Harry Reid allow amendments the budget agreement.
>
> Sessions hoped to attach his amendment to the deal — which would have closed the loophole by requiring a Social Security number to claim the refundable portion of the child tax credit and restore military retirement benefits.
>
> Sessions' motion failed on a 46 to 54 party-line vote, with North Carolina Sen. Kay Hagan crossing the aisle as the lone Democrat to vote with the Republicans.

I am really not sure how it is possible to prefer giving $4.2 billion of refundable tax credits to illegal immigrants to funding the pensions of veterans. How could anyone think that was a good idea?

# Why doesn't God give us more evidence of his existence?

**Wintery Knight** · 20 December 2013 · Archived copy · Original

Have you ever heard someone say that if God existed, he would give us more evidence? This is called the "hiddenness of God" argument. It's also known as the argument from "rational non-belief".

Basically the argument is something like this:

1. God is all powerful
2. God is all loving
3. God wants all people to know about him
4. Some people don't know about him
5. Therefore, there is no God.

You may hear have heard this argument before, when talking to atheists, or in debates, like in William Lane Craig's debate with Theodore Drange, (audio, video).

Basically, the atheist is saying that he's looked for God real hard and that if God were there, he should have found him by now. After all, God can do anything he wants that's logically possible, and he wants us to know that he exists. To defeat the argument we need to find a possible explanation of why God would want to remain hidden when our eternal destination depends on our knowledge of his existence.

**What reason could God have for remaining hidden?**

Dr. Michael Murray, a brilliant professor of philosophy at Franklin & Marshall College, has found a reason for God to remain hidden.

His paper on divine hiddenness is here:
"Coercion and the Hiddenness of God", American Philosophical Quarterly, Vol 30, 1993.

He argues that if God reveals himself too much to people, he takes away our freedom to make morally-significant decisions, including responding to his self-revelation to us. Murray argues that God stays somewhat hidden, so that he gives people space to either 1) respond to God, or 2) avoid God so we can keep our autonomy from him. God places a higher value on people having the free will to respond to him, and if he shows too much of himself he takes away their free choice to respond to him, because once he is too overt about his existence, people will just feel obligated to belief in him in order to avoid being punished.

But believing in God just to avoid punishment is NOT what God wants for us. If it is too obvious to us that God exists and that he really will judge us, then people will respond to him and behave morally out of self-preservation. But God wants us to respond to him out of interest *in him*, just like we might try to get to know someone we admire. God has to dial down the immediacy of the threat of judgment, and the probability that the threat is actual. That leaves it up to us to respond to God's veiled revelation of himself to us, in nature and in Scripture.

(Note: I think that we don't seek God on our own, and that he must take the initiative to reach out to us and draw us to him. But I do think that we are free to resist his revelation, at which point God stops himself short of coercing our will. We are therefore responsible for our own fate).

The atheist's argument is a logical/deductive argument. It aims to show that there is a contradiction between God's will for us and his hiding from us. In order to derive a contradiction, God MUST NOT have any possible reason to remain hidden. If he has a reason for remaining hidden that is consistent with his goodness, then the argument will not go through.

When Murray offers a possible reason for God to remain hidden in order to allow people to freely respond to him, then the argument is defeated. God wants people to respond to him freely so that there is a genuine love

relationship – not coercion by overt threat of damnation. To rescue the argument, the atheist has to be able to prove that God could provide *more* evidence of his existence without interfering with the free choice of his creatures to reject him.

**More of Michael Murray's work**

Murray has defended the argument in works published by prestigious academic presses such as Cambridge University Press, (ISBN: 0521006104, 2001) and Routledge (ISBN: 0415380383, 2007). The book chapter from the Cambridge book is here. The book chapter from the Routledge book is here.

Michael Murray's papers are really fun to read, because he uses hilarious examples. I should mention that I disagree with his view that God's work of introducing biological information in living creatures has to be front-loaded.

Here's more terrific stuff from Dr. Murray:

- "Who's Afraid of Religion?", Inaugural Lecture delivered March 30, 2006. Franklin and Marshall College.
- "Seek and You Will Find", in God and the Philosophers. Thomas Morris, editor. Oxford: Oxford University Press. 1994.

**Is there any evidence of God's existence?**

Yes, just watch this lecture by Dr. William Lane Craig. It contains 5 reasons why God exists and 3 reasons why it matters.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature

# Charles Krauthammer writes the column of the year on Obamacare

**Wintery Knight** · 20 December 2013 · Archived copy · Original

*Note: I am on Christmas blogging hours now, so we are only going to have posts at 10 AM and 4 PM till January 6th! Sorry for the interruption in service.*

This Washington Post editorial might be the editorial of the year, so please read the whole thing.

Excerpt:

> Obamacare was sold as simply a refinement of the current system, retaining competition among independent insurers but making things more efficient, fair and generous. Free contraceptives for Sandra Fluke. Free mammograms and checkups for you and me. Free (or subsidized) insurance for some 30 million uninsured. And, *mirabile dictu*, not costing the government a dime.
>
> In fact, Obamacare is a full-scale federal takeover. The keep-your-plan-if-you-like-your-plan ruse was a way of saying to the millions of Americans who had insurance and liked what they had: Don't worry. You'll be left unmolested. For you, everything goes on as before.
>
> That was a fraud from the very beginning. The law was designed to throw people off their private plans and into government-run exchanges where they would be made to overpay — forced to purchase government-mandated services they don't need — as a way to subsidize others. (That's how you get to the ostensible free lunch.)
>
> It wasn't until the first cancellation notices went out in late 2013 that the deception began to be understood. And felt. Six million Americans with private insurance have just lost it. And that's just the beginning. By the Department of Health and Human Services' own estimates, about 75 million Americans would have plans that their employers would have the right to cancel. And millions of middle-class workers who will migrate to the exchanges and don't qualify for government subsidies will see their premiums, deductibles and co-pays go up.
>
> […]Look what happened just last week. Health and Human Services unilaterally and without warning changed coverage deadlines and guidelines. It asked insurers to start covering people on Jan. 1 even if they signed up as late as the day before and even if they hadn't paid their premiums. And is "strongly encouraging" them to pay during the transition for doctor visits and medicines *not* covered in their current plans (if covered in the patient's previous — canceled — plan).
>
> On what authority does a Cabinet secretary tell private companies to pay for services not in their plans and cover people not on their rolls? Where in Obamacare's 2,500 pages are such high-handed dictates authorized? Does anyone even ask? The bill itself is simply taken as a kind of blanket warrant for HHS to run, regulate and control the whole insurance system.
>
> Remember the uproar over forcing religious institutions to provide contraception coverage? The president's "fix" was a new regulation ordering insurers to provide these services for free. Apart from the fact that this transparent ruse does nothing to resolve the underlying issue of conscience — God sees — by what right does the government order private companies to provide free services for anyone?

Previously, I blogged about a Duke University health care policy expert's estimate that it was going to be 129 million. I blogged about these problems from 2010 to now, study after study, maybe one post a month. No one listened. But these things were known. We knew that government was going to destroy a private health care system that was number one in the world for patient outcomes. Now everyone knows what conservatives were warning about in 2010.

The last column by Charles Krauthammer was also really good. It's about how Obama had never realized how bad government is at doing things when compared to the private sector.

# Eric Metaxas interviews Stephen C. Meyer on his book “Darwin’s Doubt”

**Wintery Knight** · 21 December 2013 · Archived copy · Original

Just watched this Friday night, and it’s a very good discussion that starts with the 5 basic questions you need to understand before you can understand intelligent design.

Here are the first 5 questions:

- What is intelligent design?
- What are the three meanings of the word evolution?
- Is Darwinian evolution compatible with intelligent design?
- Is intelligent design science?
- What is biological information and where is it found?

There are many more questions covered, and Eric Metaxas is a very witty interviewer. I laughed out loud many times. There is a period of question and answer at the end. Those were some of the most intelligent questions I have ever seen from a lay audience.

# Obama administration issues permits to wind energy companies to kill rare birds

**Wintery Knight** · 21 December 2013 · Archived copy · Original

From National Review.

Excerpt:

> We have to kill eagles in order to save them.
>
> That's now the official policy of the U.S. Interior Department. On Friday, the agency announced that it would grant some wind-energy companies permits that will allow them to kill or injure bald and golden eagles for up to 30 years without penalty.
>
> The move is an unprecedented gift to the wind-energy industry, which has been lobbying for the 30-year permit for several years. Shortly after the deal was announced, the wind-energy lobby issued a statement that would make George Orwell proud. An official with the American Wind Energy Association declared that this "is not a program to kill eagles." It is, he claimed, "about conservation."
>
> Well then. We can now rest easy. Big Wind is saving eagles by getting permits to kill them.
>
> Dozens of environmental groups, including the American Bird Conservancy, the Conservation Law Center, and the National Audubon Society, opposed the deal. Under the headline "Interior Dept. Rule Greenlights Eagle Slaughter at Wind Farms," Audubon issued a statement calling it "a stunningly bad move" and quoting the group's president and CEO, David Yarnold: "Instead of balancing the need for conservation and renewable energy, Interior wrote the wind industry a blank check." He called it "outrageous" that "the government is sanctioning the killing of America's symbol, the Bald Eagle."
>
> […]On September 11, some of the top raptor biologists at the Fish and Wildlife Service issued a report that found that the number of documented eagle kills by wind turbines has increased dramatically over the past few years, rising from two in 2007 to 24 in 2011. In all, some 85 eagles have been killed by wind turbines since 1997. And that figure is "an absolute minimum," Joel Pagel, the lead author of the report, recently told me. Among the carcasses: six bald eagles.
>
> In an interview shortly after the publication of his findings in the *Journal of Raptor Research*, Pagel told me that he and his colleagues have since documented additional eagle kills by wind turbines in Idaho, Montana, Nevada, and North Dakota. He refused to give a number but said "it's quite a few." There are now 14 states where the problem has been identified, he said, adding that more than half of the eagle carcasses have been found "incidentally" — that is, by people not out looking for them. And so the total of dead eagles is likely far higher than what Pagel and his colleagues are reporting.

As someone who loves birds of all kinds and who has owned different species of parrots for the last 25 years, I am outraged by the Obama administration's war on birds. Birds are among the most intelligent animals, and many species are capable of forming bonds with humans in ways that most other animals cannot. We should not be subsidizing "green" energy projects that result in the killing of rare birds. Although global warming theory is now widely recognized as being contrary to observations, the need to protect endangered species is real.

# Mark Steyn on the intolerance of the gay activism movement

**Wintery Knight** · 22 December 2013 · Archived copy · Original

Dina found this article in by the Canadian national treasure in National Review.

Excerpt:

> *Duck Dynasty*'s Phil Robertson, in his career-detonating interview with *GQ*, gave a rather thoughtful vernacular exegesis of the Bible's line on sin, while carefully insisting that he and other Christians are obligated to love all sinners and leave it to the Almighty to adjudicate the competing charms of drunkards, fornicators, and homosexuals. Nevertheless, GLAAD — "the gatekeepers of politically correct gayness" as the (gay) novelist Bret Easton Ellis sneered — saw their opportunity and seized it. By taking out TV's leading cable star, they would teach an important lesson *pour encourager les autres*— that espousing conventional Christian morality, even off-air, is incompatible with American celebrity.
>
> Some of my comrades, who really should know better, wonder why, instead of insisting Robertson be defenestrated, GLAAD wouldn't rather "start a conversation." But, if you don't need to, why bother? Most Christian opponents of gay marriage oppose gay marriage; they don't oppose the right of gays to advocate it. Yet thug groups like GLAAD increasingly oppose the right of Christians even to argue their corner. It's quicker and more effective to silence them.
>
> **As Christian bakers ordered to provide wedding cakes for gay nuptials and many others well understand, America's much-vaunted "freedom of religion" is dwindling down to something you can exercise behind closed doors in the privacy of your own abode or at a specialist venue for those of such tastes for an hour or so on Sunday morning, but when you enter the public square you have to leave your faith back home hanging in the closet.** Yet even this reductive consolation is not permitted to Robertson: GLAAD spokesgay Wilson Cruz declared that "Phil and his family claim to be Christian, but Phil's lies about an entire community fly in the face of what true Christians believe." Robertson was quoting the New Testament, but hey, what do those guys know? In today's America, land of the Obamacare Pajama Boy, Jesus is basically Nightshirt Boy, a fey non-judgmental dweeb who's cool with whatever. What GLAAD is attempting would be called, were it applied to any other identity group, "cultural appropriation."

Make no mistake about this. There is a totalitarian impulse in the gay agenda. Their morality-free view of sexuality is not compatible with the Judeo-Christian values that ground Western civilization. It's not OK with them that you disagree with them. They are up for using any and all means necessary up to and including violence (as we saw in the domestic terrorism attack against the Family Research Council). Their goal is to stop you for publicly defending marriage. They are at war with the idea that anyone can use their freedom of speech to tell them that what they are doing is wrong.

UPDATE: Mark Steyn follows up here with more examples of gay activists bullying their critics.

# Dan Barker debates Casey Luskin on academic freedom on the Michael Medved show

**Wintery Knight** · 22 December 2013 · Archived copy · Original

The Michael Medved show is a national radio show broadcast out of Seattle, Washington. According to Talkers magazine, he has the fifth largest radio audience. He has a regular weekly segment on science and culture featuring scholars from the Discovery Institute.

This is a re-post from earlier this year (June)

The MP3 file is available for download. (38 minutes)

The description is:

> On this episode of **ID the Future**, the CSC's Casey Luskin and atheist Dan Barker of the Freedom From Religion Foundation debate academic freedom and free speech on the Medved Show. This debate was inspired by the ongoing case of Professor Eric Hedin, a physicist at Ball State University who is being threatened by the Freedom From Religion Foundation for favorably portraying intelligent design in the classroom.
>
> *[…]Each week, leading fellows from Discovery Institute will join Michael Medved to talk about the intersection of science and culture. Listen in live online or on your local Medved station, or stay tuned at ID the Future for the weekly podcast.*

Topics: (note that I am paraphrasing Dan Barker for the sake of humor, and he will probably sue me, since that is his entire contribution to the search for truth in this debate)

- Michael Medved: untenured Ball State University professor Eric Hedin is under fire for teaching both sides of intelligent design in a college course
- Dan Barker: this complaint against professor Hedin came to our attention from Jerry Coyne not from students of Professor Hedin
- Dan Barker: professors are not allowed to question the presuppositions atheism, materialism, naturalism in the physics classroom
- Dan Barker: this is a science course and you cannot question the religion of naturalism in class or else it's teaching religion
- Dan Barker: we need to use the power of the courts to stifle any dissent from of my religion (naturalism)
- Dan Barker: the classroom of a university is not the proper place for students to inquire about both sides of scientific disputes
- Dan Barker: even if students are paying their money and choosing this course of their own free will, they can't be allowed to hear both sides
- Casey Luskin: this course is not a science course, it is open to non-science students
- Casey Luskin: the course evaluations from students of all majors is overwhelmingly positive
- Casey Luskin: the course features people on both sides
- Casey Luskin: the course features brilliant scholars like Lennox and Penrose, both from Oxford University
- Casey Luskin: the course features opponents of intelligent design like Francis Collins and Karl Gilberson
- Casey Luskin: the course features non-Christians like Lee Spetner, Paul Davies, Roger Penrose and Gerald Schroeder
- Dan Barker: (taking over the host) you cannot study scientists like Francis Collins who mapped the human genome, that is "creationism"
- Michael Medved: academic freedom allows professors to put a slant on what they are teaching

- Dan Barker: if the professor's slant is against my religion of naturalism, then I have to put them in jail and inquisition them
- Dan Barker: you cannot teach science like the Big Bang and fine-tuning  as if it is science because it contradicts naturalism
- Casey Luskin: Even radical atheist PZ Myers says that professors have the right to academic freedom
- Dan Barker: I'll burn that creationist at the stake, too! And smash his filthy microscopes and telescopes!
- Michael Medved: Casey, would you use state power to fire a professor who disagreed with you because you were offended?
- Casey Luskin: no, I had to take tons of courses from professors who had a slant against my views and I learned a lot from different views
- Dan Barker: you will address me as the Holy Father, please! Every professor who disagrees with my religion must burn!
- Casey Luskin: Barker has no idea what is going on in the class, he never attended it
- Casey Luskin: The atheists students who took his class gave him high ratings and said he graded fairly
- Dan Barker: I don't have to look through the telescope to know the Earth is flat – Hedin is a traitor! Off with his head!
- Dan Barker: Creationist PZ Myers is wrong, and I'll burn him at the stake for creationist heresy against my Holy Church!
- Dan Barker: Oxford professors like John Lennox are creationists because his Big Bang religion is grounded on experimental data like the cosmic background radiation, the hydrogen/helium abundances and the redshifting of light from distant galaxies
- Dan Barker: I have a degree in Religion and I write hymns, which makes me smarter than John Lennox since he is a "creationist"
- Dan Barker: I haven't published any scientific research myself, but I have written some atheist praise hymns, so I am qualified to burn the heretics!
- Michael Medved: The course is taught by someone with a PhD in Physics, and the syllabus says that it investigates science and religion
- Michael Medved: Why is it wrong to investigate the science that questions philosophical assumptions like naturalism and materialism?
- Casey Luskin: The syllabus features amazing readings from all the latest science relevant to that question from both sides
- Michael Medved: What will Ball State U do to the professor?
- Casey Luskin: So far no action from Ball State U, but people need to sign the petition to protect the professor
- Michael Medved: Isn't academic freedom being applied inconsistently here?
- Casey Luskin: Yes and science is supposed to move forward by disagreement and debate
- Casey Luskin: How confident can intelligent design censors really be if their contribution to the debate is coercion and intimidation?
- Michael Luskin: Is Dan Barker right to say that Oxford professor John Lennox is a "creationist"?
- Casey Luskin: Creationism starts with the Bible, but intelligent design starts with scientific data

And there is a period of questions from the callers. This episode features a debate, so it is not to be missed.

You can see more about Dan Barker's educational background:

> Dan became a teenage evangelist at age 15. At 16 he was choir librarian for faith-healer Kathryn Kuhlman's Los Angeles appearances. He received a degree in Religion from Azusa Pacific University and was ordained to

> the ministry by the Standard Community Church, California, in 1975.
>
> […]Dan preached for 19 years. He maintained an ongoing touring musical ministry, including eight years of full-time, cross-country evangelism. An accomplished pianist, record producer, arranger and songwriter, he worked with Christian music companies such as Manna Music and Word Music. For a few years, Dan wrote and produced the annual "Mini Musicale" for Gospel Light Publications' Vacation Bible School curriculum.

I'm not sure if Dan Barker has the right background for disputing whether intelligent design belongs in a classroom or not. Remember, the bulk of his life was spent writing and singing feel-g0od, happy-clappy songs. In his debates with Christians, it's quite clear that he is totally unequipped to assess scientific evidence from the Big Bang, the fine-tuning, the origin of life, the Cambrian explosion, or habitability. It's just not his thing, and I don't think that musicians have what it takes to understand those arguments enough to feel comfortable using the courts to suppress people with actual PhDs in science.

You can read more about my opinion about how Dan Barker arrived at his atheism through a mistaken view of the Christian life.

I subscribe to the ID the Future podcast, and I really recommend that you do as well!

# Gay activists pressure comedian Bob Newhart to cancel show for Catholic group

**Wintery Knight** · 23 December 2013 · Archived copy · Original

Mark Steyn's previous column, which I blogged about, drew a response from the National Review editor who urged Mr. Steyn not to upset gay activists by being "derogatory" and "puerile" in our defense of free speech. Mark Steyn replied to him, and in that reply he linked to this article from Life Site News.

Excerpt:

> Famed comedian Bob Newhart has canceled a headline show at a conference for Catholic business leaders after a homosexual activist group ran a campaign portraying the organizers as "anti-gay."
>
> After learning of the 84-year-old comedian's scheduled appearance at the Legatus Summit in Orlando on February 6, the Gay & Lesbian Alliance Against Defamation (GLAAD) began urging him last week to back out.
>
> […]The homosexual activist group launched the campaign in a December 12 post titled "Bob Newhart, don't become the next Kirk Cameron!"
>
> […]"Personally, I'm choosing to believe that he just doesn't know and that this booking is the result of bad advice," wrote author Jeremy Hooper, GLAAD's special projects consultant. "GLAAD is reaching out to Mr. Newhart's representatives to let them know how, exactly, an appearance at this event will come across to LGBT people and allied voices."
>
> "I am hoping that I am right, and Mr. Newhart doesn't want to go down that path," he added. "He can still express his Catholic faith in a way more consistent with the rest of American Catholics, by loving and supporting his LGBT friends and family. GLAAD is urging him to do the right thing."

Isn't that nice that the gay activists are going to allow Catholics express their moral convictions in a way that is consistent with their gay agenda? When Jesus said that marriage is between a man and a woman in Mark 10, he was just being being a hateful bigot. GLAAD could have straightened Jesus right out with a little intimidation, shaming and coercion. Then he would have been a lot better as a religious figure. Fortunately, the helpful gay activists at GLAAD are here to straighten out the rest of us today. By any means necessary, because it's for our own good to have correct views on what the Bible teaches about sin.

I was talking to a friend about this whole Mark Steyn dust-up and I think my core conviction on this issue is this. When I sin, I don't run around using threats, vandalism and violence in order to force others to celebrate and participate in my sinning. When I sin, I call it a sin and I don't use worldly power to force others to affirm my sin. I don't ask people to subsidize my sinning and pay for my medical bills. I don't demand that people who disagree with my sinning to be fired from their jobs. I don't vandalize people's churches and businesses. And I don't commit acts of domestic terrorism, like the gay activist Floyd Lee Corkins did.

# Stephen Baskerville: five myths about no-fault divorce

**Wintery Knight** · 23 December 2013 · Archived copy · Original

From the Catholic News Agency.

Introduction:

> Almost four decades after the "no-fault" divorce revolution began in California, misconceptions abound. Even the many books about divorce, including myriad self-help manuals, are full of inaccurate and misleading information. No public debate preceded the introduction of no-fault divorce laws in the 1970s, and no debate has taken place since.
>
> Yet divorce-on-demand is exacting a devastating toll on our children, our social order, our economy, and even our constitutional rights. A recent study estimates the financial cost of divorce to taxpayers at $112 billion annually. Recent demands to legitimize same-sex marriage almost certainly follow from the divorce revolution, since gay activists readily acknowledge that they only desire to marry under the loosened terms that have resulted from the new divorce laws. Divorce also contributes to a dangerous increase in the power of the state over private life.

Here are the five myths about no-fault divorce:

- No-fault divorce permitted divorce by mutual consent, thus making divorce less acrimonious
- We cannot force people to remain married and should not try
- No-fault divorce has led men to abandon their wives and children
- When couples cannot agree or cooperate about matters like how the children should be raised, a judge must decide according to "the best interest of the child"
- Divorce must be made easy because of domestic violence

And the details about number three:

> Myth 3: No-fault divorce has led men to abandon their wives and children.
>
> Fact: This does happen (wives more often than children), but it is greatly exaggerated. The vast majority of no-fault divorces — especially those involving children — are filed by wives. In fact, as Judy Parejko, author of Stolen Vows, has shown, the no-fault revolution was engineered largely by feminist lawyers, with the cooperation of the bar associations, as part of the sexual revolution. Overwhelmingly, it has served to separate large numbers of children from their fathers. Sometimes the genders are reversed, so that fathers take children from mothers. But either way, the main effect of no-fault is to make children weapons and pawns to gain power through the courts, not the "abandonment" of them by either parent.

Al Mohler wrote about the history of no-fault divorce a while back, and I think it's worth reviewing why we have this lousy law.

> The story behind America's love affair with no-fault divorce is a sad and instructive tale. As Baskerville documents, no-fault divorce laws emerged in the United States during the 1970s and quickly spread across the nation. Even though only nine states had no-fault divorce laws in 1977, by 1995, every state had legalized no-fault divorce.
>
> Behind all this is an ideological revolution driven by feminism and facilitated by this society's embrace of autonomous individualism. Baskerville argues that divorce "became the most devastating weapon in the arsenal of feminism, because it creates millions of gender battles on the most personal level." As far back as 1947, the

> National Association of Women Lawyers [NAWL] was pushing for what we now know as no-fault divorce. More recently, NAWL claims credit for the divorce revolution, describing it as “the greatest project NAWL has ever undertaken.”
>
> The feminists and NAWL were not working alone, of course. Baskerville explains that the American Bar Association “persuaded the National Conference of Commissioners on Uniform State Laws [NCCUSL] to produce the Uniform Marriage and Divorce Act.” Eventually, this led to a revolution in law and convulsions in society at large. This legal revolution effectively drove a stake into the heart of marriage itself, with inevitable consequences. In effect, no-fault divorce has become the catalyst for one of the most destructive cultural shifts in human history. Now, no-fault divorce is championed by many governments in the name of human rights, and America’s divorce revolution is spreading around the world under the banner of “liberation.”

And note that Democrats oppose any effort to reform laws that make it easy to break up marriages:

> A basic dishonesty on the question of divorce pervades our political culture. Baskerville cites Michigan governor Jennifer Granholm as referring to divorce as a couple’s “private decision.” Granholm’s comments came as she vetoed a bill intended to reform divorce law in her state. The danger and dishonesty of referring to divorce as a couple’s “private decision” is evident in the fact that this supposedly private decision imposes a reality, not only on the couple, but also on children and the larger society. Indeed, the “private decision” is really not made by a couple at all–but only by any spouse demanding a divorce.

So, no-fault was pushed by two groups: feminists and trial lawyers.

There’s a lot of talk these days about gay marriage and how it undermines marital norms and normalizes raising children without either their biological father or biological mother. But before there was gay marriage, there was no-fault divorce, which deprives children of their biological father. There is no provision for no-fault divorce in the Bible, so it seems to me that Christians should be against frivolous divorce just like we are against same-sex marriage.

# Did Jesus really teach that it is wrong to judge others?

**Wintery Knight** · 24 December 2013 · Archived copy · Original

Great post by Matt at MandM on an often misunderstood verse.

Here's the passage in question, Matthew 7:1-5:

[1]"Do not judge, or you too will be judged.

[2]For in the same way you judge others, you will be judged, and with the measure you use, it will be measured to you.

[3]"Why do you look at the speck of sawdust in your brother's eye and pay no attention to the plank in your own eye?

[4]How can you say to your brother, 'Let me take the speck out of your eye,' when all the time there is a plank in your own eye?

[5]You hypocrite, first take the plank out of your own eye, and then you will see clearly to remove the speck from your brother's eye.

Most people only quote the first verse, but they don't look at the rest of the verses that come after.

Here's what Matt has to say about those other verses:

> The phrase translated in the NIV as, "do not judge, or you too will be judged," was originally written by Matthew in Koine (a Greek dialect). The Interlinear Bible gives the literal translation here as, "do not judge that you be judged." In other words, do not judge others *in a way that leads one to put oneself under judgement.*
>
> […]One is not to judge in a way that brings judgment on oneself. The reason for this ("for") is that the standard one uses to judge others is the standard that one's own behaviour will be measured by. Jesus goes on to illustrate, with a sarcastic example, precisely what he is talking about; a person who nit-picks or censures the minor faults of others (taking the speck out of their brothers eye) who ignores the serious, grave, moral faults in their own life (the log in one's own eye). His point is that such faults actually blind the person's ability to be able to make competent moral judgments. This suggests that Jesus is focusing on a certain type of judging and not the making of judgments *per se*.
>
> In fact, the conclusion that Jesus does not mean to condemn *all* judging of others is evident from the proceeding sentences in the above quote. Rather than engaging in the kind of judgment Jesus has condemned one should "first take the plank out of your own eye, and then you will see clearly to remove the speck from your brother's eye." In other words one should try to rectify the serious moral flaws in one's own life precisely so one *can* assist others with theirs. One needs to avoid hypocrisy in order to make constructive and effective moral judgments about others. This would make no sense if Jesus meant to condemn *all* judging by this passage.

This is something I actually try to do, and it's easy. Before you open your mouth to judge someone, you have to look at your own life and make sure that you don't do the thing you're condeming.

I try not to say anything about individual people at all, but just talk about behaviors in general that are harmful. I don't ask people if they do any of those behaviors. If they try to tell me about their bad behaviors, I tell them that their personal lives are not up for discussion, unless they explicitly ask me to comment on their specific case. So, instead of saying "you're bad!", I say "this behavior is bad and here's why". And I make sure I don't DO that behavior before I declare it as immoral!

I hear this challenge about Christians being too judgmental all the time from non-Christians. If you do, too, then you should definitely click through to MandM and read the whole thing. There's a logical element, a common sense

element and a hermeneutical element to this problem, and all are discussed by Matt. He's a sharp guy, you're bound to learn something new that you can use.

# Is the story of the woman being stoned for adultery in John 7-8 authentic?

**Wintery Knight** · 24 December 2013 · Archived copy · Original

Here's the leading conservative New Testament scholar Daniel Wallace to explain.

Excerpt:

> One hundred and forty years ago, conservative biblical scholar and Dean of Canterbury, Henry Alford, advocated a new translation to replace the King James Bible. One of his reasons was the inferior textual basis of the KJV. Alford argued that "a translator of Holy Scripture must be…ready to sacrifice the choicest text, and the plainest proof of doctrine, if the words are not those of what he is constrained in his conscience to receive as God's testimony." He was speaking about the Trinitarian formula found in the KJV rendering of 1 John 5:7–8. Twenty years later, two Cambridge scholars came to the firm conclusion that John 7:53–8:11 also was not part of the original text of scripture. But Westcott and Hort's view has not had nearly the impact that Alford's did.
>
> For a long time, biblical scholars have recognized the poor textual credentials of the story of the woman caught in adultery (John 7:53–8:11). The evidence against its authenticity is overwhelming: The earliest manuscripts with substantial portions of John's Gospel (P66 and P75) lack these verses. They skip from John 7:52to 8:12. The oldest large codices of the Bible also lack these verses: codex Sinaiticus and Vaticanus, both from the fourth century, are normally considered to be the most important biblical manuscripts of the NT extant today. Neither of them has these verses. Codex Alexandrinus, from the fifth century, lacks several leaves in the middle of John. But because of the consistency of the letter size, width of lines, and lines per page, the evidence is conclusive that this manuscript also lacked the *pericope adulterae*. Codex Ephraemi Rescriptus, also from the fifth century, apparently lacked these verses as well (it is similar to Alexandrinus in that some leaves are missing). **The earliest extant manuscript to have these verses is codex Bezae, an eccentric text once in the possession of Theodore Beza. He gave this manuscript to the University of Cambridge in 1581 as a gift, telling the school that he was confident that the scholars there would be able to figure out its significance.** He washed his hands of the document. Bezae is indeed the most eccentric NT manuscript extant today, yet it is the chief representative of the Western text-type (the text-form that became dominant in Rome and the Latin West).
>
> **When P66, P75, Sinaiticus, and Vaticanus agree, their combined testimony is overwhelmingly strong that a particular reading is not authentic. But it is not only the early Greek manuscripts that lack this text. The great majority of Greek manuscripts through the first eight centuries lack this pericope. And except for Bezae (or codex D), virtually all of the most important Greek witnesses through the first eight centuries do not have the verses. Of the three most important early versions of the New Testament (Coptic, Latin, Syriac), two of them lack the story in their earliest and best witnesses. The Latin alone has the story in its best early witnesses.**
>
> Even patristic writers seemed to overlook this text. Bruce Metzger, arguably the greatest textual critic of the twentieth century, argued that "No Greek Church Father prior to Euthymius Zigabenus (twelfth century) comments on the passage, and Euthymius declares that the accurate copies of the Gospel do not contain it" (*Textual Commentary*, 2nd ed., *loc. cit.*).
>
> It is an important point to note that although the story of the woman caught in adultery is found in most of our printed Bibles today, the evidence suggests that the majority of Bibles during the first eight centuries of the Christian faith did not contain the story. Externally, most scholars would say that the evidence for it not being an authentic part of John's Gospel is rock solid.
>
> But textual criticism is not based on external evidence alone; there is also the internal evidence to consider.

> This is comprised of two parts: *intrinsic evidence* has to do with what an author is likely to have written;*transcriptional evidence* has to do with how and why a scribe would have changed the text.
>
> Intrinsically, the vocabulary, syntax, and style look far more like Luke than they do John. There is almost nothing in these twelve verses that has a Johannine flavor. And transcriptionally, scribes were almost always prone to add material rather than omit it—especially a big block of text such as this, rich in its description of Jesus' mercy. One of the remarkable things about this passage, in fact, is that it is found in multiple locations. Most manuscripts that have it place it in its now traditional location: between John 7:52 and 8:12. But an entire family of manuscripts has the passage at the end of Luke 21, while another family places it at the end of John's Gospel. Other manuscripts place it at the end of Luke or in various places in John 7.
>
> The *pericope adulterae* has all the earmarks of a pericope that was looking for a home. It took up permanent residence, in the ninth century, in the middle of the fourth gospel.

Wallace teaches at the ultra-conservative fundamentalist Dallas Theological Seminary, and is the foremost evangelical manuscript expert in the world.

Why is this important? I think it is important because this story is very prominent for a great many Christians, especially Christian women, who use this to justify a variety of positions that are inconsistent with the rest of the Bible. These Christians *do not like the idea of anyone being judged* and so they are naturally inclined to blow this disputed passage into an entire theology that repudiates making moral judgments on such things as capital punishment. In fact, in another post, I was accused of being the equivalent of one of the people who wanted to stone the woman taken for adultery because I oppose fornication and single motherhood. That's how far this has gone, where some Christians, especially Christian feminists, have leveraged this passage to redefine the Bible so that women are no longer responsible to the Bible's moral rules and can never be blamed for acting irresponsibly.

**Is WK a big liberal?**

As this debate between Peter Williams and Bart Ehrman shows, there are only TWO disputed passages in the entire NT that are theologically significant. The long ending of Mark and this adultery passage. A good case can be made for the long ending of Mark, but it's best not to assume it in a debate. The adultery passage is difficult to defend as authentic. Dr. Wallace talks about both passages in this Parchment & Pen article (reclaimingthemind.org). Wallace has also debated Bart Ehrman in the Greer-Heard Forum. What that debate showed is that the New Testament text is actually quite reliable except for those two passages, but it's important to be honest about the two places that are not well supported.

The other other NT passages that are a concern are the earthquake passage and the guard story in Matthew. I think that the earthquake is apocalyptic language and the guard is more likely historical than not.

For a closer look at what the Bible says about capital punishment, look here.

# What is the meaning and significance of Christmas for Christians?

**Wintery Knight** · 25 December 2013 · Archived copy · Original

It's the time of year when we explain what Christianity is about.

**God exists**

Basically, we know from a variety of scientific arguments that the universe was created and fine-tuned for life by an intelligent agent that existed causally prior to the beginning of the universe, because this agent brought the universe into being. Our purpose as humans is to enter into a two-way loving relationship with this Creator/Designer of the universe. This is the only way that we can ultimately be happy and fulfilled.

**We avoid God**

Now, when you look at human experience, none of us is interested in finding out about the character of this Creator/Designer, because we are afraid that if we find out too much about him then we will have our freedom to do as we please constrained by the demands of a relationship with an all-powerful, all-good being. Just knowing that such a person exists and has a character distinct from our own is enough to cause us to flee from him so that we can stay autonomous from the obligations of the moral law that he expects us to follow.

Christians believe that this universal desire to avoid an all-powerful, all-good God who will judge us is a result of bad behaviors inherited by us from the very first rebellion against God by our ancestors. Ever since that rebellion, the capability for relating to God has been lost, because we no longer have the ability to stop our rebellion against God. Christians call the first rebellion of our ancestors "The Fall of Man".

What does this rebellion look like for us today? Well, we want to do whatever we want, in order to be happy, and to ignore God's demands. We want to have happy feelings, including security, community and being morally good, all without a relationship with God. We want to acquire and rearrange matter for our selfish ends without acknowledging and honoring the Creator/Designer of that matter. And, of course, we would like other people to affirm, voluntarily or involuntarily, that our rebellion against God is really the height of moral goodness.

Additionally, some people imagine that God, if he exists at all, must desire our happiness. And of course when their needs are not met by this invented God, then they become even more bitter at God, and eventually decide that God could not really exist since their selfish needs are not being met by him. It never seems to occur to us humans that

some pain and suffering may be permitted by God in order to turn our attention away from pleasure and security in this life, and back towards a relationship with him.

This is the mess we find ourselves in. This propensity for turning away from God and trying to pursue selfish happiness and security apart from a relationship with God is what the Bible calls "sin". Every single one of us deserves severe punishment for refusing to pursue a genuine two-way love relationship with the God who is there. That is the mess we are in before Jesus appears to address this problem.

**Jesus saves the day**

I cannot say much about *how* Jesus solves the problem of rebellion against God, because that is really the story of Easter, and today we are dealing with the story of Christmas. But I can say that the solution to the problem requires that God step into history to communicate with his creatures and to perform actions in order to be reconciled with them. That is the message of Christmas: God is stepping into history to do something to end our rebellion. Easter is the story of *what he does*.

This is talked about in the Bible in John 1, for example.

John 1:1-5:

[1]In the beginning was the Word, and the Word was with God, and the Word was God.

[2]He was with God in the beginning.

[3]Through him all things were made; without him nothing was made that has been made.

[4]In him was life, and that life was the light of men.

[5]The light shines in the darkness, but the darkness has not understood it.

You can substitute the word "Word" there for *Logos*, which really means *logic* or *reason* or *wisdom.* This is a person with a divine nature, identified with the eternal being of God, who exists causally prior to the creation of the universe, who is going to take on an additional human nature, including a human body. (Christians believe that there is one divine "what" being and three divine "who" persons). Software engineers, you can think of Jesus having two natures as multiple inheritance in C++.

And it continues in John 1:10-14:

[10]He was in the world, and though the world was made through him, the world did not recognize him.

[11]He came to that which was his own, but his own did not receive him.

[12]Yet to all who received him, to those who believed in his name, he gave the right to become children of God—

[13]children born not of natural descent, nor of human decision or a husband's will, but born of God.

[14]The Word became flesh and made his dwelling among us. We have seen his glory, the glory of the One and Only, who came from the Father, full of grace and truth.

Here the word grace doesn't mean like a graceful ballet dancer. It means an instance of mercy received from a superior. A person (a "who") identified with the divine being (a "what") has decided to make us a top-down offer of mercy.

The same message of God stepping into history is found in the Christmas carols that people sing at Christmas.

**Christmas carols**

Here's the best one, "O, Holy Night", and it says:

O holy night! The stars are brightly shining.
It is the night of the dear Savior's birth.

Long lay the world in sin and error pining,
Till He appeared and the soul felt its worth.

When we were in rebellion, we had lost our most valuable capacity – the capacity of being in a direct relationship with God. And if the newborn baby Jesus can accomplish his mission (and he did), then we are going to regain that capacity for a direct relationship with God.

Now look at "Hark! The Herald Angels Sing", which one of my favorites:

Hark! The herald angels sing,
"Glory to the newborn King!
Peace on earth and mercy mild,
God and sinners reconciled."

Basically, as I often say, there are only two kinds of people in the world. There are people who are willing to respond to the offer of a relationship with God, with all the little sacrifices and compromises that a relationship entails, and then there are people who are not willing to respond. For the people who are willing to respond, the appearance of Jesus is the best thing that could possibly happen, because now we are finally going to have a chance to deal directly with God, face-to-face, to find out what he is like, and change ourselves to be more like him, with his help.

And that is why people celebrate Christmas. It's the anniversary of the birth of Jesus. It is the story of God stepping into history to be reconciled with his rebellious creatures. It's the story of the divine *Logos* subjecting himself to the life of a creature in order to rescue us from our sinful, self-destructive rebellion. This love for undeserving creatures is above and beyond the call of duty. We didn't love him, but instead he loved us first, and he loved us enough to come down here and suffer with us so that we could be reconciled with God.

MERRY CHRISTMAS!

# Number of states with white Christmas highest in 11 years

**Wintery Knight** · 26 December 2013 · Archived copy · Original

From Investors Business Daily.

Excerpt:

> Those humming the words to "White Christmas" got their wish big-time as snow covered more than half the lower 48 states as of mid-December, putting snowless winters on the pile of failed climate predictions.
>
> More than half of the continental U.S. had snow cover as of Dec. 15, according to the National Oceanic and Atmospheric Administration (NOAA), the most in 11 years. That exposes as worthless the predictions of the climate scammers of snowless winters as far as the eye can see. In 2006, by comparison, snow covered just 12% of these states.
>
> […]We recall the prediction in 2000 by Dr. David Viner, a senior research scientist at the climatic research unit (CRU) of the University of East Anglia, that winter snowfall would become "a very rare and exciting event" and claiming, "Children just aren't going to know what snow is."
>
> Of course, we all remember that researchers with the CRU at East Anglia were responsible for omitting climate data with the purpose, according to uncovered email, to "hide the decline" in global temperatures.
>
> The temperatures that have flatlined over the last 15 years can no longer be hidden, and neither can the whir of snowblowers all across America this Christmas, as state after state gets hit with bitter cold and snow.
>
> Using computer models seemingly based on that old computer adage "garbage in, garbage out," models that cannot even predict the past, the climate Chicken Littles are prone to predict snowless winters, glacier-free Himalayas and an ice-free North Pole. Polar bears would drown and Santa would have no place to land.
>
> In his Dec. 10, 2007, "Earth has a fever" speech as he accepted his Nobel Prize, climate extremist Al Gore mentioned a prophecy of doom by U.S. climate scientist Wieslaw Maslowski.
>
> Maslowski said the Arctic's summer ice could "completely disappear" by 2013 due to global warming arising from carbon emissions. He was off by only a little. The Arctic had 920,000 square miles of ice more than it had in 2012, the largest year-to-year increase on record.
>
> German scientists Carl-Otto Weiss and Horst-Joachim Luedecke of the European Institute for Climate and Energy reported recently that two naturally occurring cycles would combine to lower global temperatures this century and that temperature levels would decline to levels similar to the "little ice age" of 1870.

I'm not sure how the lefties are going to spin this news, but I'm pretty sure that the only solution to our ongoing "climate crisis" is going to be more government control of corporations and individuals. It always is.

# What we voted for: new Obamacare taxes coming in 2014

**Wintery Knight** · 26 December 2013 · Archived copy · Original

The New York Post reports.

Excerpt:

> The cost of President Obama's massive health-care law will hit Americans in 2014 as new taxes pile up on their insurance premiums and on their income-tax bills.
>
> Most insurers aren't advertising the ObamaCare taxes that are added on to premiums, opting instead to discretely pass them on to customers while quietly lobbying lawmakers for a break.
>
> But one insurance company, Blue Cross Blue Shield of Alabama, laid bare the taxes on its bills with a separate line item for "Affordable Care Act Fees and Taxes."
>
> The new taxes on one customer's bill added up to $23.14 a month, or $277.68 annually, according to Kaiser Health News. It boosted the monthly premium from $322.26 to $345.40 for that individual.
>
> The new taxes and fees include a 2 percent levy on every health plan, which is expected to net about $8 billion for the government in 2014 and increase to $14.3 billion in 2018.
>
> There's also a $2 fee per policy that goes into a new medical-research trust fund called the Patient Centered Outcomes Research Institute.
>
> Insurers pay a 3.5 percent user fee to sell medical plans on the HealthCare.gov Web site.
>
> […]Americans also will pay hidden taxes, such as the 2.3 percent medical-device tax that will inflate the cost of items such as pacemakers, stents and prosthetic limbs.
>
> Those with high out-of-pocket medical expenses also will get smaller income-tax deductions.
>
> Americans are currently allowed to deduct expenses that exceed 7.5 percent of their annual income. The threshold jumps to 10 percent under ObamaCare, costing taxpayers about $15 billion over 10 years.
>
> Then there's the new Medicare tax.
>
> Under ObamaCare, individual tax filers earning more than $200,000 and families earning more than $250,000 will pay an added 0.9 percent Medicare surtax on top of the existing 1.45 percent Medicare payroll tax. They'll also pay an extra 3.8 percent Medicare tax on unearned income, such as investment dividends, rental income and capital gains.

Right now, Obama is furiously trying to re-write the law by arbitrary executive decisions. But all this does is remove the amount of money being paid into the system, while keeping the amount being spent the same. What will be the end result of a massive shortfall in funding for Obamacare? As Byron York argues, the end result of will be that the Democrats bail out health care insurance companies to keep them from going bankrupt.

Transcript:

**COLBY:** What do you think about these bailouts of insurance companies, as well? Could that happen?

**YORK:** It absolutely will happen –

**COLBY:** Will happen?!

**YORK:** As a matter of fact, it's written into the law. There's something called "risk corridors," which basically ensure that if an insurance company ends up paying a lot more in benefits than it takes in in premiums, then the federal government will bail it out — it will make it good. And it looks like we are entering a situation — certainly in the first month of January — where the insurance companies will be in that situation. And they'e not going to

take the losses. It will be the taxpayer who makes up for those losses.

Do you think that raising the debt from $8.5 trillion to $17 trillion was irresponsible? Then wait until the government has to bail out all their left-wing cronies in the health insurance industry.

One thing is for sure – the Republicans will be running on Obamacare in 2014:

New Hampshire:

Minnesota:

This money that is being *wasted* due to socialist incompetence doesn't come from government workers or politicians – they don't earn any money of their own. The money comes from government *borrowing from your children*. Honestly, I if I had children, I might be tempted to leave this country, especially if I wanted to have lots of them. This really isn't the place for a big family any more.

# The importance of the traditional family for income mobility

**Wintery Knight** · 27 December 2013 · Archived copy · Original

Michael Barone writes about a new report on the family by Nick Schultz of the American Enterprise Institute.

Excerpt:

> [I]t is an uncomfortable truth that children of divorce and children with unmarried parents tend to do much worse in life than children of two-parent families.
>
> (I'll leave aside the sensitive issue of children of same-sex marriages, since these haven't existed in a non-stigmatized atmosphere long enough to produce measurable results.)
>
> As Schulz points out, that uncomfortable truth is not controversial among social scientists. It is affirmed by undoubted liberals such as Harvard's David Ellwood and Christopher Jencks.
>
> Growing up outside a two-parent family means not just lower incomes and less social mobility, Schulz argues.
>
> It also reduces human capital — "the knowledge, education, habits, will power — all the internal stuff that is largely intangible a person has that helps produce an income."
>
> While children are born with certain innate capacities, those capacities can be broadened or narrowed by their upbringing.
>
> The numbers indicate that single or divorced parents — however caring and dedicated — are unable, on average, to broaden those capacities as much as married parents can.
>
> These differences have sharp implications for upward mobility.
>
> **Schulz points to an Economic Mobility Project analysis showing that, among children who start off in the bottom third of the income distribution, only 26% with divorced parents move up, compared to 42% born to unmarried mothers (who may marry later, of course) and 50% who grow up with two married parents.**
>
> All this matters more than it used to because two-parent families are much more uncommon than they used to be. In 1960 about three-fourths of Americans 18 and over were married. In 2011, less than half were.

Now, you might say to yourself "what exactly have the secular left down to improve the income mobility of the poor by promoting marriage?" And the answer would be that the left promotes premarital sex for people who are not even ready for marriage, made contraceptives taxpayer-funded, subsidized the largest provider of abortions with hundreds of millions of dollars, promoted the first redefinition of marriage through their feminism and trial lawyer lobbying groups, and now redefined marriage to mean either no biological father or no biological mother. Barack Obama himself has praised every other kind of non-traditional family arrangement as being equal to the traditional family. That's the sort of nonsense that passes for wisdom on the morally relativistic left. They just don't like the idea that there are moral rules that apply to sexual activity.

The left isn't really interested in income mobility. They talk about it as if it's a problem, but their "solutions" to the problem actually make the problem *worse*.

# Can prayer, Bible reading, church-singing and charismatic preaching stop Katy Perry's apostasy?

**Wintery Knight** · 27 December 2013 · Archived copy · Original

I received an e-mail from a woman who was telling me to drop my list of 10 worldview questions and just look for a wife who reads the Bible and has feelings about Jesus.

She wrote:

> My suggestion to you is to consider a top-down approach. Just pray for God to send you your wife and pray that you recognize her immediately. You don't seem like you really want to remain single…and your children are missing out on having you as their dad. Marriage is for children, remember? I know several young ladies who know their Scripture and who love Jesus but who, I don't think, would pass your test because, in my perception, they aren't cerebral enough.

I get this e-mail a lot, especially from women who have married non-Christians or who are divorced. Now the whole point of the list of 10 questions is to detect women who are not going to help me to produce effective, influential Christian children. If I am going to spend north of $100,000 per child + tuition, then I expect to get some sort of return on that investment for God. That money doesn't earn itself, and it needs to be well-spent serving God.

It's my wife's job to help me to do that. My goal in choosing a wife is to find a helper to make the relationship serve God. Otherwise, it's better for God if I give that money that I worked very hard to earn directly to effective Christian scholars. I don't have money to burn "playing house" with someone who is guided by her feelings. I can just give the money to Reasonable Faith or Discovery Institute instead.

Let's take a look at two parents who aimed at nothing and hit it with their daughter. The two parents run a ministry that is based around passionate preaching, prayer and Bible verses.

Excerpt:

> The Lord spoke to Arise International Conference host Mary Hudson to encourage women to reach their full destiny in Jesus Christ. He wants women to rise up as trailblazers, to think outside the box and be bold in Him, of course putting God first, your husband second and then your family!
>
> Mary's ministry of Arise! International holds annual women's empowerment and leadership conferences in Hawaii, Belgium, Colombia, France, Switzerland, Denmark and the USA. The river of glory is rising and we must flow with it.
>
> 2012 promises to be a break-through year to Arise! in who you are in Christ. Lean on Him for direction, don't look to man. Knowing the signs of the times and hearing the voice of the Holy Spirit will be vital to being at the right place at the right time to reap the harvest of souls coming into the Kingdom.
>
> Pray about being a part of Arise! this coming year. It just may be the meeting that propels you into the next level for your life. Remember, you are equipped with everything you need to fulfill your purpose. God's assignments reveal your abilities and your capabilities, and He will provide both the potential and the provision to meet every assignment.
>
> We call you blessed and highly favored!

I noticed that their "book store" offers nonsense books like this:

Keith Hudson "Looking and Seeing":

> Like this disciplined athlete, you need to learn how to look beyond your present situation and keep your eye on

> His Presence. God is ready to display His glory in your life as well in these last days, but it is going to take boldness for you to take the mask off and look at people and situations the way God sees them, not how man looks at them. What may stand in front of you may look too big for you to grasp; that what you see now is the way it's always going to be. Or you look at the dream God has given you and think, "there is no way I can ever accomplish this with my resources at my age…" That is the moment you have to flip the switch from looking to seeing.

Mary Hudson "Smart Bombs":

> Smart Bombs is a book which will show you practically and with true life examples how to take God's Word and let it explode strongholds in your life. When you read the Bible, He quickens particular passages or verses to your heart. You know it is God talking to you about your situation. Or when you receive a prophetic word, you sense in your heart this is speaking to you. But what do you do with these words when they bear witness with you? Let them fade away and disappear off of your memory? No, Smart Bombs shows you how to go on the offense with the anointed word of God, how to demolish strongholds and take back everything the enemy has stolen from you.
>
> This easy read is a must for anyone who is looking for clarity on their destiny.

Keith Hudson "The Cry":

> The Cry will reignite you with new fire. Christians lose their passion when they let go of their zeal for God. We come into prayer meetings and we are so polished and perfected. But the Lord wants to hear the cry of your heart. The church has lost its cry: God is about to restore it. Why did the thirty people gathered for the Azusa Street revival have such a move of the spirit of God in their day? Because they had a cry in their hearts and in their prayers. The Cry will release a desperate longing in you for Gods intervention in your life. It goes way beyond your natural thinking into a spiritual hunger from your innermost being. When everything else has failed, a desperate cry touches the heart of God.

Now do you think that someone who reads books like that will produce the same kind of children as parents who read William Lane Craig, Stephen C. Meyer, Jay Richards, and Michael Licona? Of course not. Because the Hudson books are fluff and the books by real Christian scholars are not fluff.

Now let's read an article from Christian Post about what sort of child the fluff approach produces. (H/T Mysterious Chris S.)

Excerpt:

> Katy Perry, the 29-year-old singer and songwriter, is revealing that while she prays she no longer identifies with Christianity.
>
> "I don't believe in a heaven or a hell, or an old man sitting on a throne. I believe in a higher power bigger than me because that keeps me accountable," she told Marie Claire magazine recently. "Accountability is rare to find, especially with people like myself, because nobody wants to tell you something you don't want to hear."
>
> Perry, who took the Billboard charts by storm with her hit song "I Kissed a Girl" in 2008, told Marie Claire that she no longer considers herself a Christian despite being raised by Christian ministers.
>
> "I'm not Buddhist, I'm not Hindu, I'm not Christian, but I still feel like I have a deep connection with God. I pray all the time – for self-control, for humility," she told Marie Claire. "There's a lot of gratitude in it. Just saying 'thank you' sometimes is better than asking for things."
>
> Despite her decision to perform music that may seem controversial to the Christian community, the chart-topping singer has never shied away from crediting the Christian church for giving her a start as a performer.

> "The atmosphere I grew up in was 100 percent Christian," Perry said her "Part of Me: 3D" movie which was released last year. "I started singing in the church, I never really had another plan."

Their daughter is writing songs to promote homosexuality to young people. That's their legacy. The legacy of spiritual gifts, God opening doors of mysticism and charismatic anti-intellectualism. That's what they are going to present to God as their spiritual legacy. I noticed that Mary Hudson is now calling her daughter's celebrity divorce after one year of marriage a "gift from God". Her daughter married a heroin-addicted leftist non-Christian – but he was *hawt*. Tall, dark, handsome and a famous comedian, too.

The list of questions I use when courting helps me to avoid marrying a woman like Katy Perry's mother. She could not answer any of my questions. None of them. And what's more, she doesn't want to answer them. She wants to live her whole life without learning how to answer them. She wants to stick with her Bible, her singing, her feelings, her passionate oratory and her crowds of gullible people. I will not marry a woman like that. It produces disaster and failure. It produces anti-Christian children.

In fact, you can't succeed at anything worthwhile in life using the Keith and Mary Hudson approach to parenting. You can't do a thing with that approach. Not writing software, not fixing cars, not making investments, not sending a rocket to the moon, not even evangelizing an apostate daughter. You do not want to be a Christian man who pumps 30 years of hard labor into a family that produces apostate children. If you are going to spend the money, then make sure you get the results.

# Veterans Administration blocks cards from children that mention Christmas

**Wintery Knight** · 28 December 2013 · Archived copy · Original

Todd Starnes has the story over at Fox News.

Excerpt:

> The national commander of the American Legion is demanding answers from the Veterans Administration after hospitals in three states placed restrictions on Christian volunteers, including a group of schoolchildren who were told they could only perform Christmas carols from a government-approved list.
>
> "Every Christmas, every religious holiday, Christians are more and more often targeted for censorship and restriction at VA facilities," American Legion National Commander Daniel Dellinger said. "Veterans in these hospitals fought to protect such freedoms."
>
> In Iowa City, American Legion members were told they could not hand out presents to veterans if the wrapping paper said Merry Christmas.
>
> In Augusta, Ga., the VA told a group of students from a Christian school that they could not sing religious-themed Christmas carols. Instead, the students were presented with a list of government-approved, secular songs.
>
> And in Dallas, the VA hospital refused to allow children to distribute Christmas cards to patients because the cards included phrases like "Merry Christmas" and "God Bless You."
>
> […]On Monday morning boys and girls from Grace Academy in Prosper, Tex., were planning on hand delivering the cards to the wounded veterans. Math teacher Susan Chapman called the hospital to make final arrangements and that's when she learned there was a problem.
>
> "I told him my students made cards, we'd like to bring them down for the veterans," Chapman told MyFoxDFW.com. "And he said, 'That's great. We're thrilled to have them, except the only thing is, we can't accept anything that says 'Merry Christmas' or 'God bless you' or any scriptural references because of all the red tape.'"

This is just another story that shows that the Obama administration is hostile to Judeo-Christian values, especially when they are expressed in the military.

# A primer for social conservatives who want to argue for their views with economics

**Wintery Knight** · 28 December 2013 · Archived copy · Original

Somehow I missed this editorial from Ross Douthat, which appeared in the radically leftist New York Times. He responds to the charge that conservatives don't make economic arguments for their socially conservative views, even though the data is there to support such arguments. What he writes is a pretty good primer on evidential arguments for social conservatives. My regular readers will recognize some of the names he mentions from previous posts on this blog.

Excerpt:

> Here are a few (of many) possible answers. The first is that social conservatives actually *do* make such arguments, even if the phrase "negative externalities" isn't deployed with quite the frequency Caplan would like. Look at any prominent document on changing family structures, for instance, from The Moynihan Report down through Barbara Dafoe Whitehead's famous "Dan Quayle Was Right" to the "marriage gap" arguments of today, and you'll find an intense focus on the socioeconomic costs of the trends the writers are describing and/or deploring. Indeed, the entire corpus of socially-conservative intellectual efforts, from 1970s-era neoconservatives like Richard John Neuhaus and James Q. Wilson down to the present era, is shot through with arguments that are, if not purely economic, at least heavily informed by economic questions.
>
> Right now, whether you're reading Jonathan Last on demography or Kay Hymowitz on young manhood or Brad Wilcox on marriage and middle America or Mark Regnerus on the market for premarital sex, the case for social conservatism is reliably — perhaps even *too* reliably, I fear, in some of my own work — framed in the language of costs and benefits, mobility and opportunity, education and income and life outcomes. (And likewise on issues that fall within the socially-conservative penumbra, like immigration, crime, and drugs.)
>
> But note that very few of the writers and intellectuals I've just mentioned are practicing economists: They're political scientists, sociologists, journalists, and so forth. (Arguably the most influential socially-conservative champion of free market economics in the last generation, Michael Novak, earned degrees in theology and philosophy, not economics itself.)

In a previous NYT piece, he had also linked to a new 2014 study from the Journal of Sexual Research which showed how delaying sexual activity improves relationship quality and stability.

Abstract:

> While recent studies have suggested that the timing of sexual initiation within a couple's romantic relationship has important associations with later relationship success, few studies have examined how such timing is associated with relationship quality among unmarried couples. Using a sample of 10,932 individuals in unmarried, romantic relationships, we examined how four sexual-timing patterns (i.e., having sex prior to dating, initiating sex on the first date or shortly after, having sex after a few weeks of dating, and sexual abstinence) were associated with relationship satisfaction, stability, and communication in dating relationships. **Results suggested that waiting to initiate sexual intimacy in unmarried relationships was generally associated with positive outcomes. This effect was strongly moderated by relationship length, with individuals who reported early sexual initiation reporting increasingly lower outcomes in relationships of longer than two years.**

That's nothing new, but it shows that research falsifies the standard leftist/feminist narrative about recreational sex being normal and healthy. The sexual revolution is very much an idealistic flight from reality. Reality is generally

more conservative than the leftists present in their sterile classrooms and popular culture entertainment. You’re not going to see the conclusions of mainstream research reflected in a feminist university professor’s angry rhetoric, or in TV shows and movies written by privileged radicals who have made all the wrong choices in life.

# Michael Strauss lectures on scientific evidence for God at UT Dallas 2013

**Wintery Knight** · 29 December 2013 · Archived copy · Original

Mysterious Chris S. posted this and I have provided a summary of the lecture below.

**About Michael Strauss:**

His full biography is here. (I removed his links from my excerpt text below)

Excerpt:

> I had an interest in science and theology, so in 1977 I chose to go to Biola University where I could study both subjects in detail. I thoroughly enjoyed college and participated in intramural sports, was elected to student government, served as a resident assistant, competed in forensics, and studied a lot. As I neared college graduation my dual interest continued so I applied to seminary and to graduate school. After graduating *summa cum laude* from Biola, I decided to pursue a graduate degree in physics at UCLA.
>
> During my first few years of graduate school, I developed an increased interest in quantum mechanics and subatomic physics and decided to do research in a field that dealt with these subjects. I joined a High Energy Physics experimental group doing research at the Stanford Linear Accelerator Center (SLAC) and moved to the San Francisco Bay Area to actively participate in research at SLAC. I graduated in 1988 with my Ph.D in High Energy Physics (a.k.a. Elementary Particle Physics). If you would like to know more about High Energy Physics, the Particle Data Group at Lawrence Berkeley Laboratory has a very nice interactive adventure that teaches you all about the subject. My research advisor was professor Charles Buchanan and my disertation was titled "A Study of Lambda Polarization and Phi Spin Alignment in Electron-Positron Annihilation at 29 GeV as a Probe of Color Field Behavior."
>
> After graduation, I accepted a post-doctoral research position with the University of Massachusetts at Amherst. I continued to do research at SLAC where I joined the SLD experiment. My research interests centered on the SLD silicon pixel vertex detector. I wrote most of the offline software for this device, and did physics analysis which used the vertex detector, including tagging *b* quark events for flavor specific QCD (Quantum Chromodynamics) analysis. In the seven years I was employed by UMASS, I only spent 3 days on the Amherst campus. The rest of the time was spent in California.
>
> […]In August 1995, I accepted a job as an Assistant Professor of Physics at the University of Oklahoma (OU) in Norman, Oklahoma. The University of Oklahoma has a vibrant high energy physics research group involved in experiments at the Fermi National Accelerator Center (Fermilab), and CERN. I joined the DØ experiment at Fermilab where I continue to do research in elementary particle physics. As a member of the DØ collaboration I have made contributions to the testing of silicon sensors for the upgraded vertex detector, to the track finding algorithms, to a measurement of the photon production cross section which probes the gluon content of protons, and to other QCD measurements. I am currently studying properties of *B* mesons that contain a *b*-quark, the production cross section of jets coming from quarks and gluons, and other QCD analyses. At CERN, I am a collaborator on the ATLAS detector.
>
> I received tenure in 2001 and was promoted to the rank of Professor in the summer of 2010. Most of the time at OU I have taught introductory physics classes to physics majors, engineers, and life science majors. In these classes I have used a number of interactive techniques to facilitate student participation and learning. I have been privileged to win a few awards for my teaching. In 1999, the Associated Students selected me as the Outstanding Professor in the College of Arts and Science, and in 2000 I was awarded the BP AMOCO Foundation Good Teaching Award. In 2002, I was given the Regents Award for Superior Teaching. I received the Carlisle Mabrey and Lurine Mabrey Presidential Professorship in 2006 which is given to "faculty members who excel in all their professional activities and who relate those activities to the students they teach and

> mentor."

He seems to have done a fine job of integrating his faith with a solid career in physics research. It would be nice if we were churning out more Christian scholars who are experts in experimental science.

Note: there is a period of 19 minutes of Q&A at the end of the lecture.

**The lecture:**

**Summary:**

It used to be true that most of the great scientists were believers in God
But now science has advanced and we have better instruments – is it still true?
Today, many people believe that science has shows that the universe and Earth are not special
We used to believe that the Earth was the center of the universe, and Darwin showed we are not designed
The problem with this view is that it is based on old science, not modern science
Three topics: origin of the universe, fine-tuning of the universe, the Rare Earth hypothesis

Experimental evidence for the origin of the universe:

- #1: Hubble discovered that the universe expands because of redshifting of light from distant galaxies
- #2: Measurements of the cosmic microwave background radiation show the universe had a beginnning
- #3: Measurements of the light element (hydrogen and helium) abundances confirm an origin of the universe
- The best explanation for an absolute origin of space, time, matter and energy is a supernatural cause

Experimental evidence for the design of the universe:

- #1: The amount of matter: a bit less = no stars and galaxies, a bit more = universe recollapses
- #2: The strong force: a bit more = only hydrogen, a bit more = little or no hydrogen
- #3: Carbon resonance level: a bit higher = no carbon, a bit lower = no carbon

Experimental evidence for galactic, stellar and planetary habitability:

- #1: Galaxy: produces high number of heavy elements and low radiation
- #2: Star: long stable lifetime, burns bright, bachelor star, third generation star (10 billion years must elapsed),
- #3: Planet: mass of planet, stable orbit, liquid water, tectonic activity, tilt, moon

Naturalistic explanations:

- Humans evolve to the point where they reach back in time and create finely-tuned universe
- Eternally existing multiverse

Hawking and Mlodinow response to Rare Earth:

- There are lots of planets so one must support life
- Odds of a planet that supports life are low even with 10^22 planets

Hawking and Mlodinow proposal of M-theory multiverse:

- There is no experimental evidence for M-theory being true
- M-theory is not testable now and is not likely to be testable in the future
- But science is about making testable predictions, not about blind speculation

Hawking and Mlodinow no-boundary proposal:

- This theory requires the laws of physics to exist prior to the universe
- But where do you get laws of physics before there is any physical world?
- There is no experimental evidence for no-boundary proposal
- All the evidence we have now (redshift, CMBR, H-He abundances) is for Big Bang

What science has revealed provide abundant evidence for a transcendent Creator and Designer

# New Yale University Press book: fertility rates are in decline worldwide

**Wintery Knight** · 29 December 2013 · Archived copy · Original

I saw this article about a new Yale University Press book on demographics, posted at Yale University's web site.

Excerpt:

> It's no surprise that the world's population is at an all-time high – exceeding 7 billion – although many might not know that it increased by 5 billion during the past century alone, rising from less than 2 billion in 1914. And many people would be surprised – even shocked – to know that over the past three decades, fertility rates have plummeted in many parts of the world, including China, Japan and even significant regions of India.
>
> These Asian giants have not been alone. In much of Europe, North America, East Asia and elsewhere, the average number of children born to women during the course of their childbearing years has fallen to unprecedentedly low levels.
>
> Our new book, *The Global Spread of Fertility Decline: Population, Fear, and Uncertainty* (Yale University Press, 2013) analyzes these trends and the demographic, political and economic consequences and uncertainties as low fertility has become a global phenomenon. Like other facets of globalization, low fertility rates are by no means universal: High fertility persists in sub-Saharan Africa and in parts of the Middle East, but elsewhere low fertility is more the rule than the exception. These underlying trends in childbearing mean that in the near future the rate of population growth both in Europe and Asia are likely to decline. The world is not on a path of unrestrained demographic growth, as some believe. People all over the world have hit the brakes.

It's strange because a lot of people on the secular left are worried about overpopulation, which is one of the factors causing them to push for abortion. I guess I shouldn't be surprised that the same people who are worried about overpopulation in the teeth of declining fertility rates are the ones who are worried about global warming even though there has been no significant warming for the last 17 years.

Something to think about when people on the secular left claim to be "reality-based". The universe is eternal, aliens seeded the Earth with life, the planet is burning to a crisp, fatherless children do as well as children of married couples, you can keep your health care plan, you can keep your doctor, and… fertility rates are too high. I think we need to change our perception of people on the left to reflect how deluded they really are.

# Does the last-minute Obamacare exemption fix anything?

**Wintery Knight** · 30 December 2013 · Archived copy · Original

One of my favorite writers on health care policy is Michael F. Cannon of the libertarian Cato Institute. He has an article in Forbes magazine that I think is a good level-set for the Obamacare changes that are happening in 2014 and beyond.

He writes:

> […]President Obama announced, just days before the deadline for purchasing coverage with a January 1 effective date, that he would offer a categorical "hardship exemption" from the individual mandate to anyone who had their insurance cancelled due to ObamaCare.
>
> […]If these folks choose not to buy health insurance, they will not face a penalty. They will also have the option to buy, "if it is available in your area," the lower-cost catastrophic coverage that ObamaCare otherwise offers only to people under age 30, or who receive the separate "unaffordability" exemption from the mandate.
>
> The obvious purpose of this policy is to give political cover to Senate Democrats who must face the voters next year, and are no doubt afraid of attack ads like this one.
>
> […]Yet this exemption may not be of much value to those who qualify, and is likely to create more problems for ObamaCare supporters than it solves.
>
> The people who qualify for this exemption don't actually want it. They want health insurance. They had affordable coverage, until ObamaCare took it away from them, and that's what they still want now. Sebelius boasts that ObamaCare's catastrophic plans cost 20 percent less than other ObamaCare plans, but don't confuse that with affordable coverage. The Manhattan Institute's Avik Roy — who is now the opinion editor for the sprawling Forbes empire – notes that ObamaCare's catastrophic plans can still cost twice as much as what was previously available on the individual market.
>
> But even if they like their catastrophic plan, they can't keep it. Sebelius has complete control over the duration of the exemptions, which she has described as a "temporary" step "to smooth [consumers'] transition" to enrollment in Exchange plans. So in a matter of months, Obama will violate his "if you like your health plan" pledge *again* by kicking these folks out of their catastrophic plans. They will get *another* cancellation letter tossing them into the Exchanges. Their premiums will surge *again*. They may lose their doctor *again*.
>
> The exemption means insurers will suffer losses this year, and rates will be higher next year, for all ObamaCare plans.
>
> The president argued before the Supreme Court that ObamaCare's regulatory scheme cannot work with out the individual mandate. Yet he has now exempted millions of the very people he most needs to comply with it. This exemption siphons good risks out of the Exchanges and destabilizes the risk pools for both the standard ObamaCare plans and the catastrophic plans. Participating carriers set the rates for their Exchange plans with the expectation that these folks would be purchasing bronze, silver, gold, and platinum plans through the Exchanges. **But the healthiest members of this now-exempt group are the most likely to go uninsured or purchase a catastrophic plan. So Obama's blanket exemption makes those risk pools older and sicker.**
>
> **This blanket exemption also destabilizes the risk pools for the catastrophic plans. It opens those pools to lots of people over age 30, who have higher health expenses than people under age 30, and whom the insurers were not expecting to buy catastrophic plans when they set those rates.**

So the effect of this is going to be to raise rates temporarily, because the insurers companies are not getting the younger, healthy people they need to make the rates as low as they originally calculated. They are going to lose a ton of money because the Democrats are changing the rules at the last minute. They people who have coverage are going to be the ones who make all the claims, and the people who normally don't make claims are now exempt,

temporarily – until the 2014 elections. This is going to be a huge hit to the health insurance companies.

As I noted before, the Democrats are going to have to bail out the insurance companies in order to account for the losses. It's actually in the Obamacare law already, as David Freddoso explained. But will the Democrats use money from their political party to pay for their mistakes? Hell no – they will borrow it from your children, which is what they are so good at doing. There is a cost for electing incompetent people, and it's going to continue to rise until the fools are voted out.

# Woman who slept with 18 guys shocked that no one wants to marry her

**Wintery Knight** · 30 December 2013 · Archived copy · Original

Does being a virgin before marriage affect marital stability?
Sunshine Mary linked to a post from Reddit by a 32-year old "progressive" woman who is surprised that 15 years of sleeping around with 18 different guys is not attractive to marriage-minded men.

Excerpt:

> My parents are first generation immigrants. I have a younger brother and younger sister. In my family I was always the rebellious one; I would often challenge my parents. My family was very strict, when it came to dating and my siblings usually fell in line. However, I would challenge that norm.
>
> My brother and sister were very repressed with their sexualities as a result, while I lost my virginity at 17 to my then boyfriend. While my brother and followed the traditional Indian path. My brother ended up not having any sexual contact with a girl until he got married at 25 (arranged marriage) and now they have a child together. My sister (too never kissed a boy) has recently gotten married too at 24 with an Indian boy she met at our Temple (both parents approved).
>
> I live in LA, a city where both men and woman tend to marry a bit later in life, and yet I still spent the last years of my 20's feeling that somehow, I'd messed up. I had followed the wrong trail and thus, my "important-life-moments" timeline was off. Even with my more progressive friends it began slowly at first, when I was 27 … an engagement post on Facebook, an invite to a wedding—it was happening. People I knew were beginning the next stage of life and saying "I do."
>
> Throughout my whole life I never really dated any Indian guys; I exclusively dated white guys. However now I realize more than ever that the guys I dated never really took me seriously. They never really viewed me as someone they would eventually marry. I was always just some exotic fun. This part was definitely a realization that has hurt me to the core. I didn't actually do it to spite Indian men or anything like that. I did what a lot of

> my white female friends did; I thought I was the same as them, but that could be farther from the truth. Most white guys I ran into wanted white wives.
>
> I am now 32, and seems like everyone in my family has lapped me. I too want a family a marriage. However, now my chance of finding someone is gone. At my age getting an arranged marriage or finding another Indian man to marry me is out of the question. Majority of Indian guys usually get married pretty early. Often either to another Indian girl they meet here, or they go back to India for an arranged marriage. My parents have tried signing me up for a matrimony site, but of the guys I'd meet they would be turned off by my history (drink/eat meat/not a virgin).
>
> […]Most of my relationships have been long term I have only been with 18 guys and I have been sexually active since I was 17 years old.

She has only had steady sexual relationships with 18 guys in 15 years! That's not a lot. Is it?

Let's see what Sunshine Mary says first:

> However, the more I think about it, the more it seems to me that articles like hers are a *good* thing simply because they expose the lie. Feminists have sold young women a bill of goods, that they can live like men, work like men, have sex like men, and then turn back into women when they feel like it. We laugh at a woman like this sometimes and make fun of her and say, "Didn't she know that she'd end up like this?"
>
> No, she *didn't* know that. That's because when you are 17 years old, you don't know much, especially in this culture of extended adolescence. And when you have been told from a very young age that, as a girl, it is your destiny to Have It All exactly When You Want It, I'm sure it is very baffling to find yourself in your thirties with no husband and none in sight, with the dawning realization that your job and lonely apartment are not nearly as fulfilling as being a wife and mother would have been.
>
> […]Personally, I feel no joy in this woman's pain. I don't think a White Knight should ride in to save her because I think she should suffer the natural consequences of her decisions so that other young women may see and learn from her errors, but I take no pleasure in the fact that she will have this lot in life. However, what most of us don't seem to understand is that **young women make the terrible choices that they are making because they are told from an early age that these are actually *good* choices.** Some girls are able to resist that message, which saturates every aspect of the media and schools, but most girls aren't, and they don't develop the necessary wisdom until it is too late.

Emphasis hers. And now my turn.

Let me tell you what awaits a man who marries a woman like that, who spent her 20s hooking up with hot guys who had no interest in marriage and no demonstrated ability to protect, provide and lead on moral/spiritual issues. She will have convinced herself that she is more attractive than she really is, and be constantly comparing a less-attractive husband to these other hot guys. I therefore do not recommend that any man marry this woman as she is now. What men need in marriage is respect, affection, affirmation and approval. A woman like her needs to work on building up her ability to trust and encourage men by choosing good men and supporting them chastely and unselfishly. That is the only way to fix this, if it even can be fixed.

I know that women will be surprised by this, but men can tell if you are a virgin or not based on how much you trust and encourage them in their plans. If you are constantly putting them down, calling them names, and making excuses for why you don't have to care about their needs and feelings, then that's just your past promiscuity showing itself. Virgins with good relationships with their fathers don't put men down like that – they build men up. My recommendation for women who realize that they are making bad choices with men and being negative about the men they choose is to look in the mirror and acknowledge that *they are the problem.* The solution, then, is to find a good man and work hard at being submissive and supportive, but chastely.

**In the church**

My friend Ari, who is married with lots of kids, sent me a related article from Vox Day, about how church women are making choices about during their 20s and 30s.

Vox writes:

> Women increasingly expect churches and church functions to be places of freedom from "unwanted" interactions. Translated, this means women expect unattractive men to know their place and not to ask women out or otherwise talk to them at church. They expect men either to avoid them completely, or to be eunuchs, existing to serve them. There have been reports in the manosphere of women actually complaining to pastors about "unattractive" men asking them out at church. It is as if women expect pastors and church staff to punish and rebuke men for "sexual harassment" at churches, merely because in a social situation they acted like men and pursued someone/something they wanted. Of course, none of this applies to attractive men, who are never the subject of complaint or sanction no matter what they do.

A friend of mine who has an engineering degree from MIT and a very high-paying job replied to that with this:

> Heh. Sad, but good insight about the desexualized church. When I was single, I very friendly (not sexually — was very discerning and had very high standards) and some women found that very disconcerting. I was even had my behavior likened as "sexual harassment" at one point, so I asked if there were things like pelvic thrusts, hands in pockets pointing the wrong way, things that I said that were inappropriate. No, the answer came back. It was just that I was friendly. (Besides, I couldn't see any of the women as date-material … one or two from what I could discern were nominally Christian, as in, one thought it would be cool to find a husband at a church but would take home guys.)
>
> So I stated: I merely say hi and ask how the person is and if the person doesn't want to talk, I don't push the conversation. I am merely being pleasant especially to people I know. The answer came back that a certain group of women wanted me to just ignore them, not even wave, say hi, or acknowledge their existence. Really? Jesus died so we could just ignore each other? I mostly gaped … and wondered about John 13:34-35.
>
> I was told "this was an unachievable ideal, don't even try." Now, who is still worshiping and still there? Not this group of women!

I think this problem of women wasting their lives on men who are attractive and entertaining, but not marriage-capable, is even more serious when it comes to the church, because I think there is a temptation that women have to be very secular in their standard for men, and yet the church affirms them by making it seem that their feelings are actually God speaking to them about which man to like. Every objection about the man's unsuitability for marriage is met with "but he has a good heart for Jesus and he works hard". Heart for Jesus = never read so much as a C.S. Lewis book in his life.

Where does the standard come from? Well it comes from TV, movies, music and pop culture. That's where they learn what kind of man to like, and it's reinforced by their peers. There is no effort to look at what a Christian man does in a marriage and then choose a man who is showing he can do that. A woman should always choose a man who gives her the tingles, because the tingles are the voice of God telling her that he is opening doors and providing signs for her to prefer the agnostic psychology student who lives in his parents' basement and is 3 years younger than she is. But he is *hawt*, and the Holy Spirit told her to spend her 20s pining away for him. Her friends would be so envious, because he looks like that guy on "Mad Men".

# What motivates William Lane Craig and why is he so effective?

**Wintery Knight** · 31 December 2013 · Archived copy · Original

Nathan Schneider, who wrote a balanced profile of Dr. Craig for the Chronicle of Higher Education a few weeks back, has written an even more in-depth profile of Christianity's ablest defender.

Here's the introduction:

> Nobody—or just about nobody, depending on whom you ask—beats William Lane Craig in a debate about the existence of God, or the resurrection of Jesus, or any topic of that sort. During their debate at Notre Dame in April of last year, New Atheist author Sam Harris referred to Craig as "the one Christian apologist who seems to have put the fear of God into many of my fellow atheists."
>
> Over the course of working on my book about how people search for proof of God's existence, I had the chance to spend a generous amount of time with Craig, both in the Atlanta area where he lives and at Biola University, an evangelical school on the outskirts of Los Angeles, where he teaches a few weeks out of the year. For the book, I've gotten to write about ideas like his "kalam cosmological argument," one of the most-cited ideas of its generation in philosophy of religion, which fuses medieval Muslims with modern cosmology. I also tell of his entrepreneurial savvy in turning the Evangelical Philosophical Society into an academic organization that moonlights as a slick-as-a-banana apologetics platform for changing hearts like yours and mine. But none of that quite captures the man's role as a sage and exemplar, in which he renders something like the upbuilding service Oprah provides to home-bound American women, except that his acolytes are the precocious set among conservative, evangelical, young-adult males. He makes me almost wish I were that kind of conservative evangelical myself—which is, to him, the point.
>
> Craig dresses impeccably and professorially, often with a buttoned shirt and a patterned blazer, sweater, or sweater-vest. His dimples hint at a basic innocence that can be startling when it pokes through the frontage of logic. I find in Craig the decency associated with an era I am too young to be nostalgic for, and which I've been taught to imagine was imperialistic, sexist, homophobic, narrow-minded, or otherwise regressive. His rationalizations of certain parts of the Hebrew Bible can sound like he's okay with genocide. Yet none of these accusations quite sticks to him; none is even comprehensible in the cosmic snow-globe within which he expertly thinks his way through life, whose sole and constant storyline is bringing more and more souls to a saving knowledge of the one true Lord and Savior, Jesus Christ.
>
> I live in a different snow-globe from Craig's. Nevertheless, I've gained a lot from the lessons I learned with him, and from his carefully crafted advice, and from his answers to my questions. ("I may not answer, but you can ask!" he once warned.) They've improved my productivity, and my relationship with loved ones, and my physical fitness. It would be selfish if I did not pass some of these lessons on, in synthesized and practicable form, to you.

The article covers 7 points about Dr. Craig:

1. **Do Everything Like It's a Ministry**
2. **Make a Covenant with Your Wife**
3. **Organize the Day**
4. **Turn Weakness into Strength**
5. **Be Prepared**
6. **Remember That Time Is Everything—and Nothing**
7. **Love God and Authority**

And here's one that I found fascinating, being single myself:

> **3. Organize the Day**
>
> There was a time, says Craig, when he began to worry he was losing his knack for philosophy. “Honey,” he remembers telling Jan, “I don’t know what’s the matter with me. I just can’t seem to concentrate anymore. I used to be able to study all day long, and there was no problem, and now I find I just can’t concentrate anymore. My mind wanders, and I’m tired.” He was tempted to despair.
>
> “No, no, don’t be ridiculous!” she told him. “You just need to organize your day.”
>
> As usual, she was right. She put him on a new schedule: starting the workday with the hardest philosophical work in the morning, then lighter material, like his writing for popular audiences, after lunch. He doesn’t look at his email until late afternoon, “when my brain is really fried.” (For fear of being bombarded with mail, he doesn’t even share his email address with his graduate students.) Soon after trying this regime, he regained his philosophical powers completely.
>
> The couple’s life together, at home in the suburbs of Atlanta, is a picture of (a certain kind of) teamwork. Craig wakes up each morning at 5:30, and begins the day with devotional time, reading from the Church Fathers and the New Testament in Greek, and then he prays for the spread of the gospel in some benighted part of the world, with the help of the *Operation World* handbook. Soon, Jan is up. They have coffee together (which he dislikes, but recommends for the health and social benefits), after which he goes down to the weight room for an hour of exercise. By the time he reemerges, she has a hot breakfast ready and waiting—sometimes as elaborate, he says, as ham and eggs and pumpkin waffles with whipped cream and strawberries. (“She’s a fabulous cook.”) He’ll return downstairs for an intensive morning of scholarship, and reemerge for the hot lunch Jan has prepared. Then, he’s back downstairs for the lighter work of the afternoon, culminating in emails, which he responds to in longhand and she has often been the one to type out and send, since his rare neuromuscular disease—more on that in a moment—renders him unable to type. Between meals and typing sessions, Jan plays the stock market. Before long dinner is ready, and they eat, and spend the evening together, watching TV and drinking red wine (which he also dislikes, but also recommends for the health and social benefits).
>
> “She’s not an intellectual herself,” Craig says of his wife, “but she appreciates the value of what I do, and that’s what matters.” One would hope that this is true, because she has typed out all of his papers, books, and both doctoral dissertations. Would that we all had such devoted help, though it may be untenable in the present economic climate for those scholars among us unable to garner five-figure speaking fees. We can at least hold off on our email for a few hours—which I have since done, to enormous benefit.

It’s very interesting to read this because it’s got lots of positive and negative points. On the one hand, he finds Dr. Craig’s conservative beliefs and exclusive positions difficult to accept. On the other hand, he has to admit that Dr. Craig really believes what he says he believes, and he’s very good at persuading others. He’s done his homework. I think the biggest problem that a person has with accepting Christianity is re-orienting the will. Another big problem is being willing to be disapproved of by non-Christians. Even if they can’t beat you, the pressure to compromise and please others makes many people shy away from Christianity.

This new profile of Dr. Craig is getting tons of likes and shares on Facebook, so give it a look. Be sure and share it on Facebook and tweet it, too.

# Arthur Brooks: earning your own success through work makes you happy

**Wintery Knight** · 31 December 2013 · Archived copy · Original

In the Wall Street Journal.

Excerpt:

> Earned success means defining your future as you see fit and achieving that success on the basis of merit and hard work. It allows you to measure your life's "profit" however you want, be it in money, making beautiful music, or helping people learn English. Earned success is at the root of American exceptionalism.
>
> The link between earned success and life satisfaction is well established by researchers. The University of Chicago's General Social Survey, for example, reveals that people who say they feel "very successful" or "completely successful" in their work lives are twice as likely to say they are very happy than people who feel "somewhat successful." It doesn't matter if they earn more or less income; the differences persist.
>
> The opposite of earned success is "learned helplessness," a term coined by Martin Seligman, the eminent psychologist at the University of Pennsylvania. It refers to what happens if rewards and punishments are not tied to merit: People simply give up and stop trying to succeed.
>
> During experiments, Mr. Seligman observed that when people realized they were powerless to influence their circumstances, they would become depressed and had difficulty performing even ordinary tasks. In an interview in the New York Times, Mr. Seligman said: "We found that even when good things occurred that weren't earned, like nickels coming out of slot machines, it did not increase people's well-being. It produced helplessness. People gave up and became passive."
>
> Learned helplessness was what my wife and I observed then, and still do today, in social-democratic Spain. The recession, rigid labor markets, and excessive welfare spending have pushed unemployment to 24.4%, with youth joblessness over 50%. Nearly half of adults under 35 live with their parents. Unable to earn their success, Spaniards fight to keep unearned government benefits.
>
> Meanwhile, their collective happiness—already relatively low—has withered. According to the nonprofit World Values Survey, 20% of Spaniards said they were "very happy" about their lives in 1981. This fell to 14% by 2007, even before the economic downturn.
>
> That trajectory should be a cautionary tale to Americans who are watching the U.S. government careen toward a system that is every bit as socially democratic as Spain's.
>
> Government spending as a percentage of GDP in America is about 36%—roughly the same as in Spain. The Congressional Budget Office tells us it will reach 50% by 2038. The Tax Foundation reports that almost 70% of Americans take more out of the tax system than they pay into it. Meanwhile, politicians foment social division on the basis of income inequality, instead of attempting to improve mobility and opportunity through education reform, pro-growth policies, and an entrepreneur-friendly economy.
>
> These trends do not mean we are doomed to repeat Spain's unhappy fate. But our system of earned success will not defend itself.

What I find most interesting is that the people who vote for Obama don't even realize how they are making themselves more and more unhappy by being more and more dependent on government. It's the bluest states that have seen the lowest income growth, the lowest job growth, lower home prices, and the highest unemployment. All of this talk about taxing the rich and spreading the wealth around through bigger and more intrusive government *hasn't worked*.

More government means less prosperity, and less prosperity means fewer jobs, and fewer jobs means *less*

*happiness*. Punishing your successful neighbor and borrowing huge amounts of money from the next generation of Americans does not create jobs. And without a job, you’re not going to be happy.

We need to have a public policy that recognizes that human beings are spiritual creatures, and we aren’t happy unless we chart our own course and earn our own success instead of depending on government to take it from someone else and hand it to us.

# SCOTUS Justice grants stay for some from Obamacare pro-abortion mandate

**Wintery Knight** · 1 January 2014 · Archived copy · Original

This article from NBC News reports on a development in some of the cases being brought by Christian organizations against the Obama administration.

Excerpt:

> Supreme Court Justice Sonia Sotomayor granted a last-ditch plea from Catholic groups Tuesday night to block a birth control mandate in the new health care law for religious organizations, just hours before it was to have gone into effect.
>
> Sotomayor issued the stay at the request of an order of Catholic nuns in Colorado, part of a larger effort by Catholic-affiliated groups from around the nation to halt provisions of the Affordable Care Act that require companies — regardless of religious beliefs — to provide contraceptives and other abortion-inducing drugs to their employees.
>
> The groups wanted the mandate halted while the court considers a legal challenge, brought by the for-profit company Hobby Lobby, arguing that the requirement violates their religious liberties.
>
> In June, the 10th U.S. Circuit Court of Appeals in Denver waived millions of dollars of fines against Hobby Lobby and a subsidiary, Mardel Christian Stores, which refused to comply with the mandate, writing that the companies were likely to win their claim that requiring for-profit companies to pay for birth control was a violation of religious protections.
>
> The motion for a stay went to Sotomayor as the justice with oversight for the 10th Circuit. She gave the government until Friday to respond.
>
> “Tomorrow, a regulatory mandate will expose numerous Catholic organizations to draconian fines unless they abandon their religious convictions and take actions that facilitate access to abortion-inducing products, contraceptives, sterilization, and related education and counseling for their employees,” the groups said in their request for a stay Tuesday.

The mandate requires companies run by Christians to provide their employees coverage for drugs that can cause abortions  by preventing the implantation of a fertilized egg.

The big case that everyone is watching is the Hobby Lobby case, and they were granted a stay from a federal court back in July of 2013. Their case is headed to the U.S. Supreme Court, where the government will argue that Christians should be forced to subsidize abortion, in violation of their consciences.

# Greg Ganssle explains the problems of evil and suffering

**Wintery Knight** · 1 January 2014 · Archived copy · Original

I found these three videos on Apologetics 315. They are each about 5 minutes long.

Here's the first one:

Description:

> Part 1 of a trilogy. Greg lays out a classic argument that God does not exist, called 'The Problem of Evil'. He distinguishes two versions of that argument, which are sometimes called 'the deductive' and 'the evidential' version. He goes into some details on the deductive version.

And the second one:

Description:

> Part 2 of a trilogy. Here, Greg gives a response to the deductive version of the Problem of Evil on behalf of someone who believes that God exists. In thinking about this response, we need to think about whether God can make contradictions true, and whether God can have good reasons for allowing bad things to happen.

And the third one:

Description:

> Part 3 of a trilogy. Greg considers the evidential version of the Problem of Evil, and gives a response on behalf of someone who believes that God exists. This involves considering whether God might have a good reason to allow bad things to happen.

This is very practical and you won't find a shorter introduction to the problem of evil than these videos. When things go wrong as they sometimes will in your life it's very important to understand that we shouldn't be surprised by suffering and evil.

Probably the most important thing to understand about evil and suffering is that God is not our cosmic butler. It's not his job to provide happiness for his human pets. You would never get the idea from the Bible that God is interested in making people feel happy, especially if they ignore him and his moral laws. Everything God does with people is meant to make them know him better and serve him better, and many things that happen to us that don't make us happy, but they do give us the opportunity to either grow towards God or away from him.

If the story of Jesus tells us anything, it tells us that you can be morally perfect and still get whammed while you learn how to be obedient to God. Being good is no guarantee of happiness. Doing God's will is no guarantee of happiness. There just is no guarantee of happiness, no matter how righteous you are. But what there is for us is a promise that God works through evil and suffering in order to make those who respond to his leading as much like his Son Jesus as they can be. And that has to be enough for us. We have to learn how to trust God through suffering. Knowing the logic of the problems of evil and suffering can help us to develop that trust.

See the links below for more.

# Scientists go to Antarctic to prove global warming, get trapped in ice

**Wintery Knight** · 2 January 2014 · Archived copy · Original

From Investors Business Daily.

Excerpt:

> In an event chock-full of bitterly cold irony, perhaps even Al Gore has noticed that multiple icebreakers couldn't free a boat stuck in Antarctic ice that global warming was supposed to have melted.
>
> Few of the media reports on the plight of the Russian-flagged research vessel MV Akademik Schokalskiy have noted the irony of a ship full of climate scientists getting stuck in an Antarctic ice sheet so thick that early attempts at breaking through the ice to free them were failures.
>
> "We're stuck in our own experiment," the Australasian Antarctic Expedition said in a statement. "We came to Antarctica to study how one of the biggest icebergs in the world has altered the system by trapping ice. We … are now ourselves trapped by ice surrounding our ship."
>
> In a statement only climate-change die-hards could make, the group said, "Sea ice is disappearing due to climate change, but here ice is building up."
>
> A Chinese icebreaker was unable to reach the ship, and another vessel, the Australian icebreaker Aurora Australis, got within 10 nautical miles of the stranded ship but couldn't see it through a driving blizzard and had to turn back to open water, Fox News reported.
>
> A makeshift helicopter pad on the ice sheet was being readied for a helicopter rescue.
>
> […]Expedition leader Chris Turney, a professor of climate change at Australia's University of New South Wales, dismissed the irony of their situation, claiming the ice they were trapped in was old ice likely formed from an iceberg that broke away years ago, and proves nothing.

The rest of the article contains a brief listing of the facts on global warming and ice extents:

> Antarctic sea ice has grown to a record-large extent for a second straight year.
>
> A review of the Icesat satellite data from 1992 to 2008 showed a net gain in ice mass in Antarctica — not a decline.
>
> In 2013, the ice reached 19.51 million square kilometers, according to the National Snow and Ice Data Center website.
>
> That number topped the record-high level set in 2012 of 19.48 million square kilometers. The Australasian Antarctic Expedition has now found itself trapped in some of that ice as its leaders try to explain away the ice's presence.
>
> Dr. Don J. Easterbrook, a professor of geology at Western Washington University, points out that the East Antarctic sheet, which contains about 90% of the world's fresh water, is not melting, but expanding.

That, together with the 16 years of no significant warming, should be enough to finish off the global warming hypothesis. It would be nice if the government had to refund all the money to the taxpayers that they spend on this ridiculous enviro-mythology, but somehow, I think that the money is gone for good. The only way to stop government waste on pseudo-science is to shrink government.

# Gang-raped teen burned to death in India, corrupt police try to cover it up

**Wintery Knight** · 2 January 2014 · Archived copy · Original

Map of India

From the UK Daily Mail. Excerpt:

> The body of a gang-raped teenager who was burned to death after her attackers threatened her family was 'hijacked' by police who attempted to forcibly cremate it, reports today suggest. The girl, 16, was gang-raped in October in Madhyamgram, near Calcutta, by a group of six men – who are believed to have links with West Bengal's ruling party, the Trinamool Congress. They again attacked her the following day as she returned from reporting the crime to police with her father, it is claimed. The group were arrested – but the teen and her family say they received a series of threats from the men. The alleged threats included one saying the girl's taxi-driver father would be killed if she continued to pursue charges. The family's landlord, who is reportedly related to one of the gang, allegedly told them they must leave their one-bedroom property also. On the morning of her death, two friends of the accused allegedly visited the girl's home and verbally abused the girl. The teen victim was set alight on December 23 and died from her injuries on New Year's Eve. Doctors said the victim – who had 40 per cent burns – had suffered severe damage to her throat and face, making it difficult for her to breathe. Earlier reports suggested the victim had committed suicide – a story that initially came from police – but today it was revealed the girl said two men poured kerosene over her and burned her before she died. Doctors have also said the girl was pregnant when she died. Reports today suggest police 'hijacked' the hearse carrying the girl's body and attempted to have it cremated despite the family's wishes to wait to give her a proper funeral. On Tuesday evening police are alleged to have intercepted the hearse, which was travelling from RG Kar Hospital to a mortuary. They took it to a crematorium where the body remained for three hours, it is claimed. Officers are then said to have gone to the home of the bereaved family at around 2am and threatened to break down the door if they did not give them the death certificate needed for the cremation. The girl's father refused, but officers allegedly tormented the family all night. In a letter written to Govenor M K Narayanan the father said: 'The superintendent of police and other officers reached our house in the dead of the

> night and asked us to open the door.

I think it's very important in cases like this to let them break down the door so that there is evidence of what they did. They will not want to do anything like that, because it can be photographed. It leaves a trace.

The fact that this went right up to the superintendent of police just chills my blood. Imagine living in a country like India where people who gang-rape and murder a child can go to the police and get support in covering it up because of corruption and connections.

I remember my Indian co-workers telling me how surprised they were not to have to bribe American police officers when they got pulled over for speeding. I think there is something to that. In Judeo-Christian America, we still believe that God is watching what we do, by and large. So we tend to do the right thing, especially conservatives. But Hinduism and Islam seem not to have the same requirement.

Even if religion played no role in this, the culture as a whole seems to condone corruption to the level where you cannot expect basic honesty like you can in Western countries. I have heard horrifying stories about what it is like to be a woman and ride on public transportation in India. For the Islamic religion, there seems to be an epidemic of gang rape and sex-trafficking going on in Western countries from Muslim men. The idea of chastity for men seems to be more of a Judeo-Christian value.

# How to increase the number of adoptions in America

**Wintery Knight** · 3 January 2014 · Archived copy · Original

Here's an article from National Review that argues that there is far more demand for children to adopt than there is supply of children to adopt for certain specific reasons.

The article mentions how legalized abortion and pro-eugenic attitudes contribute to diminishing the supply of children via abortion, but then it discusses another reason for reduced supply which I found horrifying. Apparently leftist social workers think that it is a bad idea for white parents to adopt black children, and would prefer those black children grow up in foster care.

Look:

> Most of the parents waiting to adopt are white; most of the children awaiting adoption are not. Parents' attitudes toward transracial adoption have become much more liberal since the 1970s, but the racial attitudes of social workers, those sometimes pitiless gatekeepers on the adoption pilgrimage, have hardened. A study published by the academic journal *Child Welfare* found that 43 percent of the caseworkers responsible for the longest-waiting black children in New York State expressed hostility toward transracial adoption. Federal law prohibits the use of racial criteria in adoption placement, but ethnic considerations have seeped into the system: **The number of transracial adoptions executed each year remains tiny despite the willingness of the majority of couples to adopt a child of a different race.** About 8 percent of all adoptions are transracial or cross-cultural — and that number includes international adoptions, commonly from Asia and South America. **Professor Judy Fenster of Adelphi University finds that black social workers are particularly inimical to the prospect of cross-racial adoption. It seems that the matchmakers at the heart of the adoption system are part of the problem.**
>
> **Transracial adoption is a volcanically touchy issue — the National Association of Black Social Workers has deployed weapons-grade rhetoric characterizing the practice as "cultural genocide." That ideology has had predictable consequences: Black children spend more time in foster care than others, and in general have less luck in finding permanent adoptive homes.** The Multi-Ethnic Placement Act of 1994, a legacy of the late senator Howard Metzenbaum, forbade the use of race as the decisive factor in making adoption-placement decisions, but the language of the statute left those politically opposed to transracial adoptions with room for much mischievous maneuvering. Would-be adoptive parents were disqualified for expressing political opinions at odds with social workers' preferences.
>
> […]In one case, a white couple who had hoped to adopt a severely disabled black girl in 1994 were disqualified on political grounds — specifically that they expressed a desire to raise their children to be "colorblind" — and on racial grounds, specifically that they lived in Alaska, which was judged to be superabundantly Caucasian. The couple had raised other severely disabled children of various ethnic backgrounds but they were rejected in favor of a single woman who expressed the "correct" racial attitudes — and who ended up declining to adopt the child, precisely because of her disabilities. The girl in question suffered from Fetal Alcohol Syndrome and from Russell-Silver Syndrome, a form of dwarfism associated with, among other things, gastrointestinal difficulties, a triangular face, and asymmetrical body growth. It is difficult to imagine that her most pressing challenge in life was going to be the relative scarcity of black neighbors in Fairbanks.

So, it's very important to think about the rhetoric of the left on children's rights and welfare. On the one hand, they talk about wanting to help children. On the other hand, the policies they embrace seem to promote child murder, child abuse, child neglect and child poverty. On the one hand, the secular left is very much in favor of killing children with abortion, or depriving them of fathers with single mother welfare, or depriving them of bio-moms or bio-dads with gay marriage. On the other hand, they are actually working against letting these children be adopted, so much that American parents have to go to other countries to find children to adopt. And even that process is very

difficult.

When will we get to the point where we can look at leftists and just flat out say that although they might have good intentions, their policies don't achieve good results. Maybe a little more compassion for children is needed.

# My experiences with Christian women in church and campus ministries

**Wintery Knight** · 3 January 2014 · Archived copy · Original

A friend of mine sent me some horror stories from his time dealing with single Christian women during seminary, and I thought I would write something about the horror stories from my experiences with single Christian women in campus ministries during my BS and MS programs, and in several evangelical churches that I attended in my 20s.

The biggest problem I've had with unmarried Christian women in college and in church is that it is impossible to impress them by being a competent, effective Christian man. Every skill and ability that seems to me to be useful and effective for the kingdom (or for marriage) seems to cut no ice with them. I had women in my youth group, in IVCF and in Campus Crusade have told me that being an engineer is bad, being chaste is bad, not drinking is bad, talking too much about apologetics is bad, and especially trying to get them to learn apologetics – that was really, *really* bad. They hated that. And forget trying to talk to them about abortion and homosexuality. They were very proud to be non-judgmental. It was a badge of honor, saying "I don't judge" as if they were saying "I am good person".

Everything that you might think makes sense for a man to be skilled at from a marriage point of view is viewed as creepy and weird by these church/campus-club unmarried Christian women, in my experience. I am a colored guy, so I always put their messed up standards down to the fact that I was colored and therefore was not allowed to talk to them, period. I was also surprised to see how little the command to "love your neighbor" was implemented by the unmarried Christian women. Here I was, struggling through a tough engineering program, and obviously coming from an unchurched background, yet these woman never had a supportive word for me. My interests in theology and apologetics and moral issues and politics were viewed by them with suspicion.

In retrospect, I would say the biggest argument against God's existence I ever faced was the complete disconnect between what these women professed and how they treated others.

There was one exception. When I was a teen, I had an older college student mentor me and she helped me pick up my grades – especially in English. She eventually fell away from her faith (she was a cradle Catholic). But other than her, I basically was in my mid-30s before I met a Christian woman who had any respect for me because of the things that I could do as a Christian. And that was after over a decade of donations, organizing, training, mentoring, apologetics, etc. By that time, I had my BS and MS and a boatload of savings, and yet up till then, no unmarried Christian woman had ever given me the time of day. I was sort of stuck looking to white Christian women for validation, because most colored girls are liberal. But what I found is that they had no standard in their worldview that I could be graded against favorably, other than physical appearance.

That was the scariest thing for me, to find out that there was no worldview there that distinguished between William Lane Craig and Jim Wallis, for example. There was just the outward appearance – that was the sole criterion that unmarried Christian women were using to decide whether a man had value or not. And their agenda for men was never a mentoring/discipling agenda. It was the standard secular boyfriend agenda. And very often, they chose standard secular boyfriends for that agenda. I later found out that they found men with definite moral positions and definite apologetics ability *intimidating*. Any man with fixed, entrenched positions – either about truth or moral issues – *frightened* them.

Even now, I find this such a weird thing, because in my own life, I act as a mentor to younger Christians regardless of their appearance or other such criteria. Mentoring other Christians is what Christians ought to be doing! I mentor about a dozen promising young Christians (women and men) in different countries. On a given night, you'll find me reading something they asked me to read, sending them links to evidence to help them argue, proof-reading their essays, buying them books, hearing about their school assignments, picking their elective courses, or ordering them not to take the summer off and to work instead, etc. Right now, I have two of my experienced pro-life friends

helping one of them take over a pro-life club at a university. Another of my friends who does Internet consulting is helping another friend start his web site. And so on, with me or my friends mentoring other Christians just for the sake of honoring that command to love others upward. It doesn't even matter how great the person is right now, because we mentor Christians at all levels of ability. No one is left out, and no oneis turned down.

But this idea that other Christians have value simply because they are Christians was NOWHERE to be found among unmarried Christian women when I was in university and in my 20s. It's totally foreign to them that Christianity imposes those mentoring/discipling obligations on them, regardless of appearances. They are feelings-driven, not obligation-driven. They are concerned with their own agenda, and not looking to God to see what he wants them to do for their fellow Christians.

I was always the same Wintery Knight back them as I am today, just at an earlier stage of development, and yet no unmarried Christian women in the church or in a campus Christian ministry gave me so much as an affirming glance while I was working out my plans. In fact, church women often stood in the way of things I tried to do, like bring in professors to speak at IVCF or show William Lane Craig debates at Campus Crusade. Focusing on evidential issues was deemed "too divisive". It was prayer walks, hymn sings and testimonies by postmodern relativists every week. I learned not to count on unmarried Christian women for support of any kind for the things I was trying to do. No matter how good the things I wanted to do were, they always had a reason why I shouldn't be allowed to do them.

I am always surprised when I meet a woman and she wants me to read the Bible, or read a book, or do anything like that. (That actually happened to me again last week!) I've had a handful of women do that to me in my whole life. Unmarried Christian women are, in my experience, running a very secular playbook, making decisions about how to treat others from their feelings. And then if you question them about it, they attribute their feelings to the work of the Holy Spirit. You don't really see how bad it is until you hear them tell you that God told them to move in with the atheist guy, etc. It's striking to me how far the Holy-Spirit-wrapping of their feelings goes, and yet they don't see a problem with it. I think the answer to this problem is that we really need to help women to think through their worldview and think about how to act on Christian convictions with other people, and men in particular, and men who are committed to building the Kingdom *effectively and intelligently* above all others.

# New study: women who take oral contraceptives have a higher risk of getting breast cancer

**Wintery Knight** · 4 January 2014 · Archived copy · Original

From the Times of India.

Excerpt:

> Women who take oral contraceptives regularly are at a higher risk of developing breast cancer compared to others, shows a study by AIIMS doctors. Breast cancer risk was found to be 9.5 times more in women with a history of consuming such pills. Early menstruation cycle, late marriage and lower duration of breastfeeding were the other major factors responsible for the disease among Indians, according to the study published in the latest issue of the Indian Journal of Cancer.

> The study was conducted on 640 women, of which 320 were breast cancer patients. "We found long-term use of oral contraceptive pills (OCP) higher among those suffering from breast cancer-11.9%-compared to healthy individuals-1.2%," said Dr Umesh Kapil, a professor at the public health nutrition unit, AIIMS. He said breast cancer is caused by repeated exposure of breast cells to circulating ovarian hormones, and long-term use of OCPs, which contain estrogen and progesterone, may be increasing this risk by causing hormonal imbalance.
>
> The study mostly had women who used OCPs for birth control. Emergency contraceptives, popularly called morning-after pills, were not included.

This is not the first study, nor even the second study, to confirm this link.

**Birth control pills**

Many studies showed that taking birth control pills caused an increased risk of breast cancer.

Study 1: (March 2003)

> RESULTS: Among the youngest age group (<35 years, n = 545), significant predictors of risk included African-American race (RR = 2.66: 95% CI 1.4-4.9) and **recent use of oral contraceptives** (RR = 2.26; 95% CI 1.4-3.6). Although these relationships were strongest for estrogen receptor-negative (ER-) tumors (RRs of 3.30 for race and 3.56 for recent oral contraceptive use), these associations were also apparent for young women with ER+ tumors. Delayed childbearing was a risk factor for ER+ tumors among the older premenopausal women (Ptrend < 0.01), but not for women <35 years in whom early childbearing was associated with an increased risk, reflecting a short-term increase in risk immediately following a birth.

Study 2: (October 2008)

> **Oral contraceptive use ≥1 year was associated with a 2.5-fold increased risk for triple-negative breast cancer** (95% confidence interval, 1.4-4.3) and no significantly increased risk for non-triple-negative breast cancer ($P_{heterogeneity}$ = 0.008). Furthermore, the risk among oral contraceptive users conferred by longer oral contraceptive duration and by more recent use was significantly greater for triple-negative breast cancer than non-triple-negative breast cancer ($P_{heterogeneity}$ = 0.02 and 0.01, respectively).

When people talk about a war on women, maybe they should be thinking about this practice of promoting behaviors

to women that make them sick. And eventually, we all have to pay for the increased costs of health care when we encourage people to do things that make them sick. We should not be promoting birth control to young women in order to enable them to have recreational sex. It's not worth the harm it causes them.

# New study: women who have induced abortions more likely to get breast cancer

**Wintery Knight** · 4 January 2014 · Archived copy · Original

New study is up here at the National Institutes of Health web site.

Life News reported on the study here.

Excerpt:

> A new study of women from India shows women who get an induced abortion are 626% more likely to have breast cancer compared with women who carry their pregnancies to term and have the baby.The study found women more likely to have breast cancer had "higher number of abortions."
>
> This study follows closely after a bombshell meta-analysis of breast cancer studies found a 44% increased risk of contracting breast cancer for women who had abortions.
>
> "History of abortion was also found to be positively associated with the risk of breast cancer with 6.26 times higher risk in women having a history of abortion," they concluded.
>
> The doctors conducting the new study are based at the Department of Gastroenterology and Human Nutrition Unit, All India Institute of Medical Sciences, Ansari Nagar, New Delhi, India. Their report, published in the Indian Journal of Cancer confirms what previous studies have shown, namely that an abortion weakens the breast's muscle tissue in a way that makes it more susceptible to cancer.

> "However, the cases had a significantly higher number of abortions (61.3%) as compared to the controls (16.3%)," they wrote. "History of abortion was also found to be positively associated with the risk of breast cancer with 6.26 times higher risk in women having a history of abortion. The history of abortions was found to be significantly higher in breast cancer cases as compared to controls, with the Relative Risk (RR) = 6.26 in women having a history of abortion."

This is not the first study to confirm a link between abortion and breast cancer.

**Abortion and breast cancer**

Many studies show a link between abortion and breast cancer.

Study 1: (September 2010)

> Based on the expression of estrogen receptor (ER), progesterone receptor (PR) and HER2/neu (HER2), breast cancer is classified into several subtypes: luminal A (ER+ and/or PR+, HER2-), luminal B (ER+ and/or PR+, HER2+), HER2-overexpressing (ER-, PR-, and HER2+) and triple-negative (ER-, PR-, and HER2-). The aim of this case-control study is to determine reproductive factors associated with breast cancer subtypes in Chinese women. A total of 1,417 patients diagnosed with breast cancer in the First Affiliated Hospital, China Medical University, Shenyang, China between 2001 and 2009 and 1,587 matched controls without a prior breast cancer were enrolled.
>
> […]Postmenopause and spontaneous abortion were inversely associated with the risk of luminal tumors. By contrast, multiparity, family history of breast cancer and **induced abortion increased the risk of breast cancer**.

Study 2: (March 2010)

> OBJECTIVE: To explore the risk factors of breast cancer for better control and prevention of the malignancy.
>
> METHODS: The clinical data of 232 patients with pathologically established breast cancer were investigated in this 1:1 case-control study to identify the risk factors of breast cancer.
>
> RESULTS: The history of benign breast diseases, family history of carcinoma and**multiple abortions were the statistically significant risk factors of breast cancer**, while breast feeding was the protective factor.
>
> CONCLUSION: A history of benign breast diseases, family history of carcinoma and multiple abortions are all risk factors of breast cancer.

And more recently, I blogged about a very recent study from China which concluded thus:

> IA is significantly associated with an increased risk of breast cancer among Chinese females, and the risk of breast cancer increases as the number of IA increases. If IA were to be confirmed as a risk factor for breast cancer, high rates of IA in China may contribute to increasing breast cancer rates.

IA is, of course, induced abortion.

# William Lane Craig lectures on the moral argument at Georgia Tech

**Wintery Knight** · 5 January 2014 · Archived copy · Original

This video has 3 parts, as well as questions and answers in individual clips.

For those who cannot watch the video, you can grab the MP3 file of the lecture, or read this essay by Dr. Craig which covers exactly the same ground as the video.

Part 1 of 3:

Part 2 of 3:

Part 2 of 3:

If you want to show this lecture and Q&A to your apologetics group, you can find the DVD here.

You can also read a debate transcript where Dr. Craig puts his ideas to the test, against Dr. Richard Taylor.

# William Lane Craig lectures on the postmodern challenge to theism

**Wintery Knight** · 5 January 2014 · Archived copy · Original

In a lecture entitled “Are there Objective Truths About God?”, philosopher William Lane Craig responds to postmodern challenges to the idea of truth, and specifically to the idea that religion is about objective truth.

Here’s the link to a page containing the lecture audio. (H/T Be Thinking)

The MP3 file is here.

So what questions does Bill answer in the lecture?

**What is a self-refuting statement?**

The main concept in the lecture is self-refutation. A self-refuting sentence is a sentence that, if true, makes itself false or meaningless. For example, suppose someone said to you: “there are no sentences longer than 5 words” then that would be self-refuting since it falsifies itself. Bill argues that objections to the idea that there are objective truths about God are all self-refuting.

**What is truth?**

Craig holds that “truth” is a property of a proposition such that a proposition is true if it corresponds to the external world. For example, if I claim that there is a crocodile in your closet and we find a crocodile in your closet, then my statement was true. If there is no crocodile in your closet then my statement was false. The real objective world out there is what makes propositional claims true or false – these are not claims about an individual’s preferences, they are claims about the world. Bill is concerned with truth claims about God that are objective – whether there are propositions about God that are true regardless of what anyone thinks.

**Are there objective truths about God?**

Bill discusses 3 objections to the idea that there are objective truths about God. Each objection seeks to make religion subjective, (true for each person, like food preferences or clothing fashion).

Objection #1:The Challenge of Verificationism

The first challenge is that religious claims cannot be verified using the 5 senses, and therefore religious statements are objectively meaningless.

Consider the statement “Only propositions that can be verified with the 5 senses are meaningful”. That statement cannot be verified with the 5 senses. If the statement is true, it makes itself meaningless. It’s self-refuting.

Objection #2: The Challenge of Mystical Anti-Realism

The second challenge is that religious claims, and claims about God, are neither true nor false.

Consider the statement “Propositions about God cannot be true or false”. Craig asks – why should we accept that? Any reason given would have to assert something about God that is true or false, and those reasons would contradict the original statement. For example, “God is too great to be grasped by human categories of thought” is a proposition about God that the speaker thinks is true, which contradicts the original assertion.

Objection #3: The Challenge of Radical Pluralism

The third challenge is that each person invents an entire reality of their own, and that there is no mind-independent objective world shared by individuals.

Consider the statement “There is no objective reality shared by all individuals”. That statement is a statement that applies to all individuals, regardless of what they think. It’s self-refuting.

**Conclusion**

Craig ends the lecture by arguing that it is OK for Christians to think that other people's views are false. It does not follow that just because someone thinks other people's views are wrong that they am going to mistreat other people. In fact, in Christianity it is objectively true that it is good for Christians to love their enemies. It is objectively true that all human beings have value, because human beings are made by God. So even if Christians disagree with others, they still treat them well, because they think that there are moral truths that they have to conform to.

**My thoughts**

Sometimes, non-Christians think that it is dangerous to hold beliefs too strongly. But I think what really matters is the content of the belief – some beliefs are false and some are true – you want to believe the true beliefs as strongly as you can, as long as the evidence warrants it. In Christianity, I am absolutely obligated to treat people with whom I disagree with respect and gentleness (1 Pet 3:15-16). The more convinced I am about *that* belief, the *better* my opponents will be treated. A *stronger* belief in Christianity means *more* tolerance for those who disagree.

Why do non-Christians get so offended when Christians claim to be right about there being only one way to be rightly related to God? Well, for many it's because their worldview is a personal preference, and they feel uncomfortable having to defend it rationally and evidentially. Christianity is different – we are used to having to defend our truth claims using evidence, because that is the core of the religion, and the example of the founder and his closest followers.

For most people, religion is just their cultural preference – like cooking style, or favorite sport, or clothing style. That's why they respond to your truth claims with name-calling like "you're intolerant" and "you're judgemental" and "you're arrogant". These are just shorthand ways of saying, "I'm offended that you think that what you believe is true and you think that what I believe is false". They would never say that in a math classroom or a chemistry lab, where truth matters. But because they are coming to the discussion with the presupposition that religion is like clothing and diet preferences, they take everything personally instead of treating religion as something objective, just like any other area of knowledge.

This problem of being offended by truth claims is especially common with people who are raised to think that their religion is a racial, national or cultural identity. They haven't thought anything through, or considered any alternatives, and they think that if you tell them they are wrong *on matters of fact* that somehow this amounts to some sort of racism, intolerance or prejudice. You make factual claims, and they hear discrimination. But that's not how Christians think of religion – we only care if it's true or not – just like we care whether the claims of history or science are true or not. For many non-Christians, religion is not about truth at all but about personal preferences – and they cannot understand why Christians say that they have to go to Hell for having the wrong personal preferences. You have to *tell them* that religion is about truth, and that people displease God because they don't know what is true, and they don't want to know what is true. Then they understand why you are disagreeing with them and you can have a conversation about what is true.

# The seven fatal flaws of moral relativism

**Wintery Knight** · 6 January 2014 · Archived copy · Original

Moral relativism is the view that moral values and moral duties do not exist in reality, but only exist as opinions in people's minds. When you ask a moral relativism where the belief that stealing is wrong comes wrong, he may tell you that it is his opinion, or that it is the opinion of most people in his society. But he cannot tell you that stealing is wrong independent of what people think, because morality (on moral relativism) is just personal preference.

So what's wrong with it?

I found this list of the seven flaws of moral relativism at the Australian site Faith Interface.

Here's the summary:

1. *Moral relativists can't accuse others of wrongdoing.*
2. *Relativists can't complain about the problem of evil.*
3. *Relativists can't place blame or accept praise.*
4. *Relativists can't make charges of unfairness or injustice.*
5. *Relativists can't improve their morality.*
6. *Relativists can't hold meaningful moral discussions.*
7. *Relativists can't promote the obligation of tolerance.*

Here's my favorite flaw of relativism (#6):

> *Relativists can't hold meaningful moral discussions.* What's there to talk about? If morals are entirely relative and all views are equal, then no way of thinking is better than another. No moral position can be judged as adequate or deficient, unreasonable, acceptable, or even barbaric. If ethical disputes make sense only when morals are objective, then relativism can only be consistently lived out in silence. For this reason, it is rare to meet a rational and consistent relativist, as most are quick to impose their own moral rules like "It's wrong to push your own morality on others". This puts relativists in an untenable position – if they speak up about moral issues, they surrender their relativism; if they do not speak up, they surrender their humanity. If the notion of moral discourse makes sense intuitively, then moral relativism is false.

I sometimes get a lot of flack from atheists who complain that I don't let them make any moral statements without asking them first to ground morality on their worldview. And that's because on atheism morality IS NOT rationally grounded, so they can't answer. In an accidental universe, you can only describe people's personal preferences or social customs, that vary by time and place. It's all arbitrary – like having discussions about what food is best or what clothing is best. The answer is always going to be "it depends". It depends on the person who is speaking because it's a subjective claim, not an objective claim. There is no objective way we ought to behave.

The whole point of atheism is to pursue pleasure without the bonds of morality – there is no other reason to do anything on atheism except for the pleasure it gives you. You do fashionable things to feel good getting praise from your neighbors, and you do unfashionable things in private to make yourself feel good and you hope that no one who is powerful enough to hold you accountable ever finds out. There's no way you were made to be.

# Global warming alarmists alarmed by potentially record-setting cold temperatures today

**Wintery Knight** · 6 January 2014 · Archived copy · Original

From Fox News.

Excerpt:

> Icy, snow-covered roads and high winds made travel treacherous Sunday from the Dakotas and Michigan to Missouri as much of the nation braced for the next winter wallop: a dangerous cold that could break records.
>
> A whirlpool of frigid, dense air known as a "polar vortex" was expected to suppress temperatures in more than half of the continental U.S. starting into Monday and Tuesday, with wind chill warnings stretching from Montana to Alabama.
>
> […]The forecast is extreme: 25 below zero in Fargo, N.D., minus 31 in International Falls, Minn., and minus 15 in Indianapolis and Chicago. Wind chills — what it feels like outside when high winds are factored into the temperature — could drop into the minus 50s and 60s. Northeastern Montana was warned of wind chills up to 59 below zero.
>
> "It's just a dangerous cold," said National Weather Service meteorologist Butch Dye in Missouri.
>
> Several Midwestern states received up to a foot of new snow Sunday. Five to 9 inches fell in the Chicago area by Sunday afternoon, St. Louis area had about a foot of snow and northern Indiana had at least 8 inches. Central Illinois braced for 8 to 10 inches, and southern Michigan could see up to 15 inches.
>
> Officials closed several Illinois roadways because of drifting snow and warned residents to stay inside. Roads in the Midwest were particularly dangerous, and officials in Missouri said it was too cold for rock salt to be very effective.
>
> Authorities also urged people to check on elderly and disabled relatives and neighbors.
>
> In Chicago, temperatures were expected to bottom out around minus 15 overnight, likely setting a daily record, National Weather Service meteorologist Ed Fenelon said. Earlier Sunday, temperatures sank to minus 20 and colder in northern Minnesota and Grand Forks, N.D.
>
> The conditions were expected to be so harsh that Chicago public school officials canceled classes for Monday.
>
> It hasn't been this cold for almost two decades in many parts of the country. Frostbite and hypothermia can set in quickly at 15 to 30 below zero.
>
> […] In New York City, a plane from Toronto landed at Kennedy International Airport and then slid into snow on a taxiway. No one was hurt, though the airport temporarily suspended operations because of icy runways.
>
> About 1,200 flights had been cancelled Sunday at O'Hare and Midway international airports in Chicago, aviation officials said, and there also were cancellations at Logan International Airport in Boston and Tennessee's Memphis and Nashville international airports.
>
> School was called off Monday for the entire state of Minnesota, as well as cities and districts in Wisconsin, Illinois and Indiana and Iowa, among others. Chicago officials said school would be in session for the nation's third-largest district, though absences would be excused.
>
> Southern states are bracing for possible record temperatures, too, with single-digit highs expected Tuesday in Georgia and Alabama.
>
> Temperatures are expected to dip into the 30s in parts of Florida on Tuesday. But Florida Citrus Mutual spokesman Andrew Meadows said it must be at 28 degrees or lower four hours straight for fruit to freeze badly.

> In western Kentucky, which could see 1 to 3 inches of snow, Smithland farmer David Nickell moved extra hay to the field and his animals out of the wind. He'd also stocked up on batteries and gas and loaded up the pantry and freezer. The 2009 ice storm that paralyzed the state and knocked out power to hundreds of thousands of people is fresh in his mind.

By the way, if you see long icicles forming on the edge of your roof, that is a potential hazard. So be careful about that. I would not stand under that and knock them down, it's safer to poke at them from a window instead, but make sure no one is underneath when you do!

# Can you have an apologetics ministry and still hold down a full-time job?

**Wintery Knight** · 6 January 2014 · Archived copy · Original

J. Warner Wallace is passionate about encouraging Christians to keep their day jobs and do their apologetics ministry without financial constraints. He did it, and it worked for him. He has just posted a list of people who have full-time vocations with a part-time apologetics ministry.

He writes:

> The Christian community is experiencing an apologetics "renaissance", and this resurgence of interest in Christian Case Making is being driven by an unexpected group of "tent-making" Christian Case Makers. Like the Apostle Paul, these avocational apologists draw their income from "conventional" careers (Paul was described as a tent-maker inActs 18:1-3) as they evangelize, preach, make a case or serve. I'm proud to be a member of this growing group of "One Dollar Apologists". In this post, I'd like to bring your attention to many of the tent-making Case Makers having an impact in our world today. If you are interested in apologetics, you've undoubtedly visited many of the websites I've collected here. In fact, you may not have realized these resources were being provided by people who are working in vocations similar to your own. As you scan this list of tent-making apologetics websites, take note of the variety of occupations held by the men and women behind the scenes…

I checked out the list to see what all the bloggers I read do in their day jobs, and was pleased to see a number of people in the list who are in science, technology and engineering fields. That's what I do, and I think it's the best thing to do. So for the rest of this post I want to give some reasons why people who want to be tent-maker case-makers should consider a STEM degree and a STEM job. (STEM = Science, Technology, Engineering, Math).

**Why you should prefer a STEM degree**

I always recommend that people prefer STEM degrees when they want to do a "tent-maker" model of apologetics ministry, for five reasons:

1. Doing a STEM degree will make you miserable and give you nightmares for life, and nothing you do after you do a STEM degree can ever be as bad as sitting in a lab all night trying to get something to work that doesn't want to work. Not even changing diapers. It's good to get you to accept that life is hard, that your feelings don't matter to anyone and that you can't have your way all the time.

2. Doing a STEM degree will give you a lot of money for your ministry, so much that you can even give some away to other ministries. Yesterday, I sent $150 to a Ratio Christi chapter that I like and $300 to another apologetics ministry that I like. And that's not a problem because a STEM job typically pays better than average.

3. Doing a STEM degree will help you to pay back any student loans you take out, which is a big problem these days because the economy is lousy for young graduates.

4. Doing a STEM degree will shield you from a lot of the pressure you might face from the secularists and leftists who dominate the university classroom, because there just isn't time to talk about politics much in those classes. The only time I ever got any trouble was my machine learning / search algorithms course in graduate school.

5. Doing a STEM degree will give you an advantage in credibility when discussing apologetics. I think that atheists are more impressed when we have some experience with a demanding job in some practical field. I don't know about you, but I don't find arguments like "the argument from fantasy literature" and "the argument from desire" persuasive coming from artsy people who don't know how to do anything practical for money in the real world.

If you are a woman and want to be a stay-at-home mom, that is excellent, but a STEM degree is still for you! I think

it's useful for everyone. I have a friend who is busy doing her nursing degree part-time and she is a stay-at-home mom, and some of my favorite women apologists (Letitia Wong and Melissa Travis) have science backgrounds.

**The best degrees for a tent-maker**

If you are just picking a STEM field, then here is a list of the majors that lead to higher paying jobs, although other jobs might even help you to study apologetics, like being a police detective.

Top 10 highest-paid college majors

1. Petroleum Engineering: $120,000
2. Pharmacy Pharmaceutical Sciences and Administration: $105,000
3. Mathematics and Computer Science: $98,000
4. Aerospace Engineering: $87,000
5. Chemical Engineering: $86,000
6. Electrical Engineering: $85,000
7. Naval Architecture and Marine Engineering: $82,000
8. Mechanical Engineering: $80,000
9. Metallurgical Engineering: $80,000
10. Mining and Mineral Engineering: $80,000

And here are some majors that you should avoid at all costs:

1. Counseling Psychology: $29,000
2. Early Childhood Education: $36,000
3. Theology and Religious Vocations: $38,000
4. Human Services and Community Organization: $38,000
5. Social Work: $39,000
6. Drama and Theater Arts: $40,000
7. Studio Arts: $40,000
8. Communication Disorders Sciences and Service: $40,000
9. Visual and Performing Arts: $40,000
10. Health and Medical Preparatory Programs: $40,000

If you're not going to do a STEM degree, then a trade degree in the right area can be just as good. The main thing is to be able to do work, preferably in the private sector, that is valuable enough to someone else that they are willing to pay you for it. I think in this economy, it is particularly reckless to be doing a PhD in the humanities, unless you are already retired and fully-funded from your previous work.

# Republican chairman delays annual meeting to let GOP leaders attend March for Life

**Wintery Knight** · 7 January 2014 · Archived copy · Original

From the Washington Times.

Excerpt:

> In an unprecedented show of opposition to abortion, Republican National Committee Chairman Reince Priebus is delaying the start of the party's annual winter meeting so he and other committee members can join the March for Life on the Mall, The Washington Times has learned.
>
> Mr. Priebus, a plain-spoken Greek Orthodox lawyer from Wisconsin, will join members of his party's national committee and thousands of other abortion opponents in the annual right-to-life march scheduled for Jan. 22, the anniversary of the Roe v. Wade decision that declared abortion a constitutional right.
>
> "I saw that there was a real interest among a significant portion of our members to attend and support the Rally for Life," Mr. Priebus said in an email to The Times. "This is a core principle of our party. It was natural for me to support our members and our principles."
>
> Mr. Priebus, in his second term as elected chairman of the Republican National Committee, chose to delay the start of the four-day winter meeting of the GOP governing body, also scheduled in Washington, to allow himself and RNC members to attend the march. The delay is unprecedented for a major U.S. political party, several state Republican Party chairmen and other RNC members said in telephone interviews.
>
> Mr. Priebus also decided that the RNC will charter a bus to and from the march for those among the RNC's 168 members who wish to attend, he said.

The Republican Party is the pro-life party, and it doesn't see to be a side issue for them. They seem to really be into it, and I know that at the state level, a lot of Republican-dominated legislatures have passed laws to restrict abortion and cut off taxpayer-funding of abortion. Although the Republicans are taking this stand on principle, I think that it will work out well for them at the polls in the November mid-term elections.

# Can a Christian woman divorce her husband if she is really, really unhappy?

**Wintery Knight** · 7 January 2014 · Archived copy · Original

So, the topic for this post is whether it's OK to get divorced.

I noticed a lot of people getting divorced these days in the church, and trying to justify why they are allowed to divorce and why they should be allowed to pursue remarriage. So I'm first going to quote from an article from Focus on the Family by Amy Tracy.

She writes:

> God is very clear, however, that He hates divorce (Malachi 2:16). He also says, "So they are no longer two, but one. Therefore what God has joined together, let man not separate" (Matthew 19:6). According to the New Testament, there are two justifications for divorce: infidelity (Matthew 5:32) and desertion (1 Corinthians 7:15).

Now, I had always taken the rule of Dr. Laura for this. She says that you can get divorced for adultery and abandonment (as above), but she allows allows for physical abuse and drug addiction. But it looks like the Bible is more strict than Dr. Laura, even.

Now with that Biblical standard in mind, take a look at this post about a woman who professes to be a Christian who is divorcing her husband for unhappiness, which I found on Sunshine Mary's blog.

Look:

> So how are we to understand women like Jenny Erickson, and the many other Christian women like her, who claim that despite thousands of years of Christian and Jewish tradition, despite the clear commands in Scripture not to separate from one's husband, despite the commandments against adultery, nevertheless the Lord God Himself has made a special exemption *just for her?* Because He wants her to be happy, so if she needs to be a faithless woman who breaks her vows and becomes an adulteress, then hey it's all good?
>
> […]After secretly filing for divorce from her husband, Mrs. Erickson's pastor caught wind of the situation and attempted to discuss it with her. When she refused, the pastor went to her husband about the situation. Mrs. Erickson has since railed against her soon-to-be ex-husband and her now ex-Pastor because they actually had the nerve to call what she was doing a *sin* – which, according to the Bible, is *is.* Let's read through a few quotes from Mrs. Erickson:
>
> > Thankfully, my faith in God is stronger than my fear of men, and I feel like **I'm finally getting right with Him** again after years of wandering in the wilderness.
>
> […]Here are a few more things that Mrs. Erickson claims:
>
> > It's odd and strangely freeing to not know exactly where I'm going to be a year from now. I've always been the girl with The Plan. The Plan has changed every now and then, because hey, life requires adaptation, but right now there is No Plan other than love my girls like crazy, work hard enough to pay the bills, and **rely totally and fully on God.** I'm sure His Plan is better than My Plan anyway.
>
> and
>
> > I needed a time-out for my marriage — possibly a permanent one. *But **every person that tells me I'm going against God's will by separating from my husband drives me further away from wanting to***

> ***reconcile with him.***
>
> Details aren't needed. Leif is the father of my amazing children, and I want nothing more than to be his friend again someday, regardless of what happens in our marriage. But things have been very broken between us for a very long time, and **it took every ounce of courage I had to take the step that went against everything my religious culture told me but somehow I knew God was telling me was right.**

and

> To be told that this beautiful, wonderful thing I have learned exists in my soul, this thing that gives me the strength to flip my life over when nothing else has worked, this thing that **has made me braver than I thought possible, and made me rely on God more than I ever have in my entire life …** ***to be told that this is a perversion of His plan for me?***

These points must confuse a lot of women because I have heard these rationalizations used by many Christian women who are leaving or have left their husbands. Therefore, allow me to clear up the confusion that seems to be rampant (but it really isn't confusion, it is willful disobedience), lest any of my sisters in Christ are considering following Mrs. Erickson's example.

**God's plan for you will never include violating anything written in the Bible.**

If you hear a voice whispering in your ear, *Here's the plan; what I want you to do is…* and the plan includes going against clear commandments in God's Word, then **it is not God who is speaking to you.** God's plan for your life, sister, never includes *you* filing for divorce. Not ever, not under any circumstances, no matter what your husband has or has not done, no matter what you want, no matter what would make you happy.

So, I think we need to be really careful with spousal candidates who claim to be Christian – we need to make sure that they really are comfortable with being led and with the authority of the Bible to overrule their feelings. In fact, you can check to see if a person takes their faith seriously just by trying to lead them to take the Bible seriously. You just have to read the Bible and think about how to live it out in a marriage, and then talk to your spousal candidate about what you've discovered. You want to present to them your plans and your reasons for those plans, and explain what you need them to do in order to make the plan work. This is a great way to see if they know what marriage is really about and how they feel about what's expected of them if they marry YOU.

Sometimes, it's really obvious that the person is not a good candidate for marriage. If you tell them your plans and then complain about arrogance, ego and how your questions would turn off any woman, then you are dealing with someone who is going to divorce you. And they might have already divorced someone else – like Erickson. The name calling in response to you trying to to make the Bible have authority over the roles that you each play in the marriage is a sure sign of impending divorce. Basically, you have to beware of anyone who is feelings-driven instead of Scripture-driven and detect them early. There are things to do in a marriage that need to be done whether anyone feels like it or not. You can't be married to someone who responds to rational discussion about plans and duties with verbal abuse.

# William Lane Craig and Paul Helm discuss Calvinism and Molinism on the Unbelievable radio show

**Wintery Knight** · 7 January 2014 · Archived copy · Original

I listened to this excellent discussion between Dr. William Lane Craig and Oxford University Calvinist philosopher Dr. Paul Helm. I think this is a useful discussion in general because atheists often bring up problems with Calvinism as objections to Christianity in general, such as:

- If God exists, then he controls everything and I don't have free will
- If God knows the future, then I don't have free will
- If God controls everything, then I am not responsible for my sinning
- If God has to choose me to be saved, then I am not responsible for my damnation

Details:

> If God ordains the future, can humans have free will? Are people predestined for salvation? And what does the Bible say on the matter? William Lane Craig is a Christian philosopher and leading proponent of Molinism, a view of divine sovereignty that seeks to reconcile God's fore-ordination with human free will. Paul Helm is a leading Calvin Scholar. He defends the view that God predestines the future, limiting human freedom.
>
> MP3 of this show: http://media.premier.org.uk/unbelievable/molinism%20full%20show-1.mp3
>
> For William Lane Craig: http://www.reasonablefaith.org
>
> For Paul Helm: http://paulhelmsdeep.blogspot.co.uk/

I was surprised because my Calvinist friend Dina thought that Dr. Helm won this debate, but I thought that Dr. Craig won. So without further ado, here is the snark-free summary of the discussion. I also sent the summary to Dina to make sure that it was reasonably fair and accurate. She said it was biased, but she was predestined to say that. Anyway, there's a commentary on the debate over at Michael's Theology blog.

UPDATE: Remington has a podcast review in parts. Part 1 is here.

**Summary:**

JB: Has Lewis had any impact on your apologetics?

Craig: Not as a scholar, but more as a model of a scholar who leaves a legacy through his published work

JB: How did you become interested in Calvinism?

Helm: Starting from childhood, and lately writing more on Calvinism from a philosophical point of view

JB: How do you view God's sovereignty?

Helm: Strong view of divine sovereignty, God is sovereign over all events, but that doesn't mean that they are determined by him

JB: What is Calvin's legacy?

Helm: He amplified an existing concept of predestination, and wrote on many other topics

JB: What is Molinism?

Craig: Molina affirms divine sovereignty as Paul Helm does, but he also affirms libertarian free will

Craig: Every event that occurs happens by God's will or by God's permission

JB: What about open theism?

Craig: Paul and I both oppose open theism

JB: How does Molinism reconcile human free will and divine sovereignty

Craig: God has knowledge of what would happen under any set of circumstances

Craig: God has knowledge of everything that COULD happen, and he has knowledge of everything that WILL happen

Craig: God knows what each person freely choose to do in any set of circumstances and he can place people in times and places where he is able to achieve his ends without violating creaturely freedom and creaturely responsibility

JB: How does this apply to the issue of salvation?

Craig: The circumstances in which God puts a person includes God leading people to him and he foreknows who will respond to his leading

Craig: God has ordered the world in such a way that he foreknows the exact people who will free respond to his leading if he puts them in certain circumstances

JB: Does God want to save the maximum of people?

Craig: My own view is that God does order the world in such a way that the maximum number of people will respond to God's drawing them to himself

JB: Is the Molinist view gaining ground?

Craig: Yes, Calvinists and open theists are both moving towards it, and Molinism is the dominant view among philosophical theologians

JB: Why has Molinism not convinced you?

Helm: It's an unnecessary theory, God's natural knowledge and free knowledge covers what middle knowledge covers

Helm: Calvinism has a stronger view of sin, such that God has to act unilaterally and irrestibly to save them

JB: Are creatures free on your view?

Helm: My view of free will is weaker than Craig's view of free will

Craig: For the Calvinist, grace is irresistible, but for the Molinist, grace is effective when it is met with a response from the creature

Craig: The Bible affirms the strong view of free will, when it says that in certain circumstances people can freely choose to do other than they do

Helm: But if a person is in circumstances X and they are free, then why don't they choose something that isn't what God can foresee

Craig: In identical circumstances, a person has the freedom to choose, and God doesn't determine what they choose, he just foreknows what they choose

Helm: How can God foreknow what people will freely do if people have this strong view of freedom that allows them to do anything? God would not know what people can freely do if they really are free

Craig: God has knowledge of what his creatures would freely do in any set of circumstances, he has knowledge of subjunctive statements

Craig: The Scripture is filled with statements that show that God has this knowledge of what people would do in other circumstances (e.g. – 2 Cor 2:8)

Helm: I am not denying that the Bible is full of subjunctive statements, but if humans have real libertarian free will, then God cannot know what they will do

Craig: I think God does preordain everything, Molinism has a strong sense of divine sovereignty BUT the foreordaining is done with the knowledge of what humans would do in any circumstances, so that what God ordains achieves his ends, but without violating creaturely free will

Craig: I take at face value the passages of the Bible where it says that God wants all persons to be saved

Craig: When the Bible says that God wants ALL persons to be saved (2 Pet 3:9), the Bible means that God wants ALL persons to be saved

Craig: So either universalism is true OR there is something that stops all from being saved outside of God

Craig: the something that prevents all from being saved is creaturely free will

Helm: Most people don't have the opportunity to hear the gospel, so God doesn't want all to be saved

Helm: People can still be responsible for what God "fore-ordains"

JB: Can a person really be responsible for wickedness if they didn't freely choose it?

Helm: Even though God is the only one who can act unilaterally to make save people, the people who act wickedly are still responsible

Craig: Molinism provides an answer to the problem of why not all people have heard the gospel, because by using middle knowledge he is able to know who would respond to the gospel if they heard it and he places those people in the times and places where they will hear it

Craig: That solution means that NO ONE is lost because they have not heard the gospel

Craig: There is Biblical support for (Acts 17:27) God choosing the times and places where people will live SO THAT they will be led by him and be able to respond to his leading

JB: Is God the author of sin, on Calvinism?

Craig: If Calvinists define providence to mean causal determinism, then he is the cause of every effect including human actions, and he is the one who causes people to sin

Craig: This view (determinism) impugns the character of God

Helm: I don't think that sovereignty requires determinism

Helm: God has mysterious resources – which I cannot specify – that reconcile his sovereignty with human responsibility for wickedness

JB: But if God is the cause of people doing wrong things, then how can they be responsible for it?

Helm: Well, humans do cause their own actions

Craig: Helm is right to say that God has resources to reconcile God's sovereignty with free will and human responsibility, and that resource is not an unknown mystery, it's middle knowledge

Craig: I can affirm everything in the Westminster Confession except for the one clause where they expressly repudiate middle knowledge as the mechanism for reconciling divine sovereignty and free will

Helm: Well, Calvinists have a strong view of sin so that humans cannot respond to God's leading

Craig: Yes, and that's why humans need prevenient grace in order to respond to him

Craig: God has to take the initiative and draw people to himself or they cannot be saved, but that grace is resistible, and that's what the Bible teaches (Acts 7:51), so humans are still responsible if they resist God

Helm: My view of grace is that it is monergistic and irrestible, it is a unilateral action on the part of God, like pulling someone out of an icy pond which they can't get out of

JB: If humans freely choose to respond to God's drawing and leading, does that diminish grace?

Helm: Many are called but few are chosen

Craig: Molinism does not require synergism – which is the idea that humans are partly responsible for their salvation

Craig: In Eph 2:8, Scripture is clear that faith opposite to works, and responding to God's drawing is not meritorious

JB: So receiving a gift is not meritorious?

Craig: It's the passive acceptance of what someone else has done for you

Helm: But doesn't this mean that you can lose your salvation, because you can accept and resist the gift of salvation?

Craig: That's a separate question that Christians can differ on, but if the Holy Spirit indwells a person and seals them, then that would argue for the view that salvation cannot be revoked

JB: Doesn't Romans 8 teach Calvinism pretty clearly?

Helm: This is called the "golden chain", and it does support Calvinism

Craig: Actually, this text is no problem for Molinists because the first link in the chain is foreknowledge, which, if it incorporates middle knowledge, is no problem for Molinists

Craig: What God is electing in Romans 8 is a specific group of people that he knows in advance of creating the universe will freely respond to his drawing them to him

Craig: In Acts 4:27-28, it is talking about God's foreknowledge, which involves and incorporates knowledge of what any individual would freely choose if placed in those circumstances

JB: If God actualizes a set plan with set circumstances for everyone, isn't that very similar to Calvinism?

Craig: Yes! It's a strong statement of divine sovereignty

Helm: Foreknowledge doesn't mean that God knows what people would do, it's just refering to God "knowing his own mind" about what he wants to do

JB: How do you respond to the fairness of God unilaterally and specifically choosing some people for salvation and choosing other people for damnation (because he refuses to act unilaterally for them)?

Helm: God ordinarily bypasses other people in the Bible, like when he chooses the Jews as his chosen people

Craig: The problem with that is that the Bible clearly teaches that God has a genuine will that all will be saved and he makes a genuine offer of salvation to all people

Craig: Also, just being a Jew and a member of the chosen people doesn't mean you were saved, because some Jews rebelled against God

Craig: And there were also people outside of the Jewish people who were righteous and in a relationship with God, like Job

Helm: "the fabric of our faith" depends on God's choice and his not-choice, it is fundamental to the Bible and to God's character, and choosing them "effectively" (irrestibly and unilaterally)

Helm: The idea of God considering “possible worlds”, some of which are feasible and not feasible, with conflicts between the wills of free creatures in different circumstances, and then actualizing one world that achieve these ends is very messy

Craig: Some worlds may not feasible for God to create, for example a world in which everyone is saved – it is logically possible, but may not be feasible

Craig: God will not exercise any divine coercion to force people to go to Heaven against their own will

Helm: If God chooses a world because it is feasible, then he doesn’t love me directly, he is choosing a world, not individuals

Craig: Well, when God actualizes a world, he specifically knows which individuals will be saved within that world, but without disrespecting free will

Craig: The world isn’t primary, the individuals are primary

Helm: I think that middle knowledge can he included in God’s natural knowledge and free knowledge

Craig: The knowledge of what people would do in different circumstances is based on the freedom of the individuals

JB: Make your conclusions!

Craig: Molinism is a Biblical model for reconciling divine sovereignty with human freedom

Helm: It is intellectually mystifying to introduce this strong view of human freedom and it is not Biblical

# Federal judge rules Chicago's ban on gun sales unconstitutional

**Wintery Knight** · 8 January 2014 · Archived copy · Original

Guns are for self-defense against criminals
From Fox News.

Excerpt:

> A federal judge on Monday overturned Chicago's ban on the sale and transfer of firearms, ruling that the city's ordinances aimed at reducing gun violence are unconstitutional.
>
> U.S. District Judge Edmond E. Chang said in his ruling that while the government has a duty to protect its citizens, it's also obligated to protect constitutional rights, including the right to keep and bear arms for self-defense. However, Chang said he would temporarily stay the effects of his ruling, meaning the ordinances can stand while the city decides whether to appeal.
>
> The decision is just the latest to attack what were some of the toughest gun-control laws in the nation. In 2010, the U.S. Supreme Court struck down Chicago's long-standing gun ban. And last year, Illinois legislators were forced by a federal appeals court to adopt a law allowing residents to carry concealed weapons in Illinois, the only state that still banned the practice. The resulting state law largely stripped city and officials of surrounding Cook County of their authority to regulate guns, which especially irked officials in Chicago, where residents had to apply for concealed-carry permits through the police chief.
>
> […]Chang wrote that the nation's third-largest city "goes too far in outright banning legal buyers and legal dealers from engaging in lawful acquisitions and lawful sales of firearms, and at the same time the evidence does not support that the complete ban sufficiently furthers the purposes that the ordinance tries to serve."
>
> Chicago last year had more homicides than any city in the nation. City officials have long acknowledged the ban on gun sales has been weakened due to the legal sale of guns in some surrounding suburbs and states.

Chicago has one of the highest crime rates in the United States, if not the highest of all. The only rival might be Washington, D.C., which is also extremely opposed to self-defense against criminals.

**A quick refresher on why people own guns**

People own guns so that they deter criminals and reduce the crime rate in their communities. The more guns there are in the hands of law-abiding citizens, the lower the crime rate goes, because criminals don't like being shot at by their crime victims.

Whenever I get into discussions about gun control, I always mention two academic books by John R. Lott and Joyce

Lee Malcolm.

- The Lott book was published by the University of Chicago Press (now in its 3rd edition)
- The Malcolm book was published by Harvard University Press

Here is a paper by Dr. Malcolm that summarizes one of the key points of her book.

Excerpt:

> Tracing the history of gun control in the United Kingdom since the late 19th century, this article details how the government has arrogated to itself a monopoly on the right to use force. The consequence has been a tremendous increase in violent crime, and harsh punishment for crime victims who dare to fight back. The article is based on the author's most recent book, Guns and Violence: The English Experience (Harvard University Press, 2002). Joyce Malcom is professor of history at Bentley College, in Waltham, Massachusetts. She is also author of To Keep and Bear Arms: The Origins of an AngloAmerican Right (Harvard University Press, 1994).
>
> Upon the passage of The Firearms Act (No. 2) in 1997, British Deputy Home Secretary Alun Michael boasted: "Britain now has some of the toughest gun laws in the world." The Act was second handgun control measure passed that year, imposed a near-complete ban on private ownership of handguns, capping nearly eighty years of increasing firearms restrictions. Driven by an intense public campaign in the wake of the shooting of schoolchildren in Dunblane, Scotland, Parliament had been so zealous to outlaw all privately owned handguns that it rejected proposals to exempt Britain's Olympic target-shooting team and handicapped target-shooters from the ban.

And the result of the 1997 gun ban:

> The result of the ban has been costly. Thousands of weapons were confiscated at great financial cost to the public. Hundreds of thousands of police hours were devoted to the task. But in the six years since the 1997 handgun ban, crimes with the very weapons banned have more than doubled, and firearm crime has increased markedly. In 2002, for the fourth consecutive year, gun crime in England and Wales rose—by 35 percent for all firearms, and by a whopping 46 percent for the banned handguns. Nearly 10,000 firearms offences were committed.
>
> […]**According to Scotland Yard, in the four years from 1991 to 1995 crimes against the person in England"s inner cities increased by 91 percent. In the four years from 1997 to 2001 the rate of violent crime more than doubled. The UK murder rate for 2002 was the highest for a century.**

I think that peer-reviewed studies – from Harvard University, no less – should be useful to those of us who believe in the right of self-defense for law-abiding people.

**A more recent study – from 2014**

A new study that was in the news just last week confirms these findings. Newsmax reported on it.

Excerpt:

> A recent study showing a reverse correlation between concealed weapons and murder rates has renewed the contentious national debate about the effect of gun controls on violent crime.
>
> Reason magazine reported last week on economist Mark Gius' study of gun controls, published in the journal Applied Economics Letters showing states with restrictions on concealed weapons had higher gun-related murder rates than other states.
>
> The study looked at the effects on murder rates of both state-level assault weapons bans and concealed

> weapons restrictions from 1980 to 2009.
>
> […]The findings come as A 2007 study has been also getting a new look from those who dispute gun control efforts aimed at stemming gun violence, Boston magazine reported last summer.
>
> In research first published in Harvard's Journal of Public Law and Policy, criminologists Don Kates and Gary Mauser looked at the correlation between gun laws and death rates.
>
> "International evidence and comparisons have long been offered as proof of the mantra that more guns mean more deaths and that fewer guns, therefore, mean fewer deaths," the pair wrote in their introduction. "Unfortunately, such discussions [have] all too often been afflicted by misconceptions and factual error and focus on comparisons that are unrepresentative."
>
> The pair found "correlations that nations with stringent gun controls tend to have much higher murder rates than nations that allow guns."

It's not a reasonable position to think that disarming law-abiding citizens will reduce crime rates. The evidence is against it.

# Do atheists have a lower divorce rate than Christians?

**Wintery Knight** · 8 January 2014 · Archived copy · Original

In the comments, an atheist was arguing that atheists have a lower divorce rate than Christians, so I thought I would re-post this USA Today article from 2011 about that.

Excerpt:

> It's been proclaimed from pulpits and blogs for years — Christians divorce as much as everyone else in America.
>
> But some scholars and family activists are questioning the oft-cited statistics, saying Christians who attend church regularly are more likely to remain wed.
>
> "It's a useful myth," said Bradley Wright, a University of Connecticut sociologist who recently wrote "Christians Are Hate-Filled Hypocrites … and Other Lies You've Been Told."
>
> "Because if a pastor wants to preach about how Christians should take their marriages more seriously, he or she can trot out this statistic to get them to listen to him or her."
>
> The various findings on religion and divorce hinge on what kind of Christians are being discussed.
>
> Wright combed through the General Social Survey, a vast demographic study conducted by the National Opinion Research Center at the University of Chicago, and found that Christians, like adherents of other religions, have a divorce rate of about 42%. The rate among religiously unaffiliated Americans is 50%.
>
> When Wright examined the statistics on evangelicals, he found worship attendance has a big influence on the numbers. Six in 10 evangelicals who never attend had been divorced or separated, compared to just 38% of weekly attendees.
>
> […]Brad Wilcox, director of the National Marriage Project at the University of Virginia, agrees there's been some confusion.
>
> "You do hear, both in Christian and non-Christian circles, that Christians are no different from anyone else when it comes to divorce and that is not true if you are focusing on Christians who are regular church attendees," he said.
>
> **Wilcox's analysis of the National Survey of Families and Households has found that Americans who attend religious services several times a month were about 35% less likely to divorce than those with no religious affiliation.**
>
> Nominal conservative Protestants, on the other hand, were 20% more likely to divorce than the religiously unaffiliated.
>
> "There's something about being a nominal 'Christian' that is linked to a lot of negative outcomes when it comes to family life," Wilcox said.

Here's a quote from an Oklahoma State University study that confirms the Wright and Wilcox conclusions:

> History of Divorce and Religious Involvement
>
> Those who say they are more religious are less likely, not more, to have already experienced divorce. Likewise, those who report more frequent attendance at religious services were significantly less likely to have been divorced. This pattern of findings held using various analytic techniques that test which variables differentiate persons who have been divorced from persons who have not been divorced, while controlling for other variables that might affect the interpretation of the data, such as age, age of first marriage, income, and gender. When both the global rating of religiousness and the item assessing fiequency of attendance at religious services are entered into the same analysis, the attendance item remains significantly associated with divorce

> history but the global religiousness item does not. This suggests that a key aspect of how religious faith affects marital relationships may be through involvement with a community of faith.

So, please do bookmark this information for the next time you hear an atheist make this argument. Obviously, you can't expect people who are not serious about their religion to be bound by the moral duties imposed by that religion. People who attend church regularly are probably more serious about their religion, and also probably more informed about what their holy book says. If their holy book is the Bible, then there are few options for divorce.

An article from Focus on the Family by Amy Tracy explains when divorce is allowed according to the Bible.

> God is very clear, however, that He hates divorce (Malachi 2:16). He also says, "So they are no longer two, but one. Therefore what God has joined together, let man not separate" (Matthew 19:6). According to the New Testament, there are two justifications for divorce: infidelity (Matthew 5:32) and desertion (1 Corinthians 7:15).

So divorce is not something a Bible believing Christian can do for frivolous reasons, unless he wants to be in rebellion against God.

# Dr. Stephen C. Meyer lectures on intelligent design and the origin of life

**Wintery Knight** · 8 January 2014 · Archived copy · Original

A MUST-SEE lecture based on Dr. Stephen C. Meyer's book "Signature in the Cell".

You can get an MP3 of the lecture here. (30 MB)

I highly recommend watching the lecture, and looking at the slides. The quality of the video and the content is first class. There is some Q&A (9 minutes) at the end of the lecture.

Topics:

- intelligent design is concerned with measuring the information-creating capabilities of natural forces like mutation and selection
- Darwinists think that random mutations and natural selection can explain the origin and diversification of living systems
- Darwinian mechanisms are capable of explaining small-scale adaptive changes within types of organisms
- but there is skepticism, even among naturalists, that Darwinian mechanisms can explain the origin of animal designs
- even if you concede that Darwinism can account for all of the basic animal body plans, there is still the problem of life's origin
- can Darwinian mechanisms explain the origin of the first life? Is there a good naturalistic hypothesis to explain it?
- there are at least two places in the history of life where new information is needed: origin of life, and Cambrian explosion
- overview of the structure of DNA and protein synthesis (he has helpful pictures and he uses the snap lock blocks, too)
- the DNA molecule is composed of a sequence of proteins, and the sequence is carefully selected to have biological function
- meaningful sequences of things like computer code, English sentences, etc. require an adequate cause
- it is very hard to arrive at a meaningful sequence of a non-trivial length by randomly picking symbols/letters
- although any random sequence of letters is improbable, the vast majority of sequences are gibberish/non-compiling code
- similarly, most random sequences of amino acids are lab-proven (Doug Axe's work) to be *non-functional gibberish*
- the research showing this was conducted at Cambridge University and published in the Journal of Molecular Biology
- so, random mutation cannot explain the origin of the first living cell
- however, even natural selection coupled with random mutation cannot explain the first living cell
- there must already be replication in order for mutation and selection to work, so they can't explain the first replicator
- but the origin of life *is* the origin of the first replicator – there is no replication prior to the first replicator
- the information in the first replicator cannot be explained by law, such as by chemical bonding affinities
- the amino acids are attached like magnetic letters on a refrigerator
- the magnetic force sticks the letters ON the fridge, but they don't determine the specific sequence of the letters
- if laws did determine the sequence of letters, then the sequences would be repetitive

- the three materialist explanations – chance alone, chance and law, law alone – are not adequate to explain the effect
- the best explanation is that an intelligent cause is responsible for the biological explanation in the first replicator
- we know that intelligent causes can produce functional sequences of information, e.g. – English, Java code
- the structure and design of DNA matches up nicely with the design patterns used by software engineers (like WK!)

There are some *very good tips* in this lecture so that you will be able to explain intelligent design to others in simple ways, using everyday household items and children's toys to symbolize the amino acids, proteins, sugar phosphate backbones, etc.

**Proteins are constructed from a sequence of amino acids:**

A sequence of amino acids forming a protein

**Proteins sticking onto the double helix structure of DNA:**

Some proteins sticking onto the sugar phosphate backbone

I highly, highly recommend this lecture. You will be delighted and you will learn something.

Here is an article that gives a general overview of how intelligent design challenges. If you want to read something more detailed about the material that he is covering in the lecture above related to the origin of life, there is a pretty good article here.

UPDATE: There is a good breakdown of some of the slides with helpful flow charts here on Uncommon Descent.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion

# German judge rules refuses to give homeschooling parents custody of their children

**Wintery Knight** · 9 January 2014 · Archived copy · Original

From the Home School Legal Defense Association (HSLDA).

Excerpt:

> Following a hearing on December 18, 2013, in Darmstadt, Germany, Family Court Judge Marcus Malkmus slammed the door on the Wunderlich family's emigration hopes. Lawyers for Dirk, Petra, and their children had asked the judge to return legal custody to the parents because they have complied with court orders that the children go to school and because they wish to move to France where homeschooling is legal.
>
> In August 2013 the four Wunderlich children were seized in a raid by 20 police officers and social workers simply because they were being homeschooled, an activity that is illegal in Germany. After an international outcry, the children were returned three weeks later on the condition that the parents send them to public school. Testing conducted on the children during their stay in a group home indicated that they were well adjusted, social, and academically proficient.
>
> In Malkmus's written order, (an unofficial English translation is available here) he compared homeschooling to a straitjacket for children. While acknowledging that the Wunderlich children were well cared for and did not have educational deficiencies, he refused to return legal custody to the parents.
>
> He said it was necessary to keep the Wunderlich children in German public schools to make sure that they were integrated into society. If they were allowed to be homeschooled in Germany or anywhere else, the consequences might be that "the children would grow up in a parallel society without having learned to be integrated or to have a dialogue with those who think differently and facing them in the sense of practicing tolerance." Malkmus also wrote that homeschooling creates "concrete endangerment to the wellbeing of the child."
>
> […]HSLDA Director of International Affairs Michael Donnelly, who is coordinating HSLDA's work on behalf of the Wunderlichs, said, "This is a disgraceful court decision. The German constitution and multiple international treaties guarantee the Wunderlichs' right to leave their country. It's one thing to disagree with homeschooling and enforce the law, but to prevent an otherwise loving and caring family from leaving because of homeschooling is a monumental violation of basic human rights. Judge Malkmus has effectively imprisoned the Wunderlichs in Germany over their intention to homeschool. It's the kind of thing that you would expect from a communist bureaucrat in the former Soviet Union, not a modern German court of law."

So, my advice for homeschoolers is that when you are raising your children, you must understand that the secular left is opposed to homeschooling because they think that government-run schools can educate your children better than you can. If you find that the public schools are not doing a good job of educating your children, then you have no right to pull them out of school, like former Presidential candidate Michele Bachmann did when her children were stuck in an underperforming school. You don't have a right to raise MIT professors like this one, who was homeschooled. Why is that?

It's because the government is supported by teachers unions, and the more teachers there are, the more dues are paid to the unions, and the more political contributions the teacher unions make to the party that supports bigger government. It doesn't matter if your children are learning that the universe is eternal (Carl Sagan), that global warming is real (Al Gore), that premarital sex is a good preparation for marriage (Alfred Kinsey), and so on. You don't have a right to good education, you have an obligation to pay enormous sums of money to the public schools so that your children can underperform Korean students at math and science.

# Does God's omniscience conflict with human free will?

**Wintery Knight** · 9 January 2014 · Archived copy · Original

Here's the setup for the question, from Come Reason ministries.

Excerpt:

> Hello,
>
> Christian doctrine holds that God is all knowing (1 John 3:20), and humans have free will (Deuteronomy 30:19 is my favorite example). however, at my favorite apologetics debate board, I have seen skeptics raise an objection to these points several times. the basic logic behind their arguments is this:
>
> 1. A being with free will, given two options A and B, can freely choose between A and B.
> 2. God is omniscient (all-knowing).
> 3. God knows I will choose A.
> 4. God cannot be wrong, since an omniscient being cannot have false knowledge.
> 5. From 3 and 4, I will choose A and cannot choose B.
> 6. From 1 and 5, omniscience and free will cannot co-exist.
>
> I have read many counter-arguments from apologetics sites, but they were either too technical (I couldn't understand them), or not satisfying. so, I was wondering what would your input be on this issue?
>
> Thank you,
>
> Justin

Ever heard that one? Here's Lenny Eposito's answer:

> Hi Justin,
>
> Thanks for writing. This is a great question as it shows how even those who appeal to logic can have biases that blind them. Let's examine this argument and see if it follows logically.
>
> Premises 1 and 2 in your outline above are the main premises to the argument and are not disputed. The Christian worldview argues that every human being is a free moral agent and is capable of making choices simply by exercising their will, not under compulsion or because of instinct. Also, it is a long held doctrine of Christianity that God is all-knowing. The Bible says that God knows "the end from the beginning (Isaiah 46:10)." For omniscience to be truly knowledgeable it must be correct knowledge, so premise number 4 is also granted.
>
> However, point number 5 is where the logic falters. Those who argue in this manner make the mistake of thinking that because God possesses knowledge about a specific matter, then he has influenced it. That does not follow at all. Just because God can foresee which choice you will make, it does not mean you couldn't still freely choose the other option.
>
> Let me give you an example. I have a five year old son. If I were to leave a chocolate chip cookie on the table about a hour before dinner time and my son was to walk by and see it, I know that he would pick up the cookie and eat it. I did not force him to make that decision. In fact, I don't even have to be in the room at all. I think I know my son well enough, though, to tell you that if I come back into the kitchen the cookie will be gone. His act was made completely free of my influence, but I knew what his actions would be.
>
> In examining the argument, the assumption is made in premise 3 that because God knows I will choose A somehow denies me the choice of B. That is the premise that Christianity rejects. Omniscience and free will

> are not incompatible and it is a non-sequitor to claim otherwise.
>
> Thank you Justin for this interesting question. I pray that you will continue to defend the gospel of our Lord and may He continue to bless you as you seek to grow in Him.

That's a great answer and should work in ordinary conversations.

**More technical**

J.W. Wartick maps out the arguments more fully with symbolic logic here on his Always Have A Reason blog. But I'll just excerpt the gist of it.

Excerpt:

> It is necessarily true that if God knows x will happen, then x will happen. But then if one takes these terms, God knowing x will happen only means that x will happen, not that x will happen *necessarily.* Certainly, God's foreknowledge of an event means that that event will happen, but it does *not* mean that the event could not have happened otherwise. If an event happens necessarily, that means the event could not have happened otherwise, but God's foreknowledge of an event doesn't somehow transfer necessity to the event, it only means that the event will happen. It could have been otherwise, in which case, God's knowledge would have been different.
>
> […]Perhaps I could take an example. Let's say that I'm going to go to classes tomorrow (and I do hope I will, I don't like missing classes!). God knows in advance that I'm going to go to classes tomorrow. His knowledge of this event means that it will happen, but it doesn't mean that I couldn't choose to stay in and sleep for a while, or play my new copy of Final Fantasy XIII, or do something more useless with my time. If I chose to, say, play Final Fantasy XIII (a strong temptation!), then God simply would have known that I would play FFXIII. His knowledge does not *determine* the outcome, His knowledge is simply *of the outcome*.

If we choose A, God would foreknow A. If we choose B, God would foreknow B. His foreknowledge of our choices is contingent on our making free choices.

I had to learn symbolic logic and Bayes' theorem in college for my computers science degrees, and it's pretty useful for understanding these philosophers. Philosophy is a lot like computer science, at least for analytical philosophy.

UPDATE: Here's another one from Sam Harper. I would click through just to read his funny author profile.

# Do atheists believe that slavery is wrong? Can atheists condemn slavery as immoral?

**Wintery Knight** · 9 January 2014 · Archived copy · Original

*Note: For a Christian response to the complaint that the Bible doesn't condemn slavery, see this article and this article for slavery in the Old Testament, and this article for slavery in the New Testament. These are all by Christian philosopher Paul Copan. You can watch a lecture with Paul Copan on the slavery challenge here, and buy a book where he answers the challenge in more detail. There is also a good debate on whether the Bible condones slavery here, featuring David Instone-Brewer and Robert Price. My post is not a formal logical essay on this issue, it is more that I am outraged that atheists, who cannot even rationally ground objective morality, insist on criticizing the morality of the Bible. I think that atheists who are serious about finding the truth about these issues should check out those links, if they are interested in getting to the truth of these matters.*

In other posts, I've argued that without an objective moral standard of what is right and wrong, any judgments about right and wrong are just individual opinions. So, when an atheist says slavery is wrong, what he really means is that he thinks slavery is wrong *for him*, in the same way that he thinks that,say, that chocolate ice cream is right *for him*. He isn't saying what is wrong *objectively*, because on atheism there are no objective moral rules or duties. He is speaking for himself: "I wouldn't own a slave, just like I wouldn't eat broccoli – because it's yucky!". But he has no rational argument against other people owning slaves in other times and places, because their justification for owning slaves is the same as his justification for not owning slaves : personal preference.

So do atheists oppose slavery? Do they believe in an objective human right to liberty? Well, there are no objective human rights of any kind on atheism. Human beings are just accidents in an accidental universe, and collections of atoms do not mysteriously accrue "rights". There is no natural right to liberty on atheism. Now consider abortion, which is arguably very similar to slavery. Most atheists do favor abortion in this time and place. Like slavery, abortion declares an entire class of weaker people as non-persons in order to justify preserving their own happiness and prosperity by means of violence. That's exactly what slavery does, except abortion is worse than slavery, because you actually kill the person you are declaring as a non-person instead of just imprisoning them.

So how many atheists have this pro-abortion view that it is OK to declare unborn children as non-persons so they can kill them?

Well, according to Gallup, the "non-religious" are the group most likely to support abortion. In fact, 68% favor legalized abortion, compared to only 19% who oppose it.

Take a look at the Gallup poll data from 2012:

*Americans' Abortion Views, by Education and Religion*

With respect to the abortion issue, would you consider yourself to be pro-choice or pro-life?

| | "Pro-choice" | "Pro-life" |
|---|---|---|
| | % | % |
| National adults | 41 | 50 |
| | | |
| No religion | 68 | 19 |
| Catholic | 38 | 54 |
| Protestant/Other Christian | 33 | 57 |
| | | |
| Postgraduate | 58 | 37 |
| College graduate only | 45 | 53 |
| Some college | 41 | 49 |
| High school graduate or less | 33 | 53 |

May 3-6, 2012

GALLUP

Most atheists are OK with the strong killing the weak

The Gallup numbers might actually be low, because “No religion” might include people who are spiritual, but not religious. But what about atheists alone?

As a group, atheists tend to be among the most radical supporters of legalized abortion. The Secular Census of 2012 found that 97% of atheists vote for abortion. There are almost no pro-life atheists. Why is it that atheists look at unborn children and think it’s OK to kill them? Well, let’s see what atheists scholars think about morality, and we’ll find out why they think abortion is OK.

**Atheist scholars think morality is nonsense**

Atheist William Provine says atheists have no free will, no moral accountability and no moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin’s views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That’s the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

Source: http://www.arn.org/docs/orpages/or161/161main.htm

Atheists Michael Ruse says atheists have no objective moral standards:

> The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological adaptation no less than are hands and feet and teeth. Considered as a rationally justifiable set of claims about an objective something, ethics is illusory. I appreciate when someone says, ‘Love thy neighbor as thyself,’ they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory.(Michael Ruse, “Evolutionary Theory and Christian Ethics,” in The Darwinian Paradigm (London: Routledge, 1989), pp. 262-269).

Atheist Richard Dawkins says atheists have no objective moral standards:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

Let's take a closer look at Richard Dawkins.

**Richard Dawkins and morality**

Here's how far Dawkins takes his view that there is no evil and no good:

Richard Dawkins explains morality on atheism
But wait! He goes even further than mere abortion:

So, looking at Dawkins, what kind of ethic can you get from Darwinism and atheism? Survival of the fittest. The strong kill the weak.

Richard Dawkins even advocates for adultery.

Now atheists may feign morality in order to get along with other people in a society that is still anchored in Judeo-Christian values, but they tend to vote for liberal social policies, and they oppose political action by those who still hold to objective morality. So what they are working toward, generally, is less and less influence in politics by those who favor objective human rights, objective moral values and objective moral duties.

**So do atheists oppose slavery, or don't they?**

I actually don't think that atheists think slavery is morally wrong, although they might personally not want to own slaves in this time and place because slavery is illegal – thanks to Judeo-Christian values. But in other areas, like abortion, we can see that atheists are willing to use violence against the weak to augment their happiness and prosperity. Unborn babies are weak, like slaves. Atheists are willing to kill the weak unborn babies who stop them from pursuing pleasure and prosperity. I don't see how they would have any objections to enslaving other people if they had the strength to do so. In fact, unjust imprisonment and forced labor are happening in atheistic North Korea right now.

But do you know who does oppose slavery enough to do something about it?

Dinesh D'Souza explains:

> Slavery was mostly eradicated from Western civilization–then called Christendom–between the fourth and the tenth century. The Greco-Roman institution of slavery gave way to serfdom. Now serfdom has its problems but at least the serf is not a "human tool" and cannot be bought and sold like property. So slavery was ended twice in Western civilization, first in the medieval era and then again in the modern era.
>
> In the American South, Christianity proved to be the solace of the oppressed. As historian Eugene Genovese documents in Roll, Jordan, Roll, when black slaves sought to find dignity during the dark night of slavery, they didn't turn to Marcus Aurelius or David Hume; they turned to the Bible. When they sought hope and inspiration for liberation, they found it not in Voltaire or D'Holbach but in the Book of Exodus.
>
> The anti-slavery movements led by Wilberforce in England and abolitionists in America were dominated by Christians. These believers reasoned that since we are all created equal in the eyes of God, no one has the right to rule another without consent. This is the moral basis not only of anti-slavery but also of democracy.

And, in fact, you can see Christians pushing the culture hard against abortion today, just as we did with slavery. Defending the weak is what we do. Meanwhile, most atheists think that an unborn child has as much of a right to legal protection as a cockroach.

UPDATE: I don't know what's was wrong with my brain yesterday but I totally forgot to mention the growth of the national debt under Pelosi/Reid/Obama. The Democrats have more than doubled the national debt to $17 trillion so that those who are older and more wealthy can increase their own standard of living and make their weaker children (born and unborn) pay for it. So now we have it for certain. Most atheists do in fact believe in slavery, since atheists are one of the most reliable voting groups for the Democrat Party.

UPDATE: I have to put in this caveat to this post from commenter George Yancey:

> Great post Wintery. I do have to make one correction as a social scientist although I agree with your philosophical arguments. Stating that 97 percent of all atheists vote to support abortion is a little misleading. I have no doubt that atheists are more likely to support abortion than Christians however, merely voting for liberal politicians – who are the ones more likely to support abortion – does not mean that a person supports abortion. They may support that politician for a lot of other reasons rather than abortion. For example, a lot of African-Americans support liberal politicians but not abortion. So I suspect that the 97 percent is too high of a figure to use to indicate atheists support of abortion.

# DOJ selects Democrat donor to head investigation of IRS corruption

**Wintery Knight** · 10 January 2014 · Archived copy · Original

From the Washington Times.

Excerpt:

> The Justice Department selected an avowed political supporter of President Obama to lead the criminal probe into the IRS targeting of tea party groups, according to top Republicans who said Wednesday that the move has ruined the entire investigation.
>
> **House Oversight and Government Reform Committee Chairman Darrell E. Issa, California Republican, and regulatory affairs subcommittee Chairman Jim Jordan, Ohio Republican, said they have discovered that the head of the investigation is Barbara Kay Bosserman, a trial lawyer in the Justice Department who donated more than $6,000 to Mr. Obama's 2008 and 2012 campaigns, as well as several hundred dollars to the national Democratic Party.**
>
> "The department has created a startling conflict of interest," Mr. Issa andMr. Jordan said in a letter sent Wednesday and reviewed by The Washington Times. "It is unbelievable that the department would choose such an individual to examine the federal government's systematic targeting and harassment of organizations opposed to the president's policies."
>
> The Internal Revenue Service's internal auditor revealed in May that the agency had been inappropriately targeting and blocking applications for tax-exempt status from tea party and conservative-leaning groups. In the immediate aftermath, Mr. Obama promised that the FBI and the Justice Department would investigate whether the IRS broke any laws.
>
> Eight months later, the investigation has not produced any public findings, and Mr. Issa says the FBI and Justice Department have stonewalled his efforts to find out what's going on.
>
> Ms. Bosserman didn't respond to an email seeking comment.

Don't worry, everything will be fine. We can trust big government to investigate itself properly.

# Why do famous atheists believe that God does not exist?

**Wintery Knight** · 10 January 2014 · Archived copy · Original

Here's a lecture by New York University professor Paul Vitz to explain a connection between atheism and fatherlessness:

Here's an article by Paul Copan (related to the lecture) which points out how father presence/absence and father quality affects belief and disbelief in God.

Excerpt:

> *Seventh, the attempt to psychologize believers applies more readily to the hardened atheist.*It is interesting that while atheists and skeptics often psychoanalyze the religious believer, they regularly fail to psychoanalyze *their own*rejection of God. Why are believers subject to such scrutiny and not atheists? Remember *another* feature of Freud's psychoanalysis — namely, an underlying resentment that desires to kill the father figure.
>
> Why presume atheism is the rational, psychologically sound, and default position while theism is somehow psychologically deficient? New York University psychology professor Paul Vitz turns the tables on such thinking. He essentially says, "Let's look into the lives of leading atheists and skeptics in the past. What do they have in common?" The result is interesting: *virtually all of these leading figures lacked a positive fatherly role model — or had no father at all.*[11]
>
> ### Let's look at some of them.
>
> - *Voltaire*(1694–1778): This biting critic of religion, though not an atheist, strongly rejected his father and rejected his birth name of Francois-Marie Arouet.
> - *David Hume*(1711–76): The father of this Scottish skeptic died when Hume was only 2 years old. Hume's biographers mention no relatives or family friends who could have served as father figures.
> - *Baron d'Holbach*(1723–89): This French atheist became an orphan at age 13 and lived with his uncle.
> - *Ludwig Feuerbach* (1804–72): At age 13, his father left his family and took up living with another woman in a different town.
> - Karl Marx(1818–83): Marx's father, a Jew, converted to being a Lutheran under pressure — not out of any religious conviction. Marx, therefore, did not respect his father.
> - *Friedrich Nietzsche*(1844–1900): He was 4 when he lost his father.
> - *Sigmund Freud*(1856–1939): His father, Jacob, was a great disappointment to him; his father was passive and weak. Freud also mentioned that his father was a sexual pervert and that his children suffered for it.
> - *Bertrand Russell*(1872–1970): His father died when he was 4.
> - *Albert Camus*(1913–60): His father died when he was 1 year old, and in his autobiographical novel The First Man, his father is the central figure preoccupation of his work.
> - *Jean-Paul Sartre*(1905–80): The famous existentialist's father died before he was born.[12]
> - *Madeleine Murray-O'Hair* (1919–95): She hated her father and even tried to kill him with a butcher knife.
> - We could throw in a few more prominent contemporary atheists not mentioned by Vitz with similar childhood challenges:
> - *Daniel Dennett* (1942–): His father died when he was 5 years of age and had little influence on Dennett.[13]
> - *Christopher Hitchens* (1949–): His father ("the Commander") was a good man, according to Hitchens, but he and Hitchens "didn't hold much converse." Once having "a respectful distance," their relationship took on a "definite coolness" with an "occasional thaw." Hitchens adds: "I am rather barren of paternal recollections."[14]

> - *Richard Dawkins* (1941–): Though encouraged by his parents to study science, he mentions being molested as a child — no insignificant event, though Dawkins dismisses it as merely embarrassing.[15]
>
> Moreover, Vitz's study notes how many prominent *theists* in the past — such as Blaise Pascal, G.K. Chesterton, Karl Barth, and Dietrich Bonhoeffer — have had in common a loving, caring father in their lives.[16]

Not only is there that anecdotal evidence of a psychological explanation for atheism, but there is also statistical evidence.

Excerpt:

> In 1994 the Swiss carried out an extra survey that the researchers for our masters in Europe (I write from England) were happy to record. The question was asked to determine whether a person's religion carried through to the next generation, and if so, why, or if not, why not. The result is dynamite. There is one critical factor. It is overwhelming, and it is this: It is the religious practice of the father of the family that, above all, determines the future attendance at or absence from church of the children.
>
> If both father and mother attend regularly, 33 percent of their children will end up as regular churchgoers, and 41 percent will end up attending irregularly. Only a quarter of their children will end up not practicing at all. If the father is irregular and mother regular, only 3 percent of the children will subsequently become regulars themselves, while a further 59 percent will become irregulars. Thirty-eight percent will be lost.
>
> If the father is non-practicing and mother regular, only 2 percent of children will become regular worshippers, and 37 percent will attend irregularly. Over 60 percent of their children will be lost completely to the church.
>
> Let us look at the figures the other way round. What happens if the father is regular but the mother irregular or non-practicing? Extraordinarily, the percentage of children becoming regular goes*up*from 33 percent to 38 percent with the irregular mother and to 44 percent with the non-practicing, as if loyalty to father's commitment grows in proportion to mother's laxity, indifference, or hostility.
>
> […]In short, if a father does not go to church, no matter how faithful his wife's devotions, only one child in 50 will become a regular worshipper. If a father does go regularly, regardless of the practice of the mother, between two-thirds and three-quarters of their children will become churchgoers (regular and irregular). If a father goes but irregularly to church, regardless of his wife's devotion, between a half and two-thirds of their offspring will find themselves coming to church regularly or occasionally.
>
> A non-practicing mother with a regular father will see a minimum of two-thirds of her children ending up at church. In contrast, a non-practicing father with a regular mother will see two-thirds of his children never darken the church door. If his wife is similarly negligent that figure rises to 80 percent!
>
> The results are shocking, but they should not be surprising. They are about as politically incorrect as it is possible to be; but they simply confirm what psychologists, criminologists, educationalists, and traditional Christians know. You cannot buck the biology of the created order. Father's influence, from the determination of a child's sex by the implantation of his seed to the funerary rites surrounding his passing, is out of all proportion to his allotted, and severely diminished role, in Western liberal society.

Basically, anyone who doesn't have a benevolent, involved father is going to have an enormously difficult time believing that moral boundaries set by an authority are for the benefit of the person who is being bounded. The best way to make moral boundaries stick is to see that they apply to the person making the boundaries as well – and that these moral boundaries are rational, evidentially-grounded and not arbitrary.

By the way, isn't it interesting to note that Barack Obama also grew up fatherless and has issues with God and morality.

UPDATE: Ed Babinski has some corrections for my list. He writes in a comment:

> 1) Voltaire was not an atheist but a deist who rejected claims of the Bible's inspiration, like Paine. Voltaire's aphorism, "If God did not exist, it would be necessary to invent him," far from being the cynical remark it is often taken for, it was meant as a retort to the atheistic clique of d'Holbach, Grimm, and others.
>
> 2) David Hume's religious views remain uncertain. He never said he was an atheist. A gentle skeptic suits him more.
>
> 3) Bertrand Russell was an agnostic.

# Stephen C. Meyer and Keith Fox debate intelligent design and evolution

**Wintery Knight** · 10 January 2014 · Archived copy · Original

From Justin Brierley's "Unbelievable" podcast.

Details:

> Stephen Meyer is a leading proponent of Intelligent Design who directs the Centre for Science and Culture at the Discovery Institute in Seattle. His most recent book "Signature in the Cell" claims to show that the DNA code is the product of intelligent mind, not naturalistic processes. Keith Fox is Professor of Biochemistry at Southampton University. He chairs the UK Christians in Science network but disagrees strongly with ID. They debate how life could have originated and whether design is allowed as an explanation in science.

The MP3 file is here.

Summary: (stuff in italics is my snarky paraphrase)

Meyer:

- background and how he got interested in intelligent design
- his research focus is on the origin of life – the first replicator
- summarizes the history of origin of life studies
- authored the book "Signature in the Cell"
- the DNA enigma: where did the information in DNA come from?
- naturalistic explanations of the DNA information have failed
- but intelligent agents are known to be able to produce information
- the best explanation of the information in DNA is that an intelligent agent authored it
- Meyer's book was named by atheist philosopher of science Thomas Nagel as a Times Literary Supplement Book of the Year in 2010
- why is design so controversial? Many people think that Darwin explained why nature appears design
- the Darwinian view is that nature can create the appearance of design using mutation and selection
- however, Darwinian mechanisms cannot explain the origin of the first living cell, it assumes replication, and the origin of life is about where the first replicator comes from

Fox:

- Meyer's argument is not about the evolution of life after the first cell
- Meyer's case for design is about the origin of life
- naturalists do not know a naturalistic explanation for the origin of life
- there are a number of naturalistic hypotheses for the origin of life, like the RNA-first hypothesis
- maybe in a few years one of them will turn out to be correct
- what intelligent design is arguing from a gap in our current naturalistic knowledge to infer that God intervened in nature

Meyer:

- that's not what intelligent design is at all
- the approach ID theorists use is the inference to best explanation

- you evaluate all explanations, non-intelligent causes and intelligent causes
- you prefer the best possible explanation
- we know that minds are capable of producing information just like the information we find in DNA

Fox:

- living cells replicate, so they have the ability to introduce mutations as they replicate and then some of those mutations can be selected
- so maybe the process of replicating that living cells do created the first living cell
- maybe the first living cell created itself, X brought X into being, self-creation, what's irrational about that?

Meyer:

- the issue is the origin of life – where did the first living cell come from?
- you cannot appeal to the operations that a living cell can perform to explain the origin of the first living cell
- there was no first living cell operating before the first living cell
- there was no replication, mutation or selection before the first living cell
- in fact, in my book I show that there is no known naturalistic mechanism that is able to produce the information needed for the first living cell
- *nothing can create itself, that is self-contradictory*

Fox:

- Well, you are just saying that because something is complex that God did it

Meyer:

- Sadly, no. What I actually said needed to be explained was the information, not complexity
- And we know from software engineering that the process of adding information to code is performed by programmers
- in the absence of any adequate naturalistic explanation for information, we are justified in taking the explanation that we are familiar with – namely, intelligent agency – based on our uniform, universal experience of what causes information

Fox:

- well, maybe we can appeal to the mutation and selection in existing living cells to explain the origin of the first living cell
- maybe there were living cells before the first living cell, and then these other living cells created the first living cell

Meyer:

- we can't keep invoking mutation and selection when those processes are not operating prior to the origin of the first living cell

Fox:

- well maybe some bare-bones self-replication molecule was a precursor to the first living cell

Meyer:

- even to generate very limited replicator would require a large amount of information
- the argument I am making is – where does the evolution come from?

Fox:

- well, maybe we will think of an explanation for information that is naturalistic in 20 years
- we've thought of explanations to things that were NOT information before
- so maybe we will be able to think of something to explain information based on our ability to explain NOT information before

Moderator: Change topics: the Dover decision

Meyer:

- the Discovery Institute opposed the policy that causes the trial
- the wording of the statute was poor
- the judge was completely wrong in his decision
- young earth creationists used the phrase "intelligent design" to cover their agenda
- intelligent design is an inference using the normal methods of science

Fox:

- intelligent design is a science stopper because it stops looking for a naturalistic explanation
- everything in nature must have a naturalistic explanation
- everything has to be explained using matter and time and chance
- it just has to be that way!!!!

Meyer:

- well, what luck would you have explaining an effect like Mt. Rushmore?
- can you explain that using matter,time and chance?
- Mt. Rushmore was the product of intelligence, not wind and erosion
- similarly, there is information in the cell, and we know that intelligence causes information

Fox:

- So you are saying that we don't understand and therefore an intelligence is necessary?

Meyer:

- no I am saying we DO understand and we are making an inference based on that understanding
- you are the one who is insisting on a material explanation because you pre-suppose materialism
- we know that minds have causal powers, and we can infer mind as an explanation from information

Fox:

- well nature is a seamless chain of material causes and effects

Meyer:

- agents can act without violating the laws of nature
- even humans can act as intelligent agents to create information in books, and they don't violate the laws of nature
- intelligent causes are real, and they explain effects in nature

Fox:

- you're trying to impose on science something to do with meaning and purpose

Meyer:

- no that's not what we're doing, we're inferring from from the fact that we ourselves are known causes of information to the fact that an intelligence cause is the best explanation for information in the cell

Fox:

- *but I am a materialist*, I need a materialist explanation

Meyer:

- mind IS an answer to the how question
- we infer to mind in many other scientific disciplines, like cryptography, archaeology, etc.
- a materialist might accuse an archaeologist of engaging in a "scribe-of-the-gaps" argument, but the best explanation of an artifact with information is a scribe
- we are inferring that mind is the cause from the nature of the effect: information

Moderator: is it appropriate to call DNA "information"
Fox:

- well DNA is just a molecular polymer, any reference to information is just by analogy

Meyer:

- DNA is a molecular polymer, but it also exhibits the property of specified complexity
- the arrangement of bases, which function as machine instructions in a software program, for performings task in the cell
- we have observed that the property of specified complexity always comes from an intelligence

Fox:

- well, maybe there are other sequences that would work, so maybe it's really not uncommon to develop functioning sequences by chance alone, without an intelligence

Meyer:

- you can measure how precise the functional specificity is in DNA and proteins

Moderator: is Shannon information the same as functional information

Meyer:

- Shannon information refers to the sequences of digits or symbols that do not necessarily have any function, i.e. – a four character string QSZX has as much Shannon information as WORD. However, only the latter is functional against the pattern of the English language. There are arrangements of DNA bases and amino acids that have the same number of symbols/characters as a functional sequence would have, but they have no biological function – they do not exhibit specified complexity

Fox:

- Well, maybe there are lots and lots of sequences of DNA and proteins so that it is fairly easy to get a functional one by chance

Meyer:

- DNA sequences that are functional are extremely rare, protein sequences are even more rare
- this is not my opinion, this is what the research shows – functional protein sequences are rare

Fox:

- well maybe there are other functional sequences that are occur before the first functional sequence that are precursors to the first functional sequence
- maybe there are billions of years of replication, mutation and selection before the first replication, mutation and selection

Meyer:

- you can't get to the first selectable functional sequence by appealing to precursor selectable functional sequences – there are no selectable functional sequences before the FIRST one
- you have to get the first selectable functional sequence by chance alone, because there is nothing to mutate or select before the first replicator
- the chance hypothesis has been rejected because the minimal amount of information for the simplest replicator is too high to get by chance alone, given the resources, including time, that are available

Moderator: *Keith are you confident that naturalism will be able to substantiate these naturalism-of-the-gap speculations that you offer in response to Meyer's actual science that we have today?*

Fox:

- well, it is hard to know for sure because it was just a fluke event
- but there's nothing irrational or unscientific or miraculous about it – the fluke would have a material explanation
- there is nothing that we can detect that would implicate God, my speculations about a fluke which I cannot observe or measure or test would all be compatible with an atheistic worldview that omits God as a causal entity

Meyer:

- where are those material processes that could account for this fluke then?
- the whole point of this argument is that the information in DNA transcends the material components in the sequence
- it's the arrangement of the material parts/letters/characters/symbols/instructions that needs to be explained

Fox:

- Well, I just have a different philosophy of science that rules out intelligent causation a priori

Meyer:

- Yes, that's the difference between us – you pre-suppose that all explanations of natural phenomena must exclude intelligent causes

There is a bit more where Meyer talks about how parts of the cell are implementations of various design patterns (Gang of Four design patterns) that are used by software architects who design software.

Find more posts on Stephen C. Meyer here.

# Only 74,000 jobs added in December, lowest in 3 years

**Wintery Knight** · 11 January 2014 · Archived copy · Original

Labor Force Participation down to 62.8%

CNS News reports on the disappointing job numbers.

Excerpt:

> The economy added only 74,000 non-farm jobs in December, the fewest in three years. Yet the unemployment rate dropped 0.3 points to 6.7 percent — the first time in 60 months it has dropped below 7 percent, the Labor Department announced on Friday.
>
> With so few jobs added, the jobless rate still went down because people stopped looking for work.
>
> The Bureau of Labor Statistics says the number of unemployed persons declined by 490,000 to 10.4 million in December, indicating that many of them dropped out of the labor force.
>
> The government counts people as unemployed only if they are actively searching for work.
>
> […]In 2013, job growth averaged 182,000 per month, about the same as in 2012, when it averaged 183,000 a month.

I am thinking about whether the Obama administration has done anything in the last 5 years to create any jobs. I know they could have suspended the employer portion of payroll taxes. They didn't do that. They could have allowed the Keystone XL pipeline. They didn't do that. They could have repealed Obamacare so that employers didn't have to reduce worker hours to avoid having to pay penalties. They didn't do that. They could have stopped borrowing over a trillion dollars a year. They didn't do that.

So I am just wondering what exactly this government has done to create jobs. I know the economy is resilient, and some jobs get created every month, no matter what. But I would like someone to tell me how this government has encouraged the private sector to hire more workers. I think if they had done anything to specifically address jobs, then I would know about it.

# J. Warner Wallace: important differences between Christianity and Mormonism

**Wintery Knight** · 11 January 2014 · Archived copy · Original

Here's a podcast featuring J. Warner Wallace that I listened to twice on a recent road trip. This is an after action report from Wallace's recent missions trip to Utah to evangelize Mormons.

The MP3 file is here. (74 minutes)

Topics:

- Mormons disagree with Christians about the nature of God, Jesus and salvation
- The differences are so dramatic that the two religions are completely different views
- Mormons try to portray themselves as a denomination of Christianity
- The Utah missions trip: how Christians were trained to engage with Mormons
- Mormonism is a works-based religion – you earn your way to eternal life by doing works
- In Christianity, eternal life is a free gift from God to anyone who accepts Jesus as their leader and redeemer
- Mormons believe that doctrines can change from generation to generation (progressive revelation)
- Mormons commonly make the case for a works-based theology by appealing to Jesus' Sermon on the Mount
- Mormons believe that you have to be perfect in order to get "exalted" eternal life
- Christians are perfect because Jesus has paid the price of our rebellion against God
- Christians: Jesus' sacrifice pays for anything evil that we have done and could do
- Christians are made perfect because Jesus' perfection is applied to them
- Christians are not practically perfect, but they are perfect by accepting that the sacrifice of Jesus on the cross
- God credits righteousness to Christians because Jesus has already died to pay off the punishment for their sins
- The good works that Christians do are a voluntary response to this free gift of salvation
- The good works do not secure a Christian's salvation, they are the natural outworking of accepting the gift of salvation
- The Mormon view of the afterlife is different from the Christian view
- The best Mormon afterlife ("exaltation") requires continued righteousness to the end of one's natural life
- This is not compatible with Christian teaching about salvation being by grace and not by doing good works (Gal 3:10-14)
- Mormons can never know whether they are saved or not until the day they die
- Christians can be sure of their salvation from the moment they accept Jesus as their leader and redeemer
- The Bible is clear that we can know whether we are saved or not (John 5:9-14)
- It is inconsistent for Mormons to claim to be Christians and then try to convert Christians to Mormonism
- The reason why Mormons go door to door is because they think Christians are wrong
- The Mormon view of Jesus is nothing like the Christian view of Christ (from the Bible)
- Mormonism is polytheistic, whereas Christianity is monotheistic
- Mormon "gods" are just beings who have a human nature who were "exalted" for doing good works
- When debating Mormons, they will try to argue that Mormonism is true because it results in good works
- The Biblical standard for a good prophet is to see whether his prophecies come true
- The Mormon view is that Joseph Smith is reliable because he did good works
- But good works are not a good way to test truth claims – a person could be "good" and still say false things

- A good question to ask Mormons: is the Book of Mormon ancient? It claims to be ancient, but is it?
- They may try to answer this question by appealing to fideism: praying for confirmation by burning bosom
- But this is not a question that can be assessed by subjective feelings (just pray about it)
- This is a question that needs to be assessed by historians using historical evidence
- There is no historical or archaeological support for the claims in the Book of Mormon
- In contrast, we have direct eyewitness testimony about the life of Jesus in the New Testament
- We have fragments of NT manuscripts dating back to first century so we know that the New Testament is ancient

Previously, I posted my refutation of Mormonism which used two evidential arguments. And J.W. Wartick has posted two philosophical arguments against Mormonism as well.

# Is the Bible's definition of faith opposed to logic and evidence?

**Wintery Knight** · 12 January 2014 · Archived copy · Original

Probably the biggest misconception that I encounter when defending the faith is the mistaken notion of what faith is. Today we are going to get to the bottom of what the Bible says faith is, once and for all. This post will be useful to Christians and atheists, alike.

**What is faith according to the Bible?**

I am going to reference this article from apologist Greg Koukl of Stand to Reason in my explanation.

Koukl cites three Biblical examples to support the idea that faith is not blind leap-of-faith wishing, but is based on evidence.

1. Moses went out into the wilderness and he had that first encounter with the burning bush, and God gave him the directive to go back to Egypt and let his people go. Moses said, Yeah, right. What's going to happen when they say, why should we believe you, Moses?God said, See that staff? Throw it down.Moses threw it down and it turned into a serpent.God said, See that serpent? Pick it up.And he picked it up and it turned back into a staff.God said, Now you take that and do that before the Jewish people and you do that before Pharaoh. And you do this number with the hail, and the frogs, and turning the Nile River into blood. You put the sun out. You do a bunch of other tricks to get their attention.And then comes this phrase: "So that they might know that there is a God in Israel."
2. [I]n Mark 2 you see Jesus preaching in a house, and you know the story where they take the roof off and let the paralytic down through the roof. Jesus said, "Your sins are forgiven." And people get bugged because how can anyone forgive sins but God alone?Jesus understood what they were thinking and He said this: What's harder to say, your sins are forgiven, or to rise, take up your pallet and go home?Now, I'll tell you what would be harder for me to say : Arise, take up your pallet and go home. I can walk into any Bible study and say your sins are forgiven and nobody is going to know if I know what I am talking about or not. But if I lay hands on somebody in a wheelchair and I say, Take up your wheelchair and go home, and they sit there, I look pretty dumb because everyone knows nothing happened.But Jesus adds this. He says, "In order that you may know that the Son of Man has the power and authority to forgive sins, I say to you, arise, take up your pallet and go home." And he got up and he got out. Notice the phrase "In order that you may know". Same message, right?
3. Move over to the Book of Acts. First sermon after Pentecost. Peter was up in front of this massive crowd. He was talking about the resurrection to which he was an eyewitness. He talked about fulfilled prophecy. He talked about the miraculous tongues and the miraculous manifestation of being able to speak in a language you don't know. Do you think this is physical evidence to those people? I think so. Pretty powerful.Peter tells them, These men are not drunk as it seems, but rather this is a fulfillment of prophecy. David spoke of this. Jesus got out of the grave, and we saw him, and we proclaim this to you.Do you know how he ends his sermon? It's really great. Acts 2:36. I've been a Christian 20 years and I didn't see this until about a year ago. This is for all of those who think that if you can know it for sure, you can't exercise faith in it. Here is what Peter said. Acts 2:36, "Therefore let all the house of Israel know for certain that God has made him both Lord and Christ, Messiah, this Jesus whom you crucified." There it is again. "Know for certain."

**What is faith according to Bible-based theologians?**

I am going to reference this article from theologian C. Michael Patton of Parchment and Pen in my explanation.

Patton explains that according to Reformation (conservative, Bible-based) theologians, faith has 3 parts:

1. **notitia –** This is the basic informational foundation of our faith. It is best expressed by the word content. Faith, according to the Reformers must have content. You cannot have faith in nothing. There must be some referential propositional truth to which the faith points. The proposition "Christ rose from the grave," for

example, is a necessary information base that Christians must have.

2. **assensus –** This is the assent or confidence that we have that the *notitia* is correct… This involves evidence which leads to the conviction of the truthfulness of the proposition… This involves intellectual assent and persuasion based upon critical thought… *assensus*… says, "I am persuaded to believe that Christ rose from the grave."
3. **fiducia –** This is the "resting" in the information based upon a conviction of its truthfulness. *Fiducia* is best expressed by the English word "trust."… Fiducia is the personal subjective act of the will to take the final step. It is important to note that while *fiducia* goes beyond or transcends the intellect, it is built upon its foundation.

So, Biblical faith is really trust. Trust(3) can only occur *after* intellectual assent(2), based on evidence and thought. Intellectual assent(2) can only occur *after* the propositional information(1) is known.

The church today accepts 1 and 3, but denies 2. I call this "fideism" or "blind faith". Ironically, activist atheists, (the New Atheists), also believe that faith is blind. The postmodern "emergent church" denies 1 and 2. A person could accept 1 and 2 but deny 3 by not re-prioritizing their life based on what they know to be true.

**How do beliefs form, according to Christian philosophers?**

I am going to reference a portion of chapter 3 of J.P. Moreland's "Love Your God With All Your Mind" (i.e. – LYGWYM).

J.P. Moreland explains how beliefs form and how you can change them.

1. Today, people are inclined to think that the sincerity and fervency of one's beliefs are more important than the content… Nothing could be further from the truth… As far as reality is concerned, what matters is not whether I like a belief or how sincere I am in believing it but whether or not the belief is true. I am responsible for what I believe and, I might add, for what I refuse to believe because the content of what I do or do not believe makes a tremendous difference to what I become and how I act.
2. A belief's strength is the degree to which you are convinced the belief is true. As you gain ,evidence and support for a belief, its strength grows for you… The more certain you are of a belief… the more you rely on it as a basis for action.

But the most important point of the article is that *your beliefs are not under the control of your will.*

> …Scripture holds us responsible for our beliefs since it commands us to embrace certain beliefs and warns us of the consequences of accepting other beliefs. On the other hand, experience teaches us that we cannot choose or change our beliefs by direct effort.
>
> For example, if someone offered you $10,000 to believe right now that a pink elephant was sitting next to you, you could not really choose to believe this… If I want to change my beliefs about something, I can embark on a course of study in which I choose to think regularly about certain things, read certain pieces of evidence and argument, and try to find problems with evidence raised against the belief in question.
>
> …by choosing to undertake a course of study… I can put myself in a position to undergo a change in… my beliefs… And… my character and behavior… will be transformed by these belief changes.

I think definition of faith is important, because atheists seemed to want to substitute their own definition of faith as blind belief for this Biblical definition, but there is no evidence for their view that faith is belief without evidence. I think this might be another case of projection by atheists. Blind faith is how they arrive at their views, so they are trying to push it onto us. But the Bible is clearly opposed to it.

# Mark D. Linville: can evolution rationally ground the concept of a moral obligation?

**Wintery Knight** · 12 January 2014 · Archived copy · Original

Have you ever heard an atheist tell you that naturalistic evolution is an answer to the moral argument? I have. And I found a good reply to this challenge in the book "Contending With Christianity's Critics". The chapter that responds to the challenge is authored by Dr. Mark D. Linville. It is only 13 pages long. I have a link to the PDF at the bottom of this post.

First, a bit about the author:

> Blog: The Tavern at the End of the World
> Current positions:
>
> - PhD Research Fellow
> - Tutoring Fellow in Philosophy
>
> Education:
>
> - PhD in Philosophy with a minor in South Asian Studies and a specialization in Philosophy of Religion, University of Wisconsin-Madison
> - MA in Philosophy, University of Wisconsin-Madison
> - MA in Philosophy of Religion, Trinity Evangelical Divinity School
> - MA in Theology, Cincinnati Christian Seminary
> - BA in Biblical Studies, Florida Christian College

Here is his thesis of the essay:

> Darwin's account of the origins of human morality is at once elegant, ingenious, and, I shall argue, woefully inadequate. In particular, that account, on its standard interpretation, does not explain morality, but, rather, explains it away . We learn from Darwin not how there could be objective moral facts, but how we could have come to believe—perhaps erroneously—that there are.
>
> Further, the naturalist, who does not believe that there is such a personal being as God, is in principle committed to Darwinism, including a Darwinian account of the basic contours of human moral psychology. I'll use the term evolutionary naturalism to refer to this combination of naturalism and Darwinism. And so the naturalist is saddled with a view that explains morality away. Whatever reason we have for believing in moral facts is also a reason for thinking naturalism is false. I conclude the essay with a brief account of a theistic conception of morality, and argue that the theist is in a better position to affirm the objectivity of morality.

And here's a sample to get your attention:

> But even if we are assured that a "normal" person will be prompted by the social instincts and that those instincts are typically flanked and reinforced by a set of moral emotions, we still do not have a truly normative account of moral obligation. There is nothing in Darwin's own account to indicate that the ensuing sense of guilt—a guilty feeling—is indicative of actual moral guilt resulting from the violation of an objective moral law. The revenge taken by one's own conscience amounts to a sort of second-order propensity to feel a certain way given one's past relation to conflicting first-order propensities (e.g., the father's impulse to save his child versus his impulse to save himself). Unless we import normative considerations from some other source, it seems that, whether it is a first or second-order inclination,one's being prompted by it is more readily

> understood as a descriptive feature of one's own psychology than material for a normative assessment of one's behavior or character. And, assuming that there is anything to this observation, an ascent into even higher levels of propensities ("I feel guilty for not having felt guilty for not being remorseful over not obeying my social instincts…") introduces nothing of normative import. Suppose you encounter a man who neither feels the pull of social, paternal or familial instincts nor is in the least bit concerned over his apparent lack of conscience. What, from a strictly Darwinian perspective, can one say to him that is of any serious moral import? "You are not moved to action by the impulses that move most of us." Right. So?
>
> The problem afflicts contemporary construals of an evolutionary account of human morality. Consider Michael Shermer's explanation for the evolution of a moral sense—the "science of good and evil." He explains,
>
> By a moral sense, I mean a moral feeling or emotion generated by actions. For example, positive emotions such as righteousness and pride are experienced as the psychological feeling of doing "good." These moral emotions likely evolved out of behaviors that were reinforced as being good either for the individual or for the group.2
>
> Shermer goes on to compare such moral emotions to other emotions and sensations that are universally experienced, such as hunger and the sexual urge. He then addresses the question of moral motivation.
>
> In this evolutionary theory of morality, asking "Why should we be moral?" is like asking "Why should we be hungry?" or "Why should we be horny?" For that matter, we could ask, "Why should we be jealous?" or "Why should we fall in love?" The answer is that it is as much a part of human nature to be moral as it is to be hungry, horny, jealous, and in love.3
>
> Thus, according to Shermer, given an evolutionary account, such a question is simply a non-starter. Moral motivation is a given as it is wired in as one of our basic drives. Of course, one might point out that Shermer's "moral emotions" often do need encouragement in a way that, say, "horniness," does not. More importantly, Shermer apparently fails to notice that if asking "Why should I be moral?" is like asking, "Why should I be horny?" then asserting, "You ought to be moral" is like asserting, "You ought to be horny." As goes the interrogative, so goes the imperative. But if the latter seems out of place, then, on Shermer's view, so is the former.
>
> One might thus observe that if morality is anything at all, it is irreducibly normative in nature. But the Darwinian account winds up reducing morality to descriptive features of human psychology. Like the libido, either the moral sense is present and active or it is not. If it is, then we might expect one to behave accordingly. If not, why, then, as a famous blues man once put it, "the boogie woogie just ain't in me." And so the resulting "morality" is that in name only.
>
> **In light of such considerations, it is tempting to conclude with C. S. Lewis that, if the naturalist remembered his philosophy out of school, he would recognize that any claim to the effect that "I ought" is on a par with "I itch," in that it is nothing more than a descriptive piece of autobiography with no essential reference to any actual obligations.**

When it comes to morality, we are not interested in mere descriptions of behavior. We want to know about prescriptions of behavior, and whether why we should care about following those prescriptions. We are interested in what grounds our sense of moral obligation in reality. What underwrites our sense of moral obligation? If it is just rooted in feelings, then why should we obey our moral sense when obeying it goes against out self-interest? Feelings are subjective things, and doing the right thing in a real objective state of affairs requires more than just feelings. There has to be a real objective state of affairs that makes it rational for us to do the right thing, even when the right thing is against our own self-interest. That's what morality is – objective moral obligations *overriding* subjective feelings. I wouldn't trust someone to be moral if it were just based on their feelings.

The PDF is right here for downloading, with the permission of the author.

# Walmart's health care plans are cheaper and offer more coverage than Obamacare plans

**Wintery Knight** · 13 January 2014 · Archived copy · Original

The Washington Examiner takes a look at the numbers.

Excerpt: (links removed)

> Walmart offers its employees two standard plans, a Health Reimbursement Account and an alternative it calls "HRA High" that costs more out of employees' pockets but has lower deductibles. Blue Cross Blue Shield manages both plans nationally.
>
> Also offered is a Health Savings Account plan that includes high deductibles but allows tax-free dollars to be used for coverage.
>
> For a monthly premium as low as roughly $40, an individual who is a Walmart HRA plan enrollee can obtain full-service coverage through a Blue Cross Blue Shield preferred provider organization. A family can get coverage for about $160 per month.
>
> Unlike Obamacare, there are no income eligibility requirements. Age and gender do not alter premium rates. The company plan is the same for all of Walmart's 1.1 million enrolled employees and their dependents, from its cashiers to its CEO.
>
> **A Journal of the American Medical Association analysis from September showed that unsubsidized Obamacare enrollees will face monthly premiums that are five to nine times higher than Walmart premiums.**
>
> **JAMA found the unsubsidized premium for a nonsmoking gouple age 60 can cost $1,365 per month versus the Walmart cost of about $134 for the same couple.**
>
> **The medical journal reported a 30-year-old smoker would pay up to $428 per month, in contrast to roughly $70 each month for a Walmart employee.**
>
> **A family of four could pay a $962 premium, but the same Walmart family member would pay about $160.**
>
> Low premiums are not the only distinguishing feature of the Walmart plan. The retailer's employees can use eight of the country's most prestigious medical facilities, including the Mayo Clinic, Pennsylvania's Geisinger Medical Center and the Cleveland Clinic.
>
> At these institutions, which Walmart calls "Centers of Excellence," Walmart employees and their dependents can get free heart or spinal surgery. They can also get free knee and hip replacements at four hospitals nationwide.
>
> Many top-rated Walmart hospitals — such as the Mayo and Cleveland clinics — are left out of most Obamacare exchange plans.
>
> But the real difference between Obamacare and Walmart can be seen in the levels of day-to-day access to doctors and hospitals.
>
> **Robert Slayton, a practicing Chicago independent insurance agent for 11 years and the former president of the Illinois State Association of Health Underwriters, described to the *Examiner* the differences between Walmart and Obamacare provider networks.**
>
> **Slayton said the BlueChoice exchange network for President Obama's hometown has very limited hospital participation. "In downtown Chicago, the key is the number of hospitals: 28," he said.**
>
> **"Now we're going to the national network — this is what the Walmart network would most likely be — and you have 54 hospitals. That's a big difference," he said.**

> […]**Slayton said the gap between doctor availability in Chicago under the Obamacare and Walmart plans is dramatic.**
>
> **“You will notice there are 9,837 doctors [under Obamacare]. But the larger network is 24,904 doctors. Huge, huge difference,” he said.**
>
> Walmart also offers a free preventive health plan that mirrors the Obamacare plan. Its employees can take advantage of a wide range of free exams and counseling, including screenings for colorectal cancer, cervical cancer, chlamydia, diabetes, depression and special counseling for diet and obesity.
>
> Their children can get more than 20 free preventive services, ranging including screenings for genetic disorders, autism and developmental problems to obesity, lead poisoning exposure and tuberculosis. There are also 12 free vaccinations, and free hearing and vision testing.
>
> Walmart employees pay as little as $4 for a 30-day supply of generic drugs and only $10 for eye exams through a separate vision plan.

And Wal-Mart didn’t need to waste $600 million of taxpayer money on the web site. See why we need to led the private sector handle these things? Obamacare sucks, and that’s why the Democrats voted to exempt themselves and all their staff from it.

# Did Jesus exist? Agnostic historian Bart Ehrman debates Infidel Guy

**Wintery Knight** · 13 January 2014 · Archived copy · Original

I find atheism a bit of a quirky worldview because a significant group of the more militant atheists seem to be willing to believe in weird things that are obviously false. Even things that are denied by the majority of scholars. And sometimes things denied by ALL scholars. And yet as long as they can make fun of people and tell jokes about it, they are very happy to go on believing things that are obviously false, and congratulate themselves on how clever they are.

Believe in my atheists delusions or I'll insult you!

Anyhoo, here is an interesting case in point, in which "The Infidel Guy", who thinks that Jesus never existed, confronts skeptical historian Bart Ehrman. Bart Ehrman lets the true believing jihadi know that the world really is round and that leprechauns most certainly do not exist.

When I look at atheists, I do see a lot of belief without evidence, and I suspect that they are just projecting their childish Santa Claus epistemology on Christians. Atheists believe weird things. They deny the Big Bang cosmology, and believe that the universe is eternal (Secular Humanifest Manifesto I). They believe you can explain the origin of life by appealing to unobservable aliens (Richard Dawkins). They think that morality doesn't exist (Jerry Coyne). They think that cosmic fine-tuning is not real (Victor Stenger). They think that it is morally permissible for a society to murder unwanted 5-year olds (P.Z. Myers). The ice caps will be melted by 2014 (Al Gore). The majority DNA is non-coding "junk" (John Timmer). The universe popped into being, uncaused out of nothing (Lawrence Krauss). And so on. Don't even get me started on the multiverse! Oh my. Talk about believing things without evidence just because you want to believe them.

**The most powerful argument against Christianity**

You know, the most powerful argument that radical atheists can press against the reliability of the New Testament reports about Jesus' empty tomb and post-mortem appearances is their own gullibility. What they should do in a debate is stand up and say "look at me! I believe Jesus never existed! I am batsh*t crazy!! Bleh bleh bleh! (Dances the robot) And if I am this crazy, then maybe the early Christians were as good at believing weird things as I am!" That is an argument that could cause any Christian to quake in fear.

That is actually the strongest argument against Christianity in my view – the widespread delusions of the radical "New Atheist" community. If a group of people can be that credulous, then maybe the early Christians were that credulous as well? If people can invent an alternate Easter Bunny / Santa Claus reality when it suits their desires, then maybe the early church could do the same. Maybe humans are as credulous, in general, as these radical atheists are and just make things up. Maybe we are all just believing what is comfortable for us against the evidence, like the Infidel Guy and his buddies.

Now, I realize that there is a large group of non-radical atheists who are just not convinced by the evidence for theism and Christianity, and for those moderate atheists, we should prepare a defense for them, because they are still open to being convinced by arguments and evidence. Many of them may have grown up in the church, listening to anti-intellectual sermons and never getting answers to their questions. That's fine, and we should be respectful and thoughtful with them. But I am just saying that there is another group of radical atheists out there who are just interested in deluding themselves, and we needn't be impressed by them.

# Luke Barnes reviews Victor Stenger's critique of cosmic fine-tuning

**Wintery Knight** · 13 January 2014 · Archived copy · Original

Victor Stenger is a famous "Internet Infidel" atheist, but what makes him different is that he is has a PhD in physics. He wrote a book published by the atheist publisher Prometheus Press where he explains why he thinks that the universe is not fine-tuned for embodied sentient life.

An Australian physicist named Luke Barnes decided to write a response to his book, and the response is summarized (without the math!) on Uncommon Descent. Barnes has a PhD in Astronomy from Cambridge. He did postdoctoral research in Switzerland at the Institute for Astonomy, and now he is doing more postdoctoral research at the University of Sydney . The response that he wrote does not talk about God, or explanations of why the fine-tuning happened. I have no idea where his convictions are on any of that, because his response just talks about the fine-tuning itself from a scientific point of view.

Here's how Uncommon Descent explains Barnes' response.

Summary:

> Professor Victor Stenger is an American particle physicist and a noted atheist, who popularized the phrase, "Science flies you to the moon. Religion flies you into buildings". Professor Stenger is also the author of several books, including his recent best-seller, The Fallacy of Fine-Tuning: How the Universe is Not Designed for Humanity (Prometheus Books, 2011). Stenger's latest book has been received with great acclaim by atheists: "Stenger has demolished the fine-tuning proponents," writes one enthusiastic Amazon reviewer, adding that the book tells us "how science is able to demonstrate the non-existence of god."
>
> Well, it seems that the great Stenger has finally met his match. Dr. Luke A. Barnes, a post-doctoral researcher at the Institute for Astronomy, ETH Zurich, Switzerland, has written a scathing critique of Stenger's book. I've read refutations in my time, but I have to say, *this one is devastating.*
>
> In his paper, Dr. Barnes takes care to avoid drawing any metaphysical conclusions from the fact of fine-tuning. He has no religious axe to grind. His main concern is simply to establish that the fine-tuning of the universe is real, contrary to the claims of Professor Stenger, who asserts that all of the alleged examples of fine-tuning in our universe can be explained without the need for a multiverse.
>
> Dr. Barnes' ARXIV paper, The Fine-Tuning of the Universe for Intelligent Life (Version 1, December 21, 2011), is available online, and I shall be quoting from it below. Since the paper is quite technical at times, I've omitted mathematical equations and kept the references to physical parameters to a minimum, since I simply wish to give readers an *overview* of what Dr. Barnes perceives as the key flaws in Professor Stenger's book.

First, the abstract:

> The fine-tuning of the universe for intelligent life has received a great deal of attention in recent years, both in the philosophical and scientific literature. The claim is that in the space of possible physical laws, parameters and initial conditions, the set that permits the evolution of intelligent life is very small. I present here a review of the scientific literature, outlining cases of fine-tuning in the classic works of Carter, Carr and Rees, and Barrow and Tipler, as well as more recent work. **To sharpen the discussion, the role of the antagonist will be played by Victor Stenger's recent book *The Fallacy of Fine-Tuning: Why the Universe is Not Designed for Us*.** Stenger claims that all known fine-tuning cases can be explained without the need for a multiverse. Many of Stenger's claims will be found to be highly problematic. We will touch on such issues as the logical necessity of the laws of nature; objectivity, invariance and symmetry; theoretical physics and possible universes; entropy in cosmology; cosmic inflation and initial conditions; galaxy formation; the cosmological

> constant; stars and their formation; the properties of elementary particles and their effect on chemistry and the macroscopic world; the origin of mass; grand unified theories; and the dimensionality of space and time. I also provide an assessment of the multiverse, noting the significant challenges that it must face. **I do not attempt to defend any conclusion based on the fine-tuning of the universe for intelligent life.** This paper can be viewed as a critique of Stenger's book, or read independently.

Here's a quote that I wanted to put out there from the paper about how widely accepted fine-tuning is among scientists:

> There are a great many scientists, of varying religious persuasions, who accept that the universe is fine-tuned for life, e.g. Barrow, Carr, Carter, Davies, Dawkins, Deutsch, Ellis, Greene, Guth, Harrison, Hawking, Linde, Page, Penrose, Polkinghorne, Rees, Sandage, Smolin, Susskind, Tegmark, Tipler, Vilenkin, Weinberg, Wheeler, Wilczek. They differ, of course, on what conclusion we should draw from this fact. Stenger, on the other hand, claims that the universe is not fine-tuned.

That is a very diverse list. I know that Sandage, Ellis, Page, Tipler and Polkinghorne are theists. But I also know that Weinberg, Rees, Hawking, Greene, and Dawkins are atheists. So scientists all across the spectrum of worldview admit that the fine-tuning is real.

Now, let's look at Barnes' paper and see why Victor Stenger disagrees with the view of those scientists.

1) Stenger doesn't show why the entropy at the beginning of the universe isn't a case of fine-tuning:

> **Entropy**
>
> We turn now to cosmology. **The problem of the apparently low entropy of the universe is one of the oldest problems of cosmology.** The fact that the entropy of the universe is not at its theoretical maximum, coupled with the fact that entropy cannot decrease, means that the universe must have started in a very special, low entropy state. (p. 23)
>
> Let's return to Stenger's proposed solution… Stenger takes it for granted that the universe is homogeneous and isotropic. We can see this also in his use of the Friedmann equation, which assumes that space-time is homogeneous and isotropic. Not surprisingly, once homogeneity and isotropy have been assumed, Stenger finds that the solution to the entropy problem is remarkably easy.
>
> **We conclude that Stenger has not only failed to solve the entropy problem; he has failed to comprehend it.** He has presented the problem itself as its solution. Homogeneous, isotropic expansion cannot solve the entropy problem – it is the entropy problem. Stenger's assertion that "the universe starts out with maximum entropy or complete disorder" is false. A homogeneous, isotropic spacetime is an incredibly low entropy state. **Penrose (1989) warned of precisely this brand of failed solution two decades ago.**.. (p. 26)

2) Stenger responds to calculations showing the need for fine-tuning by speculating that future calculations will overturn the ones we have now:

> **The Cosmological Constant, Lambda**
>
> The cosmological constant problem is described in the textbook of Burgess & Moore (2006) as "arguably the most severe theoretical problem in high-energy physics today, as measured by both the difference between observations and theoretical predictions, and by the lack of convincing theoretical ideas which address it". A well-understood and well-tested theory of fundamental physics (Quantum Field Theory – QFT) predicts contributions to the vacuum energy of the universe that are [approx.] 10^120 times greater than the observed total value. Stenger's reply is guided by the following principle:
>
> Any calculation that disagrees with the data by 50 or 120 orders of magnitude is simply wrong and should not

> be taken seriously. We just have to await the correct calculation. [FOFT p. 219]
>
> This seems indistinguishable from reasoning that the calculation must be wrong since otherwise the cosmological constant would have to be fine-tuned. One could not hope for a more perfect example of begging the question. **More importantly, there is a misunderstanding in Stenger's account of the cosmological constant problem.** The problem is not that physicists have made an incorrect prediction. We can use the term *dark energy* for any form of energy that causes the expansion of the universe to accelerate, including a "bare" cosmological constant (see Barnes et al., 2005, for an introduction to dark energy). Cosmological observations constrain the total dark energy. QFT [quantum field theory – VJT] allows us to calculate a number of contributions to the total dark energy from matter fields in the universe. Each of these contributions turns out to be 10^120 times larger than the total. There is no direct theory-vs.-observation contradiction as one is calculating and measuring different things. **The fine-tuning problem is that these different independent contributions, including perhaps some that we don't know about, manage to cancel each other to such an alarming, life-permitting degree.** This is not a straightforward case of Popperian falsification. (pp. 34-35)

3) Stenger doesn't consider the full range of values when deciding if something is fine-tuned or not:

> **Protons, Neutrons, Electrons**
>
> We turn now to the relative masses of the three most important particles in our universe: the proton, neutron and electron, from which atoms are made. Consider first the ratio of the electron to the proton mass, … of which Stenger says: "…we can argue that the electron mass is going to be much smaller than the proton mass in any universe even remotely like ours." [FOFT p. 164] (p. 50)
>
> The fact that Stenger is comparing the electron mass in our universe with the electron mass in universes "like ours" is all the evidence one needs to conclude that **Stenger doesn't understand fine-tuning.** The fact that universes like ours turn out to be rather similar to our universe isn't particularly enlightening. (p. 50)
>
> Finally, and most importantly, note carefully Stenger's conclusion. He states that no fine-tuning is needed for the neutron-proton mass difference in our universe to be approximately equal to the up quark-down quark mass difference in our universe. **Stenger has compared our universe with our universe and found no evidence of fine-tuning. There is no discussion of the life-permitting range**, no discussion of the possible range of [mass(neutron) – mass(proton)] (or its relation to the possible range of [mass(down quark) – mass(up quark)], and thus no relevance to fine-tuning whatsoever. (p. 51)

Those are just a few of the examples in the paper, highlighted in the Uncommon Descent article (emphasis theirs).

UPDATE: Commenter Eugene advises me that Barnes' paper has now been published in a peer-reviewed journal. The journal is published by Cambridge University.

# Wisconsin judge defends free speech rights of conservative groups against Democrat fascists

**Wintery Knight** · 14 January 2014 · Archived copy · Original

Wisconsin Governor Scott Walker
From the Wall Street Journal.

Excerpt:

> Chalk up a big victory for the First Amendment. On Friday a Wisconsin judge struck a major blow for free political speech when he quashed subpoenas to conservative groups and ordered the return of property to the targets of a so-called John Doe campaign-finance probe.
>
> John Doe probes operate much like grand juries, allowing prosecutors to issue subpoenas and conduct searches while gag orders require the targets to keep quiet. We wrote about the kitchen-sink subpoenas and morning raids by special prosecutor Francis Schmitz that targeted dozens of conservative groups that participated in the battle to recall Republican Governor Scott Walker ("Wisconsin Political Speech Raid," Nov. 16, 2013).
>
> Now we learn that Judge Gregory A. Peterson ruled on Friday that at least some of those subpoenas were improper. They "do not show probable cause that the moving parties committed any violations of the campaign finance laws," he wrote. His opinion remains under seal but we obtained a copy.
>
> The quashed subpoenas were sent to Friends of Scott Walker, Wisconsin Manufacturers & Commerce Inc., the Wisconsin Club for Growth, and Citizens for a Strong America, as well as their officers and directors. Judge Peterson's order doesn't apply to other subpoena targets, but they can presumably get the same result if they file a motion with the judge and have a similar factual basis.
>
> […]**"There is no evidence of express advocacy" and therefore "the subpoenas fail to show probable cause that a crime was committed," Judge Peterson wrote. Even "the State is not claiming that any of the independent organizations expressly advocated" for the election of Mr. Walker or his opponent, he added. Instead they did "issue advocacy," which focuses on specific political issues.**
>
> **This means that prosecutors essentially invented without evidence the possibility of criminal behavior to justify the subpoenas and their thuggish tactics. At least three targets had their homes raided at dawn, with police turning over belongings, seizing computers and files, and even barring phone calls.**
>
> **The judge's order vindicates our suspicion that the John Doe probe is a political operation intended to shut up Mr. Walker's allies as he seeks re-election this year. No one has taken public credit for appointing the special prosecutor, but we know the probe began in the office of Milwaukee County Assistant District Attorney Bruce Landgraf.**

Charlie Sykes, the famous Wisconsin-based radio talk show host, had more to say about it on Right Wisconsin.

He writes:

> The IRS scandal — which is ongoing — is *not* that Tea Party groups may have engaged in political activities; it is the abuse of government power to target, harass, and intimidate political opponents. It involves singling out conservative Tea Party groups for special scrutiny and harassment if they sought tax exempt status.
>
> But that pales next to the Doe, which targeted dozens of conservative groups and individuals and subjected them to *criminal* investigations. Prosecutors cast a breathtakingly wide net –- 29 separate groups, including Wisconsin Club for Growth, Wisconsin Manufacturers and Commerce (WMC), the League of American Voters, Wisconsin Family Action, Americans for Prosperity, American Crossroads, and the Republican Governors Association, along with other innocent bystanders.
>
> **In the IRS scandal, Tea Party groups were threatened with the denial of tax exempt status and subject to legal and financial inconvenience. In Wisconsin, conservatives were threatened with imprisonment.**
>
> […]**The anti-Walker probe included raiding the homes of targeted activists, seizing their private correspondence, phones, and computers – including the computers, phones, and emails of their spouses and other family members. Under the Doe's draconian gag orders, conservatives subjected to such raids were threatened with imprisonment if they spoke about it. And because the probe was secret, the prosecutors could not be held accountable for their conduct.**
>
> […]So, what is the motivation/agenda behind the witch-hunt? The office of Milwaukee Democrat district attorney, John Chisolm, presided over a three-year-old long John Doe aimed at Scott Walker that resulted in charges only against a handful of functionaries. Dozens of members of Chisholm's office signed Walker recall petitions; the chief investigator had a recall sign in his front yard, and some of Chisolm's aides reportedly were panting at the prospect of charging Walker himself. Their disappointment has been palpable.
>
> Sources describe deputies Bruce Landgraf and David Robles as particularly vindictive and aggressive in pursuing the new probe.

I just finished reading Governor Scott Walker's new book about his effort to limit public sector unions in Wisconsin, and their (failed) effort to recall him. I believe this man has what it takes to be President one day. I believe in experience, and Walker is getting a lot of experience passing bold, innovative reforms as governor of Wisconsin. He could. Go. All. The. Way.

# Bailout for health insurers? Less than 25% of Obamacare sign-ups under age 34

**Wintery Knight** · 14 January 2014 · Archived copy · Original

The Wall Street Journal reports.

Excerpt:

> One-third of health plan enrollees in new insurance marketplaces are 55 or older, the Obama administration said Monday, a figure that insurers said makes the pool older than they would need to sustain their coverage at current premiums.

> Administration officials said they are pushing to enroll more young people before a March 31 deadline for most people to get coverage for this year, and some cushions built into the law mean it won't necessarily face trouble right away even if the 2014 pool of enrollees skews older.
>
> Still, the release of the data, showing for the first time the age breakdown of people who had signed up for coverage through December, highlighted the challenge in persuading younger people who may not have a pressing need for health coverage to sign up for policies that can cost about $200 a month before subsidies.
>
> "This is concerning to us that we're seeing this portion come in so old," said Marty Anderson, marketing director for the Wisconsin-based Security Health Plan, which serves rural counties in the state.
>
> **Just under a quarter of the roughly 2.2 million people who signed up for private plans nationwide by Dec. 28 were between the ages of 18 and 34, while one-third were in the 55-to-64 range, just short of the age at which most qualify for Medicare, the federal government program for the elderly.**
>
> […]Under the 2010 Affordable Care Act, consumers no longer pay premiums based on their health risks. To prevent a sharp rise in premiums in 2015 and beyond, carriers say they need strong enrollment from younger people who are likely to be healthier. That would balance out the bills racked up by sicker and older people.
>
> […]"There's no way to spin it: Youth enrollment has been a bust so far," said Brendan Buck, a spokesman for House Speaker John Boehner (R., Ohio). "When they see that Obamacare offers high costs for limited access to doctors—if the enrollment goes through at all—it's no surprise that young people aren't rushing to sign up."

So who is going to be on the hook when the insurance companies take far higher losses than the Democrats estimated?

YOU ARE. The Weekly Standard explains why in this article.

Excerpt:

> Robert Laszewski—a prominent consultant to health insurance companies—recently wrote in a remarkably candid blog post that, while Obamacare is almost certain to cause insurance costs to skyrocket even higher than it already has, "insurers won't be losing a lot of sleep over it." How can this be? Because insurance companies won't bear the cost of their own losses—at least not more than about a quarter of them. The other three-quarters will be borne by American taxpayers.
>
> […]As Laszewski explains, Obamacare contains a "Reinsurance Program that caps big claim costs for insurers (individual plans only)." He writes that "in 2014, 80% of individual costs between $45,000 and $250,000 are paid by the government [read: by taxpayers], for example."
>
> **In other words, insurance purchased through Obamacare's government-run exchanges isn't even full-**

> **fledged private insurance; rather, it's a sort of private-public hybrid. Private insurance companies pay for costs below $45,000, then taxpayers generously pick up the tab—a tab that their president hasn't ever bothered to tell them he has opened up on their behalf—for four-fifths of the next $200,000-plus worth of costs. In this way, and so many others, Obamacare takes a major step toward the government monopoly over American medicine ("single payer") that liberals drool about in their sleep.**
>
> Laszewski adds, "The reinsurance program has done and will continue to do what it was intended to do; help attract and keep more carriers in Obamacare than might have otherwise come." Thus, Obamacare is being aided by having taxpayers subsidize big insurance companies' business expenses. (Who could ever have guessed that big government and big business might be natural allies?)
>
> **But, amazingly, it doesn't stop there. Laszewski writes that Obamacare also contains a "Risk Corridor Program that limits overall losses for insurers." So insurers not only don't have to pay out all of their costs; they also don't have to swallow all of their losses.**
>
> Laszewski explains that if an insurance company expects its costs in a given year to be X, and those costs end up being more than X plus 2 percent, taxpayers will come to that insurance company's rescue—thanks to Obamacare. In fact, once an insurance company covers that initial 2 percent in unexpected costs, taxpayers will cover at least 80 percent of any additional costs the insurer accrues.

Does this sound familiar? Yes – this is exactly what caused the mortgage lending crisis and bailout in 2008. Democrats were very anxious to guarantee the bad loans of mortgage lenders with taxpayer money supplied through Fannie Mae and Freddie Mac. And they are doing it again with health insurers. (And they'll do it again with student loans, just wait)

The best way to stop this madness is by electing Republicans in the 2014 mid-term elections. And then electing a conservative as President in 2016. Evict the children from the White House and Congress.

# The 50 worst countries for anti-Christian persecution

**Wintery Knight** · 14 January 2014 · Archived copy · Original

Kirsten Powers explains in the leftist Daily Beast, of all places.

Excerpt:

> In their annual report of the worst 50 countries for Christian persecution, Open Doors found that Christian martyr deaths around the globe doubled in 2013. Their report documented 2,123 killings, compared with 1,201 in 2012. In Syria alone, there were 1,213 such deaths last year. In addition to losing their lives, Christians around the world continue to suffer discrimination, imprisonment, harassment, sexual assaults, and expulsion from countries merely for practicing their faith.
>
> **Once again, the worst persecutor of Christians is North Korea, where an estimated 50,000 to 70,000 followers of Jesus are suffering in prison camps for "crimes" such as owning a Bible, going to church, or sharing their faith. In November 2013, it was reported that 80 prisoners were publicly executed, many for possessing Bibles. Last year, North Korea sentenced an American missionary, Kenneth Bae to 15 years of hard labor in a prison camp.**
>
> […]**It's chilling to imagine worse treatment than what the average North Korean prisoner has reported, including a mother forced to drown her own baby in a bucket, and tales of subsisting on nothing more than rats and insects. According to first-hand accounts from former prisoners reported by Amnesty International, "every former inmate at one camp had witnessed a public execution, one child was held for eight months in a cube-like cell so small he couldn't move his body and an estimated 40% of inmates die from malnutrition."**
>
> Syria, ranked as the third-worst country by Open Doors, has devolved in the last year to a horror show for Christians. The Hudson Institute's Nina Shea noted in December 2013 a message she received from a contact in Syria who reported, "Kidnapping, killings, ransom, rape . . . 2013 is a tragedy for Christians in Syria. All Syrians have endured great suffering and distress. The Christians, however, often had to pay with their lives for their faith. Our bishops and nuns have been kidnapped, our political leader killed by torture. After our Christian villages have been occupied, our churches have been destroyed and even mass graves were found in Saddad. [T]he Islamists have put [to] the Christians the alternative: Islam or death. Why [is] the West just watching?"
>
> Some of the most harrowing stories about how Christians are persecuted have come from the African country of Eritrea, which Open Doors lists as the twelfth worst country in the world for Christian persecution. In his 2013 book, The Global War on Christians, reporter John L. Allen Jr., writes that in Eritrea, Christians are sent to the Me'eter military camp and prison, which he describes as a "concentration camp for Christians." It is believed to house thousands being punished for their religious beliefs.
>
> Prisoners are packed into 40'x38' metal shipping containers, normally used for transporting cargo. It is so cramped that it's impossible to lie down and difficult even to find a place to sit. "The metal exacerbates the desert temperatures, which means bone chilling cold at night and wilting heat during the day….believed to reach 115 degrees Fahrenheit or higher," Allen writes. One former inmate…described [it] as "giant ovens baking people alive." Prisoners are given next to nothing to drink so "they sometimes end up drinking their own scant sweat and urine to stay alive." The prisoners are tortured, sexually abused, and have no contact with the outside world. One survivor of the prison described witnessing a fellow female inmate "who had been beaten so badly her uterus was actually hanging outside her body. The survivor desperately tried to push the uterus back in" but couldn't prevent the inmate's excruciating death.

Lately, I've been blogging quite a lot about the difference between the Judeo-Christian morality and atheist

morality. Christians have a objective standard to condemn what is going on in these other countries. Christians believe in human rights. Christians believe in religious liberty. Christians are grieved when we hear about these crimes being committed against followers of Jesus. On the Judeo-Christian view, every human being is made to be in a relationship with God – a relationship that lasts into eternity. That means that when Christians see someone in distress, we are rationally compelled to try to try to help them. In fact, the earliest Christians used to take in abandoned babies, because of that reasoning. If Christianity is true, then what these people are doing to persecute Christians for their beliefs is really wrong.

But on atheism, you can't condemn violence against Christians in other countries as wrong:

> **Rule #1: Relativists Can't Accuse Others of Wrong-Doing**
>
> Relativism makes it impossible to criticize the behavior of others, because relativism ultimately denies that there is such a thing as wrong- doing. In other words, if you believe that morality is a matter of personal definition, then you can't ever again judge the actions of others. Relativists can't even object on moral grounds to racism. After all, what sense can be made of the judgment "apartheid is wrong" when spoken by someone who doesn't believe in right and wrong? What justification is there to intervene? Certainly not human rights, for there are no such things as rights. Relativism is the ultimate pro-choice position because it accepts every personal choice—even the choice to be racist.

And that's why in the secular mainstream media, crimes like this are seldom talked about. Secularists have no basis to condemn these actions, they would rather crusade for late-term abortion and same-sex marriage, which is nothing but the celebration of the selfishness of adults at the expense of children.

If you would like to the difference that Christianity makes when dealing with a real threat of danger, then click through to this National Review article, which talks about Christians living in Syria.

# Transcripts show that top U.S. military officials briefed Obama on Benghazi terrorist attack

**Wintery Knight** · 15 January 2014 · Archived copy · Original

Investors Business Daily reports.

Excerpt:

> Newly declassified transcripts show top defense officials who briefed Obama on the day of the Benghazi attack described it as a terrorist attack and told the president so, yet he pushed a false narrative about a video.
>
> Just as the new book by former Defense Secretary Bob Gates confirmed what many believed, that President Obama was a politically motivated commander-in-chief who had no faith in an Afghan surge he put 30,000 Americans in harm's way to execute, transcripts of congressional testimony by military leaders confirm that President Obama knew Benghazi was a terrorist attack before he went to bed to rest for a Las Vegas fundraising trip.
>
> Fox News reporter James Rosen examined 450 pages of declassified testimony given by senior Pentagon officials in closed-door hearings held last year by Congress. In those hearings, Gen. Carter Ham, who at the time headed Africom, the Defense Department combat command with jurisdiction over Libya, testified that he learned about the assault on the consulate compound within 15 minutes of its start, at 9:42 p.m. Libya time, from the Africom Command Center.
>
> Ham said he immediately contacted Joint Chiefs of Staff Chairman Martin Dempsey to say he was coming down the hall at the Pentagon to meet with him.
>
> "I told him what I knew. We immediately walked upstairs to meet with Secretary Panetta," Ham testified, adding "they had the basic information as they headed across for the meeting at the White House."
>
> Rep. Brad Wenstrup, R-Ohio, an Iraq war veteran and Army reserve officer, asked 29-year Army veteran Ham what he told Panetta and Dempsey. "As a military person, I am concerned that someone in the military would be advising that this was a demonstration. I would hope that our military leadership would be advising that this was a terrorist attack," Wenstrup said.
>
> Ham responded that "there was some preliminary discussion about, you know, maybe there was a demonstration. But I think at the command, I personally and I think the command very quickly got to the point that this was not a demonstration, this was a terrorist attack" and that was the "nature of the conversation" Ham had with Panetta and Dempsey moments before their 30-minute meeting with President Obama.
>
> This confirms Panetta's testimony to the Senate Armed Services Committee in February of last year that it was he who told the president "there was an apparent attack going on in Benghazi."
>
> "Secretary Panetta, do you believe that unequivocally at that time we knew that this was a terrorist attack?" asked Sen. Jim Inhofe, R-Okla.
>
> "There was no question in my mind that this was a terrorist attack," Panetta replied.
>
> **Despite a briefing by Dempsey and Panetta that it was a terrorist attack, President Obama and Secretary of State Hillary Clinton would trumpet the false narrative that four Americans were murdered due to an inflammatory video — something Obama would repeat six times before the U.N. General Assembly and U.N. Ambassador Susan Rice would say on five Sunday talk shows five days after the terrorist attack.**
>
> **It is a disgrace that the only person ever jailed for the Benghazi attack was the maker of that irrelevant video. The terrorists got away with it.**

The terrorists got away with it, because the Obama administration didn't bother to conduct an investigation, or hold anyone accountable. And now we know why – because the person who should have been fired was Barack Obama. He should have been fired in the 2012 election. This whole Benghazi cover-up was just another case of "if you like your doctor, you can keep him" and "if you like your health care plan, you can keep it". The wonder was that the American people were stupid enough to believe that someone with no experience of any kind at running anything could do a good job as President.

And don't count on the mainstream media to investigate these stories. They are Democrats. This was their Watergate, and they covered it up.

# FBI declines to prosecute IRS for targeting Tea Party groups ahead of 2012 election

**Wintery Knight** · 15 January 2014 · Archived copy · Original

Investors Business Daily reports.

Excerpt:

> The FBI says it won't prosecute anyone at the IRS for its admitted targeting of the president's political foes. This just as the agency claims the law is no longer its main mission. So it's a political goon squad now.
>
> According to a leak to the Wall Street Journal, the Federal Bureau of Investigation "didn't find the kind of political bias or 'enemy hunting' that would amount to a violation of criminal law." And so, nobody was likely to be prosecuted for the most blatant politicization of a federal agency within memory.
>
> All the Bureau found was a "mismanaged" agency that enforced rules "it didn't understand." In other words, nothing to see here, move along.
>
> That's strange stuff for an agency whose most implicated regulator, Lois Lerner, invoked her Fifth Amendment rights against self incrimination in congressional testimony last year. That she came to congressional attention was only because of her calculated announcement that the IRS had in fact targeted Tea Party groups for special scrutiny — that's right, admitted to breaking the law — in a preemptive attempt to paint her abuse of power as a customer service problem.
>
> Her minions lied that it was only the work of low-level bureaucratic bumblers in Cincinnati. And after that sleazy string of favors that coincidentally benefited her president, she was permitted to retire on a full pension.
>
> The reality is, the acts reeked of political targeting, the most illegal of acts, a corrupt use of government power, and a worthy target of checks and balances provided by the FBI in the name of law and order.
>
> But for some reason, the FBI has neither interviewed the Tea Party activists targeted for intrusive scrutiny, nor has it noticed anything amiss in light of the White House's rabid attacks on Tea Party activists. It hasn't noticed the Tea Party's demonstrable political strength in its large gatherings during the most intense period of its political targeting, nor noted the president's record of "joking" about investigating political opponents.
>
> And it hasn't picked up the clue from the Center for Responsive Politics showing that IRS employees donated to Obama's campaign by more than 2 to 1 over Tea Party-tied Republicans — let alone that the prosecutor chosen by the president to look into this case is a fat-cat donor to Obama.

I was lying in bed at 2:30 AM reading Twitter tweets when I came across this one and I just lay there thinking about this story before getting up to blog about it. And I thought to myself… I used to respect the FBI. I used to believe that they were different from the crooks at the State Department or Health and Human Services or the Environmental Protection Agency. I used to believe that they were the good guys. And now I see that they are just as corrupt as any secret police would be in any fascist state.

This is not the first time that the FBI has disappointed me, either:

- FBI partners with anti-Christian hate group Southern Poverty Law Center
- Why has New York City been able to avoid another terrorist attack?
- Has political correctness made the FBI impotent against real terrorist threats?
- Democrats and pro-abortion groups target pro-lifers in FBI and DOJ training

Maybe the big pay increases and benefits that Obama gave all his supporters in the public sector unions were

enough to buy off every last bit of honor and decency that used to be in the FBI.

# Guerilla skepticism on Wikipedia: how should Christians and conservatives respond?

**Wintery Knight** · 15 January 2014 · Archived copy · Original

The Messianic Drew urges us to watch the first 27 minutes of this lecture featuring skeptic and anti-paranormalist Susan Gerbic. He wants us to see how skeptics are monitoring and policing wikipedia entries to give it a skeptical bias.

Here is Gerbic's thesis:

> We use Wikipedia to shape the public's view of paranormal topics. We already know that shouting and belittling believers is not the way to go about changing minds. Guerilla skepticism is the act of inserting well-documented well-cited information into Wikipedia. We still follow all of Wikipedia's guidelines. We are also trying to improve the history of the scientific skeptical movement and document it. It allows editors to edit from home without being confrontational with people.

The Messianic Drew wrote about the lecture on his blog.

Excerpt:

> Gerbic is absolutely right. People generally trust Wikipedia, and do not view it with the same degree of scrutiny with which someone would view an atheist website.
>
> If you are a rising Christian apologist, but don't have the time, money, or experience to publish in professional journals or debate atheists on stage, that's fine. The Internet is a great place to conduct apologetics. Instead of wasting your time arguing on message boards or social media (like Facebook), why not learn to edit Wikipedia? It costs nothing but time, and it reaches an audience far more open-minded than anyone you will debate online. Remember that people trust Wikipedia as a reliable source of information, something not lost on Gerbic.
>
> Gerbic's tactics have worked due to organization. Wikipedia has mobs of tens of thousands of editors. Gerbic's group is a small, but highly focused army of 90 editors, and it has changed the face of Wikipedia's paranormal pages, as well as its pages on famous skeptics, creationism, and evolution. As far as I know, there is not one single Christian apologetics organization that focuses on Wikipedia. Not one. Zilch. Zip. Zero. This needs to be fixed.

He has a whole bunch of ideas on how Christians can get on this, and he has examples of what the skeptics have been doing (before and after edits) on specific pages.

Now Drew was telling me about this video and his idea last night, and I had two objections. First, I told him that Wikipedia is a cesspool of secularism and leftism that is policed by thuggish fascists. I got this impression by reading about Wikipedia's suppression about intelligent design on the Evolution News blog. Second, I told him that no one respects Wikipedia as a source. I never use Wikipedia as a source for anything, I prefer to link to the peer-reviewed journal articles or to reputable news sources.

Drew came back with two responses that have swayed me back from opposition to indifference. First, he said that like it or not, people do use Wikipedia to get basic information about things they are interested in. Google search even displays information from Wikipedia entries in the searches. Second, he pointed out specific edits that he had made to specific pages that were not deleted, even after a few days. And these were impressive edits, linking to sources critical of skeptics and skeptical ideas.

We were discussing this on Facebook, and many people started off by objecting to Drew's plan to have Christians

(and conservatives could also do this) systematically monitor and edit Wikipedia pages. A band of Wikipologists, if you will. I know that J. Warner Wallace tweeted his post, and Mike Licona both posted it on their Facebook pages. So I wanted to ask my readers: do you think that Christians should imitate these guerilla tactics on Wikipedia? Why or why not?

If you want to get involved with this, message me on Facebook, by the way.

# Ryan T. Anderson defends marriage at Indiana House Judiciary Committee hearing

**Wintery Knight** · 16 January 2014 · Archived copy · Original

(the video is 11 minutes long)

The Heritage Foundation reports.

Excerpt:

> Ryan T. Anderson, the William E. Simon Fellow at The Heritage Foundation, testified before the Indiana House Judiciary Committee yesterday on their proposed constitutional amendment to define marriage as the union of a man and woman.
>
> The controversial bill, which would place the amendment on the state ballot and give citizens the right to vote about such an important matter, spurred a three-hour heated debate full of testimonies from both supporters and opponents.
>
> Anderson, co-author with Princeton's Robert P. George and Sherif Girgis of the acclaimed book "*What Is Marriage? Man and Woman: A Defense*" which Justice Samuel Alito cited twice in his dissenting opinion in the Supreme Court case involving the Defense of Marriage Act, began his testimony by explaining what marriage is and why marriage matters. According to Anderson, the collapse of marriage over the past 50 years is directly tied to the over-expanded welfare state of the country, and lack of male figureheads in families.
>
> "If the biggest social problem we face right now in the United States is absentee dads," Anderson said, "How will we insist that dads are essential when the law redefines marriage to make fathers optional?"

The full testimony is here at the Public Discourse, and here is one part of it:

> Part of this is based on the reality that there's no such thing as parenting in the abstract: there's mothering, and there's fathering. Men and women bring different gifts to the parenting enterprise. Rutgers sociologist Professor David Popenoe writes, "the burden of social science evidence supports the idea that gender-differentiated parenting is important for human development and the contribution of fathers to childrearing is unique and irreplaceable." He then concludes:
>
> We should disavow the notion that mommies can make good daddies, just as we should the popular notion that daddies can make good mommies. The two sexes are different to the core and each is necessary—culturally and biologically—for the optimal development of a human being.
>
> This is why so many states continue to define marriage as the union of a man and a woman, many doing so by amending their constitutions.
>
> So why does marriage matter for public policy? Perhaps there is no better way to analyze this than by looking to our own president, President Barack Obama. Allow me to quote him:
>
> We know the statistics: that children who grow up without a father are five times more likely to live in poverty and commit crime, nine times more likely to drop out of school, and twenty times more likely to end up in prison. They are more likely to have behavioral problems or run away from home, or become teenage parents themselves. And the foundations of our community are weaker because of it.
>
> There is a host of social science evidence. We go through the litany and cite the studies in our book, but President Obama sums it up pretty well. We've seen in the past fifty years, since the war on poverty began, that the family has collapsed. At one point in America, virtually every child was given the gift of a married mother and father. Today, 40 percent of all Americans, 50 percent of Hispanics, and 70 percent of African Americans are born to single moms—and the consequences for those children are quite serious.

> The state's interest in marriage is not that it cares about my love life, or your love life, or anyone's love life just for the sake of romance. The state's interest in marriage is ensuring that those kids have fathers who are involved in their lives.

People who are honest in recognizing that fathers matter cannot press for a redefinition of marriage that makes fathers optional. Any policy that normalizes and celebrates gender-interchangeability is bad for children, and we should be favoring the rights of children over the selfishness of adults in our laws and policies. Period.

The rest of the article is a nice short summary of the case for traditional marriage. It addresses social issues like religious liberty, but it also addresses fiscal issues like the costs of social programs.

# An atheist explains the real consequences of adopting an atheistic worldview

**Wintery Knight** · 16 January 2014 · Archived copy · Original

If you love to listen to the Please Convince Me podcast, as I do, then you know that in a recent episode, J. Warner Wallace mentioned a blog post on an atheistic blog that clearly delineated the implications of an atheistic worldview. He promised he was going to write about it and link to the post, and he has now done so.

Here is the whole the whole thing that the atheist posted:

> "[To] all my Atheist friends.
>
> Let us stop sugar coating it. I know, it's hard to come out and be blunt with the friendly Theists who frequent sites like this. However in your efforts to "play nice" and "be civil" you actually do them a great disservice.
>
> We are Atheists. We believe that the Universe is a great uncaused, random accident. All life in the Universe past and future are the results of random chance acting on itself. While we acknowledge concepts like morality, politeness, civility seem to exist, we know they do not. Our highly evolved brains imagine that these things have a cause or a use, and they have in the past, they've allowed life to continue on this planet for a short blip of time. But make no mistake: all our dreams, loves, opinions, and desires are figments of our primordial imagination. They are fleeting electrical signals that fire across our synapses for a moment in time. They served some purpose in the past. They got us here. That's it. All human achievement and plans for the future are the result of some ancient, evolved brain and accompanying chemical reactions that once served a survival purpose. Ex: I'll marry and nurture children because my genes demand reproduction, I'll create because creativity served a survival advantage to my ancient ape ancestors, I'll build cities and laws because this allowed my ape grandfather time and peace to reproduce and protect his genes. My only directive is to obey my genes. Eat, sleep, reproduce, die. That is our bible.
>
> We deride the Theists for having created myths and holy books. We imagine ourselves superior. But we too imagine there are reasons to obey laws, be polite, protect the weak etc. Rubbish. We are nurturing a new religion, one where we imagine that such conventions have any basis in reality. Have they allowed life to exist? Absolutely. But who cares? Outside of my greedy little gene's need to reproduce, there is nothing in my world that stops me from killing you and reproducing with your wife. Only the fear that I might be incarcerated and thus be deprived of the opportunity to do the same with the next guy's wife stops me. Some of my Atheist friends have fooled themselves into acting like the general population. They live in suburban homes, drive Toyota Camrys, attend school plays. But underneath they know the truth. They are a bag of DNA whose only purpose is to make more of themselves. So be nice if you want. Be involved, have polite conversations, be a model citizen. Just be aware that while technically an Atheist, you are an inferior one. You're just a little bit less evolved, that's all. When you are ready to join me, let me know, I'll be reproducing with your wife.
>
> I know it's not PC to speak so bluntly about the ramifications of our beliefs, but in our discussions with Theists we sometimes tip toe around what we really know to be factual. Maybe it's time we Atheists were a little more truthful and let the chips fall where they may. At least that's what my genes are telling me to say."

In his post, Wallace comments on the statement above, but for more, you should listen to the podcast.

This fellow is essentially expanding on what Richard Dawkins has said about atheism:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance

> to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

And Cornell University atheist William Provine agrees: (this is taken from his debate with Phillip E. Johnson)

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

And what about Florida State University atheist Michael Ruse:

> "The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological adaptation no less than are hands and feet and teeth. Considered as a rationally justifiable set of claims about an objective something, ethics is illusory. I appreciate when someone says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory." (Michael Ruse, "Evolutionary Theory and Christian Ethics," in The Darwinian Paradigm (London: Routledge, 1989), pp. 262-269).

I see a lot of atheists these days thinking that they can help themselves to a robust notion of consciousness, to real libertarian free will, to objective moral values and duties, to objective human rights, and to objective meaning in life, without giving credit to theism. It's not rational to do this. As Frank Turek said on the latest episode of "Cross Examined", atheists have to sit in God's lap to slap his face. We should be calling them out on it. I think it's particularly important not to let atheists utter a word of moral judgment on any topic, since they cannot ground an objective standard that allows them to make statements of morality. Further, I think that they should have every immorality ever committed presented to them, and then they should be told "your worldview does not allow you to condemn this as wrong". They can't praise anything as right, either. This is not to say that we should go all presuppositional on them, but if the opportunity arises to point out how they are borrowing from theism in order to attack it, we should do that *in addition* to presenting good scientific and historical evidence.

# William Lane Craig debates Lawrence Krauss in North Carolina: Does God Exist?

**Wintery Knight** · 16 January 2014 · Archived copy · Original

Would you like to hear a debate featuring the least intelligent atheist ever? Well, this is a good candidate.

The full transcript of the debate is here at the Reasonable Faith web site.

Audio of the William Lane Craig vs. Lawrence Krauss debate at North Carolina State University has now been posted at Apologetics 315. The people who recorded it did not do a good job, though.

And I also posted some background information on Craig's arguments.

And now for one of my snarkiest summaries, which is fitting for Lawrence Krauss. A less snarky summary is at J.W. Wartick's blog. And if you want to see a summary of a debate with a smart atheist, then here is the Craig-Millican debate summary.

**William Lane Craig's case**

William Lane Craig made 5 arguments for the existence of God:

- the contingency argument
- theargument from the origin of the universe (kalam)
- the argument from cosmic fine-tuning
- the moral argument
- the argument from the miracle of the resurrection

These arguments went unrefuted during the debate.

**Lawrence Krauss's case**

Lawrence Krauss made the following arguments in his first speech:

- Dr. Craig is a professional debater
- Dr. Craig is not a scientist
- Dr. Craig is a philosopher
- Disproving God's is a waste of my valuable time
- Dr. Craig has the burden of proof to show evidence
- My job is not to present any evidence
- I think that "extraordinary claims require extraordinary evidence" is a nice slogan, but I have no evidence for it
- I don't like that God doesn't appear on Youtube, therefore he doesn't exist
- I don't like that God didn't appear to humans until recently, therefore he doesn't exist
- I don't like that the stars didn't come together to spell "I am here", therefore God doesn't exist
- Dr. Craig has to supply extraordinary evidence, because my favorite slogan says he has to
- Dr. Craig talks about logic, but the universe is not logical
- Dr. Craig doesn't have any arguments, just things he doesn't like
- Dr. Craig doesn't like infinity, and that's why he believes in the Big Bang cosmology
- Dr. Craig doesn't like chance, and that's why he believes in cosmic fine-tuning
- Dr. Craig doesn't like rape, and that's why he believes in the ontological foundations of morality
- If people believe in logic, then they can't do science

- The things that science discovers contradict the laws of logic
- For example, Dr. Craig doesn't like infinity, so he believes in the experimental measurements of the cosmic microwave background radiation
- For example, Dr. Craig doesn't like chance, so he believes in the fine-tuning of the gravitational constant for the formation of stable stars
- Quantum mechanics shows that the universe is stranger than you think, therefore all of Craig's arguments are false
- My t-shirt says 2 + 2 = 5, therefore all of Craig's arguments are false
- Atheism may look ridiculous, but it's true, and if you don't like it, too bad – because the universe is very strange
- Accidents happen all the time, so that explains the cosmic fine-tuning
- We all have to convince ourselves of 10 impossible things before breakfast, and atheism is impossible, so you need to convince yourself of it
- I don't know about the Big Bang, so Dr. Craig cannot use the Big Bang to to prove the universe began to exist
- I don't know about the cosmic fine-tuning, so Dr. Craig cannot use the fine-tuning of cosmological constants to prove the fine-tuning
- I don't know anything about science, so Dr. Craig cannot use science in his arguments
- Dr. Craig says that the universe is contingent because it began to exist 13.7 billion years ago based on the state-of-the-art scientific evidence for the Big Bang creation out of nothing from 1) red-shift of light from distant galaxies, 2) cosmic microwave background radiation, 3) helium-hydrogen abundances, 4) experimental confirmation of general relativity, 5) the second law of thermodynamics, 6) radioactive element abundances, etc., but how does he know that? I don't know that
- It's fine not to know the answer to scientific questions like whether the universe began to exist, it's more exciting
- Thinking that the universe began to exist based on 6 pieces of scientific evidence is the "God-of-the-Gaps" fallacy, it's intellectual laziness
- But all kidding aside, the universe actually did begin to exist 13.72 billion years ago, exactly like Craig says in his argument
- I could argue that God created the universe 4.5 seconds ago with all of us sitting believing that we heard Dr. Craig, and how could you prove me wrong? It's not falsifiable
- Universes can spontaneously appear out of nothing, and in fact they have to appear out of nothing
- *Nothing is unstable*, and space and time can come into existence out of nothing, so that's not a problem
- Our universe could have appeared out of a multiverse, an unobservable, untestable multiverse that I have no way of observing or testing
- The universe is not fine-tuned for life, and no scientist says so, especially not Martin Rees, the atheist Astronomer Royal, and every other scientist
- What if God decided that rape was OK, would it be OK? God can change his moral nature arbitrarily, can't he?

Here are the arguments in Krauss' second speech:

- We don't understand the beginning of the universe
- We don't understand whether the universe had a cause
- Steven Weinberg says that science makes it possible to be an atheist, so therefore the universe didn't begin and didn't have a cause
- It's just intellectual laziness to say that the universe came into being 13.7 billion years ago, and that things that come into being of nothing have a cause
- Dr. Craig is an expert on nothing, ha ha ha!

- There are multiple versions of nothing, there's nothing, and then there is something, which is also nothing if I want it to be
- There was no space, there was no time, and then the space create the empty space
- I'm going to give Dr. Craig a break
- At least in the nothing there were laws like *F=ma*, and those laws created the empty space, because *descriptions of matter that does not even exist yet* can create space out of nothing
- Alan Guth and Alexander Vilenkin are good friends of mine and I talk to them all the time, unlike Dr. Craig
- Alan Guth and Alexander Vilenkin don't mention God in their scientific papers, therefore the universe didn't begin and didn't have a cause
- Maybe there is a multiverse that cannot be observed or tested? And my unscientific speculations are a refutation of Craig's scientific evidence for the fine-tuning
- Dr. Craig just doesn't like my speculations about the unobservable, untestable multiverse, and that's why he believes in the Big Bang cosmology
- And if you let me speculate about an unobservable, untestable multiverse, then maybe the inanimate invisible universes reproduce and compete for food and mutate like animals and then there is natural selection so that the finely-tuned universes survive and now we're in one!
- My cool animation of blue goo mutating proves that the multiverse is real! Empty space is not empty!
- Darwinism, which is a theory about the origin of species, explains the cosmic fine-tuning that occurred at the moment of creation
- The unobservable, untestable multiverse universes all have different laws, I believe
- We don't know what the right answer is, but we are willing to look at any possibility, as long as the possibilities we look at are not supernatural possibilities
- The discovery of the origin of the universe could be an accident, I don't know if the universe began to exist or not, maybe all the six scientific evidences are wrong because if I don't like the evidence we have, so I'll just wait for new evidence to overturn the evidence we have which I don't like
- Maybe there are other forms of life that are unobservable and untestable that are compatible with a universe that has no stable stars, no planets, no elements heavier than hydrogen, no hydrogen, no carbon, etc.

Here are the arguments in Krauss' third speech:

- Dr. Craig is stupid
- Why should we even care about Dr. Craig's arguments and evidence, we can just count the number of scientists who are atheists and decide whether God exists that way – I decided everything based on what my teachers told me to believe
- I actually know general relativity, not like Dr. Craig who co-wrote a book on general relativity published by Oxford University Press
- What quantum mechanics shows is that virtual particles come into being in a quantum vacuum, and then go out of existence almost immediately – and that is exactly like how a 13.7 billion year old universe came into being in a quantum vacuum, and we're going to disappear *very soon*
- Space and the laws of physics can be created, possibly, if you accept my speculations about an unobservable, untestable multiverse
- I don't like the God of the Old Testament, therefore he doesn't exist
- Groups of people can decide what they think is good and evil, like the Nazis and slave-owners did, and then that becomes good for them in that time and place, and that's what I mean by morality
- Here's something I studied that wasn't fine-tuned, therefore there is no fine-tuning of the universe
- Not knowing things is really exciting! Dr. Craig is not really exciting because he knows things – phooey!

Here are the arguments in Krauss' fourth speech:

- If you will just grant me an observable, untestable multiverse, then there must be some universe where intelligent life exists
- Infinite numbers of things exist everywhere in nature, you can see lots of infinite collections of things, like jelly beans and bumblebees and invisible pink unicorns
- I don't like the fine-tuning, but if my speculations about the multiverse are proven true, then I won't have to learn to live with the fine-tuning
- Inflation, the rapid expansion of the universe which occurs at some time after the the origin of the universe (t = 0), explains the absolute origin of time, space, matter and energy out of nothing that occurred at t = 0
- Physical processes that develop subsequent to the creation of the universe at t > 0 can explain the fine-tuning of quantities that are set at t = 0
- Morality is just a bunch of arbitrary conventions decided by groups of people in different times and places by an accidental process of biological and social evolution, but *that* practice over there by *those* people is *objectively* wrong!
- 1 Cor 15:3-7, which most scholars, even atheists like James Crossley, admit is dated to within 3 years of the death of Jesus, is actually dated to 50 years after the death of Jesus
- The historical case for the resurrection made by people like N.T. Wright in their multi-volume academic works is on par with the story of Mohammed ascending to Heaven on a horse

If you liked this, please check out my snarky summary of Christopher Hitchens' speeches in the Craig-Hitchens debate.

# New study: Obama's proposed minimum wage hike could destroy 1 million jobs

**Wintery Knight** · 17 January 2014 · Archived copy · Original

Labor Force Participation down to 62.8%
From the Daily Caller. (H/T Conway)

Excerpt:

> The Obama administration's proposal to raise the minimum wage to $10.10 an hour could result in as many 1,084,000 jobs eliminated from the work force, according to a new study conducted by the Employment Policies Institute (EPI)
>
> "No amount of denial by the president and his political allies — and no number of 'studies' published by biased researchers — can change the fact that minimum wage hikes eliminate jobs for low-skill and entry-level employees. Non-partisan economists have agreed on this consensus for decades, and the laws of economics haven't changed," Michael Saltsman, research director at EPI, said in a statement.
>
> He offered an alternative to the president's plan: "Instead of raising small businesses' labor costs and creating more barriers to entry-level employment, the president and the Senate should focus on policies that help reduce poverty and create jobs."
>
> The study was released in the wake of an expected vote on a Senate bill that aims to raise the federal minimum wage from the current $7.25 an hour to $10.10 an hour — a nearly 40 percent increase.
>
> Many Democrats argue that increasing the federal minimum will reduce poverty without having an adverse effect on unemployment.
>
> EPI's report, which used analysis from economists at Miami and Trinity University, reached a different conclusion.
>
> Researchers used recently updated Census Bureau data from 2012 and 2013 to calculate how each individual state would be impacted by the proposed wage hikes. As a lump sum, Americans would see a loss of at least

> 360,000 jobs, and perhaps even over one million if hourly wages are increased to $10.10.
>
> The number of job losses would be the most dramatic in large states, such as California and Texas. Economists found that California could lose as many as 100,016 jobs and Texas could see up to 128,617 jobs disappear from its economy.

This article from Investors Business Daily, written by the famous economist Thomas Sowell has more on the effects of raising the minimum wage.

Excerpt:

> Switzerland is one of the few modern nations without a minimum-wage law. In 2003, the Economist magazine reported: "Switzerland's unemployment neared a five-year high of 3.9% in February."
>
> In February of this year, Switzerland's unemployment rate was 3.1%. A recent issue of the Economist showed Switzerland's unemployment rate as 2.1%.
>
> Most Americans today have never seen unemployment rates that low. However, there was a time when there was no federal minimum-wage law in the United States.
>
> The last time was during the Coolidge administration, when the annual unemployment rate went as low as 1.8%. When Hong Kong was a British colony, it had no minimum-wage law. In 1991 its unemployment rate was under 2%.
>
> […]Most people in the lower income brackets are not an enduring class. Most working people in the bottom 20% in income at a given time do not stay there over time. More of them end up in the top 20% than remain behind in the bottom 20%.
>
> There is nothing mysterious about the fact that most people start off in entry-level jobs that pay much less than they will earn after they get some work experience.
>
> But when minimum-wage levels are set without regard to their initial productivity, young people are disproportionately unemployed — priced out of jobs.
>
> In European welfare states where minimum wages, and mandated job benefits to be paid for by employers, are more generous than in the United States, unemployment rates for younger workers are often 20% or higher, even when there is no recession.
>
> Unemployed young people lose not only the pay they could have earned but, at least equally important, the work experience that would enable them to earn higher rates of pay later on.
>
> Minorities, like young people, can also be priced out of jobs. In the United States, the last year in which the black unemployment rate was lower than the white unemployment rate — 1930 — was also the last year when there was no federal minimum-wage law.
>
> Inflation in the 1940s raised the pay of even unskilled workers above the minimum wage set in 1938. Economically, it was the same as if there were no minimum-wage law by the late 1940s.
>
> In 1948 the unemployment rate of black 16-year-old and 17-year-old males was 9.4%. This was a fraction of what it would become in even the most prosperous years from 1958 on, as the minimum wage was raised repeatedly to keep up with inflation.
>
> **A survey of American economists found that 90% of them regarded minimum-wage laws as increasing the rate of unemployment among low-skilled workers.**

Harvard University economist Greg Mankiw puts the level of opposition to minimum wage hikes at 79% among professional economists across the ideological spectrum.

# Is giving to charity more rational for religious people or atheists?

**Wintery Knight** · 17 January 2014 · Archived copy · Original

Well, let's take a look at the numbers with this article by Arthur Brooks, published by the Hoover Institute at Stanford University.

Excerpt:

> How do religious and secular people vary in their charitable behavior? To answer this, I turn to data collected expressly to explore patterns in American civic life. The *Social Capital Community Benchmark Survey* (SCCBS) was undertaken in 2000 by researchers at universities throughout the United States and the Roper Center for Public Opinion Research. The data consist of nearly 30,000 observations drawn from 50 communities across the United States and ask individuals about their "civic behavior," including their giving and volunteering during the year preceding the survey.
>
> From these data, I have constructed two measures of religious participation. First, the group I refer to as "religious" are the respondents that report attending religious services every week or more often. This is 33 percent of the sample. Second, the group I call "secular" report attending religious services less than a few times per year or explicitly say they have no religion. These people are 26 percent of the sample (implying that those who practice their religion occasionally make up 41 percent of the sample). The SCCBS asked respondents whether and how much they gave and volunteered to "religious causes" or "non-religious charities" over the previous 12 months. Across the whole population, 81 percent gave, while 57 percent volunteered.
>
> **The differences in charity between secular and religious people are dramatic. Religious people are 25 percentage points more likely than secularists to donate money (91 percent to 66 percent) and 23 points more likely to volunteer time (67 percent to 44 percent). And, consistent with the findings of other writers, these data show that practicing a religion is more important than the actual religion itself in predicting charitable behavior. For example, among those who attend worship services regularly, 92 percent of Protestants give charitably, compared with 91 percent of Catholics, 91 percent of Jews, and 89 percent from other religions.**
>
> Socioeconomically, the religious and secular groups are similar in some ways and different in others. For example, there is little difference between the groups in income (both have average household incomes around $49,000) or education level (20 percent of each group holds a college degree). On the other hand, the secular group is disproportionately male (49 percent to 32 percent), unmarried (58 percent to 40 percent), and young (42 to 49 years old, on average). In addition, the SCCBS data show that religion and secularism break down on ideological lines: Religious people are 38 percentage points more likely to say they are conservative than to say they are liberal (57 percent to 19 percent). In contrast, secular people are 13 points more likely to say they are liberal than to say they are conservative (42 percent to 29 percent).
>
> It is possible, of course, that the charity differences between secular and religious people are due to these nonreligious socioeconomic differences. To investigate this possibility, I used a statistical procedure called probit regression to examine the role of religious practice in isolation from all other relevant demographic characteristics: political beliefs, income (and hence, indirectly, the tax incentives for giving), education level, gender, age, race, marital status, and area of residence. **The data show that if two people — one religious and the other secular — are identical in every other way, the secular person is 23 percentage points less likely to give than the religious person and 26 points less likely to volunteer.**

Honestly, I've always struggled to understand how giving to charity could be rational, on atheism. If you are only alive for 80 years, and the purpose of your life is to be happy, then the only reason I can think of to give anything away to anyone is because it makes you feel happier or more respected or something. Maybe because you like thinking of yourself as moral, or maybe because you want to be seen as moral, or maybe because you want a tax

deduction, or maybe something else. But if this is the only life you are ever going to have, and people are just collections of atoms, then why care about what anyone is doing? We're all just accidents anyway, on atheism, and we're going to die out eventually. One set of atoms giving some atoms to another set of atoms, and then in the end all the atoms get scattered: who cares?

Here's something interesting I found about the leaders of the two political parties in this country.

Excerpt:

> In 2009, the Obamas gave 5.9 percent of their income to charity, about the same as they gave in 2006 and 2007. In the eight years before he became president, Obama gave an average of 3.5 percent of his income to charity, upping that to 6.5 percent in 2008.
>
> The Obamas' charitable giving is equally divided between "hope" and "change."
>
> George W. Bush gave away more than 10 percent of his income each year he was president, as he did before becoming president.
>
> Thus, in 2005, Obama gave about the same dollar amount to charity as President George Bush did, on an income of $1.7 million — more than twice as much as President Bush's $735,180. Again in 2006, Bush gave more to charity than Obama on an income one-third smaller than Obama's.
>
> In the decade before Joe Biden became vice president, the Bidens gave a total — all 10 years combined — of $3,690 to charity, or 0.2 percent of their income. They gave in a decade what most Americans in their tax bracket give in an average year, or about one row of hair plugs.
>
> Of course, even in Biden's stingiest years, he gave more to charity than Sen. John Kerry did in 1995, which was a big fat goose egg. Kerry did, however, spend half a million dollars on a 17th-century Dutch seascape painting that year, as Peter Schweizer reports in his 2008 book, "Makers and Takers."
>
> To be fair, 1995 was an off-year for Kerry's charitable giving. The year before, he gave $2,039 to charity, and the year before that a staggering $175.
>
> He also dropped a $5 bill in the Salvation Army pail and almost didn't ask for change.
>
> In 1998, Al Gore gave $353 to charity — about a day's take for a lemonade stand in his neighborhood. That was 10 percent of the national average for charitable giving by people in the $100,000-$200,000 income bracket. Gore was at the very top of that bracket, with an income of $197,729.
>
> When Sen. Ted Kennedy released his tax returns to run for president in the '70s, they showed that Kennedy gave a bare 1 percent of his income to charity — or, as Schweizer says, "about as much as Kennedy claimed as a write-off on his 50-foot sailing sloop Curragh." (Cash tips to bartenders and cocktail waitresses are not considered charitable donations.)
>
> The Democratic base gives to charity as their betters do. At the same income, a single mother on welfare is seven times less likely to give to charity than a working poor family that attends religious services.
>
> In 2006 and 2007, John McCain, who files separately from his rich wife, gave 27.3 percent and 28.6 percent of his income to charity.
>
> In 2005, Vice President Cheney gave 77 percent of his income to charity. He also shot a lawyer in the face, which I think should count for something.
>
> In a single year, Schweizer reports, Rush Limbaugh "gave $109,716 to 'various individuals in need of assistance mainly due to family illnesses,' $52,898 to 'children's case management organizations,' including 'various programs to benefit families in need,' $35,100 for 'Alzheimer's community care — day care for families in need,' and $40,951 for air conditioning units and heaters delivered to troops in Iraq."

The Democrats are the non-religious party, the Republicans are the religious party. The Democrats are also the

talking party, as you can see, and the Republicans are the doing party.

By the way, Arthur Brooks eventually turned this research into a book called "Who Really Cares?", and it's a good response to atheists when they tell you that they can be moral without God. If it doesn't make sense to be moral, then atheists aren't going to do it. You can read more about that book here.

# My conversation with a leftist friend about basic economics and rent control

**Wintery Knight** · 17 January 2014 · Archived copy · Original

My conversation with a leftist friend about "Basic Economics: A Common Sense Guide to the Economy, 4th Edition", by Thomas Sowell.

Him: I remember why I stopped reading that book when you asked me to read it.

Me: Why did you stop reading it?

Him: Because of the chapter on rent control.

Me: Chapter 3 is the chapter on price controls. It talks about rent control.

Him: I expect an economist to present both sides of rent control. He has to present the arguments for and against rent control.

Me: There are not two sides to rent control. There is only one side to rent control. He chose that because it is a clear cut example of the problems caused by price controls. Economists universally condemn rent control, across the ideological spectrum.

Him: No they don't.

Me: The chair of the Department of Economics at Harvard University, Greg Mankiw, reports in his economics textbook that 93% of professional economists agree that rent control reduces housing supply and housing quality. It is the most agreed upon position among economists across the ideological spectrum, number one in his list of facts on which professional economists agree. And obviously they have reasons for agreeing on that, specifically the experience of trying rent control policies in different times and places. It has always failed.

Him: Somebody must like rent control, because they have it in New York city.

Me: Politicians and low-information voters support rent control. It makes politicians feel good, and it gets them elected, too – if the voters are economically illiterate enough, as they are in New York city.

Him: But what about global warming then? Isn't the consensus against you there?

Me: There has been no global warming in the last 17 years, according to the New York Times. They were reporting on findings by the UN IPCC in 2013.

Him: The UN never said that. The New York Times never wrote that.

Me: Yes, they did. And I have the sources I can send them to you.

Him: I'll bet you do. (walks away in a huff)

This is the relevant quote from the Greg Mankiw post from his survey of economists that appears in his textbook:

1. **A ceiling on rents reduces the quantity and quality of housing available. (93%)**
2. Tariffs and import quotas usually reduce general economic welfare. (93%)
3. Flexible and floating exchange rates offer an effective international monetary arrangement. (90%)
4. Fiscal policy (e.g., tax cut and/or government expenditure increase) has a significant stimulative impact on a less than fully employed economy. (90%)
5. The United States should not restrict employers from outsourcing work to foreign countries. (90%)
6. The United States should eliminate agricultural subsidies. (85%)
7. Local and state governments should eliminate subsidies to professional sports franchises. (85%)

8. If the federal budget is to be balanced, it should be done over the business cycle rather than yearly. (85%)
9. The gap between Social Security funds and expenditures will become unsustainably large within the next fifty years if current policies remain unchanged. (85%)
10. Cash payments increase the welfare of recipients to a greater degree than do transfers-in-kind of equal cash value. (84%)
11. A large federal budget deficit has an adverse effect on the economy. (83%)
12. A minimum wage increases unemployment among young and unskilled workers. (79%)
13. The government should restructure the welfare system along the lines of a "negative income tax." (79%)
14. Effluent taxes and marketable pollution permits represent a better approach to pollution control than imposition of pollution ceilings. (78%)

And this is the relevant quote from the New York Times article, dated September 2013:

> The global warming crowd has a problem. For all of its warnings, and despite a steady escalation of greenhouse gas emissions into the atmosphere, the planet's average surface temperature has remained pretty much the same for the last 15 years.
>
> As you might guess, skeptics of warming were in full attack mode as the Intergovernmental Panel on Climate Change gathered in Sweden this week to approve its latest findings about our warming planet. The skeptics argue that this recent plateau illustrates what they always knew — that complex global climate models have no predictive capability and that, therefore, there is no proof of global warming, human-caused or not.

The author of the NYT article (a leftist) goes on to attempt to explain he is not concerned by the 17 year period of no significant warming, but the point is that the 17 year (not 15 year) period of no significant warming is A FACT acknowledged by the UN IPCC that has to be explained by those who believe in catastrophic man-made global warming. The IPCC may not like the temperature measurements, but those facts are not in doubt. The global warming crowd might make predictions about the future, but they made predictions about the past before, and we now know for a fact that those predictions (polar ice caps melting, Himalayans melting, significant global warming, etc.) were FALSE. They have been falsified by evidence, and that's not in doubt.

**Economic illiteracy is the problem**

When people on the left voted for Barack Obama in 2012, they did not *know based on evidence* that they could keep their doctors and keep their health plans and that insurance premiums would drop $2500. They did not know it because the *economic studies contradicted Obama's words*. They even believed Obama when he said that the Benghazi incident was caused by a Youtube video. Obama-supporters had *a sincere belief* in the words of his passionate speeches. They were impressed by the visuals of him talking to large crowds of young people. They believed him because they had feelings about him. And voting for him made them have good feelings *about themselves.* They felt that they were going to achieve good things by voting for this good man. They meant well, but they did not know. They did not have evidence.

Before the 2012 election, people on the right pointed to evidence from studies (like this one) showing that Obama was lying, but his supporters were apparently not interested in economic studies. They want to preserve the feelings of being good people. They want to preserve the belief that you can embrace policies that sound good, and that words that sound good will necessarily lead to good results for people who are at a disadvantage. I don't question the motives of people on the left – they mean well. But meaning well doesn't produce good results without knowledge of economics. In economics, policies that sound appealing to well-meaning liberals (rent control, tariffs, protectionism, minimum wage, trillion-dollar deficits) actually produce bad results for poor people. And we know this for a fact from our *experience across different times and places.*

If we can get people to accept the authority of our observations of policy experimentation in different times and

places *over and above their feelings and intuitions*, then we can save this country.

# Is the definition of atheism “a lack of belief in God”?

**Wintery Knight** · 18 January 2014 · Archived copy · Original

First, let’s see check with the Stanford University Encyclopedia of Philosophy.

Excerpt:

> ‘Atheism’ means the negation of theism, the denial of the existence of God.

Stanford University is one of the top 5 universities in the United States, so that’s a solid definition. To be an atheist is to be a person who makes the claim that, as a matter of FACT, there is no intelligent agent who created the universe. Atheists think that there is no God, and theists think that there is a God. Both claims are objective claims about the way the world is out there, and so both sides must furnish forth arguments and evidence as to how they are able to *know* what they are each claiming.

Philosopher William Lane Craig has some thoughts on atheism, atheists and lacking belief in God in this reply to a questioner.

Question:

> In my discussions with atheists, they are using the term that they “lack belief in God”. They claim that this is different from not believing in God or from saying that God does not exist. I’m not sure how to respond to this. It seems to me that its a silly word-play and is logically the same as saying that you do not believe in God. What would be a good response to this?
> Thank you for your time,
>
> Steven

And here is Dr. Craig’s full response:

> Your atheist friends are right that there is an important logical difference between believing that there is no God and not believing that there is a God. Compare my saying, “I believe that there is no gold on Mars” with my saying “I do not believe that there is gold on Mars.” If I have no opinion on the matter, then I do not believe that there is gold on Mars, and I do not believe that there is no gold on Mars. There’s a difference between saying, “I do not believe (p)” and “I believe (not-p).” Logically where you place the negation makes a world of difference.
>
> But where your atheist friends err is in claiming that atheism involves only not believing that there is a God rather than believing that there is no God.
>
> There’s a history behind this. Certain atheists in the mid-twentieth century were promoting the so-called “presumption of atheism.” At face value, this would appear to be the claim that in the absence of evidence for the existence of God, we should presume that God does not exist. Atheism is a sort of default position, and the theist bears a special burden of proof with regard to his belief that God exists.
>
> So understood, such an alleged presumption is clearly mistaken. **For the assertion that “There is no God” is just as much a claim to knowledge as is the assertion that “There is a God.” Therefore, the former assertion requires justification just as the latter does. It is the agnostic who makes no knowledge claim at all with respect to God’s existence. He confesses that he doesn’t know whether there is a God or whether there is no God.**
>
> But when you look more closely at how protagonists of the presumption of atheism used the term “atheist,” you discover that they were defining the word in a non-standard way, synonymous with “non-theist.” So understood the term would encompass agnostics and traditional atheists, along with those who think the

> question meaningless (verificationists). As Antony Flew confesses,
>
> the word 'atheist' has in the present context *to be construed in an unusual way*. Nowadays it is normally taken to mean someone who explicitly denies the existence . . . of God . . . But here it has to be understood not positively but negatively, with the originally Greek prefix 'a-' being read in this same way in 'atheist' as it customarily is in . . . words as 'amoral' . . . . In this interpretation an atheist becomes not someone who positively asserts the non-existence of God, but someone who is simply not a theist. (*A Companion to Philosophy of Religion,* ed. Philip Quinn and Charles Taliaferro [Oxford: Blackwell, 1997], s.v. "The Presumption of Atheism," by Antony Flew)
>
> **Such a re-definition of the word "atheist" trivializes the claim of the presumption of atheism, for on this definition, atheism ceases to be a view. It is merely a psychological state which is shared by people who hold various views or no view at all. On this re-definition, even babies, who hold no opinion at all on the matter, count as atheists! In fact, our cat Muff counts as an atheist on this definition, since she has (to my knowledge) no belief in God.**
>
> **One would still require justification in order to know either that God exists or that He does not exist, which is the question we're really interested in.**
>
> So why, you might wonder, would atheists be anxious to so trivialize their position? Here I agree with you that a deceptive game is being played by many atheists. If atheism is taken to be a view, namely the view that there is no God, then atheists must shoulder their share of the burden of proof to support this view. But many atheists admit freely that they cannot sustain such a burden of proof. So they try to shirk their epistemic responsibility by re-defining atheism so that it is no longer a view but just a psychological condition which as such makes no assertions. They are really closet agnostics who want to claim the mantle of atheism without shouldering its responsibilities.
>
> This is disingenuous and still leaves us asking, "So is there a God or not?"

So there you have it. We are interested in what both sides *know* and *what reasons and evidence they have to justify their claim to know.* We are interested in talking to people who make claims *about objective reality*, not about themselves, and who then go on to give reasons and evidence to support their claims *about objective reality*. There are atheists out there that do make an objective claim that God does not exist, and then support that claim with arguments and evidence. Those are good atheists, and we should engage in rational conversations with them. But clearly there are some atheists who are not like that. How should we deal with these "subjective atheists"?

**Dealing with subjective atheists**

How should theists respond to people who just want to talk about their psychological state? Well, my advice is to avoid them. They are approaching religion irrationally and non-cognitively – like the person who enters a physics class and says "I lack a belief in the gravitational force!". When you engage in serious discussions with people about God's existence, you only care about what people know and what they can show to be true. We don't care about a person's psychology.

**Dealing with persistent subjective atheists**

What happens when you explain all of that to a subjective atheist who continues to insist that you listen to them repeat over and over "I lack a belief in God, I lack a belief in God"? What if you tell them to make the claim that God does not exist, and then support it with arguments and evidence, but instead they keep leaving comments on your blog telling you again and again about their subjective state of mind: "I lack a belief in cupcakes! I lack a belief in icebergs!" What if they keep e-mailing you and threatening to expose you on Twitter for refusing to listen to them, or denounce you via skywriting: "Wintery Knight won't listen to me! I lack a belief in crickets!". I think at this point you have to give up and stop talking to such a person.

And that's why I moderate and filter comments on this blog. There are uneducated people out there with access to

the Internet who want attention, but I am not obligated to give it to them. And neither are you. We are not obligated to listen to abusive people who don't *know* what they are talking about. I do post comments from objective atheists who make *factual* claims about the objective world, and who support those claims with *arguments and evidence*. I am not obligated to post comments from people who refuse to make objective claims or who refuse to support objective claims with arguments and evidence. And I'm not obligated to engage in discussions with them, either.

# Atheist cosmologist Sean Carroll to debate with Hans Halvorson and William Lane Craig

**Wintery Knight** · 19 January 2014 · Archived copy · Original

The first one will be held at California Institute of Technology on January 23, 2014 at 7:30 PM in Baxter Lecture Hall.

Speakers:

> **Hans Halvorson**
> Professor of Philosophy and Associate Professor of Mathematics, Princeton University
> Hans Halvorson received his bachelor's degree in Philosophy from Calvin College, going on to receive master's degrees in mathematics and philosophy and his Ph.D. in philosophy from Pittsburgh. He has taught at Princeton since 2001 and was promoted to full faculty in the philosophy department in 2010.
>
> Halvorson's research focus is category theory and the philosophy of physics, but he also specializes in philosophical logic, philosophy of mathematics, philosophy of religion, and philosophy of science.

> **Sean Carroll**
> Senior Research Associate, Physics and Astrophysics, California Institute of Technology

> Sean Carroll is a physicist at the California Institute of Technology. He received his Ph.D. in 1993 from Harvard University. His research focuses on theoretical physics and cosmology, especially the origin and constituents of the universe. He has contributed to models of interactions between dark matter, dark energy, and ordinary matter; alternative theories of gravity; and violations of fundamental symmetries. Carroll is the author of The Particle at the End of the Universe, From Eternity to Here: The Quest for the Ultimate Theory of Time, and Spacetime and Geometry: An Introduction to General Relativity. He has been awarded fellowships by the Sloan Foundation, Packard Foundation, and the American Physical Society, as well as the MIT Graduate Student Council Teaching Award and the Villanova University Arts and Sciences Alumni Medallion. Carroll has appeared on TV shows such as The Colbert Report and Through the Wormhole with Morgan Freeman, and frequently serves as a science consultant for film and television. He lives in Los Angeles with his wife, writer Jennifer Ouellette.

The topic for that one is: "Metaphysics: An atheist and a Christian discuss physics and cosmology".

**Greer-Heard Forum on God and cosmology**

The second one will be held at New Orleans Baptist Theological Seminary on February 21-22, 2014. The topic is "God and cosmology".

The speakers for that one will be well known to regular readers. The main event will be William Lane Craig vs Sean Carroll.

The respondents are Alex Rosenberg, Robin Collins, Tim Maudlin and James Sinclair. I've featured Robin Collins before here for his work on fine-tuning.

I recognize Collins and Sinclair as Christians, and Rosenberg is a thorough-going atheist. You might remember him from his debate with William Lane Craig, which I summarized here. Sean Carroll is the co-author of one of the no-beginning theoretical cosmologies that Lawrence Krauss appealed to in his debate with Craig in Australia, which I summarized here.

**Dr. Craig's podcasts on Sean Carroll**

If you want to listen to something about Sean Carroll, William Lane Craig did some podcasts about him a while back.

He also replied to a question about Carroll and cosmology in his Q&A section.

I thought this part was interesting:

> Finally, I'm disappointed that Carroll cannot find it in himself to have a collegial discussion of these important questions but feels the need to resort to snide, personal attacks in his closing paragraph. His unfamiliarity with my work is evident in his remark that I do not cite the relevant, original, scientific papers (despite my quoting the Vilenkin-Mithani paper in the very podcast to which he is responding), as well as the popular works of physicists (where they often feel freer to express what they take to be the philosophical and theological implications of their work). His condescension is especially awkward in light of his own missteps in correctly characterizing the BGV Theorem. Carroll will pardon us, I hope, for our scepticism about his counting himself among the ranks of the open-minded.

This should be a great debate!

# United Nations climate chief explains the real motive of global warming alarmism

**Wintery Knight** · 19 January 2014 · Archived copy · Original

Previously, I've documented many problems with global warming, and I've also noted that contrary to the predictions of the global warming socialists, we have had no significant warming in 17 years and Arctic ice is at a 35-year high. If global warmists are trying to convince us of something that is true, then they will have to show us better evidence for their views. A lot of us have given up on global warming as science, especially after the whole Climategate scandal, where it was proved that scientists at the University of East Anglia sent e-mails showing how they were trying to "hide the decline" in temperatures and suppress scientific articles critical of their theories.

My good friend Letitia posted this Daily Caller article, which discusses a possible motive for pushing a theory that is in conflict with the evidence we have.

Excerpt: (links removed)

> United Nations climate chief Christiana Figueres said that democracy is a poor political system for fighting global warming. Communist China, she says, is the best model.
>
> China may be the world's top emitter of carbon dioxide and struggling with major pollution problems of their own, but the country is "doing it right" when it comes to fighting global warming says Figueres.
>
> "They actually want to breathe air that they don't have to look at," she said. "They're not doing this because they want to save the planet. They're doing it because it's in their national interest."
>
> Figueres added that the deep partisan divide in the U.S. Congress is "very detrimental" to passing any sort of legislation to fight global warming. The Chinese Communist Party, on the other hand, can push key policies and reforms all on its own. The country's national legislature largely enforces the decisions made by the party's Central Committee and other executive offices.
>
> Communism was responsible for the deaths of about 94 million people in China, the Soviet Union, North Korea, Afghanistan and Eastern Europe in the 20th Century. China alone was responsible for 65 million of those deaths under communist rule.
>
> Environmentalists often hail China as a model for fighting global warming, since they are a "leader" in renewable energy. The country set a goal of getting 15 percent of its power from renewable sources by 2020. In 2012, China got 9 percent of its power from renewables — the U.S. by contrast got 11 percent in 2012.
>
> However, the country still gets 90 percent of its power from fossil fuels, mostly from coal. In fact, Chinese coal demand is expected to explode as the country continues to develop. China has approved 100 million metric tons of new coal production capacity in 2013 as part of the government's plan to bring 860 million metric tons of coal production online by 2015.
>
> China has publicly made big efforts to clean up its environment. The country's booming industrial apparatus has caused so much pollution that the skies have been darkened over major cities and the air quality has heavily deteriorated.
>
> The Wall Street Journal notes that China's air quality was so bad that about "1.2 million people died prematurely in China in 2010 as a result of air pollution" and Chinese government figures show that "lung cancer is now the leading cause of death from malignant tumors. Many of those dying are nonsmokers."
>
> The Soviet bloc's environmental track record was similarly dismal.

Letitia also posted this USA Today article from last Thursday to show you just how far off base this UN communist is.

Excerpt:

> Beijing's skyscrapers receded into a dense gray smog Thursday as the capital saw the season's first wave of extremely dangerous pollution, with the concentration of toxic small particles registering more than two dozen times the level considered safe.
>
> […]The city's air quality is often poor, especially in winter when stagnant weather patterns combine with an increase in coal-burning to exacerbate other forms of pollution and create periods of heavy smog for days at a time. But the readings early Thursday for particles of PM2.5 pollution marked the first ones of the season above 500 micrograms per cubic meter.
>
> The density of PM2.5 was about 350 to 500 micrograms Thursday midmorning, though the air started to clear in the afternoon. It had reached as high as 671 at 4 a.m. at a monitoring post at the U.S. Embassy in Beijing. That is about 26 times as high as the 25 micrograms considered safe by the World Health Organization, and was the highest reading since January 2013.

It seems tha the global warmists are very fond of big government, such as we find in the (mostly) communist China. This is not surprising since many of them receive government money (e.g. – Solyndra) if a global warmist President gets elected. In my experience talking to people about global warming, I am generally able to win the debate about the science, but then they explain to me that we must promote global warming alarmism because we need the public to do something about overpopulation and natural resource depletion. The comments of the UN woman seems to indicate that the something they want is bigger government, which can be used to nudge people away from having more children and restrict their use of natural resources.

So I think we need to be careful when science is being misused to support an ideology, especially one that is obviously false. (Global birth rates are dropping below replacement and shale oil reserves are abundant)

Having said all that, I want to reiterate that science itself is a great thing, and I support it. If it wasn't for real science, Christian theists would not have the argument from the origin of the universe, the argument from the origin of life, the cosmic fine-tuning, the Cambrian explosion, molecular machines, galactic habitability, stellar habitability, planetary habitability, and so on. We also would not have many good things that make us freer, more prosperous and more healthy. Science is a good thing. But hijacking science to serve a power-hungry ideology (or just greed) is not a good thing. I oppose it.

# Questions for proponents of government-controlled redistribution of wealth

**Wintery Knight** · 20 January 2014 · Archived copy · Original

George Mason University economist Donald Boudreaux wrote a couple of articles asking people who complain about income inequality whether their solution of letting government redistribute wealth from some people to others makes sense. After he is done asking his questions, I am going to complain a little about what it is like to study hard things and do hard work

In the first article, he asked a series of questions to the wealth redistributers.

Here were a few that caught my eye:

> Do you teach your children to envy what other children have? Do you encourage your children to form gangs with their playmates to "redistribute" toys away from richer kids on the schoolyard toward kids not so rich? If not, what reason have you to suppose that envy and "redistribution" become acceptable when carried out on a large scale by government?
>
> Suppose that Jones chooses a career as a poet. Jones treasures the time he spends walking in the woods and strolling city streets in leisurely reflection; his reflections lead him to write poetry critical of capitalist materialism. Working as a poet, Jones earns $20,000 annually. Smith chooses a career as an emergency-room physician. She works an average of 60 hours weekly and seldom takes a vacation. Her annual salary is $400,000. Is this "distribution" of income unfair? Is Smith responsible for Jones' relatively low salary? Does Smith owe Jones money? If so, how much? And what is the formula you use to determine Smith's debt to Jones?
>
> While Dr. Smith earns more money than does poet Jones, poet Jones earns more leisure than does Dr. Smith. Do you believe leisure has value to those who possess it? If so, are you disturbed by the inequality of leisure that separates leisure-rich Jones from leisure-poor Smith? Do you advocate policies to "redistribute" leisure from Jones to Smith — say, by forcing Jones to wash Smith's dinner dishes or to chauffeur Smith to and from work? If not, why not?

In the second article, he had even more questions for the wealth redistributers.

Here are the two that I liked best:

> When you describe growing income inequality in the United States, you typically look only at the incomes of the rich before they pay taxes and at the incomes of the poor before they receive noncash transfers from government such as food stamps, Medicare and Medicaid. You also ignore noncash transfers that the poor receive from private charities. Why? If you're trying to determine whether or not more income redistribution is warranted, doesn't it make more sense to look at income differences after the rich have paid their taxes and after the poor have received all of their benefits from government and private sources?
>
> Do you not share Thomas Sowell's concern that efforts to "de-concentrate" incomes among the people require concentrating power among the politicians? Asked differently, if you worry that abuses of power are encouraged by concentrations of income, shouldn't you worry even more that abuses of power are encouraged by concentrations of power?

Mark Perry of AEI saw this column, and he had two more questions.

> Many extremely wealthy people (movie stars, celebrities like Oprah, businessmen like Warren Buffet, filmmaker Michael Moore, and Robert Reich for example) who are in America's "top 1%" by income (some

> are easily in the top 1/0 of 1%), often complain about income and wealth inequality in America. And yet these wealthy individuals rarely take any direct actions themselves that could reduce income inequality immediately, e.g. giving away a majority of their multi-million dollar annual salaries and unburdening themselves of millions of dollars of their wealth (stocks, real estate, cars, airplanes, etc.) and living on a modest, but still very comfortable incomes of say, $200,000 per year. Isn't it inconsistent that most of these individuals hoard a majority of their income and wealth to live lavishly without taking immediate steps to redistribute their largess to those less fortunate and reduce the income/wealth inequality they complain about? If not, why?
>
> Many Americans express great concern about income inequality in the United States, but seem relatively unconcerned about global income inequality. For example, nearly half of the world's richest 1% of people live in the U.S., and the threshold required to make it into that elite group is only $34,000 per person, according to World Bank economist Branko Milanovic. Is it inconsistent for an American making $34,000 to complain about the incomes and wealth of the top 1% in the United States and yet show no concern for the fact that he himself is in the top 1% of the world's population based on income? Many Americans making $34,000 and above support income redistribution schemes (e.g. raising taxes on the top 1%) to reduce income inequality in America. Because they are themselves in the top 1% of the world's population by income, shouldn't these Americans also support redistribution of income and wealth from themselves (the world's top 1%) to dirt-poor countries like Zimbabwe? If not, why not?

One quick point about who pays taxes in this country as it is now.

CNS News reports on a study by the Congressional Budget Office (CBO).

Excerpt:

> The top 40 percent of households by before-tax income actually paid 106.2 percent of the nation's net income taxes in 2010, according to a new study by the Congressional Budget Office.
>
> At the same time, households in the bottom 40 percent took in an average of $18,950 in what the CBO called "government transfers" in 2010.
>
> Taxpayers in the top 40 percent of households were able to pay more than 100 percent of net federal income taxes in 2010 because Americans in the bottom 40 percent actually paid negative income taxes, according to the CBO study entitled, "The Distribution of Household Income and Federal Taxes, 2010."

This is where the money comes from for all our lavish social programs, which I do not even use.

**My choices**

I remember growing up as the son of poor immigrants and having to struggle to do well in school. When I was growing up, I didn't learn to ride bicycle until very late. We didn't have a car to drive anywhere. We had a black and white TV. We took public transportation to go anywhere. I remember that we used to eat macaroni and cheese with sliced hot dogs quite a lot. We went to a sit-down restaurant for dinner less than five times as a family. I always took school very seriously from the beginning, and I remember having conflicts with the popular students, who were having more fun than me because they had more wealth and more friends and they did more expensive things for fun. I chose not to drop math, even though I struggled with it more than English and computer science. I remember my friends buying Apple IIe and Commodore 64 computers, and I didn't have any video game system much less a computer. I would go over to their houses and play games at their houses. I never had a summer off. I was always in summer school or working, and that working summers continued through my undergraduate degree.

When the time came to go to college, I chose computer science. Some of the courses I took during that time were so hard that I cried. I had not been well-prepared for college in high school, it was a big stretch for me. I remember failing a test in second year calculus, the first test I ever failed. I can remember doing calculus problems and crying about how hard it was, and my Dad looking on wondering if he had made the right decision when he snudged me

toward computer science, when I wanted to do something easy like English. But I graduated with a 3.4 GPA, and went on to graduate school, where I finished with a 3.9 GPA. I chose to do both of my degrees locally, and lived at home. I never went out drinking or to a club or anything like that. The school I chose was not the best, but I saved money, and graduating with a few thousand dollars in the bank was important to me. I didn't want to go into debt in order to learn how to program a computer.

When I graduated, I started working in a different city, and I remember that my apartment had firebrats, which is a kind of insect infestation. I chose a modest apartment because I wanted to save money. I saved most of what I earned because I anticipated that I would soon be married and starting a family. During my career to this day, I have seen politicians express their desire to take what I earn and give it to people who were born in this country, but who made different decisions from me. Some of them dropped out of high school. Some of them had sex before marriage. Some of them drank alcohol. Some of them smoked. Some of them dropped math. Some of them chased women. Some of them drank and smoked and did drugs. Some of them went on expensive trips. Some of them went to movie theaters and bought popcorn. But I never saw these people in the computer lab at 3 AM trying to help me with my assignments. I never saw these people show up to work weekends when I was working 70-hour weeks in a startup company trying to build sweat equity.

Somehow, people in government, at all levels, have decided that I don't deserve to keep what I earn. They have decided that other people can get subsidies, but I have to pay full price. I walk into the grocery store and see people buying better food than me, and paying with food stamps. I am paying for my groceries and paying for theirs, too. Somehow, a significant number of people in our society have decided that I should not be allowed to keep what I earn, buy the things I want, and live my life the way that I planned to live it. My earned income is my freedom to express myself, and the politicians have decided that I am allowed to get up and go to work to earn the money, but that I am not allowed to express myself using my earned income. They get to take the money I earned and express their views, instead.

To learn more about why income inequality is not something for government to solve, read this article from the American Enterprise Institute.

# A popular reason why people leave Christianity: disappointment with God

**Wintery Knight** · 20 January 2014 · Archived copy · Original

Part 2 of a brilliant series by Bradley Wright. This time he explains how people leave Christianity because they expect God to meet their needs and he doesn't.

Excerpt:

> In a study of religious deconversion, we analyzed 50 on-line testimonies posted by former Christians, and in these testimonies we found four general explanations for deconversion. The first explanation, which I wrote about last week, regarded intellectual and theological concerns about the Christian faith. The second, which I elaborate here, regards a failed relationship with God. Almost half (22 of 50) of the writers expressed sentiments that in some way God had failed them by His not doing what they thought He should.
>
> God's perceived failure took various forms, most of which fall under the general heading of "unanswered prayers."
>
> One way that people felt that God had failed them happened when He did not respond to requests for help during difficult times. A young man raised in a Baptist church epitomized this feeling of failure when he wrote about God not answering his prayers about family difficulties. He wrote: "The first time I questioned the faith was when my grandmother shriveled up in front of me for 6 month's due to cancer. I was 13 & my mother & father [were] getting a divorce. My father told me I should have been aborted. I prayed to God but nothing fails like prayers."

So you can see here where people have this expectation that it is God's job to give them good health. But is that anywhere in the Bible? Is it God's job to make us healthy so that we can have a happy life, even if we are busy spending that happy life ignoring him and not knowing his character. When you ask a serious Christian what it is like to be a Christian, we will tell you that what God is about is NOT making us healthy or happy, but instead giving us time and peace to study him, to make plans to serve him, to execute those plans, and to have (sometimes unhappy) experiences that cause our sympathies to change as we feel what God feels. In short, life is about getting closer to him, and suffering and sickness is one of the tools God uses in order to get us to know him as he is and to participate in the relationship.

> Likewise, a woman raised in a Methodist household described her step-father as "cruel and abusive" to her, and she could not understand why "if God loves me, why won't he protect me instead of letting this happen to me?"

I think the reason why God allows suffering like this is to create people who take his rules about sexual morality seriously. When I was growing up I had front-row seats to the divorces of many of my friends. I remember vividly talking to children who cried to me about how they felt when their mothers invited new men into the house after the divorce. Pain and suffering like this is a reminder to us that the moral law is real, that God expects us to follow it in order to prevent harm. One of the reasons why I am chaste is because I listen to the stories of men whose girlfriends aborted their babies, the stories of women who cohabitated and then were betrayed, the stories of the children of divorces. And from this I learn that morality is real and it matters.

> In a variation of this theme, some deconverts lamented God's inactivity amidst spiritual difficulties. A man in his forties, a former elder at a charismatic church, wrote: "In my own life, no matter how much I submitted to 'God' and prayed in faith, 'sin' never seemed to leave me. Well, what's the point of being 'saved' if you aren't delivered from 'sin'?"

This is why accurate theology matters. No serious Christian thinks that you stop sinning after you become a Christian, and no serious Christian thinks that prayer alone is a solution to sin. To stop sinning, you need to engage more than the spirit, you need to engage the mind. Most people want to spiritualize things because prayer is easier than study. But if you want to stop sinning, the best way is a combination of prayer and study. If you want to stop premarital sex, study how premarital sex affects STD infection, risk of divorce, future marital stability, oxytocin, quality of marriage, and so on. Study the risks of divorce. That's how you stop sinning. Some people want to dumb Christianity down to the level of superstition then they complain that it doesn't work. But Christianity is better when you learn more and work harder.

> A former Southern Baptist described the various good things that God failed to give him: "God promises me a lot in the bible and he's not come through. Ask and it shall be given. Follow me and I will bless you. I promise you life and promise abundance. Man should not be alone. I have a plan for you. Give tithe and I will reward you. All broken promises. This god lacks clarification. This god lacks faith in me. He wants my faith. I want his too."

Do you know what I expect from God after reading the Bible? I expect what Jesus got: pain and suffering during obedience. What kind of simpleton reads the Bible and thinks that it is about getting goodies from God? That is NOWHERE in the Bible. It's projecting Santa Claus onto God and that isn't going to work – God has other plans for us, and those plans involve work and pain. People become Christians because they want to be like Jesus, and they understand that Jesus was not having fun. He was doing a job, and he wasn't happy or appreciated.

> Other writers took a different approach to God's failures. They too sought God's help, but when they did not receive it, they simply concluded that God did not exist. A former member of an Assemblies of God church explicitly linked unanswered prayers and the existence of God: "How many humble and totally selfless prayers offered up to and ignored by the imaginary skydaddy does it take for the average person to finally throw in the towel and say [God doesn't exist]!!!!" His answer: "Too damn many."

It's so strange to me that people think that the best way to see God interfere is to pray. The way I see God working in my life is when I go home and listen to some debate about the problem of evil, and then the next day some atheist asks me out to lunch to talk about why God allows evil. Maybe instead of doing easy things, we should actually invest in our relationship with God and then see if he responds by giving us work to do. Maybe a relationship with God is about serving him, and the joy is about seeing him reward those efforts by working with us and through us. Maybe God has more for us than just entertainment.

> Still others sought a tangible sign of God's presence. A former Pentecostal exclaimed: "There were many nights while in bed I would ask God to show me the truth, or give me some type of sign to show that he or she existed. These prayers would never be answered. So I would just go on with my life having doubts." Likewise, a former Baptist missionary wrote: "I've begged God to show himself to me and put an end to my inner torture. So far it hasn't happened and the only thing I know for sure is that I have unanswered questions."

I think this paragraph is interesting, since I consider things like church, praying and singing hymns to be less practical when compared with practical and difficult things like chastity, apologetics, charity, studying hard things, getting a good job, committing to caring for others who have special needs, etc. If you want to feel the presence of God, then do the right thing and take the punishment for doing it. That's what Christianity is really about.

**The example of Dan Barker**

I've actually written about this before in the context of Dan Barker, a charismatic fundamentalist praise hymn singer and writer who expected God to validate all of his irresponsible ministry decisions. Eventually, he fell away from the church because he had this ludicrous Santa Claus caricature of God that didn't match reality. Dan Barker

is the complete opposite of everything I consider a manly Christian to be. He is the polar opposite of what I recommend to men when I recommend that they study math, science, engineering and technology, avoid music, singing and dancing, and prefer apologetics and conservative politics over speaking in tongues and apocalyptic fiction. This man, when he was a “Christian”, was the complete opposite of the WK Christian man model. Men should be practical.

I think that Christians should protect themselves from the Dan Barker outcome by being aware of how emotional experiences and praise hymns warp your view of God. God is a person, and he has a goal for you – to know him. To achieve that goal, it may not be effective to just give you everything you want. It may be the case that God has to allow you to experience some suffering, to form your character and to bring your goals in line with his character. Children have to grow up, and shielding them from pain and responsibility doesn’t allow them to grow up.

# Federal court approves taxpayer-funded sex change for man convicted of murdering his wife

**Wintery Knight** · 20 January 2014 · Archived copy · Original

Fox News reports.

Excerpt:

> A federal judge on Tuesday ordered state prison officials to provide taxpayer-funded sex-reassignment surgery to a transgender inmate serving life in prison for murder.
>
> […]Kosilek was born male but has received hormone treatments and now lives as a woman in an all-male prison. Robert Kosilek was convicted of murder in the killing of his wife in 1990.
>
> U.S. District Judge Mark Wolf is believed to be the first federal judge to order prison officials to provide sex-reassignment surgery for a transgender inmate.
>
> Kosilek first sued the Massachusetts Department of Correction 12 years ago. Two years later, Wolf ruled that Kosilek was entitled to treatment for gender-identity disorder but stopped short of ordering surgery. Kosilek sued again in 2005, arguing that the surgery is a medical necessity.
>
> In his ruling Tuesday, Wolf found that surgery is the "only adequate treatment" for Kosilek's "serious medical need."
>
> "The court finds that there is no less intrusive means to correct the prolonged violation of Kosilek's Eighth Amendment right to adequate medical care," Wolf wrote in his 126-page ruling.
>
> […]In a telephone interview last year with The Associated Press, Kosilek said the surgery is a medical necessity, not a frivolous desire to change his appearance.
>
> "Everybody has the right to have their health care needs met, whether they are in prison or out on the streets," Kosilek said. "People in the prisons who have bad hearts, hips or knees have surgery to repair those things. My medical needs are no less important or more important than the person in the cell next to me."
>
> […]Kosilek's lawsuit has become fodder for radio talk shows and lawmakers who say the state should not be forced to pay for a convicted murderer's sex-change operation — which can cost up to $20,000 — especially since many insurance companies reject the surgery as elective.

The Boston Globe had this to say:

> Gay & Lesbian Advocates & Defenders issued a statement hailing the ruling.
>
> "Like the district court before it, the First Circuit has affirmed that constitutional rights belong to everyone," said Jenifer Levi, director of GLAD's Transgender Rights Project. "The Appeals Court affirmed that the District Court properly found that Michelle Kosilek needed this lifesaving medical care. If she needed treatment for cancer or heart disease, this case would never have wound up in court. If we are to call ourselves a civilized society, there is a baseline of care that has to be provided to all prisoners, including prisoners who are transgender."

The man is now 64 years old. He *strangled* his wife to death in 1990.

My personal opinion on this man is that he should have been executed by the state a few minutes after he was convicted.

**Sarcastic WK**

We have a lot of people in this country who are very compassionate handing out other people's money. They don't

like discipline, judging or obedience to the law. They keep on voting for bigger government and more government spending to enable people avoid the consequences of their own actions. They believe that nothing we do is our fault, because we are all victims. They believe that nothing you earn is really yours, because everyone just gets up and does what they like every day.

If a musician gets up and does what he likes and a surgeon wakes up and does what he likes, why should they be paid differently? Work is meant to be fun and fulfilling, so we should resdistribute wealth from the surgeon to the musician, so they can both have sex changes, if they want them. People need money for free condoms, or a free abortion, or free breast implants, or free IVF, or free sex changes, or free health care for STDs. We should just take money from people who have it and give the other people whatever they want.

That's why I go to work, you know, so that I can pay the government elected by the compassionate, non-judgmental people to give convicted murderers sex changes. It's not like I need the money I earned for anything, like funding opportunities for Christians scholars to defend God's reputation. At one point, I planned to get married and have children, too. What a waste of money my plans are – the government is right to take my money and use it on "compassion". And when we have single payer health care, sex changes will be free for everyone, just like in Ontario, Canada and the UK. In the UK, you can even get breast implants for "free". Isn't that more compassionate and non-judgmental?

# Don Johnson: six reasons why people reject Christianity

**Wintery Knight** · 21 January 2014 · Archived copy · Original

Here's a post on practical evangelism by Christian scholar Don Johnson.

His list of reasons why people often reject Christianity:

1. Christians behaving badly
2. Disappointment with God
3. Weak or absent father
4. Social pressure
5. Cost of discipleship
6. Immorality (especially sexual immorality)

And here's the detail on #6:

> Of all the motivations and reasons for skepticism that I encounter, immorality is easily the most common. In particular, sexual sin seems to be the largest single factor driving disbelief in our culture. Brant Hanson calls sex "The Big But" because he so often hears this from unbelievers: "'I like Jesus, BUT…' and the 'but' is usually followed, one way or the other, with an objection about the Bible and… sex. People think something's deeply messed-up with a belief system that says two consenting, unmarried adults should refrain from sex." In other words, people simply do not want to follow the Christian teaching that sexual intercourse should take place only between and man and woman who are married, so they throw the whole religion out.
>
> The easiest way to justify sin is to deny that there is a creator to provide reality with a nature, thereby denying that there is any inherent order and purpose in the universe.
>
> Aldous Huxley admitted that this is a common reason for skepticism:
>
> I had motives for not wanting the world to have a meaning; consequently I assumed that it had none and was able without any difficulty to find satisfying reasons for this assumption…. Those who detect no meaning in the world generally do so because, for one reason or another, it suits their books that the world should be meaningless. …
>
> For myself as, no doubt, for most of my contemporaries, the philosophy of meaninglessness was essentially an instrument of liberation. The liberation we desired was …liberation from … a certain system of morality. We objected to the morality because it interfered with our sexual freedom…. There was one admirably simple method in our political and erotic revolt: We could deny that the world had any meaning whatsoever. Similar tactics had been adopted during the eighteenth century and for the same reasons. (Ends and Means, 270-273)
>
> Indeed, similar tactics have been used extensively up to the present day. If you are looking for two great resources that document the extent to which the work of the world's "great" atheistic thinkers has been "calculated to justify or minimize the shame of their own debauchery," (Spiegel, 72) I recommend *Intellectuals* by Paul Johnson and *Degenerate Moderns: Modernity as Rationalized Sexual Misbehavior* by E. Michael Jones. The bottom line is that these skeptical scholars didn't reach their conclusions by following the evidence where it led. They didn't "discover" that the world was meaningless and then proceed to live accordingly. They lived sinful lives (usually involving some type of sexual deviancy) and then produced theories that justified their actions.

It's important to understand that an atheist is not identical to a Christian, except not religious. There is something else going on in their minds when they reject very obvious evidences like the origin of the universe, the cosmic fine-tuning, the origin of life, the Cambrian explosion, the habitability arguments, etc. The something else that is

going on is hinted at when you look at atheist attitudes to abortion. According to a recent survey of atheists, 97% of them were pro-abortion!

What kind of person likes abortion? The kind of person who wants to be sexually active with no consequences, even if it means taking someone else's life. The desire to do as they please and retreat from obligations to others is the key. Now dispensing with God and his obligations is not an unreasonable view if there is no evidence for God, but it does provide a motive for people to not look for that evidence if happiness is their main goal. When I discuss these issues with atheists, I find that no work has been done to read anything. Not even debates, where there are two sides. They don't want to hear the case for Christian theism, and they work hard to avoid stumbling across it by accident, too.

Tough Questions Answered has a quote from Christian philosopher Paul Moser that I think is relevant:

> It would be a strange, defective God who didn't pose a serious cosmic authority problem for humans. Part of the status of being God, after all, is that God has a unique authority, or lordship, over humans. Since we humans aren't God, the true God would have authority over us and would seek to correct our profoundly selfish ways.

So we're not dealing with unbiased truth-seekers here. The goal might not always be sex, but let's be honest. Who wants to have to spend time reading the Bible, praying, going to church and reading thick books by Stephen C. Meyer, Michael Licona and Hugh Ross so that we can answer questions? No one. Who wants to give up premarital sex so that we can create a stable marriage for children so they can grow up in a safe place where knowing God is natural and easy? No one. We just don't want to have to do stuff for God, even if it's good stuff. We don't want to have build a life that is a testament to God's existence and character, especially if it means that other people will think that we are weird and maybe even a bit mean. We want to do what we want to do instead, and be liked by other people.

That's the real challenge of Christianity: setting aside what you wanted to do, and letting God be your customer, instead. You'd be surprised how many Christians aren't comfortable with the idea of serving God and being viewed in a bad way by non-Christians. They aren't OK with the self-sacrifice, and they are really not OK with the social disapproval. It's hard to be chaste, and to be known to be chaste by your peers, for example. Much easier to just give in and do what everyone else is doing.

UPDATE: Just as I was about to turn in for the night, with all my blogging for the next day done, I found this quote by the older devil Screwtape, from C.S. Lewis' "The Screwtape Letters": (H/T Tim McGrew)

> You must have often wondered why the enemy [God] does not make more use of his power to be sensibly present to human souls in any degree he chooses and at any moment. But you now see that the irresistible and the indisputable are the two weapons which the very nature of his scheme forbids him to use. Merely to over-ride a human will (as his felt presence in any but the faintest and most mitigated degree would certainly do) would be for him useless. He cannot ravish. He can only woo. For his ignoble idea is to eat the cake and have it; the creatures are to be one with him, but yet themselves; merely to cancel them, or assimilate them, will not serve…. Sooner or later he withdraws, if not in fact, at least from their conscious experience, all supports and incentives. He leaves the creature to stand up on its own legs—to carry out from the will alone duties which have lost all relish…. He cannot "tempt" to virtue as we do to vice. He wants them to learn to walk and must therefore take away his hand…. Our cause is never more in danger than when a human, no longer desiring, but still intending, to do our enemy's will, looks round upon a universe from which every trace of him seems to have vanished, and asks why he has been forsaken, and still obeys.
>
> — Uncle Screwtape, in The Screwtape Letters

I'm not a big fan of Lewis, but I think he is onto something there. That's really what the Christian life is like, and no

wonder more people don’t choose it. Who wants to do your duty for God, as part of a relationship with him, in a universe that seems so unfair? It’s a tall order, and most people prefer to do their own thing instead of building something nice for God with their lives.

# What is the purpose of capital punishment? Does it deter crime?

**Wintery Knight** · 21 January 2014 · Archived copy · Original

Why do some people support the death penalty? Because research conducted by multiple teams of scholars at multiple universities have shown that the death penalty deters crime.

Excerpt:

> "Science does really draw a conclusion. It did. There is no question about it," said Naci Mocan, an economics professor at the University of Colorado at Denver. "The conclusion is there is a deterrent effect."
>
> A 2003 study he co-authored, and a 2006 study that re-examined the data, found that each execution results in five fewer homicides, and commuting a death sentence means five more homicides. "The results are robust, they don't really go away," he said. "I oppose the death penalty. But my results show that the death penalty (deters) — what am I going to do, hide them?"
>
> Statistical studies like his are among a dozen papers since 2001 that capital punishment has deterrent effects. They all explore the same basic theory — if the cost of something (be it the purchase of an apple or the act of killing someone) becomes too high, people will change their behavior (forego apples or shy from murder).

And specifically:

> • Each execution deters an average of 18 murders, according to a 2003 nationwide study by professors at Emory University. (Other studies have estimated the deterred murders per execution at three, five and 14).
>
> • The Illinois moratorium on executions in 2000 led to 150 additional homicides over four years following, according to a 2006 study by professors at the University of Houston.
>
> • Speeding up executions would strengthen the deterrent effect. For every 2.75 years cut from time spent on death row, one murder would be prevented, according to a 2004 study by an Emory University professor.

In case anyone is wondering what sort of crimes are deterred by the death penalty, you can read this graphic description of a recent death-penalty crime.

**What sort of crimes are eligible for the death penalty?**

Here's an example of a death-penalty eligible crime from the Hartford Courant. (WARNING: graphic!)

Excerpt:

> A Superior Court jury today sentenced Steven Hayes to death for the murders of Jennifer Hawke-Petit and her daughters, Hayley and Michaela, during a seven-hour home invasion, robbery and arson at their Cheshire home in July 2007.
>
> Outside the courthouse after the verdicts, Hawke-Petit's father, the Rev. Richard Hawke, said "There are some people who do not deserve to live in God's world."
>
> Asked what he had in his heart, Dr. William Petit Jr. struggled with his answer. "….Probably many of you have kids," he said, pausing to choke back tears. "Michaela was an 11-year-old little girl…tortured and killed in her own bedroom, surrounded by her stuffed animals…."
>
> Petit then talked about his daughter Hayley's bright future and her strength and the children that his wife, Jennifer, helped.
>
> "So, I was really thinking of the tremendous loss" during the verdict, Petit said, adding that he was pleased with it, but "mostly I was sad for the loss we have all suffered."

> Asked if he thought there'd be closure now, Petit said, "There's never closure. There's a hole…. with jagged edges…that may smooth out with time, but the hole in your heart and the hole in your soul" remains.
>
> "This isn't about revenge," Petit said. "Vengeance belongs to the Lord. This is about justice."
>
> […]The jury sentenced Hayes to death on six counts: killing Hawke-Petit and Michaela and Hayley in the course of a single action; killing a child under the age of 16; killing Hawke-Petit in the course of a kidnapping; killing Hayley in the course of a kidnapping; killing Michaela in the course of a kidnapping; and killing Hawke-Petit in the course of a sexual assault.
>
> […]Hayes, 47, of Winsted, was convicted Oct. 5 of breaking into the Petit home, beating Petit, tying up and torturing the family as Hayes and another man ransacked the home for cash and valuables and tortured the family for seven hours. Testimony during Hayes' trial showed that at one point in the break-in, Hayes forced Hawke-Petit to go to the bank to withdraw money. During that time, according to testimony, Komisarjevsky sexually assaulted Michaela Petit, 11.
>
> When Hawke-Petit and Hayes returned from the bank, Hayes raped and strangled Hawke-Petit. The house was doused with gasoline and set on fire as the intruders fled, testimony showed. Hayley, 17, and Michaela died of smoke inhalation.
>
> […]Prosecutors used the words of Hayes' younger brother Matthew to counter testimony that home-invasion crime was an aberration in Hayes otherwise troubled but basically nonviolent life.
>
> Matthew Hayes portrayed his brother as a conniving, sadistic, violent thief who saw Matthew take countless beatings from his brutal father for Steven Hayes' misdeeds. At one point, Steven Hayes held a gun to Matthew's head, according to the statement, which was given to state police after the home invasion.
>
> Examples of Hayes' sadistic behavior toward his brother included hooking Matthew to the garage door by his belt and raising the door up and down, and holding Matthew's hand to a red-hot burner. Matthew said his brother's life of crime was not a result of bad parenting or poor childhood. He said Hayes never learned to take responsibility for his actions.

Sometimes, I think that we have stopped judging others *because* we do not want to be judged *ourselves*. We hope that by not judging anyone, that we will somehow escape being judged by anyone – especially by God himself. The opposition to punishing the guilty is, I think, really just a way of expressing our desire to do away with the idea that we will finally face judgment.We seem to be able to ignore the victim's needs and act as if the criminal is the victim. We act as if deterring a crime with punishment has no impact on the decision making of people who are considering whether to commit the crime. But crime isn't some random action – criminals do consider what will happen to them if they are caught. We send potential killers a message by being willing to punish the ones we catch. But if we treat them like victims, then others watching are not going to be deterred from committing crimes.

# Does the Bible support capital punishment?

**Wintery Knight** · 21 January 2014 · Archived copy · Original

Llet's take a look at what the Bible says in general about capital punishment, using this lecture featuring eminent theologian Wayne Grudem.

About Wayne Grudem:

> Grudem holds a BA from Harvard University, a Master of Divinity from Westminster Theological Seminary, and a PhD from the University of Cambridge. In 2001, Grudem became Research Professor of Bible and Theology at Phoenix Seminary. Prior to that, he had taught for 20 years at Trinity Evangelical Divinity School, where he was chairman of the department of Biblical and Systematic Theology.
>
> Grudem served on the committee overseeing the English Standard Version translation of the Bible, and in 1999 he was the president of the Evangelical Theological Society. He is a co-founder and past president of the Council on Biblical Manhood and Womanhood. He is the author of, among other books, Systematic Theology: An Introduction to Biblical Doctrine, which advocates a Calvinistic soteriology, the verbal plenary inspiration and inerrancy of the Bible, the body-soul dichotomy in the nature of man, and the complementarian (rather than egalitarian) view of gender equality.

The MP3 file is here.

A PDF sermon outline is here.

Topics:

- Genesis 9:5: to whom does this passage apply?
- What makes murder such a serious offense?
- Romans 13:3-4: what does this verse mean?
- Capital punishment is a contrast to taking personal vengeance
- Redistribution on behalf of the victim is the main reason for CP
- Deterrence of future crimes to protect the public is another reason
- The purpose of retribution assumes individual responsibility
- Retribution is more acceptable if you believe in the concepts of good and evil
- Retribution is less acceptable if you accept that "society is to blame"
- Secular Europe and liberal US states do no have the death penalty
- Conservative states that believe in good and evil and individual responsibility do have it
- Moral relativists are unlikely to support the death penalty
- Christians who oppose the death penalty say that it has a sinful motive (revenge)
- Revelations 6:9 has Christian martyrs calling for God to punish their murderers
- So this argues that the desire for justice is not motivated by sinful motives
- Colossians 3:25 God provides justice for wrongs in this life
- 1 Pet 2:23 The example of Jesus is to give up personal vengeance
- Romans 12:17-21 Personal vengeance on people who wrong you is not acceptable

The second half of the lecture is Q&A, and the questions are good.

You can find more talks by Wayne Grudem here.

**What about the woman caught in adultery?**

Some people like to bring up the woman caught in adultery as proof that Jesus opposed capital punishment. But that passage of the Bible was added much later after the canon was decided.

Daniel B. Wallace is an eminent New Testament scholar who also teaches at Dallas Theological Seminary, an extremely conservative seminary.

About Dr. Wallace:

> Dr. Daniel B. Wallace
>
> - Professor of New Testament Studies
> - B.A., Biola University, 1975; Th.M., Dallas Theological Seminary, 1979; Ph.D., 1995.

> Dr. Wallace influences students across the country through his textbook on intermediate Greek grammar. It is used in more than two-thirds of the nation's schools that teach that subject. He is the senior New Testament editor of the *NET Bible* and coeditor of the *NET-Nestle Greek-English diglot*. Recently his scholarship has shifted from syntactical and text-critical issues to more specific work in John, Mark, and nascent Christology. However he still works extensively in textual criticism, and has founded The Center for the Study of New Testament Manuscripts, an institute with an initial purpose to preserve Scripture by taking digital photographs of all known Greek New Testament manuscripts. His postdoctoral work includes work on Greek grammar at Tyndale House in Cambridge and textual criticism studies at the Institut für Neutestamentliche Textforschung in Münster.

And Dr. Wallace writes about the passage in John on Bible.org.

Excerpt:

> One hundred and forty years ago, conservative biblical scholar and Dean of Canterbury, Henry Alford, advocated a new translation to replace the King James Bible. One of his reasons was the inferior textual basis of the KJV. Alford argued that "a translator of Holy Scripture must be…ready to sacrifice the choicest text, and the plainest proof of doctrine, if the words are not those of what he is constrained in his conscience to receive as God's testimony." He was speaking about the Trinitarian formula found in the KJV rendering of 1 John 5:7–8. Twenty years later, two Cambridge scholars came to the firm conclusion that John 7:53–8:11 also was not part of the original text of scripture. But Westcott and Hort's view has not had nearly the impact that Alford's did.
>
> For a long time, biblical scholars have recognized the poor textual credentials of the story of the woman caught in adultery (John 7:53–8:11). The evidence against its authenticity is overwhelming: The earliest manuscripts with substantial portions of John's Gospel (P66 and P75) lack these verses. They skip from John 7:52 to 8:12. The oldest large codices of the Bible also lack these verses: codex Sinaiticus and Vaticanus, both from the fourth century, are normally considered to be the most important biblical manuscripts of the NT extant today. Neither of them has these verses. Codex Alexandrinus, from the fifth century, lacks several leaves in the middle of John. But because of the consistency of the letter size, width of lines, and lines per page, the evidence is conclusive that this manuscript also lacked the *pericope adulterae*. Codex Ephraemi Rescriptus, also from the fifth century, apparently lacked these verses as well (it is similar to Alexandrinus in that some leaves are missing).The earliest extant manuscript to have these verses is codex Bezae, an eccentric text once in the possession of Theodore Beza. He gave this manuscript to the University of Cambridge in 1581 as a gift, telling the school that he was confident that the scholars there would be able to figure out its significance. He washed his hands of the document. Bezae is indeed the most eccentric NT manuscript extant today, yet it is the chief representative of the Western text-type (the text-form that became dominant in Rome and the Latin West).

> When P66, P75, Sinaiticus, and Vaticanus agree, their combined testimony is overwhelmingly strong that a particular reading is not authentic. But it is not only the early Greek manuscripts that lack this text. The great majority of Greek manuscripts through the first eight centuries lack this pericope. And except for Bezae (or codex D), virtually all of the most important Greek witnesses through the first eight centuries do not have the verses. Of the three most important early versions of the New Testament (Coptic, Latin, Syriac), two of them lack the story in their earliest and best witnesses. The Latin alone has the story in its best early witnesses.
>
> […]It is an important point to note that although the story of the woman caught in adultery is found in most of our printed Bibles today, the evidence suggests that the majority of Bibles during the first eight centuries of the Christian faith did not contain the story. Externally, most scholars would say that the evidence for it not being an authentic part of John's Gospel is rock solid.But textual criticism is not based on external evidence alone; there is also the internal evidence to consider. This is comprised of two parts: *intrinsic evidence* has to do with what an author is likely to have written; *transcriptional evidence* has to do with how and why a scribe would have changed the text.
>
> Intrinsically, the vocabulary, syntax, and style look far more like Luke than they do John. There is almost nothing in these twelve verses that has a Johannine flavor. And transcriptionally, scribes were almost always prone to add material rather than omit it—especially a big block of text such as this, rich in its description of Jesus' mercy. One of the remarkable things about this passage, in fact, is that it is found in multiple locations. Most manuscripts that have it place it in its now traditional location: between John 7:52 and 8:12. But an entire family of manuscripts has the passage at the end of Luke 21, while another family places it at the end of John's Gospel. Other manuscripts place it at the end of Luke or in various places in John 7.
>
> The *pericope adulterae* has all the earmarks of a pericope that was looking for a home. It took up permanent residence, in the ninth century, in the middle of the fourth gospel.

So when you take a closer look at the issue, the Bible is very solid on being in favor of capital punishment for serious crimes. I think people who take the Bible seriously should take this view as well. If you go outside the Bible, well, then you might come up with a different view.

# Wendy Davis divorced her second husband one day after he paid off her student loans

**Wintery Knight** · 22 January 2014 · Archived copy · Original

Wendy Davis: Feminist champion and independent woman

So, it turns out that Wendy Davis has been misleading or even lying about her background for political ends.

Here are the facts from the Dallas Morning News. (H/T Letitia)

Excerpt:

> Wendy Davis has made her personal story of struggle and success a centerpiece of her campaign to become the first Democrat elected governor of Texas in almost a quarter-century.
>
> While her state Senate filibuster last year captured national attention, it is her biography — a divorced teenage mother living in a trailer who earned her way to Harvard and political achievement — that her team is using to attract voters and boost fundraising.

Was she a divorced teenaged mother? Not quite:

> **She was 17 and still in high school when she moved in with her boyfriend, a construction worker named Frank Underwood. She got pregnant, married and "some time between [age] 19 and 20 was when Frank and I separated," she said.**
>
> Davis remained in the mobile home a few months, then moved in with her mother before getting her own apartment. She got custody of her daughter, Amber, and Underwood was ordered to pay child support.
>
> Under terms of the divorce, he got a boat, the mobile home and the responsibility for the mortgage on it. She got a 3-year-old Pontiac Grand Prix, a 1972 Firebird and a 1967 Chevy pickup. Davis was 21.

I don't think that moving in with a construction worker at that age shows good judgment – it puts possible children at risk of divorce.

More:

> A single mother working two jobs, she met Jeff Davis, a lawyer 13 years older than her, married him and had a second daughter.
>
> […]After they married, when she was 24, they moved into a historic home in the Mistletoe Heights

> neighborhood of Fort Worth.
>
> […]**When she was accepted to Harvard Law School, Jeff Davis cashed in his 401(k) account and eventually took out a loan to pay for her final year there.**
>
> […]The daughters, then 8 and 2, remained with Jeff Davis in Fort Worth while Wendy Davis was at Harvard.
>
> […]**Jeff Davis said that was right around the time the final payment on their Harvard Law School loan was due. "It was ironic," he said. "I made the last payment, and it was the next day she left."**
>
> […]**In his initial divorce filing, Jeff Davis said the marriage had failed, citing adultery on her part and conflicts that the couple could not overcome.** The final court decree makes no mention of infidelity, granting the divorce solely "on the ground of insupportability."
>
> […]A former colleague and political supporter who worked closely with Davis when she was on the council said the body's work was very time-consuming.
>
> "Wendy is tremendously ambitious," he said, speaking only on condition of anonymity in order to give what he called an honest assessment. "She's not going to let family or raising children or anything else get in her way."

The Daily Caller says that she "relinquished custody" of the children after the divorce.

So, she had a man 13 years her senior pay for half her undergraduate degree, and her time at Harvard Law School, and then when the last student loan payment was made, she divorced him and *abandoned her own children.* You definitely don't want to elect a person whose desire to be perceived in a positive way by others causes her *to lie* about herself, to make herself appear as a victim when the truth is that she was a gold-digger and a bad mother. Truth-telling is important, and especially important for a governor.

So here is my point about all of this. *What did people expect from this woman?* Do people really think that someone who stands up and advocates the outright murder/infanticide of unborn children after 20 weeks could be relied on to tell the truth? Would she be a good wife? Would she be a good mother? Or are people so taken in by her attractive appearance that they invent in their minds a completely fictional world where pink running shoes and blonde hair are all that matter in assessing a person's character?

Abortion is a way of killing people you created by your own decisions. These people are weaker than you. They are depending on you to take responsibility for what you did, and to choose who you have sex with wisely. But you are killing them anyway, in order to stop them from taking your money and time. It's possible for someone like Wendy Davis to look glamorous and pretty on the outside and be evil and selfish on the inside. That doesn't mean that she is irredeemable, but it does mean that she would make a *lousy* governor.

Good leaders should care about other people, and especially children, and even more so their own children who were created because of their choice of man and choice of activity with that man. Good leaders take responsibility for what they do, and they honor moral obligations to others. Caring for others requires good decision-making and planning. You can't break all the moral rules and choose men poorly, and then expect your children to get what they need. Life isn't that unpredictable – there is a need for humility and wisdom. Ambition doesn't cure selfishness, it just masks it.

**Wendy Davis responds**

Wendy Davis has responded to these revelations by melting down on Twitter, which reflects poorly on her leadership ability, and then criticizing her opponent because he hasn't "walked a day in her shoes", which is some sort of back-handed attack on his disability – he is a paraplegic. She also implied that he doesn't know what it is to struggle with difficulties in life. The man is *paralyzed,* for God's sake.

Additionally, the Houston Chronicle reports that her campaign is trying to hush up her ex-husband from telling more about what really happened. (H/T Legal Insurrection via Letitia)

Excerpt:

> *"They've asked me not to talk to reporters," Jeff said.* He is anyway, because: "If she runs, the scrutiny on her will be extraordinary. She needs to deal with it in a constructive way. She needs to take control of the message. … My goal in all this, I think, is just try and protect the kids as much as I can."

Now this should be the end of her campaign, but seriously, I wonder whether all of this crap is just going to cause her supporters to double down on voting for her "victimhood". I would not be surprised, because we re-elected Obama. Every criticism of his policies (like this study by a Duke U. researcher) was dismissed as "racism", and people actually believed that.

**Sarah Palin and Michele Bachmann**

I just want to remind everyone how two conservative women, who are decidely pro-life and NON-VICTIMS, were *mercilessly attacked* by the left-wing media. I mean Sarah Palin and Michele Bachmann, the latter of whom was my top candidate for President in 2012. I wrote about 50 posts about Michele starting from before she even announced her candidacy for President to when she dropped out of the 2012 race. If you are going to pick someone to lead, pick someone with a good marriage and 24 foster kids. Someone who also *quit her job to homeschool her kids when they were struggling in school*.

I'm sure that Michele and her husband had stresses and strains in their marriage, but they never divorced, either. Women can be great leaders, if they are trustworthy and moral. Michele Bachmann would be a *fine* President. Palin also seemed to have this calm, responsible demeanor. She took *a lot* of hits, and never melted down like Hillary Clinton and Wendy Davis have. That's what you're looking for in a leader. But the mainstream press wanted nothing to do with those women leaders, because they were *pro-life,* and that was the difference.

# Should welfare be paid to able-bodied Americans indefinitely? Is dependency good for people?

**Wintery Knight** · 22 January 2014 · Archived copy · Original

Nancy P. posted this article from the Heritage Foundation, and I thought it would make a good blog post.

Excerpt:

> Food stamp rolls have been growing rapidly. But what many may not realize is that participation among able-bodied adults without dependents (ABAWDs) has been skyrocketing compared to the total number of participants. That's just one reason Congress should reform the food stamp program in the farm bill now under consideration. In just four years, the number of able-bodied adults without dependents (ABAWDs) on the food stamp rolls skyrocketed by over 2 million. While overall food stamp use grew by 53 percent between Fiscal Year 2007 and Fiscal Year 2010 (from about 26 million to nearly 40 million), it more than doubled among able-bodied adults without dependents during this time–from 1.7 million to 3.9 million–an increase of roughly 127 percent. Food stamp spending today is roughly $80 billion, double what it was in Fiscal Year 2008.
>
> […]While the recession no doubt plays into the increases in food stamp participation, policy loopholes have opened the doors to boost growth as well In his 2009 stimulus bill, Obama allowed states to waive the modest ABAWD work provision (which says that after 3 months ABAWDs must work or perform some type of work activity for 20 hours per week to remain on food stamps).
>
> With the work waivers in place, ABAWDs can stay on food stamps for an unlimited amount of time without working or preparing for work. Without a work requirement it is difficult to ensure food stamps are not going to those who could otherwise work. A work requirement acts as a gatekeeper: those who really need assistance can still get it, while those who may not really need it will be deterred, thus targeting resources to the truly needy. It also encourages individuals to move towards work, and it can provide job training and other employment help.
>
> Self-sufficiency for able-bodied adults should be the goal of any sound welfare policy. Unfortunately, most of the government's 80-plus welfare programs–including food stamps–aren't focused in this direction.
>
> Helping those in need means helping them rise above government dependence. Unfortunately, self-sufficiency seems to be kicked to the bottom of the list all too often when it comes to reforming the nation's broken welfare system. It's time for Congress to realize that helping individuals means a hand-up, not merely a handout.

A long time ago, there was a reasonable, temporary safety net that was available to people who were in real need of relief. But now it seems as if the government is spending alot of money on these programs, and often to people who are not trying to get out of their dependency situation on their own.

Here is what I do not want to have happen:

1. Government confiscates the earnings of job creators and employees through taxation
2. Government keeps some fraction of the money for their salaries, benefits and pensions
3. Government gives some of the money to Planned Parenthood and Solyndra
4. Government gives some money to people who are likely to vote for them
5. The people who get the money vote for bigger government, and are discouraged from working
6. The children of the people who are dependent on government see a bad example of dependency

It seems to me that if you look in the Bible, there is no support for government-controlled redistribution of wealth as a cure for "poverty". There is support there for industry and business, and voluntary charity. Most of the poverty

in the USA is, in my opinion, either caused by government policies or caused by individual decisions, like dropping out of school or having children before marriage. This is a wealthy country, and people are very generous with charity. They would be even more generous if government were more limited so that they could keep more of their own money for charity. I think the problem with the left is that they think that people don't give to charity, since they don't, and must be forced to pay taxes. But we on the right are not like you. I would rather give away twice as much as I pay in taxes rather than pay what I pay in taxes. I love charity, and the only thing stopping me from giving away more is taxes.

This previous post about earned success references a Wall Street Journal article written by Arthur Brooks (president of the American Enterprise Institute) is also relevant, I think.

# Does the Bible teach government-controlled wealth redistribution to help the poor?

**Wintery Knight** · 22 January 2014 · Archived copy · Original

Eric from Ratio Christi posted an essay by famous Christian philosopher J.P. Moreland entitled "A Biblical Case for Limited Government".

About the author:

> I am the Distinguished Professor of Philosophy at Talbot School of Theology, Biola University in La Mirada, California. I have four earned degrees: a B.S. in chemistry from the University of Missouri, a Th.M. in theology from Dallas Theological Seminary, an M. A. in philosophy from the University of California-Riverside, and a Ph.D. in philosophy from the University of Southern California.

Here's the intro from the essay:

> In what follows, I shall argue that, when properly interpreted, biblical teaching implies a minimal government with a specific function to be mentioned shortly. I will begin by describing the three-way worldview struggle in our country and explain why two of those worldviews have a vested interest in big government. I will then present a biblical methodology for getting at scriptural teaching about the state. I will apply that methodology to support the claim that Israel's ethical policies in the Old Testament are better analogies for the church/covenant community than for the government, and in this context I will clarify the role that "defining terms of address" plays in my discussion. I will then distinguish negative and positive rights and argue that the best texts for unpacking biblical teaching about the state are two: four key New Testament texts and the obligations placed on pagan nations by the Old Testament prophets. I will try to show that these key texts depict the state as a protector of negative rights and not a provider of positive rights. Thus the scriptures support a limited view of government and its function.
>
> Next, I will turn to a description of the decisive feature of New Testament ethics in general, and Jesus's ethics in particular, namely, virtue ethics with voluntary adherence to the love commands. I will show that, given this ethic, the state may be able to show mercy, but it cannot show compassion due to both the nature of the state and the nature of compassion. I will close with a brief treatment of the importance of Natural Moral Law in the state's fulfilling of its God-given role so as to avoid a theocracy. And I will examine the charge that commitment to the Natural Moral Law makes one an intolerant bigot.

And here's the best part:

> [W]e need to make a distinction between positive and negative rights. A positive right is a right to have something given to the right-holder. If Smith has a positive right to X, say to health care, then the state has an obligation to give X to Smith. In general, positive rights and duties are correlative. That is, if someone has a positive right to something, then a duty is placed on others to provide that right to that person (or class of persons). Thus the state has the moral right to impose on citizens the duty to provide that right to the right-holder. A negative right to X is a right to be protected from harm while one seeks to get X on one's own. If Smith has a negative right to X, say to health care, then the state has an obligation to protect Smith from discrimination and unfair treatment in his attempt to get X on his own. We learn much if we approach key biblical texts about the state armed with the distinction between positive and negative rights.

Then he brings up the Romans 13 passage that Wayne Grudem mentioned yesterday in the post on the Bible and capital punishment, which talks about how the state can punish evildoers.

More:

> A second feature of the Romans 13 text is that it seems to depict the state as the protector of individuals from harm due to negative-rights violations (and as the praiser of those who do not engage in such law-breaking behavior) rather than as the provider of positive rights. In the preceding context (Romans 12:17-21), the issue in focus is someone who has had evil done against him, i.e., has had his negative rights violated. The passage makes clear that in such a case, the individual is not to take revenge and repay evil with evil. This would most naturally raise a question of criminal justice, viz., will the person have to pay for what he/she did to me in this age? Romans 13:1-7 answers that question in the affirmative by stating that such justice is precisely the purpose of the state. Moreover, in the verses that follow Romans 13:1-7 (verses 8-10) the focus is on showing compassion and love to one another, a topic mentioned in Romans 12:20 in the context of providing things (food and drink) for one who has harmed you. Now while compassion, love, and providing for others are mentioned just before and after Romans 13:1-7, it is significant that these topics fall from sight when the nature and function of the state is in view. A good explanation for this is that the state is not to be in the business of showing compassion (for more on this, see below) or providing positive rights for others. That is an individual moral responsibility. No, the state is the protector of negative rights.
>
> […]By contrast with the voluntary nature of compassion and genuine ethical action, the state is coercive and forces conformity to its dictates. The coercive approach works well when the state is protecting negative rights, but it raises an ethical problem if the state tries to provide positive rights. While the state can show mercy—it bears the sword and can refrain from using it—the state cannot show compassion. As an individual, a representative of the state can have compassion in his heart as he gives to the poor; but this compassion is exhibited by him qua individual and not qua representative of the state. The state's care for the poor is coercive since it redistributes wealth by force. It takes from some and gives to others, all by the force of law.
> Such actions count for very little in God's eyes because they do not reflect the features of Jesus's ethic identified above. And because Jesus was not a utilitarian, even if such actions accomplish good ends, the end does not justify the means. In a biblical ethic, helping the poor by the coercive power of the state is of little ethical value. If I am right about this, then it follows that when the state steps outside its role of protecting the violation of negative rights, the state will be incompetent and less effective than private or charitable alternatives.

And J.P. Moreland is right about it. This is a great essay and it helped me to understand how to talk about these issues. I think you should print this out and read it. Send it to everyone, especially young people who seem to be so confused about the free market system.

You can grab the PDF here from the Institute for Faith, Work and Economics (IFWE). It's only 11 pages long, without footnotes. It took me only 15 minutes to read it.

# Sweden turning to capitalism as money for government spending runs out

**Wintery Knight** · 23 January 2014 · Archived copy · Original

I hear a lot of people in my office predicting doom and gloom for the United States. Rubbish. The worst that's going to happen is that we have the kind of slow economy that France has, and that will only last until we run out of money to borrow.

Yahoo News explains what happens when socialists run out of money.

Excerpt:

> The Nordic model, known for high taxes and its cradle-to-grave welfare system, is getting a radical makeover as nations find themselves cash-strapped.
>
> […]In the wake of a banking crisis in the early nineties, Stockholm scrapped housing subsidies, reformed the pension system and slashed the healthcare budget.

> A voucher-based system that allows for-profit schools to compete with state schools was introduced, and has drawn attention from right-wing politicians elsewhere, including Britain's Conservative Party.
>
> In 2006, conservative Prime Minister Fredrik Reinfeldt's government accelerated the pace of reform, tightening the criteria for unemployment benefits and sick pay while lowering taxes.
>
> Income tax in Sweden is now lower than in France, Belgium and Denmark, and public spending as a share of GDP has declined from a record 71.0 percent in 1993 to 53.3 percent last year.

Just so you know, his numbers might be out of date.

The latest Heritage Foundation Index of Economic Freedom says this:

> The top individual income tax rate is 57 percent, and the top corporate tax rate has been cut to 22 percent. Other taxes include a value-added tax (VAT) and a capital gains tax. The overall tax burden is 44.5 percent of GDP. Public expenditures make up about half of GDP, and public debt is below 40 percent of GDP. The government is attempting to expand investment in infrastructure and research while reining in welfare spending.

The United States had this:

> The top individual income tax rate has risen to 39.6 percent, and the top corporate tax rate remains at 35 percent. Other taxes include a capital gains tax and excise taxes. The payroll tax holiday expired at the beginning of 2013. The overall tax burden amounts to 25.1 percent of gross domestic income. General government expenditures are slightly over 40 percent of GDP. Total public debt equals over 100 percent of the size of the economy.

So we are actually *worse* than Sweden now, in terms of government spending as a percent of GDP.

**Denmark, too**

More from the Yahoo News article:

> If Sweden is the Nordic country to have gone the furthest in shrinking its welfare state, Denmark has moved the fastest.

> When her Social Democratic government took power in 2011, there was little to suggest Prime Minister Helle Thorning-Schmidt would make any dramatic changes to the country's cherished welfare state — funded by the world's highest tax burden.
>
> After a centre-right government had raised the retirement age and reduced the unemployment benefits period from four to two years, "Gucci Helle" — as she is known among her detractors — went on to cut corporate taxes to 22 percent from 25 percent.
>
> Other reforms have included requiring young people on benefits to undertake training, and withdrawing student aid to those taking too long to finish their studies.
>
> Denmark has been spurred into action by a persistently sluggish economy since a housing bubble imploded in 2007, leading to anaemic household spending.
>
> But among Danes there is also a sense that the welfare state was ballooning out of control.
>
> In 2011, a TV report aiming to show what life was like for the poor in Denmark visited the home of a single mother on benefits, whose disposable income turned out to be 15,728 kroner (2,107 euros, $2,860) per month.
>
> "Poor Carina", as she was later nicknamed, sparked a national debate on the level of unemployment benefits, with one pollster crediting her with fuelling a rise in the number of people who felt benefits were too high.

It would be nice if we had journalists who could do a story like that.

A different article from a Swedish newspaper called The Local has more on the new Sweden.

Excerpt:

> One in ten Swedes now has private health insurance, often through their employers, with some recipients stating it makes business sense to be seen quickly rather than languish in national health care queues.
> More than half a million Swedes now have private health insurance, showed a new review from industry organization Swedish Insurance (Svensk Försäkring). In eight out of ten cases, the person's employer had offered them the private insurance deal.
>
> "It's quicker to get a colleague back to work if you have an operation in two weeks' time rather than having to wait for a year," privately insured Anna Norlander told Sveriges Radio on Friday. "It's terrible that I, as a young person, don't feel I can trust the health care system to take care of me."
>
> The insurance plan guarantees that she can see a specialist within four working days, and get a time for surgery, if needed, within 15.

I used to make fun of Sweden for being so socialist, but then I started to read more about them on Reason.com and from the Cato Institute (two libertarian sites) and my mind changed. These new articles confirm for me that Sweden is improving their economy by embracing the free market system and rejecting socialism. Obviously, there is more to do, but the trend is good, and the results cannot be questioned. What could the United States do if we acted more like Sweden? It seems like just as they are moving away from government control of health care, we are moving towards it! We are embracing old ideas, and we need something new.

I am still worried about the European countries because of the breakdown of the family, the disrespect of marraige and the low fertility rates. But still, this is a good sign for those of us who are worrying that we need to cheer up. This is how socialism ends. We'll get there.

# Ryan T. Anderson explains how gay marriage undermines natural marriage norms

**Wintery Knight** · 23 January 2014 · Archived copy · Original

From the Heritage Foundation. (H/T Tom)

Excerpt:

> Weakening marital norms and severing the connection of marriage with responsible procreation are the admitted goals of many prominent advocates of redefining marriage. E. J. Graff celebrates the fact that redefining marriage would change the "institution's message" so that it would "ever after stand for sexual choice, for cutting the link between sex and diapers." Enacting same-sex marriage, she argues, "does more than just fit; it announces that marriage has changed shape."[3]
>
> Andrew Sullivan says that marriage has become "primarily a way in which two adults affirm their emotional commitment to one another."[4]
>
> **The Norm of Monogamy.** New York University Professor Judith Stacey has expressed hope that redefining marriage would give marriage "varied, creative and adaptive contours," leading some to "question the dyadic limitations of Western marriage and seek…small group marriages."[5] In their statement "Beyond Same-Sex Marriage," more than 300 "LGBT and allied" scholars and advocates call for legal recognition of sexual relationships involving more than two partners.[6]
>
> University of Calgary Professor Elizabeth Brake thinks that justice requires using legal recognition to "denormalize[] heterosexual monogamy as a way of life" and "rectif[y] past discrimination against homosexuals, bisexuals, polygamists, and care networks." She supports "minimal marriage" in which "individuals can have legal marital relationships with more than one person, reciprocally or asymmetrically, themselves determining the sex and number of parties, the type of relationship involved, and which rights and responsibilities to exchange with each."[7]
>
> In 2009, *Newsweek* reported that the United States already had over 500,000 polyamorous households.[8] The author concluded:
>
> [P]erhaps the practice is more natural than we think: a response to the challenges of monogamous relationships, whose shortcomings…are clear.… [C]an one person really satisfy every need? Polyamorists think the answer is obvious—and that it's only a matter of time before the monogamous world sees there's more than one way to live and love.[9]
>
> A 2012 article in *New York Magazine* introduced Americans to "throuple," a new term akin to a "couple," but with three people whose "throuplehood is more or less a permanent domestic arrangement. The three men work together, raise dogs together, sleep together, miss one another…and, in general, exemplify a modern, adult relationship. Except that there are three of them."[10]
>
> **The Norm of Exclusivity.** Andrew Sullivan, who has extolled the "spirituality" of "anonymous sex," also thinks that the "openness" of same-sex unions could enhance the bonds of husbands and wives:
>
> [A]mong gay male relationships, the openness of the contract makes it more likely to survive than many heterosexual bonds.… [T]here is more likely to be greater understanding of the need for extramarital outlets between two men than between a man and a woman.… [S]omething of the gay relationship's necessary honesty, its flexibility, and its equality could undoubtedly help strengthen and inform many heterosexual bonds.[11]
>
> "Openness" and "flexibility" are Sullivan's euphemisms for sexual infidelity. Similarly, in a *New York Times Magazine* profile, gay activist Dan Savage encourages spouses to adopt "a more flexible attitude" about allowing each other to seek sex outside their marriage.[12] *The New York Times* recently reported on a study

> finding that exclusivity was not the norm among gay partners: "'With straight people, it's called affairs or cheating,' said Colleen Hoff, the study's principal investigator, 'but with gay people it does not have such negative connotations.'"[13]
>
> **Leading Advocates of Redefining Marriage Celebrate That It Will Weaken Marriage**
>
> Some advocates of redefining marriage embrace the goal of weakening the institution of marriage *in these very terms*. "[Former President George W.] Bush is correct," says Victoria Brownworth, "when he states that allowing same-sex couples to marry will weaken the institution of marriage…. It most certainly will do so, and that will make marriage a far better concept than it previously has been."[14]Professor Ellen Willis celebrates the fact that "conferring the legitimacy of marriage on homosexual relations will introduce an implicit revolt against the institution into its very heart."[15]
>
> Michelangelo Signorile urges same-sex couples to "demand the right to marry not as a way of adhering to society's moral codes but rather to debunk a myth and radically alter an archaic institution."[16]Same-sex couples should, he says, "fight for same-sex marriage and its benefits and then, once granted, redefine the institution of marriage completely, because the most subversive action lesbians and gay men can undertake…is to transform the notion of 'family' entirely."[17]
>
> It is no surprise that there is already evidence of this occurring. A federal judge in Utah allowed a legal challenge to anti-bigamy laws.[18] A bill that would allow a child to have three legal parents passed both houses of the California state legislature in 2012 before it was vetoed by the governor, who claimed he wanted "to take more time to consider all of the implications of this change."[19]

It's very important to understand that the typical gay relationship between males is not going to conform to the lifelong, exclusive commitment that heterosexual marriage involves. You can read about the numbers right here on this paper from the Family Research Council, which collects together evidence from secular sources, such as the U.S. Census and peer-reviewed research.

Take a look:

> Research indicates that the average male homosexual has hundreds of sex partners in his lifetime:
>
> · The Dutch study of partnered homosexuals, which was published in the journal *AIDS*, found that men with a steady partner had an average of eight sexual partners per year.[12]
>
> · Bell and Weinberg, in their classic study of male and female homosexuality, found that 43 percent of white male homosexuals had sex with 500 or more partners, with 28 percent having one thousand or more sex partners.[13]
>
> · In their study of the sexual profiles of 2,583 older homosexuals published in the *Journal of Sex Research*, Paul Van de Ven et al. found that "the modal range for number of sexual partners ever [of homosexuals] was 101-500." In addition, 10.2 percent to 15.7 percent had between 501 and 1,000 partners. A further 10.2 percent to 15.7 percent reported having had more than one thousand lifetime sexual partners.[14]
>
> · A survey conducted by the homosexual magazine *Genre* found that 24 percent of the respondents said they had had more than one hundred sexual partners in their lifetime. The magazine noted that several respondents suggested including a category of those who had more than one thousand sexual partners.[15]
>
> […]Even in those homosexual relationships in which the partners consider themselves to be in a committed relationship, the meaning of "committed" or "monogamous" typically means something radically different than in heterosexual marriage.
>
> · A Canadian study of homosexual men who had been in committed relationships lasting longer than one year found that only 25 percent of those interviewed reported being monogamous." According to study author Barry Adam, "Gay culture allows men to explore different…forms of relationships besides the monogamy coveted by heterosexuals."[16]

> · The *Handbook of Family Diversity* reported a study in which “many self-described ‘monogamous’ couples reported an average of three to five partners in the past year. Blasband and Peplau (1985) observed a similar pattern.”[17]
>
> · In *The Male Couple*, authors David P. McWhirter and Andrew M. Mattison reported that, in a study of 156 males in homosexual relationships lasting from one to thirty-seven years:
>
> Only seven couples have a totally exclusive sexual relationship, and these men all have been together for less than five years. Stated another way, all couples with a relationship lasting more than five years have incorporated some provision for outside sexual activity in their relationships.[18]

Are we ready to call that marriage? Isn’t it bad enough that we already have undermined the permanence and stability of marriage with no-fault divorce laws and giving benefits to common-law couples? Don’t you think that these factors will undermine stability, the same way that infidelity undermines heterosexual relationships?

But marriage is a particular thing. It’s permanent. It’s exclusive. It’s not based on feelings and desires. The purpose of marriage is to recognize and encourage people to constrain and bound their sexual activity for the benefit of society. We want to encourage parents to bond together permanently and exclusively, so that the bond is stable. We should be encouraging people to be chaste before marriage, to make good decisions about who to marry, to reward marriages that last, and to make it harder to get out of a marriage. Especially one with children.

# William Lane Craig lectures on naturalistic alternatives to the Big Bang

**Wintery Knight** · 23 January 2014 · Archived copy · Original

Here's the lecture, which was given in 2004 at the University of Colorado, Boulder. A very liberal university!

This lecture might be a little advanced for beginners, but if you stretch your mind first, you shouldn't tear anything. (Note: standard disclaimers apply if you do tear something!)

The description of the video states:

> This is quite simply one of the best lectures William Lane Craig (a philosopher of science) has given. Craig explores the origins of the universe. He argues for a beginning of the universe, while refuting scientific models like the Steady State Theory, the Oscillating Theory, Quantum Vacuum Fluctuation Model, Chaotic Inflationary Theory, Quantum Gravity Theory, String Theory, M-Theory and Cyclic Ekpyrotic Theory.

And here is the description of the lecture from Reasonable Faith:

> A Templeton Foundation lecture at the University of Colorado, Boulder, laying out the case from contemporary cosmology for the beginning of the universe and its theological implications. Includes a lengthy Q & A period which features previous critics and debate opponents of Dr. Craig who were in attendance, including Michael Tooley, Victor Stenger, and Arnold Guminski.

Craig has previously debated famous atheists Stenger and Tooley previously. And they both asked him questions in the Q&A time of this lecture. Imagine – having laid out your entire case to two people who have debated you before and who know your arguments well. What did they ask Craig, and how did he respond?

**The scientific evidence**

The Big Bang cosmology that Dr. Craig presents is the standard model for how the universe came into being. It is a theory based on six lines of experimental evidence.

Scientific evidence:

1. Einstein's theory of general relativity (GTR)
2. the red-shifting of light from distant galaxies implies an expanding universe
3. the cosmic background radiation (which also disproves the oscillating model of the universe)
4. the second law of thermodynamics applied to star formation theory
5. hydrogen-helium abundance predictions
6. radioactive element abundance predictions

If you are looking for some detail on these evidences, here's a re-cap of the three main evidences for the Big Bang cosmology from Caltech. (Numbers 2, 3 and 5 from the list above)

Excerpt:

> Until the early 1900s, most people had assumed that the universe was fixed in size. New possibilities opened up in 1915, when Einstein formulated his famous general relativity theory that describes the nature of space, time, and gravity. This theory allows for expansion or contraction of the fabric of space. In 1917, astronomer Willem de Sitter applied this theory to the entire universe and boldly went on to show that the universe could be expanding. Aleksandr Friedmann, a mathematician, reached the same conclusion in a more general way in 1922, as did Georges Lemaître, a cosmologist and a Jesuit, in 1927. This step was revolutionary

> since the accepted view at the time was that the universe was static in size. Tracing back this expanding universe, Lemaître imagined all matter initially contained in a tiny universe and then exploding. These thoughts introduced amazing new possibilities for the universe, but were independent of observation at that time.
>
> **Why Do We Think the Big Bang Happened?**
>
> Three main observational results over the past century led astronomers to become certain that the universe began with the big bang. First, they found out that the universe is expanding—meaning that the separations between galaxies are becoming larger and larger. This led them to deduce that everything used to be extremely close together before some kind of explosion. Second, the big bang perfectly explains the abundance of helium and other nuclei like deuterium (an isotope of hydrogen) in the universe. A hot, dense, and expanding environment at the beginning could produce these nuclei in the abundance we observe today. Third, astronomers could actually observe the cosmic background radiation—the afterglow of the explosion—from every direction in the universe. This last evidence so conclusively confirmed the theory of the universe's beginning that Stephen Hawking said, "It is the discovery of the century, if not of all time."

It's probably a good idea to be familiar with these if you are presenting this argument, because experimental science is a reliable way of knowing about reality.

**Published research paper**

This lecture by Dr. Craig is based on a research paper published in an astrophysics journal, and was delivered to an audience of students and faculty, including atheist physicist Victor Stenger and prominent atheist philosopher Michael Tooley, at the University of Colorado at Boulder.

Here's the peer-reviewed article that the lecture is based on.

Here's the abstract:

> Both cosmology and philosophy trace their roots to the wonder felt by the ancient Greeks as they contemplated the universe. The ultimate question remains why the universe exists rather than nothing. This question led Leibniz to postulate the existence of a metaphysically necessary being, which he identified as God. Leibniz's critics, however, disputed this identification, claiming that the space-time universe itself may be the metaphysically necessary being. The discovery during this century that the universe began to exist, however, calls into question the universe's status as metaphysically necessary, since any necessary being must be eternal in its existence. Although various cosmogonic models claiming to avert the beginning of the universe predicted by the standard model have been and continue to be offered, no model involving an eternal universe has proved as plausible as the standard model. Unless we are to assert that the universe simply sprang into being uncaused out of nothing, we are thus led to Leibniz's conclusion. Several objections to inferring a supernatural cause of the origin of the universe are considered and found to be unsound.

The whole text of the article is posted online here.

If you want something to post on your Twitter or Facebook that is much shorter than this lecture, then you should check out this quick 4-minute explanation of the kalam argument.

# Only 11% of new Obamacare enrollees were previously uninsured

**Wintery Knight** · 24 January 2014 · Archived copy · Original

From the Wall Street Journal.

Excerpt:

> Early signals suggest the majority of the 2.2 million people who sought to enroll in private insurance through new marketplaces through Dec. 28 were previously covered elsewhere, raising questions about how swiftly this part of the health overhaul will be able to make a significant dent in the number of uninsured.
>
> Insurers, brokers and consultants estimate at least two-thirds of those consumers previously bought their own coverage or were enrolled in employer-backed plans.
>
> The data, based on surveys of enrollees, are preliminary. But insurers say the tally of newly insured consumers is falling short of their expectations, a worrying trend for an industry looking to the law to expand the ranks of its customers.
>
> About 48 million Americans were uninsured in 2012. The health law is expected to cut 25 million from that total by expanding state-run Medicaid programs and the pool of privately insured people who buy through state marketplaces, also called exchanges.
>
> Only 11% of consumers who bought new coverage under the law were previously uninsured, according to a McKinsey & Co. survey of consumers thought to be eligible for the health-law marketplaces. The result is based on a sampling of 4,563 consumers performed between November and January, of whom 389 had enrolled in new insurance.
>
> One reason for people declining to purchase plans was affordability. That was cited by 52% of those who had shopped for a new plan but not purchased one in McKinsey's most recent sampling, performed in January. Another common problem was technical challenges in buying the plans, which 30% mentioned.

I thought that the point of Obamacare was to reduce the number of uninsured Americans. Well, I guess if you know 129 million people out of their current insurance, and some of those people who are now uninsured will be obligated by law to buy Obamacare health care plans, then that counts as reducing the uninsured, right? I mean – they were uninsured when you knocked them out of their current health plan, right? It makes sense. Like me robbing you of $500 and then giving you $50 back. Good deal, right?

Previously, the Wall Street Journal reported on how the number of young people enrolling was WAY below estimates, which will increase the losses of the private insurance companies.

Excerpt:

> **Just under a quarter of the roughly 2.2 million people who signed up for private plans nationwide by Dec. 28 were between the ages of 18 and 34, while one-third were in the 55-to-64 range, just short of the age at which most qualify for Medicare, the federal government program for the elderly.**

> […]Under the 2010 Affordable Care Act, consumers no longer pay premiums based on their health risks. To prevent a sharp rise in premiums in 2015 and beyond, carriers say they need strong enrollment from younger people who are likely to be healthier. That would balance out the bills racked up by sicker and older people.
>
> […]"There's no way to spin it: Youth enrollment has been a bust so far," said Brendan Buck, a spokesman for House Speaker John Boehner (R., Ohio). "When they see that Obamacare offers high costs for limited access to doctors—if the enrollment goes through at all—it's no surprise that young people aren't rushing to sign up."

Previously, I blogged about a study that showed that young people have to pay are much higher than pre-Obamacare health plans. That's why fewer of them are enrolling than the Democrats expected. If the insurance companies take losses on this shortfall, then they will need to be bailed out by the government – and the Obamacare bill provides for this bailout. As it stands right now, Moody's has downgraded health insurance companies from stable to negative.

# New study: teen pot use could hurt brain and memory

**Wintery Knight** · 24 January 2014 · Archived copy · Original

NBC News reports.

Excerpt:

> Teenage pot smokers could be damaging brain structures critical to memory and reasoning, according to new research that found changes in the brains of heavy users.
>
> Research released Monday in the journal Schizophrenia Bulletin showed the brains of young heavy marijuana users were altered in so-called sub-cortical regions — primitive structures that are part of the memory and reasoning circuits. And young people with such alterations performed worse on memory tests than non-using controls, despite the fact that the heavy users had not indulged for more than two years, on average, before the testing.
>
> "We see that adolescents are at a very vulnerable stage neurodevelopmentally," said Matthew Smith, who led the research team at Northwestern University Feinberg School of Medicine in Chicago. "And if you throw stuff into the brain that's not supposed to be there, there are long-term implications for their development."
>
> The portion of people ages 12 to 17 who used marijuana during the past month fell to 9.5 percent last year from almost 12 percent in 2002, according to the latest figures from the government's Substance Abuse and Mental Health Services Administration. But that still represents millions of adolescents and teenagers — and the legalization of marijuana has raised the specter that underage people will have easier access.
>
> Adults who smoked pot regularly as teens were shown to have "neuropsychological decline" and "more cognitive problems" than non-users in a study last year in the Proceedings of the National Academy of Sciences (PNAS). This was true even if users stopped using long before the study.

I think these papers are useful when talking to young people about drugs. You don't want it to be a situation where you are ordering them around based on nothing more than YOUR needs and YOUR beliefs. Then it turns into a head-butting contest, and you can't watch them all the time. A better alternative is to produce the studies that show the real effects and then ask them what they have on their side. If they are going to rebel anyway, at least you have tried to persuade them rather than control them, and that's good parenting.

# Do pro-lifers have to adopt unwanted children in order to have standing to oppose abortion?

**Wintery Knight** · 24 January 2014 · Archived copy · Original

This was sent to me by my friend Robb. The caller asks Greg whether he has ever taken in any foster children, since he is pro-life. She apparently thinks that Greg cannot be pro-life unless Greg is willing to adopt every crisis pregnancy child who is allowed to be born.

This is the greatest amount of ass-kicking that has ever been accomplished in 10 minutes. I have never heard Greg Koukl lose his temper, but he is clearly a little annoyed with the caller.

# Study confirms that predictions about junk DNA by materialists are false

**Wintery Knight** · 25 January 2014 · Archived copy · Original

First, let's see what Darwinian evolutionists predict about junk DNA, before we look at what the experiments show.

Here's biologist John Timmer to explain the orthodox Darwinian view of DNA from 2007:

> Personally, I fall into the "it's all junk" end of the spectrum. If almost all of these sequences are not conserved by evolution, and we haven't found a function for any of them yet, it's hard to see how the "none of it's junk" view can be maintained. There's also an absence of support for the intervening view, again because of a lack of evidence for actual utility. The genomes of closely related species have revealed very few genes added from non-coding DNA, and all of the structural RNA we've found has very specific sequence requirements. The all-junk view, in contrast, is consistent with current data.

Got that? According to Darwinists, DNA is almost entirely junk – this is what is consistent with the view that creatures have evolved through a process of random mutation and selection. The estimates that I've seen from evolutionary biologists range from 95% to 99% junk. Now let's compare the religion with science, and separate mythology from reality.

Now let's compare that with intelligent design theorist William Dembski's view of "junk" DNA, from 1998:

> Even if we have a reliable criterion for detecting design, and even if that criterion tells us that biological systems are designed, it seems that determining a biological system to be designed is akin to shrugging our shoulders and saying God did it. The fear is that admitting design as an explanation will stifle scientific inquiry, that scientists will stop investigating difficult problems because they have a sufficient explanation already.
>
> But design is not a science stopper. Indeed, design can foster inquiry where traditional evolutionary approaches obstruct it. Consider the term "junk DNA." Implicit in this term is the view that because the genome of an organism has been cobbled together through a long, undirected evolutionary process, the genome is a patchwork of which only limited portions are essential to the organism. **Thus on an evolutionary view we expect a lot of useless DNA. If, on the other hand, organisms are designed, we expect DNA, as much as possible, to exhibit function. And indeed, the most recent findings suggest that designating DNA as "junk" merely cloaks our current lack of knowledge about function… Design encourages scientists to look for function where evolution discourages it.**

Now let's look at the experimental evidence and see whose prediction was proven right by the progress of science.

Science Daily reports on a recent study that confirms the previous study that falsified Darwinian predictions about junk DNA.

Excerpt:

> Researchers from the Gene and Stem Cell Therapy Program at Sydney's Centenary Institute have confirmed that, far from being "junk," the 97 per cent of human DNA that does not encode instructions for making proteins can play a significant role in controlling cell development.
>
> […]Using the latest gene sequencing techniques and sophisticated computer analysis, a research group led by Professor John Rasko AO and including Centenary's Head of Bioinformatics, Dr William Ritchie, has shown how particular white blood cells use non-coding DNA to regulate the activity of a group of genes that determines their shape and function. The work is published today in the scientific journal*Cell*.
>
> "This discovery, involving what was previously referred to as "junk," opens up a new level of gene expression

> control that could also play a role in the development of many other tissue types," Rasko says. "Our observations were quite surprising and they open entirely new avenues for potential treatments in diverse diseases including cancers and leukemias."

Now, this is yet another falsification of Darwinism, to go with the other papers that I keep posting about new research that falsifies Darwinism. How many papers do we need to falsify Darwinism? I think if you are in an argument over Darwinism, and you produce these articles, then you win, so long as the other person cannot produce anything. It's also a good idea to couple these pieces of evidence with a positive case for intelligent causes operating during the origin of life and the Cambrian explosion.

# Michael Ruse debates Stephen C. Meyer on intelligent design and evolution on NPR

**Wintery Knight** · 25 January 2014 · Archived copy · Original

Details: (from NPR web site)

> About one third of Americans believe in intelligent design, according to a recent Gallup poll. That's the idea that humans evolved over time from lesser life forms – with the process guided by God. It's added a new dimension to the old debate over where humans come from and raised serious concern in the scientific world about mixing faith with science.
>
> - Stephen C. Meyer, author of Darwin's Doubt: The Explosive Origin of Animal Life and the Case for Intelligent Design
> - Michael Ruse, Director of the History and Philosophy of Science Program at Florida State University

The MP3 file is here. (28 minutes)

The following summary is rated S for Slightly Snarky. Reader discretion is advised.

Topics:

- Moderator: (to Meyer) define creationism, evolution, and intelligent design
- Meyer: creationism is based on an interpretation of the Bible
- Meyer: evolution is an unguided process of mutation and selection that produces organisms
- Meyer: intelligent design is the idea that the best explanation for certain features of life
- Moderator: (to Ruse) Where do you disagree?
- Ruse: Intelligent design is similar to creationism, but I won't say how exactly
- Meyer: ID is a good explanation for the sudden origin of animal body plans in the Cambrian era
- Moderator: (to Meyer) Is the designer God? Is the designer the Christian God?
- Meyer: No, ID theory is an inference that is rooted in scientific evidence, not in a religious text
- Meyer: ID can be inferred from the origin of biological information and from molecular machines
- Moderator: (to Ruse) Where do you disagree?
- Ruse: Meyer is disingenuous because ID requires the designer to be God
- Meyer: The biological evidence for intelligent design by itself does not implicate God
- Meyer: The fine-tuning of the cosmos is intelligent design in physics, and that *would* require God
- Moderator: (to Meyer) Explain what the Cambrian explosion is
- Meyer: sudden origin of 36 body plans in 10 million years 530 million years ago
- Moderator: So you think that 36 body plans in 10 million years is too sudden for Darwinian mechanisms to produce?
- Meyer: Yes, for two reasons. One, there are no precursors prior to the start of the explosion in complexity
- Meyer: And two, the complexity of animal life includes code, circuitry, hierarchies – best explained by a designer
- Moderator: (to Ruse) Is it a problem for you?
- Ruse: There is no peer-reviewed paper that denies that the Ediacaran fauna are precursors to the Cambrian animals
- Ruse: There is no peer-reviewed paper that denies that microfossils are precursors to the Cambrian animals

- Ruse: There is no peer-reviewed paper that denies that animal complexity goes from simple to complex in the fossil record
- Ruse: There is no peer-reviewed paper that shows that the Cambrian explosion took place over a few million years
- Ruse: There is no peer-reviewed paper that shows that there were complex organ types at the start of the Cambrian explosion
- Ruse: There is no peer-reviewed paper that denies that we already have a materialist explanation for the Cambrian explosion
- Ruse: everything is solved! nothing to see here! (folds arms and beams) I trust that my unsupported assertions have relieved your doubts, yes?
- Moderator: Is intelligent design undermined by more recent science?
- Meyer: no, there is an absence of precursor fossils in the period before the Cambrian explosion
- Meyer: there are other things that make the problem even worse for naturalism, like information from epigenetics
- Moderator: (to Ruse) Answer that
- Ruse: He is just pulling out passages out of context because he is a creationist!
- Moderator: The leftist New Yorker reviewer Gareth Cook says that the Cambrian explosion took tens of millions of years
- Meyer: Actually, the peer-reviewed science is clear that the standard date is at most 10 million nears
- Moderator: (to Ruse) Deny the mainstream date
- Ruse: Well, Prothero says no! Ho ho ho! (folds arms) He just says it. No it's not published in peer-reviewed research
- Ruse: We know so much more than Darwin did, how could the progress of science disprove my materialist pre-supposition? It's unpossible!
- Moderator: (to Meyer) Isn't ID pseudo-science?
- Meyer: If we limit ourselves to materialist explanations only, then we cannot infer intelligence when we see artifacts like the Rosetta Stone
- Meyer: wind and erosion is not an adequate explanation for certain systems – systems that are rich in information
- Meyer: the best explanation is the explanation that relies on known causes – we know that intelligence produces information
- Moderator: (to Meyer) so the intelligence is the best explanation of systems that have information?
- Meyer: yes, think about software code – the best explanation of new computer instructions is an intelligence
- Meyer: we have uniform and repeated experience of intelligence bringing new information into being, and new animals need new information
- Moderator: (to Ruse) must science only work with natural explanations?
- Ruse: intelligent design is religion! Ho ho ho ho! (folds arms)
- Ruse: there is no a priori way of ruling out supernatural causes in order to explain nature
- Ruse: We don't need to introduce supernatural causes to explain information in living systems or in software code
- Ruse: Steve is asking me to explain the Cambrian explosion, but why does he want me to explain that?
- Ruse: How did anything start to fly? How did whales come? There, those questions explain the Cambrian explosion naturalistically
- Ruse: Steve's answer to explain new information is to bring in miracles, like when he said that new computer

code requires God

- Ruse: inferring intelligence as an explanation for information like the computer code is religion! God! Creationism! Prayer in schools!
- Ruse: we have to keep looking for naturalistic explanations for the Big Bang, the DNA, the fine-tuning, the Cambrian fossils, etc.
- Ruse: we are never justified in inferring an intelligence to explain information, because that would deny my religion of materialism
- Moderator: (to Ruse) what are the requirements for a theory to be scientific?
- Ruse: any explanation has to be naturalistic, because I am an atheist and that's my religion, and we can't go against my religion
- Ruse: it's "really stupid" to infer God as the explanation of the creation of the entire physical universe or the cosmic fine-tuning
- Moderator: (to Meyer) why is intelligent design so popular when we have court cases saying it is not science?
- Meyer: the Discovery Institute does not have an agenda to teach intelligent design in public schools
- Meyer: intelligent design is about inferring intelligence as a causal explanation for information in living systems, and elsewhere
- Moderator: (to Ruse) are evolutionists unwilling to entertain the possibility of intelligence being the best explanation?
- Ruse: scientists have to make sure that that all their explanations don't go outside of the materialist reservation
- Ruse: intelligent design is evangelical Christianity dressed up to look like science, the Dover judge said so
- Ruse: Meyer is disingenuous! Ho ho ho ho ho! (folds arms contentedly)
- Meyer: first, judges don't decide science, evidence decides science
- Meyer: the Dover people made a mistake by trying to go to the courts to get things into the schools
- Meyer: intelligent design is about research, writing books and papers based on what we learn from science
- Moderator: (to Ruse) is intelligent design dangerous?
- Ruse: yes, intelligent design is about politics, it's not about cosmic fine-tuning, origin of life, molecular machines or Cambrian explosion
- Ruse: intelligent design is about abstinence, prayer in schools, burdening women with unwanted babies and male-female marriage
- Ruse: my reason for opposing ID is the socially conservative agenda which emerges from protein folding probability calculations
- Ruse: I don't want to be drafted to fight in Vietnam, I don't want them to take away my drugs, etc. so that's why I believe Darwinism
- Moderator: (to Meyer) why do you want to take abortion away, you meany?
- Meyer: actually, intelligent design is about science, and in any case National Review gave my book a bad review
- Moderator: (to Ruse) are science and religion in conflict?
- Ruse: well religion can just abstain from making any claims about the physical world, and just stick to subjective nonsense – that's fair
- Moderator: (to Meyer) isn't all opposition to evolution rooted in fundamentalist religion?
- Meyer: you can believe in Darwinism and be a theist, but the real reason for doubting Darwinism is the scientific evidence, not religion

Tell me how you think Dr. Meyer did in the comments. I think that Ruse is a Darwinist because he views it as a way to push people away from the conservative morality and politics. But he's a nice guy, and I appreciate him debating the issue. Things are tough right now for his side.

# Looking for some inspiration? Here's an interview with Wisconsin governor Scott Walker

**Wintery Knight** · 26 January 2014 · Archived copy · Original

Wisconsin Governor Scott Walker

This interview was conducted by John Hawkins, who runs Right Wing News.

Here's a quick summary of why Scott Walker is famous – he stood up to the public sector unions:

> Q. Outside of Wisconsin you are most famous for taking on the unions in your state; briefly tell us what you did legislatively and what the impact of it has been on the state.
>
> A. The easiest way to explain it is we had a choice. In the past the big union bosses had been in charge of both state and local government. We made a change that ultimately put the hard working taxpayers back in charge and by that, what I mean is under the old system of collective bargaining, not only the state but local governments had to abide by union contracts that many times were run contrary to the best interest of the taxpayers and to the people they newly elected. So we came in early 2011, we faced a big budget deficit, $3.6 billion per capita, one of the biggest in the country — and we knew to balance our budget we weren't going to raise taxes, we weren't going to do massive layoffs, we weren't going to cut things like Medicaid. Instead we put in place these long-term structure reforms that put the power back in the hands of, again, of the hard working taxpayers.
>
> **By pulling back on collective bargaining we empowered local governments, school districts, counties, cities, towns, villages, and the state to go out and control and not only get things like reasonable pension and healthcare contributions which were nowhere in line with the private sector, but they got to change work rules and everything else as part of running a government. We went from a $3.6 billion budget deficit to today we finished our fiscal year off with just shy of a $760 million surplus. We cut taxes a billion and a half and an unemployment rate that was once 9.2% is now 6.3% — so we've had some positive results and we're going to keep on that path.**

What Scott Walker is famous for is that he passes laws that work so well that even in one of the bluest states, he can win elections. Why is that? It's because if your policies are good, you will get good results. And people recognize good results regardless of their party identification. If you couple good results with sincerity and honesty, then you can win over a lot of independents and even some conservative Democrats.

And this is the part that made me the happiest to read:

> Q. In your book you encourage Republicans to do something important that the GOP, much to its detriment,

> has gotten out of the habit of doing. You said we should champion the vulnerable. Talk a little bit about that, talk about why that's important for Republicans to do.
>
> A. Yeah, one of the things that frustrates me so much in the Presidential election is I thought there was a tremendous lost opportunity — and obviously the clearest example of that was when Republican nominees talked about the 47% and also in a similar conversation talked about not worrying about the poor because the poor had a safety net. That really, truly doesn't match where I'm at. I don't think it matches with people like Ronald Reagan who was a great inspiration for me as a kid. I went back in the book and talked about how Reagan in 1980 at the National Convention in Detroit in his acceptance speech talked about things like saying if you're living in poverty, we want to lift you out. If you're living in despair, we want to be hope, but that hope isn't based on more government. It's based on empowering people with the skills and the talents and the abilities that they need to go out and control their own lives and so I think the message is really simple, I believe, and I think this was the missed opportunity. I believe the president and his allies in Washington in particular measure success in government by how many people are dependent on government, by how many people are on Medicaid, by how many people are on food stamps, by how many people are on unemployment. That's why they want to extend unemployment benefits. They want more people signed up, more people dependent. I think we as Republicans should measure success by just the opposite — by how many people are no longer dependent on the government, not because we've got to be careful to articulate this correctly, not because we don't care about people or because we want to push people out to the streets, but because we understand that true freedom and prosperity don't come from the mighty hand of the government. It comes from empowering the people to control their own lives and their own destiny. One example that I give in the book that I've talked about before is we made a change in food stamps that said if you want to get food stamps, if you don't have kids, you're an adult in our state and you want to get food stamps, you've either got to be working part-time or you've got to be in one of my employment training programs, and I said it's simple.
>
> I don't want to make it harder to get government assistance. I want to make it easier to get a job and we've got to show people. **I think any of us who either have our own households or who have friends who have sons or daughters who are in their 20's, they're at college and at some point you say to your son or daughter eventually in their best interest, "Hey, it's time to move out of the house. It's time to get your own job and your own place." That's not about being heartless and cold. That's just the opposite. It's about you love your kids so much you want to get them out and help them get on their own two feet so they can have the pride that comes from work in controlling their own destiny.**

Now, recently there was  post on Politico about 10 people who should give the Republican response to the state of the union address (SOTU), and Walker was in the top spot. I heard about this list on Dennis Prager's show, and it came up again on Michael Medved's show. Now I think Prager is more of a principled conservative, and Medved is more of a pragmatic moderate. And yet they both thought that Walker should do the response. I think that Republicans across the spectrum are realizing that we need to pick someone competent in order to be different from the Democrats.

During the Christmas vacation, I read governor Walker's new book, which was a Christmas present from my friend ECM. If you want to learn more about governor Walker, I recommend picking that up. I actually got the audio version, and it's read by governor Walker himself.

# A closer look at the journey to atheism of Nathan Pratt

**Wintery Knight** · 26 January 2014 · Archived copy · Original

I found a deconversion testimony by an atheist on Prayson Daniel's blog, and I thought it might be useful to take a look at it.

But first, I want to recap some reasons why people think that God exists.

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature

In addition to these arguments for theism, Christians would make be some sort of minimal facts case for the resurrection, one that leverages the early creed in 1 Corinthians 15:3-7. And some sort of case for the early belief that Jesus was divine.

In addition to those positive evidences, there would be informed defenses to other questions like the problem of evil, the problem of suffering, religious pluralism, the hiddenness of God, materialist conceptions of mind, consciousness and neuroscience, the justice of eternal damnation, sovereignty and free will, the doctrine of the Incarnation, the doctrine of the Trinity, and so on.

I listed these out so that you can see how many of these positive arguments and defenses that he wrestles with in his deconversion testimony, which is linked below.

So here is the deconversion testimony.

And here are some revealing snippets, under headings.

**Legalist upbringing**

" Being baptists things were pretty legalistic growing up."

**Anti-intellectual parents**

His parents tell him: "This is the bible and its truth can't be debated. It is what it is."

**Piety rather than apologetics**

"Most of my young life I was "that" religious kid. You know him. He's awkward looking with coke bottle glasses and horrendous hair and triple hand me down clothes. I told random kids on the bus that I would pray for them and would be mocked in return."

**Peer disapproval**

"I told random kids on the bus that I would pray for them and would be mocked in return. One time I even got

jumped while fishing and once they started punching me I didn't even fight back, "turn the other cheek" was being said in my mind over and over. I got the crap kicked out of me and several months of ridicule at school over getting such a beating.

I think the most embarrassing time for me was in 8th grade science class when one kid started calling me a "bible beater" while the teacher was out of the room. He then got the entire class to mock and laugh at me. It wasn't fun. In fact, it sucked."

**Deconversion prior to serious study of the evidence**

"I think it was around 9th grade that my apathy for religion and god really started to set it. Being honest with myself I didn't want to be the kid that got mocked anymore."

**Ineffective church leadership**

"We'd laugh at our peers that were so moved by the message told by the church leaders… Everything I was seeing my peers do could easily be chalked up to a group or mob mentality. A psychological effect of emotions."

I agree with him about this one, the church generally does nothing to form a Christian worldview, even though they have years and years to do it. And they are quite proud of this "focus on the gospel", even as kids drop Christianity as soon as they hear intellectual objections to it in college.

**Self-focus / autonomy**

"The fact that our purpose of living was the blow smoke up the skirt of a god that will damn us to hell."

**Theological determinism**

"The thought that a god with a plan can't/won't/doesn't listen to your prayers because if your prayer isn't in line with his plan then it goes unheard or unanswered."

**Bible difficulties**

"God set up Adam and Eve for failure in the Garden of Eden. If he really didn't want us to "fall from grace" then the tree never would have been there. He would've stopped the serpent from deceiving Adam and Eve. He would've equipped Adam and Eve with the knowledge of deceit so they could recognize when they're being lied to."

**God's job is to make us happy and healthy**

"God would have either have had a direct hand in creating hell or allowing satan to create it with his knowledge. God created the rules by which people go to hell. He damns billions of people there. Is that love? Is that moral? Is that just?"

**Accuracate knowledge of God's character and historical actions are less important than "being good"**

"Anne Frank, a Jew, is in hell because she didn't recognize Jesus as the Son of God, but Ted Bundy, a serial rapist and murderer, is in heaven because he accepted Jesus into his heart before dying on death row. Is that fair? Is that love? Is that moral? Is that just?"

**Emotional problem of evil**

His brother was killed in a motorcycle accident, and his view is that it's God's job to keep everyone alive and happy. So this guy is reading the story of Jesus and he is saying something like this to himself when he reads the Bible, "see, the founder of Christianity has all his needs met by God and he is happy all the time, and everyone likes him and he never, ever has anything bad happen to him that isn't his fault". The problem of evil is one of the most responded-to problems in Christian apologetics. He didn't cite anyone who has responded to it.

**Ignorance of how the Bible defines faith**

"Faith is believing in something without evidence."

So he doesn't even know what the definition of faith is, according to the Biblical use of the term, where faith is trusting in something you know to be true because of the evidence, e.g. – because of the resurrection, say. That was Jesus' model of getting people to have faith in him, but apparently you can attend church and come up with a different, postmodern notion of what the word means. A definition that is pleasing to all the people in church who are there for emotional comfort, and not for truth and knowledge. His definition of faith is more like the atheist definition of faith, like they say "I have faith in the multiverse" or "I have faith in aliens seeding the Earth with life" or "I have faith that God has no morally sufficient reason for permitting this instance of apparently gratuitous evil". Atheists project their own irrational epistemology onto Christians.

**Unfamiliarity with Christian scholarship**

"After I realized that my friends and church leaders had no good responses to anything I was saying I started searching for good apologist books on the internet. A good book about a good reason for belief. I can't effectively relay my shock at turning up nothing worth the paper it was printed on."

**The purpose of life is to feel happy**

"I'd heard through a friend that an old acquaintance from our youth group was now an agnostic… His reply was straight forward in that he'd realized that he'd gained nothing from trying to understand, follow and love god. Since it was bringing nothing positive to his life he left it behind. He shared that we're all trained as kids in church that we have a god shaped hole in our hearts, but that it wasn't true. Here he was, 11 years after leaving christianity, at the happiest and most content point of his life. He told me it was okay to doubt."

**Reads simplistic books by atheists**

"That book that would ultimately be one of the most revolutionary books in my life was "50 Reasons People Give for Believing in a God.""

This book is a caricature of the reasons why people believe in God. I searched for the names of top Christian apologists, and there were none. No William Lane Craig, Hugh Ross, Gary Habermas, Michael Licona, Stephen C. Meyer, Mike Behe, etc. I took a look at the 50 arguments. They were generally re-phrasings of this "I'm stupid, so I'll believe Christianity because it makes me happy".

I clicked on the few that I thought might cite Christian scholars, but no Christian scholars were cited. For the chapter on "fine-tuning", the author cited Ray Comfort. And his banana argument. In a chapter on fine-tuning. The chapter on intelligent design did not cite a single scholar, pro or con. ID was not even defined.

**My conclusion**

Well, I'll leave the rest of his post to you. I did a quick search on the author's blog for "William Lane Craig", just to see, and found nothing. Then I did a search for "intelligent design", and found nothing. Then I did a search for "minimal facts" and found nothing. His post on his journey to atheism is here. And let this testimony be a lesson to you parents and church leaders not to fail other Christians the way this guy's parents and church leaders failed him. You should read the comments on his post, as well.

# William Lane Craig's case for the resurrection of Jesus

**Wintery Knight** · 27 January 2014 · Archived copy · Original

Dr. Craig's famous minimal facts case for the resurrection has been posted at the Christian Apologetics Alliance. He presents 4 facts admitted by the majority of New Testament historians, and then he supplies multiple pieces of evidence for each fact.

Here are the four facts:

- FACT #1: *After his crucifixion, Jesus was buried in a tomb by Joseph of Arimathea.*
- FACT #2: *On the Sunday following the crucifixion, Jesus' tomb was found empty by a group of his women followers.*
- FACT #3: *On multiple occasions and under various circumstances, different individuals and groups of people experienced appearances of Jesus alive from the dead.*
- FACT #4: *The original disciples believed that Jesus was risen from the dead despite their having every predisposition to the contrary.*

Here's the detail on fact #3, the post-mortem appearances.

> FACT #3: *On multiple occasions and under various circumstances, different individuals and groups of people experienced appearances of Jesus alive from the dead.*
>
> This is a fact which is almost universally acknowledged among New Testament scholars, for the following reasons:
>
> 1. The list of eyewitnesses to Jesus' resurrection appearances which is quoted by Paul in I Cor. 15. 5-7 guarantees that such appearances occurred. These included appearances to Peter (Cephas), the Twelve, the 500 brethren, and James.
>
> 2. The appearance traditions in the gospels provide multiple, independent attestation of these appearances. This is one of the most important marks of historicity. The appearance to Peter is independently attested by Luke, and the appearance to the Twelve by Luke and John. We also have independent witness to Galilean appearances in Mark, Matthew, and John, as well as to the women in Matthew and John.
>
> 3. Certain appearances have earmarks of historicity. For example, we have good evidence from the gospels that neither James nor any of Jesus' younger brothers believed in him during his lifetime. There is no reason to think that the early church would generate fictitious stories concerning the unbelief of Jesus' family had they been faithful followers all along. But it is indisputable that James and his brothers did become active Christian believers following Jesus' death. James was considered an apostle and eventually rose to the position of leadership of the Jerusalem church. According to the first century Jewish historian Josephus, James was martyred for his faith in Christ in the late AD 60s. Now most of us have brothers. What would it take to convince you that your brother is the Lord, such that you would be ready to die for that belief? Can there be any doubt that this remarkable transformation in Jesus' younger brother took place because, in Paul's words, "then he appeared to James"?
>
> Even Gert Ludemann, the leading German critic of the resurrection, himself admits, "It may be taken as historically certain that Peter and the disciples had experiences after Jesus' death in which Jesus appeared to them as the risen Christ."3

Yes, Gerd Ludemann is actually an atheist new Testament historian, and he has even debated Dr. Craig on the resurrection – not once, but *twice*. That's the kind of evidence Dr. Craig uses in his case. Not just what your pastor will give you, but what atheists will give you. We need to learn to debate like that.

# Scientists discover that tides affect a planet's habitability

**Wintery Knight** · 27 January 2014 · Archived copy · Original

Circumstellar Habitable Zone

Science Daily reports on a new factor that affects planetary habitability: tides. Specifically, tides can affect the surface temperature of a planet, which has to be within a certain range in order to support liquid water – a requirement for life of any conceivable kind.

Excerpt:

> Tides can render the so-called "habitable zone" around low-mass stars uninhabitable. This is the main result of a recently published study by a team of astronomers led by René Heller of the Astrophysical Institute Potsdam.
>
> […]Until now, the two main drivers thought to determine a planet's temperature were the distance to the central star and the composition of the planet's atmosphere. By studying the tides caused by low-mass stars on their potential earth-like companions, Heller and his colleagues have concluded that tidal effects modify the traditional concept of the habitable zone.
>
> Heller deduced this from three different effects. Firstly, tides can cause the axis of a planet`s rotation to become perpendicular to its orbit in just a few million years. In comparison, Earth's axis of rotation is inclined by 23.5 degrees — an effect which causes our seasons. Owing to this effect, there would be no seasonal variation on such Earth-like planets in the habitable zone of low-mass stars. These planets would have huge temperature differences between their poles, which would be in perpetual deep freeze, and their hot equators which in the long run would evaporate any atmosphere. This temperature difference would cause extreme winds and storms.
>
> The second effect of these tides would be to heat up the exoplanet, similar to the tidal heating of Io, a moon of Jupiter that shows global vulcanism.
>
> Finally, tides can cause the rotational period of the planet (the planet's "day") to synchronize with the orbital period (the planet's "year"). This situation is identical to the Earth-moon setup: the moon only shows Earth one face, the other side being known as "the dark side of the moon." As a result one half of the exoplanet receives extreme radiation from the star while the other half freezes in eternal darkness.
>
> The habitable zone around low-mass stars is therefore not very comfortable — it may even be uninhabitable.

Here is my previous post on the factors needed for a habitable planet. Now we just have one more. I actually find this article sort of odd, because my understanding of stars was that only high-mass stars could support life at all. This is because if the mass of the planet was too low, the habitable zone wouldbe very close to the star. Being too close to the star causes tidal locking, which means that the planet doesn't spin on its axis at all, and the same side

faces the star. This is a life killer.

This astrophysicist who teaches at the University of Wisconsin explains it better than me.

Excerpt:

> Higher-mass stars tend to be larger and luminous than their lower-mass counterparts. Therefore, their habitable zones are situated further out. In addition, however, their HZs are much broader. As an illustration,
>
> - a 0.2 solar-mass star's HZ extends from 0.1 to 0.2 AU
> - a 1.0 solar-mass star's HZ extends from 1 to 2 AU
> - a 40 solar-mass star's HZ extends from 350 to 600 AU
>
> On these grounds, it would seem that high-mass starts are the best candidates for finding planets within a habitable zone. However, these stars emit most of their radiation in the far ultraviolet (FUV), which can be highly damaging to life, and also contributes to photodissociation and the loss of water. Furthermore, the lifetimes of these stars is so short (around 10 million years) that there is not enough time for life to begin.
>
> **Very low mass stars have the longest lifetimes of all, but their HZs are very close in and very narrow. Therefore, the chances of a planet being formed within the HZ are small. Additionally, even if a planet did form within the HZ, it would become tidally locked, so that the same hemisphere always faced the star. Even though liquid water might exist on such a planet, the climactic conditions would probably be too severe to permit life.**
>
> In between the high- and low-mass stars lie those like our own Sun, which make up about 15% percent of the stars in the galaxy. These have reasonably-broad HZs, do not suffer from FUV irradiation, and have lifetimes of the order of 10 billion years. Therefore, they are the best candidates for harbouring planets where life might be able to begin.

This guy is just someone I found through a web search. He has a support-the-unions-sticker on his web page, so he's a liberal crackpot. But he makes my point, anyway, so that's good enough for me.

Maybe the new discovery is talking about this now, but I already knew about the tides and habitability, because I watched The Privileged Planet DVD. Actually that whole video is online, and the clip that talks about the habitable zone and water is linked in this blog post I wrote before.

# William Lane Craig vs Walter Sinnott-Armstrong: evil, suffering and God's existence

**Wintery Knight** · 27 January 2014 · Archived copy · Original

This is one the top 4 best debates that William Lane Craig has done in my opinion. (The other two are Craig-Millican debate and the first and second Craig-Dacey debates) This one doesn't seem to get a lot of play on the Internet: there's no video, transcript or anything. But it is a great debate, and on a problem we are all concerned about: the problem of evil and suffering. One other thing – Sinnott-Armstrong is also a very courteous, respectful and intelligent scholar and he is very good at defending his side. This is a very cordial and engaging debate, and because it was held in front of a church audience, it was targeted to laymen and not academics.

The MP3 file is here.

There is also a book based on this debate, published by Oxford University Press. I was actually able to find a PDF of it online. I should also remind people that you can get the wonderful Craig-Hitchens debate DVD from Amazon.com if you are looking for a debate to watch, or show in your church.

**The debaters:**

- William Lane Craig
- Walter Sinnott-Armstrong

**The format:**

- WSA: 15 minutes
- WLC: 15 minutes
- Debaters discussion: 6 minutes
- Moderated discussion: 10 minutes
- Audience Q&A: 18 minutes
- WSA: 5 minutes
- WLC: 5 minutes

**SUMMARY:**

**WSA opening speech:**

Evil is incompatible with the concept of God (three features all-powerful, all-god, all-knowing)

God's additional attributes: eternal, effective and personal (a person)

He will be debating against the Christian God in this debate, specifically

Contention: no being has *all* of the three features of the concept of God

His argument: is not a deductive argument, but an inductive/probabilistic argument

Examples of pointless, unjustified suffering: a sick child who dies, earthquakes, famines

The inductive argument from evil:

1. If there were an all-powerful and all-good God, then there would not be any evil in the world unless that evil is logically necessary for some adequately compensating good.
2. There is evil in the world.
3. Some of that evil is not logically necessary for some adequately compensating good.
4. Therefore, there can't be a God who is all-powerful and all-good.

Defining terms:

- Evil: anything that all rational people avoid for themselves, unless they have some adequate reason to want that evil for themselves (e.g. – pain, disability, death)
- Adequate reason: some evils do have an adequate reason, like going to the dentist – you avoid a worse evil by having a filling

God could prevent tooth decay with no pain

God can even change the laws of physics in order to make people not suffer

Responses by Christians:

- Evil as a punishment for sin: but evil is not distributed in accordance with sin, like babies
- Children who suffer will go straight to Heaven: but it would be better to go to Heaven and not suffer
- Free will: this response doesn't account for natural evil, like disease, earthquakes, lightning
- Character formation theodicy: there are other ways for God to form character, by showing movies
- Character formation theodicy: it's not fair to let X suffer so that Y will know God
- God allows evil to turn people towards him: God would be an egomaniac to do that
- We are not in a position to know that any particular evil is pointless: if we don't see a reason then there is no reason
- Inductive evil is minor compared to the evidences for God: arguments for a Creator do not prove that God is good

**WLC opening speech:**

Summarizing Walter's argument

1. If God exists, gratuitous does not exist.
2. Gratuitous evil exists.
3. Therefore, God does not exist.

Gratuitous evil means evil that God has no morally sufficient reason to permit. WSA doesn't think that all evil is incompatible with God's existence, just gratuitous evil.

Everyone admits that there are instances of evil and suffering such that we cannot see the morally sufficient reason why God would allow it to occur.

The claim of the atheist is that if they cannot see that there is a moral justification for allowing some instance evil, then there is no moral justification for that instance of evil.

Here are three reasons why we should not expect to know the morally sufficient reasons why God permits apparently pointless evil.

1. the ripple effect: the morally sufficient reason for allowing some instance of evil may only be seen in another place or another time
2. Three Christian doctrines undermine the claim that specific evils really are gratuitous
3. Walter's own premise 1 allows us to argue for God's existence, which means that evil is not gratuitous

Christian doctrines from 2.:

- The purpose of life is not happiness, and it is not God's job to make us happy – we are here to know God. Many evils are gratuitous if we are concerned about being happy, but they are not gratuitous for producing the knowledge of God. What WSA has to show is that God could reduce the amount of suffering in the world while

still retaining the same amount of knowledge of God's existence and character.

- Man is in rebellion, and many of the evils we see are caused by humans misusing their free will to harm others and cause suffering
- For those who accept Christ, suffering is redeemed by eternal life with God, which is a benefit that far outweighs any sufferings and evils we experience in our earthly lives

Arguing for God in 3.

- If God exists, gratuitous does not exist.
- *God exists*
- Therefore, gratuitous does not exist.

Four reasons to think that God exists:

- the kalam cosmological argument
- the fine-tuning argument
- the moral argument
- the argument *from* evil

# Wisconsin governor Walker's reforms hit the left in their wallets

**Wintery Knight** · 28 January 2014 · Archived copy · Original

Canadian Prime Minister Stephen Harper is mean

First, let's talk about Stephen Harper. I sometimes blog about conservative Canadian prime minister Stephen Harper, who Dennis Prager calls "the leader of the free world". He has a record of putting into place laws that cut off the ability of the left to get campaign funding without consent from the people supplying the money.

Here's an article from Canada's National Post.

Excerpt:

> While the political showdown making news this month has pitted Prime Minister Stephen Harper against Senator Mike Duffy, a more important battle is shaping up for the 2015 election. It's between the Conservative Party and organized labour — as evidenced by the resolutions the party will be debating at its policy convention in Calgary this week.
>
> Proposals include allowing secret ballots during strikes, banning the use of dues for political purposes, requiring increased financial disclosure by unions, and passing right-to-work legislation. The resolutions are moved by electoral district associations in Alberta, Ontario and Quebec, and together represent what appears to be the largest block of resolutions on any one theme.
>
> Why the focus on organized labour, and why now? In part, it's ideological. While small-c conservatives respect freedom of association, they also respect the freedom not to associate. The labour movement's rules — particularly the RAND formula, which obliges workers in unionized workplaces to join whether they want to or not — restricts workers' freedom of choice. Unions also spend dues on causes that workers may not support, and demand workers follow their direction on strike action, even if workers may be opposed or not be able to afford the loss in pay.
>
> […]The Conservatives have pledged to balance the federal budget by the time they go to the polls. One of the elements of their plan is downsizing government, which pits them directly against the Public Service Alliance of Canada. For two years now, PSAC has been fighting against Conservative cuts to the bureaucracy and the party's policy of reduction by attrition. PSAC's rallies and campaigns, however, have done nothing to dent the Tories' resolve (long overdue, considering that they substantially grew the size of the bureaucracy during the early years of their mandate). Curtailing PSAC's power and voice would help the Tories achieve their

> downsizing goals for both the short and long term.

Back in 2006, Stephen Harper banned political contributions from corporations and unions. Nasty! And he's not done yet, according to this article. It's good to win, and win, and win again. I am tired of conservatives losing, even in other countries.

**Governor Scott Walker**

Now when I look around at the Republican Party, I rarely see the same will to do effective things that will cripple the left financially. It's like Republicans don't want to offend people, especially journalists. They want to be liked at cocktail parties.

But there is one Republican who is fine with being hated by his enemies, and he is getting a lot of attention from conservatives ahead of the 2016 election.

Wisconsin Governor Scott Walker is also mean

Here's the story from the Associated Press.

Excerpt:

> The 2011 state law that all but ended collective bargaining for most public workers has hit Wisconsin's second largest union particularly hard.
>
> The latest tax documents available show combined income of American Federation of State, County and Municipal Employees (AFSCME) dropped 45 percent in 2012 _ the first full year of the law, according to The Capital Times.
>
> In 2011, the four councils that make up the state organization reported a combined income of $14.9 million. In 2012 that dropped to $8.3 million. Dues revenue dropped 40 percent to $7.1 million.
>
> Walker and supporters of the law said it was a way to help local governments reduce the costs of employee benefits, but the legislation also included measures aimed at financially weakening unions by ending automatic dues deductions.
>
> The union's Council 40 executive director, Rick Badger, says that while the declines in revenue stemming from the law were expected, he has been encouraged by the number of workers who have continued to pay voluntary dues.
>
> "In fact, what (the law's) architects might find surprising is our resilience," he wrote in an email. He said thousands of "front-line workers are remaining engaged in fighting for their rights despite heavy-handed political attempts to silence them."
>
> While public unions no longer enjoy the official bargaining power that they exercised in recent decades, he said many public workers continue to value their presence as advocates for their rights and welfare.

> AFSCME is second only to the Wisconsin Education Association Council, or WEAC, in members in Wisconsin. It has long been a powerful player in state politics, funneling money directly to campaigns and running independent television ads in support of pro-labor candidates, as well as providing a legion of employees and member volunteers who made sure their union brethren voted on Election Day.
>
> The law has also hit other big unions in the state. For instance, WEAC, the state's largest teachers union, saw its revenue drop from $26 million in 2011 to $20 million in 2012.

This is definitely someone we conservatives need to look at in 2016. He has had to face the left in a blue-ish state, and he won.

During the Christmas vacation, I read governor Walker's new book, which was a Christmas present from my friend ECM. If you want to learn more about governor Walker, I recommend picking that up. I actually got the audio version, and it's read by governor Walker himself.

# How the research of Jeffrey M. Schwartz on mindfulness confirms free will

**Wintery Knight** · 28 January 2014 · Archived copy · Original

Here's a summary of the research of UCLA professor Jeffrey Schwartz which appeared in First Things.

Excerpt:

> Schwartz provides a nonmaterialist interpretation of neuroscience and argues that this interpretation is more compelling than the standard materialist interpretation. He arrived at this position as a psychiatrist specializing in the treatment of obsessive-compulsive disorder (OCD). OCD sufferers recognize obsessive-compulsive thoughts and urges as separate from their intrinsic selves. For instance, after a few washings, the compulsive hand-washer realizes that his hands are clean and yet feels driven to keep washing them. It was reflection on this difference between the obvious truth (the hands are clean) and the irrational doubts (they might still be dirty) that prompted Schwartz to reassess the philosophical underpinnings of neuroscience.
>
> From brain scans, Schwartz found that certain regions in the brain of OCD patients (the caudate nucleus in particular) exhibited abnormal patterns of activity. By itself this finding is consistent with a materialist view of mind (if, as materialism requires, the brain enables the mind, then abnormal patterns of brain activity are likely to be correlated with dysfunctional mental states). Nonetheless, having found abnormal patterns of brain activity, Schwartz then had OCD patients engage in intensive mental effort through what he called relabeling, reattributing, refocusing, and revaluing (the 4 Rs). In the case of compulsive hand-washing, this involved a patient acknowledging that his hands were in fact clean (relabeling); attributing anxieties and doubts about his hands being dirty to a misfunctioning brain (reattributing); directing his thoughts and actions away from handwashing and toward productive ends (refocusing); and, lastly, understanding at a deep level the senselessness of OCD messages (revaluing).
>
> **Schwartz documents not only that patients who undertook this therapy experienced considerable relief from OCD symptoms, but also that their brain scans indicated a lasting realignment of brain-activity patterns.** Thus, without any intervention directly affecting their brains, OCD patients were able to reorganize their brains by intentionally modifying their thoughts and behaviors. The important point for Schwartz here is not simply that modified thoughts and behaviors permanently altered patterns of brain activity, but that such modifications resulted from, as he calls it, "mindful attention"-conscious and purposive thoughts or actions in which the agent adopts the stance of a detached observer.

So mind-brain interaction is not a one-way street. Everyone knows that you can alter your consciousness, beliefs, moods, sensations, etc. by changing your brain. But it turns out that you can also will to focus your thoughts on certain things in order to change your brain chemistry. So the causation is not just bottom-up, but top-down.

Now mindfulness therapies – which are documented in the research papers published by Schwartz (like this one and this one and this one)- assume the existence of *free will*. Naturalists don't like these scientific publications because naturalists don't believe in free will, as the famous naturalist philosopher Alex Rosenberg explained in his debate with William Lane Craig.

This post from Uncommon Descent explains the naturalist conundrum. (H/T J. Warner Wallace tweet)

Excerpt:

> The issue, for Schwartz, turns on whether or not there is such a thing as free will. The assumption of free will is critical to mindfulness therapies *for practical purposes*.
>
> Philosophies and religions have various opinions about ultimate free will. **The therapist must ask, is my patient capable of carrying out a program that requires that he choose to focus his attention on A and**

> **not B? In practice, this turns out to be true for many patients, which makes the therapy useful. There is neuroscience evidence for brain reorganization as a result, showing that it is not merely an imagined effect.**
>
> **Now, if someone wishes to claim, as many outspoken advocates of Darwinian evolution have, for example, that free will is impossible, the only thing that a mindfulness therapist can say is, go away. Either they are mistaken or the research results from mindfulness therapies are.**

By the way, if you like this topic, and want a resource to show your friends, be sure and get a hold of the debate on mind vs. brain between Jeffrey M. Schwartz and Michael Shermer.

# J. Warner Wallace: why are you a Christian?

**Wintery Knight** · 28 January 2014 · Archived copy · Original

J. Warner Wallace ask this question of a bunch of young people he trained, and he posted some of the responses.

Excerpt:

> Last week I had the opportunity to train a group of high school students in preparation for an upcoming Berkeley Missions trip. These students will spend the next eight weeks learning about the evidence supporting the Christian worldview and examining many of the most popular objections to Christianity. Since we were very early in the process, I began by asking the students to tell me why they were Christians in the first place.
>
> …[W]hen I asked the students to tell me why *they* were Christians, I didn't get a single evidential response. Most had difficulty answering the question at all, and those who did sounded like members of the Mormon Church.
>
> I didn't know a lot of Christians growing up; I was surrounded by atheists and Mormon family members. I have six fantastic half-brothers and sisters who were raised in the LDS (Latter Day Saints) Church. Many are still committed to Mormonism and happy to share their faith. But if you ask them why they are believers, you'll get many of the same answers I received with the high school students in the Berkeley training. "I prayed about it and God confirmed it was true," "I have a relationship with God and I feel His presence," "I had a strong experience that changed my life," "I just know it is true," "I was raised in the Church and I've never had a reason to question it; God has always been a part of my life," "I know it's true because my life is very different now." These are all great responses and I want to be careful not to minimize the importance or validity of experiential evidence. But when I heard these kinds of answers offered as justification by the Christian students in our group, I asked them: "Do you believe Mormonism is true?" Many of these students had already been on the Utah Missions trip, so they understood the dramatic difference between the claims of Mormonism and the claims of Christianity. They all confirmed they did not believe Mormonism was true and immediately recognized the problem with their responses.

Since he mentioned Mormonism, I'll just link to my post on Mormonism that offers 3 reasons to think that Mormonism is false. The first reason is scientific, the second is historical, and the third is philosophical.

But Wallace's post made me think that it was a good for me to explain that it is OK for people to critically evaluate a worldview – any worldview – by using evidence. It's important because a lot of Christians who believe that religion is about believing sincerely in things without evidence are going to have a hard time knowing why apparently moral, definitely sincere people in other religions are going to Hell, apparently just for the small crime of getting a few questions wrong on a theology quiz. The real answer to the question "Why am I a Christian?" is "because of the evidence". And the real answer to the question "Why I am not some other religion?" is "because of the evidence". Let's take a look.

Here are a couple of worldviews that can be easily falsified with evidence.

**Falsifying a religion using science**

Consider this argument:

1. Hindu cosmology teaches that the universe cycles between creation and destruction, through infinite time.
2. The closest cosmological model conforming to Hindu Scriptures is the eternally "oscillating" model of the universe.
3. The "oscillating" model requires that the universe exist eternally into the past.

4. But the evidence today shows the the universe, and time itself, had a beginning at the big bang.
5. The "oscillating" model requires that the expansion of the universe reverse into a collapse, (= crunch).
6. In 1998, the discovery of the year was that the universe would expand forever. There will be no crunch.
7. Therefore, the oscillating model is disconfirmed by observations.
8. The oscillating model also faces theoretical problems with the "bounce" mechanism.

Atheism also requires an eternal universe, according the Secular Humanist Manifesto:

> FIRST: Religious humanists regard the universe as self-existing and not created.

One of the eternal models of the universe favored by atheists was proposed by Carl Sagan:

> [I]nformation from our universe would not trickle into that next one and, from our vantage point, such an oscillating cosmology is as definitive and depressing an end as the expansion that never stops" (Sagan, Carl (1979), "Will It All End in a Fireball?" *Science Digest*, 86[3]:13-14, September, pp 13-14)

Again, this atheist cosmology, like the Hindu cosmology, is falsified by the evidence – both theoretical and experimental. Now, lots of people believed Carl Sagan, but the progress of science proved that his atheism was wrong. His whole cosmology was wrong. That's a pretty big mistake to make, but that's what you get when you invent a self-serving worldview that goes against the progress of science.

**Falsifying a religion using history**

Consider this argument:

1. To be a Muslim, you must believe that the Koran is without error.
2. The Koran claims that Jesus did not die on a cross. (Qur'an, 4: 157-158)
3. The crucifixion of Jesus is undisputed among non-Muslim historians, including atheist historians.
4. Therefore, it is not rational for me to become a Muslim.

I'm going to support the premise that Jesus was crucified by citing historians from all backgrounds.

Consider some quotes from the (mostly) non-Christian scholars below:

> "Jesus' death as a consequence of crucifixion is indisputable." Gert Lüdemann
>
> "That he was crucified is as sure as anything historical can ever be." J.D. Crossan
>
> "The passion of Jesus is part of history." Geza Vermes
>
> Jesus' death by crucifixion is "historically certain". Pinchas Lapide
>
> "The single most solid fact about Jesus' life is his death: he was executed by the Roman prefect Pilate, on or around Passover, in the manner Rome reserved particularly for political insurrectionists, namely, crucifixion." Paula Fredriksen
>
> "The support for the mode of his death, its agents, and perhaps its co-agents, is overwhelming: Jesus faced a trial before his death, was condemned, and was executed by crucifixion." L.T. Johnson
>
> "One of the most certain facts of history is that Jesus was crucified on orders of the Roman prefect of Judea, Ponitus Pilate." Bart Ehrman

That's 7 famous historians: 3 atheists, 3 Jews and 1 moderate Catholic. The atheists, Ludemann, Crossan and Ehrman, have all debated against the resurrection of Jesus with William Lane Craig. Johnson is the moderate Catholic, the rest are Jewish historians. The Koran was written in the 7th century. That is why no professional

historian accepts the Koran as more authoritative than the many earlier Christian and non-Christian sources for the crucifixion story. Many of the sources for the crucifixion are dated to the 1st century. The Koran is simply too far after the events to be reliable history, especially since it often contradicts earlier sources, both Christian and non-Christian.

Notice how my criticisms of these religions are very much different than what you hear from atheists. My evidence is specific and scholarly. I'm not claiming that these religions are false because it conflicts with my personal preferences. That would be a very stupid way of arguing against a religion. What you have to do is find a claim that is central to the religion and then falsify it using evidence that is incontrovertible. No one cares if you think the universe is too vast. No one cares if you think the eye is badly designed. That's just an opinion. That's a personal preference. Even moral claims are personal preferences on atheism. God isn't bound by any one person's preferences. To falsify a worldview, you have to find clear evidence that is at odds with a core claim of that religion.

Christopher Hitchens is a good example of someone who uses his feelings and personal preferences to make an emotional case against theism, for example. I sort of consider him to be more of a comedian than a scholar, but rank-and-file atheists really go for him. He didn't do very well in his debate with William Lane Craig, that's for sure. He is trying to disprove a worldview the wrong way – with snarky opinions. That's not the way to get to the truth.

**Conclusion**

So, the point here is that it's not that Hindus and Muslims are bad people, and it's not that they are unhappy people. It's that they have *false beliefs.* And it's the falseness of their beliefs that is important to God. It's not God's purpose that we are *sincere* in our beliefs, regardless of whether they are true. It's not God's purpose that we feel *happy* and *content*. It's not God's purpose that we are *liked by others*. God's purpose for us is that we have true beliefs about him, his existence, and what he has done in history, and the spiritual meaning of what he's done. And he expects a proper response to knowing the truth about him in the way we live our lives, too. The truth comes first, then the actions.

A sincere Hindu or Muslim or Mormon or atheist may be very adept at complying with the moral standards of their families and communities. They may feel very confident in the meaningfulness of their plans and achievements in this world. They may feel that they have lived a good life, one that they are happy about. They may have friends and family who affirm the goodness of their beliefs and actions. But in the end, that is not the purpose of life – we don't decide what we are here to do, since we didn't choose to be here. Someone else made us for a purpose. We didn't create and design this universe.

I think people who spend their entire lives in a non-Christian religion or no religion obviously invent a story for themselves that makes them feel comfortable. The real question that everyone has to answer is "is it true?". And for that, we look to the evidence. We do not look to our feelings. We do not look to our friends. We do not look to our family. We do not look to customs and traditions. We look to the evidence and we fashion and proportion our beliefs to the evidence.

# Liberal feminist Hanna Rosin debunks the 77 percent pay for women myth

**Wintery Knight** · 29 January 2014 · Archived copy · Original

In the far-left Slate, of all places.

Excerpt:

> The official Bureau of Labor Department statistics show that the median earnings of full-time female workers is 77 percent of the median earnings of full-time male workers. But that is very different than "77 cents on the dollar for doing the same work as men." The latter gives the impression that a man and a woman standing next to each other doing the same job for the same number of hours get paid different salaries. That's not at all the case. "Full time" officially means 35 hours, but men work more hours than women. That's the first problem: We could be comparing men working 40 hours to women working 35.

> How to get a more accurate measure? First, instead of comparing annual wages, start by comparing average weekly wages. This is considered a slightly more accurate measure because it eliminates variables like time off during the year or annual bonuses (and yes, men get higher bonuses, but let's shelve that for a moment in our quest for a pure wage gap number). By this measure, women earn 81 percent of what men earn, although it varies widely by race. African-American women, for example, earn 94 percent of what African-American men earn in a typical week. Then, when you restrict the comparison to men and women working 40 hours a week, the gap narrows to 87 percent.

> But we're still not close to measuring women "doing the same work as men." For that, we'd have to adjust for many other factors that go into determining salary. Economists Francine Blau and Lawrence Kahn did that in a recent paper, "The Gender Pay Gap.".”They first accounted for education and experience. That didn't shift the gap very much, because women generally have at least as much and usually more education than men, and since the 1980s they have been gaining the experience. The fact that men are more likely to be in unions and have their salaries protected accounts for about 4 percent of the gap. The big differences are in occupation and industry. Women congregate in different professions than men do, and the largely male professions tend to be higher-paying. If you account for those differences, and then compare a woman and a man doing the same job, the pay gap narrows to 91 percent. So, you could accurately say in that Obama ad that, "women get paid 91 cents on the dollar for doing the same work as men."

I believe that the remainder of the gap can be accounted for by looking at other *voluntary* factors that differentiate men and women.

The Heritage Foundation says that a recent study puts the number at 95 cents per dollar.

Excerpt:

> Women are more likely than men to work in industries with more flexible schedules. Women are also more likely to spend time outside the labor force to care for children. These choices have benefits, but they also reduce pay—for both men and women. When economists control for such factors, they find the gender gap largely disappears.
>
> A 2009 study commissioned by the Department of Labor found that after controlling for occupation, experience, and other choices, women earn 95 percent as much as men do. In 2005, June O'Neil, the former

> director of the Congressional Budget Office, found that “There is no gender gap in wages among men and women with similar family roles.” Different choices—not discrimination—account for different employment and wage outcomes.

A popular article by Carrie Lukas in the Wall Street Journal agrees.

Excerpt:

> The Department of Labor’s Time Use survey shows that full-time working women spend an average of 8.01 hours per day on the job, compared to 8.75 hours for full-time working men. One would expect that someone who works 9% more would also earn more. This one fact alone accounts for more than a third of the wage gap.
>
> […]Recent studies have shown that the wage gap shrinks—or even reverses—when relevant factors are taken into account and comparisons are made between men and women in similar circumstances. In a 2010 study of single, childless urban workers between the ages of 22 and 30, the research firm Reach Advisors found that women earned an average of 8% more than their male counterparts. Given that women are outpacing men in educational attainment, and that our economy is increasingly geared toward knowledge-based jobs, it makes sense that women’s earnings are going up compared to men’s.

When women make different choices about education and labor that are more like what men choose, they earn just as much or more than men. What does it mean that people on the left keep pushing pseudo-science on us to try to punish men and reward women? Why are men so awful that they need to be denigrated like this? And how will men respond to social expectations when they have to face being told that they are “bad”? It seems to me that putting men down is going to lower their level of engagement.

# Minimum wage: doing what feels good doesn't produce good results

**Wintery Knight** · 29 January 2014 · Archived copy · Original

Labor Force Participation down to 62.8%
Will Obama's plan to raise minimum wage help people?

From the Daily Caller. (H/T Conway)

Excerpt:

> The Obama administration's proposal to raise the minimum wage to $10.10 an hour could result in as many 1,084,000 jobs eliminated from the work force, according to a new study conducted by the Employment Policies Institute (EPI)
>
> "No amount of denial by the president and his political allies — and no number of 'studies' published by biased researchers — can change the fact that minimum wage hikes eliminate jobs for low-skill and entry-level employees. Non-partisan economists have agreed on this consensus for decades, and the laws of economics haven't changed," Michael Saltsman, research director at EPI, said in a statement.
>
> He offered an alternative to the president's plan: "Instead of raising small businesses' labor costs and creating more barriers to entry-level employment, the president and the Senate should focus on policies that help reduce poverty and create jobs."
>
> The study was released in the wake of an expected vote on a Senate bill that aims to raise the federal minimum wage from the current $7.25 an hour to $10.10 an hour — a nearly 40 percent increase.
>
> Many Democrats argue that increasing the federal minimum will reduce poverty without having an adverse effect on unemployment.
>
> EPI's report, which used analysis from economists at Miami and Trinity University, reached a different conclusion.

> Researchers used recently updated Census Bureau data from 2012 and 2013 to calculate how each individual state would be impacted by the proposed wage hikes. As a lump sum, Americans would see a loss of at least 360,000 jobs, and perhaps even over one million if hourly wages are increased to $10.10.
>
> The number of job losses would be the most dramatic in large states, such as California and Texas. Economists found that California could lose as many as 100,016 jobs and Texas could see up to 128,617 jobs disappear from its economy.

But's it's not just this proposal that is the problem, it's his past policies.

After FIVE YEARS of Obamanomics, we still have a record 100 MILLION people still out of work from when he became President. There has been NO RECOVERY since the housing bubble, which was caused by the Democrats in Congress. Policies like raising the minimum wage only make that worse, although it sounds great to Obama's low information supporters.

**Minimum wage raises cause higher unemployment**

Government Spending Vs Jobs
From Investors Business Daily.

Excerpt:

> How amusing to watch Democrats wring their hands over what they can do to get businesses to create jobs, when one of the biggest job killers is the minimum wage they keep hiking.
>
> Recall that it was Democrats who raised the federal wage floor a whopping $2.10 an hour in the middle of the recession. The record 41% increase has led to record unemployment among young people, especially black teens.
>
> Congress started ratcheting up the minimum wage from $5.15 an hour in mid-2007, arguing it would help abate poverty. But retailers looking to slash costs eliminated low-skilled, entry-level jobs rather than pay the mandated increases.
>
> Now 1.5 million fewer teens are working. Last year's unemployment rate for workers ages 16 to 19 shot up to 26% from 2007's 15%.
>
> As for black teens, their joblessness soared to a record 43% after the final raise to $7.25 took effect in mid-2009. It helped put more than half of young black men out of work — a first.
>
> The president proposes cranking the minimum wage even higher to $9.50. Then he wants to raise it every year thereafter as a "living wage" indexed to inflation.

Yes, this is the problem that happens when you elect someone who knows nothing whatsoever about economics. And when I say nothing, I mean he is in disagreement with virtually all economists *across the ideological spectrum*.

**A large majority of economists agree**

Moderate economist Gregory Mankiw of Harvard University lists the policies that are accepted by virtually all economists.

Here's Greg's list, together with the percentage of economists who agree:

1. A ceiling on rents reduces the quantity and quality of housing available. (93%)
2. Tariffs and import quotas usually reduce general economic welfare. (93%)
3. Flexible and floating exchange rates offer an effective international monetary arrangement. (90%)
4. Fiscal policy (e.g., tax cut and/or government expenditure increase) has a significant stimulative impact on a less than fully employed economy. (90%)
5. The United States should not restrict employers from outsourcing work to foreign countries. (90%)
6. The United States should eliminate agricultural subsidies. (85%)
7. Local and state governments should eliminate subsidies to professional sports franchises. (85%)
8. If the federal budget is to be balanced, it should be done over the business cycle rather than yearly. (85%)
9. The gap between Social Security funds and expenditures will become unsustainably large within the next fifty years if current policies remain unchanged. (85%)
10. Cash payments increase the welfare of recipients to a greater degree than do transfers-in-kind of equal cash value. (84%)
11. A large federal budget deficit has an adverse effect on the economy. (83%)
12. **A minimum wage increases unemployment among young and unskilled workers. (79%)**
13. The government should restructure the welfare system along the lines of a "negative income tax." (79%)
14. Effluent taxes and marketable pollution permits represent a better approach to pollution control than imposition of pollution ceilings. (78%)

You can find out more about how raising the minimum wage increases unemployment, especially for young people and minorities, from this comprehensive, 50-year, government study.

This is why it is important for voters to understand economics. When you raise the price of labor, fewer employers will purchase labor. Supply and demand. This is so basic, that I am surprised that someone as educated as Obama doesn't understand it. It's probably because he has virtually no experience working in the private sector.

# Global warming causing accidents and deaths in the South, thousands stranded

**Wintery Knight** · 29 January 2014 · Archived copy · Original

Leftist CNN explains the results of global warming.

Excerpt:

> Chicago saw a record low of minus 16 (minus 27 C) on Monday. The day's high was minus 11, with a windchill of minus 34. It's part of an Arctic blast that plunged deep into the central United States on Monday, leaving Nashville, Tennessee, 40 degrees colder than Albany, New York; Memphis 20 degrees colder than Anchorage, Alaska; and Atlanta colder than Moscow — Russia or Idaho, take your pick.
>
> The bitter cold that a "polar vortex" is pushing into much of the United States is not just another winter storm. It's the coldest in 20 years in many areas. The South was downright balmy compared to the Great Lakes region, where temperatures hovered in the negative 20s — before wind chill, which dropped temps to the negative 40s and in places like Minneapolis.
>
> […]Authorities have blamed a total of 15 deaths on the cold so far, 11 of them from traffic accidents.
>
> But the the death of an Indianapolis woman found in her backyard early Monday "is believed to be weather-related," police spokesman Kendale Adams told CNN. A man in Wisconsin died of hypothermia, and an elderly woman with Alzheimer's disease who wandered away from her home in New York state was found dead in the snowy woods about 100 yards away, authorities there said.
>
> In addition, hypothermia was a contributing factor in the death of a patient at University Hospitals Case Medical Center in Cleveland, hospital spokesman George Stamatis told CNN.
>
> […]The deep freeze has also snarled air traffic across the country, with more than 3,800 flights canceled by Monday evening, according to flightaware.com.

More leftist CNN:

> A winter storm that paralyzed the South churned up the Eastern Seaboard Tuesday, threatening heavy snowfalls and more misery for the Northeast.
>
> The Southern storm left a trail of treacherous conditions from Arkansas to the Atlantic, closing schools and government offices and contributing to the traffic deaths of at least three people.
>
> Southern states were crippled — covered in sheets of ice that formed on roads, pavements, cars and atop the crunchy snow.
>
> Meanwhile, with memories still fresh of a monster Christmas weekend storm, Northern states again braced for heavy accumulations of snow and potential blizzard conditions. The National Weather Service predicted 4 to 8 inches of snow in the Philadelphia, Pennsylvania, area, 4 inches or more in northern New Jersey and 2 to 6 inches in southern Delaware from Tuesday afternoon into Wednesday morning.
>
> It will be all snow as well for the Interstate 95 corridor Tuesday night and Wednesday, with 8 to 12 inches predicted for the New York City area and between 12 to 16 inches in Boston, Massachusetts. The National Weather Service issued a blizzard warning for coastal Massachusetts, including Boston, on Tuesday night.
>
> New York Gov. Andrew Cuomo activated the state's emergency management plan in an effort, he said, to ensure resources and equipment are positioned to clear roadways and respond to the approaching storm.
>
> Officials declared a "weather emergency" and advised motorists to stay off the roads. The move restricts parking and allows authorities to remove vehicles that block roadways or impede snow plows.

> […]The city of Philadelphia declared a snow emergency Tuesday night, while public schools in Boston will be closed Wednesday because of the predicted snowfall.
>
> At least 30 states were under some sort of winter storm watch or warning Tuesday, and states of emergencies were declared in Louisiana, Alabama, Georgia and the Carolinas. Florida is currently the only U.S. state with no snow, according to the National Oceanic and Atmospheric Administration.

Snow emergencies and record low temperatures, all caused by high carbon emissions and global warming.

**Expert predicts 20 yeas of global cooling**

Why is this happening after we have spent billions on trying to stop the global warming that all the leftists predicted?

CNS News explains what comes next:

> Dr. Don Easterbrook – a climate scientist and glacier expert from Washington State who correctly predicted back in 2000 that the Earth was entering a cooling phase – says to expect colder temperatures for at least the next two decades.
>
> Easterbrook's predictions were "right on the money" seven years before Al Gore and the United Nation's Intergovernmental Panel on Climate Change (IPCC) shared the 2007 Nobel Peace Prize for warning that the Earth was facing catastrophic warming caused by rising levels of carbon dioxide, which Gore called a "planetary emergency."
>
> "When we check their projections against what actually happened in that time interval, they're not even close. They're off by a full degree in one decade, which is huge. That's more than the entire amount of warming we've had in the past century. So their models have failed just miserably, nowhere near close. And maybe it's luck, who knows, but mine have been right on the button," Easterbrook told CNSNews.com.
>
> "For the next 20 years, I predict global cooling of about 3/10ths of a degree Fahrenheit, as opposed to the one-degree warming predicted by the IPCC," said Easterbrook, professor emeritus of geology at Western Washington University and author of 150 scientific journal articles and 10 books, including "Evidence Based Climate Science," which was published in 2011. (See EasterbrookL coming-century-predictions.pdf)
>
> In contrast, Gore and the IPCC's computer models predicted "a big increase" in global warming by as much as one degree per decade. But the climate models used by the IPCC have proved to be wrong, with many places in Europe and North America now experiencing record-breaking cold.
>
> Easterbrook noted that his 20-year prediction was the "mildest" one of four possible scenarios, all of which involve lower temperatures, and added that only time will tell whether the Earth continues to cool slightly or plunges into another Little Ice Age as it did between 1650 and 1790.
>
> **"There's no way to tell 'til you get there," he told CNSNews.com. But he lamented the fact that governments worldwide have already spent a trillion dollars fighting the wrong threat.**

We really should be listening to people who made predictions that have been proven right – not people who are just looking for grant money and political power.

**The real motivation of global warming alarmism is socialism**

My good friend Letitia posted this Daily Caller article, which discusses a possible motive for pushing a theory that is in conflict with the evidence we have.

Excerpt: (links removed)

> United Nations climate chief Christiana Figueres said that democracy is a poor political system for fighting

> global warming. Communist China, she says, is the best model.
>
> China may be the world's top emitter of carbon dioxide and struggling with major pollution problems of their own, but the country is "doing it right" when it comes to fighting global warming says Figueres.

That's what all this nonsense is really about.

We have had no statistically significant warming in 17 years, and now we have record cold, with predictions now of 20 years of global cooling. What is really driving this counter-factual mythology is socialism. It certainly isn't science.

# House Republicans pass “No Taxpayer Funding for Abortion Act”: Obama vows veto

**Wintery Knight** · 30 January 2014 · Archived copy · Original

I’m Scheming Unborn Baby, and I approve this bill

From The Weekly Standard.

Excerpt:

> The House voted Tuesday night to pass Congressman Chris Smith’s (R-N.J.) No Taxpayer Funding for Abortion Act, which expands bans on federal funding of abortions and requires that the Obamacare insurance exchanges clearly describe which plans cover abortion.
>
> The act forbids Obamacare insurance subsidies from being used toward plans that cover abortion. It would make the Hyde Amendment, a 1976 law that prohibited Medicaid from funding abortions, a permanent fixture of national law. It also disqualifies abortion payments from tax benefits. The bill provides for exceptions in cases of rape, incest, and endangerment of the life of the mother.
>
> In the past, multiple polls have shown that Americans disapprove of public funding for abortion.
>
> The bill also mandates “prominent display” of abortion coverage in all plans offered on the new insurance exchanges, and disclosure of any surcharges that apply to abortion procedures.
>
> […]White House aides have already suggested that they would recommend vetoing the bill, should it pass both chambers of Congress.

CNS News reports that the Obama administration handed $540 million taxpayer dollars to Planned Parenthood in FY 2013.

Excerpt:

> Planned Parenthood’s net revenue increased 5% to total of $1.21 billion in its organizational fiscal year ending

> on June 30, 2013, according to its newAnnual Report 2012-2013, and about 45% of that revenue–$540.6 million–was provided by taxpayer-funded government health services grants.
>
> In the same report, Planned Parenthood said that in the year that ended on Sept. 30, 2012 it did 327,166 abortions.
>
> Clinics in Iowa, Arkansas, Nebraska, Oklahoma, Montana and New Hampshire also received $655,192 in grants from the Department of Health and Human Services to serve as Obamacare "navigators," as CNSNews.com reported earlier.
>
> The 2012-2013 Planned Parenthood report states on its second page, "We are the most effective advocate in the country for policies that protect access to safe and legal abortion and advance women's health, actively lobbying in every state legislature …."
>
> Planned Parenthood's affiliates spent $26 million on public policy this past year, while the national office spent $31.3 million on building "advocacy capacity."
>
> Planned Parenthood lobbied heavily for the Affordable Care Act's mandatory contraception coverage, and the ACA, or Obamacare, is celebrated throughout the annual report as "a historic advance for women's health."

Planned Parenthood is the largest provider of abortions in the USA.

Now even if you were a pro-choice person, it seems to me that you should be in favor of this bill to ban taxpayer-funding of abortion. After all, if you're "pro-choice" then you should have to pay for your own choices. If you look at it from a pro-life view, it's like I am being forced to pay you to murder babies. Or from a slavery analogy, I am being forced to buy you slaves. If I have an objection to something you are choosing to do, then I shouldn't have to pay for it. That sounds like common sense, but as you can see, the Democrats are opposed to it. They have no problems at all stealing from my earnings in order to subsidize acts that violate my conscience.

However, in states where the Democrats are not in control, these laws to ban taxpayer-funding of abortion do get passed.

Consider this story from Fox News.

Excerpt:

> Arizona Gov. Jan Brewer on Friday signed into law a bill to cut off Planned Parenthood's access to taxpayer money funneled through the state for non-abortion services.
>
> Arizona already bars use of public money for abortions except to save the life of the mother, but anti-abortion legislators and other supporters of the bill have said the broader prohibition is needed to make sure that no public money indirectly supports abortion services.
>
> "This is a common sense law that tightens existing state regulations and closes loopholes in order to ensure that taxpayer dollars are not used to fund abortions, whether directly or indirectly," said Brewer, a Republican. "By signing this measure into law, I stand with the majority of Americans who oppose the use of taxpayer funds for abortion."
>
> Arizona has said a funding ban would interrupt its preventive health care and family planning services for nearly 20,000 women served by the organization's clinics. The organization has said it will consider a legal challenge.
>
> The measure targeting funding for Planned Parenthood for non-abortion services was one of several approved by Arizona's Republican-led Legislature related to contentious reproductive health care issues during a 116-day session that ended Thursday. Brewer is a Republican.
>
> Other approved Arizona bills include one generally banning abortions after 20 weeks of pregnancy, which Brewer has already signed, and one loosening a state law that generally requires health care plans to cover

> contraception.

So the bottom line is, if you don't want to pay for someone else's "choices", then vote Republican. And remember, whatever you tax, you get less of. Whatever you subsidize, you get more of.

# Six reasons why you should believe in non-physical minds

**Wintery Knight** · 30 January 2014 · Archived copy · Original

(Podcast uploaded, with permission, by ReligioPolitical Talk)

This podcast is a must-listen. Please take the time to download this podcast and listen to it. I guarantee that you will love this podcast. I even recommended it to my *Dad* and I almost never do that.

Details:

> In this podcast, J. Warner examines the evidence for the existence of the mind (and inferentially, the soul) as he looks at six classic philosophical arguments. Jim also briefly discusses Thomas Nagel's book, Mind and Cosmos and discusses the limitations of physicalism.

The MP3 file is here. (67 MB, 72 minutes)

Topics:

- Atheist Thomas Nagel's latest book "Mind and Cosmos" makes the case that materialism cannot account for the evidence of mental phenomena
- Nagel writes in this recent New York Times article that materialism cannot account for the reality of consciousness, meaning, intention and purpose
- Quote from the Nagel article:

> Even though the theistic outlook, in some versions, is consistent with the available scientific evidence, I don't believe it, and am drawn instead to a naturalistic, though non-materialist, alternative. Mind, I suspect, is not an inexplicable accident or a divine and anomalous gift but a basic aspect of nature that we will not understand until we transcend the built-in limits of contemporary scientific orthodoxy.

- When looking at this question, it's important to not have our conclusions pre-determined by presupposing materialism or atheism
- If your mind/soul doesn't exist and you are a purely physical being then that is a defeater for Christianity, so we need to respond
- Traditionally, Christians have been committed to a view of human nature called "dualism" – human beings are souls who *have* bodies
- The best way* to argue for the existence of the soul is using philosophical arguments

The case:

- The law of identity says that if A = B' if A and B have the exact same properties
- If A = the mind and B = the brain, then is A identical to B?
- Wallace will present 6 arguments to show that A is not identical to B because they have different properties

Not everyone of the arguments below might make sense to you, but you will probably find one or two that strike you as correct. Some of the points are more illustrative than persuasive, like #2. However, I do find #3, #5 and #6 persuasive.

1) First-person access to mental properties

- Thought experiment: Imagine your dream car, and picture it clearly in your mind
- If we invited an artist to come and sketch out your dream car, then we could see your dream car's shape on

paper

- This concept of your dream car is not something that people can see by looking at your brain structure
- Physical properties can be physically accessed, but the properties of your dream care and privately accessed

2) Our experience of consciousness implies that we are not our bodies

- Common sense notion of personhood is that we own our bodies, but we are not our bodies

3) Persistent self-identity through time

- Thought experiment: replacing a new car with an old car one piece at a time
- When you change even the smallest part of a physical object, it changes the identity of that object
- Similarly, your body is undergoing changes constantly over time
- Every cell in your body is different from the body you had 10 years ago
- Even your brain cells undergo changes (see this from New Scientist – WK)
- If you are the same person you were 10 years ago, then you are not your physical body

4) Mental properties cannot be measured like physical objects

- Physical objects can be measured (e.g. – use physical measurements to measure weight, size, etc.)
- Mental properties cannot be measured

5) Intentionality or About-ness

- Mental entities can refer to realities that are physical, something outside of themselves
- A tree is not about anything, it just is a physical object
- But you can have thoughts about the tree out there in the garden that needs water

6) Free will and personal responsibility

- If humans are purely physical, then all our actions are determined by sensory inputs and genetic programming
- Biological determinism is not compatible with free will, and free will is required for personal responsibility
- Our experience of moral choices and moral responsibility requires free will, and free will requires minds/souls

He spends the last 10 minutes of the podcast responding to naturalistic objections to the mind/soul hypothesis.

*Now in the podcast, Wallace does say that scientific evidence is not the best kind of evidence to use when discussing this issue of body/soul and mind/brain. But I did blog yesterday about two pieces of evidence that I think are relevant to this discussion: corroborated near-death experiences and mental effort.

You might remember that Dr. Craig brought up the issue of substance dualism, and the argument from intentionality ("aboutness"), in his debate with the naturalist philosopher Alex Rosenberg, so this argument about dualism is battle-ready. You can add it to your list of arguments for Christian theism along with all the other arguments like the Big Bang, the fine-tuning, the origin of life, stellar habitability, galactic habitability, irreducible complexity, molecular machines, the Cambrian explosion, the moral argument, the resurrection, biological convergence, and so on.

# Stephen C. Meyer: does the Big Bang cosmology support atheism or theism?

**Wintery Knight** · 30 January 2014 · Archived copy · Original

Here's the 66-minute video featuring Dr. Stephen C. Meyer, who holds the Ph.D in philosophy of science from Cambridge University, and other degrees in the hard sciences. (H/T UK Apologetics)

The lecture starts really, really slowly. You can just fast-forward to the 12 minute mark, or you might die of boredom.

Topics:

- Up until the the last 100 years or so, everyone agreed that the universe was eternal
- This is at odds with the traditional Christian view that God created the universe
- Materialism, the view that matter is all there is, requires eternally existing matter
- Discovery #1: Hubble discovers that the universe is expanding (redshift observation)
- The expanding universe was resisted by proponents of the eternal universe, like Einstein
- Some naturalists even proposed speculative static models like the steady-state model
- However, not of the speculative models fit with observations and experimental results
- Discovery #2: Penzias and Wilson discover the cosmic microwave background radiation
- Measurements of this background radiation confirmed a prediction of the Big Bang theory
- The steady-state theory was falsified of by the discovery of this background radiation
- The oscillating model was proposed to prevent the need for an absolute beginning
- But the oscillating model is not eternal, it loses energy on each "bounce"
- A paper by Alan Guth and Marc Sher from 1982 proved that our universe will not bounce
- In addition, experiments reveal that the universe will expand forever, and not contract
- The beginning of the universe is more at home in a theistic worldview than an atheistic one
- The beginning of the universe fits in well with the Bible, e.g. – Genesis 1, Titus 1, etc.

In case you are wondering about what the evidence is for the Big Bang, here are 3 of the evidences that are most commonly offered:

> Three main observational results over the past century led astronomers to become certain that the universe began with the big bang. First, they found out that the universe is expanding—meaning that the separations between galaxies are becoming larger and larger. This led them to deduce that everything used to be extremely close together before some kind of explosion. Second, the big bang perfectly explains the abundance of helium and other nuclei like deuterium (an isotope of hydrogen) in the universe. A hot, dense, and expanding environment at the beginning could produce these nuclei in the abundance we observe today. Third, astronomers could actually observe the cosmic background radiation—the afterglow of the explosion—from every direction in the universe. This last evidence so conclusively confirmed the theory of the universe's beginning that Stephen Hawking said, "It is the discovery of the century, if not of all time."

This is a good article to send to atheists who are not comfortable with what the progress of science has revealed about the beginning of the universe, and of time itself. If you look in agnostic astronomer Robert Jastrow's book "God and the Astronomers" (2nd edition), you'll find 6 evidences.

By the way, Dr. Meyer also does a great job of explaining the problem of proteins, DNA and the origin of life in this lecture. And you can hear him defend his views in this debate podcast with Keith Fox and in this debate

podcast with Peter Atkins. He does a great job in these debates.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature

# Six things you have to believe to be a Christian

**Wintery Knight** · 31 January 2014 · Archived copy · Original

Here is the article on the Stand to Reason web site, written by Greg Koukl.

Excerpt:

> The six essential doctrines would be: the Trinity, the deity and humanity of Christ, the bodily resurrection, man's fallenness and guilt, salvation by grace through faith by the substitutionary atonement of Jesus Christ, and belief that Jesus is the Messiah. And you have a seventh doctrine that strikes me as a functional necessity, that is the ultimate authority of Scripture without which none of the other truths can be affirmed or asserted with confidence.
>
> By the way, it's really important that people know these doctrines because many Christians are quite kind-hearted and they end up not being very careful about drawing distinctions between truth and falsity because they don't want to disagree. I understand that. But if you were really kind-hearted then you would be honest and straight-forward with people about the demands of the gospel on their lives. The demand of the gospel is that you believe particular things to be true. It's not just a matter of mere belief, as if these are just some incidental details of theology that you might happen to be mistaken about. And if you just happen to be mistaken, why should you go to hell because of that?
>
> You don't go to hell because you just happen to mistake a doctrine. You go to hell because you have broken God's law. It is very critical to understand that. God only judges guilty people. People get judged by God not because they mess up on their theology but because they are guilty. People who are guilty get condemned. That's it. There is a way to get around that but you've to know a couple of particular things that are true before you can take advantage of the forgiveness God offers. That's where the essential doctrines come in.

He's writing from a Calvinist perspective, which I don't entirely agree with. But I don't see anything wrong in that minimal list. Sometimes, it's a good thing for us to focus on the essentials. There are lots of Christian denominations, and they disagree on many minor things, but on the major things, they are in agreement. And that's a good thing, too.

# How good are the atheistic arguments of Christopher Hitchens?

**Wintery Knight** · 31 January 2014 · Archived copy · Original

I thought that I would go over an opening statement from a previous debate featuring Christopher Hitchens to find out what atheists are like in debates. I used his opening speech from his debate with Frank Turek. The audio from that debate is here, at Brian Auten's Apologetics 315 site.

Now the important thing to remember about a generic debate on whether GOD EXISTS is that there should be no mention of any particular God, such as the Christian God, and no mention of the history of any particular religion. All arguments that assume specific theological or moral doctrines or specific religious history are *irrelevant* to a debate on generic theism.

The question being debated is: does a God who created and designed the universe, who has all the traditional properties of God, such as omniscience, omnipotence, omni-benevolence, etc. exist? That is the question being debated in a "Does God Exist?" debate.

**Frank Turek's case for theism:**

Frank Turek made 4 *relevant* arguments for theism, each of which *alone* would support his conclusion, that God exists:

- the origin of time, space, matter and energy out of nothing
- the fine-tuning of the physical constants to support the minimum requirements for life of any kind
- the origin of the biological information in the first self-replicating organism
- objective, prescriptive moral rules need to be grounded by the designer of the universe

And he also listed 4 features of the universe that are more consistent with theism than atheism (= materialism).

- non-material minds that allow rationality that would be impossible on materialism/determinism
- the mathematical structure of the universe and its intelligibility to the scientific method
- free will, which is required for moral responsibility and moral choices, requires a non-material mind/soul
- our first person experience of consciousness is best explained by a non-material mind/soul

**Hitchens' case against theism**

To counter, Hitchens has to argue against God using arguments in one of two forms:

1. The concept of God is logically self-contradictory
2. An *objective* feature of the world is inconsistent with the attributes of God

The claim that God does not exist is a claim to know something about God, namely, that he does not exist. This claim requires the speaker to bear a burden of proof. In a debate on "Does God Exist?", Hitchens must *deny* that God exists. Let me be clear: Hitchens must defeat the arguments for the claim that God exists, and then defend the claim that God does not exist, and support that claim using arguments and evidence.

Hitchens makes 2 basic claims:

- There are no good reasons to believe that theism is true
- There are good reasons to believe atheism is true

So far so good. But what are his good reasons for atheism?

1. I personally don't like Christianity, therefore God doesn't exist
   – Premise: I personally don't like Catholicism getting rid of limbo

– Premise: I personally don't like Hell
– Premise: I personally don't like some episodes in church history
– Conclusion: God doesn't exist

2. The plurality of religions means that no religious claims can be correct, therefore God doesn't exist
   – Premise: There are lots of religions
   – Premise: The religions all disagree in their truth claims about the external world
   – Conclusion: No religion's claims can be correct, therefore God doesn't exist
3. I believe in one less God than you, therefore God doesn't exist
   – Premise: You disbelieve in every God I do, except one
   – Conclusion: God doesn't exist
4. Religious people are stupid and evil, therefore God doesn't exist
   – Premise: Religious people are ignorant
   – Premise: Religious people are fearful
   – Premise: Religious people are servile
   – Premise: Religious people are masochistic
   – Conclusion: God doesn't exist
5. Evolution explains how life progressed from single cell to today's bio-diversity, therefore God doesn't exist
   – Premise: Modern theists like Turek believe in Paley's argument, and argued it in this debate
   – Premise: Paley's argument was refuted by evolution
   – Conclusion: God doesn't exist
6. God wouldn't have made the universe this way, therefore God doesn't exist
   – Premise: If God exists, then he would have made the universe my way
   – Premise: The heat death of the universe wasn't done my way
   – Premise: The extinction of species wasn't done my way
   – Premise: The size of the universe wasn't done my way
   – Premise: The amount of open space wasn't done my way
   – Premise: The large number of stars wasn't done my way
   – Premise: The age of the universe wasn't done my way
   – Conclusion: God doesn't exist
7. Religion makes people do things that I don't like, therefore God doesn't exist
   – Premise: Some religions do suicide bombing
   – Premise: Some religions do child abuse
   – Premise: Some religions do genital mutilation
   – Conclusion: God doesn't exist
8. If you speak a sentence, I can repeat the same words as you said, therefore God doesn't exist
   – Premise: Anything that you say is good, I can say is good too
   – Premise: Anything that you say is bad, I can say is bad too
   – Conclusion: God doesn't exist
9. Atheists are morally superior to religious people, therefore God doesn't exist
   – Premise: I act in a way that is consistent with my personal, arbitrary moral preferences
   – Premise: You don't act in a way that is consistent with my personal, arbitrary moral preferences
   – Conclusion: God doesn't exist
10. If I believe in God, I would have to submit to an authority
    – Premise: If I believe in God, then I can't do whatever I want
    – Premise: But I want to do whatever I want
    – Conclusion: God doesn't exist
11. I don't like certain Christian doctrines, therefore arguments for God from science fail and therefore God doesn't

exist
– Premise: I don't like the atonement
– Premise: I don't like the virgin birth
– Premise: I don't like the incarnation
– Premise: I don't like original sin
– Premise: I don't like the resurrection
– Conclusion: Arguments that are built on recent discoveries from the progress of science like the big bang, fine-tuning, origin of life, etc. are incorrect, and therefore God doesn't exist

General comments about Hitchens' case:

- The form of *all* of these arguments is *logically invalid*. The conclusions do not follow from the premises using the laws of logic, such as modus ponens and modus tollens.
- Hitchens cannot complain about morality because he has no foundation for objective moral facts. What he is really expressing is that he personally does not like such-and-such a state of affairs, based on his own arbitrary personal preferences, and the arbitrary social customs that evolved in the place and time that he finds himself in. On atheism, "morality" is just describing what people do – either individually or as groups living in different times and places. There is no objective right and wrong, and no objective way we ought to be. All statements are *subjective.* They describe what the speaker personally likes and dislikes. Just like taste in foods or taste in dress – which varies by individually, and is influenced by time and place ARBITRARILY.

Specific comments about each argument:

- Argument 1 tries to disprove God by arguing from Hitchens' personal preferences about specific Christian doctrines. Christian doctrines are irrelevant to a debate about generic theism. And there is no reason why God should be bound by the personal, subjective preferences of one man. In fact, the concept of God entails that his unchanging nature is the standard of good and evil. So, this argument doesn't disprove God, it's just a statement of personal, subjective preference.
- Argument 2: Just because there are different truth claims made by different groups, doesn't mean no one is correct. Mormons believe that matter existed eternally, and Jews believe it was created out of nothing. The big bang theory shows that the Mormons are wrong and the Jews are right.
- Argument 3: First of all, the debate is a about a generic Creator and Designer, not any particular religious conception of God. So the argument is irrelevant. Moreover, Christians reject Zeus, for example, because Zeus is supposed to exist in time and space, and therefore could not be the cause of the beginning of time and space.
- Argument 4: This is just the ad hominem fallacy. Hitchens is attacking the character of the theist, but that doesn't show theism is false.
- Argument 5: This argument can be granted for the sake of argument, even though it's debatable. The point is that it is irrelevant, since it doesn't refute any of Turek's actual scientific arguments like the big bang, the fine-tuning of the physical constants, the origin of information in the simplest living cell.
- Argument 6: Again, there is no reason to think that God should be bound by Hitchens' personal opinion of how God should operate.
- Argument 7: This is the ad hominem fallacy again. The good behavior of religious believers is not a premise in any of Turek's FOUR arguments for theism. Therefore, Hitchens' point is irrelevant to the debate.
- Argument 8: The fact that the atheist can parrot moral claims is not the issue. Being able to speak English words is not what grounds objective, prescriptive morality. The issue is the ontology of moral rules, the requirement of free will in order to have moral responsibility and moral choices, ultimate significance of moral actions, and the rationality of self-sacrificial moral actions.
- Argument 9: This is just the ad hominem fallacy again.
- Argument 10: This is not argument so much as it reveals that the real reason Hitchens is an atheist is emotional.

One might even say infantile.

- Argument 11: Again, these specific Christian doctrines are irrelevant to a debate about generic theism. And Hitchen's subjective, personal preferences about Christian doctrine certainly do not undermine the objective scientific support for the premises in Turek's 3 scientific arguments.

So Frank Turek talked about facts in the external world, and Christopher Hitchens mistakenly thought that his opinions and preferences about what he would do if he were God were interesting to us. They might be interesting to his psychiatrist, but they are not interesting to us.

# Dr. Robin Collins explains two kinds of cosmic fine-tuning

**Wintery Knight** · 31 January 2014 · Archived copy · Original

I was busy working my way through "Debating Christian Theism", a book published by Oxford University Press in August 2013. It features about 20 different topics from science, to philosophy, to history. For each topic, there is an essay by a world-class scholar in favor, and one opposed. So you get both sides of many interesting issues, at a very advanced level. The section on cosmic fine-tuning features a chapter written by Dr. Robin Collins.

About Robin Collins:

> Robin Collins (PhD, University of Notre Dame, 1993), is professor of philosophy at Messiah College, Grantham, PA specializing in the area of science and religion. He has written over twenty-five articles and book chapters on a wide range of topics, such as the fine-tuning of the cosmos as evidence for the existence of God, evolution and original sin, the Doctrine of Atonement, Asian religions and Christianity, and Bohm's theory of quantum mechanics. Some of his most recent articles/book chapters are "Philosophy of Science and Religion" in The Oxford Handbook of Science and Religion, "Divine Action and Evolution" in The Oxford Handbook of Philosophical Theology (2009) "The Multiverse Hypothesis: A Theistic Perspective," in Universe or Multiverse? (Cambridge University Press), and "God and the Laws of Nature," in Theism or Naturalism: New Philosophical Perspectives (Oxford University Press, forthcoming). He recently received a grant from the John Templeton Foundation to finish a book that presents the case for design based on physics and cosmology, tentatively entitled The Well-Tempered Universe: God, Cosmic Fine-tuning, and the Laws of Nature.

**The fine-tuning argument**

Here's a short article where Collins gives TWO examples of the fine-tuning. He is very modest in his argument, merely asserting that the fine-tuning is more compatible with theism than it is with atheism.

Excerpt:

> Science is commonly thought to have undercut belief in God. As Nobel Prize winning physicist Steven Weinberg famously remarked, "the more we find out about the universe, the more meaningless it all seems." Yet, the discoveries of modern physics and cosmology in the last 50 years have shown that the structure of the universe is set in an extraordinarily precise way for the existence of life; if its structure were slightly different, even by an extraordinarily small degree, life would not be possible. In many people's minds, the most straightforward explanation of this remarkable fine-tuning is some sort of divine purpose behind our universe.

> This fine-tuning falls into three categories: the fine-tuning of the laws of nature, the fine-tuning of the constants of physics, and the fine-tuning of the initial conditions of the universe. "Fine-tuning of the laws of nature" refers to the fact that if the universe did not have precisely the right combination of laws, complex intelligent life would be impossible. If there were no universal attractive force (law of gravity), for example, matter would be dispersed throughout the universe and the energy sources (such as stars) needed for life would not exist. Without the strong nuclear force that binds protons and neutrons together in the nucleus, there would not be any atoms with an atomic number greater than hydrogen, and hence no complex molecules needed for life. And without the Pauli-exclusion principle, all electrons would fall to the lowest orbital of an atom, undercutting the kind of complex chemistry that life requires.

> Some fundamental physical numbers governing the structure of the universe—called the constants of physics—also must fall into an exceedingly narrow range for life to exist. For example, many have estimated

> that the cosmological constant—a fundamental number that governs the expansion rate of empty space—must be precisely set to one part in $10^{120}$ in order for life to occur; if it were too large, the universe would have expanded too rapidly for galaxies and stars to form, and if it were too small, the universe would have collapsed back on itself. As Stephen Hawking wrote in his book A Brief History of Time, "The remarkable fact is that the values of these numbers [i.e. the constants of physics] seem to have been very finely adjusted to make possible the development of life." Finally, the initial distribution of mass energy at the time of the big bang must have an enormously special configuration for life to occur, which Cambridge University mathematical physicist Roger Penrose has calculated to be on the order of one part in $10^{10^{123}}$. This is an unimaginably small number.

I know what you're thinking: How do we know that non-Christian scientists acknowledge the fine-tuning of gravity in the way that Collins describes?

Well, the New Scientist actually talks about the fine-tuning of the force of gravity. And they're not Christians.

Excerpt:

> The feebleness of gravity is something we should be grateful for. If it were a tiny bit stronger, none of us would be here to scoff at its puny nature.
>
> The moment of the universe's birth created both matter and an expanding space-time in which this matter could exist. While gravity pulled the matter together, the expansion of space drew particles of matter apart – and the further apart they drifted, the weaker their mutual attraction became.
>
> It turns out that the struggle between these two was balanced on a knife-edge. If the expansion of space had overwhelmed the pull of gravity in the newborn universe, stars, galaxies and humans would never have been able to form. If, on the other hand, gravity had been much stronger, stars and galaxies might have formed, but they would have quickly collapsed in on themselves and each other. What's more, the gravitational distortion of space-time would have folded up the universe in a big crunch. Our cosmic history could have been over by now.
>
> **Only the middle ground, where the expansion and the gravitational strength balance to within 1 part in $10^{15}$ at 1 second after the big bang, allows life to form.**

Here's a very long paper by Collins on the fine-tuning argument, where he answers several objections to the argument, including the multiverse/many-universe hypothesis. I normally make fun of the multiverse, (= the Flying Spaghetti Monster), but it actually does deserve a reasonable, fair response. (Unless Jerry asks, then it's Flying Spaghetti Monster all the way).

# Graduate students with non-STEM degrees increasingly dependent on welfare programs

**Wintery Knight** · 1 February 2014 · Archived copy · Original

From the Chronicle of Higher Education.

Excerpt:

> Melissa Bruninga-Matteau, a medieval-history Ph.D. and adjunct professor who gets food stamps: "I've been able to make enough to live on. Until now."
>
> "I am not a welfare queen," says Melissa Bruninga-Matteau.
>
> That's how she feels compelled to start a conversation about how she, a white woman with a Ph.D. in medieval history and an adjunct professor, came to rely on food stamps and Medicaid. **Ms. Bruninga-Matteau, a 43-year-old single mother** who teaches two humanities courses at Yavapai College, in Prescott, Ariz., says the stereotype of the people receiving such aid does not reflect reality. Recipients include growing numbers of people like her, the highly educated, whose advanced degrees have not insulated them from financial hardship.
>
> "I find it horrifying that someone who stands in front of college classes and teaches is on welfare," she says.
>
> Ms. Bruninga-Matteau grew up in an upper-middle class family in Montana that valued hard work and saw educational achievement as the pathway to a successful career and a prosperous life. She entered graduate school at the University of California at Irvine in 2002, idealistic about landing a tenure-track job in her field. She never imagined that she'd end up trying to eke out a living, teaching college for poverty wages, with no benefits or job security.
>
> Ms. Bruninga-Matteau always wanted to teach. She started working as an adjunct in graduate school. This semester she is working 20 hours each week, prepping, teaching, advising, and grading papers for two courses at Yavapai, a community college with campuses in Chino Valley, Clarkdale, Prescott, Prescott Valley, and Sedona. Her take-home pay is $900 a month, of which $750 goes to rent. Each week, she spends $40 on gas to get her to the campus; she lives 43 miles away, where housing is cheaper.
>
> **Ms. Bruninga-Matteau does not blame Yavapai College for her situation but rather the "systematic defunding of higher education."** In Arizona last year, Gov. Jan Brewer, a Republican, signed a budget that cut the state's allocation to Yavapai's operating budget from $4.3-million to $900,000, which represented a 7.6 percent reduction in the college's operating budget. The cut led to an 18,000-hour reduction in the use of part-time faculty like Ms. Bruninga-Matteau.
>
> "The media gives us this image that people who are on public assistance are dropouts, on drugs or alcohol, and are irresponsible," she says. **"I'm not irresponsible. I'm highly educated.** I have a whole lot of skills besides knowing about medieval history, and I've had other jobs. I've never made a lot of money, but I've been able to make enough to live on. Until now."

She's irresponsible, because she expects the people who choose to study rather difficult and unpleasant subjects like nursing and computer science and economics to pay for her lifestyle through taxation and "higher education funding". I do think it's important to point out that the main driver of higher tuition is increasing government funding of education, and that this increasing funding of higher education is nothing but corporate welfare.

Excerpt:

> The most obvious way that colleges might capture federal student aid is by raising tuition. Research to date has been inconclusive, but Stephanie Riegg Cellini of George Washington University and Claudia Goldin of Harvard have provided compelling new analysis. Cellini and Goldin looked at for-profit colleges, utilizing the

> key distinction that only some for-profit schools are eligible for federal aid. Riegg and Goldin find that that aid-eligible institutions "charge much higher tuition … across all states, samples, and specifications," even when controlling for the content and quality of courses. The 75 percent difference in tuition between aid-eligible and ineligible for-profit colleges — an amount comparable to average per-student federal assistance — suggests that "institutions may indeed raise tuition to capture the maximum grant aid available."

Here are some of the comments that I posted in a Facebook discussion about the CHE story:

> I know that some may disagree with me, but this is why people need to focus on STEM fields and stay away from artsy stuff and Ph.Ds in general. We are in a recession. Trade school and STEM degrees only until things improve.
>
> Also, no single motherhood by choice. Get married before you have children, and make sure you vet the husband carefully for his ability to protect, provide, commit and lead on moral and spiritual issues. This woman is not a victim. She chose her life, and the rest of us are paying for it. Nice tattoos by the way – that will really help when she's looking for a job.
>
> I am actually better at English than computer science, but I find myself with a BS and MS in computer science. We don't get to do what we like. We do what we have to in order to be effective as Christians. According to the Bible, men have an obligation to not engage in premarital sex, and to marry before having children, and to provide for their families, or they have denied the faith. I would like to have studied English, but the Bible says no way.
>
> I have no problem with people who can make a career out of the arts, like a Robert George or a William Lane Craig. But you can't just go crazy. And I think men have a lot less freedom than women to choose their major, we have the obligation to be providers and we have to be selected by women based on whether we can fulfill that role (among other roles).
>
> Women have more freedom because they are not saddled with the provider role like men are. However, I think that the times now are different than before. There is more discrimination against conservatives on campus in non-STEM fields and fewer non-STEM jobs in a competitive global economy. The safest fields are things like petroleum engineering, software engineering, etc.
>
> If [people who major in the humanities] can make a living and support a family without relying on government-controlled redistribution of wealth, then I salute and encourage you. If you rely on the government, know that this money is being taken away from those who are doing things they don't like at all in order to be independent and self-reliant. It is never good to be dependent on government. That money comes from people like me.

In response to an artsy challenger:

> I am happy to be scorned by those who make poor choices so long as I can have my money back from them so that I can pursue my dreams. I didn't see any of these artsy people in the lab at 4 AM completing their operating system class assignments, nor do I see them here working overtime on the weekend in the office. They can say anything and feel anything they want, and write plays and poetry all about their feelings, too. Just give me the money I earned back first. It's not their money. They have no right to it.

One person asked why I was "always winter, never Christmas", and I replied:

> It is Christmas for the Christians who I send books and DVDs to, as well as for the Christian scholars I support, and the Christian conferences, debates and lectures I underwrite across the world. Unfortunately, every dollar taken from me is a dollar less for that Ph.D tuition of a Christian debater, a dollar less for the flight of that Christian apologetics speaker, a dollar less for that textbook for that Christian biology student,

> and a dollar less for the flowers being sent to that post-abortive woman who I counseled who is now in law school. I have a need for the money I earn, and when it's sent to Planned Parenthood to pay for abortions by the government, my plan to serve God suffers. And finally, should I ever get married, I would like my wife to have the option of staying home with the children and even homeschooling them. That costs money. Somehow, I feel that given the choice between my homeschooling wife and the public school unions, the government will choose to give my money to the unions. Just a hunch.

I'm not Santa Claus – I have goals for the money I earn.

I think that people should go into the humanities when they are serious about making a career of it and can get the highest grades. But if they are coasting and only getting Bs and Cs and not paying attention in class, then drop out and go to trade school. Don't complain later when you can't find a job. STEM careers pay the most.

**15 top-earning degrees**

| | | |
|---|---|---|
| 1 | Petroleum engineering | $83,121 |
| 2 | Chemical engineering | $64,902 |
| 3 | Mining engineering | $64,404 |
| 4 | Computer engineering | $61,738 |
| 5 | Computer science | $61,407 |
| 6 | Electrical engineering | $60,125 |
| 7 | Mechanical engineering | $58,766 |
| 8 | Industrial engineering | $58,358 |
| 9 | Systems engineering | $57,438 |
| 10 | Engineering technology | $56,447 |
| 11 | Actuarial science | $56,320 |
| 12 | Aeronautical engineering | $56,311 |
| 13 | Agricultural engineering | $54,352 |
| 14 | Biomedical engineering | $54,158 |
| 15 | Construction management | $53,199 |

NATIONAL ASSOCIATION OF COLLEGES AND EMPLOYERS

Top-earning degrees / college majors

Here's my previous post on the woman who accumulated $185,000 of student debt studying the humanities and is likewise demanding handouts and claiming not to be responsible.

# Christina Hoff Sommers: how to make school better for boys

**Wintery Knight** · 1 February 2014 · Archived copy · Original

Christina Hoff Sommers

One of the most troubling things I see in the modern church is the tendency of church people and pastors to blame men for not being more aggressive about marrying. Often, the blame is placed on men. Men are told that we need to do better in school, work harder at work, and that we need to be more aggressive about courting and marrying. Very often, you hear the slogan "man up" directed at men, and we are told to stop playing video games and looking at porn and grow up.

The first thing to note is that marriage is much less attractive to men these days. First, the value proposition of marriage changed – especially the problem of no-fault divorce and divorce courts. The economic situation facing men has changed as well – the economy is poor, but the debt is very very high. Those are two important factors.

Another problem is fatherlessness, which is caused by welfare incentives. A lot of the behavior of young men is based on whether there is a father present in the home. The fact of the matter is that single motherhood by choice has become commonplace, and the aggravating factor for this trend is support for welfare. Welfare is bad for two reasons. First, it encourages women to raise children without a father. Boys raised without a father are not as likely to pursue courtship and marriage as boys raised with a father, because fatherlessness harms a boy's ability to learn to do the things needed for marriage.

Another problem is the availability of pre-marital sex. When a man can get sex without marriage, then he doesn't feel the same desire to get married.

So there are a few examples of things that we can change to nudge men toward marriage. Just speaking slogans like "man up" to men doesn't really address these problems.

But in this post, I want to look at a problem that I haven't even mentioned yet – the problem of schools that don't produce men who can provide for a family.

**Education Reform**

Here is Christian equity-feminist Christina Hoff Sommers of the American Enterprise Institute to do that, writing in the left-leaning Atlantic about this problem.

Excerpt:

> Women in the United States now earn 62 percent of associate's degrees, 57 percent of bachelor's degrees, 60 percent of master's degrees, and 52 percent of doctorates.
>
> […]Boys in *all* ethnic groups and social classes are far less likely than their sisters to feel connected to school, to earn good grades, or to have high academic aspirations. A recent working paper from the National Bureau of Economic Research documents a remarkable trend among high-achieving students: In the 1980s, nearly the same number of top male and female high school students said they planned to pursue a postgraduate degree (13 percent of boys and 15 percent of girls). By the 2000s, 27 percent of girls expressed that ambition, compared with 16 percent of boys. During the same period, the gap between girls and boys earning mostly A's nearly doubled—from three to five percentage points.

I was a minority boy before I became a minority man – look at this:

> This gap in education engagement has dire economic consequences for boys. A 2011 Brookings Institution report quantifies the economic decline of the median male: For men ages 25 to 64 with no high school diploma, median annual earnings have declined 66 percent since 1969; for men with only a high school diploma, wages declined by 47 percent. Millions of male workers, say the Brookings authors, have been "unhitched from the engine of growth." The College Board delivered this disturbing message in a 2011 report about Hispanic and African-American boys and young adults: "Nearly half of young men of color age 15 to 24 who graduate from high school will end up unemployed, incarcerated or dead." Working-class white boys are faring only slightly better. When economist Andrew Sum and his colleagues at the Center for Labor Market Studies at Northeastern University examined gender disparities in the Boston Public Schools, they found that for the class of 2007, among blacks and Hispanics, there were 186 females for every 100 males attending a four-year college or university. For white students: 153 females to every 100 males.

Is this a U.S. – only problem? No. The problem exists in many places. But Dr. Sommers lists some of the initiatives those other countries are taking – trying to understand why boys are different and what needs to be done differently in order to get them to engage and succeed. But we are not doing anything here. Why not?

Well, first – let's see what works:

> In a rare example of the academic establishment taking note of boys' trouble in school, the Harvard Graduate School of Education recently published a major study, Pathways to Prosperity, that highlights the "yawning gender gap" in education favoring women: "Our system… clearly does not work well for many, especially young men." The authors call for a national revival of vocational education in secondary schools. They cite several existing programs that could serve as a model for national reform, including the Massachusetts system, sometimes called the "Cadillac of Career Training Education."
>
> Massachusetts has a network of 26 academically rigorous vocational-technical high schools serving 27,000 male and female students. Students in magnet schools such as Worcester Technical, Madison Park Technical Vocational, and Blackstone Valley Regional Vocational Technical take traditional academic courses but spend half their time apprenticing in a field of their choice. These include computer repair, telecommunications networking, carpentry, early childhood education, plumbing, heating, refrigeration, and cosmetology. As*Pathways* reports, these schools have some of the state's highest graduation and college matriculation rates, and close to 96 percent pass the states' rigorous high-stakes graduation test.
>
> Blackstone Valley Tech in Upton, Massachusetts, should be studied by anyone looking for solutions to the boy problem. It is working wonders with girls (who comprise 44 percent of the student body), but its success with boys is astonishing. According to a white paper on vocational education by the Commonwealth's Pioneer Institute, "One in four Valley Technical students enter their freshman year with a fourth-grade reading level." The school immerses these students in an intense, individualized remediation program until they read

> proficiently at grade level. These potentially disaffected students put up with remediation as well as a full load of college preparatory courses (including honors and Advanced Placement classes), because otherwise they could not spend half the semester apprenticing in diesel mechanics, computer repair, or automotive engineering.
>
> In former times, vocational high schools were often dumping grounds for low achievers. Today, in Massachusetts, they are launching pads into the middle class.

Who could possibly be opposed to turning boys into marriage-minded men? Look:

> Recent research shows that enrollment in high school vocational programs has dramatic effects on students' likelihood of graduating from high school—*especially boys*. But efforts to engage more boys in career and technical programs face a formidable challenge. In a series of scathing reports, the National Council on Women and Girls Education (NCWGE—a 38-year-old consortium that today includes heavy hitters such the AAUW, the National Women's Law Center, the ACLU, NOW, the Ms. Foundation, and the National Education Association) has condemned high school vocational training schools as hotbeds of "sex segregation."
>
> Because of decades of successful lobbying by NCWGE groups, high school and college career and technical training programs face government sanctions and loss of funds if they fail to recruit *and graduate* sufficient numbers of female students into "non-traditional" fields. Over the years, untold millions of state and federal dollars have been devoted to recruiting and retaining young women into fields like pipefitting, automotive repair, construction, drywall installing, manufacturing, and refrigeration mechanics. But according to *Statchat*, a University of Virginia workforce blog, these efforts at vocational equity "haven't had much of an impact." Despite an unfathomable number of girl-focused programs and interventions, "technical and manual occupations tend to be dominated by men, patterns that have held steady for many years."
>
> In March 2013 NCWGE released a report urging the need to fight even harder against "barriers girls and women face in entering nontraditional fields." Among its nine key recommendations to Congress: more federal funding and challenge grants to help states close the gender gaps in career and technical education (CTE); mandate every state to install a CTE gender equity coordinator; and impose harsher punishments on states that fail to meet "performance measures" –i.e. gender quotas.
>
> Instead of spending millions of dollars attempting to transform aspiring cosmetologists into welders, education officials should concentrate on helping young people, male and female, enter careers that interest them. And right now, boys are the underserved population requiring attention.

So. We know what works to make boys into marriage-ready men. And now we know who is standing in the way. What I'd like to see from the man-up crowd, especially the man-up crowd in the church, is a serious assessment of the research on this issue and some action.

But this is what we get from Mark Driscoll: (whom I almost always agree with)

> The number one consumer of online pornography is 12- to 17-year-old boys. What that means is he's home eating junk food, drinking Monster energy drinks, downloading porn, masturbating and screwing around with his friends. That really doesn't prepare you for responsible adulthood. That's a really sad picture, especially if you're a single gal hoping to get married someday. You're like: "Seriously, that's the candidate pool? You've got to be kidding me." **That's why 41 percent of births right now are to unmarried women. A lot of women have decided: "I'm never going to find a guy who is actually dependable and responsible to have a life with. So I'll just get a career and have a baby and just intentionally be a single mother because there are no guys worth spending life with."**

We really need better leadership – informed leadership – on these issues from prominent pastors. They need to start

to read some research (e.g. – what Dr. Sommers presented) on these issues. Maybe pastors need to affirm the *traditional* view of the Bible on sexual morality, and then take on the root cause of the disengaged boys problem: feminism in the schools. We don't want to take on these problems in a superficial way and then actually make the problem *worse* by making excuses for views of sexuality that are unBiblical.

By the way, you should subscribe to the AEI podcast, which is on my list of favorite podcasts. And Dr. Sommers has a new edition of her classic book defending young men. If you have ever wondered what is going wrong with men, that book is required reading. It is required reading for anyone who wants to comment on this issue, in fact.

# Two famous near-death experiences: Pam Reynolds and Maria's tennis shoe

**Wintery Knight** · 2 February 2014 · Archived copy · Original

Dr. Mario Beuregard writes about out of body experiences and near death experiences in the leftist Salon.com, of all places.

NDE number one:

> Pam was brought into the operating room at 7:15 a.m., she was given general anesthesia, and she quickly lost conscious awareness. At this point, Spetzler and his team of more than 20 physicians, nurses, and technicians went to work. They lubricated Pam's eyes to prevent drying, and taped them shut. They attached EEG electrodes to monitor the electrical activity of her cerebral cortex. They inserted small, molded speakers into her ears and secured them with gauze and tape. The speakers would emit repeated 100-decibel clicks—approximately the noise produced by a speeding express train—eliminating outside sounds and measuring the activity of her brainstem.
>
> At 8:40 a.m., the tray of surgical instruments was uncovered, and Robert Spetzler began cutting through Pam's skull with a special surgical saw that produced a noise similar to a dental drill. At this moment, Pam later said, she felt herself "pop" out of her body and hover above it, watching as doctors worked on her body.

> Although she no longer had use of her eyes and ears, she described her observations in terms of her senses and perceptions. "I thought the way they had my head shaved was very peculiar," she said. "I expected them to take all of the hair, but they did not." She also described the Midas Rex bone saw ("The saw thing that I hated the sound of looked like an electric toothbrush and it had a dent in it … ") and the dental-drill sound it made with considerable accuracy.
>
> Meanwhile, Spetzler was removing the outermost membrane of Pamela's brain, cutting it open with scissors. At about the same time, a female cardiac surgeon was attempting to locate the femoral artery in Pam's right groin. Remarkably, Pam later claimed to remember a female voice saying, "We have a problem. Her arteries are too small." And then a male voice: "Try the other side." Medical records confirm this conversation, yet Pam could not have heard them.

I like the second one even better than the first.

NDE number two:

> Maria was a migrant worker who had a severe heart attack while visiting friends in Seattle. She was rushed to Harborview Hospital and placed in the coronary care unit. A few days later, she had a cardiac arrest but was rapidly resuscitated. The following day, Clark visited her. Maria told Clark that during her cardiac arrest she was able to look down from the ceiling and watch the medical team at work on her body. At one point in this experience, said Maria, she found herself outside the hospital and spotted a tennis shoe on the ledge of the north side of the third floor of the building. She was able to provide several details regarding its appearance, including the observations that one of its laces was stuck underneath the heel and that the little toe area was worn. Maria wanted to know for sure whether she had "really" seen that shoe, and she begged Clark to try to locate it.
>
> Quite skeptical, Clark went to the location described by Maria—and found the tennis shoe. From the window of her hospital room, the details that Maria had recounted could not be discerned. But upon retrieval of the shoe, Clark confirmed Maria's observations. "The only way she could have had such a perspective," said Clark,

> "was if she had been floating right outside and at very close range to the tennis shoe. I retrieved the shoe and brought it back to Maria; it was very concrete evidence for me."
>
> This case is particularly impressive given that during cardiac arrest, the flow of blood to the brain is interrupted. When this happens, the brain's electrical activity (as measured with EEG) disappears after 10 to 20 seconds. In this state, a patient is deeply comatose. Because the brain structures mediating higher mental functions are severely impaired, such patients are expected to have no clear and lucid mental experiences that will be remembered. Nonetheless, studies conducted in the Netherlands, United Kingdom, and United States have revealed that approximately 15 percent of cardiac arrest survivors do report some recollection from the time when they were clinically dead. These studies indicate that consciousness, perceptions, thoughts, and feelings can be experienced during a period when the brain shows no measurable activity.

Here's the author bio:

> Mario Beauregard is associate research professor at the Departments of Psychology and Radiology and the Neuroscience Research Center at the University of Montreal. He is the coauthor of "The Spiritual Brain" and more than one hundred publications in neuroscience, psychology and psychiatry.

It's a helpful article, and one you might want to share or tweet to get a discussion started.

In previous posts, I have listed six arguments for non-physical minds, and also blogged about peer-reviewed scientific evidence on how consciousness changes brain chemistry through mental effort.

# How well are Democrat economic policies working in Venezuela and Argentina?

**Wintery Knight** · 2 February 2014 · Archived copy · Original

Are Barack Obama and Hugo Chavez very different?

I have been reflecting sorrowfully on some of the outright lies spoken by the President in his recent State of the Union address. I am thinking specifically of lies that are almost universally rejected by economists across the ideological spectrum – lies so obvious that you would have to be an illiterate peasant living in a village in Venezuela or Argentina in order to believe it.

Three of his lies stand out – the minimum wage lie, the global warming lie and women pay gap lie. Each of these lies is as false as saying that the Sun goes around the Earth, or that the Earth is flat. What bothers me is not that the President spoke them, because I expect someone with no scientific background and no private sector experience to say things that are not true. But what bothers me is that the American electorate is now incapable of identifying such obvious lies.

Let's take a look at this article from the leftist Washington Post.

Excerpt:

> On aisle seven, among the diapers and fabric softener, the socialist dreams of the late Venezuelan president Hugo Chávez looked as ragged as the toilet paper display.
>
> Employees at the Excelsior Gama supermarket had set out a load of extra-soft six-roll packs so large that it nearly blocked the aisle. To stock the shelves with it would have been pointless. Soon word spread that the long-awaited rolls had arrived, and despite a government-imposed limit of one package per person, the checkout lines stretched all the way to the decimated dairy case in the back of the store.
>
> […]Pathetic, in a country with the world's largest petroleum reserves and oil prices at nearly $95 a barrel, yet unable to supply basic goods because of its crumbling local currency and a shortage of U.S. dollars.
>
> […]Nearly a year after Chávez's death of complications from cancer at age 58, his handpicked successor, Nicolás Maduro, is struggling to contain food shortages, spiraling inflation and rampant crime.
>
> The arrival of basic staples such as cooking oil, chicken, flour or milk brings Venezuelans running to supermarkets and touches off surreal mob scenes, even as the government imposes price caps and rationing to prevent hoarding.

> Maduro squeaked past opposition candidate Henrique Capriles in April's presidential election, and Maduro's United Socialist Party won enough races in Dec. 8 local elections to push back against perceptions that Chávez loyalists were deserting him. Just before the vote, with television cameras rolling, he sent soldiers into an appliance store accused of price gouging and ordered huge markdowns on televisions and microwaves. Apparently it gave his party a final boost at the polls.

There's not a dime worth of difference in terms of vision between the Democrats in the USA and the socialists in Venezuela. The same people who think that sending armed troops to nationalize industry in Venezuela are nationalizing health care in this country right now. We will eventually see the same lines for health care that form in Canada and the UK. When you tax, regulate, and even attack those who provide services and products, you get shortages. Period. And yet big government redistribution of wealth seems to be winning over low-information voters in Venezuela and in the United States.

Are Barack Obama and Cristina Kirchner very different?

Venezuela has 56% currency inflation right now thanks to "stimulus" spending, but that is not the only place where Democrat policies are in force. Consider this article from the leftist Guardian about Argentina, where Democrat "stimulus" spending policies have led to rising prices of consumer goods.

Excerpt:

> Every morning around 8am, the stern-faced cabinet chief Jorge Capitanich stands behind a podium at the Casa Rosada presidential palace for a televised verbal blast at the perceived enemies of the "victorious decade" presided over by the current president and her husband, the late Nestor Kirchner. Without naming them, Capitanich lashes out against the "visible and invisible" politicians, labour representatives, businessmen and journalists he blames for the sudden collapse of the peso and the explosive price increases that followed the forced devaluation.
>
> Argentina's economic earthquake has placed a huge question mark over the political future of the stateswoman so powerful she is referred to as Queen Cristina by both the opposition press and her supporters. In the past week, Capitanich has attempted to pin the price lurch on faceless foreign speculators, whom he accuses of a "strategy of domination" to gain control of Argentina's oil and freshwater reserves, pandering to the widespread belief here, often underlined by the president in her speeches, that "vultures" of the leading industrial countries harbour secret plans to siphon off natural reserves from this resource-rich South American nation.

> Capitanich has also blamed “anti-patriotic” farmers and large retailers, allegedly in league with independent, corruption-probing journalists, of fuelling price rises by “generating psychological action of permanent destabilisation” against Fernández de Kirchner.
>
> But critics of the government point to inept administration and populist spending by a government that considers itself to be leading a revolution against Argentina’s erstwhile oligarchy.

Just like Obama, the socialists in Argentina are always looking to blame others for the problems they cause with their own policies. The problem is never bad policies that attack job creating businesses, it’s always a lack of loyalty and patriotism. We are disloyal to our economically-illiterate elites who only want to help us, they say. Leftist economic policies can work if we just believe in the leader, they say. And many ignorant peasants believe that, even when the failure is right in front of them.

**Not just in Venezuela and Argentina**

Of course in America, we have a different kind of policy failure. We have Obamacare. Conservatives warned the public about it for years, but our peasants went ahead and voted for it anyway when we re-elected a know-nothing in 2012. He said that we could keep our health care plans and that we could keep our doctors. He said he would reduce the cost of health care. And we believed him. We believed him because the uneducated stand-up comedians we watched on the Comedy Channel made us believe him.

Take a look at the peasants realizing that not every piece of happy talk read from a teleprompter by a celebrity is automatically true:

Human Events explains the story behind that video.

Excerpt:

> All of Barack Obama’s phony rhetoric about how wonderfully the Affordable Care Act is chugging along means less than nothing compared to the cold reality that awaited the employees of a Pennsylvania company, as a local news station captured their stunned reactions to ObamaCare price hikes in real time.
>
> […][They] learned they’d be facing premium hikes of over 30 percent, with higher deductibles. Even their co-payments for doctor visits have doubled. And the numbers hitting these good people aren’t as bad as the premiums and deductibles slamming into other ObamaCare victims around the country. The great second wave of damage in the larger group insurance market is about to get under way.
>
> “I don’t know how President Obama thinks he’s helping us,” one employee sighs, “because we can’t afford this, we can’t afford to pay these co-pays, to pay these deductibles on what we’re making.”
>
> Another repeats the sarcastic but accurate observation made by ObamaCare critics since day one: “there’s nothing affordable” about the Affordable Care Act. It is observed that average people can’t just cough up three hundred dollars a month, because that’s a big chunk of a rent check or mortgage payment. One shell-shocked woman, looking at a $400 monthly premium increase *plus* a $4000 deductible, confesses she has no idea how she’s going to pay it.
>
> […]Needless to say, none of these people will be invited to come on stage with President Obama and talk about their ACA experiences. They’re learning the hard way that political control of an industry means distant commissars picking winners and losers. You can do everything right and still get socked by the biggest middle-class tax increase in history, because the imperial President and his court have decided other people need lower premiums, and you must be squeezed to pay for it.

We have a generation of people who have been educated to value rhetoric from celebrities over the Constitution and sound economics in general. We must not think that we can be as ignorant as South American peasants now and avoid the consequences of that ignorance. We need to turn off the TV and pick up the Thomas Sowell book.

# Famous gay activist pleads guilty to child pornography charges

**Wintery Knight** · 3 February 2014 · Archived copy · Original

From the San Francisco Chronicle. (H/T Robert S. McCain via First Street Journal)

Excerpt:

> Veteran gay rights advocate and former San Francisco Human Rights Commission staffer Larry Brinkin pleaded guilty Tuesday to possessing child pornography.
>
> Brinkin, 67, changed his plea in a deal with the district attorney's office that will result in a sentencing recommendation of six months in county jail, six months of home detention, five years of probation and lifetime registration as a sex offender.
>
> Brinkin, who worked as a senior contract compliance officer with the rights commission until his 2010 retirement, was arrested in June 2012. Authorities said e-mail attachments were found on his America Online subscriber's account that contained images of toddlers engaged in sex acts with men.
>
> Prosecutors originally charged him with six felony counts of possessing and distributing child pornography, but dropped all but one felony count of possession as part of the plea bargain.
>
> Brinkin must undergo sex offender therapy and is banned from working with kids, contacting a juvenile without parental consent, and living with someone responsible for a child without disclosing his offender status.
>
> During his 22-year tenure at the rights commission, Brinkin helped craft the city's Equal Benefits Ordinance, which became a national model for workplace equality for gays and lesbians. When he retired, the Board of Supervisors declared the week of Feb. 1, 2010, as Larry Brinkin Week.
>
> Brinkin, who appeared in court with his husband, has been out on $240,000 bail since September 2012. He is scheduled to return for sentencing on March 5, and to surrender into custody at a later date.

He's going to keep his pension, though:

> Knox said he did not believe Brinkin's city pension would be affected by the plea because his conviction doesn't fall under "moral turpitude." Under Proposition C, approved by voters in 2008, a city employee convicted of a crime involving moral turpitude – usually theft, fraud or a breach of the public trust – cannot collect employer-funded retirement benefits.

This is the public sector after all.

Previously, I blogged about a case of two gay men who had adopted a boy from Russia for the purpose of creating child pornography using him. I'm not sure if this is the Australian connection mentioned in the article, but it would make sense. The trouble we have today is that we are so interested in talking about love, love, love, that we have no will to say anything to protect children. When it comes to the selfishness of adults, anything goes, whether it be divorce, single motherhood or anything. We just don't care about kids, and we mask our indifference by talking about "love" and "not judging". It's very important to understand that there are real victims from all of this "love" and "not judging", and it's not as benign as it looks on the surface.

**Other cases**

The NY Daily News reports on another similar case, and links to CBS News and the Hartford Courant.

Excerpt:

> The case of a same-sex Connecticut couple accused of repeatedly raping and abusing two of their nine adopted boys is headed for trial.

> Married couple George Harasz and Douglas Wirth of Glastonbury were supposed to be sentenced Friday in Hartford Superior Court under a plea deal, but instead withdrew from their agreement with prosecutors. The men had already pleaded no contest in January to one felony count each of risk of injury to a minor — a reduction from even more serious charges related to sexual assault.
>
> […]Harasz and Wirth adopted nine children — three sets of male siblings — beginning in 2000, and ran a home-based dog breeding business called The Puppy Guy.
>
> The couple was arrested in November 2011 following a police and state investigation of sex-abuse allegations. The children were removed from the home.
>
> Police said two boys, ages 5 and 15, accused Harasz of sexually assaulting them. Harasz was initially facing first-degree sexual assault and other charges, while Wirth had been charged with third-degree sexual assault of the 15-year-old boy.
>
> Their arrest warrants claimed the couple not only sexually and physically abused the children, but also forced them to sleep in closets.
>
> […]One of the victims who spoke during the court hearing said sexual assault began when he was 6.
>
> "They took turns raping me over and over," he said.

Now, a lot of these rape accusations turn out to be false, so we don't really know if anyone is guilty until the trial concludes. But I've posted before about other trials that did conclude, so that you know that these things are in fact happening. I had blogged previously about the Duke University official who was offering his 5-year-old adopted son for sex on the Internet, not to mention the famous Jerry Sandusky case and the case where the head of a gay youth organization was running a child sex ring.

# What are the historical arguments for the empty tomb narrative?

**Wintery Knight** · 3 February 2014 · Archived copy · Original

I wanted to go over this article by William Lane Craig which includes a discussion of the empty tomb, along with the other minimal facts that support the resurrection.

**The word resurrection means bodily resurrection**

The concept of resurrection in use among the first converts to Christianity was a *Jewish* concept of resurrection. And that concept of resurrection is unequivocally in favor of a *bodily resurrection*. The body (soma) that went into the grave is the body (soma) that came out.

Craig explains what this means with respect to the fast start of Christian belief:

> For a first century Jew the idea that a man might be raised from the dead while his body remained in the tomb was simply a contradiction in terms. In the words of E. E. Ellis, "It is very unlikely that the earliest Palestinian Christians could conceive of any distinction between resurrection and physical, 'grave emptying' resurrection. To them an *anastasis* without an empty grave would have been about as meaningful as a square circle."

And:

> Even if the disciples had believed in the resurrection of Jesus, it is doubtful they would have generated any following. So long as the body was interred in the tomb, a Christian movement founded on belief in the resurrection of the dead man would have been an impossible folly.

It's significant that the belief in the resurrection started off in the city where the tomb was located. Anyone, such as the Romans or Jewish high priests, who wanted to nip the movement in the bud could easily have produced the body to end it all. They did not do so, because they could not do so, although they had every reason to do so.

**There are multiple early, eyewitness sources for the empty tomb**

Paul's early creed from 1 Corinthians 15:3-7, dated to within 5 years of the crucifixion, implies the empty tomb.

Craig writes:

> In the formula cited by Paul the expression "he was raised" following the phrase "he was buried" implies the empty tomb. A first century Jew could not think otherwise. As E. L. Bode observes, the notion of the occurrence of a spiritual resurrection while the body remained in the tomb is a peculiarity of modern theology. For the Jews it was the remains of the man in the tomb which were raised; hence, they carefully preserved the bones of the dead in ossuaries until the eschatological resurrection. There can be no doubt that both Paul and the early Christian formula he cites pre-suppose the existence of the empty tomb.

The dating of the resurrection as having occurred "on the third day" implies the empty tomb. The date specified for the resurrection would have been the date that the tomb was discovered to be empty.

> The phrase "on the third day" probably points to the discovery of the empty tomb. Very briefly summarized, the point is that since no one actually witnessed the resurrection of Jesus, how did Christians come to date it "on the third day?" The most probable answer is that they did so because this was the day of the discovery of the empty tomb by Jesus' women followers. Hence, the resurrection itself came to be dated on that day. Thus, in the old Christian formula quoted by Paul we have extremely early evidence for the existence of Jesus' empty tomb.

A few quotes from atheist historians not from Dr. Craig's article: (thanks to Eric of Ratio Christi OSU)

> Michael Goulder (Atheist NT Prof. at Birmingham) "…it goes back at least to what Paul was taught when he was converted, a couple of years after the crucifixion." ["The Baseless Fabric of a Vision," in Gavin D'Costa, editor, Resurrection Reconsidered (Oxford, 1996), 48.]
>
> Gerd Lüdemann (Atheist Prof of NT at Göttingen): "…the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus…not later than three years… the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE." [The Resurrection of Jesus, trans. by Bowden (Fortress, 1994), 171-72.]
>
> Robert Funk (Non-Christian scholar, founder of the Jesus Seminar): "…The conviction that Jesus had risen from the dead had already taken root by the time Paul was converted about 33 C.E. On the assumption that Jesus died about 30 C.E., the time for development was thus two or three years at most." [Roy W. Hoover, and the Jesus Seminar, The Acts of Jesus, 466.]

The early pre-Markan burial narrative mentions the empty tomb. This source pre-dates Mark, the earliest gospel. The source has been dated by some scholars to the 40s. For example, the atheist scholar James Crossley dates Mark some time in the 40s. (See the debate below)

> *The empty tomb story is part of the pre-Markan passion story and is therefore very old*. The empty tomb story was probably the end of Mark's passion source. As Mark is the earliest of our gospels, this source is therefore itself quite old. In fact the commentator R. Pesch contends that it is an incredibly early source. He produces two lines of evidence for this conclusion:
>
> (a) Paul's account of the Last Supper in 1 Cor. 11:23-5 presupposes the Markan account. Since Paul's own traditions are themselves very old, the Markan source must be yet older.
>
> (b) The pre-Markan passion story never refers to the high priest by name. It is as when I say "The President is hosting a dinner at the White House" and everyone knows whom I am speaking of because it is the man currently in office. Similarly the pre-Markan passion story refers to the "high priest" as if he were still in power. Since Caiaphas held office from AD 18-37, this means at the latest the pre-Markan source must come from within seven years after Jesus' death. This source thus goes back to within the first few years of the Jerusalem fellowship and is therefore an ancient and reliable source of historical information.

So we are dealing with very early sources for the empty tomb.

**Lack of legendary embellishments**

The empty tomb narrative in the gospels lacks legendary embellishments, unlike later 2nd century forgeries that originated outside of Jerusalem.

**The eyewitness testimony of the women**

This is the evidence that has been the most convincing to skeptics, and to me as well.

> *The tomb was probably discovered empty by women*. To understand this point one has to recall two facts about the role of women in Jewish society.
>
> (a) Woman occupied a low rung on the Jewish social ladder. This is evident in such rabbinic expressions as "Sooner let the words of the law be burnt than delivered to women" and "Happy is he whose children are male, but woe to him whose children are female."
>
> (b) The testimony of women was regarded as so worthless that they were not even permitted to serve as legal witnesses in a court of law. In light of these facts, how remarkable must it seem that it is women who are the discoverers of Jesus' empty tomb. Any later legend would certainly have made the male disciples to discover

> the empty tomb. The fact that women, whose testimony was worthless, rather than men, are the chief witnesses to the empty tomb is most plausibly accounted for by the fact that, like it or not, they were the discoverers of the empty tomb and the gospels accurately record this.

**The earliest response from the Jewish high priests assumes the empty tomb**

This report from Matthew 28 fulfills the criteria of enemy attestation, although Matthew is not the earliest source we have. Oh, well.

> In Matthew 28, we find the Christian attempt to refute the earliest Jewish polemic against the resurrection. That polemic asserted that the disciples stole away the body. The Christians responded to this by reciting the story of the guard at the tomb, and the polemic in turn charged that the guard fell asleep. Now the noteworthy feature of this whole dispute is not the historicity of the guards but rather the presupposition of both parties that the body was missing. The earliest Jewish response to the proclamation of the resurrection was an attempt to explain away the empty tomb. Thus, the evidence of the adversaries of the disciples provides evidence in support of the empty tomb.

Note how careful Craig is not to imply that the guard tradition is historical, because we can't prove the guard as a "minimal fact", since it doesn't pass the standard historical criteria.

**See it used in a debate**

You can see the arguments made and defended from criticism in this debate with the atheist scholar James Crossley.

This my favorite resurrection debate.

# Lawrence Krauss debates “A Universe From Nothing” with an astrophysicist

**Wintery Knight** · 3 February 2014 · Archived copy · Original

Dina sent me news of Saturday’s episode of Unbelievable, which features Lawrence Krauss, who debated William Lane Craig. Krauss’ book was also reviewed in the New York Times.

The MP3 file is here.

Details:

> Lawrence Krauss is a Cosmologist at Arizona State University who describes himself as an “anti-theist”. His latest book “A Universe From Nothing” has received both acclaim and criticism for its attempt to answer the question “Why is there something rather than nothing?” Debating the issue with Krauss is Rodney Holder, Course director at the Faraday Institute, Cambridge. An astrophysicist and priest by background. In a lively exchange they debate whether Krauss’ “nothing” is “nothing”, fine tuning and multiverses, scientific knowledge, miracles and the usefulness of theology and philosophy.

This debate is quite entertaining, and do not be intimidated if your don’t understand science. You can understand pretty easily who is arguing based on facts and who is speculating about unobservable, untestable entities. At one point, Krauss actually denies that there is any fine-tuning in the universe, so please see this link to refute that claim as well as this podcast which explains some examples of fine-tuning. Krauss gets a bit angry at the beginning, but calms down.

Quotation marks are for direct quotes, italics is for made-up snark. See below the summary for more posts that are related to this one.

**Summary of the discussion:** (picked up at 9:30 when they start talking about the book)

Brierley:

- explain your theory of how the universe can come into being from nothing

Krauss:

- the nothing that preceded the universe is “no space, no time, no universe”
- theists say that God is responsible for creating the universe out of this nothing
- but the laws of nature can create the universe uncaused out of nothing

Holder:

- Krauss sometimes writes that the nothing is really a quantum vacuum, but that is not nothing
- He even acknowledges in his book that a quantum vacuum is not nothing
- He thinks that the nothing has properties, even though it has no being
- It has the property of being unstable
- It has the property of being acted on by quantum fields
- It has the property of being acted on by gravity

Krauss:

- But nothing can have the potential to do things inside it
- For example suppose you have an electron, *which is not nothing*

- If it jumps from one level to another, it emits light
- There was no potential for the light in the electron, but it was there as part of atomic structure

Holder:

- But in cases like that, there is something physical that has the potential

Krauss:

- Well, how did God makes the universe then if it had no potential?

Holder:

- God existed, and the potential for creating the universe in himself

Brierley:

- Consider the critical review of your book in the New York Times

Krauss:

- It was written by a philosopher, so I dismissed it

Brierley:

- Consider the critical review of your book in the Scientific American

Krauss:

- These book reviewers have not even read my book!

Krauss:

- Science will be able to figure out how to make something from nothing in the future
- We are even now speculating about interesting questions, like is there a multiverse?

Brierley:

- Consider the critical review of your book in the New York Times
- The author of the review claims that you equivocate on the term "nothing"
- In order to get things to pop into being, you have to make "nothing" mean "something"
- Reviewer: none of Krauss' theories explain how something can come from actual nothingness

Krauss:

- In physics, something and nothing are not that different
- The reviewer doesn't understand the physics
- He doesn't understand quantum field theory
- You could call a quantum vacuum "nothing", *(this is the vacuum fluctuation model, refuted by William Lane Craig in a peer-reviewed publication in an astrophysics journal – get the full text of the article here)*
- Maybe there is an eternally existing multiverse that we can't observe or test scientifically
- Maybe it has laws that we don't know about which allow our universe to pop into being
- Maybe this popping into being is uncaused
- (alarmed) Who made God? Who made God?

Holder:

- God is eternal and necessary

Krauss:

- (interrupting, angry) What does it mean for something to be necessary?

Holder:

- Basically, you have to decide whether there is more evidence that the necessary being God or a multiverse

Brierley:

- So Dr. Krauss are you willing to say that the universe is a brute fact, in some sense, and requires no explanation

Krauss:

- (angry) Religious people are stupid because they just assume brute facts, *not like me and my unobservable, untestable multiverse*
- (angry) Religious people are against the progress of science, they don't want to figure out how things work

Brierley:

- But isn't it possible that naturalists can be opposed to the progress of science?
- What about the way the Fred Hoyle opposed the Big Bang because he wanted an eternal universe

Krauss:

- (angry) But naturalists like me let the facts determine our beliefs, *like the facts about the eternal unobservable, untestable multiverse*
- (angry, shouting) Philosophers are stupid, they know nothing!

=== Break ===

Brierley:

- Do you see any evidence of purpose in the universe?

Krauss:

- Well maybe I would believe if the stars lined up to spell out a message from God

Brierley:

- Actually no, that wouldn't be evidence for God on your multiverse view
- if there an infinite number of universes existing for an infinite amount of time, then anything can happen no matter how unlikely it is
- therefore, no evidence could convince you that God exists, since the unobservable, untestable, eternal multiverse can make anything it wants

Krauss:

- That's a true statement, *and very convenient for atheists who don't want to be accountable to God, don't you think?*

Brierley:

- Back to the multiverse, how does it solve the fine-tuning?

Krauss:

- "We have no idea if the universe is fine-tuned for life", *even though the atheist Martin Rees who endorsed Krauss' book wrote his own book about the fine-tuning of the universe called "Just Six Numbers"*
- Inflationary theory does suggest a way to create multiple universes, *(this is the chaotic inflationary model, refuted by William Lane Craig in a peer-reviewed publication in an astrophysics journal – get the full text of the article here)*

Brierley:

- But this theory is still very much a hypothesis, isn't it? We can't observe *or test* this hypothesis can we?

Krauss:

- "No, and that is really important to state"
- "I'm an empiricist, so if you can't falsify it and if you can't test it then it's not science"
- In my book, I speculate about a way that we could test the multiverse theory

Holder:

- Yes, in principle, the multiverse would be scientific if you could test it through other theories like inflationary theory
- There are a lot of speculations about multiverse theory, but no evidence from predictions that were validated in the lab

Krauss:

- "I agree completely with everything you just said"

Brierley:

- Roger Penrose agrees with Holder that the multiverse theory is too speculative
- (To Holder) Isn't the multiverse theory better than positing a completely different kind of being, which is God?

Holder:

- The multiverse theory is extremely speculative
- Even if the multiverse were true, you would still need to explain the multiverse

Krauss:

- People don't oppose my book because it's full of self-contradictory speculations
- People oppose my book because they are stupid and ignorant

Holder:

- There are things that exist that science cannot measure, like objective morality
- It's possible to give explanations for moral behavior by appealing to evolution
- But that does not ground self-sacrificial morality, such as what occurs in the Christian life

Brierley:

- Dawkins says there is no purpose or morality in in the universe, do you agree?

Krauss:

- "There is certainly no evidence of any of that"

Brierley:

- In the book, you talk about how we live in a special time in the universe's history to be able to do science, *(i.e. – The Privileged Planet hypothesis)*
- You also write about how all the discoveries were are making will not be communicated to anyone in other places in the universe
- So what is the meaning of doing science on your view? And why are you sad at the knowledge that will not be available to people in the future?
- Are you longing for some kind of purpose?

Krauss:

- No, I just get enjoyment from studying the universe with science to gain understanding

Holder:

- What do you make of Einstein's statement about the unexpected comprehensibility of the universe
- Theists would say that this is because God wanted us to study and understand and gain knowledge

Krauss:

- "It is remarkable that the universe is comprehensible"

Brierley:

- Why is the universe comprehensible?

Krauss:

- Well, maybe the universe just has to be that way

Brierley:

- What do you make of the heat death of the universe, when all life in the universe will die out?

Krauss:

- That's the way the universe is

=== BREAK ===
Krauss:

- I wouldn't want to live in a universe where there was a God
- God is a cosmic Saddam Hussein
- "Religious people turn their minds off" and believe in God for consolation

Holder:

- First, Jesus is the revelation of God and he is no Saddam Hussein
- Second, the Christian life is anything but easy, we are facing some persecution already in the UK
- Third, there is also the problem of being accountable to God when we die
- It's very much like science – Christianity is the way it is, not the way we want it to be

Krauss:

- "If you don't believe in him, you don't get any of the benefits, so you have to believe"

- “And then if you’ve done something wrong, you’re going to be judged for it”
- “So I don’t want to be judged by God, I want to be… that’s the bottom line”

Holder:

- Well, Jesus has died to pay the price for those things we’ve done wrong
- Although we will have to face the charges for what we’ve done, believers will ultimately be forgiven

UPDATE: Peter Sean Bradley note that Krauss is now walking back his rhetoric in response to criticisms from people like atheist John Horgan.

# UK survey: nearly 60% of working moms would cut their work hours if they could afford to

**Wintery Knight** · 4 February 2014 · Archived copy · Original

Dina tweeted this UK Daily Mail article that made me think about how women vote.

Excerpt:

> More than a third of working mothers would like to give up their jobs completely and stay at home with their children, a major Government survey has found.
>
> It showed that millions of mothers of young children who go out to work do so only because they need to work to pay the bills.
>
> The research for the Department for Education found that, far from being anxious to get out of their homes and into employment, the great majority of mothers are only reluctant workers.
>
> Nearly six out of ten of all working mothers would cut down their hours to spend more time with their families if they could afford to, it said.
>
> The yearning among mothers to leave their jobs and look after their children instead is even more pronounced among the highest achieving women, the survey indicated.
>
> More than two-thirds of those in senior and middle management roles would spend fewer hours in the office and devote more time to their children if they had enough money, it said.
>
> […]Yesterday's survey also undermines the claims that prejudice and discrimination against women in male-dominated companies is the reason why women are heavily outnumbered in the boardroom.
>
> Rather, it suggests that many women who could get to the top in business choose instead to put their children before their careers.

The problem is that when government gives people free stuff, people who work have to work more to pay for it. And the strangest thing is that even though women seem to want to stay home with their kids (which is good), when it comes time to vote, they actually vote NOT to stay home with their kids. How? By growing the size of government, which results in higher taxes. To find out what women really think about staying home with their kids, we can look at how they vote.

Women voted 56-44 for more government spending in 2012

CNN reports on how women voted in the 2012 election:

> **According to CNN's exit polls, 55% of women and 45% of men voted for Obama and 44% of women and 52% of men voted for Romney. That level of female support for the president made an especially**

> **big impact in swing states like Ohio where the gender breakdown mirrored the national figures.**
>
> […]There are some indications that social issues directly impacting women might have helped sway votes in some states.
>
> Tuesday's early exit polls showed 51% of Missouri voters said they believed abortion should be legal all or most of the time. Of those voters, exit polls showed 76% supported Democratic incumbent Claire McCaskill, who won Tuesday night, while 19% voted for Akin.
>
> Forty-seven percent of Missouri's voters said abortion should be illegal. Exit polls showed Akin netted 67% of this group's votes while 27% of people who think abortion should be illegal supported McCaskill.
>
> **But much more than social issues, pocketbook economic issues most concerned women voters, exit polling showed.**
>
> **"Women like all voters felt the economics were most important," Swers said. "Women tend to be more supportive of government spending… than men are … so they were less responsive to Romney in that way and more responsive to Obama's message on empathy and helping the middle class."**

Gallup reported that the gender gap in the 2012 election was actually 20 points. That was the largest ever measured in a Presidential election. The actual vote for Obama among women, according to Gallup, was **56-44**.

Women are also more pro-abortion more than men

Here is a peer-reviewed research paper that shows the problem that we need to warn women about, so that they vote smarter.

The abstract reads:

> This paper examines the growth of government during this century as a result of giving women the right to vote. Using cross-sectional time-series data for 1870–1940, we examine state government expenditures and revenue as well as voting by U.S. House and Senate state delegations and the passage of a wide range of different state laws. Suffrage coincided with immediate increases in state government expenditures and revenue and more liberal voting patterns for federal representatives, and these effects continued growing over time as more women took advantage of the franchise. Contrary to many recent suggestions, the gender gap is not something that has arisen since the 1970s, and it helps explain why American government started growing when it did.

When people vote for government to do more for everyone else, then men who work have to pay more in taxes.

Women vote for higher taxes, so they have to work more

If women want to stay home with their children more, then they need to vote for their husbands (present or future) to pay less in taxes when they work. That means voting for smaller government, more liberty and more personal responsibility. Until women get to the point of connecting their future plans (marriage and parenting) for their lives with their current voting, this situation is not going to change. Marriages run on money. It's no good to urge men to "man-up" and then take away their ability to provide by taxing more of their earnings to pay for Sandra Fluke's birth control pills and abortions. Keep the money in the family, and then you can stay home with the kids more.

# Three logical prerequisites for biological evolution to work

**Wintery Knight** · 4 February 2014 · Archived copy · Original

Biologist, blogger and super-mom Lindsay has written a post that explains what supporters of Darwinian mechanisms have to prove in order to explain the origin and diversity of life.

Here are the three things that Darwinists must demonstrate:

1. **It is possible to add biological information.**
2. **There are more upward steps than downward steps (or at least a way to get more upward steps than downward steps at least some of the time).**
3. **There does exist a gradual genetic pathway that can be climbed in tiny, incremental steps.**

So first of all, the main two arguments for intelligent design and against naturalism are the origin of life and the Cambrian explosion. Both involve massive infusions of new biological information. So Lindsay is right to focus on whether Darwinism can add new biological information. But I wanted to focus on number three, because I really think that her post is about the burden of proof on Darwinists more than it is about *our* burden of proof. And we do need to get used to asking Darwinists for the evidence for their view.

Take a look at the detail on number three:

> In order for evolution to be true, not only does information have to be added over time, but each successive change must occur in a living organism and it must be conserved by being passed on to offspring. Thus, the change cannot kill the organism or seriously disable it, or the change will not be passed on. This must be the case for EVERY step in the entire evolutionary sequence, no matter how small. At every step you must have a functional organism. Thus, the changes must be gradual enough that the tiny upward steps (if they exist) can achieve each new level without killing or disabling the organism. To use a simplistic analogy, if one tries to change from one word to another by changing one letter at a time (cat to cot to dot to dog, for example), there must, at every step, be an actual word that can be reached by changing one letter. In the Mount Improbable analogy, this means that there can be no upward jumps in the trail. If the maximum possible upward step is 6 inches, then there can be no 6 foot cliffs along the trail, or even 7 inch steps. If ever there is a step which requires more information than unguided evolution can provide, then evolution is falsified in that instance. It cannot account for the change in information if that is the case.

Now I have never seen a gradual genetic pathway from one body plan to another in any peer-reviewed paper. I am talking about from one phyla to another. What I need to see to believe in the ability of Darwinian mechanisms to drive change from one body plan to another is that sequence of changes at the genetic level. And I don't just need to see the steps, I need to see the probabilities of getting the correct sequence of changes at the genetic level within the time available *by chance.* That's what Darwinists assert in their theory – that's what they need to prove. Talking about how one creature looks like another creature is irrelevant. My car looks like my Dads car, because we drive the same model, but different model years – and both cars are designed.

When people ask our side for evidence for our claims, we are able to produce the evidence to substantiate our claims, e.g. – cosmic fine-tuning factors or protein sequencing probabilities. I would like to see the other side do the same, and not just tell me a story.

If you are looking to understand what the other side has to prove, and in a concise way, read her post.

# Mike Licona lectures on historical methods and the New Testament

**Wintery Knight** · 4 February 2014 · Archived copy · Original

Here's a quick overview of Michael Licona's latest book on the resurrection, entitled "The Resurrection of Jesus".

60 minutes of lecture, 20 minutes of Q&A.

Summary:

- Dr. Licona's background and education
- The definition of history and philosophy of history
- Postmodern approaches to history
- Historical bedrock: facts that are historically demonstrable
- Historical criterion 1: Explanatory scope
- Historical criterion 2: Explanatory power
- Historical criterion 3: Plausibility
- Historical criterion 4: Ad Hoc / Speculation / non-evidenced assumptions
- Inference to the best explanation
- Investigating miracle claims: is it possible? How?
- Objection of James D.G. Dunn
- Objection of Bart Ehrman
- New Testament sources: Gospels and Paul's letters
- The Gnostic gospels: are they good sources?
- The minimal facts
- The hallucination hypothesis
- The best explanation

While watching this lecture, it struck what good preparation it was for understanding debates. This lecture is more about historical methods, but if you're interested in Mike's minimal facts case for the resurrection, here's a video on that:

This is the case he uses in his debates with Richard Carrier, Dale Allison, Bart Ehrman, etc.

Mike Licona's ministry is here: Risen Jesus, and I noticed that the most popular article on the site is on the comological argument, which is not surprising at all, since he co-edited a book on 50 evidences for God from many differences with William Dembski. He likes evidence from every discipline you can think of, and then some.

If you are looking for a good book to read on the resurrection of Jesus, the best introductory book on the resurrection is "The Case for the Resurrection of Jesus" and the best comprehensive book is "The Resurrection of Jesus".

# State department: not building the Keystone XL pipeline could increase greenhouse gas emissions

**Wintery Knight** · 5 February 2014 · Archived copy · Original

From CNS News.

Excerpt:

> Not building the 875-mile Keystone XL Pipeline could result in the release of up to 42 percent more greenhouse gases than would be released by building it, according to the State Department.
>
> Not building the pipeline "is unlikely to significantly impact the rate of extraction in the [Canadian] oil sands or the continued demand for heavy crude oil at refineries in the United States," the department noted in a long-awaited environmental report released January 31st.
>
> But the "No Build" option is likely to result in an increased number of oil spills, six more deaths annually, and up to 42 percent higher greenhouse gas (GHG) emissions, the State Department concluded.
>
> The proposed 36-inch pipeline would transport 830,000 barrels of crude oil each day from western Canada through the Bakken oil fields of Montana and South Dakota before connecting to an existing pipeline in Nebraska on its way to Gulf Coast refineries.
>
> The project will create an estimated 42,100 jobs and add $3.4 billion to the U.S. economy.

This report follows last week's report showing that the pipeline would have no major environmental impact.

Excerpt:

> The long-delayed Keystone XL oil pipeline cleared a major hurdle toward approval Friday, a serious blow to environmentalists' hopes that President Barack Obama will block the controversial project running more than 1,000 miles from Canada through the heart of the U.S.
>
> The State Department reported no major environmental objections to the proposed $7 billion pipeline, which has become a symbol of the political debate over climate change. Republicans and some oil- and gas-producing states in the U.S. — as well as Canada's minister of natural resources — cheered the report, but it further rankled environmentalists already at odds with Obama and his energy policy.

Now the State Department is one of the most liberal departments in the government. Unfortunately, this has not appeased the great climate science experts in Hollywood, who donate so much money to Democrat election campaigns. So long as the money keeps flowing from the high school drop-out celebrities, don't expect this pipeline to get built. For the Democrats, it's all about staying in power.

# Michael Behe and Keith Fox debate theistic evolution vs intelligent design

**Wintery Knight** · 5 February 2014 · Archived copy · Original

***I am re-posting this because people are searching for something on the Ken Ham vs Bill Nye debate. You can read a review of the Ham-Nye debate on J. W. Wartick's blog. Another good review is from Evolution News, written by Casey Luskin of the Discovery Institute. In the meantime, your time would be more profitably spent listening to this debate.***

Michael Behe and Keith Fox debate evolution and intelligent design. (See below for link to MP3 file)

Details:

> Michael Behe is professor of biochemistry at Lehigh University, Pennsylvania and the founder of the modern Intelligent Design movement. His book "Darwin's Black Box" ignited the controversy 14 years ago when it claimed that certain molecular machines and biological processes are "irreducibly complex" and cannot be explained by Darwinian evolution.
>
> His new book "The Edge of Evolution" takes his conclusions further, arguing that the Darwinian processes of random mutation and natural selection are incapable of producing the variation and complexity we see in most of life.
>
> So can we conclude that life was intelligently designed by a creator?
>
> Keith Fox is Professor of biochemistry at the University of Southampton and chairman of Christians in Science. As a theistic evolutionist he believes that Evolution is the best explanation going for the complexity we see and that ID is a blind scientific alley and theologically unappealing to boot.
>
> They debate whether micromachines in the cell such as the "bacterial flagellum" could have evolved by a Darwinian process of evolution. When inference to design is and isn't acceptable in science. Whether random mutation can mathematically stack up to complex life, and whether God is reduced to a divine "tinkerer" by ID.

I get the impression that Fox learned everything he knows about ID by reading Darwinists.

The MP3 file is here.

The summary below is rated VERY SNARKY.

**Summary**

Michael Behe:

- ID is not Biblical creationism
- ID is not religion
- ID is a scientific research program
- People refuse to discuss ID because of personal philosophical assumptions
- ID is like the Big Bang – it is based on evidence, but it has broad religious implications

Keith Fox:

- ID is not Biblical creationism, but it isn't science

Michael Behe:

- ID is compatible with common descent

- ID is only opposed to unplanned, unguided evolution (Darwinism)
- ID is not necessarily opposed to long periods of time

**Behe's first book – the bacterial flagellum**

Keith Fox:

- Here are a couple of papers that show how parts of the flagellum evolved
- They are possible pathways

Michael Behe

- No, those are studies that show that there are similarities between bacterial flagella in multiple organisms
- Similarities of proteins between different organisms do not necessarily imply a developmental pathway
- The problem of having the instructions to BUILD the flagellum still remains

Keith Fox:

- Maybe parts of the flagellum had other functions before they were used in the flagellum
- Maybe you can use the parts of the flagellum for other purposes
- Maybe, one can imagine, it's possible that!

Michael Behe:

- No, parts have to be modified and re-purposed in order to be used for other functions

Keith Fox:

- But maybe the proteins can be used in other systems for other things
- I re-purpose parts from of designed things to other purposes in my house when I do maintenance

Michael Behe

- Uh, yeah – but aren't you an intelligent designer? What does your home maintenance have to do with Darwinian evolution?

**Is ID another God-of-the-gaps argument?**

Michael Behe:

- Well consider the Big Bang… there was a build-up of scientific evidence for that theory
- Just because a theory has religious implications, doesn't mean that it isn't true
- You really have to look at the specific evidence for a theory, and not decide in advance

Keith Fox: (I'm paraphrasing/inventing/mocking from now on)

- But the Big Bang is based on discoveries, and intelligent design is based on gaps in our scientific knowledge
- What if I did have evidence of a step by step pathway (which I don't right now)? Then I would win the argument – what would you do then?

Michael Behe:

- Well, if tomorrow you do manage to find expiremental evidence of a pathway, which you don't have today, then I would be wrong
- ID is falsifiable by experimental evidence
- But what about your your view? Is that falsifiable by experimental evidence?

- What if someone goes into a lab (someone like Scott Minnich?) and performs gene knockout experiments, and publishes the results
- You knock out a gene from the bacterial flagellum, you wait for a large number of generations, and it never develops the missing gene
- You repeat this with every one of the 50 genes in the bacterial flagellum and it never recovers for any of the 50 genes
- There is no pathway to build up even one of the 50 genes – according to actual experiments
- What do Darwinists do with experimental evidence that falsifies Darwinism?

Keith Fox:

- No, I would not accept that experimental evidence could falsify Darwinism
- Just because known published experimental evidence that we have today falsifies Darwinism, it doesn't mean Darwinism is false because it's not falsifiable
- We don't know how Darwinism even works – it happened so long ago, and it's not repeatable or testable, so how could lab ,experiments falsify it?
- Darwinism is science and intelligent design is faith, though

**Which side has the experimental evidence?**

Michael Behe:

- Consider the largest longest-running lab experiment of evolution, Richard Lenski's experiments on e. coli
- Lenski has presided over 50,000 generations, (millions of years of evolution)
- The bacterium *did evolve* and they *did get better* but not by *evolving* features, but by *disabling* features

Keith Fox:

- But those are just LAB EXPERIMENTS! What do lab experiments prove?
- What if? What if? What if? You don't know, it happened so long ago, and you weren't there! You weren't there!
- (clutches Flying Spaghetti Monster idol tighter and sobs pitifully)

Michael Behe:

- See, the thing is that I have actual experiements, and here's some more evidence that just got published last week
- So I've got evidence and then some more evidence and them some other evidence – experimental evidence
- And all the evidence shows that adaptation is done *losing traits* not by *gaining traits*
- And the published observations are what we see in nature as well

Keith Fox:

- But doesn't Darwinism explain some things that we observe?

Michael Behe:

- Well, I am not saying that micro-evolution doesn't explain *some things* – it explains bacterial resistance, and other micro-evolution
- it just doesn't explain macro-evolution, and that's what the experiments show

Keith Fox:

- But ID is a science stopper! It stops science! You can't produce *experimental evidence* to falsify Darwinism –

that would stop science!

Michael Behe:

- Well, you have to understand that the Big Bang postulated a non-material cause to the entire physical universe and yet the experimental evidence was allowed to stand because it was testable and verifiable evidence, even if the theory does have religious implications
- All explanations in science are design to settle a question and it stops rival explanations that are not as good at explaining the observations
- Finding the best explanation stops further study because it is better than rival explanations

Keith Fox:

- Well you have to come up with a materialist explanation because that's the only kind that a functional atheist like me will allow

Michael Behe:

- Well, what if the best explanation for an observed effect in nature is non-material, as with the Big Bang?

Keith Fox:

- But I have to have a material explanation because I am a functional atheist! (i.e. – a theistic evolutionist = functional atheist)

Michael Behe:

- Well what about the cosmic fine-tuning argument? Do you accept that?
- That's an inference to design based on the latest scientific discoveries

Keith Fox:

- Well I do accept that argument, but I don't accept design in biology
- When you apply it to biology, somehow it's bad and you can't do that or you losing research money and get fired
- Anyway, your argument is based on a gap in our current knowledge

Michael Behe:

- No, back in Darwin's time we had a gap in our knowledge – we didn't know what the cell was – we thought it was jello
- Now, we know what the cell is *really* like, it's irreducibly complex, and you can't build up those molecular machines in a step-wise manner
- The inference to design is based on the progress of science revealing the increasing levels of complexity
- In experiments, Darwinian mechanisms cannot build anything useful, instead genes are disabled or dropped
- You guys don't have the evidence to prove your view that naturalistic mechanisms can do the creating
- You keep issuing promissory notes

Keith Fox:

- Well, you're just seeing design subjectively, because you are a non-scientist
- I'm being objective when I tell you that we will discover a materialist explanation later on – really really soon now, maybe even tomorrow, yeah
- You won't accept my speculations and you insist on these published experiments
- You're subjective and I'm objective

- Just give me more research money so I can hide the decline better

Michael Behe:

- Uh, you're the one who is subjective – I cited evidence, and you are the one who is speculating
- You have arguments from credulity, and I've got the lab experiments
- You refuse to be skeptical, I am the one who is being skeptical

Keith Fox:

- Maybe, maybe, maybe! Maybe tomorrow! Maybe in a parallel universe! Maybe aliens from Planet 9 from Outer Space!
- Who knows! I certainly don't know! And that somehow means you don't know either! See?

Michael Behe:

- Well, to prove me wrong, go into the lab, and run experiments and evolve some new genes (using Darwinian mechanisms) that have new useful functionality

**Are there limits to what evolution can do?**

Michael Behe:

- You need multiple changes in the genome to get a new helpful feature (let's say two specific mutations)
- One specific change is possible
- the odds are against getting multiple beneficial changes are really really small – you need two SPECIFIC changes to occur in order

Keith Fox:

- Well, lots of things are really unlikely – any permutation of dice rolls is as unlikely as any other

Michael Behe:

- Well, we are talking about TWO SPECIFIC mutations that are needed to get a beneficial function – lots of other mutations are possible, but we are looking for a specific outcome that requires two SPECIFIC mutations out of the whole genome
- You aren't going to get useful outcomes unless you direct the mutations

Keith Fox:

- *But then why does God allow evil!!!!1!1!!one!!!*

# Stephen C. Meyer and Keith Fox debate intelligent design and evolution

**Wintery Knight** · 5 February 2014 · Archived copy · Original

***I am re-posting this because people are searching for something on the Ken Ham vs Bill Nye debate. You can read a review of the Ham-Nye debate on J. W. Wartick's blog. Another good review is from Evolution News, written by Casey Luskin of the Discovery Institute. In the meantime, your time would be more profitably spent listening to this debate.***

From Justin Brierley's "Unbelievable" podcast.

Details:

> Stephen Meyer is a leading proponent of Intelligent Design who directs the Centre for Science and Culture at the Discovery Institute in Seattle. His most recent book "Signature in the Cell" claims to show that the DNA code is the product of intelligent mind, not naturalistic processes. Keith Fox is Professor of Biochemistry at Southampton University. He chairs the UK Christians in Science network but disagrees strongly with ID. They debate how life could have originated and whether design is allowed as an explanation in science.

The MP3 file is here.

Summary: (stuff in italics is my snarky paraphrase)

Meyer:

- background and how he got interested in intelligent design
- his research focus is on the origin of life – the first replicator
- summarizes the history of origin of life studies
- authored the book "Signature in the Cell"
- the DNA enigma: where did the information in DNA come from?
- naturalistic explanations of the DNA information have failed
- but intelligent agents are known to be able to produce information
- the best explanation of the information in DNA is that an intelligent agent authored it
- Meyer's book was named by atheist philosopher of science Thomas Nagel as a Times Literary Supplement Book of the Year in 2010
- why is design so controversial? Many people think that Darwin explained why nature appears design
- the Darwinian view is that nature can create the appearance of design using mutation and selection
- however, Darwinian mechanisms cannot explain the origin of the first living cell, it assumes replication, and the origin of life is about where the first replicator comes from

Fox:

- Meyer's argument is not about the evolution of life after the first cell
- Meyer's case for design is about the origin of life
- naturalists do not know a naturalistic explanation for the origin of life
- there are a number of naturalistic hypotheses for the origin of life, like the RNA-first hypothesis
- maybe in a few years one of them will turn out to be correct
- what intelligent design is arguing from a gap in our current naturalistic knowledge to infer that God intervened in nature

Meyer:

- that's not what intelligent design is at all
- the approach ID theorists use is the inference to best explanation
- you evaluate all explanations, non-intelligent causes and intelligent causes
- you prefer the best possible explanation
- we know that minds are capable of producing information just like the information we find in DNA

Fox:

- living cells replicate, so they have the ability to introduce mutations as they replicate and then some of those mutations can be selected
- so maybe the process of replicating that living cells do created the first living cell
- maybe the first living cell created itself, X brought X into being, self-creation, what's irrational about that?

Meyer:

- the issue is the origin of life – where did the first living cell come from?
- you cannot appeal to the operations that a living cell can perform to explain the origin of the first living cell
- there was no first living cell operating before the first living cell
- there was no replication, mutation or selection before the first living cell
- in fact, in my book I show that there is no known naturalistic mechanism that is able to produce the information needed for the first living cell
- *nothing can create itself, that is self-contradictory*

Fox:

- Well, you are just saying that because something is complex that God did it

Meyer:

- Sadly, no. What I actually said needed to be explained was the information, not complexity
- And we know from software engineering that the process of adding information to code is performed by programmers
- in the absence of any adequate naturalistic explanation for information, we are justified in taking the explanation that we are familiar with – namely, intelligent agency – based on our uniform, universal experience of what causes information

Fox:

- well, maybe we can appeal to the mutation and selection in existing living cells to explain the origin of the first living cell
- maybe there were living cells before the first living cell, and then these other living cells created the first living cell

Meyer:

- we can't keep invoking mutation and selection when those processes are not operating prior to the origin of the first living cell

Fox:

- well maybe some bare-bones self-replication molecule was a precursor to the first living cell

Meyer:

- even to generate very limited replicator would require a large amount of information
- the argument I am making is – where does the evolution come from?

Fox:

- well, maybe we will think of an explanation for information that is naturalistic in 20 years
- we've thought of explanations to things that were NOT information before
- so maybe we will be able to think of something to explain information based on our ability to explain NOT information before

Moderator: Change topics: the Dover decision

Meyer:

- the Discovery Institute opposed the policy that causes the trial
- the wording of the statute was poor
- the judge was completely wrong in his decision
- young earth creationists used the phrase "intelligent design" to cover their agenda
- intelligent design is an inference using the normal methods of science

Fox:

- intelligent design is a science stopper because it stops looking for a naturalistic explanation
- everything in nature must have a naturalistic explanation
- everything has to be explained using matter and time and chance
- it just has to be that way!!!!

Meyer:

- well, what luck would you have explaining an effect like Mt. Rushmore?
- can you explain that using matter,time and chance?
- Mt. Rushmore was the product of intelligence, not wind and erosion
- similarly, there is information in the cell, and we know that intelligence causes information

Fox:

- So you are saying that we don't understand and therefore an intelligence is necessary?

Meyer:

- no I am saying we DO understand and we are making an inference based on that understanding
- you are the one who is insisting on a material explanation because you pre-suppose materialism
- we know that minds have causal powers, and we can infer mind as an explanation from information

Fox:

- well nature is a seamless chain of material causes and effects

Meyer:

- agents can act without violating the laws of nature
- even humans can act as intelligent agents to create information in books, and they don't violate the laws of nature

- intelligent causes are real, and they explain effects in nature

Fox:

- you're trying to impose on science something to do with meaning and purpose

Meyer:

- no that's not what we're doing, we're inferring from from the fact that we ourselves are known causes of information to the fact that an intelligence cause is the best explanation for information in the cell

Fox:

- *but I am a materialist*, I need a materialist explanation

Meyer:

- mind IS an answer to the how question
- we infer to mind in many other scientific disciplines, like cryptography, archaeology, etc.
- a materialist might accuse an archaeologist of engaging in a "scribe-of-the-gaps" argument, but the best explanation of an artifact with information is a scribe
- we are inferring that mind is the cause from the nature of the effect: information

Moderator: is it appropriate to call DNA "information"
Fox:

- well DNA is just a molecular polymer, any reference to information is just by analogy

Meyer:

- DNA is a molecular polymer, but it also exhibits the property of specified complexity
- the arrangement of bases, which function as machine instructions in a software program, for performings task in the cell
- we have observed that the property of specified complexity always comes from an intelligence

Fox:

- well, maybe there are other sequences that would work, so maybe it's really not uncommon to develop functioning sequences by chance alone, without an intelligence

Meyer:

- you can measure how precise the functional specificity is in DNA and proteins

Moderator: is Shannon information the same as functional information

Meyer:

- Shannon information refers to the sequences of digits or symbols that do not necessarily have any function, i.e. – a four character string QSZX has as much Shannon information as WORD. However, only the latter is functional against the pattern of the English language. There are arrangements of DNA bases and amino acids that have the same number of symbols/characters as a functional sequence would have, but they have no biological function – they do not exhibit specified complexity

Fox:

- Well, maybe there are lots and lots of sequences of DNA and proteins so that it is fairly easy to get a functional one by chance

Meyer:

- DNA sequences that are functional are extremely rare, protein sequences are even more rare
- this is not my opinion, this is what the research shows – functional protein sequences are rare

Fox:

- well maybe there are other functional sequences that are occur before the first functional sequence that are precursors to the first functional sequence
- maybe there are billions of years of replication, mutation and selection before the first replication, mutation and selection

Meyer:

- you can't get to the first selectable functional sequence by appealing to precursor selectable functional sequences – there are no selectable functional sequences before the FIRST one
- you have to get the first selectable functional sequence by chance alone, because there is nothing to mutate or select before the first replicator
- the chance hypothesis has been rejected because the minimal amount of information for the simplest replicator is too high to get by chance alone, given the resources, including time, that are available

Moderator: *Keith are you confident that naturalism will be able to substantiate these naturalism-of-the-gap speculations that you offer in response to Meyer's actual science that we have today?*

Fox:

- well, it is hard to know for sure because it was just a fluke event
- but there's nothing irrational or unscientific or miraculous about it – the fluke would have a material explanation
- there is nothing that we can detect that would implicate God, my speculations about a fluke which I cannot observe or measure or test would all be compatible with an atheistic worldview that omits God as a causal entity

Meyer:

- where are those material processes that could account for this fluke then?
- the whole point of this argument is that the information in DNA transcends the material components in the sequence
- it's the arrangement of the material parts/letters/characters/symbols/instructions that needs to be explained

Fox:

- Well, I just have a different philosophy of science that rules out intelligent causation a priori

Meyer:

- Yes, that's the difference between us – you pre-suppose that all explanations of natural phenomena must exclude intelligent causes

There is a bit more where Meyer talks about how parts of the cell are implementations of various design patterns (Gang of Four design patterns) that are used by software architects who design software.

Find more posts on Stephen C. Meyer here.

# Can the negative effects of fatherlessness be attributed to other factors, like poverty?

**Wintery Knight** · 6 February 2014 · Archived copy · Original

Marriage and family

Here's a blog post from the Institute for Family Studies to answer that question.

Introduction:

> Growing up without a father—whether that's due to divorce, a nonmarital birth, or a father's death—is associated with a host of negative effects. But given that children from low-income families, for instance, are more likely to live apart from their father in the first place, it can be hard to tell to what extent an absent father *causes* the problems that father absence is associated with, and to what extent other factors related to both family structure and child outcomes (like household income) are to blame.
>
> Researchers Sara McLanahan, Laura Tach, and Daniel Schneider published a paper last year on exactly this problem. They reviewed 47 studies that used a variety of methods designed to uncover the causal effects of father absence, such as lagged dependent variable models, natural experiments, and individual fixed effects models.

Here's one of the findings:

> Labor Force: McLanahan and her colleagues found few studies on how father absence affects children's employment and income in adulthood. The handful of analyses they did find are not entirely comparable; however, some of their findings were consistent. "Divorce was associated with lower levels of employment" in two studies, and in two other studies there were "higher levels of labor force inactivity among those who experienced divorce in early childhood." In a fifth study, growing up with stepparents and with a single divorced mother had negative effects on occupational status, while growing up with a single widowed mother was not a disadvantage relative to growing up with stably married parents.

Here is Dr. Robert Rector of the Heritage Foundation to add some more evidence for this view.

He writes:

> Census data and the Fragile Families survey show that marriage can be extremely effective in reducing child poverty. But the positive effects of married fathers are not limited to income alone. Children raised by married parents have substantially better life outcomes compared to similar children raised in single-parent homes.
>
> When compared to children in intact married homes, children raised by single parents are more likely to have

> emotional and behavioral problems; be physically abused; smoke, drink, and use drugs; be aggressive; engage in violent, delinquent, and criminal behavior; have poor school performance; be expelled from school; and drop out of high school.[19] Many of these negative outcomes are associated with the higher poverty rates of single mothers. **In many cases, however, the improvements in child well-being that are associated with marriage persist even after adjusting for differences in family income. This indicates that the father brings more to his home than just a paycheck.**
>
> The effect of married fathers on child outcomes can be quite pronounced. For example, examination of families with the same race and same parental education shows that, when compared to intact married families, children from single-parent homes are:
>
> - More than twice as likely to be arrested for a juvenile crime;[20]
> - Twice as likely to be treated for emotional and behavioral problems;[21]
> - Roughly twice as likely to be suspended or expelled from school;[22] and
> - A third more likely to drop out before completing high school.[23]
>
> The effects of being raised in a single-parent home continue into adulthood. Comparing families of the same race and similar incomes, children from broken and single-parent homes are three times more likely to end up in jail by the time they reach age 30 than are children raised in intact married families. [24] Compared to girls raised in similar married families, girls from single-parent homes are more than twice as likely to have a child without being married, thereby repeating the negative cycle for another generation.[25]
>
> Finally, the decline of marriage generates poverty in future generations. Children living in single-parent homes are 50 percent more likely to experience poverty as adults when compared to children from intact married homes. This intergenerational poverty effect persists even after adjusting for the original differences in family income and poverty during childhood.[26]

Yesterday, on the Dennis Prager show, Dennis was discussing this article and this article during the male – female hour. He made the point that children raised by single mothers and divorced mothers don't have the experience of growing up and seeing their mother *love her husband* and *act like a wife towards him.* No government program can provide that. It is important that boys and girls have that experience of seeing a woman love her husband, and seeing a man love his wife. Of seeing them in a committed, stable, purposeful relationship, trying to provide for and raise their children.

Today, a lot of women are watching Hollywood movies and TV shows where men are portrayed in a very negative way, e.g. – Mad Men. These shows are often written by people on the hard left – radical feminists and/or gay activists. A girl growing up in this environment is just not going to have access to a positive view of how men and women get along in a marriage, making them less marry-able. Less safe to marry. That example of man and wife would act as a counter to Hollywood, but too many boys and girls are growing up without it.

So what's the take-home lesson? The take-home lesson is that we need to be more careful about choosing partners and having children. It's probably a good idea to be less driven by emotions, peer approval and hormones, and more driven by rational thought and studies. Choose wisely, and test well.

# J. Warner Wallace: influence the culture by encouraging young Christians

**Wintery Knight** · 6 February 2014 · Archived copy · Original

From the Cold Case Christianity blog.

Excerpt:

> I came to faith at the age of 35. I didn't have a deep relationship with any Christians at the time, and I had no strong Christian influences in my life. Without a mentor or role model, I felt like I had to work through the evidence and claims of Christianity on my own. Many years later however, as I was preparing to write my own book and start a modest journey as a public Case Maker, members of the apologetics community surrounded me with support and encouragement. While I wasn't much younger than any of them (and was, in fact, older than some), they recognized I was the "new kid" on the block and surprised me with their generosity, wisdom and assistance. I was humbled by the response, and began to look at my own sphere of influence, searching for young men and women I could encourage in a similar way.
>
> Those of us who hope to influence the culture for Christ typically think of our own efforts to communicate and reach the world. What can I write today? What can I say? How can I effectively use the internet to promote and defend the Christian worldview? Like others, I'm guilty of viewing my influence through the narrow lens of my own efforts. As a guy who started this season in my 50's however, I've come to realize the limits of my own impact and the role I can play as an encourager. My questions are starting to change: Who can I inspire as a young Christian Case Maker? What small piece of wisdom can I provide to someone who is a few steps behind me in this journey? How can I impact the younger generation of Christian Case Makers? I know I won't be writing and speaking 30 years from now, but there are men and women out there who will be. What can I do to make them even more effective?

I wanted to add to what he wrote and tell you a little bit about what I do. Through my blog, I have been able to meet young people in high school and college who are making decisions about what to study and where to work. I'm been able to help people in some specific ways:

- helping them to know what to read/listen to/watch in order to build up their worldview
- helping them learn how to debate with skeptics
- helping them to decide between college and trade school
- helping them to choose the right major
- encouraging them to work in the summer instead of taking time off
- helping them get funding for apologetics events that they organize
- rewarding them for doing well in school or work
- listening to the conflicts with teachers and professors
- helping them make plans for their lives
- helping them make good decisions with the opposite sex
- spending time playing games with them or just talking
- asking them about their classes, assignments and tests

It's always rewarding to seem them studying hard subjects, getting good grades, entering competitions and getting summer/full-time jobs. I like to give rewards to people who do try to grow their skills and produce results. It can be small stuff like games or books, or bigger stuff, like sponsoring an apologetics event that they've organized. Sometimes I can get a young person connected with a mentor. For example, one young lady wanted to start a pro-

life club, and I was able to connect her with someone who started a large pro-life organization and the office manager from that large pro-life organization. I also provided her with some helpful pro-life books.  It's important that we not understimate how much good it does to try to be supportive when young people want to grow their skills and take on challenges.

I think that mentoring young people is especially for those of us who are not married with children. We typically have more disposable income and time than married people do, especially married people with children. Not only is it good for them to get the advice from someone more experienced, but it also gives you parenting practice, and that's something that you can talk about in a courting situation. This is the kind of thing that signals to a candidate spouse that you are going to be interested in mentoring them, and in raising effective Christian children. The most challenging thing about doing this is that you really have to think about how to please God with your mentoring, and that means that you have to put yourself second a lot of the time. It's good for singles to learn how to do that.

# Jason Lisle debates Hugh Ross on the age of the Earth

**Wintery Knight** · 6 February 2014 · Archived copy · Original

***I am re-posting this because people are searching for something on the Ken Ham vs Bill Nye debate. You can read a review of the Ham-Nye debate on J. W. Wartick's blog. Another good review is from Evolution News, written by Casey Luskin of the Discovery Institute. In the meantime, your time would be more profitably spent listening to this debate.***

I found this radio debate about the age of the Earth on the Apologetics 315 Twitter feed.

Speakers:

Jason Lisle

Dr. Lisle graduated *summa cum laude* from Ohio Wesleyan University where he double-majored in physics and astronomy, and minored in mathematics. He did graduate work at the University of Colorado where he earned a Master's degree and a Ph.D. in Astrophysics. While there, Dr Lisle used the SOHO spacecraft to investigate motions on the surface of the sun as well as solar magnetism and subsurface weather. His thesis was entitled "Probing the Dynamics of Solar Supergranulation and its Interaction with Magnetism." Among other things, he discovered a previously unknown polar alignment of supergranules (solar convection cells), and discovered evidence of solar giant cells. He has also authored a number of papers in both secular and creation literature.

Hugh Ross

At age seventeen he became the youngest person ever to serve as director of observations for Vancouver's Royal Astronomical Society. With the help of a provincial scholarship and a National Research Council (NRC) of Canada fellowship, he completed his undergraduate degree in physics (University of British Columbia) and graduate degrees in astronomy (University of Toronto). The NRC also sent him to the United States for postdoctoral studies. At Caltech he researched quasi-stellar objects, or "quasars," some of the most distant and ancient objects in the universe.

So both have impeccable scientific credentials.

The MP3 file is here. (This is the updated version that Brian Auten fixed to remove the commercials!)

I don't always agree with Frank Pastore, (only 95%), but he knows the topic of the debate back to front, and guides the discussion in an incredibly useful, accurate way. This is a fine debate to listen to! You will learn a lot. And you will have fun learning.

**The Bible and the early church fathers**

Jason Lisle

- we take Genesis literally
- the starting point of YEC is Scripture
- the plain meaning of Scripture is that the earth was made in 6 24-hour days
- science has to be interpreted in a way that fits a plain reading of Genesis 1
- the evidence for an old universe and old Earth must be rejected a priori

Hugh Ross

- we take Genesis literally
- the Hebrew word for day (yom) can mean 24 hours or a long period of time
- there are multiple creation accounts in the Bible
- interpreting yom as long periods of time harmonizes all the accounts

- the Bible says that the seventh day is not even ended
- we believe in a literal Adam and Eve living thousands of years ago

Jason Lisle

- there's only 1 account of creation in the Bible: Genesis
- the normal view in church history is 6 24-hour days
- there are some early church fathers who that the days are long
- the other places where creation is discussed are not real accounts

Hugh Ross

- the early church did not spend a lot of time talking about the age of the Earth
- there is not unanimous agreement about the age of the Earth
- there is no definitive statement on the age of the Earth until Isaac Newton
- Newton strongly favored an old earth, hundreds of years before Darwin
- there are other creation accounts, Job 38-39
- Pslam 104 is a creation account

Jason Lisle

- a Psalm is not written in the genre of historical narrative
- Psalm 104 is not a creation account – it talks about ships, etc
- it's talking about the modern era, not a creation account

**The evidence from science**

Hugh Ross

- both of us believe in an absolute beginning of time, space and matter
- both of us believe that space is expanding now
- stars form as matter coalesces during the expansion of the universe
- star formation requires a universe aged on the order of billions of years

Jason Lisle

- if you pre-suppose my interpretation of Genesis, then the universe is young

Hugh Ross

- the speed of the expansion of the universe proves an old universe
- the light emitted from the oldest stars also proves an old universe

Jason Lisle

- if you pre-suppose my interpretation of Genesis, then the universe is young

**Was the universe made with the appearance of age**

Jason Lisle

- any evidence for an old universe is wrong
- stars didn't form gradually, they were created by God instantly
- stars have the appearance of age, but they're actually young

Hugh Ross

- God doesn't lie in the Bible or in the book of nature
- Scientists can look back in time by looking further out into the universe
- Because light takes a long time to travel to the Earth, we can see the past
- we can see a time when there were no stars yet
- stars formed slowly over time, not instantaneously
- we have photos of the universe before stars and after stars
- we can see a history of the universe by looking closer and further away

**Does nature provide us with knowledge about creation?**

They discuss Psalm 19 now, so here's Psalm 19:1-5:

[1] The heavens declare the glory of God; the skies proclaim the work of his hands.

[2] Day after day they pour forth speech; night after night they display knowledge.

[3] There is no speech or language where their voice is not heard.

[4] Their voice goes out into all the earth, their words to the ends of the world.
In the heavens he has pitched a tent for the sun,

[5] which is like a bridegroom coming forth from his pavilion, like a champion rejoicing to run his course.

Jason Lisle

- nature isn't a book
- nature doesn't provide knowledge about God
- Psalm 19 doesn't say that nature communicates to us
- **verse 3 says "There is no speech nor language"**

Hugh Ross

- **If you read all of verse 3, it says the exact opposite of what you just said it says**
- Verse 1: "The heavens declare the glory of God; the skies proclaim the work of his hands"
- Verse 2: "Day after day they pour forth speech; night after night they display knowledge."
- Verse 3: "There is no speech or language **where their voice is not heard.**"
- Verse 4: "Their voice goes out into all the earth, their words to the ends of the world."

Jason Lisle

- You can't take the Bible literally all the time

**How important is the age of the Earth?**

Hugh Ross

- it's a non-essential because it has nothing to do with salvation or inerrancy
- both sides of the debate affirm the same views of salvation and inerrancy
- professional scientists have multiple lines of evidence saying the universe is old
- the only reason it matters is that young earth creationism is a barrier to faith
- if you have to deny science to be a Christian, then it stops people from being saved
- young earth opposition to science has been used by secularists to marginalize Christianity

Jason Lisle

- there was no death in the Garden of Eden, animal or human, before the Fall
- the Bible says that death was a consequence of Adam's sin
- so there was no death before the Fall, according to the Bible
- old earth people believe in death before the Fall

Consider Romans 5:12:

[12]Therefore, just as sin entered the world through one man, and death through sin, and in this way death came to all men, because all sinned—

Hugh Ross

- Romans 5:12 says that Adam's sin caused death to come **to all men**
- old earth people believe that only animal death existed before the Fall, not human death
- plant and animal death existed before the Fall – Adam and Eve were eating!

Jason Lisle

- I interpret the Bible to say that plants aren't living creatures

**What about dinosaurs, the Flood, and Noah's ark?**

Jason Lisle

- dinosaurs were created on the 6th day
- dinosaurs lived alongside humans and were vegetarians before the Fall
- dinosaurs were on the Ark – they're not that big – just take baby dinosaurs
- it's a global flood

Hugh Ross

- dinosaurs were created on the 5th day
- they were extinct before before humans ever appeared
- nobody in history ever wrote about dinosaurs until 200 years ago
- it's a local flood

# Will global warming alarmism undermine the authority of science?

**Wintery Knight** · 7 February 2014 · Archived copy · Original

This is a must read article from Forbes magazine about a new paper in an Australian journal by Garth Paltridge. Dr. Paltridge is an Australian atmospheric physicist who holds a BSc from the University of Queensland, a PhD from University of Melbourne and a DSc from the University of Queensland.

The article introduces the author and his thesis:

> Will the overselling of climate change lead to a new scientific dark age? That's the question being posed in the latest issue of an Australian literary journal,*Quadrant*, by Garth Paltridge, one of the world's most respected atmospheric scientists.
>
> Paltridge was a Chief Research Scientist with the Commonwealth Scientific and Industrial Research Organization (CSIRO). The latter is Australia's equivalent of the National Science Foundation, our massive Federal Laboratory network, and all the governmental agency science branches rolled into one.
>
> Paltridge lays out the well-known uncertainties in climate forecasting. These include our inability to properly simulate clouds that are anything like what we see in the real world, the embarrassing lack of average surface warming now in its 17th year, and the fumbling (and contradictory) attempts to explain it away.

Paltridge writes:

> "The trap was fully sprung when many of the world's major national academies of science (such as the Royal Society in the UK, the National Academy of Sciences in the USA and the Australian Academy of Science) persuaded themselves to issue reports giving support to the conclusions of the IPCC [the United Nations' Intergovernmental Panel on Climate Change]. The reports were touted as national assessments that were supposedly independent of the IPCC and of each other, but of necessity were compiled with the assistance of, and in some cases at the behest of, many of the scientists involved in the IPCC international machinations. In effect, the academies, which are the most prestigious of the institutions of science, formally nailed their colours to the mast of the politically correct.
>
> […]"In the light of all this, we have at least to consider the possibility that the scientific establishment behind the global warming issue has been drawn into the trap of seriously overstating the climate problem—or, what is much the same thing, of seriously understating the uncertainties associated with the climate problem—in its effort to promote the cause. It is a particularly nasty trap in the context of science, because it risks destroying, perhaps for centuries to come, the unique and hard-won reputation for honesty which is the basis of society's respect for scientific endeavour."

None of this is a surprise to Christian apologists, because we've been through this before with Darwinism. Yes, it really can happen that science is hijacked by religious people who want to support their ideologies. Science is wonderful, but it's not immune to being abused.

Forbes also posted an excellent long article re-capping how climate scientists manipulated data in order to prove what they wanted to prove. This article takes about the Climategate scandal, which is useful to show how far these scientists will go.

# State of Utah lists 15 consequences to redefining marriage in appellate brief

**Wintery Knight** · 7 February 2014 · Archived copy · Original

This is from National Review.

Excerpt:

> In an historic opening brief filed yesterday before the U.S. Court of Appeals for the Tenth Circuit, the state of Utah identified at least 15 consequences of redefining marriage to include same-sex couples. You can read the full text, which justifies more fully why each of these reasons are valid.

Here are some of their reasons:

> 1. "First, as many commentators have observed, because procreation is an inherently gendered affair, redefining marriage in genderless terms would break the critical conceptual link between marriage and procreation. . . . Given the manifest ills of fatherless parenting, the State has a compelling interest in sending a powerful message to women that, whenever possible, marriage to the fathers of their children is very important to the welfare of those children and to society itself."
>
> 5. "Fifth, and most obviously, a genderless definition of marriage would likely increase the number of children being raised by same-sex parents. That could happen because the couple decides to raise together an existing child of one of the partners. Or it could result from the conception of a new child through surrogacy or sperm-donation. Either way, such children will not benefit from the State's preferred mother-father parenting model; often they will have no way of knowing even the identity of both biological parents. And recent evidence on same-sex parenting, while not conclusive, indicates that same-sex parenting arrangements are less effective than married biological mothers and fathers in producing positive outcomes in the lives of their children.
>
> 8. "[The] correlation between genderless marriage and lower birthrates. . . . It is also striking that fertility and birthrates tend to be markedly lower in nations and states that have embraced same-sex marriage."
>
> 12. "Governments would likely be pressured—and perhaps agree—to revoke the tax-exempt status of churches or other non-profit religious organizations that refuse on religious grounds to recognize same-sex marriages or to provide benefits to same-sex couples on the same terms as husband-wife couples."
>
> 13. "Governments would likely be pressured—and perhaps agree—to investigate, prosecute and punish people in wedding-related businesses for refusing on religious conscience grounds to assist with same-sex weddings."
>
> 14. "Government licensing agencies would likely be pressured—and perhaps agree—to investigate and punish counselors for refusing on religious conscience grounds to counsel same-sex married couples on the same terms as heterosexual couples."
>
> 15. "Religion-based conflicts between public schools and parents would likely increase as children are taught about sexuality and marriage in ways that contravene parents' and students' deeply held religious beliefs."

These reasons are all of interest to the state, but what about the other social consequences of redefining marriage?

Ryan T. Anderson wrote about that a while back.

Excerpt:

> **The Norm of Monogamy.** New York University Professor Judith Stacey has expressed hope that redefining marriage would give marriage "varied, creative and adaptive contours," leading some to "question the dyadic limitations of Western marriage and seek…small group marriages."[5] In their statement "Beyond Same-Sex

> Marriage," more than 300 "LGBT and allied" scholars and advocates call for legal recognition of sexual relationships involving more than two partners.[6]
>
> University of Calgary Professor Elizabeth Brake thinks that justice requires using legal recognition to "denormalize[] heterosexual monogamy as a way of life" and "rectif[y] past discrimination against homosexuals, bisexuals, polygamists, and care networks." She supports "minimal marriage" in which "individuals can have legal marital relationships with more than one person, reciprocally or asymmetrically, themselves determining the sex and number of parties, the type of relationship involved, and which rights and responsibilities to exchange with each."[7]

And:

> **The Norm of Exclusivity.** Andrew Sullivan, who has extolled the "spirituality" of "anonymous sex," also thinks that the "openness" of same-sex unions could enhance the bonds of husbands and wives:
>
> [A]mong gay male relationships, the openness of the contract makes it more likely to survive than many heterosexual bonds.… [T]here is more likely to be greater understanding of the need for extramarital outlets between two men than between a man and a woman.… [S]omething of the gay relationship's necessary honesty, its flexibility, and its equality could undoubtedly help strengthen and inform many heterosexual bonds.[11]
>
> "Openness" and "flexibility" are Sullivan's euphemisms for sexual infidelity. Similarly, in a *New York Times Magazine* profile, gay activist Dan Savage encourages spouses to adopt "a more flexible attitude" about allowing each other to seek sex outside their marriage.[12] *The New York Times* recently reported on a study finding that exclusivity was not the norm among gay partners: "'With straight people, it's called affairs or cheating,' said Colleen Hoff, the study's principal investigator, 'but with gay people it does not have such negative connotations.'"[13]

We really need to think about the consequences of these decisions before we jump into them. The last time we redefined marriage, it was no-fault divorce. That worked out great for selfish adults who wanted to make marriage about their own happiness and feelings, but it didn't work out well for the children who were impacted.

# N.T. Wright lectures on the resurrection of Jesus: did Jesus rise from the dead?

**Wintery Knight** · 7 February 2014 · Archived copy · Original

Here's a lecture from N.T. Wright, whose multi-volume case for the historicity of the bodily resurrection of Jesus seems to be getting a lot of respect from the other side, (although I strongly disagree with his economic and political views, which are naive at best). Wright has taught at Cambridge University, Oxford University, Duke University, McGill University, and lectured on dozens of prestigious campuses around the world. He's published 40 books.

Here's a video of his case for the resurrection:

**N.T. Wright's historical case for the bodily resurrection of Jesus**

Wright basically argues that the resurrection cannot have been a myth invented by the early Christian community, because the idea of the Messiah dying and being bodily resurrected to eternal life was completely unexpected in Jewish theology, and therefore would not have been fabricated.

In Judaism, when people die, they stay dead. At the most, they might re-appear as apparitions, or be resuscitated to life for a while, but then die again later. *There was no concept of the bodily resurrection to eternal life of a single person, especially of the Messiah, prior to the general resurrection of all the righteous dead on judgment day.*

Wright's case for the resurrection has 3 parts:

- The Jewish theological beliefs of the early Christian community underwent 7 mutations that are *inexplicable* apart from the bodily resurrection of Jesus
- The empty tomb
- The post-mortem appearances of Jesus to individuals and groups, friends and foes

Here's the outline of Wright's case:

> …the foundation of my argument for what happened at Easter is the reflection that this Jewish hope has undergone remarkable modifications or mutations within early Christianity, which can be plotted consistently right across the first two centuries. And these mutations are so striking, in an area of human experience where societies tend to be very conservative, that they force the historian… to ask, Why did they occur?
>
> The mutations occur within a strictly Jewish context. The early Christians held firmly, like most of their Jewish contemporaries, to a two-step belief about the future: first, death and whatever lies immediately beyond; second, a new bodily existence in a newly remade world. 'Resurrection' is not a fancy word for 'life after death'; it denotes life after 'life after death'.

And here are the 7 mutations:

1. Christian theology of the afterlife mutates from multiples views (Judaism) to a single view: resurrection (Christianity). When you die, your soul goes off to wait in Sheol. On judgment day, the righteous dead get new resurrection bodies, identical to Jesus' resurrection body.
2. The relative importance of the doctrine of resurrection changes from being peripheral (Judaism) to central (Christianity).
3. The idea of what the resurrection would be like goes from multiple views (Judaism) to a single view: an incorruptible, spiritually-oriented body composed of the material of the previous corruptible body (Christianity).
4. The timing of the resurrection changes from judgment day (Judaism) to a split between the resurrection of the

Messiah *right now* and the resurrection of the rest of the righteous *on judgment day* (Christianity).

5. There is a new view of eschatology as collaboration with God to transform the world.
6. There is a new *metaphorical* concept of resurrection, referred to as being “born-again”.
7. There is a new association of the concept of resurrection to the Messiah. (The Messiah was not even supposed to die, and he certainly wasn’t supposed to rise again from the dead in a resurrected body!)

There are also other historical puzzles that are solved by postulating a bodily resurrection of Jesus.

1. Jewish people thought that the Messiah was not supposed to die. Although there were lots of (warrior) Messiahs running around at the time, whenever they got killed, their followers would abandon them. Why didn’t Jesus’ followers abandon him when he died?
2. If the early Christian church wanted to communicate that Jesus was special, despite his shameful death on the cross, they would have made up a story using the existing Jewish concept of *exaltation*. Applying the concept of bodily resurrection to a dead Messiah would be a radical departure from Jewish theology, when an invented exaltation was already available to do the job.
3. The early church became extremely reckless about sickness and death, taking care of people with communicable diseases and testifying about their faith in the face of torture and execution. Why did they scorn sickness and death?
4. The gospels, especially Mark, do not contain any embellishments and “theology historicized”. If they were made-up, there would have been events that had some connection to theological concepts. But the narratives are instead bare-bones: “Guy dies public death. People encounter same guy alive later.” Plain vanilla narrative.
5. The story of the women who were the first witnesses to the empty tomb cannot have been invented, because the testimony of women was inadmissible under almost all circumstances at that time. If the story were invented, they would have invented male discoverers of the tomb. Female discovers would have hampered conversion efforts.
6. There are almost no legendary embellishments in the gospels, while there are plenty in the later gnostic forgeries. No crowds of singing angels, no talking crosses, and no booming voices from the clouds.
7. There is no mention of the future hope of the general resurrection, which I guess they thought was imminent anyway.

To conclude, Wright makes the argument that the best explanation of all of these changes in theology and practice is that God raised Jesus (bodily) from the dead. There is simply no way that this community would have made up the single resurrection of the Messiah – who wasn’t even supposed to die – and then put themselves on the line for that belief.

And remember, the belief in a resurrected Jesus was something that the earliest witnesses could really assess, because they were the ones who saw him killed and then walking around again after his death. They were able to confirm or deny their belief in the resurrection of Jesus based on their own *personal experiences* with the object of those beliefs.

# South Carolina Republicans introduce bill to ban abortions after 19 weeks

**Wintery Knight** · 8 February 2014 · Archived copy · Original

The Sacramento Bee reports.

Excerpt:

> Abortion opponents hope a proposed law banning the procedure in South Carolina beyond the 19th week of pregnancy ends up before the U.S. Supreme Court.
>
> The legislation, co-sponsored by 34 Republicans, asserts that a fetus can feel pain at 20 weeks old. Doctors who disregard the ban could be charged with a felony.
>
> Rep. Wendy Nanney, the main sponsor, said as a mother of five children, she wants to protect children from pain.
>
> “That’s what a mother does,” said Nanney, R-Greenville. Asked whether a mother should decide based on her situation, she added, “I think the child is the most important thing, and the fact it feels pain is very important to me.”
>
> Doctors with the South Carolina chapter of the American Congress of Obstetricians and Gynecologists said the bill’s supporters are looking only at studies that support their conclusion, while other reviews have found a fetus does not feel pain before 24 weeks. The doctors point to lethal or serious fetal problems that often aren’t diagnosed, or at least can’t be confirmed, before 20 weeks.
>
> “Once the diagnosis is confirmed, many couples need additional time to make a well-informed and careful decision,” reads the joint statement signed by three doctors.
>
> The proposed ban provides an exception only when the mother’s life is in danger, and in such a case, the doctor must end the pregnancy in a way that gives the fetus the best chance for survival. Asked why she made no exception for rape or incest victims, Nanney said those pregnancies are normally aborted before 20 weeks.

This bill would be similar to the one that Texas Republicans passed. Texas and South Carolina are deep red states, so if you’re looking for abortion to be reduced, then that’s where it’s going to happen. About a dozen states have passed bans on abortion at 20 weeks.

# Chairwoman of Tea Party group targeted by IRS, ATF, FBI: “I refuse to be intimidated”

**Wintery Knight** · 8 February 2014 · Archived copy · Original

Real Clear Politics has the transcript.

Snips:

> Nearly two decades of running our small business, my husband and I never dealt with any government agency, outside of filing our annual tax returns. We had never been audited, we had never been investigated, but all that changed upon submitting applications for the non-profit statuses of True the Vote and King Street Patriots. Since that filing in 2010, my private businesses, my nonprofit organizations, and family have been subjected to more than 15 instances of audit or inquiry by federal agencies.
>
> In 2011, my personal and business tax returns were audited by the Internal Revenue Service, each audit going back for a number of years.
>
> In 2012, my business was subjected to inspection by OSHA, on a select occasion when neither my husband nor I were present, and though the agency wrote that it found nothing serious or significant, it still issued fines in excess of $20,000.
>
> In 2012 and again in 2013 the Bureau of Alcohol, Tobacco, and Firearms conducted comprehensive audits at my place business.
>
> Beginning in 2010, the FBI contacted my nonprofit organization on six separate occasions – wanting to cull through membership manifests in conjunction with domestic terrorism cases. They eventually dropped all matters and have now redacted nearly all my files.
>
> All of these incursions into my affairs began after filing applications for tax-exemption. There is no other remarkable event, no other reason, to explain away how for decades I went unnoticed, but now find myself on the receiving end of interagency coordination into and against all facets of my life, both public and private.
>
> Bear in mind, distinguished ladies and gentlemen of this sub-committee, these events were occuring while the IRS was subjecting me to multiple rounds of abusive inquiries, with requests to provide every Facebook and Twitter entry I’d every posted, questions about my political aspirations, and demands to know the names of every group I’d ever made presentations to, the content of what I’d said, and where I intended to speak for the coming year. The answers to these sorts of questions are not of interest to the typical IRS analyst, but they are of great interest to a political machine that puts its own survival above the civil liberties of any private citizen.

The whole video and transcript is worth a look.

What has been the response of the Democrats to these facts? Well, Obama has picked one of his campaign donors to investigate. And Obama insisted in a recent interview that there was not “a smidgen of corruption” in his autocratic socialist regime.

Obama blamed Fox News and said there was not even a smidgen of corruption. In other words, shut up because I am doing this for your own good, you peasants. Believe my lies, because I am your King.

Remember, Obama won the 2012 election in part through intimidation and persecution of these conservative groups, especially the ones like True the Vote that sought to prevent rampant voter fraud by Democrat voters.

It reminds me of a quotation from C.S. Lewis:

> If we are to be mothered, mother must know best. . . . In every age the men who want us under their thumb, if they have any sense, will put forward the particular pretension which the hopes and fears of that age render

> most potent. They 'cash in.' It has been magic, it has been Christianity. Now it will certainly be science. . . . Let us not be deceived by phrases about 'Man taking charge of his own destiny.' All that can really happen is that some men will take charge of the destiny of others. . . . **The more completely we are planned the more powerful they will be.**
>
> . . . .
>
> Of all tyrannies, a tyranny exercised for the good of its victims may be the most oppressive. It may be better to live under robber barons than under omnipotent moral busybodies. The robber baron's cruelty may sometimes sleep, his cupidity may at some point be satiated; but those who torment us for our own good will torment us without end for they do so with the approval of their own conscience. They may be more likely to go to Heaven yet at the same time likelier to make a Hell of earth. Their very kindness stings with intolerable insult. To be 'cured' against one's will and cured of states which we may not regard as disease is to be put on a level of those who have not yet reached the age of reason or those who never will; to be classed with infants, imbeciles, and domestic animals.
>
> **—C. S. Lewis**, *God in the Dock*

Democrats stand for the complete planning of everyone's lives according to their own secular leftist values, and they want to grow government in order to achieve that control over society.

# What criteria do historians use to determine the facts about the historical Jesus?

**Wintery Knight** · 9 February 2014 · Archived copy · Original

Have you ever heard Gary Habermas, Michael Licona or William Lane Craig defend the resurrection of Jesus as the best explanation for the "minimal facts" about Jesus? The lists of minimal facts that they use are typically agreed to by their opponents during the debates. But why? Well it turns out that historians from all worldviews tend to use the same historical methods to determine facts, and that's why they agree on the facts that pass their historical tests.

For example, consider William Lane Craig. In his debates on the resurrection, he argues that the burial of Jesus, his empty tomb (post-mortem), the post-mortem appearances, and the early church's use of the word "resurrection" to describe what happened to him are all minimal facts.

For example, in his debate with Bart Ehrman, Craig was able to quote Ehrman's own writings where he agreed that all four facts were probably true.

Excerpt:

> Now in his early published work Dr. Ehrman expressed skepticism about these facts. He insisted that we cann , Apologetics, Authenticity, Bart Ehrman, Bible, Criteria, Dissimilarity, Early Attestation, Embarrassment, Enemy Attestation, Historical Jesus, Historical Methods, History, Hypothesis, Jesus, Minimal Facts, Multiple Attestation, New Testament, Resurrection, Resurrection of Jesus, William Lane Craigot really affirm these facts.
>
> […]Dr. Ehrman has himself come to re-think his position on these issues. Inconsistencies in the details notwithstanding, he now recognizes that we have "solid traditions," not only for Jesus' burial, but also for the women's discovery of the empty tomb, and therefore, he says, we can conclude with "some certainty" that Jesus was in fact buried by Joseph of Arimathea in a tomb and that three days later the tomb was found empty. 8
>
> When I discovered that Professor Ehrman had reversed himself on this question, my admiration for his honesty and scholarly objectivity shot up. Very few scholars, once they've gone into print on an issue, have the courage to re-think that issue and admit that they were wrong. Dr. Ehrman's reversal of his opinion on these matters is testimony, not merely to the force of the evidence for these four facts, but also to his determination to follow the evidence wherever it leads. What this means is that my first contention is not an issue of disagreement in tonight's debate.

These minimal facts are accepted because they pass the tests that historians bring to ancient texts. So what are the criteria that historians use to derive a list of minimal facts about Jesus?

Dr. Craig explains them in this article.

Excerpt:

> The other way, more influential in contemporary New Testament scholarship, is to establish specific facts about Jesus without assuming the general reliability of the Gospels. The key here are the so-called "Criteria of Authenticity" which enable us to establish specific sayings or events in Jesus' life as historical. Scholars involved in the quest of the historical Jesus have enunciated a number of these critieria for detecting historically authentic features of Jesus, such as dissimilarity to Christian teaching, multiple attestation, linguistic semitisms, traces of Palestinian milieu, retention of embarrassing material, coherence with other authentic material, and so forth.

> It is somewhat misleading to call these "criteria," for they aim at stating sufficient, not necessary, conditions of historicity. This is easy to see: suppose a saying is multiply attested and dissimilar but not embarrassing. If embarrassment were a necessary condition of authenticity, then the saying would have to be deemed inauthentic, which is wrong-headed, since its multiple attestation and dissimilarity are sufficient for authenticity. Of course, the criteria are defeasible, meaning that they are not infallible guides to authenticity. They might be better called "Indications of Authenticity" or "Signs of Credibility."
>
> In point of fact, what the criteria really amount to are statements about the effect of certain types of evidence upon the probability of various sayings or events in Jesus' life. For some saying or event S and evidence of a certain type E, the criteria would state that, all things being equal, the probability of S given E is greater than the probability of S on our background knowledge alone. So, for example, all else being equal, the probability of some event or saying is greater given its multiple attestation than it would have been without it.
>
> What are some of the factors that might serve the role of E in increasing the probability of some saying or event S? The following are some of the most important:
>
> (1) Historical congruence: S fits in with known historical facts concerning the context in which S is said to have occurred.
>
> (2) Independent, early attestation: S appears in multiple sources which are near to the time at which S is alleged to have occurred and which depend neither upon each other nor a common source.
>
> (3) Embarrassment: S is awkward or counter-productive for the persons who serve as the source of information for S.
>
> (4) Dissimilarity: S is unlike antecedent Jewish thought-forms and/or unlike subsequent Christian thought-forms.
>
> (5) Semitisms: traces in the narrative of Aramaic or Hebrew linguistic forms.
>
> (6) Coherence: S is consistent with already established facts about Jesus.
>
> For a good discussion of these factors see Robert Stein, "The 'Criteria' for Authenticity," in *Gospel Perspectives I*, ed. R. T. France and David Wenham (Sheffield, England: JSOT Press, 1980), pp. 225-63.
>
> Notice that these "criteria" do not presuppose the general reliability of the Gospels. Rather they focus on a particular saying or event and give evidence for thinking that specific element of Jesus' life to be historical, regardless of the general reliability of the document in which the particular saying or event is reported. These same "criteria" are thus applicable to reports of Jesus found in the apocryphal Gospels, or rabbinical writings, or even the Qur'an. Of course, if the Gospels can be shown to be generally reliable documents, so much the better! But the "criteria" do not depend on any such presupposition. They serve to help spot historical kernels even in the midst of historical chaff. Thus we need not concern ourselves with defending the Gospels' every claim attributed to Jesus in the gospels; the question will be whether we can establish enough about Jesus to make faith in him reasonable.

And you can see Dr. Craig using these criteria to defend minimal facts in his debates. For example, in his debate with Ehrman, he alludes to the criteria when making his case for the empty tomb.

Here, he uses multiple attestation and the criteria of embarrassment:

> Among the reasons which have led most scholars to this conclusion are the following:
>
> 1. The empty tomb is also multiply attested by independent, early sources.
>
> Mark's source didn't end with the burial, but with the story of the empty tomb, which is tied to the burial story verbally and grammatically. Moreover, Matthew and John have independent sources about the empty tomb; it's also mentioned in the sermons in the Acts of the Apostles (2.29; 13.36); and it's implied by Paul in his first letter to the Corinthian church (I Cor. 15.4). Thus, we have again multiple, early, independent attestation of the

> fact of the empty tomb.
>
> 2. The tomb was discovered empty by women.
>
> In patriarchal Jewish society the testimony of women was not highly regarded. In fact, the Jewish historian Josephus says that women weren't even permitted to serve as witnesses in a Jewish court of law. Now in light of this fact, how remarkable it is that it is women who are the discoverers of Jesus' empty tomb. Any later legendary account would certainly have made male disciples like Peter and John discover the empty tomb. The fact that it is women, rather than men, who are the discoverers of the empty tomb is best explained by the fact that they were the chief witnesses to the fact of the empty tomb, and the Gospel writers faithfully record what, for them, was an awkward and embarrassing fact.

There are actually a few more reasons for believing in the empty tomb that he doesn't go into in the debate, but you can find them in his written work. For example, in his essay on Gerd Ludemann's "vision" hypothesis. That essay covers the reasons for all four of his minimal facts.

So, if you are going to talk about the resurrection with a skeptic, you don't want to invoke the Bible as some sort of inerrant/inspired Holy Book.

Try this approach instead:

1. Explain the criteria that historians use to get their lists of minimal facts
2. Explain your list of minimal facts
3. Defend your list of minimal facts using the criteria
4. Cite skeptics who admit to each of your minimal facts, to show that they are widely accepted
5. List some parts of the Bible that don't pass the criteria (e.g. – guard at the tomb, Matthew earthquake)
6. Explain why those parts don't pass the criteria, and explain that they are not part of your case
7. Challenge your opponent to either deny some or all the facts, or propose a naturalistic alternative that explains the facts better than the resurrection
8. Don't let your opponent attack any of your minimal facts by attacking other parts of the Bible (e.g. – the number of angels being one or two, etc.)

And just keep in mind that there is no good case for the resurrection that does not make heavy use of the early creed in 1 Corinthians 15:3-7. You have to use that!

Back to the minimal facts criteria. The best essay on the minimal facts criteria that I've read is the one by Robert H. Stein in "Contending with Christianity's Critics". It's a good short essay that goes over all the historical criteria that are used to derive the short list of facts from which we infer the conclusion "God raised Jesus from the dead". That whole book is really very, very good.

# What historical evidence is there to support the post-mortem appearances of Jesus?

**Wintery Knight** · 9 February 2014 · Archived copy · Original

Eric Chabot of Ratio Christi Ohio State University has a *great* post up about the post-mortem appearances of Jesus.

The post contains:

- a list of the post-mortem resurrection appearances
- quotations by skeptical historians about those appearances
- alternative naturalistic explanations of the appearances
- responses to those naturalistic explanations

Although there is a lot of research that went into the post, it's not very long to read. The majority of scholars accept the appearances, because they appear in *so many different sources* and because some of those sources are very early, especially Paul's statement of the early Christian creed in 1 Corinthians 15:3-7, which is from about 1-3 years after Jesus was executed by the Romans. Eric's post lists out some of the skeptical scholars who the appearances, and you can see how they allude to the historical criteria that they are using. (If you want to sort of double-check the details, I blogged about how historians investigate ancient sources before)

Let's take a look at some of the names you might recognize:

> **E.P. Sanders:**
>
> That Jesus' followers (and later Paul) had resurrection experiences is, in my judgment, a fact. What the reality was that gave rise to the experiences I do not know. "I do not regard deliberate fraud as a worthwhile explanation. Many of the people in these lists were to spend the rest of their lives proclaiming that they had seen the risen Lord, and several of them would die for their cause. Moreover, a calculated deception should have produced great unanimity. Instead, there seem to have been competitors: 'I saw him first!' 'No! I did.' Paul's tradition that 500 people saw Jesus at the same time has led some people to suggest that Jesus' followers suffered mass hysteria. But mass hysteria does not explain the other traditions." "Finally we know that after his death his followers experienced what they described as the 'resurrection': the appearance of a living but transformed person who had actually died. They believed this, they lived it, and they died for it."[1]
>
> **Bart Ehrman:**
>
> It is a historical fact that some of Jesus' followers came to believe that he had been raised from the dead soon after his execution. We know some of these believers by name; one of them, the apostle Paul, claims quite plainly to have seen Jesus alive after his death. Thus, for the historian, Christianity begins after the death of Jesus, not with the resurrection itself, but with the belief in the resurrection.[2]
>
> **Ehrman also says:**
>
> We can say with complete certainty that some of his disciples at some later time insisted that . . . he soon appeared to them, convincing them that he had been raised from the dead.[3]
>
> **Ehrman also goes onto say:**
>
> Historians, of course, have no difficulty whatsoever speaking about the belief in Jesus' resurrection, since this is a matter of public record.[4]
>
> Why, then, did some of the disciples claim to see Jesus alive after his crucifixion? I don't doubt at all that some disciples claimed this. We don't have any of their written testimony, but Paul, writing about twenty-five years later, indicates that this is what they claimed, and I don't think he is making it up. And he knew are least a couple of them, whom he met just three years after the event (Galatians 1:18-19).[5]

> **Marcus Borg**
>
> The historical ground of Easter is very simple: the followers of Jesus, both then and now, continued to experience Jesus as a living reality after his death. In the early Christian community, these experiences included visions or apparitions of Jesus. [8]

The references to Paul are because of the early creed he records in 1 Corinthians 15:3-7, and his conversations with the other eyewitnesses in Galatians. Eric has another post where he goes over that early creed, and it is something that every Christian should know about. It's really kind of surprising that you never hear a sermon on that early creed in church, where they generally sort of assume that you believe everything in the Bible on faith. But skeptical historians don't believe in the post-mortem appearances by faith – they believe it (in part) because of 1 Corinthians 15:3-7.

If you want to see a Christian scholar make the case for the resurrection appearances in a debate, then here is a post I wrote with the video, audio and summary of the William Lane Craig vs James Crossley debate on the resurrection.

# Why do atheists like Dan Barker abandon their faith?

**Wintery Knight** · 10 February 2014 · Archived copy · Original

Unbelievable's latest radio show featured a discussion with former Christian Dan Barker, the founder and co-President of the Freedom From Religion Foundation.

The MP3 file is here. (60 minutes)

I thought that I would make some general comments about why I think that many people leave the Christian faith, and what you should be careful of in order to avoid following in Dan Barker's footsteps, specifically.

Basically, there are four major reasons why people leave Christianity.

1. They want to do something immoral with impunity. This type of person wants to do something immoral that is forbidden by Christianity, like pre-marital sex. They dump Christianity in order to feel better about seeking happiness in this life, apart from God and his moral duties.
2. They want to pursue happiness in irresponsible ways. This type of person thinks that God's job is to save them when they act irresponsibly while pursuing happiness. When God disappoints them by not giving them what they want in order to be happy, they leave the faith.
3. They want to be loved by people, not by God. This type of person thinks that Christianity is a tool that they can use to become popular. When they first try to articulate the gospel in public, they find that people don't like them as much, and they feel bad about offending people with exclusive truth claims that they cannot back up using logic and evidence. So, they water down Christianity to get along with atheists, liberal Christians and other religions. Finally, they jettison Christianity completely and focus on making everyone feel good about whatever they believe.
4. They don't want to learn to defend their faith. This type of person is asked questions by skeptics that they cannot answer. Usually this happens when people go to university after growing up in the shelter of the Church. The questions and peer pressure make them feel stupid. Rather than investigate Christianity to see if it's true and to prepare to defend it in public, they dump it so they can be thought of as part of the "smart" crowd.

Now listen to the discussion and see if you can identify some of these factors from Barker's own carefully-prepared words. He is trying very hard to make himself look honest and moderate, because he wants Christians to be sympathetic with his story and his motives for leaving Christianity. But I think that there is enough in his statements to construct a different hypothesis of why he left Christianity.

I've grouped the data by risk factor. (These are not his *exact* views)

**Non-rational, emotional approach to Christianity**

- he was raised in a devout Christian family where he probably wouldn't have faced skeptical questions
- he converted to Christianity at age 15 as a result of a religious experience, not a serious investigation
- his idea of God was probably idealized and uninformed, e.g. – a loving God who wants us to be happy
- he wandered around from church to church preaching, with no fixed address or source of income
- he earned money by collecting "love offerings" from churches where he performed his music
- he wrote Christian songs and Christian musicals, but nothing substantive on apologetics and theology
- he worked in three churches known for being anti-intellectual and fundamentalist
- there's no evidence that of any deep study of philosophy, science and history during this time

**Desire to gain acceptance from non-Christians**

- he began to notice that some people were uncomfortable with sin and Hell

- he began to avoid preaching about sin and Hell in order to make these people comfortable
- he watered-down the gospel to focus on helping people to be happy in this life
- his manic approach to Christian ministry was challenged by the “real life” needs of his growing family
- he met liberal pastors while performing his music in their churches
- he found it difficult to disagree with them because they seemed to be “good” people
- he watered down his message further in order to appeal to people across the theological spectrum

**Ignorance of Christian apologetics**

- he began to think that if there are many different views of religion, then no view can be correct
- he was not intellectually capable of using logic and evidence to test these competing claims to see which was true
- he decided to instead re-interpret Christian truth claims as non-rational opinions, so they could all be “valid”
- he became a theological liberal, abandoning theism for an impersonal “ground of being”
- he embraced religious pluralism, the view that all religions are non-rational and make no testable truth claims
- he began to see God as a “metaphor” whose purpose is to make people have a sense of meaning and purpose
- he jettisoned God completely and focused more on helping people find meaning and morality apart from God
- seems to think that religion is about having a “great life”, and felt that you can have a “great life” without religion
- seems to think that religion is about being “good”, and felt that you can be “good” without religion
- religion makes people feel bad by telling them what to do instead of letting them do anything they want
- religion makes people feel bad by telling them what is true, instead of letting them believe whatever they want
- religion makes people feel bad by telling them that God will hold them accountable for their beliefs and actions

**So what do I think happened?**

I think he abandoned his faith because he wanted people to like him and because he needed to be invited to liberal churches in order to make money to pay for the “real life” needs of his family.

He seems to have thought that Christianity is about having his needs met and being liked by others. I think he wanted to feel good and to make people feel good with his preaching and singing. He seems to have become aware that the exclusive claims of Christianity made other people feel offended, so he cut them out. He hadn’t studied philosophy, science or history so that he would have been able to demonstrate to other people whether what he was saying was true. It’s hard to offend people when you don’t really know whether your claims are true or not, and when you don’t know how to demonstrate whether they are true or not.

I also think money was a factor. It seems to me that it would have hurt his career and reduced his invitations from liberal churches if he had kept up teaching biblical Christianity. In order to appeal to a wider audience, (like many Christian singers do – e.g. – Amy Grant, Jars of Clay, etc.), he would have felt pressured to water down the unpleasant parts of his preaching and singing. Lacking apologetics skill, he instead abandoned his message. He needed to account for his family’s needs and “real life”, and exclusive truth claims and Hell-talk would probably have reduced his ability to do that. It seems to me that he should have scaled back his extreme schedule of preaching and singing, and instead gotten a steady job so that he could afford “real life” and a family without being pressured into altering his message.

Life isn’t a fairy tale. God isn’t there to reward risky behavior. We need to be more shrewd about financial matters so that we have the ability to *not care* about what people think of us. Look at this blog. I work all day as a senior software engineer with two degrees in computer science so that I can refuse donations. I save most of what I make in case a tragedy strikes. Since I am financially secure, I can say what I think, and disregard anyone who wants me to change my message because they are offended. Becoming a Christian isn’t a license to behave irrationally and

immaturely with money. For some people, (like William Lane Craig), stepping out in faith works. But if it doesn't work, it's better to retreat and re-trench, rather than to compromise your message for money.

Barker didn't seem to make any effort to deal intellectually with typical challenges like the existence of Hell and religious pluralism. He just wanted to be liked by people instead of being liked by God. He seemed to have thought that being a Christian would make him happy and that other people would all respond to him and like him without having to do any work to explain why Christianity is true. But that's not Biblical. When the singing and preaching is over, you still have to know how to give an answer to non-Christians. But Barker couldn't give an answer – not one that allowed him to retain his beliefs. He had not prepared a defense.

**What does Dan Barker think about Christianity today?**

Many atheists today are interested in eradicating public expressions of Christian beliefs in the public square, because they hate Christianity and believe that Christians should not be allowed to make them feel bad by exercising their rights of free speech. Is Dan Barker one of these militant atheists?

Well, take a look at this video, in which he objects to a nativity scene and demands that an atheistic denunciation of theism be posted alongside it. In the video, Barker explains that the nativity scene is *hate speech*, and that the baby Jesus is a *dictator*. He seems to be totally oblivious to the the idea that if Christianity is *true,* then it doesn't matter whether it's mean and exclusive. And this seems to me to have been his problem all along, from the day of his "conversion".

So the real question is this: is it true? Barker seems to be much more interested in asking "is it nice?" and "will it make me happy?".

# How premarital sex damages a woman's ability to be in a relationship

**Wintery Knight** · 10 February 2014 · Archived copy · Original

Nancy P. linked this article from the radically leftist New York Times to me. I was pleasantly surprised how much I agreed with it.

Excerpt:

> I recently overhead two students talking in a dining hall at the university where I teach. "Yeah, I might get married, too," one confided. "But not until I'm at least 30 and have a career." Then she grinned. "Until then? I'm going to party it up."
>
> This young woman was practically following a script. An increasing number of studies show that many millennials want to marry — someday.
>
> Generation Y is postponing marriage until, on average, age 29 for men and 27 for women. College-educated millennials in particular view it as a "capstone" to their lives rather than as a "cornerstone," according to a report whose sponsors include the National Marriage Project at the University of Virginia.
>
> Yet for all of their future designs on marriage, many of them may not get there. Their romance operandi — hooking up and hanging out — flouts the golden rule of what makes marriages and love work: emotional vulnerability.
>
> […]Research led by the social psychologist Sara H. Konrath at the University of Michigan has shown that college students' self-described levels of empathy have declined since 1980, especially so in the past 10 years, as quantifiable levels of self-esteem and narcissism have skyrocketed. Add to this the hypercompetitive reflex that hooking up triggers (the peer pressure to take part in the hookup culture and then to be first to unhook) and the noncommittal mind-set that hanging out breeds. The result is a generation that's terrified of and clueless about the A B C's of romantic intimacy.
>
> In "The End of Sex: How Hookup Culture Is Leaving a Generation Unhappy, Sexually Unfulfilled, and Confused About Intimacy," Donna Freitas chronicles the ways in which this trend is creating the first generation in history that has no idea how to court a potential partner, let alone find the language to do so.
>
> If this fear of vulnerability began and ended with mere bumbling attempts at courtship, then all of this might seem harmless, charming even. But so much more is at stake.
>
> During class discussions, my students often admit to hoping that relationships will simply unfold through hooking up. "After all," one student recently said, "nobody wants to have The Talk," the dreaded confrontation that clarifies romantic hopes and expectations. "You come off as too needy."
>
> This fear sets up the dicey precedent Dr. Brown warns us about: Dodging vulnerability cheats us of the chance to not just create intimacy but also to make relationships work.
>
> Then there's the emotional fallout of hooking up. This kind of sexual intimacy inevitably leads to becoming "emotionally empty," writes Dr. Freitas. "In gearing themselves up for sex, they must at the same time drain themselves of feeling."
>
> This dynamic is about more than simply quelling nerves with "liquid courage" at college parties or clubs. It's about swallowing back emotions that are perceived as annoying obstacles. And this can start a dangerous cycle.
>
> "We cannot selectively numb emotions," writes Dr. Brown. "When we numb the painful emotions, we also numb the positive emotions."

I've personally observed women who had sexual histories firsthand, during my college years as an undergraduate

student and graduate student. I noticed that it caused them some trouble when they were trying to see a relationship through to marriage. The more a woman chooses men purely for looks rather than husband-qualities, the more likely she is to see a bad side of men. You don't see the good side of men when you hook up with men who are willing to have sex before marriage. If women have enough of these bad experiences with men, it gets very hard for women to continue to invest in relationships and to serve and care for men. The very things that men are looking for from women – support, empathy, understanding, trust, vulnerability – disappear from the woman, and she is left trying to get a man to commit to her using her sex appeal alone. What a scary thought. What kind of man can you land with sex alone? Not the kind that makes a good husband and father, that's for sure.

What does the hook-up culture teach women? It teaches them to work on their educations and careers first. It teaches them to choose the best-looking men. It teaches them to worry more about what their friends will think than about what a man does in a marriage. It teaches them to turn off their emotions for fear of getting hurt. It teaches them that offering recreational sex to a man is the way to get male attention and engagement. In the old days, before feminism, women couldn't even use sexuality to impress a man. Everything had to be done the old-fashioned way. You would hear phrases like "the way to a man's heart is through his stomach". Women would look at men who were good husband candidates and think about getting their attention by cooking and helping and caring. That's all gone now, and many women aren't even cultivating domestic skills. Domestic skills are still very much sought after by men, although sometimes they can't articulate their needs very well.

I asked a friend of mine who had experience dating a woman who had a sexual past about this post, and he said that past sexual relationships with good-looking, non-committal men has the same effect on women that pornography has on men. He said that it changes their expectations, so that they become more and more fixated on the man's appearance, and less and less concerned about his ability to do husband and father tasks. Another man who also has a lot of sexual experience told me that the effect of hook-up sex on women's perception of men would be even stronger than the effect of pornography on men. Hooking-up with men for status and fun causes a change in how women evaluate men. After all, if a wedding cermemony guarantees you "happily ever after" then why not just try to make a relationship "work out" by jumping right into bed and see if easy access to recreational sex makes the man see the value of long-term, exclusive commitment and self-sacrifice.

So we have a situation where women are not looking at what a man does in a family – working, discovering the truth, setting moral boundaries, helping others to be related to God. Instead, women are trained by the hook-up culture to think about appearances and how a good looking man will make others think about her in her social group. It seems to me to be as counterproductive as if a man were choosing computer based on how the case looked on the outside, rather than the performance and cost of the parts on the inside of the case. It makes no sense. Speaking as a man, I have a list of things that I am looking for from a woman, because I have specific goals that I want marriage to achieve. A woman's decision and ability to hook-up with me tells me nothing about her ability to perform the tasks I need her to perform in a marriage. The antidote to the strains and stress of marriage and parenting cannot be found in a hook-up, or even in a woman's career. That's not going to help a husband the way a husband needs to be helped.

# Dr. Michael Egnor discusses the logical implications of atheism

**Wintery Knight** · 10 February 2014 · Archived copy · Original

There are four podcasts in this series of talks between Casey Luskin and Michael Egnor.

About Dr. Egnor:

> *Dr. Michael Egnor is a Professor in the Department of Neurosurgery at The State University of New York at Stony Brook, where he specializes in Pediatric Neuroscience. An award-winning neurosurgeon and a widely-published researcher, Dr. Egnor writes regularly at* Evolution News & Views.

Podcast one details:

> On this episode of **ID the Future**, brain surgeon and ID blogger Michael Egnor talks with CSC Research Coordinator Casey Luskin about his internet debates with Jerry Coyne and the trends and dynamics he sees in the ID/evolution blogosphere. Dr. Egnor also speaks briefly on the evidence he sees for intelligent design in the brain.

The first MP3 file is here.

Podcast two details:

> On this episode of **ID the Future**, Dr. Michael Egnor and Casey Luskin continue their conversation, speaking on Dr. Egnor's recent experience in an online debate on free will with evolutionary biologist Dr. Jerry Coyne. Listen in as Dr. Egnor explains why the argument against free will is self-refuting and shows how determinism as a theory in physics is dead.

The second MP3 file is here.

Podcast three details:

> On this episode of **ID the Future**, hear more of Dr. Michael Egnor and Casey Luskin's discussion on free will. If there is no free will, and humans are merely following our chemical instructions, than how can we recognize evil and good? Tune in as Dr. Egnor explores the societal and political consequences of denying free will.

The third MP3 file is here.

Podcast four details:

> On this episode of **ID the Future**, Dr. Michael Egnor is on the show again to talk more about his recent debates with atheist evolutionary biologist Dr. Jerry Coyne. Listen in as Egnor and Research Coordinator Casey Luskin discuss recent efforts that Jerry Coyne has made against open discourse on intelligent design and evolution, looking at two recent incidents of censorship at Ball State University and the LA County Museum of Natural History.

The fourth MP3 file is here.

# American Spectator praises Australia's bold new conservative leader

**Wintery Knight** · 11 February 2014 · Archived copy · Original

Tony Abbott, Prime Minister of Australia

Well, I think we can get some encouragement from this article from the American Spectator.

Let's take a look at his policies and appointments:

> On economic policy, his government has moved in the opposite direction of those who favor Dodd-Frank-like behemoth approaches to the financial industry. Instead it's opted to simplify regulation. As the minister responsible for the reform bluntly pointed out, "no amount of legislation will ever be a guarantee against another Storm Financial." Indeed it's often excessive regulation that creates opportunities for financial shenanigans by industry insiders.
>
> Regarding the welfare state, Abbott's minister for Social Security, Kevin Andrews (another conservative politician-thinker), has announced a major overhaul of a welfare system that was starting to drift in a distinctly European-direction. Predictably the left are up in arms. But so too are those rent-seeking Australian businesses who now find themselves dealing with a government uninterested in subsidizing them. That's nothing, however, to the fury that greeted Abbott's disbanding of the climate-change bureaucracy established by the preceding Labor government.
>
> […]The first sign of Abbott's seriousness about obstructing the left's long march through the institutions was his government's appointment of the policy-director of the center-right Institute of Public Affairs to the nation's Human Rights Commission. This was widely seen as the beginning of an effort to re-balance an organization long criticized as monolithically left-wing. Since then Abbott has indicated that major changes are coming to the ABC: Australia's government-funded institutional — and ideological — equivalent of the BBC.
>
> […]Along the same lines, Abbott's education minister, Christopher Pyne, has initiated a review of the national curriculum implemented by the previous government. A moment's glance at the curriculum's treatment of

> history soon illustrates the extent to which it seeks to downplay Australia's indisputably Western heritage. In the words of Sydney's Cardinal George Pell, "Europe, Britain and the United States are mentioned 76 times, while Asia is referred to on more than 200 occasions." This disparity is odd because although Australia is certainly in Asia, no objective observer could say that Australia is "of" Asia. Moreover, while Australian students learn about "Gaia" and other deep-green fantasies in grade 9, many Australian universities find they need to put the same students through remedial English classes once they begin college.
>
> Then there are Abbott's initial steps on the international stage. Take, for instance, his recent remarks at Davos. Much of the address was devoted to pushing a strong free trade agenda and insisting that governments should let business do what it does best: promote lasting economic growth. "After all," Abbott said, "government doesn't create wealth; people do, when they run profitable businesses."
>
> In the same speech, however, Abbott made the conservative point that economic prosperity and freedom can't be sustained in a value-neutral world. Nor did Abbott shy away from relentlessly pressing one of the most important moral arguments for free trade articulated long ago by Adam Smith: that economic freedom, combined with the right institutions, radically reduces poverty faster than any other approach. "No country," Abbott added, "has ever taxed or subsidized its way to prosperity."
>
> All in all, the address added up to a solid integration of sound economics with conservative principles. That's what makes Abbott different from, say, Canada's Stephen Harper or Spain's Mariano Rajoy. Abbott happily engages in the indispensable task of moral suasion in favor of conservative positions. What's more, he's quite good at it. With his rare combination of plain-speaking and intellectual substance, Abbott makes conservative ideas sound, well, reasonable to the average voter.

Now, I personally thought that prime minister Stephen Harper of Canada was the best leader of any nation out there, but I had not been following Australian politics as much as I should be, and now I think I'll give the crown to Abbott. He seems to have a good fusionist view that integrates economic policy and social policy, and that makes him better than Harper, in my view. I would like to see Abbott flex his muscles on foreign policy, as well. Something to look forward to.

# “The Proper Care and Feeding of Husbands” is required reading for women who want to marry

**Wintery Knight** · 11 February 2014 · Archived copy · Original

Valentine’s Day is approaching fast, so I thought I would post something about the best book you can read on love and marriage.

Sue Bohlin of Probe Ministries read “The Proper Care and Feeding of Husbands“, and her assessment is here.

Excerpt:

> Talk show host Dr. Laura Schlessinger has written a book that is improving thousands of marriages: *The Proper Care and Feeding of Husbands.*{1} We need this book because millions of wives either don’t know how to love their husbands wisely and well, or they’re too self-centered to see it as important. Dr. Laura credits this dismal condition to forty years of feminist philosophy, “with its condemnation of just about everything male as evil, stupid, and oppressive, and the denigration of female and male roles in families.”{2} While the women’s movement certainly had a hand to play in the disintegration of relationships and the family, I believe the core cause is our sinful self-centeredness, just as the Bible says.{3}
>
> Which is why we need help, and God instructs older women to train younger women to love their husband and children, to be self-controlled and pure, to be busy at home, to be kind, and to be subject to their husbands, so that no one will malign the word of God.{4} *The Proper Care and Feeding of Husbands* is a great resource for learning these important values and skills.

She talks about men’s needs for direct communication, respect, appreciation, support, and sex.

And ends with this:

> I can’t recommend *The Proper Care and Feeding of Husbands* highly enough. In fact, I gave a copy to my new daughter-in-law! Let me close with one more piece of wisdom from Dr. Laura: “[M]en are simple creatures who come from a woman, are nurtured and brought up by a woman, and yearn for the continued love, admiration and approval of a woman. . . Women need to better appreciate the magnitude of their power and influence over men, and not misuse or abuse it.”{25}

Sue is the husband of famous Christian scholar Ray Bohlin, PhD, and they’ve been married for a very long time.

And here’s another summary of the book that I found.

Full text:

> Dr. Laura Schlessinger has written another book that deserves a place on the best seller list with six of her other books, such as Ten Stupid Things Women Do to Mess Up Their Lives and Ten Stupid Things Men Do to Mess Up Their Lives. The Proper Care and Feeding of Husbands, from this unmarried man’s perspective, is an excellent manual for women on how to get want they want from men and marriage and, generally, how to be happy. Dr. Laura makes a number of important, practical points, based on her experience in private practice, from advising her radio callers, and from literally hundreds of letters and emails she received from men and women while she was writing the book. Here are the points that struck this writer, together with commentary:

> 1. **Men Need Women, and This Need Gives Women Huge Influence**. Dr. Laura states the point as follows: “[M]en are simple creatures who come from a woman, are nurtured and brought up by a woman, and yearn for the continued love, admiration, and approval from a woman.” Women have great power and influence over

men, and wives in particular have tremendous power over their husbands. How they use this power essentially controls the relationship, because women are the masters of most relationships and marriages. That's why Dr. Laura says that she probably won't write The Proper Care and Feeding of Wives: wives already have most of the power and their marriages depend, for the most part, on them.

2. **Women Err in Favoring Children Over Husband**. A friend once told this writer that once a woman has children, her husband is relegated to the moral equivalence of a piece of furniture. How sad if this is true in many marriages. Here's how Dr. Laura puts it: "Once wives became mothers, they had no time to be wives. The men would even compliment their wives on being great mothers, but expressed considerable pain over not being shown love, affection, or sexual interest. The typical reply from a wife challenged with this was 'I only have time to take care of one person, and our child is that person. I'm just too tired for you.' This puts fathers in the ugly and uncomfortable position of feeling competitive with and resentful of their children, whom they love so much."

3. **Men and Women Are Different**. That men and women are deeply different ought not to be notable, but for the fact that it is so often challenged today. Dr. Laura says that society tries to make both men and women "unisex." But men are happiest being men, and women are happiest being women, with few exceptions. The differences start to manifest themselves very early. In one study Dr. Laura mentions, a barrier was placed between 1 year-old babies and their mothers. What did the little boys do? They attempted to get around the barrier or knock it down. The little girls? They cried until their mothers' picked them up. Men tend to respond to things physically, women verbally. In fact, the two sexes are just right for each other.

4. **Not Every Thought and Feeling Needs to be Said**. Women tend to be so verbal, so expressive, that they can tire out men easily unless they exercise some restraint. Dr. Laura reports that wives generally overwhelm their husbands with communication. "Husbands imagine (so foolishly) that their wives are telling them something they actually need to know because they're supposed to do something about it. Otherwise, men can't imagine why the 'communication' is happening at all. It confuses them, frustrates them, and their response is to turn off. That's when they unfairly become labeled insensitive." Husbands and fiances are not girlfriends or psychologists, and women who want attention should adjust their communication style accordingly when speaking with them.

5. **Men Are Not Mind-Readers**. Most men are not very intuitive compared to most women. Many women "get caught up in the absurdly romanticized notion that 'if he loved me, he'd just know what I'm thinking, what I'd like, what he should say.'" If a woman wants her man to do something, she should just ask him plainly, without nagging, and show appreciation when he does it. To act otherwise, as many women do, shows arrogance and lack of respect for the husband's difference, and it leads to unhappiness in the marriage and in the family.

6. **Man Is an Embodied Soul**. No, Dr. Laura didn't put it that way; "embodied soul" is a Catholic concept. But that concept is what underlies her discussion of how important it is to a man that his wife try to keep up her appearance. What does it mean that we are embodied souls? It means that our bodies are integral parts of who we are. We are not just souls. Our bodies are not like clothing that we can take on or off. There was no time during which we had only souls and not bodies, and in eternity as well we will have bodies. It is through our bodies, in fact, that we communicate to our loved ones and to the rest of the world. One thinks of the beautiful line from the old Anglican marriage rite: bride and groom pledge to each other "with my body I thee worship." It is ironic, but in many cases men–sex-crazed pigs in the minds of many women–actually have a truer understanding of the beauty of the body and the meaning of the marital embrace than their wives do.

> “Objectification” may come as much or more from the woman’s side as from the husband’s if the woman sees her own body as being separate from rather than an integral part of herself. Dr. Laura writes: “In reading all the letters from men, I was struck by their depth of senstivity about the issue of women’s appearance. It wasn’t an impersonal, animal reaction (as it is with women the men don’t personally know), it was a deeply personal one. The wife’s comfort with and appreciation of her own body and femininity, and her willingness to share that with her husband, actually fed his sense of well-being, his feeling of being loved as a husband and valued as a ‘man.'”

> 7. **Infidelity by Omission**. Brides and grooms make a number of vows, not only of sexual fidelity. Marital vows include and imply words like love, honor, protect, and care for. “[W]hen one breaches those vows by neglect, is that also not a form of infidelity? Perhaps we should start looking at the act of intentionally depriving a spouse of legitimate needs as infidelity, too, because it stems from being unfaithful to the intent of the vows.”

> 8. **In the Bedroom**. To her credit, Dr. Laura gives due place to the importance for marriage of the marital act: “The bedroom is the foundation of marriage and family.” St. Josemaria Escriva, founder of Opus Dei, that supposedly conservative institution within the Church, put it this way: “The marriage bed is an altar.” Enough said?

> 9. **Women Should Appreciate Men’s Masculinity**. Dr. Laura relates a trip she made recently to a swimming pool. A mom and a dad were wading with their infant child. Mom held the child against her chest, cooed to him, and swooped him up and down. She passed the baby to dad. He turned the baby’s face outward and swooshed him forward and up into the air. “Mom equals protection and nurturance. Dad equals autonomy and adventure. It is the perfect balance that helps produce a functional, secure human being.” Too many women, though, act like Alice Kramdens, constantly belitting their husbands, shooting down their aspirations, treating them like children. Dr. Laura writes: “When a wife treats her man like he’s one of her children, when she puts him down or thwarts his need for autonomy, adventure, risk, competition, challenge, and conquest, she ends up with a sullen, unooperative, unloving, hostile lump.”

> 10. **Thou Shalt Not Covet**. Dr. Laura contributes a novel (to this writer) and insightful contemporary application of the commandment, “thou shal not covet.” Specifically, she understands it as a rebuke to people who want it all, especially feminists. “Perhaps the feminist notions about women having power if they do it all has obstructed too many women’s ability to realize that in real life we all make choices, and that the true joy and meaning of life is not in how many things we have or do, but in the sacrifice and commitment we make to others within the context of the choices we’ve made. The Tenth Commandment, about coveting, reminds us that none of us can have everything there is nor everything we want. Without enjoying and appreciating our gifts and blessings, we create a hell on earth for ourselves and for those who love us.”

PCF Husbands is the best basic book on marriage. Easy to read, tons of wisdom. It’s a great book for women to read to find out what men really want from a wife. Marriage can be a beautiful thing if both people go into the relationship with the view that each person has to put in 100% effort to make it work. Understanding a man’s needs helps a woman to put in her 100%. It would be hard to take care of a parrot or some other strange creature if you didn’t know anything about what their needs and habits were. This book explains a lot of what women need to know about men.

# Dr. George Yancey lectures on anti-Christian bias in academia, and beyond

**Wintery Knight** · 11 February 2014 · Archived copy · Original

My good friend Wes posted this 28-minute lecture.

If you watch 5 minutes, then you'll definitely stay and watch the whole thing. It's fascinating.

Details:

> Join Dr. George Yancey in an in depth discussion of the bias taking place within academia against religion in general, but more specifically Christianity. Within the discussion Dr.Yancey uses brief explanations of his previous book, Compromising Scholarship and many other excerpts of his past research as well as his forthcoming research to give us a new viewpoint on academia and religion.

I found a quick description of Dr. Yancey's work in this New York Times article from July 2011.

It says:

> Republican scholars are more likely than Democrats to end up working outside academia,as documented by Daniel Klein, an economist at George Mason University. Dr. Klein, who calls himself a classical liberal (a k a libertarian), says that the university promotes groupthink because its system of "departmental majoritarianism" empowers the dominant faction to keep hiring like-minded colleagues. And when a faculty committee is looking to hire or award tenure, political ideology seems to make a difference, according to a "collegiality survey" conducted by George Yancey.
>
> Dr. Yancey, a professor of sociology at the University of North Texas, asked more than 400 sociologists which nonacademic factors might influence their willingness to vote for hiring a new colleague. You might expect professors to at least *claim* to be immune to bias in academic hiring decisions.
>
> But as Dr. Yancey reports in his new book, "Compromising Scholarship: Religious and Political Bias in American Higher Education," more than a quarter of the sociologists said they would be swayed favorably toward a Democrat or an A.C.L.U. member and unfavorably toward a Republican. About 40 percent said they would be less inclined to vote for hiring someone who belonged to the National Rifle Association or who was an evangelical. Similar results were obtained in a subsequent survey of professors in other social sciences and the humanities.
>
> Dr. Yancey, who describes himself as a political independent with traditional Christian beliefs and progressive social values, advises nonliberal graduate students to be discreet during job interviews. "The information in this research," he wrote, "indicates that revealing one's political and religious conservatism will, on average, negatively influence about half of the search committee one is attempting to impress."
>
> Dr. Yancey's research was a survey, not a field experiment, so it's impossible to know how many of those academics who confessed to hypothetical bias would let it sway an actual decision. Perhaps they'd try to behave as impartially as the directors of graduate studies in Dr. Gross's experiment.

The lecture is a real eye-opener. It turns out that in academia, you are likely to be viewed the same way as blacks were viewed by slave-owners, and Jews were viewed by Nazis. Stereotypes, ignorance and hatred abound.

We have a lot of work to do to correct these perceptions, and unfortunately nothing that Christians see and hear in church is likely to change this. Until we get serious about prodding our young people to think and achieve, this is what people on the secular left will think of us. Not because they really are smarter, but because we are not capable of pointing out the nonsense on their side of the aisle, e.g. – eternal universes, aliens seeding the Earth with life,

fatherlessness is good for children, and so on. If we don't study the evidence, then their stupidity will rule the day, and they are the ones who are entrenched in academia.

# Heather McDonald: Campus sexual assault crisis is based on a fiction

**Wintery Knight** · 12 February 2014 · Archived copy · Original

This article by Heather McDonald from City Journal, the journal of the moderate, centrist Manhattan Institute. (H/T Dennis Prager)

Excerpt:

> In the last few weeks… the White House has… created a new federal task force to "protect [college] students from sexual assault."
>
> […]The materials accompanying the new sexual-assault task force recycle the usual feminist claims about campus rape: an "estimated 1 in 5 women is sexually assaulted at college," proclaims a White House press release. Such an assault rate would represent a crime wave unprecedented in civilized history. By comparison, the 2012 rape rate in New Orleans and its immediately surrounding parishes was .0234 percent; the rate for all violent crimes in New Orleans in 2012 was .48 percent. According to the White House Council on Women and Girls, "survivors" of this alleged campus sexual-assault epidemic "often" experience a life of depression, chronic pain, diabetes, anxiety, eating disorders, and post-traumatic stress disorder.
>
> And yet, the crazed push on the part of mothers (and fathers) to get their daughters into this maelstrom of predation begins earlier and earlier each year. Parents in Manhattan pay tutors $200 an hour to prep their tots for the elite nursery school admissions tests, all with an eye to college. These are many of the same baby-boomer parents who refuse to vaccinate their children or feed them genetically modified foods based on wholly speculative risks. If the college experience were in fact the tsunami of violence that the feminists proclaim, leading to widespread emotional dysfunction—a dysfunction nowhere in evidence among increasingly dominant female college graduates—there would have been a stampede to create single-sex schools where girls could study in safety. Instead, college applications from girls rise each year, and the chance of admission at selective campuses drops further under the press of eager petitioners. At Yale alone, the target of an Obama administration Title IX probe into alleged indifference to rampant sexual assault, applications rose from 13,000 in 1996 to 27,000 in 2011. Somehow, word about Yale's "unsafe" environment for girls is not getting out. Imagine, by contrast, that one in five college girls would merely have their iPhones stolen at knifepoint at some point during her college career. A wave of preventive strategies would have emerged, but nothing comparable has arisen in response to the alleged rape crisis.
>
> And that's because the one-in-five number is wholly deceptive, based on the strategic phrasing of questions and the exquisite parsing of definitions. In the 1986 *Ms.* survey that sparked the campus-rape industry, 73 percent of respondents whom the study characterized as rape victims said that they hadn't been raped when asked the question directly. Forty-two percent of these supposed victims had intercourse again with their alleged assailants—an inconceivable behavior in the case of actual rape.
>
> **The reality on campuses is not a rape epidemic but a culture of drunken hook-ups with zero normative checks on promiscuous behavior.**

It's important to understand that many women who regret recreational hook-up sex afterwards deliberately choose to get drunk at parties so that they can hook-up with guys. Check out the words of some college students from this study of relationships on campus published by the Institute for American Values.

Excerpt:

> A notable feature of hook ups is that they almost always occur when both participants are drinking or drunk.
>
> A Rutgers University student observed, "You always hear people say, oh my gosh, I was so drunk, I hooked up

> with so and so…" Perhaps not surprisingly, many noted that being drunk helped to loosen one's inhibitions and make it easier to hook up. A number of students noted that being drunk could later serve as your excuse for the hook up. A Yale University student said, "Some people like hook up because they're drunk or use being drunk as an excuse to hook up." A New York University student observed, "[Alcohol is] just part of an excuse, so that you can say, oh, well, I was drinking."
>
> A Rutgers University student commented, "If you're drinking a lot it's easier to hook up with someone… [and] drugs, it's kind of like a bonding thing… and then if you hook up with them and you don't want to speak to them again, you can always blame it on the drinking or the drugs."
>
> Other women observed that being drunk gives a woman license to act sexually interested in public in ways that would not be tolerated if she were sober. For instance, a University of Michigan student said, "Girls are actually allowed to be a lot more sexual when they are drunk…"
>
> A University of Chicago junior observed, "One of my best friends… sometimes that's her goal when we go out. Like she wants to get drunk so I guess she doesn't have to feel guilty about [hooking up]."
>
> Some reported that drinking had led them to do things they later regretted. A University of Virginia student said, "My last random hook up was last October and it was bad. I was drunk and I just regretted it very much."

This is actually the new feminist-approved way of landing a husband, because traditional courting is sexist. Don't believe me, believe feminist academics writing in the New York Times.

Excerpt:

> If there's anything that feminism has bequeathed to young women of means, it's that power is their birthright. Visit an American college campus on a Monday morning and you'll find any number of amazingly ambitious and talented young women wielding their brain power, determined not to let anything — including a relationship with some needy, dependent man — get in their way. Come back on a party night, and you'll find many of these same girls (they stopped calling themselves "women" years ago) wielding their sexual power, dressed as provocatively as they dare, matching the guys drink for drink — and then hook-up for hook-up.

So let's review the rules for relationships according to feminism. Man sets time for date? Sexist! Man arrives in car to pick you up? Sexist! Man brings you flowers to be put in a vase? Sexist! Man talks to your father first to get the ground rules? Sexist! Man takes you to a sit-down restaurant and asks you questions about marriage? Sexist! Man drops you off at home and gets a wave goodbye? Sexist! But do you know what feminists do approve of? 1) Getting drunk. 2) Hooking-up. 3) Crying rape (when the guy doesn't call back). And this is the problem that Obama is trying to solve. It's a problem *created* by the people of his ideological bent.

And why do we have hooking up instead of courting?

It's because feminists know *perfectly well* that when a woman gets used and abused over and over by the kind of good-looking scum that she meets at parties, then she is less likely to get married, less capable of staying married, less likely to put family (husbands and kids!) over her career. And that's exactly what they want young women to do. When you tell young women that men have no special roles as {protector, provider, moral leader, spiritual leader}, then you are setting them up for failure. They need boundaries in order to avoid the bad men, and choose the good ones – the marriage-capable ones. But if your goal is to make women avoid marriage, then hook-ups and binge drinking are in, while chastity and chivalry are out.

Women have been told by music, movies, culture, peers, feminists, etc. that there is a certain kind of man that they should prefer, and a certain way to get their attention. Maybe women need a dose of logical thinking so that they can connect their method of choosing a man to their end goal. If they want marriage and children, then the way to get it is NOT by following the lead of Hollywood celebrities and bitter feminist academics.

# David Brooks on young people's rejection of American values

**Wintery Knight** · 12 February 2014 · Archived copy · Original

He voted for Obamacare, and he got it

I normally don't read David Brooks anymore since his slide to the left, but Dennis Prager mentioned this article from the radically leftist New York Times, and I thought it was worth a look.

Excerpt:

> When foreign visitors used to describe American culture, they generally settled on different versions of one trait: energy. Whether driven by crass motivations or spiritual ones, Americans, visitors agreed, worked more frantically, moved more and switched jobs more than just about anybody else on earth.
>
> That's changing. In the past 60 years, for example, Americans have become steadily less mobile. In 1950, 20 percent of Americans moved in a given year. Now, it's around 12 percent. In the 1950s and 1960s, people lived in the same house for an average of five years; now people live in the same house for an average of 8.6 years. When it comes to geographic mobility, we are now at historic lows, no more mobile than people in Denmark or Finland.

Why is that? Here is his hypothesis:

> [A] big factor here is a loss in self-confidence. It takes faith to move. You are putting yourself through temporary expense and hardship because you have faith that over the long run you will slingshot forward. Many highly educated people, who are still moving in high numbers, have that long-term faith. Less-educated people often do not.
>
> One of the oddities of the mobility that does exist is that people are not moving to low-unemployment/high-income areas. Instead they are moving to lower-income areas with cheap housing. That is to say, they are less likely to endure temporary housing hardship for the sake of future opportunity. They are more likely to move to places that offer immediate comfort even if the long-term income prospects are lower.
>
> This loss of faith is evident in other areas of life. Fertility rates, a good marker of confidence, are down. Even accounting for cyclical changes, people are less likely to voluntarily vacate a job in search of a better one. Only 46 percent of white Americans believe they have a good chance of improving their standard of living, the lowest levels in the history of the General Social Survey.
>
> [Leftist] Peter Beinart wrote a fascinating piece for [Leftist] National Journal, arguing that Americans used to have much more faith in capitalism, a classless society, America's role in the world and organized religion than people from Europe. But now American attitudes resemble European attitudes, and when you just look at young people, American exceptionalism is basically gone.
>
> Fifty percent of Americans over 65 believe America stands above all others as the greatest nation on earth.

> Only 27 percent of Americans ages 18 to 29 believe that. As late as 2003, Americans were more likely than Italians, Brits and Germans to say the “free market economy is the best system on which to base the future of the world.” By 2010, they were slightly less likely than those Europeans to embrace capitalism.
>
> Thirty years ago, a vast majority of Americans identified as members of the middle class. But since 1988, the percentage of Americans who call themselves members of the “have-nots” has doubled. Today’s young people are more likely to believe success is a matter of luck, not effort, than earlier generations.

The funny thing about this story is that the young people themselves are voting for the very things that are destroying their hopes and dreams. They vote for the Democrat Party, the champions of social liberalism and fiscal liberalism.

What do young people need to get ahead? They need a stable family with a mother and father. Young people vote for the pro-no-fault-divorce Democrat Party. They vote for the pro-gay-marriage Democrat Party. They vote to call any family arrangement marriage, and any collection of people with kids a family. They are the ones who are the strongest opponents of the nuclear family that used to be the norm in America. Maybe they are doing it out of ignorance, but they are still responsible – they are voting for it. They are voting for more adult selfishness, and they are the victims of it.

What else to young people need to get ahead? They need a good education and a job. What do they vote for? They vote for the Democrat Party. The party that opposes school choice. The party of teacher unions. They party that undermines free market capitalism with taxes, regulations and nationalization of the private sector. They vote for judicial activism instead of the rule of law. They vote for redistribution of wealth instead of private property. And what’s more they are anti-corporations! Who exactly do they expect to work for? They keep voting for more and more government spending on adults, and they are the ones who are going to be stuck with the bill.

This will go on until the United States ends up like France and Greece, when there is no more money left to borrow, and then it will stop. But one thing is for sure – these young people will never have the standard of living their grandparents had. Either you believe in America, and what America represents, or you devolve into Greece, and live at home, unemployed, with your parents for your whole life.

# Ryan J. Bell's year of atheism testimony shows need for apologetics

**Wintery Knight** · 12 February 2014 · Archived copy · Original

Are you interested in knowing how to avoid losing your Christian faith? Well, an episode of the Unbelievable show will give you some clues.

But before we go to the podcast, I want to recap some reasons why people think that God exists.

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds

In addition to these arguments for theism, Christians should be able to make a minimal facts case for the resurrection, one that leverages the early creed in 1 Corinthians 15:3-7. And some sort of case for the belief that Jesus was divine using only the earliest sources.

In addition to those positive evidences, there would be informed defenses to other questions like the problem of evil, the problem of suffering, religious pluralism, the hiddenness of God, materialist conceptions of mind, consciousness and neuroscience, the justice of eternal damnation,sovereignty and free will, the doctrine of the Incarnation, the doctrine of the Trinity, and so on.

I listed these out so that you can see how many of these positive arguments and defenses that he wrestles with in his deconversion testimony.

**The podcast**

Details:

> Ryan J Bell is a former pastor who has decided to try being an atheist for a year. He explains why and interacts with New Zealand apologist Matt Flannagan.

The MP3 file is here. (We only care about the first 45 minutes)

Matt Flanagan and Justin Brierley do a great job in this debate getting the real issues on the table, although you have to wait until about 20 minutes in. Quick note about Bell. He has a BA in Pastoral Ministry, an MDiv, and a doctorate in Missional Organization. Now I have a suspicion of people with a background like that – my view is that they are more likely to be impractical and/or insulated from real life.

I also noticed that his politics are liberal, and that he is featured on the web site of GLAAD, a gay rights organization, for supporting gay marriage. Why do people support same-sex marriage? I think the most common

reason is because they care more about the needs of adults than they care about the needs of children for a mother and a father. That's where this guy is coming from – he is a people-pleaser, not someone who promotes the needs of children over the needs of adults.

**Summary:**

At the start of the podcast, we learn that Bell was in the Seventh Day Adventist church, which is strongly invested in young-Earth creationism. Depending on how strict his young Earth view was, this closes off many of the best arguments for theism from science, such as the cosmological argument, the cosmic fine-tuning argument, the stellar habitability argument, the galactic habitability argument, the Cambrian explosion argument, and even the origin of life argument (to a degree). These are the arguments that make theism *non-negotiable*.

When he started his journey to atheism, he says that he was reading a book called "Religion Without God" by Ronald Dworkin.I was curious to see what view of faith was embraced by this book. Would it be the Biblical view of faith, trust based on evidence? Or the atheist view of faith, belief without evidence? I found an excerpt from the book in the New York Times, which said this:

> In the special case of value, however, faith means something more, because our convictions about value are emotional commitments as well and, whatever tests of coherence and internal support they survive, they must feel right in an emotional way as well. They must have a grip on one's whole personality. Theologians often say that religious faith is a sui generis experience of conviction. Rudolf Otto, in his markedly influential book, *The Idea of the Holy*, called the experience "numinous" and said it was a kind of "faith-knowledge." I mean to suggest that convictions of value are also complex, sui generis, emotional experiences. As we will see… when scientists confront the unimaginable vastness of space and the astounding complexity of atomic particles they have an emotional reaction that matches Otto's description surprisingly well. Indeed many of them use the very term "numinous" to describe what they feel. They find the universe awe-inspiring and deserving of a kind of emotional response that at least borders on trembling.

The excerpt quotes William James, who reduces religion to non-rational emotional experiences. I don't know about you, but I don't think that view of faith is Biblical at all. Biblical faith is rooted in evidence. So clearly, what is important to this Dworkin is not objective evidence, it's feelings. And this is what Bell was reading. He was not reading academic books like "Debating Christian Theism" to get the best arguments pro-and-con. He was looking for something that "resonated" with his feelings.

His journey was prompted by a female Episcopal priest friend who was asked by an atheist "what difference does religion make in my life?". So, the framework of his investigation is set by a question that is not focused on truth, but is instead focused on emotions and life enhancement. Now Christianity might be a real stinker of a worldview for life enhancement, and the Bible warns us not to expect a bed of roses in this life. Christianity is not engineered to make you feel good or to make people like you, especially people like female Episcopal priests and GLAAD.

When talking about atheism, he is not concerned with whether atheism is logically consistent or consistent with objective evidence. He is concerned by whether atheists can have the experience of being moral without God. He sees an atheist who has moral preferences and seems like a good person by our arbitrary social standards, and he finds that as "valid" as religion. He is judging worldviews by whether people have their needs met, not by truth.

He says that as a pastor, his method of evangelizing atheists was to encourage them to "try on faith" "go through the motions" "participate in social justice outreach events", etc. His goal was that they would "step into the stream of the Christian narrative and discover that it held value and meaning to them, and find that they actually believed it". So his method of recommending Christianity to others has nothing to do with logic, evidence or truth. He is offering Christianity as life enhancement – not knowledge but a "narrative" – a story. If it makes you feel good, and it makes people like you, then you can "believe" it. He says that he was "a Christian by practice, a Christian by tradition". Not a Christian by truth. Not a Christian by knowledge. He just picked a flavor of ice cream that tasted

right to him, one that pleased his parents, friends and community. And now he has new friends and a new community, and he wants to please them and feel good about himself in this new situation.

He says that the Christian worldview is "a way of approaching reality" and "creating meaning" and "identifying meaning in the experiences we have". And he says that there are "other ways of experiencing meaning". He talks a lot about his correspondence with people and reading atheists, but nothing about reading Christian scholars who deal with evidence, like William Lane Craig, Stephen C. Meyer or Mike Licona.

Literal, literal quote: (23:35) "Well I think the only access we have to the question of God's existence or not is how we feel. I mean there's no falsifiable data that says God either exists or doesn't exist. It's all within the realm of our personal experience". "If living as though God exists makes you happy and comforts you, then by all means, go for it". This attitude is so popular in our churches today, and where does it end? In atheism. I had a fundamentalist woman telling me just last night how this feelings mysticism approach was the right approach to faith, and that the head knowledge approach was bad and offensive.

I'm going to cut off my summary there, but the podcast goes on for 45 minutes. Matt Flannagan is brilliant, and went far beyond what I wanted to say to this guy, but in such a winsome way. I recommend listening to the whole thing, and be clear where this fideistic nonsense ends – in atheism.

**My thoughts**

This podcast is a great warning against two views: 1) faith is belief without evidence and 2) religion not about truth, but about life enhancement. Three other related stories might also help: the story of Dan Barker, the story of Nathan Pratt and the story of Katy Perry. I think the Christian life requires a commitment to truth above all. If you think that you can get by as a Christian relying on hymn singing, church attending, mysticism and emotional experiences, you have another thing coming. This is a different time and a different place than 50 years ago, when that sort of naivete and emotionalism might have been safe. Now we have many challenges – some intellectual and some not. To stand in this environment, it's going to take a little more than piety and emotions.

People today are very much looking for religion to meet their needs. And this is not just in terms of internal feelings, but also peer approval and mystical coincidences. They expect God to give them happy feelings. They expect God to give them peer approval. They expect God to make every crazy unBiblical, unwise selfish plan they invent "work out" by miracle. They feel very constrained by planning and moral boundaries, believing in a "God of love" who is primarily concerned with their desires and feelings, not with rules and duties. Nothing in the Bible supports the idea that a relationship with God is for the purpose of making us feel happy and comfortable. When people realize that they will be happier in this life without having to care what God thinks, they will drop their faith, and there are plenty of non-Christians to cheer them on when they do it.

I would say to all of you reading that if the opinions of others causes you to stumble then meditate on the following passage: 1 Cor 4:1-4 too. There is only one person's opinion that matters, ultimately.

# Global warming killing people with ice and snow in North Carolina

**Wintery Knight** · 13 February 2014 · Archived copy · Original

Is ManBearPig to blame for global warming?

President Barack Obama, you need to stop golfing and fix the global warming! Radically leftist CNN reluctantly reports.

Excerpt:

> Get off the roads, and stay off.
>
> That was the message in Georgia and the Carolinas as a snow and ice storm swept through Wednesday, bringing some of the Southeast's most populous cities to a standstill.
>
> The warnings came as freezing rain brought heavy ice accumulations from Atlanta to Charlotte. Across a large swath of the South, hundreds of thousands of people were without power and thousands of flights were canceled.
>
> Calling ice the biggest enemy, Georgia Gov. Nathan Deal declared a state of emergency. School districts canceled classes and government offices were shuttered in an attempt to avoid a repeat of the traffic paralysis caused by a storm last month.
>
> Up to three-quarters of an inch of ice was expected to accumulate in Atlanta and up to 10 inches of snow and sleet were expected in Raleigh and Charlotte, making travel treacherous.
>
> Also in the storm's path were Virginia and Washington, with much of the Northeast to follow.
>
> All federal offices in the nation's capital were ordered closed, and thousands of employees were being told to stay home, according to the Office of Personnel Management.
>
> […]More than 600,000 customers were without power in the Southeast, power companies told CNN. About 180,000 were Georgia Power Co. customers, the utility said.
>
> South Carolina was the hardest hit, with about 220,000 customers without electricity, while Wilmington, North Carolina, accounted for more than 58,000 outages.
>
> The utilities said Wednesday morning they expect those numbers to rise over the next 24 hours.
>
> Georgia Power, the state's largest utility, warned that hundreds of thousands could be without electricity for days.

> […]At least 10 deaths have been blamed on the weather, including a 55-year-old man who was killed in a head-on collision in Virginia, authorities said. Two people were killed in Georgia, and two died in North Carolina, they said.
>
> In Texas, three people died when an ambulance driver lost control on an icy patch of road outside of Carlsbad, the state Department of Public Safety said. A patient, a paramedic and another passenger were pronounced dead at the scene.
>
> In Mississippi, authorities blamed the storm for two traffic deaths.

Meanwhile, former NASA climate scientist finds that 95% of global warming predictions have failed when measured against actual global temperatures.

The Daily Caller reports:

> Environmentalists and Democrats often cite a "97 percent" consensus among climate scientists about global warming. But they never cite estimates that 95 percent of climate models predicting global temperature rises have been wrong.
>
> Former NASA scientist Dr. Roy Spencer says that climate models used by government agencies to create policies "have failed miserably." Spencer analyzed 90 climate models against surface temperature and satellite temperature data, and found that more than 95 percent of the models "have over-forecast the warming trend since 1979, whether we use their own surface temperature dataset (HadCRUT4), or our satellite dataset of lower tropospheric temperatures (UAH)."
>
> […]Climate scientists have been baffled by the 17-year pause in global warming. At least eight explanations have been offered to explain the lapse in warming, including declining solar activity and natural climate cycles.

We are spending millions and even billions trying to stop this global warming, but clearly, we aren't doing enough. We need to borrow even more money from our children, otherwise they will be burned to cinders when the Earth turns into Hell.

# Studies show that egalitarian marriage results in less sex

**Wintery Knight** · 13 February 2014 · Archived copy · Original

From the ultra-leftist New York Times, of all places. (H/T Dennis Prager)

Most of the article is standard leftist boilerplate, but check this out:

> Today, according to census data, in 64 percent of U.S. marriages with children under 18, both husband and wife work. There's more gender-fluidity when it comes to who brings in the money, who does the laundry and dishes, who drives the car pool and braids the kids' hair, even who owns the home. A vast majority of adults under 30 in this country say that this is a good thing, according to a Pew Research Center survey: They aspire to what's known in the social sciences as an egalitarian marriage, meaning that both spouses work and take care of the house and that the relationship is built on equal power, shared interests and friendship. But the very qualities that lead to greater emotional satisfaction in peer marriages, as one sociologist calls them, may be having an unexpectedly negative impact on these couples' sex lives.
>
> **A study called "Egalitarianism, Housework and Sexual Frequency in Marriage," which appeared in The American Sociological Review last year, surprised many, precisely because it went against the logical assumption that as marriages improve by becoming more equal, the sex in these marriages will improve, too. Instead, it found that when men did certain kinds of chores around the house, couples had less sex. Specifically, if men did all of what the researchers characterized as feminine chores like folding laundry, cooking or vacuuming — the kinds of things many women say they want their husbands to do — then couples had sex 1.5 fewer times per month than those with husbands who did what were considered masculine chores, like taking out the trash or fixing the car. It wasn't just the frequency that was affected, either — at least for the wives. The more traditional the division of labor, meaning the greater the husband's share of masculine chores compared with feminine ones, the greater his wife's reported sexual satisfaction.**
>
> […][Study co-author] Brines believes the quandary many couples find themselves in comes down to this: "The less gender differentiation, the less sexual desire." In other words, in an attempt to be gender-neutral, we may have become gender-neutered.
>
> […]The chores study seems to show that women do want their husbands to help out — just in gender-specific ways. Couples in which the husband did plenty of traditionally male chores reported a 17.5 percent higher frequency of sexual intercourse than those in which the husband did none.
>
> […]When I asked Esther Perel, a couples therapist whose book, "Mating in Captivity," addresses the issue of desire in marriage, about the role sexual scripts play in egalitarian partnerships, she explained it like this: "Egalitarian marriage takes the values of a good social system — consensus-building and consent — and assumes you can bring these rules into the bedroom. But the values that make for good social relationships are not necessarily the same ones that drive lust." In fact, she continued, "most of us get turned on at night by the very things that we'll demonstrate against during the day."

Now let's leave that new study, and review an older study.

**Egalitarianism inroduces a risk of divorce**

Here is a related story about a Norwegian study that finds that egalitarian marriages have a higher risk of divorce.

Excerpt:

> Couples who share housework duties run a higher risk of divorce than couples where the woman does most of the chores, a Norwegian study sure to get tongues wagging has shown.

> The divorce rate among couples who shared housework equally was around 50 per cent higher than among those where the woman did most of the work.
>
> “The more a man does in the home, the higher the divorce rate,” Thomas Hansen, co-author of the study entitled Equality in the Home, said.
>
> Researchers found no, or very little, cause-and-effect. Rather, they saw in the correlation a sign of “modern” attitudes.
>
> “Modern couples are just that, both in the way they divide up the chores and in their perception of marriage” as being less sacred, Mr Hansen said, stressing it was all about values.
>
> “In these modern couples, women also have a high level of education and a well-paid job, which makes them less dependent on their spouse financially. They can manage much easier if they divorce,” he said.
>
> There were only some marginal aspects where researchers said there may be cause-and-effect.
>
> “Maybe it’s sometimes seen as a good thing to have very clear roles with lots of clarity … where one person is not stepping on the other’s toes,” Mr Hansen suggested.
>
> “There could be less quarrels, since you can easily get into squabbles if both have the same roles and one has the feeling that the other is not pulling his or her own weight,” he added.

I think that this article is basically correct – men like having clearly defined roles. A man has the traditional roles of protector, provider and moral/spiritual leader. He has the responsibility to lead in those areas. He doesn’t want to have the woman’s role, he doesn’t want to be forced to perform it. Complementarianism is the rational view, the view that leads to happier and more stable marriages. That’s not my opinion, that’s a fact. Men and women maybe be equal in importance and value, but they are not interchangeable. They are not identical.

Now, anyone who denies the facts has to do better than 1) introduce the bare possibility that all the studies are wrong and 2) claim that their own marriage refutes what the studies say and 3) sex isn’t that important anyway for the stability of the marriage, 4) a higher risk of divorce isn’t that bad for the stability of the marriage. The facts are what they are and the wise man proportions his beliefs to the evidence. Complementarianism is supported by evidence. Egalitarianism is just ideology.

**Egalitarian marriage does not make women happier**

Elusive Wapiti writes about in this blog post.

Excerpt:

> Norwegian researchers confirm and extend Brad Wilcox and Steven Nock’s research suggesting that egalitarianism sets couples up to fail:
>
> “What we’ve seen is that sharing equal responsibility for work in the home doesn’t necessarily contribute to contentment,” said Thomas Hansen, co-author of the study entitled “Equality in the Home”.
>
> The lack of correlation between equality at home and quality of life was surprising, the researcher said. “One would think that break-ups would occur more often in families with less equality at home, but our statistics show the opposite,” he said.
>
> The figures clearly show that “the more a man does in the home, the higher the divorce rate,” he went on. The reasons, Mr Hansen said, lay only partially with the chores themselves. “Maybe it’s sometimes seen as a good thing to have very clear roles with lots of clarity … where one person is not stepping on the other’s toes,” he suggested. “There could be less quarrels, since you can easily get into squabbles if both have the same roles and one has the feeling that the other is not pulling his or her own weight.”

See, Wilcox’s view is this:

> The companionate theory of marriage suggests that egalitarianism in practice and belief leads to higher marital quality for wives and higher levels of positive emotion work on the part of husbands. Our analysis of women's marital quality and men's marital emotion work provides little evidence in support of this theory. Rather, in examining women's marital quality and men's emotional investments in marriage, we find that dyadic commitment to institutional ideals about marriage and women's contentment with the division of household tasks are more critical. We also show that men's marital emotion work is a very important determinant of women's marital quality. We conclude by noting that her marriage is happiest when it combines elements of the new and old: that is, gender equity and normative commitment to the institution of marriage.

His full study from 2006 is here.

Now some people think that if men are not forced to do women's chores, it will somehow lead to domestic abuse. What do studies say about that?

**Domestic violence more likely in two income couples**

From Psych Central.

Excerpt:

> Intimate partner violence is two times more likely to occur in two income households, compared to those where only one partner works, according to a new study.
>
> Conducted by Sam Houston State University researchers Cortney A. Franklin, Ph.D., and doctoral student Tasha A. Menaker and supported by the Crime Victims' Institute, the study looked at the impact of education levels and employment among heterosexual partners as it relates to domestic violence.
>
> While the researchers found that differences in education levels appeared to have little influence, when both partners were working, intimate partner violence increased.
>
> **"When both male and females were employed, the odds of victimization were more than two times higher than when the male was the only breadwinner in the partnership, lending support to the idea that female employment may challenge male authority and power in a relationship," said the researchers.**
>
> The study was based on telephone interviews with 303 women who identified themselves as either currently or recently in a serious romantic relationship.
>
> […]The study found that more than 60 percent of women in two-income couples reported victimization, while only 30 percent of women reported victimization in cases when only the male partner was employed.
>
> […]The study is scheduled to be published in the journal *Violence Against Women.*

Now let's see if women in church have their views informed by studies, or not.

**Church women have it exactly backwards**

For further reading, check out this excellent post from Sunshine Mary. I am including this for life application.

Excerpt:

> My husband and I attend a large Protestant church of the superfunrockband denomination. On Wednesday evenings, our church holds small group Bible studies, and HHG and I attend the one for married couples. We meet in a large room and split into small groups, each group with its own table and leader.
>
> This past week was rough because the topic was sex. I just could not believe that all the things we joke about Christians saying were *actually said.* For example, one young woman actually used the *women-are-like-a-crockpot* crock of crap. This is not true, in case anyone has not figured it out yet. It does not take a woman,

> Christian or otherwise, eight hours to become sexually aroused. The idea that a man needs to spend eight hours giving her tender kisses, helping with the laundry, telling her how much he loves her, and bringing her flowers just to turn her on is wrong. She may like all those things very much, they may be nice things to do, but they *will not make her sexually aroused.* Why do Christian women keep telling men this? It's like we've all succumbed to mass delusion.
>
> Unbelievably, another woman told the group how hot it is when her husband does the dishes and plays with the kids. She actually *said that as a serious comment,* and all the other ladies laughed and nodded.
>
> […]I could no longer stand it, so I whipped out my iPad and looked up a recent study, refuting her blue pill bull pucky…
>
> […]For the entire evening, it was the same old yip yap about helping with the housework, making sure your wife feels loved enough, making her feel safe, blah blah blah. None of this is good advice for generating attraction, of course, although it wasn't surprising.
>
> Why do Christian women perpetuate these myths about attraction, thereby assuring themselves and their husbands a frustrating sex life? It's certainly not Biblical. We could be really jaded and say they are just lying, but I don't think that is the reason.
>
> It's more that we hear this over and over again – that we want men who are always tender, gentle, and sensitive, that we need a deep emotional connection, lots of intimate conversation, and plenty of sweet romance before we can feel sexual attraction. This advice is pervasive: it's on every Christian website, in our movies, magazines, sermons, and books, and thus we just come to believe it.

You would think that these studies would destroy feminist myths, but a lot of what goes on in churches is never checked against the data. Maybe we should start, though. And note that this is a case where the Bible and the data are once again in perfect harmony — in the sense that both claim that the sexes really are different. It's the church's embrace of radical feminism that's wrong.

# Michael Strauss lectures on scientific evidence for a Creator at UT Dallas

**Wintery Knight** · 13 February 2014 · Archived copy · Original

**The lecture: (from 2013)**

Note: there is a period of 19 minutes of Q&A at the end of the lecture.

**About the speaker:**

His full biography is here. (I removed his links from my excerpt text below)

Excerpt:

> I had an interest in science and theology, so in 1977 I chose to go to Biola University where I could study both subjects in detail. I thoroughly enjoyed college and participated in intramural sports, was elected to student government, served as a resident assistant, competed in forensics, and studied a lot. As I neared college graduation my dual interest continued so I applied to seminary and to graduate school. After graduating *summa cum laude* from Biola, I decided to pursue a graduate degree in physics at UCLA.
>
> During my first few years of graduate school, I developed an increased interest in quantum mechanics and subatomic physics and decided to do research in a field that dealt with these subjects. I joined a High Energy Physics experimental group doing research at the Stanford Linear Accelerator Center (SLAC) and moved to the San Francisco Bay Area to actively participate in research at SLAC. I graduated in 1988 with my Ph.D in High Energy Physics (a.k.a. Elementary Particle Physics). If you would like to know more about High Energy Physics, the Particle Data Group at Lawrence Berkeley Laboratory has a very nice interactive adventure that teaches you all about the subject. My research advisor was professor Charles Buchanan and my disertation was titled "A Study of Lambda Polarization and Phi Spin Alignment in Electron-Positron Annihilation at 29 GeV as a Probe of Color Field Behavior."
>
> After graduation, I accepted a post-doctoral research position with the University of Massachusetts at Amherst. I continued to do research at SLAC where I joined the SLD experiment. My research interests centered on the SLD silicon pixel vertex detector. I wrote most of the offline software for this device, and did physics analysis which used the vertex detector, including tagging *b* quark events for flavor specific QCD (Quantum Chromodynamics) analysis. In the seven years I was employed by UMASS, I only spent 3 days on the Amherst campus. The rest of the time was spent in California.
>
> […]In August 1995, I accepted a job as an Assistant Professor of Physics at the University of Oklahoma (OU) in Norman, Oklahoma. The University of Oklahoma has a vibrant high energy physics research group involved in experiments at the Fermi National Accelerator Center (Fermilab), and CERN. I joined the DØ experiment at Fermilab where I continue to do research in elementary particle physics. As a member of the DØ collaboration I have made contributions to the testing of silicon sensors for the upgraded vertex detector, to the track finding algorithms, to a measurement of the photon production cross section which probes the gluon content of protons, and to other QCD measurements. I am currently studying properties of *B* mesons that contain a *b*-quark, the production cross section of jets coming from quarks and gluons, and other QCD analyses. At CERN, I am a collaborator on the ATLAS detector.
>
> I received tenure in 2001 and was promoted to the rank of Professor in the summer of 2010. Most of the time at OU I have taught introductory physics classes to physics majors, engineers, and life science majors. In these classes I have used a number of interactive techniques to facilitate student participation and learning. I have been privileged to win a few awards for my teaching. In 1999, the Associated Students selected me as the Outstanding Professor in the College of Arts and Science, and in 2000 I was awarded the BP AMOCO Foundation Good Teaching Award. In 2002, I was given the Regents Award for Superior Teaching. I received

> the Carlisle Mabrey and Lurine Mabrey Presidential Professorship in 2006 which is given to “faculty members who excel in all their professional activities and who relate those activities to the students they teach and mentor.”

He seems to have done a fine job of integrating his faith with a solid career in physics research.

**Summary:**

- It used to be true that most of the great scientists were believers in God
- But now science has advanced and we have better instruments – is it still true?
- Today, many people believe that science has shows that the universe and Earth are not special
- We used to believe that the Earth was the center of the universe, and Darwin showed we are not designed
- The problem with this view is that it is based on old science, not modern science
- Three topics: origin of the universe, fine-tuning of the universe, the Rare Earth hypothesis

Experimental evidence for the origin of the universe:

- #1: Hubble discovered that the universe expands because of redshifting of light from distant galaxies
- #2: Measurements of the cosmic microwave background radiation show the universe had a beginnning
- #3: Measurements of the light element (hydrogen and helium) abundances confirm an origin of the universe
- The best explanation for an absolute origin of space, time, matter and energy is a supernatural cause

Experimental evidence for the design of the universe:

- #1: The amount of matter: a bit less = no stars and galaxies, a bit more = universe recollapses
- #2: The strong force: a bit more = only hydrogen, a bit more = little or no hydrogen
- #3: Carbon resonance level: a bit higher = no carbon, a bit lower = no carbon

Experimental evidence for galactic, stellar and planetary habitability:

- #1: Galaxy: produces high number of heavy elements and low radiation
- #2: Star: long stable lifetime, burns bright, bachelor star, third generation star (10 billion years must elapsed),
- #3: Planet: mass of planet, stable orbit, liquid water, tectonic activity, tilt, moon

Naturalistic explanations:

- Humans evolve to the point where they reach back in time and create finely-tuned universe
- Eternally existing multiverse

Hawking and Mlodinow response to Rare Earth:

- There are lots of planets so one must support life
- Odds of a planet that supports life are low even with 10^22 planets

Hawking and Mlodinow proposal of M-theory multiverse:

- There is no experimental evidence for M-theory being true
- M-theory is not testable now and is not likely to be testable in the future
- But science is about making testable predictions, not about blind speculation

Hawking and Mlodinow no-boundary proposal:

- This theory requires the laws of physics to exist prior to the universe

- But where do you get laws of physics before there is any physical world?
- There is no experimental evidence for no-boundary proposal
- All the evidence we have now (redshift, CMBR, H-He abundances) is for Big Bang

What science has revealed provide abundant evidence for a transcendent Creator and Designer

# Not a smidgen: 100% of 501(c)(4) groups audited by the IRS were conservative

**Wintery Knight** · 14 February 2014 · Archived copy · Original

The Wall Street Journal reports.

Excerpt:

> A Republican House committee chairman said the Internal Revenue Service targeted tax-exempt conservative groups for audits, widening the scope of GOP ire over the agency's oversight of political activities.
>
> House Democrats pushed back, saying Republicans were seeking to use the IRS controversy to score political points with their conservative base in an election year.
>
> The IRS has been under scrutiny since an inspector general's report last May found that the agency had targeted conservative groups for lengthy and heavy-handed review of their applications to become tax-exempt organizations under section 501(c) 4 of the tax code. The controversy led to significant management shakeups at the IRS and generated a slew of congressional investigations, some of which are still going on.
>
> On Tuesday, House Ways and Means Chairman Dave Camp (R., Mich.) said his committee's continuing investigation has found that the IRS also singled out established conservative tax-exempt groups for audits.
>
> "We now know that the IRS targeted not only right-leaning applicants, but also right-leaning groups that were already operating as 501(c)(4)s," Mr. Camp said in a statement. "At Washington, DC's direction, dozens of groups operating as 501(c)(4)s were flagged for IRS surveillance, including monitoring of the groups' activities, websites and any other publicly available information. Of these groups, 83% were right-leaning. And of the groups the IRS selected for audit, 100% were right-leaning."

Obama says there is not a smidgen of corruption here. Do you agree?

# Treasury Department threatens private companies for responding to Obamacare incentives

**Wintery Knight** · 14 February 2014 · Archived copy · Original

Investors Business Daily reports on how the Treasury Department is threatening private companies who lay off employees because of the costs imposed on them by Obamacare.

Excerpt:

> In what may be considered an ObamaCare loyalty oath, the Treasury Department orders employers to attest that any employee layoffs are not due to its imposed costs under penalty of perjury.
>
> The first rule of business is to stay in business, something which is accomplished by doing what government is incapable of doing — controlling costs and making a profit by giving customers a product or service they need or want.
>
> ObamaCare is obviously a product neither business nor the individual wants, so coercion is necessary under penalty of law.
>
> Enforced by the Internal Revenue Service, individuals must enroll in government-approved plans or be fined.
>
> Individuals are not allowed, despite presidential promises, to keep the plans and doctors they like and can afford.
>
> Instead, they must accept plans they don't like and can't afford, some getting subsidies extracted from other taxpayers or China. They must grin and bear their reduced health care choices and higher costs.
>
> Even though ObamaCare's employer mandate has once again been illegally and unconstitutionally extended by the president who would be king, business still faces ObamaCare's punitive cost increases down the road and its own form of government coercion.
>
> Layoffs are an unfortunate but sometimes necessary means for a business to control costs and stay in business.
>
> On Monday, a Treasury Department unconcerned with the necessities of the free market said that businesses will need to "certify" that they are not shedding full-time workers simply to avoid the mandate and its costs.
>
> Officials said employers will be told to sign a "self-attestation" on their tax forms affirming this, under penalty of perjury.

What happens when a government passes regulations that make it harder for employers to lay off workers if they are forced to? Well, companies stop hiring workers, and expand their operations elsewhere. That's exactly what has happened in countries like France, where the government makes it nearly impossible to get rid of workers, even when circumstances warrant it. So the net effect of policies that reduce the freedom to hire/fire as needed is to raise unemployment.

Here's the economist Aparna Mathur of the American Enterprise Institute to explain.

Excerpt:

> Labor market regulations often take the form of employment protection rules that govern the hiring and firing of workers. These were originally introduced to enhance workers' welfare; for instance, by reducing unfair dismissals. The same provisions that protect employees, however, translate into cost for employers, leading an employer to think twice (at least) before hiring a new employee.
>
> Theoretical economic models have shown that, in general, the effect of such laws is to reduce job flows (broadly, the sum of jobs created and jobs destroyed). In my paper, I show that these reduced job flows could have negative effects on investments in education because they reduce the expected returns on a job search;

> and they lower the value of education as a signaling device.
>
> Under rigid labor market regulations, employers have a stronger disincentive to create new jobs, so there are fewer available jobs on the market. As a result, one's likelihood of earning a productive wage is reduced. Moreover, firings under a system of strong labor market regulations are less frequent than they would be otherwise, so even workers with jobs expect to face fewer opportunities to search for re-employment. As a result, they will have less use of education as a signaling device to secure their next job.
>
> With flexible labor markets and higher job mobility, these conditions are reversed. Job flows are higher, leading to more vacancies per unemployed worker. This yields a higher expected return on a job search for educated workers since the likelihood of finding a job is higher. Further, workers are either fired or they quit more frequently (i.e., job destruction is higher), leading to a greater use (or need) of education as a signaling device.
>
> Put simply, imagine a developing country with rigid labor markets leading to few vacancies. For a low-income worker, the cost of getting educated may outweigh the prospective benefits since the likelihood of finding a job in this scenario is fairly low. On the other hand, for the same worker, if the likelihood of finding a job goes up when labor market restrictions are removed, the incentive to invest in education may be higher since the returns to investing in this costly activity are higher. Countries such as France, Germany, and Italy, which consistently have strict labor regulations, would do well to heed these results (see figure). It is also true in general that developing countries have stricter labor regulations than the OECD economies.

All these regulations sound so good, but we have to think beyond stage one in order to see the real results of the happy-sounding speeches. These things are understood by economists, but we didn't elect an economist.

# Upcoming Greer-Heard forum on cosmology, featuring Sean Carroll and William Lane Craig

**Wintery Knight** · 14 February 2014 · Archived copy · Original

(Video: William Lane Craig debates the fine-tuning argument with Duke University philosopher Alex Rosenberg)

Christian Post reports on what promises to be one of the best debates in William Lane Craig's career.

Excerpt:

> The debate over God's existence heats up next week as leading physicist and atheist Sean Carroll is pitted against William Lane Craig, a top theologian and philosopher, to discuss their views about philosophy, cosmology, and the role of God and the cosmos.
>
> The two experts will debate on Feb. 21 under the theme "God and Cosmology: The Existence of God in Light of Modern Cosmology." Organizers announced Wednesday that the event will be held at New Orleans Baptist Theological Seminary as part of a Greer-Heard Point-Counterpoint Forum in Faith and Culture Weekend Conference. Modern cosmology is dominated by the Big Bang theory, which attempts to bring together observational astronomy and particle physics.
>
> "Though Carroll is as fiercely anti-theistic as other cosmologists I have debated, he differs in being philosophically informed and civil in demeanor," Craig wrote in a statement about the event.
>
> Craig is a philosopher, professor, author and founder of ReasonableFaith.org, a web-based ministry "whose purpose is to provide, in the public arena, an intelligent and articulate perspective about the existence of God." He has debated some of the most notable atheists, including the late Christopher Hitchens, Richard Dawkins, and, most recently, Lawrence Krauss. Some 250,000 people have watched the Craig-Krauss dialogues since they took place last August in Australia.
>
> Over the years, Craig has developed "Eight Reasons for God." These form his case for theism, showing that God is the best explanation for why anything exists at all; the origin of the universe; the application of mathematics to the physical world; the fine-tuning of the universe for intelligent life; intentional states of consciousness in the world; objective moral values and duties in the world; the historical facts concerning Jesus' resurrection; and personal experience of God.
>
> Sean Carroll is a physicist at the California Institute of Technology. His research focuses on theoretical physics and cosmology, especially the origin and constituents of the universe. He has contributed to models of interaction between dark matter, dark energy, and ordinary matter; alternative theories of gravity; and violations of fundamental symmetries. He has appeared on TV shows including "The Colbert Report" and Through the Wormhole with Morgan Freeman, and frequently serves as a science consultant for film and television. He is the author of several books including the upcoming *The Particle at the End of the Universe*.
>
> Each has selected two commentators to round out the discussion, philosophers Tim Maudlin and Alex Rosenberg on Carroll's tag team and philosopher Robin Collins and physicist James Sinclair on Craig's. A follow-up discussion is planned for that Saturday.
>
> "I selected the physicist James Sinclair, with whom I co-authored the article on the kalam cosmological argument in the Blackwell Companion to Natural Theology, and Robin Collins, who is writing what will be the definitive book on the fine-tuning of the universe," said Craig. "Carroll and I will be afforded the opportunity to give brief responses to each of their papers.
>
> "There will also be opportunity for audience interaction with all the participants. Not only will the entire proceedings be video-recorded, but the transcript of the debate, papers, and responses will be published by Fortress Press. So this promises to be a very substantive and important engagement. It will also be live-streamed on the Internet, so you can join in if you'd like."

The post includes a link to the live stream, which is provided by Tactical Faith.

**Dr. Carroll's blog post about the debate**

Dr. Carroll posted about this upcoming debate on his blog, and it seems like he is is going to be a fine opponent for Dr. Craig.

Excerpt: (links removed)

> Next month I'll be doing something related, although under quite different circumstances. On February 21 I'll be debating William Lane Craig at the Greer-Heard Forum, an event sponsored by the New Orleans Baptist Theological Seminary. It will actually be a two-day event; a debate between Craig and me on Friday night, and follow-ups on Saturday from other speakers — Tim Maudlin and Alex Rosenberg for Team Naturalism, Robin Collins and James Sinclair for Team Theism.
>
> […]William Lane Craig (or WLC as we call him in the business) is of course a very well-known figure, largely for his many public debates, on theism/atheism as well as on various other specific theological issues. As far as debating goes: he's very good at it! If his debates were being judged by a panel of experts as in an intercollegiate debate tournament, he would have a very good record indeed. This has led many people to conclude that atheists just shouldn't debate him at all, or at least not until they have devoted 10,000 hours to learning how to be a good debater.
>
> Daniel Dennett warned me that, as soon as word got out that I would be debating WLC, I would be deluged with opinions and unsolicited advice. Which is great! Always happy to hear other perspectives, although I don't promise to actually follow any of the advice. I won't reproduce the various emails I've received, but here are a few very different perspectives online: Jerry Coyne, Luke Barnes (and another), and Wintery Knight. (WK is relatively restrained, but others predict "pummelings," presumably for me.)

Dr. Carroll explained his goals for the event:

> Just so we're clear: my goal here is not to win the debate. It is to say things that are true and understandable, and establish a reasonable case for naturalism, especially focusing on issues related to cosmology. I will prepare, of course, but I'm not going to watch hours of previous debates, nor buy a small library of books so that I may anticipate all of WLC's possible responses to my arguments. I have a day job, and frankly I'd rather spend my time thinking about quantum cosmology than about the cosmological argument for God's existence. If this event were the Final Contest to Establish the One True Worldview, I might drop everything to focus on it. But it's not; it's an opportunity to make my point of view a little clearer to a group of people who don't already agree with me.

Recently, Dr. Carroll debated Christian philosopher Hans Halvorson, who is a professor at Princeton University, and Hugh Ross was in attendance. In a podcast, Dr. Ross said that Carroll was a gentleman, and it was a good debate, although he wanted Halvorson to disagree with Carroll more. (You can watch the "debate" here, although it really wasn't a debate because Halvorson didn't engage Carroll for the most part). Reasons to Believe has since pulled the podcast. However, I was able to find it, (I am a software engineer!), and I've posted it here. I have no idea why they pulled it, because it was a good review. If you want a good introduction to the issues they'll be debating from a particle physicist, check out this recent lecture by Dr. Michael Strauss.

**The two duelists choose their seconds**

My understanding is that Dr. Carroll has already made one mistake. He selected Alex Rosenberg (see video above) as a respondent. Dr. Rosenberg is not a good spokesman for naturalism, and in his debate with Dr. Craig, he did very poorly. A better wingman would have been someone like Graham Oppy or Quentin Smith. Dr. Carroll's other choice (Tim Maudlin) looks solid, though.

On Dr. Craig's side, he's chosen Robin Collins and James Sinclair. Collins recently had a chapter in "Debating Christian Theism" (Oxford University Press, 2013) and Collins and Sinclair both had chapters in "The Blackwell Companion to Natural Theology" (Wiley-Blackwell, 2009). Collins is an engaging public speaker, and I featured a lecture by him on the fine-tuning argument in this post.

Please pray that God would reach out to Dr. Carroll and for other non-theists listening to the debate so they can see that there are good reasons for them to rethink their views about God.

**Dr. Luke Barnes previews the debate**

If you would like to read some comments from an accomplished cosmologist, check out these posts (post one, post two, post three, post four) on Dr. Luke Barnes' Letters to Nature blog. You might remember him because I wrote about his paper critical of atheist physicist Victor Stenger in this blog post. Note that Barnes' paper has now been published in a peer-reviewed journal. The journal is published by Cambridge University.

# Conservative Party of Canada on track to deliver budget surplus in 2015

**Wintery Knight** · 15 February 2014 · Archived copy · Original

Prime Minister Stephen Harper (Conservative Party)

Story from Yahoo News about the results delivered by the Conservative Party of Canada.

*Note: To understand the numbers in the article, simply multiple the numbers by 10 to compare with American numbers – Canada's economy is about 1/10 the size of ours. For example, our GDP is $15.7 trillion and theirs is $1.8 trillion. Our national debt is $17 trillion, while their's is $1.2 trillion.*

Excerpt:

> Canada's Conservative government looks set to comfortably balance its books in 2015 or even sooner, its latest budget showed on Tuesday, with cuts in spending on the public service more than offsetting a series of modest new expenditures.
>
> The low-key spending plan leaves Prime Minister Stephen Harper well-positioned to offer tax breaks and other initiatives in the runup to an election scheduled for October next year.
>
> "Some people will say this budget is boring," Finance Minister Jim Flaherty told reporters ahead of the budget speech. "Boring is good."
>
> The budget shows a deficit of C$2.9 billion ($2.63 billion)in the 2014-15 fiscal year, up from the previous estimate of C$5.5 billion. That balance includes a C$3 billion contingency fund, which in fact reveals an underlying surplus that year.
>
> Flaherty acknowledged the budget would be narrowly balanced this coming year without the contingency fund, but said he preferred to have a "nice clean surplus next year".
>
> The government estimates a bigger-than-expected C$6.4 billion surplus in 2015-16. In the year ending March 31 of this year, the deficit is pegged at C$16.6 billion.
>
> […]Flaherty, who is 64 and battling a rare skin disease, has staked his reputation on eliminating Canada' small deficit, equivalent to about 1 percent of gross domestic product (GDP), and restoring the reputation the country had before the global financial crisis as having the strongest fiscal record in the Group of Seven major economies.

> Germany is currently the only G7 country running a surplus, but Canada's ratio of debt to GDP is substantially less and it is one of a handful of countries with a triple-A rating from rating agencies.

Canada is beating us in debt to GDP:

G7 % Debt to GDP as of 2012 (lower is better)
Canada is beating us in economic growth:

G7 % GDP growth from 2007 to 2012 (higher is better)
Source: BBC Business

The next Canadian election is in 2015. I know that the Liberal Party is currently leading in the polls, but I found some good news. The Canadians just redistricted after their census, and there are 30 new electoral districts. If the same turnout occurs in 2015 which occurred in the 2011 election, then the Conservative Party of Canada would get 22 out of 30 of those new seats. However, I am concerned. I want Harper to keep his majority, as he and Tony Abbott (Australia) are two bright conservative stars who show people what conservatives can do.

# Christians embracing premarital sex, despite increased risk of divorce

**Wintery Knight** · 15 February 2014 · Archived copy · Original

I've posted before about how premarital sex wrecks the stability of marriages by making divorce more likely. And I wanted to begin this post by showing that this is not a controversial point in the research.

Here another good study on relationship tempo and relationship quality.

Abstract:

> *Rapid sexual involvement may have adverse long-term implications for relationship quality. This study examined the tempo of sexual intimacy and subsequent relationship quality in a sample of married and cohabiting men and women. Data come from the Marital and Relationship Survey, which provides information on nearly 600 low- to moderate-income couples living with minor children. Over one third of respondents became sexually involved within the first month of the relationship. Bivariate results suggested that delaying sexual involvement was associated with higher relationship quality across several dimensions. The multivariate results indicated that the speed of entry into sexual relationships was negatively associated with marital quality, but only among women. The association between relationship tempo and relationship quality was largely driven by cohabitation. Cohabiting may result in poorer quality relationship because rapid sexual involvement early in the romantic relationship is associated with entrance into shared living.*

The authors are from Cornell University and University of Wisconsin – Madison. Hardly bastions of conservatism! This is not complicated, this is black and white.

Here's another recent study that shows that if a woman has more than her husband as a premarital sex partner, her risk of divorce increases.

His findings:

> Using nationally representative data from the 1995 National Survey of Family Growth, I estimate the association between intimate premarital relationships (premarital sex and premarital cohabitation) and subsequent marital dissolution. I extend previous research by considering relationship histories pertaining to both premarital sex and premarital cohabitation. I find that premarital sex or premarital cohabitation that is limited to a woman's husband is not associated with an elevated risk of marital disruption. **However, women who have more than one intimate premarital relationship have an increased risk of marital dissolution.**

Here's another study that makes it even more clear.

Findings:

> Data from the 1988 US National Survey of Family Growth (NSFG) were utilized to assess the impact of premarital sexual activity on subsequent marital stability. **Among white NSFG subjects first married in 1965-85, virgin brides were significantly less to have become separated or divorced (25%) than women who had not been virgins at marriage (35%).**
>
> **[…]The lower risk of divorce on the part of white women with no premarital sexual experience persisted even after numerous intervening and background variables were controlled.**

This study supports what the Bible says about chastity and premarital sex:

> 1 Cor. 7:8-9:

> 8 To the unmarried and the widows I say that it is good for them to stay single as I am.
>
> 9 But if they cannot exercise self-control, they should marry. For it is better to marry than to burn with passion.
>
> The idea of "burning" here has to do with sexual desire. Here Paul tells all unmarried people that if they cannot control their sexual desires, they need to get married. Why? Because Paul assumes that one cannot fulfill this sexual desire outside of the marital bed. While Paul would love for them to remain single (1 Cor. 7:7), he believes that sex outside of marriage is a destructive sin and *cannot* be used as a gratifying release of our sexual passions.

Now despite studies supporting the Biblical prohibition on premarital sex, Christians are actually embracing it. Why is that? Well, church pastors are very, very set in the idea that the Bible is *assumed* to be inerrant in church, and they feel that supporting what the Bible says with actual evidence is "putting evidence at the same level as the Bible". That's their approach – don't confirm the Bible with evidence, just tell people to *assume* that the Bible is true, and tell them to believe it, in the face of mounting culture pressure, secular policies and a resurgence of atheism.

Take a look at this review by a pious pastor of a recent apologetics book, if you don't believe me.

Excerpt:

> *Cold-Case Christianity* places far too much emphasis on the role of extrabiblical sources. No doubt there is a legitimate role for biblical archaeology and extrabiblical writing from antiquity. Christianity is, after all, a faith firmly rooted in human history. But there is a grave danger when truth is suspended because of an apparent lack of corroboration from extrabiblical sources. And Wallace, I'm afraid, wanders too close to this dark side of apologetics.
>
> All of chapter 12, for instance, is devoted to proving the Gospels have external corroborative evidence—"evidence that are independent of the Gospel documents yet verify the claims of the text" (183). Wallace then addresses the historicity of the pool of Bethesda and makes another worrying statement: "For many years, there was no evidence for such a place outside of John's Gospel. Because Christianity makes historical claims, archaeology ought to be a tool we can use to see *if these claims are, in fact, true*" (201-202, emphasis added).
>
> In other words, Wallace seems to suggest we cannot affirm the truth of the Gospel accounts without the stamp of approval from archaeology and other extrabiblical sources. Such reasoning is dangerous, not least because it cannot affirm the inerrancy of the Bible. But also, it places the final court of appeal in the realm of extrabiblical sources rather than of God's all-sufficient, all-powerful Word.

So does the approach of Bible-thumping church pastors work? Are young people really convinced by proclamations and assertions, piously expressed?

**Majority of Christians embrace premarital sex**

Consider this article that Dina tweeted from the Christian Post.

Excerpt:

> [A] new Christian Mingle study suggests that it is increasingly commonplace for Christians to sleep together outside of a marital context.
>
> In a survey of 716 Christians released in January, only 11 percent said they save sex exclusively for marriage. Instead, 60 percent said they would be willing to have sex without any strings attached, while 23 percent said they would have to be "in love." Five percent said they would wait to get engaged.

> This data supports a 2011 Relevant Magazine poll that revealed that 80 percent of "young, unmarried Christians have had sex" and that "two-thirds have been sexually active in the last year."
>
> While the findings of a 2012 National Association of Evangelicals (NAE) and Grey Matter Research poll did not show outcomes as high as the two previous polls, according to its research, 44 percent of unmarried evangelicals between ages 18-29 said that they had sex, including 25 percent who said they had had sex in the last three months.

You know, if just invoking the Bible piously, and asserting that it's without error, were enough, then that's what you'd see people like William Lane Craig doing in debates at the top universities when he faces off against atheists. But he doesn't do that. Dr. Craig appeals to evidence outside the Bible in order to explain why the Bible ought to be respected when we make our decisions. There is no such thing as pious fideism when you are in front of a crowd of students at a major secular university. And young people, no matter how "nice" they behave in church, are not going to behave like Christians outside of church – especially when they get to an alcohol-soaked, sex-saturated university campus. They need reasons and evidence to support the claims they read in the Bible before they get challenged.

We need to train pastors who understand how to construct an argument and how to support arguments with evidence. Because when the kids get to college, they are going to face a tsunami of propaganda from the pro-sexual-immmorality crowd. (WARNING: that link describes what happens during "Sex Week" on college campuses. Reader discretion is advised!) They need to be able to explain their views using something other than praise songs and Bible verse memorization, or they are going to fall away under peer pressure and shaming by secular leftist professors. And they need to have that information BEFORE they make the decisions that ruin their ability to commit.

By the way, another great book on the topic of premarital sex is "Hooked: New Science on How Casual Sex is Affecting Our Children" by Joe S. McIlhaney Jr., M.D. and Freda McKissic Bush, M.D. Again – look at the research and be persuaded, and be persuasive with others. Don't be like these pastors who think that praise hymns and charismatic preaching are enough to make young people do the right thing, because it's not working. It's not working.

# Jerry Coyne presents the strongest argument for Darwinian evolution

**Wintery Knight** · 16 February 2014 · Archived copy · Original

What is the strongest argument for Darwinian evolution? This podcast explains the best way to persuade an intelligent design theorist to accept Darwinian evolution.

Details:

> On this episode of **ID the Future**, David Klinghoffer announces Discovery Institute's 2013 Censor of the Year award. Listen in as Klinghoffer explains why we've chosen to recognize University of Chicago biologist Jerry Coyne, out of several promising nominees, for his success in choking off free speech on intelligent design and evolution.

The MP3 file is here.

The story behind this powerful argument is described in this post from Evolution News.

Excerpt:

> Let me make clear at the outset: In naming University of Chicago biologist Jerry Coyne as "Censor of the Year," we at the Center for Science & Culture are not bestowing an honor. While the idea of giving out a "prize" for something so malignant as censorship may sound like a lark, it's not. As CSC associate director John West points out, "This is very serious business. Censorship retards the search for truth and hurts innocent people."
>
> And says Dr. West, "Among die-hard defenders of evolutionary orthodoxy, it's now standard operating procedure." **This is how the scientific "consensus" against Darwin skeptics and intelligent-design advocates is maintained — by fear.**
>
> The "award" will be distributed this Wednesday, February 12, for Darwin Day.
>
> Coyne was pivotal in stampeding Ball State University president Jo Ann Gora to issue a campus-wide gag order on teaching about intelligent design in science classrooms. This involved intimidating and silencing a young Ball State physicist, Eric Hedin. That's censorship. But something that really stands out about Coyne's effort is the power differential between himself and his victim.
>
> Here's Coyne, comfortable as could be in what sure sounds like an easy yet highly prestigious position at the University of Chicago. His workload is evidently so light that he has time to blog at *Why Evolution Is True* what seems like around the clock about frivolous pet topics. While he's ostensibly a scientist, his main passion is bashing religion. Coyne is protected by tenure. He's safe.
>
> On the other hand we have Eric Hedin, at a state school, Ball State in Indiana, with considerably less cachet. Hedin is actively publishing in his field, unlike Coyne, but he is not tenured, and so his professional future is really on the line. His prospects are now far more fragile, thanks to Professor Jerry Coyne. Frittering away time blogging about cute animals and posting cartoons insulting various religions — as Coyne does — was not, I'm fairly sure, something that Dr. Hedin would have felt free to do if he was (highly unlikely) inclined to do it.
>
> So we have the powerful, prestigious and above all *safe* Jerry Coyne, swooping in from the next state to rile up Hedin's employers, Ball State's administration. Why? Because Hedin included a bibliography in an interdisciplinary class that listed some books that were favorable to intelligent design (and others that were critical of it).
>
> Coyne was not only successful in shutting down Hedin, and getting intelligent design shut down on the campus as a whole. **He was also a bully, exploiting the difference in power to tyrannize and dominate a**

> **vulnerable younger scholar.**

This is the best argument for Darwinism that I have ever heard: believe it, or we'll destroy your academic career. I think that works on most Darwin skeptics.

By the way, if you're headed to the secular university, keep in mind that some departments don't handle diversity well. If you disagree with evolutionary biologists, they don't try to convince you. They just end your career. It's that simple. Keep your views to yourself as long as you can. If you're going to publicly question the 150-year-old theory of evolution, then do it with an alias.

# Can you forgive someone who isn't sorry for what they did?

**Wintery Knight** · 16 February 2014 · Archived copy · Original

Kevin Lewis, a professor of Theology and Law at the conservative Biola University, was asked this question:

> Recently, I was reading Dr. Kenneth Bailey's Jesus Through Middle Eastern Eyes (IVP press 2008). When commenting on Matthew 6:12-13, he writes,
>
> "It is a common human assumption that the violator of the rights of others must ask for forgiveness before the wronged party can be expected to accept the apology and grant forgiveness…But Jesus here asks the person wronged to forgive the one responsible for the wrongdoing when when there is no confession of guilt… There is a voice from the cross that echoes across history to all saying 'Father forgive them for they know not what they do.' Neither Pilate nor the high priest nor the centurion offered any apology to Jesus, yet he prayed for divine forgiveness…(p.125)"

And here's his response in full, copied with permission from his Facebook note:

> Regarding Bailey's comments on Matthew 6:12, he errs by not considering the theological context of this statement and fails to consider any implied biblical conditions for forgiveness inherent in the statement. The text simply does not mean what he says it means. He is reading too much into the statement.
> Bailey states, "Jesus here asks the person wronged to forgive the one responsible for the wrongdoing when there is no confession of guilt…"
>
> Bailey errs. Here, Jesus is giving a model for prayer commensurate with the way His Kingdom works. Jesus teaches them to pray: "Forgive us our debts, as we also have forgiven our debtors." This is a statement of the objective, "forgiveness," without a discussion of any express or implied conditions to accomplish the objective. It is also a statement of the proper attitude of the Christian, that is, that we must have a demeanor of being willing to forgive, just as God was willing to forgive us. Bailey's assertion that there is no "confession of guilt" or repentance is merely an unwarranted assumption.
>
> Moreover, the use of "as" (Grk. hos) in the passage introduces a comparison between the way we forgive and the way God forgives. This comparative phraseology is employed elsewhere on the subject of forgiveness. For example, Ephesians 4:32 states that we should be "forgiving each other just as God in Christ also has forgiven" us. Here, the comparative "just as" (Grk. kathos) is employed and indicates our forgiveness is to be just like God's forgiveness of us, which flows from a loving disposition. So in the same manner that God forgives, we must forgive. We are to be "imitators of God" (Eph. 5:1). See also Matthew 5:48 and Luke 6:36 for exhortations to imitate God.
>
> To ascertain whether the Scriptures describe any conditions for forgiveness, one must search elsewhere in the Scriptures for comment. This is the nature of systematic theology. We need to examine what the entire Bible says on a given topic, such as forgiveness. And the Bible contains ample support for the notion that there are conditions for forgiveness.
>
> First, regarding God and His forgiveness, it is undisputed in orthodox Christian theology that God does not forgive everyone. The doctrine of Hell is a sufficient proof of the lack of universal forgiveness by God.
>
> Next, it is clear that God does not forgive without repentance. This doctrine is taught in a number of texts. For example, in Luke 13:3 Jesus says, "unless you repent, you will all likewise perish." In Mark 1:15 John the Baptist commands that we must "repent and believe the Gospel." The connection between repentance and forgiveness of sins (i.e. "salvation") is seen throughout the Scriptures. For example, in Acts 2:38 repentance is directly connected as a condition for the remission of sins. For additional examples of this connection see Matthew 11:20-24; Luke 24:45-49; Acts 3:19; 8:22; 17:30-31; Romans 2:4-5; II Corinthians 7:10; II Tim. 2:25-26.

So since we are to be imitators of God and forgive in the same way God forgives, we would expect the Scriptures to be consistent, stating that the condition of repentance is required to be fulfilled before believers are required to forgive each other's sins. It does.

Jesus stated in Luke 17:3, "If your brother sins, rebuke him; and if he repents, forgive him." Here, the meaning is clear. The word "if" (Grk. ean) introduces the condition for a rebuke and for granting forgiveness. If (subjunctive) a person sins, we must (imperative) rebuke him, and if (subjunctive) he repents, we must (imperative) forgive him. This is as clear a statement as you will find on the subject. Forgiveness is conditioned upon repentance—and this is one of the same criteria that God requires before He forgives sin.

This principle of permitting believers to withhold forgiveness unless the condition of repentance is satisfied is also explicitly seen in Matthew 18:15-17. Compared with the Luke 17:3 text above, the situation is the same. If a brother sins, reprove him; if he listens to you, you have won your brother. Here, the word "reprove" is used rather than "rebuke" and the word "listen" is employed rather than "repent," but the meaning is virtually identical to Luke 17:3. What we see in Matthew 18 is an escalation of the issue and the result if the person fails to repent (i.e. "listen"). If the person fails to repent, we are to shun him in all appropriate ways (v. 17).

These passages in Luke and Matthew give us the connection between sin, rebuke, repentance and forgiveness. Other biblical texts that merely mention "forgiveness" as a concept or an objective do not necessarily proffer every aspect of the doctrine of forgiveness. As such, they must be read in light of the clear conditions expressed in other passages.

Finally, I would make the case that it is harmful to a person to forgive him without requiring repentance. As seen above, the Bible is clear that sin requires a rebuke. Ignoring sin teaches sinners that sin does not bring consequences. This is harmful to their souls. Continuing to have the benefit of a righteous relationship with another and yet remain in sin against that person results in fostering a habituation of sinful inclinations in their soul, which God says brings about suffering and death.

Moreover, since the ultimate purpose of forgiveness is reconciliation, it is meaningless and harmful to forgive when no reconciliation may be had with the sinner. We cannot "walk together" in a biblical manner in righteous peace when the unrepentant sinner walks in unrighteousness. Necessarily, there is a conflict and a want of shalom. Their soul is headed in a different direction than the believer's soul; they are walking away from God and we cannot have fellowship with darkness. God has no intimate fellowship with unrepentant people, and that is the model for Christians as well (See Matt. 18).

Regarding personal anger issues commonly raised by Christian psychologists, these types of psychologists unbiblically make unconditional forgiveness a part of therapy. By contrast, however, if a counselee will not forgive after the offending party has truly repented, the counselee sins, and this kind of unforgiveness may be one of the causes of his or her problems. But this is a separate issue from universal and unconditional forgiveness raised above.

Human beings in the image of God may be angry in appropriate ways (Eph.4:26, 31). There is a time to love and a time to hate (Ecclesiastes 3:8). The notion that Christians cannot ever hate, be angry, or lack forgiveness is an unbiblical concept. God Himself is eternally angry with sin, but He is certainly not a psychological basket case. He loves, hates, and is angry in appropriate ways. Our task as believers is to imitate this. Be angry with and hate sin appropriately (Rom. 12:9) and love what good appropriately. For example, righteous anger can evolve beyond the biblical limits to become malice, slander, and bitterness while, to give another example, an appropriate love of food can evolve beyond the biblical limits into gluttony.

Psychological problems arise from many issues other than lack of forgiveness. For example, a lack of trust in God that He has a particular instance of evil under His sovereign control can cause undue anxiety in one's life. Also, if a counselee's self worth is grounded in the shifting sand of how others treat him (i.e., badly) rather than being grounded in the fact that he is a divine image bearer and inherently valuable no matter how badly anyone treats him, he will likely fall into anxiety, depression, and other sorts of psychological maladies. Changing the biblical doctrine of forgiveness will not truly help a counselee. It only makes it worse.

> Soli Deo Gloria

I agree with Kevin, and I think it is a helpful tool for people to insist on seeing some sort of repentance and restitution from someone who wrongs you before you trust them again. If they are not even sorry for what they've done, and they refuse to explain why what they did is wrong, then they can't be forgiven, and you can't trust them again.

# New study: three or more hours of TV per day harms children's development

**Wintery Knight** · 17 February 2014 · Archived copy · Original

From the UK Daily Mail.

Excerpt:

> Toddlers who watch three hours of TV a day may end up educationally stunted, physically weak and prone to bullying, a study has revealed.
>
> Researchers have found that after two hours of viewing, every extra hour of TV has the potential to harm a child's development, both physically and socially.
>
> This includes poorer vocabulary, maths skills and attention in class, victimisation by classmates and poor physical prowess at nursery.
>
> The study looked at 1,997 boys and girls aged 29 months whose parents reported their television viewing behaviour as part of the Quebec Longitudinal Study of Child Development.
>
> The researchers found that if a child watched up to two hours and 52 minutes of TV, they were unlikely to suffer any negative effects.
>
> […]The study was published in the journal Paediatric Research.

I actually made the decision to give up TV about 8 years back and stick with my computer and a high speed connection instead. One of my reasons was to avoid handing money to the people who create TV programs, because those people do not agree with my values in the vast majority of cases. Why would I give them money to present their worldview to me, when I cannot get a hearing from them?

Life Site News explains the problem.

Excerpt:

> Ipsos MediaCT, a global market research company, have just released a study…
>
> According to the report, 18 percent of Americans between the ages of 13 and 64 said that television has directly contributed to their increasing support for same-sex "marriage."
>
> That's nearly double the number (10 percent) who reported television had increased their opposition to marriage redefinition.
>
> "Based on this data, I think we can conclude that TV has, at least in part, moved the needle of public opinion to see same-sex marriage in a positive way," Ben Spergel, Senior Vice President and Head of TV Insights at Ipsos MediaCT said in a statement.
>
> "With everything from higher profile portrayals of gay characters, to celebrity support of gay marriage, to last year's groundbreaking endorsement by President Obama, we are seeing a shift in our culture that is being influenced by popular culture," he said.
>
> Last month, liberal writer Andrew O'Hehir wrote an article for *Salon* crediting the American movement toward homosexual acceptance to television shows like "Will and Grace,""Roseanne," "The Real World," "Ellen DeGeneres," "Buffy the Vampire Slayer," "Modern Family," and "Glee."
>
> "From 'Soap' to Ellen DeGeneres to Richard Hatch on 'Survivor' to the macho male couple who won season 4 of 'The Amazing Race,'" O'Hehir wrote, "televisual images of sexual diversity have gradually moved away from victimology and 'gay best friend' stereotypes toward a 'normalizing vision'of LGBT culture."

> “While the startling public shift on gay marriage – something few people of my generation, straight or gay, thought they’d ever see — is not solely the product of TV, it represents the ultimate fulfillment of TV’s vision of sexual equality,” O’Hehir added.
>
> Support for same-sex “marriage” is on the rise in the United States. Recent polls show more than half of Americans support redefining marriage to include homosexual couples, and several states now allow gay nuptials in defiance of federal law.

So that’s one reason. Why would I voluntarily give money to people who are working against what I believe?

Secondly, I particularly don’t like the “passive” feel of television. If I liked mysteries, I would rather solve one than watch one being solved. If I liked sports, I’d rather play sports or play a video game with a friend of sports, than watch millionaires play sports. If I liked military history, I’d rather play a military simulation than watch a documentary. I think that I learn a lot more by doing than by seeing.

# The Democrat agenda – reducing self-sufficiency and increasing dependency

**Wintery Knight** · 17 February 2014 · Archived copy · Original

Two articles, both from Investors Business Daily.

The first explains how Obamacare encourages people to stop working or reduce their work hours in order to get more benefits from the government.

Charles Krauthammer explains:

> First, the Congressional Budget Office triples its estimate of the drop in the workforce resulting from the disincentive introduced by ObamaCare's insurance subsidies: 2 million by 2017, 2.3 million by 2021.
>
> Democratic talking points gamely defend this as a good thing because these jobs are being given up voluntarily. Nancy Pelosi spoke lyrically about how ObamaCare subsidies will allow people to leave unfulfilling jobs to pursue their passions:
>
> "Think of an economy where people could be an artist or a photographer or a writer without worrying about keeping their day job in order to have health insurance."
>
> […]Pelosi's vision is equally idyllic except for one thing: The taxes of the American factory worker — grinding away dutifully at his repetitive mind-numbing job — will be subsidizing the voluntary unemployment of the artiste in search of his muse. A rather paradoxical position for the party that poses as tribune of the working man.
>
> […]In the reductio ad absurdum of entitlement liberalism, Jay Carney was similarly enthusiastic about this ObamaCare-induced job loss. Why, ObamaCare creates the "opportunity" that "allows families in America to make a decision about how they will work, and if they will work."
>
> If they will work? Pre-Obama, people always had the right to quit work to tend full time to the study of butterflies. It's a free country. The twist in the new liberal dispensation is that the butterfly guy is to be subsidized by the taxes of people who actually work.
>
> In the traditional opportunity society, government provides the tools — education, training and various incentives — to achieve the dignity of work and its promise of self-improvement and social mobility.
>
> In the new opportunity society, you are given the opportunity for idleness while living parasitically off everyone else. Why those everyone elses should remain at their jobs — hey! I wanna dance, too! — is a puzzle Carney has yet to explain.

So, if you are working, you are going to be taxed more to pay for the leisure (or laziness) of your fellow citizens. And why must the Democrats do this? In order to continue to win elections by getting the votes of people who want you to work harder and longer so that they don't have to work.

So how much are we paying people to not work or to work less?

**Major Welfare Programs, 2012**

| | |
|---|---|
| Medicaid | $296 bil |
| Unemployment Insurance | $126 |
| Disability | $124 |
| Food Stamps | $75 |
| Supplemental Security Income | $60 |
| Earned Income Tax Credit | $56 |
| Pell Grants | $41 |
| Section 8 housing/rental assistance | $28 |
| Drug Benefits | $23 |
| Education for Disadvantaged | $14 |
| School Lunches | $10 |
| S-CHIP | $9 |
| Head Start | $8 |
| TANF Cash Aid | $7 |

Sources: Congressional Research Service, Congressional Budget Office

Major welfare programs as of 2012

Again, Investors Business Daily explains.

Excerpt:

> In 2011, the latest year for which we have complete spending data, federal outlays on all means-tested welfare programs targeted for the poor hit $746 billion, according to an analysis by the Congressional Research Service.
>
> But this doesn't include two of the fastest-growing taxpayer-funded cash subsidies: unemployment insurance and disability, which are not based on one's income level, so are not considered anti-poverty programs. That's another $250 billion a year. All told, federal income transfer programs (not including Social Security and Medicare) have hit $1 trillion.
>
> Adding state spending, the Senate Budget Committee found another $257 billion spent each year. The welfare state is now larger than the GDP of 175 of the 190 wealthiest countries.
>
> Astoundingly, if all this spending were simply sent in the form of a check to every household in America living below the poverty level, we could raise each of these family's incomes not just above the poverty line, but double that level, according to Robert Rector of the Heritage Foundation. Every poor family of four could have a cash income of $44,000 a year — which in most countries would be princely.
>
> Most Americans probably have no idea how expansive the welfare state is. That's because the cost is disguised by more than 80 separate means-tested programs counted by the CRS, including cash benefits, health care, social services, food, child care, training, and housing and utility subsidies. They often have overlapping and uncoordinated missions. This explains the vast duplication of effort, with at least 12 programs offering food and nutrition, 18 offering housing assistance, nine offering vocational training, and so on.
>
> In all, just over 100 million Americans now get some form of welfare-based government benefit. This does not include Medicare or Social Security. Obama's economics team thinks the more the better, because these are programs that "stimulate" the economy.
>
> Oh, and by the way: These numbers do not include the ObamaCare expansion of Medicaid, which could add 20 million to the rolls over time. Obama boasts of 5 million more Americans now being eligible for Medicaid under ObamaCare, as if that's an applause line.

That only leaves the question of who is paying for all this vote-buying today. Well, the money is being borrowed and added to the national debt. And who is going to pay for that? Your children. Especially if you bothered to get

married before having children, because those are the children most likely to get the high-paying jobs that our slavemasters in government love to redistribute.

# A simple case for the pro-life position by Scott Klusendorf

**Wintery Knight** · 17 February 2014 · Archived copy · Original

Are you able to make a basic case for the pro-life view?

Here's a short 38-lecture by Scott Klusendorf, president of the Life Training Institute.

This is a long treatment that talks about the challenge of moral relativism and the case for the pro-life view. He does show a clip of abortion in the video to the audience.

There's also a 35-minute audio recording of Scott on the LTI web site. (H/T Apologetics 315) You can put that on your podcast player and listen to it. Listen to it a lot and soon you'll sound like Scott.

Scott also has an article posted on the LTI web site for those who don't have time for the video or the audio.

In the article makes three points:

1. **Clarify the issue**
2. **Defend your pro-life position with science and philosophy**
3. **Challenge your listeners to be intellectually honest**

Here's the second point:

> Scientifically, we know that from the earliest stages of development, the unborn are distinct, living, and whole human beings. Leading embryology books confirm this.[2] For example, Keith L. Moore & T.V.N. Persaud write, "A zygote is the beginning of a new human being. Human development begins at fertilization, the process during which a male gamete or sperm … unites with a female gamete or oocyte … to form a single cell called a zygote. This highly specialized, totipotent cell marks the beginning of each of us as a unique individual."[3] Prior to his abortion advocacy, former Planned Parenthood President Dr. Alan Guttmacher was perplexed that anyone, much less a medical doctor, would question this. "This all seems so simple and evident that it is difficult to picture a time when it wasn't part of the common knowledge," he wrote in his book *Life in the Making*.[4]
>
> Philosophically, we can say that embryos are less developed than newborns (or, for that matter, toddlers) but this difference is not morally significant in the way abortion advocates need it to be. Consider the claim that the immediate capacity for self-awareness bestows value on human beings. Notice that this is not an argument, but an arbitrary assertion. Why is some development needed? And why is this particular degree of development (i.e., higher brain function) decisive rather than another? These are questions that abortion advocates do not adequately address.
>
> As Stephen Schwarz points out, there is no morally significant difference between the embryo that you once were and the adult that you are today. Differences of size, level of development, environment, and degree of dependency are not relevant such that we can say that you had no rights as an embryo but you do have rights today. Think of the acronym **SLED** as a helpful reminder of these non-essential differences:[5]
>
> **S**ize: True, embryos are smaller than newborns and adults, but why is that relevant? Do we really want to say that large people are more human than small ones? Men are generally larger than women, but that doesn't mean that they deserve more rights. Size doesn't equal value.
>
> **L**evel of development: True, embryos and fetuses are less developed than the adults they'll one day become. But again, why is this relevant? Four year-old girls are less developed than 14 year-old ones. Should older children have more rights than their younger siblings? Some people say that self-awareness makes one human. But if that is true, newborns do not qualify as valuable human beings. Six-week old infants lack the immediate capacity for performing human mental functions, as do the reversibly comatose, the sleeping, and those with

> Alzheimer's Disease.
>
> **E**nvironment: Where you are has no bearing on who you are. Does your value change when you cross the street or roll over in bed? If not, how can a journey of eight inches down the birth-canal suddenly change the essential nature of the unborn from non-human to human? If the unborn are not already human, merely changing their location can't make them valuable.
>
> **D**egree of Dependency: If viability makes us human, then all those who depend on insulin or kidney medication are not valuable and we may kill them. Conjoined twins who share blood type and bodily systems also have no right to life.
>
> In short, it's far more reasonable to argue that although humans differ immensely with respect to talents, accomplishments, and degrees of development, they are nonetheless equal because they share a common human nature.

That's the core of the basic pro-life case right there. There's also a good interview of Mr. Klusendorf that I blogged about.

**Advanced Objections**

You can learn more by reading basic pro-life apologetics… from Francis Beckwith. You might recognize Frank Beckwith as the author of "Defending Life: A Moral and Legal Case Against Abortion Choice". He wrote that book for Cambridge University Press, a top academic press. But before Cambridge University Press, Beckwith wrote easy-to-understand essays for the Christian Research Journal.

Here are four essays that answer common arguments in favor of legalized abortion.

- Part I. The Appeal to Pity
- Part II. Arguments from Pity, Tolerance, and Ad Hominem
- Part III. Is The Unborn Human Less Than Human?
- Part IV. When Does a Human Become a Person?

Here's an excerpt from Part II:

Excerpt:

> A woman who becomes pregnant due to an act of either rape or incest is the victim of a horribly violent and morally reprehensible crime. Although pregnancy as a result of either rape or incest is extremely rare, **[1]** there is no getting around the fact that pregnancy does occur in some instances.
>
> […]Despite its forceful appeal to our sympathies, there are several problems with this argument. First, it is not relevant to the case for abortion on demand, the position defended by the popular pro-choice movement. This position states that a woman has a **right** to have an abortion for **any** reason she prefers during the entire nine months of pregnancy, whether it be for gender-selection, convenience, or rape. **[3]** To argue for abortion on demand from the hard cases of rape and incest is like trying to argue for the elimination of traffic laws from the fact that one might have to violate some of them in rare circumstances, such as when one's spouse or child needs to be rushed to the hospital. Proving an exception does not establish a general rule.
>
> […]Fourth, this argument begs the question by assuming that the unborn is not fully human. For if the unborn is fully human, then we must weigh the relieving of the woman's mental suffering against the right-to-life of an innocent human being. **And homicide of another is never justified to relieve one of emotional distress**. Although such a judgment is indeed anguishing, we must not forget that the same innocent unborn entity that the career-oriented woman will abort in order to avoid interference with a job promotion is biologically and morally indistinguishable from the unborn entity that results from an act of rape or incest. And since abortion for career advancement cannot be justified if the unborn entity is fully human, abortion cannot be justified in

> the cases of rape and incest. In both cases abortion results in the death of an innocent human life. As Dr. Bernard Nathanson has written, “The unwanted pregnancy flows biologically from the sexual act, but not morally from it.” **[5]**Hence, this argument, like the ones we have already covered in this series, is successful only if the unborn are not fully human.

Scott Klusendorf wrote the The Case for Life, which is the best book for beginners on the pro-life view. For those looking for advanced resources, Francis Beckwith, a professor at Baylor University, published the book Defending Life, with Cambridge University Press, 2007.

I found a very polished hour-long talk by Scott on Youtube. That talk was delivered to students and faculty at Furman University.

Finally, if you want to see Scott Klusendorf in a debate with a former ACLU executive, you can see it right here.

My friend Papa Georgio sent me a post that features THREE talks by Scott Klusendorf. (H/T Religio-Political Talk)

**Learn about the pro-life case**

- How to take an incremental approach to the abortion problem
- Videos from academic debate on abortion at the University of Victoria
- Audio: Scott Klusendorf’s 35-minute case for the pro-life position
- Audio: A 55-minute discussion featuring Greg Koukl and Scott Klusendorf
- A comparison of embryonic and adult stem cell research
- Video: 12-year old girl makes the pro-life case in a short speech
- Video:10-year old girl makes the pro-life case in a short speech
- Objective truth in the abortion debate – a pro-life training video
- Alan Shlemon explains a classification system for pro-abortion arguments
- What is the best single book on the pro-life position?

And some posts motivating Christians and conservatives to take abortion seriously:

- Why Christians should focus on cultural issues as well as evangelism
- Republicans introduce House and Senate bills to establish that life begins at conception
- House Republicans introduce ban on taxpayer funding of abortion
- Are Christians too involved in politics?
- What did the early church fathers think about abortion?
- Scott Klusendorf confronts a “pro-life” nun who voted for Obama

# Are liberals or conservatives more likely to believe in weird things?

**Wintery Knight** · 18 February 2014 · Archived copy · Original

From the leftist Washington Post, of all places. (H/T ECM)

Excerpt:

> A belief in astrology is surprisingly widespread in modern America. The National Science Foundation recently released a report reviewing scientific knowledge and attitudes. As noted by Chris Mooney at Mother Jones, perhaps NSF's most striking finding was an increase in the belief in astrology from 32 percent in 2006 and 35 percent in 2010 to 45 percent in 2012.
>
> At the Demography of Diversity Project at Northwestern University, we took the same astrology data from the General Social Survey that NSF used and broke it down further by political party and liberal-conservative orientation. The results can be found in a brief report that I put up at the Social Science Research Network: "Who Believes That Astrology is Scientific?"

Here are the top 3 groups:

> 1. Conservative Democrats
>
> In the 2012 General Social Survey, 56.9 percent of conservative Democrats believe that astrology is very or sort of scientific, while only 43.1 percent believe that it is not scientific at all. This support for astrology is the highest among 15 overlapping political groups.
>
> 2. Moderate Democrats
>
> The political group that is second most likely to believe in astrology is moderate Democrats. A majority of them — 52.0 percent — think that astrology is at least sort of scientific.
>
> 3. Democrats (overall)
>
> Although liberal Democrats are insignificantly less likely than average to believe in astrology (43.5 percent), the difference is not enough to offset the beliefs of moderate and conservative Democrats. Thus, Democrats overall are in the third position, with nearly half (49.1 percent) believing in astrology.

The surprising thing is that no Republicans appear in the top 7 groups.

**Pew Research**

I blogged a Pew Research survey before.

Excerpt:

> **Among both evangelical and mainline Protestants, those who attend church weekly express much lower levels of belief in reincarnation, yoga, the existence of spiritual energy in physical things and astrology compared with those who attend religious services less often.**
>
> […]Older people (those over age 65) consistently express lower levels of acceptance of these kinds of beliefs compared with younger people. **These beliefs are more common among Democrats and independents than Republicans and are more widely held by liberals and moderates than conservatives.**
>
> […]**Evangelical Protestants are the group least likely to say they have felt in touch with a dead person (20%).**
>
> […]Compared with those with a college degree, more Americans with a high school education or less report having felt in touch with a dead person (32% vs. 24%) and having seen a ghost (21% vs. 13%). However,

> Americans with less education are no more inclined to have consulted a fortuneteller than are Americans with a college education (13% vs. 17%). **Conservatives and Republicans report fewer experiences than liberals or Democrats communicating with the dead, seeing ghosts and consulting fortunetellers or psychics.**

It's not just Pew, it's Gallup, too.

**Gallup survey**

And here is a Wall Street Journal article about the Gallup survey entitled "Look Who's Irrational Now".

Excerpt:

> "What Americans Really Believe," a comprehensive new study released by Baylor University yesterday, shows that traditional Christian religion greatly decreases belief in everything from the efficacy of palm readers to the usefulness of astrology. It also shows that the irreligious and the members of more liberal Protestant denominations, far from being resistant to superstition, tend to be much more likely to believe in the paranormal and in pseudoscience than evangelical Christians.
>
> The Gallup Organization, under contract to Baylor's Institute for Studies of Religion, asked American adults a series of questions to gauge credulity.
>
> […]The answers were added up to create an index of belief in occult and the paranormal. While 31% of people who never worship expressed strong belief in these things, only 8% of people who attend a house of worship more than once a week did.

And it's not just spiritual superstition, it's economics, too.

**Zogby survey**

And of course, Republicans are more informed on economic issues than Democrats, and even Independents. The Wall Street Journal explains.

Excerpt:

> Who is better informed about the policy choices facing the country—liberals, conservatives or libertarians? According to a Zogby International survey that I write about in the May issue of Econ Journal Watch, the answer is unequivocal: The left flunks Econ 101.
>
> Zogby researcher Zeljka Buturovic and I considered the 4,835 respondents' (all American adults) answers to eight survey questions about basic economics.

The first question was "Restrictions on housing development make housing less affordable." The right answer there is agree, because any time you restrict supply while demand is high, you create a shortage, causing prices to go up.

Here are the others:

> The other questions were: 1) Mandatory licensing of professional services increases the prices of those services (unenlightened answer: disagree). 2) Overall, the standard of living is higher today than it was 30 years ago (unenlightened answer: disagree). 3) Rent control leads to housing shortages (unenlightened answer: disagree). 4) A company with the largest market share is a monopoly (unenlightened answer: agree). 5) Third World workers working for American companies overseas are being exploited (unenlightened answer: agree). 6) Free trade leads to unemployment (unenlightened answer: agree). 7) Minimum wage laws raise unemployment (unenlightened answer: disagree).

And the results:

> How did the six ideological groups do overall? Here they are, best to worst, with an average number of incorrect responses from 0 to 8: Very conservative, 1.30; Libertarian, 1.38; Conservative, 1.67; Moderate, 3.67; Liberal, 4.69; Progressive/very liberal, 5.26.

To be conservative means to understand the world as it is, and how it really works. We don’t believe in superstitious nonsense like astrology and socialism.

# New study: scientists and the general public similar in religious practices

**Wintery Knight** · 18 February 2014 · Archived copy · Original

Rice University reports on a new study conducted by sociologist Elaine Howard Ecklund.

Excerpt:

> The public's view that science and religion can't work in collaboration is a misconception that stunts progress, according to a new survey of more than 10,000 Americans, scientists and evangelical Protestants. The study by Rice University also found that scientists and the general public are surprisingly similar in their religious practices.
>
> The study, "Religious Understandings of Science (RUS)," was conducted by sociologist Elaine Howard Ecklund and presented today in Chicago during the annual American Association for the Advancement of Science (AAAS) conference. Ecklund is the Autrey Professor of Sociology and director of Rice's Religion and Public Life Program.
>
> "We found that nearly 50 percent of evangelicals believe that science and religion can work together and support one another," Ecklund said. "That's in contrast to the fact that only 38 percent of Americans feel that science and religion can work in collaboration."
>
> The study also found that 18 percent of scientists attended weekly religious services, compared with 20 percent of the general U.S. population; 15 percent consider themselves very religious (versus 19 percent of the general U.S. population); 13.5 percent read religious texts weekly (compared with 17 percent of the U.S. population); and 19 percent pray several times a day (versus 26 percent of the U.S. population).
>
> […]RUS is the largest study of American views on religion and science.

What would be interesting is to find out what specific arguments scientists who believe in God would appeal to, and which specific arguments scientists who don't believe in God would appeal to.

You can see Ecklund's book about her research here on the Oxford University Press web site. You can also buy the book here from Amazon.com.

And here is a related lecture from Cambridge University featuring Dr. Ecklund.

# Peter J. Williams lectures on the historical reliability of the gospel narratives

**Wintery Knight** · 18 February 2014 · Archived copy · Original

Peter J. Williams

Greg West of The Poached Egg tweeted this lecture featuring Peter D. Williams yesterday, and I'm posting it today with a summary below.

Here's the main lecture: (54 minutes)

And here's the Q&A: (9 minutes)

About Peter Williams:

> **Peter J. Williams** is the Warden (CEO) of Tyndale House and a member of the Faculty of Divinity in the University of Cambridge. He received his MA, MPhil and PhD, in the study of ancient languages related to the Bible from Cambridge University. After his PhD, he was on staff in the Faculty of Divinity, Cambridge University (1997–1998), and thereafter taught Hebrew and Old Testament there as Affiliated Lecturer in Hebrew and Aramaic and as Research Fellow in Old Testament at Tyndale House, Cambridge (1998–2003). From 2003 to 2007 he was on the faculty of the University of Aberdeen, Scotland, where he became a Senior Lecturer in New Testament and Deputy Head of the School of Divinity, History and Philosophy. In July 2007 he became the youngest Warden in the history of Tyndale House. He also retains his position as an honorary Senior Lecturer in Biblical Studies at the University of Aberdeen.

Summary of the lecture:

- What if the stories about Jesus are legendary?
- were the gospels transmitted accurately?
- were the gospels written in the same place as where the events happened?
- do the gospel authors know the customs and locations where the events happened?
- do the gospels use the right names for the time and place where the events took place?
- do the gospels disambiguate people's names depending on how common those names were?
- how do the New Testament gospels compare to the later gnostic gospels?
- how do the gospels refer to the main character? How non-Biblical sources refer to Jesus?
- how does Jesus refer to himself in the gospels? do the later Christians refer to him that way?
- how does Jesus teach? do later Christians teach the same way?
- why didn't Jesus say anything about early conflicts in the church (the Gentiles, church services)?
- did the writers of the gospels know the places where the events took place?
- how many places are named in the gospels? how about in the later gnostic gospels?

- are the botanical details mentioned in the gospels accurate? how about the later gnostic gospels?

And here are the questions from the audience:

- how what about the discrepancies in the resurrection narratives that Bart Ehrman is obsessed with?
- what do you think of the new 2011 NIV translation (Peter is on the ESV translation committee)?
- how did untrained, ordinary men produce complex, sophisticated documents like the gospels?
- is oral tradition a strong enough bridge between the events and the writers who interviewed the eyewitnesses?
- what does the name John mean?
- why did the gospel writers wait so long before writing their gospels?
- do you think that Matthew and Luke used a hypothetical source which historians call "Q"?
- which gospel do critical historians trust the least and why?

I really enjoyed watching this lecture. He's getting some of this material from Richard Bauckham's awesome book "Jesus and the Eyewitnesses", so if you aren't familiar with it, you can get an idea of what's in it. Peter Williams is a lot of fun to listen to – an excellent speaker.

You can read an interview with Peter Williams here on Between Two Worlds.

And you can listen to the Peter Williams vs Bart Ehrman debate. That link contains a link to the audio of the debate as well as my snarky summary. It's very snarky.

And Apologetics 315 also posted Peter Williams' assessment of Bart Ehrman's "Misquoting Jesus".

# CBO report: Obama's proposed minimum-wage increase could kill 500,000 jobs

**Wintery Knight** · 19 February 2014 · Archived copy · Original

Three stories from Investors Business Daily, and one of them is about the dreaded stagflation.

First one, on the CBO report.

Excerpt:

> On Tuesday, the Congressional Budget Office made another blockbuster pronouncement, this one concluding that the White House minimum wage hike to $10.10 an hour really does kill jobs.
>
> The $10.10 option, when fully implemented, "would reduce total employment by about 500,000 workers, or 0.3%," CBO says. Job losses could be as high as 1 million.
>
> This followed last week's CBO calculation that the impact of ObamaCare on the labor market will be about 2 million fewer workers over time, due to higher costs on employers and employees of mandated coverage and the availability of subsidized insurance to nonworkers.

Second article, about how the Democrats seem to be trying to create dependency in order to buy votes from people who cannot pay their own way.

Excerpt:

> January's labor report confirmed yet another month with over 100 million Americans not working. In fact, more than 100 million Americans have not been working in Obama's workers' paradise for all of 2012 and 2013, a unique achievement in American history.
>
> […]How has Obama managed to "liberate" so many workers from work? Through Social Security disability, which has increased by more than 21%, extending "unemployment" benefits to two years and by eliminating work requirements as a condition of receiving federal benefits.
>
> The number of Americans on food stamps has soared by 50% under Obama to close to 50 million, largely because work requirements, asset checks and other restraints on abuse have been relaxed. Indeed, more than twice as many more Americans have gotten food stamps under Obama than have gotten jobs. Under ObamaCare, the same transformation is now under way for Medicaid.
>
> Today, federal and state taxpayers pay a trillion dollars every year to the lowest 20% on the income ladder basically not to work. Under Obama total welfare spending has doubled since 2008. (Note that the administration is suing the state of Louisiana to turn over the names of everyone on welfare, precisely for Obama's voter-turnout database.)
>
> […]CBO estimates that the slower economic growth from this reduced labor supply will mean $1.4 trillion less in federal tax revenue over the next 10 years. So ObamaCare will increase the deficit after all.

Third article, explaining that the failed policies of the Democrats have been tried before – by Carter.

Excerpt:

> Since the Obama "recovery" started 4-1/2 years ago, inflation appears to have been relatively tame, with core prices climbing just 7% from June 2009 to December 2013.
>
> But as CBS News discovered when it looked a little closer, the overall number is deceptive. In fact, it found

> food prices soaring.
>
> The official inflation data confirm this. Overall, food prices are up 9% since June 2009, according to the Bureau of Labor Statistics. And the cost of many staples is skyrocketing. Pork prices have climbed 14%; poultry is up 12%; eggs, 27%; milk, 20%.
>
> Meanwhile, energy prices have climbed 18% during the recovery, and the price of gasoline is up a whopping 31.5%. Then there's college tuition, up 23%.
>
> At the same time, wages aren't budging. In fact, measured in real terms, the median household income is 4% below where it was four-1/2 years ago. And while the official unemployment rate is down, that's due to millions quitting the workforce altogether.
>
> Yes, the economy has created 6.6 million jobs since June 2009. But the ranks of those not in the labor force climbed nearly 11 million, driving the labor force participation rate down from 65.7% to today's 63% — a level not seen since 1978.

You might remember from the Carter era that stagflation was the name given to describe a period of slow or stagnant economic growth, low labor force participation and high prices (inflation). The only solution to this is to raise interest rates, which is very painful. But the longer we keep interest rates low, and keep government spending high, and keep taxing and regulating businesses into oblivion, the worst the medicine is going to be when we are forced to take it.

# What do men want from a marriage?

**Wintery Knight** · 19 February 2014 · Archived copy · Original

Well, my friend Curby sent me this article from a very conservative Calvinist blog. It talks about one of the things that men want from a marriage. I thought I would post it here, and affirm its truth, so that all my feminist readers can have steam shoot out of their ears.

Excerpt:

> Men are created different than women. And man's priorities, deep in his very being, are very different from the woman's priorities.
>
> […]The family was created to be an institution, and that institution has a *purpose* and *function* in God's order for the things: to expand the dominion of God's people over the whole world (Gen. 1:27-28). The purpose and function were first given to the man, and he is supposed to be the chief carrier and executive of that function. And just as the woman was uniquely designed and gifted to discern and understand the issues of relationships, the man was uniquely designed and gifted to fulfill the purpose of taking dominion over the earth. **The father's and the husband's position of the man is not primarily focused on relationships – that's what he was given a wife for. That responsibility is given to man to ensure that his family fulfills its purpose in the plan of God in conquering the earth. Man's very being is *outward*-oriented, not inward-oriented. His interests would be in work and war, not in feelings and relationships.** While women also have their part in business (Prov. 31) and war (Judges 4), by creation ordinance it is man's realm and sphere of responsibility and authority.
>
> And therefore a church that preaches only relationships and no purpose, will tend to attract mostly women, not men. **And when the family is preached as mostly relationships but the purpose and the functions of the family are not preached, men influenced by that preaching won't be interested in having families.** That's just the created nature of things.

Men feel obligated to do something that is going to please God. And relationships and feelings are not the something they are trying to do:

> The Bible has little to say about a "relationship with Jesus." In fact, Jesus Himself speaks about a personal relationship between Him and His disciples only in two places, and He gives a very simple explanation of what a personal relationship with Him is: obedience to His will. In Matt. 12:46-50 He explains how one gets to be a member of Jesus's family: "For whoever does the will of My Father who is in heaven, he is My brother and sister and mother." And then again, in John 15:14, "You are My friends if you do what I command you." There is no special theology of "personal relationship with Jesus" in the Bible; that personal relationship is very simple: do what He commands. It is not based on emotions or feelings. It is based on the self-conscious commitment to do what He commands.
>
> But what He commands is given in the whole Bible. And it starts with the Dominion Mandate for man and his family to fill the earth, and subdue it. And this means that there is purpose and calling to man as a father and husband to work, fight, educate, care, build, lay foundations, protect, conquer, establish. **There is a purpose to man's life. And that purpose is matched by the inclination in the heart of man to do these things. A man's heart is thrilled by the possibility to work and conquer. And when the family is presented to him not as an institution of dominion – that is, an institution for work and conquering – but only as a place for "relationships," he won't get excited about it. He will leave the church and find another place to work and conquer.**

So let me say something about this, and please don't be offended. My views do go against the popular view of

marriage today.

If I were to get married it would be to a woman who understood that my purpose in working from age 20 to age 60 is not primarily to provide a her with feelings and relationships and peer approval.

My purpose in marrying is to make the marriage promote the things that God likes, and oppose the things that God doesn't like.

In my case that means:

- impacting the university with apologetics and conservatism
- impacting the church with apologetics and conservatism
- impacting the public square to promote policies that enable Christian living
- producing as many effective, influential children as I can afford to raise

So if I were courting a woman interested in marrying me, then that would be my time to persuade her that the areas I want to work on are important and suited to our skills. I would not be trying to impress her with my ability to please her, but I would be trying to convince her that we could do better for God as a pair than as two singles. And she would have the opportunity to listen to and improve our plans and decide whether to sign with me or not. No one is forcing her to marry me, she gets to choose if she thinks that my plan to make the marriage serve God is acceptable to her. We would look in the Bible together and then look at the culture and decide what areas needed our efforts and what would be the best way for us to impact those areas.

That's what I mean when I say that men ought to lead in a marriage. I mean that men should have a plan for making the marriage serve God in a practical way. He needs a wife in order to help him man execute his plan to serve God, especially if the plan involves children and other relationships with people outside the home. I do think it is a good idea for a woman to get a degree and have some experience in the workplace before she marries.

Now what shall I do if no woman accepts this idea that marriage is about negotiating a plan and then achieving it for God's benefit?

Well, that is fine with me. Although I budgeted for a stay-at-home wife and tuition for four PhD-credentialed children, if I cannot find such a woman, then I should take my earnings (after taxes) and spend them on Christian scholars instead. And I should use some of that money on blogging and other related activities that I can do myself. At least that way, I am going to get some sort of a return on my earnings for my client (God). So far, I've run into a lot of kickback because the single women I've approached want to sort of wing it, and make their feelings and their relationships the goal of the marriage. But that's not my plan, and that's not what I'm prepared to sacrifice for.

Moreover, I would just add that any woman who accepts her husband's plan as her own, and develops the skills necessary to help him, is going to have more love than she can handle. The experience of being listened to, understood, respected and assisted by a woman produces lots of affection, devotion, protectiveness and desire from a man. Think of it this way. Very few people in this world care about what we are trying to do for God, except potentially our wives, if we choose wisely. Right now, the environment is very much against the plans of Christian men. The experience of having a woman help a Christian man to execute his plan is Earth-shaking for him. After so many years of struggling to do everything himself for God, suddenly another human being comes along who can understand what he is trying to achieve and can freely choose help him to achieve the things he cares so much about. That is what a man really needs from a woman. Respect for his deepest aspiration – to serve God and to make his life count for the Kingdom.

# William Lane Craig debates Alex Rosenberg: Does God Exist? Video, MP3 audio and summary

**Wintery Knight** · 19 February 2014 · Archived copy · Original

Below, please find my summary of the Craig-Rosenberg debate, which occurred on February 1st, 2013 at Purdue University.

Brian Auten has posted the MP3 audio of the debate at Apologetics 315.

**The debaters**

- William Lane Craig
- Alex Rosenberg

Below is the summary from tonight (February 1st, 2013).

If you like the summary below, please friend me on Facebook and/or follow me on Twitter.

**Summary of the debate**

**Dr. Craig's opening speech:**

The topic: What are the arguments that make belief in God reasonable or unreasonable?
First speech: arguments for reasonableness of belief in God
Second speech: respond to arguments against reasonableness of belief in God

Eight arguments:

1. Contingency argument: God – a transcendent, personal being – is the explanation of why a contingent universe exists.
2. Cosmological argument: God is the cause of the beginning of the universe, which is attested by physics and cosmology.
3. Applicability of mathematics to nature: God is the best explanation for the applicability of mathematics to nature.
4. Fine-tuning argument: God is the best explanation of the fine-tuning of the universe to permit life.
5. Intentionality of conscious states: God is the best explanation of the intentionality of our mental states.
6. The moral argument: God is the best explanation for the existence of objective moral values and duties.
7. The resurrection of Jesus: God is the best explanation for the core of historical facts accepted by most ancient historians across the ideological spectrum.
8. Religious experience: God is the best explanation of our immediate experience and knowledge of his existence.

**Dr. Rosenberg's opening speech**

First argument: The fallacy of ad hominem

- I don't know whether to laugh or to cry
- Dr. Craig has said all of that before in other debates
- You didn't need to come out on this cold night
- Craig's arguments have all been refuted
- Dr. Craig just doesn't listen
- Dr. Craig is not interested in getting at the truth
- Dr. Craig is just interested in scoring debate points

- The adversarial system is the wrong approach to decide truth
- Dr. Craig is very confident about his take of physics

Second argument: The fallacy of arguing from authority

- 95% of members of the NAS are atheists
- Therefore Dr. Craig cannot use science

Third argument: Effects don't require causes

- I am going to pretend that Craig said that "every effect requires a cause"
- Quantum mechanics shows that some effects occur without causes
- A particle of uranium (which is not nothing, it is something) decays without a cause
- This uncaused effect is the same as the universe coming into being out of nothing uncaused
- Therefore the principle of sufficient reason is false

Fourth argument: Silicon-based life and the multiverse

- If these constants had been different, maybe we would have other kinds of intelligent life, like silicon-based life
- Carbon-based life is not the only kind of life, maybe you can have other kinds of life, none of which have been observed
- There could be different kinds of life in other areas of the universe that we can't see
- There are things we can't see that disprove the current physics that we can see
- Quantum foam is evidence that a multiverse exists
- The multiverse would solve the problem of fine-tuning

Fifth argument: The Euthyphro dilemma

- The moral argument is refuted by Euthyphro dilemma
- Dr. Craig is such a moron that he has never heard of the Euthyphro dilemma ever before
- This is found in the first and simplest of Plato's dialogs
- Why is Dr. Craig so stupid that he has not read this simple dialog ever before?
- Evolution explains why humans evolve arbitrary customs and conventions that vary by time and place
- Alternative moral theories: utilitarianism, social contract, etc. that don't require God

Sixth argument: Mormonism undermines Dr. Craig's three minimal facts about Jesus

- Why is Dr. Craig so stupid and ignorant to persist in pushing such an ignorant, stupid argument?
- Mormonism is a silly religion that is not historically well founded
- Therefore, Jesus was not buried
- Islam is a silly religion that is not historically grounded
- Therefore, the tomb was not found empty
- Scientology is a silly religion that is not historically grounded
- Therefore, the eyewitnesses didn't have post-mortem appearances
- Eyewitness testimony is unreliable in some cases
- Therefore, eyewitness testimony was unreliable in this case
- Apparitions of Mary are bizarre
- Therefore, the majority of historians are wrong to think that the disciples saw post-mortem appearances

Seventh argument: Deductive problem of evil

- Evil and suffering are logically incompatible with an all good, all powerful God

Eight argument: God is not just to allow evil and suffering

- God cannot make the evils of this life right in the afterlife

**Dr. Craig's first rebuttal**

Dr. Rosenberg sketched the deductive argument from evil.

Dr. Rosenberg presupposes naturalism. Naturalism is a false theory of knowledge:

1. It's too restrictive: There are truths that cannot be proved by natural science.
2. It's self-refuting: no scientific proof for naturalism exists.

That's why epistemological naturalism is considered false by most philosophers of science.

But more importantly than that: Epistemological naturalism does not imply metaphysical naturalism. (E.g. – W. Quine)

Dr. Rosenberg has to present arguments in favor of (metaphysical) naturalism, not just assume that (metaphysical) naturalism is true.

Dr. Craig presented eight arguments against metaphysical naturalism taken from Rosenberg's own book:

1. The argument from the intentionality (aboutness) of mental states implies non-physical minds (dualism), which is incompatible with naturalism
2. The existence of meaning in language is incompatible with naturalism, Rosenberg even says that all the sentences in his own book are meaningless
3. The existence of truth is incompatible with naturalism
4. The argument from moral praise and blame is incompatible with naturalism
5. Libertarian freedom (free will) is incompatible with naturalism
6. Purpose is incompatible with naturalism
7. The enduring concept of self is incompatible with naturalism
8. The experience of first-person subjectivity ("I") is incompatible with naturalism

Metaphysical naturalism is false: it is irrational and it contradicts our experience of ourselves.

And epistemological naturalism is compatible with theism.

Rebutting Dr. Rosenberg's responses:

1. Contingency: no response

2. Cosmological: he mis-states the first premise to say every effect… when it is whatever begins to exist…, the origin of the universe was not from a vacuum, virtual particles come from a vacuum not nothing, there are interpretations of QM that are compatible with determinism. Rosenberg has to believe that the entire universe popped into being from non-being.

3. Mathematics: no response

4. Fine-tuning: the multiverse is refuted by empirical observations of the universe. Without fine-tuning, it's not that we still have silicon to make life out of. It's that we lose basic minimal things like chemical diversity, matter, stars, planets, etc. No life of any kind, not just no carbon-based life.

5. Intentionality: no response.

6. Moral argument: the answer to the dilemma is that you split the dilemma: God is the standard of good, and the

commands flow from his unchanging moral nature. The commands are not arbitrary, and the standard is not external to God. Dr. Rosenberg is a nihilist and he cannot ground good and evil on his nihilistic view.

7. Resurrection: The Gospels are early eyewitness testimony. Mormonism and Islam have nothing to do with the minimal set of historical facts about Jesus agreed to by the majority of ancient historians across the ideological spectrum, general statements against eyewitnesses do not refute the specific eyewitness testimony in this case.

8. Religious experience: No response.

**Dr. Rosenberg's first rebuttal**

I wrote a book and you should buy it, because it got me invited to this debate. Let me repeat the title a few times for you. Please buy it.

Dr. Craig is right, there are multiple interpretations of QM, not just the one I presented, including deterministic ones.

All the disturbing implications of naturalism that Dr. Craig stated follow from metaphysical naturalism, and metaphysical naturalism is true. (Note: he equates science with metaphysical naturalism)

Science proves that metaphysical naturalism is true, but I won't say what specific scientific tests prove my philosophical assumption of metaphysical naturalism.

I'll pretend that the Big Bang (science) doesn't disprove naturalism, like Dr. Craig said. Again. (covers ears) La la la, there is no Big Bang.

We didn't come here to debate epistemological naturalism and metaphysical naturalism.

Let me explain the problem of intentionality since I'm so smart and no one knows what it means.

There are many answers to this problem of intentionality.

My answer is that most scientists are naturalists, therefore naturalism is true, regardless of the argument from intentionality of mental states.

That's how I would respond to one of the eight problems with naturalism that Dr. Craig raised. I won't answer the other seven problems.

It is an argument from ignorance to argue that the applicability of mathematics to the universe requires a designer, because there are non-Euclidean geometries. Craig's argument, which he gets from people like respected physicists like Eugene Wigner, is bizarre. It is bizarre, therefore I refute Eugene Wigner and all the other scholars who make that argument. It is bizarre! Bizarre!

Deductive problem of evil: there is no response to this argument, certainly not Alvin Plantinga's free will defense. The deductive argument from evil has not been entirely abandoned at all! It's not like arch-atheist J.L. Mackie himself admits that the deductive problem of evil doesn't lead to a logical inconsistency between evil and God.

Dr. Craig has to tell me why God allows evil or God doesn't exist.

It is offensive that Dr. Craig cannot tell me why God allows every evil and suffering that occurs.

He literally said this: "I will become a Christian if Dr. Craig can tell me why God allowed EVERY EVIL THAT OCCURRED IN THE LAST 3.5 BILLION YEARS"

**Dr. Craig's second rebuttal**

We are not in a position to know why God allows specific instances of evil and suffering.

God cannot force people to freely do anything – freedom is not compatible with determinism. Freedom is a good, but freedom opens up the possibility of moral evil. You cannot have the good of free will without allowing people to choose to do morally evil things.

God can permit evil and suffering in order to bring more people into a relationship with him.

The atheist has to show that God could allow less evil and achieve more knowledge of God in order to say there is too much evil.

The purpose of life is not happiness, but knowledge of God.

Dr. Craig quotes agnostic Paul Draper (Purdue) and Peter Van Inwagen (Notre Dame) to state that the deductive problem of evil is dead because of free will and morally sufficient reasons for permitting evil.

1. Contingency: no response.

2. Cosmological: QM does not apply, because the universe came from nothing, not a vacuum, and QM only works in a vacuum.

3. Mathematics: He mentions alternatives like non-Euclidean geometry, but we have to explain the structure of THIS universe.

4. Fine-tuning: ???

5. Intentional states: intentional mental states proves that minds exist, which fits with theism better than it fits with atheism.

6. Moral argument: You need God to ground morality, and Dr. Rosenberg believes in morality. He needs God to ground objective moral values and duties.

7. Historical argument: He has to respond to the minimal facts supported by the consensus of ancient historians across the ideological spectrum.

8. The problems of naturalism: He says that you can't have science without naturalism, but you can have science with EPISTEMOLOGICAL NATURALISM, and theists accept science and methodological naturalism. We don't accept METAPHYSCIAL NATURALISM because of the eight problems Craig presented, like intentionality, first-person, persistence of self, etc. You can believe in both science and theism, by embracing epistemological naturalism, while rejecting methaphysical naturalism.

**Dr. Rosenberg's second rebuttal**

Dr. Craig hasn't answered many of my points, I won't say which ones though.

Debates don't work as a way of deciding what's true, so we should overturn the entire criminal justice system.

The principle of sufficient reason is false because it is disconfirmed by quantum mechanics. And quantum mechanics (vacuum and virtual particles that exist for a short time) is similar to the origin of the universe (nothing and entire universe and 14 billion years).

We know that alpha particles come into being without cause all the time from a quantum vacuum for a tiny sub-second duration before going out of existence, so we can say that the entire physical universe came into being for 14 billion years from absolute nothing which is not a quantum vacuum.

Peter Van Inwagen is the best metaphysician working today, and he says that my deductive argument from evil is not decisive, it's not a successful argument. (Why is he undermining his own problem of evil argument????!)

Dr. Craig invoked Plantinga's free will defense to the deductive POE. Freedom allows us to do evil. God could have given us free will without evil and suffering. I won't show how, but I'll just assert it, because debates are such a bad forum for supplying evidence for my speculative assertions.

If you answer the question 3 + 5 as being 8, then you don't have free will – you are biologically determined if you answer 8, because everyone answers 8, and that means everyone is biologically determined with no free will.

Why can't God give us free will and then prevent us from making a free choice?

No scholars date the gospels earlier than 60-70 AD, especially not atheists like James Crossley who dates Mark to 40 AD. Therefore Jesus' burial isn't historical, like the majority of scholars across the broad spectrum of scholarship agree it is.

The original New Testament documents were written in Aramaic.

All New Testament scholars are orthodox Christians, like atheist Robert Funk for example.

**Dr. Craig's concluding speech**

In order to sustain the deductive argument from evil, Dr. Rosenberg must show that God could create a world of free creatures with less evil.

Principle of Sufficient Reason: not using the general principle of sufficient reason, but a more modest version of this states that contingent things should have an explanation for their existence. And we know that the universe is a contingent.

The New Testament was not written in Aramaic, they were written in Greek. Dr. Rosenberg is wrong there too.

(Dr. Craig spends the rest of his concluding speech giving his testimony and urging people to investigate the New testament).

**Dr. Rosenberg's concluding speech**

Some long-dead French guy named Laplace said that he has no need of that (God) hypothesis. He did not know about any of Dr. Craig's arguments made in this debate tonight when he said that, though.

There is no need to explain how the universe began or how the universe is finely-tuned if you just assume metaphysical naturalism on faith.

The Easter Bunny, therefore atheism.

Most scientists are atheists, therefore atheism.

You can do a lot of science without God, just don't look at the origin of the universe, the fine-tuning of the universe, or the other parts of science that Craig mentioned, as well as the origin of life, the Cambrian explosion, the habitability argument, and so on.

You can be a Christian, but good Christians should not use arguments and evidence.

Good Christians should be irrational and ignorant. Bad Christians look for arguments and evidence from science and history.

Good Christians should embrace the absurd. Bad Christians want to search for truth and use logic and evidence.

# Are green energy sources like solar power and wind power good for the environment?

**Wintery Knight** · 20 February 2014 · Archived copy · Original

Green energy harms wildlife, especially birds

Investors Business Daily explains how green energy hurts birds, even rare, endangered species of birds.

Excerpt:

> What do you call an energy source that consumes vast tracks of open land and fries birds that cross its path? If you're the president, you call it "safe," "reliable," "green" and worthy of massive taxpayer subsidies.
>
> That, at least, is the case with the Ivanpah Solar Electric Generating Station that covers a vast area of desert outside Las Vegas and, thanks to the generous support of the Obama administration, has officially opened.
>
> The plant points hundreds of thousands of mirrors at three towers to boil turbine-spinning water. But the heat rays aren't very friendly to the area's birds, including falcons, hawks, warblers and sparrows that have shown up dead near the towers.
>
> One of the inconvenient truths that global warming fanatics and renewable energy purists try to ignore is that wind and solar energy are not so environmentally friendly. At least, not if you care about wildlife and land preservation.
>
> First, these energy sources are massive land hogs. Ivanpah requires more than 5 square miles of mirrors to produce enough electricity to light 140,000 homes. It would take roughly 3,600 Ivanpahs to supply all the country's electricity needs, with mirrors covering New Jersey, Connecticut, Delaware, Rhode Island and a chunk of Massachusetts combined.
>
> Wind power is hardly much better. According to the Nature Conservancy, it takes 30 times the land for windmills to produce as much electricity as a nuclear power plant.
>
> And their turbines amount to bird Cuisinarts. To keep wind farms spinning, the Obama administration recently issued permits letting them kill protected bald and golden eagles for 30 years, provided they take some steps to mitigate the slaughter.

People who friend me on Facebook know that I love birds very much and I keep them as pets – they are my favorite animal. So this just gives me another reason to be disgusted with the policies of the secular left. When you add this wholesale slaughter of birds to the fact that we could be creating many more new jobs by investing in traditional sources of energy at home, it makes me even more angry.

# Obama silent as Venezuelan government violently represses democratic opposition

**Wintery Knight** · 20 February 2014 · Archived copy · Original

Socialism in Venezuela
From the Heritage Foundation.

Excerpt:

> Thousands of supporters and opponents of Venezuela's socialist government have taken to the streets this past week. Initiated by student groups, the protestors are voicing their grievances against soaring crime rates, high inflation, a shortage of basic goods, and a lack of political and economic freedom.
>
> All the while, the Obama Administration has been relatively silent. The occasional press release from the State Department uses the same recycled lines of "deep concern" that we've come to expect from an indifferent Administration. Not even the expulsion of three U.S. diplomats Sunday evening could elicit a stronger statement.
>
> So far, three people have been killed and hundreds have been arrested and tortured. Some even disappeared thanks to government security forces. Videos, pictures, and eyewitness testimony blame the governing regime for the deaths of two of the victims. Armed with automatic weapons, tear gas, grenades and even tanks, the military and police are using all means to silence the democratic opposition.
>
> Much like the Arab Spring, demonstrators have taken to social media—mainly Twitter—to relay information to the international community.
>
> Yet a few days into the demonstrations, the Venezuelan government shut down Twitter and one of the last private cable broadcasters, Colombia's NTN24. The government has even called for the arrest of leading opposition figurehead Leopoldo Lopez.
>
> At the helm of this sinking ship is Venezuela's leader, Nicolas Maduro. The former union leader and bus driver-turned-ordained president, he was handpicked by his successor Hugo Chavez.

Meanwhile on Wednesday, CNS News reported on the latest developments.

Excerpt:

> Violent clashes flared up across Venezuela on Wednesday as the nation waited to learn what charges jailed opposition leader Leopoldo Lopez will face for organizing mass protests that have breathed new life into the

> movement challenging socialist rule in the oil-rich nation.
>
> […]There was no immediate word on whether there were any new casualties, after a week of demonstrations and clashes that have resulted in at least six deaths and more than 100 injuries.
>
> […]The president also said he would take harsh measures in Tachira, an opposition stronghold on the western border with Colombia where there have been fierce clashes between National Guard troops and opposition protesters. Maduro said he is prepared to declare a "state of exception," a form of martial law.
>
> "If I have to decree a state of exception for Tachira and send in the tanks, I am ready to do it," he said.
>
> […][I]n Valencia, the third largest city… National Guard troops fired rubber bullets and unknown gunman on motorcycles fired live rounds at protesters. Genesis Carmona, a 22-year-old university student who had been Miss Tourism 2013 for the state of Carabobo, was struck in the head and killed by a bullet, a death that reverberated in a country that prizes beauty queens.

You can always count on big government socialists to resort to violence when their communist policies fail.

# Does a commitment to naturalism undermine rational thought and textual meaning?

**Wintery Knight** · 20 February 2014 · Archived copy · Original

Dr. William Lane Craig had a formal debate with an atheist philosopher named Alex Rosenberg a few months back that brought up an interesting idea. Rosenberg is a strong naturalist and he suggests all kinds of counterintuitive outworkings of naturalism in his book. Dr. Craig brought up a bunch of those strange views in his debate, and I listed them out in my summary of the debate as follows:

1. The argument from the intentionality (aboutness) of mental states implies non-physical minds (dualism), which is incompatible with naturalism
2. The existence of meaning in language is incompatible with naturalism, Rosenberg even says that all the sentences in his own book are meaningless
3. The existence of truth is incompatible with naturalism
4. The argument from moral praise and blame is incompatible with naturalism
5. Libertarian freedom (free will) is incompatible with naturalism
6. Purpose is incompatible with naturalism
7. The enduring concept of self is incompatible with naturalism
8. The experience of first-person subjectivity ("I") is incompatible with naturalism

We are concerned with #1 and #2 in this post.

Now I was visiting my parents last week in my home town and Dad and I went to church on Sunday. He wanted to listen to some weird sing-song-voiced pastor on the drive there, but I plugged in my smartphone and we listened to these three podcasts by William Lane Craig instead.

- Arguments in the Debate "Is Faith in God Reasonable?" Part 1
- Arguments in the Debate "Is Faith in God Reasonable?" Part 2
- Arguments in the Debate "Is Faith in God Reasonable?" Part 3

Dr. Craig was explaining in part 3 (I think) about how he went on the offensive with the 8 points. One point caught my attention. Craig said that if naturalism is true, then nothing written down is meaningful. He also wanted to know why Dr. Rosenberg would write a book if his worldview entailed that nothing written down is meaningful.

The solution has to do with Rosenberg's denial of "intentionality", which is the idea that something can be about something else. For example, I can think about what I had for breakfast today on the way to church (two apples and coffee) or I can think about the sermon today in my home church and how good it was. A naturalist believes that the whole universe is made up of pure matter alone, and matter cannot be about anything. So Rosenberg denies this common sense view of "intentionality" or "aboutness" because there is no room for it on his naturalistic / materialistic / physicalist view of reality.

Here is a post by Bill Valicella on Maverick Philosopher blog that answers Dad's questions.

First, Rosenberg's own view from his book.

> A single still photograph doesn't convey movement the way a motion picture does. Watching a sequence of slightly different photos one photo per hour, or per minute, or even one every 6 seconds won't do it either. But looking at the right sequence of still pictures succeeding each other every one-twentieth of a second produces the illusion that the images in each still photo are moving. Increasing the rate enhances the illusion, though beyond a certain rate the illusion gets no better for creatures like us. But it's still an illusion. There is noting to it but the succession of still pictures. That's how movies perpetrate their illusion. The large set of still pictures

> is organized together in a way that produces in creatures like us the illusion that the images are moving. In creatures with different brains and eyes, ones that work faster, the trick might not work. In ones that work slower, changing the still pictures at the rate of one every hour (as in time-lapse photography) could work. But there is no movement of any of the images in any of the pictures, nor does anything move from one photo onto the next. Of course, the projector is moving, and the photons are moving, and the actors were moving. But all the movement that the movie watcher detects is in the eye of the beholder. That is why the movement is illusory.
>
> The notion that thoughts are about stuff is illusory in roughly the same way. Think of each input/output neural circuit as a single still photo. Now, put together a huge number of input/output circuits in the right way. None of them is about anything; each is just an input/output circuit firing or not. But when they act together, they "project" the illusion that there are thoughts about stuff. They do that through the behavior and the conscious experience (if any) that they produce. (Alex Rosenberg,The Atheists' Guide to Reality: Enjoying Life Without Illusions. The quotation was copied from here.)

And here is what Bill V. says about that:

> Rosenberg is not saying, as an emergentist might, that the synergy of sufficiently many neural circuits gives rise to genuine object-directed thoughts. He is saying something far worse, something literally nonsensical, namely, that the object-directed thought that thoughts are object-directed is an illusion. The absurdity of Rosenberg's position can be seen as follows.
>
> 1. Either the words "The notion that thoughts are about stuff is illusory" express a thought — the thought that there are no object-directed thoughts — or they do not.
> 2. If the latter, then the words are meaningless.
> 3. If the former, then the thought is either true or false.
> 4. If the thought is true, then there there are no object-directed thoughts, including the one expressed by Rosenberg's words, and so his words are once again meaningless.
> 5. If the thought is false, then there are object-directed thoughts, and Rosenberg's claim is false.
>
> Therefore:
>
> - Rosenberg's claim is either meaningless or false. His position is self-refuting.
>
> As for the analogy, it is perfectly hopeless, presupposing as it does genuine intrinsic intentionality. If I am watching a movie of a man running, then I am under an illusion in that there is nothing moving on the movie screen: there is just a series of stills. But the experience I am undergoing is a perfectly good experience that exhibits genuine intrinsic intentionality: it is a visual experiencing of a man running, or to be perfectly punctilious about it: a visual experiencing AS OF a man running. Whether or not the man depicted exists, as would be the case if the movie were a newsreel, the experience exists, and so cannot be illusory.
>
> To understand the analogy one must understand that there are intentional experiences, experiences that take an accusative. But if you understand that, then you ought to be able to understand that the analogy cannot be used to render intelligible how it might that it is illusory that there are intentional experiences.
>
> What alone remains of interest here is how a seemingly intelligent fellow could adopt a position so manifestly absurd. I suspect the answer is that he has stupefied himself by his blind adherence to scientistic/naturalistic ideology.

If you want to sort of double check the details, then go ahead and watch the debate or read my summary or listen to the debate audio, and then listen to Dr. Craig's three podcasts that I linked above.

I know a lot of you are thinking right now "Hey! You cheater! That's a presuppositional argument! You said they

were bad!" Well, I didn't say they were bad, I said that the epistemological view of presuppositionalism was bad. Presuppositional arguments are *good.* See below for a few posts about them. Use them all you can, but use the good scientific and historical evidence, too.

# Anti-government protesters shot to death by pro-Yanukovych gunmen in Ukraine

**Wintery Knight** · 21 February 2014 · Archived copy · Original

From the leftist New York Times.

Excerpt:

> Security forces fired on masses of antigovernment demonstrators in Kiev on Thursday in a drastic escalation of the three-month-old crisis that left dozens dead and Ukraine reeling from the most lethal day of violence since Soviet times.
>
> The shootings followed a quickly shattered truce, with enraged protesters parading dozens of captured police officers through Kiev's central square. Despite a frenzy of East-West diplomacy and negotiations, there was little sign that tensions were easing.
>
> President Viktor F. Yanukovych lost at least a dozen political allies, including the mayor of the capital, who resigned from his governing Party of Regions to protest the bloodshed. Mr. Yanukovych conferred with three foreign ministers from the European Union who had come to press for a compromise solution, practically within sight of the main conflict zone in downtown Kiev.
>
> The sights of bullet-riddled bodies slumped amid smoldering debris, some of them shot in the head, and screaming medics carrying the dead and wounded to emergency clinics, including one in a hotel lobby, shocked the country and the world. The opposition said that at least 70 and as many as 100 people had been killed, while municipal authorities put the day's death toll at 39.
>
> […]Sviatoslav Khanenko, a lawmaker and a head of the medical service of the National Resistance Headquarters, said by telephone that about 70 people had been killed and more than 1,000 had been wounded. Some news reports said 100 people had been killed.
>
> The death tolls could not be corroborated. But even at the lower casualty numbers reported by Kiev's municipal health authorities, Thursday was the most lethal day in Ukraine since independence from the Soviet Union more than 22 years ago.

Negotiations are underway, but no deal has been reached:

> The foreign ministers of Germany, Poland and France met with Mr. Yanukovych for more than four hours on Thursday, and then announced that they would stay in Kiev overnight to continue their discussions. "Ahead of us is a night of heavy negotiations," Marcin Wojciechowski, a spokesman for the Polish foreign minister, Radoslaw Sikorski, wrote on Twitter.
>
> After the initial round of meetings, the Polish prime minister, Donald Tusk, said at a news conference in Warsaw that there were some indications that Mr. Yanukovych would be willing to schedule earlier parliamentary and presidential elections, something he had previously resisted. The presidential elections are scheduled for March 2015.

The great fear now is that the pro-Russia government will declare a "state of emergency", which would mean the deployment of the army and more killing of innocent protesters.

The protests were started by the pro-Russia President's refusal to sign a free trade deal with the European Union. A free trade deal would displease his Russian masters, even it would help lift Ukraine out of poverty.

As usual, conservative Canadian prime minister Stephen Harper is leading the way.

Excerpt:

> Canada is expanding a travel ban on senior members of the Ukrainian government and imposing economic sanctions on President Viktor Yanukovych, Prime Minister Stephen Harper announced in an emailed statement Thursday.
>
> “Canada continues to be outraged by the ongoing violence in Ukraine,” Harper said in the statement.
>
> “Our government has responded by introducing a travel ban on the regime’s senior leaders and announcing medical aid to assist the protesters in their time of need.”
>
> Ukrainian citizens, Harper said, “must be allowed to exercise their democratic right to peaceful protest without being subjected to deadly force and appalling brutality.”
>
> The government is expanding travel restrictions originally announced on Jan. 28 and imposing economic sanctions on the Yanukovych regime and its supporters, the news release said.
>
> The travel ban means the officials sanctioned won’t be allowed into Canada.
>
> “You are not welcome in Canada and we will continue to take strong action until the violence against the people of Ukraine has stopped and democracy has been restored,” Citizenship and Immigration Minister Chris Alexander said at a press conference to announce the sanctions.
>
> […]The economic sanctions are to “freeze any assets in Canada belonging to senior Ukrainian government officials,” according to a release from Harper’s office.

Meanwhile, Secretary of State John Kerry gave a speech asserting that global warming is as big a threat to the world as terrorism.

# Ready for the Craig-Carroll debate? review the BGV theorem and quantum tunneling

**Wintery Knight** · 21 February 2014 · Archived copy · Original

**UPDATE: My brief summary of the Craig-Carroll debate is now posted. I may do a longer one next week if they release audio/video. Otherwise, the short summary will be it.**

In the debate between William Lane Craig and Peter Millican, William Lane Craig presented the arguments for theism, including his standard Kalam cosmological argument which asserts that the universe had a beginning. The atheist, Peter Millican, raised several objections to the notion of a beginning to the universe. But Craig was able to establish the beginning of the universe by appealing to something called the Borde-Guth-Vilenkin theorem. This theorem is new – but it is worth learning about.

First, let's review Craig's cosmological argument:

> A1) The origin of the universe
>
> 1. The universe began to exist.
> 2. If the universe began to exist, then the universe has a transcendent cause.
> 3. The universe has a transcendent cause.
>
> The origin of the universe is confirmed by philosophical arguments and scientific evidence.
>
> There cannot be an actual infinite number of past events, because mathematical operations like subtraction and division cannot be applied to actual infinities.
>
> The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, can be eternal into the past.
>
> Even speculative alternative cosmologies do not escape the need for a beginning.
>
> The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

So he appealed to the Bord-Guth-Vilenkin theorem right from the start in order to guarantee a space-time boundary in the past – i.e., a beginning of the universe, which is his premise 1.

Ok, now let's take a look at some videos on this theorem.

**The Borde-Guth-Vilenkin theorem, explained**

From the Craig-Millican debate:

The BGV theorem also came up in the Craig-Krauss debate:

See my summary of the Craig-Krauss debate for more. I also wrote about after the debate, where it was shown that Krauss misrepresented the BGV theory to favor naturalism. So that's why we all need to be familiar with what it says and how it is misrepresented by naturalists in debates. That will prepare us to understand what is happening in tonight's debate.

I also expect quantum tunneling to come up in tonight's debate, and here is a clip from Dr. Craig's first debate with Lawrence Krauss at North Carolina State University.

**Further study**

If you would like to read a nice LONG article about Craig's cosmological argument, just check this post I wrote a while back. And it even contains a nice peer-reviewed paper that Craig wrote for an Astrophysics journal – and the abstract is *online* on Springer.

# William Lane Craig: must the cause of the universe be a person?

**Wintery Knight** · 21 February 2014 · Archived copy · Original

***I am posting this to prepare everyone for tonight's debate between Sean Carroll and William Lane Craig. The cause of the universe is sure to come up in tonight's debate, which is at 7 PM Central, 8 PM Eastern time!***

I expect Dr. Carroll to raise many objections to the kalam cosmological argument in tonight's debate. One that will come up for sure is the objection that the cause of the universe need not be a person (i.e. – the cause need not be personal).

Here's a post from my friend Fred Woodbridge, who blogs at IFCONFIG blog, where he quotes from Dr. Craig's book "Reasonable Faith". The quote contains three arguments for why the cause of the universe must be personal.

Quote:

> **First**, as Richard Swinburne points out [in *The Existence of God]*, there are two types of causal explanation: scientific explanations in terms of laws and initial conditions and personal explanations in terms of agents and their volitions. For example, if I come into the kitchen and find the kettle boiling, and I ask Jan, "Why is the kettle boiling?" she might answer, "The heat of the flame is being conducted via the copper bottom of the kettle to the water, increasing the kinetic energy of the water molecules, such that they vibrate so violently that they break the surface tension of the water and are thrown off in the form of steam." Or she might say, "I put it on to make a cup of tea. Would you like some?" The first provides a scientific explanation, the second a personal explanation. Each is a perfectly legitimate form of explanation; indeed, in certain contexts it would be wholly inappropriate to give one rather than the other. Now a first state of the universe cannot have a scientific explanation, since there is nothing before it, and therefore it cannot be accounted for in terms of laws operating on initial conditions. It can only be accounted for in terms of an agent and his volitions, a personal explanation.
>
> **Second**, the personhood of the cause of the universe is implied by its timelessness and immateriality. The only entities we know of which can possess such properties are either minds or abstract objects, like numbers. But abstract objects do not stand in causal relations. Indeed, their acausal nature is definitive for abstract objects; that is why we call them abstract. Numbers, for example, cannot cause anything. Therefore, the transcendent cause of the origin of the universe must be of the order of mind.
>
> **Third**, this same conclusion is also implied by the fact that we have in this case the origin of a temporal effect from a timeless cause. We've concluded that the beginning of the universe was the effect of a first cause. By the nature of the case, that cause cannot have any beginning of its existence or any prior cause. Nor can there have been any changes in this cause, either in its nature or operations, prior to the beginning of the universe. It just exists changelessly without beginning, and a finite time ago it brought the universe into existence. Now this is exceedingly odd. The cause is in some sense eternal and yet the effect which it produced is not eternal but began to exist a finite time ago. How can this be? If the necessary and sufficient conditions for the production of the effect are eternal, then why isn't the effect eternal? How can all the causal conditions sufficient for the production of the effect be changelessly existent and yet the effect not also be existent along with the cause? How can the cause exist without the effect?
>
> One might say that the cause came to exist or changed in some way just prior to the first event. But then the cause's beginning or changing would be the first event, and we must ask all over again for its cause. And this cannot go on forever, for we know that a beginningless series of events cannot exist. There must be an absolutely first event, before which there was no change, no previous event. We know that this first event must have been caused. The question is: How can a first event come to exist if the cause of that event exists changelessly and eternally? Why isn't the effect co-eternal with its cause?
>
> To illustrate: Let's say the cause of water's freezing is subzero temperatures. If the temperature were eternally

> below zero degrees Centigrade, then any water around would be eternally frozen. If the cause exists eternally, the effect must also exist eternally. But this seems to imply that if the cause of the universe existed eternally, the universe would also have existed eternally. And this we know to be false.
>
> One way to see the difficulty is by reflecting on the different types of causal relations. In event/event causation, one event causes another. For example, the brick's striking the window pane causes the pane to shatter. This kind of causal relation clearly involves a beginning of the effect in time, since it is a relation between events which occur at specific times. In state/state causation one state of affairs causes another state of affairs to exist. For example, the water's having a certain surface tension is the cause of the wood's floating on the water. In this sort of causal relation, the effect need not have a beginning: the wood could theoretically be floating eternally on the water. If the wood begins to float on the water, then this will be a case of event/event causation: the wood's beginning to float is the result of its being thrown into the water. Now the difficulty that arises in the case of the cause of the beginning of the universe is that we seem to have a peculiar case of state/event causation: the cause is a timeless state but the effect is an event that occurred at a specific moment in the finite past. Such state/event causation doesn't seem to make sense, since a state sufficient for the existence of its effect should have a state as its effect.
>
> There seems to be only one way out of this dilemma, and that is to say that the cause of the universe's beginning is a personal agent who freely chooses to create a universe in time. Philosophers call this type of causation "agent causation," and because the agent is free, he can initiate new effects by freely bringing about conditions which were not previously present. For example, a man sitting changelessly from eternity could freely will to stand up; thus, a temporal effect arises from an eternally existing agent. Similarly, a finite time ago a Creator endowed with free will could have freely brought the world into being at that moment. In this way, the Creator could exist changelessly and eternally but choose to create the world in time. By "choose" one need not mean that the Creator changes his mind about the decision to create, but that he freely and eternally intends to create a world with a beginning. By exercising his causal power, he therefore brings it about that a world with a beginning comes to exist. So the cause is eternal, but the effect is not. In this way, then, it is possible for the temporal universe to have come to exist from an eternal cause: through the free will of a personal Creator.
>
> On the basis of a conceptual analysis of the conclusion implied by the kalām cosmological argument, we may therefore infer that a personal Creator of the universe exists, who is uncaused, beginningless, changeless, immaterial, timeless, spaceless, and unimaginably powerful. This, as Thomas Aquinas was wont to remark, is what everybody means by "God."

I'm sure that Dr. Carroll will raise many other objections to the kalam argument. If Dr. Carroll is clever, he might also object that the notion of timeless person is incoherent, that the notion of an unembodied mind is incoherent, that we don't know that non-physical minds can cause effects in the physical world, that matter can't come into being out of nothing, that even if effects in the physical universe have causes that doesn't mean the universe as a whole has to have a cause, and that the notion of causation doesn't make sense unless time has already started. But these are objections that Dr. Craig answered in his debate with Peter Millican, so they shouldn't phase him.

# Tactical Faith will live-stream the responses to the Craig-Carroll debate on Saturday

**Wintery Knight** · 22 February 2014 · Archived copy · Original

The schedule of events for Saturday is on the Greer-Heard web site.

**Saturday, Feb. 22nd, 2014 schedule: (ALL TIMES CENTRAL)**

9:00 a.m. Tim Maudlin, ”Cosmology, Theology and Meaning”

10:00 a.m. Robin Collins, “God and the Fine-tuning of the Universe for Discovery”

11:00 a.m. Lunch (New Orleans Style Red Beans & Rice) Cafeteria

12:30 p.m. Alex Rosenberg, “How Physics Fakes Design, and Makes Things Difficult for Theism”

1:30 p.m. James Sinclair, “Cosmology and Cosmologists Within the ‘Does God Exist’ Question”

2:30 p.m. Concluding Comments from Sean Carroll and William Lane Craig

For Eastern times, add an hour.

Click here for the the live-stream. Note: You have to click on this link and go back to the main page each time a response ends, because the youtube link is different for each response.

**Is there a recording?**

I do have a recording of last night’s debates, but I’m not posting it unless I get permission.

**Quick thoughts on the debate:**

Carroll was as good of a speaker as Craig in terms of style. Very easy to listen to, very quick on his feet, very civil. There was no clear winner on style.

It was difficult to assess the truth value of scientific points being made, especially for the layperson. I explained a few of them in my posts earlier this week, but I think laypeople might struggle with them if they are hearing about these things for the first time.

A couple of Craig’s slides: (click for larger images)

Slide 1 of 2:

Dr. Craig slide #1 of 2

Slide 2 of 2:

Dr. Craig slide #2 of 2

**Quick summary:** (this is not complete, because I couldn't get everything they were saying noted)

Dr. Craig defended two arguments: 1) the kalam cosmological argument and the fine-tuning argument.

Dr. Craig supported the origin of the universe with 1) the expansion of the universe and 2) the second law of thermodynamics.

Dr. Craig said that the BGV theorem supports a beginning for the universe.

Dr. Craig said that the consensus of scientists did not accept Carroll's naturalistic cosmology, quoting Stephen Hawking in support.

Dr. Craig said that multiverse models fall victim to the Boltzmann brain problem, where we should observe Boltzmann brains coming into existence and then phasing out again far more probably than embodied minds. But we observe embodied minds, and no Boltzmann brains.

Dr. Carroll said that science cannot study metaphysical questions.

Dr. Carroll said that science is about making models that may or may not be consistent with the experimental data.

Dr. Carroll said that the BGV theorem does not support a beginning for the universe.

Dr. Carroll proposed 17 alternative cosmologies, but did not provide a shred of scientific evidence for any of them, the way that Craig did for the standard model.

Dr. Carroll refuted Dr. Craig's citation of Stephen Hawking, and Craig yielded the point.

Dr. Carroll speculated that science might progress to the point where the fine-tuning can be explained without an intelligent cause, and he gave an example of where that happened (inflation).

Dr. Craig argued that all 17 of the models suggested by Carroll either conflicted with evidence, had serious problems or did require a beginning.

Dr. Craig argued that Carroll's own model required a beginning.

Dr. Craig argued that Carroll's own model fell victim to the Boltzmann brain problem.

Dr. Craig argued that Carroll's own model violated the second law of thermodynamics.

Dr. Craig re-stated his point that the baby universe spawning in Carroll's model was speculative and incomplete, and cited Christopher Weaver's work.

Dr. Carroll denied that things that pop into being out of nothing require a transcendent cause.

Dr. Carroll reiterated that science can only make naturalistic models, and that he did not have to answer questions about ultimate causes.

Dr. Carroll showed a photo of Alan Guth expressing his opinion that the universe is "probably" eternal. No

evidence was given for this assertion.

Dr. Carroll said that the fine-tuning was not done in an optimal way, because one fine-tuned value was lower than it needed to be, and it should be exactly what it needed to be if God did it.

Dr. Carroll said that a finely-tuned universe is more probably in naturalism than in theism, because God can do anything he wants and doesn't need a fine-tuned universe.

Dr. Carroll said he would stop defending his model now, and would instead defend Aguirre-Gratton.

Dr. Craig gave three reasons why the universe popping into being out of nothing requires a transcendent cause.

First, he said that nothing cannot cause anything to happen, because nothing is nothing.

Second, he said that if things pop into being out of nothing, then why don't we see it happening all the time with other things.

Third, he said that we have no reason to dismiss the causal principle, especially when it is the basis of scientific inquiry and has been so fruitful in the progress of science.

Dr. Craig reiterated that baby universes in Carroll's model would be dominated by Boltzmann brains, and we don't observe that.

Dr. Craig said that even on the quantum gravity models that Carroll mentioned, there would still be a beginning.

Dr. Carroll said that Craig mustn't say "popped into being" but instead that "there was a first moment of time".

Dr. Carroll said that his model does indeed violate the second law of thermodynamics "YES!".

*At this point Carroll stopped talking about the topic of the debate and started expressing personal opinions about religion. It's funny how often atheists do this in debates.*

Dr. Carroll said that most theists don't believe in God because of cosmology, but because of community and feelings.

Dr. Carroll said that science had learned a lot in the last 2000 years, so theism was false.

Dr. Carroll said that most philosophers don't think that God exists, so theism was false.

Dr. Carroll said microscopes and telescopes were absent 2000 years ago, so theism was false.

Dr. Carroll said that religion should be about community and feelings, not about what is true.

**Conclusion:**

My conclusion was that Carroll lost because he is just satisfied to throw theories out and not to argue that they are true by citing evidence. Carroll never seemed to be interested in finding out what is true, but instead he just wanted to tell a story that didn't include God, and assert that by Occam's Razor, his story was a better explanation. I am not impressed with theoretical speculations, although the layperson might be. I kept waiting for him to respond to Craig's points about how his model was falsified by experimental evidence and observations, e.g. – the Boltzmann brains or the baby universe generation, and he never cited the evidence I wanted him to cite. Craig did have some evidence for his views, but he could have been stronger in making his case. He could have shown the e-mail from Vilenkin that stated that he had understood the BGV theorem, and was using it correctly, for example.

For me the winning side comes down to evidence. The standard model is the standard model because of scientific evidence. Until that evidence is overturned, then speculative models are of no interest to anyone who is evidence-driven. Speculations are not science. A philosophical presupposition of metaphysical naturalism is not science.

The nice thing is that Robin Collins, one of Craig's respondents, went deep into the science of the fine-tuning, especially on one of my favorite data points, the cosmic microwave background radiation. The paper he presented is now posted on his web site (H/T Christian Apologetics Alliance). I posted about the CMBR before in my post

about particle physicist Michael Strauss lecture on cosmology and fine-tuning at Stanford University and the his more recent lecture at the University of Texas. Note that Strauss is an experimental physicist, not a theoretical physicist like Carroll.

Unfortunately, naturalistic respondent Tim Maudlin said nothing at all of value, choosing to use his time to speak about the evils of the coal industry and the threat of global warming, despite the fact that the IPCC says there has been no significant global warming in the past 17 years.

The last two respondents have started speaking. I'm expecting the philosopher Alex Rosenberg to stay away from the science, and then we'll hear from the experimental scientist James Sinclair. Rosenberg spoke on Darwinian evoloution being incompatible with theism, and it was interesting, but off topic for this debate. James Sinclair is speaking now, and is giving a technical paper on cosmology.

I may be posting a more accurate summary sometime next week, especially if they release either the audio or the video. If not, this will be it.

UPDATE: here's another review by Randy Everist of Possible Worlds blog. He explains the back-and-forth over Boltzmann brains and the BGV theorem in more detail.

# Craig Hazen explains why Christianity is different from other religions

**Wintery Knight** · 22 February 2014 · Archived copy · Original

A 28-minute lecture delivered at Biola University.

Topics:

- Christianity is different from other religions for several reasons
- Christianity is testable using objective evidence
- you can offer objective evidence for and against it
- compare that to Zen Buddhism, for example, which is about subjective experiences
- Buddhism is subjective, you can't test it objectively
- Christianity can be tested using the historical method
- if Jesus did not rise from the dead, Christianity is false
- Christianity is set up for inquiry
- You can know whether the resurrection happened using historical methods
- "faith" in Christianity is not belief without arguments and evidence
- the Bible presents it's claims about God as testable and public

This was very fun to watch.

UPDATE: Here's a related post at the Simpson blog.

# Eight tips for talking to non-Christians about Christianity

**Wintery Knight** · 22 February 2014 · Archived copy · Original

From Stand to Reason – some excellent tactical advice from a master apologist.

Here's the setup:

> I overheard a conversation on the airplane coming back from my vacation in Wisconsin. A Christian gentleman was vigorously sharing his faith with a gentleman in the seat directly behind me. There are some things we can learn, both good and bad, from what I overheard and take his effort—which was a good one—and channel it in a little bit more constructive direction.
>
> So I am going to give you eight points of application.

And here are my favorites from his list:

> **3. Try to stay away from religious language, terminology, and religious affect.** This person was very religious in his whole approach. I think this is hard for us as Christians because we are brought up in a Christian environment and it's natural for us to talk this way, but it sounds weird to people outside of that environment. I think there are a lot of people who may be, in principle, interested in a bona fide, genuine relationship with God through Jesus Christ but who are not interested in the Christian religion as they perceive it. This is where I think a lot of the emergent guys have a legitimate bone to pick with Evangelicalism. Let's try not to sound like Bible-thumping fundamentalists if we can avoid it, even if that's what we are, because there's no need to sound that way if it puts people off. Find another way to communicate the message. Just talk in a straightforward manner. Be conscious of using religious language the other person may not understand or may think is strange. Avoid all of that so they can hear the message you're trying to communicate.
>
> **4. Focus on the truth, not personal benefits of Christianity.** I appreciated the gentleman's approach in that he kept talking about truth. One person he was talking to said he liked reincarnation. The Christian man said that even if he liked reincarnation that that didn't make it true if it's not true. Liking something is not going to change reality. That's a great point. He was focusing on the truth claims of Jesus. He wasn't giving a bunch of promises. He wasn't saying, "Jesus is my ice cream. He's a great flavor. Try him to see if you like him, too." Or, "Try Jesus because he'll make your life so wonderful." Focus on truth and not personal benefits.
>
> **5. Give evidence.** This gentleman was giving all kinds of evidence for his seatmates to consider. Good for him! You should too. You know why? Because people in the Bible did, too. Jesus, Paul, Peter, all the Apostles. If you look at the details of how they communicated their faith they gave evidence for the truth of what they were saying about Jesus. In fact, if you want to get the content of the Gospel, one of the most famous passages for the articulation of the Gospel is the beginning of 1 Corinthian 15. Paul gives all kinds of evidence. It's all right there as he is explaining the Gospel. We see that all through the New Testament. So give evidences. It's appropriate. People do respond to that even in a postmodern age.

I remember that I was once working in Chicago, and after a particular good apologetics discussion with a team of engineers, I apologized to them all for being so exclusive and a fundamentalist. These guys all had MS and PhD degrees in computer science from top schools like Stanford, Purdue, U of I, NIU and Northwestern. They said "you're not a fundamentalist". And I said, "but I am ultra-conservative in my theology!". And they said "That's ok – as long as you have considered different points of view and you have objective evidence, then somehow it doesn't sound fundamentalist".

I think that's something that we need to work on. When Christianity is about truth, it's open to investigation using public evidence. At work, I have explained the structure of DNA molecules in the office and had people rolling

their chairs out of their cubicles to come and see me draw amino acid chains on a white board, and calculate the probabilities with a calculator. You can be a fundamentalist, without sounding like a fundamentalist. You just have to focus on public, testable evidence.

Look here:

Make religion about truth – not personal preferences. They respect that way of talking – as long as you bring the science and the history.

# William Lane Craig lectures on failure in the Christian life

**Wintery Knight** · 23 February 2014 · Archived copy · Original

I found this audio on Brian Auten's Apologetics 315 web site.

Here is the MP3 file.

And here is my summary.

Intro:

- the topic of failure is not one that is often discussed by Christians
- failure #1: failure in the Christian life which is the result of sin
- failure #2: when a Christian is defeated while trying to serve God
- the consequences for failure #1 can be worse for the Christian
- the consequences for failure #2 can be worse for the world as whole
- how is it possible for a person to fail when they are obeying God? (#2)
- how can it be that God can call someone to a task then let them fail?
- failure is not persecution – persecution is normal for Christians
- failure is not trials – testing is normal for Christians to grow

Bill's failure:

- Bill had submitted all the coursework for his second doctoral degree
- but he had to pass a comprehensive oral examination
- he failed to pass the comprehensive exam
- Bill and Jan and his supporters had all prayed for him to pass
- how could God allow this to happen?

Solution to the problem:

- God's will for us may be that we fail at the things we try in life
- there are things that God may teach us through failure
- Bill learned that human relationships are more important than careers
- we need to realize that "success" in life is not worldly success
- true success is getting to know God well during your life
- and failure may be the best way to get to know God well
- it may even be possible to fail to know God while achieving a lot
- the real measure of a man is loving God and loving your fellow man

Practical:

- give thanks to God regardless of your circumstances
- try to learn from your failure
- never give up

The ending of Bill's story:

- Bill spent an entire year preparing for a re-take of his exam
- Bill was awarded his second doctorate "magna cum laude" (with great distinction)

- Bill learned that American students are not well prepared for exams
- the year of studying remedied his inadequate American education
- in retrospect, he is thankful for the failure – he learned more

If you like this, you should pick up Craig's book "Hard Questions, Real Answers", which has a chapter on this problem. And here is a similar lecture that Dr. Craig gave at his home church in Atlanta on the same topic. I'm not posting this because I've had a catastrophic failure or anything. But I think in this economy, I am seeing a lot of my plans dashed and I am being forced to circle the wagons a little and take fewer risks. I am being forced to aim for smaller goals, and plan for future difficulties. It does bother me that I can't comfortably take risks to achieve the best goals that I want to achieve. But I have to play the hand I'm dealt, and do what looks doable right now. Some of my friends are having the same problem of having to recalculate what is probable and what is possible.

# Has Christianity held back the progress of science? What about Galileo?

**Wintery Knight** · 23 February 2014 · Archived copy · Original

First, here's an article from the peer-reviewed journal Nature, probably the best peer-reviewed journal on science in the world.

The article is written by James Hannam. He has a PhD in the History and Philosophy of Science from the University of Cambridge and is the author of The Genesis of Science: How the Christian Middle Ages Launched the Scientific Revolution (published in the UK as God's Philosophers: How the Medieval World Laid the Foundations of Modern Science).

Excerpt:

> Few topics are as open to misunderstanding as the relationship between faith and reason. The ongoing clash of creationism with evolution obscures the fact that Christianity has actually had a far more positive role to play in the history of science than commonly believed. Indeed, many of the alleged examples of religion holding back scientific progress turn out to be bogus. For instance, the Church has never taught that the Earth is flat and, in the Middle Ages, no one thought so anyway. Popes haven't tried to ban zero, human dissection or lightening rods, let alone excommunicate Halley's Comet. No one, I am pleased to say, was ever burnt at the stake for scientific ideas. Yet, all these stories are still regularly trotted out as examples of clerical intransigence in the face of scientific progress.
>
> Admittedly, Galileo was put on trial for claiming it is a fact that the Earth goes around the sun, rather than just a hypothesis as the Catholic Church demanded. Still, historians have found that even his trial was as much a case of papal egotism as scientific conservatism. It hardly deserves to overshadow all the support that the Church has given to scientific investigation over the centuries.
>
> That support took several forms. One was simply financial. Until the French Revolution, the Catholic Church was the leading sponsor of scientific research. Starting in the Middle Ages, it paid for priests, monks and friars to study at the universities. The church even insisted that science and mathematics should be a compulsory part of the syllabus. And after some debate, it accepted that Greek and Arabic natural philosophy were essential tools for defending the faith. By the seventeenth century, the Jesuit order had become the leading scientific organisation in Europe, publishing thousands of papers and spreading new discoveries around the world. The cathedrals themselves were designed to double up as astronomical observatories to allow ever more accurate determination of the calendar. And of course, modern genetics was founded by a future abbot growing peas in the monastic garden.
>
> But religious support for science took deeper forms as well. It was only during the nineteenth century that science began to have any practical applications. Technology had ploughed its own furrow up until the 1830s when the German chemical industry started to employ their first PhDs. Before then, the only reason to study science was curiosity or religious piety. Christians believed that God created the universe and ordained the laws of nature. To study the natural world was to admire the work of God. This could be a religious duty and inspire science when there were few other reasons to bother with it. It was faith that led Copernicus to reject the ugly Ptolemaic universe; that drove Johannes Kepler to discover the constitution of the solar system; and that convinced James Clerk Maxwell he could reduce electromagnetism to a set of equations so elegant they take the breathe away.
>
> Given that the Church has not been an enemy to science, it is less surprising to find that the era which was most dominated by Christian faith, the Middle Ages, was a time of innovation and progress. Inventions like the mechanical clock, glasses, printing and accountancy all burst onto the scene in the late medieval period. In the field of physics, scholars have now found medieval theories about accelerated motion, the rotation of the earth

> and inertia embedded in the works of Copernicus and Galileo. Even the so-called “dark ages” from 500AD to 1000AD were actually a time of advance after the trough that followed the fall of Rome. Agricultural productivity soared with the use of heavy ploughs, horse collars, crop rotation and watermills, leading to a rapid increase in population.

I hope this will set the record straight – Judeo-Christian monotheism created the enterprise of experimental science.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge’s ontological argument from reason
- Alvin Plantinga’s epistemological argument from reason
- William Lane Craig’s moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds

# Can gay marriage proponents tolerate religious liberty?

**Wintery Knight** · 24 February 2014 · Archived copy · Original

An article by Ryan T. Anderson explains the problem in National Review.

Excerpt:

> For years now, a central argument of those in favor of same-sex marriage has been that all Americans should be free to live and love how they choose. But does that freedom require the government to coerce those who disagree into celebrating same-sex relationships?
>
> A growing number of incidents show that the redefinition of marriage and state policies on sexual orientation have created a climate of intolerance and intimidation for citizens who believe that marriage is the union of a man and a woman and that sexual relations are properly reserved for marriage. Now comes government coercion and discrimination. Laws that create special privileges based on sexual orientation and gender identity are being used to trump fundamental civil liberties such as freedom of speech and the free exercise of religion.

Let's see specific examples:

> In addition to the well-known examples of Christian adoption and foster-care agencies that have been forced to stop providing those services because they object to placing children in same-sex households, the examples below show how government has penalized citizens trying to run their businesses in accordance with their beliefs.
>
> […]The case of Elaine Huguenin and her husband, Jon, is perhaps the best-known example of violations of religious liberty at the state level… the Huguenins run Elane Photography, a small business in Albuquerque, N.M. In 2006, the couple declined a request to photograph a same-sex commitment ceremony…
>
> […]Elane Photography didn't refuse to take pictures of gay and lesbian individuals, but it did refuse to photograph a ceremony that ran counter to the owners' belief that marriage is the union of a man and a woman (a belief that New Mexico law endorses). Other photographers in the Albuquerque area were more than happy to photograph the event.
>
> But in 2008, the New Mexico Human Rights Commission ruled that the Huguenins, by declining to use their artistic and expressive skills to communicate what what occurred at the ceremony, had discriminated based on sexual orientation. The commission ordered them to pay $6,637.94 in attorneys' fees. The ruling cited New Mexico's human-rights law, which prohibits discrimination in "public accommodations" (that is, "any establishment that provides or offers its services . . . or goods to the public") based on race, religion, and sexual orientation — among other protected classes.

And another:

> In early 2013, two women, Rachel Cryer and Laurel Bowman, asked the Oregon bakery Sweet Cakes by Melissa to bake a wedding cake for their same-sex commitment ceremony. Although bakery owners Melissa and Aaron Klein consistently had served all customers on a regular basis, they asserted that this request would have required them to facilitate and celebrate a same-sex relationship — which would violate their religious belief that marriage is the union of one man and one woman. (Oregon law defines marriage in the same way.)
>
> Soon afterward, Cryer and Bowman filed a complaint under the Oregon Equality Act of 2007, which prohibits discrimination based on sexual orientation. During an investigation by Oregon's Bureau of Labor and Industries, bureau official Brad Avakian commented: "The goal is to rehabilitate. For those who do violate the law, we want them to learn from that experience and have a good, successful business in Oregon."

> In January, the agency issued a ruling that held that the Kleins violated Oregon's sexual-orientation law when they declined to bake the cake.
>
> Melissa and Aaron Klein faced increasing ridicule for their unwillingness to violate their beliefs. Sweet Cakes by Melissa came under threats, vicious protests, and boycotts. The Kleins, who have five children, reportedly received hundreds of phone calls and letters, including death threats to the family. Fearing for their safety, the Kleins decided to close the doors of their small business in September 2013 and operate from an in-home bakery. In the meantime, the family still has to deal with the Labor Commission's conclusion that they violated Oregon's law. The case is likely to proceed to an administrative law judge.

And another:

> A similar situation occurred when a judge in Colorado — a state that in 2006 constitutionally defined marriage as the union of a man and a woman — decided that Jack Phillips, owner of Masterpiece Cakeshop, violated the law when he declined to bake a cake for a same-sex wedding reception.
>
> In 2012, a same-sex couple received a marriage license in Massachusetts and asked Phillips to bake a cake for a reception back home in Denver. On the basis of his faith, Phillips declined to create a wedding cake: "I don't feel like I should participate in their wedding, and when I do a cake, I feel like I am participating in the ceremony or the event or the celebration that the cake is for." The couple obtained a wedding cake, one with rainbow-colored filling, from another local bakery.
>
> The American Civil Liberties Union filed a complaint against Masterpiece Cakeshop with the state, alleging violations of Colorado's public-accommodation law. Administrative Law Judge Robert N. Spencer ruled against the bakery on December 6, 2013, concluding that Phillips violated the law by refusing service to the two men "because of their sexual orientation."
>
> Phillips objected to this characterization and responded that that he would happily sell the couple his baked goods for any number of occasions, but baking a wedding cake would force him to express something that he does not believe, violating his freedom to run his business in step with his faith.

And another:

> On March 1, 2013, longtime customers Roger Ingersoll and Curt Freed met with Arlene's Flowers and Gifts shop owner Barronelle Stutzman to request that she arrange the flowers for their same-sex wedding ceremony. Washington State had redefined marriage the previous year. Stutzman respondedthat she could not accept the job because of her "relationship with Jesus Christ" and her belief that marriage is between one man and one woman.
>
> Acting on a complaint filed by the two men, Washington Attorney General Bob Ferguson filed suit against Stutzman, contending that she had violated the state's sexual-orientation law. Ferguson seeks a $2,000 fine and a court order forcing Barronelle to violate her conscience by using her artistic talents to celebrate a same-sex relationship.

The situation is so bad, that Arizona has had to pass a law to protect the religious liberty of people who don't want to celebrate gay marriage, a law which is universally opposed by our leftist mainstream media.

So how did we come to this? Well, I think when the debate over gay rights started, many Christians were happy to let gay people live how they wanted to and love who they wanted to and have ceremonies in churches that would have them. But now we are seeing that the gay agenda is much more about redefining marriage for everyone, and compelling assent to the new definition of marriage by force. What is striking to me is how easy secularists find it to strip religious people of their rights using the power of government when it suits them. And to go after their children in the public schools, too, at taxpayer expense. Even these state-run persecutions of Christians in "Human

Rights Commissions" is at taxpayer expense. Christians are paying secularists in the government to punish them for being faithful Christians.

Let's just weigh the damage in these cases. On the one hand, you have gay couples who are told no, feel bad, and then find another business to do what they want. On the other hand, you have the government dragging Christians into court, excoriating them, fining them thousands of dollars, making them apologize and them forcing them to violate their consciences or close their businesses. Who is being intolerant here? Who is forcing their view on others and forcing them to act against their core beliefs?

You would think that we would have learned the lessons of the 20th century – not to discriminate against people because of their religion, not to use the power of the state to force people to act against their consciences. But sadly, we have not learned that lesson. The very people who cry "tolerance" are the ones doing it, too.

# Do men need respect from women, or can they perform their male roles without it?

**Wintery Knight** · 24 February 2014 · Archived copy · Original

From reading previous posts on Matt Walsh's popular blog where he writes about male-female relationships. I got the impression that he was writing too much about how to blame men, and not enough about the policies and practices that provide incentives for men to underperform, e.g. – mostly female teachers, unfair divorce laws, stimulus spending geared towards women, etc. So imagine my surprise when I came across this article about men and their need for respect.

First, look at this excerpt. This is what I would have written to criticize Matt Walsh, but he writes it himself:

> I've discussed at length how men should treat women. I've written about the lessons I plan to teach my son; lessons about how he should love, honor, respect, serve, and protect the women in his life. Indeed, men need to respect women, and we, as men, are far from perfect in that regard.
>
> Those posts — the ones where I call on us men to improve the way we treat women — tend to be very popular. They're popular when I write them or when anyone writes them. Proclaim that women, mothers, and wives should be respected, and a chorus will shout 'amen.' Every day on Facebook brings us another viral post excoriating men and supporting women. I've written a few of them myself.
>
> But I've noticed that the corollary – a message about the respect women must give men, a message challenging wives and encouraging husbands – isn't quite so palatable for many people. Disrespect for men has become standard practice. That scene I witnessed was sad but unremarkable; we've all watched that kind of thing play out a thousand times over. Men are disrespected by their wives – they're disrespected publicly, they're disrespected privately, they're disrespected and then told that they have no right to be upset about it because they aren't worthy of respect in the first place.

Let me tell you, as a blogger who chooses to primarily focus on holding *women* accountable in relationships, I know that it is much less popular than placing demands on *men*. Believe me, I have the hate mail to prove it. It is automatic, even with some Christian women, that any attempt to suggest a moral obligation that women have to men or children is met with denial, deflection or rationalization. "But what about men's responsibilities to women?"

So Matt is concerned that men are hearing too many negative messages, and not getting enough respect from their wives.

He writes:

> These cultural messages aren't harmful because they hurt my manly feelings; they're harmful because of what they do to young girls. Society tells our daughters that men are boorish dolts who need to be herded like goats and lectured like school boys. Then they grow up and enter into marriage wholly unprepared and unwilling to accept the Biblical notion that "wives should submit to their husbands" because "the husband is the head of the wife." [Ephesians 5]
>
> It is a fatal problem, because the one thing that is consistently withheld from men and husbands — respect — is the one thing we need the most.
>
> Yes, *need*. We need respect, and that need is so deeply ingrained that a marriage cannot possibly survive if the man is deprived of it.
>
> Often, people will say that a husband should only be respected if he "earns" it. *This attitude is precisely the problem*. A wife ought to respect her husband because he is her husband, just as he ought to love and honor her because she is his wife. Your husband might "deserve" it when you mock him, berate him, belittle him, and

> nag him, but you don't marry someone in order to give them what they deserve. In marriage, you give them what you've promised them, even when they aren't holding up their end of the bargain.

OK really, one last quote from Matt:

> Respect is our language. If it isn't said with respect, we can't hear it. This is why nagging is ineffective and self defeating. This is why statements made in sarcastic tones, or with rolling eyes, will never be received well. We have a filter in our brains, and a statement made in disrespect will be filtered out like the poison it is.
>
> Men are notoriously reluctant to share feelings or display vulnerability. Many times, we keep those inner thoughts locked away — our feelings guarded and hidden — because we know we are not respected. A man will never be vulnerable to someone who doesn't respect him. Never.
>
> A man isn't satisfied or content if he isn't respected. If he can't find respect where he is, he will seek it somewhere else. This can have disastrous implications for a relationship, but it applies in other areas of life as well. A man is much more likely to stay in a low paying job, a physically demanding job, a dangerous job, or a tedious job, than a job where he isn't respected.
>
> I'm only emphasizing this because I think it might actually be news to some people. Society does not permit men to be vocal about their need for respect, so the need is often ignored.

What I've found in speaking to women about this is that all the married and divorced women know about this need that men have. And by and large, they agree with it, too. But that is much rarer among single women, which is why men need to be ready to explain their needs and feelings, and give women opportunities to practice giving men respect, especially when men are trying to practice their male roles.

Let's take a quick look at the Bible, because that's always a good thing to do when you want the truth about these things.

Ephesians 5:22-33:

22 Wives, *be subject* to your own husbands, as to the Lord.

23 For the husband is the head of the wife, as Christ also is the head of the church, He Himself *being* the Savior of the body.

24 But as the church is subject to Christ, so also the wives *ought to be* to their husbands in everything.

25 Husbands, love your wives, just as Christ also loved the church and gave Himself up for her,

26 so that He might sanctify her, having cleansed her by the washing of water with the word,

27 that He might present to Himself the church in all her glory, having no spot or wrinkle or any such thing; but that she would be holy and blameless.

28 So husbands ought also to love their own wives as their own bodies. He who loves his own wife loves himself;

29 for no one ever hated his own flesh, but nourishes and cherishes it, just as Christ also *does* the church,

30 because we are members of His body.

31 For this reason a man shall leave his father and mother and shall be joined to his wife, and the two shall become one flesh. 32 This mystery is great; but I am speaking with reference to Christ and the church.

33 Nevertheless, each individual among you also is to love his own wife even as himself, and the wife must *see to it* that she respects her husband.

Some women get scared by that, but they shouldn't be, because you get to pick your husband, so just pick someone whose leadership you actually respect.

And now for my opinion about this topic.

To start, remember that men are supposed to be good at the following roles:

- protecting (men spot threats to people, truth and goodness and attack we those threats)
- providing (men get STEM degrees, and we save money so we can share with others)
- moral leader (men read books to know how to make a secular case for pro-life and pro-marriage)
- spiritual leader (men read books to know how to use secular evidence to defend their faith)

If a woman sees a man – any man – working away at these tasks, that's the time to practice respecting him.

Here are some practical ideas on how to show a man respect, grouped in two sections.

**Respect specific to the man's core beliefs and life plan**

- Find out what goals he is trying to achieve
- Find out what steps he has taken already
- Find out what steps he plans to take
- Find out what obstacles are in his way
- Tell your friends and family about what he is doing
- Independently read books, watch lectures, etc. to learn about the problem area
- Independently solve problems related to his goal in your own life, and tell him about it
- Monitor his progress and supply encouragement and rewards appropriately
- Take care of peripheral tasks so he can concentrate on his main focus
- Attend a training event or conference related to the problem he is trying to solve
- Arrange a training event or conference related to the problem he is trying to solve at the church or university
- Invite friends over, and try to show them something related to what he cares about to get a discussion started

**Respect for men in general**

- Let him solve problems, especially through his male talents: providing, protecting, leading
- When you are in public, talk about what he is trying to achieve
- When you are in public, talk about what you are doing to help him to other people
- Learn to do the "wind-down" activities that he likes, and do it with him
- Try to do co-operative activities with him
- Explain how you feel about something that you need him to do, before and after he does it
- Explain the mechanics of tasks you do that are difficult (he will buy you something to make it easier)
- Try to learn about things that men like so you can talk to them about those things (e.g. – politics, theology, etc.)
- Give him time to achieve things at work if he needs to do that
- Be frugal with money (men feel really disrespected if their money is wasted)
- Try to read stories about ordinary men, police, soldiers being brave, so you understand why men sometimes use force (and guns) in order to defeat evil and protect others

If you're married now, then you can just tailor this list by talking to your husband. It might be hard because men typically 1) can't express their feelings, and 2) can't recommend solutions. Some of that problem can be fixed by being very careful not to do or say anything that will make the man think that he will be hurt by you if he confesses his feelings and needs. That is a nightmare for a man. Ask whether your husband feels respected, and ask for specific things you can do to make him feel respected. I always recommend that the first step be to investigate what he does that you don't do, and find out the mechanics of it. Finding out opens opportunities to help.

If you are single now, and don't even know any good men, you can still respect good men by making decisions now to study things that are helpful to good men. Instead of studying radicalized subject areas in school like social work and English, study a useful STEM field, like nursing or engineering or chemistry or economics, etc. Having to deal with difficult, math-oriented subjects is very good for anyone's character, because it prepares you for the real difficulty of life, so you can be disciplined, detail-oriented and outward-focused. Non-STEM fields don't pay much because they are not hard. Studying something hard in school helps a woman to become accustomed to having to work hard, and helps her to critical of politicians who promise goodies to people on the backs of private-sector workers.

In addition, women ought to prefer to get a private sector job in a STEM field or business field, if possible. Or better yet run her own business in a STEM field. That will help her to really be understanding and sympathetic to what men are facing in the workplace. If a woman understands the difficulty of what a man does by having done it herself, it makes a man feel respected.

# Four ways that the progress of science conflicts with naturalistic speculations

**Wintery Knight** · 24 February 2014 · Archived copy · Original

When people ask me whether the progress of science is more compatible with theism or atheism, I offer the following four basic pieces of scientific evidence that are more compatible with theism than atheism.

Here are the four pieces of evidence best explained by a Creator/Designer:

1. the kalam argument from the origin of the universe
2. the cosmic fine-tuning (habitability) argument
3. the biological information in the first replicator (origin of life)
4. the sudden origin of all of the different body plans in the fossil record (Cambrian explosion)

And I point to specific examples of recent discoveries that confirm those four arguments. Here are just a few of them:

1. An explanation of 3 of the 6 experimental evidences for the Big Bang cosmology (From an article from Caltech)
2. Examples of cosmic fine-tuning to allow the existence of conscious, embodied life (From the New Scientist)
3. Evidence that functional protein sequences are beyond the reach of chance, (from Doug Axe's JMB article)
4. Evidence showing that Ediacaran fauna are not precursors to the Cambrian fossils, (from the journal Nature)

Atheists will typically reply to the recent scientific discoveries that overturned their speculations like this:

1. Maybe the Big Bang cosmology will be overturned by the Big Crunch/Bounce so that the universe is eternal and has no cause
2. Maybe there is a multiverse: an infinite number of unobservable, untestable universes which makes our finely-tuned one more probable
3. Maybe the origin of life could be the result of chance and natural processes
4. Maybe we will find a seamless chain of fossils that explain how the Cambrian explosion occurred slowly, over a long period time

Ever heard any of these responses?

Below I list some resources to help you to respond to the four responses of atheists to the experimental data.

**1) The Big Crunch/Bounce has been disproved theoretically and experimentally.**

Theoretically:

> Nature 302, 505 – 506 (07 April 1983); doi:10.1038/302505a0
>
> The impossibility of a bouncing universe
>
> ALAN H. GUTH* & MARC SHER†
>
> *Center for Theoretical Physics, Laboratory for Nuclear Science and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139, USA
>
> †Department of Physics, University of California, Irvine, California 92717, USA
>
> Petrosian1 has recently discussed the possibility that the restoration of symmetry at grand unification in a closed contracting Robertson–Walker universe could slow down and halt the contraction, causing the universe to bounce. He then went on to discuss the possibility that our universe has undergone a series of such bounces.

> We disagree with this analysis. One of us (M.S.) has already shown2 that if a contracting universe is dominated by radiation, then a bounce is impossible. We will show here two further results: (1) entropy considerations imply that the quantity S (defined in ref. 1 and below), which must decrease by ~1075 to allow the present Universe to bounce, can in fact decrease by no more than a factor of ~2; (2) if the true vacuum state has zero energy density, then a universe which is contracting in its low temperature phase can never complete a phase transition soon enough to cause a bounce.

Experimentally:

> The universe is not only expanding, but that expansion appears to be speeding up. And as if that discovery alone weren't strange enough, it implies that most of the energy in the cosmos is contained in empty space — a concept that Albert Einstein considered but discarded as his "biggest blunder." The new findings have been recognized as 1998's top scientific breakthrough by Science magazine.
>
> […]The flood of findings about the universe's expansion rate is the result of about 10 years of study, said Saul Perlmutter, team leader of the Supernova Cosmology Project at Lawrence Berkeley National Laboratory.
>
> Perlmutter and others found such a yardstick in a particular kind of exploding star known as a Type 1A supernova. Over the course of several years, the astronomers developed a model to predict how bright such a supernova would appear at any given distance. Astronomers recorded dozens of Type 1A supernovae and anxiously matched them up with redshifts to find out how much the universe's expansion was slowing down.
>
> To their surprise, the redshift readings indicated that the expansion rate for distant supernovae was lower than the expansion rate for closer supernovae, Perlmutter said. On the largest scale imaginable, the universe's galaxies appear to be flying away from each other faster and faster as time goes on.
>
> "What we have found is that there is a 'dark force' that permeates the universe and that has overcome the force of gravity," said Nicholas Suntzeff of the Cerro Tololo Inter-American Observatory, who is the co-founder of another group called the High-z Supernova Search Team. "This result is so strange and unexpected that it perhaps is only believable because two independent international groups have found the same effect in their data."

There has only been one creation of the universe, and the universe will never reverse its expansion, so that it could oscillate eternally. That view is popular, perhaps in part because many people watched videos of Carl Sagan speculating about it in public school classrooms, but all it was was idle naturalistic speculation, (Sagan was a naturalist, and held out hope that science would vindicate naturalism), and has been contradicted by good experimental science. You should be familiar with the 3 evidences for the Big Bang (redshift, light element abundances (helium/hydrogen) and the cosmic microwave background radiation. There are others, (radioactive element abundances, second law of thermodynamics, stellar lifecycle), but those are the big three. Point out how the experimental evidence for the Big Bang has piled up, making the problem even worse for the eternal-universe naturalists.

**2) The multiverse has not been tested experimentally, it's pure speculation.**

Speculation:

> Multiverse thinking or the belief in the existence of parallel universes is more philosophy or science fiction than science. "Cosmology must seem odd to scientists in other fields".
>
> George Ellis, a well-known mathematician and cosmologist, who for instance has written a book with Stephen Hawking, is sceptical of the idea that our universe is just another universe among many others.
>
> A few weeks ago, Ellis, professor emeritus of applied mathematics at the University of Cape Town, reviewed Brian Greene's book The Hidden Reality: Parallel Universes and the Deep Laws of the Cosmos (Knopf/Allen

> Lane, 2011) in the journal Nature. He is not at all convinced that the multiverse hypothesis is credible: ”Greene is not presenting aspects of a known reality; he is telling of unproven theoretical possibilities.”
>
> According to professor Ellis, there is no evidence of multiverses, they cannot be tested and they are not science.
>
> Ellis is not the only multiverse sceptic in this universe. A few months ago, science writer John Horgan wrote a column in Scientific American, expressing his doubt in multiverses.

When you get into a debate, you must never ever let the other side get away with asserting something they have no evidence for. Call them on it – point out that they have no evidence, and then hammer them with evidence for your point. Pile up cases of fine-tuning on top of each other and continuously point out that they have no experimental evidence for their speculations. Point out that more evidence we get, the more cases of fine-tuning we find, and the tougher the problem gets for naturalists. There is no evidence for a multiverse, but there is evidence for fine-tuning. TONS OF IT.

**3) Naturalistic theories for the origin of life have two problems: can’t make the amino acids in an oxydized atmosphere and can’t make protein and DNA sequences by chance in the time available.**

Building blocks:

> The oxidation state of Hadean magmas and implications for early Earth’s atmosphere
>
> Dustin Trail, E. Bruce Watson & Nicholas D. Tailby
>
> Nature 480, 79–82 (01 December 2011) doi:10.1038/nature10655
>
> […]These results suggest that outgassing of Earth’s interior later than ~200?Myr into the history of Solar System formation would not have resulted in a reducing atmosphere.

Functional protein sequences:

> J Mol Biol. 2004 Aug 27;341(5):1295-315.
>
> Estimating the prevalence of protein sequences adopting functional enzyme folds.
>
> Axe DD.
>
> The Babraham Institute, Structural Biology Unit, Babraham Research Campus, Cambridge CB2 4AT, UK. doug.axe@bbsrc.ac.uk
>
> Proteins employ a wide variety of folds to perform their biological functions. How are these folds first acquired? An important step toward answering this is to obtain an estimate of the overall prevalence of sequences adopting functional folds.
>
> […]Starting with a weakly functional sequence carrying this signature, clusters of ten side-chains within the fold are replaced randomly, within the boundaries of the signature, and tested for function. The prevalence of low-level function in four such experiments indicates that roughly one in 10(64) signature-consistent sequences forms a working domain. Combined with the estimated prevalence of plausible hydropathic patterns (for any fold) and of relevant folds for particular functions, this implies the overall prevalence of sequences performing a specific function by any domain-sized fold may be as low as 1 in 10(77), adding to the body of evidence that functional folds require highly extraordinary sequences.

So atheists are in double jeopardy here. They don’t have a way to build the Scrabble letters needed for life, and they don’t have a way to form the Scrabble letters into meaningful words and sentences. Point out that the more research we do, the tougher the problem gets to solve for naturalists, and the more it looks like an effect of intelligence. Write out the calculations for them.

**4) The best candidate to explain the sudden origin of the Cambrian era fossils was the Ediacaran fauna, but those are now recognized as not being precursors to the Cambrian fossils.**

Science Daily reports on a paper from the peer-reviewed journal Science:

> Evidence of the single-celled ancestors of animals, dating from the interval in Earth's history just before multicellular animals appeared, has been discovered in 570 million-year-old rocks from South China by researchers from the University of Bristol, the Swedish Museum of Natural History, the Paul Scherrer Institut and the Chinese Academy of Geological Sciences.
>
> […]This X-ray microscopy revealed that the fossils had features that multicellular embryos do not, and this led the researchers to the conclusion that the fossils were neither animals nor embryos but rather the reproductive spore bodies of single-celled ancestors of animals.
>
> Professor Philip Donoghue said: "We were very surprised by our results — we've been convinced for so long that these fossils represented the embryos of the earliest animals — much of what has been written about the fossils for the last ten years is flat wrong. Our colleagues are not going to like the result."
>
> Professor Stefan Bengtson said: "These fossils force us to rethink our ideas of how animals learned to make large bodies out of cells."

The trend is that there is no evolutionary explanation for the body plans that emerged in the Cambrian era. If you want to make the claim that "evolution did it", then you have to produce the data *today*. Not speculations about the future. The data we have today says no to naturalism. The only way to affirm naturalistic explanations for the evidence we have is *by faith*. But rational people know that we need to minimize our leaps of faith, and go with the simplest and most reasonable explanation – an intelligence is the best explanation responsible for rapid generation of biological information.

**Conclusion**

I do think it's important for Christians to focus more on scientific apologetics and to focus their academic careers in scientific fields. So often I look at Christian blogs, and I see way too much G. K. Chesterton, Francis Chan and other untestable, ineffective jibber-jabber. We need to bring the *hard* science, and stop making excuses about not being able to understand it because it's too hard. It's not too hard. Everyone can understand "Who Made God?" by Edgar Andrews – start with that! Then get Lee Strobel's "The Case for a Creator". That's more than enough for the average Christian on science apologetics. We all have to do our best to learn what works. You don't want to be anti-science and pro-speculation like atheists are. I recommend reading Uncommon Descent and Evolution News every day for a start.

# Obama administration report: 65% of small firms face Obamacare premium hikes

**Wintery Knight** · 25 February 2014 · Archived copy · Original

From Investors Business Daily.

Excerpt:

> Released into a news black hole last Friday, an official Obama administration report finds that ObamaCare will push premiums up for two-thirds of small businesses. Cross off another ObamaCare promise.
>
> The report came from the actuary for the Centers for Medicare and Medicaid Services — which means it's from the administration's official ObamaCare number cruncher.
>
> What it found was that 65% of small businesses that offer insurance will likely see their premiums rise thanks to ObamaCare. That translates into higher insurance costs for 11 million workers.
>
> The reason? These companies generally employ younger, healthier workers and so had been paying lower-than-average rates.
>
> But since ObamaCare bans insurance companies from considering health when setting premiums, these companies will get hit with higher costs.
>
> "We are estimating that 65% of small firms are expected to experience increases in their premium rates," the report said, "while the remaining 35% are anticipated to have rate reductions."
>
> The report doesn't say how big these hikes will be, but we have good reason to believe the extra costs will be significant.
>
> One study, for example, found that 63% of small employers in Wisconsin will see premiums jump 15% because of ObamaCare. A separate study found that 89% of small companies in Maine would see rate hikes of 12% on average.
>
> Another, by consulting firm Oliver Wyman, concluded that ObamaCare would push up small group premiums nationwide 20%.

Is this how the bill was sold to us by the Obama administration and their supporters in the mainstream media?

No:

> In 2009, Obama promised small businesses that his plan would "make the coverage that you're currently providing more affordable." Later he said it would drive small-business premiums down by 4% in its first year, and as much as 25% by 2016.
>
> As recently as last summer, Pelosi was proclaiming that "if you're a small business … it lowers costs," while Waxman said the law would make "high-quality healthy insurance more affordable and more widely available for small businesses."
>
> Notice that nowhere — either before or after ObamaCare passed — did any Democrat say anything about two-thirds of small businesses paying more for health coverage so the lucky one-third could get rate cuts.

Next time you hear a big government liberal promising you goodies at no cost, keep in mind their record. They are making policy from emotions, not from mathematics. They believe that they are lying to you for your own good. Their goal is not to tell the truth at all. And don't rely on the left-wing journalism crowd to hold them accountable, they flunked math too.

# Should you marry someone who promises you that “there will be no divorce”?

**Wintery Knight** · 25 February 2014 · Archived copy · Original

I was having a chat with a friend of mine who just got out of a serious relationship and I was trying to pick his brain to find out everything about the woman he was intending to marry so I could see why things went wrong. He told me that she had told him over and over that “there would be no divorce” and that he found that very convincing, despite very obvious warning signs in the area of respect (which I wrote about yesterday).

Well. I was very surprised to hear this, and so I asked him whether he thought it was enough that this woman told him that “three will be no divorce”. He said yes. This woman had experienced the divorce of her own parents and she was resolved (by act of will) never to let that happen to her. He found that acceptable, but I didn’t because I know the numbers on this, and I know that children of divorced parents are more likely to divorce themselves. So the pain of divorce is no deterrent here.

So should we believe that people can avoid a divorce just by saying they will? I told him no. And for an example, I offered a thought experiment. I said to imagine two runners on a track who are charged with completing 10 laps. One runner is a Navy SEAL like Mike Murphy, who has been trained to run miles and miles carrying a 60 pound load. In the mountains. The other is a 300-lb couch potato whose idea of exercise is reaching for the TV remote control. Suppose I ask both runners: do you intend to finish the 10 laps? Should I believe them if they both say yes?

Look, marriage is like building a house. People can say whatever they want about their prospects for success, but the will doesn’t decide here. You have to certain skills, you have to have a certain amount of money, you have to have a plan, you have to be able to read blueprints, you have to be able to hire specialists, you understand the differences between materials, etc. When you think about it, no long-term enterprise can be accomplished by act of will. Piano recitals, math exams, investing for retirement… nothing can be done by sheer act of will.

Now with that being said, let’s take a look at an example.

**An example**

I found this article in the Wall Street Journal way back in 2011, but it fits my conversation with my friend.

The author, Susan Gregory Thomas, lists some of the mistakes she made that led her to get a divorce in her first marriage.

This is the first thing I saw that caught my eye:

> “Whatever happens, we’re never going to get divorced.” Over the course of 16 years, I said that often to my husband, especially after our children were born.

So she is trying to express an intention here, repeatedly, to her husband. I think the point here is that she did have good intentions but as we shall see that was not enough to prevent the divorce. That’s a warning to others that good intentions are not enough.

Here is the second thing:

> I believed that I had married my best friend as fervently as I believed that I’d never get divorced. No marital scenario, I told myself, could become so bleak or hopeless as to compel me to embed my children in the torture of a split family. And I wasn’t the only one with strong personal reasons to make this commitment.

I noticed that a lot of people seem to think that being compatible is very important to marriage. But I don’t think that it is the most important thing. For example, you would not expect two cocaine addicts or two gambling addicts,

etc. to have a stable marriage. I think marriage is more like a job interview where there are specific things that each person has to be able to do in order to make it work. So again, she's giving a warning to others that compatibility is not a guarantee of marriage success.

And there's more:

> My husband and I were as obvious as points on a graph in a Generation X marriage study. We were together for nearly eight years before we got married, and even though statistics show that divorce rates are 48% higher for those who have lived together previously, we paid no heed.
>
> We also paid no heed to his Catholic parents, who comprised one of the rare reassuringly unified couples I'd ever met, when they warned us that we should wait until we were married to live together. As they put it, being pals and roommates is different from being husband and wife. How bizarrely old-fashioned and sexist! We didn't need anything so naïve or retro as "marriage." Please. We were best friends.
>
> Sociologists, anthropologists and other cultural observers tell us that members of Generation X are more emotionally invested in our spouses than previous generations were. We are best friends; our marriages are genuine partnerships. Many studies have found that Generation X family men help around the house a good deal more than their forefathers. We depend on each other and work together.

So here I am seeing that she rejected sex roles, parental advice, or the moral guidelines of Christianity. Again, she is discussing some of the factors that I at least think contribute to divorce. I think that she is right to highlight the fact that she was wrong to disregard the statistics on cohabitation.

So here are some of the mistakes:

- reject advice from parents
- avoid chastity
- cohabitate for EIGHT YEARS
- embrace feminism, reject complementarian sex roles
- thinking that good intentions would overcome every challenge

So, what does the research show works to have a stable marriage?

- chastity
- rejection of feminism
- regular church attendance
- parental involvement in the courting
- parents of both spouses married
- no previous divorces

Guess what? You can't break all the rules and still succeed by sheer force of will. If you break all the rules like that woman in the story, you can't have a working marriage. Not without repudiating everything you believed, and taking steps to undo all the damage from everything you've done. You can't keep all the bad beliefs and bad habits you've built up and marry them to a marriage that will stand the test of time.

A good marriage is an enterprise, and it requires that your character be changed to fit the requirements. There is no way to short-circuit the preparation / selection processes by act of will. And just because your friends are getting married, that's no reason for you to rush into it unprepared. The best way to prepare for marriage is pick people of the opposite sex and practice marriage behaviors (e.g. – listening, helping) with them – even with people you don't intend to marry. Take an interest in their lives and practice denying yourself to help them with their problems. That's better than making idle promises you're not able to keep. And this works the same for men and for women.

Both people need to get this right.

# What is the Arizona religious liberty law really about?

**Wintery Knight** · 26 February 2014 · Archived copy · Original

National Review explains what the proposed law is designed to do.

Excerpt:

> In response to a number of lawsuits in which such providers of wedding-related services as bakers and photographers have been threatened with conscription into participating in same-sex ceremonies to which they object on religious grounds, Arizona's state legislature has adopted a law under which businesses that decline to provide such services will enjoy protection.
>
> It is perhaps unfortunate that it has come to this, but organized homosexuality, a phenomenon that is more about progressive pieties than gay rights per se, remains on the permanent offensive in the culture wars. Live-and-let-live is a creed that the gay lobby specifically rejects: The owner of the Masterpiece Cakeshop in Colorado was threatened with a year in jail for declining to bake a cake for a same-sex wedding. New Mexico photographer Elaine Huguenin was similarly threatened for declining to photograph a same-sex wedding. **It is worth noting that neither the baker nor the photographer categorically refuses services to homosexuals; birthday cakes and portrait photography were both on the menu. The business owners specifically objected to participating in a civic/religious ceremony that violated their own consciences.**
>
> And the so-called liberals answer: "To hell with your consciences."
>
> In T. H. White's *The Once and Future King*, the nature of totalitarianism is captured in the motto "Everything not forbidden is compulsory." Gay marriage has made the sprint from forbidden to compulsory in record time; the day before yesterday, a homosexual marriage was a legal impossibility — and today it is a crime to sit one out.
>
> Gay Americans, like many members of minority groups, are poorly served by their self-styled leadership. Like feminists and union bosses, the leaders of the nation's gay organizations suffer from oppression envy, likening their situation to that of black Americans — as though having to find a gay-friendly wedding planner (pro tip: try swinging a dead cat) were the moral equivalent of having spent centuries in slavery and systematic oppression under Jim Crow. Their goal is not toleration or even equal rights but official victim-group status under law and in civil society, allowing them to use the courts and other means of official coercion to impose their own values upon those who hold different values.
>
> Which is to say, what is regrettable here is not Arizona's law but the machinations that have made it necessary. It seems unlikely that those religious bakers and photographers were chosen at random, or that their antagonists will stop until such diversity of opinion as exists about the subject of gay marriage has been put under legal discipline.

That's a very short and sweet explanation of the law, and what led up to it.

On the one hand, we have a citizen who is *offended* at being refused a product or a service. The remedy is for them to go next door and get the product or service from someone else. Is that hard? On the other side of the case are Christians with a Constitutional right to religious liberty. Apparently, it is now OK for people to trample on Constitutional rights if they feel offended and have to go next door for something they want.

Look at it another way. Whose is forcing their values on whom? If the gay couple has to leave the store and go somewhere else, are they being forced by the state through trials and punishments to accept the traditional definition of marriage? Hell no. But Christians who are dragged in front of courts, forced to pay legal fees for both parties, forced to apologize, force to pay fines, and forced to participate in something they oppose *are* having someone else's views forced on them. It used to be that the gay activists talked about tolerance. Where is their

tolerance now? Where is their rainbow of diversity now? It's very important to understand that the people on the gay rights side do not recognize Constitutional rights, and they are not tolerant of other people's views. And they are willing to use the power of the government to force people to celebrate their sexuality.

# Coalition of African American Pastors: impeach Attorney General Holder

**Wintery Knight** · 26 February 2014 · Archived copy · Original

First, let's see what Eric Holder is doing with respect to gay marriage.

CNS News explains.

Excerpt:

> State attorneys-general who refuse to defend state laws banning same-sex marriage won't face any objection from the nation's top law enforcement official. In fact, Attorney General Eric Holder will applaud them.
>
> According to Holder, "decisions at any level not to defend individual laws must be exceedingly rare. They must be reserved only for exceptional – truly exceptional – circumstances.'
>
> He said that state laws banning same-sex marriage rise to that "truly exceptional" standard — because they do not "advance the values that once led our forebears to declare unequivocally that all are created equal and entitled to equal opportunity."
>
> Holder told a gathering of state attorneys-general at the Justice Department that they are sworn, not just to win cases, "but to see that justice is done" and to "seize the opportunities that are before us."
>
> The legal system exists, he said, not just to settle disputes and punish wrong-doers, "but to answer the really fundamental questions about fairness and about equality that have always determined who we are and who we aspire to be, both as a nation and as a people."
>
> Holder explained that those "really fundamental questions' prompted him and President Obama to decide in early 2011 that Justice Department attorneys would no longer defend the constitutionality of the federal Defense of Marriage Act.
>
> Holder said he and Obama were "motivated by the strong belief that all measures that distinguish among people based on their sexual orientation must be subjected to a heightened standard of scrutiny…and therefore this measure (DOMA) was unconstitutional discrimination."

But a group of black pastors are not taking this lying down.

CNS News explains.

Excerpt:

> A coalition of black pastors announced on Tuesday at the National Press Club in Washington, D.C. that they are launching a campaign to gather one million signatures on a petition calling for the impeachment of Attorney General Eric Holder for violating his oath of office by trying "to coerce states to fall in line with the same-sex 'marriage' agenda."
>
> "President Obama and Attorney General Eric Holder have turned their backs on the values the American people hold dear, values particularly cherished in the black community: values like marriage, which should be strengthened and promoted, rather than weakened and undermined," says a statement by the Coalition of African American Pastors that has been posted online with their impeachment petition.
>
> "Our nation calls for the building up of a healthier marriage culture; instead, our elected leaders are bent on destroying marriage, remaking it as a genderless institution and reorienting it to be all about the desires of adults rather than the needs of children," says the coalition.
>
> "In pursuing this intention, the president and his administration are trampling the rule of law. Attorney General Holder in particular has used the influence of his office and role as the chief law enforcement figure in our

> nation to try to coerce states to fall in line with the same-sex 'marriage' agenda," says the coaltion. Millions of voters in 30 states have voted to defend marriage as the union of one man and one woman, but Attorney General Holder is attempting single-handedly to throw those votes away!
>
> "For abandoning the oath he swore in taking office and his duty to defend the common good, Attorney General Holder should be impeached by Congress," says the coalition. "CAAP is calling on all men and women of good will to sign the following petition urging Congress to take action against the Attorney General's lawlessness today!"

I am happy this sort of bold leadership from black pastors. Although 94% of black Protestants voted for Obama in 2008, and thus for gay marriage, at least there is a remnant of courageous black Protestant leaders who are still under the authority of the Bible. It makes me wonder why their defense of traditional marriage is not shared by 94% of their flocks – at least in the ballot box (where it counts). There must be some huge gulf between Protestant leaders and the laity.

# Marco Rubio's speech exposing the horrors of socialism in Cuba and Venezuela

**Wintery Knight** · 26 February 2014 · Archived copy · Original

Here's an article from the Miami Herald about a recent 15-minute speech by Republican Senator Marco Rubio.

Excerpt:

> The U.S. senator from Florida had listened patiently to Sen. Tom Harkin of Iowa speak favorably about his recent trip to Cuba, all the while omitting any real references to the oppression of the totalitarian government there.
>
> To Rubio, like many Cuban exiles and their descendants, it was too much to bear.
>
> "Let me tell you what the Cubans are really good at," Rubio said Monday when he took to the Senate floor. "What they are really good at is repression … They have exported repression in real time, in our hemisphere, right now."
>
> […]For 14 minutes and 16 seconds, Rubio gave the best oration of his political career, speaking largely off the top of his head and with only the barest of notes. Rubio sometimes dripped with sarcasm or simmered with indignation as he made the case to Congress that the United States needs to continue Cuba sanctions and punish Venezuela.

That's what the speech was about.

Here are some of the details from the speech:

> As an aide flipped through over-sized photos of Venezuelan protests, Rubio ticked off the struggles of living in the country, the horrors of its citizens dying and being jailed at the hands of its government.
>
> "This gentleman here is the former mayor of a municipality in Caracas. His name is Leopoldo Lopez," Rubio said. "And this is the National Guard of Venezuela pulling him into an armored truck last week. You know why? Because he's protesting against the government."
>
> Then came the next photograph, a picture of a young woman being driven off on a motorcycle.
>
> "This is Genesis Carmona," Rubio said. "They shot her in the head. She died last week."
>
> Rubio continued: "Let me show you the next slide. Here's a demonstrator detained by police. Look how they drag him through the streets. This is in Caracas, Venezuela."
>
> Rubio also took issue with a recent survey, cited by Harkin, that indicated a thaw in American and Floridian perceptions of relations with Cuba.
>
> "He cited a poll, 'More Americans want normal relations with Cuba.' So do I — a democratic and free Cuba," Rubio said.
>
> "But you want us to reach out and develop friendly relationships with a serial violator of human rights, who supports what's going on in Venezuela and every other atrocity on the planet? On issue after issue, they are always on the side of the tyrants. Look it up," Rubio said. "And this is who we should be opening up to? Why don't they change? Why doesn't the Cuban government change? Why doesn't the Venezuelan government change?"
>
> Rubio said that, just as the United States has sanctions against North Korea and Syria — allies of Cuba — it should keep pressuring the governments in Havana and Caracas.
>
> And he disagreed with the notion that the embargo hurts the Cuban people. Instead, he said, it's the totalitarian-socialist government that's to blame for problems in Cuba — As well as in "oil-rich" Venezuela.

> “We don’t have an embargo against Venezuela,” he said. “They have a shortage of toilet paper and tooth paste. Why? Because they are incompetent. Because communism doesn’t work. They look more and more like Cuba economically and politically every single day.”
>
> Rubio repeated that last line elsewhere in his speech:
>
> “They look more and more like Cuba economically and politically every single day. What’s the first thing the Venezuelan government did when these broke out? They shut off access to Twitter and Facebook and the Internet. They ran CNN out of there. They closed down the only Colombian station. Years before, they had closed down all the independent media outlets that criticized the government.
>
> “Where did they learn that from? From Cuba. And yet we have to listen to what a paradise Cuba is.”

I am not a fan of Marco Rubio anymore as a candidate for VP or President, nor am I a fan of Paul Ryan. Both have made mistakes that rule them out as conservatives. However, this speech should be seen by all, especially by Americans who do not appreciate how different like is in countries that are further along the socialist road to serfdom. But we’re getting there.

# What should gay activists do instead of using government to force their morality on Christians?

**Wintery Knight** · 27 February 2014 · Archived copy · Original

Here's an excellent post from Michael Graham, a talk show host in New England, of all places.

Excerpt:

> I know, I know—Arizona's "Religious Freedom Restoration Act" is the greatest act of human evil since Pol Pot's killing fields. So even suggesting that maybe—just *maybe*—the Arizona legislature has a point puts me on the same side of history as Hitler, Stalin and Robin Thicke.
>
> But indulge me for a moment and consider how this would actually work:
>
> A guy is at his print shop in Tempe. In walks a customer (good) who wants to give him money (even better!) to print thousands of fliers for the upcoming LGBTQ "Whip And Chain Exchange" at a local sex shop.
>
> The printer—who has bills to pay—obviously wants to say "yes." The reason EVERY business owner opens a business is to say "yes."
>
> But the guy is also serious about his religious beliefs. He sincerely believes that his faith is the most important aspect of his life. So he opened a business to care for his family, but he goes to church/synagogue/mosque because he needs to care his soul.
>
> So he says "Uh, I appreciate the business but I'm really not comfortable being part of this event you're having. Would you mind asking another printer? I'll even recommend a few…"
>
> Now, at this point what do you think should happen? Forget the law—what is the right thing for the parties involved to do?
>
> To me the answer seems obvious: the LGBT folks should roll their eyes and say "whatever, man" and take their money somewhere else. I wouldn't mind if they said something snarky like "Dude—it's your loss," or "Can we leave you a copy in case you'd like a free spanking?"
>
> Their integrity is in place. So is the religiously-devout business owner's. Why isn't that the ideal outcome?
>
> Oh, that's right—because nobody gets to scream "I'm a victim! I'm a victim!" And nobody gets to bully the person of faith.
>
> And so instead what liberals and gay activists want is for the religiously devout printer, or baker, or wedding-band singer to be forced to participate—at gunpoint—in an event that violates their religious beliefs.
>
> They want government agents to show up at the print shop or florist shop and order the owner to get to work. Force them to supply their labor for an event.
>
> Seriously? That's really what you want? Because if you do—that's sick.
>
> Why do you care so much that some small business owner doesn't support same-sex marriage? Why isn't the jerk in this story the gay activist who doesn't do what any decent straight/gay/bi/animal-friendly person would do and just take their business somewhere else?

The whole thing is worth reading. You might recognize Michael Graham as the interviewer on the Weekly Standard podcasts, which I highly recommend. The Weekly Standard itself posted an article on Wednesday that mentioned a letter to Governor Jan Brewer signed by 11 law professors who urged Brewer to *read the bill* and to see that the purpose of the bill was to protect Christians from having to participate closely in activities that were incompatible with their religious beliefs. The lawyers claimed that popular criticisms of the bill were "deeply misleading" and the bill was "egregiously misrepresented" by critics.

By the way, I noted that the National Football League and Major League Baseball were both opposed to the Arizona bill. Apple and American Airlines also opposed religious liberty. Please spend your money wisely. I never give these companies my money, and neither should you – if you can help it. Apple in particular is one of the most anti-Christian companies out there.

# Boko Haram Muslims murder 59 unarmed Christian students in Nigeria

**Wintery Knight** · 27 February 2014 · Archived copy · Original

I did a search for this story, but the mainstream media stories from sources like the UK Guardian neglected to mention that the victims were Christians. But I finally found one that mentioned that the victims were Christians, in an Israeli news site called Arutz Sheva.

Excerpt:

> Islamist terrorists murdered 59 middle school students in a pre-dawn attack Tuesday on a northeast Nigerian boarding school, authorities said.
>
> The terrorists, thought to be from barbaric Islamist organization Boko Haram, set a locked hostel on fire, before shooting and slitting the throats of those who tried to climb out the windows. Some were burned alive, as most of the school was burned to the ground.
>
> The attackers also reportedly hurled explosives into student residential buildings, sprayed gunfire into rooms and hacked a number students to death.
>
> "Some of the students' bodies were burned to ashes," police commissioner Sanusi Rufai said of the attack on the federal government college of Buni Yadi, a secondary school in Yobe state, near the state's capital city of Damaturu.
>
> Bala Ajiya, an official at the Specialist Hospital Damaturu, said the death toll, originally set at 29, had risen to 59. "Fresh bodies have been brought in. More bodies were discovered in the bush after the students who had escaped with bullet wounds died from their injuries," he said.
>
> A senior medical source at the Sani Abacha Specialist Hospital in Yobe's capital Damaturu said the gunmen only targeted male students – all teenage boys – and that female students were spared. Teachers at the school said the gunmen gathered the female students together before telling them to go away and get married, and to abandon their education.
>
> Tuesday's attack brings the toll from killings blamed on Boko Haram to more than 300 this month alone.
>
> […]The name Boko Haram means "Western education is sin." The group aims is to replace Nigeria's political leadership and establish a new state under Islamic sharia law.

The article also listed some other recent attacks:

> In January, Islamist terrorists used explosives and heavy guns in an atrocious double-pronged attack that killed at least 100 civilians in Nigeria's northeast on Sunday. One attack took place in the village of Kawuri in Borno state, and the other targeted worshippers during a Christian church service in Adamawa state.
>
> Last September, 40 students were killed at an agricultural college during another night-time raid. massacring at least 50 students, in the latest attack by Islamist terrorists in the region.
>
> Boko Haram has also reportedly been kidnapping Christian women from rural areas and forcing them to convert under threats of death. The women are then kept as slaves and child brides – and forced to help the terrorists kill innocent Nigerians.

Other than that, only UPI.com mentioned that Boko Haram normally targets Christian schools and churches:

> Boko Haram is a militant Islamic group that has a history of committing violent attacks on Christian schools and churches in Nigeria.

I was listening to Hugh Hewitt on Monday or Tuesday night and he was asking some journalist from Mediaite why the mainstream media was ignoring this story. The journalist never answered. But I think the reason is obvious. Journalists are opposed to the Christian positions on social issues, because it cramps their pursuit of pleasure. So they would never portray Christians as victims, lest the public at large begin to have sympathy for Christianity. Christians always have to be portrayed as the villains by the mainstream media, in much the same way that Jews were in Nazi Germany.

For more on the activities of Boko Haram in Nigeria, click here for a good article from Baptist Press.

# Was Stalin an atheist? Is atheism or communism responsible for mass murders?

**Wintery Knight** · 27 February 2014 · Archived copy · Original

Let's take a look at what Josef Stalin did during his rule of Russia in the 1920s and 1930s.

The Library of Congress offers this in their "Soviet Archives exhibit":

> The Soviet Union was the first state to have as an ideological objective the elimination of religion. Toward that end, the Communist regime confiscated church property, ridiculed religion, harassed believers, and propagated atheism in the schools. Actions toward particular religions, however, were determined by State interests, and most organized religions were never outlawed.
>
> The main target of the anti-religious campaign in the 1920s and 1930s was the Russian Orthodox Church, which had the largest number of faithful. Nearly all of its clergy, and many of its believers, were shot or sent to labor camps. Theological schools were closed, and church publications were prohibited. By 1939 only about 500 of over 50,000 churches remained open.

Let's see more from a peer-reviewed journal article authored by Crispin Paine of the University College, London:

> Atheist propaganda and the struggle against religion began immediately after the Bolsheviks seized power in 1917. While social change would, under Marxist theory, bring religion to disappear, Leninists argued that the Party should actively help to eradicate religion as a vital step in creating 'New Soviet Man'. The energy with which the Party struggled against religion, though, varied considerably from time to time and from place to place, as did its hostility to particular faith groups. The 1920s saw the closure of innumerable churches and synagogues (and to a lesser extent mosques) and the active persecution of clergy and harassment of believers. From 1930, though, Stalin introduced a less aggressive approach, and wartime support for the government earned for the Russian Orthodox Church, at least, a level of toleration which lasted until Stalin's death. Under Khrushchev antireligious efforts resumed, if spasmodically, and they lasted until the end of the Soviet Union.

An article from the pro-communism Marxist.com web site says this about Stalin:

> During the ultra-left period of forcible collectivisation and the Five Year Plan in Four an attempt was made to liquidate the Church and its influence by government decree. Starting in 1929 churches were forcibly closed and priests arrested and exiled all over the Soviet Union. The celebrated Shrine of the Iberian Virgin in Moscow – esteemed by believers to be the "holiest" in all Russia was demolished – Stalin and his Government were not afraid of strengthening religious fanaticism by wounding the feelings of believers as Lenin and Trotsky had been! Religion, they believed, could be liquidated, like the kulak, by a stroke of the pen. The Society of Militant Atheists, under Stalin's orders, issued on May 15th 1932, the "Five Year Plan of Atheism" – by May 1st 1937, such as the "Plan", "not a single house of prayer shall remain in the territory of the USSR, and the very concept of God must be banished from the Soviet Union as a survival of the Middle Ages and an instrument for the oppression of the working masses."!

Now, if all you read were atheist web sites, you'd think that Stalin loved religion and wasn't opposed to Christianity at all. An atheist I know told me that Stalin was a Christian because that's what he was as a child at one point. Funny sort of way to carry out your Christian faith, isn't it? If you read atheist web sites, you'd expect Stalin to have had the career of a William Lane Craig or a J.P. Moreland. And yet in the fever swamp of atheist web sites, this is what they tell themselves. They believe it because they want to believe it. They have to believe it, in order to keep God at bay.

Now, if you were going to pick a hero of the Christian faith, you'd probably pick a real fundamentalist like William Wilberforce, who freed the slaves – because of his evangelical Christian convictions. Wilberforce took Christianity seriously – he believed every verse of the Bible, he tried to convert people to his faith, and he pushed his faith on others by passing laws. He was the worst nightmare of atheism – a politically active Evangelical Christian.

But who is a great atheist who was politically active? When I think of a great atheist, someone who really did the most to oppose the "lie" of God's existence, I think of Josef Stalin. So what kind of morality can we expect from someone who takes the message of Richard Dawkins and Dan Barker seriously and has the political power to really do something about it?

**The Ukraine Famine**

Take a look at this UK Daily Mail article about a great achievement of the atheist Josef Stalin, which occurred in 1932-1933.

Excerpt:

> Now, 75 years after one of the great forgotten crimes of modern times, Stalin's man-made famine of 1932/3, the former Soviet republic of Ukraine is asking the world to classify it as a genocide.
>
> The Ukrainians call it the Holodomor – the Hunger.
>
> Millions starved as Soviet troops and secret policemen raided their villages, stole the harvest and all the food in villagers' homes.
>
> They dropped dead in the streets, lay dying and rotting in their houses, and some women became so desperate for food that they ate their own children.
>
> If they managed to fend off starvation, they were deported and shot in their hundreds of thousands.
>
> So terrible was the famine that Igor Yukhnovsky, director of the Institute of National Memory, the Ukrainian institution researching the Holodomor, believes **as many as nine million may have died.**
>
> […]Between four and five million died in Ukraine, a million died in Kazakhstan and another million in the north Caucasus and the Volga.
>
> By 1933, 5.7 million households – somewhere between ten million and 15 million people – had vanished. They had been deported, shot or died of starvation.

This is what follows when you believe that the universe is an accident, that there is no objective good and evil, that human beings are just animals, that no God will hold us accountable, and that human beings are not made in the image of God for the purpose of freely choosing to come into a relationship with him. The Ukrainian famine is an action that came from a man whose worldview was *passionate atheism.*

**Atheism today**

You might think that today's atheists are much different than Josef Stalin, but understand that according to a recent survey of atheists conducted by atheists, 97% of atheists are pro-abortion. How many people have been killed by abortion? 56 million in the United States alone. Atheists in a society like ours, founded on Judeo-Christian values, are obviously going to live a lot better than Stalin. For one thing, they don't have the power that Stalin had to eradicate theism, although you can see Stalinism in the anti-Christian activities of groups like the Freedom From Religion Foundation. But take away the Judeo-Christian foundations of this society, and what would you see atheists doing?

Remember the words of Richard Dawkins:

> The total amount of suffering per year in the natural world is beyond all decent contemplation. During the minute that it takes me to compose this sentence, thousands of animals are being eaten alive, many others are

> running for their lives, whimpering with fear, others are slowly being devoured from within by rasping parasites, thousands of all kinds are dying of starvation, thirst, and disease. It must be so. If there ever is a time of plenty, this very fact will automatically lead to an increase in the population until the natural state of starvation and misery is restored. In a universe of electrons and selfish genes, blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, nor any justice. **The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil, no good, nothing but pitiless indifference.**
>
> ("God's Utility Function," *Scientific American*, November, 1995, p. 85)

Now, having said that, I readily admit that many atheists adopt Judeo-Christian values if their society is saturated with them, but they are acting better than their worldview requires. They are acting *inconsistently* with what atheism really teaches. It's good for us that they do, but for how long?

# All the Arizone SB 1062 bill did was allow religious liberty to be raised as a defense

**Wintery Knight** · 28 February 2014 · Archived copy · Original

The Weekly Standard posted a letter by a group of law professors from various universities, including Harvard and Stanford, to explain what the Arizona religious liberty bill did. It turns out that all the Arizona bill did was specify how religious liberty protections apply within the state, using a federal standard that was already passed nearly unanimously by Congress during the presidency of *Bill Clinton*.

Here's what the professors said about the Arizona bill:

> The federal government and eighteen states have Religious Freedom Restoration Acts (RFRAs). Another twelve or thirteen states interpret their state constitutions to provide similar protections. These laws enact a uniform standard to be interpreted and applied to individual cases by courts. They say that before the government can burden a person's religious exercise, the government has to show a compelling justification.

> That standard makes sense. We should not punish people for practicing their religions unless we have a very good reason. **Arizona has had a RFRA for nearly fifteen years now; the federal government has had one since 1993; and RFRA's standard was the constitutional standard for the entire country from 1963 to 1990.** There have been relatively few cases; if you knew little about the Arizona RFRA until the current controversy, that is because it has had no disruptive effect in Arizona. Few people had heard of the federal RFRA before the current litigation over contraception and the Affordable Care Act.
>
> **SB1062 would amend the Arizona RFRA to address two ambiguities that have been the subject of litigation under other RFRAs. It would provide that people are covered when state or local government requires them to violate their religion in the conduct of their business, and it would provide that people are covered when sued by a private citizen invoking state or local law to demand that they violate their religion.**
>
> ***But nothing in the amendment would say who wins in either of these cases.*** The person invoking RFRA would still have to prove that he had a sincere religious belief and that state or local government was imposing a substantial burden on his exercise of that religious belief. And the government, or the person on the other side of the lawsuit, could still show that compliance with the law was necessary to serve a compelling government interest. As a business gets bigger and more impersonal, courts will become more skeptical about claims of substantial burden on the owner's exercise of religion. And as a business gets bigger, the government's claim of compelling interest will become stronger.

So basically, businesses have the same religious liberty right as individuals AND individuals can use religious liberty as a defense in a civil suit. That's it. No one is being licensed to discriminate indiscriminately. The bill did not say that the defense could be used in every case, it just said that religious liberty could be used by businesses as a defense (more likely to be accepted by small businesses), and that religious liberty could be used as a defense in civil suits. Whether the defense would be effective would still be decided by the courts.

Even the libertarian Cato Institute's Ilya Shapiro, who favors gay marriage, thought the bill was FINE:

> Even though I'm for marriage equality – next week I'll be filing a brief supporting the challenge to the marriage laws of Oklahoma and Utah in the U.S. Court of Appeals for the Tenth Circuit – I have no problem with Arizona's SB 1062.
>
> SB 1062 does nothing more than align state law with the federal Religious Freedom Restoration Act (which

> passed the House unanimously, the Senate 97-3, and was signed by President Clinton in 1993). That is, no government action can “substantially burden” religious exercise unless the government uses “the least restrictive means” to further a “compelling interest.” This doesn’t mean that people can “do whatever they want” – laws against murder would still trump religious human sacrifice – but it would prevent the government from forcing people to violate their religion if that can at all be avoided. Moreover, there’s no mention of sexual orientation (or any other class or category).
>
> The prototypical scenario that SB 1062 is meant to prevent is the case of the New Mexicowedding photographer who was fined for declining to work a same-sex commitment ceremony. This photographer doesn’t refuse to provide services to gay clients, but felt that she couldn’t participate in the celebration of a gay wedding. There’s also the Oregon bakerythat closed rather than having to provide wedding cakes for same-sex ceremonies. Why should these people be forced to engage in activity that violates their religious beliefs?

That’s a libertarian speaking, there, and they are not social conservatives.

An article tweeted by Ryan T. Anderson from The Federalist asserts that the real lesson of the loss for religious liberty in Arizona is how easily the Republican Party will capitulate to pressure even when the truth is on their side. They just don’t care about religious liberty enough to defend it.

# Greenpeace co-founder Patrick Moore testifies to Congress about global warming

**Wintery Knight** · 28 February 2014 · Archived copy · Original

Investors Business Daily has a story to go with the 5-minute testimony.

Excerpt:

> A Greenpeace co-founder testified in Congress on Tuesday about global warming. What he said is hardly what anyone would expect.
>
> Patrick Moore came off as a raving denier.
>
> "There is no scientific proof that human emissions of carbon dioxide are the dominant cause of the minor warming of the Earth's atmosphere over the past 100 years," said Moore, who was testifying before the Senate Environment and Public Works Committee's Subcommittee on Oversight.
>
> "If there were such a proof, it would be written down for all to see. No actual proof, as it is understood in science, exists."
>
> Moore is somewhat famous for leaving Greenpeace, a large environmentalist organization that grew from a small activist group he belonged to in 1971 while earning his doctorate in ecology. He quit in 1986 because it had become too political and strayed away from the science he believed was its institutional strength.
>
> Moore didn't hold back in his Senate appearance. He quickly zeroed in on the United Nations Intergovernmental Panel on Climate Change and strongly scolded it for claiming there is a "95-100% probability" that man "has been the dominant cause of" global warming. Those numbers, he said, have been invented.
>
> He also characterized the IPCC's reliance on computer models as futile; told senators that history "fundamentally contradicts the certainty that human-caused CO2 emissions are the main cause of global warming"; and noted that "during the Greenhouse Ages," a period that precedes our fossil-fuel burning civilization, "there was no ice on either pole and all the land was tropical and subtropical from pole to pole."
>
> Moore further crossed the line of accepted climate change discourse when he insisted "that a warmer temperature than today's would be far better than a cooler one" and reminded lawmakers "that we are not capable, with our limited knowledge, of predicting which way" temperatures "will go next."

To with that testimony, here's an article from Forbes magazine (Feb 2013) about the real scientific consensus on global warming.

Excerpt:

> Don't look now, but maybe a scientific consensus exists concerning global warming after all. Only 36 percent of geoscientists and engineers believe that humans are creating a global warming crisis, according to a survey reported in the peer-reviewed *Organization Studies*. By contrast, a strong majority of the 1,077 respondents believe that nature is the primary cause of recent global warming and/or that future global warming will not be a very serious problem.
>
> The survey results show geoscientists (also known as earth scientists) and engineers hold similar views as meteorologists. Two recent surveys of meteorologists (summarized here and here) revealed similar skepticism of alarmist global warming claims.
>
> According to the newly published survey of geoscientists and engineers, merely 36 percent of respondents fit the "Comply with Kyoto" model. The scientists in this group "express the strong belief that climate change is happening, that it is not a normal cycle of nature, and humans are the main or central cause."

I have been listening to Hugh Hewitt's radio show a lot in the evenings to keep up with Russian troop movements near Ukraine, because I frankly think that the dictator Putin has been eyeing our defense cuts and licking his chops at our diplomatic weakness. When Putin hears our Secretary of State go out there and declare that a major threat to national security is global warming, that doesn't exactly discourage him from aggression.

It's junk science. It conflicts with observations. It's pushed by scientists to get more grant money. It's pushed by socialists to get more control. Period.

# Apprenticeship programs help boys develop maturity and job skills

**Wintery Knight** · 28 February 2014 · Archived copy · Original

If you have boys, or if you know any, then this article in the left-leaning Atlantic is a must-read for you.

Excerpt:

> Young men are more likely to drop out of high school and are less likely to aspire to college than their female peers. Young men who are poor, live in a city, and are black or Latino are at even higher risk of unemployment and unplanned teen fatherhood than their peers in other demographics. As men's earnings have stagnated, marriage has declined. It's a vicious cycle: Being unmarried weakens men's commitment to the work force, but a stagnation in earnings is contributing to the decline in marriage.
>
> Robert Lerman—an economist at American University and fellow at the Urban Institute, a nonpartisan economic and social policy research center in Washington, D.C.—has a solution. He believes bringing apprentice-based learning to America's schools would both raise earnings and give young men the skills they need to be good husbands and fathers. Put boys in a real-world situation outside the classroom, with skilled adults as mentors, Lerman says, and students have a chance to engage in on-the-job training in a wide range of fields from baking to boat-building, farming to architecture, public health to civil engineering. This is learning in context and it's what young men (and women) crave: It feels immediate and real. It is not isolated or abstract; it is refreshingly relevant, and it is taking place in real time, in real space, and among adults who take young people seriously. Youth apprenticeship has an immediacy that engages students who have trouble paying attention in class; instead, they are being given the time and the means to develop genuine mastery in a given field. At the very same time, they are cultivating skills—such as how to communicate effectively, problem-solve, work in teams, and maintain a positive attitude—that help them be reliable partners to their spouses and present, stable fathers to their children.
>
> "If we teach everything entirely in a classroom context, we're not going to be as effective—even when it comes to academics," Lerman tells me. "The reality is that people learn best—whether it's cognitive or technical skills or even how to get along with others—*in context*."

Although skill-based training is in decline, the article convincingly show how boys learn better when their education includes real-world skills and real-world behaviors.

Here's just one snippet:

> Robert Halpern, a professor of education at the Erikson Institute in Chicago, whose research focuses on after-school programs for poor children and their families, argues that the best schooling for adolescent developmental needs goes beyond the classroom. During a 30-month investigation of one afterschool apprenticeship program, After School Matters in Chicago, Halpern found that participating youth, who attend the program a mere three afternoons a week for one school year, became more flexible thinkers and undertook tasks with more care. The youngsters learned to persevere and understand the value of working through problems. They became more self-responsible and more patient. Notably, their public behavior changed; they became "more mature, more appropriately assertive," Halpern explains in his book *The Means to Grow Up: Reinventing Apprenticeship as a Developmental Support in Adolescence*. These are all skills that serve young people well when they enter the workforce, and when they start families of their own.
>
> These apprenticeships, according to Halpern, gave youth "a sense of different ways of being an adult, what it means to be passionate about a discipline, and what it takes to become good at thinking." Not only were students learning actively rather than passively for the first time in their lives, the experience enabled many of them to begin to overcome years of thinking of themselves as subpar learners. In so doing, their experiences opened up a future that would otherwise have remained closed, and influenced them at a critical time in their

> lives. These “very specific learning and work experiences leave a deep imprint on still malleable selves.”

You need to read the whole thing if this is relevant to you. It’s no use complaining about “man up” and other nonsense. The real causes of male decline are systemic. Find the policies that work and implement them. Throw out the failed ideology of feminism from the classroom and do what works for our young men.

# Russia launches armed invasion of Crimea region of Ukraine

**Wintery Knight** · 1 March 2014 · Archived copy · Original

Fox News reports.

Excerpt:

> Russian troops moved into Crimea Friday, U.S. officials told Fox News, prompting Ukraine to accuse Russia of an "armed invasion."
>
> At the White House, President Obama said the U.S. government is "deeply concerned" by reports of Russian "military movements" and warned any violation of Ukraine's sovereignty would be "deeply destabilizing."
>
> "There will be costs" for any military intervention, he said, without specifying what those costs might be.
>
> U.S. officials told Fox News they see "evidence of air and maritime movement into and out of Crimea by Russian forces" although the Pentagon declined to officially "characterize" the movement.
>
> Agence France Press quoted a top Ukranian official as saying Russian aircraft carrying nearly 2,000 suspected troops have landed at a military air base near the regional capital of the restive Crimean peninsula.
>
> "Thirteen Russian aircraft landed at the airport of Gvardeyskoye (near Simferopol) with 150 people in each one," Sergiy Kunitsyn, the Ukrainian president's special representative in Crimea, told the local ATR television channel, according to AFP. He accused Russia of an "armed invasion."
>
> The new developments prompted Ukraine to accuse Russia of a "military invasion and occupation" — a claim that brought an alarming new dimension to the crisis.
>
> [Republican] Mike Rogers, chairman of the House Select Committee on Intelligence, issued a statement late Friday saying, "It appears that the Russian military now controls the Crimean peninsula. This aggression is a threat not only to Ukraine, but to regional peace and stability. Russia's latest action is yet another indicator that Vladimir Putin's hegemonic ambitions threaten U.S. interests and allies around the world."

Why would Russia be so bold about landing troops in the Ukraine? Well, what have they learned about Obama?

**Obama mocked the idea that Russia was our enemy**

Remember when Obama said this about Romney?

"The 1980s are calling to ask for their foreign policy back" Obama told Romney, in one debate. And this lack of seriousness about Russia caused Obama to bungle the European missile defense deal with Russia, such that Obama basically gave away the store.

The radically leftist UK Guardian explains in this September 2009 article:

> Barack Obama has abandoned the controversial Pentagon plan to build a missile defence system inEurope that had long soured relations with Russia.
>
> In one of the sharpest breaks yet with the policies of the Bush administration, Obama said the new approach would offer "stronger, swifter and smarter" defence for the US and its allies. He said it would focus on the threat posed by Iran's short- and medium-range missiles, rather than its intercontinental nuclear capabilities.
>
> Obama announced the reversal officially at a news conference today. "This new approach will provide capabilities sooner, build on proven systems to offer greater defences to the threat of attack than the 2007 European missile defence programme," he said.
>
> He phoned the leaders of Poland and the Czech Republic last night to tell them he had dropped plans to site missile interceptors and a radar station in their respective countries. Russia had furiously opposed the project,

> claiming it targeted Moscow's nuclear arsenal.

Here is the former director of the CIA James Woolsey, who served in the Clinton administration:

> President Barack Obama's administration recently threatened to veto the defense budget, citing "serious concerns" over provisions that limit the U.S. missile defense know-how that the White House is permitted to share with Moscow. This is the sort of information that Russian Prime Minister Vladimir Putin, in his earlier days, would have assigned his spies to steal. Through its single-minded pursuit of "resetting" relations with Russia, the Obama administration may simply be willing to hand over this information and, in doing so, weaken U.S. national security.
>
> Only two days after issuing the veto threat — and as Obama tried to warm Russian President Dmitry Medvedev to U.S. missile defense plans at the G-8 Summit in Deauville, France — the House of Representatives passed the defense bill. It included the provision that the president's team finds so offensive: Section 1228 requires that no funds can be used to provide the Russian Federation with sensitive U.S. missile defense technology.
>
> […]They're right to be concerned. Tehran is thumbing its nose at Washington and doubling down on its missile program. The director of national intelligence, James Clapper, told a congressional panel in March that Iran "would likely choose missile delivery as its preferred method of delivering a nuclear weapon" and that the Islamic Republic "continues to expand the scale, reach and sophistication of its ballistic missile forces, many of which are inherently capable of carrying a nuclear payload."
>
> Russian assistance has contributed to the progress made by Iran's nuclear and missile programs. Should the United States share critical information about its missile defenses with the Russians, a Russian entity — official or otherwise — could pass that information along to Tehran, enabling the Iranians to capitalize on the weaknesses in the U.S. system.
>
> Nevertheless, the Obama administration continues to demonstrate its penchant for bargaining away missile defense, and the United States is not currently developing and deploying missile defense technology at the rate and quantity the threat demands.

Here is the leftist Washington Post in March 2013:

> The Pentagon is canceling the planned fourth phase of an anti-missile system that had been scheduled for deployment in Poland in 2022. The SM3 IIb missile was significant for two reasons: It was the only interceptor planned for the Europe-based system that could have defended the United States against an attack from Iran; and it was the component of the system most decried by Russia, which claimed that it could be used against its intercontinental missiles.
>
> As it did when it canceled a previous European missile plan in 2009, the administration insisted that its decision had nothing to do with Russia or its objections. The phase-four missile was dropped, officials said, because Congress had cut some of its funding, meaning it could not have been completed in the next decade, even while the timeline of possible ICBM threats is shortening. Officials say the money can be better spent on deploying more interceptors in the United States and improving their components. As proof that Moscow has not been appeased, the White House pointed to statements by Russian officials saying they are still unsatisfied with U.S. missile defense plans and continue to demand binding legal assurances that the system can't be aimed at Russia.

What do you think that Putin learned from Obama's continuous appeasement and withdrawal from Europe? Well, he learned the same lesson that Hitler learned by watching the naive pacifists who opposed him – he learned that you can bully great nations if they are lead by weaklings. And that is what caused World War II – the refusal of

peaceful nations to check the aggression of a tyrant early.

**What has Obama been telling Russia?**

Here he is with Medvedyev:

The best way to avoid war is to make aggressors understand that there is a cost for aggression. Obama's many foreign policy blunders – failing to help the Iranian pro-democracy forces, failing to speak out for Georgia, failing to be tough with Russia, failing to help the right people in Syria – have made it clear to Putin that aggression will go unpunished. When Democrats re-elected this man in 2012, we basically abandoned freedom-loving countries like Ukraine to the Russian tyrant. But did Democrat voters care? Of course not. They were thinking of the 1 trillion dollars of government checks that would be handed out to them in exchange for re-electing Obama. Foreign policy and the peace of the free world was the last thing on their minds.

# Take a half-hour and watch this Discovery Institute documentary on environmental extremism

**Wintery Knight** · 1 March 2014 · Archived copy · Original

It runs for 31 minutes.

Description:

> Are humans the enemy? Should pigs and peas have constitutional rights? The War on Humans is a 31-minute documentary that critiques growing efforts to disparage the value of humans in the name of saving the planet. The documentary investigates the views of anti-human activists who want to grant legal rights to animals, plants, and "Mother Earth," and who want to reduce the human population by up to 90%. The video features Discovery Institute Senior Fellow Wesley J. Smith, author of a companion e-book with the same title.

Fascinating!

**Podcasts**

And there are some podcasts to go with it for those who like podcasts:

Podcast 1:

> On this episode of **ID the Future**, hear from bioethicist Wesley J. Smith as he talks about his new book *The War on Humans*, also adapted as a documentary film. In this first podcast of the series, Smith discusses what makes humans unique among the creatures of the earth, and why it matters: "Universal human rights are at stake. The intrinsic dignity of human life is at stake. The understanding of our unique place in the world, both in terms of or value and in terms of obligation, they are at stake." Listen in!

The MP3 is here.

Podcast 2:

> On this episode of **ID the Future**, hear from bioethicist Wesley J. Smith as he continues his conversation on his new book *The War on Humans*, also adapted as a documentary film. In this second podcast of the series, you'll hear about how the conservation movement turned into an anti-human movement, and how this affects humans, especially in the developing world and in marginalized people groups.

The MP3 is here.

Podcast 3:

> On this episode of **ID the Future**, hear from bioethicist Wesley J. Smith as he continues his conversation on his new book *The War on Humans*, also adapted as a documentary film. In this third podcast of the series, you'll hear about the legal movement to establish legal rights for animals, and even plants. Smith examines the meaning of the term "personhood" and its implications for human rights.

The MP3 is here.

A recent story about eco-terrorism was in the news.

# Physicist Victor Stenger debates William Lane Craig: Does God Exist?

**Wintery Knight** · 2 March 2014 · Archived copy · Original

This debate took place on March 1, 2010 at Oregon State University.

In this debate, Victor Stenger does affirm his belief that the universe could be eternal in his second rebuttal (1:02:30), thus denying the standard Big Bang cosmology. He also denies the law of conservation of energy and asserts that something can come from nothing in his concluding speech (1:33:50). He also caused the audience to start laughing when he said that Jesus was not moral and supported slavery. There is almost no snark in this summary. Instead, I quoted Dr. Stenger *verbatim* in many places. I still think that it is very entertaining even without the snarky paraphrasing.

The debate includes 30 minutes of Q&A with the students.

Here is the MP3 file for the audio.

Here's the video of the debate:

**Dr. Craig's opening speech:**

- The ontological argument
- The contingency argument
- The cosmological argument
- The moral argument
- The resurrection of Jesus (3-fact version)
- Religious experience

**Dr. Stenger's opening speech:**

- There is no scientific evidence for God's existence in the textbooks
- There is no scientific evidence for God acting in the universe
- God doesn't talk to people and tell them things they couldn't possibly know
- The Bible says that the Earth is flat, etc.
- There is no scientific evidence that God answers prayers
- God doesn't exist because people who believe in him are ignorant
- Human life is not optimally designed and appears to be the result of a blind, ad hoc evolutionary process
- The beginning of the universe is not ordered (low entropy) but random and chaotic
- It's theoretically possible that quantum tunneling explains the origin of the universe
- The laws of physics are not objectively real, they are "our inventions"
- Regarding the beginning of the universe, the explanation is that something came from nothing*
- Nothing* isn't really nothing, it is "the total chaos that we project existed just before the big bang"
- If something has no structure, then "it is as much nothing as nothing can be"
- Consciousness is explainable solely on the basis of material processes
- There are well-informed, rational non-believers in the world and God would not allow that

**Dr. Craig's first rebuttal:**

Stenger's argument that there is no objective evidence for God's existence:

- First, it is not required that God rely only on objective evidence in order to draw people to himself (Alvin Plantinga)
- Second, God is not required to provide evidence to everyone, only to the people who he knows would respond to him
- Third, Craig gave lots of objective evidence, from science, history and philosophy
- Stenger asks for certain evidence (answered prayers, prophecy, etc.), but Craig presented the evidence we have

Stenger's argument that the balance of energy is zero so "nothing" exists:

- if you have the same amount of assets and liabilities, it doesn't mean that nothing exists – your assets and liabilities exist
- Christopher Isham says that there needs to be a cause to create the positive and negative energy even if they balance
- the quantum gravity model contradicts observations
- the vacuum is not the same as nothing, it contains energy and matter
- the BVG theorem proves that *any* universe that is expanding must have a beginning

Stenger's argument that mental operations can be reduced to physical operations:

- mental properties are not reducible to physical properties
- epiphenomenalism: is incompatible with self-identity over time
- epiphenomenalism: is incompatible with thoughts about other things
- epiphenomenalism: is incompatible with free will
- substance dualism (mind/body dualism) is a better explanation for our mental experience
- God is a soul without a body

**Dr. Stenger's first rebuttal:**
Craig's cosmological argument:

- Craig's premise is "everything has a cause", but quantum mechanics has causeless events
- There are speculative theories about how something could have come into being uncaused out of nothing
- "I don't know of a single working cosmologist today who believes there was a singularity prior to the Big Bang"
- "If there wasn't a singularity then there's no basis for arguing that time began at that point"
- "There's no reason from cosmology that we know of that the universe can't be eternal"
- "When I talk about an eternal universe, I mean a universe that has no beginning or end"
- The Hartle-Hawking model doesn't have a beginning
- "There was no violation of energy conservation by having a universe coming from nothing"
- "The universe *could have* come from a previous universe for example or even just from a region of chaos"
- The paper by Vilenkin is counteracted by other papers (he doesn't specify which ones)

Craig's moral argument:

- Dr. Craig is arguing from ignorance
- But morality can be decided by humanity just like governments pass laws, and that's objective
- Dr. Craig has too little respect for the human intellect
- I don't need to tell me that slavery is wrong
- The Bible supports slavery
- Atheists can behave as good as theists

- Morality just evolved naturally as an aid to survival

Craig's resurrection argument:

- No Roman historians wrote about the execution of Jesus but none of them did
- The empty tomb is doubtful because it is only mentioned in the gospels, not by Paul
- John Dominic Crossan says there was no empty tomb
- Christianity only survived because the Roman empire thought that they were useful

**Dr. Craig's second rebuttal:**

Craig's cosmological argument:

- There is no reason to prefer an indeterministic interpretation of quantum mechanics
- Dr. Stenger himself wrote that deterministic interpretations of quantum mechanics are possible
- The vacuum in quantum mechanics is not nothing
- The quantum vacuum he proposes cannot be eternal
- The cosmological argument does not require a singularity
- The Hartle-Hawking model is from 1983
- Hawking says that there is a beginning of space and time *after* that model
- The Hartle-Hawking model *does still have a beginning of time* – the model is not eternal
- The BVG theorem that requires a beginning for expanding universes is widely accepted among cosmologists

Craig's moral argument:

- Stenger redefined objective to mean that most people agree with it – but that's not what objective means
- Objective means right and wrong whether anyone accepts it or not
- Richard Dawkins himself says that on atheism there is "no evil and no good" – why is he wrong?
- Even Dr. Stenger says that morality is the same as passing laws – it's arbitrary and varies by time and place
- But on his view, right and wrong are the same as deciding which side of the road to drive on
- But somethings really are right and some things are really wrong

Craig's resurrection argument:

- Josephus is a Roman historian and he wrote about Jesus, for example
- There were four biographies of Jesus are the best sources for his life
- The scholars that Stenger mentioned are on the radical fringe

**Dr. Stenger's second rebuttal:**

Knowledge and the burden of proof:

- Dr. Craig has to bear the burden of proof, not me – because his claim is more "extravagant"
- "I don't have to prove that a God was not necessary to create the universe"
- "I don't have to prove that a God did not design the universe and life"
- "I don't have to prove that the universe did not have a beginning"
- "I don't have to prove that God did not provide us with our moral sense"
- There are a lot of books written about how morality evolved naturally
- "I don't have to prove that the events surrounding the supposed resurrection of Jesus did not take place"
- Bart Ehrman says that the gospels are generally unreliable (Note: Ehrman accepts all 3 of Craig's minimal facts)

- Just because people are willing to die for a cause, does not make their leader God, e.g. – the Emperor of Japan

Aesthetic concerns about the universe:

- I don't like dark matter and I wouldn't have made the universe with dark matter
- I don't like the doctrine of penal substitution
- I don't like the doctrine of original sin
- I don't like the heat death of the universe

**Dr. Craig's conclusion:**

The case for atheism:

- Dr. Stenger had two arguments and he has to support his premises
- Dr. Craig addressed his two arguments and each premise and Dr. Stenger never came back on it

The contingency argument:

- Dr. Stenger has dropped the refutation of this argument

The cosmological argument:

- The theoretical vacuum he proposes cannot be eternal

The moral argument:

- He asserts that things are wrong, but there is no grounding for that to be objective on atheism

The resurrection of Jesus:

- There are surveys of scholars on the empty tomb and 75% of them agree with it
- Bart Ehrman agrees with all 3 of the minimal facts that Dr. Craig presented
- Ehrman's objection to the resurrection is not historical: he's an atheist – he thinks miracles are impossible

Religious experience:

- No response from Dr. Stenger

**Dr. Stenger's conclusion**

The cosmological argument:

- "I argued that we have very good physical reasons to understand how something can come from nothing"
- "There is a natural tendency in the universe… to go from.. simpler thing to the more complicated thing"
- The transition from a vapor to a liquid to ice shows how something could come from nothing
- "It cannot be proven that the universe had a beginning"

The moral argument:

- Objective morality, which is independent of what people think, could be developed based on what people think
- "Jesus himself was not a tremendously moral person… he had no particular regard for the poor… he certainly supported slavery… he was for the subjugation of women" (audience laughter)

The resurrection argument:

- Bart Ehrman says that the majority of the gospels are unreliable

Religious experience:

- I don’t see any evidence that there is anything more to religious experience than just stuff in their heads

God’s purpose of the world should be to make people feel happy:

- God could have made people feel happier
- God could have made people not die
- God could could have made the universe smaller: it’s too big
- God could have made it possible for humans to live anywhere “even in space”

# Arthur Brooks: why is the American public shifting from optimism to envy?

**Wintery Knight** · 2 March 2014 · Archived copy · Original

Labor Force Participation down to 62.8%

An editorial by Arthur Brooks appeared today in the leftist New York Times. His topic is the shift from optimism to envy, why it is happening, and whether envy makes us happier than optimism.

Excerpt: (links removed)

> The Irish singer Bono once described a difference between America and his native land. “In the United States,” he explained, “you look at the guy that lives in the mansion on the hill, and you think, you know, one day, if I work really hard, I could live in that mansion. In Ireland, people look up at the guy in the mansion on the hill and go, one day, I’m going to get that bastard.”
>
> […]Unsurprisingly, psychologists have found that envy pushes down life satisfaction and depresses well-being. Envy is positively correlated with depression and neuroticism, and the hostility it breeds may actually make us sick. Recent work suggests that envy can help explain our complicated relationship with social media: it often leads to destructive “social comparison,” which decreases happiness. To understand this, just picture yourself scrolling through your ex’s wedding photos.
>
> My own data analysis confirms a strong link between economic envy and unhappiness. In 2008, Gallup asked a large sample of Americans whether they were “angry that others have more than they deserve.” People who strongly disagreed with that statement — who were not envious, in other words — were almost five times more likely to say they were “very happy” about their lives than people who strongly agreed. Even after I controlled for income, education, age, family status, religion and politics, this pattern persisted.
>
> It’s safe to conclude that a national shift toward envy would be toxic for American culture.
>
> Unfortunately, in the wake of the Great Recession, such a shift may well be underway, given the increasing anxiety about income inequality and rising sympathy for income redistribution. According to data from

> the General Social Survey, the percentage of Americans who feel strongly that "government ought to reduce the income differences between the rich and the poor" is at its highest since the 1970s. In January, 43 percent of Americans told the Pew Research Center that government should do "a lot" to "reduce the gap between the rich and everyone else."
>
> Why the shift? The root cause of increasing envy is a belief that opportunity is in decline. According to a 2007 poll on inequality and civic engagement by the Maxwell School of Citizenship and Public Affairs at Syracuse University, just 30 percent of people who believe that everyone has the opportunity to succeed describe income inequality as "a serious problem." But among people who feel that "only some" Americans have a shot at success, fully 70 percent say inequality is a major concern.
>
> People who believe that hard work brings success do not begrudge others their prosperity. But if the game looks rigged, envy and a desire for redistribution will follow.
>
> This is the direction we're heading. According to Pew, the percentage of Americans who feel that "most people who want to get ahead" can do so through hard work has dropped by 14 points since about 2000. As recently as 2007, Gallup found that 70 percent were satisfied with their opportunities to get ahead by working hard; only 29 percent were dissatisfied. Today, that gap has shrunk to 54 percent satisfied, and 45 percent dissatisfied. In just a few years, we have gone from seeing our economy as a real meritocracy to viewing it as something closer to a coin flip.

There is a good lesson in this for people who want what is best for the poor. Simply receiving money from others is not going to make poor people happy. What we need to focus on is providing the poorest people with opportunities. For example, we need to reduce barriers that employers face to hire them, and we need to make the school system focus more on skill-building and less on indoctrination in leftist ideology.

Democrats like to give lots of speeches on income inequality, stoking the fires of envy, while doing nothing to help people learn useful skills in school and to help employers hire people more easily, setting them on the path of lifelong independence. For example, Democrats oppose school choice, as when they killed the D.C. voucher program that helped poor black students. Less school choice helps public schools to be insulated from competition, so that they can focus on what they want (bigger government, so they get paid more) rather than what parents want (bad teachers fired, students to learn useful skills, more male teachers in the classroom, a focus on vocational skills rather than ideology). Just this past week, the ultra-leftist mayor of New York city kicked charter schools out of the city. Why? Because if children learn useful skills in better schools, then they will be less dependent on government, and less responsive to "envy rhetoric".

Democrats also passed Obamacare, which punishes businesses with taxes if they allow part-time workers to work for more than 30 hours a week. Many jobs were lost because of this, and many people are now struggling to pay higher premiums for plans with higher deductibles and co-pays. Now the Democrats are talking about raising the minimum wage, which is going to put even more pressure on employers to lay off workers, because they can't afford to pay them more for the same work. For Democrats, this is all to the good, though. Because if the poor don't have jobs, or can't work enough hours, they start to see the economic game as "rigged" and they are more responsive to "envy rhetoric".

What we need to see is that it's not the Democrats' objective to help people find jobs. They gain when people become more envious, like in European countries, and start to vote to grow the size and power of government to redistribute wealth. Speeches about income inequality never have the goal of giving people jobs. None of Obama's policies aim to do that. That's why he won't build the Keystone XL pipeline, or boost domestic energy development here at home. Instead, they want to extend unemployment benefits and pass the costs on to the next generation. Their goal is to get you unemployed or on disability or on welfare, so that you will vote for the government to continue to take your neighbor's money. That manufactured envy is what keeps the Democrats in power.

# In 2008, Sarah Palin predicted that if Barack Obama were elected, Russia would invade Ukraine

**Wintery Knight** · 3 March 2014 · Archived copy · Original

Radically leftist CNN reports. (H/T Letitia)

Excerpt:

> In 2008, when she was the GOP vice presidential nominee, Palin questioned in a speech whether then-Sen. Barack Obama would have the foreign policy credentials to handle a scenario in which Russian President Vladimir Putin invaded Ukraine.
>
> "After the Russian army invaded the nation of Georgia, Senator Obama's reaction was one of indecision and moral equivalence – the kind of response that would only encourage Russia's Putin to invade Ukraine next," she said in Reno, Nevada on October 21, 2008.
>
> The former Alaska governor was happy to highlight her prediction on Friday and scold those who criticized her 2008 comments.
>
> […]On Facebook, Palin continued to explain how she anticipated a growing crisis between Russia and Ukraine, where there has now been an uncontested arrival of Russian military forces by air at a Russian base in Ukraine's Crimea region. They are believed to be Russian land forces, according to a U.S. assessment.

Now let's review the events that caused Putin to believe that Obama would do nothing to stop his aggression.

**Why is Russia so aggressive?**

Russia learned from repeated failures by Obama that there would be no price to pay for aggression.

Neville Chamberlain Obama: peace in our time

Let's make a list of failures, just off the top of my head.

- Scrapping the Bush missile defense plan

- Skip national security meetings on Russia
- Skip Presidential daily briefings (PDBs)
- Making deal to allow Iran's nuclear program to continue
- Leaking details of Israel's strike plan against Iran
- Favoring terrorist rights over national security
- Cutting production of the F-22 Raptor
- Cutting the military budget in 2009
- Cutting the Pentagon budget in 2012
- Cutting the military budget in 2014
- Prosecutions of counter-terrorism experts
- Lying about a Youtube video to cover-up Benghazi
- Mocking Romney for thinking that Russia is our enemy
- Promising Russian president Medvedev he would be more "flexible" after his re-election

Investors Business Daily documents more of Obama's 5 years of foreign policy weakness.

**Even the leftist Washington Post agrees**

That's not just me saying that, it's the radically leftist Washington Post!

Excerpt: (links removed)

> For five years, President Obama has led a foreign policy based more on how he thinks the world should operate than on reality. It was a world in which "the tide of war is receding" and the United States could, without much risk, radically reduce the size of its armed forces. Other leaders, in this vision, would behave rationally and in the interest of their people and the world. Invasions, brute force, great-power games and shifting alliances — these were things of the past. Secretary of State John F. Kerry displayed this mindset on ABC's "This Week" Sunday when he said, of Russia's invasion of neighboring Ukraine, "It's a 19th century act in the 21st century."
>
> That's a nice thought, and we all know what he means. A country's standing is no longer measured in throw-weight or battalions. The world is too interconnected to break into blocs. A small country that plugs into cyberspace can deliver more prosperity to its people (think Singapore or Estonia) than a giant with natural resources and standing armies.
>
> Unfortunately, Russian President Vladimir Putin has not received the memo on 21st-century behavior. Neither has China's president, Xi Jinping, who is engaging in gunboat diplomacy against Japan and the weaker nations of Southeast Asia. Syrian president Bashar al-Assad is waging a very 20th-century war against his own people, sending helicopters to drop exploding barrels full of screws, nails and other shrapnel onto apartment buildings where families cower in basements. These men will not be deterred by the disapproval of their peers, the weight of world opinion or even disinvestment by Silicon Valley companies. They are concerned primarily with maintaining their holds on power.
>
> […]The urge to pull back — to concentrate on what Mr. Obama calls "nation-building at home" — is nothing new, as former ambassador Stephen Sestanovich recounts in his illuminating history of U.S. foreign policy, "Maximalist." There were similar retrenchments after the Korea and Vietnam wars and when the Soviet Union crumbled. But the United States discovered each time that the world became a more dangerous place without its leadership and that disorder in the world could threaten U.S. prosperity.
>
> […]**Military strength, trustworthiness as an ally, staying power in difficult corners of the world such as Afghanistan — these still matter, much as we might wish they did not. While the United States has been retrenching, the tide of democracy in the world, which once seemed inexorable, has been receding. In the long run, that's harmful to U.S. national security, too.**

> As Mr. Putin ponders whether to advance further — into eastern Ukraine, say — he will measure the seriousness of U.S. and allied actions, not their statements. China, pondering its next steps in the East China Sea, will do the same. Sadly, that's the nature of the century we're living in.

*Everyone* admits that Obama's weakness has caused these foreign policy problems. We elected someone who wants our influence abroad to decline. The people who elected him just did not understand foreign policy and national security concerns, and now Ukrainians are going to pay with their freedom, and possibly with their lives, because of our inability to project power abroad. This is the high cost of isolationism for our peace-loving, pro-democracy, pro-capitalism allies.

**What should we do now?**

Speaking of Politico, they published an 8-point plan for responding to Putin's invasion of Ukraine, authored by moderate Republican Senator Marco Rubio.

Here are numbers two, seven and eight:

> Second, President Obama should dispatch Secretary of State John Kerry and Defense Secretary Chuck Hagel to Kiev to show U.S. support for Ukraine's transitional government, and urge our allies in the European Union and NATO to send representatives there as well. The United States should convene an emergency meeting of NATO to develop a strong united response from the trans-Atlantic alliance. And we should send high-level delegations to our allies in Central and Eastern Europe to reinforce the fact that we are standing by them. As part of this work with our allies, we should develop a series of economic and security assurance measures to help the transitional government in Kiev remain stable and carry out a democratic transition.
>
> […]Seventh, the Obama administration should immediately add more Russian officials to the Magnitsky list, which places travel bans and other sanctions on them – something President Obama failed to do in December. Living in Miami, I have seen in recent years the wave of Russian tourists coming to our city and state to spend money and buy property. Many are government officials or allies whose wealth stems from allegiance to Putin, and we should limit their ability to travel here.
>
> Finally, in the Senate, Majority Leader Harry Reid should immediately halt his effort to force a Senate vote on Rose Gottemoeller next week to be under secretary of state for arms control and international security. As I, Sens. John Cornyn and Jim Risch said yesterday, we shouldn't even be thinking about arms-control negotiations with Russia anytime soon. And especially not negotiations led by a State Department official, such as Ms. Gottemoeller, who has tried to play down and potentially kept information from Congress and our allies about Russian violations of arms-control agreements.

But we have no reason to expect that Obama will do *any* of these things. Why? Because the real enemy we face is *global warming*.

**John Kerry: global warming is "a weapon of mass destruction"**

Meanwhile, John Kerry gave a speech in which he asserted that among the biggest threats to national security was global warming – "the world's most fearsome weapon of mass destruction".

I fully expect Kerry to blame global warming for Russia's invasion of Ukraine. The Obama administration has already blamed our record cold temperatures on global warming. 17 years without significant warming, according to the UN IPCC, and yet that's what our government is focused on. Behold, the superstition and credulity of the secular left.

# Tonight at 8 PM Eastern: live-streaming of William Lane Craig on the Kalam Cosmological argument

**Wintery Knight** · 3 March 2014 · Archived copy · Original

Dr. Craig is speaking on the kalam cosmological argument on Monday night at the Georgia Institute of Technology.

There will be a live-stream here.

**Details:**

> What happened at the beginning of time? Dr. William Lane Craig will be using science and philosophy to pain a picture of what happened, and discuss how the implications should rule our lives. Dr. Craig is considered one of the world's experts on this topic, so you won't want to miss it! Door open at 8!

**Time:** Monday, March 3, 2014 at 8:00 pm to 9:30 pm EST

Here's what Dr. Craig said about this event on Facebook:

> Monday night I speak at Georgia Tech on the kalam cosmological argument. **I plan to expand on things said in the Carroll debate.**

Facebook Page: https://www.facebook.com/events/1469808433242091/

**The Craig-Carroll debate**

If you missed the Carroll debate, you can watch the video here:

That's the debate, here's the concluding remarks:

And here's my short review, which contains a link to another review as well.

# Ryan T. Anderson: what is marriage? why does it matter?

**Wintery Knight** · 3 March 2014 · Archived copy · Original

About the speaker:

> Ryan T. Anderson researches and writes about marriage and religious liberty as the William E. Simon Fellow at The Heritage Foundation. He also focuses on justice and moral principles in economic thought, health care and education, and has expertise in bioethics and natural law theory.
>
> Anderson, who joined the leading Washington think tank's DeVos Center for Religion and Civil Society in 2012, also is the editor of *Public Discourse*, the online journal of the Witherspoon Institute of Princeton, N.J.
>
> Anderson's recent work at Heritage focuses on the constitutional questions surrounding same-sex "marriage." He is the co-author with Princeton's Robert P. George and Sherif Girgis of the acclaimed book "What Is Marriage? Man and Woman: A Defense" (Encounter Books, December 2012).

The lecture starts at 7:20 in. The lecture ends at 49:35. There are 32 minutes of Q&A.

Introduction:

- When talking about marriage in public, we should talk about philosophy, sociology and public policy
- Gay marriage proponents need to be pressed to define what marriage is, on their view
- Every definition of marriage is going to include some relationships, and exclude others
- It's meaningless to portray one side as nice and the other mean
- Typically, marriage redefiners view marriage as a more intense emotional relationship
- Marriage redefiners should be challenged in three ways:
- 1) Does the redefined version of marriage have a public policy reason to prefer only two people?
- 2) Does the redefined version of marriage have a reason to prefer permanence?
- 3) Does the redefined version of marriage have a reason to prefer sexual exclusivity?
- Also, if marriage is just about romance, then why is the state getting involved in recognizing it?
- The talk: 1) What marriage is, 2) Why marriage matters, 3) What are the consequences of redefining marriage?

What marriage is:

- Marriage unites spouses – hearts, minds and bodies
- Marriage unites spouses to perform a good: creating a human being and raising that human being
- Marriage is a commitment: permanent and exclusive
- Male and female natures are distinct and complementary

The public purpose of marriage:

- to attach men and women to each other
- to attach mothers and fathers to their children
- there is no such thing as parenting, there is only mothering and fathering
- the evidence shows that children benefit from mothering and fathering
- boys who grow up without fathers are more likely to commit crimes
- girls who grow up without fathers are more likely to have sex earlier
- Children benefit from having a mother and a father
- can't say that fathers are essential for children if we support gay marriage, which makes fathers optional

- without marriage: child poverty increases, crime increases, social mobility decreases, welfare spending increases
- when government encourages marriage, then government has less do to – stays smaller, spends less
- if we promote marriage as an idea, we are not excluding gay relationships or even partner benefits
- finally, gay marriage has shown itself to be hostile to religious liberty

Consequences redefining marriage:

- it undermines the norm in public like that kids deserve a mom and a dad – moms and dads are interchangeable
- it changes the institution of marriage away from the needs of children, and towards the needs of adults
- it undermines the norm of permanence
- we learned what happens when marriage is redefined before: with no-fault divorce
- no-fault divorce: after this became law, divorce rates doubled – the law changed society
- gay marriage would teach society that mothers and fathers are optional when raising children
- if marriage is what people with intense feelings do, then how can you rationally limit marriage to only two people?
- if marriage is what people with intense feelings do, then if other people cause intense feelings, there's no fidelity
- if marriage is what people with intense feelings do, then if the feelings go away, there is no permanence
- the public policy consequences to undermining the norms of exclusivity and permanence = fatherless children and fragmented families
- a final consequences is the decline and elimination of religious liberty – e.g. – adoption agencies closing, businesses being sued

We're doing very well on abortion, but we need to get better at knowing how to discuss marriage. If you're looking for something short to read, click here. If you want to read a long paper that his book is based on.

# Obama administration wins court battle to have Christian homeschooling family deported

**Wintery Knight** · 4 March 2014 · Archived copy · Original

Todd Starnes at Fox News does the best job of covering the religious liberty issue, and here is his latest story.

Excerpt:

> Uwe and Hannelore Romeike came to the United States in 2008 seeking political asylum. They fled their German homeland in the face of religious persecution for homeschooling their children.
>
> They wanted to live in a country where they could raise their children in accordance with their Christian beliefs.
>
> The Romeikes were initially given asylum, but the Obama administration objected – claiming that German laws that outlaw homeschooling do not constitute persecution.
>
> […]"I think this is a part of the Obama administration's overall campaign to crush religious freedom in this country," said Michael Farris, chairman of the Home School Legal Defense Association. His organization is representing family.
>
> "The Obama administration's attitude toward religious freedom, particularly religious freedom for Christians is shocking," he told me in an exclusive telephone interview. "I have little doubt that if this family had been of some other faith that the decision would have never been appealed in the first place. They would have let this family stay."
>
> Had the family stayed in Germany, where homeschooling is illegal, they would have faced the prospect of losing their children. Like the Pilgrims, they fled their homeland yearning for a place where they could be free.
>
> Farris said the religious bias perpetrated by the Obama administration is "palpable."
>
> "It's a denial of the essence of America," he said. "The Pilgrims left England to go to Holland to seek religious freedom. They came here to seek religious freedom and parental rights for their children. Had this administration been waiting at Plymouth Rock, they would've told the Pilgrims to go back home."

But the United States has become hostile to people coming here to have religious liberty. But there is one group that is allowed to stay – no questions asked.

Excerpt:

> Building on pro-gay policies put in place by Secretary of State Hillary Clinton, President Obama today ordered overseas federal agencies to fight local anti-gay violence and provide asylum to homosexuals seeking protection.
>
> Obama said, "I am deeply concerned by the violence and discrimination targeting LGBT persons around the world — whether it is passing laws that criminalize LGBT status, beating citizens simply for joining peaceful LGBT pride celebrations, or killing men, women, and children for their perceived sexual orientation."
>
> His order was immediately praised by the Human Rights Campaign, the nation's top lobby for gays, lesbians, bisexuals and transgenders. "The Obama administration has made a tremendous difference in the lives of LGBT people in the United States and this new strategy helps to extend that presidential leadership across the globe," said HRC President Joe Solmonese.
>
> "There is no question that the administration's record of advancing equality for LGBT people has been enhanced by the leadership of Secretary Clinton who consistently underscores the simple truth that LGBT rights are human rights."

> A key element of the president's memo to federal agencies would open up the United States to asylum seekers who are gay. "Those LGBT persons who seek refuge from violence and persecution face daunting challenges," said Obama in his memo. "In order to improve protection for LGBT refugees and asylum seekers at all stages of displacement, the Departments of State and Homeland Security shall enhance their ongoing efforts to ensure that LGBT refugees and asylum seekers have equal access to protection and assistance, particularly in countries of first asylum.
>
> "In addition, the Departments of State, Justice, and Homeland Security shall ensure appropriate training is in place so that relevant Federal Government personnel and key partners can effectively address the protection of LGBT refugees and asylum seekers, including by providing to them adequate assistance and ensuring that the federal government has the ability to identify and expedite resettlement of highly vulnerable persons with urgent protection needs."

Here's an example of how Obama welcomes some people, even as he rejects others.

Imagine being deported back to a country that you know will take your children from you. That's what the Obama administration did to this family. That's how much they believe in religious liberty.

# What should the United States do now to punish Russia for invading Ukraine?

**Wintery Knight** · 4 March 2014 · Archived copy · Original

FairTaxNancy tweeted this list of seven responses for Obama to choose from Fox News columnist K. T. McFarland.

Here are some:

> **First:** I will reverse my decision to halt the missile shield in Poland and the Czech Republic. America will go ahead as originally planned and build the missile shield, but an accelerated basis. That means U.S. military personal will be working alongside Polish and Czech military to construct and operate the systems. The missile shield is designed to protect Europe from Iranian missiles, but you get the point. Uniformed U.S. military will soon be stationed near the Russian border.
>
> **Second:** I will reverse course on the defense budget. Your defense minister just announced Russia is negotiating basing rights in seven nations around the world. He also said you were rebuilding old Soviet era military bases in central Asia. Your parliament has just voted unanimously to invade Ukraine. In light of that, this is no time for my Secretary of Defense to announce we're gutting our military.
>
> **Fifth:** I will send a trade delegation to Poland and other countries in Central Europe to explore ways of helping them use fracking technologies to develop their own gas reserves. Chevron and Shell have already signed a $13 billion deal with Ukraine. I expect others to follow.
>
> At the same time I will throw roadblocks in front of any American energy company that seeks to develop your eastern Siberian fields. Your existing oil fields in western Siberia have, maybe, a decade left. You need our technology to develop new ones. You're not getting it.

Investors Business Daily had another list of seven energy policies that would deter Russia from aggression.

Here are some:

> **2. America should expand fracking.** The U.S. is enjoying an energy renaissance, thanks to fracking, horizontal drilling and other technological advances.
>
> But almost all of the gains in oil and natural gas production have been on private lands. Obama should move to open up public lands to energy exploration.
>
> **3. Promote LNG [Liquid Natural Gas] exports.** LNG facilities are expensive to build. But the biggest obstacle is regulatory. The U.S. requires approval from the Federal Energy Regulatory Commission, as well as an export license from the Energy Department. DOE licenses can take months, with the last four permits taking more than two years. It can take five years before an Energy Department OK turns into real exports. The Obama administration should work to streamline the regulatory process.
>
> More LNG exports will bring down the price of natural gas worldwide. Many European LNG import facilities have been idle or running at low capacity. Exporters are sending shipments to Asia, where prices are even higher than Europe.
>
> LNG exports will further reduce America's trade deficit. Some argue that the U.S. should keep natural gas at home to give America an energy advantage. Chemical firms in particular want cheap natgas for fuel and as a raw material. But if domestic natgas prices rise, it should encourage more production. Shale output can be ramped up or down relatively quickly.
>
> **4. Allow U.S. petroleum exports.** America has banned petroleum exports since the Arab oil boycotts of the

> 1970s. But with the U.S. poised to be the world's No. 1 producer, whatever logic the prohibition once had is long gone.
>
> The ban helps keep a wide gap between U.S. light sweet crude vs. London-based Brent — $6.28 a barrel as of Monday.
>
> An export ban hurts U.S. producers and discourages output. It mostly benefits refineries, which are ramping up exports of refined fuels — at the global price.
>
> Lifting the export ban in particular would have speedy impact on global crude prices, dealing a quick hit to Putin's pocketbook.
>
> **5. OK Keystone XL pipeline.** There are many reasons to back the Keystone XL pipeline from Canada to the Gulf of Mexico. It would create thousands of jobs, lower oil prices and reduce the risk of crude-by-rail accidents. The oil is going to be produced anyway, which even the Obama administration admits.

That would hit Putin in his pocketbook, and show him that we are serious about deterring future aggression.

And finally, in yesterday's post on the Russia-Ukraine conflict, I linked to an article with 8 responses, written by moderate Republican Senator Marco Rubio.

He had eight recommendations, and here are three of them:

> Second, President Obama should dispatch Secretary of State John Kerry and Defense Secretary Chuck Hagel to Kiev to show U.S. support for Ukraine's transitional government, and urge our allies in the European Union and NATO to send representatives there as well. The United States should convene an emergency meeting of NATO to develop a strong united response from the trans-Atlantic alliance. And we should send high-level delegations to our allies in Central and Eastern Europe to reinforce the fact that we are standing by them. As part of this work with our allies, we should develop a series of economic and security assurance measures to help the transitional government in Kiev remain stable and carry out a democratic transition.
>
> […]Seventh, the Obama administration should immediately add more Russian officials to the Magnitsky list, which places travel bans and other sanctions on them – something President Obama failed to do in December. Living in Miami, I have seen in recent years the wave of Russian tourists coming to our city and state to spend money and buy property. Many are government officials or allies whose wealth stems from allegiance to Putin, and we should limit their ability to travel here.
>
> Finally, in the Senate, Majority Leader Harry Reid should immediately halt his effort to force a Senate vote on Rose Gottemoeller next week to be under secretary of state for arms control and international security. As I, Sens. John Cornyn and Jim Risch said yesterday, we shouldn't even be thinking about arms-control negotiations with Russia anytime soon. And especially not negotiations led by a State Department official, such as Ms. Gottemoeller, who has tried to play down and potentially kept information from Congress and our allies about Russian violations of arms-control agreements.

So there are three lists of things that we could do, if we as a nation were serious about protecting democracies from tyrants. In the 1991 Gulf War, America landed an entire army to kick Saddam Hussein out of peaceful Kuwait. But does Obama have the balls for that? I don't even think he'll do one thing from the three lists I presented above. He is not that kind of man. He just doesn't care.

# William Lane Craig: Christians are idling in intellectual neutral

**Wintery Knight** · 4 March 2014 · Archived copy · Original

The video is 40 minutes long.

The full transcript is available here on the Reasonable Faith web site. (H/T Think Apologetics)

Excerpt:

> No one has issued a more forceful challenge to Christians to become intellectually engaged than did Charles Malik, former Lebanese ambassador to the United States, in his address at the dedication of the Billy Graham Center in Wheaton, Illinois. Malik emphasized that as Christians we face two tasks in our evangelism: saving the soul and saving the mind, that is to say, not only converting people spiritually, but converting them intellectually as well. And the Church is lagging dangerously behind with regard to this second task. Our churches are filled with people who are spiritually born again, but who still think like non-Christians. Mark his words well:
>
> I must be frank with you: the greatest danger confronting American evangelical Christianity is the danger of anti-intellectualism. The mind in its greatest and deepest reaches is not cared for enough. But intellectual nurture cannot take place apart from profound immersion for a period of years in the history of thought and the spirit. People who are in a hurry to get out of the university and start earning money or serving the church or preaching the gospel have no idea of the infinite value of spending years of leisure conversing with the greatest minds and souls of the past, ripening and sharpening and enlarging their powers of thinking. The result is that the arena of creative thinking is vacated and abdicated to the enemy.
>
> Malik went on to say:
>
> It will take a different spirit altogether to overcome this great danger of anti-intellectualism. For example, I say this different spirit, so far as philosophy alone—the most important domain for thought and intellect—is concerned, must see the tremendous value of spending an entire year doing nothing but poring intensely over the *Republic* or the *Sophist* of Plato, or two years over the *Metaphysics* or the *Ethics* of Aristotle, or three years over the *City of God* of Augustine. But if a start is made now on a crash program in this and other domains, it will take at least a century to catch up with the Harvards and Tübingens and the Sorbonnes—and by then where will these universities be?
>
> What Malik clearly saw is the strategic position occupied by the university in shaping Western thought and culture. Indeed, the single most important institution shaping Western society is the university. It is at the university that our future political leaders, our journalists, our lawyers, our teachers, our scientists, our business executives, our artists, will be trained. It is at the university that they will formulate or, more likely, simply absorb the worldview that will shape their lives. And since these are the opinion-makers and leaders who shape our culture, the worldview that they imbibe at the university will be the one that shapes our culture.

And:

> The great Princeton theologian J. Gresham Machen warned on the eve of the Fundamentalist Controversy that if the Church loses the intellectual battle in one generation, then evangelism would become immeasurably more difficult in the next:
>
> False ideas are the greatest obstacles to the reception of the gospel. We may preach with all the fervor of a reformer and yet succeed only in winning a straggler here and there, if we permit the whole collective thought of the nation or of the world to be controlled by ideas which, by the resistless force of logic, prevent Christianity from being regarded as anything more than a harmless delusion. Under such circumstances, what God desires us to do is to destroy the obstacle at its root.

> The root of the obstacle is to be found in the university, and it is there that it must be attacked. Unfortunately, Machen's warning went unheeded, and biblical Christianity retreated into the intellectual closets of Fundamentalism, from which it has only recently begun to re-emerge. The war is not yet lost, and it is one which we must not lose: souls of men and women hang in the balance.

This lecture is an excellent opportunity for us all to ask ourselves: what are we doing to influence the university? Do you have a plan?

Many of the strongest people who are now opposed to Christianity raised in two-parent Christian homes, and went to church for a decade before going off to the university. I'm thinking especially of people like Tim Gill, in Colorado. At university (and even increasingly in high school) they turned away from Christianity. All their peers and the adults could not answer their questions. As adults, they were able to get money, power and influence. Many of them are using it against Christ and his kingdom – kicking away the ladder that they climbed to success on. Why is this? Unfortunately, many of us are not willing to do what works – pick up the Lee Strobel books and read them. Especially "The Case for a Creator".

# Global warming alert: Washington, D.C. breaks 141-year-old cold record

**Wintery Knight** · 5 March 2014 · Archived copy · Original

The leftist Washington Post reports.

Excerpt:

> Baltimore-Washington International Thurgood Marshall Airport broke a 141-year-old record low temperature, reaching 4 degrees. The National Weather Service said the low reached early Tuesday broke a 5-degree record set on the day in 1873. It was also a record low for the month of March. Dulles International Airport – also outside Washington – tied a 1993 record for the month at -1 degree.
>
> Both airports broke record lows two days in a row.
>
> Schools and government offices along the East Coast were closed Tuesday or delayed opening. Virginia State Police said slickened roads were factors in three traffic deaths. And authorities in Maryland's Prince George's County said a 60-year-old woman died after shoveling snow there.

Global warming is to blame for these record cold temperatures. But wait, Washington wasn't the only one victimized by the global warming monster.

On Monday, leftist Reuters reports that the cold was all up and down the East coast.

Excerpt:

> A deadly winter storm hit the U.S. East Coast on Monday with freezing rain, snow and near-record cold, cancelling about 2,700 flights, shutting down Washington and closing schools and local governments.
>
> The latest in a series of weather systems to pummel the winter-weary eastern United States, the storm dumped about 4 inches on the U.S. capital by early afternoon as it swept from the Mississippi Valley to the Atlantic coast, the National Weather Service said.
>
> Brian Hurley, a weather service meteorologist, said temperatures would be about 30 degrees Fahrenheit (15 degrees Celsius) below normal as a cold front settled in from Great Plains to the Atlantic coast.
>
> "It's really, really cold, temperatures dropping into the teens (Fahrenheit, minus-7 to minus-10 Celsius) and the normal highs are around 50 (10C) at this point," he said.
>
> At least four weather-related traffic deaths in Texas, Oklahoma and Tennessee were blamed on the wide-ranging storm over the weekend.

And on Tuesday, leftist Reuters reported that the cold had spread westward.

Excerpt:

> The eastern and central United States were plunged into a deep freeze on Tuesday, with record low temperatures in the wake of a deadly storm expected to moderate in coming days.
>
> The late-winter storm left behind frigid temperatures after pushing freezing rain, sleet and snow from the Mississippi Valley to the Atlantic and Gulf coasts.
>
> Temperatures this week will be "below average east of the Rockies, as it has been for a good part of the winter," said Bob Oravec, a National Weather Service meteorologist in College Park, Maryland.
>
> The icy front sent the mercury plunging to minus 1F (minus 18C) at Washington Dulles International Airport, tying a monthly record, the weather service said.

> Baltimore; Scranton, Pennsylvania; Morgantown, West Virginia; Zanesville, Ohio; and Flint, Michigan all set or tied record lows.
>
> The latest in a series of arctic weather systems to grip the winter-weary eastern United States, the cold front stretched from the Canadian border to southern Texas, where freezing rain was forecast.
>
> […]The storm was blamed for at least six deaths, most of them from traffic accidents on slippery roads. A woman in Bowie, Maryland, died on Monday from a likely heart attack after shoveling snow, a spokesman for the Prince George's County fire department said.
>
> About 730 U.S. flights were canceled and about 2,700 delayed on Tuesday in the wake of the bad weather, according to airline tracking site FlightAware.com. About 8,000 flights were canceled or delayed on Monday.

Those people were not killed by record cold temperatures, they were killed by the global warming monster!!1! They were caught up in a fiery explosion caused by cowboy capitalism and insufficient government spending on science education. We need more grant money for a study to find out why you believe your own eyes, rather than the dire warnings of greedy scientists and their power-hungry socialist masters in government.

# Americans using student loans to pay for living expenses

**Wintery Knight** · 5 March 2014 · Archived copy · Original

Student Loan Bubble

The Wall Street Journal reports on the $1.1 trillion of student loan debt.

Excerpt:

> Some Americans caught in the weak job market are lining up for federal student aid, not for education that boosts their employment prospects but for the chance to take out low-cost loans, sometimes with little intention of getting a degree.
>
> […]A number of factors are behind the growth in student debt. The soft jobs recovery and the emphasis on education have driven people to attain more schooling. But borrowing thousands in low-rate student loans—which cover tuition, textbooks and a vague category known as living expenses, a figure determined by each individual school—also can be easier than getting a bank loan. **The government performs no credit checks for most student loans.**
>
> College officials and federal watchdogs can't say exactly how much of the U.S.'s swelling $1.1 trillion in student-loan debt has gone to living expenses. But data and government reports indicate the phenomenon is real. The Education Department's inspector general warned last month that the rise of online education has led more students to borrow excessively for personal expenses. Its report said that among online programs at eight universities and colleges, non-education expenses such as rent, transportation and "miscellaneous" items made up more than half the costs covered by student aid.
>
> The report also found the schools disbursed an average of $5,285 in loans each to more than 42,000 students who didn't log any credits at the time. **The report pointed to possible factors such as fraud in addition to cases of people enrolling without serious intentions of getting a degree.**
>
> Capella Education Co., which runs online schools, examined student costs and debt at institutions public and private in Minnesota and concluded that **between a quarter and three-quarters of loans taken out by students were for non-education expenses**. At one of Capella's master's programs, the typical graduate left with about $30,200 in student debt even though tuition, fees and book costs totaled roughly $18,800.

> Borrowers are prohibited under federal law, except in rare instances, from discharging student debt through bankruptcy.
>
> The share of student borrowers taking out the maximum amount of loans—$12,500 a year for undergraduates—has risen since the recession. In the 2011-12 academic year, federal Education Department data show, 68% of all undergraduate borrowers hit the annual loan ceiling, up from 60% in 2008.
>
> Research suggests a fair chunk of that is going to non-education expenses. In 2011-12, about a quarter of student borrowers took out loans that exceeded their tuition, after grants, by $2,500, according to research by Mark Kantrowitz, a higher-education analyst and publisher of the education site Edvisors.com.
>
> Some students say they intend to get a degree but must borrow as much as possible because they can't find decent-paying jobs to cover day-to-day expenses.

Here are some examples of how this is working out:

> Tommie Matherne, **a 32-year-old married father of five** in Billings, Mont., has been going to school since 2010, when he realized the $10 an hour he was making as a **mall security guard** wasn't covering his family's expenses. **He uses roughly $2,000 in student loans each year to stock his fridge and catch up on bills. His wife is a stay-at-home mother who also gets loans to take online courses.**
>
> "We've been taking whatever we can for student loans every year, taking whatever we have left over and using it to **stock up the freezer** just so we have a couple extra months where we don't have to worry about food," says Mr. Matherne, **who owes $51,600 in federal loans.**
>
> Some students end up going deeper into debt. Early last year, when Denna Merritt lost her long-term unemployment benefits, the 49-year-old Indianapolis woman enrolled part-time at the Art Institute of Pittsburgh's online program, aiming for a degree in graphic design. She took out $15,000 in federal loans, $2,800 of which went to catch up on **unpaid bills, including utilities, health-insurance premiums and cable.**
>
> Mr. Selent, of Fort Lauderdale, knows he is getting himself deeper in a hole but prefers that to the alternative of making minimum wage. In his 20s, he earned a bachelor's degree in communications from a local for-profit school but couldn't find a job in the field after graduating and began falling behind on his student-loan bills. **He is now taking courses for a degree in theater so he can become an actor.**
>
> Meanwhile, federal loans allow him to cover any needs that arise during the semester. Says Mr. Selent: "It keeps me from falling apart."

Wow. Communications and Theatre. Do you think a private bank would have given him money to do a degree in theater? I don't think so. A private banker might give a loan to someone trying to get a STEM degree, like computer science or nursing, but not for *theater*. So how did the theater major get the loan, then, if no sane private sector banker would give it to him?

This article from the Heritage Foundation think tank explains how he got the money.

Excerpt:

> The Obama Administration's overreach into the student loan industry has been wide-sweeping. In what *The Wall Street Journal* deemed "that other government takeover," a provision buried deep in Obamacare **effectively nationalized the student loan industry** by ending government subsidies to private lenders and putting the federal government in charge of originating and servicing federally backed student loans.
>
> The Obamacare provision came in addition to the Administration's decision in 2011—made through executive order—to forgive student loan debt after 20 years. And it comes in addition to the Administration's gainful

> employment regulations restricting access to student loans for students attending for-profit institutions.
>
> But the current debate's origins are in separate legislation passed in 2007 whereby the federal government set interest rates on student loans artificially low, cutting the rates in half temporarily for four years. Now that the interest rates are set to increase, President Obama is pressing Congress to keep rates low.

So the Democrats are repeating the mortgage lending recession they caused in 2008 by again transferring risk away from private banks and onto the backs of the taxpayers. Anybody can get a loan for anything, whether it be basket-weaving or women's studies or… *theater*.

**It's just more vote-buying from the Democrat party**

The government is giving away these loans to students, no questions asked, in order to *buy their votes*. These are the students who cheered when Obama promised that they could stay on their parents' insurance plans until they were 26. The Democrats get the moocher vote, and the students get their loans forgiven in 20 years. Everybody wins – except that the next generation of Americans gets stuck with the bill for this vote buying scheme.

# Daughter sues parents for private school and college tuition

**Wintery Knight** · 5 March 2014 · Archived copy · Original

When reading this story from leftist CNN, I think it's possible to decide who is lying and who is telling the truth based on whether the claims can be verified. Not every claim made by each side can be verified, but I am inclined to belief *entirely* the side that makes testable claims.

Excerpt:

> A high school senior's lawsuit against her mother and father for financial support and college tuition hit a hurdle Tuesday when a New Jersey judge denied the teenager's request for immediate financial assistance from the parents.
>
> Rachel Canning, 18, alleges in her lawsuit that her parents forced her out of their Lincoln Park, New Jersey home, and that she is unable to support herself financially. The lawsuit asks that her parents pay the remaining tuition for her last semester at her private high school, pay her current living and transportation expenses, commit to paying her college tuition and pay her legal fees for the suit she filed against her parents.
>
> Her parents say she left home because she didn't want to obey their rules.

Here are the daughter's claims:

> Canning, an honor student and cheerleader at Morris Catholic High School in Denville, says in court documents she had to leave her parents' home because of emotional and psychological mistreatment, alleging, among other things, that her mother called her "fat" and "porky" and that her father threatened to beat her.
>
> "I have been subjected to severe verbal and physical abuse by my mother and father," Canning wrote in a court certification. "I am not willingly and voluntarily leaving a reasonable situation at home to make my own decisions. I had to leave to end the abuse."

Here are some facts not in dispute:

> Canning left her parents' home at the end of last October. **After spending two nights at her boyfriend's home**, she moved into the home of her friend in a nearby town, where she has been staying ever since, according to court documents written by the parents' attorney.

And here are her parent's claims:

> Canning's parents, Sean and Elizabeth Canning, claim that allegations of abuse are completely unfounded.
>
> "We were always her support team, cheering her on or defending her whenever she had a problem," wrote Elizabeth Canning in a court certification. She claims that her daughter was never forced out of the family's home, but rather "took it upon herself to run away so that she could live her life without any parental supervision and without any rules."
>
> **Canning was suspended from school for truancy last October, according to court documents filed by her parents' attorney, Laurie Rush-Masuret. Her parents told the teen that she could no longer see her boyfriend, who was also suspended from school.** Car and phone privileges were also taken away. Once she learned of the punishment, **Canning cut school again** and then decided to run away, her father said in court documents.
>
> Once she left home, her parents notified Morris Catholic High School that they would no longer pay for their daughter's tuition, the documents state.

Now it seems to me that her parents are now on record making testable claims in court documents – claims that can be verified. Why would they do that if they knew those claims were not true? So I'm inclined to believe them, and I'm glad that this woman's mother is sticking by her man in this fight. That is not always the case when daughters sue fathers.

So, I'm going to assume that the parents are telling the truth. But even if they aren't, do you think that it's *normal* for a child to sue her parents for disciplining her? I find it astonishing that a child could be so stupid as to prefer her boyfriend and her friends' parents to her own parents. Doesn't she know that long after the boyfriend and the other couple are gone, that her parents will still be there for her? What they've provided her with already in terms of sending her to a private school shows me that they must care about her. Parents don't shell out money for private schools unless they have some interest in their child's success.

So I guess I'm shocked by this story, and I'm wondering what young women are coming to when they do things like this. They seem to be so rebellious, making wrong decisions and then turning to abortion, social programs and no-fault divorce to get out of their own poor choices. It really is scary. Speaking as a man, the fact that this trial even *happened* makes me not want to bother with marriage and children. Don't people realize how it looks to men when they see things like this? No man is working and saving up for marriage to be treated like this. We don't get married to have MORE rebellion and disorder.

By the way, I had to search several stories to find the details about the suspensions and the boyfriend, and CNN was the only source that had it. Color me surprised.

UPDATE: A lot more on what the daughter did to drive the parents crazy in the UK Daily Mail.

# What kinds of anti-poverty programs really work?

**Wintery Knight** · 6 March 2014 · Archived copy · Original

Christians ought to be concerned about poverty. Is there a way to help the poor without making them dependent on the government?

Yes! In this article, the American Enterprise Institute discusses a great program called the Doe Fund, which is run in New York City.

Excerpt:

> […][F]or more than 25 years, the organization run by George and Harriet McDonald has helped homeless men. The program they run is based on a clear contract between the shelter managers and the homeless men. "You get up every day and go to work and stay drug free-and we will pay you and house you and feed you. It's as simple as that," Mr. McDonald said at his shelter on 155th street in Harlem. Doe Fund facilities are funded by revenue generation from their maintenance and cleaning business, government funding for homeless services, and private donations. The breakdown is roughly one-third each.
>
> Anyone who enters one of the four Doe Fund facilities in New York City is handed a paper entitled: "Some of the Rules that You Will hear ALL the time." Among the regulations are Rule No. 4: No standing or loitering in front of the building at any time of the day. Rule No. 10: You must not drink or drug while you are in the program. Rule No. 11: No cellular phones are allowed while you are working.
>
> In return for a roof over their heads and a salary, residents of the Doe Fund shelters clean and maintain commercial strips all over New York City-real jobs, with real demands and shifts that start at 6 a.m. The Doe Fund crews add an extra touch not provided by the sanitation and park employees of New York City, and every day workers face real customers who include not only local business groups who pay for their services but also residents and pedestrians who benefit from the improved quality of life.
>
> Hourly wages start at $8.15, which gives shelter residents a chance to save, as room and board are provided. Some men accumulate as much as $5,000 while they are in the six- to nine-month program.
>
> According to the McDonalds, over the past three years 57% of the men who completed the six-month program got jobs at an average wage of $10.86 an hour. And 65% of those retained the job for at least six months. A 2010 Harvard University evaluation found similar results. For a program that works with homeless men, many of whom have served prison sentences, those are solid results.
>
> In addition to a strong work and drug-free requirement (enforced by random drug tests), the Doe Fund also requires the men who are fathers to provide financial support to their children and to identify themselves to the city's child-support enforcement office to be sure they comply with their child-support orders.
>
> **What is important about the Doe Fund is that it explicitly links aid with a strong enforcement of the rules.** Doe Fund managers enforce the rules by restricting noncompliant residents to the shelter, reducing benefits or referring them to another city shelter where these opportunities are not offered. The Doe Fund is not alone in its approach-there are similar setups across the country, but in most such programs it's still rare to tie behavior to consequences.

Now, this is the kind of anti-poverty program that I support. It's not just handing out money with no strings attached. It's easing people into the work force in a structured environment. I think that deep down, poor people really want to work, and this program is exactly how we should be getting them started at that.

But there is one thing that might hurt this program, and the article mentions it. Can you guess what it is? Look at the hourly wages these entry-level workers are being paid.

Here's what it is:

> It is troubling that at the same time the president has announced a new focus on helping young minority men, one of his administration's top legislative priorities is a substantial hike in the federal minimum wage-a mandate on employers that is likely to reduce job opportunities for the very young men the president wants to help with My Brother's Keeper.

If we really wanted to help the poor, we should be LOWERING the minimum wage, and then maybe the government can make up the difference. I would much rather have the government subsidizing work by topping off lower salaries than subsidizing bad behaviors.

# New study: methodology used by Southern Poverty Law Center to detect “hate groups” is flawed

**Wintery Knight** · 6 March 2014 · Archived copy · Original

An article from the Christian Post reports on a new study published by Dr. George Yancey, a professor of sociology at the University of North Texas.

Excerpt:

> The Southern Poverty Law Center’s “Hatewatch” fails to use objective criteria in determining which organizations should be labeled a “hate group,” George Yancey, professor of sociology at the University of North Texas, finds in a new study, “Watching the Watchers: The Neglect of Academic Analysis of Progressive Groups,” published in the January issue of the journal *Academic Questions*.
>
> SPLC’s list dubiously lists Family Research Council as a hate group while ignoring anti-Christian groups that use similar rhetoric, which demonstrates that the list is more about mobilizing liberals than providing an objective source for hate groups, Yancey argues. SPLC has escaped critical analysis of its work in academia because of a liberal bias among academicians, the study additionally claims.
>
> SPLC’s Hatewatch has become the definitive guide among some scholars, authors and media organizations to what is, or is not, a “hate group.” Conservatives have long criticized the list for labeling social conservative organizations, such as Family Research Council, as hate groups.
>
> […]According to SPLC, Yancey explains, FRC is a hate group because it intentionally makes hateful and untrue statements about the LGBT community, which can lead to violence even though FRC does not engage in violent actions. (Yancey noted the irony that while SPLC does not cite any examples of FRC-inspired violence, SPLC’s Hatewatch actually did incite violence in the case of Floyd Corkins.) To support this contention, SPLC notes that FRC reports on studies showing that the child molestation rate is higher among gays and same-sex parenting harms children, and quotes FRC President Tony Perkins saying that LGBT activists seek to “persuade kids that homosexuality is okay and actually to recruit them into that lifestyle.”
>
> If this is the standard for labeling an organization a hate group, Yancey says, then the anti-Christian MRFF should also be on the list.
>
> In a Huffington Post blog, Michael Weinstein, founder of MRFF, claimed that Christians will be responsible for ushering in “a blood-drenched, draconian era of persecutions, naturalistic militarism and superstitious theocracy.” And Weinstein has written books claiming that Christians are willing to use mass murder to bring about their goals.
>
> “In these few comments Weinstein has violated some of the same norms SPLC used to designate FRC as a hate group. Weinstein is promoting a myth of Christian violence not substantiated by previous research and has attributed motives to conservative Christians that he cannot document,” Yancey contends.
>
> Yancey does not argue that MRFF should be on Hatewatch, or that FRC should be off Hatewatch. Rather, he argues that if Hatewatch is to be an objective source for labeling hate groups, both groups should either be on the list or off the list.
>
> One possible explanation for why SPLC does not include anti-Christian groups on Hatewatch, Yancey speculates, is that Hatewatch is a tool for mobilizing liberals, rather than an objective source of hate groups.
>
> “As our society became more politically partisan, SPLC cemented its position as speaking for those with progressive political and social attitudes. Rather than developing into an objective clearinghouse for the identification of hatred – no matter where the source of that hatred may develop – SPLC has become a useful organization for progressives to legitimate their battle against conservatives. Since conservative Christians are categorized as opponents there is little, if any, incentive for SPLC to recognize hateful expressions against

> Christians, because doing so actually works against the social vested interest of the group," he wrote.
>
> Yancey's analysis of SPLC, though, is in service of a larger point. There is not enough critical analysis of liberal groups in academia, he argues, because too many in academia share the viewpoint of liberal groups.
>
> "This is a critique of the social biases within academia that preclude critical analysis of progressive social groups," Yancey wrote. "Such neglect serves academics with progressive, secular perspectives by allowing progressive, secular social groups to make claims of truth and objectivity. Such claims enhance the social power of these progressives. But this neglect damages any real scientific attempt to assess social and political factors in our society. Scrutiny directed at conservative and religious groups – and they should be scrutinized – while progressive organizations are given a pass creates a distorted understanding of reality. In doing this, social science scholars replace an objective examination of our society with a biased approach serving progressive social and political interests."

Keep in mind that the SPLC materials are being used by government agencies, including the FBI and the U.S. Army.

You might remember that I blogged before about George Yancey's work on liberal bias in academia.

# Darwinist and atheist P.Z. Myers thinks that origin of life is part of evolution

**Wintery Knight** · 6 March 2014 · Archived copy · Original

J. Warner Wallace tweeted this post by vjtorley from Uncommon Descent.

Excerpt:

> On a deeper level, however, the skeptics' attempt to divorce to the theory of evolution from the origin of life is fundamentally flawed. "Says who?", you ask. Says evolutionary biologist PZ Myers, that's who – in his 2008 post, 15 misconceptions about evolution. Myers was responding to a list of common myths about Darwin's theory of evolution, drawn up by Listverse founder Jamie Frater. For the most part, Professor Myers thought Frater's post was excellent, but on a couple of points, he differed sharply with Frater's responses to these myths about evolution. Frater had argued that evolution doesn't deal with the origin of life, but PZ Myers argued that this compartmentalization of the two issues was tantamount to "cheating":

> [Myth] #15 is also a pet peeve [of mine]: "Evolution is a theory about the origin of life" is presented as false. **It is not. I know many people like to recite the mantra that "abiogenesis is not evolution," but it's a cop-out.** Evolution is about a plurality of natural mechanisms that generate diversity. It includes molecular biases towards certain solutions and chance events that set up potential change as well as selection that refines existing variation. Abiogenesis research proposes similar principles that led to early chemical evolution. **Tossing that work into a special-case ghetto that exempts you from explaining it is cheating, and ignores the fact that life *is* chemistry.** That creationists don't understand that either is not a reason for us to avoid it.

> Well, there you have it. If you accept that "life *is* chemistry," as any card-carrying materialist surely does, then you cannot honestly maintain that the evolution of life should be studied in isolation from the question of how it originated.

Myers is wrong about a lot, but this time he is right on the money.

Darwinists who are trying to avoid putting forward a naturalistic theory for the origin of life better think again. In order to affirm that naturalistic mechanisms can account for the diversity of life, you do have to explain the origin of life. If that is the place where an intelligent cause is needed to explain the information, then that's enough to cast doubt on naturalism. There has to be a seamless chain of cause and effect for naturalism to be true. Any discontinuity, whether it be the creation event or the origin of life, is lethal to naturalism.

# The Economist: SB 1062 was a reasonable protection of religious liberty

**Wintery Knight** · 7 March 2014 · Archived copy · Original

Here's a case for tolerance of religious liberty from a gay writer in the Economist.

Excerpt: (links removed)

> Doing that seems to me to have been point of laws like Arizona's strangely controversial SB 1062, which was vetoed last week by Jan Brewer, Arizona's governor. Douglas Laycock, a professor of law at the University of Virginia, recently noted that the thrust of the bill was simply to refine existing state and federal religious-freedom protections. "These laws", Mr Laycock writes, "enact a uniform standard—substantial burden and compelling interest—to be interpreted and applied to individual cases by courts. They rest on the sound premise that we should not punish people for practicing their religion unless we have a very good reason". The point of SB 1062 in particular was to clarify "that people are covered when state or local government requires them to violate their religion in the conduct of their business, and that people are covered when sued by a private citizen invoking state or local law to demand that they violate their religion." Mr Laycock goes on to emphasise, and this is very important:
>
> *But nothing in the amendment would have said who wins in either of these cases.* SB1062 did not say that businesses can discriminate for religious reasons. It said that business people could assert a claim or defense under RFRA, … that they would have to prove a substantial burden on a sincere religious practice, that the government or the person suing them would then have the burden of proof on compelling government interest, and that the state courts in Arizona would make the final decision.
>
> It is incorrect to claim, as my colleague did last week, that SB 1062 was "in effect, an exemption from anti-discrimination laws for the pious". It was not. It was an attempt to calibrate the law so that worthy new legal rights don't infringe on worthy old ones. If forcing conservative Christian photographers to shoot gay weddings can be shown to promote a "compelling interest" of the state, and if the photographer fails to show that doing so would place a "substantial burden" on her sincere religious beliefs, then refusing to work a gay weddings would remain a violation of existing anti-discrimination law. That seems reasonable to me. As Mr Laycock says, "we should not punish people for practicing their religion unless we have a very good reason". When we *do* have a very good reason, we can go right ahead.

It's important to understand that many gay people are either 1) not in favor of gay marriage or 2) not in favor of forcing Christians to affirm gay marriage. The Economist is a socially liberal, fiscally moderate publication. So I am especially glad to see an article defending religious liberty and tolerance of Christians *here*. Of all places. I think a lot of people are going to read that and realize that it's worse to take away the religious liberty of Christians to not participate in activities they oppose, than for gay couples to simple go next door and get the product or service they want.

I also think that this article goes to show you how reasonable SB 1062 was as legislation.

# Should you go see Darren Aronofsky's movie "Noah"?

**Wintery Knight** · 7 March 2014 · Archived copy · Original

Here's a review of the draft screenplay from Christian screenwriter Brian Godawa.

Excerpt:

> As a screenwriter of films like To End All Wars and Alleged which deal with faith, and as the author of a novel called Noah Primeval about what led up to the Great Flood, I am especially conscious of issues relating to the intersection of Hollywood and the Bible and I've been keeping tabs on a film that lives at that intersection, a film called Noah, written by Darren Aronofsky and Ari Handel. I've also watched with great anticipation as a post-Passion of The Christ Hollywood tries to come to grips with how to reach the massive faith-friendly audience and I'm concerned about the phenomenon that I see, which is films being developed for that audience by people who don't understand it and are thus destined to fail. Then when they do fail, as expected, smug Hollywood executives declare "See, that audience doesn't really exist." I don't want that to keep happening. I want films to be properly developed so that they can succeed. It is in that spirit that I offer my analysis of Aronofsky and Handel's Noah script. I believe that it's never too late to right a ship that is heading in the wrong direction.
>
> Having got a chance to read an undated version of the script for Noah I want to warn you. If you were expecting a Biblically faithful retelling of the story of the greatest mariner in history and a tale of redemption and obedience to God you'll be sorely disappointed. Noah paints the primeval world of Genesis 6 as scorched arid desert, dry cracked earth, and a gray gloomy sky that gives no rain – and all this, caused by man's "disrespect" for the environment. In short, an anachronistic doomsday scenario of ancient global warming.

And here's an article by Jewish conservative Ben Shapiro on CNS News.

Excerpt:

> Meanwhile, Hollywood prepared to drop a new blockbuster based on the biblical story of Noah. The film, directed by Darren Aronofsky, centers on the story of the biblical character who built an ark after God warned him that humanity would be destroyed thanks to its sexual immorality and violent transgressions. The Hollywood version of the story, however, has God punishing humanity not for actual sin, but for overpopulation and global warming — an odd set of sins, given God's express commandments in Genesis 1:28 to "be fruitful, multiply, fill the earth, and subdue it."
>
> […]In a world in which consumerism is the greatest of all sins, America is the greatest of all sinners, which, of course, is the point of the anti-consumerist critique from the left: to target America. Global warming represents the latest apocalyptic consequence threatened by the leftist gods for the great iniquity of buying things, developing products, and competing in the global marketplace. And America must be called to heel by the great preachers in Washington, D.C., and Hollywood.

It's very rare for me to recommend that people go see a movie made by Hollywood leftists, and I give this movie the same treatment. Do not spend your money on this movie. Do not give your money to the people who made this movie.

# Physicist Frank Tipler on the usefulness of refereed journals, then and now

**Wintery Knight** · 7 March 2014 · Archived copy · Original

I really enjoyed this episode of the ID the Future podcast.

Description:

> Is the only good science peer-reviewed science? Are there other avenues to present important scientific work? On this episode of **ID The Future**, Professor of Mathematics Dr. Frank Tipler discusses the pros and cons of peer review and refereed journals. More than fifty peer-reviewed papers discussing intelligent design have been published, but critics of the theory still proclaim a lack of peer-reviewed work as an argument. Listen in as Tipler shows how things have changed with the peer review process and what we can do about it.

About the speaker:

> Frank Tipler was born and raised in Andalusia, Alabama. His first science project was a letter written in kindergarten to Werner von Braun, whose plans to launch the first earth satellite were then being publicized. Von Braun's secretary replied, regretting he had no rocket fuel for Tipler as requested. By age five, he knew he wanted to be an astrophysicist. But he's always been a polymath, reading widely across disciplines and into the history of science and theology. After graduating from MIT and the University of Maryland, he did postdoctoral work at Oxford and Berkeley, before arriving at Tulane in 1981.

Whenever William Lance Craig often cites a book by two physicists named "Barrow and Tipler" called "The Anthropic Cosmological Principle" (Oxford University Press, 1988) in his debates to support the fine-tuning argument. This Tipler is that Tipler! Dr. Tipler is a master of the physics of cosmology and fine-tuning. However, I definitely disagree with him on some of his ideas.

The MP3 file is here. (17 minutes)

Topics:

- the changing nature of refereed journals and peer-review
- previously, the refereed journals were more about communication
- now, ideas are not taken seriously unless they are published in these journals
- the problem is that referees can be motivated by ideological concerns
- before, an obscure patent official named Einstein submitted a physics paper and it was published
- now, an uncredited person would not be able to have a brilliant paper published like that
- today, there are so many scientists that many more papers are submitted
- although it restricts BAD ideas, it can also end up censoring NEW ideas
- the problem is that any really brilliant idea has to go against the prevailing consensus
- peer-review may actually be holding back the progress of science by censoring NEW ideas
- some referees are motivated to censor ideas that undercut their reputation and prestige
- Dr. Tipler was told to remove references to intelligent design before one of his papers would be published
- how scientists with NEW ideas can bypass the system of refereed journals when they are censored
- peer-review has value when it finds errors, but not when it suppresses new ideas

I think this one is a must listen. As much as I like peer-reviewed research, it's important to acknowledge the

limitations. I think if you're going into a debate, you definitely want to be the one with the peer-reviewed evidence. Let the other guy be the one making assertions and stating his preferences and opinions. But that doesn't mean that the peer-review process can't be improved – I think that it can be improved.

Here is a listing of some recent peer-reviewed publications related to intelligent design.

# Study: children of same-sex couples do less well than those of married couples

**Wintery Knight** · 8 March 2014 · Archived copy · Original

The Public Discourse reports on a recent study out of Canada.

Excerpt:

> A new academic study based on the Canadian census suggests that a married mom and dad matter for children. Children of same-sex coupled households do not fare as well.
>
> There is a new and significant piece of evidence in the social science debate about gay parenting and the unique contributions that mothers and fathers make to their children's flourishing. A study published last week in the journal *Review of the Economics of the Household*—analyzing data from a very large, population-based sample—reveals that the children of gay and lesbian couples are only about 65 percent as likely to have graduated from high school as the children of married, opposite-sex couples. And gender matters, too: girls are more apt to struggle than boys, with daughters of gay parents displaying dramatically low graduation rates.
>
> Unlike US-based studies, this one evaluates a 20 percent sample of the Canadian census, where same-sex couples have had access to all taxation and government benefits since 1997 and to marriage since 2005.
>
> While in the US Census same-sex households have to be guessed at based on the gender and number of self-reported heads-of-household, young adults in the Canadian census were asked, "Are you the child of a male or female same-sex married or common law couple?" While study author and economist Douglas Allen noted that very many children in Canada who live with a gay or lesbian parent are actually living with a single mother—a finding consonant with that detected in the 2012 New Family Structures Study—he was able to isolate and analyze hundreds of children living with a gay or lesbian *couple* (either married or in a "common law" relationship akin to cohabitation).
>
> So the study is able to compare—side by side—the young-adult children of same-sex couples and opposite-sex couples, as well as children growing up in single-parent homes and other types of households. Three key findings stood out to Allen:
>
> children of married opposite-sex families have a high graduation rate compared to the others; children of lesbian families have a very low graduation rate compared to the others; and the other four types [common law, gay, single mother, single father] are similar to each other and lie in between the married/lesbian extremes.
>
> Employing regression models and series of control variables, Allen concludes that the substandard performance *cannot* be attributed to lower school attendance or the more modest education of gay or lesbian parents. Indeed, same-sex parents were characterized by higher levels of education, and their children were more likely to be enrolled in school than even those of married, opposite-sex couples. And yet their children are notably more likely to lag in finishing their own schooling.
>
> […]The truly unique aspect of Allen's study, however, may be its ability to distinguish gender-specific effects of same-sex households on children. He writes:
>
> the particular gender mix of a same-sex household has a dramatic difference in the association with child graduation. Consider the case of girls. . . . Regardless of the controls and whether or not girls are currently living in a gay or lesbian household, the odds of graduating from high school are considerably lower than any other household type. Indeed, girls living in gay households are only 15 percent as likely to graduate compared to girls from opposite sex married homes.
>
> Thus although the children of same-sex couples fare worse overall, the disparity is unequally shared, but is instead based on the combination of the gender of child and gender of parents. Boys fare better—that is,

> they're more likely to have finished high school—in gay households than in lesbian households. For girls, the opposite is true. Thus the study undermines not only claims about "no differences" but also assertions that moms and dads are interchangeable. *They're not.*

With a little digging, I found the abstract of the study:

> Almost all studies of same-sex parenting have concluded there is "no difference" in a range of outcome measures for children who live in a household with same-sex parents compared to children living with married opposite-sex parents. Recently, some work based on the US census has suggested otherwise, but those studies have considerable drawbacks. Here, a 20% sample of the 2006 Canada census is used to identify self-reported children living with same-sex parents, and to examine the association of household type with children's high school graduation rates. This large random sample allows for control of parental marital status, distinguishes between gay and lesbian families, and is large enough to evaluate differences in gender between parents and children. Children living with gay and lesbian families in 2006 were about 65 % as likely to graduate compared to children living in opposite sex marriage families. Daughters of same-sex parents do considerably worse than sons.

The author of the study is a professor of economics at Simon Fraser University in British Columbia. His PhD in economics is from the University of Washington. A previous study had shown that gay relationships typically have far more instability (they last for more shorter times). That's not good for children either. Another study featured in the Atlantic talked about how gay relationships have much higher rates of domestic violence. That's not good for children either. So we have three reasons to think that normalizing gay relationships as "marriage" would not be good for children.

The reason I am posting this is because I want people to understand why social conservatives like me propose these laws defining and promoting marriage. We do favor natural marriage for the same reason that we oppose no-fault divorce, and for the same reason why we oppose welfare for single mothers (it encourages single motherhood). We don't want to encourage people to deprive children of their mother or their father. We look at the research, and we decide that children need their mother and father. Given the choice between the needs of the child and restraining the freedom of the adults, we prefer the child's need for her mother and father. It's not just arbitrary rules, there is a reason behind the rules.

But children are not commodities. They have certain needs right out of the box. Adults should NOT be thinking about how to duct-tape a child onto any old relationship that doesn't offer the same safety and stability that opposite sex marriage offers. We should be passing laws to strengthen marriage in order to protect children, not to weaken it. Libertarians don't want to do that, because they want adults to be free to do as they please, at the expense of children. Libertarians think that the adults should be able to negotiate private contracts and have no obligations to any children who are present, or who may be present later.

# New study: oral contraceptives linked to higher risk of multiple sclerosis

**Wintery Knight** · 8 March 2014 · Archived copy · Original

ECM sent me this article from Fox News about the new study.

Excerpt:

> In a new study, researchers found an increased risk of multiple sclerosis (MS) among women who have taken oral contraceptives. However, the findings do not mean women should stop using birth control, the researchers say.
>
> Utilizing membership data from Kaiser Permanente Southern California, researchers analyzed the health records of 305 women aged 14 to 48 who were diagnosed with MS or its precursor, clinically isolated syndrome (CIS), between 2008 and 2011. They looked at the women's birth control use up to three years prior to the onset of MS symptoms
>
> Overall, researchers found a 30 percent increased risk of developing MS amongst women who had at least three months of oral contraceptive use, compared to a control group of 3,050 women who did not have MS. They found that 29.2 percent of women with MS used birth control before their diagnoses, while 23 percent of women in the healthy control group used birth control– showing an increased risk with higher use of the drug, study author Dr. Kerstin Hellwig, a post-doctoral research fellow at Kaiser Permanente Southern California, told FoxNews.com.
>
> Additionally, for women who did not currently use an oral contraceptive but had in some time in the three years prior to being diagnosed, there was also a slightly higher risk.
>
> Multiple sclerosis is an autoimmune disease affecting the central nervous system. The causes are unclear, but experts believe genetics, environmental hazards and smoking are all possible factors. The condition normally develops between ages 20 and 40, Hellwig said.
>
> Researchers say use of birth control is not a firmly established cause for MS, but they do see a link.
>
> "It's not clear what role [hormones] play in the development of the disease, but it's clear that two to three times more women than men have MS," Hellwig said.

Previously, I blogged about studies on abortion and breast cancer.

**Abortion and breast cancer**

New study is up here at the National Institutes of Health web site.

Life News reported on the study here.

Excerpt:

> A new study of women from India shows women who get an induced abortion are 626% more likely to have breast cancer compared with women who carry their pregnancies to term and have the baby.The study found women more likely to have breast cancer had "higher number of abortions."
>
> This study follows closely after a bombshell meta-analysis of breast cancer studies found a 44% increased risk of contracting breast cancer for women who had abortions.
>
> "History of abortion was also found to be positively associated with the risk of breast cancer with 6.26 times higher risk in women having a history of abortion," they concluded.
>
> The doctors conducting the new study are based at the Department of Gastroenterology and Human Nutrition

> Unit, All India Institute of Medical Sciences, Ansari Nagar, New Delhi, India. Their report, published in the Indian Journal of Cancer confirms what previous studies have shown, namely that an abortion weakens the breast's muscle tissue in a way that makes it more susceptible to cancer.

> "However, the cases had a significantly higher number of abortions (61.3%) as compared to the controls (16.3%)," they wrote. "History of abortion was also found to be positively associated with the risk of breast cancer with 6.26 times higher risk in women having a history of abortion. The history of abortions was found to be significantly higher in breast cancer cases as compared to controls, with the Relative Risk (RR) = 6.26 in women having a history of abortion."

This is not the first study to confirm a link between abortion and breast cancer.

**Abortion and breast cancer**

Many studies show a link between abortion and breast cancer.

Study 1: (September 2010)

> Based on the expression of estrogen receptor (ER), progesterone receptor (PR) and HER2/neu (HER2), breast cancer is classified into several subtypes: luminal A (ER+ and/or PR+, HER2-), luminal B (ER+ and/or PR+, HER2+), HER2-overexpressing (ER-, PR-, and HER2+) and triple-negative (ER-, PR-, and HER2-). The aim of this case-control study is to determine reproductive factors associated with breast cancer subtypes in Chinese women. A total of 1,417 patients diagnosed with breast cancer in the First Affiliated Hospital, China Medical University, Shenyang, China between 2001 and 2009 and 1,587 matched controls without a prior breast cancer were enrolled.
>
> […]Postmenopause and spontaneous abortion were inversely associated with the risk of luminal tumors. By contrast, multiparity, family history of breast cancer and **induced abortion increased the risk of breast cancer**.

Study 2: (March 2010)

> OBJECTIVE: To explore the risk factors of breast cancer for better control and prevention of the malignancy.
>
> METHODS: The clinical data of 232 patients with pathologically established breast cancer were investigated in this 1:1 case-control study to identify the risk factors of breast cancer.
>
> RESULTS: The history of benign breast diseases, family history of carcinoma and**multiple abortions were the statistically significant risk factors of breast cancer**, while breast feeding was the protective factor.
>
> CONCLUSION: A history of benign breast diseases, family history of carcinoma and multiple abortions are all risk factors of breast cancer.

And more recently, I blogged about a very recent study from China which concluded thus:

> IA is significantly associated with an increased risk of breast cancer among Chinese females, and the risk of breast cancer increases as the number of IA increases. If IA were to be confirmed as a risk factor for breast cancer, high rates of IA in China may contribute to increasing breast cancer rates.

IA is, of course, induced abortion.

# J. Warner Wallace: science and the Bible agree on creation of the universe

**Wintery Knight** · 9 March 2014 · Archived copy · Original

I always recommend that Christians who want to make a positive case for Christian theism begin with the evidence that caused scientists to accept that the universe had a beginning. I don't recommend stating the kalam argument, or any Bible verses, or any philosophical arguments. Instead, I recommend that they tell the story of how the evidence that led up to the discovery of the Big Bang cosmology was discovered. Who made the discoveries of the evidence, what was the evidence, when was it discovered, and how was it discovered.

Here's Wallace's post on it.

Excerpt:

> **The Second Law of Thermodynamics**
>
> This law (also known as the Law of Increased Entropy) recognizes the following: While the quantity of energy within a closed, isolated system (like the Universe) remains the same, the amount of usable energy deteriorates gradually over time. "Usable energy is inevitably used for productivity, growth and repair. In the process, usable energy is converted into unusable energy. Thus, usable energy is irretrievably lost in the form of unusable energy."
>
> Many of us have played with wind-up toys over the years. After toys of this nature are wound, there is a limited period of time in which we can enjoy them. Within a few seconds, wind-up toys slow down and stop; they run out of energy. Imagine walking into an empty room and discovering a wind-up toy sitting on the floor, still operating (unwinding). The discovery of this toy (and the fact it is still in the process of unwinding), would raise two reasonable inferences: (1) the toy was recently wound at a fixed point in the not-too-distant past, and (2) there was an adequate cause responsible for the initial winding. In other words, you would start looking for the "winder" somewhere in the room, given the fact the toy was still in the process of unwinding. We happen to be living in a "wind-up" universe slowly losing its usable energy. If the universe had no beginning and was infinitely old, why would there be any usable energy still available to us? The fact there is still usable energy in the universe points to a beginning in which the universe was tightly wound, and causes us to look for the cause responsible for such winding.
>
> **The Expansion of the Universe**
> Over the years, a number of scientists have calculated or observed the expansion of the universe. In 1905, Albert Einstein developed the Special Theory of Relativity involving measurements of length, velocity and time from moving observers. These equations led to the now famous E = mc2 equation, which describes how matter and energy can be converted from one form to another. In 1915, by applying relativity to Newtonian physics, Einstein derived the equations of general relativity which describe the relationships between gravity, the speed of light, mass, and other factors in regard to the universe as a whole. His work was consistent with an expanding universe. While this conclusion was initially troubling to Einstein, other mathematicians and scientists were coming to the same conclusion.
>
> Alexander Friedman, a Russian mathematician working in the 1920's with Einstein's theories, used the mathematics to prove the universe is expanding. His work was being paralleled at the time by astronomers in Belgium who independently came to the same conclusion. An astronomer named Vesto Slipher presented findings at an obscure astronomy meeting in 1914 which showed that several 'nebulae' were receding away from the earth. A graduate student named Edwin Hubble was in attendance and realized the implications. Hubble later proved that these nebulae were actually galaxies, composed of billions of stars. In 1929 he proposed the law of red shifts. Galaxies which are moving away from the earth demonstrate emission spectra with bands shifted toward the red end of the spectrum, and Hubble observed these distant galaxies

> demonstrated this red shift phenomena. In essence, he proved by observation the universe is indeed expanding.
>
> Our universe is expanding like a balloon. Imagine individual galaxies drawn on the balloon's surface. As the edge of the balloon expands, the edge galaxies move away from center and away from each other. This is what we are seeing in our universe today. If we could go back in time and reverse the process ("deflate the balloon"), we would eventually arrive at an initial point of convergence. Once again, the science demonstrates our universe had a beginning.
>
> **The Radiation Echo**
> In 1964, two American physicists and radio astronomers, Arno Allan Penzias and Robert Woodrow Wilson, happened upon an important discovery. They were unable to eliminate the radio signal "noise" from their large antenna at the Bell Telephone Laboratories in New Jersey, regardless of where in the universe they tried to point their instrument. As a result, they began to consult with colleagues to determine the cause of this background noise. Phillip James Edwin Peebles, a physicist and theoretical cosmologist at Princeton University, suggested the noise might not be from the antenna at all. Instead, he proposed they might be detecting the residual "background radiation" caused when the universe first came into being. Penzias and Wilson pursued this line of investigation and confirmed Peebles' suspicions. Numerous additional experiments and observations have since established the existence of cosmic background radiation (culminating in data from the Cosmic Background Explorer satellite launched in 1989). For many scientists, this discovery solidified their belief the universe had a beginning at a fixed point in the past.

Wallace gets these evidences from a book by famous agnostic astornomer Robert Jastrow, former head of the NASA Goddard Space Institute. The book is called "God and the Astronomers". I have the second edition.

Wallace is working on a new book. Not much is known about it, but based on photos of the books he is reading, it's something to do with cosmology. If he can write a book for Christians that's as easy to read as his "Cold Case Christianity", then we are really going to gain some ground in the culture. The more Christians understand the science of cosmology, the more likely the culture as a whole is going to be to respect the Creator and Designer of the universe.

# Republicans advancing pro-life legislation in red and purple states

**Wintery Knight** · 9 March 2014 · Archived copy · Original

From Life Site News.

Excerpt:

> As the media debate the reason abortions declined over the last few years, pro-life voices say the record number of new laws restricting abortion played a role. The year 2014 is already shaping up to follow the trend of substantial pro-life legislation.
>
> **Arizona**
>
> Abortion facilities will no longer receive advance notice of state inspections, if the governor signs a proposed law. The state House of Representatives passed the measure, allowing unannounced health inspections of abortion facilities, by a vote of 34-22.
>
> **Florida**
>
> A woman tricked into ingesting an abortion-inducing drug that killed her child wants legislators to make sure that never happens to another woman. Remee Jo Lee testified that, unless lawmakers pass a new statute, Florida will have no state ordinance punishing offenders who harm women the way her boyfriend hurt her, physically and emotionally. “I’m still here but a big part of me is missing,” Lee told the House Judicial Committee. “I miss my baby every single day.” The committee passed the Unborn Victims of Violence Act 13-3 on Monday. It would allow prosecutors the discretion to try a criminal for a separate murder if he kills an unborn child, even if he did not know the woman was pregnant.
>
> **Oklahoma**
>
> The Oklahoma House passed a bill requiring abortionists to have admitting privileges at a hospital within 30 miles of their office, by a vote of 73-9. Similar measures have closed nine abortion facilities in neighboring Texas, as well as other states where admitting privileges were allowed to be enacted. The Senate must now pass the bill.
>
> **West Virginia**
>
> Abortion restrictions inched closer to acceptance in the Mountaineer State, as the state Senate Health and Human Resources Committee approved a ban on abortions at 20 weeks. Delegate Joe Ellington, a pro-life OB/GYN and Republican, said the bill actually goes into effect 20 weeks from conception, not the way most medical specialists count weeks. Therefore, it should really be viewed as a ban on abortion after 22 weeks of pregnancy. Violators could be fined $4,000. The bill then passed the Judiciary Committee. It will now go to the full state Senate for a vote.
>
> **Missouri**
>
> Women in Missouri may have more time to consider whether abortion is the right decision for them. The state House passed a bill to increase the waiting period for an abortion from 24 hours to 72 hours by a 115-37 vote on Wednesday. Nine Democrats joined the chamber’s Republican majority. It must pass the chamber a second time. However, Senate Democrats launched a filibuster against the Senate version of the bill on Wednesday.

More good news from a different Life Site News article.

Excerpt:

> The ever-decreasing number of abortion clinics continues its decline with the announcement of the closing of abortion clinics in Texas, Florida, and California.

> Whole Women's Health announced this week that its surgical abortion clinics in McAllen and Beaumont have permanently closed due to the new law passed last year that requires abortion facilities to meet minimum safety requirements, including hiring only abortionists that maintain local hospital privileges. The McAllen location had "temporarily" closed in January.
>
> Operation Rescue had lodged complaints about the Whole Women's Health clinics in McAllen, Beaumont, and Austin after discovering they were improperly dumping "identifiable" aborted baby remains a during an undercover investigation in 2011. This led the Austin and McAllen locations to be heavily fined.
>
> In addition, the North Florida Women's Health & Counseling Service in Tallahassee has announced in public notices that it will be closing permanently on March 31. That surgical abortion clinic has operated continuously since 1981.
>
> Surgical abortion clinics are not the only ones closing. Planned Parenthood's office in Sunnyvale, California, which offered only medication abortions (RU-486) shut down in January.
>
> "We are on track to see another great year. Every time an abortion clinic closes, lives are saved because women have a greater opportunity to seek other means of coping with the challenges they face. This is great news for women and their babies," said Troy Newman, President of Operation Rescue.
>
> Also out of business for good is Lester Minto's Reproductive Services in Harlington, Texas. Minto stopped abortions in November due to the new Texas law, but continued to see abortion patients who had taken abortion pills procured in Mexico or other locations. This week he announced onMSNBC's Rachel Maddow Show that he has closed his clinic permanently and is selling his building.
>
> Minto's clinic joins real estate market along with the former New Women All Women abortion building in Birmingham, Alabama, which was put up for sale this week.
>
> So far in 2014, seven surgical abortion clinics in four states have announced closure with one abortion pill clinic closing. Those states are California, Florida, Texas, and Iowa.

It seems like such a strange thing to me that some people get up and go to work, and their job is killing unborn children for money. But I guess that's why we Republicans have to pass these laws. It's a good signal to people that they need to be more careful about the consequences of their own behaviors. Basically, Republicans are saying to people that your freedom to do as you please ends when you brush up against someone else's freedom, no matter how small that other person might be. At least in some states, there are people looking out for the protection of those little unborn people. Sometimes, it seems to me as if the whole world is going away from morality and personal responsibility, but then I look at this legislation and I think "at least somebody is doing something right".

By the way, Life Site News also had a good article about how the Republican National Committee Chairman Reince Priebus is putting a stronger emphasis on pro-life voters. I think he's probably making the case to pro-lifers that this issue matters to Republicans and that they are advancing legislation to do something to protect unborn children from adult who want to skip out on their responsibilities.

# Obama to Ukraine: if you like your Crimea, you can keep your Crimea

**Wintery Knight** · 10 March 2014 · Archived copy · Original

Stephen F. Hayes explains (in the Weekly Standard) how screwed we really are with the Democrats running our foreign policy.

Excerpt:

> **On February 23, five days before Russia invaded Ukraine, National Security Adviser Susan Rice appeared on *Meet the Press* and shrugged off suggestions that Russia was preparing any kind of military intervention**: "It's in nobody's interest to see violence returned and the situation escalate." A return to a "Cold War construct" isn't necessary, Rice insisted, because such thinking "is long out of date" and "doesn't reflect the realities of the 21st century." Even if Vladimir Putin sees the world this way, Rice argued, it is "not in the United States' interests" to do so.

Wow, I'm shocked that the Youtube video caused Benghazi liar didn't see the invasion of Ukraine coming.

But it's not just her:

> On February 28, Russian troops poured into Ukraine. As they did, Secretary of State John Kerry spoke to Foreign Minister Sergei Lavrov, his Russian counterpart. Kerry briefed reporters after their talk, plainly unaware of the developments on the ground. **Kerry said that Russia wants to help Ukraine with its economic problems.** Lavrov had told him "that they are prepared to be engaged and be involved in helping to deal with the economic transition that needs to take place at this point."
>
> Hours later, television screens across the world displayed images of Russian soldiers infiltrating Crimea and Russian artillery rolling through Sevastopol. **Obama administration officials told CNN's Barbara Starr that the incursion was not "an invasion" but an "uncontested arrival" and that this distinction was "key" to understanding the new developments.**

Oh yes! Just like Hitler was helping out Poland with their economic problems.

Why is this happening? Well, a better question would be, why didn't it happen sooner:

> **For five years, the Obama administration has chosen to see the world as they wish it to be, not as it is. In this fantasy world, the attack in Fort Hood is "workplace violence." The Christmas Day bomber is an "isolated extremist." The attempted bombing in Times Square is a "one-off" attack. The attacks in Benghazi are a "spontaneous" reaction to a YouTube video. Al Qaeda is on the run. Bashar al-Assad is a "reformer." The Iranian regime can be sweet-talked out of its nuclear weapons program. And Vladimir Putin is a new, post-Cold War Russian leader.**

This foreign policy failure didn't come from nowhere. There's a whole list of failures that made Putin believe that the Democrats are weak on foreign policy.

Look:

- Scrapping the Bush missile defense plan
- Skip national security meetings on Russia
- Skip Presidential daily briefings (PDBs)
- Making deal to allow Iran's nuclear program to continue

- Leaking details of Israel's strike plan against Iran
- Favoring terrorist rights over national security
- Cutting production of the F-22 Raptor
- Cutting the military budget in 2009
- Cutting the Pentagon budget in 2012
- Cutting the military budget in 2014
- Prosecutions of counter-terrorism experts
- Lying about a Youtube video to cover-up Benghazi
- Mocking Romney for thinking that Russia is our enemy
- Promising Russian president Medvedev he would be more "flexible" after his re-election

Let me be clear. When Obama halted the scheduled missile defense shield in Europe, that was the end of Ukrainian sovereignty. We have to understand that Democrats are not just totally inept at fiscal policy and on social issues. They are also horrible at foreign policy. How many screw-ups must we witness before we understand that these people are not serious, and we shouldn't be electing them?

# Why does atheist historian Gerd Ludemann accept the post-mortem experiences of the risen Jesus?

**Wintery Knight** · 10 March 2014 · Archived copy · Original

William Lane Craig explains why even atheist historians like Gerd Ludemann accept that the earliest followers of Jesus had experiences in which Jesus appeared to them as resurrected Lord.

Excerpt:

> Fact #3: *On multiple occasions and under various circumstances, different individuals and groups of people experienced appearances of Jesus alive from the dead*. This is a fact which is almost universally acknowledged among New Testament scholars, for the following reasons:
>
> 1. The list of eyewitnesses to Jesus's resurrection appearances which is quoted by Paul in I Cor. 15. 5-7 guarantees that such appearances occurred.
>
> 2. The appearance traditions in the gospels provide multiple, independent attestation of such appearances.
>
> With respect to the first supporting line of evidence, it is universally accepted on the basis of the early date of Paul's tradition as well as the apostle's personal acquaintance with many of the people listed that the disciples did experience postmortem appearances of Christ. Among the witnesses of the resurrection appearances were Peter, the immediate circle of the disciples known as "the Twelve," a gathering of 500 Christian believers (many of whom Paul evidently knew, since he was aware that some had died by the time of his writing), Jesus's younger brother James, and a wider group of apostles. "Finally," says Paul, "as to one untimely born, he appeared also to me" (I Cor. 15.8).
>
> The second supporting line of evidence appeals again to the criterion of multiple attestation. The Gospels independently attest to postmortem appearances of Jesus, even to some of the same appearances found in Paul's list. Wolfgang Trilling explains,
>
> From the list in I Cor. 15 the particular reports of the Gospels are now to be interpreted. Here may be of help what we said about Jesus's miracles. It is impossible to 'prove' historically a particular miracle. But the totality of the miracle reports permits no reasonable doubt that Jesus in fact performed 'miracles.' That holds analogously for the appearance reports. It is not possible to secure historically the particular event. But the totality of the appearance reports permits no reasonable doubt that Jesus in fact bore witness to himself in such a way.38
>
> The appearance to Peter is independently attested by Paul and Luke (I Cor. 15.5; Lk. 24.34), the appearance to the Twelve by Paul, Luke, and John (I Cor. 15.5; Lk. 24:36-43; Jn. 20.19-20), the appearance to the women disciples by Matthew and John (Mt. 28.9-10; Jn. 20.11-17), and appearances to the disciples in Galilee by Mark, Matthew, and John (Mk. 16.7; Mt. 28. 16-17; Jn. 21). Taken sequentially, the appearances follow the pattern of Jerusalem-Galilee-Jerusalem, matching the festival pilgrimages of the disciples as they returned to Galilee following the Passover/Feast of Unleavened Bread and traveled again to Jerusalem two months later for Pentecost.
>
> Lüdemann himself concludes, "It may be taken as historically certain that Peter and the disciples had experiences after Jesus's death in which Jesus appeared to them as the risen Christ."39 Thus, we are in basic agreement that following Jesus's crucifixion various individuals and groups of people experienced appearances of Christ alive from the dead. The real bone of contention will be how these experiences are best to be explained.

Triablogue notes that most historians accept these post-mortem experiences of the risen Jesus:

> In their 2004 book, Gary Habermas and Michael Licona mention five facts accepted by the large majority of

> scholars:
>
> 1. Jesus died by crucifixion.
> 2. Jesus' disciples believed that he rose and appeared to them.
> 3. The church persecutor Paul was suddenly changed.
> 4. The skeptic James, brother of Jesus, was suddenly changed.
> 5. The tomb was empty.
>
> Habermas and Licona write:
>
> "On the state of Resurrection studies today, I (Habermas) recently completed an overview of more than 1,400 sources on the resurrection of Jesus published since 1975. I studied and catalogued about 650 of these texts in English, German, and French. Some of the results of this study are certainly intriguing. For example, perhaps no fact is more widely recognized than that early Christian believers had real experiences that they thought were appearances of the risen Jesus. A critic may claim that what they saw were hallucinations or visions, but he does not deny that they actually experienced something….roughly 75 percent of scholars on the subject accept the empty tomb as a historical fact." (The Case for the Resurrection of Jesus [Grand Rapids, Michigan: Kregel Publications, 2004], pp. 60, 70)
>
> Habermas and Licona explain that even "the majority of nonbelieving scholars" (p. 149) accept such facts, not just Christian scholars. And even many professing Christian scholars are Christian in name, but reject much of what Christians have traditionally believed. Skeptics sometimes suggest that a scholarly consensus on facts related to Jesus' resurrection isn't of much significance, because so many of the scholars are Christians, but *traditional* Christians make up only a small percentage of scholarship.

When talking about the appearances, the challenge is always to make the move from "through they saw" to "they actually saw". In chapter 6 of their introductory book on the resurrection of Jesus, "The Case for the Resurrection of Jesus", Mike Licona and Gary Habermas give some reasons why the post-mortem appearances of Jesus were not hallucinations. First, they argue that hallucinations are had by individuals, not groups. Second, they argue that the hallucination hypothesis leaves the empty tomb unexplained. It also doesn't explain the appearances to skeptical James and antagonistic Paul. Finally, the appearance narratives are too varied to be hallucinations, i.e. – individuals, groups, friends, enemies, different times and different places.

If you want to read a scholarly response to the hallucination hypothesis, it's right in the article by Dr. Craig that I was quoting from above. He assesses the hallucination hypothesis as put forward by atheist scholar Gerd Ludemann against the standard criteria for judging multiple competing historical explanations. It's too much to quote here, but click through and read it when you can. If you want to see a good summary of the arguments for the empty tomb, go right here.

**See it used in a debate**

You can see the arguments made and defended from criticism in this debate with the atheist scholar James Crossley.

This my favorite resurrection debate.

# Reasonable Faith podcast: the real consequences of atheism

**Wintery Knight** · 10 March 2014 · Archived copy · Original

If you love to listen to the Please Convince Me podcast, as I do, then you know that in a recent episode, J. Warner Wallace mentioned a blog post on an atheistic blog that clearly delineated the implications of an atheistic worldview. He promised he was going to write about it and link to the post, and he has now done so.

The latest episode of Reasonable Faith discusses the post mentioned in the episode.

Details:

> An atheist blogger gets brutally honest about his view and tells other atheists to quit fooling themselves!

The MP3 file is here on the Reasonable Faith web site. (23 minutes)

Kevin Harris (KH) and William Lane Craig: (WLC) discuss this post on the Wintery Knight blog.

Summary:

- KH: New Atheists always try to portray themselves as having meaningful lives, and good without God
- WLC: Exactly, they would say you don't nee God to do positive things, so God makes no difference
- KH: but what happens when an atheist explains the real consequences of atheism?

KH then reads a quote by an atheist blogger:

> "[To] all my Atheist friends.
>
> Let us stop sugar coating it. I know, it's hard to come out and be blunt with the friendly Theists who frequent sites like this. However in your efforts to "play nice" and "be civil" you actually do them a great disservice.
>
> We are Atheists. We believe that the Universe is a great uncaused, random accident. All life in the Universe past and future are the results of random chance acting on itself. While we acknowledge concepts like morality, politeness, civility seem to exist, we know they do not. Our highly evolved brains imagine that these things have a cause or a use, and they have in the past, they've allowed life to continue on this planet for a short blip of time. But make no mistake: all our dreams, loves, opinions, and desires are figments of our primordial imagination. They are fleeting electrical signals that fire across our synapses for a moment in time. They served some purpose in the past. They got us here. That's it. All human achievement and plans for the future are the result of some ancient, evolved brain and accompanying chemical reactions that once served a survival purpose. Ex: I'll marry and nurture children because my genes demand reproduction, I'll create because creativity served a survival advantage to my ancient ape ancestors, I'll build cities and laws because this allowed my ape grandfather time and peace to reproduce and protect his genes. My only directive is to obey my genes. Eat, sleep, reproduce, die. That is our bible.
>
> We deride the Theists for having created myths and holy books. We imagine ourselves superior. But we too imagine there are reasons to obey laws, be polite, protect the weak etc. Rubbish. We are nurturing a new religion, one where we imagine that such conventions have any basis in reality. Have they allowed life to exist? Absolutely. But who cares? Outside of my greedy little gene's need to reproduce, there is nothing in my world that stops me from killing you and reproducing with your wife. Only the fear that I might be incarcerated and thus be deprived of the opportunity to do the same with the next guy's wife stops me. Some of my Atheist friends have fooled themselves into acting like the general population. They live in suburban homes, drive Toyota Camrys, attend school plays. But underneath they know the truth. They are a bag of DNA whose only purpose is to make more of themselves. So be nice if you want. Be involved, have polite conversations, be a model citizen. Just be aware that while technically an Atheist, you are an inferior one. You're just a little bit

> less evolved, that's all. When you are ready to join me, let me know, I'll be reproducing with your wife.
>
> I know it's not PC to speak so bluntly about the ramifications of our beliefs, but in our discussions with Theists we sometimes tip toe around what we really know to be factual. Maybe it's time we Atheists were a little more truthful and let the chips fall where they may. At least that's what my genes are telling me to say."

Back to the summary:

- WLC: this quote explains that on naturalism, moral values and duties are just the by products of biological evolution
- WLC: he is deriding other atheists who put on a civil facade, and that the superior atheist is the one who acts openly like an atheist
- KH: he wants atheists to stop acting like Christians (being outwardly nice)
- WLC: there is no evidence for atheism presented in the quote, so why should he think that morality and meaning are illusory
- WLC: he is saying that morality is not real because our beliefs form by Darwinian evolution
- WLC: even if those beliefs formed that way, that doesn't mean that our moral judgments are not true (genetic fallacy)
- KH: the moral judgments are only false if naturalism is true, and he didn't defend that
- WLC: if objective moral values and duties exist, then naturalism is false

KH quotes Richard Dawkins:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music.

More:

- WLC: yes, that's his view, but what reason is there to accept the naturalism that requires all that?
- KH: yet he pushes various moral judgments
- WLC: yes, in his book, he pushes a bunch of moral judgments in his book, all of which are invalid on naturalism?
- KH: he wants humans to choose to show pity, even though nature is pitiless
- WLC: he thinks that these altruistic behaviors can emerge because humans are sociable beings
- WLC: but this "herd morality" is just an evolved convention, there are not objective moral truths

KH quotes Will Provine:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

More:

- WLC: it's his naturalism that is causing him to say that, theistic evolution is compatible with morality
- WLC: naturalism is what conflicts with objective morality, science doesn't invalidate objective morality

- KH: atheists deny objective meaning, but atheists can invent subjective meanings and purposes
- WLC: yes, but these invented subjective meanings and purposes are illusory
- WLC: I don't think that anyone can live happily by think

KH quotes Michael Ruse:

> "The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological adaptation no less than are hands and feet and teeth. Considered as a rationally justifiable set of claims about an objective something, ethics is illusory. I appreciate when someone says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory."

- WLC: again, science is neutral against morality, it's the philosophy of naturalism that is inconsistent with objective morality
- KH: just because theists and atheists get along, it's still important to remind atheists of the consequences of their view
- WLC: I do that in my work on the absurdity of life without God, and in the moral argument for God's existence
- WLC: I love it when they say things like this, because it supports the first premise in Craig's moral argument
- KH: even if the evidence were 50-50, why would atheists lean towards the meaningless view
- WLC: yes, if the evidence is 50-50, then people ought to prefer life, significance and moral value
- KH: you're not saying that people ought to the believe that in theism because it's more palatable to us
- WLC: right, I am saying that naturalism should be rejected on the evidence, including our experience of moral values

# Thomas Sowell: is the political left really concerned about helping minorities?

**Wintery Knight** · 11 March 2014 · Archived copy · Original

Economist Thomas Sowell

Do people who talk about race the most actually favor policies to help minorities? Thomas Sowell writes about it in Investors Business Daily.

Excerpt:

> If anyone wanted to pick a time and place where the political left's avowed concern for minorities was definitively exposed as a fraud, it would be now — and the place would be New York City, where far left Mayor Bill de Blasio has launched an attack on charter schools, cutting their funding, among other things.
>
> These schools have given thousands of low-income minority children their only shot at a decent education, which often means their only shot at a decent life. Last year 82% of the students at a charter school called Success Academy passed citywide mathematics exams, compared to 30% of the students in the city as a whole.
>
> Why would anybody who has any concern at all about minority young people — or even common decency — want to destroy what progress has already been made?
>
> One big reason, of course, is the teachers' union, one of de Blasio's biggest supporters.
>
> But it may be more than that. For many of the true believers on the left, their ideology overrides any concern about the actual fate of flesh-and-blood human beings.
>
> Something similar happened on the West Coast last year. The American Indian Model Schools in Oakland have been ranked among the top schools in the nation, based on their students' test scores.
>
> This is, again, a special achievement for minority students who need all the help they can get.
>
> But, last spring, the California State Board of Education announced plans to shut this school down!
>
> Why? The excuse given was that there had been suspicious financial dealings by the former — repeat, former — head of the institution. If this was the real reason, then all they had to do was indict the former head and let a court decide if he was guilty or innocent.

> There was no reason to make anyone else suffer, much less the students. But the education establishment's decision was to refuse to let the school open last fall. Fortunately a court stopped this hasty shutdown.
>
> These are not just isolated local incidents. The Obama administration has cut spending for charter schools in the District of Columbia and its Justice Department has intervened to try to stop the state of Louisiana from expanding its charter schools.
>
> Why such hostility to schools that have succeeded in educating minority students, where so many others have failed?
>
> Some of the opposition to charter schools has been sheer crass politics. The teachers' unions see charter schools as a threat to their members' jobs, and politicians respond to the money and the votes that teachers' unions can provide.
>
> The net result is that public schools are often run as if their main function is to provide jobs to teachers. Whether the children get a decent education is secondary, at best.
>
> In various parts of the country, educators who have succeeded in raising the educational level of minority children to the national average — or above — have faced hostility, harassment or have even been driven out of their schools.
>
> Not all charter schools are successful, of course, but the ones that are completely undermine the excuses for failure in the public school system as a whole. That is why teachers' unions hate them, as a threat not only to their members' jobs but a threat to the whole range of frauds and fetishes in the educational system.
>
> The autonomy of charter schools is also a threat to the powers that be, who want to impose their own vision on the schools, regardless of what the parents want.

This story reminds me of another story of people on the left blocking poor minority children from better schools, in order to protect the jobs of underperforming unionized teachers.

The Heritage Foundation explains how the Department of Justice, in a Democrat administration, hurts the poorest minority students.

Excerpt:

> *On August 22, 2013, the United States Department of Justice filed a motion in federal court to stop Louisiana from issuing school vouchers to low-income children in numerous school districts. DOJ is basing the suit on decades-old desegregation orders that treat Louisiana as if it were the same state it was nearly 40 years ago—something that the United States Supreme Court recently rejected in the case of Shelby County v. Holder. Ironically, DOJ's action will prevent low-income and minority students from accessing the successful Louisiana school choice program, which empowers children, underserved in their assigned public schools, to attend schools of choice that match their learning needs. Vague, open-ended, and stale court orders should not be used to prevent educational innovation and opportunity.*

Vouchers are a way of helping poor, minority students to get a quality education by letting them choose to attend better schools – any school the parents choose. But school choice is a thorn in the side of the public school unions who support the political left, because it allows poor, minority child to escape underperforming schools. Poor, minority students don't help Democrats to get elected, but public school teachers *do*. And that's why the administration sides with them against the children. On the other side of the aisle, it's the *conservatives* who push for more school choice, and better education for poor and minority students.

But education policy is only one area where minorities are harmed by leftist policies.  Minimum wage is another obvious choice.

Let's take a look at the data and see how minorities are affected by leftist policies.

Excerpt:

> Battles are brewing in New York, California, Minnesota and the nation's capital over hiking minimum wages, with Democrats having the votes to ram through hikes in all four cases.
>
> These politicians are claiming the moral high ground, saying it will help the poorest in our communities. Don't be fooled.
>
> Hiking the minimum wage hurts — not helps — the lowest-paid workers, especially young black men. A 10% hike in the minimum wage causes a 2.5% drop in employment among young white men without a high school diploma and a staggering 6.5% drop among young black men without that degree.
>
> Young black males get clobbered three times as hard because they tend to work in the fast-food and restaurant industries, where any increase in labor costs produces layoffs.
>
> […]Only 5% of American workers earn the federal minimum, according to the latest government data, compared with 13% in 1979. Minimum wage workers are largely first-time workers. They are learning what all of us learn on our first job: to be prompt, dress appropriately, do what the boss asks and be reliable.
>
> First-time workers face the biggest risk of being priced out of the job market by a minimum wage hike. They aren't worth much to an employer when they start working. They don't have the skills.
>
> When the government increases the minimum wage, it's more expensive to hire first-timers. According to David Neumark and J.M. Salas, University of California economists, and William Wascher of the Federal Reserve Board, "minimum wages tend to reduce employment among teenagers."
>
> […]All teens are harmed, but black male teenagers are hit hardest by minimum wage hikes, according to a 2011 study by labor economists David Macpherson and William Evans. Unemployment among young black males is currently 29%, double the rate for young white males.
>
> Macpherson and Evans found the reason is that one out of three young black men without a high school diploma works in the restaurant/fast-food industry, where profit margins are thin. Any labor-cost hikes compel these businesses to cut their workforce.

The truth of the matter is that the real minimum wage is zero. In order to help minority young people find jobs, we should strengthen the institution of marriage, encourage people to get married and stay married, lower taxes on businesses, lower regulations on businesses, and so on. But strangely, the people who talk the most about helping the poor and poor minorities in particular are all opposed to that. The Democrats won't even build the Keystone XL pipeline or expedite other energy development initiatives to create good paying jobs. So don't believe that people who talk the most about poverty actually have the right answers about how to solve it. After all, the Obama administration talked a lot about health care, but clearly the people who lost their doctors, lost their health care, or are paying more for less health care, do not now believe that Obamacare was the answer to the health care problem.

If you're looking for a good recent study on the minimum wage and minority youth, take a look at this study from the Employment Policies Institute. More studies here in a previous post on this blog.

# Should government get out of the marriage business?

**Wintery Knight** · 11 March 2014 · Archived copy · Original

Dr. Jennifer Roback Morse

Dina sent me three articles by Jennifer Roback Morse, post on The Public Discourse. The articles answer the charge from social liberals and libertarians that we should "get the government out of marriage".

Here's the first article which talks about how government will still be involved in marriage, even if we get rid of the traditional definition of marriage, because of the need for dispute resolution in private marriage contracts. She uses no-fault divorce as an example showing how it was sold as a way to get government out of the divorce business. But by making divorce easier by making it require no reason, it increased the number of disputes and the need for more government to resolve these disputes.

Here's the second article which talks about how the government will have to expand to resolve conflicts over decisions about who counts as a parent and who gets parental rights. With traditional marriage, identifying who the parents are is easy. But with private marriage contracts where the parties are not the biological parents, there is a need for the state to step in and assign parental rights.

Here's the third article which talks about how marriage is necessary in order to defend the needs and rights of the child at a time when they cannot enter into contracts and be parties to legal disputes.

The third article was my favorite, so here is an excerpt from it:

> The fact of childhood dependence raises a whole series of questions. How do we get from a position of helpless dependence and complete self-centeredness, to a position of independence and respect for others? Are our views of the child somehow related to the foundations of a free society? And, to ask a question that may sound like heresy to libertarian ears: Do the needs of children place legitimate demands and limitations on the behavior of adults?
>
> I came to the conclusion that a free society needs adults who can control themselves, and who have consciences. A free society needs people who can use their freedom, without bothering other people too much. We need to respect the rights of others, keep our promises, and restrain ourselves from taking advantage of others.
>
> We learn to do these things inside the family, by being in a relationship with our parents. We can see this by looking at attachment- disordered children and failure-to-thrive children from orphanages and foster care. These children have their material needs met, for food, clothing, and medical care. But they are not held, or loved, or looked at. They simply do not develop properly, without mothers and fathers taking personal care of them. Some of them never develop consciences. But a child without a conscience becomes a real problem: this is exactly the type of child who does whatever he can get away with. A free society can't handle very many people like that, and still function.
>
> In other words I asked, "Do the needs of society place constraints on how we treat children?" But even this

> analysis still views the child from society's perspective. It is about time we look at it from the child's point of view, and ask a different kind of question. *What is owed to the child*?
>
> **Children are entitled to a relationship with both of their parents. They are entitled to know who they are and where they came from. Therefore children have a legitimate interest in the stability of their parents' union, since that is ordinarily how kids have relationships with both parents. If Mom and Dad are quarreling, or if they live on opposite sides of the country, the child's connection with one or both of them is seriously impaired.**
>
> **But children cannot defend their rights themselves. Nor is it adequate to intervene after the fact, after harm already has been done. Children's relational and identity rights must be protected proactively.**
>
> **Marriage is society's institutional structure for protecting these legitimate rights and interests of children.**

I recommend taking a look at all three articles and becoming familiar with the arguments in case you have to explain why marriage matters and why we should not change it. I think it is important to read these articles and to be clear that to be a libertarian doctrine does not protect the right of a child to have a relationship with both his or her parents.  Nor does libertarianism promote the idea that parents ought to stick together for their children.

The purpose of marriage is to make adults make careful commitments, and restrain their desires and feelings, so that children will have a stable environment with their biological parents. We do make exceptions, but we should not celebrate exceptions and we should not subsidize exceptions. It's not fair to children to have to grow up without a mother or father just so that they adults can make poor, emotional decisions and have fun.

# Is there any science in the new “Cosmos” series, or is it all naturalistic religion?

**Wintery Knight** · 11 March 2014 · Archived copy · Original

I noticed a couple of reviews of this television series, produced by an atheist producer of cartoons.

The first review comes from J. W. Wartick.

Multiverse:

> The universe is actually so huge that we can’t actually observe the entire thing because there is more beyond what we can see. But “many… suspect” that our universe is but one in an extremely huge number of actual individual universes (here shown as little bubbles spreading out continually over the screen).

Origin of life:

> The origin of life “evolved” through biochemical evolution.

J.W. comments:

> The depiction of the multiverse with little-to-no qualification was alarming, for there is much debate over whether there even is such a multiverse, and if there is, to what extent it may be called a multiverse. The portrayal within this episode was essentially a fictitious account being passed off without qualification as something a lot of people believe. The wording used was that “many… suspect” there is such a universe. Well yes, that may be true, but to what extent can we test for these other universes? What models predict them and why? I am uninterested in how many people hold to a belief; I am interested in whether that belief is true.
>
> […][T]he brief snippet used to explore the origin of life: “biochemical evolution” was astonishingly insufficient. I’m sure we’ll get into that in the next episode, but the origin of life is one of the great unsolved mysteries within science and to just hand wave and say “biochemical evolution” is, well, notable to say the least.

I agree with Wartick. What I am looking for is the story of how scientists experimented, observed and tested in order to find out about the universe. I’m not interested in people working theoretical physics who presupposed naturalism at age 14 because their Sunday School teacher was mean to them. Presupposing a philosophy of naturalism is just religion. I want to see the science. Here are my responses to the multiverse speculation and the origin of life speculation.

The series quote Carl Sagan at the beginning, but he a person who let his religion of naturalism lead him away from the scientific evidence for a beginning. Instead of accepting the standard Big Bang model, which implies a transcendent Creator, Sagan chose to embrace a faith-based eternal oscillating model of the universe, which tries to avoid a Creator. I wrote about the problems with Sagan’s naturalistic speculative cosmology in this post.

Now let’s see Casey Luskin’s review on Evolution News.

Excerpt:

> During the first episode, Tyson devotes lengthy segments to promoting the old tale that religion is at war science, and strongly promotes the idea that religion opposes intellectual advancement. He tells the story of the 16th-century astronomer cultist philosopher Giordano Bruno, who he says lived in a time without “freedom of speech” or “separation of church and state,” and thus fell into the clutches of the “thought police” of the Inquisition for disagreeing with the church’s geocentric views. Never mind that his show made it appear that

> President Obama endorsed Sagan-style materialism, but I digress… Of course the main religious authority of that time was the Catholic Church, and the program shows angry priests with evil-sounding British accents dressed in full religious garb throwing Bruno out on the street, and eventually burning him at the stake.
>
> Just to make sure that other Christians who aren't Catholic also understand their religions too hinder scientific progress, Tyson goes out of his way to point out that Bruno was opposed by "Calvinists in Switzerland," and "Lutherans in Germany," including the great protestant reformer Martin Luther himself. He never mentions that Protestants aren't the ones who burned Bruno at the stake, nor does he ever mention that most of the founders of modern science were Christians. But I digress…
>
> It's a lengthy scene, all to highlight some of the darkest chapters of Christianity in Europe. But the entire retelling of Bruno's fate lasts a good portion of the first episode's hour. Why make the religious persecution of scientists some four hundred years ago a major focus of a widely publicized television series that is ostensibly about promoting science?

Luskin took issue with the idea that religious people hold science back. On the contrary, religious Christians were largely responsible for the birth of modern science. Luskin also reports on over a dozen cases where naturalists have suppressed critical thinking about whether science disproves the religion of naturalism.

Here's are a few:

> A congressional subcommittee staff investigation found that biologist Richard Sternberg experienced retaliation by his co-workers and superiors at the Smithsonian, including transfer to a hostile supervisor, removal of his name placard from his door, deprivation of workspace, subjection to work requirements not imposed on others, restriction of specimen access, and loss of his keys, because he allowed a pro-ID article to be published in a biology journal.
>
> In 2005, over 120 faculty members at Iowa State University (ISU) signed a petition denouncing ID and calling on "**all faculty members** to … reject efforts to portray Intelligent Design as science." These efforts were significant not just because they opposed academic freedom by demanding conformity among faculty to reject ID, but because they focused on creating a hostile environment for pro-ID astronomer Guillermo Gonzalez, co-author of *The Privileged Planet*, who was denied tenure at ISU in 2006 due to his support for ID. Both public and private statements exposed through public records requests revealed that members of ISU's department in physics and astronomy voted against Gonzalez's tenure due to his support for ID.
>
> In 1993, San Francisco State University biology professor Dean Kenyon was forced to stop teaching introductory biology because he was informing students that scientists had doubts about materialist theories of the origin of life.
>
> In 2005, pro-ID adjunct biology professor Caroline Crocker lost her job at George Mason University after teaching students about both the evidence for and against evolution in the classroom, and mentioning ID as a possible alternative to Darwinism. While her former employer maintains that it simply chose not to renew her contract, she was specifically told she would be "disciplined" for teaching students about the scientific controversy over evolution.

> In 2013, Ball State University (BSU) President Jo Ann Gora issued a speech codedeclaring that "intelligent design is not appropriate content for science courses" at BSU, after atheist activists from the Freedom from Religion Foundation charged that a "Boundaries of Science" course taught by a well-liked physics professor (Eric Hedin) was violating the Constitution by favorably discussing intelligent design.

You can read more about the problems with Carl Sagan's religion-driven rejection of experimental science in this post by Phillip E. Johnson. For a better take on cosmology with more evidence and less religion, check out this lecture by particle physicist Michael Strauss. I think you'll find that science is better when it's done by a practicing

experimental scientist, and not by the creator of cartoons like “Family Guy”.

UPDATE: On the Christian Apologetics Alliance blog, Dr. Tim McGrew wrote that the portrayal of Bruno had even more inaccuracies. Isn’t it amazing that that a cartoonist can get something filled with myths and misrepresentations to be televised? And many people will believe it, too, just like many people accepted the (now-discredited) oscillating model of Carl Sagan. I still have atheists proposing this to me when I present the standard model to them. That’s the hazard of having a TV-driven worldview, I guess. A worldview based on Star Trek.

# Wisconsin Governor Scott Walker cuts taxes again, expects $1 billion surplus in 2015

**Wintery Knight** · 12 March 2014 · Archived copy · Original

Wisconsin Governor Scott Walker (Republican)
Walker has actually cut taxes three times in less than a year.

I know what you're thinking, (if you're a Democrat). You're thinking "how can a governor cut taxes three times and have a surplus?".

When the government cuts taxes, people in the private sector who either create jobs or work at jobs get to keep more of their own money. They either spend or invest their money. Spending money is OK, but the magic really happens when people invest money. Even something as simple as putting money into a savings account can achieve magic, because banks lend that money to job creating businesses. What is the magic? The magic is that when people invest or save their money, the money makes its way to job-creating individuals and businesses, so that they can develop new products and services. For example, if Samsung keeps more of it's own money, it can hire more and better employees to to develop the S5 smartphone – a new product that performs better than the previous S4 model, even though it will probably cost less than the previous S4 model.

What happens when consumers can get *more* functionality for *less* money? It means that they can do more in their own lives using the better products and services, but also means that they have more money to save or spend somewhere else. So what really drives the economy is not government handing out food stamps or government giving money to companies linked to their campaign fundraisers (e.g. – Solyndra). What really drives the economy is the *private sector.* That's where new innovative products and services are made. When you thinking of government, you should think of the people with degrees in Marxist studies and women's studies who take money *away* from Samsung, so they have less money to innovate with. Government takes money from Samsung and gives it to Brigham and Women's hospital to study why lesbians are often overweight. (It's purely a coincidence that this is where Obama's Surgeon General nominee Vivek Murphy works, and purely a coincidence that he founded "Doctors for America" to market Obamacare to the voters).

When you keep the money in the private sector, you get new products and services that people actually want to buy. The more money that businesses keep, the more they higher workers, and the more the state collects in payroll and income taxes. The more that consumers spend to buy better products and services, the more the state collects in sales tax. The key to economic growth is to have businesses produce *better products* for *less money.* When consumers can do more and have more money left over, there is economic growth, which boosts tax revenues. Government rarely spends money as efficiently and effectively as job creators and workers can.

With that in mind, let's see what happened when Governor Scott Walker cut taxes and let job creators and

workers *keep more of their own money.*

The ultra-leftist Milwaukee Journal-Sentinel reluctantly reports.

Excerpt:

> Senate Republicans Tuesday narrowly passed Gov. Scott Walker's $541 million tax cut proposal in a vote that guaranteed the cuts will become law.
>
> The tax decreases — the third round of cuts by Republicans in less than a year — passed 17-15 with GOP Sen. Dale Schultz of Richland Center joining all Democrats in voting against the proposal. The proposal now goes to the Assembly, which passed a different version of the tax cuts last month with two Democrats joining all Republicans in supporting it.
>
> With growing tax collections now expected to give the state a $1billion budget surplus in June 2015, Walker's bill will cut property and income taxes for families and businesses, and zero out all income taxes for manufacturers in the state.
>
> GOP lawmakers and Walker will use the windfall for the state as an occasion to trim overall state spending slightly for the next three years rather than increase it.
>
> […]Also Tuesday, the Senate voted unanimously to pass a second bill to increase spending on worker training by $35.4 million through June 2015.
>
> […]Under Walker's bill, the average income tax filer would receive a tax cut of $46 in April 2015 and the typical homeowner would save $131 over the existing law on this December's bills, according to the Legislature's nonpartisan budget office.
>
> Also, the governor has separately had his administration alter income tax withholding rates so workers have less taken out of each paycheck — about $520 a year for a married couple making a total of $80,000 a year — starting in April.
>
> "The more money that we give back to the taxpayers, the more money they can spend or save as they wish and the more our economy will grow," said Sen. Alberta Darling (R-River Hills), co-chairwoman of the Legislature's budget committee.
>
> The bill would also lower income taxes for factory and farm owners by $36.8 million over the current two-year budget and $91.3 million over the following two years.
>
> GOP supporters of this manufacturing tax cut in the bill see it as fuel for one of the state's main economic engines.

Now the nice thing about Walker is that he is no Wall Street Republican. The man has been *plowing* money into worker re-training programs and manufacturing, which is exactly how you draw votes from working Democrats. Working Democrats tend to prefer working to collecting welfare, so Walker is out there competing for their votes by making sure that everyone who wants a job can get a job, and that those jobs pay well. Walker knows that if he can cut taxes on manufacturing, that it will cause manufacturers in his state to hire more people in order to develop cheaper and better products. That's going to cause them to invest more in his state, and some manufacturers will even leave other Democrat-run states (e.g. – Illinois) to move to Wisconsin.

When Democrats were running Wisconsin, they created a huge $3.6 billion dollar deficit that Walker inherited. Everything has been turned around under Scott Walker, but neighboring states like Illinois continue to decline. What a resume this guy is going to have in 2016 when he runs for President. Walker bet the farm on his pro-growth policies in a blue state, and guess what? He is reaping the rewards. He knows what he is doing, and the left *can't stand him.* All he does is win.

# Missouri down to just one abortion business after Planned Parenthood closes

**Wintery Knight** · 12 March 2014 · Archived copy · Original

Good news from Life News.

But first, a pretty good introduction to the abortion business:

> The abortion business can be very lucrative. Planned Parenthood alone brings in over $150 millionfrom abortion revenues – as much as half of its patient charges. Planned Parenthood destroys over 330,000 unborn children every year, an abortion every 95 seconds, at roughly $468 per abortion. The abortion giant has increased its market share of abortion commerce every year for over 3 decades.
>
> But what has made abortion so profitable has been its constitutionally privileged status and the business model that status has enabled. Unlike virtually any other medical procedure, abortion has been deemed a protected right. This has allowed Planned Parenthood and its industry competitors to resist regulation that other medical services accept as the cost of safely doing business. And by calling on their political friends in high places ( and Planned Parenthood spends millions to keep them in those places) abortion sellers are able to secure political protection from rules that would protect their patients but undercut their bottom line.
>
> Abortion businesses are thus rarely inspected and are often constructed such that women are endangered in an emergency situation. When they are inspected, the inspectors find gross health and safety violations. And as the Gosnell case demonstrates, even their shortcuts on construction can leave women endangered in an emergency situation. Planned Parenthood has also adopted a business plan that has doctors from another state (or country in some cases) fly in, perform dozens of abortions in one day, and then fly back home – leaving the woman with no relationship with the doctor and no opportunity for the doctor to assist in her care in case of complications.

Now the good news – Republicans have been busy passing regulations on this abortion clinics:

> **In Missouri, Alliance Defending Freedom attorneys Steven Aden and Dale Schowengerdt successfully defended the state's health and safety regulations of abortion clinics in two challenges in state and federal court. Our friends at 40 Days for Life and others continued to bear witness outside Missouri's four abortion clinics.**
>
> **These four were reduced to two over the next few years as providers found their abortion businesses were unprofitable and retired or closed their doors. Then, just last week we received word that, unable to comply with those reasonable health and safety standards, the Columbia, Missouri Planned Parenthood has now lost its license and closed its doors. This leaves only one licensed abortionist operating in Missouri, a Planned Parenthood franchise in St. Louis.**

More good news from Alabama, this time:

> In Alabama, ADF Allied Attorney Trenton Garmon successfully defended the rights of sidewalk counselors to peacefully pray outside a Birmingham abortion facility. As a result, those sidewalk counselors were there to witness an ambulance transporting an injured woman to a hospital. They reported this to the state health department which investigated and found numerous health and safety violations, resulting in the closure of that abortion facility. This week we learned that the abortionist who owns the facility has given up and placed the building up for sale.

Isn't that interesting? Rather than comply with the regulations, they choose to shut down. It's not about providing a

service, is it? It's about the money. And if complying with regulations costs money, then the abortionists just stop providing the service.

# Does the Bible teach the universe was created?

**Wintery Knight** · 12 March 2014 · Archived copy · Original

J. Warner Wallace has a new post up and he lists a *ton* of Bible verses that talk about the beginning of the universe.

I'm going to pick out some of the best ones – ones that will scare the stuffing out of you.

Be amazed:

***Colossians 1:16-17***
*For by Him all things were created, both in the heavens and on earth, visible and invisible, whether thrones or dominions or rulers or authorities—all things have been created through Him and for Him. He is before all things, and in Him all things hold together.*

***Hebrews 11:3***
*By faith we understand that the worlds were prepared by the word of God, so that what is seen was not made out of things which are visible.*

***John 1:3***
*All things came into being through Him [Jesus], and apart from Him nothing came into being that has come into being.*

***1 Corinthians 2:7***
*No, we declare God's wisdom, a mystery that has been hidden and that God destined for our glory before time began.*

***Isaiah 45:12***
*"It is I who made the earth, and created man upon it. I stretched out the heavens with My hands and I ordained all their host."*

All things were created? Time had a beginning? The universe is expanding? Wow, that's all stuff that naturalists hate – they want their eternal, steady-state universe back. Too bad that's been falsified by the hydrogen-helium abundance observations. Oh well, I guess they can still believe it if they want to. Now if you're an atheist, you don't like what the Bible has to say about the origin of the universe, especially since all the experimental science we have today agrees with the Bible. So atheists aren't just angry at God, they're angry at science, too.

**The latest Please Convince Me podcast**

By the way, J. Warner Wallace's latest 64-minute podcast on the scientific evidence for the creation of the universe was a must-listen. He re-caps the experimental evidence that we have for a cosmic beginning, and highlights the names of the scientists, the dates of the discoveries, the experiments that were run, and the results that were obtained. He also evaluates naturalistic alternatives to the standard model, and explains what's wrong with each one.

If you're into science, then you will love this podcast.

# Women's studies professor accused of assaulting peaceful pro-life demonstrators

**Wintery Knight** · 13 March 2014 · Archived copy · Original

Mireille Miller-Young (on the right)
From The College Fix.

Excerpt:

> A department of feminist studies professor has been accused of going berserk after coming across a campus prolife demonstration that used extremely graphic displays, leading a small mob of students to chant "tear down the sign" before grabbing one of the signs, storming off with it, then allegedly engaging in an altercation with a 16-year-old prolife protestor who had followed the educator to retrieve it.
>
> Much of the scuffle was recorded on a smartphone by the 16-year-old, Thrin Short. The yet-to-be-released video is now in the custody of Santa Barbara law enforcement officials, who are investigating the March 4 incident.
>
> The professor at the heart of the controversy is Mireille Miller-Young, an associate professor whose area of emphasis is black cultural studies, pornography and sex work, according to her faculty webpage. She could not be reached for comment Tuesday by *The College Fix*.
>
> The confrontation took place at the coastal, public university's "free speech" area, a heavily traversed part of the quad.
>
> The roughly 3-feet by 5-feet displays included images of aborted fetuses, as well as diagrams detailing the abortion process and other "educational" information, according to Kristina Garza, a spokeswoman for 16-year-old Thrin. Garza heads up campus outreach for the nonprofit, Riverside-based Survivors of the Abortion Holocaust – a group that had trained the Short sisters and other students on how to conduct campus antiabortion events.
>
> […]According to Garza, when Miller-Young came across the prolife demonstration, the professor started yelling at the protestors, saying abortion is a woman's right. Then things got uglier, as the scholar allegedly enticed about 15 students to begin shouting "tear down the sign, tear down the sign" at the group, which consisted of 12 young women and one young man, Garza said.
>
> […]As the prolife demonstrators tried to engage students one-on-one in conversation during a lull in the chanting, that's when Miller-Young allegedly grabbed one of their signs and stormed off, followed by two

> UCSB students, Garza said, adding Thrin followed the threesome with her older sister, Joan, in tow and calling 9-1-1.

The pro-life students have posted their account of the events:

> The parade weaved through two buildings and entered an elevator in the third. Thrin attempted to get on the elevator with them, but Young blocked the doorway. Thrin stuck her foot in the door, but Young pushed it out with her foot. Tenaciously, Thrin put it back. This happened several times as Thrin pleaded with the students to not get involved. "The police are on their way," she told them …
>
> **Suddenly Young reached out and pushed 16 year old Thrin. "Don't touch me!" Thrin cried, startled. Young's long fingernails scratched Thrin's arm. Young pushed Thrin twice more and each time Thrin kept the door from closing with her arm. Finally, Young got out of the elevator, and tried to pull Thrin away from the elevator door. Thrin held onto the elevator with her other hand, the one holding the camera. Realizing that students were trying to take the camera out of her hand, Thrin let go of the elevator.**
>
> **The elevator doors closed. Professor Young let go of Thrin, leaving several scratches on her arms, and got on another elevator.** Then the police arrived. The police did not seem overly concerned about the incident until they saw the video and realized how violent the professor had been. Police identified the assailant and found the remains of the sign – it had been destroyed. UC Santa Barbara police are completing their report …

Something similar happened last year at DePaul University.

Excerpt:

> The head of a conservative student organization at DePaul University has been sanctioned by the university and could be expelled after he released the names of vandals who destroyed a pro-life flag display.
>
> Kristopher Del Campo, the chairman of the Young Americans for Freedom chapter, was found guilty by the university on two counts – "Disorderly, Violent, Intimidating or Dangerous Behavior to Self or Others" and "Judicial Process Compliance."
>
> DePaul University did not return calls seeking comment.
>
> Last January Del Campo and other pro-life students received permission from the university to erect a pro-life display featuring 500 flags. **Vandals later destroyed the display – stuffing a number of the flags into trash cans.**
>
> The university's public safety department launched an investigation and eventually identified 13 students who confessed to the crime. Those names were then released by the university to Del Campo.
>
> On Feb. 5 the national Young Americans for Freedom organization posted the names of the vandals on their website. The posting generated negative comments directed at the vandals – and the university held Del Campo responsible.
>
> Three days later, Del Campo was informed that he had violated DePaul's Code of Student Responsibility. He was formally charged ten days later.

Here's another example of the tolerant left, from Life Site News.

Excerpt:

> A group of youths arrested and charged with vandalizing a Kentucky pro-life campus display said that destroying the display was an expression of their "right to free speech."
>
> Pro-life leaders of Northern Right to Life at Northern Kentucky University (NKU) say they first set up the

> display on Monday morning. It consisted of tiny onesies hanging on a line with red “X” taped onto every fourth outfit to symbolize a life lost to abortion. The display included a sign explaining its significance and citing the Guttmacher Institute.
>
> But after the display was torn down twice within the first two days, members of the pro-life group began taking night shifts to watch for the vandals. On Friday morning around 1am, they say they spotted four young men beginning to cut down the line and throwing the clothing, which was to be donated to needy local children, in the trash.
>
> […]Both Piron and the Kentucky Post report that the three suspects police caught – Travis Black, Steven White and Montez Jenkins Copeland – have been charged with Criminal Mischief.
>
> “Though the vandals don’t think they deserve to be faced with consequences, we at NRTL believe that it’s important for people to understand that they cannot just rip down a display simply because they disagree with its message,” said Piron.
>
> **A fourth suspect who had turned himself in, Kyle Pickett, agreed with pro-lifers that they had a right to display the clothing as free speech – but justified the vandalism as equally protected.**
>
> **“Tearing it down was expressing our right to free speech,” he said, according to the Post.**

I think the troubling thing about these stories is that pro-abortion radicals are moving beyond mere disagreement and into coercion, threats, vandalism and violence. I guess we shouldn’t be surprised that they would attack grown-ups. They advocate for killing babies, after all. That’s even worse.

# Democrats want government social workers to visit children starting “at birth”

**Wintery Knight** · 13 March 2014 · Archived copy · Original

This is from CNS News.

Excerpt:

> Will America be a better and freer country three decades from now if the children who turn four in this decade spend most of their waking hours with members of a government teachers union rather than with their moms?
>
> President Barack Obama’s vision of America, not surprisingly, starts with very young children spending their time in the custody of government employees.
>
> “I believe we should start teaching our kids at the earliest ages,” Obama said last week.
>
> When he used the word “we” here, Obama was not talking about Michelle and himself, he was talking about the government. When he used the words “our kids,” he was not talking about his own children — who attend the most expensive private school in Washington, D.C. — he was talking about other people’s children and grandchildren.
>
> […]Health and Human Services Secretary Kathleen Sebelius explained at the National Press Club last April — at a lectern shared with American Federation of Teachers President Randi Weingarten — that Obama’s vision for federal involvement in the lives of very young children does not stop with 4-year-olds.
>
> Obama’s budget calls for HHS to spend $15 billion over 10 years to fund an Obamacare provision called the Maternal, Infant, and Early Childhood Home Visiting Program. An HHS budget document says this program will send government-funded “nurses, social workers, and other professionals” into people’s homes to “improve parenting skills.”
>
> “I think that there still needs to be great understanding of what the president has put on the table is really a birth-to-five proposal, recognizing that you can’t start at 4-year-olds,” Sebelius said at the National Press Club.
>
> **“We really need to start at birth,” said Sebelius.** “**So, there will be an enhancement of home-visiting**, which we know is an evidence-based strategy that helps people be good parents from the onset, helps the first and best teacher a child will ever have learn important skills.
>
> […]Obama, and his allies in government, advocate policies that violate the natural law and destroy human lives. They advocate, for example, the deliberate killing of innocent human lives through abortion (and, in Obama’s case, through intentionally neglecting-to-death born children who have survived abortions). They advocate destroying the family by redefining it to include, so far, carnal relationships between people of the same sex — thus denying that children have a God-given right to a mother and father.
>
> Sebelius has been Obama’s chief agent in attacking the First Amendment right to the free exercise of religion. At this very moment, she is fighting in federal court to force Catholic schools in Washington, D.C., to secure health coverage for their faculty and staff that would provide abortion-inducing drugs in direct and unambiguous violation not only of the inalterable teachings of the Catholic Church but also in direct and unambiguous violation of the inalienable God-given right to life expressly recognized in the founding document of this nation.
>
> For each of the last five years, according to the CDC, at least 40 percent of the babies born in the United States were born to unmarried mothers. As recently as 1980, it was only 18.4 percent.
>
> Obama’s vision of a government that “educates” babies aims at forming the characters of the tragically increasing number of children born illegitimately in the United States — and as many other children as his programs can reach.

> His strategic aim is to make them allies in his cause.

I don't think that strangers in government can do as good of a job as my future wife and I can do. And I don't like having to pay them to try. Big government secularists seem to have a deep suspicion of parents, and they seem to want to get the children away from them as quickly as possible, especially the fathers. Fathers are bad, I guess, because we teach children about God and about morality, and we teach them to be practical and independent. These are things that a secular leftist government does not like. But they do like to take money from fathers. And mothers too, if they can get it. None of this taking of money and then using it to influence your children is voluntary either. The whole idea that government will be interfering with my family, should I choose to start one, is really upsetting to me. Why don't they raise their families with their own money, and leave me to raise mine with my money? What gives them the right to push their views on my children, paid for with my salary?

# Brian Auten interviews Dr. Angus Menuge on philosophy of mind

**Wintery Knight** · 13 March 2014 · Archived copy · Original

Click here for the interview. It's up at Apologetics 315!

Details:

> Today's interview is with Dr. Angus Menuge, Professor of Philosophy at Concordia University, and author of *Agents Under Fire: Materialism and the Rationality of Science*. He talks about his background and work, the philosophy of mind, what reason (or reasoning) is, what materialism is as a worldview, things excluded from a materialistic worldview, methodological naturalism and materialism, accounting for free will, materialistic accounts of reason, the epistemological argument from reason, the ontological argument from reason, finding the best explanation for reason, problems with methodological naturalism, implications of materialism, practical application of the argument from reason, advice for apologists, the International Academy of Apologetics, and more.

If what Dr. Menuge says in this interview is true, and I think it is, then a person who believes in materialism can neither ground free will nor rationality! So atheism wouldn't really be freethought so much as it would be… un-free… non-thought.

In case people don't want to listen to the podcast, then I've got some things for you to read below.

**The ontological argument from reason**

Dr. Menuge presented a paper at the real Evangelical Philosophical Society conference for students and professors of philosophy, and you can download the paper here in Word format. (here's a PDF version I made)

Here is the introduction to the paper that Dr. Menuge read at the EPS conference:

> The argument from reason is really a family of arguments to show that reasoning is incompatible with naturalism. Here, naturalism is understood as the idea that foundationally, there are only physical objects, properties and relations, and anything else reduces to, supervenes on, or emerges from that. For our purposes, one of the most important claims of naturalism is that all causation is passive, automatic, event causation (an earthquake automatically causes a tidal wave; the tidal wave responds passively): there are no agent causes, where something does not happen automatically but only because the agent exerts his active power by choosing to do it. The most famous version of the argument from reason is *epistemological*: if naturalism were true, we could not be justified in believing it. Today, I want to focus on the *ontological* argument from reason, which asserts that there cannot be reasoning in a naturalistic world, because reasoning requires libertarian free will, and this in turn requires a unified, enduring self with active power.
>
> The two most promising ways out of this argument are: (1) Compatibilism—even in a deterministic, naturalistic world, humans are capable of free acts of reason if their minds are responsive to rational causes; (2) Libertarian Naturalism—a self with libertarian free will emerges from the brain. I argue that neither of these moves works, and so, unless someone has a better idea, the ontological argument from reason stands.

The paper is 11 pages long, and it is helpful for those of you looking for some good discussion of one of the issues in the area of philosophy of mind.

You may also be interested in Alvin Plantinga's epistemological argument from reason, which is related to this argument. It shows that even to have the ability to think, you have to have a certain anthropology and you have to have mental faculties that are designed for reason, not survival.

**Methodological naturalism**

Dr. Menuge also wrote an article entitled "Is methodological materialism good for science?".

Intro:

> Should science by governed by methodological materialism? That is, should scientists assume that only undirected causes can figure in their theories and explanations? If the answer to these questions is yes, then there can be no such thing as teleological science or intelligent design. But is methodological materialism a defensible approach to science, or might it prevent scientists from discovering important truths about the natural world? In my contribution to The Waning of Materialism (Oxford University Press, 2010), edited by Robert Koons and George Bealer, I consider twelve of the most common arguments in favor of methodological materialism and show that none of them is convincing.
>
> Of these arguments, perhaps the most prevalent is the "God of the gaps" charge, according to which invoking something other than a material cause is an argument from ignorance which, like a bad script writer, cites a *deus ex machina* to save our account from difficulty. Not only materialists, but also many Christian thinkers, like Francis Collins, worry that appeal to intelligent design commits the God of the gaps fallacy.
>
> As I argue, however, not only is an inference to an intelligent cause not the same as an inference to the supernatural, it is a mistake to assume that all gap arguments are bad, or that only theists make them. If a gap argument is based solely on ignorance of what might explain some phenomenon, then indeed it is a bad argument. But there are many good gap arguments which are made both by scientific materialists and proponents of intelligent design.

So how do you make an argument like that?

> As Stephen Meyer has argued in his *Signature in the Cell*, intelligent design argues in just the same way, claiming not merely that the material categories of chance and necessity (singly or in combination) are unable to explain the complex specified information in DNA, but also that in our experience, intelligent agents are the only known causes of such information. The argument is based on what we know about causal powers, not on what we do not know about them.
>
> Since the inference is based on known causal powers, we learn that the cause is intelligent, but only further assumptions or data can tell us whether that intelligence is immanent in nature or supernatural. It is a serious mistake to confuse intelligent design with theistic science, and the argument that since some proponents of design believe that the designer is God, that is what they are claiming can be inferred from the data, is a sophomoric intensional fallacy.

If you think this is interesting, then do have a listen to the podcast. Dr. Menuge is not an ordinary academic – he is very direct. He calls materialism "a catastrophe" in the podcast!

# Obamacare enrollment of young adults about 50 percent below target

**Wintery Knight** · 14 March 2014 · Archived copy · Original

If you remember, Obamacare works by forcing young people (especially young men) to pay for care they don't need and won't use. This lowers the costs of health care for younger women and especially for older, sicker people. The target is 2.7 million enrollments of people from age 18-34. But are young people signing up for this plan in numbers like that?

Investors Business Daily has the answer.

Excerpt:

> Data through five months of the open-enrollment period show that slightly fewer than 10% of eligible 18- to 34-year-olds have signed up for coverage. Among young men, roughly 1 in 12 has signed up.
>
> The Kaiser Family Foundation puts the ObamaCare-eligible population at 28.6 million, with 40%, or about 11.4 million, in the 18-to-34 age group.
>
> Compared to the size of the potential market, the first-year target of 7 million enrollees, including about 2.8 million young adults, was relatively modest.
>
> Yet it's now clear that the initial target is well out of reach. The Avalere Health consultancy projected that sign-ups — paid and unpaid — will end March at around 5.4 million.
>
> Through February, not quite 1.1 million young adults had selected an exchange plan. Among this group, the male-female breakdown was about 45% vs. 55%. That matters because women at child-rearing age are more likely to run up big medical bills.
>
> **In February, 268,000 18- to 34-year-olds signed up, so a decent upsurge in March could lift the total close to 1.4 million.** But that's before winnowing out the people who don't pay.
>
> **Anecdotal reports from a handful of states and large insurers now point to a paid rate of about 85%, possibly lower.**
>
> **While that could improve before the March 31 deadline, there's reason to suspect that the paid percentage might lag among young adults, since they are showing more reticence about signing up in the first place.**
>
> **Once the unpaid group is subtracted, it appears likely that young-adult enrollees will fall at least 50% below the first-year target The White House had initially set that target at 2.7 million.**
>
> […]The age mix is important because the exchanges charge younger people higher premiums relative to pre-ObamaCare individual market insurance, so that older people can be charged less without negating insurer profits.
>
> If young adults make up just 25% of the ObamaCare exchange population, it would wipe out much, but not all, of the 3% to 4% profit margin insurers typically allow for in setting premiums, Kaiser Family Foundation experts figure.
>
> Yet that calculation assumes the health status of those who do sign up is about average. In general, an insured pool comprising a smaller share of the eligible group raises concern that the covered group will be costlier than average.

So they are expecting 2.7 million, but even with a late surge of enrollments, they are only going to get 1.4 million young people. That's bad for Democrats, but I am happy that young men are not signing up for this law. They have nothing to gain from it. Maybe this whole mess will be worth it if young men understand that big government rides

on the backs of young men. They are expected to pay the taxes, but without getting any of the benefits. Sex changes? IVF? Maternity? Well woman exam? Birth control pills? We don't use that. We don't mind paying for that for our wives, but we don't want to pay for it for complete strangers.

# Matt Walsh: boys are experiencing at least as many challenges as girls

**Wintery Knight** · 14 March 2014 · Archived copy · Original

Matt Walsh is annoyed that the problems of our young men are being minimized by a feminist culture.

Excerpt: (links removed)

> Boys — particularly boys in public school – are most assuredly NOT encouraged to be opinionated, assertive, loud, boisterous, or confident. Do you know what happens to boys like that?
>
> We punish them.
>
> We label them.
>
> We medicate them.
>
> Their opinions and their personalities aren't just discouraged – they're chemically obliterated.
>
> According to the CDC, more than 20 percent of 14-year-old boys have been diagnosed with ADHD at some point in their lifetime. *Twenty percent.*
>
> Boys are 125 percent more likely to be stuck with the ADHD label than girls, and *127 percent* more likely to be medicated for it.
>
> I suppose we can chalk this up to a mental disorder that mysteriously discriminates based on sex, or we could contemplate the possibility that we have turned boyhood into a disease. Overall, young males are almost twice as likely to be deemed "learning disabled." Could boys really be this inherently flawed, or is the system itself flawed?
>
> Whether or not a boy manages to exhibit the "correct" personality traits and narrowly avoid a psychiatric diagnosis, he has a much greater chance of being expelled or suspended from school. In fact, boys make up about 70 percent of the suspensions from grades K – 12. They're also five times more likely to be expelled from pre-school.
>
> And it's not just that young males tend to "misbehave" more; it's that we've defined "misbehavior" in a way that unfairly targets them. The news is rife with stories of kids suspended or expelled or arrested for making a pretend gun with their fingers, or a Poptart, or a keychain, or a pencil.
>
> These are healthy and normal games of imagination and fantasy — games that boys, not girls, usually play — and we've literally made a criminal matter out of it.
>
> Boys are frequently kicked out of school and sent hurtling on a path towards delinquency and failure, even for minor instances of physical aggression. Does it make sense to treat a kid like a dangerous psychopath just because he got into a minor shoving match or — horror of horrors — a fist fight? This is how boys often express their aggression. Girls express it in more damaging and traumatizing ways. They spread gossip and rumors, they shun and ostracize other girls, and these acts can reverberate through a child's life much further and deeper than getting pushed into a locker or punched in the nose.
>
> But typical male aggression leads to expulsion, while typical female aggression usually leads to, at most, a stern lecture from the guidance counselor. To make matters worse, we've banned and outlawed the healthier outlets for a boy's energy and rambunctiousness. Schools have increasingly prohibited tag, and kickball, and dodgeball , and football.
>
> Of course, the plight of the American male is far more serious and tragic than a ruined recess.
>
> Feeling abandoned, angry, hateful, and confused, guys are about 4 times more likely to kill themselves than girls. It's true that females attempt suicide at a higher rate, but males are at an exponentially greater risk of completing the horrible deed.

> And the story doesn't end there. While (if) these boys grow into men, it is much more probable that they will become alcoholics and drug addicts.
>
> Everyone knows that men are infinitely more likely to go to prison, but did you know they even receive longer sentences for the same crimes? Indeed, women convicted on the same charges are twice as likely to avoid incarceration altogether.
>
> Is this what you call "male privilege"?
>
> Privileged to be drugged as a child, expelled from school as a teenager, and incarcerated as an adult? Privileged to bad grades, a psychiatric diagnosis, and an early death?

I have blogged about some of the things he mentioned in the post, like the gun play and the longer prison sentences. But I think the post as a whole is very useful for people who think that young men are doing fine, and we need to keep focusing on young women. We need to focus more on young men, because in general, they really are falling behind, and they are not going to be able to fulfill the expectations that society places on them unless we identify the root causes for their decline.

# Congressman Trey Gowdy holds Obama accountable for lawlessness and abuse of power

**Wintery Knight** · 14 March 2014 · Archived copy · Original

[youtube.com=http://www.youtube.com/watch?v=Qw0AsBanu-o]
Rep. Trey Gowdy took Obama to task for his lawless behavior in a speech that drew a standing ovation. The Blaze reported on the speech, and I'll quote some it here for those who cannot watch the 5-minute video above.

Excerpt:

> Ignoring President Barack Obama's veto threat, **the House voted on Wednesday for a bill that would expedite congressional lawsuits against the chief executive for failure to enforce federal laws.**
>
> The vote was 233-181 in the Republican-led House as GOP lawmakers excoriated Obama for multiple changes to his 4-year-old health care law, steps he's taken to allow young immigrants to remain in the United States and the administration's resistance to defend the federal law banning gay marriage.
>
> Rep. Trey Gowdy, R-S.C., sponsor of the ENFORCE the Law Act, delivered a fiery speech and read a series of statements by Obama when he was an Illinois senator in which he warned of the encroachment of the executive on the powers of the other branches of government.
>
> "How does going from being a senator to a president rewrite the Constitution?" Gowdy asked. "What's different from when he was a senator? Mr. Speaker, I don't think there's an amendment to the Constitution that I've missed. I try to keep up with those with regularity."
>
> Gowdy went on to argue that "process matters" in law enforcement, noting that evidence gathered with a legitimate search warrant is thrown out if an officer so much as accidentally checks the wrong box on the application.
>
> "Even though he was well-intended, even though he had good motivations, even though he got the evidence — because process matters," he added.
>
> "We all swore an allegiance to the same document that the president swears allegiance to, to faithfully execute the law," Gowdy continued. "If a president does not faithfully execute the law… what are our remedies?"
>
> He then argued that Congress should do exactly what then-Sen. Obama suggested before he was president of the United States: "To go to the Supreme Court and have the Supreme Court say once and for all: 'We don't pass suggestions in this body. … We don't pass ideas — we pass laws. And we expect them to be faithfully executed."

I understand that in a lot of banana republics, the Supreme Ruler does whatever he pleases. But this is America. We have Constitution and separation of powers. Changing laws after they are passed for political reasons (mid-term elections) is not legal. Candidate Obama would never have done this, but President Obama does it all the time.

# Pro-marriage event at Stanford University deemed “hate speech”, denied funding

**Wintery Knight** · 15 March 2014 · Archived copy · Original

From The College Fix.

Excerpt:

> An upcoming conference organized by Stanford University’s Anscombe Society called “Communicating Values: Marriage, Family & the Media” has been dubbed “hate speech” by the college’s graduate-level student government, which refused to allow any of its student fee-funded budget to support the event.
>
> The Anscombe Society is a conservative student group centered around traditional marriage and family values; **it also encourages chastity**, and tackles subjects such as sexual integrity and pornography.
>
> According to the minutes of the student government meeting on March 5, a large group of angry students attended to protest the conference and its request for funding.
>
> […]Ultimately, the Graduate Student Council refused a $600 funding request: “With a vote of 10 for, 2 against, and 2 abstaining, the funding to Anscombe Society has been retracted by the GSC,” the minutes stated. What’s more, the *Stanford Daily* reports that the undergraduate student government also denied the Stanford Anscombe Society a $5,000 funding request last week.
>
> According to the Anscombe Society’s website, the event aims to “help university students and young adults to promote the values of marriage, family, and sexual integrity to the broader popular culture. Featuring speakers at the forefront of this effort, the conference will allow students to network with other individuals who are willing to engage in intellectual and civil discourse about the issues of marriage, family, and sexual integrity.”

These days it seems as if college students have moved away from the traditional view of marriage in more ways than just the male-female formulation. They think that male-female marriage is too restrictive because marriage should be about being happy and being in love, not about complementary sexes. Marriage should last as long as love-feelings and happy-feelings last, it’s not about commitment and self-sacrifice and the responsibilities of parenting. Now, the marriage means happily ever after – it means that if you have a wedding, then you are guaranteed happiness, without having any self-sacrificial responsibilities to spouses or children. It means that you can continue to be selfish, and that somehow, you and the other person will be able to keep the relationship going by just living like you’re each still single. Your spouse is there to make you happy. Your children are there to make you happy. There is nothing that marriage teaches you, because there is no design for it other than to produce happy feelings.

My view is that people who are rejecting the old definition of marriage, and the old responsibilities of husbands and wives in marriage, will never be able to produce a lasting, loving marriage. Either the challenges and responsibilities of marriage and parenting excite you, or you won’t have a real marriage that lasts. If you are going into the the thing with the attitude that there are no rules and responsibilities, and that it’s all about you and your feelings, you will fail. You can have a wedding, but it’s not going to magically produce a permanent, exclusive, life-giving union. Marriage is a specification, and you can’t magically implement the specification with a big wedding, any more than you save enough for retirement by winning the lottery. There is a right way to do it and a wrong way. Smashing all the rules is the wrong way.

# How far will global warming alarmists go to destroy critics like Mark Steyn?

**Wintery Knight** · 15 March 2014 · Archived copy · Original

A post from Free Think U tells you everything you need to know about whether global warming is based in evidence or intimidation.

Excerpt:

> The critical point in this campaign is a defamation lawsuit by global warming promoter Michael Mann against Mark Steyn, National Review, and the Competitive Enterprise Institute.
>
> […] Consider the specific argument Mann is making, as summed up in the report I linked to above.
>
> "In the articles, Mann says in his lawsuit, the think tank and the publication ignored more than half a dozen investigations that found no scientific wrongdoing, focusing almost exclusively on the Penn State inquiry in order to call him a fraud. CEI also mentioned the National Academy of Science's investigation, but dismissed those findings by saying the body had obtained information from Penn State, meaning the inquiry was 'not truly independent.' The basis mentioned by CEI to call the Penn State investigation a whitewash was stating it had only interviewed Mann, and 'seemingly ignored the content of the emails.'"
>
> Even more ominous, the DC Superior Court, which let the suit proceed, embraced this reasoning in its ruling.
>
> "The CEI Defendants' persistence despite the EPA and other investigative bodies' conclusion that Plaintiff's work is accurate (or that there is no evidence of data manipulation) is equal to a blatant disregard for the falsity of their statements."
>
> In other words, Steyn's evaluation of Mann's scientific claims can be legally suppressed because Steyn dares to question the conclusions of established scientific institutions connected to the government. On this basis, the DC Superior Court arrives at the preposterous conclusion that it is a violation of Mann's rights to "question his intellect and reasoning." That's an awfully nice prerogative to be granted by government: an exemption against any challenge to your reasoning.
>
> […]Mann is attempting to install himself as a kind of American Lysenko. Trofim Lysenko was the Soviet scientist who ingratiated himself to Joseph Stalin and got his crackpot theories on genetics installed as official dogma, effectively killing the study of biology in the Soviet Union. Under Lysenko, the state had an established and official scientific doctrine, and you risked persecution if you questioned it. Mann's libel suit is an attempt to establish that same principle here.
>
> Mann has recently declared himself to be both a scientist and a political activist. But in attempting to intimidate his critics and suppress free debate on global warming, he is violating the fundamental rules of both science and politics. If it is a sin to doubt, then there is no science. If it is a crime to dissent, then there is no politics.

In one way I think the tactics of censors in general are interesting because they show us how Darwinism came to be accepted as "science" despite the back that it is at odds with the evidence from origin of life studies and the Cambrian explosion, not to mention molecular machinery in the cell. The science doesn't matter if the government and the courts make it illegal to question the dogma.

Another reason never to write under your real name. Use an alias, because these people don't play games. They will go after you in your work place and destroy your ability to earn a living. Don't make it easy for them.

# Two families fighting for their religious liberty at the Supreme Court

**Wintery Knight** · 16 March 2014 · Archived copy · Original

The Heritage Foundation reports on the cases that will determine how far the Democrats can go to undermine religious liberty.

Excerpt:

> In less than two weeks, the Supreme Court will hear arguments in cases challenging an Obamacare mandate that is trampling on religious freedom. The Hahn family and the Green family will be at the Court on March 25 asking for respect of their religious liberty and the freedom to continue offering their employees generous health plans.
>
> Let's meet these families and what they're fighting for.
>
> A Christian Mennonite family, the Hahns have run Conestoga Wood Specialties near Lancaster, Pennsylvania, for nearly 50 years. A second-generation family business, Conestoga employs almost 1,000 individuals to produce quality wood products.
>
> The Hahns have always run their family business in accordance with their faith, including offering an employee health plan that aligns with their values. Under the mandate, however, Conestoga Wood could face fines of up to $95,000 *per day* for sticking to their deeply held beliefs and not complying with the mandate.
>
> Speaking of their fight for religious freedom at the Supreme Court, Conestoga president Anthony Hahn explains the magnitude of their case: "It's not really only for Conestoga; we're taking a stand for other businesses as well. This is a religious liberty issue that is concerning to us. We feel that the government has gone too far in too many instances."

And number two:

> "We believe that the principles that are taught scripturally are what we should operate our lives by, so that naturally flows over into the business," explains Steve Green, president of Hobby Lobby, an arts-and-crafts retailer.
>
> Headquartered in Oklahoma City, Hobby Lobby has grown from one 300-square-foot garage to over 500 stores in 41 states employing more than 16,000 individuals.
>
> The Greens' faith is integral to how they operate their family business. Hobby Lobby storesclose on Sundays and are open only 66 hours a week so that their employees can spend more time with their families. The family's faith influences not only the way they care for employees but their investment in communities through partnerships with numerous Christian ministries.
>
> Yet under the Obamacare mandate, the government is forcing families like the Greens to violate those beliefs by funding coverage of potentially life-ending drugs and devices or face crippling fines—up to $1.3 million per day in the case of Hobby Lobby. Even if the business is forced to drop employee health care coverage to avoid the mandate, it would still face a fine of $2,000 per employee per year.

There are other victims as well, but these are the two that I am watching. The Obama administration just recently established in the courts that parents have no human right to homeschool their children. Now there will be a fight to see if government can force Christians to violate their consciences in their business operations. We should all be watching and praying about this, and thinking about what we can do to protect our values.

# This year, 70% of all government spending will be direct payments to individuals

**Wintery Knight** · 16 March 2014 · Archived copy · Original

Investors Business Daily reports.

Excerpt:

> Buried deep in a section of President Obama's budget, released this week, is an eye-opening fact: This year, 70% of all the money the federal government spends will be in the form of direct payments to individuals, an all-time high.
>
> In effect, the government has become primarily a massive money-transfer machine, taking $2.6 trillion from some and handing it back out to others. These government transfers now account for 15% of GDP, another all-time high. In 1991, direct payments accounted for less than half the budget and 10% of GDP.
>
> What's more, the cost of these direct payments is exploding. Even after adjusting for inflation, they've shot up 29% under Obama.
>
> Where do these checks go? The biggest chunk, 38.6%, goes to pay health bills, either through Medicare, Medicaid or ObamaCare. A third goes out in the form of Social Security checks. Only 21% goes toward poverty programs — or "income security" as it's labeled in the budget — and a mere 5% ends up in the hands of veterans.

So a lot of the money is not even going for poverty! More:

> Instead, a surprisingly large amount of federal money is handed out to wealthy Americans through Social Security, Medicare, farm subsidies, unemployment benefits, conservation programs, disaster payments and other programs.
>
> An IBD analysis found that the richest 1% of Americans, in fact, receive roughly $10 billion each year in federal checks.
>
> Outgoing Sen. Tom Coburn, R-Okla., who exposed these vast payment programs available to the rich, said "this reverse Robin Hood-style of wealth distribution is an intentional effort to get all Americans bought into a system where everyone appears to benefit."

Why is this bad? It's because government only spends the money that it collects from other individuals and businesses. They should be spending that money on government responsibilities like roads, the military and foreign policy. Not redistributing wealth to particular people. That just makes a certain segment of the population dependent on government and makes them more likely to vote for bigger government. Government is notoriously terrible at knowing who is really in need of help. Plus, private charities are more likely to push poor people in the direction of independence and responsibility. Government basically says, "here's the money, and keep doing whatever you're doing because we don't have a plan for you to get out of poverty".

We don't want to be the kind of country that punishes people for working or for starting businesses, but it seems like that is the direction we are heading in.

# Democrat who has served 38 years in Congress down 14 points in latest poll

**Wintery Knight** · 17 March 2014 · Archived copy · Original

Michael Barone reports on it in the Washington Examiner.

Excerpt:

> Here's an astonishing poll: David Freddoso at Conservative Intelligence Briefing links to a report by the Washington Post's Aaron Blake that West Virginia 3rd district incumbent Rep. Nick Rahall trails Republican challenger state Sen. Evan Jenkins by a 54-percent to 40-percent margin. The poll was conducted by the Tarrance Group, a Republican firm which, like several Democratic and other Republican firms, has had a good record for reliability over the years.
>
> This is astonishing for several reasons. Rahall, first elected in 1976, is now the seventh most senior member of the House, with three of the more senior members retiring (John Dingell, Henry Waxman, George Miller) and another with a serious primary challenge (Charlie Rangel). Moreover, his district in southern West Virginia has historically been very Democratic; in its previous boundaries it voted for Walter Mondale overRonald Reagan in 1984. Rahall won in 1976 by 46 percent to 37 percent over Ken Hechler, his predecessor in the seat, who after losing a Democratic primary for governor ran as a write-in candidate; the Republican nominee received only 18 percent of the vote. From 1978 to 2008, Rahall was re-elected with at least 64 percent of the vote, except in 1990 when he beat Republican Marianne Brewster by only 52 percent to 48 percent.
>
> But this is coal country, and Rahall's margins have gone down after President Obama was elected president. In 2010, Rahall won by a reduced margin of 56 percent to 44 percent, and in 2012, his margin was only 54 percent to 46 percent. Obama's unpopularity surely cost him: John McCain carried the district within its then-boundaries by a 56-percent to 42-percent margin in 2008, and Mitt Romney carried the current district 65 percent to 33 percent in 2012. Rahall is ranking Democrat on the Transportation and Infrastructure Committee and was Chairman of the Natural Resources Committee when Democrats had a majority in the House; these are committee positions of importance to a mountainous coal district, but apparently they are not enough to help him now.

So, this time the culprit isn't Obama's terrible health care policy, it's Obama's terrible energy policy. Remember, the Environmental Protection Agency basically banned construction on all future coal plants which cost a lot of jobs. Not only that, but coal plants have been closing because of Democrat energy policies. Lastly, restrictions on coal production by Democrats have made energy prices go up, especially in the South. So people who are connected to the coal industry in Ohio, Pennsylvania, West Virginia, etc. should really be thinking a second time about supporting the Democrats in 2014 – and 2016, too.

# Democrats in California want to pass laws to penalize Asians

**Wintery Knight** · 17 March 2014 · Archived copy · Original

Basically, the Democrats in California want to pass an affirmative action bill, which would penalize overachievers. Asians tend to outperform other races in academics, so they are always the losers when academic criteria are minimized in favor of racial criteria for college admissions.

Here's an article from National Review, sent to me by Letitia.

Excerpt:

> The California state legislature was on the verge of approving a referendum to restore the consideration of race and ethnicity in admissions to state universities.
>
> […]What both sides of the bimodal Asian immigration population have in common is that their children do uncommonly well in school. They are represented in California's much-admired universities in far larger numbers than their share of the population would suggest: Asians compose 14 percent of California's population but 37 percent of the undergraduates at its state universities. They make up about 40 percent of the students at UCLA, 43 percent of the students at Berkeley, half the students at UC San Diego, and more than half of the students at UC Irvine. A relatively small minority, they compose the largest single ethnic group on California university campuses (at least as California defines "ethnic group").
>
> […]Liberals talk a great deal of mindless rot about what they like to call "privilege," the supposedly omnipresent advantages that accrue to the white, the male, the heterosexual, those whose sense of self is more or less congruent with their biological genitals, etc. But it is worth keeping in mind that progressive social-engineering programs such as the use of racial criteria in university admissions do not hurt only hurt well-off white people sporting penises. (Not that we should shortchange the interests of well-off white penis-sporters.) They also hurt poor people and immigrants, in this case a group of immigrants that we as a country should count ourselves lucky to have. It is important to remember why race-based admissions are such an important issue for progressives: The Left lives in the public schools, which do a terrible job of teaching black, Hispanic, and poor students, who consequently show up in embarrassingly small proportions at elite institutions. Asian students, on the other hand, do a tremendous amount of work outside of school, spending ten times as much time as non-Asian students do on organized non-school activities ranging from music lessons to tutoring to test-preparation courses. That is true across the economic spectrum: Working-class Asian immigrant families in Queens send their children to tutoring sessions and piano lessons at a much higher rate than does the non-Asian population, even though the relative financial sacrifices necessary for them to do so are heavy.
>
> For that, California's professional race hustlers, and their allies across the country, would see them punished.

So, here is another case where the party that talks a lot about racism and race is actually the one that is opposed to Asians getting ahead. My view is that if Asians have the strong families that produce high achievers, then let them be 40% of the students at the university. Maybe then people of other races will get the message that they need to focus more on raising children who can compete. Follow the rules and you won't be poor: finish high school, get jobs, get married, have children, don't get divorced. If you follow those rules, you will not be poor, and your children will outperform you.

# Bible study: on the importance of truth in religion

**Wintery Knight** · 17 March 2014 · Archived copy · Original

Here's an interesting passage of the Bible. What do you all think the practical value of this passage is?

[1] In the second year of his reign, Nebuchadnezzar had dreams; his mind was troubled and he could not sleep.

[2] So the king summoned the magicians, enchanters, sorcerers and astrologers to tell him what he had dreamed. When they came in and stood before the king,

[3] he said to them, "I have had a dream that troubles me and I want to know what it means."

[4] Then the astrologers answered the king, "May the king live forever! Tell your servants the dream, and we will interpret it."

[5] The king replied to the astrologers, "This is what I have firmly decided: If you do not tell me what my dream was and interpret it, I will have you cut into pieces and your houses turned into piles of rubble.

[6] But if you tell me the dream and explain it, you will receive from me gifts and rewards and great honor. So tell me the dream and interpret it for me."

[7] Once more they replied, "Let the king tell his servants the dream, and we will interpret it."

[8] Then the king answered, "I am certain that you are trying to gain time, because you realize that this is what I have firmly decided:

[9] If you do not tell me the dream, there is only one penalty for you. You have conspired to tell me misleading and wicked things, hoping the situation will change. So then, tell me the dream, and I will know that you can interpret it for me."

[10] The astrologers answered the king, "There is no one on earth who can do what the king asks! No king, however great and mighty, has ever asked such a thing of any magician or enchanter or astrologer.

[11] What the king asks is too difficult. No one can reveal it to the king except the gods, and they do not live among humans."

[12] This made the king so angry and furious that he ordered the execution of all the wise men of Babylon.

[13] So the decree was issued to put the wise men to death, and men were sent to look for Daniel and his friends to put them to death.

[14] When Arioch, the commander of the king's guard, had gone out to put to death the wise men of Babylon, Daniel spoke to him with wisdom and tact.

[15] He asked the king's officer, "Why did the king issue such a harsh decree?" Arioch then explained the matter to Daniel.

[16] At this, Daniel went in to the king and asked for time, so that he might interpret the dream for him.

[17] Then Daniel returned to his house and explained the matter to his friends Hananiah, Mishael and Azariah.

[18] He urged them to plead for mercy from the God of heaven concerning this mystery, so that he and his friends might not be executed with the rest of the wise men of Babylon.

[19] During the night the mystery was revealed to Daniel in a vision. Then Daniel praised the God of heaven

[20] and said:

"Praise be to the name of God for ever and ever;

wisdom and power are his.

[21] He changes times and seasons;
he deposes kings and raises up others.
He gives wisdom to the wise
and knowledge to the discerning.

[22] He reveals deep and hidden things;
he knows what lies in darkness,
and light dwells with him.

[23] I thank and praise you, God of my ancestors:
You have given me wisdom and power,
you have made known to me what we asked of you,
you have made known to us the dream of the king."

[24]Then Daniel went to Arioch, whom the king had appointed to execute the wise men of Babylon, and said to him, "Do not execute the wise men of Babylon. Take me to the king, and I will interpret his dream for him."

[25] Arioch took Daniel to the king at once and said, "I have found a man among the exiles from Judah who can tell the king what his dream means."

[26] The king asked Daniel (also called Belteshazzar), "Are you able to tell me what I saw in my dream and interpret it?"

[27] Daniel replied, "No wise man, enchanter, magician or diviner can explain to the king the mystery he has asked about,

[28] but there is a God in heaven who reveals mysteries. He has shown King Nebuchadnezzar what will happen in days to come. Your dream and the visions that passed through your mind as you were lying in bed are these:

[29] "As Your Majesty was lying there, your mind turned to things to come, and the revealer of mysteries showed you what is going to happen.

[30] As for me, this mystery has been revealed to me, not because I have greater wisdom than anyone else alive, but so that Your Majesty may know the interpretation and that you may understand what went through your mind.

This passage is interesting to me because it shows the kind of attitude that God answers. The King in this passage was tired of hearing man-made stories from his servants – stories that were undoubtedly influenced by the servants desire to survive the King's wrath. The servants would only have told the King things that were vague and happy, so that they could never be proved wrong or found to be judgmental or offensive. But the King was tired of that. He wanted someone with authority to tell him the truth about the way the world was.

In the rest of the chapter, Daniel interprets the dream, and concludes by saying this: "The great God has shown the king what will take place in the future. The dream is true and its interpretation is trustworthy.". The King replies: "Surely your God is the God of gods and the Lord of kings and a revealer of mysteries, for you were able to reveal this mystery."

I think it is is going to be difficult for Christians living today to be able to tell people their dreams like that. But what we can do is talk about God's miracles as revealed by science and history. We can study astrophysics, biochemistry and history and we can explain what God did in creating and fine-tuning the universe for life, in sequencing amino acids into functioning proteins, in creating brand new body plans in the Cambrian explosion, in raising Jesus from the dead as a matter of historical record, and so on. We have to show how great God is to people who do not even think he exists, and without assuming that they believe in the Bible.

There are still people out there like the King who are looking for someone who can speak to them with authority.

All it takes from us is a little studying, and we can be like Daniel, too. But we have to know what God has done from science and history, and speak with authority about how we can know that God has acted *supernaturally*. Authority to speak comes from having knowledge about what we are talking about, and knowledge comes from studying and debating with people we disagree with. Nebuchadnezzar was not a believer in the God of Israel, but he was still interested in truth. That won't always be the case, but it is the case for some people.

# New discovery confirms Big Bang, and is direct evidence for cosmic inflation

**Wintery Knight** · 18 March 2014 · Archived copy · Original

From the UK Telegraph.

Excerpt:

> Space-time ripples left over from the Big Bang have been picked up for the first time by Harvard scientists.

> Astrophysicists have been hunting for 'primordial gravitational waves' since they were predicted by Albert Einstein's theory of general relativity in 1916.
>
> Today, after days of rumour and speculation, scientists from the Harvard-Smithsonian Centre announced they had recorded the first direct evidence of gravitational waves rippling through the infant universe.
>
> "The implications for this detection stagger the mind," said project leader Jamie Bock. "We are measuring a signal that comes from the dawn of time."

> Our universe burst into existence 13.8 billion years ago. Fractions of a second later, space and time were created, expanding exponentially in an episode known as 'inflation'.
>
> It was theorized that inflation should also produce gravitational waves – ripples in space-time which spread throughout the universe.
>
> "Think of the ripples you see when you throw a stone into a pond," said Professor Martin Hendry of the department of Physics and Astronomy at the Univesity of Glasgow.
>
> "But these aren't ripples on the surface of the water, they are gravitational waves emitted billions of years ago, rippling through the fabric of space and time itself, in the universe's earliest moments.
>
> "We always suspected they were still washing about but we haven't been able to detect them.
>
> […]The signal was found using a specialised telescope called Bicep (Background Imaging of Cosmic Extragalactic Polarization) at the South Pole.
>
> It scans the sky at microwave frequencies, where it picks up light energy from slightly after the Big Bang – around 380,000 years later. Scientists have been searching for tiny ripples in this light which would show it is being slightly stretched by gravitational waves.

We have had a string of solid, recent scientific discoveries that support the idea that the universe came into existence at some point in the finite past, as follows:

- Einstein's theory of general relativity, and the scientific confirmation of its accuracy
- measurements of the cosmic microwave background radiation
- red-shifting of light from galaxies moving away from us
- radioactive element abundance predictions (from supernovae)
- helium/hydrogen abundance predictions (nuclear fusion)
- star formation and stellar lifecycle theories
- the second law of thermodynamics

This new discovery is building on #2 above – the cosmic microwave background radiation.

**What came into being at the moment of creation?**

As the article states, space was created and time began at the first moment.

1. There was no space causally prior to the universe beginning to exist
2. There was no time causally prior to the universe beginning to exist
3. There was no matter causally prior to the universe beginning to exist

All of these things *began to exist* at the first moment.

**What can we infer about the cause?**

So, space, time, and matter began to exist. What could have caused them to begin to exist?

1. Whatever causes the universe to appear is not inside of space, because there *was no space* causally prior to the creation event. The cause must therefore be non-physical, because physical things exist in space.
2. Whatever causes the universe to appear is not bound by time (temporal). It *never began to exist.* There was no passage of time causally prior to the big bang, so the cause of the universe did not *come into being.* The cause existed *eternally*.
3. And the cause is not material. All the matter in the universe came into being at the first moment. Whatever caused the universe to begin to exist cannot have been matter, because there was no matter causally prior to the big bang.

So what could the cause be? Dr. William Lane Craig notes that we are only familiar with *two kinds* of non-material realities:

1. Abstract objects, like numbers, sets and mathematical relations
2. Minds, like your own mind

Now, abstract objects don't cause of any effects in nature. But we are very familiar with the causal capabilities of our own minds – just raise your own arm and see! So, by process of elimination, we are left with a mind as the cause of the universe. As Sherlock Holmes says, "*When you have eliminated the impossible, whatever remains, however improbable, must be the truth.*"

This cause created the entire physical universe. The cause of this event is therefore *supernatural, b*ecause it brings nature into being and is not inside of nature itself. The cause of the universe violates the law of conservation of matter is therefore a miracle. And when we do our science, we find evidence of it.

# Christianity and the doctrines of exclusivism, inclusivism and pluralism

**Wintery Knight** · 18 March 2014 · Archived copy · Original

Are you familiar with the differences between *exclusivism, inclusivism* and *pluralism?* This article from Leadership University explains all three of them.

Here's exclusivism:

> The following is a succinct explanation of the central characters and ideas behind each position. The exclusivist position has been the dominant position of the church as a whole through much of its history until the Enlightenment. Major representatives include Karl Barth, Emil Brunner, Hendrick Kraemer, D.A. Carson, William Lane Craig, and R. Douglas Geivett.
>
> Key to this position is the understanding of God's general and special revelations. God is manifested through creation (general revelation), but Man has responded by freely going against this revelation and, thus, stands guilty before a holy God. However, God has demonstrated a reconciliatory mercy through His word and deed, fulfilled completely in Jesus Christ. The historical person of Jesus, then, is the unique, final, decisive, and normative self-revelation of God to Man (special revelation). Exclusivists believe that Jesus Christ is the sole criterion by which all religions, including Christianity, should be understood and evaluated. Calvin Shenk explains:
>
> > Christ did not come just to make a contribution to the religious storehouse of knowledge. The revelation which he brought is the ultimate standard. Since in Christ alone is salvation and truth, many religious paths do not adequately reflect the way of God and do not lead to truth and life. Jesus is not, therefore, just the greatest lord among other lords. There is no other lord besides him.
>
> Specific texts often employed by exclusivists include Acts 4:12; John 14:6; 1 Corinthians 3:11; and 1 Timothy 2:5-6.

And inclusivism:

> Inclusivism is a blanket term to characterize a sort of "middle way" between exclusivism and pluralism. Most prominent within mainline Protestantism and post-Vatican II Catholicism, its notable proponents (in one formor another) include Karl Rahner, Raimundo Panikkar and Stanley Samartha, and Hans Kung. Evangelical theologians such as Clark Pinnock, Norman Anderson, and John Sanders have also identified themselves with this position. Herein, the agnosticism associated with the latter option above is replaced with outright optimism. Christian salvation is not confined to the historical or geographic extent special revelation has spread, rather it must be available to all cultures, irrespective of age or geography.Salvation is still posited wholly in Christ and his salvific work. Specific knowledge of this work, however, is not necessary for the effect (i.e., salvation) to apply to those within a different religious culture who have responded to the general revelation available. Once again, Shenk explains:
>
> > Inclusivists want to avoid monopolizing the gospel of redemption. They acknowledge the possibility of salvation outside of Christian faith or outside the walls of the visible church, but the agent of such salvation is Christ, and the revelation in Jesus is definitive and normative for assessing that salvation. Jesus Christ is believed to be the center, and other ways are evaluated by how they relate to him. Other religions are not just a preparation for Christ, but Christ is actually present in them.
>
> The fundamental differences between exclusivism and inclusivism… are the nature and the content of "saving

> faith." The former emphasizes explicit faith while the latter points to an implicit faith.

And pluralism:

> Finally, there is the pluralist position. This is undoubtedly the most difficult of the three to define in any general sense. The spectrum of pluralistic thought is as wide as it is long. The focusof this particular study will examine the contributions of its key figures: Paul Knitter, John Hick, and Wilfred Cantwell Smith. Just as in the previous positions, the interpretative range within just these three individuals varies. It is fitting, however, to focus primarily on them since they are the most vocal and influential figures espousing pluralism today.
>
> Hick and Knitter argue the case for pluralism on the following grounds: (1) ethically, it is the only way to promote justice in an intolerant world; (2) in terms of the "ineffability of religious experience," so no religion can claim an absolutist stance; and (3) through the understanding that historical and cultural contexts must be the filter for any absolute religious claim. Hick has argued that all world religions attempt to relate to the unknowable Ultimate Reality (or, the Real), but because of their various cultural and historical contexts these attempts are all naturally different. Hence the various conceptions of the Real and the salvation(s) sought. The common soteriological goal, toward which all religions strive, though, is rooted in the desire to transcend self-centeredness and, in turn, encounter a new (unexplainable) experience with the Real. But, he emphatically emphasizes the fact that there is "no public evidence that any one religion is soteriologically unique or superior to others and thus has closer access to Ultimate Reality."
>
> Therefore, with pluralism, Christ is no more definitive or normative than any religious figure or concept. Or, as Andrew Kirk explains, "Rather than confessing that Jesus Christ is the one Lord over all, this view asserts that the one Lord who has manifested himself in other names is also known as Jesus." By "crossing the Rubicon," as Hick and Knitter illustrate, Christians are encouraged to abandon any claim of Christian uniqueness and the possibility of absolute revelation, accepting the fact that the Christian faith is one among many options.

Now maybe you didn't know this, but Roman Catholics seem to have taken a turn away from exclusivism and towards inclusivism in the last century.

So, I thought I would post a rebuttal to the Roman Catholic embrace of inclusivism from one of my favorite Christian apologists, Greg Koukl.

Excerpt:

> There are some issues of Christianity that are intra-Nicene, intramural discussions between believers, in which I think a charitable person can easily see how another Christian can hold a different view because there are things that are difficult to understand in Scripture. For instance, though I'm Reformed in my soteriology, my understanding of salvation–I'm a Calvinist–I am sympathetic to an Arminian perspective because I can see how they, in lines of reasoning from the New Testament and verses themselves from the New Testament, can come to their view. So, though I would disagree, and I think they're mistaken, I understand how they can see it.But there are other positions that I cannot understand because there is no New Testament evidence in favor of it, and, to the contrary, almost to a word, as the New Testament touches the issue, it says quite the opposite.
>
> Earlier this week, I was honored, flattered, and, frankly, humbled to have a very unique opportunity on Monday to address an audience of about 150 Jewish people that were in the midst of Jewish High Holy Day services–morning services, evening services–at kind of a pause time in the afternoon, in which my host and I and another guest had a discussion about Jews and Christians. The three of us were on the panel: my host, Dennis Prager, a man I have a tremendous admiration and affection for, and Greg Coiro, a Roman Catholic priest and a professional friend. I've known both of these men over 20 years and have been in many discussions, both in private and public on the air with Dennis and Greg Coiro.
>
> It was in this opportunity that, in a sense, the ancient quarrel of sorts, theologically, was revisited, that I've had

> in the past many years ago when we were talking about this in interfaith dialogues. This difference of opinion is a historically new development in Roman Catholicism that stunned me when I first encountered it in the early days of being on Religion on the Line in the late eighties, a radio panel Dennis Prager hosted for many years. The priests on the panel uniformly held the conviction, informed by Vatican II, that Jews don't have to believe in Jesus in order to receive the benefits of Jesus' salvation. This is a view called "inclusivism." It's not the same as pluralism, but in my view, it seems to have the same impact: "Yes, Jesus is necessary for salvation, but you don't have to believe in Jesus to benefit from Jesus."
>
> Now, at this afternoon panel recently, the very first question that came up was whether trust in Jesus is necessary for salvation. "Greg, do you believe that? Do Protestants believe that?" I answered, "Yes, I believe that. And no, not all Protestants believe that. But let me try to explain it to you in a way that doesn't sound so stark. Let me try to give it some perspective." I explained that it wasn't as if God was up there looking down at a bunch of religious clubs and prefers some over others. He used to prefer the Jewish club and now He prefers the Christian club. It may sound that way to many when this doctrine of Christianity is put forward: Jesus is the only way of salvation; you must believe in Jesus in order to benefit from what Jesus did.

Talk about Daniel in the lions' den. Anyway, click through and read the whole article to get an idea of how to make your stand for exclusivism in difficult places.

For a general article defending the Christian doctrine of exclusivism, check out this article by William Lane Craig. One of my favorites, from way way back to when I was an undergraduate.

And, if you would like to listen to a debate on pluralism, then here is a debate featuring pluralist John Hick.

# Profiles of women in apologetics: Letitia Wong

**Wintery Knight** · 18 March 2014 · Archived copy · Original

Letitia Wong
Article in the Examiner.

Excerpt:

> Letitia Wong is a busy woman.
>
> She is a devoted mother of two, a responsibility that she takes very seriously. She also writes a Christian Apologetics blog, "Talitha, Koum!"
>
> At Missouri Baptist University in St. Louis; she directs a student chapter which is devoted to providing those students with resources for defending the Christian worldview against cultural and intellectual challenges. In addition to helping college students, she also helps teenagers with apologetics through a local organization called Faith Ascent Ministries.
>
> Letitia is a cohost of a weekly radio program – named TRU-Life Fridays Radio – which focuses on educating and promoting the defense of a healthy ethic of human life.
>
> […]Letitia is well-qualified in her specific focus on the defense of life, having studied Health Sciences at Purdue and Medical Technology at Arizona State. Letitia's unique capacity to uphold the Christian worldview does not stop here, though:

This quotation from Letitia was what caused me to link to her profile:

> "For as long as I can remember, critics have accused Christianity as a legalistic religion that is anti-woman among other things. This seems to demand that Christian women come to the forefront to proclaim that Woman was created as the completion to humankind. How appropriate, then, that women engage and complete the argument for the validity and veracity of the Christian faith. Plus, women who can communicate well and teach other women make the disciplines used in apologetics so much more accessible so that more women can become involved.
>
> "I have many times heard women disparage apologetics study, questioning its relevance, worried that it causes people to complicate faith or be combative. I want to shift this perspective. **Women tend to invest heavily in their children's education and spiritual and worldview formation. However, they also tend to**

> **disconnect at the most crucial point in this investment, the point at which the Christian worldview relies heavily on sound reasoning about philosophical and theological matters. The need to follow through is key to bringing the heart and the mind together to apply all the knowledge of their education (history, science, and the humanities) to be able to have and share an integrated Christian worldview. Apologetics study completes what women begin in earnest in properly educating their children, and I believe what is beneficial for children is likewise beneficial for women.** Apologetics bridges the gap between knowledge and application. Knowledge and application together are the key to communication of truth to a world that is skeptical about the claims of Christianity."

I have always felt concerned because I meet many women who are not interested in apologetics, and especially not the evidential kind that Letitia likes. I really love the way that she has thought through her responsibilities as wife and mother, and realized that apologetics is needed for her to do her jobs. I know that she has been involved with organizing apologetics conferences, her pro-life podcast, and her blog. So clearly, she has a need to be good at defending her faith. I think that's the right way to become interested in apologetics – you want to be able to talk to people about these things, and have an influence. That means having the knowledge, so that you are leading others, not just expressing your opinions.

# Man signs up for Obamacare and goes into debt $50,000 paying for treatment

**Wintery Knight** · 19 March 2014 · Archived copy · Original

Story from Washington Free Beacon.

Excerpt:

> Cancer patient Tony Angran has quite the fighting spirit: he is battling Stage 3 cancer and trying desperately to find funds to pay for his new Obamacare plan.
>
> Angran… was diagnosed with stage 3 cancer of the esophagus had insurance, but due to a previous heart condition, the insurance did not cover the treatments he needed for his cancer. He was notified of his insurance plan's limitations just moments before receiving life-saving chemotherapy.
>
> "One of the workers came and said, 'I need to talk to you,' and so I went and talked to her and she says, 'We found out that your insurance does not include chemo,'" Angran told WHO-IA.
>
> Over the past two months, the Angrans have depleted their savings account and accrued $50,000 in debt to pay for his treatments.
>
> They signed up for Obamacare in hopes of finding better, less expensive coverage, but have been dismayed with the price of the health insurance offered by the exchange. It will cost them more than $800 a month.
>
> The insurance plan they enrolled in will not begin for another two weeks, leaving them essentially hanging by a thread.
>
> Tony Angran has since lost the ability to swallow, now eating through a feeding tube, and he is no longer able to take his necessary heart medicine.
>
> A Pastor, Angran has dedicated his life to the services others and has shown compassion through his ministry. He says that Obamacare, which promises to alleviate the financial burden associated with health insurance and aims to provide quality care for Americans, lacks compassion.
>
> "I'm sitting here with Stage 3 Esophageal Cancer, and they're taking me to the finance person and saying, 'How are you going to pay for this?'" he said.
>
> The Angrans have until the start of April to pay $7000- their copay under their new Obamacare health insurance plan.

Meanwhile, Democrat Senate majority leader Harry Reid says that all of these horror stories are untrue.

# Catholic school being pressured by government to teach that all religions are equal

**Wintery Knight** · 19 March 2014 · Archived copy · Original

Christian Post reports on a story out of Quebec, the most liberal province in Canada. (H/T Reasonable Faith)

Excerpt:

> The Canadian Supreme Court is set to decide whether teachers at private religious schools in the province of Quebec will be allowed to share their faith with students, in a case concerning a Catholic high school that is being forced to teach students in an ethics and religious course that all religions are the same.
>
> "It is the same thought process that has been the genesis for prohibitions on blasphemy in other jurisdictions. The whole idea behind blasphemy laws in some parts of the world is that you don't want to offend different religions, and so what they (the Quebec government) do is argue that they promote tolerance and understanding, but rather they want to control what is said," Gerald Chipeur, Q.C., of the Canadian firm Miller Thompson LLP, told The Christian Post in a phone interview on Wednesday.
>
> Chipeur is one of 2,300 attorneys allied with Alliance Defending Freedom, a nonprofit legal organization that filed a brief on Monday with the Canadian Supreme Court in defense of Loyola High School, the Jesuit Roman Catholic school in question.
>
> The Catholic high school has argued that it does not object to teaching the 2008 government-mandated ethics and religion course, which is required to be taught in all private and public schools, but asked to be allowed to teach the course in good conscience. **The problem they found with the course was that it insisted that all religions, including Wicca and pagan rites, are equally valid. The government has also prohibited teachers from expressing preference for any one faith.**

That's why Christians need to take an interest in politics, and push for the policies that work for Christian families. I know several excellent Christian parents who do send their kids to public schools, and you never know when that might be your only option financially. It doesn't make sense to think that things will always be as good as they are now for Christians. You need to understand that there are groups out there who are not happy with the things we tell our kids, not happy with the way we spend family money, not happy with the fact that married families do better than single mothers. They have their own agenda, and we should have one of our own, too.

# Do people go to Hell just because they don't accept Jesus?

**Wintery Knight** · 19 March 2014 · Archived copy · Original

From J. Warner Wallace at Please Convince Me. (Link is now down, I can't find it anywhere else)

Excerpt:

> A "just" God does justice, which means to punish or reward appropriately. In the Western tradition, we punish people for the actions they commit, but the extent of punishment is dependent also on the person's mental state, and a person's mental state is reflective of his or her beliefs. Premeditated murder is worse than manslaughter, and is punished more severely, and a hate crime is a sentencing enhancement that adds more punishment to the underlying crime. In both examples, a person's beliefs are at play: the premeditated murderer has reflected on his choices and wants the victim dead; a hate crime reflects a belief that the rights of a member of the protected group are especially unworthy of respect. So, considering a person's beliefs may well be relevant, especially if those beliefs have motivated the criminal behavior.
>
> But the challenger's mistake is even more fundamental. He is wrong to assert that people are condemned for not accepting the gospel. Christians believe that people are condemned for their sinful behavior – the "wages of sin is death" – not for what they fail to do. The quoted challenge is like saying that the sick man died of "not going to the doctor." No, the person died of a specific condition – perhaps cancer or a heart attack – which a doctor might have been able to cure. So too with eternal punishment. No one is condemned for refusing to believe in Jesus. While Jesus can – and does – provide salvation for those who seek it, there is nothing unjust about not providing salvation to those who refuse to seek it. After all, we don't normally feel obliged to help someone who has not asked for, and does not want, our assistance. So too the Creator has the right to withhold a gift – i.e. eternity spent in His presence – from those who would trample on the gift, and on the gift-giver.
>
> The quoted assertion also demonstrates an unspoken belief that we can impress God with our "kind" or "generous" behavior. This fails to grasp what God is – a perfect being. We cannot impress Him. What we do right we should do. We don't drag people into court and reward them for not committing crimes. This is expected of them. They can't commit a murder and then claim that punishment is unfair, because they had been kind and generous in the past. When a person gets his mind around the idea of what perfection entails, trying to impress a perfect Creator with our "basic goodness" no longer seems like such a good option.

Here's a related answer from CARM. This one answers the question about degrees of punishment in Hell.

Excerpt:

> Yes, there are different degrees of punishment in hell.
>
> […]But, not all people are equally bad. Though all deserve damnation because all are sinners, different people have committed different degrees of sin.
>
> - Mt. 11:20-22, "Then He began to reproach the cities in which most of His miracles were done, because they did not repent. 21 "Woe to you, Chorazin! Woe to you, Bethsaida! For if the miracles had occurred in Tyre and Sidon which occurred in you, they would have repented long ago in sackcloth and ashes. 22 "Nevertheless I say to you, it shall be more tolerable for Tyre and Sidon in the day of judgment, than for you…I say to you that it shall be more tolerable for the land of Sodom in the day of judgment, than for you."
> - Luke 12:47-48, "And that slave who knew his master's will and did not get ready or act in accord with his will, shall receive many lashes, 48 but the one who did not know it, and committed deeds worthy of a flogging, will receive but few. And from everyone who has been given much shall much be required; and to

> whom they entrusted much, of him they will ask all the more."
>
> - John 19:11, "Jesus answered [Pilate], 'You would have no authority over Me, unless it had been given you from above; for this reason he who delivered Me up to you has the greater sin.' "
> - Heb. 10:29, "How much severer punishment do you think he will deserve who has trampled under foot the Son of God, and has regarded as unclean the blood of the covenant by which he was sanctified, and has insulted the Spirit of grace?"
>
> So, if Jesus speaks of greater condemnation for Chorazin and Bethsaida than Tyre and Sidon (Matt. 11:21-22), one slave received more punishment than another (Luke 12:47-48), the one who delivered Jesus to Pilate has the greater sin (John 19:11), and a more severe punishment is reserved for those who trample underfoot the Son of God, then does not greater sin mean that greater punishment will also happen in hell? Yes it does.

Not only are there degrees of punishment in Hell, but there are degrees of reward in Heaven, based on what you do on Earth and what strengths you start out with.

Philippians 4:10-18:

[10] I rejoiced greatly in the Lord that at last you renewed your concern for me. Indeed, you were concerned, but you had no opportunity to show it.

[11] I am not saying this because I am in need, for I have learned to be content whatever the circumstances.

[12] I know what it is to be in need, and I know what it is to have plenty. I have learned the secret of being content in any and every situation, whether well fed or hungry, whether living in plenty or in want.

[13] I can do all this through him who gives me strength.

[14] Yet it was good of you to share in my troubles.

[15] Moreover, as you Philippians know, in the early days of your acquaintance with the gospel, when I set out from Macedonia, not one church shared with me in the matter of giving and receiving, except you only;

[16] for even when I was in Thessalonica, you sent me aid more than once when I was in need.

[17] Not that I desire your gifts; what I desire is that more be credited to your account.

[18] I have received full payment and have more than enough. I am amply supplied, now that I have received from Epaphroditus the gifts you sent. They are a fragrant offering, an acceptable sacrifice, pleasing to God.

Everyone who believes in Jesus gets salvation, but your experience in Heaven will be different based on what you do while you are alive. And that's also the answer to another common question – about deathbed conversions. Both deathbed converts and William Lane Craig will get the same experience of being in the presence of God, but there are completely different levels of reward. One person has an empty account, and the other person has huge massive amounts of virtuous action on deposit. But I think the real reason that Christians are trying to do good things here on Earth is that they like God, and they want to be his friend. They want to work on the relationship, even if it means a little self-denial, and a little sacrifice. We all have things that we would rather be doing for ourselves, but sometimes we have to things that work – things that are effective – for someone else. My values are not his values. Sometimes it is good to do something based on what He values. I don't always have to get my way, because then it wouldn't be a real relationship.

I enjoy thinking about Bible puzzles like this… so often in church we just make Christianity a checklist of things that we are supposed to believe somehow, by brute force willpower. I think reflecting on these problems, asking questions, and making sense of them on our own, is a much better approach.

# New study: 39 percent of private employers will cut workers if minimum wage is raised

**Wintery Knight** · 20 March 2014 · Archived copy · Original

Fox News reports on a study that should make Obama change his mind about his plan to raise minimum wage.

Excerpt:

> Thirty-eight percent of America's private employers say they will lay off workers if Congress agrees to raise the minimum wage to $10.10, according to a new survey by the nation's largest privately held staffing firm.
>
> Fifty-four percent of employers who are paying their workers the current minimum wage of $7.25 per hour say they would reduce hiring, while 65 percent say they would raise prices on their goods and services to offset the bumps in pay.
>
> Of the 1,213 business and human resources professionals surveyed by Express Employment Professionals last month – which include whose who pay their employees the minimum wage as well as those who do not – 19 percent say they'd fire workers, 39 percent would reduce hiring and 51 percent would raise prices on their services to make up the salary costs.
>
> "As with any such policy change, there are upsides and downsides. But based on this survey, there's no denying that raising the minimum wage will result in layoffs, reduced hiring, and higher prices at a large chunk of American companies," Bob Funk, CEO of Express and the former chairman of the Federal Reserve Bank of Kansas, said. "How severe will those effects be? That remains to be seen, but policymakers will certainly want to be mindful of this reality as they legislate."
>
> Last month, the Congressional Budget Office released a report that said that while raising the country's minimum wage might boost the incomes of millions of Americans, it would simultaneously mean hundreds of thousands of fewer workers.
>
> According to the CBO, a graduated boost in the minimum wage to $10.10 by 2016 would lead to an estimated decline in employment of 500,000 workers by the second half of that year.

Although wages might go up for millions of workers, businesses would have to charge more for whatever they were selling. So really, it's just redistribution of wealth, except for the massive layoffs.

My worry about these dumb policies is like Obamacare and minimum wage hikes is that people see bad things happening and blame businesses rather than bad policies. I think we need to be studying economics to explain what is really happening to people, so that when they have a chance to vote, they vote smart.

# Wisconsin House passes Scott Walker's tax cut bill, headed to governor's desk

**Wintery Knight** · 20 March 2014 · Archived copy · Original

Wisconsin Governor Scott Walker: All He Does Is Win

The leftist Milwaukee Journal-Sentinel reluctantly reports on another victor for Governor Scott Walker.

Excerpt:

> Gov. Scott Walker's $541 million tax cut proposal ended its trek through the Legislature on Tuesday with a final vote in the Assembly, clearing the way for the governor to sign it by next week.
>
> The Assembly voted, 61-35, in support of the bill, with three Democrats joining all Republicans in favor of the proposal. It now goes to the Republican governor for his approval.
>
> "That's exactly what taxpayers want — giving their money back to them rather than keep their dollars here in Madison," Assembly Speaker Robin Vos (R-Rochester) said, urging lawmakers, "Let's give it back."
>
> […]With growing tax collections now expected to give the state a $1 billion budget surplus in June 2015, Walker's tax proposal will cut property and income taxes for families and businesses, and zero out all income taxes for manufacturers in the state.
>
> Though the state's tax revenues are increasing, GOP lawmakers and Walker will use that growth as an occasion to trim overall state spending slightly for the next three years rather than increase it.
>
> Rep. Jim Steineke (R-Kaukauna), a Realtor, said the state's property taxes are a considerable barrier to people buying a home and staying in it into their old age.
>
> "What we're doing today does move us back in the right direction, lowering the property tax," he said.
>
> […]Under Walker's bill, the average income tax filer would receive a tax cut of $46 in April 2015 and the typical homeowner would save $131 over the existing law on this December's bills, according to the Legislature's nonpartisan budget office.
>
> Also, the governor has separately had his administration alter income tax withholding rates so workers have less taken out of each paycheck — about $520 a year for a married couple making a total of $80,000 a year — starting in April.
>
> The bill also would lower income taxes for factory and farm owners by $36.8 million over the current two-year budget and $91.3 million over the following two years.
>
> GOP supporters of the manufacturing tax cut in the bill see it as fuel for one of the state's main economic

> engines. Democratic opponents see it as a giveaway with a dubious payback to some of the richest people in the state, averaging about $800 for roughly 30,000 tax filers in 2015.

The Christian Post had a story about Scott Walker as well.

Excerpt:

> A Wisconsin-based atheist organization has demanded that that Governor Scott Walker remove a posting on the social media website Twitter that is religious in nature.
>
> The Freedom From Religion Foundation stated Tuesday that they took exception to Walker's official account, including a tweet posted Sunday that simply read, "Philippians 4:13."
>
> As rendered by the New King James Version, Philippians 4:13 states, "I can do all things through Christ who strengthens me."
>
> On Sunday, Walker tweeted "Phillipians 4:13" on the @GovWalker twitter handle. This is noted as being the "Official Twitter Account of the 45th Governor of the State of Wisconsin, Scott Walker." Walker has another twitter handle, @ScottWalker.
>
> The @GovWalker tweet of the verse citation received as of Tuesday evening 52 retweets and 76 favorites. It also received diverse responses from other Twitter accounts.

As of Wednesday, the tweet was still up. So I re-tweeted it and favorited it.

I think that in 2016 we should be looking at candidates who will take the fight to the Democrats. We don't need another Mitt Romney. I want to see a candidate who sticks his neck out for what he believes in and comes out on top. Real accomplishments, this time. Not rhetoric. Why do we always have to care what our opponents think of us? Why not just beat them up and then be magnanimous in victory? If he runs for President on the platform of zeroing out manufacturing income tax, he will win. Every union worker will vote for him.

During the Christmas vacation, I read governor Walker's new book, which was a Christmas present from my friend ECM. If you want to learn more about governor Walker, I recommend picking that up. I actually got the audio version, and it's read by governor Walker himself.

# Are Christians responsible for making plans and making good decisions?

**Wintery Knight** · 20 March 2014 · Archived copy · Original

Here's a wonderful post on decision making and the will of God posted on Neil's blog. Neil links to another post where someone is trying to figure out what God wants him to do.

Excerpt:

> **Really short version:** Aside from direct and clear personal revelation from God, you don't have access to his sovereign will when making decisions. Therefore you must look at other factors. **If it isn't moral, don't do it. If it is moral but not wise, don't do it. If it is moral and wise, then use your personal preferences.**
>
> Using this model you can end up with a wise and biblical decision, but you have avoided the traps of the "God told me to ____" routine. People who run around saying that God told them this and that convey a super-spirituality that can leave less mature believers wondering if they really have a relationship with God (i.e., "God doesn't tell me every little thing to do, so maybe I don't really know him.").

He has a helpful picture posted as well:

This is actually a very important topic for me, because I like making plans and making good decisions. I like being the quarterback or squad leader of my own life. I like to pick objectives and then make plans to achieve them. (Nothing too exotic, just simple stuff like saving money or reading more books)

Actually, I really oppose the idea that God has a magical fairy tale will for each person that will make them happy and fulfilled. For me, life isn't like that. I don't expect God to lead me along like a child at a scavenger hunt. I expect to survey the battlefield where I am and then *do something* to make a difference. There are lots of things you can do that will please God. Should you focus on your career and sponsor apologetics conferences? Or should you use your spare time preparing Sunday school lessons? *There are lots of good things you could do to please God*. Your job is to pick the one that will be the most effective. It doesn't matter if it makes you happy, it only matters if it's effective and if you are good at it.

**Who is Rifleman Dodd?**

A while back, I was busily working my way through the U.S. Marine Corps Official Reading List, and I came across a book by C.S. Forester called *Rifleman Dodd*, or alternatively titled *Death to the French*. It's a work of historical fiction that takes place during the Napoleonic wars. The story is about a British marksman named Dodd, who is cut off from his own lines during a withdrawal maneuver. He is subsequently left to fend for himself behind enemy lines. An ordinary man might be full of despair and forget about his mission entirely. But Dodd is no ordinary man. Not only does he find a way to survive by finding food to eat, water to drink and places to sleep, but he also tries to remember his orders and to think about what he can do to advance the cause of his General, the Duke of Wellington.

Here's an excerpt from a gritty book review:

> It's about a green-coated British infantry rifleman in the Napoleonic Wars, an age when rifles were a novelty and most of the army was red-coated and carried muskets. Private Matthew Dodd gets separated from his regiment during a retreat and finds himself stranded behind enemy (French) lines in Portugal. With the occasional aid of some natives, but mostly on his own, he harasses the French with his rifle and tries to prevent them from building a bridge across the Tagus River. It's a remarkable tale of survival and solitary achievement, of a rank-and-file soldier who lives by his wits and slowly learns to make plans without orders, and shows leadership qualities and a knowledge of warfare.

I think we're in the same situation as Dodd.

There is no point in us looking for breadcrumb trails to happiness at this point. That's not the point of Christianity. The point of Christianity is friendship with God, imitation of Christ, honoring moral obligations, self-sacrificial love for your neighbor (and even your enemies!), and dedication to the truth – whether anyone else likes you or not. It's not supposed to make you happy, and it's not necessarily going to be a normal life like everyone else has. Things may not work out the way you'd like them to.

We seem to be making such a big deal about compassion and forgiveness in the Christian life these days – such a big emphasis on our feelings. Almost like we have forgotten that we have obligations to our friend – and his objectives. A relationship doesn't mean that one person completely disregards the character and goals of the other person and then is automatically granted forgiveness whenever they want it. That's not a friendship – that's using someone else for your own ends. Maybe it's time to remember what this is all about.

# Court rules university violated conservative professor's freedom of speech

**Wintery Knight** · 21 March 2014 · Archived copy · Original

From Campus Reform.

Excerpt:

> A jury has concluded that the University of North Carolina-Wilmington retaliated against one of its professors for his outspoken conservative views.
>
> The battle for his First Amendment rights is finally over for Mike Adams, a criminology professor who asserted the university denied him a promotion to full professor in 2006 because of his conversion to Christianity and subsequent vocal conservatism.
>
> Today, a jury in a U.S. District Court in Greenville, N.C., agreed.
>
> "We are just grateful that the jury saw what we've long known what was the case, that Dr. Adams was an incredible scholar," Alliance Defending Freedom(ADF) attorney Travis Barham, who represents Adams, told *Campus Reform*.
>
> "This is an incredibly important victory for the First Amendment," Barham said. "To be able to speak freely without retaliation is a principle that should be a reality on campus and the jurors reassured that."
>
> The university hired Adams in 1993; at the time, he was a self-described atheist. After his conversion to Christianity in 2000, Adams adjusted his political and social views and spoke publicly on conservatism, including through his column at Townhall.com. From then on, Adams was subjected to "intrusive investigations" and "baseless accusations" according to an ADF press release.
>
> "They retaliated against me for exercising my First Amendment rights in my column and other outlets," Adams told *Campus Reform* after the trial. "I'm unbelievably thrilled [at the verdict]."
>
> The case was originally filed in April 2007 and the trial was granted by a federal court last year.

Well done, Alliance Defending Freedom! And congratulations, Mike Adams, for the win! There's probably no conservative professor in the United States who is more hated than Mike Adams.

However, there is definitely a warning for conservatives here. If you are thinking that the university campus is fair to Christians and conservatives, you really need to re-think that. On the modern secular leftist campus, you can expect to have your views ridiculed and attacked, not just by the professors, but by the students, too. After a little indoctrination, the students are just as likely to ridicule and attack you as the professors are. It's not a place for free speech and rational discussion, especially outside the sciences. Young Christians and conservatives headed to the university – BEWARE.

# What criteria do historians use to get to the minimal facts about the historical Jesus?

**Wintery Knight** · 21 March 2014 · Archived copy · Original

Have you ever heard Gary Habermas, Michael Licona or William Lane Craig defend the resurrection of Jesus as the best explanation for the "minimal facts" about Jesus? The lists of minimal facts that they use are typically agreed to by their opponents during the debates.

For example, in his debate with Bart Ehrman, Craig was able to quote Ehrman's own writings where he agreed that all four facts were probably true.

Excerpt:

> Now in his early published work Dr. Ehrman expressed skepticism about these facts. He insisted that we cannot really affirm these facts.
>
> […]Dr. Ehrman has himself come to re-think his position on these issues. Inconsistencies in the details notwithstanding, he now recognizes that we have "solid traditions," not only for Jesus' burial, but also for the women's discovery of the empty tomb, and therefore, he says, we can conclude with "some certainty" that Jesus was in fact buried by Joseph of Arimathea in a tomb and that three days later the tomb was found empty.
>
> When I discovered that Professor Ehrman had reversed himself on this question, my admiration for his honesty and scholarly objectivity shot up. Very few scholars, once they've gone into print on an issue, have the courage to re-think that issue and admit that they were wrong. Dr. Ehrman's reversal of his opinion on these matters is testimony, not merely to the force of the evidence for these four facts, but also to his determination to follow the evidence wherever it leads. What this means is that my first contention is not an issue of disagreement in tonight's debate.

So what are the criteria that historians use to derive a list of minimal facts about Jesus?

Dr. Craig explains them in this article.

Excerpt:

> The other way, more influential in contemporary New Testament scholarship, is to establish specific facts about Jesus without assuming the general reliability of the Gospels. The key here are the so-called "Criteria of Authenticity" which enable us to establish specific sayings or events in Jesus' life as historical. Scholars involved in the quest of the historical Jesus have enunciated a number of these critieria for detecting historically authentic features of Jesus, such as dissimilarity to Christian teaching, multiple attestation, linguistic semitisms, traces of Palestinian milieu, retention of embarrassing material, coherence with other authentic material, and so forth.
>
> It is somewhat misleading to call these "criteria," for they aim at stating sufficient, not necessary, conditions of historicity. This is easy to see: suppose a saying is multiply attested and dissimilar but not embarrassing. If embarrassment were a necessary condition of authenticity, then the saying would have to be deemed inauthentic, which is wrong-headed, since its multiple attestation and dissimilarity are sufficient for authenticity. Of course, the criteria are defeasible, meaning that they are not infallible guides to authenticity. They might be better called "Indications of Authenticity" or "Signs of Credibility."
>
> In point of fact, what the criteria really amount to are statements about the effect of certain types of evidence upon the probability of various sayings or events in Jesus' life. For some saying or event S and evidence of a certain type E, the criteria would state that, all things being equal, the probability of S given E is greater than

> the probability of S on our background knowledge alone. So, for example, all else being equal, the probability of some event or saying is greater given its multiple attestation than it would have been without it.
>
> What are some of the factors that might serve the role of E in increasing the probability of some saying or event S? The following are some of the most important:
>
> (1) Historical congruence: S fits in with known historical facts concerning the context in which S is said to have occurred.
>
> (2) Independent, early attestation: S appears in multiple sources which are near to the time at which S is alleged to have occurred and which depend neither upon each other nor a common source.
>
> (3) Embarrassment: S is awkward or counter-productive for the persons who serve as the source of information for S.
>
> (4) Dissimilarity: S is unlike antecedent Jewish thought-forms and/or unlike subsequent Christian thought-forms.
>
> (5) Semitisms: traces in the narrative of Aramaic or Hebrew linguistic forms.
>
> (6) Coherence: S is consistent with already established facts about Jesus.
>
> For a good discussion of these factors see Robert Stein, "The 'Criteria' for Authenticity," in *Gospel Perspectives I*, ed. R. T. France and David Wenham (Sheffield, England: JSOT Press, 1980), pp. 225-63.
>
> Notice that these "criteria" do not presuppose the general reliability of the Gospels. Rather they focus on a particular saying or event and give evidence for thinking that specific element of Jesus' life to be historical, regardless of the general reliability of the document in which the particular saying or event is reported. These same "criteria" are thus applicable to reports of Jesus found in the apocryphal Gospels, or rabbinical writings, or even the Qur'an. Of course, if the Gospels can be shown to be generally reliable documents, so much the better! But the "criteria" do not depend on any such presupposition. They serve to help spot historical kernels even in the midst of historical chaff. Thus we need not concern ourselves with defending the Gospels' every claim attributed to Jesus in the gospels; the question will be whether we can establish enough about Jesus to make faith in him reasonable.

And you can see Dr. Craig using these criteria to defend minimal facts in his debates. For example, in his debate with Ehrman, he alludes to the criteria when making his case for the empty tomb.

Here, he uses multiple attestation and the criteria of embarrassment:

> Among the reasons which have led most scholars to this conclusion are the following:
>
> 1. The empty tomb is also multiply attested by independent, early sources.
>
> Mark's source didn't end with the burial, but with the story of the empty tomb, which is tied to the burial story verbally and grammatically. Moreover, Matthew and John have independent sources about the empty tomb; it's also mentioned in the sermons in the Acts of the Apostles (2.29; 13.36); and it's implied by Paul in his first letter to the Corinthian church (I Cor. 15.4). Thus, we have again multiple, early, independent attestation of the fact of the empty tomb.
>
> 2. The tomb was discovered empty by women.
>
> In patriarchal Jewish society the testimony of women was not highly regarded. In fact, the Jewish historian Josephus says that women weren't even permitted to serve as witnesses in a Jewish court of law. Now in light of this fact, how remarkable it is that it is women who are the discoverers of Jesus' empty tomb. Any later legendary account would certainly have made male disciples like Peter and John discover the empty tomb. The fact that it is women, rather than men, who are the discoverers of the empty tomb is best explained by the fact that they were the chief witnesses to the fact of the empty tomb, and the Gospel writers faithfully record what, for them, was an awkward and embarrassing fact.

There are actually a few more reasons for believing in the empty tomb that he doesn't go into in the debate, but you can find them in his written work. For example, in his essay on Gerd Ludemann's "vision" hypothesis. That essay covers the reasons for all four of his minimal facts.

So, if you are going to talk about the resurrection with a skeptic, you don't want to invoke the Bible as some sort of inerrant/inspired Holy Book.

Try this approach instead:

1. Explain the criteria that historians use to get their lists of minimal facts
2. Explain your list of minimal facts
3. Defend your list of minimal facts using the criteria
4. Cite skeptics who admit to each of your minimal facts, to show that they are widely accepted
5. List some parts of the Bible that don't pass the criteria (e.g. – guard at the tomb, Matthew earthquake)
6. Explain why those parts don't pass the criteria, and explain that they are not part of your case
7. Challenge your opponent to either deny some or all the facts, or propose a naturalistic alternative that explains the facts better than the resurrection
8. Don't let your opponent attack any of your minimal facts by attacking other parts of the Bible (e.g. – the number of angels being one or two, etc.)

And just keep in mind that there is no good case for the resurrection that does not make heavy use of the early creed in 1 Corinthians 15:3-8. You have to use that – it's the law.

Back to the minimal facts criteria. The best essay on the minimal facts criteria that I've read is the one by Robert H. Stein in "Contending with Christianity's Critics". It's a good short essay that goes over all the historical criteria that are used to derive the short list of facts from which we infer the conclusion "God raised Jesus from the dead". That whole book is really very, very good.

# 1 Corinthians 15: the earliest source for the basic facts about the life of Jesus

**Wintery Knight** · 21 March 2014 · Archived copy · Original

First, the creed – which is found in 1 Corinthians 15:3-8:

[3]For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

[4]that he was buried, that he was raised on the third day according to the Scriptures,

[5]and that he appeared to Peter, and then to the Twelve.

[6]After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep.

[7]Then he appeared to James, then to all the apostles,

[8]and last of all he appeared to me also, as to one abnormally born.

Almost all historians accept this creed as dating back to within 5 years of the death of Jesus. But why?

Here's a great article from Eric Chabot, director of Ratio Christi Apologetics Alliance, The Ohio State University to explain why.

Excerpt:

> The late Orthodox Jewish scholar Pinchas Lapide was so impressed by the creed of 1 Cor. 15, that he concluded that this "formula of faith may be considered as a statement of eyewitnesses." (5)
>
> Paul's usage of the rabbinic terminology "passed on" and "received" is seen in the creed of 1 Cor. 15:3-8:
>
> "For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures, that he was buried, that he was raised on the third day according to the Scriptures, and that he appeared to Peter, and then to the Twelve. After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep. Then he appeared to James, then to all the apostles, and last of all he appeared to me also, as to one abnormally born."
>
> There is an interesting parallel to Paul's statement in 1 Cor. 15:3-8 in the works of Josephus. Josephus says the following about the Pharisees.
>
> "I want to explain here that the Pharisees passed on to the people certain ordinances from a succession of fathers, which are not written down in the law of Moses. For this reason the party of the Sadducees dismisses these ordinances, averaging that one need only recognize the written ordinances, whereas those from the tradition of the fathers need not be observed." (6)
>
> As Richard Bauckham notes, "the important point for our purposes is that Josephus uses the language of "passing on" tradition for the transmission from one teacher to another and also for the transmission from the Pharisees to the people."(7)
>
> Bauckham notes in his book Jesus and the Eyewitnesses: The Gospels as Eyewitness Testimony that the Greek word for "eyewitness" (autoptai), does not have forensic meaning, and in that sense the English word "eyewitnesses" with its suggestion of a metaphor from the law courts, is a little misleading. The autoptai are simply firsthand observers of those events. Bauckham has followed the work of Samuel Byrskog in arguing that while the Gospels though in some ways are a very distinctive form of historiography, they share broadly in the attitude to eyewitness testimony that was common among historians in the Greco-Roman period. These historians valued above all reports of firsthand experience of the events they recounted.

> Best of all was for the historian to have been himself a participant in the events (direct autopsy). Failing that (and no historian was present at all the events he need to recount, not least because some would be simultaneous), they sought informants who could speak from firsthand knowledge and whom they could interview (indirect autopsy).” In other words, Byrskog defines “autopsy,” as a visual means of gathering data about a certain object and can include means that are either direct (being an eyewitness) or indirect (access to eyewitnesses).
>
> Byrskog also claims that such autopsy is arguably used by Paul (1 Cor.9:1; 15:5–8; Gal. 1:16), Luke (Acts 1:21–22; 10:39–41) and John (19:35; 21:24; 1 John 1:1–4).
>
> While the word “received” (a rabbinical term) can also be used in the New Testament of receiving a message or body of instruction or doctrine (1 Cor.11:23; 15:1, 3; Gal. 1:9, 12 [2x], Col 2:6; 1 Thess 2:13; 4:1; 2 Thess 3:6), it also means means “to receive from another.” This entails that Paul received this information from someone else at an even earlier date. 1 Corinthians is dated 50-55 A.D. Since Jesus was crucified in 30-33 A.D. the letter is only 20-25 years after the death of Jesus. But the actual creed here in 1 Cor. 15 was received by Paul much earlier than 55 A.D.
>
> […]Even the co-founder Jesus Seminar member John Dominic Crossan, writes:
>
> “Paul wrote to the Corinthians from Ephesus in the early 50s C.E. But he says in 1 Corinthians 15:3 that “I handed on to you as of first importance which I in turn received.” The most likely source and time for his reception of that tradition would have been Jerusalem in the early 30s when, according to Galatians 1:18, he “went up to Jerusalem to visit Cephas [Peter] and stayed with him fifteen days” (11).
>
> This comment by Crossan makes sense because within the creed Paul calls Peter by his Aramic name, Cephas. Hence, if this tradition originated in the Aramaic language, the two locations that people spoke Aramaic were Galilee and Judea. (12) The Greek term “historeo” is translated as “to visit” or “to interview.” (13) Hence, Paul’s purpose of the trip was probably designed to affirm the resurrection story with Peter who had been an actual eyewitness to the resurrected Christ (1 Cor. 15:5).

I know what you’re thinking. You’re thinking “Hey WK, isn’t John Dominic Crossan that wacky liberal atheist who is on the far-left fringe of historical Jesus scholarship? So wacky, that he actually thought that Secret Gospel of Mark was *real*, instead of just being a hoax?” Yes, that’s the nutty John Dominic Crossan I mean. The very one.

Here’s a bit more about this early creed from Gary Habermas.

Quote:

> (1) Contemporary critical scholars agree that the apostle Paul is the primary witness to the early resurrection experiences. A former opponent (1 Cor. 15:9; Gal. 1:13-14; Phil. 3:4-7), Paul states that the risen Jesus appeared personally to him (1 Cor. 9:1; 15:8; Gal. 1:16). The scholarly consensus here is attested by atheist Michael Martin, who avers: “However, we have only one contemporary eyewitness account of a postresurrection appearance of Jesus, namely Paul’s.”[3]
>
> (2) In addition to Paul’s own experience, few conclusions are more widely recognized than that, in 1 Corinthians 15:3ff., Paul records an ancient oral tradition(s). This pre-Pauline report summarizes the early Gospel content, that Christ died for human sin, was buried, rose from the dead, and then appeared to many witnesses, both individuals and groups.
>
> Paul is clear that this material was not his own but that he had passed on to others what he had received earlier, as the center of his message (15:3). There are many textual indications that the material pre-dates Paul. Most directly, the apostle employs paredoka and parelabon, the equivalent Greek terms for delivering and receiving rabbinic tradition (cf. 1 Cor. 11:23). Indirect indications of a traditional text(s) include the sentence structure and verbal parallelism, diction, and the triple sequence of kai hoti Further, several non-Pauline words, the proper names of Cephas (cf. Lk. 24:34) and James, and the possibility of an Aramaic original are all

> significant. Fuller attests to the unanimity of scholarship here: "It is almost universally agreed today that Paul is here citing tradition."[4] Critical scholars agree that Paul received the material well before this book was written.[5]
>
> The most popular view is that Paul received this material during his trip to Jerusalem just three years after his conversion, to visit Peter and James, the brother of Jesus (Gal. 1:18-19), both of whose names appear in the appearance list (1 Cor. 15:5; 7). An important hint here is Paul's use of the verb historesai (1:18), a term that indicates the investigation of a topic.[6] The immediate context both before and after reveals this subject matter: Paul was inquiring concerning the nature of the Gospel proclamation (Gal. 1:11-2:10), of which Jesus' resurrection was the center (1 Cor. 15:3-4, 14, 17; Gal. 1:11, 16).
>
> Critical scholars generally agree that this pre-Pauline creed(s) may be the earliest in the New Testament. Ulrich Wilckens asserts that it "indubitably goes back to the oldest phase of all in the history of primitive Christianity."[7] Joachim Jeremias agrees that it is, "the earliest tradition of all."[8] Perhaps a bit too optimistically, Walter Kasper even thinks that it was possibly even "in use by the end of 30 AD . . . ."[9]
>
> Indicating the wide approval on this subject, even more skeptical scholars frequently agree. Gerd Ludemann maintains that "the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus. . . . not later than three years. . . . the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE. . . ."[10] Similarly, Michael Goulder thinks that it "goes back at least to what Paul was taught when he was converted, a couple of years after the crucifixion."[11] Thomas Sheehan agrees that this tradition "probably goes back to at least 32-34 C.E., that is, to within two to four years of the crucifixion."[12] Others clearly consent.[13]
>
> Overall, my recent overview of critical sources mentioned above indicates that those who provide a date generally opt for Paul's reception of this report relatively soon after Jesus' death, by the early to mid-30s A.D.[14] This provides an additional source that appears just a half step removed from eyewitness testimony.
>
> (3) Paul was so careful to assure the content of his Gospel message, that he made a second trip to Jerusalem (Gal. 2:1-10) specifically to be absolutely sure that he had not been mistaken (2:2). The first time he met with Peter and James (Gal. 1:18-20). On this occasion, the same two men were there, plus the apostle John (2:9). Paul was clearly doing his research by seeking out the chief apostles. As Martin Hengel notes, "Evidently the tradition of I Cor. 15.3 had been subjected to many tests" by Paul.[15]
>
> These four apostles were the chief authorities in the early church, and each is represented in the list of those who had seen the resurrected Jesus (1 Cor. 15:5-7). So their confirmation of Paul's Gospel preaching (Gal. 2:9), especially given the apostolic concern to insure doctrinal truth in the early church, is certainly significant. On Paul's word, we are again just a short distance from a firsthand report.
>
> (4) Not only do we have Paul's account that the other major apostles confirmed his Gospel message, but he provides the reverse testimony, too. After listing Jesus' resurrection appearances, Paul tells us he also knew what the other apostles were preaching regarding Jesus' appearances, and it was the same as his own teaching on this subject (1 Cor. 15:11). As one, they proclaimed that Jesus was raised from the dead (15:12, 15). So Paul narrates both the more indirect confirmation of his Gospel message by the apostolic leaders, plus his firsthand, direct approval of their resurrection message.

That's how solid this early creed is – even atheists like Crossan and Ludemann accept it as historically reliable. It's historical bedrock, as Michael Licona likes to say. This is the stuff that *everyone* accepts – across the ideological spectrum!

# A Harvard University student explains how evidence changed her mind about God

**Wintery Knight** · 22 March 2014 · Archived copy · Original

Here's a must-read article about the effectiveness of apologetics on college campuses in Christianity Today. (H/T Sanjay M.)

Excerpt:

> I don't know when I first became a skeptic. It must have been around age 4, when my mother found me arguing with another child at a birthday party: "But how do you know what the Bible says is true?" By age 11, my atheism was so widely known in my middle school that a Christian boy threatened to come to my house and "shoot all the atheists." My Christian friends in high school avoided talking to me about religion because they anticipated that I would tear down their poorly constructed arguments. And I did.
>
> As I set off in 2008 to begin my freshman year studying government at Harvard (whose motto is *Veritas*, "Truth"), I could never have expected the change that awaited me.
>
> It was a brisk November when I met John Joseph Porter. Our conversations initially revolved around conservative politics, but soon gravitated toward religion. He wrote an essay for the *Ichthus*, Harvard's Christian journal, defending God's existence. I critiqued it. On campus, we'd argue into the wee hours; when apart, we'd take our arguments to e-mail. Never before had I met a Christian who could respond to my most basic philosophical questions: How does one understand the Bible's contradictions? Could an omnipotent God make a stone he could not lift? What about the Euthyphro dilemma: Is something good because God declared it so, or does God merely identify the good? To someone like me, with no Christian background, resorting to an answer like "It takes faith" could only be intellectual cowardice. Joseph didn't do that.
>
> And he did something else: He prodded me on how inconsistent I was as an atheist who nonetheless believed in right and wrong as objective, universal categories. Defenseless, I decided to take a seminar on meta-ethics. After all, atheists had been developing ethical systems for 200-some years. In what I now see as providential, my atheist professor assigned a paper by C. S. Lewis that resolved the Euthyphro dilemma, declaring, "God is not merely good, but goodness; goodness is not merely divine, but God."
>
> Joseph also pushed me on the origins of the universe. I had always believed in the Big Bang. But I was blissfully unaware that the man who first proposed it, Georges Lemaître, was a Catholic priest. And I'd happily ignored the rabbit trail of a problem of what *caused* the Big Bang, and what *caused* that cause, and so on.
>
> By Valentine's Day, I began to believe in God. There was no intellectual shame in being a deist, after all, as I joined the respectable ranks of Thomas Jefferson and other Founding Fathers.
>
> I wouldn't stay a deist for long. A Catholic friend gave me J. Budziszewski's book Ask Me Anything, which included the Christian teaching that "love is a commitment of the will to the true good of the other person." This theme—of love as sacrifice for true good—struck me. The Cross no longer seemed a grotesque symbol of divine sadism, but a remarkable act of love. And Christianity began to look less strangely mythical and more cosmically beautiful.

Now, I'm going to get into a lot of trouble for saying this, but I think that if you are a Christian and you are in a secular university, then you really need to have put in the effort to study the areas of science, history and philosophy that are relevant to the Christian faith. This is regardless of your personal abilities or field of study. We must all make an effort regardless of how comfortable we are with things that are hard for us to learn.

Granted, most atheists are not interested in truth, because they tend to jettison truth whenever it conflicts with their personal autonomy – their desire to seek pleasure apart from moral constraints. But there is another kind of atheist.

This kind of atheist is honest, open-minded, and they just have never encountered any good reasons or evidence to think that God exists and that Jesus is anything other than a man. There are a lot of atheists like that who are just waiting to hear some decent evidence. Our job is to prepare for them and then engage them, if they are willing to be engaged.

I think that definition of love she cited – self-sacrifice for the true good of another person – is important. I don't think that ordinary Christians like you or me spends time on apologetics because we "like" it. I know lots of Christians who are in tough, expensive academic programs trying to get the skills they need to defend truth in areas that matter. They do this because they know that there are people out there who are interested in truth, and who are willing to re-prioritize their lives if the truth is made clear to them. We need to be willing to serve God by doing hard things that work.

# Courage under fire: Ronald Speirs and Easy Company at the Battle of Foy

**Wintery Knight** · 22 March 2014 · Archived copy · Original

I try to occasionally post something that shows a particularly brave action from some time and place in military history. For example, I previously wrote about Medal of Honor winner Michael Murphy in 2011. Last year, his story was told more widely in the movie "Lone Survivor", which I recommend to everyone. Today I want to highlight another hero: Ronald Speirs.

It is January 1945 and the famous "Screaming Eagles", the 101st Airborne division, are about to turn the tide of the Battle of the Bulge in Bastogne.

Let's read about the Battle of Foy courtesy of a scenario description from the wargame "Flames of War". (Note: LMG = light machine gun, in this case, a .30 caliber machine gun)

Excerpt:

> E or 'Easy' Company, 2nd Battalion, 506th Parachute Infantry Regiment, 101st Airborne Division, like the rest of the division, was ordered on to the attack on 9 January 1945 as part of a general offensive to drive back the Germans from Bastogne. In the following days the 506th Regiment, along with the 501st Parachute Infantry Regiment, cleared the forests around the town of Foy and pushed the Germans out. Their next objective was to take Foy to allow the 11th Armored Division to attack from Foy across the fields northeast towards Noville.
>
> […]At 0900 hours on 13 January Easy Company attacked along the western edge of Foy, along the road. The new year had brought heavy snow and the it blanketed the ground and had reduced temperatures to well below zero. 2nd Battalion commander, Captain Dick Winters, had two section of LMGs deployed on the edge of the woods facing Foy to give Easy Company covering fire while they crossed the 250 yards of open field between the forest and Foy's buildings. There were just a few scattered trees and haystacks to give cover. As Easy Company advance the covering fire did its job, limiting the fire on the paratroopers to sporadic rifle shots. The approach on Foy made good pace under the cover of the LMG fire, but about 75 yards out from the edge of the village the skirmish line halted and the paratroopers hunkered down in the snow. Captain Winters stared in disbelief, wondering what was going on.
>
> Lieutenant Dike, who was commanding Easy Company, had been overwhelmed with indecision. It became obvious to Winters that Dike didn't know what he was doing, or had had a failure of confidence. His immediate impulse was to take command himself, but he noticed Lieutenant Ronald Speirs, a capable platoon commander from D Company, standing nearby. Winters ordered Speirs to take command of Easy Company and get the attack moving again. What Speirs did next amazed many of the paratroopers who witnessed it.
>
> **On receiving his orders from Winters, Speirs immediately ran at full speed down to where Dike and his HQ had taken cover behind a haystack and told Dike his orders, 'I'm here to take over'. After quickly being told of the situation by the NCOs he ran off towards Foy. The men of Easy Company immediately followed. On reaching the outskirt buildings of Foy, Speirs immediately sought to link up with I Company of 3rd Battalion who, despite only having 25 men, were supporting the attack from the other flank of Foy. He set off running again, through the German lines, to find I Company's commander. After consulting with its commander, Captain Gene Brown, he turned around and dashed back through Foy and the surprised Germans. Through all this the enemy fired on him with machine-guns, rifles and guns, but not a single shot hit its mark.**

Now with all that said, watch the two clips below, and pay close attention the faces of the men under Lieutenant Dike, and then later under Lieutenant Speirs. Pay close attention to how Speirs' courage inspires the men under him to also be courageous. Especially First Sergeant Lipton, who later risks his own life to draw fire from a German

sniper so that Shifty Powers can prevent any other troops from being killed by the sniper.

The two clips are from "Band of Brothers", the episode entitled "The Breaking Point". There is some coarse language, but no sexual language in it. Really, if you are squeamish, do not watch it. However, if you can handle it, then buy the whole DVD set. It will inspire you, and help you to do things that you didn't think were possible. If you really want to understand the men of E Company, you can read a book by Stephen E. Ambrose called *Band of Brothers: E Company, 506th Regiment, 101st Airborne from Normandy to Hitler's Eagle's Nest* (New York, 1992).

**Low resolution clip, includes briefing at the beginning**

This video is lower resolution, but show Winters reflecting on how Lipton had asked him not to let Dike lead the attack the night before, and also Winters carefully explaining to Dike that the American attack has to *keep moving* or they will get pinned down by machine guns and zeroed-in by mortars and destroyed.

I like that one because it shows the briefing, but the next clip is in 720HD.

**High resolution clip, does not include briefing**

This is a higher resolution version that is only 8.5 minutes long, but doesn't have the briefing.

If you listen closely when Speirs explains what everyone is going to do, you can here one of the NCOs say "thank God" as he pats the other on the back.

**Leadership**

To be a good military leader, you have to know many things. A knowledge of strategy and tactics, a knowledge of military history, the ability to see the battlefield, knowledge of your opponent, knowledge of weapons, and so on. But surely the greatest of these is courage. As Von Clausewitz says in his famous book "On War", "War is the province of danger, and therefore courage above all things is the first quality of a warrior." Nothing inspires troops like a commander who is willing to take on the same risks that he asks his troops to take.

Take a look at this article from the Ivey School of Business journal, which talks about the characteristics of Canadian generals in Afghanistan.

Excerpt:

**A leader must be in front of subordinates**. This takes courage. Leadership from the front encapsulates the adage, *never ask a subordinate to do something that you, the leader, wouldn't do*. In Afghanistan, the leader must not only be in front, but he or she must *be seen* to be in front. Subordinates seek this reassurance from their leaders at all levels. Though they may be tentative, leaders must demonstrate character and moral strength. Their credibility is inextricably dependent on their ability to do so.. During his frequent visits to Afghanistan, former Chief of Defence Staff (CDS), General Rick Hillier, made a point of visiting troops that were situated in some of the most IED-laden areas of the Canadian sector. Through his demonstrated courage, he inspired leaders of all levels. "If the CDS goes there, so can I" was the resulting mindset. The current CDS, General Walt Natynczyk, has successfully continued this practice.

[…]All leaders need courage. It is the lynchpin of effective leadership. No one respects a wimp who will buy in to any idea no matter how inane it might be. Courage is having the strength of character to persist and hold on to ideas in the face of opposition. Here, I'm not restricting my treatment of courage as it relates to fear. It's also about strength of character and devotion to causes and ideas.

As Christians, we have a leader who led by example. We all need to learn to not be so concerned with looking out for ourselves and our happiness first, but to instead be willing to take risks and sacrifice ourselves to do the right thing. We Christians should all be courageous, because we are led by a courageous leader.

That doesn't necessarily mean going halfway across the world, it can mean reaching out to someone right there next to you who needs your help and support. Maybe that person has been running on an empty tank for a long time, but

still trying to do the right thing. You never know when the opportunity to do something amazing will arise, but you won't take it if you keep thinking of how you might get hurt. You have to reconcile yourself that you are not here to avoid every possible kind of suffering. It doesn't mean that you take unnecessary risks, but it does mean *not letting fear stop you from doing the right thing*.

Now get out there and take that attack on in.

# American Physical Society appoints panel to re-evaluate global warming predictions

**Wintery Knight** · 23 March 2014 · Archived copy · Original

From Investors Business Daily.

Excerpt:

> Climate change "deniers," as global warm-mongers call those who think empirical evidence is more reliable than computer models, may soon count among their number a 50,000-strong body of physicists.
>
> At the risk of being accused of embracing what alarmists call the flat-earth view of climate change, the American Physical Society has appointed a balanced, six-person committee to review its stance on so-called climate change that includes three distinguished skeptics: Judith Curry, John Christy and Richard Lindzen. Their credentials are impressive.
>
> Christy is director of the Earth System Science Center at the University of Alabama, Huntsville, and was a lead author of the 2001 report by the Intergovernmental Panel on Climate Change.
>
> Curry is a professor and chairwoman of the School of Earth & Atmospheric Sciences at the Georgia Institute of Technology.
>
> Lindzen, an Alfred P. Sloan professor of meteorology at MIT from 1983 to 2013, is currently a distinguished senior fellow in the Center for the Study of Science at the Cato Institute.
>
> A question the American Physical Society panel will address is one we ask repeatedly: Why wasn't the current global temperature stasis, with no discernible change in the past 15 years, not predicted by any of the climate models used by the IPCC, part of the United Nations?
>
> The APS announcement lists among its questions to be answered: "How long must the stasis persist before there would be a firm declaration of a problem with the models?"
>
> In a nod to the likelihood that nature, not man, calls the shots, another APS audit question asks the panel: "What do you see as the likelihood of solar influences beyond TSI (total solar irradiance)? Is it coincidence that the stasis has occurred during the weakest solar cycle (i.e., sunspot activity) in about a century?"
>
> The other three American Physical Society members, reports Quadrant Online, maintain that climate change is real, disaster is imminent and man is at fault. They are long-time IPCC stalwart Ben Santer (who in 1996 drafted, in suspicious circumstances, the original IPCC mantra about a "discernible" influence of man-made CO2 on climate), IPCC lead author and modeler William Collins, and atmospheric physicist Isaac Held.
>
> The APS, to its credit, is addressing the chasm between computer models that cannot even predict the past and actual observations suggesting that warming is on hold and largely influenced by natural factors.

If I were picking three people to represent the skeptical side, I would have picked the three they chose, with Tim Ball, Roy Spencer and Fred Singer as my alternates. I've always believed that people who go into physics are far more driven by the data than in other areas of science, especially evolutionary biology and paleontology. After all, these are the same guys that went along with the Big Bang cosmology that ruined the eternal universe that was required by the religion of naturalism. But they didn't care, and now a cosmology that repudiates naturalism is dominant. So, once again, the physics researchers are leading the way out of a quagmire of blind faith.

# Summary of the William Lane Craig vs Christopher Hitchens debate: Does God Exist?

**Wintery Knight** · 23 March 2014 · Archived copy · Original

*I got word today that there was an agnostic philosophy student at Dr. Craig's "Defenders" class today who read this summary of the Craig-Hitchens debate and said it was "perfectly on the money" according to my source. I have not re-posted this summary since 2009, when the debate happened, so I thought I would re-post it today.*

Here is the video of the debate has been posted:

**TOPIC: DOES GOD EXIST?**

MY NOTES ON THE DEBATE: (WC = William Lane Craig, CH = Christopher Hitchens)

**WC opening speech:**

Introduction:

WC makes two contentions:
– there are no good arguments for atheism
– there are good arguments for theism

These topics are IRRELEVANT tonight:
– social impact of christianity
– morality of Old Testament passages
– biblical inerrancy
– the debate is whether god (a creator and designer of the universe) exists

1. cosmological argument
– an actually infinite number of past events is impossible
– number of past events must be finite
– therefore universe has a beginning
– the beginning of the universe is confirmed by science – universe began to exist from nothing
– space, time, matter, energy began at the big bang
– the creation of the universe requires a cause
– the cause is uncaused, timeless, spaceless, powerful
– the cause must be beyond space and time, because it created space and time
– the cause is not physical, because it created all matter and energy
– but there are only two kinds of non-physical cause: abstract objects or minds
– abstract objects don't cause effects
– therefore must be mind

2. teleological argument
– fine-tuned constants and ratios
– constants not determined by laws of nature
– also, there are arbitrary quantities
– constants and quantities are in narrow range of life-permitting values
– an example: if the weak force were different by 1 in 10 to the 100, then no life
– there are 3 explanations: physical law or chance or design
– not due to law: because constants and quantities are independent of the laws
– not due to chance: the odds are too high for chance
– therefore, due to design
– the atheist response is the world ensemble (multiverse)

– but world ensemble has unobservable universes, no evidence that they exist
– and world ensemble contradicts scientific observations we have today

3. moral argument
– objective moral values are values that exist regardless of what humans think
– objective values are not personal preferences
– objective values are not evolved standards that cultures have depending on time and place
– objective moral values and duties exist
– objective moral values and duties require a moral lawgiver

4. argument from resurrection miracle
– resurrection implies miracle
– miracle implies God
– 3 minimal facts pass the historical tests (early attestation, eyewitness testimony, multiple attestation, etc.)
– minimal fact 1: empty tomb
– minimal fact 2: appearances
– minimal fact 3: early belief in the resurrection
– jewish theology prohibits a dying messiah – messiah is not supposed to die
– jewish theology has a general resurrection of everybody, there is not supposed to be a resurrection of one person
– jewish theology certainly does not predict a single resurrection of the messiah after he dies
– therefore, the belief in the resurrection is unlikely to have been invented
– disciples were willing to die for that belief in the resurrection
– naturalistic explanations don't work for the 3 minimal facts

5. properly basic belief in god
– religious experience is properly basic
– it's just like the belief in the external world, grounded in experience
– in the absence of defeaters, those experiences are valid

Conclusion: What CH must do:
– destroy all 5 of WC's arguments
– erect his own case in its place

**CH opening speech:**

1. evolution disproves biological design argument
– evolution disproves paley's argument for a watchmaker

2. god wouldn't have done it that way
– god wouldn't have waited that long before the incarnation
– mass extinction and death before Jesus
– god wouldn't have allowed humans to have almost gone extinct a while back in africa
– why insist that this wasteful and incompetent history of life is for us, that's a bad design
– the universe is so vast, why would god need so much space, that's a bad design
– there is too much destruction in the universe, like exploding stars – that's a bad design
– the heat death of the universe is a bad design
– too many of the other planets don't support life, that's a bad design
– the sun is going to become a red giant and incinerate us, that's a bad design

3. hitchens' burden of proof
– there is no good reason that supports the existence of god
– all arguments for god can be explained without god
– atheists can't prove there is no god

– but they can prove there is no good argument for god

4. craig's scientific arguments don't go far enough, they only prove deism, not theism
– the scientific arguments don't prove prayer works
– the scientific arguments don't prove specific moral teachings of christianity

5. if the laws of physics are so great then miracles shouldn't be allowed
– good laws and miracles seem to be in contradiction

6. extraordinary claims need extraordinary evidence
– none of craig's evidence was extraordinary

7. science can change, so craig can't use the progress of science
– it's too early for craig to use the big bang and fine-tuning
– the big bang and fine-tuning evidences are too new
– they could be overturned by the progress of science

8. craig wrote in his book that the internal conviction of god's existence should trump contradicting evidence
– but then he isn't forming his view based on evidence
– he refuses to let evidence disprove his view
– but then how can atheists be to blame if they don't believe
– so evidence is not really relevant to accepting theism

9. the progress of science has disproved religion
– christianity taught that earth was center of the universe
– but then cosmology disproved that

Response to the big bang and fine-tuning arguments:
– was there pre-existing material?
– who designed the designer?

**WC first rebuttal:**

Reiterates his 2 basic contentions

CH agrees that there is no good argument for atheism
– then all you've got is agnosticism
– because CH did not claim to know there is no God
– and he gave no arguments that there is no God

CH's evolution argument
– irrelevant to christianity
– Genesis 1 allows for evolution to have occurred
– christianity is not committed to young earth creationism
– the origin of biological diversity is not central to christianity
– st. augustine in 300 AD said days can be long, special potencies unfold over time
– also there are scientific reasons to doubt evolution
– cites barrow and tipler, and they say:
– each of 10 steps in evolution is very improbable
– chances are so low, it would be a miracle if evolution occurred

CH's argument that god is wasteful
– efficiency is only important to people with limited time or limited resources
– therefore god doesn't need to be efficient

CH's argument that god waits too long to send Jesus

– population was not that high before jesus
– jesus appears just before the exponential explosion of population
– conditions were stable – roman empire, peace, literacy, law, etc.

CH's argument that Craig's scientific arguments only prove deism, not theism
– deism a type of theism, so those scientific arguments work
– all that deism denies is miraculous intervention

CH's argument that Craig has a burden of proof
– theism doesn't need to be proven with certainty
– must only prove best explanation of the evidence

CH's citation of Craig's book saying that evidence should not overrule experience
– there is a difference between knowing and showing christianity is true
– knowing is by religious experience which is a properly basic belief
– showing is done through evidence, and there the evidence does matter

CH's rebuttal to the big bang
– there was no pre-existent material
– space and time and matter came into being at the big bang
– the cause must be non-physical and eternal
– cause of universe outside of time means = cause of universe did not begin to exist
– this is the state of science today

CH's rebuttal to the fine tuning
– CH says scientists are uncertain about the fine-tuning
– craig cites martin rees, an atheist, astronomer royal, to substantiate the fine tuning
– the fine-tuning is necessary for minimal requirements for life of any kind
– the progress of science is not going to dethrone the fine-tuning

CH's argument about heat death of the universe
– duration of design is irrelevant to whether something was designed
– cars are designed, yet they break down
– design need not be optimal to be designed
– ch is saying why create if we all eventually go extinct
– but life doesn't end in the grave on christianity

CH's rebuttal to the moral argument
– CH says no obj moral values
– but CH uses them to argue against god and christians
– but CH has no foundation for a standard that applies to God and Christians

CH's rebuttal to the resurrection argument
– empty tomb and appearances are virtually certain
– these are minimal facts, well evidenced using standard historical criteria
– best explanation of these minimal facts is the resurrection

CH's rebuttal to religious experience
– prop basic belief is rational in the absence of defeaters
– so long as craig has no psychological deficiency, experience is admissible

**CH first rebuttal:**

it's not agnosticism
– if there are no good arguments for theism

– then there is no reason for belief in god
– that is atheism
– everything can be explained without god

god wouldn't have done it that way
– homo sapiens is 100K years old
– for 98K years, they had no communication from God
– lots of people died in childbirth
– disease and volcanos are a mystery to them
– life expectancy is very low
– they die terrible deaths
– their teeth are badly designed
– their genitalia are badly designed
– why solve the problem of sin by allowing a man to be tortured to death
– that's a stupid, cruel, bumbling plan

lots of people haven't even heard of jesus
– many of them die without knowing about him
– they cannot be held responsible if they do not know about jesus

the early success of christianity doesn't prove christianity is true
– because then it applies to mormonism and islam, they're growing fast

objective morality
– belief in a supreme dictator doesn't improve moral behavior
– i can do moral actions that you can do
– i can repeat moral positions that you can say

religious people are immoral
– genital mutilation
– suicide bombing

moral behavior doesn't need god
– we need to act moral for social cohesion
– it evolved for our survival
– that's why people act morally
– it's degrading to humans, and servile, to require god for morality

free will
– i believe in free will
– i don't know why, because i can't ground free will on atheism
– a bossy god seems to reduce free will because then we are accountable to god

**WC cross-examination of CH:**

WC why call yourself an atheist when you have no reasons?

CH because absence of belief is atheism

WC but agnosticism, atheism, verificationism all don't hold that belief, which are you?

CH i think god does not exist

WC ok give me an argument for the claim you just made to know god does not exist

CH i have no argument, but i don't believe in god because it depresses me to think he might be real

WC would you agree that absence of evidence is not evidence of absence?

CH no i don't agree

WC moral argument: it's not epistemology it's the ontology – have you got a foundation for moral values and duties?

CH i do not, it's just evolution, an evolved standard based on social cohesion

**CH cross-examination of WC:**

CH you said that the historical reports of jesus doing exorcisms are generally accepted – do you believe in devils?

WC i commit to nothing, what I am saying there historical concensus on the reports that jesus did exorcisms

CH what about the devils going into the pigs, do you believe that?

WC yes i do, but the main point i'm making is that the historical reports show that jesus acted with divine authority

CH do you believe in the virgin birth?

WC yes, but that's not historically provable using the minimal facts methods, and i did not use the virgin birth in my arguments tonight, because it doesn't pass the historical tests to be a minimal fact

CH do you believe that all the graves opened and dead people all came out?

WC not sure if the author intended that part as apocalyptic imagery or as literal, i have no opinion on it, have not studied it

CH do exorcisms prove son of god?

WC no, i am only saying that the historical reports show that jesus exercised authority and put himself in the place of god

CH  are any religions false? name one that's false

WC islam

CH so some religions are wicked right?

WC yes

CH if a baby were born in saudi arabia would it be better if it were an atheist or a muslim?

WC i have no opinion on that

CH are any christian denominations wrong?

WC calvinism is wrong about some things, but they are still christians, i could be wrong about some things, i do the best i can studying theology so i'm not wrong

**WC second rebuttal**

Response to CH arguments:

no reasons for atheism
– no reasons to believe that god does not exist
– ch withholds belief in god

why wait so long before contacting humans with jesus
– population matters, not time – jesus waited until there was about to be a population explosion
– there is natural revelation (Romans 1) for those who lived before christ

what about those who never heard
– (*Acts* 17:22-31) god chooses the time and place of each person who is born to optimize their opportunity to know him based on how they will respond to evidence (this is called middle knowledge)
– those who haven't heard will be judged based on general revelation

WC re-assess the state of his five arguments:

cosmological argument <signal loss>
– heat death of the universe won't happen on christianity

moral argument
– if no objective moral standard, can't judge other cultures as wrong
– no transcendent objective standard to be able to judge slavery as wrong

name an action argument
– e.g. – tithing
– the greatest command – love the lord your god your god with everything you've got
– atheists can't do that, and that is the biggest commandment to follow

moral obligations
– there are no objective moral obligations for anyone on atheism
– on atheism, you feel obligated because of genetics and social pressure
– on atheism, we're animals, and animals don't have moral obligations

resurrection <signal loss>
– the belief in resurrection of 1 man, the messiah is totally unexpected on judaism
– they would not have made this up, it was unexpected

religious experience
– experience is valid in the absence of defeaters

**CH second rebuttal:**

faith and reason
– Tertullian says faith is better when it's against reason

it's easy to start a rumor with faith-based people
– mother teresa: to be canonized she needs to have done a miracle
– so there was a faked miracle report
– but everybody believes the fake miracle report!
– this proves that religious rumors are easy to start
– the resurrection could have started as a similar rumor by people wanting to believe it

name an action
– tithing is a religious action, i don't have to do that

moral argument
– i can be as moral as you can without god
– i can say that other cultures are wrong, there i just said it
– without god, people would still be good, so god isn't needed

religious people did bad things in history
– this church did a bad thing here
– that church did a bad thing there
– therfore god doesn't exist

religion is the outcome of man's struggle with natural phenomenon

– that is why there are so many religions

**WC concluding speech**

no arguments for atheism presented

What CH has said during the debate:
– god bad, mother teresa bad, religion bad

atheism is a worldview
– it claims to know the truth
– therefore it is exclusive of other views

what does theism explain
– theism explains a broad range of experiences
– origin of universe, CH has dropped the point
– fine-tuning, CH has dropped the point
– moral, CH says that humans are no different from animals – but an evolved standard is illusory, there are no actual moral values and standards, it's just a genetic predisposition to act in a certain way – that's not prescriptive morality
– resurrection, CH has dropped the point
– experience, craig tells his testimony and urges the audience to give it a shot

**CH concluding speech**

HITCHENS YIELDS HIS ENTIRE CONCLUDING SPEECH!

A question & answer Period followed end of the formal debate

**Further study**

Check out my analysis of the 11 arguments Hitchens made in his opening speech in his debate with Frank Turek. You can also watch or listen to a *preview debate* that was held in Dallas recently between Craig, Hitchens, Lee Strobel and some other people. Biola University philosopher Doug Geivett's review is here. He attended the debate.

# Woman gets $36,000 medical bill because hospital not covered by Obamacare gold plan

**Wintery Knight** · 24 March 2014 · Archived copy · Original

From KOMO News.

Excerpt:

> Alex Szablya just wants the best health care she can get for her children. So she got a gold plan, the highest level possible with the Washington Health Benefit Exchange. She picked a plan with Lifewise, an affiliate of Premera Blue Cross.
>
> In early March, her 16-year old daughter had a medical emergency. Alex drove her to the nearest hospital, which was Seattle Children's. Alex says doctors there felt her daughter's situation was so dire she needed to be admitted to the hospital immediately. She was there for nine days.
>
> Then came news that her stay, which involved specialized mental health care for adolescents, was going to cost $36,000 and her insurance would only pay for half because Seattle Children's was considered on out-of-network facility.
>
> She thought by going for the highest premium PPO gold level coverage offered the state exchange, a majority of the bill would have been covered.
>
> "I'm paying a premium for that and I'm willing to pay that premium, but I expect to get services that are not so limited by the insurance companies," she said.
>
> She's not alone. Seattle Children's says its treated more than 125 patients who are not covered by policies offered by the exchange. In October, the hospital filed suit against the Office of the Insurance Commissioner, claiming the state office failed to ensure adequate network coverage in plans from its biggest providers like Premera Blue Cross.
>
> "Because Seattle Children's was not included in the major plans, children coming for care here were going to be denied care and in fact that's what we are seeing," said Dr. Sandy Melzer, senior vice president and chief strategy officer for Seattle Children's.
>
> Alex says Lifewise offered similar alternative care at other hospitals but it required traveling a three hour drive to Yakima or a two hour trip and ferry ride to Bremerton. Children's is a five minute car ride from her north Seattle home.
>
> "This limited network is preventing me to get the specialty services that my children and I need in this community," Aex said. She's now facing an $18,000 hospital bill she wasn't prepared for.

Here's a sketch from Chris Rock (whom I can't stand) explaining the Obamacare Gold Plan:

Well, I don't see why this is a problem, because the Obamacare Gold Plan covers all the birth control pills that she could possibly need, and at *any* hospital. It's Sandra Fluke approved! Why isn't this greedy reactionary Seattle woman thanking Obama for saving her from all those worthless private health care plans that existed before Obamacare? After all, the only reason that Obama lied to us about lowering premiums, keeping our doctors and our health plans is because those old private insurance plans were garbage compared to the Robitussin Gold Plan.

Please can we elect someone who understands health care policy in 2016?

# Leader of gay student group: disagreeing with us makes us kill ourselves

**Wintery Knight** · 24 March 2014 · Archived copy · Original

The latest from Life Site News about Stanford's University's attempt to suppress a pro-natural-marriage group's campus event.

Excerpt:

> At a recent GSC meeting, SAS co-president Judy Romea reminded student leaders that not only is the SAS not "anti-gay," it stood "in solidarity" with homosexual groups against the controversial Westboro Baptist Church when it held a protest on campus.
>
> But that wasn't enough for campus gay activist groups, who turned out en masse for the same GSC meeting to demand that funding for the event be pulled.
>
> "Their viewpoint kills people," Jeffrey Cohen, vice president of GradQ, a homosexual advocacy group for graduate students, told the GSC. "There's a lot of research published in top psychology journals that have looked at university environments, both positive and negative. An event such as this would be a negative event, [and] in schools that have negative events there is a statistically significant increase in suicide." He said the last time a pro-marriage speaker visited the campus, someone told him "they wanted to kill themselves."
>
> Cohen said he was especially "bothered by the idea that their conference is trying to create better ways to deliver [the pro-marriage] message. … The idea that they are learning how to deliver their message scares [me]." Cohen suggested SAS cancel its conference and instead hold a joint event with GradQ in which gay activists would have a chance to promote their message too.
>
> Ben Holston, chair of the undergraduate senate, also threw his weight behind the gay groups. "This is an event that hurts the Stanford community," Holston said. "To express a belief that, for some reason this event is not discriminatory, is completely off-base. This event as it stands, given the speakers, and given that they have said the event is supposed to 'promote one-man one-woman [marriage],' which promotes stripping away rights of people in this room, is unacceptable on Stanford's campus." He urged the GSC to withdraw its funding for the conference.

Now I'm chaste, and a virgin, so I was just imagining what it would be like for me at Yale during Sex Week, when my student fees (hypothetically) would be used to bring in sex addicts to instruct college students that my view is sick and twisted and that binge drinking and premarital promiscuity is morally praiseworthy. Does anyone here seriously think that I would threaten to commit suicide unless people who disagreed with my chastity and virginity stopped disagreeing with me? No. A sex addict's disapproval of my chastity and virginity doesn't make me want to commit suicide, *because I am not insane.* I'm also *not engaged in immoral behavior* by being chaste and remaining a virgin. Criticism of me for being moral doesn't bother me – that's *your* problem if you disagree with morality.

If you tell me that what I'm doing is wrong, I've got piles of papers in peer-reviewed journals showing me that for my plans – life-long married love and influential Christian children raised by a stay-at-home mom – chastity is the best plan. But it doesn't bother me if you disagree with me, and I'm not going to attack your place of work with guns, vandalize your church, or force you to lose your job – because I'm not a gay activist. I don't care that you disagree with me, because I believe that there is a right to free speech and no right to force you to celebrate and fund my sexual orientation.

That gay activist sounded insane, but I don't think that most gay people agree with him.

Look:

> Ben, a graduate student in neuroscience, told the GSC that even though he is homosexual, he believes the SAS should be able to access the same student funding as any other group.
>
> "What bothers [me] the most is that in the name of tolerance, we are silencing and taking away support from a view that we don't agree with," Ben said. "These views are out there, we should listen to them. I totally disagree with these people, but we need to hear what they have to say.  We need to hear SAS."

Now there is a gay person I can tolerate – because he tolerates me.

# New study: fruit fly DNA reveals unexpected complexity

**Wintery Knight** · 24 March 2014 · Archived copy · Original

From Evolution News.

Excerpt:

> You know about ENCODE, the project that found 80 percent or more of the human genome is transcribed and appears functional. Now, along comes modENCODE: the ENCODE project for model organisms. Results from the fruit fly are in, and Indiana University shares the surprises (for evolutionary theory, that is): "Study of complete RNA collection of fruit fly uncovers unprecedented complexity."
>
> The paper shows that the *Drosophila* genome is **far more complex than previously suspected** and suggests that the **same will be true of the genomes of other higher organisms**. The paper also reports a number of **novel, particular results**: that a small set of genes used in the nervous system are responsible for a disproportionate level of complexity; that long regulatory and so-called **"antisense" RNAs are especially prominent during gonadal development**; that **"splicing factors" (proteins that control the maturation of RNAs by splicing) are themselves spliced in complex ways**; and that the*Drosophila* transcriptome undergoes large and interesting changes in response to environmental stresses. (Emphasis added.)
>
> Ten of the 41 researchers from 11 universities working on modENCODE came from IU. They found many genes transcribed only under stress, such as exposure to heat, cold, and toxins. "In total, 5,249 transcript models for 811 genes were revealed only under perturbed conditions," they said. As if the "junk DNA" myth needed any more pounding, the lead author testifies:
>
> "As usual in science, we've answered a number of questions and raised even more. For example, we identified **1,468 new genes, of which 536 were found to reside in previously uncharacterized gene-free zones.**"

The post on Evolution News also talks about another study from the University of Vienna on the genome of the sea anemone.  Their genome was way more complex than expected, too.

So what is the best explanation for all this specified complexity that enables biological function?

Evolution News explains:

> Intelligent design… knows how to explain the observations. Whenever we see a complex, functioning system (like a rollout of a software system), we know intelligence played a role in its origin. We also know that intelligence can explain multiple, independent instantiations of similar systems. We *never* see, however, complex, networked systems arising *de novo* by unguided natural processes.

Yes. In the company I work for, we have a release of functional code every month (at least). These explanation for the increase in specified complexity in our applications is that busy little software engineers have been carefully sequencing characters into lines of Java code, for  purpose. No rational person believes that you can get huge increases in specified complexity by random chance. Code is code is code. It all requires a coder, just like the Big Bang requires a Big Bang.

# Feminist professor who attacked pro-lifer charged with theft, battery and vandalism

**Wintery Knight** · 25 March 2014 · Archived copy · Original

Update on the story from last week, courtesy of The College Fix.

Excerpt:

> *The College Fix* reported on March 12 that department of feminist studies professor Mireille Miller-Young, whose research emphasis is black studies, pornography, and sex work, had been caught on camera assaulting a 16-year-old student, Thrin Short.
>
> Miller-Young led a small mob that approached a group of pro-life demonstrators who were holding signs. The mob chanted "tear down the sign." Miller-Young then grabbed one of the signs and stormed off with it, eventually engaging in a physical altercation with 16-year-old Short, one of the pro-life demonstrators, when Short tried to retrieve the stolen sign.
>
> The confrontation took place in the university's designated "free speech area."
>
> The 3 by 5 foot sign contained graphic images of aborted fetuses as well as statistics and facts about abortion. The scuffle left the 16-year-old Short with visible scars and scratches on her arms.
>
> […]**Late last week, Santa Barbara officials announced that Miller-Young is being prosecuted for misdemeanor theft, battery, and vandalism in connection with her assault on Ms. Short.**
>
> Short says Miller-Young pushed her at least three times, stole her sign, then grabbed and attempted to restrain her while others made off with the sign.
>
> Short's father told *Fox News* that he hopes the prosecution of Miller-Young will serve as a lesson for those who seek to halt free speech on campus. "She was free to engage in a rational dialogue with them," Mr. Short said. "Instead, she chose to bully them, steal and destroy their property, and hit and scratch my daughter."
>
> "I think the goal of this prosecution should be to set a good example for her students, one that will not only deter her from repeating this conduct, but will also deter those who approve of her actions from imitating her appalling behavior," Mr. Short added.

This sort of stuff happens all the time, by the way. Sometimes the pro-abortion people run over signs:

And sometimes, they try to run over people.

And sometimes, they actually shoot people.

I have some friends in the pro-life movement, and I'm familiar with some of the horrors they have to endure. If you reason that people who are willing to kill innocent unborn babies are fine with committing lesser crimes against less innocent people, you'd be right. I think we should all agree that whatever you do in your life, you shouldn't be taking innocent human lives in order to avoid having to take responsibility for your own actions. That's just wrong.

# Police rule that racist graffiti on dorm door is a fake hate crime

**Wintery Knight** · 25 March 2014 · Archived copy · Original

From The College Fix.

Excerpt:

> The Grand Valley State University student who found racist graffiti on her dorm room door's whiteboard in mid-February is the same person who put it there, police have determined.
>
> […]"When the incident was initially brought to the campus's attention, several organizations and groups were highly alarmed, prompting assemblies, discussions in the classroom and a university-wide alert to the situation," according to the Michigan-based college's student newspaper, the *Grand Valley Lanthorn.*
>
> Turns out, the incident joins the long and growing list of campus hate-crime hoaxes across the nation.
>
> "The person believed to be responsible for the drawing and language written on the dry erase board is a Grand Valley student and the owner of the message board," stated Grand Valley Police Department Chief Renee Freeman on Friday. "The incident has had a disruptive impact on the community and as a result, the student has been referred to the Dean of Students for a student code violation. University policy does not permit the release of his/her name."
>
> […]Despite this development, a university-wide "Teach-In" prompted by bias incidents on campus is still set to take place at Grand Valley State on Wednesday, the *Lanthorn* reports, adding "the day-long event will feature student and faculty presentations about preventing discrimination and oppression on GVSU's campuses."

The College Fix article links to another half-dozen recent fake hate crimes.

Sometimes, I wonder if these college kids are learning anything useful at college. They learn how to be victims, how to censor others, how to complain and whine and blame. But I wonder if they are learning anything that they can use to serve others – like in a real job. They sure are paying a lot of tuition to learn how to call other people "racist", "sexist", "homophobe" and "Islamophobe". And they can do it because the government is loaning them taxpayer dollars to do it.

# World Vision endorses same-sex marriage, denies Biblical definition of marriage

**Wintery Knight** · 25 March 2014 · Archived copy · Original

I frankly don't care to link to any source on this story other than Al Mohler and Franklin Graham. Lapsed Christian organizations and secular news sources are celebrating this decision, but they will have nothing valuable to say to anyone who takes the Bible seriously as an authority on moral issues. Even though I keep posting secular evidence and research to confirm what the Bible teaches, I still get my moral positions *from the Bible*. Clearly, this is not the case with organizations like World Vision any more.

Al Mohler first, on what happened:

> The headline in the news story by *Christianity Today* made the issue easy enough to understand — "World Vision: Why We're Hiring Gay Christians in Same-Sex Marriages."
>
> As the magazine reported, "World Vision's American branch will no longer require its more than 1,100 employees to restrict their sexual activity to marriage between one man and one woman."
>
> World Vision U.S. President Richard Stearns announced the change in a letter to World Vision staff. The organization, one of the largest humanitarian organizations in the world, "will continue to expect abstinence before marriage and fidelity within marriage for all staff," Stearns said. He then added that "since World Vision is a multi-denominational organization that welcomes employees from more than 50 denominations, and since a number of these denominations in recent years have sanctioned same-sex marriage for Christians, the board—in keeping with our practice of deferring to church authority in the lives of our staff, and desiring to treat all of our employees equally—chose to adjust our policy." That led to the key change Stearns was then to announce: "Thus, the board has modified our Employee Standards of Conduct to allow a Christian in a legal same-sex marriage to be employed at World Vision."

Stearns basically claimed that the Bible is not clear on whether gay marriage is permissible. No theologians were cited, no Bible passages were references. He merely said that disagreement among denominations means that there is no right answer. Before continuing with Mohler, let me just point out the relevant quotation from the Bible.

Matthew 19:3-6: [NASB]

3 *Some* Pharisees came to Jesus, testing Him and asking, "Is it lawful *for a man* to divorce his wife for any reason at all?"

4 And He answered and said, "Have you not read that He who created *them* from the beginning made them male and female,

5 and said, 'For this reason a man shall leave his father and mother and be joined to his wife, and the two shall become one flesh'?

6 So they are no longer two, but one flesh. What therefore God has joined together, let no man separate."

So Richard Stearns either *doesn't believe that Jesus said that* OR *he believes that Jesus was wrong, and therefore fallible*. It's one or the other.

Now, more from Al Mohler:

> Richard Stearns has every right to try to make his case, but these arguments are pathetically inadequate. Far more than that, his arguments reveal basic issues that every Christian ministry, organization, church, and denomination will have to face — and soon.
>
> The distinction between an "operational arm" of the church and a "theological arm" is a fatal misreading of

> reality. World Vision claims a Christian identity, claims to serve the kingdom of Christ, and claims a theological rationale for its much-needed ministries to the poor and distressed. It cannot surrender theological responsibility when convenient and then claim a Christian identity and a theological mandate for ministry.
>
> Add to this the fact that World Vision claims not to have compromised the authority of Scripture, even as its U.S. president basically throws the Bible into a pit of confusion by suggesting that the Bible is not sufficiently clear on the question of the morality of same-sex sexuality. Stearns insists that he is not compromising biblical authority even as he undermines confidence that the church can understand and trust what the Bible reveals about same-sex sexuality.
>
> The policy shift points back to a basic problem with World Vision's understanding of the church. No organization can serve on behalf of churches across the vast theological and moral spectrum that would include clearly evangelical denominations, on the one hand, and liberal denominations such as the Presbyterian Church (USA), the Episcopal Church, and the United Church of Christ, on the other. That might work if World Vision were selling church furniture, but not when the mission of the organization claims a biblical mandate.
>
> Furthermore, it is ridiculous to argue that World Vision is not taking sides on the issue. The objective fact is that World Vision will now employ openly-gay employees involved in openly homosexual relationships. There is no rational sense in claiming that this represents neutrality.
>
> […]Writing to the Corinthian Christians, the Apostle Paul stated: "Or do you not know that the unrighteous will not inherit the kingdom of God? Do not be deceived: neither the sexually immoral, nor idolaters, nor adulterers, nor men who practice homosexuality, nor thieves, nor the greedy, nor drunkards, nor revilers, nor swindlers will inherit the kingdom of God." [1 Corinthians 6:9-10]
>
> The leader of World Vision U.S. now claims that the Bible is not sufficiently clear on the sinfulness of same-sex sexuality and relationships, but he also claims a "mission of building the kingdom." The Apostle Paul makes homosexuality a kingdom issue, and he does so in the clearest of terms.
>
> Of course, Paul's point is not that homosexuals are uniquely sinful, but that all of us are sinners in need of the grace and mercy of God that come to us in the gift of salvation. Thanks be to God, Paul follows those words with these: "And such were some of you. But you were washed, you were sanctified, you were justified in the name of the Lord Jesus Christ and by the Spirit of our God." [1 Corinthians 6:11]
>
> The worst aspect of the World Vision U.S. policy shift is the fact that it will mislead the world about the reality of sin and the urgent need of salvation. Willingly recognizing same-sex marriage and validating openly homosexual employees in their homosexuality is a grave and tragic act that confirms sinners in their sin — and that is an act that violates the gospel of Christ.

Now my comments. Be aware that I wrote the stuff below in 20 minutes and was very agitated and upset when I wrote it – it may be revised when I calm down.

**My thoughts**

I have a long-standing policy of NEVER, EVER, EVER giving money to Christian organizations who do anything except apologetics. I am willing to give money to groups who do pro-life apologetics and pro-marriage apologetics. I am open to giving money to Christian organizations who put forward good economic policy and good foreign policy, too, like the Heritage Foundation or the Family Research Council. But I think the safest thing to do is to take your money and give it to groups like Reasonable Faith, Ratio Christi, Faith Beyond Belief, Stand to Reason, Please Convince Me, Cross Examined, Reasons to Believe, etc. I just sent $300 to Ratio Christi for an event yesterday. So generosity is not the issue – stewardship is.

Apologetics groups are the SAFEST groups to give money to, because they are the ones who are guided by *truth.* World Vision and other "works-based" groups, including some missionary groups are some of the WORST places to put your money if you care about theological accuracy. People don't get into apologetics in order to feel

good or be liked, they go into it to discover truth and defend truth. We are hard-core in this business. So again, if you want to be a good steward of your money, put your money into apologists who are active in research, active on the university campus, and actively engaged for the truth of Christianity.

I realize I am being controversial here, but trust me on this. There is something different about people who go out and study philosophy, history and science and then get into debates with people. There is something inside them that is resistant to the spirit of the age, which is secularism, postmodernism and moral relativism. A lot of non-apologists think that God is primarily interested in making people good, and making them do good things here on Earth. And that's what leads to the apostasy that you see in groups like World Vision – this focus on doing good, rather than on having true beliefs first, then doing good second.

What does the Bible say is most important?

Look at the words of Jesus in Matthew 22:36-40: [NASB]

> 36 "Teacher, which is the greatest commandment in the Law?"
>
> 37 Jesus replied: "'Love the Lord your God with all your heart and with all your soul and with all your mind.'
>
> 38 This is the first and greatest commandment.
>
> 39 And the second is like it: 'Love your neighbor as yourself.'
>
> 40 All the Law and the Prophets hang on these two commandments."

If people settle on a false set of beliefs about whether God exists and whether Jesus is Lord and Savior, it doesn't matter how nice they are to other people – that's not what God is looking for, primarily. Everyone has to answer the question that Jesus asked of Peter in Luke 18. "Who do you say that I am?"

Is World Vision right to focus on the poor rather than Biblical Christianity?

Matthew 26:6-11: [NASB]

6 Now when Jesus was in Bethany, at the home of Simon the leper,

7 a woman came to Him with an alabaster vial of very costly perfume, and she poured it on His head as He reclined *at the table*.

8 But the disciples were indignant when they saw *this*, and said, "Why this waste?

9 For this *perfume* might have been sold for a high price and *the money* given to the poor."

10 But Jesus, aware of this, said to them, "Why do you bother the woman? For she has done a good deed to Me.

11 For you always have the poor with you; but you do not always have Me.

So the real issue in this life is not being nice to people. That is a good thing, it's not the main thing. The main thing is Jesus. Not a single verse in the Bible declares homosexuality to be anything other than a sin. By claiming that Christianity is somehow compatible with homosexuality, World Vision has *ceased to be a Christian organization*. My warning to you is to not focus so much on helping the poor at the expense of having true beliefs about God and Christ, and making those true beliefs known to others. We are here for just a few years and our purpose is not a worldly purpose. Our purpose is also not to feel good nor to be seen by others as kind, tolerant and compassionate. Be generous in your horizontal relationships, but not at the expense of that *crucial vertical relationship.*

UPDATE: My friend Neil wrote to me and suggested that I endorse giving to the poor directly, and I do endorse that. That respects the repeated Biblical commands to care for the poor, without getting in the mess described above.

# Court awards permanent custody of girl to Mass. Department of Children and Families

**Wintery Knight** · 26 March 2014 · Archived copy · Original

Wow. I'm not sure if you all have been following this story, but just when you think that it has to end, the insanity just keeps on going.

The Daily Caller reports.

Excerpt:

> A juvenile court judge issued a ruling Tuesday giving the Massachusetts Department of Children and Families "permanent" custody of Justina Pelletier. Any future decision to return the 15-year-old to her parents is now solely up to the agency.
>
> Judge Joseph Johnston ruled in response to a motion from Pelletier's court-appointed lawyer and her parents' lawyers, Linda and Lou Pelletier of West Hartford Conn., which called for "conditional custody" of their daughter, reports The Boston Globe.
>
> She has been in the custody of the state since February, 2013, when DCF removed her from her parents care. They have been aggressively demanding custody of Justina since then, and the case has gained national attention.
>
> Justina Pelletier was being treated for mitochondrial disease, a genetic disorder that affects muscle tissue, by doctors at Tufts Medical Center early last year. She was admitted to Boston Children's Hospital when she came down with the flu. Doctors at BCH disagreed with the Tufts doctors and diagnosed her with somatoform disorder, a mental illness.
>
> Her parents rejected the new diagnosis and attempted to move her back to Tufts, when BCH notified the state it suspected the parents of medical abuse. The Massachussetts Department of Children and Families took emergency custody of Pelletier in February.
>
> She has remained in their custody since then, spending most of her time in a psychiatric ward, and allowed one supervised hour a week to see her parents, reported The Boston Globe. She was moved to a residential facility a few months ago, but continues to be treated as an outpatient.
>
> […]Yesterday, AllVoices reported Justina's visits with her parents are now supervised by armed guards.

So, basically, if you have a child in Massachusetts, that child can be kidnapped by the state government indefinitely. Note to self: never have children in Democrat-dominated state.

# Why is the left trying to force moral and religious people to fund their immorality?

**Wintery Knight** · 26 March 2014 · Archived copy · Original

This article by Kevin Williamson on National Review was pretty popular, and it explains my great fear about marrying and starting a family in a society run by secular leftists.

Excerpt:

> I make a pretty poor puritan, though perhaps someday I'll make a better one. I object to abortion as violence, including abortion actuated via relatively bloodless chemical means, and believe that it should be prohibited as a matter of humane principle. The use of actual contraceptives, such as condoms, and the question of what combinations of consenting adults do what with whom — by which I mean maintaining joint bank accounts and sharing dental plans, of course — may be of acute interest to the bishops but are not properly matters of prohibition by the federal government, the purpose of which is to protect property, thus enabling Americans to organize their lives as they will, rather than to move citizens about like chessmen on the theory that it does so for their benefit. There is not much that I would have be illegal — but any civilized society requires a great deal of breathing room between *forbidden* and *compulsory*.
>
> The Left would not have it that way: **Homosexual behavior is not to be tolerated, or homosexual unions recognized under law — rather, homosexuality is to constitute a special class of blessedness, and the failure to celebrate it is to be a sin, which in the liberal mind must be identical to a crime. It is not enough for religious conservatives, such as the ones who own Hobby Lobby, to tolerate the legal sale and use of things such as the so-called morning-after pill — rather, they are expected to provide them at their own expense. Abortions are not to be legal, but legal and funded by the general community, with those funds extracted at gunpoint if necessary.**
>
> This is not merely, or even mainly, a question of economics. A monthly dose of emergency contraception (which seems like a lot) paid entirely out-of-pocket would run less than the typical cell-phone bill. One does not suspect that Americans would find it very difficult to locate gay-friendly firms in the wedding-planning business. The typical first-trimester abortion costs less than an entry-level iPad — hardly an insurmountable economic barrier for a procedure that is, if we take the pro-choice side at their word, absolutely fundamental to a woman's health and happiness.
>
> The economics are incidental. The point is not to ensure that we all pay, but that we are all involved.
>
> The Left may be morally illiterate, but it is not blind. The effects of the pathologically delusional tendency that once styled itself "the sexual revolution" are everywhere to be seen. In the 1960s and 1970s, our cultural discourse was dominated by the benefits side of that revolution's ledger; since then, we've had sufficient time to have a good long look at the cost side, too, and the tradeoffs are more severe than our bell-bottomed Aquarian prophets had predicted. It reads like an Old Testament genealogy: Sexual chaos begat family chaos, family chaos begat social chaos, social chaos begat economic chaos, economic chaos begat political chaos. And so the generations unfold. The relevant political reality is that those costs and benefits are not distributed equally: The benefits of license accrue mainly to the well-off and educated, who have the resources to make the most of their enjoyment of them; the costs accrue mainly to the poor, who cannot afford to live, economically or morally, beyond their means. Kate Moss can afford to be a single mother in her $20 million London townhouse. Not everybody can. Our so-called liberals find themselves in the queasy position of having created a moral culture that has destroyed millions of lives and many communities among the very disadvantaged people they claim to care most about, but they are incapable of criticizing a culture of license that none of them can imagine living without, even if they themselves are square as houses in their sexual habits.
>
> The result of that is, if not guilt, at least a nagging awareness that this all turns out to be a great deal more

> morally complex than our liberationist-latitudinarian forebears had imagined. The way to assuage the collective liberal conscience is to institutionalize and normalize liberal social preferences: There is nobody to be blamed for social anarchy if that's just the way things are. And if everybody is involved — as taxpayers or as employers providing health insurance — then everybody is implicated. They are a little like those addicts who are uncomfortable in the social presence of abstainers, taking that abstention as a rebuke, whether it is intended as one or not. In the United Kingdom, the government-run hospitals are burning the corpses of aborted children for heat, and we are all expected to get cozy by the fire.
>
> **The Hobby Lobby case is in part about private property and whether we are to have it. If we hold capital only at the sufferance of the politico-sexual whims of those who hold power, then we do not really hold capital at all — we only rent property from our rulers, serfs in the world's most sophisticated fiefdom. The property right is the fundamental right upon which all other political rights have their foundation. But there is a separate question — the right of conscience, which is, at minimum, the right not to be implicated, to at least stand apart from that which is no longer forbidden but is not yet, as of Tuesday morning, compulsory.**

Right now, a large amount of my income is being taken from me by a secular leftist government that is busy spending it on things that are absolutely against my conscience, my morality and my religion. They are content to do this for the reason Williamson stated – to implicate me in their failed social vision, even as they see it destroying the lives of millions of poor Americans. Why must I be forced to pay for this? Why must I be forced to celebrate and affirm secular leftist moral views?

Every time we have an election in this country, a large portion of the voting public chooses to vote for "compassion", by which they mean taking the money I earned to pay for *my plan*, and handing that money to a secular, socialist government to hand out as they implement *their plan*. Does anyone care about individual freedom and conscience any more? I don't want to be involved in evil. I don't want government to force me to be involved in evil. I do not get up every morning to work so that women can have free abortions. I do not want to be forced by courts to celebrate gay marriage. I do not want to subsidize government-run schools to indoctrinate my children against everything that I hold dear.

# William Lane Craig debates James Crossley: Did Jesus rise from the dead?

**Wintery Knight** · 26 March 2014 · Archived copy · Original

This is my favorite debate on the resurrection.

You can watch the debate here:

The MP3 file can be obtained from Apologetics 315.

There is not much snark in this summary, because Crossley is a solid scholar, and very fair with the evidence. He's also done debates with Richard Bauckham and Michael Bird. You have to respect him for getting out there and defending his views in public.

SUMMARY

**William Lane Craig's opening speech**

Two contentions:

- There are four minimal facts that are accepted by most historians
- The best explanation of the four minimal facts is that God raised Jesus from the dead

Contention 1 of 2:

Fact 1: The burial

- The burial is multiply attested
  - The burial is based on the early source material that Mark used for his gospel
  - Scholars date this Markan source to within 10 years of the crucifixion
  - The burial is also in the early passage in 1 Cor 15:3-8
  - So you have 5 sources, some of which are very early
- The burial is credited to a member of the Sanhedrin
  - the burial is probable because shows an enemy of the church doing right
  - this makes it unlikely to to be an invention

Fact 2: The empty tomb

- The burial story supports the empty tomb
  - the site of Jesus' grave was known
  - the disciples could not proclaim a resurrection if the body were still in it
  - the antagonists to the early Christians could have produced the body
- The empty tomb is multiple attested
  - it's mentioned explicitly in Mark
  - it's in the separate sources used by Matthew and John
  - it's in the early sermons documented in Acts
  - it's implied by 1 Cor 15:3-8, because resurrection requires that the body is missing
- The empty tomb was discovered by women
  - the testimony of women of women was not normally allowed in courts of law
  - if this story was being made up, they would have chosen male disciples
- The empty tomb discover lacks legendary embellishment

    - there is no theological or apologetical reflection on the meaning of the tomb
- The early Jewish response implies that the tomb was empty
    - the response was that the disciples stole the body
    - that requires that the tomb was found empty

Fact 3: The appearances to individuals and groups, some of the them hostile

- The list of appearances is in 1 Cor 15:3-8
    - this material is extremely early, withing 1-3 years after the cross
    - James, the brother of Jesus, was not a believer when he got his appearance
    - Paul was hostile to the early church when he got his appearance
- Specific appearances are multiply attested
    - Peter: attested by Luke and Paul
    - The twelve: attested by Luke, John and Paul
    - The women: attested by Matthew and John

Fact 4: The early belief in the resurrection emerged in a hostile environment

- There was no background belief in a dying Messiah
- There was no background belief in a single person resurrecting before the general resurrection of all of the righteous at the end of the age
- The disciples were willing to die for their belief in the resurrection of Jesus
- The resurrection is the best explanation for the transformation of the disciples from frightened to reckless of death

Contention 2 of 2:

- The resurrection is the best explanation because it passes C.B. McCullough's six tests for historical explanations
- None of the naturalistic explanations accounts for the minimal facts as well as the resurrection

**James Crossley's opening speech**

Appeals to the majority of scholars doesn't prove anything

- the majority of people in the west are Christians so of course there are a majority of scholars that support the resurrection
- there are Christian schools where denial of the resurrection can result in termination

The best early sources (1 Cor 15:3-8 and Mark) are not that good

1 Cor 15:3-8 doesn't support the empty tomb

- verse 4 probably does imply a bodily resurrection
- the passage does have eyewitnesses to appearances of Jesus
- but there are no eyewitnesses to the empty tomb in this source
- appearances occur in other cultures in different times and places
- Jesus viewed himself as a martyr
- his followers may have had hallucinations

Mark 16:1-8

- Mark is dated to the late 30s and early 40s

- The women who discover the tomb tell no one about the empty tomb

The gospels show signs of having things added to them

- Jewish story telling practices allowed the teller to make things up to enhance their hero
- one example of this would be the story of the earthquake and the people coming out of their graves
- that story isn't in Mark, nor any external sources like Josephus
- if there really was a mass resurrection, where are these people today?
- so this passage in Matthew clearly shows that at least some parts of the New Testament could involve
- what about the contradiction between the women tell NO ONE and yet other people show up at the empty tomb
- the story about Jesus commissioning the early church to evangelize Gentiles was probably added
- there are also discrepancies in the timing of events and appearances
- why are there explicit statements of high Christology in John, but not in the earlier sources?

**William Lane Craig's first rebuttal**

Crossley's response to the burial: he accepts it

Crossley's response to the empty tomb: he thinks it was made up

- rabbinical stories are not comparable to the gospel accounts
- the rabbinical stories are just anecdotal creative story-telling
- the gospels are ancient biographies – the genre is completely different
- the rabbinic miracle stories are recorded much later than the gospels
- the rabbi's legal and moral ideas were written down right away
- the miracle stories were written down a century or two later
- in contrast, the miracle stories about Jesus are in the earliest sources, like Mark
- the rabbinical stories are intended as entertainment, not history
- the gospels are intended as biography
- just because there are some legendary/apocalyptic elements in Matthew, it doesn't undermine things like the crucfixion that are historically accurate

Crossley's response to the evidence for the empty tomb:

- no response to the burial
- the empty tomb cannot be made up, it was implied by Paul early on
- the women wouldn't have said nothing forever – they eventually talked after they arrived to where the disciples were
- no response to the lack of embellishment
- no response to the early Jewish polemic

Crossley's response to the appearances

- he agrees that the first followers of Jesus had experiences where they thought Jesus was still alive

Crossley's response to the early belief in the bodily resurrection:

- no response about how this belief in a resurrection could have emerged in the absence of background belief in the death of the Messiah and the resurrection of one man before the general resurrection of all the righteous at the end of the age

What about Crossley's hallucination theory?

- Crossley says that the followers of Jesus had visions, and they interpreted these visions against the story of the Maccabean martyrs who looked forward to their own resurrections
- but the hallucination hypothesis doesn't account for the empty tomb
- and the Maccabean martyrs were not expecting the resurrection of one man, and certainly not the Messiah – so that story doesn't provide the right background belief for a hallucination of a single resurrected person prior to the end of the age
- if the appearances were non-physical, the disciples would not have applied the word resurrection – it would just have been a vision
- the visions could easily be reconciled with the idea that somehow God was pleased with Jesus and that he had some glorified/vindicated non-corporeal existence – but not resurrection
- not only that, the hallucination hypothesis doesn't even explain the visions, because there were visions to groups, to skeptics and to enemies in several places

What about the argument that only Christians accept the resurrection?

- it's an ad hominem attack that avoids the arguments

**James Crossley's first rebuttal**

Regarding the burial:

- I could be persuaded of that the burial account is accurate

Regarding the non-expectation of a suffering/dying Messiah:

- Jesus thought he was going to die
- this thinking he was going to die overturned all previous Messianic expectations that the Messiah wouldn't suffer or die
- the early Jews could easily reconcile the idea of a suffering, dead man killed by the Romans with the power of the all-powerful Messiah who supposed to reign forever
- no actually bodily resurrection would have to happen to get them to continue to identify an executed corpse with the role of Messiah

Regarding the belief in the bodily resurrection:

- it would be natural for Jews, who believed in a general resurrection of all the rigtheous dead at the end of the age, to interpret a non-physical vision of one man after he died as a bodily resurrection, even though no Jew had ever considered the resurrection of one man before the general resurrection before Jesus

Regarding the testimony of the women:

- Just because women were not able to testify in courts of law (unless there were no male witnesses), the early church might still invent a story where the women are the first witnesses
- first, the disciples had fled the scene, so only the women were left
- and it would have been a good idea for the early church to invent women as the first witnesses – the fact that they could not testify in court makes them ideal witnesses and very persuasive
- also, it's a good idea to invent women as witnesses, because the Romans had a rule that said that they never killed women, so they wouldn't have killed these women – Romans only ever kill men
- in any case, the first witness to the empty tomb is angel, so as long as people could talk to the angel as being the first witness, that's the best story to invent

Regarding the consensus of Christian scholars:

- I am not saying that Craig's facts are wrong, just that appealing to consensus is not legitimate
- he has to appeal to the evidence, not the consensus

Regarding my naturalistic bias:

- I don't know or care if naturalism is true, let's look at the evidence

Regarding the genre of the gospels:

- the creative story-telling is common in all genres, it's not a genre in itself
- stuff about Roman emperors also has creative story-telling

Regarding the legendary nature of the empty tomb in Mark:

- First, Christians interpreted the visions as a bodily resurrection
- Second, they invented the story of the empty tomb to go with that interpretation
- Third, they died for their invention

**William Lane Craig's second rebuttal**

The burial:

- Bill's case doesn't need to know the specifics of the burial, only that the location was known
- the location is important because it supports the empty tomb
- to proclaim a resurrection, the tomb would have to be empty
- a tomb with a known location is easier to check

The empty tomb:

- creative story telling was common in Judaism: retelling OT stories (midrash), romances/novels, rabbinical anecdotes
- but the gospels are none of these genres – the gospels are ancient biographies
- Craig also gave five arguments as to why the tomb was empty
- the burial story supports the empty tomb
- there is multiple *independent* attestation, then it cannot be a creative fiction invented in Mark alone
- the witnesses were in Jerusalem, so they were in a position to know
- regarding the women, even though Jesus respected the women, their testimony would not be convincing to *others*, so why invent a story where they are the witnesses
- the male disciples did not flee the scene, for example, Peter was there to deny Jesus three times
- if the story is made up, who cares what the male disciples did, just invent them on the scene anyway
- the angel is not authoritative, because the angel cannot be questioned, but the women can be questioned
- there was no response on the lack of embellishment
- there was no response to the earliest Jewish response implying that the tomb was empty

The appearances:

- we agree on the appearances

The early belief in the resurrection:

- he says that Jesus predicted his own death

- yes, but that would only cause people to think that he was a martyr, not that he was the messiah – something else is needed for them to keep their believe that he was the Messiah even after he died, because the Messiah wasn't supposed to die
- and of course, there was no expectation of a single person rising from the dead before the general resurrection, and certainly not the Messiah

The consensus of scholars:

- Jewish scholars like Geza Vermes and Pinchas Lapide accept these minimal facts like the empty tomb, it's not just Christian scholars

Against Crossley's hallucination hypothesis:

- it doesn't explain the empty the tomb
- it doesn't explain the early belief in the resurrection
- hallucinations would only lead to the idea that God had exalted/glorified Jesus, not that he was bodily raised from the dead
- the hallucination theory cannot accommodate all of the different kinds of appearances; individual, group, skeptic, enemy, etc.

The pre-supposition of naturalism:

- if Crossley is not committed to naturalism, then he should be open to the minimal facts and to the best explanation of those facts
- the hallucination hypothesis has too many problems
- the resurrection hypothesis explains everything, and well

**James Crossley's second rebuttal**

Religious pluralism:

- well, there are lots of other religious books
- those other religious books have late sources, and are filled with legends and myths, and no eyewitness testimony
- so why should we trust 1 Cor 15 and the early source for Mark and the other early eyewitness testimony in the New Testament?
- if other religious books can be rejected for historical reasons, then surely the New Testament can be rejected for historical reasons

Genre:

- the genre of ancient biography *can* incorporate and commonly incorporates invented legendaryt story-telling
- this is common in Roman, Greek and Jewish literature and everyone accepts that

Empty tomb: multiple attestation

- ok, so maybe the empty tomb is multiply attested, but that just gets back to a belief, not to a fact
- multiple attestation is not the only criteria, and Craig needs to use the other criteria to make his case stronger

Empty tomb: invented

- if there is a belief in the resurrection caused by the visions, then the empty tomb would have to be invented
- why aren't there more reliable stories of people visiting the empty tomb in more sources?

Empty tomb: role of the women

- there are women who have an important role in the Bible, like Judith and Esther
- Mark's passage may have used women who then kept silent in order to explain why no one knew where the empty tomb was
- if the fleeing of the men is plausible to explain the women, then why not use that? why appeal to the supernatural?
- we should prefer any explanation that is naturalistic even if it is not as good as the supernatural explanation at explaining everything

Empty tomb: embellishment

- well there is an angel there, that's an embellishment
- anyway, when you say there is no embellishment, what are you comparing it to that makes you say that?

Appearances: anthropology

- I've read anthropology literature that has some cases where people have hallucinations as groups

Appearances: theology

- the hallucinations would not be interpreted against the background theological beliefs that ruled out the resurrection of one man before then general resurrection of all the righteous dead
- these hallucinations could have been so compelling that they made the earliest Christians, and skeptics like James, and enemies like the Pharisee Paul abandon all of their previous background beliefs, proclaim the new doctrine of a crucified and resurrected Messiah which no one had ever expected, and then gone on to die for that belief
- the hallucinations could have changed all of their theology and reversed all of their beliefs about the what the word resurrection meant

**William Lane Craig's conclusion**

Supernaturalism:

- None of the four facts are supernatural, they are natural, and ascertained by historians using normal historical methods
- the supernatural part only comes in after we decide on the facts when we are deciding which explanation is the best
- a tomb being found empty is not a miraculous fact

Genre:

- the gospels are not analagous to these rabbinical stories, the purpose and dating is different

Empty tomb:

- what multiple attestation shows is that it was not made-up by Mark
- and the argument was augmented with other criteria, like the criterion of embarrassment and the criterion of dissimilarity
- Judith and Esther are very rare exceptions, normally women were not viewed as reliable witnesses
- if the story was invented, whatever purpose the inventors had would have been better served by inventing male witnesses
- Craig grants that the angel may be an embellishment for the sake of argument, but there are no other embellishments

- the real embellishments occur in forged gnostic gospels in the second and third centuries, where there are theological motifs added to the bare fact of the empty tomb (e.g. – the talking cross in the Gospel of Peter)
- he had no response to the earliest jewish response which implied an empty tomb

Belief in the resurrection:

- there was no way for Jewish people to interpret an appearance as a bodily resurrection before the end of the world, they did not expect that
- they could have imagined exaltation, but not a bodily resurrection

**James Crossley's conclusion**

Supernatural explanation:

- as long as there is any other other possible naturalistic explanation, we should prefer that, no matter how unlikely

Creative stories:

- some of these creative stories appear within the lifetimes of the people connected to the events (none mentioned)

Embellishment:

- you should compare to earlier stories when looking for embellishments, not later
- and we don't have any earlier sources, so we just don't know the extent of the embellishment

Jewish response:

- they probably just heard about the empty tomb, and didn't check on it, then invented the stole-the-body explanation without ever checking to see if the tomb was empty or not

# J. Warner Wallace: how can you trust Christianity if you haven't tested all the alternatives?

**Wintery Knight** · 27 March 2014 · Archived copy · Original

I heard Wallace talking about this on one of his recent podcasts, and it's nice to see it in an article that I can blog on.

Here's the objection:

> I've had the privilege to speak on university campuses across the country, making a case for the reliability of the New Testament Gospels and the truth of the Christian Worldview (I'll be at Rutgers next Monday night). One of the most common questions asked in the Q and A is something similar to: "Have you taken the time to apply the same approach with all the other religious worldviews?" Sometimes people ask this question because they are curious about how well other ancient religious claims (or alleged eyewitness accounts) hold up under investigative scrutiny. But many times this question is followed by a more pointed objection: "How can you trust Christianity is true if you haven't examined all the alternatives?"

Here's the answer:

> In every criminal trial, the investigators and prosecutors are obligated to present the evidence related to *one* defendant. While the burden of proof lies with the prosecutorial team, the prosecution is not required to have examined *every* possible alternative suspect. If I am investigating a case in which the suspect was initially described as a white male, 25 to 35 years of age with brown hair, the potential suspect pool in Los Angeles County would be quite large; there may be hundreds of thousands fitting this description. As I make the affirmative case related to one of the men in this large group, I'm under no obligation to make the case against the others. In fact, when the jury evaluates the case and decides whether the defendant is guilty, they will do so without *any* consideration of the alternatives. If the evidence is strong enough to reasonably infer the defendant's involvement, the jury will make a confident decision, even though many, many alternatives were left unexamined.

When an LAPD homicide detective can use his professional experience to answer a very relevant apologetics question, it's a good thing.

Now for a general point about investigating religions. You can make a cut to rule out many of the main religious alternatives just by using cosmology. Of the major world religions, only Christianity, Judaism and Islam affirm a beginning of the universe, and time itself. So it's not a very difficult thing to take those three live options and move on to a historical analysis. Islam is out because its holy book has obvious historical mistakes, like denying the crucifixion of Jesus in Surah 4:157. So you're left with two live alternatives, and that dilemma can be decided by selecting the best explanation for the minimal facts surrounding Jesus' resurrection. There are minimal facts, and there is a best explanation of those minimal facts.

The real issue is whether people are willing to put in the effort in the investigation, and be bound by what they discover. If they decide up front that their lifestyle / career / social standing / etc. cannot be impacted by their findings, then the whole thing becomes moot.

# Six bad arguments against religious liberty from the SCOTUS Hobby Lobby hearing

**Wintery Knight** · 27 March 2014 · Archived copy · Original

From the Federalist. (H/T Jay Richards)

Here are the 6 arguments:

1. A Government Surtax On Religious Exercise Is Totally Acceptable
2. The Mandate Isn't Really A Mandate
3. This Is Just A Sneaky Way To Undo The Civil Rights Act
4. Corporations Can Have A Racial Identity, Just Not A Religious One
5. Don't Start A Business If You Want The Government To Respect Your Religious Rights
6. Abortifacients Aren't Really Abortifacients

I want to highlight two of these.

First, number 1 makes clear that the Obama administration thinks that you should have to pay a tax in order to follow your conscience. Obama explained that very well in his campaign speeches. If you have a business, you didn't build that. The government made that happen, and so they have a right to tell you how to run your business.

Here's #1:

> During her questioning of Hobby Lobby's lead attorney, Justice Sonia Sotomayor appeared to endorse the concept of a religion surtax. Sotomayor's rationale was that rather than providing health coverage that included abortifacient coverage, companies could refuse outright to provide any health insurance at all, thereby getting around the mandate.
>
> But isn't there another choice nobody talks about, which is paying the tax, which is a lot less than a penalty and a lot less than — than the cost of health insurance at all? These employers could choose not to give health insurance and pay not that high a penalty – not that high a tax.
>
> Given that the American Revolution started in large part due to a tax on stamps, it seems odd that the Founders would have agreed that citizens should be forced to pay a tax for the privilege of not doing things that might lead to the eternal damnation of their souls. At any rate, Chief Justice John Roberts interjected, and noted that Hobby Lobby's owners believed they had a religious duty to provide health coverage to their employees. As a result, they would be forced to violate their beliefs no matter what: providing abortifacient coverage would be a violation, as would a failure to provide any health insurance coverage at all.

Number 4 is also interesting. The Democrats basically argued that although companies can be regarded by the law as Black-owned or Hispanic-owned, they cannot be regarded as Christian-owned. A Black-owned company can complain about racial discrimination, but a Christian-owned company can't complain about religious discrimination. So corporations can have a race, but not a religion.

Here's #4:

> Corporations are people, my friend, just as long as they're not religious people. That's the essence of one argument offered by Verrilli. A major issue in the case is whether a for-profit company or corporation even has standing to sue under RFRA, or whether that right is granted only to individuals or non-profits. The Obama administration has argued that for-profit companies do not have standing. That argument led Roberts to ask the following:
>
> CHIEF JUSTICE ROBERTS: Well, that's a question of State corporate law. It's not a question of who can

> bring an action under RFRA.
>
> Could I just raise — eight courts of appeals, every court of appeal to have looked at the situation have held that Corporations can bring racial discrimination claims as corporations.
>
> Now, does the government have a position on whether corporations have a race?
>
> GENERAL VERRILLI: Yes. We think those are correct and that this situation is different.
>
> CHIEF JUSTICE ROBERTS: So that — so that a corporation does have a race for purposes of discrimination laws.
>
> "So the person — the corporation can bring as a person a claim of racial discrimination[?]" Roberts asked.
>
> "That's correct, but not exercise of religion," Verrilli replied.

My opinion of this Hobby Lobby case is that the government's real aim is to force Christian churches, groups and businesses to offer abortion as another service in a health insurance plan. They have no respect for religious liberty or conscience. They just want to make sure that no Christian can judge because we would all be complicit in the mass murder of millions of unborn children. There would be no one on the outside who could claim to stand in judgment over the pro-abortion people. That's why it's so important to make evil taxpayer-funded. That normalizes it and removes the stigma from the people who take advantage of it. "The whole society paid for this, so I don't need to feel guilty about it – it's normal".

# Rob Bowman reviews new book that refutes Bart Ehrman's "How Jesus Became God"

**Wintery Knight** · 27 March 2014 · Archived copy · Original

A very good, but very long, review of skeptical historian Bart Ehrman's new book. It's written by Rob Bowman, co-author of "Putting Jesus in his Place".

Here are some of the really bad mistakes made by Bart Ehrman, according to the review.

#2: Ehrman thinks that Jesus didn't think he was the "Son of Man" figure from Daniel:

> A second notable weakness in Ehrman's theory is his claim that Jesus expected to fill the role of the Messiah but not of the Son of Man. This interpretation gets its initial plausibility from the fact that Jesus routinely referred to the Son of Man in the third person. However, even in most of the Synoptic Son of Man sayings, it is quite clear in the immediate context that Jesus is referring to himself (Matt. 8:20; 9:6; 11:19; 12:8; 16:13; 17:22-23; 20:18-19, 28; 26:2, 24, 45; Mark 2:10; 8:31; 9:31; 10:33; 14:21, 41; Luke 5:24; 7:34; 9:22, 44, 58; 19:10; 22:22, 48). The Messiah and the Son of Man are both understood as eschatological figures that receive an eternal kingdom on behalf of God's people; it is simply not plausible that Jesus, who used the title Son of Man incessantly and rarely used the title Messiah or Christ, claimed to be the latter but not the former.

#3: Ehrman can't explain the early church's proclamation that Jesus was divine:

> Ehrman's main thesis on its face appears completely lacking in credibility. According to Ehrman, whereas Jesus did not view himself as anything more than a man and did not expect to become anything more than a glorious earthly king, within a few weeks or months of Jesus' death his original followers were sincerely proclaiming that Jesus was a divine figure ruling over all creation at God's right hand in heaven. Keep in mind that in Ehrman's mind, Jesus did not rise from the dead and did not actually speak to his disciples after his death. Nor does Ehrman suggest that the disciples thought Jesus had made these stupendous claims about himself during his appearances to them. Rather, Ehrman credits the disciples with *inferring* these things about Jesus by interpreting their visionary experiences in the light of the apocalyptic worldview he had taught them before his death (205-206). What all this means is that Ehrman's view requires that Jesus' original disciples, who had walked all over Galilee and Judea with him and listened to him teach for hours on end, simply discounted Jesus' own self-image as nothing more than the future human Messiah.

#4: Ehrman denies the burial of Jesus, which makes him one of a handful of ancient historians who do:

> To make his theory work, Ehrman has abandoned his earlier view that the burial of Jesus in a tomb just outside Jerusalem was historically likely. He now accepts something like John Dominic Crossan's view that Jesus received no decent burial at all. In a way, denying the tomb is a smart move on Ehrman's part. As long as he acknowledged both the tomb and the appearances, he remained vulnerable to the vise grip of the historical argument for the Resurrection. Accept the empty tomb and discount the appearances, and you can postulate that the body was moved or stolen or lost. Accept the appearances and reject the empty tomb, and you can speculate that the disciples had hallucinations or "bereavement visions." Accept both the empty tomb and the appearances and you have to come up with a blatantly *ad hoc* explanation like Greg Cavin's identical-twin theory (what William Lane Craig mischievously labeled "the Dave theory") or strain credulity by accepting two unrelated explanations for the evidence (e.g., the body was stolen *and* the disciples had hallucinations). So Ehrman, who knows he cannot deny that at least some of the disciples had experiences in which they thought they saw Jesus alive from the dead, has gone the more sensible skeptical route and questioned the burial in the tomb. But this move, while sensible enough from his agnostic perspective, lands him in evidential hot water,

> because the evidence that the Gospels are telling the truth about the empty tomb is very good.

#5: Ehrman discounts Paul's resurrection appearance, which he speaks about in 1 Cor 15:

> Ehrman's attempts to explain the appearances of Jesus naturalistically ignore entirely the testimony of the apostle Paul that Jesus had appeared to him when Paul was still a persecutor of Christians. Ehrman quietly omits any mention of Paul's experience throughout his treatment of the resurrection appearances in the fifth chapter of his book. Then, having finished with the subject of Jesus' resurrection, at the beginning of chapter 6 Ehrman says only that Paul, after converting to faith in Jesus, "later *claimed* that this was because he had had a vision of Jesus alive, long after his death" (214, emphasis added). That is all he says—and it is difficult even to take his statement seriously. That Paul sincerely thought he had a vision of the risen Christ is really beyond debate. That fact is a stubborn datum that Ehrman failed to incorporate into his account of the origins of the Christian movement.

The post mentions a new book out that challenges Ehrman's book, and describes all of the responses to Ehrman's views. It is edited by well-known Australian scholar Michael F. Bird, whom I have blogged about before.

Here's one snippet:

> Craig Evans's treatment on the burial of Jesus is the stand-out chapter of the book. Evans rightly criticizes Ehrman's argument from silence regarding the omission of the name of Joseph of Arimathea from the pre-Pauline confession of Jesus' death, burial, and resurrection in 1 Corinthians 15:3-5 (90-91). Evans shows, against Ehrman, that rabbinical and Qumran texts attest to the Sanhedrin taking responsibility for the burial of executed criminals (80-81, 88-89). This means that the supposed discrepancy between Acts 13:29 and the Gospel accounts of Jesus' burial (even Luke's account!) evaporates. Evans is especially in his element when he documents painstakingly from both literary and archaeological evidence that burial in a tomb was not, as Ehrman had argued at length, inconsistent with Roman policies and practices regarding criminals who were crucified (73-80, 83-86). This chapter alone is worth the price of the book.

You really can't deny the burial – it's in 1 Cor 15:3-7, and that's early eyewitness testimony. I really am not sure what has gone wrong with Bart. You can't say the things he says in this book and maintain your respect as a historian, in my opinion. His views are fringe, and worse, they are in conflict with evidence that is undeniable, historically speaking. He's reaching, because something other than history is making him reach.

Here's a video about the new book, featuring Craig Evans:

He talks about the evidence for the burial. That video is 20 minutes, but worth watching. If you want to get a full treatment of the divinity of Jesus, then click here and buy Robert M. Bowman Jr. and J. Ed Komoszewski, *Putting Jesus in His Place: The Case for the Deity of Christ* (Grand Rapids: Kregel, 2007), for $1.99 (Kindle edition).

You can also view a debate on Youtube between William Lane Craig and Bart Ehrman here. (Transcript here)

# Why does God allow so much natural evil from earthquakes?

**Wintery Knight** · 27 March 2014 · Archived copy · Original

My friend Eric Chabot of Ratio Christi shared this video with me, which features chemist Fazale Rana.

The video runs under 4 minutes:

Basically, there was an atheist who challenged the idea that nature is designed because there are things in nature which cause suffering, like earthquakes and volcanoes.

Now the first thing to note is that atheists commonly think that God's job is to make humans happy. If he doesn't make humans feel happy – regardless of their knowledge of him and relationship with him – then he is a big failure. Many atheists think that, it is one of the most common reasons why people become atheists. But of course anyone who reads the Bible and reads the story of Jesus knows that the purpose of life on God's view is for humans to know him and to be disciples of a *suffering* Messiah who sacrifices himself in order to obey God the Father. So that's the first thing to say – purpose of life *not* happiness, but knowledge of God and being a disciple of Jesus. This may involve all kinds of suffering, and that's to be expected.

Second, there is a response to the problem of evil based on the necessity of natural laws. The argument goes that you can't have genuine morality without a predictable, knowable system of natural laws.

But I want to talk about something different in this post. In the video, Dr. Rana thinks that many of the things that cause suffering in the natural world are actually necessary for life to exist at all. He provides the example of plate tectonics in his video above, and I want to take that one and add to it the example of heavy element production and the stellar lifecycle. These are both from a book called "Rare Earth", which is written by two non-Christians – Peter Ward and Donald Brownlee, but I'll link to web sites to make the case.

**Plate tectonics.**

Here's an article from Reasons to Believe by Dr. David Rogstad, who has a PhD in physics from Caltech – the top school for experimental science. The article not only goes over the basic plate tectonics to carbonate-silicate cycle connection, but it adds a newer discovery to boot.

Excerpt:

> Earthquakes are a byproduct of plate tectonics, a theory in geology developed in recent years for explaining motions near the surface of the Earth. One of the benefits from plate tectonics is that Earth maintains the right levels of carbon dioxide ($CO_2$) in the atmosphere to compensate for the Sun's increasing luminosity. This is accomplished by what is called the carbonate-silicate cycle. $CO_2$ is removed from the atmosphere through weathering. The weathered products are eventually drawn into the Earth's interior via plate tectonics. Processes inside the Earth's interior release the $CO_2$ back into the atmosphere via volcanoes. While all aspects of this mechanism are not yet fully understood, it has been instrumental in providing a stable environment for life on the Earth for billions of years.
>
> New research provides yet another component that appears fine-tuned for life. In a letter in the September 27, 2007 issue of Nature together with a corresponding news release from the University of Bonn, Arno Rohrbach and his colleagues have discussed another mechanism similar to the carbonate-silicate cycle. It also depends on plate tectonics but, in this case, the mechanism controls the amount of oxygen on the surface of the Earth.
>
> Oxygen becomes bound up in various oxides which are then drawn into the Earth's interior, where various processes result in its being incorporated into an exotic mineral called majorite. The results reported in this letter established that majorite functions as a kind of "reservoir" for oxygen, and when the majorite ascends nearer to the surface of the Earth it breaks down and releases its oxygen. Some of this oxygen also binds with hydrogen released from the interior of the Earth to form water. The authors have referred to the whole process

> as an “oxygen elevator.”
>
> They go on to say that “without the ‘oxygen elevator’ in its mantle the Earth would probably be a barren planet hostile to life. According to our findings, planets below a certain size hardly have any chance of forming a stable atmosphere with a high water content.”
>
> This research confirms the existence of one more finely tuned mechanism that depends on plate tectonics and contributes to an environment that can support life. It also gives humans one more reason to be appreciative rather than dismayed when we experience an earthquake that breaks some precious possessions beyond repair.

Astronomer Dr. Hugh Ross who has a PhD in Astronomy from the University of Toronto and did a 5-year post-doctoral work at Caltech, adds to this with another discovery.

Excerpt:

> In the December 2007 issue of *Astrobiology* Stanford University geophysicists Norman H. Sleep and Mark D. Zoback note that the higher tectonic activity during Earth’s early history could have played a key role in cycling critically important nutrients and energy sources for life. The production of numerous small faults in the brittle primordial crust released trapped nutrients. Such faults could also release pockets of methane gas and molecular hydrogen. The methane and hydrogen could then provide crucial energy sources for nonphotosynthetic life. Finally, the production of faults could bring water to otherwise arid habitats, such as rocks far below Earth’s surface.
>
> Faulting, generated by active and widespread tectonics, allowed a youthful Earth to support diverse and abundant life. This enhanced diversity and abundance of life quickly transformed Earth’s surface into an environment safe for advanced life. Also, the buildup of biodeposits for the support of human civilization occurred more rapidly due to active tectonics.
>
> The more rapid preparation of Earth for humanity is critical. Without such rapid preparation, humans could not come upon the terrestrial scene before the Sun’s increasing luminosity would make their presence impossible (due to excessive heat).

So that’s the science behind earthquakes. So that’s a brief look at why we need plate tectonics for life, and we just have to buck up and take the earthquakes with it. It’s not God’s job to give us happiness and health. That’s not his plan. People who complain about earthquakes have to show how God could get the life-permitting effects of earthquakes without wrecking his ability to succeed in his plan to make people know him and follow him. But how can an atheist do that? They can’t. I think that people just need to realize that humans are not in charge here and we have to live with that. We have to accept that we didn’t make the universe, and we don’t get to decide what purpose it has. God decides.

On to star formation.

**Star formation**

Atheists often complain that the universe is too big or too old (which is actually the same thing, since the more time passes, the more it expands). The fact of the matter is that life appeared the earliest it could appear – we needed the universe to be a certain age before it could support life.

Dr. Hugh Ross explains in this article.

Excerpt:

> The second parameter of the universe to be measured was its age. For many decades astronomers and others have wondered why, given God exists, He would wait so many billions of years to make life. Why did He not do it right away? The answer is that, given the laws and constants of physics God chose to create, it takes about

> ten to twelve billion years just to fuse enough heavy elements in the nuclear furnaces of several generations of giant stars to make life chemistry possible.
>
> Life could not happen any earlier in the universe than it did on Earth. Nor could it happen much later. As the universe ages, stars like the sun located in the right part of the galaxy for life (see chapter 15) and in a stable nuclear burning phase become increasingly rare. If the universe were just a few billion years older, such stars would no longer exist.

The Rare Earth book explains the details on p. 40-4:

> The trick for getting from helium to the generation of planets, and ultimately to life, was the formation of carbon, the key element for the success of life and for the production of heavy elements in stars. Carbon could not form in the early moments following the Big Bang, because the density of the expanding mass was too low for the necessary collisions to occur. Carbon formation had to await the creation of giant red stars, whose dense interiors are massive enough to allow such collisions. Because stars become red giants only in the last 10% of their lifetimes (when they have used up much of the hydrogen in their cores), there was no carbon in the Universe for hundreds of millions to several billion years after the Big Bang—and hence no life as we know it for that interval of time.
>
> […]The sequence of element production in the Big Bang and in stars provided not only the elements necessary for the formation of Earth and the other terrestrial planets but also all of the elements critical for life—those actually needed to form living organisms and their habitats.

> […]The processes that occurred during the billions of years of Earth's "prehistory" when its elements were produced are generally well understood. Elements are produced within stars; some are released back into space and are recycled into and out of generations of new stars. When the sun and its planets formed, they were just a random sampling of this generated and reprocessed material. Nevertheless, it is believed that the "cosmic abundance" mix of the chemical elements—the elemental composition of the sun—is representative of the building material of most stars and planets, with the major variation being the ratio of hydrogen to heavy elements.
>
> […]Many stars are similar in composition, but there is variation, mainly in the abundance of the heavier Earth-forming elements relative to hydrogen and helium. The sun is in fact somewhat peculiar in that it contains about 25% more heavy elements than typical nearby stars of similar mass. In extremely old stars, the abundance of heavy elements, may be as low as a thousandth of that in the sun. Abundance of heavy elements is roughly correlated with age. As time passed, the heavy-element content of the Universe as a whole increased, so newly formed stars are on the average more "enriched" in heavy elements than older ones.
>
> […]The matter produced in the Big Bang was enriched in heavier elements by cycling in and out of stars. Like biological entities, stars form, evolve, and die. In the process of their death, stars ultimately become compact objects such as white dwarfs, neutron stars, or even black holes. On their evolutionary paths to these ends, they eject matter back into space, where it is recycled and further enriched in heavy elements. New stars rise from the ashes of the old. This is why we say that each of the individual atoms in Earth and in all of its creatures—including us—has occupied the interior of at least a few different stars.

What he's saying is that heavy elements are created gradually because of the star formation lifecycle. The first generation of stars are metal-poor. The next generation of stars is better. And so on until we get to stars that can support life by providing a steady, stable amount of energy – as well as other benefits like planets with an atmosphere.  Our planet is 4.5 billion years old, and the universe is about 14 billion years old. Simple life appears about 4 billion years ago on Earth. That means we got life practically immediately, given that we had to develop the heavy elements needed to make a life-supporting star, a life-supporting planet and our physical bodies.

# Appeals court upholds Texas' tough pro-life laws

**Wintery Knight** · 28 March 2014 · Archived copy · Original

From Texas Right to Life. (H/T Dad)

Excerpt:

> A panel of three judges in the US Court of Appeals for the Fifth Circuit released its ruling upholding HB2, Texas' Pro-Life law, which took full effect in October of last year. The opinion affirms the constitutionality of the legislation passed last summer and rejects Planned Parenthood's argument that HB2 places an "undue burden" upon abortionists, abortion facilities, and women seeking abortion.
>
> The court upheld sections of the law that require abortionists hold admitting privileges at a nearby hospital, and that the dangerous RU-486 abortion drug be administered according to FDA procedure. The judges wrote,
>
> "The district court held that parts of both provisions were unconstitutional and granted, in substantial part, the requested injunctive relief. A motions panel of this court granted a stay pending appeal, and the Supreme Court upheld the stay. We conclude that both of the challenged provisions are constitutional and, therefore, reverse and render judgment, with one exception, for the State."
>
> There is a minor caveat to the ruling, abortionists who have applied for admitting privileges prior to the law going into effect, but have not yet received a reply from local hospitals may continue to commit abortions until their applications for privileges are officially denied.
>
> The court asserted that higher standards for an abortionist are, in fact, justified,
>
> "During these proceedings, Planned Parenthood conceded that at least 210 women in Texas annually must be hospitalized after seeking an abortion. Witnesses on both sides further testified that some of the women who are hospitalized after an abortion have complications that require an Ob/Gyn specialist's treatment."
>
> This is the third time recently that this Court of Appeals has upheld Pro-Life policies attacked by abortion advocates. The same court upheld Texas' 2011 Sonogram Law and a policy that kept the abortion business Planned Parenthood out of the taxpayer-funded Women's Health Program.

The 5th Circuit Court of Appeals has my absolute favorite judge, Edith Hollan Jones. If I were President, that's who I would choose, and then Janice Rogers Brown if I had two picks. Well, it might not ever happen, but a guy can dream… about Supreme Court picks.

At the beginning of the month, there was a story on Life News about how these laws are closing abortion clinics.

Excerpt:

> The Dallas Morning News is reporting that the last two abortion clinics outside of big Texas cities will close Thursday because they can't meet the restrictions placed on facilities under the state's new abortion law.
>
> Whole Woman's Health in Beaumont and McAllen will close after providing abortions in the areas for a decade. Amy Hagstrom Miller, president of Whole Woman's Health, which operated five abortion clinics before the law went into effect, said the provision requiring physicians to have admitting privileges at a hospital within 30 miles of the clinic was proving the most problematic.
>
> Miller said hospitals near her McAllen clinic refused to grant her physicians' applications for privileges. Some hospitals in the area require their privileged physicians to live nearby. Others require a current physician to co-sign applications for privileges, which many are unwilling to do for fear of being targeted or stigmatized.
>
> In Beaumont, one 75-year-old physician secured privileges, but a second one could not, Miller said.

In addition to that Texas news, there is also a story this morning from National Right to Life about the 10th Circuit Court of Appeals has allowed Kansas to suspending taxpayer-funding of Planned Parenthood pending resolution of a court challenge. (H/T J.W. Wartick tweet) So there is more good news!

# A closer look at the Islamization of schools in the UK

**Wintery Knight** · 28 March 2014 · Archived copy · Original

Here is a story from the UK Telegraph that should concern us all. (H/T Dennis Prager)

The news story:

> The Birmingham school at the centre of an alleged campaign of "Islamisation" by Muslim radicals is to be placed in "special measures" by the Government's education watchdog in a move that could see its head teacher and governors removed.

> Park View, previously rated "outstanding" by Ofsted, will be downgraded to "inadequate", the lowest possible score, in the category of leadership and management, senior education sources said.
>
> This enables Ofsted to place the school in special measures, allowing the watchdog, if it wishes, to remove the school's entire leadership.

> The move, described as "seismic" by senior educational sources, follows a highly unusual two Ofsted inspections in the past three weeks at the school, the alleged victim of a campaign by Islamists called a "Trojan Horse" to remove secular head teachers and install Islamic practices in Birmingham state schools.

So why does the government have to step in?

Here's why:

> The disclosure comes as parents and school governors and staff describe in detail how the campaign has destabilised and undermined successful schools.
>
> In extensive interviews with *The Sunday Telegraph*, more than a dozen sources disclosed how children at one supposedly non-religious primary school, Oldknow, were led in anti-Christian chanting by one of their teachers at assembly.
>
> The school also conducts weekly Friday prayers, has organised at least three school trips to Mecca subsidised from public funds, and requires all pupils to learn Arabic — almost unheard of at a primary school.
>
> It also runs its own madrassah, or religious school. Oldknow's highly successful non-Muslim head teacher has been driven from her post for resisting this "Islamising agenda", this newspaper has learnt.
>
> The head of another successful primary school, Springfield, received death threats, had his car tyres slashed and is under "non-stop attack" by radical governors, according to parents, other governors and staff at the school.

And more:

> Last year Mr da Costa recruited a new deputy head, Jahangir Akbar, from a Muslim faith school in Leicester. Soon afterwards, Jahangir's younger brother, Khalil, was recruited as assistant head. No other candidates were interviewed for either position and the assistant headship was not even advertised, staff said. Jahangir Akbar is another colleague of Tahir Alam's and has worked with him in the Association of Muslim Schools, of which Mr Alam is vice-chairman.
>
> "Oldknow's pupils are mostly but not entirely Muslim and it was always an equal-opportunity school," said one

> former member of staff. “But then all of a sudden there were Jummah [Friday] prayers, and going to Saudi Arabia on government money, and the Arabic, and blatant belittling of Christianity.”
>
> Hardline teachers were recruited who would “sow the seed of religion in every lesson,” said one source. “Some of the teachers told pupils that music was sinful in Islam and the children started to refuse to do music, even though it is compulsory in the National Curriculum. It is incredibly difficult when your own colleagues undermine your efforts to give the children a balanced education.”
>
> Matters came to a head, three separate sources said, last December when all the normal Christmas activity, including a tree, cards and the pantomime, was cancelled because it was considered un-Islamic, and the school’s Arabic teacher, Asif Khan, delivered an assembly “ridiculing” Christian beliefs. “It was like a rally,” said one person present. “He was leading them in chants of, ‘Do we believe in Christmas? No! Do we give out Christmas cards? No! The seven days of Christmas, they [Christians] can’t even count!’

The UK was under Labour Party rule for a long time, and under the Labour Party, huge numbers of unskilled immigrants from Muslim countries were let into the country in the name of multiculturalism. The Labour Party is gone from office now, but the damage is still being felt today. Under Labour rule, the country seems to have taken a turn towards moral relativism and radical feminism, so that people seem to be terrified of making moral judgments or standing up to a centralized, powerful government. Even many Christians in the UK seem to struggle with holding to conservative morality and theology, and they even vote for the Labour Party and worse, the Liberal Democrats. There just seems to be a suspicion of individual liberty and personal responsibility that has weakened the country so that it is a shadow of its former self.

# Did the divinity of Jesus emerge slowly after many years of embellishments?

**Wintery Knight** · 28 March 2014 · Archived copy · Original

How early is the doctrine of the divinity of Jesus?

When I answer this question, I only want to use the earliest, most reliable sources – so I can defend them *on historical grounds* using the standard rules of historiography.

The 4 sources that I would use are as follows:

- The early creed in 1 Corinthians 15:3-8, and 1 Corinthians 1
- A passage in Philippians 2
- Two passages from Mark, the earliest gospel
- A passage from Q, which is an early source of Matthew and Luke

So let's see the passages.

**1 Corinthians**

I've written before about the early creed in 1 Corinthians 15:3-8, which skeptical scholars date to 1-3 years after the death of Jesus, for a variety of reasons I covered in the previous post. Here's the creed which definitely makes Jesus out to be more than an ordinary man. Ordinary men don't get resurrection bodies after they die.

Here's the passage: (1 Cor 15:3-8)

[3]For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

[4]that he was buried, that he was raised on the third day according to the Scriptures,

[5]and that he appeared to Peter, and then to the Twelve.

[6]After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep.

[7]Then he appeared to James, then to all the apostles,

[8]and last of all he appeared to me also, as to one abnormally born.

Additionally, 1 Corinthians 1:21-25 talks about Jesus being "the power of God and the wisdom of God". Paul is identifying Jesus with the divine.

[21]For since in the wisdom of God the world through its wisdom did not know him, God was pleased through the foolishness of what was preached to save those who believe.

[22]Jews demand miraculous signs and Greeks look for wisdom,

[23]but we preach Christ crucified: a stumbling block to Jews and foolishness to Gentiles,

[24]but to those whom God has called, both Jews and Greeks, Christ the power of God and the wisdom of God.

[25]For the foolishness of God is wiser than man's wisdom, and the weakness of God is stronger than man's strength.

But it gets even stronger! You all probably already know that the most important passages in the Old Testament for Jews is the famous "Shema", which is found in Deuteronomy 6:4-9. The Shema is a strong statement of Jewish monotheism.

Here's the passage:

[4] Hear, O Israel: The LORD our God, the LORD is one.

[5] Love the LORD your God with all your heart and with all your soul and with all your strength.

[6] These commandments that I give you today are to be upon your hearts.

[7] Impress them on your children. Talk about them when you sit at home and when you walk along the road, when you lie down and when you get up.

[8] Tie them as symbols on your hands and bind them on your foreheads.

[9] Write them on the doorframes of your houses and on your gates.

So how does Paul fit Jesus in with this strong statement of Jewish monotheism?

Paul alludes to the Shema in 1 Corinthians 8:4-6.

[4]So then, about eating food sacrificed to idols: We know that an idol is nothing at all in the world and that there is no God but one.

[5]For even if there are so-called gods, whether in heaven or on earth (as indeed there are many "gods" and many "lords"),

[6]yet for us there is but one God, the Father, from whom all things came and for whom we live; and there is but one Lord, Jesus Christ, through whom all things came and through whom we live.

Holy mackerel! How did that get in there? Paul is splitting the roles of God in the the Shema and identifying Jesus in one of the divine roles! Jesus is not an ordinary man. That passage "through whom all things came" foreshadows John identifying Jesus as "the Word of God", which "became flesh and dwelt among us". Holy snark – did you guys know that was all in here so early?

The date for 1 Corinthians is 55 AD. It should be noted that skeptical scholars like James Crossley accept these passages, and you can check it out in the debate audio yourself.

**Philippians**

Check out Philippians 2:5-11.

[5]Your attitude should be the same as that of Christ Jesus:

[6]Who, being in very nature God, did not consider equality with God something to be grasped,

[7]but made himself nothing, taking the very nature of a servant, being made in human likeness.

[8]And being found in appearance as a man, he humbled himself and became obedient to death— even death on a cross!

[9]Therefore God exalted him to the highest place and gave him the name that is above every name,

[10]that at the name of Jesus every knee should bow, in heaven and on earth and under the earth,

[11]and every tongue confess that Jesus Christ is Lord, to the glory of God the Father.

The date for Philippians is 60-61 AD. Still within the lifetime of the eyewitnesses, and written by an eyewitness who was in contact with the other eyewitnesses, like Peter and James, whom Paul spoke with numerous times on his journeys to Jerusalem.

**Mark's gospel**

Mark's gospel is the earliest and atheists like James Crossley date it to less than 40 AD, which is 10 years after the

death of Jesus at most. When you read the gospel of Mark, you are getting the earliest and best information available about the historical Jesus, along with Paul's epistles. So what does Mark say about Jesus? Is Jesus just a man, or is he something more?

Check out Mark 12:1-9:

[1]He then began to speak to them in parables: "A man planted a vineyard. He put a wall around it, dug a pit for the winepress and built a watchtower. Then he rented the vineyard to some farmers and went away on a journey.

[2]At harvest time he sent a servant to the tenants to collect from them some of the fruit of the vineyard.

[3]But they seized him, beat him and sent him away empty-handed.

[4]Then he sent another servant to them; they struck this man on the head and treated him shamefully.

[5]He sent still another, and that one they killed. He sent many others; some of them they beat, others they killed.

[6]"He had one left to send, a son, whom he loved. He sent him last of all, saying, 'They will respect my son.'

[7]"But the tenants said to one another, 'This is the heir. Come, let's kill him, and the inheritance will be ours.'

[8]So they took him and killed him, and threw him out of the vineyard.

[9]"What then will the owner of the vineyard do? He will come and kill those tenants and give the vineyard to others.

And Mark 13:32, talking about the date of the final judgment.

[32]"No one knows about that day or hour, not even the angels in heaven, nor the Son, but only the Father.

And again, this passage is establishing a hierarchy such that Jesus is being exalted above all men and the angels, too. And the passage is embarrassing to the early church, because it makes Jesus look ignorant of something, so they would not have made this passage up. Jesus is not an ordinary man, he is *above* the angels – God's *unique* Son.

**The "Q" source for Matthew and Luke**

Here's Matthew 11:27, which is echoed in Luke 10:22:

[27]"All things have been committed to me by my Father. No one knows the Son except the Father, and no one knows the Father except the Son and those to whom the Son chooses to reveal him.

[22]"All things have been committed to me by my Father. No one knows who the Son is except the Father, and no one knows who the Father is except the Son and those to whom the Son chooses to reveal him."

Since this passage is in both of Matthew and Luke, but not in Mark, scholars believe that it is in the earlier "Q" source used by both Matthew and Luke. Q predates both Matthew and Luke, and so it is also fairly early (maybe 67-68), although not as early as Mark and Paul. Bill Craig writes that this passage is also embarrassing because it says that *no one* knows Jesus.

**Learn more**

You can learn more about the early belief in the divinity of Jesus by listening to a lecture by William Lane Craig and reading the related paper, and by listening to the debate between Richard Bauckham and James Crossley on that topic. The first link contains other scholarly debates on Jesus.

# Hypocrisy on the left: do the actions of liberals match their words?

**Wintery Knight** · 29 March 2014 · Archived copy · Original

Funny video from American Power Blog.

That's one case, but are leftists always hypocrites?

**Do As I Say Not As I Do**

I had a long drive on the way to my parents' house for Christmas and I decided to listen to the audio book version of Peter Schweizer's 2004 book "Do As I Say Not As I Do". In that book, he profiles a number of leftist public figures, and he discovers that leftists don't practice what they preach, because even they know that leftist ideas *don't actually work*. I really recommend the book, so let's take a closer look at it and you'll see why you should read it, too.

Here's a 32 minute 2011 lecture about the book:

And here's an interview with the author from FrontPage magazine.

Excerpt:

> **FrontPage:** Give us some of the best examples of the gulf between some liberals' social criticisms and the ingredients of their private lives. Give us some insights, for instance, into the likes of Noam Chomsky, Michael Moore, Cornel West, Hillary Clinton, Ted Kennedy and Barbra Streisand.
>
> **Schweizer:** Looking for liberal hypocrisy is, as they say in the military, a target-rich environment. Noam Chomsky, for example, has attacked wealthy Americans who set up trusts to avoid paying inheritance taxes. But this self-professed "radical socialist" has a tax attorney and did the very same thing. (When I asked him about this hypocrisy he said it was okay because he and has family have been working on behalf of suffering people all these years.)

> Michael Moore's hypocrisy is pathological. He has said numerous times that he doesn't own a single share of stock and that capitalism is not acceptable "on any level." And yet, I found that, according to tax returns filed with the IRS, he has owned shares in Halliburton, numerous oil companies, defense contractors and other multinationals through a tax shelter. When it comes he race he's also wildly hypocritical. He says that Americans who happen to live in largely white neighbhorhoods do so because they are "racists." But he lives in Central Lake, Michigan, which according to the U.S. Census has more than 2,500 residents and not a single black person in the entire town.
>
> Cornel West has numerous times condemned middle class blacks that abandon the "chocolate cities" for the "vanilla suburbs" but guess what, his flavour of choice is vanilla, too.
>
> Ted Kennedy likes to pose as the Robin Hood of the Senate, forcing wealthy Americans to pay their taxes to help the poor. But I discovered that Kennedys record of actually paying taxes is horrible. Tax the inheritance tax. He says that Americans should pay 49% to the IRS when they die in the name of "social justice." But according to public records, the Kennedys have almost completely avoided contributing to "social justice" by placing their assets in trusts that are located overseas. The Kennedys, over the past thirty years, have paid less than 1% in inheritance taxes on more than $300 million. Ted Kennedy, like Hillary Clinton and George Soros, loves higher taxes. On other people.

And:

> **FrontPage:** Why do you think people are drawn to leftist ideals and what kind of people are they? Self-

> contempt appears to be a common ingredient, no?
>
> **Schweizer:** Yes, self-contempt is a big part of it. Dietrich Bonhoeffer, the great German pastor who stood up to Hitler, wrote a book about "cheap grace." Liberals are guilty of cheap grace in the political sense. They feel guilty and their form of penance is embracing the destructive ideas of the progressive faith. But it's cheap grace because as I show it the book, they don't actually change the way they live. I think that the religious comparison makes sense because in many respects the modern day left represents a religious movement. They are motivated by a sense of sin, guilt, and the need for salvation and absolution in the political sense. Socialism offers salvation to them. Of course, they don't actually plan to live like socialists.

I would really recommend taking a look at this book. It's similar to Paul Johnson's "Intellectuals" if you've ever read that, but it's better.

# Review of evidential apologetics book by pastor shows where church needs to improve

**Wintery Knight** · 29 March 2014 · Archived copy · Original

There are basically two views of faith in Christianity.

The first view of faith is the Biblical view of faith as active trust in propositions we know to be true, because we have reasons and evidence to believe those propositions. This view is not only rooted in the Bible, but it extends through Augustine and Aquinas to the present day. I have written about this view of faith before, and quoted many theologians in support of it. I also showed how people in the Bible use miracles as a sign in order to convince skeptics. For example, Peter appealing to the resurrection in Acts 2. The Bible teaches that faith is active trusting based on evidence.

The second view is blind faith. This view is nowhere in the Bible, and this view asserts that becoming a Christian is a leap-of-faith in the dark against all the evidence. This view not only minimizes evidence, but it actually opposes presenting evidence to unbelievers and skeptics in the way that the Bible teaches. This view is nowhere in the Bible, and it was not the method used by Jesus or his followers. It is an unBiblical way of viewing faith, but it is very popular in some circles of Christianity. It is also popular among atheists, because this is what many Christian leaders and pastors tell them that faith is. Why would these Christian leaders reject the plain teaching of the Scripture on faith, and adopt a man-made view of evangelism that opposes the use of evidence?

Well, I have an idea why, based on my experiences trying to get apologetics into the church and university. Suppose a pastor or campus group leader wants to avoid having to learn physics and cosmology, or the minimum facts case for the resurrection, or how to respond to apparently gratuitous suffering, or the problem of religious pluralism. Suppose he thinks that Christianity, if it is about anything, is about his feeling happy and comfortable with a minimum of effort and work. So, he diligently avoids reading apologetics, because learning evidence is hard work. He avoids watching debates on God's existence and the resurrection, because this is hard work. He avoids conversations with people who do study these things, and implies that there is something wrong with them for studying these things. He endeavors to conceal his laziness and ignorance and cowardice from his flock with much pious God-talk and fervent praise-hymn-singing.

Eventually, some member of his church asks him to go for lunch with an actual non-Christian family member. The pastor agrees and when he meets the unbelieving family member, he has nothing at all to say about typical challenges that unbelievers face. He has no knowledge of evolution, the problem of evil, the hiddenness of God, or the hallucination theory. He has never read a single atheist, and never read a single piece of evidence to refute them from Christian scholars. He lacks humility, refusing to admit that other Christian scholars may know more than he does because they have studied other areas. Needless to say, he fails to defend God's reputation to the non-Christian. What will he say to the members of his flock about his failure? How will he justify his obstinate refusal to do what everyone else in the Bible does when confronting non-believers?

Well, consider this review of a recent book that defends the Gospels and the historicity of the resurrection by one such fideist pastor.

He writes:

> There are, however, two significant shortcomings to the book.
>
> First, *Cold-Case Christianity* places far too much emphasis on the role of extrabiblical sources. No doubt there is a legitimate role for biblical archaeology and extrabiblical writing from antiquity. Christianity is, after all, a faith firmly rooted in human history. But there is a grave danger when truth is suspended because of an apparent lack of corroboration from extrabiblical sources. And Wallace, I'm afraid, wanders too close to this dark side of apologetics.

> All of chapter 12, for instance, is devoted to proving the Gospels have external corroborative evidence—"evidence that are independent of the Gospel documents yet verify the claims of the text" (183). Wallace then addresses the historicity of the pool of Bethesda and makes another worrying statement: "For many years, there was no evidence for such a place outside of John's Gospel. Because Christianity makes historical claims, archaeology ought to be a tool we can use to see *if these claims are, in fact, true*" (201-202, emphasis added).
>
> In other words, Wallace seems to suggest we cannot affirm the truth of the Gospel accounts without the stamp of approval from archaeology and other extrabiblical sources. Such reasoning is dangerous, not least because it cannot affirm the inerrancy of the Bible. But also, it places the final court of appeal in the realm of extrabiblical sources rather than of God's all-sufficient, all-powerful Word.

That is a textbook definition of fideism – that belief is somehow more pious and praiseworthy the less evidence we have. And the best way to have less evidence is to study nothing at all, but to just make a leap-of-faith in the dark. Of course, a leap-of-faith can land you anywhere – Islam, Mormonism. Presumably this pastor is like the Mormons who eschew all evidence and prefer to detect the truth of Mormonism by "the burning of the bosom" which happens when people read the all-sufficient, all-powerful Book of Mormon. His view of faith is identical to theirs, and 180 degrees opposed to the Bible. He has made his leap-of-faith, and that leap-of-faith is not accountable to arguments and evidence. His faith is private and personal, based on his own feelings. He considers it blasphemous to have to demonstrate what he believes to those who disagree with him. Where is this in the Bible? It's nowhere. But it is everywhere in anti-intellectual Christian circles.

There is a good response to this blind-faith pastor on Deeper Waters. Much less angry than my response.

Excerpt:

> The dark side of apologetics? Did I somehow step into a Star Wars universe?
>
> Yes. How horrible to show that the Bible is backed up by sources outside of it. How terrible to show that these events did not happen in a vacuum. Thankfully, no one in the Bible took this approach.
>
> Except for the fact that when the gospel was being preached, there were no gospels per se and there were no epistles. Paul told Agrippa that the events done weren't done in a corner. In other words, investigate the claims for yourself! The early testimony was eyewitness testimony. Sources like Tacitus and others show the eyewitnesses were right! This was not done in a corner! This was done out in the open! Archaeology helps us confirm the biblical writings and shows that unlike the pagan myths, these events were rooted in a place and time. Is there some danger that our faith will be destroyed by outside sources?
>
> It really becomes a fideistic approach. If your worldview is true, you should have no problem putting it to the strictest scrutiny. If it is not, then you will have a problem. No Christian should fear further research into what they believe. No Christian should have a problem with extra-biblical sources. Now I do agree there is a problem with stating that EVERYTHING must be backed extra-biblically. I think this is a prejudice we too often have where nothing in the Bible can be considered historical unless it's verified somewhere else. A gospel account alone could count as a historical claim itself that can be investigated, and indeed is in NT scholarship, but where we can get extra-biblical evidence, I'm all for it.
>
> […]Christianity is a faith that is rooted in evidences so we should be able to use evidences to demonstrate it. I have often been told by those of the presuppositional bent that the approach is used all the time in the Bible. The problem is I can't find one. I get told passages like "The fear of the Lord is the beginning of wisdom." Yes. It is. Wisdom refers to godly living. It doesn't refer to confirming the gospel to be true. When I look at the apostles in every case, I see them pointing to evidences.

I think that Christians are much better off following the example of authentic Christian pastors like R.C. Sproul, who, in a conference on evangelism, invited Dr. Stephen C. Meyer to present multiple lines of evidence from

mainstream science to establish the existence of God. The only reason not to take this approach is laziness, which leads to ignorance, which leads to cowardice. And failure. It is pastors like Pastor Bungle above who are responsible for the great falling away from Christianity that we are seeing when we look at young people. Pastors who pride themselves in refusing to connecting the Bible to the real world, with evidence and with policy analysis, are causing young people to abandon the faith.

# FBI removes Southern Poverty Law Center from hate crime resource list

**Wintery Knight** · 30 March 2014 · Archived copy · Original

Breitbart reports.

Excerpt:

> Christian groups are celebrating with the news that the Federal Bureau of Investigation appears to have scrubbed the Southern Poverty Law Center (SPLC) from its hate crimes webpage, where the controversial group was listed as a resource and referred to as a partner in public outreach.
>
> […]**In the fall of 2012, Floyd Lee Corkins, armed with a loaded semi-automatic pistol and 100 rounds of ammunition, entered FRC headquarters not far from FBI headquarters in downtown Washington, D.C. Corkins shot the front desk security guard and tried to gain entrance to the upper floors where he intended to kill FRC employees. Though wounded, the front desk security guard subdued Corkins, who became the first person ever convicted under the Washington, D.C., domestic terrorism law. Corkins said he got the idea of killing FRC employees from reading the SPLC hate list and made use of a map of the FRC office found on the SPLC website.**

You'll recall that Corkins was a gay activist who volunteered for gay causes.

More:

> SPLC has come under severe criticism from the left and the right in recent years.
>
> Writing in the left-wing website Counterpunch, Alexander Coburn called SPLC founder Morris Dees "king of the hate business." Coburn wrote, "Ever since 1971, U.S. Postal Service mailbags have bulged with Dees' fundraising letters, scaring dollars out of the pockets of trembling liberals aghast at his lurid depictions of hate-sodden America, in dire need of legal confrontation by the SPLC." In fact, so prolific is Dees at direct mail that he is in the Direct Marketing Association Hall of Fame.
>
> Writing at the Harper's Magazine blog in 2007, Ken Silverstein said, "What [the SPLC] does best… is to raise obscene amounts of money by hyping fears about the power of [right-wing fringe] groups; hence the SPLC has become the nation's richest 'civil rights' organization."
>
> A critical analysis published recently by Professor George Yancey of North Texas University concluded that SPLC targets only those groups its leaders disagree with politically while leaving liberal groups who use extreme language alone.
>
> A 2013 article in Foreign Policy concluded that SPLC exaggerates the hate crimes threat, saying SPLC is not an "objective purveyor of data," instead calling them "anti-hate activists" and suggesting that their reports need to be "weighed more carefully by news outlets that cover their pronouncements."

I think that the Democrats are doing this because it is an election year, and they don't want people to know that their government department (the FBI) was connected to the SPLC. Especially in light of the domestic terrorism conviction of Floyd Corkins. The U.S. Army is still partnering with SPLC, so there is still work for us to do in publicizing the issue.

It would be nice if we could get to the point where gay activists accept that others disagree with them on sexual morality and the nature of marriage, and stop calling it "hate" when it's disagreement. It would also be nice if gay activists didn't try to break into think tanks and shoot people. I think the word for refraining from doing that is "tolerance".

# Do atheists have a lower divorce rate than Christians?

**Wintery Knight** · 30 March 2014 · Archived copy · Original

In the comments, an atheist was arguing that atheists have a lower divorce rate than Christians, so I thought I would re-post this USA Today article from 2011 about that.

Excerpt:

> It's been proclaimed from pulpits and blogs for years — Christians divorce as much as everyone else in America.
>
> But some scholars and family activists are questioning the oft-cited statistics, saying Christians who attend church regularly are more likely to remain wed.
>
> "It's a useful myth," said Bradley Wright, a University of Connecticut sociologist who recently wrote "Christians Are Hate-Filled Hypocrites … and Other Lies You've Been Told."
>
> "Because if a pastor wants to preach about how Christians should take their marriages more seriously, he or she can trot out this statistic to get them to listen to him or her."
>
> The various findings on religion and divorce hinge on what kind of Christians are being discussed.
>
> Wright combed through the General Social Survey, a vast demographic study conducted by the National Opinion Research Center at the University of Chicago, and found that Christians, like adherents of other religions, have a divorce rate of about 42%. The rate among religiously unaffiliated Americans is 50%.
>
> When Wright examined the statistics on evangelicals, he found worship attendance has a big influence on the numbers. Six in 10 evangelicals who never attend had been divorced or separated, compared to just 38% of weekly attendees.
>
> […]Brad Wilcox, director of the National Marriage Project at the University of Virginia, agrees there's been some confusion.
>
> "You do hear, both in Christian and non-Christian circles, that Christians are no different from anyone else when it comes to divorce and that is not true if you are focusing on Christians who are regular church attendees," he said.
>
> **Wilcox's analysis of the National Survey of Families and Households has found that Americans who attend religious services several times a month were about 35% less likely to divorce than those with no religious affiliation.**
>
> Nominal conservative Protestants, on the other hand, were 20% more likely to divorce than the religiously unaffiliated.
>
> "There's something about being a nominal 'Christian' that is linked to a lot of negative outcomes when it comes to family life," Wilcox said.

Here's a quote from an Oklahoma State University study that confirms the Wright and Wilcox conclusions:

> History of Divorce and Religious Involvement
>
> Those who say they are more religious are less likely, not more, to have already experienced divorce. Likewise, those who report more frequent attendance at religious services were significantly less likely to have been divorced. This pattern of findings held using various analytic techniques that test which variables differentiate persons who have been divorced from persons who have not been divorced, while controlling for other variables that might affect the interpretation of the data, such as age, age of first marriage, income, and gender. When both the global rating of religiousness and the item assessing fiequency of attendance at religious services are entered into the same analysis, the attendance item remains significantly associated with divorce

> history but the global religiousness item does not. This suggests that a key aspect of how religious faith affects marital relationships may be through involvement with a community of faith.

So, please do bookmark this information for the next time you hear an atheist make this argument. Obviously, you can't expect people who are not serious about their religion to be bound by the moral duties imposed by that religion. People who attend church regularly are probably more serious about their religion, and also probably more informed about what their holy book says. If their holy book is the Bible, then there are few options for divorce.

An article from Focus on the Family by Amy Tracy explains when divorce is allowed according to the Bible.

> God is very clear, however, that He hates divorce (Malachi 2:16). He also says, "So they are no longer two, but one. Therefore what God has joined together, let man not separate" (Matthew 19:6). According to the New Testament, there are two justifications for divorce: infidelity (Matthew 5:32) and desertion (1 Corinthians 7:15).

So divorce is not something a Bible believing Christian can do for frivolous reasons, unless he wants to be in rebellion against God.

**The future of marriage in the church**

In my own case, I learned about chastity and sobriety and courting *outside* the church, and in my case that means that I am still a virgin, that I don't drink more than a beer a year, and that when I like a girl, I court her. I do think that people in the church are generally more moral than people outside the church, but that's more because of convention rather than conviction. I don't think it's going to last, in other words – it's more like a hangover. Church is not the place where reasons and evidence are given that help people to resist peer pressure when they enter hostile environments, like the university. And often, parents are too busy working to understand the issues and communicate them to their children.

I've never been in a church where they explained the hormones that are released during sex that cause you to bond to the person you're having sex with. You would have to look in books or listen to lectures in order to understand the problem with having sex with someone you are not committed to – how it causes you to hold back your emotions for fear of a break-up. The church doesn't have much to say about the social effects of single motherhood by choice or the effects of gay parenting on children. Nor do they have any positive vision to offer men about how they can serve God by marrying carefully.

Christians who participate in a church community will adopt some of these values, especially if they stay clear of popular culture, the university, etc. Especially if they don't work in a very secular environment, like a high-tech company or in Hollywood. But unless Christian communities get serious about grounding their values in evidence, I wouldn't expect this situation to go on, and you can already see young people falling away from church in record numbers when they get to university as a result of this refusal to engage. We're doing well *now*, but we should move to secure our gains.

# Is there such a thing as a pro-life Democrat?

**Wintery Knight** · 31 March 2014 · Archived copy · Original

Life News reports on a troubling story.

Excerpt:

> Democratic Governor Earl Ray Tomblin, who describes himself as pro-life and campaigned as a pro-life candidate, has vetoed a bill that would ban abortions after 20 weeks of pregnancy.
>
> […]"West Virginia's Pain-Capable Fetus Protection Act protects children from abortion beginning at 20 weeks fetal age, based on scientific evidence that by this stage of development the child would experience excruciating pain. Arizona's law, as its name implies, focused on protecting the health and safety of the mother," Balch explained.
>
> […]The states that have passed Pain-Capable bills include Nebraska, Kansas, Idaho, Oklahoma, Alabama, Georgia, Louisiana, Arkansas, North Dakota, and Texas. The Pain-Capable Unborn Child Protection Act (H.R. 1797) passed the U.S. House of Representatives on June 18, 2013, by 228-196. All three members of the West Virginia congressional delegation voted for that bill.
>
> A National Right to Life Committee poll found that 63 percent of Americans, and 70 percent of women, support a ban on post-fetal pain abortion. The same poll also found that American women, by an overwhelming majority of 62-27 percent, would be more likely to vote for lawmakers who support this bill.

Now it seems to me that a ban on abortion after 20 weeks is a no-brainer, sort of like banning sex-selection abortions or banning race-selection abortions. Those are moderate positions that everyone can agree on, and yet this so-called pro-life governor wouldn't sign the bill. Is that an exception to the way that Democrats usually do business?

**Note the first time**

But this is not the first time that Democrats have claimed to be pro-life when they actually voted pro-abortion.

Excerpt:

> It became apparent on Tuesday that former Congressman Bart Stupak (D-MI) is suffering from a bout of "voter's remorse." In March of 2010, he and a coalition of pro-life democrats made an eleventh-hour decision to vote in favor of the Affordable Care Act (ACA), with the justification that an executive order—to be issued by President Obama—would ensure that existing restrictions on federal funding for abortion would apply to the ACA.
>
> What a difference nearly 2 ½ years makes. Mr. Stupak, who in March 2010 expressed unwavering confidence in the "'ironclad' commitment" he received "from the president that no taxpayer dollars will be used to pay for abortions," is now singing a different tune about the ACA, or at least its implementation.
>
> In a Democrats for Life panel during the Democratic National Convention, Stupak expressed his disapproval of the "HHS mandate," which requires most private insurance plans to cover life-ending drugs and devices, and requires nearly all employers to offer (and pay for) the plans to their employees or pay a stiff penalty.
>
> Mr. Stupak remarked, "I am perplexed and disappointed that, having negotiated the Executive Order with the President, not only does that HHS mandate violate the Executive Order but it also violates statutory law . . . . I think it is illegal."
>
> Similarly, in November of 2011 former Congresswoman Kathy Dahlkemper (D-PA), a member of Stupak's coalition, claimed that she "would have never voted for the final version of the bill if [she] expected the Obama Administration to force Catholic hospitals and Catholic Colleges and Universities to pay for contraception."

> She argued that she and her colleagues “worked hard to prevent abortion funding in health care and to include clear conscience protections for those with moral objections to abortion and contraceptive devices that cause abortion.”

Bart’s “perplexed and disappointed”. He said that in September 2012. Before the election.

But after the election, in 2013, he said that he “did not regret” his vote for the abortion mandate in Obamacare.

So the moral of this story is simple. If you don’t like killing unborn babies, and you don’t want it on your conscience, don’t vote for so-called “pro-life” Democrats. They campaign pro-life and then vote pro-abortion.

# Matt Walsh urges everyone to avoid the “Noah” movie

**Wintery Knight** · 31 March 2014 · Archived copy · Original

This movie review on Matt Walsh’s blog should save you some money.

He writes:

> On Friday, my wife and I had a very rare date night.
>
> Naturally, we decided to spend it being pummeled by the blaring condescension of the most insipid, absurd, unimaginative, clumsily contrived piece of anti-Christian filmmaking to come along since, well, probably just last week.
>
> […]*Noah* is a major Hollywood blockbuster, made by an atheist director best known for his previous flick where a mentally disturbed lesbian ballerina goes insane and bleeds to death on stage. Already, a critical person might be slightly concerned about his handling of the Bible, considering what he just did to the ballet.
>
> These concerns grew from suspicion to reality before it was even released, when the man himself came out publicly and professed *Noah* to be both an environmentalist propaganda piece, and the “least Biblical” Bible film ever made.
>
> He wasn’t lying.
>
> But he forgot to mention that it’s also a terrible film.

Matt continues the review by through the movie and explaining the worldview they are trying to push in it. You have to read the whole post if you want the details, but the summary is that this movie has nothing at all to do with the Biblical story of Noah. It’s something that could have been made by animal rights activists and global warming alarmists.

Here is the conclusion:

> I’ve heard the movie compared to *Titanic* and *Gladiator*. Personally, I’d say it’s more of a cross between *Mutiny on the Bounty* and *The Shining*. Only far less coherent than any of them.
>
> I’ve also heard some “Christian leaders” endorse this steaming pile of heretical horse manure. I’m tempted to accuse them of being cowardly, dumb, or dishonest, but I’ll just give them the benefit of the doubt and assume they slept through the most troubling parts — like the part at the beginning, and the end, and all of the parts in between.
>
> It’s true that it might be a bit difficult to discern the “message” in a film so filled with explosions (the Bad Guys have bazookas, naturally), monsters, and infanticide, but any supposed Christian “leader” ought to try a little harder. Pay a little closer attention. If you do, you’ll see a tale that entirely perverts the nature of God, while flipping sin and immorality on its head.
>
> Aside from a brief glimpse of something that appeared to be either rape or cannibalism, wickedness is portrayed as mostly a matter of eating meat and mining the earth for resources. Noah — a righteous man in the Bible — is stripped of his righteousness in favor of obsessiveness. God is stripped of any characteristics at all, apart from vindictiveness.
>
> It’s not that ‘Noah’ strays from the text — of course it does, the actual text is only a few pages long — it’s that the movie completely and utterly distorts the message and meaning of the original story.

If you are thinking about watching this movie, I urge you to reconsider. That money would be better spent on something else. Really, anything else would be better. It’s a fine movie for people who like to see Bible stories butchered by atheists who are pushing an Earth-First environut agenda, but it’s not a good movie for

believing Jews and Christians. When an atheist director claims to have made "the least Biblical film ever made", you should believe him.

This is an issue of stewardship – why would you give your money to someone who hates your worldview, when there is no possible purpose for it other than entertainment? Be a good steward of your money and don't hand it to people who are tearing up your religion. There are plenty of better things to do with it than hand it to people who are opposed to the God of the Bible. You don't have to watch a movie just because it's new and a lot of money was spent making it.

# Fred Sanders reviews a book that makes the case for the deity of Christ

**Wintery Knight** · 31 March 2014 · Archived copy · Original

Putting Jesus in His Place

From Touchstone magazine, a review of "Putting Jesus in His Place: The Case for the Deity of Christ" by Biola University professor Fred Sanders.

Excerpt:

> The case as perceived by scholars for the deity of Christ is stronger now than it has been for a long time, and those who went through seminary more than a decade ago should take a moment to update their notes. Though the New Testament is clear about the deity of Christ, generations of modern critical scholars have picked away at the standard proofs. Here a verse, there a verse, the arguments that Christians have always relied on to demonstrate that the New Testament teaches that Jesus is God have been rendered dubious.
>
> Putting Jesus in His Place does not simply reclaim those lost passages, revisit the standard debates, and bolster the old arguments (though in many cases it does that, and persuasively); it publicizes new arguments for demonstrating the deity of Christ, which have previously been available only to scholars.
>
> The authors are ideal popularizers, each with one foot in the library and one in the local church. Robert Bowman is manager of apologetics and interfaith evangelism for the Southern Baptist Convention's North American Mission Board, while Ed Komoszewski is the founder of the educational ministry Christus Nexus and a director of Reclaiming the Mind Ministries.
>
> To help readers remember the arguments, they organize the book around the acronym "HANDS," arguing that Jesus shares God's Honor, Attributes, Names, Deeds, and Seat. The text breezes along in straightforward, popular prose—it paraphrases the Nicene homoousios as "Jesus: The Right Stuff," for example, and explains pre-existence as being "Older Than Dirt—Literally!"—with more technical matters referred to the endnotes.

If you are looking to make a case for the divinity of Jesus, you should go to the earliest sources, and try to see if Jesus has a divine self-understanding, whether he is acting in the place of God.

The book is basically one-stop shopping at a popular level for the best scholarly arguments:

> Jesus didn't so much verbalize his claim to deity, for example; he enacted it. The people of God were waiting

> for the Lord to show up in person to bring reconciliation; Jesus walked among men, healing, forgiving, and doing everything that God was supposed to do. When, on occasion, he also claimed to be more than a prophet, his claim made sense because it put into words what he was doing in the flesh.
>
> Jesus does what God does. This is the foundation for his claim to deity. N. T. Wright has recently helped his readers see this with his massive narrative arguments, and Bowman and Komoszewski boil a lot of Wright down to a manageable size.
>
> […]Readers alert to the scholarly scene will recognize that the authors reproduce at an accessible level the arguments of Richard Bauckham (particularly in God Crucified: Monotheism and Christology in the New Testament) and Larry Hurtado (in Lord Jesus Christ: Devotion to Jesus in Earliest Christianity), among others. (Bauckham and Hurtado are among the book's many endorsers.)

Wright, Bauckham and Hurtado are three of the leading historical Jesus scholars in the world. I got the book because I wanted to know about the latest research from these experts – but without having to comb through an academic book!

I have some good news, too. The book is on sale in the Kindle edition for under $2 for a limited time. If you don't have a single book on the divinity of Jesus, you cannot go wrong with this book. It's good to have one book on this issue, because it comes up a lot in conversations with skeptics. You see annoying documentaries all the time claiming that Jesus was initially viewed as just a man, and then was embellished into a divine figure later. This book helps you to answer that objection.

# Democrats freed nearly 68,000 illegal aliens with criminal convictions in 2013

**Wintery Knight** · 1 April 2014 · Archived copy · Original

From Investors Business Daily.

Excerpt:

> The federal government let nearly 68,000 illegal aliens with criminal records go free in 2013. When it's law and order vs. future votes for Democrats, we all know which wins under this administration.
>
> A new study from Washington's Center For Immigration Studies (CIS) found that the Obama administration in 2013 released 67,879 illegal aliens who had been convicted of a criminal offense — 35% of the total number of the aliens with criminal convictions encountered by law enforcement.
>
> The vast majority, the CIS report said, were due to "the Obama administration's prosecutorial discretion policies, not because the aliens were not deportable."
>
> So much for President Obama's claim last June that "today, deportation of criminals is at its highest level ever" because "we focused our enforcement efforts on criminals who are here illegally and who are endangering our communities."
>
> […]How can our government let so many criminals go instead of deporting them, as the law demands?
>
> "Eleven million people living in the shadows, I believe, are already American citizens," Vice President Joseph Biden told the Hispanic Chamber of Commerce.
>
> And the repeat crimes so many of these illegals with criminal records will commit against Americans is a perfectly acceptable price to pay, apparently, to win millions of new Democratic votes Obama's aggressive, lawless open-door immigration policies in the years ahead.

Here's an example of one of the people that Joe Biden believes is already an American citizen from National Review.

Excerpt:

> Meet 27-year-old Julio Miguel Blanco-Garcia. An illegal alien from Guatemala, he has lived and worked in Fairfax County, Va., for at least eleven years. The region is a notorious "sanctuary" for immigration lawbreakers where elected officials and big business look the other way in exchange for cheap labor and cheap votes.
>
> When he wasn't working illegally as a construction worker in the government-fueled Boomtown 'burb or getting himself high on drugs, Blanco-Garcia was building up a lengthy rap sheet. According to Fairfax County court records cited by the Fairfax City Patch.com, Blanco-Garcia has been arrested for:
>
> - Public swearing/intoxication in March 2010.
> - Petit larceny in September 2011.
> - Concealment/price alteration of merchandise in April 2012.
>
> With the feds granting blanket amnesty waivers by administrative fiat and refusing to fix the deportation abyss, coupled with brazen "don't ask, don't tell" sanctuary policies by local officials, Blanco-Garcia managed to escape detention and deportation for more than a decade. In December 2012, the Capital Area Regional Fugitive Task Force (which includes U.S. Marshals staff, Fairfax County police, U.S. Immigration and Customs Enforcement, and D.C. fugitive-operations officers) finally caught up with Blanco-Garcia. They detained him after determining "that he was in violation of U.S. immigration law."

> But it was too late for 19-year-old college freshman Vanessa Pham. In July 2010, the bubbly art student's decision to be a Good Samaritan to open-borders beneficiary Blanco-Garcia cost Pham her life. After getting her nails done at a Fairfax Plaza salon, she encountered the illegal alien and his infant daughter in the parking lot. Blanco-Garcia was strung out on $400 worth of PCP.
>
> According to prosecutors, he asked Pham to take him to the hospital. She let the man and his baby into her car. When Pham took a wrong turn, Blanco-Garcia turned on her — stabbing her more than a dozen times with a knife he was carrying. She veered into a ditch; he coldly wiped her blood off of his hands with a baby wipe and clambered out of the sunroof with the child.
>
> Cops found the blade of the murder weapon, with the killer's DNA, under Pham's seat. But for nearly three years, her friends and family agonized as the DNA remained unidentified and the case unsolved. The investigative break? Illegal-alien Blanco-Garcia continued his criminal havoc — surprise, surprise — and attempted to steal several bottles of champagne from a local grocery store. He was convicted of larceny in April 2012. By December, law enforcement had tied his fingerprints to Pham's murder. Blanco-Garcia's trial begins next week.
>
> True to form, the whitewash media have ignored Blanco-Garcia's immigration status and the public-policy implications of our government's systemic, bipartisan refusal to enforce the laws already on the books. The *Washington Post* (which employed illegal-alien reporter turned amnesty activist Jose Antonio Vargas for years and glorified the amnesty mob marches in 2006 and 2007) conveniently failed to mention Blanco-Garcia's illegal-alien status. Some crimes are more equal than others.

Here's another case where an illegal alien murdered an 18-year-old after he was offered a ride home by the victim. Again, the mainstream media ignored the story.

Which political party is more interested in protecting taxpaying citizens from criminals? Well, it's not the Democrats, that's for sure. On the one hand, they want to disarm law-abiding citizens. On the other hand they want to be lenient with illegal aliens who commit crimes against law-abiding citizens. It seems to me that government should exist to *prevent* crimes – not to grant favors to groups that they know will vote for their agenda.

Just to be clear, I favor more skilled immigration and faster naturalization of skilled immigrants who come here legally, pay their own way for some long period of time (10 years, cumulative?) and do not break the law in that time. But that's not what the Democrats are promoting here, they want the criminals to stay. Even if it means that innocent taxpayers have to die for their political plans.

# College official ridicules pro-life demonstrator who was attacked by feminist professor

**Wintery Knight** · 1 April 2014 · Archived copy · Original

What kind of people are in charge of universities that preach diversity and tolerance?

The College Fix explains.

Excerpt:

> *The College Fix* previously reported the attack on a pro-life student at the University of California, Santa Barbara. A feminist professor attacked a teenage demonstrator, and the episode was caught on video.
>
> Now, a statement released by UCSB vice-chancellor, Michael D. Young, shortly after the incident, has come to our attention. In the statement, which was released to students on March 19, Young ridicules pro-life demonstrators, calling them "evangelical types," "self-proclaimed prophets," and "anti-abortion crusaders."
>
> The peaceful pro-life demonstrators were subjected to an unprovoked attack by feminist studies professor, Mireille Miller-Young. But the vice chancellor insults the demonstrators as "proselytizers hawking intolerance" and peddlers of "fear," "hate," "intolerance," and "discord" at UCSB.
>
> Nowhere in the memo does vice-chancellor Young condemn the violent actions of his faculty member, Professor Miller-Young, which left the arms of a 16-year old girl covered with scars and abrasions.
>
> Instead, the vice-chancellor praises himself as one known for fighting on behalf of "tolerance." He touts his long record of speaking at "anti-hate events" and officiating at a "Queer wedding." Contrast that to the pro-life demonstrators who, the vice-chancellor says, come "wrapped in intolerance and extremism."
>
> With no apparent sense of irony, vice-chancellor Young reiterates his strong commitment to free speech. He directs all his criticism toward the pro-life demonstrators, and none toward the intolerant, hateful and violent liberals who attacked them.
>
> Apparently, "intolerance" at UCSB has a special meaning–and it covers any point of view that falls outside the extreme liberal groupthink of academia. If you are pro-life, you are considered intolerant. If you hold traditional religious views you are intolerant. On the other hand, if you physically attack a pro-life student, you are probably considered a noble and excellent person who simply took the struggle for good a little too far.
>
> […]In view of all the events of the past few weeks, one can reasonably come away with no other conclusion but that the strongholds of intolerance at UCSB have little to do with so-called "evangelical types," upon home UCSB's Michael D. Young seeks to place blame. Instead, at UCSB, intolerance thrives among feminist professors and senior administrators who believe that, ultimately, a liberal-progressive point of view and intent justifies any action, even, as in this case, a physical attack. Or, at least, it shields the liberal who carries out that attack from any criticism.
>
> All the criticism, as usual, is reserved for those who dare to hold pro-life views, and who dare to utter those views aloud.

I post this to show parents exactly what is waiting for their children at college. You are paying tens of thousands of dollars for sociopaths to indoctrinate your children in secularism and leftism. Not just that, but the university is also affirming of a very promiscuous sexual environment, which goes beyond ridicule into peer-pressure. If you are sending your kids in unprepared, keep in mind that the people running the show are much like Michael D. Young, and they are not shy about making sure that your kids turn out just like him.

# Gallup polls show that men are more pro-life and more pro-marriage than women

**Wintery Knight** · 1 April 2014 · Archived copy · Original

*Note: in this post, I will be addressing the views of young, unmarried women, who tend to be more liberal than married women. Married women are not being targeted in this post, because their views tend to be more pro-life and pro-marriage.*

First, abortion. The latest Gallup poll shows that men are far more pro-life than women. Men are strongly pro-life by a margin of 8 points, 50-42. Women are more pro-abortion by a margin of 1 point, 47-46.

Second, marriage. Polls show that men are far more pro-marriage than women.

Excerpt:

> A new national poll points towards a gender gap over same-sex marriage.
>
> According to new numbers released Monday morning from Gallup, 50% of Americans say same-sex marriages should be legal. But break it down by gender, and 56% of women say same-sex couples should be legally allowed to marry, but only 42% of men feel the same way.

In addition, exit polls from the 2008 and 2012 elections revealed that about 70-80 percent of young, unmarried women voted for Obama, whose views on abortion are somewhere to the left of Kermit Gosnell. And Obama supports gay marriage. Men are more likely to vote conservative than young, unmarried women, especially married men.

Now some of you may find this data about men being good very surprising. According to many people these days, all young men do is look at porn, order in pizza and leave the boxes scattered around, play video games, binge drink, live in their parents' basement, underperform at school, and fail to find jobs so they can man up and marry these pro-abortion, pro-gay marriage women. None of this bad performance is caused by institutionalized feminism, or the effects of feminism on the family. It's all just bad, bad men being bad – so were are told. But somehow, despite reports that all men are losers, they seem to have better views on abortion and marriage than women.

**What does it mean?**

Think about what it means that a young, unmarried woman is pro-abortion.

Being pro-abortion means that a men and women should be allowed to have recreational sex before marriage, and then if a baby is conceived, then they should be able to terminate that unwanted pregnancy, and send taxpayers the bill. Pro-life doctors and nurses who don't want to perform the procedure must be forced to do it, lest the selfish grown-ups feel offended. Pro-life organizations who don't want to offer abortion-inducing drugs as part of their medical insurance must be forced to provide it, lest the selfish grown-ups feel offended. Pro-life taxpayers who don't want to pay for the recreational sex risks of others must be forced to pay for them, lest the selfish grown-ups feel offended.

Now suppose a man is considering marriage to a young, unmarried woman. It's likely that she supports abortion, given what polls show and what exit polls show. Now if a woman thinks that it is OK to kill an innocent unborn child in order to avoid being burdened with that child's needs, even though she consented to the recreational sex that produced that child, then should the man marry her? I think that a man should not marry such a woman. After all, if a woman is willing to kill a baby in order to protect her happiness, then she will certainly divorce her husband to do the same. Husbands are much less innocent than babies.

Now think about what it means that a young, unmarried woman is pro-gay marriage.

Being pro-gay marriage means that two men and two women should be able to adopt children away from one or both of their biological parents and raise them. Churches who don't want to perform the wedding ceremonies must be forced to perform the wedding ceremonies, lest the selfish grown-ups feel offended. Christian companies that don't want to treat gay couples as married must be forced to treat gay couples as married, lest the selfish grown-ups feel offended. Christian taxpayers who don't want to pay for the next generation of children to be indoctrinated to believe that marriage can be between two men or two women must be forced to pay for government to indoctrinate children to believe in redefined marriage, lest the selfish grown-ups feel offended.

Now suppose a man is considering marriage to a young, unmarried woman. It's likely that she supports gay marriage, given what the polls show and what exit polls show. Now if a woman thinks that it's OK to deprive a child of a mother or of a father and expose children to a notion of marriage that deprives them of stability, sexual faithfulness and permanence, then should the man marry her? I think that a man should not marry such a woman. After all, if a woman is willing to deprive a child of a mother or a father and of the interaction between a man and a woman cooperating in marriage, then she will certainly be willing to deprive any children she has with him of his presence, since she already believes that fathers are expendable and that the selfishness of adults trumps the needs of children.

**The way forward**

What can we do to fix young, unmarried women so that they are more pro-life and more pro-marriage, like men already are? Well, men are pro-life and pro-marriage because we read pro-life and pro-marriage books and because we watch debates on abortion and marriage. Men like to focus on things like logical arguments and scientific research. Men like to see pictures of the different development stages of unborn babies and read research papers about how same-sex marriage harms children and how welfare policies encourage women to have babies out of wedlock. Men are not inclined to decide moral views based on feelings, peer opinions and popular culture. In order to make young, unmarried women more pro-life and more pro-marriage, we should try to introduce them to more books and debates and scientific evidence, so that their views will change based on what is true, not based on feelings and peer pressure and cultural trends.

# Mark D. Linville: does Darwinian evolution make morality rational?

**Wintery Knight** · 1 April 2014 · Archived copy · Original

Have you ever heard an atheist tell you that naturalistic evolution is an answer to the moral argument? I have. And I found a good reply to this challenge in the book "Contending With Christianity's Critics". The chapter that responds to the challenge is authored by Dr. Mark D. Linville. It is only 13 pages long. I have a link to the PDF at the bottom of this post.

First, a bit about the author:

> Blog: The Tavern at the End of the World
> Current positions:
>
> - PhD Research Fellow
> - Tutoring Fellow in Philosophy
>
> Education:
>
> - PhD in Philosophy with a minor in South Asian Studies and a specialization in Philosophy of Religion, University of Wisconsin-Madison
> - MA in Philosophy, University of Wisconsin-Madison
> - MA in Philosophy of Religion, Trinity Evangelical Divinity School
> - MA in Theology, Cincinnati Christian Seminary
> - BA in Biblical Studies, Florida Christian College

Here is his thesis of the essay:

> Darwin's account of the origins of human morality is at once elegant, ingenious, and, I shall argue, woefully inadequate. In particular, that account, on its standard interpretation, does not explain morality, but, rather, explains it away . We learn from Darwin not how there could be objective moral facts, but how we could have come to believe—perhaps erroneously—that there are.
>
> Further, the naturalist, who does not believe that there is such a personal being as God, is in principle committed to Darwinism, including a Darwinian account of the basic contours of human moral psychology. I'll use the term evolutionary naturalism to refer to this combination of naturalism and Darwinism. And so the naturalist is saddled with a view that explains morality away. Whatever reason we have for believing in moral facts is also a reason for thinking naturalism is false. I conclude the essay with a brief account of a theistic conception of morality, and argue that the theist is in a better position to affirm the objectivity of morality.

And here's a sample to get your attention:

> But even if we are assured that a "normal" person will be prompted by the social instincts and that those instincts are typically flanked and reinforced by a set of moral emotions, we still do not have a truly normative account of moral obligation. There is nothing in Darwin's own account to indicate that the ensuing sense of guilt—a guilty feeling—is indicative of actual moral guilt resulting from the violation of an objective moral law. The revenge taken by one's own conscience amounts to a sort of second-order propensity to feel a certain way given one's past relation to conflicting first-order propensities (e.g., the father's impulse to save his child versus his impulse to save himself). Unless we import normative considerations from some other source, it seems that, whether it is a first or second-order inclination,one's being prompted by it is more readily understood as a descriptive feature of one's own psychology than material for a normative assessment of one's

> behavior or character. And, assuming that there is anything to this observation, an ascent into even higher levels of propensities ("I feel guilty for not having felt guilty for not being remorseful over not obeying my social instincts…") introduces nothing of normative import. Suppose you encounter a man who neither feels the pull of social, paternal or familial instincts nor is in the least bit concerned over his apparent lack of conscience. What, from a strictly Darwinian perspective, can one say to him that is of any serious moral import? "You are not moved to action by the impulses that move most of us." Right. So?
>
> The problem afflicts contemporary construals of an evolutionary account of human morality. Consider Michael Shermer's explanation for the evolution of a moral sense—the "science of good and evil." He explains,
>
> By a moral sense, I mean a moral feeling or emotion generated by actions. For example, positive emotions such as righteousness and pride are experienced as the psychological feeling of doing "good." These moral emotions likely evolved out of behaviors that were reinforced as being good either for the individual or for the group.2
>
> Shermer goes on to compare such moral emotions to other emotions and sensations that are universally experienced, such as hunger and the sexual urge. He then addresses the question of moral motivation.
>
> In this evolutionary theory of morality, asking "Why should we be moral?" is like asking "Why should we be hungry?" or "Why should we be horny?" For that matter, we could ask, "Why should we be jealous?" or "Why should we fall in love?" The answer is that it is as much a part of human nature to be moral as it is to be hungry, horny, jealous, and in love.3
>
> Thus, according to Shermer, given an evolutionary account, such a question is simply a non-starter. Moral motivation is a given as it is wired in as one of our basic drives. Of course, one might point out that Shermer's "moral emotions" often do need encouragement in a way that, say, "horniness," does not. More importantly, Shermer apparently fails to notice that if asking "Why should I be moral?" is like asking, "Why should I be horny?" then asserting, "You ought to be moral" is like asserting, "You ought to be horny." As goes the interrogative, so goes the imperative. But if the latter seems out of place, then, on Shermer's view, so is the former.
>
> One might thus observe that if morality is anything at all, it is irreducibly normative in nature. But the Darwinian account winds up reducing morality to descriptive features of human psychology. Like the libido, either the moral sense is present and active or it is not. If it is, then we might expect one to behave accordingly. If not, why, then, as a famous blues man once put it, "the boogie woogie just ain't in me." And so the resulting "morality" is that in name only.
>
> **In light of such considerations, it is tempting to conclude with C. S. Lewis that, if the naturalist remembered his philosophy out of school, he would recognize that any claim to the effect that "I ought" is on a par with "I itch," in that it is nothing more than a descriptive piece of autobiography with no essential reference to any actual obligations.**

When it comes to morality, we are not interested in mere descriptions of behavior. We want to know about prescriptions of behavior, and whether why we should care about following those prescriptions. We are interested in what grounds our sense of moral obligation in reality. What underwrites our sense of moral obligation? If it is just rooted in feelings, then why should we obey our moral sense when obeying it goes against out self-interest? Feelings are subjective things, and doing the right thing in a real objective state of affairs requires more than just feelings. There has to be a real objective state of affairs that makes it rational for us to do the right thing, even when the right thing is against our own self-interest. That's what morality is – objective moral obligations *overriding* subjective feelings. I wouldn't trust someone to be moral if it were just based on their feelings.

# University of South Carolina Upstate teaching students to be lesbians with taxpayer money

**Wintery Knight** · 2 April 2014 · Archived copy · Original

From Campus Reform, a story that shows what awaits your children when they get to university.

Excerpt:

> An upcoming LGBTQ seminar at the University of South Carolina Upstate (USCU) will teach students How to Be a Lesbian in 10 Days or Less and will focus on LGBTQ cultural mores.
>
> According to the school's website, theater artist Leigh Hendrix will perform her one-woman show, **How to Be a Lesbian in 10 Days or Less**, to kick off the sixth Bodies of Knowledge Symposium and Conference.
>
> The show is a one-hour performance that follows Butchy McDyke, a motivational speaker and expert lesbian, as she "deftly guides her captive audience in an exploration of self-discovery and first love, coming out, lesbian sex, queer politics, and a really important Reba McEntire song."
>
> Hendrix encourages her audience to shout "I'm a big 'ol dyke!" in a show that is "one part instructional seminar, one part personal story, and one party wacky performance art."
>
> The symposium is funded by outside grants as well as university funds according to Dr. Lisa Johnson, the Director of the **Center for Women's & Gender Studies at USCU**.
>
> Dr. Johnson declined to discuss what percentage of the funding was coming from the university.
>
> "Until you call and ask how much money has been spent on heterosexual literature, I'm not going to answer that question," Johnson told *Campus Reform*.
>
> Earlier this month, the South Carolina House of Representatives voted to cut almost $70,000 in funding for two public universities, including $17,142 from USCU, over literature containing gay themes.

This is what your tax dollars are funding. Every time you vote for more "compassion", you are giving money to a government that *pays* leftists on campus to teach your children to vote against your American values. And your kids are not just hearing the indoctrination from professors, but the whole environment at university is set up to promote the overthrow of traditional moral values. They have organizations, like this Center for Women's & Gender Studies that promote the anti-marriage, anti-child views of the sexually-permissive left.

If you want a positive outcome for your children at college, then you need to be more careful about what they are learning in college. And you need to be more careful about preparing them for what they encounter. If you can't explain to them how traditional marriage differs from the gay lifestyle in terms of sex addiction, domestic violence, sexually-transmitted diseases, health care costs, suicide risks, relationship duration, etc. then your kids surely don't know what the difference is either. They will never hear it from anyone but you. No one else has any incentive to tell them about these things except you.

# An exchange on purpose from one of William Lane Craig's early debates

**Wintery Knight** · 2 April 2014 · Archived copy · Original

The full transcript of this 1991 debate is here on the Reasonable Faith site. Keep in mind that this is young William Lane Craig against old, experienced Kai Nielsen.

Nevertheless, here is an exchange I wanted to highlight.

William Lane Craig:

*The chief purpose of life is not happiness* per se*, but the knowledge of God.* One reason the problem of evil seems so puzzling is that we tend to think that the goal of human life is happiness in this world. But on the Christian view this is false. Man's end is not happiness as such, but the knowledge of God–which in the end will bring true and everlasting human fulfillment. Many evils occur in life which seem utterly pointless with respect to producing human happiness, but they may not be unjustified with respect to producing the knowledge of God. Innocent human suffering provides an occasion for deeper dependency and trust in God, either on the part of the sufferer or perhaps those around him. Whether God's purpose is achieved through our suffering all depends on how we freely respond.

Kai Nielsen:

The first thing you should come to recognize is that there can be purposes *in* life that are perfectly intact even if there is no purpose *to* life. If there is no God or *telos* of any sort, there is no purpose to life; you weren't made for a purpose. But even if you weren't made for a purpose, you could find plenty of purposes in life, things worth doing and having and believing and struggling for. Some religious people will say, "That's all right for little individual small purposes, but you can't have any overarching purpose in life without belief in God. You can little, fairly trivial things, but no really deep and pervading conception of a purpose in life without God." But that's not true. There are many atheists who have had such overarching purposes. They've fought relentlessly "the plague" (to use Camus' metaphor). They've sought to lessen the sum total of human suffering, of human degradation, of blighted hopes; they've positively sought to bring about a world with more happiness in it and more understanding of each other–more human flourishing, more human solidarity, a brotherhood and sisterhood. They've sought, in short, to bring about a classless, raceless, genderless world. Those big purposes – overarching purposes in life – are perfectly available to anyone who is an atheist as well as to someone who is a theist. I don't deny that believers haven't done that, but you don't *need* God to have either small purposes in life or an overarching purpose in life.

William Lane Craig:

First of all, I have never denied that you can have *subjective* purposes in life, but what I *am* arguing is that there is no *objective* basis to assume the moral worth of your purpose in life on an atheistic view. All purposes in life you choose are morally equal–whether you want to live a life as a doctor caring for the poor or choose instead to be a Ferdinand Marcos. There's no objective basis for assessing the moral worth of those purposes.

Kai Nielsen:

He says that I don't meet his objection that moral purposes *in* life all are perfectly arbitrary without God. I don't see the slightest reason for that. Some of them are arbitrary if they are silly and thoughtless purposes. Some purposes, if they are integrated, carefully thought-out, related to everything else we know, reflective (where human beings work through long traditions, including working with Christian traditions, in which you put together everything you know and think carefully about these purposes), are perfectly objective. And they are the only kind you can give much sense to.

You'll note that what counts as a good purpose on Kai's view is not objective. Every purpose that he mentioned (e.g. – genderless world) was meaningful *to him*. But do these purposes have any significance, ultimately?

Consider the heat death of the universe:

> The 'heat-death' of the universe is when the universe has reached a state of maximum entropy. This happens when all available energy (such as from a hot source) has moved to places of less energy (such as a colder source). Once this has happened, no more work can be extracted from the universe. Since heat ceases to flow, no more work can be acquired from heat transfer. This same kind of equilibrium state will also happen with all other forms of energy (mechanical, electrical, etc.). **Since no more work can be extracted from the universe at that point, it is effectively dead, especially for the purposes of humankind.**

This is how the universe ends, on atheism. No purpose achieved by any atheist matters, ultimately – the end destination is the same. Humans are going to die out individually and collectively on atheism, nothing anyone does to affect anyone else is going to change a thing. Nothing atheists do matters.

Atheists like to make much of this life being all they have, and to live it to the fullest, etc. But nothing ultimately matters if atheism is true, because the end result of the universe is the same. Nothing they do matters to them, because they're dead. Nothing they do matters to anyone else, because we're all dead. It will be as if we never existed or did anything, one way or the other.

In Christian theism, however, what you do in this life has ultimate meaning beyond our earthly lives. What you choose affects your afterlife. What you do with others affects their afterlife. Plans made with respect to that objective goal of knowing God do stand the test of time. They matter, even if they don't feel good now. If your actions help to turn someone towards God or away from God, it makes a huge difference. A difference that lasts.

# Muslims drag 25-year-old Coptic Christian woman from her car and murder her

**Wintery Knight** · 2 April 2014 · Archived copy · Original

From CNS News.

Excerpt:

> Eyewitnesses have given a harrowing account of the murder in Cairo of a young Coptic Christian woman, hauled out of her car and beaten and stabbed to death by a Muslim mob, apparently targeted because of a cross hanging from her rear-view mirror.
>
> The incident occurred in the Cairo suburb of Ain Shams after mosque prayer services on Friday, when police clashed with Muslim Brotherhood supporters angered by army chief Abdel Fattah al-Sisi's decision to run for president.
>
> An eyewitness appearing on "90 minutes," a program on the al-Mehwar satellite network, said 25-year-old Mary Sameh George was attacked in her car near a church, where she planned to deliver medicine to an ill and elderly woman.
>
> Protestors climbed onto her car, collapsing the roof, then hauled her from the vehicle, beating and mauling her – to the extent, he said, that portions of her scalp were torn off. She was stabbed multiple times, her throat was slit and when she was dead, the mob torched her car.
>
> One Coptic outlet said that according to the health ministry, the young woman had been stabbed at least a dozen times.
>
> The death of Mary Sameh George received little coverage in Egyptian newspapers.

Keep in mind that the Muslim Brotherhood was supported by the Obama administration.

Here's a story from David Limbaugh about those two women who were imprisoned in Iran in 2009 for their Christian faith. (H/T Frank Turek)

Excerpt:

> On Sunday, two remarkable Christian women, Maryam Rostampour and Marziyeh Amirizadeh, spoke at our church, describing their harrowing tale of imprisonment by the Iranian regime because of their Christian faith.
>
> Both were raised in Muslim homes in Iran but never embraced Islam. As young adults, they became Christians and met each other while studying theology in Turkey in 2005. When they returned to Iran, they began evangelizing together for several years, covertly distributing Bibles to some 20,000 people and starting two secret house churches. In March 2009, they were arrested in Tehran for promoting Christianity, which is punishable by death.
>
> The regime officially charged them with apostasy, anti-government activity and blasphemy, and they were sentenced to execution by hanging. Before being cleared of all charges and released in 2009 as a result of worldwide prayer and international pressure, they endured 259 days in Evin prison. Thereafter, they moved to the United States and wrote a book together describing their horrendous experiences, "Captive in Iran."
>
> In Evin, which is notorious "for torturing, raping and executing innocent people," they experienced brutal and humiliating treatment, poisoning and illness. They each endured solitary confinement and were interrogated once a week for eight or nine hours at a time. All the while, whether together or separated, they prayed for each other.
>
> The first week, they were horrified and prayed to be released. But soon, they came to see their presence in

> prison as an *opportunity* to witness to other prisoners, many of whom were prostitutes and addicts and "so hopeless and sad." Maryam and Marziyeh prayed for them and saw God work in their lives as they cried and confessed their sins. It became "like a church for us," said Marziyeh.
>
> […]**At any time, they could have secured their own release by simply renouncing their Christian faith, but they each emphatically refused, saying, "We will never renounce our faith." Marziyeh told one Muslim prisoner who said they were "silly" for not renouncing their faith: "Our insistence on our faith is not out of stubbornness. … I have lived with God for many years. … He is my all. We are inseparable. My life has no value without him. I love God so much that denying him would be denying my own existence. How could I ever deny something that is in every cell of my body? I would rather spend the rest of my life in prison if that's what it takes to stay close to him. I would rather be killed than kill the spirit of Christ within me."**

I blogged about them way back in July of 2009. Nice to see that there is a happy ending here, but not without costs.

Most young Christians that I speak to who come from a church background seem to have this idea that all religions are basically the same because the main goal of religions is to make people "nice". Well. Maybe instead of having their heads stuck up their butts, they should be reading stories like this to inform themselves about the real differences between Christianity and Islam in places other than their safe Western suburbs. The content of the beliefs matter, and the contents of beliefs are different between religions. Christians would rather be killed than deny their faith, and Muslims would rather kill and imprison others who have a different faith. It's not the same thing, is it?

# Media declines to report on pro-gun control Democrat arrested for arms smuggling

**Wintery Knight** · 3 April 2014 · Archived copy · Original

Dr. Glenn Reynolds writes about it in USA Today, and makes the point about media bias.

Excerpt: (links removed)

> It sounds like something out of a Hollywood thriller: Anti-terrorist politician actually running guns to terrorists. But that's precisely what's been charged in California, although with a final plot twist that Hollywood would never imagine.
>
> California State senator (and, until last week, candidate for secretary of state) Leland Yee was well-known as an anti-gun activist. Then, last week, he was indicted for, yes, conspiring to smuggle guns and rocket launchers between mobsters and terrorists in exchange for massive bribes. Some highlights, as excerpted by *San Francisco* Magazine.
>
> Yee told an FBI agent that, in exchange for $2 million in cash, he'd fill a shopping list of weapons, which he took personal responsibility for delivering, according to the indictment. He also allegedly "masterminded" a complex scheme bring illegal weapons into the country, agreeing to "facilitate" a meeting with an illegal arms dealer to arrange for the weapons to be imported via Newark, N.J. In arranging all of this, the indictment said, Yee relied on connections with Filipino terrorist groups who could supply "heavy" weapons, including the Muslim terrorists of the Moro Islamic Liberation Front. Yee allegedly noted that the Muslim terrorists had no reservations about kidnapping, extortion and murder.
>
> This all sounds like news. You've got charges of huge bribes, rampant hypocrisy, illegal weapons and even a connection with foreign terrorists — and from a leading politician in an important state.
>
> But — and here's the part Hollywood would miss — outside of local media like *San Francisco* magazine, the coverage was surprisingly muted.*The New York Times* buried the story as a one-paragraph Associated Press report on page A21, with the bland dog-bites-man headline, "California: State Senator Accused of Corruption." This even though Yee was suspended, along with two others, from the California state senate in light of the indictment.
>
> CNN, home (also until last week) of Piers Morgan, whom Yee had praised for his anti-gun activism, didn't report the story at all.

Is this surprising? Not really. After all, the Democrats are currently being investigated for smuggling assault weapons to Mexican drug cartels – weapons that were used to murder at least one Border Patrol officer. Handing guns to criminals and terrorists is normal Democrat behavior – they even shipped tanks and F-16 fighters to the Muslim Brotherhood in Egypt. When the Democrats say "gun control" they mean no guns for the good guys. Plenty of guns for the bad guys, and at taxpayer expense. Yes, they really are this crazy. And the media, of course, largely ignores it.

Let's take a look at the peer-reviewed studies.

**Peer-reviewed academic studies of media bias**

Let's take a look at peer-reviewed academic studies of media bias, and see if they confirm or falsify what Pew Research found.

Here's a UCLA study on media bias.

Excerpt:

> Of the 20 major media outlets studied, 18 scored left of center, with CBS' "Evening News," The New York Times and the Los Angeles Times ranking second, third and fourth most liberal behind the news pages of The Wall Street Journal.
>
> Only Fox News' "Special Report With Brit Hume" and The Washington Times scored right of the average U.S. voter.
>
> The most centrist outlet proved to be the "NewsHour With Jim Lehrer." CNN's "NewsNight With Aaron Brown" and ABC's "Good Morning America" were a close second and third.
>
> "Our estimates for these outlets, we feel, give particular credibility to our efforts, as three of the four moderators for the 2004 presidential and vice-presidential debates came from these three news outlets — Jim Lehrer, Charlie Gibson and Gwen Ifill," Groseclose said. "If these newscasters weren't centrist, staffers for one of the campaign teams would have objected and insisted on other moderators."
>
> The fourth most centrist outlet was "Special Report With Brit Hume" on Fox News, which often is cited by liberals as an egregious example of a right-wing outlet. While this news program proved to be right of center, the study found ABC's "World News Tonight" and NBC's "Nightly News" to be left of center. All three outlets were approximately equidistant from the center, the report found.
>
> "If viewers spent an equal amount of time watching Fox's 'Special Report' as ABC's 'World News' and NBC's 'Nightly News,' then they would receive a nearly perfectly balanced version of the news," said Milyo, an associate professor of economics and public affairs at the University of Missouri at Columbia."

Here's a Harvard University study on media bias.

Excerpt:

> The programming studied on Fox News offered a somewhat more positive picture… of Republicans and more negative one of Democrats compared with other media outlets. Fox News stories about a Republican candidate were most likely to be neutral (47%), with the remainder more positive than negative (32% vs. 21% negative). The bulk of that positive coverage went to Giuliani (44% positive), while McCain still suffered from unflattering coverage (20% positive vs. 35% negative).
>
> When it came to Democratic candidates, the picture was more negative. Again, neutral stories had a slight edge (39%), followed by 37% negative and 24% positive. And, in marked contrast from the rest of the media, coverage of Obama was twice as negative as positive: 32% negative vs. 16% positive and 52% neutral.
>
> But any sense here that the news channel was uniformly positive about Republicans or negative about Democrats is not manifest in the data."

And more from a study reported by NBC News.

Excerpt:

> MSNBC.com identified 143 journalists who made political contributions from 2004 through the start of the 2008 campaign, according to the public records of the Federal Election Commission. Most of the newsroom checkbooks leaned to the left: 125 journalists gave to Democrats and liberal causes. Only 16 gave to Republicans. Two gave to both parties.
>
> The donors include CNN's Guy Raz, now covering the Pentagon for NPR, who gave to Kerry the same month he was embedded with U.S. troops in Iraq; New Yorker war correspondent George Packer; a producer for Bill O'Reilly at Fox; MSNBC TV host Joe Scarborough; political writers at Vanity Fair; the editor of The Wall Street Journal's weekend edition; local TV anchors in Washington, Minneapolis, Memphis and Wichita; the ethics columnist at The New York Times; and even MTV's former presidential campaign correspondent.

Those are the facts.

# New study: the effects of declining marriage rates and lower salaries for men

**Wintery Knight** · 3 April 2014 · Archived copy · Original

First, let's remember that Obama's massive trillion dollar stimulus program was designed to help women, not men, even though men had a higher unemployment rate than women when it was enacted.

Christina Hoff Sommers explained it in the Weekly Standard.

Excerpt:

> A "man-cession." That's what some economists are starting to call it. Of the 5.7 million jobs Americans lost between December 2007 and May 2009, nearly 80 percent had been held by men. Mark Perry, an economist at the University of Michigan, characterizes the recession as a "downturn" for women but a "catastrophe" for men.
>
> Men are bearing the brunt of the current economic crisis because they predominate in manufacturing and construction, the hardest-hit sectors, which have lost more than 3 million jobs since December 2007. Women, by contrast, are a majority in recession-resistant fields such as education and health care, which gained 588,000 jobs during the same period. Rescuing hundreds of thousands of unemployed crane operators, welders, production line managers, and machine setters was never going to be easy. But the concerted opposition of several powerful women's groups has made it all but impossible. Consider what just happened with the $787 billion American Recovery and Reinvestment Act of 2009.
>
> […]The National Organization for Women (NOW), the Feminist Majority, the Institute for Women's Policy Research, and the National Women's Law Center soon joined the battle against the supposedly sexist bailout of men's jobs. At the suggestion of a staffer to Speaker of the House Nancy Pelosi, NOW president Kim Gandy canvassed for a female equivalent of the "testosterone-laden 'shovel-ready' " terminology. ("Apron-ready" was broached but rejected.) Christina Romer, the highly regarded economist President Obama chose to chair his Council of Economic Advisers, would later say of her entrance on the political stage, "The very first email I got . . . was from a women's group saying 'We don't want this stimulus package to just create jobs for burly men.' "
>
> […]Our incoming president did what many sensible men do when confronted by a chorus of female complaint: He changed his plan. He added health, education, and other human infrastructure components to the proposal. And he tasked Christina Romer and Jared Bernstein, Joseph Biden's chief economist, with preparing an extraordinary report that calculated not only the number of jobs the plan would likely create, but the gender composition of the various employment sectors and the division of largess between women and men.
>
> Romer and Bernstein delivered "The Job Impact of the American Recovery and Reinvestment Plan" on January 10. They estimated that "the total number of created jobs likely to go to women is roughly 42 percent." Lest anyone miss the point, they added that since women had held only 20 percent of the jobs lost in the recession, the stimulus package now "skews job creation somewhat towards women."

But in the lower quintiles, women can do a lot better for themselves and their children by getting married before having children. The second income makes a big difference. But what if men's incomes go down, and their unemployment rate goes up?

The left-leaning Atlantic explains how it works.

Excerpt:

> The good news, trumpeted in *Women's Work,*the latest report from the Pew Economic Mobility Project, is that dramatic increases in women's labor-force participation have boosted the "financial security and mobility" of

> millions of families across America since 1970. The bad news is that growing economic opportunities for women have not translated into more family income for poor and working-class families at the lower end of the income ladder.
>
> […]What accounts for the paradox that women's income is rising across the board yet family income is falling for the bottom 40 percent of families? Mainly, to paraphrase [feminist] Hanna Rosin, the end of marriage and men in working-class and poor communities across the nation, coupled with the fact that maternal labor-force participation has plateaued since the 1990s. That is, a dramatic retreat from marriage, declines in men's employment and income, and a leveling off of maternal labor-force participation have all combined to limit the income available to lower-income families, and to offset the increases in women's income documented in this new report.
>
> […]One reason that lower-income families are losing economic ground is that gains in women's income have been offset by declines in marriage among the poor and working class. As the figure below indicates, more than half of these families are headed by just one parent—typically a single mother. Lacking the income of two parents, or the income of a father, these single-parent families are much less likely to reap the benefits of increases in income that have accrued to today's working women.
>
> […]Another major factor holding back families financially in the bottom 40 percent are declines in men's income. Consistent with Rosin's thesis, which argues that many men in the United States are seeing their economic fortunes erode, the graph below indicates that men's personal income has fallen across most groups, but particularly among working-class and poor men. So, one more reason that family income has declined for poor and working-class families is that husbands and boyfriends have less dough to put on the table than they once did. This is particularly important because, even today, as the Pew report notes, men's wage rates in couple-headed families are almost "twice as important as those of their female partners for boosting family income."

So if you want to help poor women, here are two things that you should do. First, you should help men get better educations so they can get good-paying jobs, even at the low end of the job market. Second, we should be encouraging women to marry in order to get that second income (or only income, if it's high enough) in order to help make ends meet. Unfortunately, the Democrats are opposed to both.

# William Lane Craig explains the moral argument to Georgia Tech students and faculty

**Wintery Knight** · 3 April 2014 · Archived copy · Original

This video has 3 parts, as well as questions and answers in individual clips.

For those who cannot watch the video, you can grab the MP3 file of the lecture, or read this essay by Dr. Craig which covers exactly the same ground as the video. The essay is for Christians already familiar with basic apologetics.

Part 1 of 3:

Part 2 of 3:

Part 2 of 3:

If you want to show this lecture and Q&A to your apologetics group, you can find the DVD here.

You can also read a debate transcript where Dr. Craig puts his ideas to the test, against Dr. Richard Taylor.

# No self-defense at Fort Hood: another shooting in another gun-free zone

**Wintery Knight** · 4 April 2014 · Archived copy · Original

Investors Business Daily explain why it happened twice in the same place.

Excerpt:

> Another tragedy at Fort Hood is compounded by the absurdity of well-trained and disciplined soldiers told to "shelter in place" until the police arrive.
>
> [..]It is… a grim echo of its predecessor, which was an act of terrorism called "workplace violence." And to this day, the commander in chief calls Maj. Nidal Hasan's Nov. 5, 2009, rampage in which 13 were murdered and 32 wounded "workplace violence."
>
> In that tragedy, Hasan, a self-proclaimed "Soldier of Allah," shouted "Allahu Akhbar" and opened fire on dozens of U.S. civilians and soldiers who were unarmed and unable to fire back. Then, as now and in the Sept. 16, 2013, mass shooting at the Washington Navy Yard, military personnel trained to defend themselves were unable to do so and had to wait until the police arrived.
>
> […]Because of the nonsensical policy, terrorists or the mentally unstable would face more return fire if they began shooting at a Texas Wal-Mart than they would face at Fort Hood, home of the heavily armed and feared 1st Cavalry Division. During the second attack in five years at Fort Hood, soldiers were again forced to run from a violent and armed perpetrator.

I would say that there would not even *be* any attacks at Fort Hood if people were allowed to concealed carry their own firearms. Who the heck would be stupid enough to start shooting an an army post if the people there could actually carry weapons?

This article from National Review shows that multiple-victim public shootings are common in gun-free zones.

Excerpt:

> Gun-free zones have been the most popular response to previous mass killings. But many law-enforcement officials say they are actually counterproductive. "Guns are already banned in schools. That is why the shootings happen in schools. A school is a 'helpless-victim zone,'" says Richard Mack, a former Arizona sheriff. "Preventing any adult at a school from having access to a firearm eliminates any chance the killer can be stopped in time to prevent a rampage," Jim Kouri, the public-information officer of the National Association of Chiefs of Police, told me earlier this year at the time of the Aurora, Colo., Batman-movie shooting. Indeed, there have been many instances — from the high-school shooting by Luke Woodham in Mississippi, to the New Life Church shooting in Colorado Springs, Colo. — where a killer has been stopped after someone got a gun from a parked car or elsewhere and confronted the shooter.
>
> Economists John Lott and William Landes conducted a groundbreaking study in 1999, and found that a common theme of mass shootings is that they occur in places where guns are banned and killers know everyone will be unarmed, such as shopping malls and schools.
>
> I spoke with Lott after the Newtown shooting, and he confirmed that nothing has changed to alter his findings. He noted that the Aurora shooter, who killed twelve people earlier this year, had a choice of seven movie theaters that were showing the Batman movie he was obsessed with. All were within a 20-minute drive of his home. The Cinemark Theater the killer ultimately chose wasn't the closest, but it was the only one that posted signs saying it banned concealed handguns carried by law-abiding individuals. All of the other theaters allowed the approximately 4 percent of Colorado adults who have a concealed-handgun permit to enter with their

> weapons.
>
> “Disarming law-abiding citizens leaves them as sitting ducks,” Lott told me. “A couple hundred people were in the Cinemark Theater when the killer arrived. There is an extremely high probability that one or more of them would have had a legal concealed handgun with him if they had not been banned.”
>
> Lott offers a final damning statistic: “With just one single exception, the attack on congresswoman Gabrielle Giffords in Tucson in 2011, every public shooting since at least 1950 in the U.S. in which more than three people have been killed has taken place where citizens are not allowed to carry guns.”
>
> There is no evidence that private holders of concealed-carry permits (which are either easy to obtain or not even required in more than 40 states) are any more irresponsible with firearms than the police. According to a 2005 to 2007 study by researchers at the University of Wisconsin and Bowling Green State University, police nationwide were convicted of firearms violations at least at a 0.002 percent annual rate. That’s about the same rate as holders of carry permits in the states with “shall issue” laws.

Here’s Dr. John R. Lott to explain why gun-free zones should really be called “helpless victim zones”.

Excerpt:

> Contrary to public perception, Western Europe, most of whose countries have much tougher gun laws than the United States, has experienced many of the worst multiple-victim public shootings. Particularly telling, all the multiple-victim public shootings in Western Europe have occurred in places where civilians are not permitted to carry guns. The same is true in the United States: All the public shootings in which more than three people have been killed have occurred in places where civilians may not legally bring guns.
>
> Look at recent history. Where have the worst K–12 school shootings occurred? Nearly all of them in Europe. The very worst one occurred in a high school in Erfurt, Germany, in 2002, where 18 were killed. The second-worst took place in Dunblane, Scotland, in 1996, where 16 kindergartners and their teacher were killed. The third-worst, with 15 dead, happened in Winnenden, Germany. The fourth-worst was in the U.S. — Columbine High School in 1999, leaving 13 dead. The fifth-worst, with eleven murdered, occurred in Emsdetten, Germany.
>
> It may be a surprise to those who believe in gun control that Germany was home to three of the five worst attacks. Though not quite as tight as the U.K.’s regulations, Germany’s gun-control laws are some of the most restrictive in Europe. German gun licenses are valid for only three years, and to obtain one, the person must demonstrate such hard-to-define characteristics as trustworthiness, and must also convince authorities that he needs a gun. This is on top of prohibitions on gun ownership for those with mental disorders, drug or alcohol addictions, violent or aggressive tendencies, or felony convictions.
>
> The phenomenon is not limited to school attacks. Multiple-victim public shootings in general appear to be at least as common in Western Europe as they are here.

Dr. Lott then lists about two dozen incidents – all occurring in gun free zones.

# Mozilla claims to be inclusive but forces pro-marriage CEO Brendan Eich to step down

**Wintery Knight** · 4 April 2014 · Archived copy · Original

This article from Townhall by Guy Benson is a must-read.

Excerpt:

> Eich is out on his ear for the unpardonable sin of subscribing to a moral and political belief so mean-spirited and close-minded that it was shared by President Obama back when the fateful contribution was made. (Obama was never actually against gay marriage, but it was his public stance for awhile). Indeed, a majority of California voters endorsed Proposition 8 that year, including substantial majorities of Hispanics and African-Americans. When Eich's private beliefs recently came to light, online petitioners demanded that he either renounce them or be fired. Think about that. "Renounce your beliefs and agree with us, *or else*" is not a sentence that should be uttered lightly, if ever, in a free society. Scalp collected, and message received. They didn't even seriously allege — let alone try to prove — that Eich's tenure as CEO would be marked by discrimination in any way. It was his mere presence that was intolerable. An appeal to reason from one of Eich's gay colleagues evidently fell on deaf ears:
>
> Mozilla's Education Lead Christie Koehler, **who is gay**, also defended the company in a blog post, despite stressing that she was "disappointed" to learn that Eich had made donations in support of Prop 8. "Certainly it would be problematic if Brendan's behavior within Mozilla was explicitly discriminatory … I haven't personally seen this (although to be clear, I was not part of Brendan's reporting structure until today)," she wrote. "**To the contrary, over the years I have watched Brendan be an ally in many areas and bring clarity and leadership when needed**."
>
> Ah, but who needs "clarity and leadership" in a CEO when there are ideological conformity tests to satisfy? Upon Eich's departure, Mozilla issued a statement expressing their support of "free speech and equality," with no apparent trace of irony. Gay rights organization GLAAD was even less self-aware in its official response:
>
> Mozilla's strong statement in favor of equality today reflects where corporate America is: **inclusive, safe, and welcoming to all.**
>
> Inclusive and welcoming to all…unless you're a hateful "bigot" who disagrees with us on the definition of marriage — in which case, get the hell out.

[UPDATE: Link to PJ Tatler story removed, and title of this post changed]

Let's take a look at one case of fascism in detail.

**Frank Turek, too**

You might remember that this happened to well-known Christian apologist Frank Turek when he spoke at Cisco.

Excerpt:

> In 2008, Dr. Turek was hired by Cisco to design and conduct a leadership and teambuilding program for about fifty managers with your Remote Operations Services team. The program took about a year to conduct, during which he also conducted similar sessions for another business unit within Cisco. That training earned such high marks that in 2010 he was asked to design a similar program for about 200 managers within Global Technical Services. Ten separate eight-hour sessions were scheduled.
>
> The morning after completing the seventh session earlier this year, a manager in that session —who was one of the better students in that class—phoned in a complaint. It had nothing to do with content of the course or how it was conducted. In fact, the manager commented that the course was "excellent" as did most who

> participated. His complaint regarded Dr. Turek's political and religious views that were never mentioned during class, but that the manager learned by "googling" Dr. Turek after class.
>
> The manager identified himself as gay and was upset that Dr. Turek had written this book providing evidence that maintaining our current marriage laws would be best for the country. Although the manager didn't read the book, he said that the author's view was inconsistent with "Cisco values" and could not be tolerated. (Dr. Turek is aware of this because he was in the room when his call came in.) The manager then contacted an experienced HR professional at Cisco who had Dr. Turek fired that day without ever speaking to him. The HR professional also commended the manager for "outing" Dr. Turek.
>
> This firing had nothing to do with course content—the program earned very high marks from participants. It had nothing to do with budget constraints—the original contract was paid in full recently. A man was fired simply because of his personal political and religious beliefs—beliefs that are undoubtedly shared by thousands of your very large and diverse workforce.

When I meet people at lectures, debates and conferences, the first question they ask me is why I have an alias. This case explains why. It's much harder to get a job or a promotion when people on the secular left can just search the Internet for all your views and rule you out – or have you fired. It doesn't matter if you are using peer-reviewed data to make your case, as I do. They don't care about facts, they just want you to stop disagreeing with them and start celebrating their views.

You absolutely have to have an alias if you are a man who expects to provide for a family. And don't take chances – save everything you make for that day when they find out who you really are, so you can go down fighting.

# New study: Noah's ark could float with two of each of 35,000 species

**Wintery Knight** · 4 April 2014 · Archived copy · Original

From the Australian Telegraph.

Excerpt:

> The students from the Department of Physics and Astronomy at the University of Leicester who came to this conclusion used the dimensions for the boat that were given in the Bible.
>
> In the book of Genesis, Noah is commanded to build an ark which is 300 cubits long, 50 cubits wide and 30 cubits high to house himself, his family and two of every species of animal.
>
> For the study, the students settled on a cubit being 48.2cm long and found the ark could support the weight of 2.5 million sheep. The university said that previous research suggested there were approximately 35,000 species of animals in Noah's time.
>
> The students said it was not clear if all the animals would actually be able to fit on board. But if they did, the boat would still float.
>
> Student Thomas Morris, 22, said: "You don't think of the Bible necessarily as a scientifically accurate source of information, so I guess we were quite surprised when we discovered it would work. We're not proving that it's true, but the concept would definitely work."
>
> The full paper, *The animals float two by two, hurrah*!, was published in a peer-reviewed student journal.
>
> Research lead Oliver Youle, 22, explained the science behind the study.
>
> "Every object when immersed in a liquid has an upwards force acting against it — a buoyancy force; it also has a weight acting downwards — a downwards force, and in order for it to float, these two forces need to be equal."
>
> His colleague Benjamin Jordan added: "Using the dimensions of the ark and the density of the water, we were able to calculate its buoyancy force, which, according to Archimedes' principle, is equal to the weight of the volume of fluid the object displaces. This meant we were then able to estimate the total mass the ark could support before the gravitational weight would overcome the buoyancy force, causing the ark to sink, which we calculated as 50.54x106kg."

Good news for us who accept the flood story as historical, and I do. And it's nice to see scientists taking a look at these things in the Bible to see if they are true. Most people these days seem to sort of assume that everything in the Bible is just figurative metaphors. Well, sometimes the genre is not historical… and sometimes it is. It depends on the book. One thing is for sure – if the Bible is not true, then it's of no value. The point of it is not to read it for comfort or community. The purpose of it is to tell us who God is and what he's done.

Please don't get into a young-Earth vs Old-Earth dispute in the comments.

# Christians in China form human shield around church after demolition threat

**Wintery Knight** · 5 April 2014 · Archived copy · Original

From the UK Telegraph.

Excerpt:

> Thousands of Chinese Christians have mounted an extraordinary, round-the-clock defence of a church in a city known as the 'Jerusalem of the East' after Communist Party officials threatened to bulldoze their place of worship.

> In an episode that underlines the fierce and long-standing friction between **China's** officially atheist Communist Party and its rapidly growing Christian congregation, Bible-carrying believers this week flocked to the Sanjiang church in Wenzhou hoping to protect it from the bulldozers.
>
> Their 24-hour guard began earlier this week when a demolition notice was plastered onto the newly-constructed church which worshippers say cost around 30 million yuan (£2.91 million) and almost six years to build.
>
> Officials claimed the church had been built illegally and used red paint to daub the words: "Demolish" and "Illegal construction" onto its towering facade.

> The threat triggered a furious reaction in Wenzhou, a booming port city known for its vibrant Christian community, said to be China's largest.
>
> Hundreds of people, including elderly and in some cases disabled women, have now occupied the church to prevent demolition teams moving in.
>
> […]Wenzhou, a wealthy coastal city around 230 miles south of Shanghai in Zhejiang province, has around seven million residents. Local Christians claim as many as 15 per cent of them are church goers, the majority Protestant.

Some of the comments made by the Chinese Christians are quite moving. I was encouraged that Christians on the other side of the planet were willing to risk their lives to defend their church. I prayed about the Christian church in China on Friday night. I hope that God is watching over them.

# Cold Case Christianity podcast talks about lack of authenticity in the church

**Wintery Knight** · 6 April 2014 · Archived copy · Original

On Saturday, I got a chance to listen to the latest episode of the Cold Case Christianity podcast, and the whole thing was solid. This is one you definitely do not want to miss. I wanted to summarize the first topic of three because it's something that's been coming up a lot lately, but topics 2 and 3 are worth listening to, as well.

You can grab the MP3 file here.

Topic #1: Why are young people leaving church?

- problem: not convinced Christianity is true
- problem: apparent conflict with science
- problem: unanswered questions
- problem: difficulties inside the church
- problem: the church's (correct) position on same-sex marriage

Jim's claim: if people do not think that the Bible is accurate and divinely inspired, then they are going to be tempted to pick and choose what to believe and what not to believe

Jim reads a blog post from a young lady who attends church, and here are *her* top problems with the church:

1. you can't ask questions
2. you can't voice your doubts
3. you can't explain your struggles
4. you can't confess your sins
5. you can't confide your fears

And she wants the leadership to be real and open about these things as well.

Wallace says that there here are two main problems that teens run into at college:

1. intellectual skepticism
2. selfish desires, especially in sexual areas

It's aggravated by the hostile university setting (skeptical professors), and a culture of drinking and sex.

The university culture is offering you a worldview that makes your selfish desires more permissible and normal. Unless people have a compelling reason not to reject that, they won't reject it. It's the path of least resistance to conform to the expectations of your peers and professors. Our aim should be to provide young people with evidence before they face the skepticism in college.

Another major problem facing young people is the Christian position on homosexuality and gay marriage. Christian teachings on sexuality in general are viewed with suspicion, and these things are not discussed or debated in the church. One way to respond to this is to defend the reliability of Scripture. (Note: I think another way to respond is to give *secular reasons* for what the Bible teaches, and to help young people link their decisions about sexuality with their larger life plan).

Topic 2 was about objective vs cultural moral standards, and topic 3 was about whether different denominations differ in essentials or in peripheral issues.

**My thoughts on topic #1**

This week I've been spending time with a younger Christian discussing apologetics with her and we have had some different life experiences and she sometimes asks me to explain what happened. So I've been telling about some of the problems I had trying to map what the Bible says onto real life. I'm not going to post them here, but there were definitely problems dealing with my parents, my peers in school, my co-workers and church people. I kept trying to do good things, like trying to talk about my faith at work, and sometimes, very unexpected things happened to me. So telling about these struggles does convey the sort of seriousness that I think is lacking in the church environment.

So my point here is this. If you are dealing with young people, it might be a good idea to not gloss over these problems and keep everything at the surface level. Talk to them about what a Christian life should look like and the struggles you had trying to live it out. Talk to them about their plans, and how different decisions are going to affect those plans. Talk to them about their grades. Talk to them about their future profession. Talk to them about apologetics. Talk to them about politics and economics, so they know how to vote for their futures. Basically, they should have the idea that you are interested in whether Christianity is true or not, and that you are interested in them make some sort of plan to serve God and making the decisions they need to get there. You should tell young people your plan and how you are funding it and working on it, in order to prod them to make their own plan.

So if the problem is perceived lack of authenticity, then the solution is to talk to young people like grown ups and give them insight. This is my plan to serve God. This is my plan for my marriage. This is why I think Christianity is true. This is what I want my kids to end up like. This is what I want my wife to do. This is how I intend to fund all this. These are the laws/public policies that help/hurt my plan. These are the problems and struggles I've had implementing my plan. Here is an area where my sinfulness is really messing up my plan. When I talk to other Christians, we talk about these issues relevant to my plan.

It's this kind of frank talk about what you are trying to do (and what role self-control plays in your plans) that helps young people to get serious about their beliefs. Don't reduce the whole religion to rituals and feelings – it's a mistake.

# Mary Eberstadt: why Christians should promote policies that strengthen marriage

**Wintery Knight** · 6 April 2014 · Archived copy · Original

Here's an interesting post about a new book by Mary Eberstadt. The post is written by historian Benjamin Wiker.

Excerpt:

> As the West has become increasingly secularized, the loss of faith has coincided with the destruction of the natural family. The sexual revolution, higher and higher rates of divorce, cohabitation, same-sex marriage—all have combined to make life-long man-woman marital unions an increasing rarity.
>
> Clearly, the rejection of God has led to a rejection, or radical redefinition, of the family.
>
> But in her *How the West Really Lost God*, Mary Eberstadt bids her readers to look at things from the other end as well. The "decline of the natural family" in the West is not only the effect of the loss of faith, but the cause as well: "the ongoing deterioration of the natural family has both accompanied and accelerated the deterioration in the West of Christian belief."
>
> Briefly put, "family decline…helps to power religious decline."
>
> One affects the other because the two go together, argues Eberstadt, like the spiral ladder of the double helix. The fortunes of family and faith correlate, and causation goes both ways. Across the board, regardless of social status or income, the religious tend to have more children than the secular-minded. And the more children a couple has, the more likely they are to go to church.
>
> But that means, of course, that those who are most secular are least likely to have children, and those who are unmarried and/or have no children are least likely to be religious.
>
> That correlation explains the precipitous decline in the birth rate for the most secularized countries of Europe, but allows us to see it in a new light. It is not just that secularization has led to plummeting birth rates in Europe. *Europe's demographic collapse is actually speeding up its secularization*.
>
> This is not a correlation that exists only in recent history. The French Revolution gave the West the first self-consciously secular government at the end of the 1700s, and one of its first revolutionary acts was to liberalize its marriage laws. But what people may not realize, was that France was the first country in Europe to experience a decline in fertility rates within marriage, and an increase in cohabitation and illegitimacy, decades *before* the French Revolution. In the early 1700s, over a half century before the Revolution, illegitimacy was only at 1%, but by the storming of the Bastille, which ushered in the Revolution, France's illegitimacy rate had climbed to 20% overall, with a 30% rate in the boiling pot of Paris. The French Revolution's successful attack on Christianity, and the consequent secularization of France, was, in part, the result of the prior erosion of the family.
>
> We see the same pattern in the UK, argues Eberstadt. "In Britain…the decline in births started a century later [than in France] at the very height of Victorian England,…Bit by bit…the same family trends already established in France—fewer births, more divorces, more out-of-wedlock births—also began reshaping the world of Britain. By our own time, over half of all children in Britain are born to unmarried people, and the fertility rate stands at 1.91 children per woman." Not surprisingly, Britain's churches are, like those of France, largely empty.
>
> In the Scandinavian countries, like Sweden, where marriage rates are lowest, and divorce, cohabitation, and single-family households, and out-of-wedlock births are the highest, we find the greatest degree of secularization.
>
> The obvious lesson we must draw, says Eberstadt, is "Vibrant families and vibrant religion go hand in hand."
>
> America is no exception. On the positive side, the baby boom after World War II brought with it a kind of

> “boom” in religious practice in the US.
>
> But the negative side of the correlation between family and faith is now more evident. Eberstadt quotes the findings of sociologist W. Bradford Wilcox, “The recent history of American religion illuminates what amounts to a sociological law: The fortunes of American religion rise with the fortunes of the intact, married family.”

Now here’s the part that I think is interesting. When you walk into a church, you will find very little, if any, education about the kinds of policies that cause marriages to actually not happen or actually break up. The trouble is that most pastors are so focused on reading the Bible, and only the Bible, that they have no idea what sorts of policies and incentives cause people to not marry or to not stay married. In order to know that, they would have to be reading outside the Bible, in the scientific literature, and then communicating that knowledge to their flocks to get them to make better decisions and to vote more intelligently.

I think that we need to read more widely in order to know how to reach our goals (promoting marriage, in this case) in a practical way. What can we say to people to show them how to get to marriage? What decisions should they be making now, in order to be ready for marriage later? What policies should we be supporting to nudge people towards marriage? What policies should we be against that make it easier for people to dispense with marriage?

# Democrat “Champion for Change” indicted for immigration fraud

**Wintery Knight** · 7 April 2014 · Archived copy · Original

Bonnie M. Youn

Story from Breitbart News. (H/T ECM)

Excerpt:

> An amnesty advocate that President Barack Obama’s White House publicly promoted as part of its “Champion of Change” series has been indicted in federal court on charges of fraud.
>
> Bonnie M. Youn, who Obama’s White House touts on its website as “a recognized Asian American & Pacific Islander (AAPI) community leader in Georgia,” was indicted on three criminal charge counts in the U.S. District Court for the Northern District of Georgia Atlanta Division on April 1, according to publicly filed court documents.
>
> The first indictment count alleges Youn committed perjury with regard to an alien illegally in the United States. The second indictment count alleges that Youn violated a federal immigration law that prohibits bringing illegal aliens into the United States and harboring them, alleging she did so “for the purpose of commercial advantage and private financial gain.” The third indictment count alleges Youn illegally tampered with witness testimony, specifically alleging she influenced the illegal alien—whose identity is kept anonymous in the indictment—to provide false information about employment in the United States to federal agents.
>
> The indictment, signed by U.S. Attorney Sally Quillian Yates and two Assistant U.S. Attorneys, indicates that Youn’s alleged illegal activity began “on or about February 9, 2009,” just as President Obama took office at the beginning of his first term and before she was honored by the White House. The third indictment count says that the alleged witness tampering began on or about August 15, 2011.
>
> An arrest warrant was filed for Youn Tuesday.
>
> […]According to a press release from the National Asian Pacific American Bar Association (NAPABA), Youn received the White House honor from President Obama in late March 2013. “Today, the White House honored 10 individuals with the Cesar Chavez Champions of Change Award,” the press release, dated March 26, 2013, reads. “Among the 10 honorees is Bonnie M. Youn, who is a member of the National Asian Pacific American Bar Association (NAPABA).”

One of the things that really bothers me about the Obama administration’s fascination with amnesty is that people

think that they are for immigrants. As far as I can tell, the Obama administration has done nothing to streamline the legal immigration process for immigrants who pay taxes and stay out of trouble with the law. Concern for skilled immigrants is typically something that Republicans champion. Skilled immigrants are not a concern for Democrats, because they pay taxes, and are therefore more likely to favor lower taxes and limited and government than illegal immigrants.

# Theistic evolutionists and the two-platoon strategy

**Wintery Knight** · 7 April 2014 · Archived copy · Original

What should we make of theistic evolutionists telling us that you can *believe* in God, while still *knowing* that matter, law and chance explain the full development of all of life?

Consider this quotation from Phillip E. Johnson.

Quote:

> The National Academy's way of dealing with the religious implications of evolution is akin to the two-platoon system in American football. When the leading figures of evolutionary science feel free to say what they really believe, writers such as Edward O. Wilson, Richard Dawkins, Daniel Dennett, Carl Sagan, Steven Pinker, Stephen Jay Gould, Richard Lewontin and others state the "God is dead" thesis aggressively, invoking the authority of science to silence any theistic protest. That is the offensive platoon, and the National Academy never raises any objection to its promoting this worldview.
>
> At other times, however, the scientific elite has to protect the teaching of the "fact of evolution" from objections by religious conservatives who know what the offensive platoon is saying and who argue that the science educators are insinuating a worldview that goes far beyond the data. When the objectors are too numerous or influential to be ignored, the defensive platoon takes the field. That is when we read those spin-doctored reassurances saying that many scientists are religious (in some sense), that science does not claim to have proved that God does not exist (but merely that he does not affect the natural world), and that science and religion are separate realms which should never be mixed (unless it is the materialists who are doing the mixing). Once the defensive platoon has done its job it leaves the field, and the offensive platoon goes right back to telling the public that science has shown that "God" is permanently out of business. (The Wedge of Truth, IVP 2000, pp. 88-89).

So what naturalistic scientists believe is that God didn't do anything to create the diversity of life – that nature does all of its own creating. In fact, it doesn't matter if the best naturalistic explanation is improbable or implausible – scientists *must* bitterly cling to materialistic explanations of natural phenomena.

The problem for these scientists is that they are taxpayer-funded, and religious people don't like paying to have scientists shoehorn reality into a pre-supposed naturalistic framework. Sometimes, religious people get annoyed about being told that sparking gases can create functional proteins. And sometimes, religious people get annoyed about being told that the universe oscillates eternally despite observations that falsify that speculative theory. And sometimes, religious people get annoyed about being told that there are as yet undiscovered fossilized precusors to the Cambrian era fossils.

Naturalists think that opposition to these lame naturalistic theories only ever be religiously-motivated. They cannot accept that people might question their naturalistic just-so stories on scientific grounds. So what do the naturalists do when faced with scientifically-motivated dissent that *they think* is religiously motivated? Well, they trot out "religious" scientists. These "religious" scientists claim to have a deep personal faith in God, and a belief in miracles. But these religious scientists believe that what actually happened is that law, matter and chance did all the creating of life. This is the "second platoon". They are sent out to mislead the public by talking about their personal faith, and what God could and couldn't do, and how evolutionists can believe in God without any evidence of intelligent causes in the history of life. The one question they most want to avoid is whether science, done in the ordinary naturalistic way, can discover evidence of intelligent agency in the history of the development of life.

Now, take a look at this article by Jay Richards. He cites some theistic evolutionists.

Excerpt:

> Biologist Ken Miller:
>
> For his part, [Ken] Miller, a biologist, has no qualms about telling us what *God* would do: "And in Catholicism, he said, God **wouldn't** micromanage that way. 'Surely he **can** set things up without having to violate his own laws.'"
>
> I am unaware of any tenet of Catholic theology that requires God not to micromanage. It is, however, a tenet of deism.

Got that? What really happened is that God didn't do anything. How does he know that? From the science? No. Because he assumes naturalism. Oh, it's true that he *says* that God is lurking somewhere behind the material processes that created life. But God's agency is *undetectable* by the methods of science. And he is hoping that you will accept his subjective pious God-talk as proof that a fundamentally atheistic reality is somehow reconcilable with a robust conception of theism.

More from Richards:

> Then we get Stephen Barr offering his private definition of "chance."

> It **is possible** to **believe** simultaneously in a world that is shaped by chance and one following a divine plan. "God is in charge and there's a lot of accident," said Barr, also a Catholic. "It's all part of a plan. . . . God **may have** known where every molecule was going to move."

What does Barr really believe? He believes that what science shows is that nature created life without any interference by an intelligent agent. Barr then offers believers his subjective pious God-talk to reassure them that evolution is compatible with religion. He has a *personal belief* – NOT BASED ON SCIENCE – that the material processes that created all of life are "all part of a plan". He cannot demonstrate that from science – it's his *faith commitment*. And more speculations: "God may have known…". He can't demonstrate that God did know anything *from science*. He is just offering a personal opinion about what God "could have" done. The purpose of these subjective opinions is to appease those who ask questions about what natural mechanisms can really create. Can natural causes really account for the development of functional proteins? Never mind that – look at my shiny spiritual-sounding testimony!

That's theistic evolution. What really happened is that no intelligent causes are needed to explain life. What they say is "God could" and "God might" and "I believe" and "I attend this church" and "I received a Christian award" and "I believe in miracles too". None of these religious opinions and speculations are scientifically knowable – they are just opinions, speculations and biographical trivia. Atheists and theistic evolutions agree on what science shows about the diversity of life – *intelligent causes didn't do anything*.

The quickest way to disarm a theistic evolutionist is to refuse to talk about religion or God, and to ask them to show you the naturalistic explanation of the Big Bang. And the naturalistic explanation of the fine-tuning. And the naturalistic explanation of the origin of life. And the naturalistic explanation of the Cambrian explosion. And so on. Focus on the science – don't let them turn the conversation to their personal beliefs, or to the Bible, or to religion, or to philosophy. Ask them what they can show in the lab. If naturalistic mechanisms can do all the creating they say it can do, let's see the demonstration in the lab.

# Bruce Gordon: problems with inflationary multiverse cosmologies

**Wintery Knight** · 7 April 2014 · Archived copy · Original

From Evolution News. Dr. Bruce Gordon reflects on whether the new BICEP2 results offer any support for the multiverse.

First, quick review of the Big Bang so we're clear on the challenge that poses for naturalism:

> Now, Big Bang theory has its theoretical basis in general relativity, which predicts that the universe is spatiotemporally expanding in the future direction and thus would be contracting if we were to reverse the direction of time. As Roger Penrose and Stephen Hawking showed in the late 1960s, no matter which general-relativistic model of our universe is chosen, this contraction leads to a beginning point in the finite past — a singularity, to use the technical term — from which not just matter and energy, but spacetime itself, emerged. This coming into existence of the universe from *nothing* (no space, no time, no matter, no energy, and hence no physical laws either) is what is known as the Big Bang. It is, as the agnostic astronomer Robert Jastrow once observed, startling evidence for the doctrine of creation *ex nihilo*. He famously put it this way:
>
> For the scientist who has lived by his faith in the power of reason [editorial aside: Jastrow might better have said "faith in the sufficiency of materialist explanations" because the inference from the *ex nihilo* generation of the universe to a transcendent intelligent cause is eminently reasonable], the story ends like a bad dream. He has scaled the mountain of ignorance; he is about to conquer the highest peak; as he pulls himself over the final rock, he is greeted by a band of theologians who have been sitting there for centuries.
>
> This having been established, as the physicist George Gamow demonstrated in 1948, one of the predictions of Big Bang theory is the existence of gravitational ripples and cosmic background radiation (CBR) that are an "echo of Creation," as it were, throughout the whole observable universe. This cosmic background electromagnetic radiation was discovered in 1965 by Robert Wilson and Arno Penzias, a discovery for which they were awarded the Nobel Prize. In this regard, the alleged detection of gravitational waves would serve as further confirmation of the correctness of Einstein's theory of general relativity and of the nature of the Big Bang itself. If corroborated by the scientific community, it would be a hugely important discovery, not just because of the evidence it provides for gravitational waves, but also because of the way this discovery is linked to another theory, namely, inflationary cosmology.

Inflationary cosmology is an enhancement to the standard Big Bang cosmology, and some models of inflationary theory can create additional universes. Some people are hoping that this will address the fine-tuning argument.

But Dr. Gordon is having none of that:

> Of course, the inflationary mechanism is often regarded as generative of an unending and rapid succession of universes with the idea that, if enough universes are produced by such means, the improbabilities just mentioned don't matter. Several things need to be said about this "inflationary multiverse" proposal:
>
> **(1) First of all, as pointed out by one of the physicists involved in the BICEP2 project, Kent Irwin at Stanford University, the BICEP2 results do *not* address the truth or falsity of inflationary *multiverse* theories.**
>
> (2) Secondly, attempting to swamp the improbabilities intrinsic to inflation by multiplying the number of universes it generates to the point of compensation has consequences that undermine scientific rationality. In a materialist multiverse resting on the hypothesis of an undirected and irreducibly probabilistic quantum inflationary mechanism that lacks any principle of sufficient material causality, *anything* can happen for *no* reason at all. What is more, quantum-mechanically speaking, everything that can happen, no matter how improbable, does happen, and it happens with unlimited frequency. In this environment we can have no

> confidence that the future will resemble the past in a way that legitimates uniformitarian assumptions and the very inductive inferences that make science possible. In short, taken seriously, the inflationary multiverse proposal completely undermines scientific rationality.
>
> (3) Thirdly, at least two paradoxes result from the inflationary multiverse proposal that suggest our place in such a multiverse must be very special: the "Boltzmann Brain Paradox" and the "Youngness Paradox." In brief, if the inflationary mechanism is autonomously operative in a way that generates a multiverse, then with probability indistinguishable from one (i.e., virtual necessity) the typical observer in such a multiverse is an evanescent thermal fluctuation with memories of a past that never existed (a Boltzmann brain) rather than an observer of the sort we take ourselves to be. Alternatively, by a second measure, post-inflationary universes should overwhelmingly have *just* been formed, which means that our existence in an old universe like our own has a probability that is effectively zero (i.e., it's nigh impossible). So if our universe existed as part of such a multiverse, it would not be at all typical, but rather infinitely improbable (fine-tuned) with respect to its age and compatibility with stable life-forms.
>
> **(4) Fourthly, a mechanism that generates universes *ad infinitum* must have stable characteristics that constrain its operation if it is to avoid breaking down and sputtering to a halt. In short, universe-generators have finely tuned design parameters that themselves require explanation. So postulating a universe-generator to explain away the appearance of first-order design in a single universe does not obviate the inference to design, it merely bumps it up to the next level. Avoiding an infinite regress of explanatory demands leads to the recognition of actual design terminating in an Intelligence that transcends spacetime, matter and energy, and which, existing *timelessly* logically prior to creating any universe or multiverse, must also therefore exist *necessarily*, and therefore require no further explanation of its own existence.**
>
> **(5) Fifthly and finally, as demonstrated by Arvind Borde, Alan Guth, and Alexander Vilenkin in 2003 (see further reading suggestions below), any inflationary multiverse has a beginning in the finite past: while inflationary models can, in theory, be eternal into the future, it is mathematically impossible for them to be eternal into the past. This means that the inflationary multiverse entails creation *ex nihilo* in precisely the same manner as the Big Bang. The universe thus manifests dependence on a transcendent reality in respect of its origin, but what is more, in virtue of the manifest absence of sufficient material causation in many aspects of its persistence as a quantum-mechanical phenomenon, the material universe also manifests dependence on a transcendent reality in respect of its operation (for an extended argument to this effect, see my article on quantum-theoretic challenges to philosophical naturalism referenced in the suggested readings).**
>
> What all of this reveals, of course, is that it's intelligent design all the way through and all the way down and that theophobic scientific materialists, once they get past knee-jerk denials, must come to terms with what is, for them, a worldview-defeating fact.

The Boltzmann Brain paradox in point 3) came up as a problem with inflationary multiverse cosmologies in the recent Craig-Carroll debate.

I bolded part 4) because as Dr. Robin Collins has argued before, the multiverse-generation mechanism does not get rid of the fine-tuning, it just pushes it up one level. And I bolded part 5) because Dr. Gordon is alluding to the Borde-Guth-Vilenkin (BGV) theorem there, which always comes up in debates on cosmology. The theory applies to inflationary cosmologies: they still require an absolute beginning. These are serious problems that we should not gloss over when people push a speculative model like the multiverse in order to escape the fine-tuning argument.

I always thought of Dr. Gordon as kind of a moderate Canadian guy, but I love that last line, don't you? :) Don't fear the reaper, naturalists.

# Stephen Moore: how environmentalist restrictions are killing energy sector jobs

**Wintery Knight** · 8 April 2014 · Archived copy · Original

From the Heritage Foundation.

Excerpt:

> […][I]f you visit the drilling sites in Williston, N.D., you discover an amazing phenomenon: At night, this little energy town of fewer than 30,000 people lights up like Manhattan on New Year's Eve. All these lights are flares burning off the natural gas that was drilled that day. Why on earth would the drillers do that? Because they want oil, which sells at $100 a barrel, as opposed to natural gas, which is now so abundant that it's cheap.
>
> But why don't they sell the natural gas too? Because they don't have the pipeline capacity to bring it to the markets where it's needed. So they are burning off an energy source, without capturing the power. What a waste.
>
> **The pipelines aren't getting built, simply because the government isn't *letting* them get built. It has been an eye-opening experience to watch liberals block an infrastructure project — the Keystone XL pipeline — that two of three Americans (and even a plurality of Democrats) support. Pew had an amazing poll last month reporting that just about every demographic group in America supports the Keystone pipeline, except for Democrats with Ph.D.s and Democrats who earn more than $100,000.**
>
> But this problem goes well beyond the Keystone pipeline. We need to build in America a national network of pipelines from coast to coast, much as Eisenhower built the interstate highway system. Unlike the highways, the private sector will gladly build the pipelines; they just need the permits. And Uncle Sam won't give them out.
>
> We are talking about a lot of jobs here — and really high-paying, often union, jobs. Welders and pipe fitters and construction workers and truckers earn $70,000 or more — well above the median salary in America.
>
> But the environmentalists hate pipelines because they encourage drilling, and drilling is bad because it kills windmills, er, the planet. The enviros have been running a campaign in Washington to keep the oil and gas in the ground. And if you can't transport it, why drill it? These activists are the same sort of people who opposed the Great Alaska Pipeline back in the 1970s. Can you imagine how much we'd be in hock to the Saudis these days if we'd listened to their loopy advice back then?
>
> And since they won't allow pipelines, we use trains and trucks — which is *much* worse for the environment than building the pipelines. Remember the rail crash several weeks ago with massive explosions? Thank the Sierra Club.

Meanwhile, in Canada, where the Conservative Party is firmly opposed to global warming nonsense, the government has decided to build pipelines from Alberta to the West *and* East coasts.

Excerpt:

> Foreign Minister John Baird said Sunday he's sure there will be a pipeline from Alberta's oilsands to the Pacific coast.
>
> Without mentioning the Northern Gateway specifically, Baird sounded confident when discussing pipelines on Fox News on Sunday morning.
>
> Asked for his thoughts on recent comments from former U.S. energy secretary Spencer Abraham, who expressed doubt President Barack Obama will approve the Keystone XL pipeline, Baird said Canada's energy resources are vast and that he expects a decision from the president within two months.

> “Listen, we want to get this project approved,” he said on the U.S. network. “We want to work with our American friends, our partners in freedom and liberty.
>
> **“At the same time there will be pipelines going to the Pacific coast and even reverse pipelines going to the Atlantic so we can diversify our markets.”**

I expect that Republicans will be making a big deal of the jobs that could be created if we the government were giving out the appropriate energy production permits and approving the Keystone Pipeline. I think people will be responsive to a message like that when Obamacare kicks in for employer-provided health care and employers start to cut jobs. I know the Democrats are happy right now keeping everyone on unemployment payments, but eventually, that money is going to run out. It might not be tomorrow, but it’s coming one day.

# Benghazi hearings: CIA director altered talking points from “attack” to “demonstration”

**Wintery Knight** · 8 April 2014 · Archived copy · Original

From the Wall Street Journal, a summary on the Benghazi congressional hearings.

Excerpt:

> Last week’s encounter between former acting CIA Director Michael Morell and the House Permanent Subcommittee on Intelligence may have brought us a bit closer to the truth of how four Americans came to be killed at the U.S. consulate in Benghazi, Libya, on Sept. 11, 2012, and how their countrymen came to be lied to about it. But the progress toward truth was probably not made in a way that Mr. Morell intended. The encounter on Capitol Hill also made clear that the forum that will take us all the way to the truth must be something other than a congressional hearing.
>
> […]Critics of the government’s performance on Benghazi have charged that Mr. Morell’s revisions principally although not exclusively involved changing the description of the violence and its perpetrators, and removing the suggestion that they might have had ties to a terrorist organization. These changes, it is argued, enabled Susan Rice, the U.S. ambassador to the United Nations at the time, to promote the discredited and since abandoned narrative that the violence was a reaction to an anti-Muslim YouTube video produced by a probationer in Los Angeles.
>
> The acting CIA director’s changes to the talking points did indeed enable the blame-it-on-the-video fiction, which served the interest of a president seeking re-election based in part on having put al Qaeda on the run, although in fairness it is not clear that was Mr. Morell’s motive. Thus he edited out a description of the warnings that the CIA had provided to the State Department of earlier terrorist attacks on the British embassy and on the Red Cross that caused them to withdraw their personnel, and a description of an attack that blew a hole in the U.S.’s own installation—events that might have suggested that Sept. 11, 2012, was not an isolated event.

Morell believed “analysts” who are desk employees, and disregarded statements of the station chief, who was on the scene, and in contact with the eyewitnesses:

> **He substituted “demonstration” for “attack” despite the direct statement by the CIA’s Libya station chief in Tripoli that there was no demonstration;** Mr. Morell changed “terrorist” to “extremist.” **His explanation is that he relied on the CIA’s analysts, who he said had comprehensive information available to them, rather than on the CIA’s station chief, who relied on the testimony of eyewitnesses who arrived soon after the attack started.**
>
> The directorate of intelligence functions according to a protocol whose rigidity we more often associate with the military. **So analysts whose deductions put them at odds with those on the scene wouldn’t have considered, and apparently didn’t consider, simply ringing up those on the scene and getting their input. To the contrary, analysts deal only with information that comes in the prescribed way. The CIA station chief’s communication to headquarters came in an email and did not get circulated within the intelligence community as it would have if it had been contained in a cable.**

There was plenty of information disconfirming his “demonstration” lie:

> There was, as it happens, other information available. A private company, Agincourt Solutions, had followed the Twitter, Facebook and other social media in the vicinity of the U.S. installation attacked in Benghazi. The company found no evidence of a “demonstration.” There were video cameras trained on the front gate of the

> consulate that showed no demonstration. Days before the attack, al Qaeda leader Ayman al Zawahiri had been calling for an attack to avenge the death of Abu Yahya al-Libi, a senior al Qaeda member who was, as his name suggests, a Libyan. And Sept. 11 is a date of highly symbolic value to people who set great store by symbols.
>
> The last two data points were certainly available to the CIA analysts, and the camera feed should have been. But all this was discounted, apparently in favor of their consensus view that the attack at Benghazi had started with a demonstration that drew inspiration from violence inflicted on the U.S. Embassy in Cairo—allegedly as part of a protest against the video.

Both Obama and Clinton blamed the Youtube video for a "demonstration", and denied that there was a terrorist attack:

> Mr. Obama and Mrs. Clinton told the grieving families that the producer of the video would feel the weight of the law. It was one promise they kept: Nakoula Basseley Nakoula was arrested in the middle of the night in the glare of TV lights for a probation violation—the only arrest thus far growing out of the Benghazi attack, even though the identity and whereabouts of the principal suspects, one of whom is an alumnus of Guantanamo Bay, have long been known.

The Obama administration blamed the Youtube video in order to win the 2012 election. They were afraid if the real story came out, people would know that they had screwed by underestimating the threat and ignoring the warning signs and the requests for additional security. Democrats can't do national security – they just give speeches about spending taxpayer money.

# Pastor Matt discusses his past experiences as an atheist – part 1

**Wintery Knight** · 9 April 2014 · Archived copy · Original

Don't worry, he was an atheist then, and now he's pastor Matt, thanks to God's grace.

This post Pastor Matt talks about why he was once an atheist.

Excerpt:

> I am sometimes asked, by both skeptics and believers alike, why I was once an atheist and what convinced me to become a Christian. I will answer the latter in another post but let me deal with the former now.
>
> I am a "PK" or "preacher's kid." My father served as the founding pastor of the largest church in southern Ohio. It is a non-denominational, evangelical congregation that grew very quickly.
>
> As a PK, I was privy to a lot of "inside information" and it was not encouraging. I learned men and women who sang hymns with passion and shouted "Amen!" with gusto during the sermon were cheating on their spouse or on their taxes.
>
> By the time I was a teenager I understood why those who called themselves Christians lived secret lives–they wanted to believe but really didn't. I understood because I became one of them.
>
> I was an active member of an '80′s evangelical youth group. So, I rocked out to Stryper, had comedian Pat Hurley tapes and volunteered for the children's ministry, which consisted of videotaping episodes of Superbook and The Flying House for the kids. However, I actually seriously doubted if God even existed.
>
> I was struggling with the normal sins of a teenager and begged for help in prayer. I also petitioned God on a regular basis to feel His presence but that didn't happen either.
>
> I eventually came to the conclusion that Christianity simply didn't work. I declared myself an atheist at age fifteen and remained an unbeliever for the next ten years.
>
> I ran away from home at age fifteen as well eventually making my way to Hollywood. During those days I partied like it was 1999 (until 1997) and like Aldous Huxley is quoted as saying decades before, I came to not even want God to be real because even the possibility interfered with my desire to create my own morality.

Christianity is not something where you just profess it and suddenly you are automatically perfect. You get the gift of eternal life immediately by faith in Christ, but becoming more like Christ takes time. It's easier to act consistently with the teachings of Christ if you have *spent the time* studying, practicing and growing as a Christian. You shouldn't expect perfect behavior on day one – that is crazy. You should expect that as your beliefs become more solid, then your outward actions will change naturally. And often what you hear at home and in the church is not the best for finding truth through investigation and debate.

It would be terrible to have to put out "good" actions when you never settled the questions of what is true and how are we going to apply what is true in our own decisions. Sometimes, I think that young Christians face too much pressure to appear to be perfect when no one has been willing to help them work through the grounding for the behaviors they are expected to display. And I think a lot of the behaviors they are expected to display are either not important or not Biblical. Behaving like a Christian should be natural – it should proceed from free inquiry, not dogmatism.

Now I'm skipping a lot, but here is his advice for people who were in his situation:
