> In Matthew 28, we find the Christian attempt to refute the earliest Jewish polemic against the resurrection. That polemic asserted that the disciples stole away the body. The Christians responded to this by reciting the story of the guard at the tomb, and the polemic in turn charged that the guard fell asleep. Now the noteworthy feature of this whole dispute is not the historicity of the guards but rather the presupposition of both parties that the body was missing. The earliest Jewish response to the proclamation of the resurrection was an attempt to explain away the empty tomb. Thus, the evidence of the adversaries of the disciples provides evidence in support of the empty tomb.

Note how careful Craig is not to imply that the guard tradition is historical, because we can't prove the guard as a "minimal fact", since it doesn't pass the standard historical criteria.

**See it used in a debate**

You can see the arguments made and defended from criticism in this debate with the atheist scholar James Crossley.

This my favorite resurrection debate.

# Minnesota's largest and cheapest Obamacare insurer drops out of exchange

**Wintery Knight** · 18 September 2014 · Archived copy · Original

The Daily Caller reports.

Excerpt:

> The largest insurer with the lowest premium rates on Minnesota's Obamacare exchange is dropping out because the government health-exchange is unsustainable, the company announced Tuesday.
>
> PreferredOne Health Insurance told MNsure, the state-run exchange, Tuesday morning that it would not continue to offer its popular insurance plans on the marketplace in 2015.
>
> […]"Our MNsure individual product membership is only a small percentage of the entire PreferredOne enrollment **but is taking a significant amount of our resources to support administratively**," the company said in a statement. "We feel continuing on MNsure was not sustainable and believe this is an important step to best serve all PreferredOne members."
>
> PreferredOne was Minnesota's largest exchange insurer with 59 percent of individual MNsure sign-ups, according to KSTP. Another four insurance companies — Blue Cross Blue Shield, HealthPartners, Medica and UCare — will continue to offer plans on the exchange next year.
>
> This leaves Minnesota Obamacare customers in a tricky situation. PreferredOne had significantly lower rates than any other insurer on the exchange. When these plans disappear, customers will see a significant rate hike if they choose to continue on the Obamacare exchange, independent of yearly rate hikes.
>
> Minnesota is scheduled to announce premium rates for 2015 Obamacare plans in October and signs point to looming price hikes that will hit Minnesotans doubly hard.

The administration costs are too high.

I noticed that Minnesota has a Senate election this year, and that comedian Al Franken is up for re-election, and he is leading by 9 points. Maybe Minnesota will learn something from their rate hikes and stop voting in a clown who voted for Obamacare. One can hope that money will cause them to learn their lesson.

# If you care about the poor, must you vote for bigger government?

**Wintery Knight** · 18 September 2014 · Archived copy · Original

Here's an article on the Daily Signal that traces the history of big government "solutions" to poverty, and argues that big government has not been able to solve the poverty problem no matter how much money they've taken from taxpayers.

Excerpt:

> Today, the U.S. Census Bureau will release its annual report on poverty. This report is noteworthy because this year marks the 50th anniversary of President Lyndon Johnson's launch of the War on Poverty. Liberals claim that the War on Poverty has failed because we didn't spend enough money. Their answer is just to spend more. But the facts show otherwise.
>
> […]Over 100 million people, about one third of the U.S. population, received aid from at least one welfare program at an average cost of $9,000 per recipient in 2013. If converted into cash, current means-tested spending is five times the amount needed to eliminate all poverty in the U.S.
>
> But today the Census will almost certainly proclaim that around 14 percent of Americans are still poor. The present poverty rate is almost exactly the same as it was in 1967 a few years after the War on Poverty started. Census data actually shows that poverty has gotten worse over the last 40 years.
>
> How is this possible? How can the taxpayers spend $22 trillion on welfare while poverty gets worse?
>
> The answer is it isn't possible. Census counts a family as poor if its income falls below specified thresholds. But in counting family "income," Census ignores nearly the entire $943 billion welfare state.
>
> For most Americans, the word "poverty" means significant material deprivation, an inability to provide a family with adequate nutritious food, reasonable shelter and clothing. But only a small portion of the more than 40 million people labelled as poor by Census fit that description.
>
> […]According to government surveys, the typical family that Census identifies as poor has air conditioning, cable or satellite TV, and a computer in his home. Forty percent have a wide screen HDTV and another 40 percent have internet access. Three quarters of the poor own a car and roughly a third have two or more cars. (These numbers are not the result of the current bad economy pushing middle class families into poverty; instead, they reflect a steady improvement in living conditions among the poor for many decades.)
>
> The intake of protein, vitamins and minerals by poor children is virtually identical with upper middle class kids. According to surveys by the U.S. Department of Agriculture, the overwhelming majority of poor people report they were not hungry even for a single day during the prior year.

The article goes on t make the point that if the purpose of government social programs is to make people more independent so they can get off the welfare, then the government has *failed* to achieve that goal. In fact, they've made even *more* people dependent on government since they started to try to make them independent of government.

According to a Congressional Research Service study, we spend more on welfare per year (1.03 trillion) than we do on Social Security (725 billion) or Medicare (480 billion) or non-war defense (540 billion). And what do we get? More dependency on government, not less.

# Greg Ganssle explains the problems of evil and suffering

**Wintery Knight** · 18 September 2014 · Archived copy · Original

I found these three videos on Apologetics 315. They are each about 5 minutes long.

Here's the first one:

Description:

> Part 1 of a trilogy. Greg lays out a classic argument that God does not exist, called 'The Problem of Evil'. He distinguishes two versions of that argument, which are sometimes called 'the deductive' and 'the evidential' version. He goes into some details on the deductive version.

And the second one:

Description:

> Part 2 of a trilogy. Here, Greg gives a response to the deductive version of the Problem of Evil on behalf of someone who believes that God exists. In thinking about this response, we need to think about whether God can make contradictions true, and whether God can have good reasons for allowing bad things to happen.

And the third one:

Description:

> Part 3 of a trilogy. Greg considers the evidential version of the Problem of Evil, and gives a response on behalf of someone who believes that God exists. This involves considering whether God might have a good reason to allow bad things to happen.

This is very practical and you won't find a shorter introduction to the problem of evil than these videos. When things go wrong as they sometimes will in your life it's very important to understand that we shouldn't be surprised by suffering and evil.

Probably the most important thing to understand about evil and suffering is that God is not our cosmic butler. It's not his job to provide happiness for his human pets. You would never get the idea from the Bible that God is interested in making people feel happy, especially if they ignore him and his moral laws. Everything God does with people is meant to make them know him better and serve him better, and many things that happen to us that don't make us happy, but they do give us the opportunity to either grow towards God or away from him.

If the story of Jesus tells us anything, it tells us that you can be morally perfect and still get whammed while you learn how to be obedient to God. Being good is no guarantee of happiness. Doing God's will is no guarantee of happiness. There just is no guarantee of happiness, no matter how righteous you are. But what there is for us is a promise that God works through evil and suffering in order to make those who respond to his leading as much like his Son Jesus as they can be. And that has to be enough for us. We have to learn how to trust God through suffering. Knowing the logic of the problems of evil and suffering can help us to develop that trust.

# Wikipedia editor deletes all evidence of Neil deGrasse Tyson's quote fabrication

**Wintery Knight** · 19 September 2014 · Archived copy · Original

Wikipedia is garbage, and here's a story that explains why, from The Federalist.

Excerpt:

> Neil Tyson, a prominent popularizer of science (he even has his own television show) was recently found to have repeatedly fabricated multiple quotes over several years. The fabrications were not a one-off thing. They were deliberate and calculated, crafted with one goal in mind: to elevate Tyson, and by extension his audience, at the expense of know-nothing, knuckle-dragging nutjobs who hate science. Tyson targeted journalists, members of Congress, even former President George W. Bush. And what was their crime? They were guilty of rejecting science, according to Tyson.

> There's only one problem. None of the straw man quotes that Tyson uses to tear them down are real. The quote about the numerically illiterate newspaper headline? Fabricated. The quote about a member of Congress who said he had changed his views 360 degrees? It doesn't exist. That time a U.S. president said "Our God is the God who named the stars" as a way of dividing Judeo-Christian beliefs from Islamic beliefs? It never happened.
>
> […]After I published my piece about Neil Tyson's fabrication of the George W. Bush quote, several users edited Neil Tyson's wiki page to include details of the quote fabrication controversy. The fact-loving, evidence-weighing, ever-objective editors of the online encyclopedia did not appreciate the inclusion of the evidence of Tyson's fabrication. Not at all.
>
> According to a review of the edit history of Tyson's page, one long-time Wikipedia editor deleted an entire pending section summarizing the issue of Tyson's fabricated quotes. Another editor attempted to insert a brief mention of Tyson's fabrication of the George W. Bush quote. That mention was also deleted. When it was reinserted, it was deleted yet again by an editor who describes himself as a childless progressive and an apostle of Daily Kos (h/t @kerpen). Here are just a few of that user's political ramblings, in case you were curious about the motivation behind the scrubbing of Tyson's wiki.
>
> Literally every single mention of Tyson's history of fabricating quotes has been removed from Tyson's Wikipedia page.

The Federalist post has been updated now to indicate that:

> Early this morning, in a discussion thread about whether references to Neil deGrasse Tyson's history of quote fabrication should be added to Tyson's Wikipedia page, an editor stated that "no version of this event will be allowed into the article."

So I hope this helps everyone to understand that Wikipedia is a joke site, and you should try never to quote from it if you are in a debate situation.

On the other hand, I have to give kudos to well-known atheist Hemant Mehta, who has a full breakdown of Tyson's other fabrications, and Mehta, who might be expected to cover up for Tyson, instead said this "If a pastor or right-wing conservative did it, we'd be calling them out on it immediately. Tyson doesn't deserve a free pass just because his intentions are pure. It certainly wouldn't (or shouldn't) get by in an academic setting, and just because he often speaks to a lay audience doesn't mean he should make up quotations or fail to cite them if they're real." Now that's

an honest atheist. The reason that quote fabrication is not punished on Wikipedia, though, is because it is a joke site. And this episode proves it.

# What you do before you marry affects your marital happiness and stability

**Wintery Knight** · 19 September 2014 · Archived copy · Original

A recent article from The Federalist explains why chastity matters when choosing a mate.

Excerpt:

> [A] new study shows that the more relationships you've had prior to marriage, the less likely you'll have a good marriage. This seems somewhat obvious, but it's so contrary to popular culture and practice these days that even the study's authors say the finding is "counterintuitive."
>
> "In most areas, more experience is better. You're a better job candidate with more experience, not less. When it comes to relationship experience, though, we found that having more experience before getting married was associated with lower marital quality," said Galena K. Rhoades, research associate professor of psychology at the University of Denver. She's a co-author of the study "Before 'I Do': What Do Premarital Experiences Have To Do With Marital Quality Among Today's Young Adults?," from the National Marriage Project at the University of Virginia. The report has all sorts of interesting findings, including that large weddings and conscious decision-making in relationships are also factors in happy marriages.
>
> **Previous marriages and previously having lived with a partner were both identified as risk factors for less-happy marriages, the authors said.** We know so much about how living together is a risk factor for all sorts of unhappiness that I seriously have to restrain myself from shouting at my female friends who tell me they're moving in or have moved in with their boyfriends. I mean, even if there were no moral problem with it, it's just bad strategy if you want a happy life.
>
> […][T]he nearly one-quarter of people in the study who had sex solely with the person they married reported high marital quality, higher than those who had sex with other partners prior to marriage. And the more sexual partners a woman had before marriage, the less happy she reported her marriage to be. Well that's not what we've been told by the *Cosmo*-Jezebel alliance. The study's authors speculate on why this might be.

> **One reason that more experience could lead to lower marital quality is that more experience may increase one's awareness of alternative partners. A strong sense of alternatives is believed to make it harder to maintain commitment to, and satisfaction with, what one already has. People who have had many relationships prior to their current one can compare a present partner to their prior partners in many areas—like conflict management, dating style, physical attractiveness, sexual skills, communication ability, and so on. Marriage involves leaving behind other options, which may be harder to do with a lot of experience.**

I have to say that this factor is the biggest factor that gives me pause when considering marriage with a woman with a sexual past. Will I be compared to these other men? Will I be trusted? Will she be vulnerable to me? Usually when a woman has had past experiences with bad men, then she tends to be more guarded with me, regardless of how I would perform sexually after we were married. I am interested in a woman being trusting and vulnerable, yet a sexual past usually doesn't make a woman more trusting and vulnerable.

However, there is a way to work on the problem, I think – and that way is taking a structured approach to courting that involves open communication and deliberate planning:

> [T]he hook-up thing, which was a factor in lower marital quality, also matches with other less formalized arrangements that are becoming common among younger generations. If you can make out with someone

> thanks to the lowered inhibitions you guzzled down at the bar, you don't have to make a formal request to ask her out or to plan a date. Similarly, many respondents reported shacking prior to marriage. And those who lived with their eventual spouse before making a commitment to marry reported lower marital quality than those who waited to move in together until they were engaged or married.

> **The study actually had people rate how much of living together was a conscious decision vs. something that just sort of happened. And the more it was a decision, the happier the eventual marriage was. This might be because of higher levels of commitment present at the time of moving in or because it reflects better communication skills, a key to marital contentment, the authors said.**

> **The same sort of conscious decision making effect could be seen in differences in pre-marital counseling. While only 32 percent of those who did not have premarital preparation reported high marital quality, that jumped to 57 percent of those who did take part in premarital preparation. Less sliding, more deciding might not be a Millennial motto but it should be.**

What you want to avoid is someone who cannot communicate and is not good at making decisions and then sticking with her decisions over the long haul. And that can be developed – it can be worked on and improved. But it takes time to do.

Here's the author's conclusion:

> All the options make it hard to man-up or woman-up and make some decisions **because we're so terrified of missing out on the next best thing.** But the whole truly counterintuitive point of a happy marriage is that you're not supposed to be thinking about what your spouse can do for you so much as what you can do for your spouse. That's why this whole commercialized approach to spouse-picking is wrong. When you're trying to figure out which yogurt to buy, you're doing a lot of comparison shopping, but you're not thinking of what you can do for the yogurt, you know?

> We all want marriage, more or less, but we couldn't be doing a worse job of trying to attain it. We want to find the perfect spouse, even though he or she doesn't exist and finding a perfect spouse isn't what marriage is about. What's worse, we demand that someone forgive us our many faults even while we're mentally comparing our potential spouse with other people or figments of our imagination. We should stop with that and really work at doing what it takes to get married and stay happily married.
>
> […]**Even if you have not made the healthiest or most prudential sexual choices prior to now, don't flip out or despair. Just because some factors are related to marital happiness doesn't mean you can't have a happy marriage. Just focus on making better decisions from this point forward. Be conscious and deliberate about them. Stop letting life happen to you and start thinking about what you want and how to get there. And, finally, remember that your big extended family is a blessing and that rituals occur throughout the world for very good reason.**

I think having a string of past relationships does lead a person to want to delay marriage and hold out for "the next best thing". That's why so many women are delaying marriage and getting into fertility problems. They want to have fun and them jump off the carousel into the respectability of marriage at the last possible instant. Which is not fun for a man who is seeking the kind of intimacy that grows slowly over time. I have always been impressed by couples who have been married for decades, but you get that by marrying for the benefit of that other person, instead of holding out for the best deal for you. If you find someone you want to care for for the rest of your life,

just marry them – that's my advice. Try to make relationships more about planning and obligations, and less about fun and excitement.

# Study of elementary school children finds entrenched discrimination against boys

**Wintery Knight** · 19 September 2014 · Archived copy · Original

The study is here (PDF), and Susan Walsh writes about the study on her blog. (H/T Stuart Schneiderman)

Excerpt:

> A new study of nearly 6,000 elementary school children has found that boys are discriminated against beginning in kindergarten. Christopher Cornwell, an economics professor at the University of Georgia, says that "gender disparities in teacher grades start early and uniformly favor girls."
>
> Despite having higher scores on standardized tests, boys get lower grades than girls. Why? Because teachers are basing grades at least partly on classroom behavior, and the standards are very much geared to female norms.
>
> […]Here's what the disparity looks like for kindergarten boys:
>
> | Std. Deviation | Test Scores | Grades |
> |---|---|---|
> | Reading | -.017 | -.27 |
> | Math | +.02 | -.15 |
> | Science | +.035 | -.14 |
>
> (Note: Values are approx., gauged visually from study graphic.)
>
> Another interesting finding was that boys who adhere to female norms on non-cognitive skills were not penalized. Effectively, the more female behavior was rewarded with a grade "bonus" for males.
>
> The implications of this are obvious. Masculinity, even normal maleness, is being punished in schools from a very young age. Only the most female-acting boys are rewarded with a fair assessment.

I found this story on Stuart Schnederman's blog, and this is what he had to say about it:

> The results demonstrated that schoolteachers are prejudiced against boys. When teachers do not just grade on performance, but include a number of intangible qualities that girls are more likely to possess, they are acting as bigots.

I recommend that everyone pick up a copy of "The War Against Boys" by AEI scholar Christina Hoff Sommers to learn more about this anti-male discrimination problem.

I see a lot of people raving at men to "man up" these days. Many of those people are pastors who remain ignorant about the real, systemic causes of male underachievement. Even very obvious factors – like the dominance of female teachers and administrators in schools – are ignored by the blame-men crowd. Boys generally learn better when they learn from male teachers in all-male classrooms. But unfortunately for boys, there are people who don't want to do what works for men, especially when it doesn't fit with feminist ideology.

# SATIRE: Unemployed Gender Studies Major Sues 'The Patriarchy'

**Wintery Knight** · 20 September 2014 · Archived copy · Original

From the Daily Currant.

Excerpt:

> An unemployed gender studies major from Eugene, Ore. sued "The Patriarchy" today in federal court for refusing to give her a job.
>
> In a 25-page brief, attorneys for Sarah Miller-Jones, 24, argue that gender discrimination from the patriarchy has prevented their client from finding gainful employment since she graduated from university three years ago.
>
> The suit seeks $2 million in compensation and $139 million in punitive damages, which together equal $1 from every adult man in America.
>
> "Despite the fact that Ms. Miller-Jones graduated with a 2.8 GPA from the prestigious University of Oregon, she has been unable to find a job fitting her qualifications," the document reads.
>
> "Ms. Miller-Jones has been on unemployment benefits for 18 months. And despite extensive coursework in Zambian feminist hip-hop she has only received six job offers — all of which were for entry-level call center and health care positions.
>
> "It is outrageous that the patriarchy refuses to offer our client a decent career. She has applied for over 20 positions in the recording, publishing and television industries and has been rejected every single time.
>
> "We all know that terms like 'no experience' and 'lack of relevant education' are codewords the patriarchy uses to keep keep women in their place. But Ms. Miller-Jones refuses to be a housewife or a nurse. She deserves a real job."
>
> Millions of young Americans who recently graduated from university are finding themselves working in jobs below their educational level.
>
> Media reports have tended to blame the slow recovery from the Great Recession for the trend. However, an equally important factor is the fact that the American university system turns out too few graduates with employable skills.
>
> There are an estimated 3 million open jobs in the United States that go unfilled due to a lack of qualified candidates. Many of these jobs are in science and engineering, while the most popular majors for U.S. college graduates are in psychology and the liberal arts.
>
> According to a former employer, Miller-Jones' gender studies degree actually hurt her employability. Gilbert Grass manages a call center for a local credit union in Eugene and says he regrets hiring her straight out of college.
>
> "She refused to use the words 'he' or 'she' when talking to customers," he says. "That lead to a lot of confusion. And she once gave a customer who called to check her bank balance a 20-minute lecture on how the film *Toy Story* perpetuated gender-specific archetypes of heroism.

I'm sorry, but this just makes me laugh so hard. I just want to remind everyone that this is satire. Not real! Not real!

# Shorebird's beak inspires researchers to design new water collection strategy

**Wintery Knight** · 20 September 2014 · Archived copy · Original

The shorebird's beak is more interesting than you might think

Dr. Fazale Rana of Reasons to Believe tweeted this cool example of biomimetics from Science Daily.

Excerpt:

> A UT Arlington engineering professor and his doctoral student have designed a device based on a shorebird's beak that can accumulate water collected from fog and dew.

> The device could provide water in drought-stricken areas of the world or deserts around the globe.
>
> Xin Heng… a doctoral student in Mechanical and Aerospace Engineering, and Cheng Luo, MAE professor, have made a device that can use fog and dew to collect water.
>
> Cheng Luo, professor in the Mechanical & Aerospace Engineering Department, and Xin Heng, PhD candidate in the same College of Engineering department, published "Bioinspired Plate-Based Fog Collectors" in the Aug. 25 edition of ACS' (American Chemical Society) *Applied Materials & Interfaces* journal.
>
> The idea began when Heng saw an article that explained the physical mechanism shorebirds use to collect their food — driving food sources into their throats by opening and closing their beaks. Luo said that inspired the team to try to replicate the natural beak in the lab.
>
> "We wanted to see if we could do that first," Luo said. "When we made the artificial beaks, we saw that multiple water drops were transported by narrow, beak-like glass plates. That made us think of whether we could harvest the water from fog and dew."
>
> Their experiments were successful. They found out they could harvest about four tablespoons of water in a couple of hours from glass plates that were about 26 centimeters long by 10 centimeters wide.

Now, if we are lifting designs out of nature, then shouldn't we give honor to God for putting the designs in there in the first place? I really think it's important to give God credit where due for his clever designs, even if you're not a big fan of the shorebird. I also think it's interesting that it's engineers who made this application of something in nature, not biologists.  Also, I feel I have to mention that the birdy is also cute, which is not insignificant, if you like birds as much as I do.

# Jennifer Roback Morse on the injustice of the American family court system

**Wintery Knight** · 21 September 2014 · Archived copy · Original

Here is an article by marriage-defender Jennifer Roback Morse about one of the biggest challenges to life-long married love.

Excerpt:

> Easy divorce opens the door for an unprecedented amount of government intrusion into ordinary people's lives. This unacknowledged reality is the subject of *Taken Into Custody,* by Stephen Baskerville**.** With penetrating insight, the political scientist exposes the truly breathtaking consequences of no-fault divorce for the expansion of state power and the decline of personal autonomy.
>
> First, no-fault divorce frequently means unilateral divorce: one party wants a divorce against the wishes of the other, who wants to stay married. Kim Basinger dumped Baldwin for no particular reason, unleashed the power of the Los Angeles Family Court system to inflict pain on him and, in the process, inflicted untold damage on their child. Second, the fact that one party wants to remain married means that the divorce has to be enforced. Baldwin wanted to stay married and to continue to be a husband and father. Yet, the coercive and intrusive machinery of the state must be wheeled into action to separate the reluctantly divorced party from the joint assets of the marriage, typically the home and the children.
>
> Third, enforcing the divorce means an unprecedented blurring of the boundaries between public and private life. People under the jurisdiction of family courts can have virtually all of their private lives subject to its scrutiny. If the courts are influenced by feminist ideology, that ideology can extend its reach into every bedroom and kitchen in America. Baldwin ran the gauntlet of divorce industry professionals who have been deeply influenced by the feminist presumptions that the man is always at fault and the woman is always a victim. Thus, the social experiment of no-fault divorce, which most Americans thought was supposed to increase personal liberty, has had the consequence of empowering the state.
>
> Some might think the legacy of no-fault divorce is an example of the law of unintended consequences in operation. That assumes its architects did not intend for unilateral divorce to result in the expansion of the state. But Baskerville makes the case in this book—as well as his 2008 monograph, "The Dangerous Rise of Sexual Politics," in The Family in America—that at least some of the advocates of changes in family law certainly have intended to expand the power of the state over the private lives of law-abiding citizens.

She explains who is really behind the attempt to destroy marriage, and the answer might shock you.

It's important for people to understand the real reasons why people are not getting married, so that we can do something to encourage them to marry that really fixes the problem. If you don't understand the threats that men are seeing with respect to marriage, it might be a good idea to take a look at this essay by Stephen Baskerville, hosted by the Christian Touchstone magazine. It's a summary of the book that Dr. Morse reviewed. I consider that book "Taken Into Custody" to be a must-read for anyone contemplating marriage.

# Stephen C. Meyer and Marcus Ross lecture on the Cambrian explosion

**Wintery Knight** · 21 September 2014 · Archived copy · Original

Access Research Network is a group that produces recordings of lectures and debates related to intelligent design. I noticed that on their Youtube channel they are releasing some of their older lectures and debates for FREE. So I decided to write a summary of one that I really like on the Cambrian explosion. This lecture features Dr. Stephen C. Meyer and Dr. Marcus Ross.

The lecture is about two hours. There are really nice slides with lots of illustrations to help you understand what the speakers are saying, even if you are not a scientist.

Here is a summary of the lecture from ARN:

> The Cambrian explosion is a term often heard in origins debates, but seldom completely understood by the non-specialist. This lecture by Meyer and Ross is one of the best overviews available on the topic and clearly presents in verbal and pictorial summary the latest fossil data (including the recent finds from Chengjiang China). This lecture is based on a paper recently published by Meyer, Ross, Nelson and Chien "The Cambrian Explosion: Biology's Big Bang" in *Darwinism, Design and Public Education*(2003, Michigan State University Press). This 80-page article includes 127 references and the book includes two additional appendices with 63 references documenting the current state of knowledge on the Cambrian explosion data.
>
> The term *Cambrian explosion* describes the geologically sudden appearance of animals in the fossil record during the Cambrian period of geologic time. During this event, at least nineteen, and perhaps as many as thirty-five (of forty total) phyla made their first appearance on earth. Phyla constitute the highest biological categories in the animal kingdom, with each phylum exhibiting a unique architecture, blueprint, or structural body plan. The word *explosion* is used to communicate that fact that these life forms appear in an exceedingly narrow window of geologic time (no more than 5 million years). If the standard earth's history is represented as a 100 yard football field, the Cambrian explosion would represent a four inch section of that field.
>
> For a majority of earth's life forms to appear so abruptly is completely contrary to the predictions of Neo-Darwinian and Punctuated Equilibrium evolutionary theory, including:
>
> - the gradual emergence of biological complexity and the existence of numerous transitional forms leading to new phylum-level body plans;
> - small-scale morphological diversity preceding the emergence of large-scale morphological disparity; and
> - a steady increase in the morphological distance between organic forms over time and, consequently, an overall steady increase in the number of phyla over time (taking into account factors such as extinction).
>
> After reviewing how the evidence is completely contrary to evolutionary predictions, Meyer and Ross address three common objections: 1) the artifact hypothesis: Is the Cambrian explosion real?; 2) The Vendian Radiation (a late pre-Cambrian multicellular organism); and 3) the deep divergence hypothesis.
>
> Finally Meyer and Ross argue why design is a better scientific explanation for the Cambrian explosion. They argue that this is not an argument from ignorance, but rather the best explanation of the evidence from our knowledge base of the world. We find in the fossil record distinctive features or hallmarks of designed systems, including:
>
> - a quantum or discontinuous increase in specified complexity or information
> - a top-down pattern of scale diversity
> - the persistence of structural (or "morphological") disparities between separate organizational systems; and
> - the discrete or novel organizational body plans

> When we encounter objects that manifest any of these several features and we know how they arose, we invariably find that a purposeful agent or intelligent designer played a causal role in their origin.
>
> *Recorded April 24, 2004. Approximately 2 hours including audience Q&A.*

You can get a DVD of the lecture and other great lectures from Access Research Network. I recommend their origin of life lectures – I have watched the ones with Dean Kenyon and Charles Thaxton probably a dozen times *each*. Speaking as an engineer, you never get tired of seeing engineering principles applied to questions like the origin of life.

The Cambrian explosion lecture above is a great intermediate-level lecture and will prepare you to be able to understand Dr. Meyer's new book "Darwin's Doubt: The Explosive Origin of Animal Life and the Case for Intelligent Design". The Michigan State University book that Dr. Meyer mentions is called "Darwin, Design and Public Education". That book is one of the two good collections on intelligent design published by academic university presses, the other one being from Cambridge University Press, and titled "Debating Design: From Darwin to DNA". If you think this lecture is above your level of understanding, then be sure and check out the shorter and more up-to-date DVD "Darwin's Dilemma".

# John Key leads New Zealand conservatives to 48-25 majority victory over leftists

**Wintery Knight** · 22 September 2014 · Archived copy · Original

National Party leader John Key

Note: The New Zealand conservative party is called the National Party, but their policies are center-right, at least on fiscal issues.

The Wall Street Journal reports on a stunning victory.

Excerpt:

> John Key is set to lead New Zealand for a third consecutive term after official results showed his party garnered 48% of the national vote, and would likely end up with 61 seats in a 121-member Parliament.
>
> […]David Cunliffe, leader of the main opposition Labour Party, conceded defeat late Saturday. The Labour Party picked up 25% of the overall vote, according to the Electoral Commission, while the Green Party, always thought to be its likeliest coalition partner, won 10%.
>
> The 53-year-old Mr. Key has helped steer New Zealand to a level of prosperity rarely found in developed countries since the global financial crisis, campaigning against a backdrop of the strongest economic growth in a decade.
>
> […]Mr. Key's victory was stronger than opinion polls were predicting. Meanwhile, Labour's weak showing was the worst since the 1920s, prompting speculation of a possible change in leadership, though Mr. Cunliffe said he had no plans to resign. "I don't believe that rotating the leaders is the key to changing and upgrading our party," he said Sunday in a television interview. "If I did, I would simply stand down now."
>
> The University of Otago's Mr. Edwards said it would be difficult for Mr. Cunliffe to reassert his authority after Labour's poor result, but added that the party still had no obvious replacement.
>
> The Green party's support was little changed from 2011, despite opinion polls predicting it could win as much as 14% of the vote. Green Party Co-leader Metiria Turei said Sunday the party had consolidated its 2011 result and held on to its 10% support even though the country had swung to the right.

The National Party is not achieving this economic growth by raising taxes on individuals and job creators – New Zealand has the second lowest taxes in the industrialized world.

Look:

> Many countries have been working hard to improve their tax codes. New Zealand is a good example of one of those countries. In a 2010 presentation, the chief economist of the New Zealand Treasury stated, "Global trends in corporate and personal taxes are making New Zealand's system less internationally competitive." In

> response to these global trends, New Zealand cut its top marginal income tax rate from 38 percent to 33 percent, shifted to a greater reliance on the goods and services tax, and cut their corporate tax rate to 28 percent from 30 percent. This followed a shift to a territorial tax system in 2009. New Zealand added these changes to a tax system that already had multiple competitive features, including no inheritance tax, no general capital gains tax, and no payroll taxes.
>
> In a world where businesses, people, and money can move with relative ease, having a competitive tax code has become even more important to economic success. The example set by New Zealand and other reformist countries shows the many ways countries can improve their uncompetitive tax codes.

Compare that with the United States which is stuck down at 30 out of 32 countries! We have a lower median income and labor force participation than we did five years ago, despite packing over NINE TRILLION dollars onto the national debt.

John Key isn't packing trillions onto his country's national debt  they are set to balance the budget in the coming year. And more than the balance budget, he is also trying to privatize bloated, inefficient state-run companies. Imagine what we could do if we privatized the USPS, the departments of motor vehicles and AMTRAK. Just cut the fat out completely.

So now we have conservative majority governments in Canada (Harper), Australia (Abbott) and New Zealand (Key).

# Darwinists thought whale hips were accidents of evolution, then science happened

**Wintery Knight** · 22 September 2014 · Archived copy · Original

Another win for reason in the long war between science and naturalistic philosophy.

Science Daily reports.

Excerpt:

> Both whales and dolphins have pelvic (hip) bones, evolutionary remnants from when their ancestors walked on land more than 40 million years ago. Common wisdom has long held that those bones are simply vestigial, slowly withering away like tailbones on humans.

> New research from USC and the Natural History Museum of Los Angeles County (NHM) flies directly in the face of that assumption, finding that not only do those pelvic bones serve a purpose — but their size and possibly shape are influenced by the forces of sexual selection.
>
> "Everyone's always assumed that if you gave whales and dolphins a few more million years of evolution, the pelvic bones would disappear. But it appears that's not the case," said Matthew Dean, assistant professor at the USC Dornsife College of Letters, Arts and Sciences, and co-corresponding author of a paper on the research that was published online by *Evolution* on Sept. 3.
>
> […]"Our research really changes the way we think about the evolution of whale pelvic bones in particular, but more generally about structures we call 'vestigial.' As a parallel, we are now learning that our appendix is actually quite important in several immune processes, not a functionally useless structure," Dean said.

This is not the first time this has happened – as they said, the appendix now has known functionality.

Flashback: ENCODE study falsifies Darwinian prediction that most of the genome is "Junk" DNA.

# Scott Klusendorf defends the pro-life view on the Unbelievable radio show

**Wintery Knight** · 22 September 2014 · Archived copy · Original

Here are the details:

> The abortion debate reared its head again this summer after controversial tweets by Richard Dawkins made the news.
>
> Justin hosts a discussion between Mara Clarke of the Abortion Support Network and Scott Klusendorf of the Life Training Instititute. Mara believes women need to be decide whether to terminate a pregnancy, but Scott says that all depends on whether we are dealing with a human life in the womb.
>
> MP3 of this show http://media.premier.org.uk/unbelievable/5fd916e8-46a5-4b08-8eb7-0c0dc4473979.mp3

My snarky paraphrase of the debate (not exact):

- Speaker introductions
- Klusendorf: no justification for abortion is necessary if the unborn are not human
- Klusendorf: we need to address the issue "what is the unborn?" Are the unborn human?
- Klusendorf: SLED: size, level of development, environment, degree of dependency
- Klusendorf: None of these things affect the value of a human being
- Klusendorf: Even if we don't KNOW whether the unborn is human
- Mara: I'm not going to debate when life begins
- Mara: Women know when life begins by feelings
- Mara: The moral decision is "whether I can take care of this child?"
- Brierley: When is an unborn being human?
- Mara: I refuse to debate that – the real question is whether women want their babies or not
- Mara: Forced pregnancy is not OK
- Brierley: Could your justification for abortion (not wanting to care for a child) work through all 9 months?
- Mara: Late term abortions are rare, so I don't have to answer that question
- Mara: Abortion should be OK through all 9 months of pregnancy because women cannot be restricted
- Mara: Some women are poor, they need to be able to kill expensive babies at any time
- Klusendorf: although she says she won't debate the unborn, she does take a position
- Klusendorf: she assumes the unborn is not human, because she says that insufficient funds is justification for abortion
- Klusendorf: no one argues that you can kill a two year old because they cost money, because she thinks they are human
- Klusendorf: she is begging the question by assuming the unborn are not human, but that is the issue we must resolve
- Klusendorf: I am pro-choice on many other things, e.g. women choosing their own husbands, religion, etc.
- Klusendorf: Some choices are wrong – Mara might be right, but she needs to make the case for the unborn not being human
- Brierley: What is your reason for thinking that an unborn child is different from a 2-year old?
- Mara: An unborn child is not the same as a 2-year old, in my personal opinion
- Mara: I am not a debater, so I don't have to provide reasoning for my assertion, I just feel it

- Mara: Not everybody agrees with Scott, they don't have to have a rational argument, they just need to feel differently
- Mara: From my experience, when a woman doesn't want to be pregnant, then she should be able to not be pregnant
- Mara: Women shouldn't be punished with a baby that she doesn't want, even if she chooses to have recreational sex
- Brierley: What do you think of women who think the unborn is human and do it anyway?
- Klusendorf: It's interesting that they never kill their toddlers for those reasons
- Klusendorf: I layed out scientific and philosophical reasons for the humanity of the unborn
- Klusendorf: Her response was "but some people disagree with you"
- Klusendorf: People disagreed about whether slavery was wrong, or whether women should be able to vote
- Klusendorf: that doesn't mean there is no right answer – the right answer depends on the arguments
- Klusendorf: if absence of agreement makes a view false, then it makes HER pro-choice view false as well
- Klusendorf: she did make an argument for the unborn child having no rights because of the location
- Klusendorf: she needs to explain to us why location matters – what about location confers value
- Mara: I'm not going to let Scott frame my debate for me!!!
- Mara: women get pregnant and they don't want their babies! should we put them in jail!!!!
- Klusendorf: I didn't just give my opinion, I had science and philosophy, the issue is "what is the unborn?"
- Mara: philosophical and scientific debates are unimportant, I am an expert in real women's lives
- Klusendorf: Which women? Women in the womb or only those outside the womb?
- Mara: Only those outside the womb
- Klusendorf: Only those outside the womb?
- Mara: Women living outside the womb have a right to kill women inside the womb – women have bodily autonomy
- Klusendorf: then does a pregnant woman with nausea have a right to take a drug for it that will harm her unborn child?
- Mara: Unborn children are only valuable if they are wanted, unborn children only deserve protection if they are wanted
- Mara: There are restrictions on abortion – you can't get an abortion through all nine months in the US
- Mara: There is a 24-week limit in the UK as well
- Klusendorf: There are no restrictions on abortion that conflict with "a woman's health" because Supreme Court said
- Mara: where are these late term abortion clinics?
- Klusendorf: (he names two)
- Mara: that's not enough!!! we need more! where is there one in Pennsylvania?
- Klusendorf: well, there used to be Gosnell's clinic in Pennsylvania, and you could even get an infanticide there….
- Brierley: What about Dawkins' view that it is moral to abort Down's Syndrome babies?
- Klusendorf: he is ignoring the scientific case and philosophical case for the pro-life
- Klusendorf: the pro-life view is a true basis for human equality

What I wanted Scott to ask was whether sex-selection abortions were OK with her. Since her reasoning is "if it's unwanted, it has no rights", then that would mean sex-selection abortions are just fine. That's what a UK abortion expert recently argued. And I also posted recently about how sex-selection abortions are not prosecuted in the

UK. If you’re looking for a war on women, there it is.

# Does a new, distinct human being begin at conception?

**Wintery Knight** · 23 September 2014 · Archived copy · Original

Scott Klusendorf posted a public reply to a critic of his debate on the Unbelievable show, which I blogged about yesterday.

The full reply is here, but I wanted to highlight's Scott's scientific defense that the embryo is a human being.

He writes:

> First, your claim that because biological life is continuous (an "unbroken tree" as you put it), we can't say when the embryo's life begins, is demonstrably false. Just because life is continuous between generations does not mean we can't tell when an individual human begins to exist. The science of embryology points to a clear, non-arbitrary divide between sperm/egg on one hand, and a newly conceived embryo on the other. That is to say, from the earliest stages of development, embryos are distinct human beings. True, they have yet to grow and mature, but they are human nonetheless. Leading embryology textbooks affirm this.
>
> For example, in "The Developing Human: Clinically Oriented Embryology" (Saunders/Elsevier, 2008), Keith L. Moore & T.V.N. Persaud write: "A zygote is the beginning of a new human being. Human development begins at fertilization, the process during which a male gamete or sperm…unites with a female gamete or oocyte…to form a single cell called a zygote. This highly specialized, totipotent cell marks the beginning of each of us as a unique individual."
>
> T.W. Sadler's "Langman's Embryology" (Saunders, 1993) states: "The development of a human begins with fertilization, a process by which the spermatozoon from the male and the oocyte from the female unite to give rise to a new organism, the zygote."
>
> Embryologists Ronan O'Rahilly and Fabiola Müller write, "Although life is a continuous process, fertilization is a critical landmark because, under ordinary circumstances, a new, genetically distinct human organism is thereby formed" (Human Embryology & Teratology. 2nd edition. New York: Wiley-Liss, 1996).

And then he quotes some pro-choice scholars, *including Peter Singer and David Boonin*, to make the point:

> Contemporary defenders of abortion also reject your claim that we can't tell when individual life begins. For example, in his book "Practical Ethics" (Cambridge, 1993) Peter Singer—a bioethicist at Princeton University and supporter of both abortion and infanticide —denies your claim the beginning of human life is can't be known. He writes: "Whether a being is a member of given species is something that can be determined scientifically, by an examination of the nature of the chromosomes in the cells of living organisms. In this sense, there is no doubt that from the first moments of its existence an embryo conceived from human sperm and eggs is a human being."
>
> Philosopher David Boonin, author of "A Defense of Abortion" (Cambridge, 2002), writes: "A human fetus, after all, is simply a human being at a very early stage in his or her development."

I tried to space it out a bit to make it more readable. I think what his sources are saying is that when an egg and sperm meet, they create something with a completely different DNA signature than either the sperm or the egg. I think if you have an organism that has human DNA, distinct from the mother and father, and it is developing in a self-directed way (unlike your finger nails, or hair, say), then you have a distinct human life. And I don't think "because I'm bigger than she is" is an adequate reason to kill that other human being.

I have a rule in my life. Don't do anything that is likely to get an innocent person killed. Why can't everyone have this rule? Is recreational pre-marital sex REALLY that important? I don't think any of the reasons that people give for having sex (self-esteem, pleasure, etc.) are more important than not killing an innocent human being. When

little lives are at stake, we grown-ups should all try to control ourselves, so that we don't harm people who are smaller and weaker than we are. It just isn't right.

You can read the whole dialog between CoD and Scott on the Unbelievable page.

# This woman's husband left her for his business partner and took her kids

**Wintery Knight** · 23 September 2014 · Archived copy · Original

A striking story from the Public Discourse.

Excerpt:

> In the fall of 2007, my husband of almost ten years told me that he was gay and that he wanted a divorce. In an instant, the world that I had known and loved—the life we had built together—was shattered.
>
> I tried to convince him to stay, to stick it out and fight to save our marriage. But my voice, my desires, my needs—and those of our two young children—no longer mattered to him. We had become disposable, because he had embraced one tiny word that had become his entire identity. Being gay trumped commitment, vows, responsibility, faith, fatherhood, marriage, friendships, and community. All of this was thrown away for the sake of his new identity.
>
> Try as I might to save our marriage, there was no stopping my husband. Our divorce was not settled in mediation or with lawyers. No, it went all the way to trial. My husband wanted primary custody of our children. His entire case can be summed up in one sentence: "I am gay, and I deserve my rights." It worked: the judge gave him practically everything he wanted. At one point, he even told my husband, "If you had asked for more, I would have given it to you."
>
> I truly believe that judge was legislating from the bench, disregarding the facts of our particular case and simply using us—using *our children*— to help influence future cases. In our society, LGBT citizens are seen as marginalized victims who must be protected at all costs, even if it means stripping rights from others. By ignoring the injustice committed against me and my children, the judge seemed to think that he was correcting a larger injustice.
>
> […]At the time of the first ceremony, the marriage was not recognized by our state, our nation, or our church. And my ex-husband's new marriage, like the majority of male-male relationships, is an "open," non-exclusive relationship. This sends a clear message to our children: what you feel trumps all laws, promises, and higher authorities. You can do whatever you want, whenever you want—and it doesn't matter who you hurt along the way.
>
> […]Our two young children were willfully and intentionally thrust into a world of strife and combative beliefs, lifestyles, and values, all in the name of "gay rights." Their father moved into his new partner's condo, which is in a complex inhabited by sixteen gay men. One of the men has a 19-year-old male prostitute who comes to service him. Another man, who functions as the father figure of this community, is in his late sixties and has a boyfriend in his twenties. My children are brought to gay parties where they are the only children and where only alcoholic beverages are served. They are taken to transgender baseball games, gay rights fundraisers, and LGBT film festivals.
>
> Both of my children face identity issues, just like other children. Yet there are certain deep and unique problems that they will face as a direct result of my former husband's actions. My son is now a maturing teen, and he is very interested in girls. But how will he learn how to deal with that interest when he is surrounded by men who seek sexual gratification from other men? How will he learn to treat girls with care and respect when his father has rejected them and devalues them? How will he embrace his developing masculinity without seeing his father live out authentic manhood by treating his wife and family with love, honoring his marriage vows even when it's hard?
>
> My daughter suffers too. She needs a dad who will encourage her to embrace her femininity and beauty, but these qualities are parodied and distorted in her father's world. Her dad wears make-up and sex bondage straps for Halloween. She is often exposed to men dressing as women. The walls in his condo are adorned with large

> framed pictures of women in provocative positions. What is my little girl to believe about her own femininity and beauty? Her father should be protecting her sexuality. Instead, he is warping it.
>
> Without the guidance of both their mother and their father, how can my children navigate their developing identities and sexuality? I ache to see my children struggle, desperately trying to make sense of their world.

When I was younger and considering marriage, I thought a lot about no-fault divorce and how I would feel about my wife leaving me because she wanted to find herself in Europe, or something. I thought about the feminist judge who would give her custody of our children, and force me to pay alimony and child support. Marriage did not seem like a good risk to me then. I guess part of me always thought that feminists would be the only bad guys in this sexual revolution, and men and children were the victims of feminist selfishness. But this woman's story really makes me realize how women can be just as much the victims of judicial activism as any man was under no-fault divorce laws. That story she told about the activist judge just made my blood run cold. What must that have been like for her, to lose custody of her kids and have them put into the "gay lifestyle" Grindr-style environment? My heart goes out to her.

Previously, I blogged about Dawn Stefanowicz's story of growing up with a gay father.

# Is common ancestry confirmed by molecular and morphological evidence?

**Wintery Knight** · 23 September 2014 · Archived copy · Original

Casey Luskin did a good podcast explaining a problem with two kinds of evidence commonly used to argue for common ancestry.

Details:

> On this episode of **ID the Future**, Casey Luskin takes a keen-eyed look at Darwin's tree of life and finds that common descent, far from being confirmed by the data, is actually contradicted by it, as *New Scientist* pointed out in their cover story, "Why Darwin was wrong about the tree of life."
>
> Listen in to learn how the data is challenging Darwinist assumptions, and check out "A Primer on the Tree of Life" for more information.

The MP3 file is here.

The paper linked above seems to be exactly what he read out loud in the podcast.

Here is one section from the paper that summarizes everything:

> One authoritative review paper by Darwinian leaders in this field stated, "**As morphologists with high hopes of molecular systematics, we end this survey with our hopes dampened. Congruence between molecular phylogenies is as elusive as it is in morphology and as it is between molecules and morphology.**"
>
> Another set of pro-evolution experts wrote, "That molecular evidence typically squares with morphological patterns is a view held by many biologists, but interestingly, by relatively few systematists. Most of the latter know that the two lines of evidence **may often be incongruent.**"

The two methods of determining ancestry are "often incongruent". What I am looking for in order to be convinced of common ancestry is substantial agreement between morphological phylogenies and molecular phylogenies. I don't see that, so I am still skeptical of common ancestry. Especially with all the examples of convergence that I keep finding out about.

# U.S. CO2 emissions declining, but China and Asia CO2 emissions are rising

**Wintery Knight** · 24 September 2014 · Archived copy · Original

Investors Business Daily reports.

Excerpt:

> America is a global warming success story, for those who believe in such things. CO2 emissions are on the downtrend in this country. In fact, they are lower today than they were two decades ago. When you account for all the economic and population growth over those 20 years, that decline is even sharper.
>
> What's more, the U.S. — along with several other industrialized nations — is below the CO2 emission targets set by the Kyoto protocol. You know, the treaty that Al Gore & Co. said would save the planet, but that America never ratified.
>
> China is a completely different story. It's tripled the amount of CO2 it pumps into the air each year over those same two decades, to the point where it now emits almost twice as much CO2 as the U.S.
>
> Other developing countries are spewing CO2 at record levels as well. And all are increasing at rates much faster than industrialized nations could ever hope to cut theirs back.
>
> So where are the protestors? Are they in Beijing demanding that the communist leaders there "change course"? Are they in India — where CO2 levels have doubled in the past two decades — demanding more solar panels and electric cars?
>
> Nope. Instead they flock together in New York, in London, even Australia (which emits as much CO2 in an entire year as China does in 16 days).

I guess I don't really care about CO2 levels with respect to climate change, because like all other sane people, I have watched almost all of the projections made by global warming alarmists be falsified in my lifetime by actual data.

The Wall Street Journal explains how this was done.

Excerpt:

> The U.N. no longer claims that there will be dangerous or rapid climate change in the next two decades. Last September, between the second and final draft of its fifth assessment report, the U.N.'s Intergovernmental Panel on Climate Change quietly downgraded the warming it expected in the 30 years following 1995, to about 0.5 degrees Celsius from 0.7 (or, in Fahrenheit, to about 0.9 degrees, from 1.3).
>
> Even that is likely to be too high. The climate-research establishment has finally admitted openly what skeptic scientists have been saying for nearly a decade: Global warming has stopped since shortly before this century began.
>
> First the climate-research establishment denied that a pause existed, noting that if there was a pause, it would invalidate their theories. Now they say there is a pause (or "hiatus"), but that it doesn't after all invalidate their theories.
>
> When the climate scientist and geologist Bob Carter of James Cook University in Australia wrote an article in 2006 saying that there had been no global warming since 1998 according to the most widely used measure of average global air temperatures, there was an outcry. A year later, when David Whitehouse of the Global Warming Policy Foundation in London made the same point, the environmentalist and journalist Mark Lynas said in the New Statesman that Mr. Whitehouse was "wrong, completely wrong," and was "deliberately, or otherwise, misleading the public."

> We know now that it was Mr. Lynas who was wrong. Two years before Mr. Whitehouse's article, climate scientists were already admitting in emails among themselves that there had been no warming since the late 1990s. "The scientific community would come down on me in no uncertain terms if I said the world had cooled from 1998," wrote Phil Jones of the University of East Anglia in Britain in 2005. He went on: "Okay it has but it is only seven years of data and it isn't statistically significant."
>
> If the pause lasted 15 years, they conceded, then it would be so significant that it would invalidate the climate-change models upon which policy was being built. Areport from the National Oceanic and Atmospheric Administration (NOAA) written in 2008 made this clear: "The simulations rule out (at the 95% level) zero trends for intervals of 15 yr or more."
>
> Well, the pause has now lasted for 16, 19 or 26 years—depending on whether you choose the surface temperature record or one of two satellite records of the lower atmosphere. That's according to a new statistical calculation by Ross McKitrick, a professor of economics at the University of Guelph in Canada.
>
> It has been roughly two decades since there was a trend in temperature significantly different from zero. The burst of warming that preceded the millennium lasted about 20 years and was preceded by 30 years of slight cooling after 1940.

I love science. But I love *experimental* science. When you have government, which is intent on growing larger, paying scientists to find evidence that government *needs* to grow larger, you have a conflict of interest. We shouldn't be so anxious to *appear* on the side of the "smart" people, because "smart" people have a tendency to say stupid things when there is money being pressed into their hands. We need to be skeptical.

The cosmic background radiation is fact. The fine-tuning of the force of gravity is fact. Protein folding is fact. Predicting the weather hundreds of years into the future is something else entirely. Especially when you have to edit out the Medieval Warming Period and "hide the decline using Mike's Nature trick". That certainly isn't science. It's prostitution.

# College allows transgender man to expose himself to young girls

**Wintery Knight** · 24 September 2014 · Archived copy · Original

Todd Starnes reports on it for Fox News.

Excerpt:

> A Washington college said their non-discrimination policy prevents them from stopping a transgender man from exposing himself to young girls inside a women's locker room, according to a group of concerned parents.
>
> "Little girls should not be exposed to naked men, period," said David Hacker, senior legal counsel with the Alliance Defending Freedom. A group of concerned parents contacted the legal firm for help.
>
> Hacker said a 45-year-old male student, who dresses as a woman and goes by the name Colleen Francis, undressed and exposed his genitals on several occasions inside the woman's locker room at **Evergreen State College.**
>
> Students from nearby Olympia High School as well as children at a local swimming club share locker rooms with the college.
>
> According to a police report, the mother of a 17-year-old girl complained after her daughter saw the transgender individual walking naked in the locker room. A female swim coach confronted the man sprawled out in a sauna exposing himself. She ordered him to leave and called police.
>
> The coach later apologized when she discovered the man was transgendered but explained there were girls using the facility as young as six years old who weren't used to seeing male genitals.

And listen to what he says about it:

> Francis told KIRO-TV that he was born a man but chose to live as a woman in 2009. Francis said he felt discriminated against after he was told told leave.
>
> "This is not 1959 Alabama," Francis told the television station. "We don't call police for drinking from the wrong water fountain."

This is not 1959 Alabama. He means that if you judge him, then you are a racist. Understand? And legions of college students have been taught to agree with his view, thanks to their highly-educated humanities professors.

The story was also reported on ABC News.

Where did these non-discrimination policies come from?

Well, I remember a secular woman I worked with a while back explaining to me why she favored moral relativism. She said that she felt bad about being judged when she did something selfish, and she thought that if she refused to make any judgments of other people, then no one would ever judge her. What she really meant is that *if she shamed people who made moral judgments of anyone* then there would be no one left with the courage *to judge her actions.* So moral relativism is really about stopping anyone from judging anyone, in order to not be judged yourself.

This is the mindset behind the people who want us to do away with moral judgments and objective moral standards. This transgender story reminds me of the two gay dads story. Two gay men adopted a newborn boy from Russia for the purpose of child molestation and sex-trafficking. The abuse started almost immediately after *the child's birth.* But this was all perfectly OK with the tolerance/compassion crowd, because as they like to say "who are we to judge?" Whenever you hear that coming from someone, remember what happens when we don't respectfully

express disagreements on moral issues, and vote for sensible moral boundaries in the law. We can make moral judgments without being disrespectful or coercive about it. My own view is that we should be promoting the idea that children should grow up with their biological mothers and fathers. We should be celebrating that, and promoting that.

# Should we be trying to change the world from the bottom up or the top down?

**Wintery Knight** · 24 September 2014 · Archived copy · Original

Dr. Paul Gould is a professor of philosophy (PhD from Purdue) at Southwestern Baptist Theological Seminary.

Here is his bio, which says, in part:

> I have a Masters in Philosophy of Religion and Ethics from Talbot School of Theology and a Ph.D. in Philosophy from Purdue University.
>
> I am an Assistant Professor of Philosophy and Christian Apologetics at Southwestern Baptist Theological Seminary in Fort Worth, Texas.

What his bio page doesn't say is that he left a career in business to go onto this apologetics/philosophy track. I find that very interesting, because like most professionals with an interest in apologetics, I had the same dream – to go and do a PhD and get into a college and be a positive influence on Christian kids. But the main thing is that he has had some experience in the real world.

Anyway, Dr. Gould has written two posts on how to change the world, and I want you to look at an excerpt from the first one.

First post:

> Christians like to talk—and aspire—to changing the world. This language stems very naturally from our God-given desire to *make a difference*, to *live a life that matters*. In a very real sense, making a difference *is* to change the world. But, usually, when Christians talk about "changing the world" they mean something like "winning the world for Christ" or "helping the gospel to gain a hearing in culture" or "contributing toward shalom."Recently, there have been a number of very helpful books written by folks who challenge the common view of *how* to go about the task of world-changing, and call into question the relationship between Christ and culture. One of the most important books to enter this discussion is James Davison Hunter's *To Change the World*. I highly recommend it to anyone interested in the topic of world-change. In this post I will share his critique of the "common view" of world change. I think his critique is dead on.
>
> Hunter argued that by and large, Christians have gone about the task of world changing in completely the wrong way and the result is that Christianity in our country at least and in the western world in general, represents a weak culture.
>
> He focuses on world-view ministries (primarily from the US such as Chuck Colson's Wilberforce Forum and Focus on the Families' Truth Project) and those like them that offer the following view of how to change the world:
>
> Common view of world change: as we change the individual beliefs and values of persons, and change enough persons, then we will ultimately change society. This is a **bottom up approach**.
>
> On the common view, the implicit view of culture is that "the essence of culture is found in the hearts and minds of individuals" and that culture change will come as enough individual lives are transformed.
>
> Hunter argues that this approach fails to take into account cultural elites and the institutions that yield power within culture.
>
> Instead, cultural change has always been **top-down:** it is always elites—those who have cultural capital to exert influence and power—who have changed the culture. This is why the university, and the media, and the arts are so important in shaping the culture.
>
> All of this leads to a fascinating conclusion: ***some** ideas have consequences*—namely ideas propagated by those

> within society who possess cultural capital and a supporting network of other individuals and institutions also within the center of cultural influence and production.

Second post is here. The second post has a link to his review of Hunter's book (PDF), which is published by Oxford University Press.

I agree completely with the top-down thesis of James Davison Hunter, and I think that it is a *tragedy* that the Christian parents and Christian churches don't do a good job of challenging and guiding young Christians to study the things that will allow them to have an influence. Most Christians I talk to have a negative view of steering young Christians towards advanced degrees, or towards making a lot of money, or towards positions of cultural influence, etc. Instead of focusing on being effective, they tell me "I will do what I want to do, because God has a mysterious will for me to be happy". I don't buy it. I am happy to consider alternative plans that serve God better, but I don't think that the "I'll do what feels good" view is interested in producing a return for God in terms of money and/or influence. Crazy plans do not work out just because we want them to. There are costs to every plan, and not every plan is as likely to lead to influencing the culture as any other plan. This is reality.

I also think it is important to steer children into positions where they can be prosperous and/or influential. Again, many Christians disagree with guiding children that way. In my experience, it is assumed that children need to be happy, and that they are the best people to decide what they should be doing in life. Well, I'm not a heavy-handed bully, but I am not letting my children do whatever they like, because they don't have enough wisdom and experience to know what to do. For example, I am not letting my children study ballet in university. It doesn't pay the bills, and it isn't likely that they will have an influence compared to other choices. Money is important because money can be used to fund Christian scholars, apologetics ministries and apologetics events. Marriage is a great way to have an influence, but marriage costs money, and that means that marriage-minded people should have a plan to *pay the bills* before they consider marriage. We do not have the right to *do whatever we feel like*, because we have a boss who *expects a return on his investment*. If a person is capable of doing hard things that produce a better return (money or influence or children, etc.) then he should do that.

We have a problem in this country as it is with young people borrowing tens of thousands of dollars to study things that either don't pay off, or that don't allow them to have an influence. It's not unloving to tell children the truth about the choices they make. Especially when the cost of having a child is over six figures *per child*. You can have a huge Christian influence with that kind of money if you spent it on other things, like apologetics scholars, their ministries and their events. So, if you are going to have children and spend it on them, you'd better have some sort of plan, and look for a spouse who is on board with that idea of providing God with a good return on his investment. Everything we do – including the choices to marry and have children – should be focused on serving God. If people shy away from the idea of steering children to have an influence, I don't think it's a good idea to get married at all. Save the money and use it for the kingdom somewhere else. Marriage is about making the best decisions you can in order to serve God, and you can't marry someone who puts their own happiness over the need to produce that return for the boss.

Having said that, if you are already married, stick with it. I am advocating for making smarter decisions *before* you commit. And before you go off to college, ask yourself: is what you are thinking of studying worth it? Trade school is an excellent option that will give you an income that can support a family AND give to apologetics ministries, with less exposure to debt. If you must go to university, then it's generally wiser to stick with STEM degrees, so that you can get a job and actually pay off those loans. Marriages and children are NOT free. Retirement is not free. Health care is not free. Christian apologetics ministries do not run on wishes and hopes. Christian scholars do not get their degrees for free – they need support. I think another good plan is to have one person do philosophy or history and then be supported by other people with jobs in STEM fields. That's what I do – I help out Christian scholars on my team to finish their graduate degrees in fields related to apologetics. Those non-STEM degrees are the best way to have an influence, but it's easier to get them as a multi-disciplinary team effort. Everyone has to pull their weight!

And one last point. The most amazing thing in the world is when I meet people who are very very skeptical about mentoring young people and steering children towards prosperous and influential areas, even though they themselves may be facing the results of their own poor decisions. You would think that someone who has burned $60,000 on a degree in Women's Studies and can't find a job would be on your side about helping other young people to make better decisions, but they are often not on your side. Why is that? Somewhere along the way, this culture stopped liking the Mr. Knightleys who were praised for loving people by telling them the truth about their bad decisions. Now we think that the Emmas can do whatever they want, and no one should be giving them any guidance. How sad.

# Do women commit acts of domestic violence as often as men?

**Wintery Knight** · 25 September 2014 · Archived copy · Original

A friend of mine posted a link to this Time magazine article that answers that question. Note that Time magazine leans far to the left. (H/T Jerry)

Excerpt: (links removed)

> There is little dispute that men commit far more violent acts than women. According to FBI data on crime in the U.S., they account for some 90% of known murderers. And a study published in *American Society of Criminology* finds that men account for nearly 80% of all violent offenders reported in crime surveys, despite a substantial narrowing of the gap since the 1970s. But, whatever explains the higher levels of male violence—biology, culture or both—the indisputable fact is that it's directed primarily at other males: in 2010, men were the victims in almost four out of five homicides and almost two-thirds of robberies and non-domestic aggravated assaults. Family and intimate relationships—the one area feminists often identify as a key battleground in the war on women—are also an area in which women are most likely to be violent, and not just in response to male aggression but toward children, elders, female relatives or partners, and non-violent men, according to a study published in the *Journal of Family Violence*.

And more:

> Research showing that women are often aggressors in domestic violence has been causing controversy for almost 40 years, ever since the 1975 National Family Violence Survey by sociologists Murray Straus and Richard Gelles of the Family Research Laboratory at the University of New Hampshire found that women were just as likely as men to report hitting a spouse and men were just as likely as women to report getting hit. The researchers initially assumed that, at least in cases of mutual violence, the women were defending themselves or retaliating. But when subsequent surveys asked who struck first, it turned out that women were as likely as men to initiate violence—a finding confirmed by more than 200 studies of intimate violence. In a 2010 review essay in the journal *Partner Abuse*, Straus concludes that women's motives for domestic violence are often similar to men's, ranging from anger to coercive control.

And this is also well-known problem in same-sex relationships, *especially* with lesbian couples:

> What about same-sex violence? The February CDC study found that, over their lifetime, 44% of lesbians had been physically assaulted by a partner (more than two-thirds of them only by women), compared to 35% of straight women, 26% of gay men, and 29% of straight men. While these figures suggest that women are somewhat less likely than men to commit partner violence, they also show a fairly small gap. The findings are consistent with other evidence that same-sex relationships are no less violent than heterosexual ones.

And finally this explains why you probably have never heard of this before:

> For the most part, feminists' reactions to reports of female violence toward men have ranged from dismissal to outright hostility. Straus chronicles a troubling history of attempts to suppress research on the subject, including intimidation of heretical scholars of both sexes and tendentious interpretation of the data to portray women's violence as defensive. In the early 1990s, when laws mandating arrest in domestic violence resulted in a spike of dual arrests and arrests of women, battered women's advocates complained that the laws were "backfiring on victims," claiming that women were being punished for lashing back at their abusers. Several years ago in Maryland, the director and several staffers of a local domestic violence crisis center walked out of a meeting in protest of the showing of a news segment about male victims of family violence. Women who

> have written about female violence, such as Patricia Pearson, author of the 1997 book *When She Was Bad: Violent Women and the Myth of Innocence*, have often been accused of colluding with an anti-female backlash.

I wasn't surprised by any this, because I've written about surveys on who commits more domestic violence before on this blog, as well as on the problem of violence in same-sex couples (reported by the leftist Atlantic magazine). It's very important for people to understand that there are groups in our society who are very invested in painting men as the aggressors and women as the victims. But, if you look at the actual numbers, then quite a different picture emerges. You don't even have to go to conservative sources, as you can see.

# Two short videos explain two basic scientific arguments for God's existence

**Wintery Knight** · 25 September 2014 · Archived copy · Original

These are from Reasonable Faith. The new one is on fine-tuning, and it's probably the best thing you can give someone to understand the fine-tuning argument in 6 minutes.

Here it is:

The last one they did was on the kalam cosmological argument, and it was even shorter – just over 4 minutes.

Check it out:

If you have any friends who are interested in scientific arguments for the existence of God, send them both of these videos.

# Simon Brace on the nature of spiritual warfare and a plea to the Church

**Wintery Knight** · 25 September 2014 · Archived copy · Original

This passionate, challenging lecture has been getting shared a lot on Facebook, so I thought that I would do a summary of it.

First, you can grab the MP3 file here.

Note that this talk is given by a very conservative evangelical Christian who is speaking to Christians. So this is not intended for a non-Christian audience. However, non-Christians are free to tune in if you want to hear a really passionate, fire-breathing conservative evangelical go non-linear over the superficial turn that the evangelical church has taken. If you are familiar with J.P. Moreland's view that spiritual warfare is really about disputing speculations and falsehoods using logic and evidence, then you'll know the meaning of the term "spiritual warfare" he has in mind. When he says spiritual warfare, he means apologetics: knowledge and preparation.

I would really caution you not to listen to this if you are not passionate about defending God's honor. It will overwhelm and upset you. Having said that, this lecture reflects my convictions about the churches need to drop anti-intellectualism and take up apologetics. And not pre-suppositional apologetics, which I think is ineffective, but *evidential* apologetics. Evidential apologetics is effective, which is why everyone in the Bible used it.

About the speaker:

> **Simon Brace** is the Director of Evangelism of Southern Evangelical Seminary. Simon was born in Zimbabwe and grew up in South Africa. Simon has a construction background and has lived in a number of countries and travelled extensively. He has a MA in Apologetics and BA in Religious Studies and is currently working on an MA in Philosophy at SES. Simon leads TEAM which is the missions program of SES on local, national, and international trips. In addition, Simon has worked with Ratio Christi at SES, and has an extensive knowledge of Ratio Christi's history and operation. Simon currently resides in North Carolina with his wife Nel and children, Eva and Olivia.

I liked the second part of the lecture more than the first part, so there is less summarizing of the first part.

Topics:

- What does the New Testament say about spiritual warfare in Ephesians?
- Christian slogans about spiritual warfare sound pious, but they are mistaken
- Today, Christianity is focused on piety and zeal, not on study and knowledge
- The result is that Christianity in the West is in a state of erosion and decline
- What we are doing about spiritual warfare is not working to stop the decline
- Preaching, publishing, programs, retreats, etc. are not very useful for spiritual warfare
- Enthusiasm and passion without knowledge  are not very useful for spiritual warfare
- The Church has a theoretical understanding of spiritual warfare, but no real capability
- Doesn't work: trying to make Christianity seem popular and cool
- Doesn't work: making Christian music and art that non-Christians will like
- Doesn't work: pastors trying to be relevant by having cool clothes and cool haircuts
- Doesn't work: fundamentalists getting angry about peripheral issues
- Doesn't work: not read things apart from the Bible and sound foolish when speaking in the public square
- Doesn't work: church leaders think that careful exegesis and expository preaching is a good answer to skeptics

- What works: we need to train people who are prepared and willing to defend the truth of the Christian faith
- Evangelicalism has a deep suspicion of reading things outside the Bible, so they are unable to refute anything
- Evangelicals are hyper-spiritualized and hysterical, focusing on demons, prophecy and end-times, etc.
- Evangelicals have a pagan view of using their minds to alter reality, which is irrational and superstitious
- Evangelicals like conservative celebrity preachers who do *nothing* to correct anti-intellectualism in the church
- Evangelicals are focused on their personal relationships with Jesus instead of their whole worldview
- Evangelicals focus too much on homeschooling and not enough on how to impact the secular universities
- Church programs for youth are about "strumming guitars and eating pizza once a week", not apologetics
- Evangelicals have an over-inflated view of the effectiveness of their (non-intellectual) evangelism methods
- The primary focus and primary responsibility in spiritual warfare is not dealing with supernatural evil
- The real focus and responsibility in spiritual warfare is specified in 2 Cor 10:3-5
- What we ought to be doing is defeating speculations (false ideas), using logical arguments and evidence
- Defending the faith is not memorizing Bible verses and throwing them out randomly
- Defending the faith is not just preaching the gospel
- Demolishing an argument requires understanding arguments: premises, conclusions, the laws of logic
- We should exchange our pious Bible memorizing skills and the like for a class in critical thinking
- The New Testament requires that elders be capable of *refuting* those who oppose sound doctrine (Titus 1:9)
- It is not enough to preach a good sermon, elders have to be able to defend the Christian faith as well
- People who run conservative seminaries do not mandate that M.Div graduates study apologetics
- Famous pastors like Driscoll, Begg, etc. need to teach other pastors to emphasize apologetics in church
- People in church won't engage the culture unless they have reasons and evidence to believe Christianity is true
- We need a balance of both piety and intellectual engagement
- We need to make our evangelism rooted in the intellect in order to have an influence at the university
- Mission organizations also have a responsibility to defend the faith and not merely preach (1 Peter 3:15)

And here is his closing quote from C.S. Lewis:

> To be ignorant and simple now not to be able to meet the enemies on their own ground would be to throw down our weapons and to betray our uneducated brethren who have, under God, no defense but us against the intellectual attacks of the heathen. Good philosophy must exist, if for no other reason, because bad philosophy needs to be answered.

I was really humbled by this, because I sort of knew that the church was anti-intellectual, but I didn't really reflect on how everyone else in society thinks that we are anti-intellectual. It's troubling. The quickest way to make Biblical Christianity respectable again is to hit the books and defeat all comers in intellectual disputations. Are we ready to make the sacrifices to do that?

UPDATE: A friend of mine who blogs at Think Apologetics has written a post on this same issue of anti-intellectualism in the church.

# Why is attorney general Eric Holder retiring now?

**Wintery Knight** · 26 September 2014 · Archived copy · Original

Here's one possible reason why Eric Holder is resigning ahead of the mid-term elections.

Excerpt:

> U.S. District Court Judge John D. Bates has denied a request from the Department of Justice to delay the release of a list of Operation Fast and Furious documents being protected under President Obama's assertion of executive privilege.
>
> The list, better known as a Vaughn index, was requested through a June 2012 FOIA filing by government watchdog Judicial Watch. When DOJ didn't respond to the FOIA request in the time required by law, Judicial Watch sued in September 2012, seeking all documents DOJ and the White House are withholding from Congress under executive privilege claims. President Obama made the assertion on June 20, 2012 just moments before Attorney General Eric Holder was held in contempt. In July 2014, after two years of battling for information, Judge Bates ordered the Department of Justice to release the Vaughn Index by October 1. DOJ responded by asking for a month long delay in releasing the list with a deadline of November 3, just one day before the 2014-midterm elections. That request has been denied. A short delay was granted and DOJ must produce the Vaughn index by October 22.
>
> […]"The Obama administration failed to game the courts and now will have to account for its Fast and Furious lies. Two federal courts have now rejected Eric Holder's election-related ploy to keep this information from the American people," Judicial Watch President Tom Fitton said in a statement in reaction to the ruling.

Even if Holder resigns now to avoid influencing the midterm elections, the contempt of Congress inquiry will go on.

Excerpt:

> Attorney General Eric H. Holder Jr. announced Thursday he is resigning as soon as a replacement is found, though he and the Justice Department still face contempt ofCongress charges that will linger well after he officially gives up the office.
>
> Analysts said Mr. Holder — the first sitting Cabinet official ever to face a contempt citation from Congress — will likely duck any legal punishment, though his department will soon be forced to begin turning over the documents he withheld, which sparked the initial fight. It's just the latest in a series of stormy disputes that have defined his turbulent six-year tenure.
>
> From declining to defend the Defense of Marriage Act to backing President Obama in a losing constitutional battle over presidential recess appointments and fighting — unsuccessfully, so far — to close the detention facility at Guantanamo Bay, Cuba, Mr. Holder has been the spearhead for most of Mr. Obama's major legal decisions.
>
> […]"Eric Holder is the most divisive U.S. attorney general in modern history," said Rep. Darrell E. Issa, the California Republican who, as chairman of the House oversight committee, led the push to hold Mr. Holder in contempt for refusing to turn over documents detailing how the Justice Department handled the investigation into the botched Fast and Furious gunwalking operation.

It's not a "gunwalking" operation, it's a gun SMUGGLING operation. Our government smuggled guns to Mexican drug cartels. Who would want to talk about that before mid-term elections? Obviously not Eric Holder.

UPDATE: The seven worst things Eric Holder did as attorney general.

# The seven worst things Eric Holder did as attorney general

**Wintery Knight** · 26 September 2014 · Archived copy · Original

The list is from the Daily Signal.

The list:

1. Gun smuggling
2. Corrupting election process
3. Failure to investigate IRS targeting of conservative groups
4. Failure to take the threat of terrorism seriously
5. Refusing to respect and defend the rule of law
6. Allying with leftist groups to "sue and settle" with conservative groups
7. Treated the oversight responsibility of Congress with contempt

I've written about the one that bothered me the most – the refusal to investigate the IRS. I just want to make clear how bad this one was.

Look:

> Outgoing Attorney General Eric Holder's legacy – or at least a big part of it – will be obstructing the investigation into the Internal Revenue Service targeting of conservative groups, said Rep. Jim Jordan (R-Ohio), who set a low bar for the next attorney general.
>
> "Whoever is going to be next, they have to be better than Eric Holder was," Jordan told The Blaze on the day Holder announced he was retiring from his controversial tenure as head of the Justice Department.
>
> Jordan is the chairman of the subcommittee for regulatory affairs for the House Oversight and Government Reform Committee, in which he has probed the IRS targeting of tea party and conservative groups.
>
> Primarily, he points to Holder naming DOJ attorney Barbara Bosserman, who contributed more than $6,000 to President Barack Obama and the Democratic National Committee, to run the investigation.
>
> "It just shows the arrogance that is in this attorney general's agency during his tenure," Jordan said.
>
> Every House Republican and 26 House Democrats voted for a resolution asking for a special prosecutor to investigate the IRS scandal. Holder ignored the resolution.
>
> Not only that, but Jordan points out that Holder is stepping down in the middle of other unanswered questions, such as Operation Fast and Furious and Solyndra – matters that were not resolved but dropped out of focus.
>
> Jordan said of the entire IRS scandal, "This is like a third rate, B actor crime drama."
>
> The reason, he is because of a predictable script. First, he said, Obama talks about shadowy conservative groups, then Democratic senators write letters to the IRS demanding an investigation. Once the IRS is caught for their targeting, they blame lower level employees. When that didn't work, they blamed Russell George, the Treasury Inspector General for Tax Administration for being unfair.
>
> "The last thing they do what everyone else does when they're caught in a crime, they lose the evidence," Jordan said, referring to the lost e-mails from Lois Lerner, the former head of the tax exempt organizations unit for the IRS.

This is the kind of administration we've had for the past 5+ years. It was Watergate every day in this administration. And it's not going to stop unless we throw the out the crooks in the next election and put in moral people.

# Friday night movie: Kansas City Confidential (1952)

**Wintery Knight** · 26 September 2014 · Archived copy · Original

Here's tonight's movie:

IMDB mean rating: [7.5/10]

IMDB median rating: [8/10]

Description:

> Four robbers hold up an armored truck, getting away with over a million dollars in cash. Joe Rolfe (John Payne), a down-on-his-luck flower delivery truck driver is accused of being involved and is roughly interrogated by local police. Released due to lack of evidence, Joe, following the clues to a Mexican resort, decides to look for the men who set him up both to clear his name and to exact revenge.

Happy Friday!

# New study: stay-at-home moms have strongest sense their lives are worthwhile

**Wintery Knight** · 27 September 2014 · Archived copy · Original

The UK Telegraph reports.

Excerpt:

> Mothers who have put their career aside to care for their children have a stronger sense that their lives are "worthwhile" than the rest of society, official figures suggest.

> New findings from the UK's national "well-being" index show that those classed as economically inactive because they are caring for a family or home are also among the happiest people in Britain.
>
> The figures, published by the Office for National Statistics, also show that people across the UK have got progressively happier, less anxious and more satisfied with their lives in the past year.
>
> The improvement is thought to be linked to the economic recovery and falling unemployment – even if people are not necessarily better off than a year ago.

> The ONS said the improvement appeared to be linked to optimism and improvements in people's personal situations even though typical household incomes are lower in real terms.

So then why don't more women stay home with their children? Well, part of it is going to be feminism. Feminism is everywhere and it causes women to feel guilty about staying home with their kids. They think that they have to do the exact same thing that a man does in order to have any value. They don't know what benefits a stay-at-home wife and mother brings to her family.

But sometimes, it's not feminism, it's just lack of money.

Young women need to understand that what will *really* satisfy them in life is a marriage and raising children at home. And this is not free – an enterprise like that costs money. If a woman seeks this sense of having a life that is "worthwhile", then she needs to find a man who has made decisions in his education and career such that he is able to provide for her to stay home with their children. He has to be faithful, too – not just hardworking.

That's not a popular thing to say to young women these days, and we don't usually say that to them. We tell them that they need to find their happiness in a career, doing exactly what men do. And a lot of them let their fertile years pass by in relationships with the wrong men and focused on careers that do not satisfy. By the wrong men, I mean men who are not interested in a lifelong commitment to provide for a family. Maybe we should be telling young unmarried women what will really satisfy them before it's too late?

# Christian college's accreditation threatened over adherence to Christian moral values

**Wintery Knight** · 27 September 2014 · Archived copy · Original

If you are a Christian, then you take Bible as an authority in sexual matters. That means no sex before marriage. And no sex outside marriage. Period.

Check out this article from Boston Business Journal.

Excerpt:

> The regional body that accredits colleges and universities has given Gordon College a year to report back about a campus policy on homosexuality, one that may be in violation of accreditation standards.
>
> The higher education commission of the New England Association of Schools and Colleges met last week and "considered whether Gordon College's traditional inclusion of 'homosexual practice' as a forbidden activity" runs afoul of the commission's standards for accreditation, according to a joint statement from NEASC and Gordon College.
>
> The commission asked Gordon College to submit a report next September. The report should describe the process by which the college has approached its review of the policy "to ensure that the College's policies and procedures are non-discriminatory," the statement said.

So it doesn't matter to the commission what they teach in the classroom, it just matters that they toe the line on secular sexual ethics. Accreditation doesn't mean having academic standards, it means that your moral beliefs have to match those of the commission.

If you want to contact the four women (1 president, 3 vice presidents) who lead the commission, their contact information is here. I'm sure that these four women believe that they are acting out of compassion and tolerance in order to promote diversity, but from my perspective, I just see it is as another case of secularists trying to force their moral views on Christians by threats and coercion.

Previously, Gordon College was in the news for asking for an exemption from Obamacare, which forces Christians to subsidize the cost of drugs that cause abortions.

From Campus Reform.

Excerpt:

> The town of Salem, Mass., has pitted itself against Gordon College after the president of the private Christian school added his name to a public letter to President Obama asking for a religious exemption from a planned federal mandate.
>
> The expected executive order would force any organization receiving federal funds, including religiously based organizations, to hire people whose sexual conduct may not fall in line with their beliefs. Gordon says the mandate would be an "infringement on religious liberty" and "the rights of faith-based institutions to establish a set of standards and expectations for their community."
>
> Gordon's statement of faith and conduct defines marriage as the "lifelong one-flesh union of one man and one woman." It also clarifies that the school is against "homosexual acts," not "same-sex orientation," and claims that it expects its students and faculty to "refrain from any sexual intercourse—heterosexual or homosexual; premarital or extramarital—outside of the marriage covenant."
>
> "Signing the letter was in keeping with our decades-old conviction that, as an explicitly Christian institution, Gordon should set the conduct expectations for members of our community," Gordon College President

> Michael Lindsay said in a statement. “Nothing has changed in our position.”
>
> […]It was Lindsay’s signature that prompted Salem Mayor Kimberly Driscoll to publicly chastise the school, calling the small Christian college’s longstanding policies of expressly forbidding homosexual practices “offensive” in a statement released by the city. Driscoll went on to say that the city was revoking its contract with the college over the management of the city’s Old Town Hall facility.
>
> “While I respect your rights to embed religious values on a private college campus, religious freedom does not afford you the right to impose those beliefs upon others and cannot be extended into a publicly owned facility or any management contract or a publicly owned facility, like Old Town Hall,” she said.

This Obamacare mandate is one of the cases that shows why I always urge Christians to vote for smaller and smaller government. The more money stays in our hands, the more freedom we have to run our own lives. The more money we transfer to people in secular governments, the more power they have to intrude into our lives and force their beliefs on us. Part and parcel of the rejection of God as an authority figure is the desire to get the approval of everyone else around you for acting immorally and selfishly. When people reject God, they feel guilty, and it causes them to want to surround themselves with people who tell them that they are actually doing the right thing by doing the wrong thing. But no amount of celebration of their selfishness is enough, and that’s why the secular left is so much in favor of taxpayer-funded abortion, restricting disagreement with homosexuality and so on.

One way to stop their desire to get us to celebrate and affirm their immorality is to cut off the flow of money from families and job creators to the secular government. They should be getting no more of what we make than they need to perform their jobs – e.g., building roads, maintaining armed forces, etc. The more we can privatize things like education, health care, etc., the more free we will be. That could go as far as privatizing or even abolishing entire government departments.

# Armed company owner prevents former employee from beheading second woman

**Wintery Knight** · 28 September 2014 · Archived copy · Original

Guns are for self-defense against criminals

The media isn't going to make much of this, but it does show the principal reason WHY law-abiding people should be allowed to own firearms. (H/T Czar B.)

Excerpt:

> On September 26, an armed company owner intervened in an attack by shooting a former employee who had already beheaded one worker and was stabbing another.
>
> The attack took place at Vaughan Foods in Moore, Oklahoma.
>
> Fox News reports that the alleged attacker, 30-year-old Alton Nolen, drove his car into another car in the parking lot of Vaughan Foods' parking lot, then entered the business and beheaded 54-year-old Collee Hufford. He was allegedly stabbing a second victim, 43-year-old Traci Johnson, when company owner Mark Vaughan drew the gun he was carrying and shot Nolen.
>
> Vaughan is C.O.O. of the food company and "a reserve county deputy."
>
> Moore Police Sgt. Jeremy Lewis praised Vaughan's actions, calling him a "hero." He said the situation "could have gotten a lot worse" if had not had his gun.
>
> The Associated Press reports that Lewis added: "This was not going to stop if [Vaughan] didn't stop it."
>
> Nolen was recently fired from Vaughan Foods. The FBI is "probing whether Nolen's recent conversion to Islam had anything to do with the attack."

Time to review the evidence for allowing people to own and carry guns for self-defense.

**A quick refresher on why people own guns**

People own guns so that they deter criminals and reduce the crime rate in their communities. The more guns there are in the hands of law-abiding citizens, the lower the crime rate goes, because criminals don't like being shot at by their crime victims.

Whenever I get into discussions about gun control, I always mention two academic books by John R. Lott and Joyce Lee Malcolm.

- The Lott book was published by the University of Chicago Press (now in its 3rd edition)
- The Malcolm book was published by Harvard University Press

Here is a paper by Dr. Malcolm that summarizes one of the key points of her book.

Excerpt:

> Tracing the history of gun control in the United Kingdom since the late 19th century, this article details how the government has arrogated to itself a monopoly on the right to use force. The consequence has been a tremendous increase in violent crime, and harsh punishment for crime victims who dare to fight back. The article is based on the author's most recent book, Guns and Violence: The English Experience (Harvard University Press, 2002). Joyce Malcom is professor of history at Bentley College, in Waltham, Massachusetts. She is also author of To Keep and Bear Arms: The Origins of an AngloAmerican Right (Harvard University Press, 1994).
>
> Upon the passage of The Firearms Act (No. 2) in 1997, British Deputy Home Secretary Alun Michael boasted: "Britain now has some of the toughest gun laws in the world." The Act was second handgun control measure passed that year, imposed a near-complete ban on private ownership of handguns, capping nearly eighty years of increasing firearms restrictions. Driven by an intense public campaign in the wake of the shooting of schoolchildren in Dunblane, Scotland, Parliament had been so zealous to outlaw all privately owned handguns that it rejected proposals to exempt Britain's Olympic target-shooting team and handicapped target-shooters from the ban.

And the result of the 1997 gun ban:

> The result of the ban has been costly. Thousands of weapons were confiscated at great financial cost to the public. Hundreds of thousands of police hours were devoted to the task. But in the six years since the 1997 handgun ban, crimes with the very weapons banned have more than doubled, and firearm crime has increased markedly. In 2002, for the fourth consecutive year, gun crime in England and Wales rose—by 35 percent for all firearms, and by a whopping 46 percent for the banned handguns. Nearly 10,000 firearms offences were committed.
>
> […]**According to Scotland Yard, in the four years from 1991 to 1995 crimes against the person in England"s inner cities increased by 91 percent. In the four years from 1997 to 2001 the rate of violent crime more than doubled. The UK murder rate for 2002 was the highest for a century.**

I think that peer-reviewed studies – from Harvard University, no less – should be useful to those of us who believe in the right of self-defense for law-abiding people.

**A more recent study – from 2014**

A new study that was in the news just last week confirms these findings.Newsmax reported on it.

Excerpt:

> A recent study showing a reverse correlation between concealed weapons and murder rates has renewed the contentious national debate about the effect of gun controls on violent crime.
>
> Reason magazine reported last week on economist Mark Gius' study of gun controls, published in the journal Applied Economics Letters showing states with restrictions on concealed weapons had higher gun-related murder rates than other states.
>
> The study looked at the effects on murder rates of both state-level assault weapons bans and concealed weapons restrictions from 1980 to 2009.

> […]The findings come as A 2007 study has been also getting a new look from those who dispute gun control efforts aimed at stemming gun violence, Boston magazine reported last summer.
>
> In research first published in Harvard's Journal of Public Law and Policy, criminologists Don Kates and Gary Mauser looked at the correlation between gun laws and death rates.
>
> "International evidence and comparisons have long been offered as proof of the mantra that more guns mean more deaths and that fewer guns, therefore, mean fewer deaths," the pair wrote in their introduction. "Unfortunately, such discussions [have] all too often been afflicted by misconceptions and factual error and focus on comparisons that are unrepresentative."
>
> The pair found "correlations that nations with stringent gun controls tend to have much higher murder rates than nations that allow guns."

It's not a reasonable position to think that disarming law-abiding citizens will reduce crime rates. The evidence is against it.

# Being a member of a large family is associated with marital stability

**Wintery Knight** · 28 September 2014 · Archived copy · Original

An article from the Sacramento Bee explains why some marriages last longer than others.

Excerpt:

> A key reason, said University of Virginia sociologist Brad Wilcox, is that a greater proportion of older adults come from large families, born into an era when big families were the norm in American life – and research shows that having lots of siblings correlates with a lower statistical likelihood of divorce.
>
> "In terms of some social outcomes, kids from large families are more likely to flourish," said Wilcox, director of the National Marriage Project. "They're less likely to get divorced. It might be the experience early in life of learning to share so much and live with the exceptional stress of having all those different personalities to deal with."
>
> Ohio State University research suggests that only children are the least likely to marry and most at risk of divorcing, while people with four to seven siblings have markedly lower rates of divorce.
>
> Maybe people from big families grow up knowing that they're not going to win every battle. Maybe they understand from birth that they're not alone in life. Or maybe they learn early on to play well with others.
>
> "All those life experiences may have prepared them better for marriage," Wilcox said.
>
> These long unions stand out in the shifting landscape of marriage. While 78 percent of American adults were married in 1950, according to census data, only about half are married today, and they're waiting longer to do so. The age of first marriage for men has risen to almost 30, compared to 23 in 1960. Fewer people marry each year, and confidence in marriage is at such a low point that a recent Pew Research Center survey showed that 40 percent of unmarried Americans think the concept of marriage is outdated.
>
> Even for older Californians, the chances of staying married are decreasing. The number of adults ages 60 and older who are divorced has risen steadily in Sacramento County and across the state during the last decade, census figures show. About 19.2 percent of Sacramento County residents past 60 are currently divorced, compared to 14.1 percent in 2005. Statewide, about 15.2 percent of residents 60 and older are divorced, compared to 13.1 percent nine years ago.
>
> Todd Migliaccio, a California State University, Sacramento, sociology professor, has researched marriages that have lasted 30 years or longer to figure out what keeps couples together. The traditional reasons for marriage – financial support, child-rearing, family stability and longstanding gender roles – aren't necessarily factors that speak to 21st-century couples. So what makes marriage last?
>
> Friendship, his research shows: Marriages that endure no matter what tend to involve couples who genuinely like each other and enjoy each other's company.
>
> "We're seeing more and more couples that have lasted where friendship is one of the big factors," he said. "And if they're from a close family, that provides a huge social network that contributes to marital longevity.
>
> "Couples have more to draw on and more commitment to the greater good of the family."

And what about couples who attend church regularly? Does that help?

Yes:

> "The important thing is that people are integrating into a religious community as a couple," said the National Marriage Project's Wilcox. "People who regularly attend religious services together are more likely to stay

> together.
>
> “But people who don’t go to church together are more likely to get divorced than the average American.”

So, if you want to help your own children have a better chance at making their marriages work, have more kids, not less.

# University of Michigan: withholding sex and affection from a woman is domestic violence

**Wintery Knight** · 29 September 2014 · Archived copy · Original

Here's a recent story from The College Fix that shows how far the university is going with this. (H/T Steve)

Excerpt:

> Examples of abuse listed on the University of Michigan's domestic violence awareness website say "sexual violence" includes "withholding sex and affection" and "discounting the partner's feelings regarding sex" – definitions that have come under fire by some men's rights activists.

> […][I]nterspersed within the typical definitions of abuse – "pushing, shoving, pulling, shaking, slapping, biting, hitting, punching, kicking, strangling, throwing objects at partner, restraining, throwing the partner, use of weapons" – the other examples, such as "discounting the partner's feelings regarding sex … criticizing the partner sexually … withholding sex and affection," are found.
>
> Also included in the definition of sexual violence is the example of having "sex with other people."
>
> The campaign also gives examples of what's considered to be "verbal or psychological abuse," including: "insulting the partner; ignoring the partner's feelings; withholding approval as a form of punishment; yelling at the partner; labeling the partner with terms like 'crazy,' 'stupid.'"
>
> It's not unheard of for sexual violence to be defined so loosely within a campus community.
>
> "Sexual violence is anything that makes someone feel unsafe; it could be catcalls, peer pressure to act a certain way in a situation, verbal harassment and unwanted touching. Many of these things occur daily without anyone giving a second thought to them," Jami Coughler, program coordinator for the Brock University Student Sexual Violence Support Centre, told the Canada-based campus newspaper this week.
>
> The University of Chicago, on its website, defines an abuser as someone who "has a strong belief in extreme gender roles" and "is jealous and possessive" among more typical forms of abuse listed.

A man who has a strong belief in extreme gender roles? That's me! Me and my chivalry and chastity.

When you have a group of feminists who set out to destroy the traditional gender roles of men, and who criminalize the traditional virtues of men, then you should NOT be surprised that government has to grow to fill the void. They told women that chastity was out, and chivalry was out. Traditional male roles of protector, provider, and moral/spiritual leader are out. What kind of men do women choose if they want to avoid all of those traditional male virtues? Bad men. And when bad men aren't doing what the feminists want, they resort to big government to coerce and punish them. Every other man looking on to this situation is going to be reinforced not to pursue relationships with women, out of fear that they could be hit with false accusations for upsetting her – even if he hasn't done anything at all!

I hope that even non-Christian men who do think that premarital sex is OK will wake up and realize that there is a secular leftist agenda here that they tend to be supportive of when they vote for Democrats. The right is for free market capitalism and individual liberty in almost ever case, except that we don't think it's OK to killing unborn babies or that two men who meet through the Grindr app can then "marry" and then raise a little girl. But the left is all about controlling people's behavior to the smallest detail, and you will be punished if you disagree with their radical ideologies. In fact, if you don't celebrate the ideologies of the secular left, the way that citizens had to at rallies in left-wing regimes like socialist Germany and Communist Russia, then you should expect to be persecuted by the state if you cross any of their favored causes and groups. Using coercion to force people to affirm that wrong is right is pretty standard practice on the secular left.

I have no axe to grind in this premarital sex debate. I'm a virgin and I'm saving my first kiss on the lips for my engagement. I don't go near feminist women because I can't deal with the craziness, the irresponsibility and the misandry. My advice for young men today – Christian and not – is this: don't even speak to third-wave feminists. Don't even speak to women who drink more than a beer or a glass of wine per night. And don't have sex with women before you are married. If you want to go out on dates and get married, then pick a woman who repudiates third-wave feminism in its entirety.

I recommend studying STEM subjects as well, in order to avoid the more radical feminists – they tend to congregate in the humanities or in fake majors like "women's studies".

# October 5th is Pulpit Freedom Sunday: is your church getting involved?

**Wintery Knight** · 29 September 2014 · Archived copy · Original

I listened to this podcast from the Alliance Defending Freedom and this podcast from the Family Research Council on the weekend. Both of them mentioned that something called Pulpit Freedom Sunday was happening this Sunday.

So I looked it up and found this online:

> Pulpit Freedom Sunday is an event associated with the Pulpit Initiative, a legal effort designed to secure the free speech rights of pastors in the pulpit. Pulpit Freedom Sunday encourages pastors to exercise their constitutionally protected freedom to speak truth into every area of life from the pulpit. Alliance Defending Freedom also hopes to eventually go to court to have the Johnson Amendment struck down as unconstitutional for its regulation of sermons, which are protected by the First Amendment.

The web site is here. They are up to 3520 pastors now who are participating. My pastor did not participate last year. He is not very intelligent when it comes to apologetics and policy, so he probably doesn't know what to say. Or maybe he just afraid, which I can understand more than not knowing what to say.

Not everyone is happy with this. The IRS is investigating churches (not Democrat-favoring churches, of course) for speaking about specific issues.

Here's an article on that.

Excerpt:

> The Internal Revenue Service (IRS) has agreed to investigate the political activity of churches after reaching a settlement with an atheist legal group. But a court has yet to decide whether or not to close the case.
>
> The Freedom from Religion Foundation (FFRF) and the IRS jointly asked a Wisconsin federal court last week to dismiss a 2012 lawsuit, FFRF v. Koskinen. The FFRF had alleged that the IRS failed to have a policy in place for investigating political activity at tax-exempt churches and religious organizations, nor did the agency enforce its 501(c)(3) codes against electioneering.
>
> Meanwhile, more than 1,600 churches have deliberately broken the existing law since 2008, endorsing political candidates from their pulpits during Pulpit Freedom Sunday events organized by the Alliance Defending Freedom (ADF). The next "showdown" will be October 5.
>
> "This is a victory, and we're pleased with this development in which the IRS has proved to our satisfaction that it now has in place a protocol to enforce its own anti-electioneering provisions," said FFRF co-president Annie Laurie Gaylor in a press release.
>
> However, the case has not yet been closed. Father Patrick Malone of Holy Cross Anglican Church in Milwaukee, Wisconsin, had been granted permission to interveneon the side of the IRS, and the Becket Fund for Religious Liberty (which represents Malone) has asked the court to dismiss the case but "with prejudice." In other words, Becket argues the FFRF should not be able to sue the IRS again on this particular issue, while the FFRF argues that it should be able to do so.
>
> Regardless of the court's final decision, the IRS won't be free to investigate churches until a moratorium related to the agency's controversial scrutiny of tea party organizations is lifted after a congressional investigation closes.
>
> CT has noted how the six-year run of Pulpit Freedom Sunday has tried to provoke the IRS into (ironically) punishing pastors as a means to reexamine the rights of pastors to promote politicians from the pulpit. The

> initiative even gained an unexpected allylast year in Sen. Charles Grassley and the Commission on Accountability and Policy for Religious Organizations (CAPRO).
>
> Meanwhile, LifeWay Research has found that only 10 percent of Protestant pastors believe pastors should endorse political candidates (while noting that is a different question from should the IRS ban the practice.)
>
> The IRS has not released the language of the settlement, and ADF is concerned about how secretive the church investigations will be—if they indeed happen. ADF has issued a Freedom of Information Act (FOIA) request in pursuit of the documents surrounding the settlement between the FFRF and the IRS.
>
> "This is one of the major problems with the IRS," said Erik Stanley, senior legal counsel with ADF. "They are secretive, which breeds mistrust and leads to problems in knowing just how they will enforce and interpret the law."
>
> Becket has also requested information on documents the FFRF and the IRS are not making available, including: "all documents relating to any investigation or determination by a high-ranking IRS official, in writing, of the acts and circumstances, including potential violations of the electioneering restrictions, that led to the high-ranking official to reasonably believe that a church or religious organization may have violated the requirements for tax exemption under 501(c)(3)."
>
> Stanley says ADF's strategy—helping churches realize how government is censoring what they say—will not change. If the IRS does monitor electioneering more closely, he hopes the issue will end in a lawsuit.
>
> "The Johnson Amendment is unconstitutional," said Stanley. "If the IRS begins enforcing it again against churches, Alliance Defending Freedom stands ready to defend a pastor's right to speak freely from the pulpit."
>
> ADF has organized Pulpit Freedom Sunday for six years, with 1,621 church and religious leaders participating in 2012 (2013 dropped to nearly 1,100 participants). But until now, the IRS has all but ignored ADF's attempts to bring the issue to a head. According to Stanley, the IRS does not want to challenge the Johnson Amendment—which bans tax-exempt organizations from endorsing or opposing political candidates—in court.

I think it's interesting that the FFRF is not so much interested in debating whether atheism is true as they in shutting down theists who seek to live consistently with their beliefs by using the power of big government. I think that's pretty par for the course though, if you look through 20th century history. That's what atheist regimes have done, so we should expect individual atheists to do that as well.

I don't recommend to the atheists at FFRF that they intimidate Christians, though, as Jesus seems to think that limiting the practice and free expression of Christian convictions is a bad idea.

Read Matthew 18:1-7:

> 1 At that time the disciples came to Jesus and said, "Who then is greatest in the kingdom of heaven?"
>
> 2 And He called a child to Himself and set him before them,
>
> 3 and said, "Truly I say to you, unless you are converted and become like children, you will not enter the kingdom of heaven.
>
> 4 Whoever then humbles himself as this child, he is the greatest in the kingdom of heaven.
>
> 5 And whoever receives one such child in My name receives Me;
>
> 6 but whoever causes one of these little ones who believe in Me to stumble, it would be better for him to have a heavy millstone hung around his neck, and to be drowned in the depth of the sea.
>
> 7 "Woe to the world because of its stumbling blocks! For it is inevitable that stumbling blocks come; but woe to that man through whom the stumbling block comes!

I think that we Christians need to take positions that are in accord with what God's Word says, and we need to be

ready to defend our positions in public using public arguments and public evidence – especially scientific research – that will be persuasive to non-Christians who do not accept the Bible. That's the only way to stop the cultural decline caused by the secular left.

The best introductory book on the interface between Christianity and politics is "Indivisible: Restoring Faith, Family, and Freedom Before It's Too Late", co-authored by Jay Wesley Richards. The Kindle edition is $9.99. Richards' Ph.D is from Princeton University.

The best comprehensive book is "Politics – According to the Bible: A Comprehensive Resource for Understanding Modern Political Issues in Light of Scripture" by Wayne Grudem. The Kindle edition of that one is $4.99. Grudem's is from Cambridge University. First-rate Christian scholarship on practical Christianity.

And you can listen to Grudem delivering Sunday school training at his church on every single chapter of that book right here. All free, and no ads. Be sure and scroll through all the previous years to get all the topics! Ethics, social policy, fiscal policy, foreign policy and more!

For more information on Pulpit Freedom Sunday, check out this web site.

If you want to hear about things like this, then subscribe to the FRC podcasts and the ADF podcast.

# How do atheists incorporate the Big Bang cosmology into their worldview?

**Wintery Knight** · 30 September 2014 · Archived copy · Original

It's easy! Just watch the video of his debate with William Lane Craig, who responds to Atkins' explanation.

So, just who is this Peter Atkins, and why is he a good spokesman for atheism?

From his Wikipedia bio.

**Peter William Atkins** (born August 10, 1940) is an English chemist and a fellow and professor of chemistry at Lincoln College of the University of Oxford. He is a prolific writer of popular chemistry textbooks, including *Physical Chemistry*, 8th ed. (with Julio de Paula of Haverford College), *Inorganic Chemistry*, and *Molecular Quantum Mechanics*, 4th ed. Atkins is also the author of a number of science books for the general public, including *Atkins' Molecules* and *Galileo's Finger: The Ten Great Ideas of Science*.

[…]Atkins is a well-known atheist and supporter of many of Richard Dawkins' ideas. He has written and spoken on issues of humanism, atheism, and what he sees as the incompatibility between science and religion. According to Atkins, whereas religion scorns the power of human comprehension, science respects it.

[…]He was the first Senior Member for the Oxford Secular Society and an Honorary Associate of the National Secular Society. He is also a member of the Advisory Board of The Reason Project, a US-based charitable foundation devoted to spreading scientific knowledge and secular values in society. The organisation is led by fellow atheist and author Sam Harris.

Now watch that 6-minute video above. Peter Atkins thinks that nothing exists. He thinks he doesn't exist. He thinks that you don't exist.

If you watch the full debate, he also argues that objective morality doesn't exist, and that moral values and moral obligations are *illusory*. That's right: a*theists cannot even make rational statements about morality because there is no such thing as an objective moral standard in their worldview.* This denial of morality is *in addition* to denying the mainstream science of the Big Bang cosmology. I don't have the ability to believe things are true that are obviously false the way Atkins does, so I guess I can't be an atheist. Oh well, I tried!

# Stephen C. Meyer and Peter Atkins debate intelligent design

**Wintery Knight** · 30 September 2014 · Archived copy · Original

This dialog occurred in 2010 on the Unbelievable radio show.

I made a rough transcript, so please see below for that.

The MP3 file is here. (60 minutes)

Details:

> The documentary film "Expelled" is presented by US Actor Ben Stein and makes the case that scientists who question Darwinian orthodoxy and support Intelligent Design are being "expelled" from academia.
>
> As the UK edition of the DVD is released we ask "Is freedom of thought at stake or is Intelligent Design out of bounds when it comes to biological science?"
>
> Stephen C Meyer is co founder of the Discovery Institute in the USA and a major proponent of Intelligent Design.
>
> Peter Atkins is Professor of Chemistry at Oxford University and an outspoken atheist.
>
> They both feature in "Expelled" and join Justin to debate the pros and cons of Intelligent Design theory.
>
> Mark Haville who is bringing the film to the UK also joins the discussion.

Note: The transcript below is quite snarky and may include paraphrases of Dr. Atkins for the sake of humor.

**My rough transcript of the Meyer-Atkins debate**

Stephen Meyer:
– started researching on ID while doing his PhD at Cambridge
– the question is whether the information-bearing properties in DNA require a designer
– what cause is adequate to explain the digital code that in the simplest living cell
– alternative explanations like self-organization and RNA-first have failed
– so the best explanation for functional sequences of parts is an intelligent designer
– Darwinists have responded to this argument with insults and suppression of dissent

Peter Atkins:
– intelligent design is creationism
– there is no science at all in it
– information can emerge without an intelligent designer
– structures emerge spontaneously, no agent is needed to generate the structure
– information in DNA is also a structure

Stephen Meyer:
– structure and information are two different things
– many structures emerge spontaneously
– structure may be like the vortex that occurs when water goes down a drain

Peter Atkins:
– the vortex is information

Stephen Meyer:
– structures are different from functionally-specified digital information
– in DNA, there is a 4-digit alphabet that is used to create code sequences
– the thing to be explained is where do the functional sequences come from

Peter Atkins:
– information can grow without an agent
– the second law of thermodynamics
– the universe is falling into disorder
– but there are local abatements of chaos that create information
– evolution can cause the amount of information to grow

Stephen Meyer:
– that's just an assertion
– I agree that energy flow through a system can produce spontaneous order
– but spontaneous order is not the same thing as information

Peter Atkins:
– spontaneous order is the same as information

Stephen Meyer:
– it's not order that needs to be explained it's specified complexity

Peter Atkins:
– what do you mean by specified complexity?

Stephen Meyer:
– the chemical bonds that connect to each letter do not determine the letter
– the chemical bonding sites will accept any letter as easily as any other
– any one of the 4 bases (letters) can attach at any place along the backbone

Peter Atkins:
– the selection of which letter comes next is determined by evolution

Stephen Meyer:
– that is just an assertion
– there is no physical process that sequences the letters to have a function

Peter Atkins:
– do you believe in evolution? YES OR NO!

Mark Haville:
– for him to answer the question you have to define the word
– do you mean macro or micro? biological or stellar? directed or undirected?

Peter Atkins:
– undirected molecules to man evolution by natural processes

Stephen Meyer:
– but even Dawkins doesn't believe in evolution then
– you're including the origin of life from non-living matter in evolution
– Dawkins says that there is no known naturalistic explanation for that

Mark Haville:
– you need to define your terms

[They discuss of the movie Expelled and the case of Richard Sternberg]

Stephen Meyer:
– the problem is people don't want to talk about the science
– they denounce dissent as unscientific
– they will not debate about whther natural causes can explain the information

– I want to talk about the science

Peter Atkins:
– ID people raise interesting questions for naturalists to work on
– but you want to tell us what the answer is (intelligence) before we begin
– you start from the idea that an intelligence was involved

Justin Brierley:
– but you start with the idea that natural mechanisms can explain everything!

Stephen Meyer:
– for Dr. Atkins, only explanations based on material processes are valid

Peter Atkins:
– that is correct

Stephen Meyer:
– but we think that the activities of mind can explain some effects
– e.g. – the best explanation of the Rosetta stone is a mind

Peter Atkins:
– but we naturalists think of minds as material as well

Stephen Meyer:
– that's a materialist pre-supposition on your part
– we would have to have a debate about mind and body

Mark Haville:
– I think that the materialist position is socially dangerous
– the problem with naturalism is that it is an ideology
– the ideology pushes absurdities, e.g. – the universe came from nothing uncaused
– and naturalists exert power over others to force them to believe nonsense

Stephen Meyer:
– science progresses as the result of scientists disagreeing
– both sides agree to the facts
– the debate is about the interpretation of those facts
– and one side is being ruled out a priori based on the pre-supposition of materialism

Peter Atkins:
– why do you say that an intelligence is involved in DNA but not general relativity

Stephen Meyer:
– it is always logically possible that intelligence can be invlved in any effect
– the main thing is that explanations based on intelligence should not be ruled out

Peter Atkins:
= well you can't appeal to any non-material process in expaining anything
– those are the rules

Moderator:
– what does intelligent design have to do with religion?

Stephen Meyer:
– creationism is about understanding the istory of life using the Bible
– intelligent design is about using the same method of inquiry as Darwin
– we know that information arises from intelligent causes

– humans create information all the time by using intelligence to sequence parts

Moderator:
– are intelligent design proponents disreputable?

Stephen Meyer:
– what's disreputable is shutting down debate by setting arbitrary rules

Peter Atkins:
– we are both interested in the same questions

Moderator:
– why won't you let Stephen publish his papers then?

Peter Atkins:
– because it breaks the pre-suppositions of naturalism and materialism

Stephen Meyer:
– you're shutting down inquiry by using an arbitrary definition of science

Mark Haville:
– we need to define the word science
– science should be based on what we can observe empirically
– we can observe micro-evolution empirically
– but Darwinism goes beyond what is observable to postulate macro-evolution

Peter Atkins:
– but paleobiology is replete with evidence

Stephen Meyer:
– paleobiology uses a method of inference that I think is valid
– but intelligent design uses the same mode of reasoning which is also valid

Peter Atkins:
= you're intellectually lazy
– we're smart, we're using our brains

Moderator:
– you're saying that appeals to intelligent causes ends science?
– is ID the view that some things are too complex to be explained with naturalism?

Peter Atkins:
– yes, and to teach children that materialism is false is child abuse

Stephen Meyer:
– let's drop the insults and the rhetoric and focus on the arguments
– the ID argument is not based on what we don't know, it's based on what we DO know
– first, we can ask what undirected natural processes can and cannot do
– second, we can ask what we know about intelligent causes from our own experience
– what we do know seems to me to require an intelligent agent as a cause

Peter Atkins:
– GOD! Do you mean God!? Do you mean God!?

Stephen Meyer:
– I personally mean God, but all that the arguments proves is a generic intelligent cause
– and I am using the same method of investigation that Darwin used to get there

– what we know from our experience is that a mind is needed to create information

Peter Atkins:
– NONSENSE! ABSOLUTE NONSENSE!

Stephen Meyer:
– in my book, I list 10 predictions made by ID, so it's not a science-stopper
– furthermore, the enterprise of science began with th goal of understanding God
– consider the earliest scientists, people like James Boyler and Johannes Kepler

Peter Atkins:
– that was 300 years ago, we've moved on

Mark Haville:
– what about Max Planck then?

Stephen Meyer:
– how about James Clark Maxwell?

Mark Haville:
– we need to focus on the facts

Peter Atkins:
– what do you mean by the facts?

Mark Haville:
– well the fact is that Darwinism has no mechanism to produce new information

Peter Atkins:
– well copying errors introduces beneficial mutations

Stephen Meyer:
– let's focus on where we get the first information from the simplest organism
– you can't account for the first organism by appealing to copying errors
– to add functionality to a program, you need new lines codes from an intelligence
– once you have life, you can generate some new information
– but you can't generate macro-evolution either

Peter Atkins:
– if we give you your explanation for teh origin of life, will you give this up

Stephen Meyer:
– of course! I'm a former theistic evolutionist
– but right now the evidence is not there for it
– we have to decide these questions based on what we see with our own eyes today

Peter Atkins:
– but I pre-suppose materialism as the starting point of all explanations
– you're just intellectually lazy to abandon my pre-supposition

Stephen Meyer:
– why is it is less intellectually lazy to insist that materialism is true
– we are making plenty of predictions, and isn't that what science is about?
– consider Junk DNA – you guys said it had no use
– now we know it has a use

Peter Atkins:

– naturalists were open to the idea that junk DNA might have a use before ID

Moderator:
– Dr. Meyer, what about the wall that locks out intelligence as an explanation?

Stephen Meyer:
– if these are interesting questions, then we should allow freedom of inquiry
– that's how science advances

Peter Atkins:
– for all their science-talk really they are just saying God did it
– people who don't agree with me are not using their brains, like I do
– to give up on my pre-supposition of materialism is a denial of humanity

Mark Haville:
– there are important issues that are affected by our view of origins
– everyone who hasn't seen Expelled movie should definitely see it

# William Lane Craig debates Peter Atkins: Does God Exist?

**Wintery Knight** · 30 September 2014 · Archived copy · Original

Apologetics 315 posted the video of a debate from the Reasonable Faith speaking tour in the UK:

This is a must-see debate. It was extremely fun to watch.

Details:

> On Wednesday 26th October 2011 William Lane Craig debated Peter Atkins on the topic: *Does God Exist?* This debate took place at the University of Manchester as part of the UK Reasonable Faith Tour with William Lane Craig. The debate was chaired by Christopher Whitehead, Head of Chemistry School at the University. Post-debate discussion was moderated by Peter S Williams, Philosopher in Residence at the Damaris Trust, UK.

Dr. William Lane Craig:

> **William Lane Craig** (born August 23, 1949) is an American analytic philosopher, philosophical theologian, and Christian apologist. He is known for his work on the philosophy of time and the philosophy of religion, specifically the existence of God and the defense of Christian theism. He has authored or edited over 30 books including *The Kalam Cosmological Argument* (1979), *Theism, Atheism and Big Bang Cosmology*(co-authored with Quentin Smith, 1993), *Time and Eternity: Exploring God's Relationship to Time* (2001), and *Einstein, Relativity and Absolute Simultaneity* (co-edited with Quentin Smith, 2007).
>
> Craig received a Bachelor of Arts degree in communications from Wheaton College, Illinois, in 1971 and two summa cum laudemaster's degrees from Trinity Evangelical Divinity School in Deerfield, Illinois, in 1975, in philosophy of religion and ecclesiastical history. He earned a Ph.D. in philosophy under John Hick at the University of Birmingham, England in 1977 and a Th.D. underWolfhart Pannenberg at the University of Munich in 1984.

Dr. Peter Atkins:

> **Peter William Atkins** (born 10 August 1940) is a British chemist and former Professor of Chemistry at the University of Oxford and a Fellow of Lincoln College. He is a prolific writer of popular chemistry textbooks, including *Physical Chemistry*, *Inorganic Chemistry*, and *Molecular Quantum Mechanics*. Atkins is also the author of a number of science books for the general public, including *Atkins' Molecules* and *Galileo's Finger: The Ten Great Ideas of Science*.
>
> Atkins studied chemistry at the University of Leicester, obtaining a bachelor's degree in chemistry, and – in 1964 – a PhD for research into electron spin resonance spectroscopy, and other aspects of theoretical chemistry. Atkins then took a postdoctoral position at the UCLA as aHarkness Fellow of the Commonwealth fund. He returned to Oxford in 1965 as fellow and tutor of Lincoln College, and lecturer in physical chemistry (later, professor of physical chemistry).

You can get the audio of the debate here, along with links to their previous debate from 1998. This debate is accessible and understandable to novice-level Christians.

I am happy when debates like this come out. I have friends who are Christians who doubt the importance of apologetics in evangelism, because they don't think that apologists can prove anything or win arguments. I have friends who are skeptical of using arguments that assume a 14-billion year old universe, because they think that the Big Bang is compatible with atheism (!). I have friends who think that philosophical arguments have no persuasive

force. I have friends who think that nothing can be proven from history, beyond a reasonable doubt. I have co-workers who ask me whether anyone wins these debates. I think that this debate answers all of those questions.

This debate clearly shows why Christians should not shy away from studying science, philosophy and history. We will not discover anything that harms Christian theism by thinking logically and by looking at the evidence. To the contrary, it is the atheist who makes war on the progress of science, and who is forced to resist the clear experimental evidence, and to resort to baseless speculations and blind faith. If you want to see a good debate with an intelligent atheist, I recommend watching the debate between William Lane Craig and Peter Millican instead. But if you want to see a really, really overwhelming defeat for atheism, watch this debate. It is very clear at the end of this debate why Richard Dawkins refused to debate William Lane Craig at Oxford.

SUMMARY OF THE OPENING SPEECHES

I only had time to summarize the first two speeches. Keep in mind that Dr. Craig always shines in his rebuttals, and this debate is no different. So you'll want to watch those rebuttals. Dr. Atkins *literally* says in this debate in his first rebuttal "There was nothing here originally. There is nothing here now. But it is an interesting form of nothing which seems to be something." And the audience laughs nervously. This debate is like that. You will see a clear winner and clear loser in this debate. This fight is decided by knockout.

**William Lane Craig opening speech:**

1. the origin of the universe
2. the moral argument
3. the resurrection of Jesus

**Peter Atkins opening speech:**

1. Dr. Craig is stupid, lazy and evil:
– Dr. Craig's arguments are old: from the 11th century! Old arguments can't be true
– Dr. Craig is just asserting that "God did it" because he is lazy
– Dr. Craig feels pressured to agree with the theistic majority
– Dr. Craig needs a psychological crutch to comfort him
– Dr. Craig is fearful of death
– Dr. Craig is just wishing for an eternal life of bliss
– Dr. Craig is driven by his heart, and not by his head

2. Origin of the universe:
– Maybe the universe is eternal and has no beginning – we don't know
– Maybe mommy universes can give birth to daughter universes
– It is naive to think that a cause is needed to cause the creation of the universe from nothing
– Science is just about to show how it is possible that something appears out of nothing without cause
– Some scientists have already begun to speculate about about how something can come into being out of nothing
– Maybe nothing is not really nothing, but it is actually something
– It would be admitting defeat to say that God created the universe out of nothing

3. Fine-Tuning:
– It could be the case that the fundamental constants are not variable
– It could be the case that the fine-tuning of the cosmic constants is a happy accident
– It could be the case that there are billions of billions of unobservable universes that are not fine tuned
– It could be the case that the cosmic constants in these billions and billions of unobservable universes are all random so that some are fine-tuned
– Anyone who infers that an intelligence is the best explanation of a finely-tuned set of life-permitting cosmic constants is lazy

4. Purpose:
– Philosophers and theologians are stupid
– I don't think that there is purpose in the universe
– I think that the universe is more grand if there is no purpose, so there is no purpose

5. Miracles:
– I don't think that miracles happen
– The resurrection is a fabrication
– It could be the case that Jesus didn't exist
– It could be the case that Jesus wasn't really crucified
– It could be the case that Jesus didn't  really die after being crucified
– It could be the case that the disciples stole his body
– It could be the case that the women went to the wrong hole in the ground
– the gospels are political propaganda written long after the events they are reporting on

6. Theodicy:
– God has no morally sufficient reason for allowing humans to perform actions that result in suffering
– God has no morally sufficient reason for allowing nature to cause suffering

7. Morality:
–  customs and conventions emerges arbitrarily in different times and places based on an awareness of the consequences of actions, as well as various anecdotes and experiences
–  these customs and conventions are decided based on the goal for survival, in much the same way as politeness and manners emerge for decorum and to avoid offense
– it is childish to presume that there is an umpire God who decides moral values and duties

8. Religious believers are stupid, lazy and evil:
– the notion of God has arisen because people are stupid and want to be comforted
– there are no arguments or evidences for belief in God
– people who believe in God do not think, but instead take refuge in incomprehensible nonsense

# Could the same libertarian impulse that led to gay marriage lead to incest marriage?

**Wintery Knight** · 1 October 2014 · Archived copy · Original

Here is an article from The Week, a liberal publication. (H/T Dina)

Excerpt:

> You should really care that the German Ethics Council (a government committee) haspronounced that Germany's laws banning consensual incest between adult brothers and sisters ought to be abolished.
>
> Now, it's not because Germany's laws directly affect the United States; they don't, of course. And even within Germany itself, the ruling party of Chancellor Angela Merkel has indicated that it doesn't plan on following the council's recommendation.
>
> The reason why Americans — and especially American liberals — should care about the council's ruling is that it gives us a glimpse of America's future.
>
> The German council's position is based on the claim that "the fundamental right of adult siblings to sexual self-determination" overrides all other moral considerations, including "the abstract idea of protection of the family."

Right now, the Supreme Court struck down the Defense of Marriage Act because they thought that there is no possible reason for defining marriage as one man and one woman other than "the desire to "'disparage,' 'injure,' 'degrade,' 'demean,' and 'humiliate' our fellow human beings, our fellow citizens, who are homosexual". So does this rationale for allow gay marriage apply to incest marriage?

Well:

Well, how long before the majority wants to and believes it can get away with declaring a constitutional right to sibling incest?

> Don't laugh. As with same-sex marriage, the principle has already been established. In a notorious passage of *Planned Parenthood v. Casey*, the 1992 decision that upheld the constitutional right to abortion, Justice Anthony Kennedy wrote that "at the heart of liberty is the right to define one's own concept of existence, of meaning, of the universe, of the mystery of human life." Kennedy relied on the same passage in his majority opinion in *Lawrence.* The German Ethics Council expressed a similarly libertarian ideal of sexual autonomy in its ruling in favor of sibling incest.
>
> […]Note that the German Ethics Council also held that the prospect of a brother and sister producing children with genetic defects cannot be used as a reason to deny them a right to marry. After all, disabled couples are not prohibited from procreating under German law, even though they have a greater-than-average chance of producing disabled kids. The same is true, incidentally, under the Americans with Disabilities Act of 1990.

Indeed. If people should be allowed to marry whomever they "love" then, there can be no prohibitions on polygamy or incest marriages. Don't they "love" each other just as much? Well, then those are both "marriage", too. But maybe that's OK with the secular left – they never liked that whole "morality" thing anyway. So long as the selfish grown-ups are happy, why should we care about children's needs or social stability at all?

# Study: recessions result in lower birth rates

**Wintery Knight** · 1 October 2014 · Archived copy · Original

A new study from Princeton University caught my eye.

Excerpt:

> […][N]ew research from Princeton University's Woodrow Wilson School of Public and International Affairs shows that women who were in their early 20s during the Great Recession will have fewer children in both the short and long term. This result is driven largely by an increase in the number of women who will remain childless at age 40.
>
> The paper, published in the Proceedings of the National Academy of Sciences, is the first to show that recessions have long-term effects on fertility, which actually increase exponentially over time.
>
> […]Their calculations show that a one-percentage point increase in the unemployment rate experienced between ages 20 and 24 reduces the short-term fertility of women by six conceptions per 1,000 women. When following these women to age 40, the same unemployment rate increase leads to an overall loss of 14.2 conceptions per 1,000 women. This increasing effect over time is largely accounted for by an increase in the fraction of women who remain unmarried and childless at age 40. These women not only forego first births, but forego later births as well.
>
> In terms of the Great Recession, the researchers estimate that the increase in unemployment rates experienced between 2008 and 2013 will result in an additional 151,082 women who will remain childless at age 40, leading to a long-term loss of 420,957 conceptions (and 426,850 live births) – a 2.4 percent decrease.

People don't just marry and have kids whenever they feel like it. However individual people may feel about romance and recklessness and risk-taking, the general behavior pattern is that if the economy is lousy, then people have fewer children. That's because they can't afford them. Maybe grown-ups should be thinking more about economic growth, by lowering taxes and reducing wasteful spending.

But there's more to it than that:

> But what are the economic mechanisms driving these results? Currie and Schwandt cite recent empirical studies showing that young adults – especially young men – who enter the job market during an economic downturn are likely to have persistently lower earnings as they age. This phenomenon may make young men less attractive matches for women, explaining the increase in the number of women who forego childbearing.

This quote made me think of another post from the liberal 538 blog.

Ben Casselman writes:

> In its report last week, Pew suggested that one reason for falling marriage rates is the decline in employment among young men. That may also help explain the education gap in marriage. Put simply, men without jobs are much less likely to get married, and men without a college degree are much less likely to get jobs.
>
> In the Pew survey, 78 percent of never-married women said it was "very important" for a prospective spouse (in most cases, a husband) to have a steady job. That ranked above any other requirement, including "same moral and religious beliefs" (38 percent), "at least as much education" (28 percent) and even "similar ideas about having and raising children" (70 percent). The survey results are borne out by women's actual behavior. About half of men ages 25 to 34 with a steady job have been married, compared to just a third of those without a steady job.
>
> For men without a steady job, having more education doesn't help much in terms of finding a spouse —

> marriage rates are nearly identical regardless of education. But having a degree makes men much more likely to be employed — and therefore more likely to get married. According to the Current Population Survey, more than 20 percent of men ages 25 to 34 with a high school diploma are out of work, versus 10 percent of young men with a college degree. And when they do have jobs, less-educated men earn less and are more likely to be laid off.

For a long time in this country, we have had schools that discriminate against young men and punish them. There are virtually no male teachers in the classrooms. This has a profound effect on young men, causing them to become disinterested in school, which makes it harder for them to find jobs.

USA Today reports on a relevant study:

> For all the differences between the sexes, here's one that might stir up debate in the teacher's lounge: Boys learn more from men and girls learn more from women.
> That's the upshot of a provocative study by Thomas Dee, an associate professor of economics at Swarthmore College and visiting scholar at Stanford University. His study was to appear Monday in *Education Next*, a quarterly journal published by the Hoover Institution.
>
> Vetted and approved by peer reviewers, Dee's research faces a fight for acceptance. Some leading education advocates dispute his conclusions and the way in which he reached them.
>
> But Dee says his research supports his point, that gender matters when it comes to learning. Specifically, as he describes it, having a teacher of the opposite sex hurts a student's academic progress.

Everything is connected together. We need a strong economy and well-educated young men in order to make marriage and child-bearing reasonable to men.

# How would gay marriage affect your marriage?

**Wintery Knight** · 1 October 2014 · Archived copy · Original

The Daily Signal explains what it costs for those who refuse to celebrate same-sex marriage.

Excerpt:

> A bakery owner in Oregon broke down in tears while discussing the fallout of her and her husband's decision not to bake a wedding cake for a same-sex couple on the basis of their Christian beliefs.
>
> Earlier this year, the Oregon Bureau of Labor and Industries found "substantial evidence" that Aaron and Melissa Klein, owners of Sweet Cakes by Melissa, discriminated against the lesbian couple.
>
> **They now face a fine in excess of $150,000.**
>
> **In an exclusive interview with The Daily Signal on Friday at the 2014 Values Voter Summit, Aaron said the fee would "definitely" be enough to bankrupt the couple and their five children.**
>
> […]In January 2014, the Kleins were charged with violating Oregon's Equality Act of 2007, a law that protects the rights of the LGBT community.
>
> […]Melissa and Aaron Klein are in the process of appealing the decision handed down by the Oregon Bureau of Labor and Industries. Following threats, vicious protests and boycotts, they have also been forced to close their bakery.
>
> Melissa told The Daily Signal the charges have "definitely impacted us pretty hard financially."
>
> "This was not the first time we've served these girls," said Aaron, maintaining their refusal was not about the couple's sexual orientation, but rather, about their religious convictions.

Sometimes, when a person is doing something they know is wrong, they will try to drown out their conscience by getting everyone around them to tell them that what they are doing is actually right. But what happens when the people around them don't perform? Well, if you're on the secular left, that's where the fascism comes in. On a secular worldview, you can't ground human rights. They don't exist. So when a secular leftists is confronted with a lack of approval for his sinfulness, he turns to government to punish anyone who disagrees with them. Even if it means violating their fundamental human rights. The gay couple in question could have gone somewhere else, but instead they chose to punish people who disagreed with them in order to push their agenda by coercion.

I think a lot of atheists like to console themselves that even if God exists, that they will be OK because they never did anything *really* bad. You know, like rape or murder. And those things are indeed terrible, and definitely worthy of capital punishment now, and an eternity of separation from God later. But I think there is something even worse than those things. Jesus says that the most important commandment is for a person to love God with everything he has. I think that when a secular leftist uses the power of government to force Christians to break their allegiance to Christ, that they are doing something *worse* than rape or murder, (in terms of final judgment – not criminal law). And this is in addition to the widespread support for abortion (which is murder of an innocent child) that is *widely* supported in the atheist community.

You definitely do not want to be found to be one of those people who made Christians feel ashamed of taking the teachings of Jesus on sexuality seriously on that day. I really think it would be nice if atheists stopped kidding themselves about being good people. You're not good people. We might treat you nicely, because you were made to know God and so have the same value as anyone else, but that doesn't mean you are a good person. In fact, atheists cannot even ground objective morality rationally in their accidental universe. I guess we should not be surprised, then, when we see them using government to force their nihilism on people of faith.

Here is atheist morality:

> The total amount of suffering per year in the natural world is beyond all decent contemplation. During the minute that it takes me to compose this sentence, thousands of animals are being eaten alive, many others are running for their lives, whimpering with fear, others are slowly being devoured from within by rasping parasites, thousands of all kinds are dying of starvation, thirst, and disease. It must be so. If there ever is a time of plenty, this very fact will automatically lead to an increase in the population until the natural state of starvation and misery is restored. In a universe of electrons and selfish genes, blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, nor any justice. **The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil, no good, nothing but pitiless indifference.**
>
> ("God's Utility Function," *Scientific American*, November, 1995, p. 85)

That's why they can do these things. Because for them, rape, murder, anything – are all neither praiseworthy nor prohibited. There is no moral oughtness on atheism. And if they have enough power, then it just leads them to behave like the atheist Josef Stalin did in his ruthless suppression of free religious expression. Killing millions of people is no problem for atheists. There is no evil and no good, as Dawkins says. I think what this intolerance towards Christians for their faith is a slippery slope that leads to the kind of religious persecution that we have seen against people of faith in atheist regimes of the past. This is not speculative. Atheists have been willing to kill in order to protect their worldview from challengers. I think fining Christians $150,000 in order to bankrupt them is a step on that path. They lack the power today, but not the will. History teaches us that there is a deep hatred for Christianity inside atheism, and there are no limits to how far they will go to act on that.

You can read more about atheist morality in this post where I talk about Richard Dawkins' support for extramarital affairs and infanticide. Like I said, if you're an atheist, there is no evil and no good. It's so strange to me when they try to make moral judgments. Like a monkey trying to write a novel. They act so outraged but really they have no standing to declare anything right or wrong. It's not grounded in their worldview, and it's important to understand what we are dealing with when we meet people who cannot distinguish right from wrong, and have no problem with coercing others against their consciences. It's easy to see where Stalin and Mao came from, isn't it?

# Poll: fewer than 1 in 3 Americans wants to keep Obamacare

**Wintery Knight** · 2 October 2014 · Archived copy · Original

The Weekly Standard reported on a recent poll by McLaughlin & Associates.

Excerpt:

> A new poll finds that three-fifths of likely voters support the repeal of Obamacare. A large plurality — 44 percent — wants to see Obamacare repealed and replaced with a conservative alternative. A much smaller group —16 percent — wants to see it repealed but not replaced. Less than one in three respondents — 32 percent — would like to keep Obamacare, whether in its current form or in amended form. So, with a conservative alternative in play, 60 percent of Americans support repeal, while only 32 percent oppose it.
>
> Repeal and replace was chosen by a plurality of every age group, every income group aside from those making over $150,000, and both sexes. Among independents, 62 percent said they support repeal, with 46 percent backing a conservative alternative. Only 31 percent of independents support keeping Obamacare in its current form or in amended form. Among those who make between $20,000 and $100,000, 63 percent support repeal, with 48 percent backing a conservative alternative. Only 30 percent of such voters want to try to salvage Obamacare.

I know what you're thinking. This poll must have favored Republican respondents over Democrats.

NOPE:

> The poll included 38 percent Democrats and 32 percent Republicans.

I was talking to a friend the other day who is from outside the United States and he was telling me how he was sure Americans just love Obamacare and that it is working really well. He must be getting that from CNN or something, because this poll is pretty clear. I think we have reason to be hopeful about the 2014 midterm elections.

**The 2014 midterm elections**

Here's an article from National Review that expresses caution because of the effectiveness of Democrat voter registration efforts, but is also optimistic about the latest polls.

Here's the rundown: (links removed)

> In just about every Senate race that matters, last week brought at least one highly-regarded poll showing exactly what a Republican wants to see.
>
> In Alaska, Dan Sullivan has led the past four polls.
>
> In Arkansas, Tom Cotton has led 11 of the past 13 polls.
>
> In Colorado, Quinnipiac put Cory Gardner ahead, 48 percent to 40 percent.
>
> In Iowa, the *Des Moines Register* poll put Joni Ernst ahead, 44 percent to 38 percent. NBC News Andrea Mitchell is openly calling Democrat Bruce Braley.
>
> In Louisiana, a runoff between Democrat incumbent Mary Landrieu and Republican Bill Cassidy is virtually assured. Cassidy led the last four polls of the runoff.
>
> Those five, just right there, along with the expected GOP wins in Montana, South Dakota, and West Virginia, would give the GOP a eight-seat pickup. Republicans could lose in Kansas and still keep the Senate. In Kansas, voters are still digesting the fact that the Democrat dropped out and getting to know "independent" Greg Orman. No one has polled this race in ten days, and the GOP is pulling out the stops to save Pat Roberts.

> And we've got more races to go…
>
> In New Hampshire, CNN had Scott Brown tied with Jeanne Shaheen.
>
> In Michigan, Republicans can be frustrated that Terri Lynn Landhasn't led any poll recently. But Democrat Gary Peters' share of the vote is actually declining from the mid-40s to the low 40s, with a lot of undecideds left out there.
>
> In North Carolina, Thom Tillis can't quite get the lead over incumbent Kay Hagan, but she's consistently in the mid-40s or even low 40s – a very precarious spot for an incumbent.
>
> Beyond Kansas, Democrats hopes for picking up a GOP seat are evaporating. In Georgia, David Purdue has led four of the past five polls. In Kentucky, Senate Minority Leader Mitch McConnell has led every poll since June.

The current poll averages from Real Clear Politics predict a 52-47 Republican Senate after the midterm elections. Eight pick-ups, with Kansas "too close to call". I hope those polls are accurate, because otherwise Obama is going to pack the courts with more leftist judges. I hope people are doing all they can to get out the Republican vote this year, because we really need to stop the bleeding – NINE TRILLION dollars added to the national debt so far. Too much. Conscience protections and religious liberty under attack. Natural marriage struck down by activist judges, Our national security and foreign policy in a shambles. And pro-life state level restrictions on abortion threatened by Democrat legistlators. We have to do something this time.

# Is marriage a good deal for men? How can we make it a better deal for men?

**Wintery Knight** · 2 October 2014 · Archived copy · Original

The Elusive Wapiti, a Christian men's rights blogger, posted this video from Dr. Helen Reynolds, author of "The Marriage Strike". In the video, she gives 6 reasons why men are shying away from marriage. I agree with some of her reasons, but I wanted to respond and give the positive case for marriage. Also, I think it is worth reading a very challenging comment from "Gaza" in that post, who says that women are pushing marriage off for too long so that they end up not being prepared for it even if they meet a marriage-minded man.

So, onto to the positive aspects of marriage for men.

Let me quote from this NIH publication, which argues that marriage is a great value for men.

Look:

> One of the strongest, most consistent benefits of marriage is better physical health and its consequence, longer life. Married people are less likely than unmarried people to suffer from long-term illness or disability (Murphy et al. 1997), and they have better survival rates for some illnesses (Goodwin et al. 1987). They have fewer physical problems and a lower risk of death from various causes, especially those with a behavioral component; the health benefits are generally larger for men (Ross et al. 1990).
>
> A longitudinal analysis based on data from the Panel Study of Income Dynamics, a large national sample, documents a significantly lower mortality rate for married individuals (Lillard and Waite 1995). For example, simulations based on this research show that, other factors held constant, nine out of ten married women alive at age 48 would still be alive at age 65; by contrast, eight out of ten never-married women would survive to age 65. The corresponding comparison for men reveals a more pronounced difference: nine out of ten for the married group versus only six out of ten for those who were never married (Waite and Gallagher 2000).

And more:

> Recent studies based on longitudinal data have found that getting married (and staying married to the same person) is associated with better mental health outcomes. Horwitz et al. (1996), Marks and Lambert (1998), and Simon (2002) present evidence of improvements in emotional well-being following marriage, and declines following the end of a union. Marks and Lambert (1998) report that marital gain affects men and women in the same way, but marital loss is generally more depressing for women. Analyses that control for the selection of the psychologically healthy into marriage, and also include a wider range of measures of mental well-being, find that although there are differences by sex in the types of emotional responses to marital transitions, the psychological benefits associated with marriage apply equally to men and women (Horwitz et al. 1996; Simon 2002).
>
> Marriage is also associated with greater overall happiness. Analysis of data from the General Social Surveys of 1972–96 shows that, other factors held constant, the likelihood that a respondent would report being happy with life in general is substantially higher among those who are currently married than among those who have never been married or have been previously married; the magnitude of the gap has remained fairly stable over the past 35 years and is similar for men and women (Waite 2000).

And more:

> A large body of literature documents that married men earn higher wages than their single counterparts. This differential, known as the "marriage premium," is sizable. A rigorous and thorough statistical analysis by

> Korenman and Neumark (1991) reports that married white men in America earn 11 percent more than their never-married counterparts, controlling for all the standard human capital variables. Between 50 and 80 percent of the effect remains, depending on the specification, after correcting for selectivity into marriage based on fixed unobservable characteristics. Other research shows that married people have higher family income than the nonmarried, with the gap between the family income of married and single women being wider than that between married and single men (Hahn 1993). In addition, married people on average have higher levels of wealth and assets (Lupton and Smith 2003). The magnitude of the difference depends on the precise measure used, but in all cases is far more than twice that of other household types, suggesting that this result is not merely due to the aggregation of two persons' wealth.

And more:

> Beyond its integrative function, emphasized above, marriage also has a regulative function. Married individuals, especially men, are more likely than their single counterparts to have someone who closely monitors their health-related conduct; marriage also contributes to self-regulation and the internalization of norms for healthful behavior (Umberson 1987). Positive and negative externalities within marriage also play a role: when an individual behaves in a way that is conducive to good health, the benefits spill over to the spouse; similarly, unhealthy behaviors inflict damage not only on the individual but also on the partner. In this way, marriage promotes healthy conduct. In addition, the enhanced sense of meaning and purpose provided by marriage inhibits self-destructive activities (Gove 1973). Consistent with this channel of causality, married individuals have lower rates of mortality for virtually all causes of death in which the person's psychological condition and behavior play a major role, including suicide and cirrhosis of the liver (Gove 1973). Lillard and Waite (1995) find that for men(but not for women) there is a substantial decline in the risk of death immediately after marriage, which suggests that the regulation of health behaviors is a key mechanism linking marriage to physical health benefits in the case of men.

Now I want to talk about is policies that will help to promote marriage, because that will help to make marriage safer and more attractive to men.

And for that, we go to the Family Research Council.

They write:

> Our tax policy should protect and encourage marriage. The marriage penalty should be eliminated, so that married couples do not pay higher taxes than single people or cohabiting couples. Along with the aim of strengthening marriage, our tax policy should encourage childbearing and adoption. The 2001 tax relief bill signed by President Bush provided a gradual phase-out of part of the marriage penalty[75] by 2010, a phased-in doubling of the child tax credit from $500 to $1,000, and a doubling of the adoption tax credit from $5,000 to $10,000. But this tax bill expires in 2011. In his 2003 State of the Union address, President Bush called for more prompt tax relief, including immediate marriage-penalty relief and a permanent increase in the child tax credit to $1,000. Representative Jim DeMint (R-S.C.) recently introduced the Adoption Tax Relief Guarantee Act, which would make the adoption tax credit permanent. These tax measures would ensure that married couples do not pay higher taxes simply because they are married and that families receive much-needed tax relief.
>
> Along with providing tax credits, the government should adequately fund abstinence-until-marriage programs, which are very effective in teaching young people how to save sex for marriage. With one out of three babies born out of wedlock today, young people need this message more than ever. The federal government has provided some abstinence-until-marriage funding in recent years, but comprehensive sex education/contraception programs, which downplay abstinence and encourage sexual activity and condom use, are vastly over-funded in comparison. In 2002, abstinence-until-marriage programs received $102 million,

> while teen sex education and contraception programs received at least $427.7 million.
>
> […]Welfare reform should aim to strengthen marriage, because the breakdown of marriage is a root cause of poverty, as most welfare recipients are never-married or divorced mothers.
>
> […]Historically, welfare laws in the United States have been anti-marriage. The old welfare system, under the Aid to Dependent Families program (AFDC), taught single mothers two lessons: don't work and don't get married, or your benefits will decrease. Even though the landmark welfare reform law of 1996 encouraged marriage and imposed the family cap ending the reward for illegitimacy, marriage penalties still exist in the welfare law. The welfare system is composed largely of means-tested aid programs, which reduce benefits as non-welfare income increases. This means that if a single mother marries, she will lose welfare benefits; therefore, it is more lucrative for her to stay single. This anti-marriage bias should be removed or at least reduced in order to encourage marriage and discourage single parenthood and cohabitation.

The problem with that last one is that Obama gutted the Welfare Reform Act of 1996. I think that was favorable to the people who tend to vote Democrat, but not good for those of us who favor marriage. In fact, Democrats in general oppose all three of those pro-marriage policies, as well as supporting no-fault divorce laws and opposing shared parenting laws.

So I guess I am posting these ideas to let women who want to get married know that there are definitely things that are scaring men off of marriage, and that nothing makes a man less scared of marriage than a woman who is aware of these dangers, enthusiastic about the benefits for men, and passionate about pro-marriage policies.

# When dealing with a non-Christian, make evidence – not behavior – the main issue

**Wintery Knight** · 2 October 2014 · Archived copy · Original

Pastor Matt posted about something that I think all Christian apologists believe, deep down. (H/T The Poached Egg)

He writes:

> Typically, the church has defined loving one's neighbor as in line with Jesus' parable of the Good Samaritan (Luke 10:25-37) and Christ's teaching in passages such as Matthew 25:31-46, in which we are commanded to love the imprisoned, the homeless, the hungry, etc. as if they were Jesus himself. Of course all believers should do so whether by volunteering at a soup kitchen or donating money to ministries like World Help.
>
> But there is more to loving one's neighbor these days than caring for the poor, as important as that is. Those of us who live in a first world western country now dwell in a post-Christian society. Our neighbors are inundated with naturalism masquerading as good science and sound philosophy. Non-Christians believe the faith is intellectually vacuous.
>
> **It shocks many people when those trained in apologetics point out that atheists cannot answer questions like, "How did the universe come into existence?" "Why is our planet so finely tuned for life despite all the odds against it?" "How did life begin?" "Why do humans have consciousness?" "How is there truth or right and wrong without God?" "Why did the disciples die horrible deaths as impoverished traveling peasants rather than deny the resurrection of Jesus?", etc.**
>
> If we are to help bring our neighbors to saving faith, we must first destroy their false ideas of what Christianity is and is not. That means we must preach the Gospel (2 Cor. 5:21), knock down specious views of the faith and present the truth of what we believe.
>
> Apologetics is not just an intellectual exercise for nerds like me or a debate to be won on college campuses but an increasing tool in loving our neighbors. For if they do not understand the faith, they will likely not come to faith and that is what the God we love wants and how we must show love to our neighbors. So, let's study not just to win arguments but to love others.

That reminds me of 2 Corinthians 10:3-5. Our job is to beat up on false ideas and speculations.

Pastor Matt's point is critical, I think. Just stop and think for a minute about your non-believing co-workers. Do they know that the universe began to exist? Do they know that the initial conditions and the cosmological constants have to be finely tuned to support things like galaxies, stars, planets and elements heavier than hydrogen? Do they know how much information is in a protein, and how many proteins would be needed to make the first living cell? Do they know what it takes to make a planet that can support life? What facts from the gospels and the Pauline letters pass the tests for historicity? What is the best explanation of those minimal facts?

These are the facts that we share when we discuss spiritual things with people. They are not Christian facts, they are public, testable facts. And yet, almost no one in the culture who is not already a believer is curious to find out these things on their own. But without the evidence, how are they supposed to take the first step towards a relationship with God through Jesus Christ? It's not possible. This is a propositional faith, and we know it's true by evidence. To share the evidence with someone so they can decide is as loving as sharing the evidence about retirement planning, or the evidence about nutrition, or the evidence about fitness and exercise, or the evidence about career planning. When you love someone, you tell them the facts, and then they decide. Evangelism is *the same thing*.

Here's something from a recent post by J. Warner Wallace, where he talks about doing apologetics with people who have not yet decided whether God exists or not.

> **The Undecided**
>
> In many ways, this group holds the most promise. People who are undecided usually fall into two categories. Some have never really given the issue much thought. They're neither for nor against; they've simply been living *unaware*. You may be the first person to introduce them to the issues you are trying to share. If so, remember the importance of a first impression. What you say or do will have an impact on the work of those who follow you. The second group of "undecideds" are people who have given the issue some thought, but are just beginning to make their decision. For this group of people, your defense of Christianity may very well be the deciding factor. The responsibility you and I have with the undecided is daunting, but it's a privilege to play a small part in their decision.

OK, so I want to make a point about this. So often, I see Christian parents and leaders trying to focus on changing people's behaviors, and not by giving them evidence. Instead of trying to convince them about what's true, they tell them Bible verses, or maybe tell them they are going to Hell. But given what Matt and J. Warner said, I don't want us to be focused on changing outward behavior. I want us to be focused on showing people what is true and showing our work – how we arrived at these true beliefs. You are doing Christianity wrong if you focus on getting behaviors from people by shaming them, overpowering them or scaring them.

So in my case, I'm not trying to get non-Christians to act like Christians when they have no reasons to be one. I'm trying to get them to settle on true beliefs – so that each of them and God can shake hands and be reconciled, responding to his drawing them of their own free will. Then, they can decide how they are going to act. And how they act might be even better than what we had in mind for them when all we wanted was for them to quit swearing and eat their vegetables. The Christian life is bigger than just making people do what we want them to do.

# Federal appeals court: Texas can proceed with tough regulations on abortion clinics

**Wintery Knight** · 3 October 2014 · Archived copy · Original

Good news on HB2 in Texas from the Associated Press.

Excerpt:

> A federal appeals court Thursday allowed Texas to immediately begin enforcing tough new abortion restrictions that will effectively close all but seven abortion facilities in America's second most-populous state.
>
> A panel of the U.S. 5th Circuit Court in New Orleans stayed a lower judge's ruling while it considers the overall constitutionality of key portions of Texas' sweeping 2013 abortion law, which Republican Gov. Rick Perry and other conservatives say is designed to protect women's health.
>
> U.S. District Judge Lee Yeakel ruled in August that part of the law requiring Texas clinics to spend millions of dollars on hospital-level upgrades was less about safety than making access to abortion difficult.

Guess who was on the panel? My favorite Supreme Court pick, Edith Hollan Jones.

Life News had this:

> When the panel reviewed the bill, they found that the state acted within its prerogative to regulate the medical profession by heeding these patient-centered concerns and requiring abortion practitioners to obtain admitting privileges at a nearby hospital. The state also found that it would be safer for patients to drive further to receive an abortion at a surgical facility with a credentialed and privileged physician than to seek an abortion at a nearby, substandard clinic. The bottom line is women deserve better than substandard care.
>
> Additionally the opinion written by Judge Edith Jones explained why admitting privileges are necessary. She said, "Requiring abortion providers to have admitting privileges would also promote the continuity of care in all cases, reducing the risk of injury caused by miscommunication and misdiagnosis when a patient is transferred from one health care provider to another."
>
> Judge Jones also noted that Planned Parenthood conceded that at least 210 women in Texas annually must be hospitalized after seeking an abortion.
>
> Abortion is not a safe medical procedure.

Life News says that this law is going to reduce the number of abortion clinics in Texas from 19 to 7. That's a huge win for unborn children who had no input into their mother's decision to conceive them. They don't deserve death sentence just because selfish adults want to be irresponsible.

# Charles Krauthammer: what the GOP should do if they retake the Senate

**Wintery Knight** · 3 October 2014 · Archived copy · Original

From National Review, a follow-up to my post yesterday about the midterm election projection.

Excerpt:

> The Democratic line is that the Republican House does nothing but block and oppose. In fact, it has passed hundreds of bills, only to have them die upon reaching the desk of Senate majority leader Harry Reid. He has rendered the Senate inert by simply ensuring that any bill that might present a politically difficult vote for his Democratic colleagues never comes to the floor.
>
> Winning control of the Senate would allow Republicans to pass a whole range of measures now being held up by Reid, often at the behest of the White House. Make it a major reform agenda. The centerpiece might be tax reform, both corporate and individual. It is needed, popular, and doable. Then go for the low-hanging fruit enjoying wide bipartisan support, such as the Keystone XL pipeline and natural-gas exports, especially to Eastern Europe. One could then add border security, energy deregulation, and health-care reform that repeals the more onerous Obamacare mandates.
>
> If the president signs any of it, good. If he vetoes, it will be clarifying. Who then will be the Party of No? The vetoed legislation would become the framework for a 2016 GOP platform. Let the debate begin.
>
> The risk-averse will say: Why take chances? Why not just run against the Obama legacy in 2016?
>
> The GOP should and will do that. What has happened to economic growth, social cohesion, and America's standing abroad will be a significant drag on Democrats. But it could very well not be enough.
>
> […]Memo to the GOP: Win the Senate, then enact an agenda and dare the president to veto it. Show the country what you stand for. Then take it to the nation in 2016.

So, if the GOP takes the House and Senate, they can proceed to pass every single bill that makes sense to the American people and then have Obama veto each one. Then they can run on those vetoed bills in 2016. Obama is a left-wing radical, so this is exactly who we want to represent the Democrat party in such an operation. Republicans can say "We wanted THIS and the Democrat in charge said no". That's one way of working around the liberal media. Now is the time to debate all the bills that they will want to pass should the GOP win the Presidency in 2016.

# Friday night detectives: two episodes of Sherlock Holmes

**Wintery Knight** · 3 October 2014 · Archived copy · Original

Jeremy Brett is the best Sherlock Holmes *ever*.

Here are 2 episodes of “The Adventures of Sherlock Holmes”.

The Speckled Band:

The Blue Carbuncle:

These are considered to be two of the best Sherlock Holmes short stories.

Happy Friday!

# Are young, unmarried women sincere about wanting to be married "some day"?

**Wintery Knight** · 4 October 2014 · Archived copy · Original

This comment by Gaza on the Elusive Wapiti blog deserves a post of it's own. He is responding to the video posted in this post.

He writes [in full]: (one part redacted)

> One thing that Helen seems to miss is how women value and prioritize marriage and what role this plays vis a vis the male corollary.
>
> The "story" isn't just about men being "on strike" or even (to Helen's credit) rationally choosing to delay and/or avoid; it must also include how women treat marriage WRT their own valuation and prioritization and life decisions (NOT merely stated desires).
>
> There are not swarms of 25 y/o female college-grads looking for a husband with no willing men within sight. There are, however, swarms of 25 y/o/ female college-grads looking to have fun, travel, chase dreams, build careers, and explore their options.
>
> I've "dated" a few of these women; most (and their social circles included) are so focused on the self-indulgence ("experience") and the status associated with sexual conquest/power that any mention of marriage is usually as a joke (enter the "boyfriends/husbands are boring/stupid/lazy" meme); marriage is merely some distant thing to be acquired at some seemingly distant age.
>
> Sure, over time (cue: the wall), the distant thing becomes a stated desire, but the transition from stated-desire to behavioral change and actual prioritization often takes years. I meet women well into their 30's who still can't alter their behaviors to demonstrate congruence with their stated desires.
>
> But that is when we start to hear how important marriage is, how men are avoiding commitment, why men should value marriage. All bacon-wrapped in various shaming mechanisms. The women singing the "Man-up and marry me" tune are not the 25 y/o versions; they are too busy singing the "you go girl" showtunes, exactly as prescribed by the Sandberg, lean-in, [binge drinking, continuous alpha male hookups, alpha male cohabitation], [and later, jump off the carousel into a marriage to a beta provider that makes her perpetually feel that she married down compared to the alphas that she used to hookup with while drunk].
>
> So we can plainly see how something is valued based on the prioritization of one's choices. Most young women value marriage as an idea, as a capstone to her personal journey; an indicator of status and achievement but not as a goal in-of-itself and not as a life decision that supersedes the accumulation of personal experience, the flexing her sexual and relationship power, or the kindling her optionality.
>
> These women desire to "hang-out" with the most attractive men they can, under any number of relationship approximations while pursuing their personal journeys and then suddenly desire to elevate commitment and marriage as something paramount, right around the same time their ability to define and opt-in/out of those indulgent relationship approximations wanes. Hmm.
>
> After 10+ years of treating men and relationships as consumable commodities, marriage is now so valuable? So sacred that it will magically be more robust in the face of challenges, requiring more giving and less taking than those previous marital approximations, and yet because it is now a "Marriage", it won't be treated as

> merely a vehicle for the pursuit of her apparently perpetually fleeting “happiness”? Convince me.
>
> There is a false premise at work that assumes that it is men who are devaluing marriage. Sure, there is some truth to this, but woman are messaging their own valuation of marriage as well; in real-time, often in very overt means and often at the expense of men who are still clinging to some idealistic view of marriage.
>
> And likely those are the very men who are willing and able to be husbands at 25. The very same men who will grow to become self-sufficient 35 y/o men feeling their own blossoming optionality, harvesting their own “experiences” with the 25 y/o versions of the suddenly-marriage-minded women, while a decade of observational and experiential evidence of what women truly value buries what remains of their marital idealism.
>
> Tl:dr
> I’d consider marriage to a woman who has demonstrated through her choices, prioritization, sacrifice and delayed gratification that marriage is valuable to her and who can articulate how it would be valuable to me. [not holding breath]

What do you think? Is that something that you are seeing more of in the current generation of young, unmarried women? I have to confess, I see a lot of emphasis among Christian women on short-term missions trips and on careers, but not much planning on how to be prepared for marriage. In my experience, there is not much preparation work going on, and marriage is put off later and later. This is despite the fact that a woman’s fertility declines starting at age 27 and is pretty much dead at 35. IVF is very expensive, but has a higher risk of birth defects and and can often lead to too many embryos, some of which will then need to be aborted.

It would be nice if there were some wisdom being transferred from older, married women to young, unmarried women, but I don’t see it happening. What I see happening is young women, including ones raised in Christian homes, going off to college to binge drink and hookup and cohabitate, and always expressing the desire for marriage “some day”. But marriage is something you prepare for early with every decision. Some decisions are not good preparation for marriage. I get the impression that young, unmarried women think that marriage is “boring” and not the way to “make a difference”, and so in practice, they are trying other things.

Remember, the offer that a woman such as Gaza describes to a man is not the same as the offer of marriage that was made by 20-year-old women in the 1950s.

Marriage no longer means:

> - Being the legally and socially recognized head of the household.
> - An expectation of regular sex.
> - Legal rights to children.
> - Lifetime commitment.
> - That you are guaranteed a chaste bride on your wedding night.

Men liked the original version of marriage without the modern debasements. Should they feel obligated to settle for the new version of marriage which is influenced by radical feminism? I would have to be convinced.

# Sean Carroll debates William Lane Craig on cosmology and God's existence

**Wintery Knight** · 4 October 2014 · Archived copy · Original

Carroll was as good of a speaker as Craig in terms of style. Very easy to listen to, very quick on his feet, very civil. There was no clear winner on style.

It was difficult to assess the truth value of scientific points being made, especially for the layperson. I explained a few of them in my posts earlier this week, but I think laypeople might struggle with them if they are hearing about these things for the first time.

A couple of Craig's slides: (click for larger images)

Slide 1 of 2:

Dr. Craig slide #1 of 2

Slide 2 of 2:

Dr. Craig slide #2 of 2

**Quick summary:** (this is not complete, because I couldn't get everything they were saying noted)

Dr. Craig defended two arguments: 1) the kalam cosmological argument and the fine-tuning argument.

Dr. Craig supported the origin of the universe with 1) the expansion of the universe and 2) the second law of thermodynamics.

Dr. Craig said that the BGV theorem supports a beginning for the universe.

Dr. Craig said that the consensus of scientists did not accept Carroll's naturalistic cosmology, quoting Stephen Hawking in support.

Dr. Craig said that multiverse models fall victim to the Boltzmann brain problem, where we should observe Boltzmann brains coming into existence and then phasing out again far more probably than embodied minds. But we observe embodied minds, and no Boltzmann brains.

Dr. Carroll said that science cannot study metaphysical questions.

Dr. Carroll said that science is about making models that may or may not be consistent with the experimental data.

Dr. Carroll said that the BGV theorem does not support a beginning for the universe.

Dr. Carroll proposed 17 alternative cosmologies, but did not provide a shred of scientific evidence for any of them, the way that Craig did for the standard model.

Dr. Carroll refuted Dr. Craig's citation of Stephen Hawking, and Craig yielded the point.

Dr. Carroll speculated that science might progress to the point where the fine-tuning can be explained without an intelligent cause, and he gave an example of where that happened (inflation).

Dr. Craig argued that all 17 of the models suggested by Carroll either conflicted with evidence, had serious problems or did require a beginning.

Dr. Craig argued that Carroll's own model required a beginning.

Dr. Craig argued that Carroll's own model fell victim to the Boltzmann brain problem.

Dr. Craig argued that Carroll's own model violated the second law of thermodynamics.

Dr. Craig re-stated his point that the baby universe spawning in Carroll's model was speculative and incomplete, and cited Christopher Weaver's work.

Dr. Carroll denied that things that pop into being out of nothing require a transcendent cause.

Dr. Carroll reiterated that science can only make naturalistic models, and that he did not have to answer questions about ultimate causes.

Dr. Carroll showed a photo of Alan Guth expressing his opinion that the universe is "probably" eternal. No evidence was given for this assertion.

Dr. Carroll said that the fine-tuning was not done in an optimal way, because one fine-tuned value was lower than it needed to be, and it should be exactly what it needed to be if God did it.

Dr. Carroll said that a finely-tuned universe is more probably in naturalism than in theism, because God can do anything he wants and doesn't need a fine-tuned universe.

Dr. Carroll said he would stop defending his model now, and would instead defend Aguirre-Gratton.

Dr. Craig gave three reasons why the universe popping into being out of nothing requires a transcendent cause.

First, he said that nothing cannot cause anything to happen, because nothing is nothing.

Second, he said that if things pop into being out of nothing, then why don't we see it happening all the time with other things.

Third, he said that we have no reason to dismiss the causal principle, especially when it is the basis of scientific inquiry and has been so fruitful in the progress of science.

Dr. Craig reiterated that baby universes in Carroll's model would be dominated by Boltzmann brains, and we don't observe that.

Dr. Craig said that even on the quantum gravity models that Carroll mentioned, there would still be a beginning.

Dr. Carroll said that Craig mustn't say "popped into being" but instead that "there was a first moment of time".

Dr. Carroll said that his model does indeed violate the second law of thermodynamics "YES!".

*At this point Carroll stopped talking about the topic of the debate and started expressing personal opinions about religion. It's funny how often atheists do this in debates.*

Dr. Carroll said that most theists don't believe in God because of cosmology, but because of community and feelings.

Dr. Carroll said that science had learned a lot in the last 2000 years, so theism was false.

Dr. Carroll said that most philosophers don't think that God exists, so theism was false.

Dr. Carroll said microscopes and telescopes were absent 2000 years ago, so theism was false.

Dr. Carroll said that religion should be about community and feelings, not about what is true.

**Conclusion:**

My conclusion was that Carroll lost because he is just satisfied to throw theories out and not to argue that they are true by citing evidence. Carroll never seemed to be interested in finding out what is true, but instead he just wanted to tell a story that didn't include God, and assert that by Occam's Razor, his story was a better explanation. I am not impressed with theoretical speculations, although the layperson might be. I kept waiting for him to respond to Craig's points about how his model was falsified by experimental evidence and observations, e.g. – the Boltzmann brains or the baby universe generation, and he never cited the evidence I wanted him to cite. Craig did have some evidence for his views, but he could have been stronger in making his case. He could have shown the e-mail from Vilenkin that stated that he had understood the BGV theorem, and was using it correctly, for example.

For me the winning side comes down to evidence. The standard model is the standard model because of scientific evidence. Until that evidence is overturned, then speculative models are of no interest to anyone who is evidence-driven. Speculations are not science. A philosophical presupposition of metaphysical naturalism is not science.

The nice thing is that Robin Collins, one of Craig's respondents, went deep into the science of the fine-tuning, especially on one of my favorite data points, the cosmic microwave background radiation. The paper he presented is now posted on his web site (H/T Christian Apologetics Alliance). I posted about the CMBR before in my post about particle physicist Michael Strauss lecture on cosmology and fine-tuning at Stanford University and the his more recent lecture at the University of Texas. Note that Strauss is an experimental physicist, not a theoretical physicist like Carroll.

Here's another review of the debate by Randy Everist of Possible Worlds blog. He explains the back-and-forth over Boltzmann brains and the BGV theorem in more detail.

# Religion and politics: Wayne Grudem's 2012 Pulpit Freedom Sunday sermon

**Wintery Knight** · 5 October 2014 · Archived copy · Original

My church probably isn't doing anything for Pulpit Freedom Sunday, because they are a gospel every week church. It's really not clear to me whether my minister is even pro-life or pro-marriage, because he never talks about anything practical. However, I was able to dig up this 2012 sermon from Dr. Wayne Grudem, an amazing pastor who does have a position on many issues relevant to the Christian worldview.

The topic is "Moral and spiritual issues in the 2012 election".

Here it is: (68 minutes, Dr. Grudem starts 4 minues in)

Details:

> This message was delivered by Dr. Wayne Grudem at Calvary Chapel Chino Hills on Pulpit Freedom Sunday. Dr. Grudem addresses directly and poignantly the spiritual and moral issues we face in the upcoming 2012 Election. He urges believers to vote according to a Biblical world view. Dr. Grudem has an excellent understanding of not only the Bible and Theology, but also how the United States political system really works. He is author of the bestselling, "Systematic Theology" (used in numerous seminaries), "Politics According to the Bible," and he is also the General Editor of the bestselling "ESV Study Bible." Please dedicate an hour and listen to him; more importantly, please heed his wisdom and vote responsibly.

The sermon notes are free to download. (PDF) I recommend printing them to follow along with the sermon.

Here's one of slides, just to show you what Wayne Grudem can do:

Federal tax receipts, spending and deficits, fiscal years 2007-2011, billions of dollars

| | Receipts | Outlays | Deficit | share of GDP |
|---|---|---|---|---|
| 2007 | 2,568 | 2,729 | 161 | 1.2% |
| 2008 | 2,524 | 2,983 | 459 | 3.2% |
| 2009 | 2,104 | 3,520 | 1,416 | 10.0 % |
| 2010 | 2,162 | 3,456 | 1,294 | 8.9% |
| 2011 | 2,303 | 3,600 | 1,298 | 8.6% |
| 2012 | | | 1,100 | 7.2% (CBO projection) |

President Obama added: $5.1 trillion. Total debt now = $16 trillion.

Source: WSJ, Oct. 18, 2011, p. A16 (2012 data added from later article)

Pulpit Freedom Sunday: can your pastor do this?
Can your pastor do that? Mine can't.

I think a lot of people like to think of Christianity as something that is about your personal well-being, or maybe your personal morality. If you attend a pretty typical gospel-every-week church, then you may never learn how the Christian worldview applies to the political issues of the day. It's "too divisive".

If you're looking for the best book on the Bible and policy, it's Wayne Grudem's "Politics According to the Bible". I really really endorse that book.

# Several abortion clinics close after court enforces Texas law HB2

**Wintery Knight** · 5 October 2014 · Archived copy · Original

Good news from Life News.

Excerpt:

> Two years ago, there were over 40 abortion facilities operating in Texas with very little oversight. Yesterday, the Fifth Circuit Court of Appeals issued a ruling that could result in the immediate closure of 13 abortion facilities, leaving only seven open by this weekend.
>
> A spot-check conducted by Operation Rescue early Friday morning of several facilities that are in known non-compliance with the law shows that some have already shut down while others continue to operate.
>
> The ruling blocks a stay issued by a lower court on enforcement of Texas' HB2, which provides minimum safety standards for abortion businesses, until the State's appeal of the lower court's decision that the law is unconstitutional can be heard.
>
> The ruling allowed the full law to be enforced immediately, including portions that were previously blocked by the lower court that pertained to the requirements that abortionists maintain hospital privileges within 30 miles of their abortion facilities and that those facilities meet Ambulatory Surgical Center standards.
>
> "This is a huge victory and gives us every confidence that all the provisions of HB2 will prevail upon appeal," said Troy Newman, President of Operation Rescue, who has coauthored the new book, *Abortion Free*, that outlines how to implement strategy to stop abortion, including those used in Texas will soon be responsible for closing 83% of all abortion centers in that state. Previous closures have already caused abortion numbers in Texas to plummet.
>
> […]"Documenting and exposing abortion abuses can serve as the foundation for safety regulations that can shut down substandard abortion mills and save lives. As a result of yesterday's ruling we expect thousands of women will be spared the trauma and tragedy of abortion and that precious baby boys and girls will grace their lives with blessings," said Newman. "Protecting the lives of women and their babies is what our work is all about."

When I posted about the ruling a few days ago, some jackass came on and talked about how now women would be able to kill their babies more safely. It never ceases to amaze me how people can claim to be pro-life and yet practically be pro-abortion. Being pro-life means saving as many unborn children as possible. If you don't like this law, then you are pro-abortion. Period. End of issue. You don't get to take credit for the pro-life effects of this law if you opposed it.

I think the take-home lesson on people who oppose incremental pro-life measures that reduce abortion is this: not everyone who claims to be pro-life is intelligent enough to support laws that *actually do something to protect unborn children*.

# Scientist who was right about cooling in 2000 predicts more cooling

**Wintery Knight** · 6 October 2014 · Archived copy · Original

From CNS News.

Excerpt:

> Dr. Don Easterbrook – a climate scientist and glacier expert from Washington State who correctly predicted back in 2000 that the Earth was entering a cooling phase – says to expect colder temperatures for at least the next two decades.
>
> Easterbrook's predictions were "right on the money" seven years before Al Gore and the United Nation's Intergovernmental Panel on Climate Change (IPCC) shared the 2007 Nobel Peace Prize for warning that the Earth was facing catastrophic warming caused by rising levels of carbon dioxide, which Gore called a "planetary emergency."
>
> "When we check their projections against what actually happened in that time interval, they're not even close. They're off by a full degree in one decade, which is huge. That's more than the entire amount of warming we've had in the past century. So their models have failed just miserably, nowhere near close. And maybe it's luck, who knows, but mine have been right on the button," Easterbrook told CNSNews.com.
>
> "For the next 20 years, I predict global cooling of about 3/10ths of a degree Fahrenheit, as opposed to the one-degree warming predicted by the IPCC," said Easterbrook, professor emeritus of geology at Western Washington University and author of 150 scientific journal articles and 10 books, including "Evidence Based Climate Science," which was published in 2011.

So what's the mechanism that he used for his predictions?

This:

> Easterbrook said he made his earlier prediction by tracing back "a consistently recurring pattern" of alternating warm and cool ocean cycles called the Pacific Decadal Oscillation (PDO) that **occurs naturally every 25 to 30 years**. He discovered that the PDO corresponded with a similar temperature cycle demonstrated by isotope ratios found in Greenland ice cores going all the way back to 1480.
>
> "We don't know what the driving mechanism is, but it's very consistent. It's happened five times a century and every time it's happened, there's been a corresponding change in global temperature, either warm or cool," Easterbrook told CNSNews.com.
>
> "What I did was I projected this same pattern forward to see what it would look like. And so in 1999, which was the year after the second warmest year on record, the PDO said we're due for a climate change, and so I said okay. It looks as though we're going to be entering a period of about three decades or so of global cooling.
>
> "And so in 2000, I published a paper with the Geological Society of America in which I predicted that we were going to stop warming and begin cooling for about 25 or 30 years, on the basis of taking the temperature records that go back a century or more and simply repeating the pattern of warming and cooling, warming and cooling, and so on.
>
> "And that in fact has happened. We have now had 17 years with no global warming and my original prediction was right so far. But we have still probably another 20 years or so to see if the cooling trend continues, and if it does, then my prediction will be right and my methods will be right. And so what it boils down to is, so far so good."

We've had seventeen years of global cooling, and now a prediction for more global cooling – 20 more years of it. Where do we taxpayers go to get our money back for the almost $70 billion we spend propping up renewable energy programs.

# Woman who escaped from North Korea tells her story

**Wintery Knight** · 6 October 2014 · Archived copy · Original

This is from the UK Telegraph.

Excerpt:

> Yeonmi was born on October 4 1993 in Hyesan, a notoriously cold river port along North Korea's 850-mile northern border with China. The following year, on July 8, Kim Il-sung, the country's 82-year-old founder and 'Great Leader', died of a heart attack. Hopes that he might have been ready to gradually open North Korea to the world evaporated as his son Kim Jong-il took power and set about transforming the hermit nation into a member of George W Bush's notorious 'axis of evil'.

> Meanwhile, the economy was collapsing and the Great Famine, which would eventually claim up to 2.5 million lives, according to Andrew Natsios, the former head of USAID, was beginning to take hold. As Barbara Demick describes in Nothing to Envy, her definitive book on the period, those too young, too poor or too honest to find food quickly died. 'The killer targets the most innocent, the people who would never steal food, lie, cheat, break the law or betray a friend.'
>
> […]Initially shielded from the effects of the famine, Yeonmi's world started to disintegrate when, in 2002, her father was arrested for illegal trading. 'Everything changed,' she recalls. Yeonmi's father was taken to a prison near Pyongyang and given a 17-year sentence. Her mother visited him once but that was enough to see the toll that the brutal torture had taken on her husband. He was beaten. Guards placed sticks between his fingers and crunched them together. He was made to sit in excruciating stress positions for interminable periods. Prisoners were deprived of water and food. 'The environment was crazy. So many bugs and lice,' Yeonmi says. 'They treated them like animals. He was a really brilliant man. He was my hero, and the country just beat him. I couldn't believe it.'
>
> Yeonmi's father was luckier than many North Koreans who were spirited off to the country's Soviet-style gulags, never to return. According to a Human Rights Watch report in January this year, up to 120,000 political prisoners, among them children, are currently being held in secretive labour camps known in Korean as the kwan-li-so. Torture including 'sleep deprivation, beatings with iron rods or sticks, kicking and slapping, and enforced sitting or standing for hours', is routine, the group found.
>
> After three years Yeonmi's father managed to bribe his way out of jail. But by then he had been diagnosed with colon cancer. When Yeonmi saw him on his release, the once strapping figure had been transformed into a ghost of a man. 'He had changed so much. He was so small. He spoke differently. I couldn't believe it was my father,' she says.
>
> […][O]n the night of March 30 2007, Yeonmi and her mother made their way towards the border with the help of a people smuggler. Yeonmi's father stayed behind, to minimise the risks. They crossed three mountains and finally came to a frozen river that separated the two countries. It was desperately cold, Yeonmi says, and she remembers feeling terrified that the ice beneath them would give. But they eventually made it to the other side. On dry land, they ran. 'I ran so fast. The only thing I could think was that I could get shot. I ran and ran and ran.'

The rest of the article tells the terrifying story of how Yeonmi and her family escaped to South Korea.

I read this article and it really caused me to think a lot about what happens when we are not careful about who we vote for. North Korea is an officially atheist and communist regime. There is no public expression of Christian convictions there, nor is there any free market capitalism. That probably sounds like a great idea to many of the

people in this country who have the same anti-Christian, anti-capitalist views. But it doesn’t sound like a good idea to me.

# What makes a planet suitable for supporting complex life?

**Wintery Knight** · 6 October 2014 · Archived copy · Original

**The Circumstellar Habitable Zone (CHZ)**

What do you need in order to have a planet that supports complex life? First, you need liquid water at the surface of the planet. But there is only a narrow range of temperatures that can support liquid water. It turns out that the size of the star that your planet orbits around has a lot to do with whether you get liquid water or not. A heavy, metal-rich star allows you to have a habitable planet far enough from the star so the planet can support liquid water on the planet's surface while still being able to spin on its axis. The zone where a planet can have liquid water at the surface is called the circumstellar habitable zone (CHZ). A metal-rich star like our Sun is very massive, which moves the habitable zone out further away from the star. If our star were smaller, we would have to orbit much closer to the star in order to have liquid water at the surface. Unfortunately, if you go too close to the star, then your planet becomes tidally locked, like the moon is tidally locked to Earth. Tidally locked planets are inhospitable to life.

Circumstellar Habitable Zone
Here, watch a clip from The Privileged Planet: (Clip 4 of 12, full playlist here)

But there's more.

**The Galactic Habitable Zone (GHZ)**

So, where do you get the heavy elements you need for your heavy metal-rich star?

You have to get the heavy elements for your star from supernova explosions – explosions that occur when certain types of stars die. That's where heavy elements come from. But you can't be TOO CLOSE to the dying stars, because you will get hit by nasty radiation and explosions. So to get the heavy elements from the dying stars, your solar system needs to be in the galactic habitable zone (GHZ) – the zone where you can pickup the heavy elements you need but not get hit by radiation and explosions. The GHZ lies between the spiral arms of a spiral galaxy. Not only do you have to be in between the arms of the spiral galaxy, but you also cannot be too close to the center of the galaxy. The center of the galaxy is too dense and you will get hit with massive radiation that will break down your life chemistry. But you also can't be too far from the center, because you won't get enough heavy elements because there are fewer dying stars the further out you go. You need to be in between the spiral arms, a medium distance from the center of the galaxy.

Like this:

Galactic Habitable Zone and Solar Habitable Zone
Here, watch a clip from The Privileged Planet: (Clip 10 of 12, full playlist here)

The GHZ is based on a discovery made by astronomer Guillermo Gonzalez, which made the front cover of Scientific American in 2001. That's right, the cover of Scientific American. I actually stole the image above of the GHZ and CHZ (aka solar habitable zone) from his Scientific American article (linked above).

These are just a few of the things you need in order to get a planet that supports life.

Here are a few of the more well-known ones:

- a solar system with a single massive Sun than can serve as a long-lived, stable source of energy
- a terrestrial planet (non-gaseous)
- the planet must be the right distance from the sun in order to preserve liquid water at the surface – if it's too close, the water is burnt off in a runaway greenhouse effect, if it's too far, the water is permanently frozen in a runaway glaciation
- the solar system must be placed at the right place in the galaxy – not too near dangerous radiation, but close enough to other stars to be able to absorb heavy elements after neighboring stars die
- a moon of sufficient mass to stabilize the tilt of the planet's rotation
- plate tectonics
- an oxygen-rich atmosphere
- a sweeper planet to deflect comets, etc.
- planetary neighbors must have non-eccentric orbits

By the way, you can watch a lecture with Guillermo Gonzalez explaining his ideas further. This lecture was delivered at UC Davis in 2007. That link has a link to the playlist of the lecture, a bio of the speaker, and a summary of all the topics he discussed in the lecture. An excellent place to learn the requirements for a suitable habitat for life.

# Supreme Court decision not to hear cases legalizes same-sex marriage in five states

**Wintery Knight** · 7 October 2014 · Archived copy · Original

From ScotusBlog.

Excerpt:

> In June 2013, in *United States v. Windsor*, a divided Supreme Court struck down Section 3 of the federal Defense of Marriage Act, which until then had defined "marriage" – for purposes of over a thousand federal laws and programs – as a union between a man and a woman.
>
> […]But on the same day, the Court sidestepped a ruling on whether the Constitution includes a right to marry someone of the same sex.
>
> […]We all assumed that the issue would be back again at the Court before too long, and that expectation only increased as lower federal courts around the country started to rely on the Court's decision in *Windsor* to strike down other states' bans on same-sex marriage – in Utah, Virginia, Oklahoma, Indiana, and Wisconsin. All told, by last Monday the Court had before it seven different petitions asking the Court to weigh in on whether states can prohibit same-sex marriage. With all of the parties on both sides in all of the cases in agreement that the Supreme Court should take up the question, review seemed inevitable.
>
> **Until this morning at 9:30, when the Court turned down all seven of the petitions, without comment.**

Since the Supreme Court refused to hear the case, that means that the marriage amendments passed by these five states are null and void, and same-sex marriage is now legal, despite what the legislatures passed.

Ryan Anderson comments on this over at the Daily Signal.

Excerpt:

> The truth of the matter is that the marriage laws in these five states—as in many states across our nation—are good laws that reflect the truth about marriage. Frequently they were passed with overwhelming democratic support. The Supreme Court should have reviewed these cases and should have upheld the authority of citizens and their elected representatives to make good marriage policy. Instead, the Supreme Court left standing bad rulings from lower federal courts that usurped authority from the people by striking down good laws.
>
> The cases at issue involve lower court rulings that struck down state marriage laws, claiming that they violated the U.S. Constitution. But the courts never provided compelling arguments that laws that reflect the truth about marriage are unconstitutional. Indeed, as former Attorney General Ed Meese and I argued last week in The Washington Post, the Supreme Court should have reviewed these cases and declared the laws constitutional.
>
> In a system of limited constitutional self-government, the people and their elected representatives should be making decisions about marriage policy. And there are reasonable arguments on both sides of this debate. Judges should not insert their own policy preferences about marriage and declare them to be required by the Constitution.
>
> […]Declining to review these cases does not speak one way or the other to the merits of the cases. But it does leave in place bad rulings from lower courts—and it will make it harder for courts to do the right thing in the future.

So we now have gay marriage in five states thanks to the Supreme Court, and to a handful of judges who overruled the votes of the majority of the people in their states. How did we ever go from a republic to an oligarchy? And how did more than half the people in this country vote for this – not just once, but twice? Are we that ignorant of

history and government that we are willing to be ruled by a handful of elites instead of by laws passed by elected representatives? Sometimes I think that even asking questions like this to people on the secular left is like trying to teach calculus to a wall. They just don't understand a thing about how and why this country was founded in the first place. It's all been reduced, in their minds, to doing what feels good, and forcing people who disagree to affirm their destructive behavior.

# How far do gay activists go in order to silence critics?

**Wintery Knight** · 7 October 2014 · Archived copy · Original

Well, consider this article from the Public Discourse.

Excerpt:

> Janna Darnelle's recent *Public Discourse* essay, "Breaking the Silence: Redefining Marriage Hurts Women Like Me—and Our Children," reveals what is behind the heartwarming pictures of gay families from a mother's point of view.
>
> […]For those of you who avoid the subterranean landscape of online same-sex parenting debates, it is useful to be introduced to Scott "Rose" Rosenzweig, a virulently misogynistic LGBT activist. As soon as Darnelle's essay was published, Rose went into action, darting from the blog *Good As You* to other sites in an effort to destroy her personally. (Rose's obsessive internet commenting has attracted attention at other news outlets as well.) Darnelle's ex-husband even weighed in. A helpful fellow, he left her personal information in the comments section of several activists' blogs, including her full legal name.
>
> Janna Darnelle wrote under a pen name in order to protect her family. Unfortunately, her ex-husband's comments helped Scott Rose embark on a campaign of harassment and intimidation. As I will discuss below, Rose was not content to confine his character assassination to the internet; he has also contacted Darnelle's employer in an attempt to get her fired.
>
> […]The publication of Janna Darnelle's story led to a spate of blog posts full of vitriol, calling her "a pitiful creature," accusing her of mental instability, and questioning her very existence.
>
> With the help of her husband's comments, Scott Rose set off to dig up and publicize as much personal information as possible about Darnelle, such as high school graduation and real estate records. Rose has harassed Darnelle with threatening messages. He has even contacted Darnelle's employer, leaving this message on the company's Facebook page:
>
> This is a COMPLAINT against […], an executive assistant in […]. Under the nom de plume of "Janna Darnelle," […] has published a horrifying, defamatory anti-gay screed on the website "Public Discourse." The first problem would be that she is creating a climate of hostility for eventual gay elders and/or their visiting friends and relatives. The second problem would be that in the screed, she comes off as being unhinged. Her public expressions of gay-bashing bigotry are reflecting very poorly on LLC.
>
> Sadly, all of this conforms to a predictable pattern of attack. If you study the routine that plays out whenever extreme activists like Scott Rose decide to take someone out, you will see seasoned patterns. Four steps comprise their usual character assassination.
>
> First, they call the individual a liar and say the person's existence cannot be verified without more data about him or her. Second, once they have such data, they write to the person's employer to get him or her fired or professionally destroyed. Third, if they cannot get the person fired, they go after the family members. Fourth, if they cannot turn the person's family against him or her, they blast endless broadsides against the person, trying to make him or her feel afraid or unsafe at all times.

This is actually not unusual for some extreme gay activists. I've blogged about things like before – e.g. – getting Frank Turek fired, forcing out Brendan Eich at Mozilla, expelling students from university, discriminating against foster parents, violence at student demonstrations, coercing Christian businesses, leaking the names of pro-marriage donors, closing down adoption agencies, threatening teachers with termination, terminating police chaplains, vandalizing businesses, vandalizing churches, or actually being convicted of committing domestic terrorism by attacking the Family Research Council building with GUNS. Any disagreement with the moral rightness of the gay lifestyle at all – no matter how caring, compassionate or rooted in evidence –

could potentially draw a coercive response, or even violent response.

# Cosmologist Luke Barnes answers 11 objections to the fine-tuning argument

**Wintery Knight** · 7 October 2014 · Archived copy · Original

This is from the blog Common Sense Atheism. (H/T Allen Hainline)

Atheist Luke Muehlhauser interviews well-respect cosmologist Luke Barnes about the fine-tuning argument, and the naturalistic response to it.

Luke M. did a good job explaining what was in the podcast. (I wish more people who put out podcasts would do that).

Details:

> In one of my *funniest* and *most useful* episodes yet, I interview astronomer Luke Barnes about the plausibility of 11 responses to the fine-tuning of the universe. Frankly, once you listen to this episode you will be better equipped to discuss fine-tuning than 90% of the people who discuss it on the internet. This episode will help clarify the thinking of anyone – including and perhaps *especially* professional philosophers – about the fine-tuning of the universe.
>
> The 11 responses to fine-tuning we discuss are:
>
> 1. "It's just a coincidence."
> 2. "We've only observed one universe, and it's got life. So as far as we know, the probability that a universe will support life is one out of one!"
> 3. "However the universe was configured, evolution would have eventually found a way."
> 4. "There could be other forms of life."
> 5. "It's impossible for life to observe a universe *not* fine-tuned for life."
> 6. "Maybe there are deeper laws; the universe *must* be this way, even though it *looks* like it could be other ways."
> 7. "Maybe there are bajillions of universes, and we happen to be in one of the few that supports life."
> 8. "Maybe a physics student in another universe created our universe in an attempt to design a universe that would evolve intelligent life."
> 9. "This universe with intelligent life is just as unlikely as any other universe, so what's the big deal?"
> 10. "The universe doesn't look like it was designed for life, but rather for empty space or maybe black holes."
> 11. "Fine-tuning shows there must be an intelligent designer beyond physical reality that tuned the universe so it would produce intelligent life."
>
> **Download** CPBD episode 040 with Luke Barnes. Total time is 1:16:31.

I'm going to put the list of resources for the podcast that Luke M. mentioned in his post, but without the actual hyperlinks. It saves me having to type up a summary. If you want to click the links that I removed, go over to Common Sense Atheism and the links are there.

Links for things we discussed:

- Fine-tuned universe
- Cosmological constant
- Miss Marple
- Other forms of life and Daleks

- Elliot Sober
- Cosmic inflation
- The graceful exit problem
- Carr and Rees, “The Anthropic Cosmological Principle and the Structure of the Physical World” (1979)
- David Lewis’ modal realism
- Boltzmann’s multiverse
- Roger Penrose argues that some modern multiverse theories face the same problem that Boltzmann’s multiverse faces in *The Road to Reality*.
- Everett’s multiverse
- Wheeler – *At Home in the Universe*
- Thorne-Hawking-Preskill bet
- Edward Robert Harrison
- Luke responds to PZ Myers
- You can find some good talks by Polkinghorne and Ellis on fine-tuning at the Faraday Institute’s multimedia page.
- William Lane Craig, “Design and the Anthropic Fine-Tuning of the Universe“
- Robin Collins, “The Teleological Argument“
- **Good stuff**: Davies – *The Goldilocks Enigma*; Rees – *Just Six Numbers*; Barrow – *The Constants of Nature*; Barrow & Tipler – *The Anthropic Cosmological Principle*; Leslie – *Universes*; George Ellis articles.
- Fred Adams and Luke’s critique
- Luke’s critique of Hector Avalos
- Luke’s critique of Victor Stenger: part 1 and part 2
- Luke’s critique of Hugh Ross
- Luke’s critique of William Lane Craig: part 1 and part 2

I thought the funniest part was the Natalie Portman part. Boy, do I wish more atheists would listen to this podcast and understand what the fine-tuning argument is actually about. Luke M. gave Luke B. a ton of time to talk. There is a very good explanation of some of the cases of fine-tuning that I talk about most on this blog – the force of gravity, the strong force, etc. as well as many other examples. Dr. Barnes is an expert, but he is also very very easy to listen to even when talking about difficult issues. Luke M. is very likeable as the interviewer.

# Democrat Senate candidates support late-term abortion

**Wintery Knight** · 8 October 2014 · Archived copy · Original

Take a look at the views of some of these Democrat candidates for the Senate.

First, North Carolina Senate candidate Kay Hagan:

The Weekly Standard explains:

> North Carolina senator Kay Hagan's position on abortion is the target of a new $620,000 TV ad campaign that is being launched today by the Women Speak Out PAC.
>
> In the ad, a husband and wife, Becca and Ned Ryun, tell the moving story of how doctors saved the life of their daughter Charlotte who was born prematurely at 24 weeks into pregnancy. Photos of their daughter in the neo-natal intenseive care unit flash across the screen, and it isn't until the end of the minute-long spot that the viewer gets a political message.
>
> "For those who are advocating late-term abortions, look at my daughter," says Ned Ryun. The ad concludes with a narrator conveying that North Carolina's senator thinks it should be legal to abort infants like Charlotte late in pregnancy: "Kay Hagan supports painful, late-term abortions. She's too extreme for North Carolina."
>
> **Hagan said in 2013 that she opposed legislation that would protect the lives of unborn children after the 20th week of gestation, when babies are old enough to feel pain and able to live long-term if born in many cases.**
>
> The bill was introduced and passed the House of Representatives in the summer of 2013 following the trial of Kermit Gosnell, the Philadelphia abortionist who was convicted of murder for killing infants outside the womb. When Nancy Pelosi, the top Democrat in the House, was asked what the difference was between killing a 23-week-old baby outside the womb and aborting that same child in utero, she sputtered and couldn't answer the question.

The Republican candidate in this race is **Thom Tillis**.

Second, Colorado Senate candidate Mark Udall:

The Weekly Standard explains:

> At the outset of the *Denver Post*'s senatorial debate on Tuesday night, a moderator asked Democratic senator Mark Udall the following question: "We know that you support a woman's right to choose, but given the advances in scientific understanding of fetal development, where pregnant mothers know at which week babies grow fingernails and can swallow, would you support a ban on late-term abortions and if so at what week?"
>
> Udall replied by citing the case of a woman who discovered during the eighth month of pregnancy that her child had a severe brain deformity. "To demand that that woman carry that child to term would be a form of government intervention that none of us want to see happen. We ought to respect the women of Colorado and their point of view," Udall said.
>
> **Udall gave no indication that he supports any legal limits on aborting healthy infants late in pregnancy or any other restrictions on abortion, a position consistent with his voting record.**

The Republican candidate in this race is **Cory Gardner**.

The story of the midterm elections next month is the Republican attempt to take the Senate, in order to block Obama's plan to pack the courts with leftist judges.

# New study: children's brains function better when they can see their mothers

**Wintery Knight** · 8 October 2014 · Archived copy · Original

The new study published in Psychological Science was reported in Pacific Standard.

Excerpt:

> For little kids, seeing mom or dad nearby is a calming influence, maybe the difference between between perfect calm and a full-bore freakout. It's as if having a trusted caregiver nearby transforms children from scared toddlers into confident adolescents. And in a way, a new report suggests, that's what having mom around does to a kid's brain.
>
> When they're first born and for years after, infants and young children can't do a whole lot by themselves. They can't eat on their own, they aren't very good at managing their emotions, and it takes a while for them to learn how to dress themselves. Most children figure it out eventually, but in the meantime they need their parents to do a lot of that stuff for them. All the while, their brains are changing, too. Well into adolescence, kids' brains undergoanatomical and physiological changes that affect the way we think and act.
>
> […]Young children's brains responded differently based on whether they were looking at their mothers or strangers. In particular, their brains showed signs of positive amygdala-PFC connections when viewing pictures of strangers, but negative connections when viewing pictures of their mothers, suggesting more mature and stable brain function—and likely more mature and stable behavior, at least when moms were around. In contrast, tweens and teens had negative connections whether they were looking at their mothers or strangers. In other words, looking at pictures of their mothers made young children's brains look a little more like those of adolescents.
>
> The companion behavioral experiment backed up that thinking—young children made around 20 percent fewer errors when their mothers were present than when they weren't, while there was no difference for adolescents. That combined with the fMRI results to suggest that mothers—and likely other caregivers—can provide an external source of mental regulation that young children won't develop until later in life, the authors write in *Psychological Science.*

In view of the recent triumphs for gay marriage advocates, I think it's worth remembering that gay marriage, like single motherhood, is not the best we can do for children. I think it's a bad enough situation when the husband dies and leaves his children to be raised by the mother. That's hard, but it's not immoral. On the other hand, I think that deliberately choosing to deprive a child of his or her mother or father IS immoral. It's child abuse, in my opinion. And that goes for gay marriage as well as "single motherhood by choice". I also oppose frivolous divorce ("frivorce"), which is very popular in a nation that views structured courtship as "boring" and no-fault divorce as a woman's right.

Previously, I blogged about another study that showed the importance of moms for young children.

Excerpt:

> Both of these images are brain scans of a two three-year-old children, but the brain on the left is considerably larger, has fewer spots and less dark areas, compared to the one on the right.
>
> According to neurologists this sizeable difference has one primary cause – the way each child was treated by their mothers.
>
> The child with the larger and more fully developed brain was looked after by its mother – she was constantly responsive to her baby, reported The Sunday Telegraph.

> But the child with the shrunken brain was the victim of severe neglect and abuse.
>
> According to research reported by the newspaper, the brain on the right worryingly lacks some of the most fundamental areas present in the image on the left.
>
> The consequences of these deficits are pronounced – the child on the left with the larger brain will be more intelligent and more likely to develop the social ability to empathise with others.
>
> But in contrast, the child with the shrunken brain will be more likely to become addicted to drugs and involved in violent crimes, much more likely to be unemployed and to be dependent on state benefits.
>
> The child is also more likely to develop mental and other serious health problems.
>
> Professor Allan Schore, of UCLA, told The Sunday Telegraph that if a baby is not treated properly in the first two years of life, it can have a fundamental impact on development.
>
> He pointed out that the genes for several aspects of brain function, including intelligence, cannot function.
>
> […]The study correlates with research released earlier this year that found that children who are given love and affection from their mothers early in life are smarter with a better ability to learn.
>
> The study by child psychiatrists and neuroscientists at Washington University School of Medicine in St. Louis, found school-aged children whose mothers nurtured them early in life have brains with a larger hippocampus, a key structure important to learning, memory and response to stress.
>
> The research was the first to show that changes in this critical region of children's brain anatomy are linked to a mother's nurturing, Neurosciencenews.com reports.
>
> The research is published online in the Proceedings of the National Academy of Sciences Early Edition.
>
> Lead author Joan L. Luby, MD, professor of child psychiatry, said the study reinforces how important nurturing parents are to a child's development.

I have a very good feminist non-Christian friend who sometimes comments here. I once asked her about marriage and she said that her skills would be wasting on raising children. I explained to her my view that a mother needs to stay at home with the children, and that is more important work. I expect my future wife to read all kinds of books on child care and to give the child attention, nutrition, exercise and play so that the child will grow up to be an effective Christian. Maybe I need to be clear. I am not going to spend hundreds of thousands per child with just any woman. I need a woman who can produce influential and effective Christians who will engage in the public square. And we do not entrust that job to just anyone. We want educated, professional women who are willing to be stay-at-home moms when it's necessary to do that – for the sake of the children.

I expect the woman I marry (if I marry) to have a college degree, and preferably a graduate degree, and at least a couple of years of employment. Then she has to stay home and invest in those children through the first five years, at least. After that she can stay home or work as much as she thinks is beneficial to the family goals of impacting the university, the church and the public square – as well as continuing to raise those children. It's not a waste of her talent to make the next William Lane Craig, or the next Marsha Blackburn, or the next Doug Axe, or the next Edith Hollan Jones.

# If you find a discrepancy in the Bible, does that mean Jesus didn't exist?

**Wintery Knight** · 8 October 2014 · Archived copy · Original

Even if we don't know whether there was one angel or two angels at Jesus' tomb, we can still know things about whether God exists and whether Jesus rose from the dead.

First, we can know that the universe was created and designed because of reliable, experimental evidence that the universe came into being and is finely-tuned for life. And second, we can know that Jesus was buried, that his tomb was found empty, that a variety of people had experiences of him appearing to them after his death, and that the Christian movement had an early belief that he was resurrected from the dead. We know those core things like we know anything – because we have good evidence. Other things that are more peripheral may not be as supported by evidence. We can remain agnostic about those peripheral things, but that agnosticism about peripheral things doesn't undermine the things that we know.

William Lane Craig answered a question related to this problem for a person who accepted the minimal facts case for the resurrection but then though that someone this case couldn't work unless he accepted inerrancy as well.

Here's the question:

> After re-evaluating my Christian faith and pruning it for two years, I can't shake what seem like two disparate conclusions. One is that the evidence for Jesus resurrection is impecable. But the other is that there seem to be some very awkward realities about the composition of scripture (like errors or authors claiming to write by another name). Yet, the authors of the New Testament, including Jesus, seem to use Scripture in a way that assumes it is word for word from God.
>
> While inductive logic is used to arrive at a strong historical case for the resurrection of Jesus, inductive logic can also be used to arrive at a strong case for many of the peculiaraties about Scripture previously mentioned.
>
> It seems that the approach which many apologists take at this point is that, having established the authority of Jesus by the resurrection, if the argument being raised against scripture contradicts an opinion expressed by Jesus in the Gospels, then the argument for a contradiction must have no possible harmonizations for it to really stick. But I don't see how this is fair to say, since (1) it seems unfair to use inductive logic to evidence Jesus' resurrection but then not use it for criticisms against the Bible and (2) an inductive argument can be strong despite what Jesus as recorded in the Gospels says, especially since we cannot assume the precision with which many of the saying were recorded. And (3), anybody can cook up a harmonization of some verse that is possible but not plausible, which I am sure you have seen first hand many times.
>
> **Yet, holding these two positions in tension tends to be corrosive to my faith and ultimately leads to a certain bitterness against God for allowing the biblical writers to play fast-and-loose with his words and for not providing a clarity that brings more certainty about what is from him and what isn't. Any help you can give to relieve this tension would be greatly appreciated.**

Now Dr. Craig has a long response on his Reasonable Faith web site, but I just want to quote you this:

> But secondly, suppose you've done all that and are still convinced that Scripture is not inerrant. Does that mean that the deity and resurrection of Christ go down the drain? No, not all. […]As you recognize, we have a very strong case for the resurrection of Jesus. That case in no way depends on the Bible's being inerrant. This became very clear to me during my doctoral studies in Munich with Wolfhart Pannenberg. Pannenberg had rocked German theology by maintaining that a sound historical case can be made for the resurrection of Jesus. Yet he also believed that the Gospel resurrection appearances stories are so legendary that they have scarcely a historical kernel in them! He did not even trust the Markan account of the discovery of the empty

> tomb. Rather his argument was founded on the early pre-Pauline tradition about the appearances in I Corinthians 15.3-5 and on the consideration that a movement based on the resurrection of dead man would have been impossible in Jerusalem in the face of a tomb containing his corpse.
>
> Evangelicals sometimes give lip service to the claim that the Gospels are historically reliable, even when examined by the canons of ordinary historical research; but I wonder if they really believe this. It *really is true* that a solid, persuasive case for Jesus' resurrection can be made without any assumption of the Gospels' inerrancy.
>
> By contrast, the case for Jesus' belief that the Old Testament Scriptures are inerrant is much weaker. I think there's no doubt that (5) is the premiss that would have to go if biblical inerrancy were to be abandoned. We should have to re-think our doctrine of inspiration in that case, but we needn't give up belief in God or in Jesus, as Bart Ehrman did. Ehrman had, it seems to me, a flawed theological system of beliefs as a Christian. It seems that at the center of his web of theological beliefs was biblical inerrancy, and everything else, like the beliefs in the deity of Christ and in his resurrection, depended on that. Once the center was gone, the whole web soon collapsed. But when you think about it, such a structure is deeply flawed. At the center of our web of beliefs ought to be some core belief like the belief that God exists, with the deity and resurrection of Christ somewhere near the center. The doctrine of inspiration of Scripture will be somewhere further out and inerrancy even farther toward the periphery as a corollary of inspiration. **If inerrancy goes, the web will feel the reverberations of that loss, as we adjust our doctrine of inspiration accordingly, but the web will not collapse because belief in God and Christ and his resurrection and so on don't depend upon the doctrine of biblical inerrancy.**

We have mainstream scientific evidence for God's existence, and a mainstream historical evidence for a minimal facts case for the resurrection. None of that evidence depends on inerrancy being true.

So can we please just accept what can be known from experimental science and standard historical methods, and work our lives around that, and not nitpick about peripheral issues so much? I am inerrantist, and so is Dr. Craig. But you don't have to be in order to accept that the *mainstream* evidence that shows that universe was created and fine-tuned, and that Jesus was raised bodily from the dead. Don't let "one angel vs two angels "stop you from accepting things we can know. You can just stay agnostic about the things you think we don't know.

# New 20-year study: long-term use of cannabis raises risk of mental health problems

**Wintery Knight** · 9 October 2014 · Archived copy · Original

A new study on marijuana was reported in the UK Daily Mail.

Excerpt:

> A definitive 20-year study into the effects of long-term cannabis use has demolished the argument that the drug is safe.
>
> Cannabis is highly addictive, causes mental health problems and opens the door to hard drugs, the study found.
>
> The paper by Professor Wayne Hall, a drugs advisor to the World Health Organisation, builds a compelling case against those who deny the devastation cannabis wreaks on the brain.
>
> Professor Hall found:
>
> - One in six teenagers who regularly smoke the drug become dependent on it
> - Cannabis doubles the risk of developing psychotic disorders, including schizophrenia
> - Cannabis users do worse at school. Heavy use in adolescence appears to impair intellectual development
> - One in ten adults who regularly smoke the drug become dependent on it and those who use it are more likely to go on to use harder drugs
> - Driving after smoking cannabis doubles the risk of a car crash, a risk which increases substantially if the driver has also had a drink
> - Smoking it while pregnant reduces the baby's birth weight
>
> Last night Professor Hall, a professor of addiction policy at King's College London, dismissed the views of those who say that cannabis is harmless.
>
> 'If cannabis is not addictive then neither is heroin or alcohol,' he said.
>
> 'It is often harder to get people who are dependent on cannabis through withdrawal than for heroin – we just don't know how to do it.'
>
> Those who try to stop taking cannabis often suffer anxiety, insomnia, appetite disturbance and depression, he found. Even after treatment, less than half can stay off the drug for six months.

I'm seeing a lot of "Christian libertarians" being supportive of initiatives to legalize drugs, but there is a reason why drugs are illegal. They hurt people. They hurt families. Why would we want to celebrate and normalize something that is known to cause harm?

Please see below for more recent studies on the effects of marijuana.

# New study: patients experience awareness of surroundings after brain ceases to function

**Wintery Knight** · 9 October 2014 · Archived copy · Original

Reported in the left-wing UK Independent.

Excerpt:

> There is scientific evidence to suggest that life can continue after death, according to the largest ever medical study carried out on the subject.
>
> A team based in the UK has spent the last four years seeking out cardiac arrest patients to analyse their experiences, and found that almost 40 per cent of survivors described having some form of "awareness" at a time when they were declared clinically dead.
>
> Experts currently believe that the brain shuts down within 20 to 30 seconds of the heart stopping beating – and that it is not possible to be aware of anything at all once that has happened.
>
> But scientists in the new study said they heard compelling evidence that patients experienced real events for up to three minutes after this had happened – and could recall them accurately once they had been resuscitated.
>
> Dr Sam Parnia, an assistant professor at the State University of New York and a former research fellow at the University of Southampton who led the research, said that he previously that patients who described near-death experiences were only relating hallucinatory events.
>
> One man, however, gave a "very credible" account of what was going on while doctors and nurses tried to bring him back to life – and says that he felt he was observing his resuscitation from the corner of the room.
>
> Speaking to *The Telegraph* about the evidence provided by a 57-year-old social worker Southampton, Dr Parnia said: "We know the brain can't function when the heart has stopped beating.
>
> "But in this case, conscious awareness appears to have continued for up to three minutes.
>
> "The man described everything that had happened in the room, but importantly, he heard two bleeps from a machine that makes a noise at three minute intervals. So we could time how long the experienced lasted for.
>
> "He seemed very credible and everything that he said had happened to him had actually happened."
>
> Dr Parnia's study involved 2,060 patients from 15 hospitals in the UK, US and Austria, and has been published in the journal Resuscitation.
>
> Of those who survived, 46 per cent experienced a broad range of mental recollections, nine per cent had experiences compatible with traditional definitions of a near-death experience and two per cent exhibited full awareness with explicit recall of "seeing" and "hearing" events – or out-of-body experiences.

Previously, I blogged about two very reliable examples of near-death experiences, as well as peer-reviewed published work done by UCLA professor Jeffrey Schwartz on "mental effort". Not to mention philosophical arguments for non-physical minds.

How should we use this evidence? Well, I wouldn't use it as part of a case for theism, but I think it is useful to show that materialism is clearly false. And that's before we even get to the cosmological and fine-tuning arguments, which make it even more clear that materialism is false.

# Does archaeological evidence confirm names, dates and places in the Bible?

**Wintery Knight** · 10 October 2014 · Archived copy · Original

I spotted this post on Be Thinking by UK apologist Peter S. Williams. (H/T Eric Chabot at Think Apologetics)

So let me pick the ones I liked most for this post.

I have to choose this one because I was just sending John 5 to the woman I am mentoring.

Look:

> ### Jerusalem and The Pool of Bethesda
>
> John 5:1-15 describes a pool in Jerusalem, near the Sheep Gate, called Bethesda, surrounded by five covered colonnades. Until the 19th century, there was no evidence outside of John for the existence of this pool and John's unusual description *"caused bible scholars to doubt the reliability of John's account, but the pool was duly uncovered in the 1930s – with four colonnades around its edges and one across its middle."*[38] Ian Wilson reports: *"Exhaustive excavations by Israeli archaeologist Professor Joachim Jeremias have brought to light precisely such a building, still including two huge, deep-cut cisterns, in the environs of Jerusalem's Crusader Church of St Anne."*[39]

And this one:

> ### Jerusalem and The Pool of Siloam
>
> In the 400s AD, a church was built above a pool attached to Hezekiah's water tunnel to commemorate the healing of a blind man reported in John 9:1-7. Until recently, this was considered to be the Pool of Siloam from the time of Christ. However, during sewerage works in June 2004 engineers stumbled upon a 1st century ritual pool when they uncovered some ancient steps during pipe maintenance near the mouth of Hezekiah's tunnel. By the summer of 2005, archaeologists had revealed what was *"without doubt the missing pool of Siloam."*[40] Mark D. Roberts reports that: *"In the plaster of this pool were found coins that establish the date of the pool to the years before and after Jesus. There is little question that this is in fact the pool of Siloam, to which Jesus sent the blind man in John 9."*[41]

I just read this one because I am working my way through John. In case you haven't read John, you really should it's my favorite gospel.

Here's another one:

> ### Herod the Great
>
> We have a bronze coin minted by Herod the Great. On the obverse side (i.e. the bottom) is a tripod and ceremonial bowl with the inscription 'Herod king' and the year the coin was struck, 'year 3' (of Herod's reign), or 37 BC.
>
> In 1996 Israeli Professor of Archaeology Ehud Netzer discovered in Masada a piece of broken pottery with an inscription, called an ostracon. This piece had Herod's name on it and was part of an amphora used for transportation (probably wine), dated to c. 19 BC. The inscription is in Latin and reads, *"Herod the Great King of the Jews (or Judea)"*, the first such that mentions the full title of King Herod.

> Herodium is a man-made mountain in the Judean wilderness rising over 2,475 feet above sea level. In 23 BC Herod the Great built a palace fortress here on top of a natural hill. Seven stories of living rooms, storage areas, cisterns, a bathhouse, and a courtyard filled with bushes and flowering plants were constructed. The whole complex was surrounded and partly buried by a sloping fill of earth and gravel. Herod's tomb and sarcophagus were discovered at the base of Herodium by archaeologist Ehud Netzer in 2007.

And one more:

> **The 'James, son of Joseph, brother of Jesus' Ossuary**
>
> James, the brother of Jesus, was martyred in AD 62. A mid-1st century AD chalk ossuary discovered in 2002 bears the inscription *"James, son of Joseph, brother of Jesus"* ( 'Ya'akov bar Yosef akhui di Yeshua'). Historian Paul L. Maier states that*"there is strong (though not absolutely conclusive) evidence that, yes, the ossuary and its inscription are not only authentic, but that the inscribed names are the New Testament personalities."*[68] New Testament scholar Ben Witherington states that:*"If, as seems probable, the ossuary found in the vicinity of Jerusalem and dated to about AD 63 is indeed the burial box of James, the brother of Jesus, this inscription is the most important extra-biblical evidence of its kind."*[69] According to Hershel Shanks, editor in chief of the *Biblical Archaeological Review*: *"this box is [more] likely the ossuary of James, the brother of Jesus of Nazareth, than not. In my opinion … it is likely that this inscription* does *mention the James and Joseph and Jesus of the New Testament."*

And finally one short one:

> **Tiberius Caesar**
>
> The Denarius coin, 14-37 AD, is commonly referred to as the 'Tribute Penny' from the Bible. The coin shows a portrait of Tiberius Caesar. Craig L. Blomberg comments: *"Jesus' famous saying about giving to Caesar what was his and to God what* his *(Mark 12:17 and parallels) makes even more sense when one discovers that most of the Roman coins in use at the time had images of Caesar on them."*[48]

This is a good article to bookmark in case you are ever looking for a quick, searchable reference on archaeology and the Bible. There are many more examples in that post.

# Ross Douthat: challenges facing the modern family, and some pro-family policy ideas

**Wintery Knight** · 10 October 2014 · Archived copy · Original

This is from the Family Studies blog. It's an interview with moderately conservative New York Times columnist Ross Douthat.

I just want to highlight the problem and a couple of his solutions. If you find it interesting, read the whole thing.

First, the problem:

> **IFS:** *Why should we be so concerned about the state of the American family today? Of all of the family issues on the nation's agenda—marriage, divorce, cohabitation, single parenthood, the fatherhood crisis, or something else—which one has you most concerned?*
>
> **Douthat:** We should be concerned because the family is the taproot of identity and community, the pre-political unit on which politics depend, the place where all the ladders of psychology and personality start. And right now, a familial experience (growing up in an intimate relationship with both your natural parents) that used to be average, boring, typical is increasingly a luxury good, an aspiration that's rising out of reach for people whose talents and resources are limited or modest.
>
> But in thinking about why this is happening, and what's going wrong, I wouldn't single out just one issue, because they're all too deeply intertwined. The biggest problem the American family faces right now is a problem of compounding: The way that many of the trends you cite have, since the 1960s but in certain ways especially in the last generation, effectively all been pushing in the same direction, with each problem making other problems worse. There's a perverse cycle, in other words, that's hard for people to escape: A higher divorce rate creates a cultural context in which young people don't see lifelong monogamy as a plausible goal and don't want to take the chance of being hurt in the way that one or both of their parents were . . . which, in turn, prompts them to delay marriage and cohabit for an extended period instead, to effectively test their partner . . . which makes it more likely that they'll have a child during such a "test" period, without a marital bond with the other parent . . . which raises the odds, whether they marry or not, that the relationship will dissolve, creating more instability in the life of their child or children . . . who in turn will grow up with an even-more pessimistic view of marriage and family life than their own divorce-shy parents did. All of these effects are then amplified by the "social contagion" aspect of family breakdown, in which just having peers or neighbors whose marriages are failing or who have had kids out of wedlock creates a context in which that seems like the norm, and a stable or flourishing family life like an exceptional, nearly-unattainable ideal.

The first three solutions I think of when I read this are: 1) eliminate single mother welfare, 2) get the normalization of premarital sex out of the schools, and 3) repeal no-fault divorce. The trouble is that feminists oppose all three of these policies. They want money to be transferred from traditional families where one man works to single mother households. They want women to get away from "sexist" notions like chastity, courtship and chivalry. They want women to be able to get out of her obligations to her husband and children if she feels "unhappy". So unless we roll back radical feminism, none of those ideas are going to happen.

But does Douthat have any other policy ideas?

This one for no-fault divorce:

> **IFS:** *With one recent study indicating that divorce has actually been on the rise over the last generation or so, what do you make of the recent efforts of some states to tighten up their no-fault divorce laws? Is there a way for the state to encourage couples to think twice about ending their marriages without returning to an era where spouses and their children could be stuck in violent relationships?*

> **Douthat:** I'm basically supportive of the mix of proposals in (IFS Senior Fellow!) Brad Wilcox's 2009 essay on divorce for National Affairs—waiting periods and counseling for divorcing couples (especially couples with children), preferential treatment in court for spouses who are being divorced against their will (in the absence of evidence of abuse)—and I know that some of those ideas have been taken up by the Coalition for Divorce Reform, which is trying to push state-level changes. My sense is that this kind of incremental tightening of divorce law is a better bet than the "covenant marriage" approach that some social conservatives pressed in the 1990s, where couples would be given the option of entering into a marriage without a no-fault escape hatch. The evidence we have from the three states that adopted the convenant option suggests that almost nobody actually opted into it, and I think it's safe to assume that the people who did choose it were at pretty low risks for divorce already. Better, I think, to push for legal changes—however modest—that might apply across the board, and thus shape incentives for the marginal, most-at-risk couples.

And this one for welfare:

> **IFS:** If you could magically pass a set of policies aimed at strengthening marriage and families, what would those policies be? (Set aside, for now, budget constraints and the chances of getting the proposals through Congress.)
>
> **Douthat:** My economic program would expand on some of the ideas being kicked around already. There would be an even larger child tax credit than the one Republicans like Mike Lee and Marco Rubio have endorsed, and the existing earned-income tax credit would be expanded and converted to a direct wage subsidy. I would impose—I'm the enlightened despot here, right, so federalism no longer applies?—various regulatory reforms on states and municipalities aimed at eliminating a lot of zoning and licensing rules that impose particularly steep costs on working class families. I'd cut and cap tax subsidies that disproportionately benefit upper middle class rentiers. I'd pursue some version of the Paul Ryan vision for welfare reform, with much more state-based experimentation in the provision of non-cash benefits. More broadly, I'd combine relatively loose monetary policy with relatively tight immigration rules, seeking a lower unemployment rate and higher wages at the bottom rungs of the economic ladder. And then I'd spend less on prisons and put more money into hiring and training (but not heavily-arming!) cops, and I'd put UCLA's Mark Kleiman in charge of reviewing sentencing policies at both the state and federal level, with an eye toward achieving significant reductions in incarceration rates wherever possible.

So maybe my ideas are not realistic, because I am too conservative, but I'd certainly like his to be enacted if mine can't be. How about you? Do you have any ideas to save marriage? We can't keep going life this – eventually we are going to run out of money for the social programs that prop up the people who bought into the sexual revolution. The spending on social programs for broken homes has got to stop somehow, one way or the other.

# Friday night detectives: two more episodes of Sherlock Holmes

**Wintery Knight** · 10 October 2014 · Archived copy · Original

Jeremy Brett is the best Sherlock Holmes *ever*.

Here are 2 episodes of “The Adventures of Sherlock Holmes”.

The Musgrave Ritual:

A Scandal in Bohemia:

These are considered to be two of the best Sherlock Holmes short stories.

Happy Friday!

# Do Christians have to do something extraordinary to make a difference?

**Wintery Knight** · 11 October 2014 · Archived copy · Original

Here's an interesting article from Relevant. (H/T Eric Chabot from Think Apologetics)

Excerpt:

> Ordinary" has to be one of the loneliest words in our vocabulary today. Who wants a bumper sticker that announces to the neighborhood, "My child is an ordinary student at Bubbling Brook Elementary"? Who wants to be that ordinary person who lives in an ordinary town, is a member of an ordinary church and has an ordinary job?
>
> We think our life *has* to count! We have to leave our mark, have a legacy, make a difference. And all of this should be something that can be managed, measured and maintained. We have to live up to our Facebook profile. It's one of the newer versions of salvation by works.
>
> […]In a world intoxicated by such freedom, everydayness is boring. This vision of reality affects us all. Even more than I'm afraid of failure, I'm terrified by boredom. Facing another day, with ordinary callings to ordinary people all around me is much more difficult than chasing the dreams I have envisioned for the grand story of my life. Other people—especially those close to us—can become props. "The Poor" can be instruments of our life project. **Our big ideas to "change the world" can become ways of actually avoiding the opportunities we have every day, right where God has placed us, to glorify and enjoy Him and to enrich the lives of others.**
>
> […]Taking a summer to build wells in Africa is, for some, a genuine calling. But so is fixing a neighbor's plumbing, feeding one's family and sharing in the burdens and joys of a local church. **What we are called to do every day, right where God has placed us, is rich and rewarding.**
>
> Sometimes, the best way to change the world is to live extraordinarily in what looks like an ordinary existence—to radically love and serve those around us every day, no matter where we are.

I want to quote from a post by Wes Widner. He is a talented software engineer, and a *very* practical person.

Here's a challenging post he wrote about about short-term missions.

Here's what was said:

> Because of this misunderstanding of the great commission and what it truly means to make disciples of those around us, we tend to overlook questions of stewardship and logistics. In fact, since we think the imperative is to go we tend to start to think that any cost is acceptable and questions of logistics are a mere nuisance.
>
> How much does a round-trip plane ticket usually cost to travel overseas? $1,000, $2,000? More? Once you count the cost of food, lodging, transportation, etc. you can often approach figures well over $3,000 just to send a single person overseas. Is this really the best way to reach the lost?

> […]Why do we go? Why do we really go? If our real aim is to make disciples as we are commanded to, then we will gladly step back and examine the questions raised above (and many will come to the conclusion that short-term, long-distance mission trips are simply not a good idea) but I believe the main reason most Christians go is to satisfy a desire for an emotional experience which they equate with "being close to God". And therein lies the heart of our dilemma.

So that's the first point to make – do the people who want to fly off to far-flung places for a few weeks want to make

a difference? If so, how does throwing away thousands of dollars do that?

In my own life, I've favored stewardship and strength over recklessness and thrill-seeking. I have been working out a slow and steady apologetics-focused plan that started when I was in high school when I was reading C.S. Lewis and winning awards in computer science. From there, I got my BS and MS in computer science and have proceeded to built a gapless resume and a fortune which I use to support Christian students and fund apologetics events. I have sponsored dozens of apologetics events during the last 15 years, and let me tell you, I can fund several campus events with as much as people spend on a 3-week mission trip. And it's a much higher impact. A much better use of funds. We need to be influencing the university, that's where future leaders come from.

Let's take a look at another concern.

Look at this post by a male reader of The Thinking Housewife blog.

Excerpt:

> Since I wrote you last, I have decided to sign up for a few online dating sites, mostly out of curiosity. I could not imagine finding a serious mate on, say, *OKCupid,* but anything is possible. In poring over many hundreds of profiles in the past few days, a few things stand out to me.
>
> - I have not seen any woman make her desire for children, or even marriage, the central focus of her profile. Even though I filter profiles based on the "wants kids?" question (which is, surprisingly, often answered "yes"), nothing in the written profile suggests it is important to them. (This is occasionally not the case for Asian women)
> - The emphasis is instead on career, activities, hobbies, favourite movies/books/music, travel, and political inclinations (always to the left, sometimes the feminist left)
> - The surpreme goal of women my age appears to be to start an NGO in a Third World country.
> - Every woman my age has read *Eat, Pray, Love*.
> - Most are doing (or have done) advanced degrees, often in education or healthcare.
> - It is rare that a woman expresses interest in cooking, though most express interest in restaurants and food.
> - I have never seen a woman mention that she desires a good home, a place to call her own, or that she is otherwise domestically inclined.
>
> I suspect these line up with your readers' experiences too. That said, it may be that women view these traits as being desired by men, and they may be at odds with more deeply held needs.

So marriage and family are not viewed as ways to make a difference, and all the effort is put into travel, education, politics, social work and career.

The Thinking Housewife adds her own thoughts:

> Right now, in this country, there are many children growing up in single-mother homes. Growing up without a father and with a mother who is usually not at home and who may bring strange men into your life is a desolating experience that has been proven to damage many people. I have a friend who is a teacher in a white working-class neighborhood. Many of the children there are growing up in homes of never-married or divorced mothers. These children are hungry for attention and love. Their situation portends further social chaos. Do you think the young Evangelical women you mention would brag about helping these white children? Would volunteer work with them have the same cachet?
>
> I suggest to you that it would not.
>
> I understand that people in Third World countries are materially *poorer* than these white children I mention. But in the Christian view, the immaterial is foremost and the *spiritual conditions* of these white children are

> nothing less than dire and probably worse than that of most children in the Third World. They are being raised by nihilistic popular culture.
>
> […]Christianity will not flourish in the Third World if it is dying in the West. We need these idealistic women to do their work at home, and that work includes becoming wives and mothers themselves.
>
> The idealism of these women is not wrong, but the direction it has taken *is*. Volunteering in the Third World has become a status symbol for Christians.

This is definitely something that I have seen with young, umarried Christian women. There is very little effort into choosing the right man, and planning for marriage and parenting with him. Everything is about missions trips, graduate degrees, changing the world with broad brush strokes. Being in the spotlight. Being recognized by everyone as important.

Last link – this time from Greg Koukl of Stand to Reason.

He writes:

> **You can make a difference as long as you're making a difference with someone else with whom you have a difference (here I mean difference in ability). So maybe you know a little bit of theology. Let's say you know like three theological truths. Well, you can teach those to somebody who know less than three theological truths, or don't know those three. You can teach them what you know. That means just about anybody can participate as long as you find someone who knows less than you do, and there's a lot of them around.**
>
> Take what you know, take the circumstance you're in, and bloom where you're planted. And that is when you learn best. When you're teaching someone else, you learn it better. It's very simple. You have a small group. Sometimes your group is two or three people. You have an audience of one, over coffee at Starbucks. You could be sharing, talking, teaching, instructing. You take those opportunities, and you are faithful in those smaller opportunities, and more opportunities will probably come your way.
>
> You may not have an audience of 100 or 1,000 or 3,000. I rarely have that size audience, anyway. But Jesus said, "If you're faithful in smaller things, you'll be given greater things." Jesus wants you to make a difference in small ways. The fields are white with harvest. There are all kinds of need out there, and you've been gifted to meet that need. So it stands to reason, to coin a phrase, that you will be used as you become better at what you do by the One who distributes these gifts, God, through the person of the Holy Spirit.
>
> My answer to the question is then, keep your eyes open, and take the opportunities that come your way, look for opportunities. Bloom where you're planted. Do whatever you can, wherever you're at. And then watch the Lord work and see what He decides to do with what you've done.

Here's the Scripture he mentioned from Luke 16:10:

[10] "He who is faithful in a very little thing is faithful also in much; and he who is unrighteous in a very little thing is unrighteous also in much.

Even more than teaching another person what you know, you can just care for them and encourage them. You can just love them.

My view has always been to learn skills through study and save money I needed to be able to respond to challenges. If opportunities arose, then I could do something. I also made big plans. But even with these big plans, I always thought that I should be flexible. There have been times when opportunities to mentor someone one-on-one came up, and when they did, I invested heavily in those other people.

So I did have big plans. But then along came individuals, some of them from rough situations, who needed my help. What should I do? Keep trying to make my big important plan happen? What if the person who came along had a

story that fit my abilities and experience so well that I was sure that God had placed us together for me to love and serve this person?

I've always felt that I should be flexible about letting my big plans go and working on these one-on-one relationships. But in order to do that, I had to accept that I might never get the recognition I wanted. That I might never get the excitement that I wanted. But sometimes, I got the joy that comes from supplying another person with what they needed, so that their wounds are healed and they move closer to God.

If we all slowly and carefully built up the skills and resources we needed to be able to make a difference with one person at a time, in the places and times where we are right now, then wouldn't that change the world?

# T-shirt company forced to print gay pride t-shirts and attend diversity training

**Wintery Knight** · 11 October 2014 · Archived copy · Original

From Kentucky.com.

Excerpt:

> Hands On Originals discriminated against the Gay and Lesbian Services Organization of Lexington when it refused to print the group's Lexington Pride Festival T-shirts in 2012, according to a hearing officer in the case.
>
> Greg Munson issued his decision Monday. The Lexington-Fayette Urban County Human Rights Commission released it Tuesday morning.
>
> "The evidence of record shows that the respondent discriminated against GLSO because of its members' actual or imputed sexual orientation by refusing to print and sell to them the official shirts for the 2012 Lexington Pride Festival."
>
> Munson wrote that the application of the Fairness Ordinance did not violate the T-shirt vendor's right to free speech and the free exercise of religion. The Human Rights Commission found in 2012 that Hands On Originals violated the city's fairness ordinance, which prohibits businesses open to the public from discriminating against people based on sexual orientation.

Alliance Defending Freedom defended the business, and here was their line of argument:

> "No one should be forced by the government — or by another citizen — to endorse or promote ideas with which they disagree," said ADF Senior Legal Counsel Jim Campbell, who argued before the hearing examiner on behalf of Hands On Originals on June 19.
>
> "Blaine (Adamson, of Hands On Originals) declined the request to print the shirts not because of any characteristic of the people who asked for them, but because of the message that the shirts would communicate."
>
> In the statement, Hands On Originals' co-counsel Bryan Beauman, with the Lexington firm of Sturgill, Turner, Barker and Moloney, said, "No one wants to live in that kind of America — a place where people who identify as homosexual are forced to promote the Westboro Baptists and where printers with sincere religious convictions are forced to promote the message of the GLSO. … In America, we don't force people to express messages that are contrary to their convictions."

In cases like this, the Human Rights Commissions will try to drag the trial out for as long as possible, in order to send an intimidating messages to minorities they want to discriminate against and coerce. This case went on for two years, and probably cost a lot of money to defend. In Canada, Ezra Levant's case went 2 years and also cost $100,000. The goal here is to use the legal system as a form of terrorist action, to intimidate anyone who disagrees with the secular left. And it works.

If you are looking for something to do with your life, becoming an ADF attorney or supporter is probably a very good option.

Do you think that intimidation like this is uncommon? Well, I've blogged about things like before – e.g. – getting Frank Turek fired, forcing out Brendan Eich at Mozilla, expelling students from university, discriminating against foster parents,violence at student demonstrations, coercing Christian businesses, leaking the names of pro-marriage donors,closing down adoption agencies, threatening teachers with termination, terminating police chaplains, vandalizing businesses, vandalizing churches, or actually being convicted of committing domestic

terrorism by attacking the Family Research Council building with guns. So sometimes it's coercion, and sometimes it's vandalism and sometimes it's domestic terrorism. It depends on how extreme the gay activist is in his views.

# ISIS on the doorstep of Baghdad as Obama fundraises in San Francisco

**Wintery Knight** · 12 October 2014 · Archived copy · Original

First, the progress of Isis, as reported by the leftist UK Independent.

Excerpt:

> In an offensive in Iraq launched on 2 October but little reported in the outside world, Isis has captured almost all the cities and towns it did not already hold in Anbar province, a vast area in western Iraq that makes up a quarter of the country. It has captured Hit, Kubaisa and Ramadi, the provincial capital, which it had long fought for. Other cities, towns and bases on or close to the Euphrates River west of Baghdad fell in a few days, often after little resistance by the Iraqi Army which showed itself to be as dysfunctional as in the past, even when backed by US air strikes.

Just a note about those air strikes – it's just a political diversion. The actual number of sorties is 10% what were doing during the Iraq war. It's just something so that Obama can say he is "doing something" about the beheading videos. It is election season, after all. And that drives foreign policy if you're a Democrat.

More:

> Today, only the city of Haditha and two bases, Al-Assad military base near Hit, and Camp Mazrah outside Fallujah, are still in Iraqi government hands. Joel Wing, in his study –"Iraq's Security Forces Collapse as The Islamic State Takes Control of Most of Anbar Province" – concludes: "This was a huge victory as it gives the insurgents virtual control over Anbar and poses a serious threat to western Baghdad".
>
> The battle for Anbar, which was at the heart of the Sunni rebellion against the US occupation after 2003, is almost over and has ended with a decisive victory for Isis. It took large parts of Anbar in January and government counter-attacks failed dismally with some 5,000 casualties in the first six months of the year. About half the province's 1.5 million population has fled and become refugees. The next Isis target may be the Sunni enclaves in western Baghdad, starting with Abu Ghraib on the outskirts but leading right to the centre of the capital.

What caused all this mess? Obama's decision to pull our troops out of Iraq. And Iraq is now begging for us to send our troops back.

Excerpt:

> As Islamic State troops move closer to Baghdad, Iraqi officials have issued a plea for American ground troops to return to the country.
>
> A senior governor claimed that up to 10,000 Islamic State fighters were closing in on the capital, amid reports that forces had reached Abu Ghraid, a suburb of Baghdad, The Telegraph reported Saturday.
>
> Iraqi officials are worried the Pentagon will not be keen to send U.S. soldiers back to an area once dubbed "the graveyard of the Americans" in Anbar Province. In 2004, U.S. troops fought the Battle of Fallujah in Anabar province, the bloodiest battle involving American troops since the Vietnam War.
>
> **Regardless, government officials believe that if the province were to fall to the radical Islamic Fighters, then it would be a strategic launching point for a full-force attack on Baghdad.**
>
> Nearly 1,500 U.S. troops are already stationed in Baghdad, training the Iraqi army.

So where is Obama?

He's in San Francisco, fundraising for Democrat candidates in the midterms. And Joe Biden is busy calling for more gun control.

# Five-year old girl punished by school for pointing crayon at classmate

**Wintery Knight** · 12 October 2014 · Archived copy · Original

Martha L. Peek, Superintendent

Reason #54,993 why you should not send your child to public schools.

Excerpt:

> Mobile mother is not happy about a controversial Mobile County School contract her daughter signed without her consent. The contract promises that her daughter will not kill or injure herself and others.
>
> Rebecca is angry.
>
> “This isn’t right. She’s 5-years-old,” said Rebecca.
>
> Rebecca did not want Local 15 News to use her last name. She said E R Dickson school officials crossed the line when they had her daughter sign a Mobile County Public Safety Contract without her being present.
>
> Rebecca said, “Most of these words on here, she’s never heard in her life.”
>
> School officials told Rebecca they had to send Elizabeth home after an incident in class.
>
> “They told me she drew something that resembled a gun,” said Rebecca. “According to them she pointed a crayon at another student and said, ‘pew pew,” said Rebecca.
>
> She said her child was given a questionnaire to evaluate her for suicidal thoughts.
>
> “[They] Asked her if she was depressed now,” said Rebecca.
>
> Without her permission, Rebecca said her child was given the Mobile County Public School Safety Contract to sign stating she wouldn’t kill herself or others.
>
> “While I was in the lobby waiting they had my 5-year-old sign a contract about suicide and homicide,” said Rebecca.
>
> According to state law, minors cannot legally sign a contract.
>
> “There should be a different way to handle this situation. If this is protocol it needs to be looked at again,” said Rebecca.
>
> Local 15 News contacted school officials to see what the proper protocol is when handling “violent-like” behavior. Local 15 News has not heard back.
>
> “My child interrupted us and said, ‘What is suicide mommy? Daddy what is suicide?” said Rebecca. “As a

> parent that's not right. I'm the one should be able to talk to my child and not have someone else mention words like this in front of her at all."
>
> Rebecca is pushing to have the incident removed from her child's record. **She said school officials have requested Elizabeth see a psychiatrist.**

How long will it be until the school doesn't just request that children see psychiatrists, but they just go right ahead and take the child from you, like what happened with the Boston children's hospital? After all, they are very sure they are right. They are the experts, you are just the parent. They know better than you – they have college degrees from the "education" department. You should be grateful for their guidance about how to raise your children. You should be grateful the opportunity to pay taxes for the salaries of people with degrees in "education".

By the way if you want to e-mail the four women who work in the superintendent's office, you can click here.

# Richard Land discusses the National Apologetics Conference on the latest FRC podcast

**Wintery Knight** · 13 October 2014 · Archived copy · Original

Dr. Land is actually hosting the show. I like to pick on Christian leaders for ignoring apologetics, but I know Dr. Land is very supportive of apologetics, and thinks it is the key to evangelism.

Here are the details of the last Washington Watch Weekly podcast:

> On this weekend edition of "Washington Watch with Tony Perkins," Dr. Richard Land, President of Southern Evangelical Seminary in Charlotte, North Carolina, guest hosted the program for Tony. Bestselling author and attorney, David Limbaugh, joined Dr. Land to discuss his new book: *Jesus on Trial, A Lawyer Affirms the Truth of the Gospel*, where he lays out the legal aspects of the gospel and gives hard evidence to support that belief. Fox News' Todd Starnes was here to discuss the latest attack on religious liberty regarding a Lexington, Ky. t-shirt company under attack from the left for standing for Christian principles. Also, FRC's Executive Vice President and founding member of the Army's Delta Force, Lt. General (ret) Jerry Boykin joined Dr. Land to highlight the latest on the ISIS threat to America and former Defense Secretary and CIA Director Leon Panetta's new book where he criticizes the President on his handling of foreign policy issues.

The MP3 file is here. (28 minutes)

This is one of my 5 favorites podcasts.

The five are:

- Family Research Council – Washington Watch Weekly (current events, policy)
- The Weekly Standard (current events, politics, elections)
- Intelligent Design: The Future (science)
- Reasonable Faith (apologetics)
- Cold Case Christianity (apologetics)

There's another podcast I listen to for current events, but because that person has been annoying Michael Licona, he can remain nameless.

# J. Warner Wallace podcast: pluralism, relativism and postmodernism at the university

**Wintery Knight** · 13 October 2014 · Archived copy · Original

The latest episode of the Cold Case Christianity podcast is useful to help parents understand what awaits their children at the university.

Details:

> In this episode of the Cold-Case Christianity Broadcast, J. Warner examines four popular misconceptions and misstatements about the nature of objective truth, tolerance and our over-reliance on science. If there are no objective truths (or they can't be known) there is little reason to examine the truth about God. We need to get to the truth about truth before we can ever know the truth about anything else.

The MP3 file is here.

He has it down to 30 minutes now, so if you thought one hour was too long, you're in luck. I liked the one-hour format better, but the new podcast series is really professional.

# William Lane Craig debates James Crossley: Did Jesus rise from the dead?

**Wintery Knight** · 13 October 2014 · Archived copy · Original

This is my favorite debate on the resurrection.

You can watch the debate here:

The MP3 file can be obtained from Apologetics 315.

There is not much snark in this summary, because Crossley is a solid scholar, and very fair with the evidence. He's also done debates with Richard Bauckham and Michael Bird. You have to respect him for getting out there and defending his views in public.

SUMMARY

**William Lane Craig's opening speech**

Two contentions:

- There are four minimal facts that are accepted by most historians
- The best explanation of the four minimal facts is that God raised Jesus from the dead

Contention 1 of 2:

Fact 1: The burial

- The burial is multiply attested
  - The burial is based on the early source material that Mark used for his gospel
  - Scholars date this Markan source to within 10 years of the crucifixion
  - The burial is also in the early passage in 1 Cor 15:3-8
  - So you have 5 sources, some of which are very early
- The burial is credited to a member of the Sanhedrin
  - the burial is probable because shows an enemy of the church doing right
  - this makes it unlikely to to be an invention

Fact 2: The empty tomb

- The burial story supports the empty tomb
  - the site of Jesus' grave was known
  - the disciples could not proclaim a resurrection if the body were still in it
  - the antagonists to the early Christians could have produced the body
- The empty tomb is multiple attested
  - it's mentioned explicitly in Mark
  - it's in the separate sources used by Matthew and John
  - it's in the early sermons documented in Acts
  - it's implied by 1 Cor 15:3-8, because resurrection requires that the body is missing
- The empty tomb was discovered by women
  - the testimony of women of women was not normally allowed in courts of law
  - if this story was being made up, they would have chosen male disciples
- The empty tomb discover lacks legendary embellishment

  - there is no theological or apologetical reflection on the meaning of the tomb
- The early Jewish response implies that the tomb was empty
  - the response was that the disciples stole the body
  - that requires that the tomb was found empty

Fact 3: The appearances to individuals and groups, some of the them hostile

- The list of appearances is in 1 Cor 15:3-8
  - this material is extremely early, withing 1-3 years after the cross
  - James, the brother of Jesus, was not a believer when he got his appearance
  - Paul was hostile to the early church when he got his appearance
- Specific appearances are multiply attested
  - Peter: attested by Luke and Paul
  - The twelve: attested by Luke, John and Paul
  - The women: attested by Matthew and John

Fact 4: The early belief in the resurrection emerged in a hostile environment

- There was no background belief in a dying Messiah
- There was no background belief in a single person resurrecting before the general resurrection of all of the righteous at the end of the age
- The disciples were willing to die for their belief in the resurrection of Jesus
- The resurrection is the best explanation for the transformation of the disciples from frightened to reckless of death

Contention 2 of 2:

- The resurrection is the best explanation because it passes C.B. McCullough's six tests for historical explanations
- None of the naturalistic explanations accounts for the minimal facts as well as the resurrection

**James Crossley's opening speech**

Appeals to the majority of scholars doesn't prove anything

- the majority of people in the west are Christians so of course there are a majority of scholars that support the resurrection
- there are Christian schools where denial of the resurrection can result in termination

The best early sources (1 Cor 15:3-8 and Mark) are not that good

1 Cor 15:3-8 doesn't support the empty tomb

- verse 4 probably does imply a bodily resurrection
- the passage does have eyewitnesses to appearances of Jesus
- but there are no eyewitnesses to the empty tomb in this source
- appearances occur in other cultures in different times and places
- Jesus viewed himself as a martyr
- his followers may have had hallucinations

Mark 16:1-8

- Mark is dated to the late 30s and early 40s

- The women who discover the tomb tell no one about the empty tomb

The gospels show signs of having things added to them

- Jewish story telling practices allowed the teller to make things up to enhance their hero
- one example of this would be the story of the earthquake and the people coming out of their graves
- that story isn't in Mark, nor any external sources like Josephus
- if there really was a mass resurrection, where are these people today?
- so this passage in Matthew clearly shows that at least some parts of the New Testament could involve
- what about the contradiction between the women tell NO ONE and yet other people show up at the empty tomb
- the story about Jesus commissioning the early church to evangelize Gentiles was probably added
- there are also discrepancies in the timing of events and appearances
- why are there explicit statements of high Christology in John, but not in the earlier sources?

**William Lane Craig's first rebuttal**

Crossley's response to the burial: he accepts it

Crossley's response to the empty tomb: he thinks it was made up

- rabbinical stories are not comparable to the gospel accounts
- the rabbinical stories are just anecdotal creative story-telling
- the gospels are ancient biographies – the genre is completely different
- the rabbinic miracle stories are recorded much later than the gospels
- the rabbi's legal and moral ideas were written down right away
- the miracle stories were written down a century or two later
- in contrast, the miracle stories about Jesus are in the earliest sources, like Mark
- the rabbinical stories are intended as entertainment, not history
- the gospels are intended as biography
- just because there are some legendary/apocalyptic elements in Matthew, it doesn't undermine things like the crucfixion that are historically accurate

Crossley's response to the evidence for the empty tomb:

- no response to the burial
- the empty tomb cannot be made up, it was implied by Paul early on
- the women wouldn't have said nothing forever – they eventually talked after they arrived to where the disciples were
- no response to the lack of embellishment
- no response to the early Jewish polemic

Crossley's response to the appearances

- he agrees that the first followers of Jesus had experiences where they thought Jesus was still alive

Crossley's response to the early belief in the bodily resurrection:

- no response about how this belief in a resurrection could have emerged in the absence of background belief in the death of the Messiah and the resurrection of one man before the general resurrection of all the righteous at the end of the age

What about Crossley's hallucination theory?

- Crossley says that the followers of Jesus had visions, and they interpreted these visions against the story of the Maccabean martyrs who looked forward to their own resurrections
- but the hallucination hypothesis doesn't account for the empty tomb
- and the Maccabean martyrs were not expecting the resurrection of one man, and certainly not the Messiah – so that story doesn't provide the right background belief for a hallucination of a single resurrected person prior to the end of the age
- if the appearances were non-physical, the disciples would not have applied the word resurrection – it would just have been a vision
- the visions could easily be reconciled with the idea that somehow God was pleased with Jesus and that he had some glorified/vindicated non-corporeal existence – but not resurrection
- not only that, the hallucination hypothesis doesn't even explain the visions, because there were visions to groups, to skeptics and to enemies in several places

What about the argument that only Christians accept the resurrection?

- it's an ad hominem attack that avoids the arguments

**James Crossley's first rebuttal**

Regarding the burial:

- I could be persuaded of that the burial account is accurate

Regarding the non-expectation of a suffering/dying Messiah:

- Jesus thought he was going to die
- this thinking he was going to die overturned all previous Messianic expectations that the Messiah wouldn't suffer or die
- the early Jews could easily reconcile the idea of a suffering, dead man killed by the Romans with the power of the all-powerful Messiah who supposed to reign forever
- no actually bodily resurrection would have to happen to get them to continue to identify an executed corpse with the role of Messiah

Regarding the belief in the bodily resurrection:

- it would be natural for Jews, who believed in a general resurrection of all the rigtheous dead at the end of the age, to interpret a non-physical vision of one man after he died as a bodily resurrection, even though no Jew had ever considered the resurrection of one man before the general resurrection before Jesus

Regarding the testimony of the women:

- Just because women were not able to testify in courts of law (unless there were no male witnesses), the early church might still invent a story where the women are the first witnesses
- first, the disciples had fled the scene, so only the women were left
- and it would have been a good idea for the early church to invent women as the first witnesses – the fact that they could not testify in court makes them ideal witnesses and very persuasive
- also, it's a good idea to invent women as witnesses, because the Romans had a rule that said that they never killed women, so they wouldn't have killed these women – Romans only ever kill men
- in any case, the first witness to the empty tomb is angel, so as long as people could talk to the angel as being the first witness, that's the best story to invent

Regarding the consensus of Christian scholars:

- I am not saying that Craig's facts are wrong, just that appealing to consensus is not legitimate
- he has to appeal to the evidence, not the consensus

Regarding my naturalistic bias:

- I don't know or care if naturalism is true, let's look at the evidence

Regarding the genre of the gospels:

- the creative story-telling is common in all genres, it's not a genre in itself
- stuff about Roman emperors also has creative story-telling

Regarding the legendary nature of the empty tomb in Mark:

- First, Christians interpreted the visions as a bodily resurrection
- Second, they invented the story of the empty tomb to go with that interpretation
- Third, they died for their invention

**William Lane Craig's second rebuttal**

The burial:

- Bill's case doesn't need to know the specifics of the burial, only that the location was known
- the location is important because it supports the empty tomb
- to proclaim a resurrection, the tomb would have to be empty
- a tomb with a known location is easier to check

The empty tomb:

- creative story telling was common in Judaism: retelling OT stories (midrash), romances/novels, rabbinical anecdotes
- but the gospels are none of these genres – the gospels are ancient biographies
- Craig also gave five arguments as to why the tomb was empty
- the burial story supports the empty tomb
- there is multiple *independent* attestation, then it cannot be a creative fiction invented in Mark alone
- the witnesses were in Jerusalem, so they were in a position to know
- regarding the women, even though Jesus respected the women, their testimony would not be convincing to *others*, so why invent a story where they are the witnesses
- the male disciples did not flee the scene, for example, Peter was there to deny Jesus three times
- if the story is made up, who cares what the male disciples did, just invent them on the scene anyway
- the angel is not authoritative, because the angel cannot be questioned, but the women can be questioned
- there was no response on the lack of embellishment
- there was no response to the earliest Jewish response implying that the tomb was empty

The appearances:

- we agree on the appearances

The early belief in the resurrection:

- he says that Jesus predicted his own death

- yes, but that would only cause people to think that he was a martyr, not that he was the messiah – something else is needed for them to keep their believe that he was the Messiah even after he died, because the Messiah wasn't supposed to die
- and of course, there was no expectation of a single person rising from the dead before the general resurrection, and certainly not the Messiah

The consensus of scholars:

- Jewish scholars like Geza Vermes and Pinchas Lapide accept these minimal facts like the empty tomb, it's not just Christian scholars

Against Crossley's hallucination hypothesis:

- it doesn't explain the empty the tomb
- it doesn't explain the early belief in the resurrection
- hallucinations would only lead to the idea that God had exalted/glorified Jesus, not that he was bodily raised from the dead
- the hallucination theory cannot accommodate all of the different kinds of appearances; individual, group, skeptic, enemy, etc.

The pre-supposition of naturalism:

- if Crossley is not committed to naturalism, then he should be open to the minimal facts and to the best explanation of those facts
- the hallucination hypothesis has too many problems
- the resurrection hypothesis explains everything, and well

**James Crossley's second rebuttal**

Religious pluralism:

- well, there are lots of other religious books
- those other religious books have late sources, and are filled with legends and myths, and no eyewitness testimony
- so why should we trust 1 Cor 15 and the early source for Mark and the other early eyewitness testimony in the New Testament?
- if other religious books can be rejected for historical reasons, then surely the New Testament can be rejected for historical reasons

Genre:

- the genre of ancient biography *can* incorporate and commonly incorporates invented legendaryt story-telling
- this is common in Roman, Greek and Jewish literature and everyone accepts that

Empty tomb: multiple attestation

- ok, so maybe the empty tomb is multiply attested, but that just gets back to a belief, not to a fact
- multiple attestation is not the only criteria, and Craig needs to use the other criteria to make his case stronger

Empty tomb: invented

- if there is a belief in the resurrection caused by the visions, then the empty tomb would have to be invented
- why aren't there more reliable stories of people visiting the empty tomb in more sources?

Empty tomb: role of the women

- there are women who have an important role in the Bible, like Judith and Esther
- Mark's passage may have used women who then kept silent in order to explain why no one knew where the empty tomb was
- if the fleeing of the men is plausible to explain the women, then why not use that? why appeal to the supernatural?
- we should prefer any explanation that is naturalistic even if it is not as good as the supernatural explanation at explaining everything

Empty tomb: embellishment

- well there is an angel there, that's an embellishment
- anyway, when you say there is no embellishment, what are you comparing it to that makes you say that?

Appearances: anthropology

- I've read anthropology literature that has some cases where people have hallucinations as groups

Appearances: theology

- the hallucinations would not be interpreted against the background theological beliefs that ruled out the resurrection of one man before then general resurrection of all the righteous dead
- these hallucinations could have been so compelling that they made the earliest Christians, and skeptics like James, and enemies like the Pharisee Paul abandon all of their previous background beliefs, proclaim the new doctrine of a crucified and resurrected Messiah which no one had ever expected, and then gone on to die for that belief
- the hallucinations could have changed all of their theology and reversed all of their beliefs about the what the word resurrection meant

**William Lane Craig's conclusion**

Supernaturalism:

- None of the four facts are supernatural, they are natural, and ascertained by historians using normal historical methods
- the supernatural part only comes in after we decide on the facts when we are deciding which explanation is the best
- a tomb being found empty is not a miraculous fact

Genre:

- the gospels are not analagous to these rabbinical stories, the purpose and dating is different

Empty tomb:

- what multiple attestation shows is that it was not made-up by Mark
- and the argument was augmented with other criteria, like the criterion of embarrassment and the criterion of dissimilarity
- Judith and Esther are very rare exceptions, normally women were not viewed as reliable witnesses
- if the story was invented, whatever purpose the inventors had would have been better served by inventing male witnesses
- Craig grants that the angel may be an embellishment for the sake of argument, but there are no other embellishments

- the real embellishments occur in forged gnostic gospels in the second and third centuries, where there are theological motifs added to the bare fact of the empty tomb (e.g. – the talking cross in the Gospel of Peter)
- he had no response to the earliest jewish response which implied an empty tomb

Belief in the resurrection:

- there was no way for Jewish people to interpret an appearance as a bodily resurrection before the end of the world, they did not expect that
- they could have imagined exaltation, but not a bodily resurrection

**James Crossley's conclusion**

Supernatural explanation:

- as long as there is any other other possible naturalistic explanation, we should prefer that, no matter how unlikely

Creative stories:

- some of these creative stories appear within the lifetimes of the people connected to the events (none mentioned)

Embellishment:

- you should compare to earlier stories when looking for embellishments, not later
- and we don't have any earlier sources, so we just don't know the extent of the embellishment

Jewish response:

- they probably just heard about the empty tomb, and didn't check on it, then invented the stole-the-body explanation without ever checking to see if the tomb was empty or not

# Concealed-carry permit holder uses gun to save woman from attempted rape

**Wintery Knight** · 14 October 2014 · Archived copy · Original

Guns are for self-defense against criminals

From Michigan Live.

Excerpt:

> The mother of a woman who told police she was attacked inside an eastside home said she is thankful for neighbors who rushed to her daughter's aid, including a man who held the alleged attacker at gunpoint then chased him down and helped hold him until police arrived.
>
> "She got lucky," said the woman's mother, who is not being identified to protect the identity of the woman. "If it wasn't for all these people who cared enough to help her, and not turn the other cheek like so many people would, my daughter would be dead right now."
>
> Jessica Abels, who lives near the spot on Cronk Avenue near Illinois Avenue where the woman was found walking bloodied and naked, said she looked out the window when she heard a woman screaming for help around 2 p.m. Sept. 26.
>
> She saw the woman jump out the window of a nearby vacant home, she said.
>
> "Her eyes were all swollen and she had blood all over her and in her mouth," Abels said. "She was pretty messed up."
>
> That's when the community jumped into action.
>
> **Several area residents offered the 21-year-old woman clothing and comfort while a man who holds a valid concealed pistols license ordered the suspect out of the house at gunpoint, according to Flint police.**
>
> **The man took off running but was chased down by the gun-wielding citizen who, with the help of an undercover auto theft police officer, tackled and held him down until police arrived.**

It's a good thing when a law-abiding citizen is able to defend his neighbors from criminals. And no shots were fired. That's what is the most common outcome from a defensive handgun usage. Usually, the mere threat of being shot is enough to stop the crime, and deter the criminal. Guns are a way to stop violence. The very rare case where a gun is fired, it is usually a warning shot. There are degrees of deterrence and shooting *at* a criminal is the last resort. In this case, it was enough to just brandish the weapon.

# Statistics on whether atheists are more moral than religious people

**Wintery Knight** · 14 October 2014 · Archived copy · Original

Well, let's take a look at the numbers with this article by Arthur Brooks, published by the Hoover Institute at Stanford University.

Excerpt:

> How do religious and secular people vary in their charitable behavior? To answer this, I turn to data collected expressly to explore patterns in American civic life. The *Social Capital Community Benchmark Survey* (SCCBS) was undertaken in 2000 by researchers at universities throughout the United States and the Roper Center for Public Opinion Research. The data consist of nearly 30,000 observations drawn from 50 communities across the United States and ask individuals about their "civic behavior," including their giving and volunteering during the year preceding the survey.
>
> From these data, I have constructed two measures of religious participation. First, the group I refer to as "religious" are the respondents that report attending religious services every week or more often. This is 33 percent of the sample. Second, the group I call "secular" report attending religious services less than a few times per year or explicitly say they have no religion. These people are 26 percent of the sample (implying that those who practice their religion occasionally make up 41 percent of the sample). The SCCBS asked respondents whether and how much they gave and volunteered to "religious causes" or "non-religious charities" over the previous 12 months. Across the whole population, 81 percent gave, while 57 percent volunteered.
>
> **The differences in charity between secular and religious people are dramatic. Religious people are 25 percentage points more likely than secularists to donate money (91 percent to 66 percent) and 23 points more likely to volunteer time (67 percent to 44 percent). And, consistent with the findings of other writers, these data show that practicing a religion is more important than the actual religion itself in predicting charitable behavior. For example, among those who attend worship services regularly, 92 percent of Protestants give charitably, compared with 91 percent of Catholics, 91 percent of Jews, and 89 percent from other religions.**
>
> Socioeconomically, the religious and secular groups are similar in some ways and different in others. For example, there is little difference between the groups in income (both have average household incomes around $49,000) or education level (20 percent of each group holds a college degree). On the other hand, the secular group is disproportionately male (49 percent to 32 percent), unmarried (58 percent to 40 percent), and young (42 to 49 years old, on average). In addition, the SCCBS data show that religion and secularism break down on ideological lines: Religious people are 38 percentage points more likely to say they are conservative than to say they are liberal (57 percent to 19 percent). In contrast, secular people are 13 points more likely to say they are liberal than to say they are conservative (42 percent to 29 percent).
>
> It is possible, of course, that the charity differences between secular and religious people are due to these nonreligious socioeconomic differences. To investigate this possibility, I used a statistical procedure called probit regression to examine the role of religious practice in isolation from all other relevant demographic characteristics: political beliefs, income (and hence, indirectly, the tax incentives for giving), education level, gender, age, race, marital status, and area of residence. **The data show that if two people — one religious and the other secular — are identical in every other way, the secular person is 23 percentage points less likely to give than the religious person and 26 points less likely to volunteer.**

Honestly, I've always struggled to understand how giving to charity could be rational, on atheism. If you are only alive for 80 years, and the purpose of your life is to be happy, then the only reason I can think of to give anything away to anyone is because it makes you feel happier or more respected or something. Maybe because you like thinking of yourself as moral, or maybe because you want to be seen as moral, or maybe because you want a tax

deduction, or maybe something else. But if this is the only life you are ever going to have, and people are just collections of atoms, then why care about what anyone is doing? We're all just accidents anyway, on atheism, and we're going to die out eventually. There are no objective moral duties – we are *accidents* on the atheist view. One set of atoms giving some atoms to another set of atoms, and then in the end all the atoms get scattered: who cares?

Look:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

They may live better than that for whatever whim, but goodness is not rational within their worldview. And we want to be rational about morality, because as the numbers show, having a reason to be good *makes a big difference* in whether actually *do good*. As opposed to just claiming to be good. Anyone can say anything, but their rational beliefs are the rails on which they run their lives.

Here's something interesting I found about the leaders of the two political parties in this country.

Excerpt:

> In 2009, the Obamas gave 5.9 percent of their income to charity, about the same as they gave in 2006 and 2007. In the eight years before he became president, Obama gave an average of 3.5 percent of his income to charity, upping that to 6.5 percent in 2008.
>
> The Obamas' charitable giving is equally divided between "hope" and "change."
>
> George W. Bush gave away more than 10 percent of his income each year he was president, as he did before becoming president.
>
> Thus, in 2005, Obama gave about the same dollar amount to charity as President George Bush did, on an income of $1.7 million — more than twice as much as President Bush's $735,180. Again in 2006, Bush gave more to charity than Obama on an income one-third smaller than Obama's.
>
> In the decade before Joe Biden became vice president, the Bidens gave a total — all 10 years combined — of $3,690 to charity, or 0.2 percent of their income. They gave in a decade what most Americans in their tax bracket give in an average year, or about one row of hair plugs.
>
> Of course, even in Biden's stingiest years, he gave more to charity than Sen. John Kerry did in 1995, which was a big fat goose egg. Kerry did, however, spend half a million dollars on a 17th-century Dutch seascape painting that year, as Peter Schweizer reports in his 2008 book, "Makers and Takers."
>
> To be fair, 1995 was an off-year for Kerry's charitable giving. The year before, he gave $2,039 to charity, and the year before that a staggering $175.
>
> He also dropped a $5 bill in the Salvation Army pail and almost didn't ask for change.
>
> In 1998, Al Gore gave $353 to charity — about a day's take for a lemonade stand in his neighborhood. That was 10 percent of the national average for charitable giving by people in the $100,000-$200,000 income bracket. Gore was at the very top of that bracket, with an income of $197,729.
>
> When Sen. Ted Kennedy released his tax returns to run for president in the '70s, they showed that Kennedy gave a bare 1 percent of his income to charity — or, as Schweizer says, "about as much as Kennedy claimed as a write-off on his 50-foot sailing sloop Curragh." (Cash tips to bartenders and cocktail waitresses are not considered charitable donations.)
>
> The Democratic base gives to charity as their betters do. At the same income, a single mother on welfare is

> seven times less likely to give to charity than a working poor family that attends religious services.
>
> In 2006 and 2007, John McCain, who files separately from his rich wife, gave 27.3 percent and 28.6 percent of his income to charity.
>
> In 2005, Vice President Cheney gave 77 percent of his income to charity. He also shot a lawyer in the face, which I think should count for something.
>
> In a single year, Schweizer reports, Rush Limbaugh "gave $109,716 to 'various individuals in need of assistance mainly due to family illnesses,' $52,898 to 'children's case management organizations,' including 'various programs to benefit families in need,' $35,100 for 'Alzheimer's community care — day care for families in need,' and $40,951 for air conditioning units and heaters delivered to troops in Iraq."

The Democrats are the non-religious party, the Republicans are the religious party. The Democrats are also the talking party, as you can see, and the Republicans are the doing party.

By the way, Arthur Brooks eventually turned this research into a book called "Who Really Cares?", and it's a good response to atheists when they tell you that they can be moral without God. If it doesn't make sense to be moral, then atheists aren't going to do it. You can read more about that book here.

# Do Democrats act consistently with their own stated beliefs?

**Wintery Knight** · 14 October 2014 · Archived copy · Original

Do leftists always act as nicely as they tell us to act?

That's one case, but are leftists always hypocrites?

**Do As I Say Not As I Do**

I recently listened to the audio book version of Peter Schweizer's 2004 book "Do As I Say Not As I Do". In that book, he profiles a number of leftist public figures, and he discovers that leftists don't practice what they preach, because even they know that leftist ideas *don't actually work*. I really recommend the book, so let's take a closer look at it and you'll see why you should read it, too.

Here's a 32 minute 2011 lecture about the book:

And here's an interview with the author from FrontPage magazine.

Excerpt:

> **FrontPage:** Give us some of the best examples of the gulf between some liberals' social criticisms and the ingredients of their private lives. Give us some insights, for instance, into the likes of Noam Chomsky, Michael Moore, Cornel West, Hillary Clinton, Ted Kennedy and Barbra Streisand.
>
> **Schweizer:** Looking for liberal hypocrisy is, as they say in the military, a target-rich environment. Noam Chomsky, for example, has attacked wealthy Americans who set up trusts to avoid paying inheritance taxes. But this self-professed "radical socialist" has a tax attorney and did the very same thing. (When I asked him about this hypocrisy he said it was okay because he and has family have been working on behalf of suffering people all these years.)

> Michael Moore's hypocrisy is pathological. He has said numerous times that he doesn't own a single share of stock and that capitalism is not acceptable "on any level." And yet, I found that, according to tax returns filed with the IRS, he has owned shares in Halliburton, numerous oil companies, defense contractors and other multinationals through a tax shelter. When it comes he race he's also wildly hypocritical. He says that Americans who happen to live in largely white neighbhorhoods do so because they are "racists." But he lives in Central Lake, Michigan, which according to the U.S. Census has more than 2,500 residents and not a single black person in the entire town.
>
> Cornel West has numerous times condemned middle class blacks that abandon the "chocolate cities" for the "vanilla suburbs" but guess what, his flavour of choice is vanilla, too.
>
> Ted Kennedy likes to pose as the Robin Hood of the Senate, forcing wealthy Americans to pay their taxes to help the poor. But I discovered that Kennedys record of actually paying taxes is horrible. Tax the inheritance tax. He says that Americans should pay 49% to the IRS when they die in the name of "social justice." But according to public records, the Kennedys have almost completely avoided contributing to "social justice" by placing their assets in trusts that are located overseas. The Kennedys, over the past thirty years, have paid less than 1% in inheritance taxes on more than $300 million. Ted Kennedy, like Hillary Clinton and George Soros, loves higher taxes. On other people.

And:

> **FrontPage:** Why do you think people are drawn to leftist ideals and what kind of people are they? Self-contempt appears to be a common ingredient, no?

> **Schweizer:** Yes, self-contempt is a big part of it. Dietrich Bonhoeffer, the great German pastor who stood up to Hitler, wrote a book about "cheap grace." Liberals are guilty of cheap grace in the political sense. They feel guilty and their form of penance is embracing the destructive ideas of the progressive faith. But it's cheap grace because as I show it the book, they don't actually change the way they live. I think that the religious comparison makes sense because in many respects the modern day left represents a religious movement. They are motivated by a sense of sin, guilt, and the need for salvation and absolution in the political sense. Socialism offers salvation to them. Of course, they don't actually plan to live like socialists.

I would really recommend taking a look at this book. It's similar to Paul Johnson's "Intellectuals" if you've ever read that, but it's better.

# City of Houston demands that pastors hand over all sermons on homosexuality

**Wintery Knight** · 15 October 2014 · Archived copy · Original

Houston's openly gay mayor, Annise Parker

Fox News has the story and the backstory, too.

Excerpt:

> The city of Houston has issued subpoenas demanding a group of pastors turn over any sermons dealing with homosexuality, gender identity or Annise Parker, the city's first openly lesbian mayor. And those ministers who fail to comply could be held in contempt of court.
>
> "The city's subpoena of sermons and other pastoral communications is both needless and unprecedented," Alliance Defending Freedom attorney Christina Holcomb said in a statement. "The city council and its attorneys are engaging in an inquisition designed to stifle any critique of its actions."
>
> ADF, a nationally-known law firm specializing in religious liberty cases, is representing five Houston pastors. They filed a motion in Harris County court to stop the subpoenas arguing they are "overbroad, unduly burdensome, harassing, and vexatious."
>
> "Political and social commentary is not a crime," Holcomb said. "It is protected by the First Amendment."
>
> The subpoenas are just the latest twist in an ongoing saga over the Houston's new non-discrimination ordinance. The law, among other things, would allow men to use the ladies room and vice versa. The city council approved the law in June.
>
> The Houston Chronicle reported opponents of the ordinance launched a petition drive that generated more than 50,000 signatures – far more than the 17,269 needed to put a referendum on the ballot.
>
> However, the city threw out the petition in August over alleged irregularities.
>
> After opponents of the bathroom bill filed a lawsuit the city's attorneys responded by issuing the subpoenas against the pastors.
>
> The pastors were not part of the lawsuit. However, they were part of a coalition of some 400 Houston-area churches that opposed the ordinance. The churches represent a number of faith groups – from Southern Baptist to non-denominational.
>
> "City council members are supposed to be public servants, not 'Big Brother' overlords who will tolerate no

> dissent or challenge," said ADF attorney Erik Stanley. "This is designed to intimidate pastors."
>
> Mayor Parker will not explain why she wants to inspect the sermons.

Why is it that people on the secular left are so comfortable with bringing in the government to threaten, intimidate and coerce those who disagree with them? Could it be that they know that what they are doing is morally wrong, and have to force others to celebrate it so their guilty consciences will be appeased? After all, you don't see chaste people marching around in pride parades, or demanding government force people to celebrate chastity. We know we are right, and opposition to chastity doesn't bother us. Our consciences are clean.

Well, the ADF is on this Houston case, and that's a good thing. Seems like anywhere Christians are under attack, the ADF is there to defend us. If you want to keep up with this story, I recommend subscribing to the Alliance Defending Freedom podcast and the Family Research Council Daily and Weekly podcasts.

# Obamacare website won't reveal plan costs until after midterm elections

**Wintery Knight** · 15 October 2014 · Archived copy · Original

Last year, they revealed all the plans on October 1st. What could cause them to delay the prices this year for over a month?

The Washington Times explains.

Excerpt:

> Those planning to purchase health insurance on the Obamacare exchange will soon find out how much rates have increased — after the Nov. 4 election.
>
> Enrollment on the Healthcare.gov website begins Nov. 15, or 11 days after the midterm vote, and critics who worry about rising premium hikes in 2015 say that's no coincidence. Last year's inaugural enrollment period on the health-care exchange began Oct. 1.
>
> "This is more than just a glitch," said Tim Phillips, president of free-market Americans for Prosperity, in a Friday statement. "The administration's decision to withhold the costs of this law until after Election Day is just more proof that Obamacare is a bad deal for Americans."
>
> […]The Iowa insurance commissioner approved last week premium increases for three insurance carriers: Wellmark Blue Cross and Blue Shield, CoOpportunity Health and Coventry Health. Two of those insurers will implement double-digit hikes ranging from 11.9 to 19 percent, the Des Moines Register reports.
>
> […]The issue is also resonating in the Louisiana Senate race, where Democratic Sen. Mary Landrieu is seeking re-election against Republican Rep. Bill Cassidy. Documents filed with the Louisiana Department of Insurance show some insurers are anticipating double-digit rate hikes, according to the New Orleans Times-Picayune.
>
> Mr. Cassidy, who's a doctor, issued a statement Thursday calling the higher premiums "another hurdle for families and businesses already struggling under the demands of Obamacare."
>
> "Premiums have gone up by 53 percent for the average Louisiana policyholder and many of these policies will again see double-digit increases," Mr. Cassidy said. "It's unfair to Louisianans who have to balance their budgets and their businesses."

I can understand why the Democrats would want to keep the exchange rates private before the election. They are counting on hoodwinking the American public again – vote first, find out what's in the bill later.

# Are “budget cuts” to blame for the CDC’s inept handling of Ebola?

**Wintery Knight** · 15 October 2014 · Archived copy · Original

Investors Business Daily tells the truth.

Excerpt:

> There haven’t been any real cuts to those budgets at all. At least not in the sense that any American household would recognize.
>
> The CDC’s budget today is 25% bigger than it was in 2008 and 188% bigger than in 2000. The NIH budget has been flat for the past few years, but at a level that’s more than double what it was 14 years ago.
>
> Plus, spending at both of these agencies has actually been higher than President Obama himself proposed (see chart). The 2014 NIH budget, in fact, is almost $1 billion bigger than Obama sought in his budget plan, released in early 2010.
>
> True, the heads of these agencies are decrying cuts. But that’s what government officials always do, even as their budgets continue to grow. Besides, the CDC and NIH are desperate to point the finger of blame somewhere other than their own incompetence.
>
> Even if there has been some cutting here and there at these agencies, it’s not as if there isn’t plenty of fat to trim.
>
> If the NIH was really so concerned about developing an Ebola vaccine, for example, it could have directed more grant money to that effort, rather than wasting it researching such things as diseases among male sex workers in Peru ($400,000), why chimps throw feces ($600,000) and sexual attraction among fruit flies (nearly $1 million).
>
> The CDC isn’t much better at husbanding its resources. A few years ago, it dumped $106 million into a swanky visitors’ center in Atlanta, even though it already had one. It bought $10 million worth of furniture for its lavish new headquarters and spent $1.7 million to advise Hollywood on medical plots.
>
> Yes, the federal government has blown it on Ebola. But that’s not because the relevant agencies have too little money to spend. It’s the result of unfocused missions, bureaucratic bloat and a shameful lack of accountability.

I think that this Ebola crisis is an excellent reminder to us why we should not trust government to be accountable to people. We were told that the government was going to handle this, and there was nothing to worry about. But now we know that there has been mistake after mistake. We were told that Ebola could not spread, but now two nurses have it. It’s another case of the government saying one thing, but the opposite is actually true. If we’re going to have government, we should at least have competent government, and that certainly is not a Democrat government.

# Second nurse with Ebola called CDC about her fever, was allowed to fly

**Wintery Knight** · 16 October 2014 · Archived copy · Original

From CBS News.

Excerpt:

> In the case of Amber Vinson, the Dallas nurse who flew commercially as she was becoming ill with Ebola, one health official said "somebody dropped the ball."
>
> The Centers for Disease Control and Prevention said that Vinson called the agency several times before flying, saying that she had a fever with a temperature of 99.5 degrees. But because her fever wasn't 100.4 degrees or higher, she didn't officially fall into the group of "high risk" and was allowed to fly.
>
> Officials in the U.S. have been trying to calm fears over the Ebola crisis, but time and again events have overtaken their assurances.
>
> In August, before the first U.S. infection, CDC Director Dr. Tom Frieden said: "We're confident that we have the facilities here to isolate patients, not only at the highly advanced ones like the one at Emory, but really at virtually every major hospital in the U.S."
>
> […]And there was reassurance from the White House.
>
> "Every hospital in this county has the capability to isolate a patient, take the measures, put them in place to ensure that any suspected case is immediately isolated and the follow-up steps that have been mentioned are immediately taken," Lisa Monaco, a homeland security and counterterrorism adviser to President Obama, said Oct. 3.
>
> But health care workers weren't so sure.
>
> "We want to make sure that we have the correct equipment – the protective equipment – to protect both our patients and ourselves," Katy Roemer, who has worked as a nurse in California for 20 years, told CBS News correspondent John Blackstone last week.
>
> Blackstone asked her whether hazmat suits were available to her.
>
> "Not that I know of," Roemer said.
>
> Duncan died Oct. 8. Four days later, nurse Nina Pham got sick. Federal officials were now discovering what health workers had warned about.
>
> […]The director of the CDC, who in August said he was "confident," said this Tuesday:
>
> "We could've sent a more robust hospital infection control team and been more hands-on with the hospital from day one," Frieden said. "… I wish we had put a team like this on the ground the day the patient – the first patient – was diagnosed. That might have prevented this infection."

We have nothing to worry about, big government is in control. Don't you doubt their ability to handle this. You can keep your doctor. You can keep your health plan. Health care premiums will go down. Nobody in the US will ever be infected with Ebola. Now that Ebola is here, it will not spread to anyone else. And if big government fails to protect you, the solution is for them to take more of your money.

Why should we believe that the same big government leftists who covered up Fast and Furious, who blamed Benghazi on a Youtube video, who lied to us about what pulling out of Iraq would cause, who covered up the IRS targeting of conservatives, who performed clandestine surveillance of journalists, the Bergdahl terrorist-leaders-for-one-traitor swap, ETC., can be counted on to take ANY threat seriously? This is not the private sector we are dealing with – this is the government. The people who lead it win popularity contests. They couldn't solve their way

out of a wet paper bag. Whenever anything goes wrong, they cover it up – and ask for more money, so it “won’t happen again”.

# Results of the Bergdahl investigation will be covered up until after midterm elections

**Wintery Knight** · 16 October 2014 · Archived copy · Original

Investors Business Daily reports.

Excerpt:

> The Army has completed its investigation into Sgt. Bowe Bergdahl's abandonment of his Afghan post but will not release the report until after the midterm elections lest it embarrass the Obama administration.
>
> […]Bergdahl walked away from his army post during wartime in 2009 and was held in semi-captivity for five years until President Obama arranged a trade of five top Taliban commanders held at Guantanamo for Bergdahl's release, initially on the grounds that Bergdahl's physical condition was so grave that immediate action was necessary.
>
> […]As the San Antonio Express-News reported, the Army on Oct. 9 announced the completion of the investigation. The report, by Brig. Gen. Kenneth Dahl, however, will not be released, according to Army spokesman Wayne Hall, until the end of a review process that is likely to be conveniently lengthy.
>
> […]This review process is eerily reminiscent of that which took place regarding the Benghazi talking points. That process was designed to make the administration look good and less culpable. It, too, took place shortly before an election.
>
> Certainly, a report that might say Bergdahl was in fact a deserter would not help an administration amid an election battle and awash in scandals and failures from ObamaCare to the IRS and now the bungling of the Ebola crisis.
>
> We note how Obama tried to mute the Taliban trade by welcoming Bergdahl's parents to the White House, where Bergdahl's father uttered words in Arabic.
>
> The White House sent national security adviser Susan Rice, of Benghazi-video-lie fame, to the talk shows to say Bergdahl served with "honor and distinction."
>
> Could it be that the report says otherwise — and that the trade of five Taliban commanders, the functional equivalents of four-star generals, was just a politically motivated mistake?
>
> Every one of the men who served with Bergdahl or tried to find him and who have spoken out publicly has said he was clearly a deserter.
>
> Indeed, the uncontestable fact is that Bergdahl walked away from his post in a time of war, leaving his weapon and gear behind. He was not out for a walk to relieve stress or clear his head.
>
> "Bowe Bergdahl deserted during a time of war, and his fellow Americans lost their lives searching for him," former Sgt. Matt Vierkant told CNN. At least six soldiers died in operations looking for Bergdahl.

We lost 6 soldiers looking for this deserter/traitor and traded 5 Taliban commanders for his release. The report should recommend a court martial for desertion for Bergdahl. That's what all the evidence we have about him would suggest. And that would be a disaster for the Democrats in these midterm elections. That's why it has to be covered up, just like the details of the new Obamacare exchange health plans – it all has to wait until after people have voted.

# Are atheists paying attention to the weightiest demands of the moral law?

**Wintery Knight** · 16 October 2014 · Archived copy · Original

J. Warner Wallace looks at what Jesus says the most important commandment is, and then asks whether atheists can be justified morally if Jesus is right.

He writes:

> I was an atheist for the first thirty-five years of my life. While I was a committed (and often aggressive) non-believer, most people who knew me would probably have described me as a "nice guy". My behavior wasn't all that different than many of my Christian friends. I worked with many other atheist police officers. We were often suspicious of the Christians in our midst and the people we arrested who claimed to be Christians. Even as atheists we were familiar with Jesus' directive to "love your neighbor as yourself." My partner, Tim, used to say, "If there is a good God and a good Heaven, I think I will be there when it's all over. I'm a good person. I try to 'do the right thing'. *I'm* not a bad guy; I put bad people in jail. So I'm not worried about it." Tim held a "works based" moral worldview and he was sure his good deeds would earn him a spot in Heaven if he was wrong about the existence of God. But Tim (and I) were unfamiliar with Jesus' teaching in its full context, and now, years later as a Christian, I've come to understand why the first part of the "Greatest Command" is even more important than the second.
>
> When approached by a skeptic, Jesus affirmed the greatest commandments of God in the following way:
>
> ***Matthew 22:35-40***
> *One of them, a lawyer, asked Him a question, testing Him, "Teacher, which is the great commandment in the Law?" And He said to him, "'You shall love the Lord your God with all your heart, and with all your soul, and with all your mind.' This is the great and foremost commandment. The second is like it, 'You shall love your neighbor as yourself.' On these two commandments depend the whole Law and the Prophets."*
>
> Most unbelievers recognize the value of the second half of this command ("You shall love your neighbor as yourself") but deny the value of the first part ("'You shall love the Lord your God with all your heart, and with all your soul, and with all your mind.") There's a reason, however, why Jesus listed these two commands in this specific order. The first command (loving God) is the "great and foremost commandment" because it is *required* to achieve the second command (loving others). You can't *truly* do the right thing unless you understand the relationship between these two commands:

Read the rest at Cold Case Christianity.

I've made the same point here many times, but I have never been an atheist and I don't make the point in the same winsome way that Wallace does.

I think his post is worth sending along to any atheists you may know who think themselves justified. I think it is a mistake for people to derive their own version of morality based on the time and place where they are, and then think that picking and choosing the parts they like will justify them with God. Remember, a recent survey of atheists found that 97% of them favor abortion rights. I think this is consistent with the atheist view that there are no human rights, including a right to life. Moreover, in my experience, I have found that most atheists have no problem with the government stomping all over the consciences of Christians when it comes to things like gay rights. It's important to show them that there is a standard independent of their personal opinions, justifications and rationalizations.

# Why are progressives so blithe about pressuring Christians to act like non-Christians?

**Wintery Knight** · 17 October 2014 · Archived copy · Original

A great post from Dr. George Yancey explains the worldview behind so many things we hear in the news these days. Here he is responding to the story about the Houston mayor who subpoena'd all the sermons from the Christian pastors in order to chill dissent to her LGBT agenda.

He writes:

> I am a sociologist studying anti-Christian attitudes in our society. This brings me to my take that I am qualified to talk about – whether this legal strategy is tied to Christianophobia. There are reasons to believe that this attempt to obtain sermons and other information is part of a larger strategy to stigmatize Christians. Thus, I do not discount the possibility that Christianophobia plays some role in these actions.
>
> However, it is work of another book I wrote a couple of years ago which I think is more relevant. That book is named What Motivates Cultural Progressives. In that book, I documented that cultural progressive activists tend to consider their political opponents to be irrational, religious individuals trying to move our culture backwards. They have little respect for their political opponents. They often express concerns about the ability of religious individuals to have influence on our political system. With this sort of mindset, it is easy to perceive a motivation from Houston officials, if they are cultural progressive activists, to gather sermons and other material in an effort to "expose" the irrationality and intolerance of their political opponents. Whether the documents are relevant to the current court case may be less important to these officials than stopping the efforts of those who would take our culture backwards.
>
> My suggestion is that it is not as much a fear of Christians as it is the fear of the socially conservative culture linked to Christians driving these subpoenas. The lack of respect cultural progressive activists have for their political opponents allow them to rationalize using the legal system to "dig up dirt" on them. In my sample, I found several individuals who did not believe that religious individuals had the right to fully participate in our political progress. A good number of respondents also articulated a belief that religious individuals are brainwashed and cultural conservative political movements have developed due to the manipulation of ignorant Christians by evil leaders. Thus the political claims in this movement are not legitimate claims by people seeking to serve their own social and material interests, but are the result of manipulation whereby they have been persuaded to vote against their own economic and social interest. When we recognize that many cultural progressive activists do not see cultural conservatives as legitimate political players in our governmental system, then the overreaching request make a great deal of sense.

So how should we respond to this?

Well, the answer is that Christians need to take seriously the need to speak and act *intelligently* when dealing with non-Christians. We need to study apologetics, yes. But we also need to be good at knowing other things – practical things, academic things. We should be able to earn a living and share with others. We should be able to demonstrate sobriety, discipline and chastity. We should be able to explain rationally and evidentially all the moral beliefs that non-Christians find the most objectionable. We should have an interest in current events, economics, law, politics and foreign policy. Etc. We have to be able to out-think our rivals, and win their respect the same way that Joseph won the respect of Pharaoh, and Daniel won the respect of Nebuchadnezzar.

I think it's interesting that Dr. George Yancey himself is an excellent example of what I am talking about. He is a full professor at the University of North Texas, and has published books with Oxford University Press. If people want to know if it is possible to be a Christian and be intelligent, this is exactly who we need to show them – and who we need to be. We should be working on this! And raising our kids to counteract these perceptions that the

secular leftists have of us. Often, the secular leftists are raised in Christian homes, see the anti-intellectualism in popular Christianity firsthand, then head off to university to train as a persecutor. We have to shape up and stop this from happening. We are train our own executioners, because of our laziness, ignorance and cowardice.

# Friday night detectives: another two episodes of Sherlock Holmes

**Wintery Knight** · 17 October 2014 · Archived copy · Original

Jeremy Brett is the best Sherlock Holmes *ever*.

Here are 2 episodes of “The Adventures of Sherlock Holmes”.

The Man With The Twisted Lip:

The Copper Beeches:

I’m trying to post some of the lessor known ones now, but these are both rated 8 out of 10 on IMDB.

Happy Friday!

# Are Christians responsible for making plans and making good decisions?

**Wintery Knight** · 18 October 2014 · Archived copy · Original

Here's a wonderful post on decision making and the will of God posted on Neil's blog. Neil links to another post where someone is trying to figure out what God wants him to do.

Excerpt:

> **Really short version:** Aside from direct and clear personal revelation from God, you don't have access to his sovereign will when making decisions. Therefore you must look at other factors. **If it isn't moral, don't do it. If it is moral but not wise, don't do it. If it is moral and wise, then use your personal preferences.**
>
> Using this model you can end up with a wise and biblical decision, but you have avoided the traps of the "God told me to ____" routine. People who run around saying that God told them this and that convey a super-spirituality that can leave less mature believers wondering if they really have a relationship with God (i.e., "God doesn't tell me every little thing to do, so maybe I don't really know him.").

He has a helpful picture posted as well:

This is actually a very important topic for me, because I like making plans and making good decisions. I like being the quarterback or squad leader of my own life. I like to pick objectives and then make plans to achieve them. (Nothing too exotic, just simple stuff like saving money or reading more books)

Actually, I really oppose the idea that God has a magical fairy tale will for each person that will make them happy and fulfilled. For me, life isn't like that. I don't expect God to lead me along like a child at a scavenger hunt. I expect to survey the battlefield where I am and then *do something* to make a difference. There are lots of things you can do that will please God. Should you focus on your career and sponsor apologetics conferences? Or should you use your spare time preparing Sunday school lessons? *There are lots of good things you could do to please God*. Your job is to pick the one that will be the most effective. It doesn't matter if it makes you happy, it only matters if it's effective and if you are good at it.

**Who is Rifleman Dodd?**

A while back, I was busily working my way through the U.S. Marine Corps Official Reading List, and I came across a book by C.S. Forester called *Rifleman Dodd*, or alternatively titled *Death to the French*. It's a work of historical fiction that takes place during the Napoleonic wars. The story is about a British marksman named Dodd, who is cut off from his own lines during a withdrawal maneuver. He is subsequently left to fend for himself behind enemy lines. An ordinary man might be full of despair and forget about his mission entirely. But Dodd is no ordinary man. Not only does he find a way to survive by finding food to eat, water to drink and places to sleep, but he also tries to remember his orders and to think about what he can do to advance the cause of his General, the Duke of Wellington.

Here's an excerpt from a gritty book review:

> It's about a green-coated British infantry rifleman in the Napoleonic Wars, an age when rifles were a novelty and most of the army was red-coated and carried muskets. Private Matthew Dodd gets separated from his regiment during a retreat and finds himself stranded behind enemy (French) lines in Portugal. With the occasional aid of some natives, but mostly on his own, he harasses the French with his rifle and tries to prevent them from building a bridge across the Tagus River. It's a remarkable tale of survival and solitary achievement, of a rank-and-file soldier who lives by his wits and slowly learns to make plans without orders, and shows leadership qualities and a knowledge of warfare.

I think we're in the same situation as Dodd.

There is no point in us looking for breadcrumb trails to happiness at this point. That's not the point of Christianity. The point of Christianity is friendship with God, imitation of Christ, honoring moral obligations, self-sacrificial love for your neighbor (and even your enemies!), and dedication to the truth – whether anyone else likes you or not. It's not supposed to make you happy, and it's not necessarily going to be a normal life like everyone else has. Things may not work out the way you'd like them to.

We seem to be making such a big deal about compassion and forgiveness in the Christian life these days – such a big emphasis on our feelings. Almost like we have forgotten that we have obligations to our friend – and his objectives. A relationship doesn't mean that one person completely disregards the character and goals of the other person and then is automatically granted forgiveness whenever they want it. That's not a friendship – that's using someone else for your own ends. Maybe it's time to remember what this is all about.

# Dr. Michael Egnor discusses the logical implications of atheism

**Wintery Knight** · 18 October 2014 · Archived copy · Original

There are four podcasts in this series of talks between Casey Luskin and Michael Egnor.

About Dr. Egnor:

> *Dr. Michael Egnor is a Professor in the Department of Neurosurgery at The State University of New York at Stony Brook, where he specializes in Pediatric Neuroscience. An award-winning neurosurgeon and a widely-published researcher, Dr. Egnor writes regularly at* Evolution News & Views.

Podcast one details:

> On this episode of **ID the Future**, brain surgeon and ID blogger Michael Egnor talks with CSC Research Coordinator Casey Luskin about his internet debates with Jerry Coyne and the trends and dynamics he sees in the ID/evolution blogosphere. Dr. Egnor also speaks briefly on the evidence he sees for intelligent design in the brain.

The first MP3 file is here.

Podcast two details:

> On this episode of **ID the Future**, Dr. Michael Egnor and Casey Luskin continue their conversation, speaking on Dr. Egnor's recent experience in an online debate on free will with evolutionary biologist Dr. Jerry Coyne. Listen in as Dr. Egnor explains why the argument against free will is self-refuting and shows how determinism as a theory in physics is dead.

The second MP3 file is here.

Podcast three details:

> On this episode of **ID the Future**, hear more of Dr. Michael Egnor and Casey Luskin's discussion on free will. If there is no free will, and humans are merely following our chemical instructions, than how can we recognize evil and good? Tune in as Dr. Egnor explores the societal and political consequences of denying free will.

The third MP3 file is here.

Podcast four details:

> On this episode of **ID the Future**, Dr. Michael Egnor is on the show again to talk more about his recent debates with atheist evolutionary biologist Dr. Jerry Coyne. Listen in as Egnor and Research Coordinator Casey Luskin discuss recent efforts that Jerry Coyne has made against open discourse on intelligent design and evolution, looking at two recent incidents of censorship at Ball State University and the LA County Museum of Natural History.

The fourth MP3 file is here.

# Physicist Michael Strauss discusses Christianity and science at Stanford University

**Wintery Knight** · 18 October 2014 · Archived copy · Original

This is one of my favorite lectures, by one of the people I admire the most for his scientific work and robust, evangelical Christian faith.

**About Michael Strauss:**

His full biography is here. (I removed his links from my excerpt text below)

Excerpt:

> I had an interest in science and theology, so in 1977 I chose to go to Biola University where I could study both subjects in detail. I thoroughly enjoyed college and participated in intramural sports, was elected to student government, served as a resident assistant, competed in forensics, and studied a lot. As I neared college graduation my dual interest continued so I applied to seminary and to graduate school. After graduating *summa cum laude* from Biola, I decided to pursue a graduate degree in physics at UCLA.
>
> During my first few years of graduate school, I developed an increased interest in quantum mechanics and subatomic physics and decided to do research in a field that dealt with these subjects. I joined a High Energy Physics experimental group doing research at the Stanford Linear Accelerator Center (SLAC) and moved to the San Francisco Bay Area to actively participate in research at SLAC. I graduated in 1988 with my Ph.D in High Energy Physics (a.k.a. Elementary Particle Physics). If you would like to know more about High Energy Physics, the Particle Data Group at Lawrence Berkeley Laboratory has a very nice interactive adventure that teaches you all about the subject. My research advisor was professor Charles Buchanan and my disertation was titled "A Study of Lambda Polarization and Phi Spin Alignment in Electron-Positron Annihilation at 29 GeV as a Probe of Color Field Behavior."
>
> After graduation, I accepted a post-doctoral research position with the University of Massachusetts at Amherst. I continued to do research at SLAC where I joined the SLD experiment. My research interests centered on the SLD silicon pixel vertex detector. I wrote most of the offline software for this device, and did physics analysis which used the vertex detector, including tagging *b* quark events for flavor specific QCD (Quantum Chromodynamics) analysis. In the seven years I was employed by UMASS, I only spent 3 days on the Amherst campus. The rest of the time was spent in California.
>
> […]In August 1995, I accepted a job as an Assistant Professor of Physics at the University of Oklahoma (OU) in Norman, Oklahoma. The University of Oklahoma has a vibrant high energy physics research group involved in experiments at the Fermi National Accelerator Center (Fermilab), and CERN. I joined the DØ experiment at Fermilab where I continue to do research in elementary particle physics. As a member of the DØ collaboration I have made contributions to the testing of silicon sensors for the upgraded vertex detector, to the track finding algorithms, to a measurement of the photon production cross section which probes the gluon content of protons, and to other QCD measurements. I am currently studying properties of *B* mesons that contain a *b*-quark, the production cross section of jets coming from quarks and gluons, and other QCD analyses. At CERN, I am a collaborator on the ATLAS detector.
>
> I received tenure in 2001 and was promoted to the rank of Professor in the summer of 2010. Most of the time at OU I have taught introductory physics classes to physics majors, engineers, and life science majors. In these classes I have used a number of interactive techniques to facilitate student participation and learning. I have been privileged to win a few awards for my teaching. In 1999, the Associated Students selected me as the Outstanding Professor in the College of Arts and Science, and in 2000 I was awarded the BP AMOCO Foundation Good Teaching Award. In 2002, I was given the Regents Award for Superior Teaching. I received the Carlisle Mabrey and Lurine Mabrey Presidential Professorship in 2006 which is given to "faculty members

> who excel in all their professional activities and who relate those activities to the students they teach and mentor."

He seems to have done a fine job of integrating his faith with a solid career in physics research. It would be nice if we were churning out more like him, but that would require the church to get serious about the integration between science and faith.

**The lecture:**

Dr. Strauss delivered this lecture at Stanford University in 1999. It is fairly easy to understand, and it even includes useful dating tips, one of which I was able to try out recently at IHOP, and it worked.

Here is a clip:

The full video can be watched on Vimeo:

UPDATE: I pulled the MP3 audio from the lecture in case anyone wants just the audio.

**Summary:**

What does science tell us about God?
– the discoveries of Copernicus made humans less significant in the universe
– the discoveries of Darwin should that humans are an accident
– but this all pre-modern science
– what do the latest findings of science say about God?

Evidence #1: the origin of the universe
– the steady state model supports atheism, but was disproved by the latest discoveries
– the oscillating model supports atheism, but was disproved by the latest discoveries
– the big bang model supports theism, and it is supported by multiple recent discoveries
– the quantum gravity model supports atheism, but it pure theory and has never been tested or confirmed by experiment and observation

Evidence #2: the fine-tuning of physical constants for life
– there are over 100 examples of constants that must be selected within a narrow range in order for the universe to support the minimal requirements for life
– example: mass density
– example: strong nuclear force (what he studies)
– example: carbon formation

Evidence #3: the fine-tuning of our planet for habitability
– the type of galaxy and our location in it
– our solar system and our star
– our planet
– our moon

It's a good lecture explaining basic arguments for a cosmic Creator and Designer. If you add the origin of life and the Cambrian explosion (Stephen C. Meyer's arguments), then you will be solid on science apologetics. That's everything a rank-and-file Christian needs.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life

- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument

# Coeur d'Alene city officials to pastors: perform gay marriages or face jail, fines

**Wintery Knight** · 19 October 2014 · Archived copy · Original

From the Alliance Defending Freedom web site.

Excerpt:

> Alliance Defending Freedom attorneys filed a federal lawsuit and a motion for a temporary restraining order Friday to stop officials in Coeur d'Alene, Idaho, from forcing two ordained Christian ministers to perform wedding ceremonies for same-sex couples.
>
> City officials told Donald Knapp that he and his wife Evelyn, both ordained ministers who run Hitching Post Wedding Chapel, are required to perform such ceremonies **or face months in jail and/or thousands of dollars in fines**. The city claims its "non-discrimination" ordinance requires the Knapps to perform same-sex wedding ceremonies now that the courts have overridden Idaho's voter-approved constitutional amendment that affirmed marriage as the union of a man and a woman.
>
> "The government should not force ordained ministers to act contrary to their faith under threat of jail time and criminal fines," said ADF Senior Legal Counsel Jeremy Tedesco. "Many have denied that pastors would ever be forced to perform ceremonies that are completely at odds with their faith, but that's what is happening here – and it's happened this quickly. The city is on seriously flawed legal ground, and our lawsuit intends to ensure that this couple's freedom to adhere to their own faith as pastors is protected just as the First Amendment intended."
>
> The Hitching Post Wedding Chapel is across the street from the Kootenai County Clerk's office, which issues marriage licenses. The Knapps, both in their 60s and who themselves have been married for 47 years, began operating the wedding chapel in 1989 as a ministry. They perform religious wedding ceremonies, which include references to God, the invocation of God's blessing on the union, brief remarks drawn from the Bible designed to encourage the couple and help them to have a successful marriage, and more. They also provide each couple they marry with a CD that includes two sermons about marriage, and they recommend numerous Christian books on the subject. The Knapps charge a small fee for their services.
>
> Coeur d'Alene officials told the Knapps privately and also publicly stated that the couple would violate the city's public accommodations statute once same-sex marriage became legal in Idaho if they declined to perform a same-sex ceremony at their chapel. **On Friday, the Knapps respectfully declined such a ceremony and now face up to 180 days in jail and up to $1,000 in fines for each day they decline to perform that ceremony.**

This is freaking IDAHO for God's sake. Thankfully the ADF is there to fight the case.

I guess part of me is surprised that in a country where so many people identify as Christians and attend church that such a thing would be possible.

First off, I credit Bible-centric pastors for failing to explain the issues of homosexuality and gay marriage in a way that their parishioners could make sense of it logically and evidentially. We never did that, so that's why Christians had nothing to say to non-Christians when the issue came up OUTSIDE the church. We never learned from church leaders or our parents how to explain the problems with gay rights (Grindr app promiscuity, domestic violence, relationship instability, HIV spread, loss of free speech, loss of religious liberty, harm to children who are separated from their biological parents, etc.). All we learned to say at home and at church was "the Bible says". That's what 20 years of church prepares you to do. That's what being raised in a Christian home prepares you to do.

"The Bible says" works great when you are a child in the Christian subculture, then you hit the university and it just

dies. And pastors and parents know this, they just *don't care*, because Christianity was like Santa Claus to them – it was about getting you to behave nicely as a child. It was never to make you kick ass like a William Lane Craig. It was never to make you into Stephen C. Meyer or an ADF attorney. It was just to make your parents' life easier, as much as they try to cover it up with pious talk excusing them from their failed parenting effort.

Secondly, I think that the type of Christianity taught by parents and pastors is also to blame. They keep telling us that Christianity is about God helping you to feel good, and be nice to other people, so they like you. Everything is about feeling good here and now. Feelings. Compassion. Non-judgmentalism. Irrationality. Nothing is about truth, nothing is about facts, nothing is about conflict. We have witnessed the feminization of the church, and as a result, nobody has any response to the rhetoric of the gay rights people. If Christianity is about being nice, being liked and feeling good, then we have no resistance to the gay rights movement's rhetoric which urges us to "be nice" so we can be liked, and feel good.

Declaring that morally wrong practices are actually morally good is only a virtue to those who want to *be liked above all*.

# Does the church do a good job of equipping Christians to talk to non-Christians?

**Wintery Knight** · 19 October 2014 · Archived copy · Original

Most churches these days are not doing a good job of helping Christians to understand how to explain and defend Christianity to non-Christians. They tend to be focused on providing comfort and entertainment, which is why so much of the focus is on compassion, singing and being "nice". Logical arguments are out. Scientific evidence is out. Historical evidence is out. There is a terrible fear of disagreeing with anyone. Everyone is focused on being "nice" and being "liked" by non-Christians. Instead of teaching people what Christians think is true, we teach people how to recycle cans and how to color pictures of Jesus.

Church is typically a mishmash of mysticism, piety and emotivism. Pastors in particular are often opposed to connecting anything the Bible says to evidence outside the Bible, whether it be research or experiments or philosophical arguments. Even the very best preaching pastors just assert things and then expect people to accept it because "the Bible says so". It's almost as if it dirties up Christianity to test it against what we know from other disciplines like cosmology and ancient history. People who are regarded as Christian leaders seem to never get around to explaining why anyone should accept the Bible as true.Accepting the Bible is just left up to your feelings, or maybe whether you think the pastor is "nice". That's it.

Now how well does this simple, blind-faith be-nice approach work on a real non-Christian?

Mary sent me this article from the New Statesman that explains how it works.

Excerpt:

> It's 7.30pm on a Tuesday evening and I'm at a small church in East London. A man called Adam* hands me a name label, pours me a plastic cup of squash and says dinner won't be long. I pull up a seat and introduce myself to ten strangers. It's all rather awkward.
>
> The reason I'm at church isn't because I'm religious (I'm not) or because my fridge is empty (it is). It's because I've signed up to Alpha, a weekly course run by churches all over the world in order to spread the Christian message. Although I'm an atheist, I don't have a problem with people who subscribe to religion. I am, however, wary of brainwashing, I think most religious beliefs are kind of stupid and I strongly suspect that organised religion is a horrible thing.
>
> […]Adam, the course leader, is wearing a Superdry shirt. After dinner, he explains that it's customary to sing. Rebecca plays the acoustic guitar and Adam mans the PowerPoint presentation, which would have got an A* if it was a piece of ICT GCSE coursework because the lyrics make noises when they appear on the screen.

Now, why on Earth would you make a non-Christian sing?? That makes no sense. If they don't accept Christianity, why would they sing about it?

More:

> After singing comes talking. Specifically, Adam talking. Over the next six weeks, his talks will cover: "Is there more to life than this?"; "Who is Jesus and why did he die?"; "How can we have faith?"; "How can we read the Bible?"; "Why and how do I pray"; and "What about the Church?". After each talk, we'll break off into groups and discuss what we've learnt.
>
> The first couple of sessions are similar. They involve Adam handing out copies of the Bible and saying things like, "So let's assume Jesus does exist and came to Earth to save us…" I'm genuinely the only person who is annoyed that Adam makes no attempt to prove Jesus's existence.

The first questions to address are thing like “Does God Exist?” and “Did Jesus Rise From the Dead?” and “Why Should People Think the Bible is Historically Reliable?”. But those questions cannot be asked by Christians, because they are totally unaware, thanks to years and years of avoiding apologetics, that those questions come *before* praise hymns and Bible study and prayer. Christians are so unaware that they don’t even realize how to discuss Christianity with a non-Christian, using authorities like logic, science and history, which non-Christians accept.

More:

> Adam’s big points in the first two weeks are that we should love Jesus because he loves us in spite of our tendency to sin and that we should try to emulate his behaviour, because it’s nice to have a role model.
>
> Discussion time isn’t fruitful. Natalie asks me how I’m able to distinguish between moral and immoral behaviour if I don’t base my actions on Jesus’ example. I explain that I work out what makes my peers happy and try to do those things. Everyone laughs, which I find confusing because I’m not joking. I agree that having a role model can be helpful, but ask how they know Jesus is the best one. Anna and Will, who are married, tell me that it’s because the Bible said so. But how do they know the Bible is right? “No offence, Tabatha,” replies Louise, “but the Bible is quite far-fetched. I don’t get why someone would have made that stuff up if it weren’t true.” It sounds like I’m lying, but I’m not.
>
> […]This week, Adam’s main point is that Christianity isn’t about rules. Fine, but there’s still no attempt to prove God’s existence.

What is going on here? It’s that Christians are basically no different than cultists. We think that it’s our jobs to just tell people things without ever proving anything with science or history. We don’t know how to construct logical arguments. All we do is say what we believe and then hope that the person listening will accept it because “the Bible says so” or maybe because it makes the person feel like a nice person to accept it.

More:

> Then we talk about which bits of the Bible we should take literally. Louise tells me I’ll work it out if I read the Bible. I tell her I’ve read it. She says I will never develop a full understanding because I’m not God so I can’t understand everything. This is becoming a recurring theme. These people have answers to some problems, but as soon as they hit a brick wall they settle for not understanding God and refuse to think through alternatives.

Wow, how do Christians handle questions that they don’t know the answer to? By going and finding the answer? NO! We think that it’s not our job to find answers to this skeptic’s questions, it’s the skeptic’s job to find answers. We hand the work to the skeptic to do, instead of doing the work for them. Finding answers is work, and if Christianity is about anything, it’s apparently about avoiding work. That’s what we learn in church, anyway.

More:

> This week, Leslie, a priest from the church, speaks about evolution, which has to be our most interesting topic to date. “How do I know evolution isn’t true?” he begins, continuing: “Because God revealed himself to me through scripture.” This annoys me: these people keep saying really obscure things and not explaining them. Leslie explains that scripture is “God-breathed,” so when you read the Bible, God is speaking directly to you. I’m not an idiot but I have absolutely no conception of what that means.

This is pretty much the answer you’re going to get from most pastors and church people, even in a time where we have amazing arguments coming out of the intelligent design community about the origin of life and the Cambrian explosion. And even without talking about evolution, we could be talking about the Big Bang cosmology and the cosmic fine-tuning. But those things can’t be talked about because they are just too “real” and we want to keep

religion in the realm of try-it-and-see-if-you-like-it bromides.

More:

> Leslie goes on to offer practical Bible-reading advice: you should read it for 15 minutes a day and ask God questions by verbalising your thoughts. By this stage, I'm annoyed. I want to know why we should read the Bible, how they know it's true, what God sounds like and how He chooses which prayers to listen to. Instead, Leslie says things like, "If we pray, we become trees. Trees grow fruit, so we will live fruitful lives." This kind of obscure, metaphorical chat is driving me mad.
>
> […]In discussion time, it becomes clear that although these people are interested in religion, they're uncritical of it. It's really starting to bother me that this institution encourages blind faith at the expense of scientific enquiry.

Again, Christians are incapable of understanding that they have to prove claims using arguments and evidence. They just want to state their beliefs, like cultists do when they knock on your door. What exactly is the difference between us and the cults if it's not that we are able to make a case for our views based on evidence, not feelings?

More:

> Adam tells a story about his wedding ring. It's a more elaborate version of this: Adam went to Costa. He left his wedding ring behind. He realised what he'd done. He said a quick prayer. He went back to Costa. He found his ring. He reckons God answered his prayer.
>
> […]Louise claims that God once answered her prayer to get her to the airport on time. Alasdair thinks God stopped a wave breaking on him when he went surfing as a teenager. Robin tells us that God warned him to wear a helmet when he snowboards.
>
> […]"Anyone feel unconvinced by the power of prayer?" Natalie asks. "YES," I feel like shouting. "YOU'RE IDIOTS. ALL OF THOSE THINGS WERE PROBABLY COINCIDENCES THAT YOU'RE READING TOO MUCH INTO."

Sigh. Well I hope that this is helpful so that everyone understands what non-Christians really need from us. I think we need to focus on studying apologetics, so that we can answer questions. Instead of focusing on telling people weird things, we should just focus on the basics: God's existence, the minimal facts case for the resurrection, intelligent design in nature, the moral argument, the problems of evil and suffering. The basics. And stop trying to talk about our own lives or our own weird experiences, because you can't prove anything by telling stories or mystical experiences or pious feelings. We really need to stop treating religion as something different from practical things. We don't hire employees or pick stocks or buy medicine on the basis of how we feel about them. We study things carefully, we look at evidence, we use reason. Truth is the point of religion, not feelings, and when we focus on feelings when talking to non-Christians, we look like idiots. And rightly so.

# White House spokesman on Ebola czar: “what we were looking for was not an Ebola expert”

**Wintery Knight** · 20 October 2014 · Archived copy · Original

Story from CNS News.

Excerpt:

> Pres. Obama wasn’t looking for an Ebola expert when he picked Ron Klain to be the new Ebola Czar, White House Press Secretary Josh Earnest explained Friday.
>
> “What does Ron Klain know about Ebola?” a reporter asked Earnest at a press conference.
>
> “The president wanted somebody who could serve in a coordinating function, to manage our implementation of our whole of government approach to this Ebola situation.”
>
> “To more directly address your question, what we were looking for was not an Ebola expert, but rather an implementation expert, and that’s exactly what Ron Klain is.”
>
> Earnest when on to praise Klain’s involvement in the 2009 Stimulus, which he said “exceeded expectations.”

So there main concern was to pick a politician in order to manage the politics.

CNS News again:

> Sen. Jeff Sessions (R-Ala.) today denounced today Pres. Obama’s selection of Ron Klain to be his Ebola “czar” as well as on the President’s latest executive actions on immigration – warning that Klain will only make the Ebola crisis worse.
>
> Sessions says that Klain is nothing more than a partisan “political spin” expert with no health care expertise:
>
> “Ebola is a health crisis. Yet the President has appointed as his new Ebola ‘czar’ a partisan loyalist whose expertise is politics-not health. One would think, faced with the prospect of an epidemic, the President would task an expert in epidemiology not an expert in political spin. Sound bites are not going to deter a single infection or save a single life.
>
> “The American people can have zero confidence in Ron Klain’s competence to carry out this critical role.”
>
> Sessions says this isn’t the first time Obama has appointed unqualified, partisan department heads, citing the appointments of HHS Sec. Sylvia Burwell and DHS Sec. Jeh Johnson:
>
> “The President’s Director of Health and Human Services, Sylvia Burwell, was promoted after refusing to answer even those most basic financial questions from Congress during her dismal tenure at the Office of Management and Budget. Burwell, a former campaign operative, was tasked with overseeing the nation’s healthcare system despite no consequential health care experience.
>
> “Secretary Jeh Johnson was chosen to head the one of the largest and most important departments of government despite being a political lawyer with no relevant background. Johnson has devoted his short tenure not to strengthening enforcement but dismantling it.
>
> “Just today-as American citizens face a jobs crisis, debt crisis, border crisis, security crisis, and now a health crisis-Secretary Johnson announced actions not to restore gutted enforcement, but further steps to open our borders.
>
> “DHS is now extending what amounts to a perpetual amnesty to thousands of immigrants from Honduras and Nicaragua, while expediting immigration from Haiti at a time when we can’t keep track of the millions we are already admitting.”

Still no word on blocking flights from countries where Ebola is out of control, because this is the amnesty administration. We don't want to appear intolerant by telling people "NO", do we?

There was an excellent podcast from The Weekly Standard on the pick featuring Stephen Hayes. Worth a listen.

# Wisconsin Democrat Mary Burke would veto bill to ban “pain capable” abortions

**Wintery Knight** · 20 October 2014 · Archived copy · Original

There is a big race right now to choose the governor of Wisconsin. The Republican candidate is Scott Walker. He is the current governor. The Democrat is a woman named Mary Burke. They are pretty much tied in the polls, but their positions on abortion are quite different.

First, let’s remember that Scott Walker is pro-life – and not just in word, but in deed.

Here’s a story from Fox News.

Excerpt:

> Gov. Scott Walker quietly signed a contentious Republican bill Friday that would require women seeking abortions to undergo an ultrasound and ban doctors who lack admitting privileges at nearby hospitals from performing the procedures.
>
> Opponents contend legislators shouldn’t force women to undergo any medical procedure and the bill will force at least two abortion clinics where providers lack admitting privileges to shut their doors.
>
> The Republican-controlled Legislature passed the bill in mid-June.
>
> […]Under the bill, any woman seeking an abortion would have to get an ultrasound. The technician would have to point out the fetus’ visible organs and external features to the woman. Abortion providers would have to have admitting privileges at a hospital within 30 miles to perform the procedures.
>
> Republican supporters argue the ultrasound requirement is designed to help the woman bond with the fetus and convince her to save it. The admitting privileges mandate is meant to ensure an abortion provider can follow up with a patient at the hospital if an emergency arises, they say.
>
> The bill is part of national GOP push to curtail abortions. North Dakota’s governor, Republican Jack Dalrymple, signed a law this spring that outlaws abortions as early as six weeks into a pregnancy, making North Dakota the most restrictive state in the nation to get an abortion. The state’s lone abortion clinic has filed a federal lawsuit seeking to block the law.
>
> Republicans in Arkansas this spring passed a law that bans most abortions after 12 weeks. The American Civil Liberties Union of Arkansas and the Center for Reproductive Rights. A federal judge has temporarily blocked that law. A trial has been tentatively scheduled for next year.
>
> Republicans in Alabama passed a law similar to the Wisconsin bill in April requiring abortion providers to have admitting privileges at a local hospital. The ACLU and Planned Parenthood filed a lawsuit contending the law would shut down three of the state’s five clinics because doctors at the clinics haven’t been able to get admitting privileges at nearby hospitals. A federal judge temporarily blocked the law in June.
>
> The Wisconsin bill sparked a fierce debate in both the state Senate and Assembly as minority Democrats tried to push back. Republican leaders in the Senate abruptly halted a floor debate in that house. Senate President Mike Ellis, R-Neenah, flew into a rage as Democrats protested, pounding his gavel so hard he broke the base. Assembly Democrats, for their part, did a slow burn, complaining about the bill for hours. Republicans still rolled the bill through both houses.

The law eventually passed, and it reduced the number of abortions in Wisconsin, as you would expect.

Now let’s see what Mary Burke thinks about saving unborn children.

Life News reports.

Excerpt:

> Wisconsin has made huge strides in the protection of unborn babies and mothers in our state. In just 2013 alone, our new lifesaving laws gave mothers more information about their unborn children and helped save 465 babies, who now sleep peacefully in their beds. But we still have far more work to do.
>
> That's why so many Wisconsinites are concerned by Mary Burke's recent statement in a Milwaukee Journal Sentinel interview about her position on legislation that would protect unborn babies who are capable of feeling pain.
>
> When asked what she would do with legislation that would "ban abortions after 20 weeks" (when unborn babies can feel pain), Burke responded, without a moment of hesitation,
>
> "Yeah, I would veto it."

Wow,  even if the unborn child can feel pain, she would veto the bill to stop their suffering. You can't get much more innocent than an unborn child.

# An atheist explains the real consequences of adopting an atheistic worldview

**Wintery Knight** · 20 October 2014 · Archived copy · Original

If you love to listen to the Cold Case Christianity podcast, as I do, then you know that in a recent episode, J. Warner Wallace mentioned a blog post on an atheistic blog that clearly delineated the implications of an atheistic worldview. He promised he was going to write about it and link to the post, and he has now done so.

Here is the whole the whole thing that the atheist posted:

> "[To] all my Atheist friends.
>
> Let us stop sugar coating it. I know, it's hard to come out and be blunt with the friendly Theists who frequent sites like this. However in your efforts to "play nice" and "be civil" you actually do them a great disservice.
>
> We are Atheists. We believe that the Universe is a great uncaused, random accident. All life in the Universe past and future are the results of random chance acting on itself. While we acknowledge concepts like morality, politeness, civility seem to exist, we know they do not. Our highly evolved brains imagine that these things have a cause or a use, and they have in the past, they've allowed life to continue on this planet for a short blip of time. But make no mistake: all our dreams, loves, opinions, and desires are figments of our primordial imagination. They are fleeting electrical signals that fire across our synapses for a moment in time. They served some purpose in the past. They got us here. That's it. All human achievement and plans for the future are the result of some ancient, evolved brain and accompanying chemical reactions that once served a survival purpose. Ex: I'll marry and nurture children because my genes demand reproduction, I'll create because creativity served a survival advantage to my ancient ape ancestors, I'll build cities and laws because this allowed my ape grandfather time and peace to reproduce and protect his genes. My only directive is to obey my genes. Eat, sleep, reproduce, die. That is our bible.
>
> We deride the Theists for having created myths and holy books. We imagine ourselves superior. But we too imagine there are reasons to obey laws, be polite, protect the weak etc. Rubbish. We are nurturing a new religion, one where we imagine that such conventions have any basis in reality. Have they allowed life to exist? Absolutely. But who cares? Outside of my greedy little gene's need to reproduce, there is nothing in my world that stops me from killing you and reproducing with your wife. Only the fear that I might be incarcerated and thus be deprived of the opportunity to do the same with the next guy's wife stops me. Some of my Atheist friends have fooled themselves into acting like the general population. They live in suburban homes, drive Toyota Camrys, attend school plays. But underneath they know the truth. They are a bag of DNA whose only purpose is to make more of themselves. So be nice if you want. Be involved, have polite conversations, be a model citizen. Just be aware that while technically an Atheist, you are an inferior one. You're just a little bit less evolved, that's all. When you are ready to join me, let me know, I'll be reproducing with your wife.
>
> I know it's not PC to speak so bluntly about the ramifications of our beliefs, but in our discussions with Theists we sometimes tip toe around what we really know to be factual. Maybe it's time we Atheists were a little more truthful and let the chips fall where they may. At least that's what my genes are telling me to say."

In his post, Wallace comments on the statement above, but for more, you should listen to the podcast.

This fellow is essentially expanding on what Richard Dawkins has said about atheism:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance

> to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

And Cornell University atheist William Provine agrees: (this is taken from his debate with Phillip E. Johnson)

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

And what about Florida State University atheist Michael Ruse:

> "The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological adaptation no less than are hands and feet and teeth. Considered as a rationally justifiable set of claims about an objective something, ethics is illusory. I appreciate when someone says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory." (Michael Ruse, "Evolutionary Theory and Christian Ethics," in The Darwinian Paradigm (London: Routledge, 1989), pp. 262-269).

I see a lot of atheists these days thinking that they can help themselves to a robust notion of consciousness, to real libertarian free will, to objective moral values and duties, to objective human rights, and to objective meaning in life, without giving credit to theism. It's not rational to do this. As Frank Turek said on the latest episode of "Cross Examined", atheists have to sit in God's lap to slap his face. We should be calling them out on it. I think it's particularly important not to let atheists utter a word of moral judgment on any topic, since they cannot ground an objective standard that allows them to make statements of morality. Further, I think that they should have every immorality ever committed presented to them, and then they should be told "your worldview does not allow you to condemn this as wrong". They can't praise anything as right, either. This is not to say that we should go all presuppositional on them, but if the opportunity arises to point out how they are borrowing from theism in order to attack it, we should do that *in addition* to presenting good scientific and historical evidence.

# Domestic violence rates are higher for homosexual couples than for heterosexual couples

**Wintery Knight** · 21 October 2014 · Archived copy · Original

From the left-leaning Atlantic Monthly.

Excerpt:

> Data on the rates of same-sex partner abuse have only become available in recent years. Even today, many of the statistics and materials on domestic violence put out by organizations like the Center for Disease Control and the Department of Justice still focus exclusively on heterosexual relationships, and specifically heterosexual women. While the CDC does provide some resources on its website for the LGBT population, the vast majority of the information is targeted at women. Materials provided by the CDC for violence prevention and survivor empowerment prominently feature women in their statistics and photographs.
>
> In 2013, the CDC released the results of a 2010 study on victimization by sexual orientation, and admitted that "little is known about the national prevalence of intimate partner violence, sexual violence, and stalking among lesbian, gay, and bisexual women and men in the United States." The report found that bisexual women had an overwhelming prevalence of violent partners in their lives: 75 percent had been with a violent partner, as opposed to 46 percent of lesbian women and 43 percent of straight women. For bisexual men, that number was 47 percent. For gay men, it was 40 percent, and 21 percent for straight men.
>
> The most recent statistics available on same-sex intimate partner violence from the National Coalition of Anti-Violence Programs, which focuses on LGBT relationships, reported 21 incidents of intimate partner homicides in the LGBT community, the highest ever. Nearly half of them were gay men and, for the second year in a row, the majority of survivors were people of color—62 percent.
>
> In 2012, NCAVP programs around the country received 2,679 reports of intimate partner violence, a decrease of around 32 percent from 2011. However the report noted that many of the NCAVP's member organizations were operating at decreased capacity due to limiting the number of cases they were able to take. The report said that excluding data from organizations, there was actually a 29 percent increase in reports of violence from 2011 to 2012.

That article comes from a source with a very clear pro-gay-agenda bias, so let's take a look at an article from the Family Research Council to balance it out. They rely on mainstream data sources as well, like the CDC, the DOJ, the US Census, etc.

Excerpt:

> A study in the Journal of Interpersonal Violence examined conflict and violence in lesbian relationships. The researchers found that 90 percent of the lesbians surveyed had been recipients of one or more acts of verbal aggression from their intimate partners during the year prior to this study, with 31 percent reporting one or more incidents of physical abuse.[69]
>
> In a survey of 1,099 lesbians, the Journal of Social Service Research found that "slightly more than half of the [lesbians] reported that they had been abused by a female lover/partner. The most frequently indicated forms of abuse were verbal/emotional/psychological abuse and combined physical-psychological abuse."[70]
>
> In their book Men Who Beat the Men Who Love Them: Battered Gay Men and Domestic Violence,D. Island and P. Letellier report that "the incidence of domestic violence among gay men is nearly double that in the heterosexual population."[71]
>
> […]Homosexual and lesbian relationships are far more violent than are traditional married households:

> The Bureau of Justice Statistics (U.S. Department of Justice) reports that married women in traditional families experience the lowest rate of violence compared with women in other types of relationships.[72]
>
> A report by the Medical Institute for Sexual Health concurred,
>
> It should be noted that most studies of family violence do not differentiate between married and unmarried partner status. Studies that do make these distinctions have found that marriage relationships tend to have the least intimate partner violence when compared to cohabiting or dating relationships.[73]

In lesbian relationships, the rate of domestic violence is extremely high, from 17% to 45%, depending on the study. I do think that men exert a calming influence on women's emotions, helping them to channel their feelings into words and reasoned arguments. That short-circuits the tendency toward violent outbursts. That's why I urge men, if they must marry, to practice disagreeing and debating with women before the marriage is actualized. You need to find out what this other person does in a conflict situation before you commit to her for life.

# How premarital sex damages a woman's ability to be in a relationship

**Wintery Knight** · 21 October 2014 · Archived copy · Original

Here's an interesting article from the radically leftist New York Times to me. I was pleasantly surprised how much I agreed with it.

Excerpt:

> I recently overhead two students talking in a dining hall at the university where I teach. "Yeah, I might get married, too," one confided. "But not until I'm at least 30 and have a career." Then she grinned. "Until then? I'm going to party it up."
>
> This young woman was practically following a script. An increasing number of studies show that many millennials want to marry — someday.
>
> Generation Y is postponing marriage until, on average, age 29 for men and 27 for women. College-educated millennials in particular view it as a "capstone" to their lives rather than as a "cornerstone," according to a report whose sponsors include the National Marriage Project at the University of Virginia.
>
> Yet for all of their future designs on marriage, many of them may not get there. Their romance operandi — hooking up and hanging out — flouts the golden rule of what makes marriages and love work: emotional vulnerability.
>
> […]Research led by the social psychologist Sara H. Konrath at the University of Michigan has shown that college students' self-described levels of empathy have declined since 1980, especially so in the past 10 years, as quantifiable levels of self-esteem and narcissism have skyrocketed. Add to this the hypercompetitive reflex that hooking up triggers (the peer pressure to take part in the hookup culture and then to be first to unhook) and the noncommittal mind-set that hanging out breeds. The result is a generation that's terrified of and clueless about the A B C's of romantic intimacy.
>
> In "The End of Sex: How Hookup Culture Is Leaving a Generation Unhappy, Sexually Unfulfilled, and Confused About Intimacy," Donna Freitas chronicles the ways in which this trend is creating the first generation in history that has no idea how to court a potential partner, let alone find the language to do so.
>
> If this fear of vulnerability began and ended with mere bumbling attempts at courtship, then all of this might seem harmless, charming even. But so much more is at stake.
>
> During class discussions, my students often admit to hoping that relationships will simply unfold through hooking up. "After all," one student recently said, "nobody wants to have The Talk," the dreaded confrontation that clarifies romantic hopes and expectations. "You come off as too needy."
>
> This fear sets up the dicey precedent Dr. Brown warns us about: Dodging vulnerability cheats us of the chance to not just create intimacy but also to make relationships work.
>
> Then there's the emotional fallout of hooking up. This kind of sexual intimacy inevitably leads to becoming "emotionally empty," writes Dr. Freitas. "In gearing themselves up for sex, they must at the same time drain themselves of feeling."
>
> This dynamic is about more than simply quelling nerves with "liquid courage" at college parties or clubs. It's about swallowing back emotions that are perceived as annoying obstacles. And this can start a dangerous cycle.
>
> "We cannot selectively numb emotions," writes Dr. Brown. "When we numb the painful emotions, we also numb the positive emotions."

I've personally observed women who had sexual histories firsthand, during my college years as an undergraduate

student and graduate student. I noticed that it caused them some trouble when they were trying to see a relationship through to marriage. The more a woman chooses men purely for looks rather than husband-qualities, the more likely she is to see a bad side of men. You don't see the good side of men when you hook up with men who are willing to have sex before marriage. If women have enough of these bad experiences with men, it gets very hard for women to continue to invest in relationships and to serve and care for men. The very things that men are looking for from women – support, empathy, understanding, trust, vulnerability – disappear from the woman, and she is left trying to get a man to commit to her using her sex appeal alone. What a scary thought. What kind of man can you land with sex alone? Not the kind that makes a good husband and father, that's for sure.

What does the hook-up culture teach women? It teaches them to work on their educations and careers first. It teaches them to choose the best-looking men. It teaches them to worry more about what their friends will think than about what a man does in a marriage. It teaches them to turn off their emotions for fear of getting hurt. It teaches them that offering recreational sex to a man is the way to get male attention and engagement. In the old days, before feminism, women couldn't even use sexuality to impress a man. Everything had to be done the old-fashioned way. You would hear phrases like "the way to a man's heart is through his stomach". Women would look at men who were good husband candidates and think about getting their attention by cooking and helping and caring. That's all gone now, and many women aren't even cultivating domestic skills. Domestic skills are still very much sought after by men, although sometimes they can't articulate their needs very well.

I asked a friend of mine who had experience dating a woman who had a sexual past about this post, and he said that past sexual relationships with good-looking, non-committal men has the same effect on women that pornography has on men. He said that it changes their expectations, so that they become more and more fixated on the man's appearance, and less and less concerned about his ability to do husband and father tasks. Another man who also has a lot of sexual experience told me that the effect of hook-up sex on women's perception of men would be even stronger than the effect of pornography on men. Hooking-up with men for status and fun causes a change in how women evaluate men. After all, if a wedding cermemony guarantees you "happily ever after" then why not just try to make a relationship "work out" by jumping right into bed and see if easy access to recreational sex makes the man see the value of long-term, exclusive commitment and self-sacrifice.

So we have a situation where women are not looking at what a man does in a family – working, discovering the truth, setting moral boundaries, helping others to be related to God. Instead, women are trained by the hook-up culture to think about appearances and how a good looking man will make others think about her in her social group. It seems to me to be as counterproductive as if a man were choosing computer based on how the case looked on the outside, rather than the performance and cost of the parts on the inside of the case. It makes no sense. Speaking as a man, I have a list of things that I am looking for from a woman, because I have specific goals that I want marriage to achieve. A woman's decision and ability to hook-up with me tells me nothing about her ability to perform the tasks I need her to perform in a marriage. The antidote to the strains and stress of marriage and parenting cannot be found in a hook-up, or even in a woman's career. That's not going to help a husband the way a husband needs to be helped.

# Christian particle physicist Michael Strauss profiled in the College Fix

**Wintery Knight** · 21 October 2014 · Archived copy · Original

Here's a link to the article on The College Fix. The article was shared 647 times on Facebook and tweeted 41 times, at the time I am writing this (Monday 11 PM)

Excerpt:

> A physics professor at the University of Oklahoma who often spends his time studying smashed subatomic particles at the Large Hadron Collider at CERN laboratory in Switzerland has another hobby – smashing the notion that all scientists believe the universe was created by some sort of cosmic accident.
>
> Dr. Michael Strauss has given some iteration of a lecture he's titled "Scientific Evidence for the Existence of God" to students and peers at universities across the nation for nearly 15 years, including at Stanford, UT Dallas, UC Santa Barbara, and most recently Thursday at the University of Missouri-Columbia, where he said observable and testable scientific evidence points to a "designer who cares about humanity."
>
> This is coming from an experimental particle physics expert who also says scientific evidence shows the universe is 14 billion years old, and that it was created through a so-called "big bang" – which many people also hear from the likes of atheist and agnostic scientists.
>
> But Strauss, also known for his knowledge and expertise on the Higgs boson "God Particle," told his audience of roughly 200 students and professors who packed a campus auditorium to hear him speak that the discoveries of modern science give abundant evidence for the existence of a transcendent, intelligent designer who created the universe and has a purpose for humanity.

Now here's what he talked about:

> During his talk, Strauss essentially argued that the scientific evidence for the existence of God could be found by studying the origins of the universe, the design of the universe, and what Strauss called the "rare Earth hypothesis."
>
> In historical times, he said, all scientists believed in God, and it was only more recently, within the last 200 years or so, that science based on the assumption there is no creator has dominated the field.
>
> But in 1929, Edwin Hubble discovered the universe was expanding, leading to the Big Bang hypothesis. Other modern experiments have also supported that theory, such as the temperature of the universe and the formation of elements.
>
> "The prediction of general relativity is that the Big Bang itself is the origin of everything we know: space, time, matter and energy," Strauss said during his talk to Dallas college students last year. "So the Big Bang is kind of a misnomer. A Big Bang brings up the idea that something exploded, but the Big Bang itself is not an explosion … it's the origin of everything we know in this universe."
>
> "If everything in the universe came into being, then the cause of the universe must be transcendent, not a part of this universe," Strauss argued. "Science kind of stumbled onto something that the Bible declared long ago … that the universe had a beginning."
>
> Strauss also brought up evidence for the existence of God by citing the apparent design of the universe, noting the amount of matter in the universe, the strength of its strong nuclear force, and the formation of carbon is so finely tuned that if any of these parameters were modified in the slightest, human life could not exist. Strauss stated there are about 100 similar finely tuned parameters.
>
> Strauss' third point delved into what he called the "rare Earth hypothesis." Strauss detailed what it would take

> to for an earthlike planet to form by chance, a planet capable of sustaining not only bacteria, but higher life forms, such as those found in science fiction stories. (Think Class M planets from Star Trek.)
>
> He highlighted how Earth is unique, with its moon, sun and solar system perfectly aligned to allow life to survive.  Few if any planets have a large moon in orbit around it to help provide just the right atmosphere. Few if any planets have a neighbor such as Jupiter, which is so large its gravity sucks into it potential threats to Earth, such as comets and asteroids.
>
> In fact, there are 322 such parameters needed for a planet capable of sustaining intelligent life to form, and the probability for occurrence of all 322 parameters to develop by chance is 10 to the minus -282.
>
> “It is unlikely that Earth could ever be duplicated,” Strauss said Thursday.
>
> During his talk, Strauss included many quotes from atheist or agnostic scientists, those who do not believe in God, but still acknowledged the possibility of a higher power at work due to their observations.

Read the whole thing. Dr. Strauss is the one who taught me the power of contrasting the trend of experimental science (big bang, fine-tuning, rare Earth, DNA, Cambrian explosion, etc.) with the speculative “Star Trek” wishing of naturalists. I got that whole idea for an apologetics narrative from his Stanford lecture. If you can share this post (mine) on your social media accounts, please do, because I am going to put some useful links in this post.

First, you can read more about Dr. Strauss’ academic background and you can also read more about his Christian testimony.

Previously, I have also posted and summarized his Stanford University talk, and his University of Dallas talk. If anyone can find his University of Missouri talk, or the Texas Tech talk that he is doing later this week, I would love to blog them. I really feel we need a lot more scientific literacy in the Christian community, especially since God has left us all this wonderful evidence of his actions.

# Report: Kay Hagan and family got nearly $450,000 in taxpayer money

**Wintery Knight** · 22 October 2014 · Archived copy · Original

Senator Kay Hagan (D-N.C.)

Here's the latest from Carolina Journal.

Excerpt:

> From a report filed early Saturday by WRAL-TV news, we have confirmation that a cluster of businesses owned by Democratic U.S. Sen. Kay Hagan's husband and other family members collected even more subsidies from taxpayers than initially reported. While *Carolina Journal*'s Don Carrington has highlighted a stimulus grant totaling $250,644 that was paid to JDC Manufacturing, a real estate business co-owned by Hagan's husband, Chip, and his brothers John and David, WRAL confirmed that JDC received an additional $137,000 in energy tax credits from the project. (Some of the relevant documents are here.)
>
> […]Add a second federal renewable energy grant of $50,000 from the U.S. Department of Agriculture to the ledger, and we learn that Hagan businesses soaked taxpayers for nearly $450,000 to pay for energy upgrades installed at JDC's 300,000-square-foot building in Reidsville.
>
> […]Team Hagan has chosen to hire Marc Elias, a high-powered political lawyer and Caitlin Legacki, acrisis-management specialist and former Hagan press secretary, to argue otherwise.

Now that the story is out, an Obama donor is blocking access to the Hagan stimulus records.

Excerpt:

> After first agreeing to allow Carolina Journal to inspect the documents relating to a taxpayer-funded U.S. Department of Agriculture energy grant to a company owned by family members of U.S. Sen. Kay Hagan, the USDA Rural Development office in Raleigh later said the matter was being handled in Washington — implying the USDA's headquarters in the nation's capital.
>
> On Tuesday, CJ spoke by telephone with Delane Johnson, North Carolina's rural development public information coordinator, who said she would treat CJ's request for documents about the $50,000 renewable energy grant as a Freedom of Information Act request. By email, she said agency policy requires USDA to contact the grant recipient, JDC Manufacturing, before complying with the document request. She also indicated that she would have a response to CJ within 10 days.
>
> By Wednesday, however, Johnson was much less cooperative. CJ went to the Raleigh office to meet Johnson and ask her additional questions about the process of reviewing the grant file. Upon arrival, CJ was told to take

> a seat outside Johnson's office. Another employee went into the office, closed the door, and a few minutes later, informed CJ that Johnson would not be able to speak with him and that the matter was being handled in Washington.

Not only that, but the Washington Free Beacon also reported on a scandal with a judicial nominee.

Excerpt:

> Just a week after Sen. Kay Hagan (D., N.C.) recommended a North Carolina judge to President Barack Obama for a seat in the U.S. District Court, the judge ruled in favor of a company partially owned by Hagan's husband.
>
> The senator's husband, Charles T. "Chip" Hagan, was a managing member of Hydrodyne Industries LLC when it sued a regional water authority for drawing water out of a river that had one of its hydroelectric dams built on. The lawsuit sought millions of dollars in damages and was carried out by Chip Hagan's legal firm.
>
> Superior Court Judge Calvin E. Murphy ruled the case in favor of Hydrodyne, setting the table for the Piedmont Triad Regional Water Authority to pay millions in damages to companies including Hydrodyne.
>
> Murphy's ruling was made on Oct. 23, 2009, just nine days after Sen. Hagan sent his name to Obama to be nominated for a lifetime seat on the U.S. District Court for Western North Carolina.

Previously, I blogged about her support for late-term abortion.

This is why we vote Republican, people. Because secular people don't do morality much.

# Should you marry someone who promises you that “there will be no divorce”?

**Wintery Knight** · 22 October 2014 · Archived copy · Original

I was having a chat with a friend of mine who just got out of a serious relationship and I was trying to pick his brain to find out everything about the woman he was intending to marry so I could see why things went wrong. He told me that she had told him over and over that “there would be no divorce” and that he found that very convincing, despite very obvious warning signs in the area of respect (which I wrote about yesterday).

Well. I was very surprised to hear this, and so I asked him whether he thought it was enough that this woman told him that “three will be no divorce”. He said yes. This woman had experienced the divorce of her own parents and she was resolved (by act of will) never to let that happen to her. He found that acceptable, but I didn’t because I know the numbers on this, and I know that children of divorced parents are more likely to divorce themselves. So the pain of divorce is no deterrent here.

So should we believe that people can avoid a divorce just by saying they will? I told him no. And for an example, I offered a thought experiment. I said to imagine two runners on a track who are charged with completing 10 laps. One runner is a Navy SEAL like Mike Murphy, who has been trained to run miles and miles carrying a 60 pound load. In the mountains. The other is a 300-lb couch potato whose idea of exercise is reaching for the TV remote control. Suppose I ask both runners: do you intend to finish the 10 laps? Should I believe them if they both say yes?

Look, marriage is like building a house. People can say whatever they want about their prospects for success, but the will doesn’t decide here. You have to certain skills, you have to have a certain amount of money, you have to have a plan, you have to be able to read blueprints, you have to be able to hire specialists, you understand the differences between materials, etc. When you think about it, no long-term enterprise can be accomplished by act of will. Piano recitals, math exams, investing for retirement… nothing can be done by sheer act of will.

Now with that being said, let’s take a look at an example.

**An example**

I found this article in the Wall Street Journal way back in 2011, but it fits my conversation with my friend.

The author, Susan Gregory Thomas, lists some of the mistakes she made that led her to get a divorce in her first marriage.

This is the first thing I saw that caught my eye:

> “Whatever happens, we’re never going to get divorced.” Over the course of 16 years, I said that often to my husband, especially after our children were born.

So she is trying to express an intention here, repeatedly, to her husband. I think the point here is that she did have good intentions but as we shall see that was not enough to prevent the divorce. That’s a warning to others that good intentions are not enough.

Here is the second thing:

> I believed that I had married my best friend as fervently as I believed that I’d never get divorced. No marital scenario, I told myself, could become so bleak or hopeless as to compel me to embed my children in the torture of a split family. And I wasn’t the only one with strong personal reasons to make this commitment.

I noticed that a lot of people seem to think that being compatible is very important to marriage. But I don’t think that it is the most important thing. For example, you would not expect two cocaine addicts or two gambling addicts,

etc. to have a stable marriage. I think marriage is more like a job interview where there are specific things that each person has to be able to do in order to make it work. So again, she's giving a warning to others that compatibility is not a guarantee of marriage success.

And there's more:

> My husband and I were as obvious as points on a graph in a Generation X marriage study. We were together for nearly eight years before we got married, and even though statistics show that divorce rates are 48% higher for those who have lived together previously, we paid no heed.
>
> We also paid no heed to his Catholic parents, who comprised one of the rare reassuringly unified couples I'd ever met, when they warned us that we should wait until we were married to live together. As they put it, being pals and roommates is different from being husband and wife. How bizarrely old-fashioned and sexist! We didn't need anything so naïve or retro as "marriage." Please. We were best friends.
>
> Sociologists, anthropologists and other cultural observers tell us that members of Generation X are more emotionally invested in our spouses than previous generations were. We are best friends; our marriages are genuine partnerships. Many studies have found that Generation X family men help around the house a good deal more than their forefathers. We depend on each other and work together.

So here I am seeing that she rejected sex roles, parental advice, or the moral guidelines of Christianity. Again, she is discussing some of the factors that I at least think contribute to divorce. I think that she is right to highlight the fact that she was wrong to disregard the statistics on cohabitation.

So here are some of the mistakes:

- reject advice from parents
- avoid chastity
- cohabitate for EIGHT YEARS
- embrace feminism, reject complementarian sex roles
- thinking that good intentions would overcome every challenge

So, what does the research show works to have a stable marriage?

- chastity
- rejection of feminism
- regular church attendance
- parental involvement in the courting
- parents of both spouses married
- no previous divorces

Guess what? You can't break all the rules and still succeed by sheer force of will. If you break all the rules like that woman in the story, you can't have a working marriage. Not without repudiating everything you believed, and taking steps to undo all the damage from everything you've done. You can't keep all the bad beliefs and bad habits you've built up and marry them to a marriage that will stand the test of time.

A good marriage is an enterprise, and it requires that your character be changed to fit the requirements. There is no way to short-circuit the preparation / selection processes by act of will. And just because your friends are getting married, that's no reason for you to rush into it unprepared. The best way to prepare for marriage is pick people of the opposite sex and practice marriage behaviors (e.g. – listening, helping) with them – even with people you don't intend to marry. Take an interest in their lives and practice denying yourself to help them with their problems. That's better than making idle promises you're not able to keep. And this works the same for men and for women.

Both people need to get this right.

# Can Al Mohler evangelize his way out of a wet paper bag?

**Wintery Knight** · 22 October 2014 · Archived copy · Original

I am basing my answer the question in the title on many months of listening to his excellent "The Briefing" podcast.

And what I've learned from all this listening is that he is very skilled at identifying interesting problems and threats to the Christian worldview, but he rarely or never brings in evidence from outside the Bible so I can discuss these things with non-Christians. Why not? In my experience of listening to him on his podcast, he is not capable of opposing any of the things that he wrings his hands about in any way other than blaming "The Fall" and reminding his listeners what the Bible says. His notion of a "Christian worldview" really just means reading the Bible, and never linking it to science, economics, history, etc. Maybe he is afraid that too much learning about these other areas will crowd out the Bible verses out of his memory. I don't know.

I still think it's good to listen to his podcast, but he's of no value in fixing anything he complains about, unless you're already a Christian.

Here's what a conversation with Al Mohler and the liberal supreme court judges would be like:

- Al Mohler: So, I heard you guys voted to overturn the Defense of Marriage Amendment.
- Liberal SCOTUS justice: That's right.
- Al Mohler: Would you like to hear what the Bible says about that?
- Liberal SCOTUS justice: Actually, no.
- Al Mohler: Are you *sure*?
- Liberal SCOTUS justice: Pretty sure.
- Al Mohler (turns to the choir): See? We live in a Genesis 3 world!
- Liberal SCOTUS justice: What does that even mean?
- Al Mohler: Oh! Oh! Oh! I know that one! It means –
- Liberal SCOTUS: Is that from the Bible? Because if it is, I don't want to hear it.
- Al Mohler: Boooo!!!! Phooey!!!!

Al Mohler is a smart man, and very good to have around if you are evangelizing fundamentalist Christians. But with anyone else, he is not in a position to be convincing. The best he can do is wall Christianity off from non-Christianity, but in my opinion, he's not able to persuasive to the part of culture that he just walled off. OK, that's the end of my satire of Al Mohler.

Anyway, let's take a look at this post from Think Apologetics blog, which explains more about this attitude. Note: Eric does not necessarily endorse my snarky satire of Al Mohler.

He quotes from this interview between two evangelical heavyweight New Testament critics:

> [Ben] Witherington says:
>
> **You speak frequently about a change, even among the laity, in what I will call the mood of the culture when it comes to Christianity. What are the telltale signs in your mind? How do you see a book like this addressing that change, especially if we are now moving into a post-Christian, post-Biblical era in America?**
>
> [Craig] Blomberg says:
>
> When I was working on my various educational degrees in the 1970s, we were still reeling as a culture from Vietnam, Watergate, Woodstock and a generation of young adults who were often very disenchanted with traditional authority, including religious authority. Yet they were truly open-minded. They were interested in

> exploring religious options other than Christianity but they were also very open to exploring the evidence for Christianity, especially when it was combined with an authentic, relevant Christian lifestyle. So mixed among other kinds of hippies were a large number of "Jesus people," many of whom had come out of alternative lifestyles.
>
> If you organized an event on a secular college or university campus with a winsome, compelling speaker and did a reasonably good job at publicizing it, there was a good chance you would draw a large crowd and that a significant minority of the non-Christians in the audience would take significant steps closer to becoming followers of Jesus if not make the commitment on that very day. And those who didn't at least had some general knowledge, even before they came to the event, of the worldview they were for the time being, at least, choosing to reject.
>
> Today we see the children of that generation as young adults on the same campuses with the same Christian organizations, with even more compelling speakers and evidence on which to draw, and yet in many instances it is extremely difficult to get a good crowd, if you do you are lucky if even a few unbelievers come, and luckier still if any of them are drawn toward the faith. But it is not as if any new evidence has emerged that we didn't know about a generation ago to make the case for faith weaker. Instead, people have grown up with less awareness of biblical claims, with more prejudice against Christianity, with an eagerness to embrace the most outlandish charges against the Bible without even wanting to research them at all, which really shows that they are looking for reasons not to believe rather than engaging in serious inquiry.

Then Eric says this:

> Did you notice that both Witherington and Blomberg acknowledge we are living in a post-Christian, post-Biblical era in America? I wish the rest of the Church would wake up and stop just giving Christians more Bible verses and Bible sermons. I love the Bible**. But as I have said elsewhere:**
>
> If pastors keep assuming that the average person in the culture thinks the Bible is authoritative, they are living in denial. This is not the 1950's! When we as Christians assume everyone outside the four walls accepts our starting point, then we are kidding ourselves. I would love to see more pastors spend at least one month or more a year teaching their congregants on the reliability and authority of the Bible.
>
> For example, let's say we have thousands of seminary students who graduate who are very skilled at exegeting the text. However, the problems is that the majority of these people (and teachers) start with a set of presuppositions that a fairly large part of our culture rejects. Here are our starting points:
>
> 1. God's existence: God exists because the Bible says so.
>
> 2. Epistemology (the study of knowledge): God gives us knowledge of Himself by revelation. The Bible tells us this as well.
>
> 3.Miracles: Christianity is a revelatory religion. Without miracles (such as the resurrection) being both possible and actual, our faith is really not very unique. What about other miracle claims in other religions? There is an overall skepticism towards miracles in the West. How do we answer these issues?
>
> 4.History: Is history knowable? What historical method are we teaching our students? And as far as miracles, can history evaluate a miracle claim such as the resurrection?
>
> 5. Hermeneutics: Can we arrive at objective meaning in the text?
>
> 6. Ethics: Is the Bible a source of ethics for us? How would we explain this to the world around us.
>
> If we continue to start with the Bible itself without Prolegomena, we will end up causing thousands of Christians to beg the question to those we minister to. To beg the question is to take for granted or assume the truth of the very thing being questioned. My advice for seminaries is to make it mandatory for all students to take a class on Prolegomena.

I love the Bible too. But I also know how to have a conversation with a non-Christian about science, economics, politics, etc. I know how to talk about the findings of mainstream science and how they point to a Creator and Designer without dismissing it all as the Devil's handiwork. I know how to make a case for the pro-life view or for chastity or traditional marriage or the free-market system without requiring that my audience assume that the Bible is the inerrant word of God (which I think it is). We need to get to the point where we can have conversations about things with people who don't go as far as we do on inerrancy. I think that when they see that we actually know what we are talking about in these other areas, that will open the door for them to listen to us on spiritual things, too.

# Obama calls Ottawa, Canada terrorist attack by a Muslim "senseless violence"

**Wintery Knight** · 23 October 2014 · Archived copy · Original

Well, at least he didn't call it "workplace violence", like he did the attack on Fort Hood by Major Nidal Hasan.

Story from the Washington Times.

Excerpt:

> A gunman who reportedly was a recent convert to Islam launched an attack Wednesday in Ottawa, killing one soldier guarding a war memorial before barging into the capital city's Parliament amid a hail of gunfire and spawning increased vigilance in Washington and Ottawa, where officials wondered how he managed to get into the government building armed.
>
> The Canadian soldier, identified as Cpl. Nathan Cirillo, was the second killed in three days in an attack by a young Muslim convert. A hit-and-run that left one soldier dead and another injured Monday has been deemed a terrorist attack by Canadian officials.
>
> The Islamic State, which has seized large swaths of land in Iraq and Syria, has called on Muslims to launch attacks in Western countries that have joined the U.S.-led coalition to combat the terrorists. Canadian officials said there was no evidence that the gunman had ties to Islamic extremism, but the investigation was in the early stages.
>
> "But let there be no misunderstanding: We will not be intimidated. Canada will never be intimidated," Canadian Prime Minister Stephen Harper said in a TV address to his nation.

The shooting stopped because there was an armed man on the scene:

> In Ottawa on Wednesday, members of Parliament said they owed their lives to Sergeant-at-Arms Kevin Vickers, who fatally shot the gunman just outside the caucus rooms where lawmakers were barricading themselves.

More on the Islamic terrorist:

> A Canadian official identified the dead gunman as Michael Zehaf-Bibeau, and an Ottawa hospital said it was treating two other victims from both attacks.
>
> […]Mr. Harper, in his evening address, said the attacks will "lead us to strengthen our resolve and redouble our efforts" to fight terrorists, work with allies and keep the country safe.
>
> He said Monday's attack was by an "ISIL-inspired terrorist," and said of Wednesday's shooting that, "in the days to come, we will learn about the terrorist and any accomplices he may have had."
>
> Zehaf-Bibeau, the gunman, had a lengthy criminal history involving convictions for drug trafficking in Montreal, robbery in Vancouver, assault and weapons offenses as well as other crimes.
>
> He was born in Quebec as Michael Joseph Hall but recently converted to Islam, CBS reported.

Home-grown terrorism, from Canada's most liberal and multicultural province.

I'm not surprised this happened in Canada – the Liberal Party was in power for years and years there, and encouraged mass immigration from the poorest countries so that people who came would vote for bigger government (the Liberal Party). They called this "multiculturalism". The problem was that many of these poor immigrants are poor because they come from Islamic countries that don't allow the basic freedoms and rights that

are needed for a capitalist economy. When they came to Canada, they not only voted for the Liberal Party, they kept their Islamic beliefs. Nothing that they learned in the multicultural schools would have taught them that there was any need to adopt the values of the country that took them in and offered them generous social programs.

You can see more Mark Steyn from the Sun News Network.

# What does Obama plan to do through executive order after the midterm elections?

**Wintery Knight** · 23 October 2014 · Archived copy · Original

Three things, and here they are in this Washington Times editorial.

Excerpt:

> The first roundhouse swing: Unless we could quarantine the White House, Mr. Obama's amnesty announcement will sucker punch millions of Americans who could lose jobs to millions of illegal immigrants. Immigration officials already are advertising to purchase up to 39 million plastic ID cards over the next five years. These are to be Employment Authorization Documentation (EAD) cards, two-year work permits like those given by Mr. Obama to over 800,00 "Dreamers." Also, Permanent Residency Cards (PRC, often called green cards). Typically, they are good for 10 years.
>
> The solicitation says the base number needed is 4 million cards a year, plus possible "surges" of an extra 5 million ID cards in 2015, 5-million in 2016, 3 million in 2017, 2 million in 2018 and 3 million in 2019. Each is to have embedded RFID chips and holographic images.
>
> Punch No. 2 is more scary news about Obamacare. Next year's rates should have been revealed Oct. 1st, but that was purposefully delayed until Nov. 14th. Analysts project premiums on the low-cost plans will rise by 14 percent next year. These are high-deductible policies, criticized for requiring a $6,000 deductible to be paid before insurance kicks in. Investors Business Daily reports an expected 64 percent jump in Seattle, rising from $60 to $98 per month. Other examples: In Providence, R.I., the monthly change would be from $72 to $99 per month; Los Angeles from $88 to $111; New York City from $97 to $114.
>
> This Obamacare wallop is a combination punch. Exemptions for "non-compliant" policies will expire, meaning that people who like their coverage cannot keep it. They'll be knocked down into the Obama mess of high premiums, high deductibles and less choice of doctors. For example, Colorado suffered 22,000 policy cancellations last month alone, with 193,000 more expected in the next year.
>
> Mr. Obama's third strike at Americans' jaws is a massive prison release. Expect 20,000 inmates to receive executive clemency in addition to the 36,000 illegal immigrant convicts set free in 2013. Most will be minorities and that's the heart of the matter. Mr. Obama and Attorney General Eric Holder have often complained that minorities are sentenced for too long, especially for drug offenses. The Justice Department announced this "New Clemency Initiative" in April, then invited criminal defense lawyers, public defenders and the ACLU to do the screening for who they think should be turned loose.
>
> They claim that violent offenders will be weeded out. But this administration is notorious for announcing supposedly strict guidelines but failing to follow them.
>
> There's also a major risk because a high number may include those recruited in prison by radical Islamists. Those jihadists focus on black American prisoners who want revenge against supposed injustice. The risk is that another Alton Nolen may be among those put on our streets. Nolen, an Islamist convert, was let out of Oklahoma's prisons early and now is accused of beheading a co-worker in his pursuit of jihad revenge.
>
> Mr. Obama's plans are in place for the one-two-three punch on amnesty, Obamacare and get-out-of-jail-early. The last remaining barrier protecting us from Obama-unchained is his need to protect fellow Democrats on Nov. 4th. That date is like a boxing bell, signaling Mr. Obama to unleash his barrage.

Regarding that third "punch", recall that convicted felons vote OVERWHELMINGLY Democrat. That's why he wants to let them out. We already know that he opposes voter ID verification. Between the release of criminals and the amnesty of criminals, we may never see another roadbock on the road to serfdom ever again in this country.

# The top 7 things a wife needs to be happy in her marriage

**Wintery Knight** · 23 October 2014 · Archived copy · Original

Do women influenced by feminism understand marriage?
From MercatorNet.

Here's the list, in order of importance:

1. A husband's emotional engagement
2. Fairness
3. A breadwinning husband
4. A commitment to marriage
5. Staying at home
6. Shared religious attendance
7. Traditional gender attitudes

I want to highlight #3, because it's the one I most frequently find missing in younger, unmarried Christian women.

Here's number three:

> American wives, even wives who hold more feminist views about working women and the division of household tasks, are typically happier when their husband earns 68% or more of the household income. Husbands who are successful breadwinners probably give their wives the opportunity to make choices about work and family—e.g., working part-time, staying home, or pursuing a meaningful but not particularly remunerative job—that allow them to best respond to their own needs, and the needs of their children.

The reason I have found that the young, unmarried Christian women oppose this is because it negates the "follow your heart" Disney princess mentality that they are often raised on. They don't want to be practical, and some of them even go so far as to shun the good advice of other married women. Women should be able to count the costs of a marriage and understand that handsomeness and confidence does not pay the considerable bills that married couples incur, especially when they have children. I think a good basic education in business, finance and/or econonomics for this "follow your heart", "have no fear" women would be beneficial.

I also liked #4:

> Wives who share a strong commitment to the norm of lifelong marriage with their husband—e.g., who both believe that even unhappily married couples should stay together for the sake of their children—are more likely to have a happy marriage than couples who do not share this commitment to marriage. Shared commitment seems to generate a sense of trust, emotional security, and a willingness to sacrifice for one's spouse—all of which lead to happier marriages for women. This shared commitment also provides women with a long-term view of their marriage that helps them negotiate the inevitable difficulties that confront any marriage.

Again, I've noticed that young unmarried women, even those entering the period of declining beauty and declining fertility, are very alarmed by the idea of being married. Marriage is somehow seen as "boring" and they are not too keen on having to sacrifice their need to be happy to a husband and to children. Marriage can wait – it can wait till they are 40. Plenty of men around to marry them then, good men, too, they say. And so long as their friends affirm their "follow your heart" plan, cost calculations don't enter into it.

So, to summarize, you can send a list like this to most young, unmarried woman and she can read it and agree, and then go in a completely different direction. So strong is her intuition and desire to be happy – it just overrules common sense. They don't know enough to pursue what will really make them fulfilled (by having a meaningful life) in the long run. And that, if I may say so, is really scary. Older, married women are, of course, much wiser and more practical.

Yes, I'm being silly to get on someone's nerves. This whole post is to annoy her. If you saw the parody of me that she wrote of me, it was even funnier than this. She is not a feminist at all, but I like telling her she is one.

# Justice Department's list of withheld Fast and Furious documents: 1,323 pages long

**Wintery Knight** · 24 October 2014 · Archived copy · Original

From intrepid journalist Sharyl Attkisson, the latest on the Obama administration's operation to run guns to Mexican drug cartels in order to motivate stricter gun regulations here in the USA.

Excerpt:

> For the first time, the Department of Justice has provided a detailed description of 15,662 *Fast and Furious*-related documents it is withholding from Congress, the public and the press under executive privilege exerted by President Obama.
>
> The description comes in the form of a so-called Vaughn index ordered by a federal court in a lawsuit filed against the Justice Department by the conservative watchdog group Judicial Watch. The Justice Department waited to provide the index, due yesterday, until 8:34 p.m.
>
> The number of withheld documents is so extensive, that the list describing them is 1,323 pages long.
>
> […]Among the withheld communications is a March 8, 2011 email from a Mexico-based Bureau of Alcohol, Tobacco and Firearms (ATF) official less than one week after federal agent John Dodson blew the whistle on *Fast and Furious* in an interview with me for CBS News. The email is described as "discussing response to [Mexico]."
>
> Another withheld email sent in the same time period is from then-White House official Kevin O'Reilly. Dated March 10, 2011, it was sent to more than a dozen federal officials and is described as, "discussing draft press statement."
>
> More withheld emails "forwarding and discussing news items" have Attorney General Holder's name on them. One series of such exchanges is dated July 26, 2011, the same day I reported the revelation that ATF had shared information about *Fast and Furious* with the White House.
>
> […]Other withheld documents are concerning Freedom of Information (FOI) requests I made in May of 2011. It's unclear as to why the president would exert executive privilege to keep from turning over documents discussing "which office will respond" to my FOI requests. The Justice Department never properly responded to my requests.

Please see below for more on what Fast and Furious was all about. The mid-term elections are coming up. Don't let Democrats shake this off!

# Evidence supports officer's account of shooting in Ferguson, Missouri

**Wintery Knight** · 24 October 2014 · Archived copy · Original

I suspended judgment on this case- this is my first blog post on it. I am writing about it now because the evidence is just in.

Here's the story from leftist Washington Post.

Excerpt:

> Ferguson, Mo., police officer Darren Wilson and Michael Brown fought for control of the officer's gun, and Wilson fatally shot the unarmed teenager after he moved toward the officer as they faced off in the street, according to interviews, news accounts and the full report of the St. Louis County autopsy of Brown's body.
>
> Because Wilson is white and Brown was black, the case has ignited intense debate over how police interact with African American men. But more than a half-dozen unnamed black witnesses have provided testimony to a St. Louis County grand jury that largely supports Wilson's account of events of Aug. 9, according to several people familiar with the investigation who spoke with The Washington Post.
>
> Some of the physical evidence — including blood spatter analysis, shell casings and ballistics tests — also supports Wilson's account of the shooting, The Post's sources said, which casts Brown as an aggressor who threatened the officer's life. The sources spoke on the condition of anonymity because they are prohibited from publicly discussing the case.
>
> The grand jury is expected to complete its deliberations next month over whether Wilson broke the law in confronting Brown, and the pending decision appears to be prompting the unofficial release of information about the case and what the jurors have been told.
>
> The St. Louis Post-Dispatch late Tuesday night published Brown's official county autopsy report, an analysis of which also suggests that the 18-year-old may not have had his hands raised when he was fatally shot, as has been the contention of protesters who have demanded Wilson's arrest.
>
> Experts told the newspaper that Brown was first shot at close range and may have been reaching for Wilson's weapon while the officer was still in his vehicle and Brown was standing at the driver's side window. The autopsy found material "consistent with products that are discharged from the barrel of a firearm" in a wound on Brown's thumb, the autopsy says.
>
> Judy Melinek, a forensic pathologist in San Francisco who reviewed the report for the Post-Dispatch, said it "supports the fact that this guy is reaching for the gun, if he has gunpowder particulate material in the wound."
>
> Melinek, who is not involved in the investigation, said the autopsy did not support those who claim Brown was attempting to flee or surrender when Wilson shot him in the street.
>
> […]Seven or eight African American eyewitnesses have provided testimony consistent with Wilson's account, but none have spoken publicly out of fear for their safety, The Post's sources said.
>
> […]Jurors have also seen the St. Louis County autopsy report, including toxicology test results for Brown that show he had tetrahydrocannabinol, the active ingredient in marijuana, in his system. The Post's sources said the levels in Brown's body may have been high enough to trigger hallucinations.
>
> […]The autopsy says that Brown was shot in the forehead, twice in the chest and once in the upper right arm. The fatal wound to Brown's head indicates that he was leaning or falling forward, and the path of a sixth shot, which hit Brown's forearm and traveled from the back of his arm to his inner arm, means that Brown's palms were not facing Wilson in an act of surrender, according to analysts cited by the Post-Dispatch.
>
> In interviews with The Post, sources said blood spatter evidence shows that Brown was heading toward the

> officer during their faceoff, but analysis of the evidence did not reveal how fast Brown was moving.

Now, that's not what we heard in the mainstream media before the actual forensic tests were done, but that's what the evidence shows. And lest anyone accuse me of racism, I noticed a video with Brown's mother and my skin is darker than hers. Facts are facts, skin color doesn't matter.

# Friday night detectives: yet another two episodes of Sherlock Holmes

**Wintery Knight** · 24 October 2014 · Archived copy · Original

It's Friday, so that means more mysteries.

Here are 2 episodes of "The Adventures of Sherlock Holmes".

The Solitary Cyclist:

The Problem Of Thor Bridge:

These are both puzzling stories. I wonder if you can guess the answers before the end.

Happy Friday!

# Woman who claims to be a Christian denounces premarital chastity

**Wintery Knight** · 25 October 2014 · Archived copy · Original

Here's the plan for this post. We're going to take a look at a post by a woman who claims to be a Christian. In that post, she offers some reasons why premarital chastity is wrong. Then we'll take a look at what the Bible says. Then we'll take a look at what the research says. Then I explain what this trend among Christian women means for marriage-minded men.

First here is the post by "Joy". Her reasons for disagreeing with premarital chastity are as follows:

1. Chastity makes women who have had premarital sex feel ashamed
2. It does no harm for a woman to have premarital sex before marriage
3. God made people with a sexual drive, so God thinks that premarital sex is OK
4. Most people are already having sex, so God thinks that premarital sex is OK
5. Practicing sex with men you don't intend to marry makes you better at marital sex

In another post, she is more clear about her views: (these are her actual words)

- Choosing to not to abstain from sexual intercourse before marriage is not shameful.
- Your decision to abstain or not to abstain does not necessarily have any connection to the health of your future marriage.
- Your decision to abstain or not to abstain does not necessarily have any connection to the health of your future sex life.

Now first off, she has no Biblical evidence for any of these assertions in the original post I linked to. She also has no evidence from outside the Bible for any of her assertions. Assertion #3 in the list of 5 above seems to me to justify adultery as easily as it justifies premarital sex. Now, you might expect a person who claims to be a Christian to look first to the Bible to see what is right and wrong, then to look to evidence to strengthen the argument when discussing it with others inside and outside the church. For Joy, feelings and peer-pressure are enough to make anything morally OK. Now let's take a quick look at what the Bible says about chastity and premarital sex:

> 1 Cor. 7:8-9
>
> 8 To the unmarried and the widows I say that it is good for them to stay single as I am.
>
> 9 But if they cannot exercise self-control, they should marry. For it is better to marry than to burn with passion.
>
> The idea of "burning" here has to do with sexual desire. Here Paul tells all unmarried people that if they cannot control their sexual desires, they need to get married. Why? Because Paul assumes that one cannot fulfill this sexual desire outside of the marital bed. While Paul would love for them to remain single (1 Cor. 7:7), he believes that sex outside of marriage is a destructive sin and *cannot* be used as a gratifying release of our sexual passions.

Now what evidence outside the Bible is there to support that? Here's some:

- New study: delaying sexual activity produces improves relationship quality and stability
- New study: staying a virgin longer enables more satisfying relationships
- New study finds that teens who lose their virginity are more likely to divorce
- New peer-reviewed paper highlights the benefits of pre-marital chastity/abstinence
- Does being a virgin before marriage affect marital stability?

- Two things you can do to make your marriage last

Now back to Joy, What I have found when dealing with women like Joy in the church is that the Bible has no authority over them. Not even the words of Jesus have authority to lead them. And obviously they are not impressed with evidence from science, history, etc. Their sole reason for acting the way they do is their own feelings. Whatever they do that seems right to them cannot be questioned or judged. If things don't "work out", then they are a helpless victim. God's will for them is that they do whatever they feel like in order to be happy.

It's very very important for men who are seeking marriage to understand that the typical woman they meet in the church does not understand that Christianity imposes any obligations on them. They don't look at the Bible for moral guidance, but for comfort. And they don't study outside the Bible to become persuaded (and persuasive) about what the Bible teaches. Their view of Christianity is that they are good where they are, and that there is nothing that they should be studying or planning for in order to achieve goals, like evangelism or marriage. Everything has to be easy and feel good.

Fortunately, there is a way to detect the women who are serious about Christianity, and it can be done by simply asking them questions to see if they have moved beyond the feelings/selfishness model of Christianity to the truth/ responsibility model of Christianity. All you have to do is ask them questions to see how much effort they've put into confirming what the Bible teaches by reading outside the Bible. Christians read the Bible to know what's true, and they read outside the Bible to convince themselves to act on what they know is true, and to show to others what's true in a persuasive way. But reading outside the Bible is at war with the feelings /victim/ don't-judge-me view of Christianity pushed by people like Joy. That is because the more you read, the less room there is for doing what you feel like. When you study, what you learn constrains your actions.

I think men should avoid women who respond to the claims of Scripture and the evidence from research by sticking their fingers in their ears and saying "don't judge me! don't shame me!". You can't make a *marriage* with someone who is dismissive of moral obligations, and who acknowledges no higher authority than her own feelings and the approval of her secular, progressive peers. The Bible forbids "unequal yoking", which is the marriage of a Christian to a non-Christian.

**More about Joy and the women of A Deeper Story**

A little more digging reveals that they are pro-gay marriage and claim that it is compatible with Christianity:

http://deeperstory.com/a-deeper-story-responds-to-doma-and-prop-8/

Joy Bennett – The Supreme Court's ruling today to overturn DOMA is the right decision, and one that I welcome. It refers the definition of marriage and recognition of same-sex marriage back to states. It surprises me to hear conservatives, who ardently support states' rights, bemoaning this ruling as "sin winning." It is my personal position that any couple wishing to vow fidelity and faithfulness to one another ought to be encouraged in that endeavor. And any couple willing to make that kind of commitment and form a family ought to receive the civil and legal rights that naturally follow the formation of a family. I see the legal recognition of a marriage as a completely separate issue from the theological discussion of homosexuality. The Supreme Court did not change anything about so-called traditional marriage. The Supreme Court did not require churches or religious bodies to recognize same-sex marriage. It made a civil ruling. The theological question of whether homosexuality is a sin is completely separate from its legality, and it would behoove today's American Christians to remember that fact.

The Sarah Bessey she links to is also in favor of same-sex marriage:
http://deeperstory.com/same-sex-marriage/

They are pro-premarital sex and claim that it is compatible with Christianity (in the post I linked to).

The two articles she linked to bashing the "purity culture" (chastity) contain no Bible verses, and no studies. No truth at all, really. Note that bashing chastity is compatible with their feminist egalitarian convictions.

One of the authors she linked to (Sarah Bessey) has a book that is endorsed by Rachel Held Evans and Brian MacLaren. That's where these guys are coming from ideologically. They are bashing Biblical morality and judging anyone who dares to say that anything is morally wrong. They feel that that people should never be made to feel bad by what the Bible says. (And what studies confirm).

So these people are not Christian in any meaningful way, but more like Trojan horses, manufacturing "diversity" of opinions where there is none, IF you take the Bible seriously as a rule on moral issues. If you're a man looking to marry, you need to be able to detect women like this – don't just assume they are good Christian women because they go to church. Ask questions.

# Matthew Vines and Michael Brown debate homosexuality and the Bible on Moody radio

**Wintery Knight** · 25 October 2014 · Archived copy · Original

The audio of the Matthew Vines vs Michael Brown debate is streamed here on the Moody site.

Details:

> Can you be gay and Christian? Matthew Vines says you can and he's created a viral video and best-selling book defending his view. This Saturday on Up for Debate, Vines joins host Julie Roys to debate author and leading evangelical apologist, Dr. Michael Brown. Is gay monogamy an option for Christians? Is it unloving to reject gay marriage? Listen and join the discussion this Saturday at 8 a.m. Central Time on Up for Debate!
>
> **Matthew Vines**
>
> Matthew Vines is an advocate for the acceptance of lesbian, gay, bisexual, and transgender (LGBT) people within Christian communities and in society at large. Living in Wichita, Kansas, Matthew attended Harvard University from 2008 to 2010. He then took a leave of absence in order to research the Bible and homosexuality and work toward LGBT inclusion in the church. In March 2012, Matthew delivered a speech at a church in his hometown about the Bible and homosexuality, calling for acceptance of gay Christians and their marriage relationships. Since then, the video of the speech has been seen more than 500,000 times on YouTube, and it was featured inThe New York Times and The Christian Post. In 2013, Matthew launched The Reformation Project, a non-profit organization dedicated to training LGBT Christians and their allies to reform church teaching on sexual orientation and gender identity. Matthew's book,God and the Gay Christian: The Biblical Case in Support of Same-Sex Relationships, is in stores now.
>
> **Dr. Michael Brown**
>
> Michael Brown holds a Ph.D. from New York University in Near Eastern Languages and Literatures and is the author of 25 books, most recently Can You Be Gay and Christian? He has served as a visiting or adjunct professor at seven leading seminaries, and contributed to numerous scholarly publications, including the Oxford Dictionary of Jewish Religion and the Theological Dictionary of the Old Testament. He hosts the nationally syndicated talk radio program The Line of Fire and the TV show Answering Your Toughest Questions, and he has been active in teaching, preaching, and debating since 1973, committed to seeing a Jesus-based moral and cultural revolution.

**Summary key:** Julie Roys (JR), Matthew Vines (MV), Michael Brown (MB)

**Summary:**

Opening speeches:

- JR: Why should Christians be open to reinterpreting the Bible on homosexuality?
- MV: Consider the lives and testimonies of gay Christians. Here is my personal story.
- MV: According to the Bible, a person with same-sex attractions would have to embrace lifelong celibacy. I refuse to do that.
- MV: There are 6 passages in the Bible that are relevant to the goodness of homosexuality. All are negative.
- MV: None of these passages address gay relationships that are "long-term" and "faithful" that are based on "commitment" and "love".
- JR: You say that it is "damaging" for Christians to disagree with you views, is that true?
- MV: Yes. One of my friends declared his homosexuality and he did not feel safe to come home. He felt pain because Christians disagreed with him.

- MV: You cannot ask a person with same-sex attractions to be celibate, it causes too much harm to ask gays to abstain from sexual relationships.
- JR: Respond to Matthew.
- MB: The Bible only permits heterosexual sexuality and in every case condemns homosexual acts.
- MB: Matthew is taking his sexual preferences and activities as given, and reinterpreting the Bible to fit it.
- MB: Genesis talks about women being made to help men, and to fulfill God's commandment to procreate and fill the Earth.
- MB: The Bible speaks about the complementarity of the sexes when talking about how two become one in marriage.
- MB: I am very sensitive to the stories of people who are gay who experience discrimination as "gay Christians".
- MB: You can feel sad for people who have two conflicting commitments, but that doesn't mean we should redefine what the Bible says.
- JR: Stop talking, we have a break.

JR takes a caller for the next topic:

- Caller 1: I had same-sex attractions and I was able to change my sexuality.
- JR: Matthew, respond to that.
- MV: Alan Chambers of Exodus International says that 99.9% of people he worked with had not changed their gay orientation.
- MV: Lifelong celibacy is not acceptable to gays, so the Bible must be reinterpreted to suit gays.
- MB: Matthew thinks that God himself did not understand the concept of sexual orientation and inadvertently hurt gays because of his lack of knowledge.
- MB: There is a solution in the Bible for people who cannot be celibate, and that solution is heterosexual marriage
- MB: If a person is only attracted to pre-teen girls, do we then have to re-write the Bible to affirm that so they won't be "harmed"?
- MB: Alan Chambers was speaking for his own group, and his statement does not account for the fact that thousands of people DO change.
- JR: What about the Jones/Yarhouse study that found that 38% of reparative therapy subjects were successful in changing or chastity?
- MV: (no response to the question)
- MV: (to Brown) do you accept that the Bible forces gays to live out lifelong celibacy

Another break, then Brown replies:

- MB: Yes. But change is possible.
- MV: Do you know of any Christian who acknowledged that this was the consequence of the Bible's teaching for gays?
- MB: Paul's explanation that the options for ALL Christians are 1) celibacy or 2) heterosexual marriage. For 2000 years.
- MV: Paul (in Romans 1) is talking about people who are not "long-term", "faithful" gay relationships.
- MV: Paul was not aware of "long-term", "faithful" gay relationships at the time he wrote his prohibitions in Romans 1.
- JR: How do you know that fixed sexual orientation is true? And that the Biblical authors would written different things if they knew?

- JR: Are there any references in the first century to “long-term”, “faithful” gay relationships?
- MB: Yes, in my book I quote prominent historian N. T. Wright who documents that those relationships were known.
- MB: Matthew’s view requires that God did not know about sexual orientation when ordaining the Bible’s content.
- MB: Leviticus 18 is for all people, for all time. This was not just for the Jews, this was for everyone.
- MV: I am not saying that Paul was wrong because he was ignorant.
- MV: Paul was writing in a context where “long-term”, “faithful” gay relationships were unknown.
- MV: NT Wright does not cite first century texts, he cites a problematic 4th century text.
- MV: Absence of 1st-century references to “long-term”, “faithful” gay relationships means that God did not intend to prohibit them.
- MB: Whenever the Bible speaks about homosexuality, it is opposed to it – Old Testament and New Testament.

Another break, then the conclusion:

- JR: Respond to the Leviticus prohibition, which prohibits homosexuality for everyone, for all time.
- MV: It is a universal prohibition on male same-sex intercourse, but it does not apply to Christians.
- MV: For example, Leviticus prohibits sex during a woman’s menstrual period. And Christians are not bound by that.
- MV: What is the reason for this prohibition of male-male sex in Leviticus? It’s not affirm the complementarity of the sexual act.
- MV: The Bible prohibits male-male sex because it is written for a patriarchal culture.
- MV: In a patriarchal culture, women are viewed as inferior. That’s why the Bible prohibits a man from taking the woman’s role in sex.
- MB: The prohibition in Leviticus is a universal prohibition against male-male sex, applicable in all times and places.
- MB: Homosexual sex is a violation of the divine order.
- MB: We can see already the consequences of normalizing this: gay marriage, and supports for polygamy and polyamory.
- MV: So the earliest reference there is to a “long-term”, “faithful” gay relationship is a 4th century text.
- MV: But that gay relationship is not like modern gay relationships.

I have a few comments about Vines’ points below.

**My comments:**

Even heterosexuals who have not married are called upon to embrace lifelong celibacy. I am in my 30s and am a virgin because I have not married. I wouldn’t seek to reinrepret the Bible to allow premarital sex just because what I am doing is difficult. I would rather just do what the Bible says than reinterpret it to suit me. And it’s just as hard for me to be chaste as it would be for him to be. In short, it’s a character issue. He takes his right to recreational sex as non-negotiable, and reinterprets the Bible to suit. I take the Bible as non-negotiable, and comply with it regardless of whether it seems to make me less happy. With respect to the purposes of God for me in this world, my happiness is expendable. If I don’t find someone to marry, I’m going to be “afflicted” with the lifelong celibacy that Vines seems to think is torture, but let me tell you – God is happy with the contributions I am making for him, and if I have to be chaste through my whole life, I am 100% fine with that. I serve the King. And not the reverse.

Notice that he talks about “long-term” but not permanent relationships, and “faithful” but not exclusive. This is important because the statistics show that gay relationships (depending on whether it is female-female or male-male) are prone to instability and/or infidelity. I just blogged on that recently, with reference to the *published*

*research* on the subject. Vines is talking about a situation that does not obtain in the real world – according to the data. Gay relationships do not normally value permanence and exclusivity in the way that opposite-sex marriage relationships do, especially where the couple regularly attends church. The divorce rate and infidelity rate for religious couples is *far below* the rates for gay couples, depending on the sexes involved. Vines is committed to the idea that marriage is about feelings, e.g. – "love", but that's not the public purpose of marriage. Marriage is not about love, it's about complementarity of the sexes and providing for the needs of children. We have published studies like this one showing that there are negative impacts to children who are raised by gay couples, which dovetails with studies showing that children need a mother and that children need a father. We should not normalize any relationship that exposes children to harm. We should prefer to inconvenience adults than to harm children.

Matthew Vines made an argument that Christians have to stop saying that homosexuality is wrong, because it makes gay people feel excluded. I wrote previously about the argument that gay activists use where they say "if you don't agree with me and celebrate me and affirm me, then I'll commit suicide". In that post, I quoted a prominent gay activist who made exactly that argument. I don't find the threats to self-destruction to be a convincing argument *for the truth* of the view that gay marriage being the same as heterosexual marriage. In fact, this is confirmed by a recent study which showed that features of gay relationships themselves, and not social disapproval, is to blame for high rates of suicide in the gay community.

Vines seems to want to argue that the context in which the Bible authors were writing did not allow them to address the problem of gays in "long-term", "faithful" relationships. Well, we have already seen that statistically speaking, those relationships are in the minority. One British study mentioned in the post I linked to above found that only 25% of gay couples were intact after 8 years. The number is 82% for heterosexual marriages, and that *doesn't* filter by couples who abstain from premarital sex and who attend church regularly. If you add those two criteria, the number is going to be well above 82% in my opinion. Studies show that premarital chastity and church attendance *vastly* improve the stability and quality of marriages.

In addition, Vines is trying to argue that 1) the Bible authors were not aware of "long-term", "faithful" gay relationships and 2) their failure to explicitly disqualify these "long-term", "stable" gay sexual relationships means that the Bible actually condones them. A friend of mine pointed out that this is a textbook case of the argument from silence, where someone asserts that because something is not explicitly condemned, then it must be OK. Carried through to its logical end, that would mean that things like identity theft are OK, because they are not mentioned explicitly. Brown asserted that there was a blanket prohibition on homosexual acts. He is arguing from what we know. Vines says that "long-term", "faithful" homosexual relationships are not mentioned, and are therefore OK. He is arguing from what we don't know. And he is trying to reverse the burden of proof so that he doesn't have to show evidence for his view. Brown wouldn't take the bait. The fact of the matter is that no one for the last 2000 years of church history have taken Vines' view. Every single Christian before Vines, who were closer to Jesus' teachings than Vines, understood the verses that Brown cited to be providing a blanket prohibition on homosexual sex acts. If Vines wants to claim that the Bible condones what he wants it to condone, he has to produce some positive evidence from the text or from church history or church fathers. He has *nothing* to support his case that could convince anyone that this is what Christians have believed, and ought to believe.

Finally, if you are looking for another debate, I blogged about a debate between Michael Brown and Eric Smaw. There's a video and summaries of the opening speeches in that post.

# California orders churches to fund abortions, or face sanctions

**Wintery Knight** · 25 October 2014 · Archived copy · Original

This is from The Federalist.

Excerpt:

> California's Department of Managed Health Care has ordered all insurance plans in the state to immediately begin covering elective abortion. Not Plan B. Not contraceptives. Elective surgical dismemberment abortion.
>
> At the insistence of the American Civil Liberties Union, the DMHC concluded that a 40-year-old state law requiring health plans to cover "basic health services" had been misinterpreted all these decades. Every plan in the state was immediately ordered, effective August 22, to cover elective abortion. California had not even applied this test to its own state employee health plans (which covered only "medically necessary" abortions). But this novel reading was nevertheless quietly imposed on every plan in the state by fiat.
>
> The news has slowly leaked out as insurers grappling with this change have begun quietly informing employers of this sudden change in the terms of their policy. This is how Kaiser Permanente broke the news to one California *church* that its insurance policy for its pastors and staff would now include elective abortion coverage:
>
> I want to formally share with you that on August 22, 2014, the Department of Managed Health Care (DMHC) notified Kaiser Permanente and other affected health plans in writing regarding group contracts that exclude 'voluntary termination of pregnancy.'
>
> This letter made clear that the DMHC considered health care services related to the termination of pregnancies – whether or not a voluntary termination – a medically necessary basic health care service for which all health care services plans must provide coverage under the Knox-Keene Health Care Service Plan Act. You may recall that at the request of some employer groups with religious affiliations, Kaiser Permanente submitted a regulatory filing in May 2012 properly notifying the DMHC of a benefit plan option that excluded coverage of voluntary terminations of pregnancies. The DMHC did not object to this filing, permitting Kaiser Permanente to offer such a coverage contract to large group purchasers that requested it. The DMHC acknowledged that it previously permitted these contract exclusions, but now is requiring health care service plans to provide coverage of all terminations of pregnancies, effective immediately. To that end, the DMHC requires Kaiser Permanente and similar health care service plans to initiate steps to modify their plan contracts accordingly.
>
> Effective August 22, Kaiser Permanente will comply with this regulatory mandate.

This is the kind of story that really justifies my suspicions about secular people's ability to be "moral". It seems to me that even if a person did not believe in God, that they would be respectful of those who do. But when you give up God, it does make a difference to whether you think that other people have these sorts of natural rights. How could you possibly ground natural rights in a materialist universe? And this does have an impact on how they act.

# Christina Hoff Sommers: helping boys succeed in school

**Wintery Knight** · 26 October 2014 · Archived copy · Original

An article from the leftist Time magazine by feminist Christina Hoff Sommers.

Excerpt:

> Being a boy can be a serious liability in today's classroom. As a group, boys are noisy, rowdy and hard to manage. Many are messy, disorganized and won't sit still. Young male rambunctiousness, according to a recent study, leads teachers to underestimate their intellectual and academic abilities. "Girl behavior is the gold standard in schools," says psychologist Michael Thompson. "Boys are treated like defective girls."
>
> These "defective girls" are not faring well academically. Compared with girls, boys earn lower grades, win fewer honors and are less likely to go to college. One education expert has quipped that if current trends continue, the last male will graduate from college in 2068. In today's knowledge-based economy, success in the classroom has never been more crucial to a young person's life prospects. Women are adapting; men are not.
>
> Some may say, "Too bad for the boys." The ability to regulate one's impulses, sit still and pay attention are building blocks of success in school and in life. As one critic told me, the classroom is no more rigged against boys than workplaces are rigged against lazy or unfocused workers. That is absurd: unproductive workers are adults — not 5- and 6-year-old children who depend on us to learn how to become adults. If boys are restive and unfocused, we must look for ways to help them do better.

She introduces three ideas to fix the problem, and here's the third one:

> In his delightful *Boy Writers: Reclaiming their Voices*, celebrated author and writing instructor Ralph Fletcher advises teachers to consider their assignments from the point of view of boys. Too many writing teachers, he says, take the "confessional poet" as the classroom ideal. Personal narratives full of emotion and self-disclosure are prized; stories describing video games, skateboard competitions or a monster devouring a city are not.
>
> Peg Tyre's *The Trouble With Boys* illustrates the point. She tells the story of a third-grader in Southern Californianamed Justin who loved *Star Wars*, pirates, wars and weapons. An alarmed teacher summoned his parents to school to discuss a picture the 8-year-old had drawn of a sword fight — which included several decapitated heads. The teacher expressed "concern" about Justin's "values." **The father, astonished by the teacher's repugnance for a typical boy drawing, wondered if his son could ever win the approval of someone who had so little sympathy for the child's imagination.**
>
> Teachers have to come to terms with the young male spirit. As Fletcher urges, if we want boys to flourish, we are going to have to encourage their distinctive reading, writing, drawing and even joke-telling propensities. Along with personal "reflection journals," Fletcher suggests teachers permit fantasy, horror, spoofs, humor, war, conflict and, yes, even lurid sword fights.

> **If boys are constantly subject to disapproval for their interests and enthusiasms, they are likely to become disengaged and lag further behind. Our schools need to work with, not against, the kinetic imaginations of boys to move them toward becoming educated young men.**

Dr. Sommers participated in a recent debate where she argued in favor of allowing all-male schools against a radical feminist. That page has audio and a transcript as well.

**My thoughts**

I do think that women need to realize that boys have to be encouraged to do the different things that boys do, if we want boys to be engaged. The good things that boys do in society are not free – they need to be encouraged and not dismissed. Playing a wargame or an adventurous boardgame with a boy is good. Firing real guns with a boy is good. Playing adventurous role-playing games with a boy is good. Going to a war museum or on a camping trip with a boy is good. Watching patriotic war movies or adventurous movies with a boy is good. Reading military history and military biographies is good. Reading classical adventure novels with a boy is good. Listening to adventurous music with a boy is good. Even watching the news with a boy is good.

Nothing is free. We have to create the boys we want, and encourage them to be aggressive, active and righteous.

# Top 5 myths that old feminists pass on to young women

**Wintery Knight** · 26 October 2014 · Archived copy · Original

Christina Hoff Sommers writing in the ultra-leftist Time magazine of all places.

The list:

1. **MYTH 1:** ***Women are half the world's population, working two-thirds of the world's working hours, receiving 10% of the world's income, owning less than 1% of the world's property.***
2. **MYTH 2:** ***Between 100,000 and 300,000 girls are pressed into sexual slavery each year in the United States.***
3. **MYTH 3:** ***In the United States, 22%–35% of women who visit hospital emergency rooms do so because of domestic violence.***
4. **MYTH 4**: ***One in five in college women will be sexually assaulted.***
5. **MYTH 5**: ***Women earn 77 cents for every dollar a man earns—for doing the same work.***

I'm posting 4 and 5 below, since they were mentioned in the video above (that's not Christina Hoff Sommers):

> **MYTH 4**: ***One in five in college women will be sexually assaulted.***
>
> **FACTS**: This incendiary figure is everywhere in the media today. Journalists, senators and even President Obama cite it routinely. Can it be true that the American college campus is one of the most dangerous places on earth for women?
>
> The one-in-five figure is based on the *Campus Sexual Assault Study*, commissioned by the National Institute of Justice and conducted from 2005 to 2007. Two prominent criminologists, Northeastern University's James Alan Fox and Mount Holyoke College's Richard Moran, have noted its weaknesses:
>
> "The estimated 19% sexual assault rate among college women is based on a survey at two large four-year universities, which might not accurately reflect our nation's colleges overall. In addition, the survey had a large non-response rate, with the clear possibility that those who had been victimized were more apt to have completed the questionnaire, resulting in an inflated prevalence figure."
>
> Fox and Moran also point out that the study used an overly broad definition of sexual assault. Respondents were counted as sexual assault victims if they had been subject to "attempted forced kissing" or engaged in intimate encounters while intoxicated.
>
> Defenders of the one-in-five figure will reply that the finding has been replicated by other studies. But these studies suffer from some or all of the same flaws. Campus sexual assault is a serious problem and will not be solved by statistical hijinks.
>
> **MYTH 5**: ***Women earn 77 cents for every dollar a man earns—for doing the same work.***
>
> **FACTS**: No matter how many times this wage gap claim is decisively refuted by economists, it always comes back. The bottom line: the 23-cent gender pay gap is simply the difference between the average earnings of all men and women working full-time. It does not account for differences in occupations, positions, education, job tenure or hours worked per week. When such relevant factors are considered, the wage gap narrows to the point of vanishing.
>
> Wage gap activists say women with identical backgrounds and jobs as men still earn less. But they always fail to take into account critical variables. Activist groups like the National Organization for Women have a fallback position: that women's education and career choices are not truly free—they are driven by powerful sexist stereotypes. In this view, women's tendency to retreat from the workplace to raise children or to enter fields like early childhood education and psychology, rather than better paying professions like petroleum engineering, is evidence of continued social coercion. Here is the problem: American women are among the best informed and most self-determining human beings in the world. To say that they are manipulated into

> their life choices by forces beyond their control is divorced from reality and demeaning, to boot.

Her conclusion:

> Why do these reckless claims have so much appeal and staying power? For one thing, there is a lot of statistical illiteracy among journalists, feminist academics and political leaders. There is also an admirable human tendency to be protective of women—stories of female exploitation are readily believed, and vocal skeptics risk appearing indifferent to women's suffering. Finally, armies of advocates depend on "killer stats" to galvanize their cause. But killer stats obliterate distinctions between more and less serious problems and send scarce resources in the wrong directions. They also promote bigotry. The idea that American men are annually enslaving more than 100,000 girls, sending millions of women to emergency rooms, sustaining a rape culture and cheating women out of their rightful salary creates rancor in true believers and disdain in those who would otherwise be sympathetic allies.

But if young women learn this for four years in college, what hope is there for any kind of trust and vulnerability with men? What hope is there for marriage? They are always going to be trying to find meaning in life on their own, apart from any kind of loving partnership with a man. And the more hooking up and cohabitating they do, the less they are going to value marriage *and take practical steps towards it.* That is the real problem – the wasting of time and the lack of seriousness, as if getting married can be left to age 35 with no preparation and no planning. As if careers and missionary work and traveling can fill the same hole that a family fills. Yet if no one tells these young women and pushes them to be sensible and discerning, they will mess up the most important decision of their lives.

This might be a good article to share and bookmark.

# New study: more than 14% of non-citizens are registered to vote in 2008 and 2010

**Wintery Knight** · 27 October 2014 · Archived copy · Original

From the leftist Washington Post.

Excerpt:

> In a forthcoming article in the journal Electoral Studies, we bring real data from big social science survey datasets to bear on the question of whether, to what extent, and for whom non-citizens vote in U.S. elections. Most non-citizens do not register, let alone vote. But enough do that their participation can change the outcome of close races.
>
> Our data comes from the Cooperative Congressional Election Study(CCES). Its large number of observations (32,800 in 2008 and 55,400 in 2010) provide sufficient samples of the non-immigrant sub-population, with 339 non-citizen respondents in 2008 and 489 in 2010. For the 2008 CCES, we also attempted to match respondents to voter files so that we could verify whether they actually voted.
>
> **How many non-citizens participate in U.S. elections? More than 14 percent of non-citizens in both the 2008 and 2010 samples indicated that they were registered to vote.**
>
> […]**Because non-citizens tended to favor Democrats (Obama won more than 80 percent of the votes of non-citizens in the 2008 CCES sample), we find that this participation was large enough to plausibly account for Democratic victories in a few close elections.** Non-citizen votes could have given Senate Democrats the pivotal 60th vote needed to overcome filibusters in order to pass health-care reform and other Obama administration priorities in the 111th Congress. Sen. Al Franken (D-Minn.) won election in 2008 with a victory margin of 312 votes. Votes cast by just 0.65 percent of Minnesota non-citizens could account for this margin. It is also possible that non-citizen votes were responsible for Obama's 2008 victory in North Carolina. Obama won the state by 14,177 votes, so a turnout by 5.1 percent of North Carolina's adult non-citizens would have provided this victory margin.

This is interesting:

> We also find that one of the favorite policies advocated by conservatives to prevent voter fraud appears strikingly ineffective. Nearly three quarters of the non-citizens who indicated they were asked to provide photo identification at the polls claimed to have subsequently voted.

Democrats keep telling us that voter fraud is a non-issue. And that's not surprising when you look at how the actual voting by non-citizens. The Democrat party doesn't want voter fraud to go away, they rely on it.

To stop this, we'll need more than voter ID protection. We should probably have a listing of voters at each precinct, make each voter show ID, strike the name of each person who votes from the list, and no voting in any other precinct.

# Was the message of the New Testament corrupted?

**Wintery Knight** · 27 October 2014 · Archived copy · Original

This video is from the Dallas Theological Seminary Hendricks Center blog:

Apologetics Guy Mikel Del Rosario writes:

> During a special event called "Jesus in Primetime," Dr. Darrell Bock, Dr. Ben Witherington, and Dr. Dan Wallace discussed a variety of topics surrounding Jesus and the Bible in the public square. One of the topics they discussed was the issue of variant readings in the New Testament. Are there really hundreds of thousands of textual differences in our New Testament manuscripts? What does it all mean?
>
> In this video clip, Dr. Dan Wallace identifies four categories of textual variants and explains why these differences don't need to shake our faith in the New Testament.
>
> The first and largest category is made up of **spelling differences** in the text, accounting for over 75% of all textual variants. What about the other 25%?
>
> The next largest category represents **synonyms, word order differences or articles with proper nouns**; issues which don't affect the meaning of text at all. For example, Greek writers would use the definite article before people's names (e.g. "The Jesus"). In this case, whether or not the definite article is there makes no difference in English translations.
>
> The third largest category is made up of variants that actually make a difference in the meaning of the text. But the differences in this category are **unlikely to represent any of the original words** of the New Testament because the manuscripts where they appear are very late–far removed from the time of Jesus and his original followers.
>
> Finally, the fourth category is made up of variants that both **make a difference and may possibly represent the original readings of the text**. But this is less than *1% of all variants in the New Testament*. For example, most scholars discuss whether the story about the woman caught in adultery was not originally in In John's text at this point. This is a genuine discussion that notes in a good study discuss. Many do question its presence. Others still argue the event does describe something that did happen in Jesus' life. What is impacted by this?
>
> Bock answers this question: "What is impacted is whether or not a particular passage teaches a particular point, but in the big scheme of things, there is no fundamental doctrine of the Christian faith that is impacted by this one percent." Wallace agrees: "There is no cardinal doctrine that is impacted by the viable variants."
>
> Indeed, **it seems a bit misleading for certain scholars to declare that there are between 300,000 and 400,000 textual variants amongst the existing manuscripts we have today and leave it at that.** We have so many variants because we have so many New Testament manuscripts. If all we had was one codex with all the books of the New Testament in it, we wouldn't have any variants!
>
> But having over 5,800 Greek New Testament manuscripts is a good thing because it can help us have more confidence in the readings which best represent the text of the original autographs.

Bart Ehrman tries to sell a lot of books by fussing about these variants, but in a debate with another expert, he quickly folded and admitted that there were only four variants that touched on anything important.

**Bart Ehrman's screeching about variants: should we care?**

In Ehrman's debate with Peter Williams on the UK-based Unbelievable radio show, and in Ehrman's debate with Dan Wallace, Ehrman lists the 4 worst problems caused by the variants:

1. the woman caught in adultery (John 7:53-8:11) is a late addition not present in the earliest manuscripts
2. the long ending of Mark (Mark 16:9-20) is a late addition not present in the earliest manuscripts

3. Jesus was angry and not compassionate when he healed the leper (Mark 1:41)
4. that Jesus died apart from God, and not by the grace of God (Hebrews 2:9)

I personally dislike that story in 1), because I think a lot of feminized Christians like it because they do not want to have their happiness diminished by moral judgments. They misunderstand this passage to support self-serving moral relativism and postmodern hedonism. Or worse, anti-capital-punishment. Eww. I say, get rid of the wimpy passage and good riddance. It's hundreds of years too late from the earliest manuscripts, anyway.

Regarding 2), I like that long ending because it's more useful from an apologetics standpoint. So I do care about this invariant, and I just don't use that ending when I debate these historical issues. For 3), I prefer angry Jesus to compassionate Jesus, but I don't really care because Jesus is angry in lots of places. And for 4) It doesn't really matter to any core doctrine. It's theological stuff, not historical fact.

# J. Warner Wallace: practical advice on becoming an effective one-dollar apologist

**Wintery Knight** · 27 October 2014 · Archived copy · Original

Below is my summary of an episode of J. Warner Wallace's Please Convince Me podcast, which I really liked, and my comments.

Details:

> J. Warner continues examining the Christian life in light of God's desire for all of us to become Christian Case Makers. Jim reads listener email highlighting some of the typical frustrations involved in starting an apologetics ministry and then provides a template to help you become the Case Maker you've always wanted to be. Jim also answers the question: Why Didn't Jesus Reveal Scientific Facts to Demonstrate His Deity?

You can grab the MP3 file here.

This episode is probably one of the best episodes of the Please Convince Me podcast I've ever heard, because it's practical. I like listening to the cold-case detective talk about practical things.

Summary:

- e-mail from someone trying to start an apologetics ministry for college students and facing difficulties
- the challenge of getting Christians to take an evidential approach to their faith
- tips for getting Christians exposed to apologetics materials
- there are a lot of Christians who are making a daily contribution to apologetics even with a full-time job
- Wallace himself started his apologetics ministry while working full-time
- Wallace, as an atheist, was initially skeptical of religion because he thought it was too focused on money
- His plan as an apologist was to take money right out of it – do it for free, and be self-funded
- 1 Cor 9: "But I have made no use of any of these rights, nor am I writing these things to secure any such provision."
- People in ministry deserve to be supported, but Paul dispensed with that right to raise support for his ministry
- Paul self-financed his ministry in order to avoid all appearance of doing his ministry for financial gain
- Similarly, Wallace's goal of being self-financed was to avoid the appearance of doing ministry for money
- If you plan your life carefully enough in the first half, you'll have the money you need to do ministry in the second half
- Wallace wanted the liberty to pursue things without any financial need, and he achieved this by working full-time
- The problem with money is that it often causes us to not cooperate well with other people
- Ministries and churches sometimes avoid working with other people, like scholars and apologists
- They do this because they are afraid of losing their own people to these scholars and apologists
- Wallace wants to get the money out of it and be able to serve anyone with a need
- Wallace: you need to work hard in the first half of life, in order to have freedom to serve in the second half
- First area: financial preparation – you need to escape financial needs so that it doesn't restrict your passion
- Wallace married well, to a woman who was a good saver, very frugal, and not materialistic – he saved 30% of his income
- Second area: need to prepare yourself educationally for being able to teach apologetics materially
- That doesn't always mean doing the MA in apologetics, but you do have master the material – continuous

learning
- Third area: try to focus on the parts of your career that might have some connection to apologetics
- You want to have experiences in your work where you learn something that can be used in your ministry
- Wallace actually made career choices to focus on evidence, case-making and teaching
- It's hard because men are naturally competitive – we focus on promotions, money and consumer goods
- It's not always the right move in your career to get promoted if it takes you away from skills related to apologetics
- Christian apologists need to not neglect to develop leadership skills and to develop influence
- He recommends a book called "Platform" by Michael Hyatt, which Doug Groothuis also recommended to me
- If you are financially independent, then if an unpaid opportunity arises, you have the freedom to take it
- You can volunteer for positions that you want to have, instead having to take what pays
- Wallace writes for Breakpoint, and he is able to dispense with the 1000-word limit that gets a fee
- Money opens up the danger of corruption, so it's another reason to just take it out of the picture
- You can be very effective in your apologetics ministry while still working full-time
- The second half is a good time to have even more freedom because your kids are grown up
- A good wife can really help you if she is picking up the slack so that you can work on your ministry
- Jane Pantig works for Ratio Christi, an organization that promotes apologetics on campus
- Jane's model: she is in full-time ministry, with a BS in biology and an MA in apologetics (Biola)
- Jane is able to get many high-quality speakers to speak for free/cheap at San Jose State University

The rest of the podcast deals a question that was asked at the San Jose State University event that Wallace did for Ratio Christi. I blogged about it this morning. I  laughed my butt off while listening to that podcast, starting at around 62:50 and on. It's pretty funny when he does the role-pay between Jesus and the people listening to him.

**My comments:**

The reason I wanted to post this is because I think that a lot of people feel obligated to quit their jobs and raise support because they think that you have to do apologetics full time. It's not true. Wallace explains that he worked as a cold-case detective until just recently when he took his pension. His pension is now underwriting his ministry. Similarly with me, I work a full-time job and run the blog out of my income. In addition, I probably donate a few thousand dollars each year to people who are organizing apologetics lectures, debates and conferences – events featuring speakers I like best.

This blog gets about 1 million page views per year, depending on the year (election years are better), so that's not an insignificant impact. In addition, I meet a lot of young Christians in university in different countries who want advice or mentoring, so I spend a few hours here and there mentoring them, and sometimes sending them rewards (books) for doing difficult degrees at good universities and getting good grades. My full-time job helps me to do all of these things. And before I could have a full-time job in information technology, I had to put in the time and effort to get the Bachelor and Masters degree in computer science.

So I think that Christian men especially need to be thinking about how much the apologetics enterprise of a one-dollar apologist relies on money. We really need to be thinking about that early on, in high school, and choosing to study hard things and to do well in those hard subjects. The higher-paying jobs that are more secure tend to be in fields like science, math, technology and engineering. We need to be thinking of doing these courses in high school – especially the men, but also the women – in order to be able to pay for our apologetics ministry. In addition, my decision to not marry (unless I meet a woman who can support me in my plan) gives me even more freedom to work on my ministry while working full time.

I fully approve of what Wallace said about self-financing your apologetics ministry – and supporting other

apologetics ministries – in order to avoid all appearance of self-interest. In fact, I have long admired Wallace for his intentional, practical way of doing his ministry. He doesn't take donations, and he gives away tons of materials for free. I like that.

# Hillary Clinton's views on the economy, taxes and jobs

**Wintery Knight** · 28 October 2014 · Archived copy · Original

The video above explains Hillary Clinton's views on how jobs get created. She doesn't think that private companies create jobs.

Here's the story from economist Stephen Moore writing at Investors Business Daily.

Excerpt:

> Hillary Clinton is getting deservedly attacked for her imbecilic statement at a Democratic political gathering in Massachusetts on Friday about business and jobs.
>
> "Don't let anybody tell you that, ah, you know, it's corporations and businesses that create jobs," she preached, to loud applause. "You know that old theory, trickle-down economics. That has been tried, that has failed. It has failed rather spectacularly."
>
> It may not be too surprising that Hillary can't connect the dots that it takes an employer to create an employee to create wages and salaries.
>
> That's how some 150 million Americans get paid every week. Ms. Clinton has made her millions in the cattle futures market, as a government employee and giving speeches for fees of $250,000 a pop. Nice work if you can get it. The rest of us mere mortals need a paycheck.
>
> Hillary's witless statement might be written off as campaign hyperbole, and some might think the Democratic front-runner for president simply got carried away speaking to her "progressive" base and didn't really mean it. Sometimes Republicans get into the act, as when Mitt Romney's GOP rivals attacked him in 2012 for being rich and a successful investor.
>
> But the scary thing is she really DID mean it. Her sophomoric comment, alas, reflects a long-simmering ideologically driven war against business that has become a central platform of the modern-day Democratic party.
>
> Her remarks were simply an extension of President Obama's "you didn't build that" statement denigrating businessmen and women who have created companies — large and small.
>
> In the left mindset, economic output and jobs are achieved collectively and thanks to the beneficence of government, not because of the ambition, drive, vision, risk-taking and guts that it takes to start a new enterprise out of nothing.

So who creates jobs then? Well, if it's not private sector businesses then the only thing left to create jobs is the government. She thinks government creates jobs. And the more government raises taxes, the more money government has to give people jobs.

But is that really how it has worked in the past?

Let's see.

Consider this article by the Cato Institute, a libertarian think tank, which discusses how the Reagan tax cuts affected the unemployment rate.

Excerpt:

> In 1980, President Carter and his supporters in the Congress and news media asked, "how can we afford" presidential candidate Ronald Reagan's proposed tax cuts?
>
> Mr. Reagan's critics claimed the tax cuts would lead to more inflation and higher interest rates, while Mr.

> Reagan said tax cuts would lead to more economic growth and higher living standards. What happened? Inflation fell from 12.5 percent in 1980 to 3.9 percent in 1984, interest rates fell, and economic growth went from minus 0.2 percent in 1980 to plus 7.3 percent in 1984, and Mr. Reagan was re-elected in a landslide.
>
> […]Despite the fact that federal revenues have varied little (as a percentage of GDP) over the last 40 years, there has been an enormous variation in top tax rates. When Ronald Reagan took office, the top individual tax rate was 70 percent and by 1986 it was down to only 28 percent. All Americans received at least a 30 percent tax rate cut; yet federal tax revenues as a percent of GDP were almost unchanged during the Reagan presidency (from 18.9 percent in 1980 to 18.1 percent in 1988).
>
> What did change, however, was the rate of economic growth, which was more than 50 percent higher for the seven years after the Reagan tax cuts compared with the previous seven years. This increase in economic growth, plus some reductions in tax credits and deductions, almost entirely offset the effect of the rate reductions. Rapid economic growth, unlike government spending programs, proved to be the most effective way to reduce unemployment and poverty, and create opportunity for the disadvantaged.

The Daily Signal describes the effects of the Bush tax cuts.

Excerpt:

> President Bush signed the first wave of tax cuts in 2001, cutting rates and providing tax relief for families by, for example, doubling of the child tax credit to $1,000.
>
> At Congress' insistence, the tax relief was initially phased in over many years, so the economy continued to lose jobs. In 2003, realizing its error, Congress made the earlier tax relief effective immediately. Congress also lowered tax rates on capital gains and dividends to encourage business investment, which had been lagging.
>
> It was the then that the economy turned around. Within months of enactment, job growth shot up, eventually creating 8.1 million jobs through 2007. Tax revenues also increased after the Bush tax cuts, due to economic growth.
>
> In 2003, capital gains tax rates were reduced. Rather than expand by 36% as the Congressional Budget Office projected before the tax cut, capital gains revenues more than doubled to $103 billion.
>
> The CBO incorrectly calculated that the post-March 2003 tax cuts would lower 2006 revenues by $75 billion. Revenues for 2006 came in $47 billion above the pre-tax cut baseline.
>
> Here's what else happened after the 2003 tax cuts lowered the rates on income, capital gains and dividend taxes:
>
> - GDP grew at an annual rate of just 1.7% in the six quarters before the 2003 tax cuts. In the six quarters following the tax cuts, the growth rate was 4.1%.
> - The S&P 500 dropped 18% in the six quarters before the 2003 tax cuts but increased by 32% over the next six quarters.
> - The economy lost 267,000 jobs in the six quarters before the 2003 tax cuts. In the next six quarters, it added 307,000 jobs, followed by 5 million jobs in the next seven quarters.
>
> The timing of the lower tax rates coincides almost exactly with the stark acceleration in the economy. Nor was this experience unique. The famous Clinton economic boom began when Congress passed legislation cutting spending and cutting the capital gains tax rate.

So in the past, the trickle-down supply-side tax cuts that Hillary Clinton derided in her speech created lots of jobs. We have to do what is known to work.

# Democrats spied on journalist who reported on gunrunning and Benghazi cover-up

**Wintery Knight** · 28 October 2014 · Archived copy · Original

Ex-CBS News reporter Sharyl Attkisson

I blogged about this before in May 2013, but this time it's in the New York Post.

Excerpt:

> A former CBS News reporter who quit the network over claims it kills stories that put President Obama in a bad light says she was spied on by a "government-related entity" that planted classified documents on her computer.
>
> In her new memoir, Sharyl Attkisson says a source who arranged to have her laptop checked for spyware in 2013 was "shocked" and "flabbergasted" at what the analysis revealed.
>
> "This is outrageous. Worse than anything Nixon ever did. I wouldn't have believed something like this could happen in the United States of America," Attkisson quotes the source saying.
>
> She speculates that the motive was to lay the groundwork for possible charges against her or her sources.
>
> Attkisson says the source, who's "connected to government three-letter agencies," told her the computer was hacked into by "a sophisticated entity that used commercial, nonattributable spyware that's proprietary to a government agency: either the CIA, FBI, the Defense Intelligence Agency or the National Security Agency."
>
> The breach was accomplished through an "otherwise innocuous e-mail" that Attkisson says she got in February 2012, then twice "redone" and "refreshed" through a satellite hookup and a Wi-Fi connection at a Ritz-Carlton hotel.
>
> The spyware included programs that Attkisson says monitored her every keystroke and gave the snoops access to all her e-mails and the passwords to her financial accounts.
>
> "The intruders discovered my Skype account handle, stole the password, activated the audio, and made heavy use of it, presumably as a listening tool," she wrote in "Stonewalled: My Fight for Truth Against the Forces of Obstruction, Intimidation, and Harassment in Obama's Washington."
>
> Attkisson says her source — identified only as "Number One" — told her the spying was most likely not court-authorized because it went on far longer than most legal taps.
>
> **But the most shocking finding, she says, was the discovery of three classified documents that Number One told her were "buried deep in your operating system. In a place that, unless you're a some kind of computer whiz specialist, you wouldn't even know exists."**
>
> **"They probably planted them to be able to accuse you of having classified documents if they ever needed to do that at some point," Number One added.**

> In her book, Attkisson says CBS lost interest in her coverage of the deadly attack on the US Embassy in Benghazi, Libya, and killed her stories of the federal “Fast and Furious” gun-running scandal.
>
> Both CBS and the White House declined to comment.

Investors Business Daily has more on some of the other things they and her former employer CBS News did to her to get her to shut up. The funny thing about her is that I remember her going after the Bush-43 administration *hard* when Bush was in power. So she is basically doing her thing whether there’s a Republican or a Democrat administration in power. The problem is her bosses – they were willing to let her report on Republican scandals, but when it was a Democrat administration, it all had to be hushed up.

# Will robots and machines ever have consciousness like humans?

**Wintery Knight** · 28 October 2014 · Archived copy · Original

There is a very famous thought experiment from UC Berkeley philosopher John Searle that all Christian apologists should know about. And now everyone who reads the Wall Street Journal knows about it, because of this article.

In that article, Searle is writing about the IBM computer that was programmed to play Jeopardy. Can a robot who wins on Jeopardy be "human"?Searle says no. And his famous Chinese room example (discussed in the article) explains why.

Excerpt:

> Imagine that a person—me, for example—knows no Chinese and is locked in a room with boxes full of Chinese symbols and an instruction book written in English for manipulating the symbols. Unknown to me, the boxes are called "the database" and the instruction book is called "the program." I am called "the computer."
>
> People outside the room pass in bunches of Chinese symbols that, unknown to me, are questions. I look up in the instruction book what I am supposed to do and I give back answers in Chinese symbols.
>
> Suppose I get so good at shuffling the symbols and passing out the answers that my answers are indistinguishable from a native Chinese speaker's. I give every indication of understanding the language despite the fact that I actually don't understand a word of Chinese.
>
> And if I do not, neither does any digital computer, because no computer, qua computer, has anything I do not have. It has stocks of symbols, rules for manipulating symbols, a system that allows it to rapidly transition from zeros to ones, and the ability to process inputs and outputs. That is it. There is nothing else.

Here is a link to the full article by John Searle on the Chinese room illustration.

By the way, Searle is a naturalist – not a theist, not a Christian. But he does oppose postmodernism. So he isn't all bad. But let's hear from a Christian scholar who can make more sense of this for us.

Here's a related article on "strong AI" by Christian philosopher Jay Richards.

Excerpt:

> Popular discussions of AI often suggest that if you keep increasing weak AI, at some point, you'll get strong AI. That is, if you get enough computation, you'll eventually get consciousness.
>
> The reasoning goes something like this: There will be a moment at which a computer will be indistinguishable from a human intelligent agent in a blind test. At that point, we will have intelligent, conscious machines.
>
> This does not follow. A computer may pass the Turing test, but that doesn't mean that it will actually be a self-conscious, free agent.
>
> The point seems obvious, but we can easily be beguiled by the way we speak of computers: We talk about computers learning, making mistakes, becoming more intelligent, and so forth. We need to remember that we are speaking metaphorically.
>
> We can also be led astray by unexamined metaphysical assumptions. If we're just computers made of meat, and we happened to become conscious at some point, what's to stop computers from doing the same? That makes sense if you accept the premise—as many AI researchers do. If you don't accept the premise, though, you don't have to accept the conclusion.
>
> In fact, there's no good reason to assume that consciousness and agency emerge by accident at some threshold of speed and computational power in computers. We know by introspection that we are conscious, free beings—though we really don't know how this works. So we naturally attribute consciousness to other humans.

> We also know generally what's going on inside a computer, since we build them, and it has nothing to do with consciousness. It's quite likely that consciousness is qualitatively different from the type of computation that we have developed in computers (as the "Chinese Room" argument, by philosopher John Searle, seems to show). Remember that, and you'll suffer less anxiety as computers become more powerful.
>
> Even if computer technology provides accelerating returns for the foreseeable future, it doesn't follow that we'll be replacing ourselves anytime soon. AI enthusiasts often make highly simplistic assumptions about human nature and biology. Rather than marveling at the ways in which computation illuminates our understanding of the microscopic biological world, many treat biological systems as nothing but clunky, soon-to-be-obsolete conglomerations of hardware and software. Fanciful speculations about uploading ourselves onto the Internet and transcending our biology rest on these simplistic assumptions. This is a common philosophical blind spot in the AI community, but it's not a danger of AI research itself, which primarily involves programming and computers.
>
> AI researchers often mix topics from different disciplines—biology, physics, computer science, robotics—and this causes critics to do the same. For instance, many critics worry that AI research leads inevitably to tampering with human nature. But different types of research raise different concerns. There are serious ethical questions when we're dealing with human cloning and research that destroys human embryos. But AI research in itself does not raise these concerns. It normally involves computers, machines, and programming. While all technology raises ethical issues, we should be less worried about AI research—which has many benign applications—than research that treats human life as a means rather than an end.

When I am playing a game on the computer, I know exactly why what I am doing is fun – I am conscious of it. But the computer has no idea what I am doing. It is just matter in motion, acting on it's programming and the inputs I supply to it. And that's all computers will ever do. Trust me, this is my field. I have the BS and MS in computer science, and I have studied this area. AI has applications for machine learning and search problems, but consciousness is not on the radar. You can't get there from here.

# New study: being raised by married parents has huge positive effect on economic well-being

**Wintery Knight** · 29 October 2014 · Archived copy · Original

Here's some of the findings from the Institute for Family Studies.

Excerpt:

> Wilcox and Lerhman found that growing up in a two-parent family correlated with many positive outcomes for kids, well into adulthood. For example:
>
> - Growing up with both parents reduced the probability for dropping out of high school by 15 percent for men and 9 percent for women.
> - Growing up in an intact family reduced women's chances of becoming single mothers by 12 percent and men's chances of being nonresidential fathers by 5 percent.
> - Both men and women who grew up in intact families enjoyed substantial marriage premiums. Young men who grew up in intact families earned, on average, more than $6,500 more in personal income and more than $16,000 more in family income than their peers who grew up in single-parent families. Young women from intact families earn more than $4,700 in personal income and more than $12,000 more than their peers from single-parent families.
> - Growing up with both parents also increased young adults chances of marrying themselves. Men who grew up in intact homes were 10 percent more likely to get married than their peers who grew up in single-parent families. Women who grew up in intact homes were 12 percent more likely to marry.
>
> Individuals who grow up in intact homes are more likely to marry and once they do, they are the recipients of a host of benefits associated with being married.
>
> - Married men age 28–30 earn nearly $16,000 more, on average, than their single peers. Their family income is nearly $22,000 higher than their single peers. And the marriage premium for men extends to less-educated and minority men who are often at a disadvantage in the work force. Married young men with only high-school educations, for example, earned more than $17,000 more than their single peers.

I don't like to blog about these things without solutions. I have some of my own (school choice, abstinence education funding, repeal no-fault divorce, defund Planned Parenthood, double the child tax credit for married couples, provide a carry forward tax credit to each married parent for ALL income earned by children before age 21, etc.).

But the new study has some solutions too:

> Wilcox and Lehrman do make recommendations for strengthening lower and middle-class families. They recommend eliminating marriage penalties from the tax code, while increasing the child credit and the earned income credit maximum. They also recommend improving vocational training and launching a national campaign that encourages young adults to follow the "success sequence": education, job, marriage, children.

I think a lot of kids of my generation should be reading studies like this and wondering "what did the party of premarital sex, no-fault divorce, abortion and gay rights do for me?". If your political party embraces policies that encourage people to see sex as recreational instead of a way of producing creatures who then become the responsibilities of parents, you are in the wrong political party. The Democrat party is the part of selfishness, and that's why they attack marriage. Marriage is about restraining adults so that children benefit, and every selfish Democrat policy that damages marriage damages children.

As Dennis Prager says:

> Even today, after decades of feminism, most Americans agree that it is better for women and men — and society — when women and men marry. Yet when women marry, it is bad for the Democratic Party; and when women do not marry, even after — or shall we say, especially after — having children, it is quite wonderful for the Democratic Party.
>
> Married women vote Republican. Unmarried women lopsidedly vote Democrat. It is both silly and dishonest to deny that it is in the Democrats' interest that women not marry.

They have no reason to strengthen marriage, and their policies (sex education, no-fault divorce, single mother welfare, gay marriage, etc.) don't strengthen marriage. It sounds like such a nice thing to want to not shame people for premarital sex and divorce. After all, we want people to feel good no matter what they choose, right? But there is a price to pay for this "tolerance" of adult selfishness – it's paid by their children. That's what happens when we put feelings about moral boundaries.

# Pastor Franklin Graham tells Obama: Islam “is a false religion”

**Wintery Knight** · 29 October 2014 · Archived copy · Original

When a pastor does the right thing, I have to feature it.

This is from CNS News.

Excerpt:

> Reverend Franklin Graham, son of world renowned evangelical pastor Billy Graham, said that President Barack Obama was “fundamentally mistaken” about radical Islam; questioned why peaceful Muslims do not collectively condemn jihadist terrorism; and argued that Islam “is a false religion” and that “it is impossible for a false religion to be a true religion of peace.”
>
> Rev. Franklin Graham also cited examples from a speech he recently gave outside the White House, decrying the actions of followers of a “peaceful religion” who practice “female circumcision,” hijacking, kidnapping, “honor” killings, and decapitation.
>
> Rev. Graham commended President Obama for sending some U.S. troops to fight the Islamic State but, citing Obama’s Sept. 24 speech at the United Nations where the president said “Islam teaches peace,” the reverend said, “I also believe our president is completely and fundamentally mistaken about the intolerant and violent nature of hardened Islamic followers.”
>
> “For Muslims, peace comes only through submission to Islam,” said Rev. Graham in his November commentary for *Decision* magazine, published by the Billy Graham Evangelistic Association. “When they speak of peace, they mean submission to their religion. Worldwide, tens of thousands of men, women and children have been slaughtered in the name of Allah, under the bloody flag of Islam.”

Persecution of minorities:

> Rev. Graham noted the case of Pastor Saeed Abedeni, an Iranian American who is in prison in Iran “simply because of his Christian faith, beaten and tortured for the sake of Christ by the hostile Islamic regime.”

Executions:

> “Mr. President, followers of a peaceful religion do not cut off the heads of innocent people in the barbaric fashion the world has watched recently,” Rev. Graham had said over the loudspeakers, addressing the president and the White House.

Kidnapping and sex-trafficking:

> “Mr. President, believers in a peaceful religion do not kidnap 300 young schoolgirls as Boko Haram did in northeastern Nigeria in April and reportedly [sell] them to men to be sex slaves,” he said. “Mr. President, no peaceful religion would tolerate, let alone practice, female circumcision, require a woman to have her husband’s permission to leave her home and take up employment, and restrict her ability to receive justice in the case of sex crimes.”

“Honor” killings:

> Rev. Graham continued, “Mr. President, a peaceful religion would not condone and allow a father to drown a daughter in a swimming pool in front of the family in the name of family honor because she might have stayed out late in the evening with her boyfriend. Mr. President, why haven’t the 3.5 million Muslims in North

> America rejected this gross, barbaric and despicable behavior by their fellow Muslims on American soil?”

And there is no widespread outrage among Western muslims over these actions:

> Rev. Graham went on to note that the “terrible acts” he cited had not been carried out by “peaceful Muslims, but by radical extremists,” but he questioned why many, “if not most” of the 1.6 billion Muslims in the world have not condemned these violent acts. If a so-called Christian commits an act of terrorism, mainstream Christians “quickly and unanimously rise together to condemn it,” he said.

I don’t think Franklin Graham is right 100% of the time, and I don’t agree with him 100% of the time. But it takes balls of steel to say things like this in today’s politically correct culture. Got to tip my hat to him. But then again, he’s not running for office, so he can say what he really thinks. And I have to say I agree that the examples of behavior by Muslims are outrageous and immoral. And I think a lot of non-Christians are going to agree with Graham, too.

# J. Warner Wallace: important differences between Christianity and Mormonism

**Wintery Knight** · 29 October 2014 · Archived copy · Original

Here's a podcast featuring J. Warner Wallace. This is an after action report from Wallace's recent missions trip to Utah to evangelize Mormons.

The MP3 file is here. (74 minutes)

Topics:

- Mormons disagree with Christians about the nature of God, Jesus and salvation
- The differences are so dramatic that the two religions are completely different views
- Mormons try to portray themselves as a denomination of Christianity
- The Utah missions trip: how Christians were trained to engage with Mormons
- Mormonism is a works-based religion – you earn your way to eternal life by doing works
- In Christianity, eternal life is a free gift from God to anyone who accepts Jesus as their leader and redeemer
- Mormons believe that doctrines can change from generation to generation (progressive revelation)
- Mormons commonly make the case for a works-based theology by appealing to Jesus' Sermon on the Mount
- Mormons believe that you have to be perfect in order to get "exalted" eternal life
- Christians are perfect because Jesus has paid the price of our rebellion against God
- Christians: Jesus' sacrifice pays for anything evil that we have done and could do
- Christians are made perfect because Jesus' perfection is applied to them
- Christians are not practically perfect, but they are perfect by accepting that the sacrifice of Jesus on the cross
- God credits righteousness to Christians because Jesus has already died to pay off the punishment for their sins
- The good works that Christians do are a voluntary response to this free gift of salvation
- The good works do not secure a Christian's salvation, they are the natural outworking of accepting the gift of salvation
- The Mormon view of the afterlife is different from the Christian view
- The best Mormon afterlife ("exaltation") requires continued righteousness to the end of one's natural life
- This is not compatible with Christian teaching about salvation being by grace and not by doing good works (Gal 3:10-14)
- Mormons can never know whether they are saved or not until the day they die
- Christians can be sure of their salvation from the moment they accept Jesus as their leader and redeemer
- The Bible is clear that we can know whether we are saved or not (John 5:9-14)
- It is inconsistent for Mormons to claim to be Christians and then try to convert Christians to Mormonism
- The reason why Mormons go door to door is because they think Christians are wrong
- The Mormon view of Jesus is nothing like the Christian view of Christ (from the Bible)
- Mormonism is polytheistic, whereas Christianity is monotheistic
- Mormon "gods" are just beings who have a human nature who were "exalted" for doing good works
- When debating Mormons, they will try to argue that Mormonism is true because it results in good works
- The Biblical standard for a good prophet is to see whether his prophecies come true
- The Mormon view is that Joseph Smith is reliable because he did good works
- But good works are not a good way to test truth claims – a person could be "good" and still say false things

- A good question to ask Mormons: is the Book of Mormon ancient? It claims to be ancient, but is it?
- They may try to answer this question by appealing to fideism: praying for confirmation by burning bosom
- But this is not a question that can be assessed by subjective feelings (just pray about it)
- This is a question that needs to be assessed by historians using historical evidence
- There is no historical or archaeological support for the claims in the Book of Mormon
- In contrast, we have direct eyewitness testimony about the life of Jesus in the New Testament
- We have fragments of NT manuscripts dating back to first century so we know that the New Testament is ancient

You can find lots more awesome J. Warner Wallace podcasts here. Also, I know a secret – his new book is coming along well, and he actually posted a picture of all the books he read preparing for it on Facebook. It's a lot! The title is "God's crime scene".

Previously, I posted my refutation of Mormonism which used two evidential arguments. And J.W. Wartick has posted two philosophical arguments against Mormonism as well.

# Chicago pastor's church is broken into by Democrats after he endorses Republican

**Wintery Knight** · 30 October 2014 · Archived copy · Original

From the Chicago Sun-Times.

Excerpt:

> Corey Brooks, a South Side pastor featured in an ad endorsing Republican gubernatorial candidate Bruce Rauner, says he's moved his family from his home while police investigate an overnight burglary of his church, as well as threatening derogatory phone calls he received which claim he'll be beaten for being Rauner's "puppet."
>
> On Saturday, Brooks rushed to the New Beginnings Church of Chicago after a maintenance employee found the church's back doors shattered and an estimated $8,000 stolen from a glass charity box, meant to build a community center across from the church.

Nothing surprising about that. To be a Democrat is to take other people's money. That's their whole thing.

More:

> "The death threats seem to be related to Bruce Rauner," Brooks said at the church Saturday. "They say his name as well as mine and most of the references were in response to me in support of him. So it's really derogatory, real racial, a lot of homophobic words. It's real life threatening."
>
> Brooks said he received the five phone calls on Friday. He recorded one of them, and provided it to police. In that call, which was played for the Sun-Times, a man's voice is disguised via a high-pitched filter. He is heard calling Brooks a "token n——."
>
> "We on you boy, we on you. And you ain't got nobody that can stop us, nobody. Who you go [to] the deacons? They can't stop us. We going to beat your fat a– in front of your mama congregation Sunday. Yeah we going to steal the sheep of the hypocrite. You's a hypocrite we going to beat your fat a– in front of your own congregation. Who you got that…f— we going to beat their a– too. They can't protect you. You sell out you Uncle Tom a– n——. You token. You a puppet for Bruce Rauner you puppet n—— a–. P—- a– n——," the voice says on the recording.
>
> Brooks said he believes his family is in danger, which prompted him to move to a temporary home until the threats are investigated.
>
> "It was enough to want to move my family. Any time people threatening your life, and you know if it were just me, I maybe would just say whatever. But when you mention my family, you mention our church. Things like that, I have to take it seriously," Brooks said.

I also noticed that this video of black conservatives has gone viral:

[Source]

As a non-white conservative, I have had reactions like this before. I remember being sneered at by liberal women in college, and I get dirty looks from them in the gym for watching Fox News, too. They ask me if I am pro-life and then turn up their noses at me when I tell them "yes". It's interesting being a colored conservative. People get so angry about it. The best way to defuse that, I've found is to just ask them questions, like who the Vice President is, or who the Speaker of the House is. Once you show them that you know more than they do, they leave you alone.

# Harvard poll: majority of youth likely voters favor Republicans this election

**Wintery Knight** · 30 October 2014 · Archived copy · Original

I'm not sure if I really believe this Harvard Institute of Politics poll because young people seem to be so disinterested in moral issues, economics and national security these days. But I guess even young people know whether they have jobs, whether they like living with their parents and whether they want to have their heads chopped off. Right?

Right:

> More than half – 51 percent – of America's millennials who say they will "definitely be voting" in November prefer a Republican-run Congress, with only 47 percent favoring Democrat control, according to a Harvard Institute of Politics poll.
>
> This marks a significant departure from the institute's findings before the 2010 midterm elections, when America's 18-29 year olds who were definitely voting favored Democrats 55 percent to 43 percent.
>
> Institute director Maggie Williams described the youth vote as "politically up for grabs" and a potential "swing vote" for control of Congress in a conference call to announce the results.
>
> "The message to political candidates is clear: Ignore millennial voters at your peril," Williams said.
>
> What's more, the poll found that only 43 percent of millennials approve of President Obama's job performance, while 53 percent disapprove. It is his second-lowest rating in the institute's polls since he took office. The figures are only slightly worse for Obama among those who will "definitely be voting": 42 percent approve, 56 percent disapprove.
>
> The results showed a stark divide in presidential approval along racial and ethnic lines. Only three in 10 young whites approve of the president's performance, while nearly eight in 10 young blacks approve. Hispanic youth approval fell to 49 percent, down from 60 percent just six months ago.
>
> Director of Polling John Della Volpe described youth voters as "a little bit less Democratic" than during Obama's first term, speaking on the conference call. Factoring in the voting likelihood of all millennials, more 18-29 year olds prefer a Democrat-controlled Congress than a Republican one (50 percent to 43 percent), Della Volpe said – but the age group has become less supportive of the party.
>
> **"A lot of it comes down to turnout," Della Volpe said. "It seems that young Republicans are more likely to participate next week."**

And this, I really like:

> The poll also surveyed voters about terrorism threats. More than six in 10 millennials say they are "a great deal" or "somewhat" worried about another terrorist attack, **with young women (66 percent) more afraid than men (56 percent).**

I guess my naive view of young, unmarried women is that they are all like the ones I see in my gym – watching the Bravo channel or game shows to see people with too much make say mean things to one another. But it turns out that they are actually concerned with the economy and national security, which is a very good thing. Welcome aboard, young ladies! It's not a shame to have a fear of something if the fear is justified, and if you do something about it to make it go away.

And by the way, the men in the gym are just as bad about not paying attention to politics and the economy. The day of the terrorist attack in Ottawa, the men were all watching *ESPN sports*. Horrible! Even the muscle bound

Christian guy changes the channel from Fox News to ESPN as soon as I leave. The only person who is responsible *at all* is the gay guy – he at least watches local news.

# New poll reveals where evangelicals diverge from orthodox Christian theology

**Wintery Knight** · 30 October 2014 · Archived copy · Original

Got this Christianity Today article from my friend Eric Chabot, who blogs at Think Apologetics.

Excerpt:

> A survey released today by LifeWay Research for Ligonier Ministries "reveals a significant level of theological confusion," said Stephen Nichols, Ligonier's chief academic officer. Many evangelicals do not have orthodox views about either God or humans, especially on questions of salvation and the Holy Spirit, he said.
>
> Evangelicals did score high on several points. Nearly all believe that Jesus Christ rose from the dead (96%), and that salvation is found through Jesus alone (92%). Strong majorities said that God is sovereign over all people (89%) and that the Bible is the Word of God (88%).

And now the bad parts:

> Almost all evangelicals say they believe in the Trinity (96%) and that Jesus is fully human and fully divine (88%).
>
> But nearly a quarter (22%) said God the Father is more divine than Jesus, and 9 percent weren't sure. Further, 16 percent say Jesus was the first creature created by God, while 11 percent were unsure.

If that's a problem for you, then read this post from Come Reason.

More badness from the original article:

> But if evangelicals sometime misunderstand doctrines about Jesus, the third member of the Trinity has it much worse. More than half (51%) said the Holy Spirit is a force, not a personal being. Seven percent weren't sure, while only 42 percent affirmed that the Spirit is a person.
>
> And 9 percent said the Holy Spirit is less divine than God the Father and Jesus. The same percentage answered "not sure."
>
> Like Arianism, confusion over the nature and identity of the Spirit dates to the early church. During the latter half of the fourth century, sects like Semi-Arians and *Pneumatomachi* (Greek for "Spirit fighters") believed "in the Holy Spirit"—as the First Council of Nicaea (A.D. 325) taught—but said the Spirit was of a different essence from the Father and the Son. Some said the Spirit was a creature, and others understood the Spirit to be a force or power, not a person of the Trinity.
>
> At Constantinople, 150 bishops assembled to discuss these heresies, among other issues, and affirmed that "the Father, the Son and the Holy Spirit have a single Godhead and power and substance, a dignity deserving the same honor and a co-eternal sovereignty, in three most perfect hypostases, or three perfect persons." Affirming the full divinity and personhood of the Holy Spirit, the church ruled out Semi-Arianism and Pneumatomachianism.

Here's another:

> Human nature and salvation were other areas of confusion for respondents. Two out of three (68%) said that a person obtains peace with God by seeking God first, and then God responds with grace. A similar percentage (67%) said people have the ability to turn to God on the own initiative. Yet half (54%) also think salvation begins with God acting first. So which is it?

> In the fifth century, a British monk named Pelagius reportedly argued that people can choose God by the strength of their own will. Adam's sin, he taught, did not sabotage human freedom, so we still have the ability to choose and follow God by the strength of our will.
>
> His school of thought, known as Pelagianism, was denounced at the Council of Carthage in 418 and later at the Council of Ephesus in 431. A variation, known as Semipelagianism, cropped up shortly thereafter, affirming original sin but teaching that humans take the initiative in salvation. The Council of Orange in 529 rejected Semipelagianism as heretical, maintaining that faith is a gift of God's grace and does not originate in ourselves.
>
> More than half of survey participants (55%) said people have to contribute to their own salvation. This, however, is a debated issue. Some Christians—such as Roman Catholics, Orthodox, and certain Protestants—believe humans cooperate with God's grace in salvation. Others believe our efforts can contribute nothing, though a response to God's grace is a necessary element of conversion. Nevertheless, historic Christian teaching in all branches maintains that whatever role humans play is ultimately inspired by the work of God's Spirit.

My view is "our efforts can contribute nothing, though a response to God's grace is a necessary element of conversion". Nobody desires God, but if we reject his drawing of us to him, in whatever form that takes, we are responsible. That's my view, anyway!

Go take a look at the article and see if you commit any of the heresies.

# The scariest old time radio shows for Hallowe'en

**Wintery Knight** · 31 October 2014 · Archived copy · Original

Arrrr! Lobster Pirate is pleased that it is Hallowe'en!
Here are some of the scariest old time radio shows EVER! These are MP3 files. Be careful, they are SCARY!

- The House in Cypress Canyon (Suspense)
- The Thing on the Fourble Board (Quiet, Please)
- Three Skeleton Key (Escape)
- Donovan's Brain – part1, part 2 (Suspense)
- Sorry, Wrong Number (Suspense)
- The Country of the Blind (Escape)
- Ghost Hunt (Suspense)

The House in Cypress Canyon is the scariest one, in my opinion. If you can't download MP3s, then you can read the transcript here.

UPDATE: This one is by request from Nathan:

Happy Hallowe'en!

# Reformation Day celebrates the supremacy of Scripture and reason in theology

**Wintery Knight** · 31 October 2014 · Archived copy · Original

The Ligonier Ministries web site has a summary of the event that kicked off the Reformation.

Excerpt:

> On October 31, 1517, Martin Luther tacked up 95 theses on the church door at Wittenberg. With this act, he hoped to provoke a discussion among the scholars about the abuses of the indulgences by the Roman Catholic Church. He was not trying to create a public furor by any means, but within a fortnight, these theses had spread through the country like wildfire. The last thing Luther had in mind was to start some kind of major controversy, but nevertheless major controversy did begin.
>
> From the discussions at Wittenberg, the disputations began to accelerate and escalate. Copies of the theses reached Rome and critical meetings were scheduled with the young monk. In these debates, Luther was maneuvered into proclaiming publicly that he had questions about the infallibility of church councils and also that he thought that it was possible that the pope could err. In 1520 a papal encyclical was issued which condemned Martin Luther as a heretic. Luther burned the document in a public bonfire and his defiance before the church was now a matter of record.
>
> In response, Martin Luther picked up his pen to challenge the entire penitential system of the Roman Catholic Church, which undermined in principle the free remission of sins that is ours in the gospel. By doing so, he was unswervingly advocating his commitment to *sola fide*, the doctrine of justification by faith alone.
>
> In 1521, Luther was summoned to the Imperial Diet, an authoritative meeting that involved the princes of the church, called by the Emperor of the Holy Roman Empire to be held in the city of Worms in Germany. Luther was an outlaw. For him to appear at the Diet was to risk his very life; therefore, he was given safe conduct by the Emperor to attend. With a few friends, Luther traveled from Wittenberg to Worms. The eyewitnesses of that episode tell us that when Luther's little covered wagon appeared around the corner of the bend, there were lookouts posted in the church tower at Worms. All the people were agog waiting for the arrival of this notorious person. When Luther's caravan was sighted, people were throwing their hats in the air, blowing trumpets, and creating all the fanfare of the arrival of the hero. It was the 16th century answer to a ticker-tape parade.
>
> Things, however, became very solemn in a hurry because the next day he appeared before the Diet. His books were stacked on a table in the room, and he was asked and ordered to recant of his writings. This surprised Luther because he thought he was going to have an opportunity to defend his writings; but the only question really of any importance that was asked of him was this: "Are these your writings?" And when he said yes, they said, "Are you ready to recant of them?"
>
> Hollywood has their version of Luther standing there boldly with his fist in the air saying, "Here I stand!" and so on. But instead he dropped his chin on his chest and muttered something that nobody could understand, so they asked him to speak up. "What did you say?" He said, "May I have 24 hours to think about it." And so Luther was granted a reprieve of 24 hours to return to his room to contemplate the seriousness of this occasion.
>
> The prayer that Luther wrote in that ensuing 24-hour period was one of the most moving prayers I have ever read in my life. In that prayer, Luther cried out for God in his sense of total loneliness fearing that God had abandoned him, and proclaimed, "O Lord, I am Thine, and the cause is Thine, give me the courage to stand."
>
> And on the morrow, Luther was called once again back to the court and was told to reply to the question. He said to the Diet, "Unless I am convinced by sacred Scripture or by evident reason, I cannot recant, for my conscience is held captive by the Word of God, and to act against conscience is neither right nor safe. Here I stand. I can do no other. God help me." And with that there was an instant uproar.

The Protestant Reformation emphasizes the responsibility of each person to become familiar with what the Bible teaches for themselves and to make sense of it using the laws of logic for themselves. There is an enormous focus on the individual and individual's responsibility to puzzle theology out for himself, using the tools available to him: reason, science, Scripture, history. The Reformation put forward the famous five Solas: "Sola Scriptura" (Scripture Alone); "Sola Gratia" (Grace Alone); "Sola Fide" (Faith Alone); "Solus Christus" (Christ Alone); and "Soli Deo Gloria" (To God Alone Be Glory).

My friend J.W. Wartick has a post about the effects of the Reformation on society as a whole.

Here's one of the effects: (links removed)

> Capitalism had already begun before the European Reformations, having its renewal start in Italian city states in the 12th Century (for a detailed and extremely interesting discussion of this, see Rodney Stark, *The Victory of Reason,* 71ff). The Reformation, however, provided a place for capitalism to flourish. John Calvin's thought touched upon nearly every contemporary problem, and one of these was usury (money lending at interest). Focusing upon the cultural context of the prohibition of usury in the Hebrew Scriptures, Calvin argued that his contemporary cultural context provided a way for usury to work without being necessarily wrong. Lending money in such a fashion was essential for the later development of capitalism (Alister McGrath, *Reformation Thought: An Introduction*, 259-260).
>
> The Reformation also paved the way for a "Protestant Work Ethic." Martin Luther's notion of the "priesthood of all believers" demolished the hard distinction between the "temporal" and "spiritual" realm which dominated the thought of the church at the time. By breaking down this barrier, hard labor was elevated. It was no longer seen as an inferior life to that of monastic withdrawal; rather, any type of work could be pleasing to God (McGrath, 256-258). In contemporary churches, one can often hear about how the engineer, the retail worker, the auto worker, and the like should all utilize their skills to the glory of God. Such thinking came directly from the Reformation.

The Reformation also accelerated scientific exploration, because Christians promoted the idea that nature held secrets about God's existence and character.

Excerpt:

> Without the Reformation, modern science would probably have developed in any event because of the ethos of rationality and the doctrine of creation conducive to it. The Reformation, however, hastened the development by criticizing scholasticism and by putting emphasis on the direct observation of nature. Luther has been called the Copernicus of theology while, on the other hand, Copernicus has been called the Luther of astronomy. Indeed, Thomas Sprat, an Anglican clergyman and an early member of the Royal Society, emphasized that there was a reformation, some would say revolution, in both philosophy and theology [3]. In natural philosophy or science, questions about nature were no longer answered primarily by quoting Aristotle and the Scholastics, but by turning to observation of and experimentation on nature itself. Similarly, after the Reformation, Protestants no longer answered questions in theology primarily by quoting scholastic philosophers and theologians, but by turning directly to the Bible. Luther interpreted Scripture by asking: what is the clear and straightforward meaning of the text? Scientists interpret nature in the simplest way using the minimum number of hypotheses.
>
> Luther believed that the world was beginning a new age, which would bring not only a reform of religion but a new appreciation of nature. In his informal "Table Talk" he said,
>
> We are at the dawn of a new era, for we are beginning to recover the knowledge of the external world that was lost through the fall of Adam. We now observe creatures properly …. But by the grace of God we already recognize in the most delicate flower the wonders of divine goodness and omnipotence [4].
>
> In the last part of this statement, Luther paraphrased the words of the Apostle Paul in his letter to the Romans

> (Rom. 1:20).
>
> Luther was open to the authentic scientific advances of his age [5]. He appreciated the mechanical inventions of his day.
>
> He accepted the use of medicine in treating disease and is quoted as having said [6],
>
> It's our Lord God who created all things and they are good. Wherefore it's permissible to use medicine, for it is a creature of God.
>
> To someone who said that it is not permissible for a Christian to use medicine, Luther replied rhetorically, "Do you eat when you are hungry?" According to Andrew White [7], this attitude of Luther made the Protestant cities of Germany more ready than others to admit anatomical investigation and dissection.
>
> Luther accepted astronomy as a science, but rejected astrology as a superstition because it cannot be confirmed by demonstration. Astrology, according to Luther, is idolatry and violates the first commandment. He was both amused and distressed by Melanchthon's interest in astrology, a belief system that was widely accepted at the time [8].

The Reformation means good economics and good science, as well as good theology.

One problem I think was left unsolved by the Reformation, though, was how to reconcile free will with divine sovereignty.

Thankfully, Christian scholars came up with the doctrine of middle knowledge, which reconciles divine sovereignty with human freedom and responsibility, solving a problem with Reformed theology.

A very good book on middle knowledge is "Salvation and Sovereignty" by Kenneth Heathley. Highly recommended by Paul Gould.

# Friday night detectives: yes, two more episodes of Sherlock Holmes

**Wintery Knight** · 31 October 2014 · Archived copy · Original

It's Friday, so that means more mysteries.

Here are 2 episodes of "The Adventures of Sherlock Holmes".

The Resident Patient:

The Second Stain:

And don't forget the scary Hallowe'en podcasts I posted this morning.

Happy Friday!

# Is feminism compatible with chivalry?

**Wintery Knight** · 1 November 2014 · Archived copy · Original

Here's an interesting article in the Federalist that makes a point I've often made about eradication gender roles. If you get rid of the idea men ought to perform certain roles in society, and then don't give them any respect for fulfilling those roles, then don't be surprised when they reject the expectations of society.

Excerpt:

> Well, our brave new world of gender *equality*—in which we scoff at gender differences and men and women are encouraged to act the same—often proves harmful to women and girls. While the modern feminist movement won women tremendous freedoms educationally, professionally, personally, and sexually, it often leaves women feeling anything but empowered.
>
> The reality is these freedoms have too often come at the expense of all values and traditions. We've in effect thrown the helpful social mores out with the old-fashioned bathwater. But it's the modern feminist movement, which ushered away any hint of traditional chivalry and gendered expectations, that's in part to blame. Certainly few want to return to an age when gender roles were excessively rigid, but feminists have gone to extremes and encouraged a culture that undermines healthy gender relationships. Men who hold doors are now viewed as part of the patriarchal society. And girls are expected to just "be one of the guys."
>
> But gender roles helped men and women and in times past allowed the sexes to better navigate the sometimes-rough waters of romance, courtship, marriage, and sex. Feminists view the chivalry and social mores of previous generations as anachronistic. But the reality is these traditional customs of giving up a seat for a woman on a train, or accompanying a woman in public, weren't all rooted in sexism. They were social structures to help make men more respectful of women and to curb this kind of inappropriate behavior.

> It might not have been perfect, but it had a purpose. Today's dismissal of gender differences instead creates confusion, disappointment, and often more opportunity for harassment.

It seems to me that this article explains why men are so disappointing these days with respect to rising up to the roles of protector, provider, moral leader and spiritual leader.

If you tell women that there is nothing that men aspire to that is different than what women aspire to, then they lose the ability to evaluate men as protectors, providers, moral leaders and spiritual leaders. If men have no special roles, then the only way to distinguish a good one from a bad one is by appearance, peer-approval and tingles (feelings). Once men understand that this is how they are being evaluated, that's where they put their effort.

I can tell you that in my experience, women who are influenced by feminism do not welcome men who focus on and excel at these male responsibilities. My new duties, as I understand them from the culture, are to be fun-loving, thrill-providing, and non-judgmental. No definite moral or spiritual opinions are allowed. That's the job of the public schools – to teach us right and wrong and our secular religion. And protecting and providing? That's the job of the police and the army, and the government social programs. Men don't like it when they don't have respect for fulfilling roles that are their responsibility. We do better when we are respected for being able to do something that others cannot do, and when we are not micro-managed by others while doing it.

Regarding chivalry, I think it's only safe to do now with women who explicitly reject feminism. Being chivalrous to a feminist doesn't earn her respect, so don't bother.

# Obama on stay-at-home moms: “that’s not a choice we want them to make”

**Wintery Knight** · 1 November 2014 · Archived copy · Original

Breitbart reports:

> During a speech in Rhode Island today, President Obama stressed the importance of public pre-school in America, pointing out that the cost of daycare was getting too high.
>
> “Moms and dads deserve a great place to drop their kids off every day that doesn’t cost them an arm and a leg,” Obama stated. “We need better child care, day care, early child education policies.”
>
> Obama explained that in many states it cost parents more money to put their kids in day care than it cost to put them in a public university.
>
> “Too often parents have no choice but to put their kids in cheaper day care that maybe doesn’t have the kinds of programming that makes a big difference in a child’s development,” he said.
>
> Because America lacks public pre-school, Obama said, women often earned less money than men.
>
> “Sometimes, someone, usually Mom, leaves the workplace to stay home with the kids, which then leaves her earning a lower wage for the rest of her life as a result,” he said. “That’s not a choice we want Americans to make.”
>
> Creating public pre-school, Obama explained, was not only “good for families” but “good for the children.”

So I watched this video in which Obama flat out says that he favors having the government spend more money on social programs for children, despite the fact that we know that mothers are best for young children. He is not the first to push this, Nancy Pelosi did the same in 2013. This is the view championed by Democrats.

These programs are a boon to the government workers who vote for Obama, because they will be run by secular leftist social workers. This is how they earn their living – by separating mothers from their children. They want to avoid having to please customers in the private sector – that’s too risky. They prefer to take over the job of mothering from a child’s biological mother. That’s safe. You don’t get fired from the government, and you don’t have the pressure of having to care about what customers think of you. This is attractive to people on the left – they want work to be like this, even if it means a child’s misery.

How will he achieve this?

Well, he will raise taxes on the husband, so that the husband can no longer support the family on his own. This will cause the wife to have to leave the children and go to work in order to make ends meet. This way, Obama can separate the child from her parents, and from the worldview of the parents. Instead of having parents working to raise their own child, you have the government raising children to believe what the government wants them to believe. For a secular government, this will probably be that family is bad, that religion is bad, that traditional morality is bad, that the free market system is bad, and that bigger government is good. Think of examples like sex education (abortion advocacy) and global warming (anti-capitalism), if you doubt this anti-family, anti-free-market angle exists.

Does it excite me, as a single chaste man, to get married and be a husband in a world run by feminist socialist leftists like Obama? No.

I am getting up every morning and going to work so that I and my future wife can run my family our way – to promote our worldview and our values. We would be doing the work of raising a family, so we should be allowed to pass on our values. But thanks to feminism and socialism, we have these bloated parasites in government who steal our children from us and then charge us money in order to pay for imposing their disgusting, immoral values on

them. The American people somewhere along the line decided that even though I earn the money, that someone else ought to be passing on their values to my children. And this would be all the people who traditionally vote Democrat. They decided that. There are many young, unmarried Christian women who vote Democrat. They decided that. They "feel" that more powerful government is more desirable than more powerful families. Nothing they hear in church teaches them not to vote for stronger government over stronger families.

I would like more Christian leaders to be telling the young, unmarried women to stop voting for bigger secular government. Someone has to get that through their heads – that men do not like sharing the duty of leadership with anyone – especially not with clowns who have degrees in the humanities and could not find private sector jobs serving customers. Unfortunately, my friends tell me that the most common books being read by young Christian women on dating sites are books by A.W. Tozer, Francis Chan, Harry Potter, Left Behind, Phillip Yancey, Beth Moore, Nancy Leigh Demoss, Joyce Meyer, Elizabeth George, Stasi Eldgredge and so on. There is a complete lack of seriousness among many Christian women about marriage and family as it relates to economics, politics and education. It's not just apologetics that is lacking. Everything is focused on feelings, but the attraction and feasibility of the marriage/family plan is diminishing after each election right under our noses. It is diminishing for men. And there is no marriage and parenting without a man, however much Christians seem to be turning toward and celebrating single motherhood – i.e. – marriage to the secular state.

Young unmarried women, if you expect to get married, you'd better start voting for small government. Small government means bigger individuals and bigger families, and that's exactly what men who consider marriage and families want. Wake up.

# Republican Joni Ernst takes 7 point lead in Iowa senate race

**Wintery Knight** · 2 November 2014 · Archived copy · Original

Joni Ernst vs Bruce Braley

I hope all my readers in Iowa will vote for her.

Here's the latest poll:

> Joni Ernst has charged to achieve a 7-point lead over Democrat Bruce Braley in a new Iowa Poll, which buoys the GOP's hope that an Iowa victory will be the tipping point to a Republican takeover of the U.S. Senate.
>
> Ernst, a state senator and military leader, enjoys 51 percent support among likely voters. That's a majority, and it's her biggest lead in the three Iowa Polls conducted this fall. Braley, a congressman and trial lawyer, gets 44 percent, according to The Des Moines Register's final Iowa Poll before Tuesday's election.

It looks like she is just winning on the issues:

> Here's what has shaped Ernst's lead, according to the poll results:
>
> - Although a small plurality of likely voters thinks Braley has more depth on the issues, they like Ernst better than Braley on several character descriptions. They think she better reflects Iowa values, she cares more about people like them, and she's more of a regular, down-to-earth person.
> - Voters find Ernst, who has led Iowa troops in war, to be a reassuring presence on security issues, the poll shows. In the wake of news developments on the Ebola outbreak in West Africa, increasing aggressiveness of Russia and the rise of the Islamic State in the Middle East, more likely voters see Ernst as better equipped than Braley to show leadership and judgment, by at least 9 points on each issue.
> - Independent voters are going Ernst's way, 51 percent to 39 percent.
> - The negativity in the race has hurt Braley more than Ernst. Forty-four percent say he has been more negative in campaign ads, compared with 32 percent for Ernst.
> - Among several potential mistakes the two candidates have made, the one that stands out is Braley's seemingly condescending remark about Republican U.S. Sen. Chuck Grassley. In March, GOP operatives released caught-on-tape remarks Braley made at a private fundraiser in Texas that seemed to question the qualifications of "a farmer from Iowa without a law degree" to become the next chairman of the Senate Judiciary Committee.
>
> That inflicted a lingering hurt, as did emergence of the news that Braley had missed the majority of his Veterans Affairs Committee hearings, the poll shows.

It's hard for a male Democrat to push the "war on women" narrative against a woman who has been off to war.

Since the article is from the ultra-leftist Des Moines Register, they register their disapproval of her support for private Social Security savings accounts. But that's just another plus. I hope she wins, and I could see her being President one day, too. We need more REAL people, not career politicians.

Just in case anyone is wondering, yes – she is pro-life. The ultra-leftist New York Times explains:

> In Iowa, a Democrat, Bruce Braley, had a 12-point advantage among women over his Republican rival, Joni Ernst, who led by 15 percentage points among men, in a poll conducted for CNN/ORC International this week; over all, the two were statistically tied. Ms. Ernst has been a particular target of women's groups because… she has not backed off her support for a "personhood" amendment conferring constitutional rights at conception, which would effectively outlaw abortion and some fertility treatments and birth control methods.

The mid term elections are on Tuesday! Make sure you make your voice heard, especially if you are in Iowa or one of the other key senate race states.

# British Columbia law society votes against accrediting evangelical law school

**Wintery Knight** · 2 November 2014 · Archived copy · Original

Map of Canada

Global News reports.

Excerpt:

> The Law Society of British Columbia has voted against accrediting a proposed law school at Trinity Western University.
>
> In a binding decision, 74 per cent of lawyers voted against TWU's program, with 8,039 ballots cast in total – more than 60 per cent of all lawyers eligible to vote.
>
> The society says the decision means that "the proposed law school at Trinity Western University is not an approved faculty of law for the purpose of the Law Society's admission program."
>
> The vote was conducted by mail and required a two-thirds majority, with a turnout more than 33.3 per cent.

CBC has the reaction from Trinity:

> The president of Trinity Western University says he is uncertain if the new law school will open as scheduled in 2016 following the recent vote by the B.C. Law Society members to reject the faith-based institution.
>
> TWU president Bob Kuhn expressed his frustration with the recent vote as he left a ratification meeting at the law society on Friday morning.
>
> "They had to choose between the principles upon which they made the initial decision and the popularity of that decision among lawyers in the province," says Kuhn.
>
> "We're disappointed of course they chose the latter. But that's the reality of people in an elected position."
>
> British Columbia is now the third province, after Ontario and Nova Scotia, to officially reject the university's law school.
>
> Kuhn says it's not clear whether the Christian university will move ahead with its 2016 opening date, and the school will decide in the coming weeks whether to file a judicial review.
>
> The board members of the B.C. Law Society voted 25 to one with four abstentions to ratify the results of a

> referendum announced yesterday rejecting the accreditation of a Trinity Western University's law school.
>
> More than 8,000 of the society's 13,530 members voted earlier this month in a special referendum to overturn the board's decision earlier this year to accredit the faith-based law school.
>
> Critics oppose the new law school's accreditation because Trinity Western students must sign a Christian covenant that states sexual relations are to be confined within the bounds of a marriage between a man and a woman.

Trinity Western Law School has a rule that says that students are expect not to engage in extramarital sex – regardless of sexual orientation, which is in keeping with what the Bible teaches. And the law society has decided that this teaching should disqualify a person from practicing law. What is objectionable about this rule? Well, the people who voted against it would be condemned by it. And so they seek to remove the influence of anyone who believes in that rule. Times change, but human nature doesn't change. If you don't want God, you try to silence anyone who reminds you of that fact. It's also a reminded that secularism isn't based in anything that science tells us or history tells us or any kind of evidence. It's about morality. It's about denying the authority of the moral law. That's why people reject God, and intimidate those who don't reject God.

I think this is a good reminder to Christian parents in the United States about why it is important to have some sort of vision for your children. If we don't get advanced degrees, then we leave these decisions to the secular bigots. We are either going to take having an influence seriously or we are going to lose the power to have an influence. Do you have a plan to counter this?

# Why are insurance costs going up?

**Wintery Knight** · 3 November 2014 · Archived copy · Original

Well, one reason why is because the costs of elective treatments are being covered now, and that means that the costs for them are being distributed to everyone else.

Here's the leftist Washington Post to explain.

Excerpt:

> Aetna this week announced it will start covering gender reassignment surgery next year for federal workers on the insurer's plans. And the company said it will begin rolling out this coverage to many of its commercial plans over the next couple of years.
>
> For years, many health insurance plans have denied coverage for gender reassignment benefits. But with the medical community recognizing gender identity disorder as a diagnosable condition, there has been a growing acknowledgement recently among employers and policymakers that insurers need to be covering these treatments, which otherwise can carry prohibitive costs.
>
> Regulators in eight states and the District of Columbia now ban discrimination against treatments for gender reassignment. In the past four years, the number of large employers covering sex reassignment surgery in their health plans grew from 49 to 340, including at 28 percent of Fortune 500 firms, according to the Human Rights Campaign.
>
> This year, the U.S. government has weighed in considerably. In May, Medicare reversed a decades-old ban on covering gender reassignment surgery in response to a 2013 lawsuit. Advocates said the Medicare decision could put pressure on more insurers to ensure equal benefits for transgender Americans, who make up 0.3 percent of the adult population.
>
> […]Without insurance, the out-of-pocket costs for gender reassignment vary greatly. Some people may only need hormone therapy, which costs hundreds of dollars a year. The cost of surgery, for those needing it, could be tens of thousands of dollars.

The Washington Post is very much in favor of making this "covered".

Now when I think of health insurance, I think of car insurance. With car insurance, you pay when there is an accident. The collision is unexpected, but it is covered. But it is increasingly the case with health insurance that elective treatments are called "health care". I think the trend is that the number of these treatments will increase as more and more of these elective surgeries get added to the mandatory coverages. And if you look at other countries, IVF (some provinces of Canada) and breast enlargements (UK) are covered.

I certainly don't want to pay for any of these "coverages" but as these treatments become mandatory coverages, I will be paying for them. Even if I don't use them. My premiums will go up so that other people who do use it can have it without having to pay for it.

# New study: picking a spouse who is conscientious is linked to career success

**Wintery Knight** · 3 November 2014 · Archived copy · Original

This article from the leftist Washington Post explains what young men should be looking for if they want to do well in the workplace.

Excerpt:

> A new paper published recently in the journal Psychological Science found a link between an individual's career improvement and the conscientiousness of his or her spouse.
>
> The research examined the careers and personalities of more than 4,500 married people, using a common personality test known as the Big Five. The test measures people on five different traits: extraversion (how outgoing and sociable a person is), agreeableness (how honest and sympathetic someone is, versus suspicious and unfriendly), conscientiousness (how well someone can plan and be productive, rather than be disorganized and impulsive), neuroticism (how anxiety-prone someone is) and openness (how naturally curious and open to change a person is).
>
> The researchers found that only one of the five traits — conscientiousness — could be linked to a partner's career success, as measured by job satisfaction, income and promotions. "Even though your spouse doesn't come to work with you day in and day out, their personality contributes to your job success," says Joshua Jackson, an assistant professor at Washington University in St. Louis.
>
> […][W]hen it came to the effect of a *spouse*'s personality traits on a person's career, only high scores on conscientiousness had any impact, whether positive or negative. Jackson suggests two main reasons for this: One, he says, is that people often emulate their spouses' behavior, meaning a husband's or wife's industriousness and organizational skills might rub off on the other.
>
> The second reason is that when a person's spouse is organized, efficient and hard working, they're probably tackling the bulk of the household chores, freeing their husband or wife up to focus more on his or her job. "You're not as stressed about certain chores or duties that need to be done while you're at work," Jackson says.

Now if the person you want to marry doesn't already have this skill, or hasn't exercised it so far in life, then that getting him or her to put it in practice should be part of the courting process – at least if you intend to be effective yourself. Don't be looking for someone fun who makes you feel good – look for someone organized and disciplined who can get things done and deliver results.

# Tuesday is election day – please make sure you vote your values!

**Wintery Knight** · 3 November 2014 · Archived copy · Original

I don't think that Frank Turek will mind me stealing his entire post from Cross Examined.

He writes:

> **When I hear Christians saying we ought not get involved in politics but just "preach the Gospel," I show them this satellite picture of the Korean peninsula.** South Korea is full of freedom, food and productivity—it's one of the most Christianized countries in the world. North Korea is a concentration camp. They have no freedom, no food, and very little Christianity.
>
> **What's the primary reason for the stark difference between these two countries? Politics.** The South politically allows freedom, while the North does not.
>
> **Ironically, Christians who shun politics to supposedly advance the Gospel are actually allowing others to *stop* the Gospel. How so? Because *politics and law affects one's ability to preach the Gospel!*** If you think otherwise, visit some of the countries I have visited—Iran, Saudi Arabia and China. You cannot legally "preach the Gospel" in those countries—or practice other aspects of your religion freely—because politically they've ruled it out as they have in North Korea (it seems the mayor of Houston was about to start down that road recently).
>
> **With that in mind, I strongly encourage you get out to vote THIS Tuesday,November 4th, and support the candidates who best represent natural law values consistent with the Bible.** "For to whom much is given, much shall be required" (Luke 12:48). Voting is more than our opportunity to make a difference. It is a responsibility in being good stewards and protecting our freedom to spread the Gospel. In fact, I think every citizen should get informed and vote.
>
> **Go to http://www.christianvoterguide.com/** for a guide to see where the candidates stand on the most important issues.
>
> ***"You are the light of the world. A city on a hill cannot be hidden. Neither do people light a lamp and put it under a bowl. Instead they put it on its stand, and it gives light to everyone in the house."*** **(Matt. 5:14-15)**

We're seeing increasing hostility from the secular left against small government, strong families, the definition of marriage, border security, the economy, national security, our ally Israel and the unborn. Tuesday is your chance to do something about it.

# Five reasons why Democrats win elections

**Wintery Knight** · 4 November 2014 · Archived copy · Original

It's election day today, so make sure you vote Republican.

Today, I wanted to highlight a few stories that show how it is that Democrats are able to win elections despite the fact that they are immoral on social issues, incompetent on fiscal issues, and irresponsible on foreign policy.

**Voter fraud**

Democrats get a big boost from voter fraud. Let me explain how easy this is to do in America.

Look:

> Filmmaker James O'Keefe has yet again demonstrated just how vulnerable our election system is to fraud.
>
> A Pew Center on the States study in 2012 found that one out of eight voter registrations is inaccurate, out-of-date, or a duplicate. Some 2.8 million people are registered in two or more states, and 1.8 million registered voters are dead.
>
> So O'Keefe decided to take some of the 700,000 "inactive" voters the Voting Integrity Project says are on the rolls in North Carolina, the site of one of the nation's most hotly contested Senate races, and see just how easy it would be to obtain a ballot in their name. Sadly, it was child's play as his video demonstrates.
>
> "Some twenty times, nearly a bus load, we were just a signature or two away from voting. Of course, we never signed anything, but we could have, and if we had, we could have voted and no one would have been the wiser," is O'Keefe's depressing conclusion.
>
> […]Last December, New York City's Department of Investigation detailed how its undercover agents claimed at 63 polling places to be individuals who were in fact dead, had moved out of town, or who were in jail. In 61 instances, or 97 percent of the time, they were allowed to vote. (To avoid skewing results, they voted only for nonexistent write-in candidates.) How did the city's Board of Elections respond? Did it immediately probe and reform their sloppy procedures? Not at all. It instead demanded that the investigators be prosecuted.

A Canadian friend of mine tells me that in Canada, you have to vote in your home precinct, and bring a photo ID. Once you vote, they cross your name off. That works. But if we did that, then Democrats would never win an election. And that's why Eric Holder and his buddies fight against measures to prevent voter fraud tooth and nail. That's the first reason why Democrats win elections.

**Dirty Tricks**

Not just that, but unions like to get involved, too:

> Neither snow nor rain nor heat nor gloom of night may keep postal carriers from the swift completion of their appointed rounds. But partisan politics, now that may be another matter altogether.
>
> An investigation has been launched into a Neenah postal carrier who allegedly dumped into a recycling bin hundreds of political advertisement mailers from the campaign of Mike Rorhkaste, Republican candidate for Wisconsin's 55th Assembly District,Rorhkaste tells Wisconsin Reporter.
>
> Neenah Postmaster Brian Smoot, who was alerted to the incident on Thursday, confirmed there is an ongoing investigation into the matter, and referred Wisconsin Reporter to the Office of the Inspector General for the U.S. Postal Service.

This kind of stuff happens all the time, when unions are involved.

**Billionaire banksters**

They're not Republicans, they're Democrats.

Excerpt:

> Meet Tom Steyer, the man being hailed as the "liberal analogue" to the Koch brothers in the political arena.
>
> The New York Times reported Tuesday that the hedge fund billionaire's super PAC — NextGen Climate Action – is set to spend in the neighborhood of $100 million in the 2014 midterm elections to back candidates who support policies Steyer's convinced himself will help stop global warming.

Yes, this is the same global warming that hasn't been happening for the last 18 years, but what do you expect from a non-scientist?

**Media bias**

Democrats get a big boost from the leftist media. Let me show you how media bias helps Democrats.

Look:

> Being Kay Hagan (or a member of her immediate family) is a pretty good gig if you can find it. As a Democratic senator, Hagan has significantly increased her net worth since getting elected and her husband, son, and son-in-law have received taxpayer funding for their businesses. Additionally, she appears to have convinced the local media that stories reflecting poorly on her are unfit for print.
>
> The *Charlotte Observer* is under fire from Republicans for pulling a story about Hagan and the stimulus grants her family received. After briefly posting a story about state government officials calling for a "legal review" of the grants—with the headline: "Memo: Grant given to company run by Sen. Hagan's husband needs 'legal review'"—the *Observer* erased the story from its website.
>
> Here is the cached version.

If you search for the story now, you get a 404. It will go up after the election, just like the truth about Fast and Furious, Benghazi, IRS persecution of conservatives, etc.

**Scare-mongering**

Republicans have been campaigning on repealing and replacing Obamacare, because people are seeing the effects of the law (higher premiums, fewer doctors, etc.).

Take a look:

> According to Kantar Media's Campaign Media Analysis Group (CMAG), Republicans ran nearly 12,000 anti-Obamacare ads in Senate races during the week of October 13-19.
>
> […]The top-5 issues for the GOP in Senate races for the week of October 13-19 were as follows:
>
> 1. Obamacare (nearly 12,000 ads)
> 2. Budget/Government Spending (nearly 9,000 ads)
> 3. Energy/Environment (nearly 7,000 ads)
> 4. Jobs/Unemployment (more than 6,000 ads)
> 5. Immigration (nearly 5,000 ads)

That's what Republicans want the election to be about.

But Democrats? Not so much:

> Campaign materials aimed at getting out the black vote are featuring references to lynchings, Jim Crow-era signs, racial unrest — and, as of last weekend, the Ku Klux Klan.
>
> In Alabama, fliers distributed in largely black communities warn voters to cast ballots or else “land may be given to extremist groups to honor klansmen.” A copy of the flier was obtained by The Washington Times.
>
> The specter of the KKK was raised as the latest example of the increase in racially charged scare tactics aimed at bolstering turnout in the black community, a traditional Democratic voting bloc that strategists view as key to winning razor-thin races in an otherwise Republican year.
>
> Conservatives view the tactic with disgust. They argue that such race-baiting is condescending and assumes black voters are concerned solely with racism and not, for example, economic and foreign policy concerns.

Democrat politicians know how to appeal to their supporters – with scare-mongering, not facts.

**Summing up**

We need every Republican voter to vote today to counter this kind of nonsense in our elections. Make sure you do your part, and get your friends and family to vote as well.

# What is the greatest achievement of the Obama administration?

**Wintery Knight** · 4 November 2014 · Archived copy · Original

Newsbusters reports on the greatest accomplishment of the Obama administration.

Excerpt: (links removed)

> It is clear that a huge amount of growth in SNAP happened under Obama's watch.
>
> Increases in the size of SNAP were "unprecedented" since 2008, according to a report by the Manhattan Institute, the conservative, New York City-based think tank. The authors of the report, Diana Furchtgott-Roth, Senior Fellow, and Claire Rogers, Research Assistant, attributed this expansion to a combination of "the difficult job market" and an "expansion of benefits" starting in October 2008.
>
> Statistics released by USDA also showed the huge expansion of food stamps under Obama. In 2013, 20 percent of American households were enrolled in SNAP. Enrollment had increased from 32.2 million individuals in January 2009, to at least 46 million individuals during the last 35 straight months for available data. This upsurge represented a jump of more than 42 percent.
>
> Meanwhile, spending on SNAP benefits rose by nearly 120 percent, from $34.6 billion to $76.1 billion, between 2008 and 2013. The increase in spending far outpaced enrollment, and could be attributed to greater benefits handed out per person. "SNAP began to pay more generous benefits to people who enrolled" between 2007 and 2011, according to an analysis published on The New York Times' Economix blog Aug. 29, 2011.
>
> Economist Peter Ferrara agreed with labeling Obama the "food stamp President," calling out the administration's "anti-growth, economic policies, which are precisely crippling the poor and the middle class" in a Forbes article Dec. 31, 2013.
>
> While these increases were partly attributed to Obama's economic policies, they could also be linked to lax enrollment policies implemented by the president. These policies included waivers for healthy individuals with no dependents and who were not actively seeking work.
>
> "The food-stamp work waiver is part of a larger agenda. Poverty advocates have long sought to convert food stamps into a no-strings-attached entitlement," Heather MacDonald, Thomas W. Smith Fellow at the Manhattan Institute, wrote in a New York Post op-ed on May 15, 2014.
>
> Two Heritage Foundation fellows said that while part of the growth in SNAP could be attributed to the country's poor economic conditions, Obama has also increased the size of the program through his budget proposal.
>
> "Part of that growth is due to the recession, but under Obama's proposed budget, food stamp spending will not return to pre-recession levels when the economy recovers. Instead, it will remain well above historic norms for the foreseeable future," Robert Rector, Senior Research Fellow, and Katherine Bradley, Research Fellow, at Heritage wrote.

Of course, if you're a Democrat, this is a feature, not a bug. They like Americans to be dependent on government, because then more of them vote for bigger government – and that means Democrats get to raise taxes and spend even more money they didn't earn. That's good news, but it gets even better – because then they give speeches about how generous they are! *With your money.*

# Only 18% of Americans think race relations have improved under President Obama

**Wintery Knight** · 4 November 2014 · Archived copy · Original

The IBD/TIPP poll was the most accurate in the 2012 presidential election, and now they found out something about race relations under President Obama.

Excerpt:

> Our latest poll suggests that far from healing America's racial wounds, the first black president has reopened them. Obama the uniter is actually the great divider.
>
> By an almost 3-1 margin, Americans say race relations have worsened under the man who was supposed to usher in a golden era of "post-racial" relations.
>
> Six years after electing the nation's first black president, a stunning 46% in the new IBD/TIPP Poll draw that conclusion compared to 18% who don't. Nearly one in four believe race relations have gotten "much worse" under President Obama, while 35% say they've stayed the same.
>
> The results corroborate a long-running poll on racial attitudes conducted by Hart Research Associates and Public Opinion Strategies since 1994. It records the steepest decline in positive views occurring over the last three years.
>
> Who can blame Americans for thinking the nation is more divided along racial lines?
>
> When our poll was taken in late October, respondents heard news that authorities in St. Louis are bracing for more senseless riots. Black street agitators bussed in from Chicago are spoiling for a race war, egged on by an attorney general who's tried to convince African-Americans that white cops like Darren Wilson are gunning for them, despite forensic and other evidence refuting such garbage.
>
> These polls also reflect campaign attack ads showing Obama-yoked Democrats resorting to shameless race-baiting in the final days of a congressional election that promises to repudiate them and their party leader.

People like me on the center right have been talking about policy failures, cover-ups and other mistakes for years since the Democrats took power, and yet the only response we ever get from Democrats is to be called "racists". Very curious in my case, since I have darker skin than Obama, and no white parents. In fact, if I ever met the man, I'd be sure to reply to all his criticisms of my views by calling him a racist. I think that's how Democrats talk.

# Republican Scott Walker beats Mary Burke to win Wisconsin Governor race

**Wintery Knight** · 5 November 2014 · Archived copy · Original

Wisconsin Governor Scott Walker

The man Dennis Prager calls “the nemesis of the left” wins again.

Read it:

> With less than one-third of precincts reporting, ABC News and Fox News project that incumbent Republican governor Scott Walker has defeated Democratic challenger Mary Burke. While most of the polls showed a tight race (except for the Marquette poll that showed Walker winning by 7 points), Walker will likely win by a commanding margin.
>
> With a lot of votes left to be counted Walker leads Burke 58 percent to 41 percent. Walker’s lead will shrink considerably as the votes are tallied, but he may be on track to win by a greater margin than he did during the 2010 Republican wave.
>
> Walker, who survived a 2012 recall election, which was spurred by backlash to his budget reforms, has now won election in Wisconsin (a state Obama carried twice) three times in four years. He now stands poised to be a serious contender for the 2016 Republican presidential nomination.

At my time of writing, it’s 55-44 with 55.4% counted.

Read a little more about him:

> **Scott Kevin Walker** (born November 2, 1967 in Colorado Springs, Colorado) is the current conservative Governor of Wisconsin and a member of the Republican Party. Previously he was Executive of Milwaukee County and a member of the Wisconsin State Assembly, and while in college he ran a student pro-life organization. He faced a recall election on June 5, 2012 and won it by a landslide. By late May liberals were already beginning to blame each other for Walker’s lead in the polls: “Top union officials are lashing out at Washington Democrats, claiming they haven’t done enough to help them unseat Gov. Scott Walker (R) in Wisconsin’s recall election.”
>
> Scott Walker became a leader of conservatives nationwide when he supported and then signed into law a repeal of the collective bargaining rights of most government workers. Walker took this historic step to prevent the State from continuing on a path of financial ruin.
>
> Perhaps due to bad political advice, Walker first focused on union issues first and accomplished virtually nothing meaningful on the abortion issue in 2011, despite having overwhelming majorities on his side in the

> legislature. But in 2012 Walker began signing into law pro-life legislation, which earned him the support of many in the working class, and he then swept to a massive victory in the recall election.

He's my pick for the Republican nominee in 2016, and he is the most vetted Republican we have. They have tried EVERYTHING to beat this man in Wisconsin. Nothing sticks. All he does is win.

# Republican Tim Scott beats Joyce Dickerson in South Carolina Senate race

**Wintery Knight** · 5 November 2014 · Archived copy · Original

Senator Tim Scott (R-SC)

The Tea Party News Network reported this Tuesday night:

> South Carolina Senator Tim Scott has been called the winner in this special election to retain the Senate seat to which he was appointed in January 2013 after then Senator Jim DeMint resigned to head the Heritage Foundation. The election was called early with Scott crushing his opponent, Democrat Joyce Dickerson, 52% to 46%, according to Fox News.
>
> When Scott was appointed, he became the first black senator from the South since Reconstruction. His defeat over Democrat opponent Randall Young helps Republicans in their quest to gain control over the Senate.
>
> During a speech at Howard University, an historically black college, Scott talked about the challenge of being a black Republican. He said, "Part of the challenge of being a black Republican anywhere is that you start off with people walking in with chips on their shoulder trying to figure out what is wrong with you. I hope that people will judge me on my agenda, what I say, and how I vote." It appears that the people of South Carolina have spoken and are supportive of the votes that Scott has made with his re-election.

The result was 61-37. He won by a bigger margin than Lindsay Graham did in the other Senate race.

Let's see what he is all about, although I blogged about him before:

> I am a strong supporter of our traditional conservative values. I believe that government should be protecting our right to religious freedom, not assaulting it.
>
> I am strongly pro-life, supporting the Child Interstate Abortion Notification Act, Pain-Capable Unborn Child Protection Act, and the No Taxpayer Funding for Abortion Act. Since *Roe vs. Wade*, more than 50 million Americans have never had the opportunity to touch our soil, and that is a tremendous tragedy.
>
> As a cosponsor of the Health Care Conscience Rights Act, I have also been steadfast in supporting efforts to repeal the Affordable Care Act's intrusion on American's religious beliefs. Government is already overreaching into our homes and businesses; it can't be allowed to do the same with our faith.
>
> The people of South Carolina have voted overwhelmingly to protect the traditional definition of marriage, and I stand with their decision.
>
> I regard all life as sacred, and am proud of our values and traditions. For this reason I am committed to protecting the unborn and continuing to take a stand in defending traditional and religious values.

I think when Christians have a candidate like this, they need to get out to the polls and vote. This guy is the perfect candidate for Christians.

UPDATE: Three black Republicans – one Senator, and two House representatives, were elected. ALL are pro-life.

# Republican Joni Ernst beats Bruce Braley in Iowa Senate race

**Wintery Knight** · 5 November 2014 · Archived copy · Original

Iowa senator Joni Ernst

NBC local news reports:

> Joni Ernst has been elected as the next U.S. Senator from Iowa. The Republican, a state Senator from Red Oak, defeated Democrat U.S. Representative Bruce Braley in one of the nation's closest watched elections.
>
> Ernst will fill the seat currently occupied by Senator Tom Harkin. Harkin, who has served in the U.S. Senate since 1985, announced in January 2013 that he would retire at the end of his term in January 2015.
>
> Recent polls had shown Ernst pulling ahead, a poll released by the Des Moines Register this weekend showed her with a seven point lead. A Quinnipiac University poll released Monday showed the race was tied at 47%.
>
> Ernst will be sworn in to the Senate in January.

Here's a bit of background on her:

> In 1989, a teenage college student from Iowa completed an agricultural exchange on a family farm in the Soviet state of Ukraine. Not surprisingly, as Joni Ernst retells it, the experience gave her a profound new appreciation for her home country — one that has colored her career choices to this day.
>
> "It was just such a difference between the United States and the opportunity we had and what that family had in Ukraine," she told RealClearPolitics, citing the farm's lack of basic utilities such as a telephone and running water. (Residents had to use an outhouse behind the chicken coop, and the family shared a single bicycle in the absence of a car. Farm work was done through manual labor, supported by horses and wagons.) "That made such an impression on me when I came back to the United States and it was a matter of 'Oh, I love my country.'"
>
> […]Ernst's campaign is putting its focus on the candidate's varied life experiences, including 21 years in the U.S. Army Reserves and the Iowa Army National Guard and being a mother of three and grandmother of six.

> Indeed, Romney's endorsement highlighted her history as a "mother, soldier and proven conservative."
>
> A company commander in Kuwait and southern Iraq during Operation Iraqi Freedom in 2003 (and now a lieutenant colonel in the National Guard), Ernst says the grim realities she witnessed in Ukraine long ago sparked her interest in giving back to and supporting her own country.
>
> "I felt that the military was a great way for me to do that, to defend the freedoms and opportunities that we have here in the United States," she explained. "I've loved it."
>
> Nonetheless, Ernst recounts the hardships of serving in the Iraqi desert, including driving convoys in 142-degree temperatures and sandstorms that would sweep over the region. The situation was "just [a] pretty difficult environment, but you just adapt and you just roll with it," she recalled. "It was the greatest of experiences and it was the worst of experiences."
>
> Those experiences are what drew some of Ernst's supporters to her side. Ruben Garza, an officer in the Iowa Army National Guard, said he sees the candidate's service as apt preparation for the U.S. Senate. "When you're a military leader, your actions and your words are highly scrutinized and you're expected to do what you say. I would expect, [if] Senator Ernst says she's going to achieve something, she's going to put 110 percent effort into achieving that."
>
> Her personal story goes far beyond the Iraqi desert, of course. It can be traced back to the cornfields of Stanton, a farming town of about 700 in southwestern Iowa. The town's premier landmark is a water tower modeled after a traditional Swedish coffeepot, complete with a colorful floral design, handle and spout. Erected during Stanton's centennial in 1970, the tower is both a nod to the town's 19th-century Swedish immigrant heritage and a tribute to native daughter Virginia Christine, an actress featured in 1960s television commercials for Folgers Coffee.
>
> Joni Culver, the second daughter of a farming couple, was born the same year the water tower was erected. Ernst and her campaign like to highlight her roots as a farmer's daughter, and she cited this aspect of her life when arguing for reduced government spending during a debate with other Republican candidates for the Senate: "As a farmer's daughter, who grew up in southwest Iowa castrating hogs with her dad, I can go to Washington and cut pork," she said to cheers from the audience.
>
> Among those familiar with Ernst during those early years is her sixth-grade teacher and campaign supporter, Rick Gustafson. He compares the candidate's upbringing to "Little House on the Prairie," where Mrs. Culver would sew young Joni's and her older sister's clothes. (He still has a pillow Ernst's mother gave him, embroidered with the names of all 23 students in his class.) Moreover, Gustafson remembers his former pupil's strong work ethic and that she learned to drive her father's tractor, as well as being a model student in class.
>
> "Joni was one of those rare students that had high intellect, very, very good academic ability, and also had a high integrity in terms of doing the right things," Gustafson told RCP. "She had all those and showed all those qualities at that time, even though she was still in those formative years."
>
> Ernst first expressed that love by joining the Army Reserves and the National Guard, and she hopes to express it further by serving in the U.S. Senate. What makes her ambition especially noteworthy is that, should she win the GOP primary on June 3 and the general election in November, Ernst would become the first woman from Iowa to serve in Congress. Given the state's long track record of moderate, independent-minded politics, one might be astonished to learn that only Iowa and Mississippi have yet to elect a woman to federal office or governor.

I think she has the background to be the first woman President one day! She is also pro-life.

# Republicans get increased support from non-whites in mid-term elections

**Wintery Knight** · 6 November 2014 · Archived copy · Original

This is from the Wall Street Journal.

Excerpt:

> National House exit polls (summarized by CNN here and here) complicate the Democratic narrative of the "emerging electorate" set against Republican appeal limited to old white men. There was a "gender gap," but this time in Republicans' favor: Democrats outpolled Republicans among women, 52% to 47%, but Republicans' advantage among men was 56% to 42%. Republicans did better among voters over 45 and Democrats among those under 45, but Republicans still managed 43% of the under-30 vote.
>
> **Republicans attracted 10% of blacks, 35% of Latinos and 49% of Asian-Americans. The comparable figures in the 2012 presidential race, according to the New York Times, were 6%, 27% and 26%.**

I'm pretty impressed that the Republicans only lost women by 5%, and I bet they won married women by a landslide, as usual. It's nice to see that women were not unduly tricked by the "war on women" rhetoric.

Life News profiled some of the newly Republicans – all of them pro-life:

> Not only did pro-life candidates win huge election victories across the board last night, but black pro-life candidates won as well and helped undermine false criticism from the other side that somehow the pro-life issue is not one that resonates with African-Americans.
>
> In the deep South, South Carolina voters sent pro-life Republican Tim Scott back to the U.S. Senate, making him the first black candidate to win a statewide race there since just after the Civil War. Scott is also the first African-American senator from the South since Reconstruction.
>
> Scott's victory was so certain that his race was called moments after polls officially closed.
>
> […]Meanwhile, in Utah, Mia Love won her congressional race to become the first black Republican woman in Congress. Love is a proudly pro-life candidate who had strong support from pro-life groups.
>
> […]And in Texas, pro-life congressional candidate Will Hurd won his race, unseating Rep. Pete Gallego.

Hurd is a former *undercover* CIA operative. He specializes in cybersecurity and counterterrorism.

Republican Saira Blair

And if all that were not enough, an eighteen-year-old college student was elected to the West Virginia state legislature.

Excerpt:

> A West Virginia University freshman who did most of her campaigning out of her dorm room became the youngest state lawmaker in the nation Tuesday.
>
> Republican **Saira Blair**, a fiscally conservative 18-year-old, will represent a small district in West Virginia's eastern panhandle, about 1½ hours outside Washington, D.C., after defeating her Democratic opponent 63% to 30%, according to the Associated Press. A third candidate got 7% of the vote.
>
> In a statement, Ms. Blair thanked her supporters and family, as well as her opponents for running a positive campaign. "History has been made tonight in West Virginia, and while I am proud of all that we have accomplished together, it is the future of this state that is now my singular focus," she said.
>
> Ms. Blair campaigned on a pledge to work to reduce certain taxes on businesses, and she also holds pro-life and pro-gun positions.

Wouldn't it be great if conservative families were making a generation of young conservatives like her?

# Chad Meister: can atheists rationally ground morality?

**Wintery Knight** · 6 November 2014 · Archived copy · Original

Philosopher Chad Meister takes a look at the attempts of some prominent atheists to make rational sense of morality within their worldviews.

Here is the abstract:

> Atheists often argue that they can make moral claims and live good moral lives without believing in God. Many theists agree, but the real issue is whether atheism can provide a justification for morality. A number of leading atheists currently writing on this issue are opposed to moral relativism, given its obvious and horrific ramifications, and have attempted to provide a justification for a nonrelative morality. Three such attempts are discussed in this article: Walter Sinnott-Armstrong's position that objective morality simply "is"; Richard Dawkins's position that morality is based on the selfish gene; and Michael Ruse and Edward Wilson's position that morality is an evolutionary illusion. Each of these positions, it turns out, is problematic. Sinnott-Armstrong affirms an objective morality, but affirming something and justifying it are two very different matters. Dawkins spells out his selfish gene approach by including four fundamental criteria, but his approach has virtually nothing to do with morality—with real right and wrong, good and evil. Finally, Ruse and Wilson disagree with Dawkins and maintain that belief in morality is just an adaptation put in place by evolution to further our reproductive ends. On their view, morality is simply an illusion foisted on us by our genes to get us to cooperate and to advance the species. But have they considered the ramifications of such a view? Each of these positions fails to provide the justification necessary for a universal, objective morality—the kind of morality in which good and evil are clearly understood and delineated.
>
> […]We can get to the heart of the atheist's dilemma with a graphic but true example. Some years ago serial killer Ted Bundy, who confessed to over thirty murders, was interviewed about his gruesome activities. Consider the frightening words to his victim as he describes them:
>
> *Then I learned that all moral judgments are "value judgments," that all value judgments are subjective, and that none can be proved to be either "right" or "wrong"….I discovered that to become truly free, truly unfettered, I had to become truly uninhibited. And I quickly discovered that the greatest obstacle to my freedom, the greatest block and limitation to it, consists in the insupportable "value judgment" that I was bound to respect the rights of others. I asked myself, who were these "others"? Other human beings, with human rights? Why is it more wrong to kill a human animal than any other animal, a pig or a sheep or a steer? Is your life more to you than a hog's life to a hog? Why should I be willing to sacrifice my pleasure more for the one than for the other? Surely, you would not, in this age of scientific enlightenment, declare that God or nature has marked some pleasures as "moral" or "good" and others as "immoral" or "bad"? In any case, let me assure you, my dear young lady, that there is absolutely no comparison between the pleasure I might take in eating ham and the pleasure I anticipate in raping and murdering you. That is the honest conclusion to which my education has led me—after the most conscientious examination of my spontaneous and uninhibited self.*[5]
>
> While I am in no way accusing atheists in general of being Ted Bundy-like, the question I have for the atheist is simply this: *On what moral grounds can you provide a response to Bundy?* The atheistic options are limited. If morality has nothing to do with God, as atheists suppose, what does it have to do with? One response the atheist could offer is moral relativism, either personal or cultural. The personal moral relativist affirms that morality is an individual matter; you decide for yourself what is morally right and wrong. But on this view, what could one say to Bundy? Not much, other than "I don't like what you believe; it offends me how you brutalize women." For the personal relativist, however, who really cares (other than you) that you are offended by someone else's actions? On this view we each decide our own morality, and when my morality clashes with yours, there is no final arbiter other than perhaps that the stronger of us *forces* the other to agree. But this kind of Nietzschean "might makes right" ethic has horrific consequences, and one need only be reminded of the

> Nazi reign of terror to see it in full bloom. This is one reason why thoughtful atheists, such as Christopher Hitchens, Walter Sinnott-Armstrong, Richard Dawkins, Sam Harris, Daniel Dennett, and others don't go there.[6]
>
> But what about cultural moral relativism—the view that moral claims are the inventions of a given culture? Most thoughtful atheists don't tread here either, and this is one reason why: If right and wrong are cultural inventions, then it would always be wrong for someone within that culture to speak out against them. If culture defines right and wrong, then who are you to challenge it? For example, to speak out against slavery in Great Britain in the seventeenth century would have been morally wrong, for it was culturally acceptable. But surely it was a morally good thing for William Wilberforce and others to strive against the prevailing currents of their time and place to abolish the slave trade. For the cultural moral relativist, all moral reformers—Wilberforce, Martin Luther King, Jr., even Jesus and Gandhi, to name a few—would be in the wrong. But who would agree with this conclusion? Thankfully, most leading atheists agree that moral relativism is doomed.[7]
>
> So what do they affirm? Here are three accounts that recent atheists have defended: (1) objective morality simply "is," (2) morality is based on the selfish gene, and (3) morality is an evolutionary illusion.[8] Let's take a brief look at each of them.

Have you ever heard any of these three categories of objections? If so, click on through and see Chad Meister's responses.

# William Lane Craig debates Alex Rosenberg: Does God Exist? Video, audio and summary

**Wintery Knight** · 6 November 2014 · Archived copy · Original

Below, please find my summary of the Craig-Rosenberg debate, which occurred on February 1st, 2013 at Purdue University.

Brian Auten has posted the MP3 audio of the debate at Apologetics 315.

**The debaters**

- William Lane Craig
- Alex Rosenberg

Below is the summary from tonight (February 1st, 2013).

If you like the summary below, please friend me on Facebook and/or follow me on Twitter.

**Summary of the debate**

**Dr. Craig's opening speech:**

The topic: What are the arguments that make belief in God reasonable or unreasonable?
First speech: arguments for reasonableness of belief in God
Second speech: respond to arguments against reasonableness of belief in God

Eight arguments:

1. Contingency argument: God – a transcendent, personal being – is the explanation of why a contingent universe exists.
2. Cosmological argument: God is the cause of the beginning of the universe, which is attested by physics and cosmology.
3. Applicability of mathematics to nature: God is the best explanation for the applicability of mathematics to nature.
4. Fine-tuning argument: God is the best explanation of the fine-tuning of the universe to permit life.
5. Intentionality of conscious states: God is the best explanation of the intentionality of our mental states.
6. The moral argument: God is the best explanation for the existence of objective moral values and duties.
7. The resurrection of Jesus: God is the best explanation for the core of historical facts accepted by most ancient historians across the ideological spectrum.
8. Religious experience: God is the best explanation of our immediate experience and knowledge of his existence.

**Dr. Rosenberg's opening speech**

First argument: The fallacy of ad hominem

- I don't know whether to laugh or to cry
- Dr. Craig has said all of that before in other debates
- You didn't need to come out on this cold night
- Craig's arguments have all been refuted
- Dr. Craig just doesn't listen
- Dr. Craig is not interested in getting at the truth
- Dr. Craig is just interested in scoring debate points

- The adversarial system is the wrong approach to decide truth
- Dr. Craig is very confident about his take of physics

Second argument: The fallacy of arguing from authority

- 95% of members of the NAS are atheists
- Therefore Dr. Craig cannot use science

Third argument: Effects don't require causes

- I am going to pretend that Craig said that "every effect requires a cause"
- Quantum mechanics shows that some effects occur without causes
- A particle of uranium (which is not nothing, it is something) decays without a cause
- This uncaused effect is the same as the universe coming into being out of nothing uncaused
- Therefore the principle of sufficient reason is false

Fourth argument: Silicon-based life and the multiverse

- If these constants had been different, maybe we would have other kinds of intelligent life, like silicon-based life
- Carbon-based life is not the only kind of life, maybe you can have other kinds of life, none of which have been observed
- There could be different kinds of life in other areas of the universe that we can't see
- There are things we can't see that disprove the current physics that we can see
- Quantum foam is evidence that a multiverse exists
- The multiverse would solve the problem of fine-tuning

Fifth argument: The Euthyphro dilemma

- The moral argument is refuted by Euthyphro dilemma
- Dr. Craig is such a moron that he has never heard of the Euthyphro dilemma ever before
- This is found in the first and simplest of Plato's dialogs
- Why is Dr. Craig so stupid that he has not read this simple dialog ever before?
- Evolution explains why humans evolve arbitrary customs and conventions that vary by time and place
- Alternative moral theories: utilitarianism, social contract, etc. that don't require God

Sixth argument: Mormonism undermines Dr. Craig's three minimal facts about Jesus

- Why is Dr. Craig so stupid and ignorant to persist in pushing such an ignorant, stupid argument?
- Mormonism is a silly religion that is not historically well founded
- Therefore, Jesus was not buried
- Islam is a silly religion that is not historically grounded
- Therefore, the tomb was not found empty
- Scientology is a silly religion that is not historically grounded
- Therefore, the eyewitnesses didn't have post-mortem appearances
- Eyewitness testimony is unreliable in some cases
- Therefore, eyewitness testimony was unreliable in this case
- Apparitions of Mary are bizarre
- Therefore, the majority of historians are wrong to think that the disciples saw post-mortem appearances

Seventh argument: Deductive problem of evil

- Evil and suffering are logically incompatible with an all good, all powerful God

Eight argument: God is not just to allow evil and suffering

- God cannot make the evils of this life right in the afterlife

**Dr. Craig's first rebuttal**

Dr. Rosenberg sketched the deductive argument from evil.

Dr. Rosenberg presupposes naturalism. Naturalism is a false theory of knowledge:

1. It's too restrictive: There are truths that cannot be proved by natural science.
2. It's self-refuting: no scientific proof for naturalism exists.

That's why epistemological naturalism is considered false by most philosophers of science.

But more importantly than that: Epistemological naturalism does not imply metaphysical naturalism. (E.g. – W. Quine)

Dr. Rosenberg has to present arguments in favor of (metaphysical) naturalism, not just assume that (metaphysical) naturalism is true.

Dr. Craig presented eight arguments against metaphysical naturalism taken from Rosenberg's own book:

1. The argument from the intentionality (aboutness) of mental states implies non-physical minds (dualism), which is incompatible with naturalism
2. The existence of meaning in language is incompatible with naturalism, Rosenberg even says that all the sentences in his own book are meaningless
3. The existence of truth is incompatible with naturalism
4. The argument from moral praise and blame is incompatible with naturalism
5. Libertarian freedom (free will) is incompatible with naturalism
6. Purpose is incompatible with naturalism
7. The enduring concept of self is incompatible with naturalism
8. The experience of first-person subjectivity ("I") is incompatible with naturalism

Metaphysical naturalism is false: it is irrational and it contradicts our experience of ourselves.

And epistemological naturalism is compatible with theism.

Rebutting Dr. Rosenberg's responses:

1. Contingency: no response

2. Cosmological: he mis-states the first premise to say every effect… when it is whatever begins to exist…, the origin of the universe was not from a vacuum, virtual particles come from a vacuum not nothing, there are interpretations of QM that are compatible with determinism. Rosenberg has to believe that the entire universe popped into being from non-being.

3. Mathematics: no response

4. Fine-tuning: the multiverse is refuted by empirical observations of the universe. Without fine-tuning, it's not that we still have silicon to make life out of. It's that we lose basic minimal things like chemical diversity, matter, stars, planets, etc. No life of any kind, not just no carbon-based life.

5. Intentionality: no response.

6. Moral argument: the answer to the dilemma is that you split the dilemma: God is the standard of good, and the

commands flow from his unchanging moral nature. The commands are not arbitrary, and the standard is not external to God. Dr. Rosenberg is a nihilist and he cannot ground good and evil on his nihilistic view.

7. Resurrection: The Gospels are early eyewitness testimony. Mormonism and Islam have nothing to do with the minimal set of historical facts about Jesus agreed to by the majority of ancient historians across the ideological spectrum, general statements against eyewitnesses do not refute the specific eyewitness testimony in this case.

8. Religious experience: No response.

**Dr. Rosenberg's first rebuttal**

I wrote a book and you should buy it, because it got me invited to this debate. Let me repeat the title a few times for you. Please buy it.

Dr. Craig is right, there are multiple interpretations of QM, not just the one I presented, including deterministic ones.

All the disturbing implications of naturalism that Dr. Craig stated follow from metaphysical naturalism, and metaphysical naturalism is true. (Note: he equates science with metaphysical naturalism)

Science proves that metaphysical naturalism is true, but I won't say what specific scientific tests prove my philosophical assumption of metaphysical naturalism.

I'll pretend that the Big Bang (science) doesn't disprove naturalism, like Dr. Craig said. Again. (covers ears) La la la, there is no Big Bang.

We didn't come here to debate epistemological naturalism and metaphysical naturalism.

Let me explain the problem of intentionality since I'm so smart and no one knows what it means.

There are many answers to this problem of intentionality.

My answer is that most scientists are naturalists, therefore naturalism is true, regardless of the argument from intentionality of mental states.

That's how I would respond to one of the eight problems with naturalism that Dr. Craig raised. I won't answer the other seven problems.

It is an argument from ignorance to argue that the applicability of mathematics to the universe requires a designer, because there are non-Euclidean geometries. Craig's argument, which he gets from people like respected physicists like Eugene Wigner, is bizarre. It is bizarre, therefore I refute Eugene Wigner and all the other scholars who make that argument. It is bizarre! Bizarre!

Deductive problem of evil: there is no response to this argument, certainly not Alvin Plantinga's free will defense. The deductive argument from evil has not been entirely abandoned at all! It's not like arch-atheist J.L. Mackie himself admits that the deductive problem of evil doesn't lead to a logical inconsistency between evil and God.

Dr. Craig has to tell me why God allows evil or God doesn't exist.

It is offensive that Dr. Craig cannot tell me why God allows every evil and suffering that occurs.

He literally said this: "I will become a Christian if Dr. Craig can tell me why God allowed EVERY EVIL THAT OCCURRED IN THE LAST 3.5 BILLION YEARS"

**Dr. Craig's second rebuttal**

We are not in a position to know why God allows specific instances of evil and suffering.

God cannot force people to freely do anything – freedom is not compatible with determinism. Freedom is a good, but freedom opens up the possibility of moral evil. You cannot have the good of free will without allowing people to choose to do morally evil things.

God can permit evil and suffering in order to bring more people into a relationship with him.

The atheist has to show that God could allow less evil and achieve more knowledge of God in order to say there is too much evil.

The purpose of life is not happiness, but knowledge of God.

Dr. Craig quotes agnostic Paul Draper (Purdue) and Peter Van Inwagen (Notre Dame) to state that the deductive problem of evil is dead because of free will and morally sufficient reasons for permitting evil.

1. Contingency: no response.

2. Cosmological: QM does not apply, because the universe came from nothing, not a vacuum, and QM only works in a vacuum.

3. Mathematics: He mentions alternatives like non-Euclidean geometry, but we have to explain the structure of THIS universe.

4. Fine-tuning: ???

5. Intentional states: intentional mental states proves that minds exist, which fits with theism better than it fits with atheism.

6. Moral argument: You need God to ground morality, and Dr. Rosenberg believes in morality. He needs God to ground objective moral values and duties.

7. Historical argument: He has to respond to the minimal facts supported by the consensus of ancient historians across the ideological spectrum.

8. The problems of naturalism: He says that you can't have science without naturalism, but you can have science with EPISTEMOLOGICAL NATURALISM, and theists accept science and methodological naturalism. We don't accept METAPHYSCIAL NATURALISM because of the eight problems Craig presented, like intentionality, first-person, persistence of self, etc. You can believe in both science and theism, by embracing epistemological naturalism, while rejecting methaphysical naturalism.

**Dr. Rosenberg's second rebuttal**

Dr. Craig hasn't answered many of my points, I won't say which ones though.

Debates don't work as a way of deciding what's true, so we should overturn the entire criminal justice system.

The principle of sufficient reason is false because it is disconfirmed by quantum mechanics. And quantum mechanics (vacuum and virtual particles that exist for a short time) is similar to the origin of the universe (nothing and entire universe and 14 billion years).

We know that alpha particles come into being without cause all the time from a quantum vacuum for a tiny sub-second duration before going out of existence, so we can say that the entire physical universe came into being for 14 billion years from absolute nothing which is not a quantum vacuum.

Peter Van Inwagen is the best metaphysician working today, and he says that my deductive argument from evil is not decisive, it's not a successful argument. (Why is he undermining his own problem of evil argument????!)

Dr. Craig invoked Plantinga's free will defense to the deductive POE. Freedom allows us to do evil. God could have given us free will without evil and suffering. I won't show how, but I'll just assert it, because debates are such a bad forum for supplying evidence for my speculative assertions.

If you answer the question 3 + 5 as being 8, then you don't have free will – you are biologically determined if you answer 8, because everyone answers 8, and that means everyone is biologically determined with no free will.

Why can't God give us free will and then prevent us from making a free choice?

No scholars date the gospels earlier than 60-70 AD, especially not atheists like James Crossley who dates Mark to 40 AD. Therefore Jesus' burial isn't historical, like the majority of scholars across the broad spectrum of scholarship agree it is.

The original New Testament documents were written in Aramaic.

All New Testament scholars are orthodox Christians, like atheist Robert Funk for example.

**Dr. Craig's concluding speech**

In order to sustain the deductive argument from evil, Dr. Rosenberg must show that God could create a world of free creatures with less evil.

Principle of Sufficient Reason: not using the general principle of sufficient reason, but a more modest version of this states that contingent things should have an explanation for their existence. And we know that the universe is a contingent.

The New Testament was not written in Aramaic, they were written in Greek. Dr. Rosenberg is wrong there too.

(Dr. Craig spends the rest of his concluding speech giving his testimony and urging people to investigate the New testament).

**Dr. Rosenberg's concluding speech**

Some long-dead French guy named Laplace said that he has no need of that (God) hypothesis. He did not know about any of Dr. Craig's arguments made in this debate tonight when he said that, though.

There is no need to explain how the universe began or how the universe is finely-tuned if you just assume metaphysical naturalism on faith.

The Easter Bunny, therefore atheism.

Most scientists are atheists, therefore atheism.

You can do a lot of science without God, just don't look at the origin of the universe, the fine-tuning of the universe, or the other parts of science that Craig mentioned, as well as the origin of life, the Cambrian explosion, the habitability argument, and so on.

You can be a Christian, but good Christians should not use arguments and evidence.

Good Christians should be irrational and ignorant. Bad Christians look for arguments and evidence from science and history.

Good Christians should embrace the absurd. Bad Christians want to search for truth and use logic and evidence.

# Sixth Circuit Court of Appeals upholds marriage amendments in four states

**Wintery Knight** · 7 November 2014 · Archived copy · Original

GOOD NEWS! Ryan T. Anderson writes about it in The Daily Signal. (H/T WGB)

Excerpt:

> Earlier today, the U.S. Court of Appeals for the 6th Circuit overruled lower court decisions that had struck down state laws defining marriage as the union of a man and a woman.
>
> The 6th Circuit Court ruled that constitutional amendments passed by popular vote in Michigan (2.7 million votes), Kentucky (1.2 million), Ohio (3.3 million) and Tennessee (1.4 million) do not violate the U.S. Constitution. Citizens remain free to define marriage as a male-female institution.
>
> Today's decision helpfully explained why these laws are constitutional, why it is reasonable for citizens to support such laws, and why arguments for court-imposed redefinition of marriage do not succeed. It also sets the stage for marriage to return to the U.S. Supreme Court.

This is a beautiful decision. It does NOT tell the people in the states what marriage is or is not. It simply says that the people in the states have to decide – NOT a handful of judges.

Look:

> As the 6th Circuit decision helpfully notes, at issue in these cases is "whether to allow the democratic processes begun in the States to continue in the four States of the Sixth Circuit or to end them now by requiring all States in the Circuit" to redefine marriage. The court ruled that the democratic process should continue:
>
> Our judicial commissions did not come with such a sweeping grant of authority, one that would allow just three of us—just two of us in truth—to make such a vital policy call for the 32 million citizens who live within the four states of the Sixth Circuit.
>
> […]A dose of humility makes us hesitant to condemn as unconstitutionally irrational a view of marriage shared not long ago by every society in the world, shared by most, if not all, of our ancestors, and shared still today by a significant number of the states.

Look what Ryan writes at the end:

> Today's decision pointed out that in our system of government, a change to marriage, if it should come, should occur "through the customary political processes, in which the people, gay and straight alike, become the heroes of their own stories by meeting each other not as adversaries in a court system but as fellow citizens seeking to resolve a new social issue in a fair-minded way."
>
> Indeed, "When the courts do not let the people resolve new social issues like this one, they perpetuate the idea that the heroes in these change events are judges and lawyers."
>
> […]Ultimately, the 6th Circuit ruled that it would not usurp the authority of the American people to discuss, debate and make marriage policy. The ruling argued that change could come in one of two ways: through a judicial usurpation of politics or through the political process. And the court rightly refused to take the former course. It would leave to the people the question of whether to take the latter.
>
> The court argued that it "is dangerous and demeaning to the citizenry to assume that *we*, and only *we*, can fairly understand the arguments for and against gay marriage." No, judges alone should not have this discussion—all

> Americans should.

We are so often bombarded with the *arrogance* of judges imposing laws on us from the bench, that it is amazing when we actually hear a judge doing what judges are supposed to do – interpret the laws passed by the representatives of the people. When you hear Republicans like George W. Bush talk about "strict constructionist" judges, these are the judges he means – interpreters of the law. When you hear the Democrats like Barack Obama talk about "the Constitution is a living document", they mean that judges make the law – not the people. We need to elect a President who believes that judges are not superior to the people's representatives.

I recommend printing out and reading the entire article. It's very good. It assesses the reasons for a state to define marriage, explains the concept of federalism, and assesses common objections to natural marriage. It's good for us to know how these arguments are used so we can talk about it.

You can also read the press release from Liberty Counsel, the law firm that argued the case for marriage.

UPDATE: More on the decision from Ed Whelan of National Review.

# Republican senator Tim Scott pushes school choice in MSNBC interview

**Wintery Knight** · 7 November 2014 · Archived copy · Original

I managed to find some of the transcript here on Newsbusters.

Let Tim Scott explain it:

> THOMAS ROBERTS: This is Thomas Roberts by the way. **You said you are concerned about kids that growing up in the wrong zip code** and — like yourself that had a tough start on the way out. **But if we look at agencies that are following some of your voting records, they have concern.** And the NAACP has given you an "F" on their annual scorecard. They also say that you voted against the ACA. You voted to hold Attorney General Eric Holder in contempt of Congress. You oppose the Congressional Black Caucus' budget. Delayed funding on a settlement between the U.S. and black farmers who say they were prejudiced against because of their race. **So how do you respond to that, if your true concern is about lower-income families and kids?**
>
> TIM SCOTT: Let's just ask ourselves if we look back over history when the congress was controlled by the **Democrats for 40 consecutive years. If we look at the result of that control, what has happened in black America? We saw greater poverty. If we take statistics from the 1970s to the 21st-century, what we see very clearly is that poverty's gone from 11% to 15%. These are classic examples of the policies of the left have not worked.** I will tell you, that if I have an "F" on the NAACP scorecard, it's because I believe progress has to be made and the government is not the answer for progress. I was a kid growing up in poverty. I had a mentor who was a Chick-fil-A operator named John Moniz who taught me that the brilliance of the American economy happens through business ownership and entrepreneurial spirit. So whether you own the business or not, **success is possible if you, a: have a good education, b: have a strong work ethic.** For the average person who can work. These two key components come together and form a foundation. **That is the way that you eradicate poverty. All the social programs that we've had. We have the largest government we've ever had in the history of the country. We have more nonprofit organizations working on the same issue. And yet we have higher percentage of people living in poverty.** The key it seems like is individual freedom and economic opportunity, fusing those together in an agenda that focuses on education seems to leave forward.

Elsewhere in the interview, he talks about how Indian-American Republican Governor Bobby Jindal has pushed hard for vouchers for the poor in Louisiana, and how the D.C. Opportunity Scholarship voucher program helped the poorest black students to get a quality education – even though Barack Obama opposed it as a favor to their public sector union bosses.

See, here's the deal. If Republicans want to get serious about winning the votes of poor people and minorities, they don't have to pass policies that discriminate against the wealthy or against whites. They just have to *pass good policies.* It shouldn't matter what color anybody's skin is. School choice is a police that disproportionately benefits the poor and minorities, but it doesn't discriminate. You just hand money to the parents whose children are stuck in an underperforming public school, and then the parents decide where to send their child. This is better than forcing parents to have to send their kids to a failing public school. It is *not right* for a child to be handed a garbage education just because lazy unionized Democrats don't want to face competition from private schools. Kids come first!

Let's learn about school choice from the Cato Institute and the Heritage Foundation.

Cato Institute:

The Heritage Foundation:

Awesome!

This is how you build Republican  voters and do the right thing *at the same time.* Republicans like to help the poor. But we also like to screw the public sector unions. Private unions are fine – public sector unions are poisonous. We have to destroy them and save the children, at the same time. Everybody wins! Well, except the Democrats.

# Friday night detectives: I found two more episodes of Sherlock Holmes

**Wintery Knight** · 7 November 2014 · Archived copy · Original

It's Friday, so that means more mysteries.

Here are 2 episodes of "The Adventures of Sherlock Holmes".

The Dying Detective:

The Norwood Builder:

I think this might be the last two I can post, so look for something different next week.

Happy Friday!

# Are people on the left really concerned about the basic rights of women?

**Wintery Knight** · 8 November 2014 · Archived copy · Original

Feminists teach young women in the West a lot about all the evils of men and western society. Christianity is evil. Capitalism is evil. Men are all out to get women and take away their salaries and birth control and abortion rights. And Western men are all rapists. Feminists have defined rape so low now that even unwanted kisses are rape. It sure sounds like they are really concerned about women, right? The Western liberal media certainly talks a lot about the "War on Women" when it's election time.

Well, consider this story from Newsbusters.

Excerpt: (links removed)

> This is the real "War on Women."
>
> Iraqi News reported Nov. 3 on an ISIS document that supposedly listed the prices at which to sell Yazidi and Christian women and children abducted by the terrorist group. Citing economic reasons, ISIS listed the worth of a young woman at $85, of girl at $128, of a child – as young as a year old – at $171. Only a few media outlets covered the story. The feminist media didn't , maybe because free contraceptives weren't at issue.
>
> Translating the ISIS document, the news site revealed, "The market to sell women and spoils of war has been experiencing a significant decrease, which has adversely affected ISIS revenue and financing of the Mujahideen."
>
> In response, the group determined specific prices for women and children, while "vowing to execute whoever violates those controls." This is the worth of a human life, according to ISIS:
>
> - A woman, 40 to 50-years-old: 50,000 dinars. ($42.90)
> - A woman, 30 to 40-years-old: 75,000 dinars. ($64.35)
> - A woman, 20 to 30-years-old: 100,000 dinars. ($85.80)
> - A girl, 10 to 20-years-old: 150,000 dinars. ($128.70)
> - A child, 1 to 9-years-old: 200,000 dinars. ($171.60)
>
> New York Post, Daily Mail, RT, International Business Times, Opposing Views and Christianity Today are among the few outlets to report on the story.
>
> […]In reaction, Tearfund's Katie Harrison told Christianity Today about the "the hasty marriage ceremonies between buyer and the woman they've bought in order to justify his raping her."
>
> "And these are not just grown women," Harrison said. "The youngest girl we heard of being taken for rape was three years old."
>
> This is the war on women the media don't report on. Instead, feminist media prefer a "silly" war, where the goals are to ban the word "bossy," demand free tampons and label abortion as "good" and "moral."
>
> You'd think, at the very least, they would find time for this too.

Slavery is only a problem for Democrats if it is being used to bash white people from hundreds of years ago. It's not something that causes them concern *today*. They just bring up slavery because they want "reparations" for themselves today. They don't care if slavery is actually going on *now* to other people. Not their problem.

Now I can't prove this, but I am willing to bet that all of these Sandra Fluke feminists vote Democrat, which means that they were in favor of withdrawing from the Middle East and letting the Islamists win. So how do they work that together with their supposed concern for women? Oh, I know. They don't have concern for *women*, they have a

concern for getting as much stuff as possible from others as they can. They care more about getting free abortion drugs for themselves than they do about these Yazidis being protected from rape. Or even about unborn women children. (Oh yes, feminists favor sex-selection abortions). That’s feminism, I guess.

# Read Theodore Dalrymple's "Life at the Bottom" online for free

**Wintery Knight** · 8 November 2014 · Archived copy · Original

I want to recommend that you read a book that is available online for free.

The author  is a psychiatrist in a British hospital that deals with a lot of criminals and victims of crime. So he gets to see the worldview of the "underclass" up close, and to understand how the policies of the compassionate secular left are really working at the street level. The theme of the book is that the left advances policies in order to feel good about themselves, even though the policies actually hurt the poor and vulnerable far more than they help them. And the solution of the elites is more of the same.

The whole book is available ONLINE for free! From City Journal!

**Table of Contents**

The Knife Went In 5
Goodbye, Cruel World 15
Reader, She Married Him–Alas 26
Tough Love 36
It Hurts, Therefore I Am 48
Festivity, and Menace 58
We Don't Want No Education 68
Uncouth Chic 78
The Heart of a Heartless World 89
There's No Damned Merit in It 102
Choosing to Fail 114
Free to Choose 124
What Is Poverty? 134
Do Sties Make Pigs? 144
Lost in the Ghetto 155
And Dying Thus Around Us Every Day 167
The Rush from Judgment 181
What Causes Crime? 195
How Criminologists Foster Crime 208
Policemen in Wonderland 221
Zero Intolerance 233
Seeing Is Not Believing 244

Lots more essays are here, all from City Journal.

**My favorite passage**

The only bad thing about reading it online is that you miss one of the best quotes from the introduction. But I'll type it out for you.

> The disastrous pattern of human relationships that exists in the underclass is also becoming common higher up the social scale. With increasing frequency I am consulted by nurses, who for the most part come from and were themselves traditionally members of (at least after Florence Nightingale) the respectable lower middle class, who have illegitimate children by men who first abuse and then abandon them. This abuse and later abandonment is usually all too predictable from the man's previous history and character; but the nurses who have been treated in this way say they refrained from making a judgment about him because it is wrong to make judgments. But if they do not make a judgment about the man with whom they are going to live and by

> whom they are going to have a child, about what are they ever going to make a judgment?
>
> "It just didn't work out," they say, the "it" in question being the relationship that they conceive of having an existence independent of the two people who form it, and that exerts an influence on their on their lives rather like an astral projection. Life is fate.

This is something I run into myself. I think that young people today prefer moral relativists as mates, because they are afraid of being judged and rejected by people who are too serious about religion and morality. The problem is that if you choose someone who doesn't take religion and morality seriously, then you can't rely on them to behave morally and exercise spiritual leadership when raising children. And being sexually involved with someone who doesn't take morality seriously causes a lot of damage.

**An excerpt**

Here's one of my favorite passages from "Tough Love", in which he describes how easily he can detect whether a particular man has violent tendencies on sight, whereas female victims of domestic violence – and even the hospital nurses – *will not* recognize the same signs.

> All the more surprising is it to me, therefore, that the nurses perceive things differently. They do not see a man's violence in his face, his gestures, his deportment, and his bodily adornments, even though they have the same experience of the patients as I. They hear the same stories, they see the same signs, but they do not make the same judgments. What's more, they seem never to learn; for experience—like chance, in the famous dictum of Louis Pasteur—favors only the mind prepared. And when I guess at a glance that a man is an inveterate wife beater (I use the term "wife" loosely), they are appalled at the harshness of my judgment, even when it proves right once more.
>
> This is not a matter of merely theoretical interest to the nurses, for many of them in their private lives have themselves been the compliant victims of violent men. For example, the lover of one of the senior nurses, an attractive and lively young woman, recently held her at gunpoint and threatened her with death, after having repeatedly blacked her eye during the previous months. I met him once when he came looking for her in the hospital: he was just the kind of ferocious young egotist to whom I would give a wide berth in the broadest daylight.
>
> Why are the nurses so reluctant to come to the most inescapable of conclusions? Their training tells them, quite rightly, that it is their duty to care for everyone without regard for personal merit or deserts; but for them, there is no difference between suspending judgment for certain restricted purposes and making no judgment at all in any circumstances whatsoever. It is as if they were more afraid of passing an adverse verdict on someone than of getting a punch in the face—a likely enough consequence, incidentally, of their failure of discernment. Since it is scarcely possible to recognize a wife beater *without* inwardly condemning him, it is safer not to recognize him as one in the first place.
>
> This failure of recognition is almost universal among my violently abused women patients, but its function for them is somewhat different from what it is for the nurses. The nurses need to retain a certain positive regard for their patients in order to do their job. But for the abused women, the failure to perceive in advance the violence of their chosen men serves to absolve them of all responsibility for whatever happens thereafter, allowing them to think of themselves as victims alone rather than the victims and accomplices they are. Moreover, it licenses them to obey their impulses and whims, allowing them to suppose that sexual attractiveness is the measure of all things and that prudence in the selection of a male companion is neither possible nor desirable.
>
> Often, their imprudence would be laughable, were it not tragic: many times in my ward I've watched liaisons form between an abused female patient and an abusing male patient within half an hour of their striking up an acquaintance. By now, I can often predict the formation of such a liaison—and predict that it will as certainly end in violence as that the sun will rise tomorrow.

> At first, of course, my female patients deny that the violence of their men was foreseeable. But when I ask them whether they think I would have recognized it in advance, the great majority—nine out of ten—reply, yes, of course. And when asked *how* they think I would have done so, they enumerate precisely the factors that would have led me to that conclusion. So their blindness is willful.

Go read the rest!

# Pope Francis again demotes conservative cardinal who criticized him

**Wintery Knight** · 9 November 2014 · Archived copy · Original

The story is from USA Today:

> In a move that reflects the loosening posture of the Vatican on major social issues, conservative U.S. cardinal Raymond Burke was removed by Pope Francis from yet another top post.
>
> Burke, who has long been vocal about denying communion to Catholic politicians who support abortion, was dismissed as head of the Holy See's highest court and given the post of Patron of the Sovereign Military Order of Malta, a largely ceremonial job overseeing charity to the elderly.
>
> At 66, Burke is considered young by church hierarchy standards. The dismissal is a set-back to his Vatican career as well as a clear message from Pope Francis to those not hewing to his progressive view of the Catholic Church.
>
> The move was expected by Vatican watchers given that Burke, the former archbishop of St. Louis, had openly criticized Francis' less doctrinaire approach to the faith. Last year, Francis had removed Burke from the Congregation for Bishops, a group tasked with the appointment of new bishops worldwide.
>
> In an interview with a Spanish Catholic weekly published last week, Burke said of the pope's leadership: "Many have expressed their concerns to me. … There is a strong sense that the church is like a ship without a rudder."
>
> […]Philadelphia archbishop Charles Chaput recently characterized Francis' reign as one of "confusion," adding that "confusion is of the devil."

This isn't the first time Burke has been demoted by this Pope, either. It happened before in December 2013:

> Pope Francis moved on Monday against a conservative American cardinal who has been an outspoken critic of abortion and same-sex marriage, by replacing him on a powerful Vatican committee with another American who is less identified with the culture wars within the Roman Catholic Church.
>
> The pope's decision to remove Cardinal Raymond L. Burke from the Congregation for Bishops was taken by church experts to be a signal that Francis is willing to disrupt the Vatican establishment in order to be more inclusive.
>
> […]To replace Cardinal Burke, Francis chose Cardinal Donald Wuerl of Washington, an ideological moderate with a deep knowledge of the Vatican but also with pastoral experience. Father Reese noted that Cardinal Burke had been a leader of American bishops arguing that Catholic politicians who support abortion rights should be barred from receiving communion, while Cardinal Wuerl had taken an opposite tack.

I'm not Catholic, but Burke and Chaput are the two most conservative Catholic leaders in my opinion. As an outsider to the church, I prefer that Catholics try to be as conservative as possible, and not be influenced by the secular culture. I don't expect them to be Bible-based like evangelical Protestants are, but I expect them to be resistant to the secular culture on things like abortion, gay marriage and the free enterprise system. This is disappointing to me, to go from Benedict to this. Benedict was a Pope I respected, but this Pope… I don't like who he tries to make friends with.

# William Lane Craig lectures on the moral argument at Georgia Tech

**Wintery Knight** · 9 November 2014 · Archived copy · Original

This video has 3 parts, as well as questions and answers in individual clips.

For those who cannot watch the video, you can grab the MP3 file of the lecture, or read this essay by Dr. Craig which covers exactly the same ground as the video. The essay is for Christians already familiar with basic apologetics.

Part 1 of 3:

Part 2 of 3:

Part 2 of 3:

If you want to show this lecture and Q&A to your apologetics group, you can find the DVD here.

You can also read a debate transcript where Dr. Craig puts his ideas to the test, against Dr. Richard Taylor.

# Midterm election: more American women choosing not to depend on government

**Wintery Knight** · 10 November 2014 · Archived copy · Original

Republican Congresswoman Elise Stefanik, age 29
From National Review.

Excerpt:

> A funny thing happened in the "war on women" — Mia Love and Joni Ernst won, Wendy Davis and Sandra Fluke lost. The representative who will be the youngest woman ever to have served in Congress, Elise Stefanik, is a Republican who won a formerly Democratic seat — not in Oklahoma or Texas but in New York. Senator-elect Ernst is a 21-year veteran of the Army Reserve and National Guard who served overseas during the Iraq war; Representative-elect Love, a daughter of Haitian immigrants who came to the United States fleeing the Tonton Macoutes, is a former city councilman and mayor of Saratoga Springs, Utah.
>
> The difference could not be more dramatic: The Democrats' vision of an American woman's life was best expressed in the Obama campaign's insipid "Julia" cartoons, in which a faceless, featureless woman at every crossroads in her life turns to the federal government, as personified by Barack Obama, for succor and support. From negotiating a salary to managing her pregnancy, Julia cannot do anything for herself — at every turn, she is reminded that she enjoys political patronage "under President Obama," in the campaign's psychosexually fraught and insistently reiterated phrase. So much for the Democrats. And the Republican women of 2014? They helped fight wars and made new lives for themselves on foreign shores. They were women who ran for office on policy platforms, not on their uteruses.
>
> […]Do women aspire to a life like Julia's, or to one more like that of Lieutenant Colonel Joni Ernst? Would you rather be a sanctimonious sack of woe, like Wendy Davis, or a happy warrior, like Mia Love? Would you rather vote for a party that speaks to you as a citizen, family member, entrepreneur, taxpayer, etc. — or one that insists you owe it not only your *vote* but your *obedience* simply because you have a certain configuration of chromosomes or a certain surname?
>
> It is one of life's little ironies that it is the feminists and the party of so-called women's issues who in the 21st century still have not quite figured out that women are individuals, and that there is more to them than the sum

> of their parts.

If there is any issue that the left thinks is important for women, it's the issue of abortion. You might expect that candidates who made a big deal of being pro-life would have lost in the mid-term elections. But Joni Ernst, Elise Stefanik and Mia Love are all pro-life. It looks like the War on Women rhetoric backfired. Maybe all it takes is for the GOP to put up more women candidates who have real, interesting lives. Maybe women would rather have an awesome life, an awesome marriage, and awesome kids instead of having abortions and being dependent on government. What if women voters were more attracted to the idea of achieving things on their own and forming relationships with real people?

Republican women are awesome.

# Wisconsin Health Board declares that wind power is a public health risk

**Wintery Knight** · 10 November 2014 · Archived copy · Original

From the Green Bay Gazette.

Excerpt:

> Brown County health officials have declared wind turbines a public health risk, but they haven't determined how to put their declaration into action.
>
> The county's Health Board this month declared the Shirley Wind Farm operated by Duke Energy Renewables poses a health risk to its neighbors in the town of Glenmore. Three families have moved out of their homes rather than endure physical illness they blame on the low-frequency noise the wind turbines generate, according to Audrey Murphy, president of the board that oversees the Brown County Health Department.
>
> […]Whatever happens, residents "are grateful to the Board of Health for reviewing the research and listening to the people of Brown County," said Susan Ashley, who also lives in the Shirley area and who has helped rally opposition to the wind farm through the years.
>
> Twenty families in the town have documented health issues since the wind farm started operated in 2010, Ashley said.
>
> Duke Energy Renewables was not invited to the health board's discussion and would have cited tests that determined sound levels from the wind generators were low and could not be linked to adverse health impacts, company spokeswoman Tammie McGee said. The company has not received any formal word about the board's declaration, McGee said.
>
> Dr. Jay Tibbetts, vice president of the Brown County health board and its medical adviser, said he knows of no science that proves there isn't a link between health problems and the low-frequency noise the giant fans produce.
>
> "There's been nothing that's debunked anything," he said. "As far as what's happening to these people, it doesn't make a difference whether you're in Shirley or Denmark, or Ontario, Canada. Forty people have moved out of their homes, and it's not just for jollies. In Shirley, three people have moved out of their homes. I know all three. They're not nuts. They're severely suffering."
>
> People might not be able to hear the sounds the Shirley turbines produce, but Tibbetts said he knows of a teenager living in the area who can tell when the turbines are off or on without being able to see them. Area residents or former residents report headaches, nausea and other symptoms they say are brought on by the turbines, and those symptoms clear up when the residents move elsewhere for a time, Tibbetts said.

Previously, I blogged about how wind power is a threat to birds – even rare, protected birds.

Excerpt:

> Wind energy facilities have killed at least 67 golden and bald eagles in the last five years, but the figure could be much higher, according to a new scientific study by government biologists.
>
> The research represents one of the first tallies of eagle deaths attributed to the nation's growing wind energy industry, which has been a pillar of President Obama's plans to reduce the pollution blamed for global warming. Wind power releases no air pollution.
>
> But at a minimum, the scientists wrote, wind farms in 10 states have killed at least 85 eagles since 1997, with most deaths occurring between 2008 and 2012, as the industry was greatly expanding. Most deaths — 79 — were golden eagles that struck wind turbines. One of the eagles counted in the study was electrocuted by a

> power line.
>
> The vice president of the American Bird Conservancy, Mike Parr, said the tally was “an alarming and concerning finding.”

And this is not only something that Democrats know about – they are actually protecting these bird killers.

Look at this article from ultra-liberal PBS:

> The Obama administration said Friday it will allow some companies to kill or injure bald and golden eagles for up to 30 years without penalty, an effort to spur development and investment in green energy while balancing its environmental consequences.
>
> The change, requested by the wind energy industry, will provide legal protection for the lifespan of wind farms and other projects for which companies obtain a permit and make efforts to avoid killing the birds. An investigation by The Associated Press earlier this year documented the illegal killing of eagles around wind farms, the Obama administration’s reluctance to prosecute such cases and its willingness to help keep the scope of the eagle deaths secret. The White House has championed wind power, a pollution-free energy intended to ease global warming, as a cornerstone of President Barack Obama’s energy plan.
>
> In other areas, too, such as the government’s support for corn-based ethanol to reduce U.S. dependence on gasoline, the White House has allowed the green industry to do not-so-green things. Another AP investigation recently showed that ethanol has proven far more damaging to the environment than politicians promised and much worse than the government admits today.
>
> Under the change announced Friday, companies would have to commit to take additional measures if they kill or injure more eagles than they have estimated they would, or if new information suggests that eagle populations are being affected. The permits would be reviewed every five years, and companies would have to submit reports of how many eagles they kill. Now such reporting is voluntarily, and the Interior Department refuses to release the information.

Just because something is called green, it doesn’t make it good for nature.

# Planned Parenthood, an abortion business, is in California schools teaching sex education

**Wintery Knight** · 10 November 2014 · Archived copy · Original

This is from Life Site News.

Excerpt:

> A group of high school parents in the East Bay area of San Francisco were surprised and upset when they learned Planned Parenthood was teaching sex education to their children in the district's schools.
>
> […]Freshmen sit through a week of "comprehensive sex ed" presented by the California faction of the nation's largest abortion provider.
>
> "The staff and governing board believe Planned Parenthood does an excellent job," Acalanes Superintendent John Nickerson told KPIX. "The concerns that were raised are not merited."
>
> The district has partnered with Planned Parenthood for the past decade, he said, adding that sex education is not about politics.
>
> […]The NOISE Coalition said the school did not notify parents ahead of time, did not have an administrator present in the class, and did not have a formal contract with Planned Parenthood for parents to review, according to the Contra Costa Times.
>
> The district denied the allegations, except for the absent contract, but then signed one with the abortion giant after the fact.

Planned Parenthood makes money off of young people who buy abortions from them. Do you think they are telling children the truth about premarital sex, which creates the need for abortion? Their bottom line depends on them getting these kids to *need abortions*. It would be like having companies that sell alcohol teaching children about the effects of drinking.

# Veteran's Day re-post: Navy SEAL Michael Murphy awarded Medal of Honor

**Wintery Knight** · 11 November 2014 · Archived copy · Original

Navy SEAL Michael Murphy wins Medal of Honor

*For Veteran's Day, I am re-posting one of my favorite Medal of Honor stories.*

Here is the story of a brave Navy SEAL named Michael Murphy.

Excerpt:

> Engaged in a frenzied firefight and outnumbered by the Taliban, Navy Lt. Michael Murphy made a desperate decision as he and three fellow SEALs fought for their lives on a rocky mountainside in Afghanistan's Kunar Province in 2005.
>
> In a last-ditch effort to save his team, Murphy pulled out his satellite phone, walked into a clearing to get reception and called for reinforcements as a fusillade of bullets ricocheted around him. One of the bullets hit him, but he finished the call and even signed off, "Thank you."
>
> Then he continued the battle.
>
> Dan Murphy, the sailor's father, said it didn't surprise him that his slain son nicknamed "The Protector" put himself in harm's way. Nor was he surprised that in the heat of combat his son was courteous.
>
> "That was Michael. He was cool under fire. He had the ability to process information, even under the most difficult of circumstances. That's what made him such a good SEAL officer," Murphy said.
>
> A warship bearing the name of the Medal of Honor recipient will be christened Saturday — on what would have been Murphy's 35th birthday — at Bath Iron Works, where the destroyer is being built.
>
> Murphy, who was 29 when he died, graduated from Pennsylvania State University and was accepted to multiple law schools, but decided he could do more for his country as one of the Navy's elite SEALS — special forces trained to fight on sea, air and land — the same forces that killed Osama bin Laden this week in

> Pakistan.
>
> […]Murphy, of Patchogue, N.Y., earned his nickname after getting suspended in elementary school for fighting with bullies who tried to stuff a special-needs child into a locker and for intervening when some youths were picking on a homeless man, said Dan Murphy, a lawyer, former prosecutor and Army veteran who served in Vietnam.
>
> Maureen Murphy said he thought he was too young to take a desk job as a lawyer. Instead, he went to officer candidate school, the first step on his journey to become a SEAL officer. He was in training during the Sept. 11 attacks, which shaped his views.
>
> His view was that there are "bullies in the world and people who're oppressed in the world. And he said, 'Sometimes they have to be taken care of,'" she said.
>
> On June 28, 2005, the day he was killed, Murphy was leading a SEAL team in northeastern Afghanistan looking for the commander of a group of insurgents known as the Mountain Tigers.

What happened to Murphy?

> The Operation Red Wings reconnaissance team rappelled down from a helicopter at night and climbed through rain to a spot 10,000 feet high overlooking a village to keep a lookout. But the mission was compromised the following morning when three local goat herders happened upon their hiding spot.
>
> High in the Hindu Kush mountains, Murphy and Petty Officers Marcus Luttrell of Huntsville, Texas; Matthew Axelson of Cupertino, Calif.; and Danny Dietz of Littleton, Colo.; held a tense discussion of the rules of engagement and the fate of the three goat herders, who were being held at gunpoint.
>
> If they were Taliban sympathizers, then letting the herders go would allow them to alert the Taliban forces lurking in the area; killing them might ensure the team's safety, but there were issues of possible military charges and a media backlash, according to Luttrell, the lone survivor.
>
> Murphy, who favored letting the goat herders go, guided a discussion of military, political, safety and moral implications. A majority agreed with him.
>
> An hour after the herders were released, more than 100 Taliban armed with AK-47 assault rifles and rocket-propelled grenades opened fire, attacking from higher elevation, and maneuvering to outflank the SEALs, said Gary Williams, author of "Seal of Honor," a biography of Murphy.
>
> […]As the only survivor, Luttrell has pangs of regret for voting to go along with Murphy, his best friend; he now believes the team could've survived if the goat herders were killed.

He wasn't willing to kill unarmed civilians. That's the difference between the United States and the Muslim terrorists. It's a moral difference. Michael Murphy was a good man. He used guns and violence to protect others, and he was not willing to kill unarmed civilians.

Here are the requirements for the Army version of the Medal of Honor:

> The Medal of Honor is awarded by the President in the name of Congress to a person who, while a member of the Army, distinguishes himself or herself conspicuously by gallantry and intrepidity at the risk of his or her life above and beyond the call of duty while engaged in an action against an enemy of the United States; while engaged in military operations involving conflict with an opposing foreign force; or while serving with friendly foreign forces engaged in an armed conflict against an opposing armed force in which the United States is not a belligerent party. The deed performed must have been one of personal bravery or self-sacrifice so conspicuous as to clearly distinguish the individual above his comrades and must have involved risk of life. Incontestable proof of the performance of the service will be exacted and each recommendation for the award of this decoration will be considered on the standard of extraordinary merit.

I once read an entire book on Medal of Honor award winners in World War II. It's hard to read those stories, because these people who won the award did amazing acts of bravery, courage and self-sacrifice, but then most of them DIED. The stories almost always end in sadness and grief. Here's the one that really stuck with me as an example.

On a happier note, what kind of ship do you think would suit Michael Murphy?

USS Michael Murphy DDG 112 Arleigh Burke

Michael Murphy is getting a brand new Arleigh Burke guided missile destroyer! Arleigh Burke vessels have the AEGIS missile defense system and their role is to protect carrier strike groups from incoming SSMs and ASMs.

Excerpt:

> The Arleigh Burke Class destroyers are equipped with the Aegis combat system which integrates the ship's sensors and weapons systems to engage anti-ship missile threats.
>
> The Aegis system has a federated architecture with four subsystems – AN/SPY-1 multifunction radar, command and decision system (CDS), Aegis display system (ADS) and the weapon control system (WCS). The CDS receives data from ship and external sensors via satellite communications and provides command, control and threat assessment. The WCS receives engagement instruction from the CDS, selects weapons and interfaces with the weapon fire control systems.
>
> […]Lockheed Martin is developing the Aegis ballistic missile defence (BMD) capability for the Aegis combat system to engage ballistic missiles with the SM-3 missile. 15 Arleigh Burke destroyers have been fitted with the Aegis BMD system, which provides the capability for long-range surveillance, tracking and engagement of short and medium-range ballistic missiles. The system received US Navy certification for full deployment in September 2006. Work was completed on the 15 destroyers at the end of 2008 and the vessels, with three Ticonderoga cruisers, form the Aegis BMD fleet. On 30 July 2009 the Aegis BMD system was successfully tested by the US Navy on the USS Hopper (DDG 70).Aegis BMD is the main sea-based component of the US ballistic missile defence system.
>
> The weapons control systems include a SWG-1A for Harpoon, SWG-3 for Tomahawk, mk99 mod 3 missile fire control system, GWS34 mod 0 gun fire control system and mk116 mod 7 fire control system for anti-submarine systems.

Only two classes of warships that I know of have the AEGIS system. The DDG Arleigh Burke and the CG Ticonderoga.

Michael Murphy was a real hero. It makes me sad that he is gone. But his spirit will live on in the new warship that

bears his name.

# Video: Obamacare architect admits deceiving the public was needed to get it passed

**Wintery Knight** · 11 November 2014 · Archived copy · Original

CNS News reports.

Excerpt:

> A key architect of Obamacare has been caught openly boasting about taking advantage of, what he calls, "the stupidity of the American voter."
>
> MIT economics professor Jonathan Gruber spoke at a panel on October 17 on the political hurdles Obamacare faced in 2009-10. The video was unearthed and posted on Youtube by **American Commitment**.
>
> Gruber was **instrumental** in crafting the legislation that was signed into law in March 2010.
>
> In the midst of his explanation, Gruber bragged about the multiple deceptions the Obama White House perpetrated on the American people:
>
> "This bill was written in a tortured way to make sure CBO did not score the mandate as taxes. If CBO scored the mandate as taxes, the bill dies. So it was written to do that. In terms of risk related subsidies, if you had a law which made explicit that healthy people pay in and sick people get money it would not have passed. Lack of transparency is a huge political advantage. And basically, call it the stupidity of the American voter or whatever, but basically that was really, really critical to get the thing to pass."
>
> This is a jaw dropping disclosure of the political lengths those in the Obama Administration were willing to go to avoid the hard truths about their signature legislative achievement.

This story is in the news, but this isn't the first time I've blogged about Gruber.

Last November, I wrote about an interview with Jonathan Gruber.

Gruber said this:

> "We currently have a highly discriminatory system where if you're sick, if you've been sick, if you are going to get sick, you cannot get health insurance," Gruber told host Chuck Todd. "The only way to end that discriminatory system is to bring everyone into the system and pay one fair price. That means that the genetic winners, the lottery winners, who've been paying their artificially low price because of this discrimination, now will have to pay more in return. And that, by my estimate is about 4 million people. In return, we'll have a fixed system where over 30 million people will now, for the first time, be able to access fairly priced and guaranteed health insurance."

So if I'm a man who chooses not to use drugs, I am a genetic winner, and I need to pay more to cover the substance abuse treatment coverage for those genetic losers who do choose to use drugs. If I'm a man, who doesn't want to be a woman, I have to pay more in insurance to cover the sex-change surgery of men who do want to be women. If I'm a man who marries and has kids, I have to pay for the IVF of the career feminists who never marry and wait until they are 40 and want suddenly want IVF. And so on.

So according to Gruber, this law was about redistributing wealth *from the beginning.*

Imagine Obamacare applied to auto insurance. It would be like paying more for your auto insurance on a low-risk SUV to cover people who drive expensive motorcycles, which are more risky. You aren't subject to high risk, but your must pay for those who are. That was the whole point of the law. And eventually, more mandatory coverages will be added for politically correct treatments like IVF, breast enlargements and sex changes, as is done in other

socialized health care systems in the UK (breast enlargements, IVF) and some provinces in Canada (sex changes).

Think about that when the insurance premiums for Obamacare exchange plans finally get published and the premium are much higher. They. Knew.

UPDATE: The Daily Caller reports that University of Pennsylvania has now pulled the video but the one I linked to above is still live.

# Huffington Post leftist credits black Republican woman's election win to "white privilege"

**Wintery Knight** · 11 November 2014 · Archived copy · Original

Republican Congresswoman Mia Love

The Daily Caller reports.

Excerpt:

> Mia Love, the former mayor of Saratoga Spring, Utah, won her race for Utah's 4th congressional district Tuesday and will now be the first black Republican woman (and first Haitian-American) to sit in the United States Congress.
>
> The heads of leftists have been exploding ever since Love's victory as they attempt to come to grips with how a black woman could champion bedrock conservative principles such as fiscal discipline, limited government and personal responsibility.
>
> The most fascinating treatise about Love — thus far —comes via The Huffington Post where Darron Smith, a desperately confused blogger with a Ph.D. in education, accuses Love of benefitting from a form of "white privilege."

Education departments are an excellent place to go if you want to learn nothing at all of practical value, but borrow a lot of money to do it. It's maybe not as useless as English, but it's pretty useless.

More:

> […][Smith] can't understand, though, how Love doesn't agree with his own political ideology. Because she disagrees with him, he declares that the principles she espouses go against her interests — because of the color of her skin and the sexual organs she possesses.
>
> "Love's political convictions show a strong support for values that do not necessarily represent her interests as a member in any of these oppressed groups," Smith writes. "For example, blacks are not doing well with respect to education, economics and health outcomes, while women still trail behind in salary and significant positions of power, and conservative politics are not typically known to aid these groups in such key issues. These actualities of Mia's existence seem to be diametrically opposed to her values that are grounded in a white, male, Christian context."
>
> Smith then lays down his blogger coup de grâce:
>
> "She appears publicly unhampered by the daily grind of white racism that affects other racial minorities within

> the United States," he proclaims. "Unlike most of them, Mia gets to walk through the hallowed doorways of white institutions controlled by elite, powerful men. She is allowed to pass through in her black, female body with the understanding that she must not see, speak or openly advocate for anything related to race or gender — an unholy compromise. Hence, she might look black, but her politics are red. This is one way white privilege is reproduced at the legislative level of government."
>
> "Mia and others like her are seemingly out of touch with the political realities of African Americans and what remains at stake for them," the blogger concludes, hastening to add that "[i]t would be a mistake to assume that all black people are monolithic and share the same political inclinations."

I think I know why Democrats are losing elections. They are so focused on learning how to recognize racism, sexism, homophobia, etc. in university that they forget how to advocate for policies that actual work for normal people. People who work for a living instead of doing PhDs in Education, for example. So then, when a Republican talks about economic growth, stronger families, school choice, national security, lower health care costs, developing energy resources, reducing the national debt, etc., and wins an election, it really confuses the left. They think that people should win elections by focusing on "important things" like race divisions, class divisions, sex divisions, and most important – FREE BIRTH CONTROL! That's what they think are the important things – that's what they learned in university. They are so focused on ideology that they can't understand that elections are about right-sizing government so that working people's lives *improve*. Mia Love won her election *on the merits*. But the secular left can't make any sense of it.

# Who thinks that it's OK to buy and sell human beings?

**Wintery Knight** · 11 November 2014 · Archived copy · Original

From The Public Discourse.

Excerpt:

> Having children is currently our only legal path to achieving both genetic and memetic immortality. But having kids isn't easy. You have to find a mate. You have to look outside yourself and into the eyes of another person and convince him or her of your decency, your desirability.
>
> […]There are two categories of infertility: clinical and social. Clinical infertility arises from physical medical problems. Social infertility occurs when someone is unwilling or unable to attract someone of the opposite sex to procreate with.
>
> Studies indicate that up to 15 percent of couples of childbearing age are clinically infertile. Much of this is due to our toxic environment, pollution, and unsafe chemicals, but there is also something to be said about our toxic behavior. At least one quarter of female infertility is a direct result of sexually transmitted infections.
>
> The sperm bank industry initially began as a mission in eugenics, but ballooned due to our unspoken epidemic in low sperm count. Clinically infertile heterosexual couples began quietly using donated sperm. After a while, they began to be open about using donated sperm and insisted that biology doesn't make a difference for the child's well-being.
>
> Then lesbian couples began using sperm donors. They argued, if biology doesn't matter for a child's well-being, then why should a parent's gender? They declared that parenting is a set of tasks and obligations, and women can fulfill those tasks just as well as men can. Single-moms-by-choice followed, saying if biology and gender don't matter, why should the number of caretakers?
>
> So what happens when fathers become disposable? *Public Discourse* readers are well aware that fatherlessness invites a stark range of social ills. For instance, 90 percent of homeless and runaway youth come from fatherless homes, as do over 80 percent of rapists with anger problems. Now, those who promote fatherlessness via sperm donation are celebrating motherlessness via egg vending and surrogacy.
>
> Think motherhood is sacred? One surrogate pregnancy can generate $100-300,000. Today, the motherless child has become the fertility industry's most lucrative enterprise.
>
> Because this is an industry, we shouldn't be surprised that fertility industry professionals are trying to *industrialize* the process and do things more efficiently. Surrogacy attorney Theresa Erickson was an "industry sweetheart" until she was convicted of baby-selling. Rather than waiting for commissioning parents to sign a contract before conception, Theresa expedited the process. She shopped for egg and sperm donors on her own and found surrogates to impregnate. Then, *after* the baby reached the second trimester, she would find parents, lie to them and tell them the original couple had backed out, and charge up to $180,000 per child. She created thirteen babies this way.
>
> The only thing illegal about what Erickson did—the only reason she was put in jail for baby-selling—is that the paperwork was done *after* conception rather than before.
>
> At a workshop where I once was on a panel with Theresa, she justified separating children from their parents by commenting that her mother was adopted, so what's the difference? Most people I speak to relate third-party reproduction to adoption just as she did.
>
> We've accepted adoption as a good. And adoption can often be very good; it is an institution that finds parents for helpless children who desperately need a decent home. But, at some point, our concept of adoption slid. Many people now think of it primarily as a way of "getting" kids. We know that adoption is made possible by the fact that the relationship between biological parent and child has been severed. So if adoption is good,

> some reason, then the severing of that relationship must at least be neutral.
>
> But it is not neutral. It's actually very sad.
>
> Adoption is only morally sound as an institution that provides a loving home for *existing* children who—for some uncontrollable reason—cannot be raised by their biological parents. Third-party reproduction is inherently unethical, because it serves as a market to manufacture children for any adult who wants them, purposely severing the biological parent-child relationship for the sake of profit.

I hate to write about these things without offering some solutions, but it's hard to come up with solutions when there are so many powerful, wealthy people wanting to buy and sell other human beings. How am I supposed to stop that? But I actually do have a course of action, even if it's just a shot in the dark.

My thinking is that we need to be focused on courting properly and having strong marriages, and being more open about showing off the love in our marriages and homes. I think that Christians need to take courting and marrying more seriously as a witness to the watching world. We need to be more serious about how our partnerships can influence the outside world by setting a standard for love of spouse and love of children. If people knew that there was a real difference if you do marriage right – the right pre-marital behaviors, the right courting, the right commitment – then maybe they would learn to be more careful and less selfish with children. It might help people to think more carefully about their own plans and focus on making decisions that will allow them to welcome children into the world and give them what they need.

# As record cold and snow hits US, Obama set to solve global warming by executive action

**Wintery Knight** · 12 November 2014 · Archived copy · Original

First, it looks like the Midwest is going to be hit with unexpectedly large amounts of snow and record cold.

Fox News reports.

Excerpt:

> Residents across the Rockies and Upper Midwest dug out from under a foot or more of snow on Tuesday, after waking up to frigid temperatures that plunged as much as 50 degrees overnight. The rest of the Midwest and the East are expecting a dose of the icy weather later this week thanks to a powerful storm that hit Alaska with hurricane-force winds over the weekend.
>
> […]Michigan's Upper Peninsula was buried under more than 14 inches of snow — with at least another foot expected before the storm moves out Wednesday. As much as 13 inches of snow fell in northern Wisconsin, while some Minnesotans awoke to 15 inches of fresh powder, with more snow expected.
>
> The weather prompted school closures across the region, including at Northern Michigan University. Multimedia journalism student Mikenzie Frost said she was headed out the door to figure skating practice early Tuesday when she got a text from the school saying classes were cancelled.
>
> […]The blast of frigid air crawled all the way to the Texas Panhandle, where temperatures tumbled overnight from the 70s into the teens. In Oklahoma City, where Monday's high was 80 degrees, the low Tuesday morning was 30 degrees — a 50-degree drop — while similar balmy weather in Missouri was replaced by temperatures in the 20s, along with a light dusting of snow.
>
> The region's coldest temperatures hit the Dakotas, where single-digit temperatures — already about 30 degrees below normal — came with frigid wind chills dipped into the negative 20s in Dickinson, North Dakota.
>
> […]Residents of Glenrock, Wyoming, aren't as lucky. More than 1,000 buildings in the town lost service because of a pipeline problem, and temperatures were hovering between zero and 5 degrees in some parts of the state.
>
> In Colorado, temperatures fell into the teens — about 20 to 30 degrees below normal — where they're expected to stay through Thursday, prompting officials to move a Veteran's Day ceremony indoors in Denver.
>
> […]Roads in parts of northern Michigan were in "very poor condition," with 2 to 3 inches of snow falling an hour on Tuesday morning, National Weather Service meteorologist Justin Titus said. But there were no delays reported Tuesday at Sawyer International Airport in Michigan's Upper Peninsula.
>
> Minneapolis-St. Paul International Airport saw the brunt of the cancellations and delays Monday, with about 175 cancellations, while about 19 had been cancelled Tuesday out of hundreds of flights, according to the airport.
>
> Elsewhere in Minnesota, the State Patrol said at least two people were killed in accidents on icy roads, and troopers handled 475 crashes and more than 700 spinouts statewide by Monday evening. In eastern Wisconsin, snow-covered roads were blamed for a school bus crash that sent the driver and an aide to a hospital, WBAY-TV reported.

This sounds like January or February weather, so what is it doing here in early November?

The radically leftist Politico has some news about Obama's response to this global warming, now that the midterm elections are over.

Excerpt:

> The Obama administration is set to roll out a series of climate and pollution measures that rivals any president's environmental actions since George H.W. Bush signed a rewrite of the Clean Air Act in 1990 — a reality check for Republicans who think last week's election gave them a mandate to end what they call the White House's "War on Coal."
>
> Tied to court-ordered deadlines, legal mandates and international climate talks, the efforts scheduled for the next two months show that President Barack Obama is prepared to spend the remainder of his term unleashing sweeping executive actions to combat global warming. And incoming Senate Majority Leader Mitch McConnell will have few options for stopping the onslaught, though Republicans may be able to slow pieces of it.
>
> The coming rollout includes a Dec. 1 proposal by EPA to tighten limits on smog-causing ozone, which business groups say could be the costliest federal regulation of all time…
>
> […]**On top of all that, the administration is expected in the coming weeks to pledge millions of dollars — and possibly billions — to help poor countries deal with the effects of climate change.**

Now one thing people need to understand is that any kind of tax increase or burdensome regulation costs businesses money, and they pay for these setbacks by laying off workers and/or raising prices and/or shipping jobs overseas. In fact, environmental regulations are *exactly* the kind of thing that would cause companies to outsource and offshore their operations.

The Washington Times re-caps Obama's record on energy policy.

Excerpt:

> President Obama has intentionally hamstrung domestic energy production under the delusional theory that the U.S. economy can thrive on so-called green power. As Mideast turmoil threatens the oil supply, the price of domestic crude has jumped above $100 a barrel and gas at the pump now exceeds $3.46 a gallon. This shows just how dangerous the Obama administration's economic and energy policies can be to our wallets.
>
> There can be no doubt that the president took deliberate action to block access to the nation's energy resources. A federal judge recently found the Interior Department in contempt for ignoring his order overturning the oil-drilling moratorium the administration imposed following the BP oil spill in the Gulf of Mexico. On Feb. 22, Judge Martin Feldman upped the pressure by insisting that the department act on five pending permits within 30 days. Permits that would, under normal circumstances, be processed in two weeks have been ignored for four to nine months. "Not acting at all is not a lawful option," Judge Feldman wrote. The department had no choice but to issue the first permit since the spill on Feb. 28.
>
> Interior pinned the blame for delays on technical problems. Yet, as the department dithered, oil companies atrophied and employees lost work. According to a study released in January by the business alliance Greater New Orleans, Inc., the moratorium cost Louisiana about 25,000 jobs. Houston-based Seahawk Drilling, the most recent victim of the drilling ban, announced Feb. 18 that it had filed for bankruptcy and agreed to a buyout from a competitor. The jobs of the company's 494 employees are in jeopardy, according to USA Today.

All this activity to stop global warming, which John Kerry considers to be a bigger threat than terrorism, even though we have had no global warming for the last 18 years.

# Students sue school for stopping them from praying during recess

**Wintery Knight** · 12 November 2014 · Archived copy · Original

Story from Todd Starnes of Fox News.

Excerpt:

> Chase Windebank, a senior at Pine Creek High School in Colorado Springs. (Courtesy of Alliance Defending Freedom)

> Christian students at a Colorado public high school were told they could no longer meet to pray, sing religious songs or discuss religious topics during free time – because such activity violated the U.S. Constitution, a lawsuit filed in federal court alleges.
>
> Chase Windebank is a senior at Pine Creek High School in Colorado Springs. Three years ago he started meeting together informally with his classmates for prayer and religious fellowship. The young people would meet in an unoccupied choir room to sing songs like "Amazing Grace" and discuss the issues of the day from a religious perspective.
>
> But all that changed on Sept. 29th when Chase was summoned to the office of Assistant Principal James Lucas.
>
> Chase Windebank is a senior at Pine Creek High School in Colorado Springs. Three years ago he started meeting together informally with his classmates for prayer and religious fellowship. The young people would meet in an unoccupied choir room to sing songs like "Amazing Grace" and discuss the issues of the day from a religious perspective."He was told that he could no longer pray with his fellow students during free time because of the separation of church and state," said Jeremy Tedesco, an attorney representing the teenager.
>
> Tedesco is with Alliance Defending Freedom, a law firm that specializes in handling religious liberty cases.
>
> "He was told that he could pray before the school day begins or after the school day ends but he could not do it during the school day," Tedesco told me.
>
> To make sure Chase got the message – he was hauled into Principal Kolette Back's office the following day where it was "reaffirmed that his religious speech could not take place during the open time" known as a "Seminar" period.
>
> The lawsuit states: "Defendants Back and Lucas stated that because of the separation of church and state and because they regarded the Seminar period as instructional time, they were banning students' discussion of issues of the day from a religious perspective during the open time of Seminar period."
>
> Pine Creek is a part of Academy School District No. 20. A spokesperson for the district confirmed that the group was told to disband in accordance with state law.

It's not just Christians who are facing sanctions from education administrators, it's conservatives, too.

Excerpt:

> In the wake of a standing room only event with conservative leader Bay Buchanan on the topic of immigration, the Virginia Tech Young Americans for Freedom (YAF) Chapter has been informed that they will not receive funding for the next two semesters.
>
> Lauren McCue, the Chair of her YAF Chapter, requested funding from the Student Budget Board and received it for her club's event with Bay Buchanan. Buchanan was the youngest person ever to serve as Treasurer of the United States, author of two books, and has an extensive career in public policy. The morning after Buchanan spoke, the event made the front page of the school newspaper—apparently administrators didn't like the "controversy" and "stir" that it caused on campus.

> Lauren was also told that their fliers went “too far” because the event was advertised as “Alien Invasion: How Illegal Immigration is Hurting America,” and while the fliers drew in a large crowd, it was “offensive” to some student groups.
>
> Apparently, the discussion on immigration with the former Treasurer of the United States irked some liberal administrators at Virginia Tech. The Student Budget Board contacted Lauren to tell her that her club would not be funded for the next two semesters because her event “violated the principles of community.”

Now, I’m pretty sure that these administrators have no problem with secular leftist groups doing events that offend conservatives.

# The importance of having a narrative when confronting the assumption of naturalism

**Wintery Knight** · 12 November 2014 · Archived copy · Original

How do you present theism as a rational belief to a person who thinks that the progress of science has removed the need for God?

Canadian science writer Denyse O'Leary writes about the history of cosmology at Evolution News.

Excerpt:

> What help has materialism been in understanding the universe's beginnings?
>
> Many in cosmology have never made any secret of their dislike of the Big Bang, the generally accepted start to our universe first suggested by Belgian priest Georges Lemaître (1894-1966).
>
> On the face of it, that is odd. The theory accounts well enough for the evidence. Nothing ever completely accounts for all the evidence, of course, because evidence is always changing a bit. But the Big Bang has enabled accurate prediction.
>
> In which case, its hostile reception might surprise you. British astronomer Fred Hoyle (1915-2001) gave the theory its name in one of his papers — as a joke. Another noted astronomer, Arthur Eddington (1882-1944), exclaimed in 1933, "I feel almost an indignation that anyone should believe in it — except myself." Why? Because "The beginning seems to present insuperable difficulties unless we agree to look on it as frankly supernatural."
>
> One team of astrophysicists (1973) opined that it "involves a certain metaphysical aspect which may be either appealing or revolting." Robert Jastrow (1925-2008), head of NASA's Goddard Institute for Space Studies, initially remarked, "On both scientific and philosophical grounds, the concept of an eternal Universe seems more acceptable than the concept of a transient Universe that springs into being suddenly, and then fades slowly into darkness." And Templeton Prize winner (2011) Martin Rees recalls his mentor Dennis Sciama's dogged commitment to an eternal universe, no-Big Bang model:

> For him, as for its inventors, it had a deep philosophical appeal — the universe existed, from everlasting to everlasting, in a uniquely self-consistent state. When conflicting evidence emerged, Sciama therefore sought a loophole (even an unlikely seeming one) rather as a defense lawyer clutches at any argument to rebut the prosecution case.

> Evidence forced theorists to abandon their preferred eternal-universe model. From the mid 1940s, Hoyle attempted to disprove the theory he named. Until 1964, when his preferred theory, the Steady State, lost an evidence test.

Here is a quick summary of some of the experimental evidence that emerged in the last few decades that caused naturalists to abandon the eternal universe that they loved so much when they were younger.

**The importance of having a narrative**

Now I want to make a very, very important point about Christianity and the progress of science. And that point is that it is very important that Christians present the evidence in exactly the way that Denyse presented it in that article – in its historical context, featuring the conflict between naturalists and the experimental evidence.

All Christians should be familiar with the following basic pieces of evidence which fit the war between science and naturalism narrative:

1. The origin of the universe
2. The cosmic fine-tuning
3. The origin of life (biological information)
4. The sudden origin of the Cambrian phyla
5. The habitability/observability correlation

When you talk about these evidences as a Christian theist to non-Christians, you have to have cultivated a genuine interest in reconciling your beliefs with science. You have to accept that there are two books that reveal God's character and attributes. The book of nature, and the book of Scripture. And you need to be flexible about getting these two books to fit together. The book of nature gives us natural theology (see Romans 1). It tells us that God is Creator and Designer. The book of Scripture tells us that God stepped into history as a man to save us by taking the punishment for our headlong rush away from God, which the Bible calls sin. Science is one way that humans can recover some of basic knowledge about God. Knowledge that is only possible because God created and designed the universe (and us) in such a way that we are capable of making discoveries, and that the universe is capable of being explored and understood.

It's very important to present these five basic evidences to non-Christians in the historical context. And here is the story you must tell: "In the beginning, there was the naturalism, and the naturalism tried to argue from ignorance that God was not Creator and God was not Designer. And then came the science, and now people have to give up their naturalism in order to not be crazy and irrational". That's the narrative you use when talking to non-Christians about science.

In the beginning was the naturalism:

1. In pre-scientific times, atheists maintained that the universe was eternal
2. In pre-scientific times, atheists maintained that a life-permitting universe was as likely as a life-prohibiting universe
3. In pre-scientific times, atheists maintained that the cell was a simple blob of jello that could spontaneously emerge in some warm pond
4. In pre-scientific times, atheists maintained that the sudden origin of the Cambrian phyla would be explained by subsequent fossil discoveries
5. In pre-scientific times, atheists maintained that there was nothing special about our galaxy, solar system, planet or moon

But then science progressed by doing experiments and making observations:

1. Scientists discovered redshift and the cosmic microwave background radiation (evidence for a cosmic beginning) and more!
2. Scientists discovered the fine-tuning of gravity and of the cosmological constant and more!
3. Scientists discovered protein sequencing and exposed the myth of "junk DNA" and more!
4. Scientists discovered an even shorter Cambrian explosion period and the absence of precursor fossils and more!
5. Scientists discovered galactic habitable zones and circumstellar habitable zones and more!

And now rational people – people who want to have true beliefs about reality – need to abandon a false religion (naturalism).

Now naturally, science is in a state of flux and things change. But you have to look at the trend of discoveries, and those trends are clearly going against naturalism, and in favor of Christian theism. No one is arguing for a deductive proof here, we are simply looking at the evidence we have *today* and proportioning our belief to the concrete evidence we have *today*. People who are guided by reason should not seek to construct a worldview by leveraging speculations about future discoveries and mere possibilities. We should instead believe what is more probable than

not. That's what a *rational* seeker of truth ought to do. Proportion belief to probabilities based on current, concrete knowledge.

It is very important that Christians keep abreast of the progress of science, and give proper respect to science when forming our worldviews, and keep in mind what is really going on with atheism. There is a lot of loud worshiping of science by people like Dawkins and Atkins and Krauss, but if you dig into things a little, you'll find that they are actually filled with rage and enmity against what science has revealed about nature. And not just in one area, but in many, many areas.

Atheism, as a worldview, is not rooted in an honest assessment about what science tells us about reality. Atheism is rooted in a religion: naturalism. And the troubling thing we learn from looking at the history of science is that this religion of naturalism is insulated from correction from the progress of science. Nothing that science reveals about nature seems to be able to put a dent in the religion of naturalism, at least for most atheists. Their belief in naturalism is so strong that it repels all scientific evidence that falsifies it. Atheists simply don't let science inform and correct their worldview.

It falls to us Christian theists, then, to hold them accountable for their abuse and misrepresentation of science. And that means telling the story of the progress of science accurately, and accurately calling out the religion of naturalism for what it is – *a religion rooted in blind faith and ignorance that has been repeatedly and convincingly falsified by the progress of science in the modern era*.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument

# Obamacare fines for non-enrollment TRIPLE for coming year

**Wintery Knight** · 13 November 2014 · Archived copy · Original

CBS News reports.

Excerpt:

> Americans will see their bank accounts shrink if they don't sign up for Obamacare in its second enrollment season.
>
> Uninsured Americans who decide not to enroll will face a penalty of $325 per person, more than tripling the $95 penalty those who did not enroll had to pay the first time around.
>
> Children under the age of 18 will be fined $162.50. The maximum amount an uninsured family will be penalized is $975 under the flat-rate method.
>
> […]CBS News reports that many Obamacare plans will be charging more as a 27-year-old earning 250 percent of the poverty rate will now have to pay an average of 7 percent more for the lowest-cost bronze plan. The analysis from Investor's Business Daily found that the lowest-cost silver plan will rise 9 percent and the lowest-priced catastrophic policy will go up by 18 percent.
>
> […]The Health and Human Services Department said earlier this week that between 9 to 9.9 million Americans will receive health care plans through the Affordable Care Act marketplaces for next year's coverage. That's lower than the 13 million estimated by the Congressional Budget Office.
>
> […]The "young invincible" crowd of 18-to-36 year olds is crucial to the law's success because insurance companies need their business to offset the costs of covering older, sicker and more expensive enrollees.

Recall that conservatives had been warning not enough of these young people have been signing up to pay for these more expensive enrollees. The people who need to be FORCED to sign up are the young people who don't use health care. These young people – especially young men – have to be forced to pay into the system while not taking anything out. Young men almost never use health care, so they are the perfect serfs for this government controlled health care plan. If lots of young men have to sign up, then the people who need their substance abuse treatments, etc. can get it much cheaper.

Makes you wonder why young people still vote Democrat, doesn't it? Especially young men! It makes no sense to me.

# What factor best predicts whether a romantic relationship will succeed?

**Wintery Knight** · 13 November 2014 · Archived copy · Original

Dr. Gottman is an expert on what makes marriages fail or succeed.

A new article on Business Insider explains his research in a nutshell.

Excerpt: (emphasis mine)

> Gottman wanted to know more about how the masters created that culture of love and intimacy, and how the disasters squashed it. In a follow-up study in 1990, he designed a lab on the University of Washington campus to look like a beautiful bed and breakfast retreat.
>
> He invited 130 newlywed couples to spend the day at this retreat and watched them as they did what couples normally do on vacation: cook, clean, listen to music, eat, chat, and hang out. And Gottman made a critical discovery in this study — one that gets at the heart of why some relationships thrive while others languish.
>
> Throughout the day, partners would make requests for connection, what Gottman calls "bids." For example, say that the husband is a bird enthusiast and notices a goldfinch fly across the yard. He might say to his wife, "Look at that beautiful bird outside!" He's not just commenting on the bird here: he's requesting a response from his wife — a sign of interest or support — hoping they'll connect, however momentarily, over the bird.
>
> The wife now has a choice. She can respond by either "turning toward" or "turning away" from her husband, as Gottman puts it. Though the bird-bid might seem minor and silly, it can actually reveal a lot about the health of the relationship. The husband thought the bird was important enough to bring it up in conversation and the question is whether his wife recognizes and respects that.
>
> People who turned toward their partners in the study responded by engaging the bidder, showing interest and support in the bid. Those who didn't — those who turned away — would not respond or respond minimally and continue doing whatever they were doing, like watching TV or reading the paper. Sometimes they would respond with overt hostility, saying something like, "Stop interrupting me, I'm reading."
>
> These bidding interactions had profound effects on marital well-being. Couples who had divorced after a six-year follow up had "turn-toward bids" 33 percent of the time. Only three in ten of their bids for emotional connection were met with intimacy. The couples who were still together after six years had "turn-toward bids" 87 percent of the time. Nine times out of ten, they were meeting their partner's emotional needs.
>
> By observing these types of interactions, Gottman can predict with up to 94 percent certainty whether couples — straight or gay, rich or poor, childless or not — will be broken up, together and unhappy, or together and happy several years later. Much of it comes down to the spirit couples bring to the relationship. Do they bring kindness and generosity; or contempt, criticism, and hostility?
>
> "There's a habit of mind that the masters have," Gottman explained in an interview, "which is this: they are scanning social environment for things they can appreciate and say thank you for. They are building this culture of respect and appreciation very purposefully. Disasters are scanning the social environment for partners' mistakes."
>
> "It's not just scanning environment," chimed in Julie Gottman. "It's scanning the *partner* for what the *partner* is doing right or scanning him for what he's doing wrong and criticizing versus respecting him and expressing appreciation."
>
> **Contempt, they have found, is the number one factor that tears couples apart. People who are focused on criticizing their partners miss a whopping 50 percent of positive things their partners are doing and they see negativity when it's not there.**

> **People who give their partner the cold shoulder — deliberately ignoring the partner or responding minimally — damage the relationship by making their partner feel worthless and invisible, as if they're not there, not valued. And people who treat their partners with contempt and criticize them not only kill the love in the relationship, but they also kill their partner's ability to fight off viruses and cancers. Being mean is the death knell of relationships.**
>
> Kindness, on the other hand, glues couples together. Research independent from theirs has shown that kindness (along with emotional stability) is the most important predictor of satisfaction and stability in a marriage. Kindness makes each partner feel cared for, understood, and validated—feel loved. "My bounty is as boundless as the sea," says Shakespeare's Juliet. "My love as deep; the more I give to thee, / The more I have, for both are infinite." That's how kindness works too: there's a great deal of evidence showing the more someone receives or witnesses kindness, the more they will be kind themselves, which leads to upward spirals of love and generosity in a relationship.
>
> There are two ways to think about kindness. You can think about it as a fixed trait: either you have it or you don't. Or you could think of kindness as a muscle. In some people, that muscle is naturally stronger than in others, but it can grow stronger in everyone with exercise. Masters tend to think about kindness as a muscle. They know that they have to exercise it to keep it in shape. They know, in other words, that a good relationship requires sustained hard work.
>
> "If your partner expresses a need," explained Julie Gottman, "and you are tired, stressed, or distracted, then the generous spirit comes in when a partner makes a bid, and you still turn toward your partner."
>
> In that moment, the easy response may be to turn away from your partner and focus on your iPad or your book or the television, to mumble "Uh huh" and move on with your life, but neglecting small moments of emotional connection will slowly wear away at your relationship. Neglect creates distance between partners and breeds resentment in the one who is being ignored.
>
> The hardest time to practice kindness is, of course, during a fight—but this is also the most important time to be kind. Letting contempt and aggression spiral out of control during a conflict can inflict irrevocable damage on a relationship.
>
> "Kindness doesn't mean that we don't express our anger," Julie Gottman explained, "but the kindness informs how we choose to express the anger. You can throw spears at your partner. Or you can explain why you're hurt and angry, and that's the kinder path."

The whole article is worth reading. It's very practical, I think. It's always good to read things like this and then analyze how you are acting. That's why it's important to read articles like this and read books on marriage – to always hold your actions accountable to people who understand what makes a relationship work. It's worth it to put in the time to understand these things, because relationships matter.

My Dad always used to have this habit of going after people when he was in the right, but it's a relationship destroyer to just let loose even if you are right. To build a relationship, you have to be doing constructive things with that other person even when they have done you wrong. You can't always be making withdrawals, there have to be deposits, too. Otherwise the relationship dies.

The Five Love Languages is a useful book for knowing how to love someone else. Even in the middle of a fight, it's good to speak encouraging words, good to give gifts, good to touch, good to serve, good to spend time together. It takes work to be intentional about doing things that convey love to that other person – even when there are conflicts in the background.

# Stephen C. Meyer and Keith Fox debate intelligent design and evolution

**Wintery Knight** · 13 November 2014 · Archived copy · Original

From Justin Brierley's "Unbelievable" podcast.

Details:

> Stephen Meyer is a leading proponent of Intelligent Design who directs the Centre for Science and Culture at the Discovery Institute in Seattle. His [first] book "Signature in the Cell" claims to show that the DNA code is the product of intelligent mind, not naturalistic processes. Keith Fox is Professor of Biochemistry at Southampton University. He chairs the UK Christians in Science network but disagrees strongly with ID. They debate how life could have originated and whether design is allowed as an explanation in science.

Summary: (stuff in italics is my snarky paraphrase)

Meyer:

- background and how he got interested in intelligent design
- his research focus is on the origin of life – the first replicator
- summarizes the history of origin of life studies
- authored the book "Signature in the Cell"
- the DNA enigma: where did the information in DNA come from?
- naturalistic explanations of the DNA information have failed
- but intelligent agents are known to be able to produce information
- the best explanation of the information in DNA is that an intelligent agent authored it
- Meyer's book was named by atheist philosopher of science Thomas Nagel as a Times Literary Supplement Book of the Year in 2010
- why is design so controversial? Many people think that Darwin explained why nature appears design
- the Darwinian view is that nature can create the appearance of design using mutation and selection
- however, Darwinian mechanisms cannot explain the origin of the first living cell, it assumes replication, and the origin of life is about where the first replicator comes from

Fox:

- Meyer's argument is not about the evolution of life after the first cell
- Meyer's case for design is about the origin of life
- naturalists do not know a naturalistic explanation for the origin of life
- there are a number of naturalistic hypotheses for the origin of life, like the RNA-first hypothesis
- maybe in a few years one of them will turn out to be correct
- what intelligent design is arguing from a gap in our current naturalistic knowledge to infer that God intervened in nature

Meyer:

- that's not what intelligent design is at all
- the approach ID theorists use is the inference to best explanation
- you evaluate all explanations, non-intelligent causes and intelligent causes

- you prefer the best possible explanation
- we know that minds are capable of producing information just like the information we find in DNA

Fox:

- living cells replicate, so they have the ability to introduce mutations as they replicate and then some of those mutations can be selected
- so maybe the process of replicating that living cells do created the first living cell
- maybe the first living cell created itself, X brought X into being, self-creation, what's irrational about that?

Meyer:

- the issue is the origin of life – where did the first living cell come from?
- you cannot appeal to the operations that a living cell can perform to explain the origin of the first living cell
- there was no first living cell operating before the first living cell
- there was no replication, mutation or selection before the first living cell
- in fact, in my book I show that there is no known naturalistic mechanism that is able to produce the information needed for the first living cell
- *nothing can create itself, that is self-contradictory*

Fox:

- Well, you are just saying that because something is complex that God did it

Meyer:

- Sadly, no. What I actually said needed to be explained was the information, not complexity
- And we know from software engineering that the process of adding information to code is performed by programmers
- in the absence of any adequate naturalistic explanation for information, we are justified in taking the explanation that we are familiar with – namely, intelligent agency – based on our uniform, universal experience of what causes information

Fox:

- well, maybe we can appeal to the mutation and selection in existing living cells to explain the origin of the first living cell
- maybe there were living cells before the first living cell, and then these other living cells created the first living cell

Meyer:

- we can't keep invoking mutation and selection when those processes are not operating prior to the origin of the first living cell

Fox:

- well maybe some bare-bones self-replication molecule was a precursor to the first living cell

Meyer:

- even to generate very limited replicator would require a large amount of information
- the argument I am making is – where does the evolution come from?

Fox:

- well, maybe we will think of an explanation for information that is naturalistic in 20 years
- we've thought of explanations to things that were NOT information before
- so maybe we will be able to think of something to explain information based on our ability to explain NOT information before

Moderator: Change topics: the Dover decision

Meyer:

- the Discovery Institute opposed the policy that causes the trial
- the wording of the statute was poor
- the judge was completely wrong in his decision
- young earth creationists used the phrase "intelligent design" to cover their agenda
- intelligent design is an inference using the normal methods of science

Fox:

- intelligent design is a science stopper because it stops looking for a naturalistic explanation
- everything in nature must have a naturalistic explanation
- everything has to be explained using matter and time and chance
- it just has to be that way!!!!

Meyer:

- well, what luck would you have explaining an effect like Mt. Rushmore?
- can you explain that using matter,time and chance?
- Mt. Rushmore was the product of intelligence, not wind and erosion
- similarly, there is information in the cell, and we know that intelligence causes information

Fox:

- So you are saying that we don't understand and therefore an intelligence is necessary?

Meyer:

- no I am saying we DO understand and we are making an inference based on that understanding
- you are the one who is insisting on a material explanation because you pre-suppose materialism
- we know that minds have causal powers, and we can infer mind as an explanation from information

Fox:

- well nature is a seamless chain of material causes and effects

Meyer:

- agents can act without violating the laws of nature
- even humans can act as intelligent agents to create information in books, and they don't violate the laws of nature
- intelligent causes are real, and they explain effects in nature

Fox:

- you're trying to impose on science something to do with meaning and purpose

Meyer:

- no that's not what we're doing, we're inferring from from the fact that we ourselves are known causes of information to the fact that an intelligence cause is the best explanation for information in the cell

Fox:

- *but I am a materialist*, I need a materialist explanation

Meyer:

- mind IS an answer to the how question
- we infer to mind in many other scientific disciplines, like cryptography, archaeology, etc.
- a materialist might accuse an archaeologist of engaging in a "scribe-of-the-gaps" argument, but the best explanation of an artifact with information is a scribe
- we are inferring that mind is the cause from the nature of the effect: information

Moderator: is it appropriate to call DNA "information"
Fox:

- well DNA is just a molecular polymer, any reference to information is just by analogy

Meyer:

- DNA is a molecular polymer, but it also exhibits the property of specified complexity
- the arrangement of bases, which function as machine instructions in a software program, for performings task in the cell
- we have observed that the property of specified complexity always comes from an intelligence

Fox:

- well, maybe there are other sequences that would work, so maybe it's really not uncommon to develop functioning sequences by chance alone, without an intelligence

Meyer:

- you can measure how precise the functional specificity is in DNA and proteins

Moderator: is Shannon information the same as functional information

Meyer:

- Shannon information refers to the sequences of digits or symbols that do not necessarily have any function, i.e. – a four character string QSZX has as much Shannon information as WORD. However, only the latter is functional against the pattern of the English language. There are arrangements of DNA bases and amino acids that have the same number of symbols/characters as a functional sequence would have, but they have no biological function – they do not exhibit specified complexity

Fox:

- Well, maybe there are lots and lots of sequences of DNA and proteins so that it is fairly easy to get a functional one by chance

Meyer:

- DNA sequences that are functional are extremely rare, protein sequences are even more rare
- this is not my opinion, this is what the research shows – functional protein sequences are rare

Fox:

- well maybe there are other functional sequences that are occur before the first functional sequence that are precursors to the first functional sequence
- maybe there are billions of years of replication, mutation and selection before the first replication, mutation and selection

Meyer:

- you can't get to the first selectable functional sequence by appealing to precursor selectable functional sequences – there are no selectable functional sequences before the FIRST one
- you have to get the first selectable functional sequence by chance alone, because there is nothing to mutate or select before the first replicator
- the chance hypothesis has been rejected because the minimal amount of information for the simplest replicator is too high to get by chance alone, given the resources, including time, that are available

Moderator: *Keith are you confident that naturalism will be able to substantiate these naturalism-of-the-gap speculations that you offer in response to Meyer's actual science that we have today?*

Fox:

- well, it is hard to know for sure because it was just a fluke event
- but there's nothing irrational or unscientific or miraculous about it – the fluke would have a material explanation
- there is nothing that we can detect that would implicate God, my speculations about a fluke which I cannot observe or measure or test would all be compatible with an atheistic worldview that omits God as a causal entity

Meyer:

- where are those material processes that could account for this fluke then?
- the whole point of this argument is that the information in DNA transcends the material components in the sequence
- it's the arrangement of the material parts/letters/characters/symbols/instructions that needs to be explained

Fox:

- Well, I just have a different philosophy of science that rules out intelligent causation a priori

Meyer:

- Yes, that's the difference between us – you pre-suppose that all explanations of natural phenomena must exclude intelligent causes

There is a bit more where Meyer talks about how parts of the cell are implementations of various design patterns (Gang of Four design patterns) that are used by software architects who design software.

Find more posts on Stephen C. Meyer here.

# New study: education departments don't produce competent teachers

**Wintery Knight** · 14 November 2014 · Archived copy · Original

From the Chronicle of Higher Education.

Excerpt:

> Are teacher-training programs rigorous enough? A new study, completed by a group that has long criticized the quality of teacher preparation, makes the case that they're not.
>
> Education students face easier coursework than do their peers in other departments, according to the study, and they're more likely to graduate with honors.
>
> A report on the study—"Easy A's and What's Behind Them," which is to be released on Wednesday by the National Council on Teacher Quality—argues that a more-objective curriculum for teaching candidates would better prepare them for careers in the classroom.
>
> […]The council examined more than 500 institutions and found that 30 percent of all their graduating students earned honors. But when it came to education programs, 44 percent of students did so.
>
> The council also analyzed syllabi across multiple majors to determine whether their assignments were "criterion-referenced" (that is, explicitly knowledge- or skill-based) or "criterion-deficient" (that is, subjective). It found that criterion-deficient assignments were more common in teacher-preparation classes than in other disciplines.
>
> As an example of an assignment that the group finds "criterion-deficient," Ms. Greenberg described a "literacy-history timeline" task that prompts students to reflect on how their own reading skills developed.
>
> "Even if that had relevance to teaching reading, it wouldn't be the best way to teach anything," she said. The advocacy group, she added, was "somewhat dismayed by how little many of the assignments seem to connect with the content and skills teacher candidates are really going to need once they enter the classroom."

If you're looking for a couple of good books on this problem, try Thomas Sowell's "Inside American Education" and "Ed School Follies" by Rita Kramer.

# Matt Walsh: women need to take responsibility for their failed relationships

**Wintery Knight** · 14 November 2014 · Archived copy · Original

The latest from Matt Walsh was sent to me by about a dozen people, so I must blog on it. He is responding to "Rebecca" who interpreted some of his previous "man up" posts as a license to blame men for everything that followed from her own poor decisions.

Excerpt:

> […]'[M]en' aren't the problem, Rebecca. It's you. You're the one. You're the common denominator. You're to blame. There has been one person conspicuously involved in all of Rebecca's romantic flops, and her name is Rebecca. Maybe you should take a look at her for a change.
>
> Frankly, it seems that when you refer to 'men' you aren't even talking about a group of actual human beings. 'Men' have become an abstract idea, a conceptual manifestation of everything that's wrong with your life. If men exist at all in your world, they exist only as vehicles for your misery.
>
> Consider that, for ritual purification, the Ancient Syrians used to cast a goat out into the wastelands. The literal scapegoat was supposed to carry the sins of the town into the nether regions, where it and its spiritual luggage would die and decay. What you've done with men is just a more efficient, animal-friendly version of this strategy. You've saddled them with your personal baggage and sent them to the desert to perish. You've made a scapegoat of the entire gender.
>
> Let's borrow a recent example from your own life.
>
> You went on a date with a man who, you claim, had no manners. Maybe that's true, or maybe you're so desperate to find fault in every male on the planet that he was fated to be labeled a boorish dolt no matter what he did or said. You also mention that he 'couldn't look you in the eyes and have a conversation.' Maybe. Maybe he was nervous. Maybe he has social anxieties. Maybe he tried to talk to you but he sensed your stand-offish, snobbish demeanor and it made him uncomfortable. I don't know. I wasn't there. Maybe he wasn't as bad as you say, or maybe he actually was a big, awkward, uncouth, stammering warthog. You seem to have come to latter conclusion very early on in the evening, yet you still chose to go back to his place.
>
> What does that say about *you*, Rebecca? Look in the mirror and ask yourself what it says about*you* that *you* came back to this man's house even though *you* were apparently disgusted by him.
>
> That's a choice you made. You. Not him. You.
>
> He continued to fumble and falter well into the night, committing the unconscionable sin of revealing himself to be a fan of the X-Men film franchise. The uncultured, lethargic lout only succeeded in finding more ways to repulse and offend you as time wore on, yet you were never put off enough to decline the invitation to stay over.
>
> Here's the thing, Rebecca: I was always told that if I want to attract a good woman, I have to be a good man. Admittedly, I managed to attract a good woman despite being a horribly flawed and sinful man, but there is still wisdom in this idea even if it doesn't always hold true. The point is, you have to work on improving yourself if you want to end up with a man who is equally intent on improving himself.
>
> Not all men are desperate, drooling oafs straight out of some cliched beer commercial. There are plenty of hardworking, engaging, dependable, morally upright men out there, but they won't come knocking on your door just because you've announced that you're a 'woman who deserves it.'
>
> Rebecca, you're willing to essentially typecast a man because he plays with video games and watches superhero movies, but have you ever considered that you might be the victim of similar assumptions because you sleep with dudes you just met? Of course, 'victim' isn't the right word. You've earned the assumptions. I'm not saying

> that you ought to be alone for the rest of your life, but I am pointing out that you are eager to jump to profound conclusions about a man based on the most superficial of flaws, without stopping to consider what conclusions might be drawn about you based on slightly more significant character traits.
>
> Then again, this guy was willing to sleep with you on the first date just as you were with him. He's not innocent in the transaction, and neither are you. It sounds like, right now, you two are evenly matched. You look at him and see yourself, and you hate him for it.
>
> We hear all of the handwringing about the decline of masculinity and the disappearance of 'real men,' yet very little is ever said about the corresponding deterioration of femininity. It's strange that you purport to care about 'manners and chivalry' yet your email was vulgar and overly aggressive, at times coming across like dialogue out of a middle school boys' locker room.
>
> 'P*ssy'? Really? A 32-year-old woman using a word like that to describe men while simultaneously complaining that men aren't courteous? I bet the ones who are courteous just get written off as 'p*ssies' anyway, so it's a lose-lose. A lose-lose for you, especially, because in the end you're the only one who has to pay for your extremely unappealing attitude.
>
> By your account, you've had two broken engagements, and both were the fault of the men who were allegedly 'full of sh*t.' Maybe they were. But it is, from a mathematical perspective, almost impossible for one human being to have two failed engagements without being at least partially to blame. In fact, in the history of human relationships, only a very, very, very tiny fraction of them have ever soured or splintered due completely to the actions and choices of one person. It's been my experience, both personally and as a student of history and an observer of people (as creepy as that sounds), that fractured and strained relationships can rarely be broken down into a clear Bad Person vs Good Person dichotomy. And, on the rare occasion when things are actually that simple, it's just as likely to be Bad Woman vs Good Guy as it is to be Bad Guy vs Good Woman.
>
> In short, Rebecca, I'm playing the odds here and assuming that you were probably not the victim of both spoiled engagements, just as you are not the victim of your other fruitless romantic endeavors. You are a participant, a catalyst, a cause.

I have, in my life, seen my share of women who, under the influence of feminism, undertake incredibly unwise and selfish courses of action and then blame the predictable consequences on bad men. In fact, it seems to be very popular. Women make poor choices with men, they complain to other women about how they are victims. You can see it with problems like abortion, cohabitation, divorce, infertility, adultery – lots of cases where women choose bad men, and then blame men when things go wrong. I guess I would recommend that men carefully read Matt's post and then be on the lookout for women who act selfishly, don't choose good men, neglect the needs of good men, and then try to play the victim and blame men. Don't be the guy who ends up married to a woman like that. I don't think it's an accident that this woman had premarital sexual experience, either.

UPDATE: I think this post dovetails nicely with my previous post about the one factor that most causes relationships to succeed or fail.

# Friday night movie: Cloak and Dagger (1946)

**Wintery Knight** · 14 November 2014 · Archived copy · Original

Here's tonight's movie:

IMDB mean rating: [6.7/10]

IMDB median rating: [7/10]

Description:

> Inspired by actual events, Cloak and Dagger was first major "atomic power" melodrama of the postwar era. Gary Cooper stars as bookish physics professor Alvah Jesper, a character obviously based on A-bomb codeveloper J. Robert Oppenheimer. Pressed into service by the OSS in the last months of WW2, Jasper is sent to Europe in search of Dr. Polda (Vladimir Sokoloff), an atomic scientist held captive by the Nazis.

This is directed by Fritz Lang.

Happy Friday!

# NHS appeals decision allowing midwives to conscientiously object to performing abortions

**Wintery Knight** · 15 November 2014 · Archived copy · Original

What happens when you let a secular government take over health care provisioning?

Here is a story from the BBC about the state-run health care system in the UK.

Excerpt:

> The UK's highest court will hear legal arguments on whether midwives have a right to refuse to take any part in abortion procedures on moral grounds.
>
> NHS Greater Glasgow and Clyde appealed to the Supreme Court after judges in Scotland said Roman Catholic midwives had a right to conscientious objection.
>
> […]Five judges in London will hear the case. A ruling is expected next year.
>
> Ms Doogan, from Garrowhill in Glasgow, and Mrs Wood, from Clarkston in East Renfrewshire, were employed as labour ward co-ordinators at the Southern General Hospital in Glasgow.
>
> […]This landmark case tests the balance between those whose religious beliefs do not allow them to play any part whatsoever in abortion, and the health authorities' duty under the law to enable women to have an abortion. Many Christian groups back the midwives' position.
>
> The midwives' counsel, Gerry Moynihan QC, told the court in the women's earlier successful appeal that the law was clear that the right to conscientious objection contained in the Abortion Act was intended to apply to the whole team whose involvement was necessary to achieve the procedure.
>
> If the Supreme Court upholds the midwives' earlier successful appeal, it could set a legal precedent, allowing other midwives who object to abortion to take the same stance.
>
> The Royal College of Midwives and the women's charity British Pregnancy Advisory Service have both warned that any such ruling could have severe implications for the care of women choosing to terminate their pregnancy.

The BPAS is the largest abortion provider in the UK. I blogged before about their leader, Ann Furedi, who supports sex-selection abortions. I thought then that sex-selection abortions was the worst thing about abortion, but now I see that she would actually force her moral views on other people, compelling them by the power of government to act against their beliefs. There is something deep inside me that just recoils from making a person do something that they think is morally wrong. But I guess pro-abortion people don't share my concern.

When I blogged before about these two midwives when they won their appeal case, I wrote this:

> If the health care system were private, then it would be easy for midwives to find another company to work for that did not violate their consciences. But when the government runs the whole health care system, where are you supposed to go? They are a monopoly and they make the rules. Yet another reasons for Christians to vote for smaller government. In a free market, if you don't want to buy something from one store, you can go to another store. There is competition. But where are these nurses supposed to go? They are midwives, and the government and the courts make the rules in a government-run health care system.

This is why we need to keep the government OUT of health care. When you work for a government monopoly, and they want you to do something that you don't want to do, you have two choices – do what they want or leave the country. If the only health care system is government-run, then if you want to practice health care, you have to leave. That seems unfair to me.

# Physicist Victor Stenger debates William Lane Craig: Does God Exist?

**Wintery Knight** · 15 November 2014 · Archived copy · Original

This debate took place on March 1, 2010 at Oregon State University.

In this debate, Victor Stenger does affirm his belief that the universe could be eternal in his second rebuttal (1:02:30), thus denying the standard Big Bang cosmology. He also denies the law of conservation of energy and asserts that something can come from nothing in his concluding speech (1:33:50). He also caused the audience to start laughing when he said that Jesus was not moral and supported slavery. There is almost no snark in this summary. Instead, I quoted Dr. Stenger *verbatim* in many places. I still think that it is very entertaining even without the snarky paraphrasing.

The debate includes 30 minutes of Q&A with the students.

Here is the MP3 file for the audio.

Here's the video of the debate:

**Dr. Craig's opening speech:**

- The ontological argument
- The contingency argument
- The cosmological argument
- The moral argument
- The resurrection of Jesus (3-fact version)
- Religious experience

**Dr. Stenger's opening speech:**

- There is no scientific evidence for God's existence in the textbooks
- There is no scientific evidence for God acting in the universe
- God doesn't talk to people and tell them things they couldn't possibly know
- The Bible says that the Earth is flat, etc.
- There is no scientific evidence that God answers prayers
- God doesn't exist because people who believe in him are ignorant
- Human life is not optimally designed and appears to be the result of a blind, ad hoc evolutionary process
- The beginning of the universe is not ordered (low entropy) but random and chaotic
- It's theoretically possible that quantum tunneling explains the origin of the universe
- The laws of physics are not objectively real, they are "our inventions"
- Regarding the beginning of the universe, the explanation is that something came from nothing*
- Nothing* isn't really nothing, it is "the total chaos that we project existed just before the big bang"
- If something has no structure, then "it is as much nothing as nothing can be"
- Consciousness is explainable solely on the basis of material processes
- There are well-informed, rational non-believers in the world and God would not allow that

**Dr. Craig's first rebuttal:**

Stenger's argument that there is no objective evidence for God's existence:

- First, it is not required that God rely only on objective evidence in order to draw people to himself (Alvin Plantinga)
- Second, God is not required to provide evidence to everyone, only to the people who he knows would respond to him
- Third, Craig gave lots of objective evidence, from science, history and philosophy
- Stenger asks for certain evidence (answered prayers, prophecy, etc.), but Craig presented the evidence we have

Stenger's argument that the balance of energy is zero so "nothing" exists:

- if you have the same amount of assets and liabilities, it doesn't mean that nothing exists – your assets and liabilities exist
- Christopher Isham says that there needs to be a cause to create the positive and negative energy even if they balance
- the quantum gravity model contradicts observations
- the vacuum is not the same as nothing, it contains energy and matter
- the BVG theorem proves that *any* universe that is expanding must have a beginning

Stenger's argument that mental operations can be reduced to physical operations:

- mental properties are not reducible to physical properties
- epiphenomenalism: is incompatible with self-identity over time
- epiphenomenalism: is incompatible with thoughts about other things
- epiphenomenalism: is incompatible with free will
- substance dualism (mind/body dualism) is a better explanation for our mental experience
- God is a soul without a body

**Dr. Stenger's first rebuttal:**
Craig's cosmological argument:

- Craig's premise is "everything has a cause", but quantum mechanics has causeless events
- There are speculative theories about how something could have come into being uncaused out of nothing
- "I don't know of a single working cosmologist today who believes there was a singularity prior to the Big Bang"
- "If there wasn't a singularity then there's no basis for arguing that time began at that point"
- "There's no reason from cosmology that we know of that the universe can't be eternal"
- "When I talk about an eternal universe, I mean a universe that has no beginning or end"
- The Hartle-Hawking model doesn't have a beginning
- "There was no violation of energy conservation by having a universe coming from nothing"
- "The universe *could have* come from a previous universe for example or even just from a region of chaos"
- The paper by Vilenkin is counteracted by other papers (he doesn't specify which ones)

Craig's moral argument:

- Dr. Craig is arguing from ignorance
- But morality can be decided by humanity just like governments pass laws, and that's objective
- Dr. Craig has too little respect for the human intellect
- I don't need to tell me that slavery is wrong
- The Bible supports slavery
- Atheists can behave as good as theists

- Morality just evolved naturally as an aid to survival

Craig's resurrection argument:

- No Roman historians wrote about the execution of Jesus but none of them did
- The empty tomb is doubtful because it is only mentioned in the gospels, not by Paul
- John Dominic Crossan says there was no empty tomb
- Christianity only survived because the Roman empire thought that they were useful

**Dr. Craig's second rebuttal:**

Craig's cosmological argument:

- There is no reason to prefer an indeterministic interpretation of quantum mechanics
- Dr. Stenger himself wrote that deterministic interpretations of quantum mechanics are possible
- The vacuum in quantum mechanics is not nothing
- The quantum vacuum he proposes cannot be eternal
- The cosmological argument does not require a singularity
- The Hartle-Hawking model is from 1983
- Hawking says that there is a beginning of space and time *after* that model
- The Hartle-Hawking model *does still have a beginning of time* – the model is not eternal
- The BVG theorem that requires a beginning for expanding universes is widely accepted among cosmologists

Craig's moral argument:

- Stenger redefined objective to mean that most people agree with it – but that's not what objective means
- Objective means right and wrong whether anyone accepts it or not
- Richard Dawkins himself says that on atheism there is "no evil and no good" – why is he wrong?
- Even Dr. Stenger says that morality is the same as passing laws – it's arbitrary and varies by time and place
- But on his view, right and wrong are the same as deciding which side of the road to drive on
- But somethings really are right and some things are really wrong

Craig's resurrection argument:

- Josephus is a Roman historian and he wrote about Jesus, for example
- There were four biographies of Jesus are the best sources for his life
- The scholars that Stenger mentioned are on the radical fringe

**Dr. Stenger's second rebuttal:**

Knowledge and the burden of proof:

- Dr. Craig has to bear the burden of proof, not me – because his claim is more "extravagant"
- "I don't have to prove that a God was not necessary to create the universe"
- "I don't have to prove that a God did not design the universe and life"
- "I don't have to prove that the universe did not have a beginning"
- "I don't have to prove that God did not provide us with our moral sense"
- There are a lot of books written about how morality evolved naturally
- "I don't have to prove that the events surrounding the supposed resurrection of Jesus did not take place"
- Bart Ehrman says that the gospels are generally unreliable (Note: Ehrman accepts all 3 of Craig's minimal facts)

- Just because people are willing to die for a cause, does not make their leader God, e.g. – the Emperor of Japan

Aesthetic concerns about the universe:

- I don't like dark matter and I wouldn't have made the universe with dark matter
- I don't like the doctrine of penal substitution
- I don't like the doctrine of original sin
- I don't like the heat death of the universe

**Dr. Craig's conclusion:**

The case for atheism:

- Dr. Stenger had two arguments and he has to support his premises
- Dr. Craig addressed his two arguments and each premise and Dr. Stenger never came back on it

The contingency argument:

- Dr. Stenger has dropped the refutation of this argument

The cosmological argument:

- The theoretical vacuum he proposes cannot be eternal

The moral argument:

- He asserts that things are wrong, but there is no grounding for that to be objective on atheism

The resurrection of Jesus:

- There are surveys of scholars on the empty tomb and 75% of them agree with it
- Bart Ehrman agrees with all 3 of the minimal facts that Dr. Craig presented
- Ehrman's objection to the resurrection is not historical: he's an atheist – he thinks miracles are impossible

Religious experience:

- No response from Dr. Stenger

**Dr. Stenger's conclusion**

The cosmological argument:

- "I argued that we have very good physical reasons to understand how something can come from nothing"
- "There is a natural tendency in the universe… to go from.. simpler thing to the more complicated thing"
- The transition from a vapor to a liquid to ice shows how something could come from nothing
- "It cannot be proven that the universe had a beginning"

The moral argument:

- Objective morality, which is independent of what people think, could be developed based on what people think
- "Jesus himself was not a tremendously moral person… he had no particular regard for the poor… he certainly supported slavery… he was for the subjugation of women" (audience laughter)

The resurrection argument:

- Bart Ehrman says that the majority of the gospels are unreliable

Religious experience:

- I don’t see any evidence that there is anything more to religious experience than just stuff in their heads

God’s purpose of the world should be to make people feel happy:

- God could have made people feel happier
- God could have made people not die
- God could could have made the universe smaller: it’s too big
- God could have made it possible for humans to live anywhere “even in space”

# Supply-side economist Larry Kudlow: marriage is pro-economic-growth

**Wintery Knight** · 16 November 2014 · Archived copy · Original

Here's a Real Clear Politics editorial from one of the biggest supply-side economics boosters out there.

Excerpt:

> The greatest economic challenge of our time is how to restore economic growth. Over the past dozen years, average real growth has slowed to 1.8 percent annually, under both Republican and Democratic presidents and congresses. It's a bipartisan problem.
>
> And it's a new one. For the past 50 years or so, the American economy grew at just less than 3.5 percent per year. But we're now experiencing one of the longest slow-growth periods in the past 100 years. Excluding the Great Depression, I bet it is the longest slow-growth period in a century.
>
> There are any number of fiscal and monetary prescriptions for restoring economic growth. As a Reagan supply sider, I would recommend lower marginal tax rates, lighter regulations, limited government and a sound dollar.
>
> But I want to add this to the list: marriage. I have come to believe that marriage is a key element of a stronger economy.

Like any good economist, he's got the numbers to back it up, too:

> Naomi Schaefer Riley writes that "children of married parents are more likely to graduate high school, less likely to go to jail and more likely to delay sexual activity. And of course, children of unmarried parents are more than five times as likely to live in poverty."
>
> Economic writer Robert Samuelson notes that single-parent families have exploded, that more than 40 percent of births now go to the unwed, and that the flight from marriage "may have subtracted from happiness." Citing a study from Isabel Sawhill, he notes that some unwed mothers "will have multiple partners and subject their children 'to a degree of relationship chaos and instability that is hard to grasp.'"
>
> Heritage Foundation economist Stephen Moore writes "that marriage with a devoted husband and wife in the home is a far better social program than food stamps, Medicaid, public housing or even all of the combined." Moore points to a Heritage study showing how welfare households are much more likely to have no one working at all, with social assistance becoming a substitute for work.
>
> A recent report from the American Enterprise Institute and the Institute for Family Studies, authored by W. Bradford Wilcox and Robert Lerman, reveals that married men have higher average incomes, seem to be more productive at work and work more and earn more. Wilcox and Lerman write that 51 percent of the 1980-2000 decline in male employment is due to the drop in marriage rates, and is highest among unmarried men. They find that "differing employment rates among married and unmarried men aren't simply due to education levels or race, either."
>
> They conclude: "Promoting the importance of marriage, looking for ways to reduce marriage penalties in current means-tested welfare programs and engaging leaders at every level to find ways to strengthen marriage in their communities, are other critical steps to take to restore a culture of marriage."
>
> I'll only add this, as I did at the Coolidge Foundation dinner: While restoring economic growth may be the great challenge of our time, this goal will never be realized until we restore marriage.
>
> In short, marriage is pro-growth. We can't do without it.

In case you missed it, there was a nice new study linking marriage to economic growth. It was put out by the

American Enterprise Institute, a fiscally conservative think tank. It's getting to be that fiscal conservatives are more interested in social conservatism than the reverse. Now if only we could get pro-lifers and pro-natural-marriage people to come towards lower taxes, smaller government, less restrictive regulations and a stronger dollar. How about it, social conservatives? Can you you run your family better when government leaves you more money in your pocket? Fiscal conservatism and social conservatism go together like peanut butter and jelly.

By the way, if you'd like to read a remarkable booklet put out by the Heritage Foundation called "Indivisible", click here. In it, you'll find well-known social conservatives advocating for fiscal conservatism, and well-known fiscal conservatives advocating for social conservatism. The essays are short and easy to understand. They don't try to prove everything, just one little point per essay. You'll find lots of names you recognize in it, like Jennifer Roback Morse, Michele Bachmann, Paul Ryan and Jay Richards.

# Will pro-life women vote for Hillary Clinton in 2016 just because she is a woman?

**Wintery Knight** · 16 November 2014 · Archived copy · Original

Hillary Clinton and Planned Parenthood

This story is from Life News.

Excerpt:

> Candidates such as out-going Colorado Senator Mark Udall and Iowa Senator-wanna-be-but-defeated Iowa Rep. Bruce Braley, along with other Democratic candidates, ran campaigns based on an extremist pro-abortion position. They were absolutely convinced that the American public would vote for candidates who say it's okay to kill helpless, innocent unborn babies at any stage, provided they mischaracterized opposition to this extremism as a "war on women."
>
> But they took this charade even further. Pro-abortion figures such as Hillary Clinton and Planned Parenthood president Cecile Richards tried to tell voters that female candidates who oppose abortion know nothing about what women really want.
>
> **Clinton, at a pro-Braley rally, told voters in Iowa, "It's not enough to be a woman, you have to be committed to expand rights and opportunities for all women." Because Joni Ernst (who defeated Braley) thinks unborn babies should be protected, she isn't committed to expanding rights and opportunities for women?**
>
> Obviously, the voters didn't see Ernst in that light. She won by almost a hundred thousand votes and she is now the pro-life Senator-elect from Iowa.
>
> Pro-abortion advocates like to say abortion is a woman's issue, but only pro-abortion women should voice their opinions. Indeed, they come very close to saying it is illegitimate for a woman who is pro-life to speak on abortion. The voices of pro-life women just don't count. The hypocrisy, or should I say the gall, of people who think you have to want to kill unborn children in order to be pro-woman is stunning.

In 2008 and 2012, many, many black people who were personally pro-life voted for Barack Obama. Will pro-life women do the same for Hillary Clinton in 2016?

I have to say that it is always a concern to me, as someone who would like to get married, when the majority of young, unmarried women vote Democrat. Maybe I am wrong, but I not only see this as a vote against family in favor of bigger government (via taxes), but I also see it as a rejection of the pro-life and pro-marriage views.

It bothers me when a woman says she is pro-abortion, because to me it means that she wants to perform actions

(sex) that are pleasurable to her, but then resort to murder to avoid being burdened with the natural consequences of her actions. You can't make a marriage with a woman who is willing to resort to murder in order to avoid taking responsibility for her actions. If you're going to marry a woman, you want her to be pro-life – to put the lives of little innocent babies first – however they come into being. You want her to have the attitude that it is more important to care for innocent people than to be without the encumbrance of relationships with others. After all, she will be encumbered by a relationship to you if you marry her, and that will not always be pleasant.

It also bothers me when a woman says she is pro-gay-marriage, because to me it means that she is denying the complimentary nature of men and women. She is saying that men can take the place of a mother, and a woman can take the place of a father. In that case, it seems to me that you are dealing with a person who doesn't take the needs of children seriously. Rather than taking a child's real needs seriously, they are more interested in telling selfish adults what they want hear. A man shouldn't make children with a woman who doesn't care about the child's need for a mother and a father. If she doesn't think that a father is necessary to raise a child, then it will be much easier for her to divorce you. It's wrong to celebrate any arrangement that deprives a child of biological parents.

# Obamacare bronze plans up 15% on average, but there's more wrong than just that

**Wintery Knight** · 17 November 2014 · Archived copy · Original

Sure, the cost of Obamacare health plans is higher, especially the cheapest bronze plans which are going up 15%. But that's not the only thing wrong with Obamacare. Here are 14 more ways Obamacare is a disaster, as reported by the Federalist.

The list:

1. Premium Increases
2. Exchange Subsidy Roller Coaster
3. Reducing the Quality of Insurance
4. Slashing Quality of Employer-Provided Insurance
5. Here Come the Trial Lawyers!
6. Enrollees Are Older and Sicker than Average
7. People Dropping Exchange Coverage Are the Ones Exchanges Need Most
8. The Exchanges Benefit Big Business at the Expense of Smaller Businesses
9. Policy Cancellation Déjà Vu
10. Medical Research Has Tanked
11. Medicaid Still Provides Terrible Care for the Poor
12. The Deficit Will Increase $131 Billion in the Next Ten Years
13. Fewer Jobs for Low-Wage Workers
14. More Economic Woes Ahead

The last two stuck out to me, because they have to do with jobs.

Labor force participation rate

Thirteen:

> Obamacare's employer mandate requires employers with 50 or more full-time employees—"full time" defined as 30 hours or more per week—to provide their workers with health insurance or pay a fine. Critics claimed this would lead to an increase in part-time work leading up to the mandate's imposition, but many liberal economists insisted part-time work was not increasing. Then Jed Graham of Investor's Business Daily dug into the data and found that work hours had declined for employees in industries where the average hourly wage was $14.50 or less.

> Graham showed that part-time work appeared stable because the decline in hours for low-wage workers was offset by an increase in hours for higher-paid workers. As Graham states, “Overall, in these low-wage industries which employ 30 million rank-and-file workers, the average workweek shrank to 27.3 hours per week in July [2014]…. For low-wage industry workers… the recovery in the workweek from a then-record low 27.5 hours in mid-2009 began to reverse in the latter half of 2012, and it’s been pretty much all downhill since then.” Employers appear to be limiting the work hours of employees who are least likely to have employer-provided insurance. Given the low wages, there are likely many workers in this group who are in need of full-time hours.

Fourteen:

> The employer mandate is causing even more damage as its January 1, 2015 imposition nears. In August, the Federal Reserve Banks of Dallas, New York, and Philadelphia released survey data on how businesses in their regions were responding to the costs of Obamacare. Businesses that had or were expecting to increase part-time employees, outsourcing, and prices far exceeded the number that that had or intended to reduce them. More business also had or intended to reduce the total number of workers and/or wages in response to Obamacare than expected to increase them.

Obamacare is a job killer. And it hurts low-wage workers the most. Imagine what would happen if Obama did an executive order to raise the price of low-wage workers for employers – another incentive to get rid of them. What a disaster.

# Decorated pilot faces discharge for telling lesbians to stop breaking Army rules

**Wintery Knight** · 17 November 2014 · Archived copy · Original

From the Washington Times.

Excerpt:

> The Army is moving to discharge a decorated combat pilot who intervened to stop two lesbian officers from showing what he considered inappropriate affection on the dance floor during a full-dress formal ball at Fort Drum, New York, in 2012.
>
> Lt. Col. Christopher Downey, who was once assigned to the White House and completed tours in the Iraq and Afghanistan wars, ended up being convicted administratively of assaulting a soldier trying to videotape the kissing and grabbing. Col. Downey's attorney, Richard Thompson, says his client merely pushed down the camera to prevent photos and video that could end up on social media.
>
> Mr. Thompson said Col. Downey's commanding officer also convicted him of violating the directive that ended the ban on gays openly serving in the military.
>
> "It's political correctness run wild," Mr. Thompson said. "Military rules do not apply to lesbian officers because of political correctness."
>
> Col. Downey won early battle with the Army last year. A special three-officer "show cause" board reviewed the punishment and unanimously ruled that the evidence showed he did not violate Army rules.
>
> "The allegation of conduct unbecoming an officer … is not supported by the preponderance of the evidence," the board wrote. "The findings do not warrant separation."
>
> Yet Col. Downey still faces separation by an Army forced-retirement board that began meeting this week.
>
> On the night of April 14, 2012, seven months after President Obama lifted the ban on acknowledged gays in the military, Col. Downey moved to the dance floor to caution the two lesbian officers, a second lieutenant and a captain.
>
> A warrant officer had approached Col. Downey and complained that their prolonged French kissing, buttocks grabbing and disrobing of Army jackets violated Army rules against inappropriate displays of public affection while in uniform on base, his attorney said.
>
> He said the captain, who since has left the Army, complained that she and her girlfriend, whom she later married and then divorced, were victims of discrimination.
>
> "Lt. Col. Downey gave his all to the Army and to the country he loves, yet the Army he so loyally served threw him under the bus merely to avoid negative press from the homosexual community," Mr. Thompson said.

And the more important thing is thing about the chilling effect that a case like this has on others, and how this in-your-face sexuality coarsens the culture. It's now the case that you can't even disagree with homosexuality without losing your job.

One other thing about that couple that sued for discrimination. It's not surprising to me that the two lesbians married and then divorced very quickly, as lesbians have an incredibly low stability rate for their relationships.

Note:

> Other research says the same thing about relationship dissolution rates. A study of two generations of British couples (one born in 1958, the other 1970) in same-sex cohabiting, opposite-sex cohabiting, and heterosexual marriage relationships found the same-sex relationships are dramatically more likely to break up than the

> opposite-sex cohabiting and married relationships. The probabilities of the various relationships surviving to the four- and eight-year anniversaries are dramatic. After four years, 88 percent of married opposite sex couples are together, 67 percent of opposite-sex cohabiting couples, and only 37 percent of same-sex cohabitors. After eight years, those numbers fall to 82 percent, 60 percent, and 25 percent, respectively.
>
> The author explains the magnitude of his findings "are consistent with previous research in other countries." There were no significant differences between the two generational cohorts, indicating that issues of social stigma and growing social acceptance had no meaningful effect.
>
> Other studies conducted by celebrated lesbian scholars find notable instability in lesbian homes, even those with children. The current National Longitudinal Lesbian Family Study (NLLFS) found "a significant difference" in family dissolution rates when comparing lesbian with mother-father headed families, 56 percent and 36 percent respectively.
>
> Additional research by other scholars highlights a major comparative study between hetero and lesbian homes where, in the five-year period of the study, six of the fourteen lesbian mother-headed homes had broken up compared to only five of the thirty-eight mother"father headed homes. They creatively explain that this stability imbalance is likely due to the "high standards lesbians bring to their intimate unions." Mundy says that "lesbians . . . tend to discuss things endlessly." Whatever the reason, lesbian relationships are dramatically more volatile, fragile, and short-lived than heterosexual couples, whether cohabiting or married.

And lesbians also have a very high rate of domestic violence.

Look:

> In 2013, the CDC released the results of a 2010 study on victimization by sexual orientation, and admitted that "little is known about the national prevalence of intimate partner violence, sexual violence, and stalking among lesbian, gay, and bisexual women and men in the United States." The report found that bisexual women had an overwhelming prevalence of violent partners in their lives: 75 percent had been with a violent partner, as opposed to 46 percent of lesbian women and 43 percent of straight women. For bisexual men, that number was 47 percent. For gay men, it was 40 percent, and 21 percent for straight men.

That's from an article by the left-leaning Atlantic, by the way. Why would anyone encourage a woman to enter this lifestyle?

# Is asking “Am I going to Hell?” a good response to scientific arguments for theism?

**Wintery Knight** · 17 November 2014 · Archived copy · Original

I want to use this woman’s story to show how sensible atheists reach a belief in God.

Excerpt:

> I don’t know when I first became a skeptic. It must have been around age 4, when my mother found me arguing with another child at a birthday party: “But how do you know what the Bible says is true?” By age 11, my atheism was so widely known in my middle school that a Christian boy threatened to come to my house and “shoot all the atheists.” My Christian friends in high school avoided talking to me about religion because they anticipated that I would tear down their poorly constructed arguments. And I did.
>
> As I set off in 2008 to begin my freshman year studying government at Harvard (whose motto is *Veritas*, “Truth”), I could never have expected the change that awaited me.
>
> It was a brisk November when I met John Joseph Porter. Our conversations initially revolved around conservative politics, but soon gravitated toward religion. He wrote an essay for the *Ichthus*, Harvard’s Christian journal, defending God’s existence. I critiqued it. On campus, we’d argue into the wee hours; when apart, we’d take our arguments to e-mail. Never before had I met a Christian who could respond to my most basic philosophical questions: How does one understand the Bible’s contradictions? Could an omnipotent God make a stone he could not lift? What about the Euthyphro dilemma: Is something good because God declared it so, or does God merely identify the good? To someone like me, with no Christian background, resorting to an answer like “It takes faith” could only be intellectual cowardice. Joseph didn’t do that.
>
> And he did something else: He prodded me on how inconsistent I was as an atheist who nonetheless believed in right and wrong as objective, universal categories. Defenseless, I decided to take a seminar on meta-ethics. After all, atheists had been developing ethical systems for 200-some years. In what I now see as providential, my atheist professor assigned a paper by C. S. Lewis that resolved the Euthyphro dilemma, declaring, “God is not merely good, but goodness; goodness is not merely divine, but God.”
>
> Joseph also pushed me on the origins of the universe. I had always believed in the Big Bang. But I was blissfully unaware that the man who first proposed it, Georges Lemaître, was a Catholic priest. And I’d happily ignored the rabbit trail of a problem of what *caused* the Big Bang, and what *caused* that cause, and so on.
>
> By Valentine’s Day, I began to believe in God. There was no intellectual shame in being a deist, after all, as I joined the respectable ranks of Thomas Jefferson and other Founding Fathers.
>
> I wouldn’t stay a deist for long. A Catholic friend gave me J. Budziszewski’s book Ask Me Anything, which included the Christian teaching that “love is a commitment of the will to the true good of the other person.” This theme—of love as sacrifice for true good—struck me. The Cross no longer seemed a grotesque symbol of divine sadism, but a remarkable act of love. And Christianity began to look less strangely mythical and more cosmically beautiful.

So, I want to point out the progression of her beliefs from atheist to deist to Christian. First, she listened to the scientific arguments for God’s existence, which took her to deism, which is a variety of theism where God just creates the universe and then doesn’t interfere with it after. Those arguments, the Big Bang and the cosmic fine-tuning, were enough for her to falsify atheism and prove some sort of theism. After that, she remained open to the evidence for Christian theism, and finally got there after looking at other evidence.

But this makes me think of how some of the atheists that I talk to do the exact opposite of what she did. I start off by explaining to them scientific evidence for a Creator and Designer. I explain the mainstream discoveries that

confirm an origin of the universe (e.g. – light element abundance predictions and observations), and I cite specific examples of fine-tuning, (e.g. – the gravitational constant). I explain protein sequencing and folding, and calculate the probabilities of getting a protein by chance. I explain the sudden origin of the phyla in the Cambrian explosion, and show why naturalistic explanations fail. I talk about the fine-tuning needed to get galaxies, solar systems and planets to support life. But many of these atheists don't become deists like the honest atheist in the story. Why not?

Well, the reason why not is because they interrupt the stream of scientific evidence coming out of my mouth and they start to ask me questions that have nothing to do with what we can know through science. See, evangelism is like building a house. You have to start with the foundation, the walls, the plumbing, the electricity, etc., but you can't know all the specific details about furniture and decorations at the beginning. But militant atheists don't care that you are able to establish the foundations of Christian theism – they want to jump right to the very fine-grained details, and use that to justify not not building anything at all. Just as you are proving all the main planks of a theistic worldview with science, they start asking "am I going to Hell?" and telling you "God is immoral for killing Canaanite children", etc. They want to stop the construction of the house by demanding that you build everything at once. But, it is much easier to accept miracles like the virgin birth if you have a God who created the universe first. The foundation comes first, it makes the later stuff easier to do.

So rather than adjust their worldview to the strong scientific evidence, and then leave the puzzling about Hell and Old Testament history for later, they want to refute the good scientific arguments with "Am I going to Hell?". How does complaining about Hell and unanswered prayer a response to *scientific evidence*? It's not! But I think that this does explain why atheists remain atheists in the face of all the scientific evidence against naturalism. They insulate their worldview from the progress of science by focusing on their emotional disappointment that they are not God and that God isn't doing what they want him to do. That's the real issue. Authority and autonomy. In my experience, they are usually not accountable to science, although there are, thank God, exceptions to that rule.

# Japan in recession after following Paul Krugman's Keynesnian advice

**Wintery Knight** · 18 November 2014 · Archived copy · Original

Here's the news story as reported by CBC:

> Japan's economy unexpectedly slipped back into recession as housing and business investment dropped following a sales tax hike, hobbling its ability to help drive the global recovery.
>
> The world's third-largest economy contracted at a 1.6 per cent annual pace in the July-September quarter, the government said Monday, confounding expectations that it would rebound after a big drop the quarter before.
>
> The news cast a pall over financial markets: Japan's share benchmark fell 3 per cent, and many others in Asia also declined. Shares were lower in early trading in Europe and Dow Jones and S&P futures were off 0.5 per cent, suggesting a dismal start for the week on Wall Street.

This Daily Signal article by respected economist Stephen Moore explains what led to this mess:

> The tenets of Lord Keynes and his modern disciples have been put on trial in Japan, and the verdict is not a happy one. The rest of the world, not least of all the U.S., ignores these lessons at its own peril.
>
> The engine of growth that created the Land of the Rising Sun economic miracle in the post-World War II era first began to falter in the early 1990s in large part because of a centrally planned industrial policy model.
>
> The panicked response to the downturn was to flood the economy with a continuing series of Keynesian monetary and spending stimulus injections.
>
> None of it has worked.
>
> The collapse of Japan's stock market tells the whole story. In December 1989, the Nikkei 225 index stood at a lofty 38,900. Today, almost a quarter-century later, the index stands at just under 16,000.
>
> In 25 years Japan has experienced a nearly 3/5 liquidation of its financial wealth.
>
> Japan has directed tens of billions of dollars into public works projects — "investments," as President Obama calls them. This was paid for with debt. In the last two decades, Japan's debt burden catapulted from 19% of GDP, among the lowest in the industrialized world, to over 142%, among the highest.
>
> The government spending coincided with a monetary policy almost unprecedented in its looseness. From the late 1980s through 2000, the central bank's balance sheet more than doubled — a precursor to the "quantitative easing" carried out by the U.S. Federal Reserve. And since 2000, the balance sheet has doubled once again.
>
> Inflation rates in Japan are bearing down on 4% — a near-high among major competitors.
>
> The result? The expected Keynesian "multiplier effect" from spending and a flood of yen into the market never arrived.
>
> Housing starts in Japan are still lower than the level nearly 25 years ago. Unemployment, still low by international standards, is nearly twice the level of 1990, and wages have been flat.
>
> Labor force participation continues to trend downward as well — falling by around 4 percentage points over the last two decades.

> **Yet, liberal economists have urged Japan to keep the stimulus coming. Last winter, the New York Times' Paul Krugman exulted in Prime Minister Shinzo Abe's expansionary fiscal and monetary policies.**
>
> **"So, how is Abenomics working?" he wrote. "The overall verdict on Japan's effort to turn its economy**

> **around is so far, so good. If Abenomics works, it will serve a dual purpose — giving Japan itself a much-needed boost and the rest of us an even more-needed antidote to policy lethargy."**
>
> **Japan, Krugman predicted, "may also end up showing the rest of us the way out" of stagnation.**

Forbes magazine confirms leftist "economist" Paul Krugman's detailed advice to Japan:

> **In the 1990s it was Krugman who most loudly championed Japan's innumerable and reckless "stimulus" schemes, together with dozens of rounds of "quantitative easing" (fiat money printing).** Japan followed his advice and ever since then has suffered a secular stagnation. Since 1990 Japan's public debt has ballooned from 68% to 233% of GDP; its money supply is up 286%, while its industrial output is lower by 3.4% and its equity index is down by 73%. This is what Keynesians "stimulus" has done for Japan – and Krugman wants the same for the U.S.
>
> Mr. Krugman repeatedly invokes the magic multiplier, the bogus claim that when we spend our own dollar we boost GDP by a dollar, but when the government takes it and spends it, GDP is boosted by $1.40. Wow. Fabulous. Government spending not only "pays for itself," but more than pays for itself. On this view, were government to take everything we earned and spend it, the economy might well expand to the moon. Is it magic – or voodoo?

I notice that leftists at the BBC are calling the failure a "surprise".

> Where did Abenomics go wrong?
>
> In the spring of 2013, Prime Minister Shinzo Abe launched an ambitious growth strategy that rapidly became known as Abenomics.
>
> Its aim was to drag Japan's economy out of 20 years of deflation and put it back on the road to growth. Billions of dollars were pumped into the economy through stimulus spending. The Bank of Japan went on an even bigger spree, printing hundreds of billions of dollars of new money and using it to buy government bonds.

And the leftist New York Times is calling it "unexpected":

> The surprise recession underscores the difficulties faced by Mr. Abe, who won power two years ago on a pledge to reinvigorate the economy and end his country's long streak of wage and consumer-price declines. His agenda, dubbed Abenomics, has focused largely on stimulus measures, in particular an expanded program of asset purchases by the central bank. Yet its impact, economists say, has been dulled by the tax increase, which was approved under a previous government.
>
> […]Then, in early 2014, Mr Abe's government took a calculated gamble. With the economy growing he could risk putting up taxes for the first time in nearly 20 years. Consumption (purchase) tax would rise from 5 to 8%. The tax rise was urgently needed to plug the giant hole in Japan's public finances.

Why does anyone take economic advice from people on the left like Paul Krugman? Raising taxes, increasing debt and more government spending never helps the economy grow. Certainly not at the rate that pro-growth policies do.

We need to cut our corporate tax, which is the highest in the world. We need to cut spending and cut government duplication and waste. We need to privatize inefficient government programs. We need to reward work instead of dependency. We need to stop borrowing money and raising our national debt. We need to stop printing money, aka – quantitative easing. We need to raise interest rates and encourage saving instead of spending.

# Yazidi girls who managed to escape Islamic State tell their stories

**Wintery Knight** · 18 November 2014 · Archived copy · Original

In the radically leftist New York Times, of all places.

Excerpt:

> The 15-year-old girl, crying and terrified, refused to release her grip on her sister's hand. Days earlier, Islamic State fighters had torn the girls from their family, and now were trying to split them up and distribute them as spoils of war.
>
> The jihadist who had selected the 15-year-old as his prize pressed a pistol to her head, promising to pull the trigger. But it was only when the man put a knife to her 19-year-old sister's neck that she finally relented, taking her next step in a dark odyssey of abduction and abuse at the hands of the Islamic State.
>
> The sisters were among several thousand girls and young women from the minority Yazidi religion who were seized by the Islamic State in northernIraq in early August.
>
> The 15-year-old is also among a small number of kidnapping victims who have managed to escape, bringing with them stories of a coldly systemized industry of slavery.
>
> Their accounts tell of girls and young women separated from their families, divvied up or traded among the Islamic State's men, ordered to convert to Islam, subjected to forced marriages and repeatedly raped.

You might think that this would be a big concern to Sandra Fluke feminists here in the West, but it isn't. They all voted Democrat so that our armed forces would pull out and when we are not present we create a vacuum where this sort of behavior becomes possible.

Anyway, back to the Yazidi girls. I was a bit curious to see whether the Quran and Hadith teach that this practice is OK.

Answering Muslims has a listing of verses, and yes – Muslims are allowed to rape captive girls. Moreover, they are allowed to rape women who are already married – as long as they kill the husbands first. You might think that would be seen as adultery, and a serious crime to those who believe the Ten Commandments, but that doesn't seem to be a problem for Muslims – the Quran is all in favor of it. Just think about that for a minute. Think of the fear that a girl feels being kidnapped from her family and then raped, or seeing her husband murdered and then raped. This is the religion that Obama is so insistent is a religion of peace. And don't expect the moral relativists on the secular left to condemn it, they've jettisoned God and so they have no ground to condemn other cultures. They believe in cultural relativism – different things are right in different times and places. Atheists may disagree with rape and sex slavery, like they disagree with varieties of ethnic food, but rape and sex slavery are not objectively wrong on atheism.

I just want to contrast the Muslim view of women with the Christian view of women. In Christianity, men are commanded to be abstain from sex outside of marriage. No sexual intercourse outside of marriage is permitted. Men are commanded to love their wives as Christ loved the church – i.e., to die for them if necessary as a way of loving them self-sacrificially.

Take a look Ephesians 5:22-33: [ESV]

[22] Wives, submit to your own husbands, as to the Lord.

[23] For the husband is the head of the wife even as Christ is the head of the church, his body, and is himself its Savior.

[24] Now as the church submits to Christ, so also wives should submit in everything to their husbands.

[25] Husbands, love your wives, as Christ loved the church and gave himself up for her,

[26] that he might sanctify her, having cleansed her by the washing of water with the word,

[27] so that he might present the church to himself in splendor, without spot or wrinkle or any such thing, that she might be holy and without blemish.

[28] In the same way husbands should love their wives as their own bodies. He who loves his wife loves himself.

[29] For no one ever hated his own flesh, but nourishes and cherishes it, just as Christ does the church,

[30] because we are members of his body.

[31] "Therefore a man shall leave his father and mother and hold fast to his wife, and the two shall become one flesh."

[32] This mystery is profound, and I am saying that it refers to Christ and the church.

[33] However,let each one of you love his wife as himself, and let the wife see that she respects her husband.

In Christianity, the man has a self-sacrificial obligation to love the woman. He has to sacrifice his own needs and own interests in order to care for her and treat her as worthy and precious. It's from these Christian convictions that chivalry emerged – a standard of conduct that aims to protect women and love them romantically. There is no chastity in Islam. There is no chivalry in Islam. There is rape in Islam. There is adultery in Islam. It's not a moral religion, and it's remarkable to me that anyone would stand in front of a teleprompter and claim that they are moral with a straight face. If you want to be a good person, and not frighten and abuse women, then don't be a Muslim.

By the way, it's interesting to look at the recent comments by the secular leftist President of the United States. After a terrorist attack against a Jewish synagogue, the President urged both sides to refrain from violence. That's like telling a victim of rape and her rapist to refrain from future rapes. But that's not all. President Moral Equivalence also recently said that the beheadings conducted by Islamic State "represent no faith, least of all the Muslim faith". Least of all. That means that it is more likely that Christians and Jews would behead their enemies than it is that Muslims would. This is the level of amorality we are dealing with in Barack Obama. The man simply *cannot do* morality.

# N.T. Wright lectures on the seven mutations caused by resurrection of Jesus

**Wintery Knight** · 18 November 2014 · Archived copy · Original

I was reading an excellent post on the high Christology of the early church on Eric Chabot's blog. He was explaining all the earliest sources for the view that Jesus was seen as divine very early on, and he said this about the famous British historian Larry Hurtado:

> This past weekend, I got to hang out and watch Derek Lehman lecture on the his book Divine Messiah. This material was something I was fairly familiar with. I have read most of Larry Hurtado, James Dunn, and Richard Bauckham's work on the subject. And being that I have had a lot of experience with Jewish people, I know their views on the issue of our claim that Jesus is divine. Anyone who studies historical method is familiar with what is called historical causation. Historians seek out the causes of a certain events. For example, there is no doubt that historians can observe the effect- the birth of Christianity pre-70 AD. What must be asked is what has better explanatory power for the birth of early Christianity- pre 70 AD and a very high Christology in a very short time period after Jesus' resurrection?
>
> […]Larry Hurtado describes the early devotion to Jesus as a "mutation." (4) One of the primary factors that Hurtado presents for the cause of this "mutation" in the context of Jewish monotheism is the resurrection itself and the post-resurrection appearances. Some of the features in the early Jesus devotion are as follows:
>
> First, there are hymns to Jesus ( Col 1:15-20; Phil.2:5-11) which are exalted things about him done in song.
>
> Second, there are prayers to Jesus: we see prayer to Jesus in prayer-like expressions such as "grace and peace" greetings at the beginning of Paul's letters and in the benedictions at the end. Also, the early followers of Jesus are seen "calling upon" the name of Jesus as Lord (Acts 9:14, 21; 22:16;1 Cor. 1:2; Rom. 10:13), which is the same pattern that is used in the Hebrew Bible where it refers to "calling upon the Lord" (Gen. 12:8;13:4 ;21:23 ; 26:25; Psalms 99:6;105:1; Joel 2:32). (5) Allow me to expand on this:
>
> In 2 Corinthians 12:7-8, Paul says, "Therefore, in order to keep me from becoming conceited, I was given a thorn in my flesh, a messenger of Satan, to torment me.Three times I pleaded with the Lord to take it away from me. But he said to me, "My grace is sufficient for you, for my power is made perfect in weakness." So here is Paul, a staunch Pharisee who was raised to call nobody 'Lord' expect the God of Israel asking Jesus the Lord to help him.

So since Eric reminded me of "mutations", I've posted this lecture featuring historian N.T. Wright on seven mutations in the thinking of Jewish converts to Christianity that followed the life of Jesus. Wright has taught at Cambridge University, Oxford University, Duke University, McGill University, and lectured on dozens of prestigious campuses around the world. He's published 40 books.

Here's a video of his case for the resurrection:

You can read the lecture online here at the Cambridge University web site.

**N.T. Wright's historical case for the bodily resurrection of Jesus**

Wright basically argues that the resurrection cannot have been a myth invented by the early Christian community, because the idea of the Messiah dying and being bodily resurrected to eternal life was completely unexpected in Jewish theology, and therefore would not have been fabricated.

In Judaism, when people die, they stay dead. At the most, they might re-appear as apparitions, or be resuscitated to life for a while, but then die again later. *There was no concept of the bodily resurrection to eternal life of a single person, especially of the Messiah, prior to the general resurrection of all the righteous dead on judgment day.*

Wright's case for the resurrection has 3 parts:

- The Jewish theological beliefs of the early Christian community underwent 7 mutations that are *inexplicable* apart from the bodily resurrection of Jesus
- The empty tomb
- The post-mortem appearances of Jesus to individuals and groups, friends and foes

Here's the outline of Wright's case:

> …the foundation of my argument for what happened at Easter is the reflection that this Jewish hope has undergone remarkable modifications or mutations within early Christianity, which can be plotted consistently right across the first two centuries. And these mutations are so striking, in an area of human experience where societies tend to be very conservative, that they force the historian… to ask, Why did they occur?
>
> The mutations occur within a strictly Jewish context. The early Christians held firmly, like most of their Jewish contemporaries, to a two-step belief about the future: first, death and whatever lies immediately beyond; second, a new bodily existence in a newly remade world. 'Resurrection' is not a fancy word for 'life after death'; it denotes life after 'life after death'.

And here are the 7 mutations:

1. Christian theology of the afterlife mutates from multiples views (Judaism) to a single view: resurrection (Christianity). When you die, your soul goes off to wait in Sheol. On judgment day, the righteous dead get new resurrection bodies, identical to Jesus' resurrection body.
2. The relative importance of the doctrine of resurrection changes from being peripheral (Judaism) to central (Christianity).
3. The idea of what the resurrection would be like goes from multiple views (Judaism) to a single view: an incorruptible, spiritually-oriented body composed of the material of the previous corruptible body (Christianity).
4. The timing of the resurrection changes from judgment day (Judaism) to a split between the resurrection of the Messiah *right now* and the resurrection of the rest of the righteous *on judgment day* (Christianity).
5. There is a new view of eschatology as collaboration with God to transform the world.
6. There is a new *metaphorical* concept of resurrection, referred to as being "born-again".
7. There is a new association of the concept of resurrection to the Messiah. (The Messiah was not even supposed to die, and he certainly wasn't supposed to rise again from the dead in a resurrected body!)

There are also other historical puzzles that are solved by postulating a bodily resurrection of Jesus.

1. Jewish people thought that the Messiah was not supposed to die. Although there were lots of (warrior) Messiahs running around at the time, whenever they got killed, their followers would abandon them. Why didn't Jesus' followers abandon him when he died?
2. If the early Christian church wanted to communicate that Jesus was special, despite his shameful death on the cross, they would have made up a story using the existing Jewish concept of *exaltation*. Applying the concept of bodily resurrection to a dead Messiah would be a radical departure from Jewish theology, when an invented exaltation was already available to do the job.
3. The early church became extremely reckless about sickness and death, taking care of people with communicable diseases and testifying about their faith in the face of torture and execution. Why did they scorn sickness and death?
4. The gospels, especially Mark, do not contain any embellishments and "theology historicized". If they were made-up, there would have been events that had some connection to theological concepts. But the narratives are

instead bare-bones: “Guy dies public death. People encounter same guy alive later.” Plain vanilla narrative.

5. The story of the women who were the first witnesses to the empty tomb cannot have been invented, because the testimony of women was inadmissible under almost all circumstances at that time. If the story were invented, they would have invented male discoverers of the tomb. Female discovers would have hampered conversion efforts.
6. There are almost no legendary embellishments in the gospels, while there are plenty in the later gnostic forgeries. No crowds of singing angels, no talking crosses, and no booming voices from the clouds.
7. There is no mention of the future hope of the general resurrection, which I guess they thought was imminent anyway.

To conclude, Wright makes the argument that the best explanation of all of these changes in theology and practice is that God raised Jesus (bodily) from the dead. There is simply no way that this community would have made up the single resurrection of the Messiah – who wasn’t even supposed to die – and then put themselves on the line for that belief.

And remember, the belief in a resurrected Jesus was something that the earliest witnesses could really assess, because they were the ones who saw him killed and then walking around again after his death. They were able to confirm or deny their belief in the resurrection of Jesus based on their own *personal experiences* with the object of those beliefs.

# After synagogue attack, Obama urges both terrorists and Israelis to “be calm”

**Wintery Knight** · 19 November 2014 · Archived copy · Original

The Weekly Standard reports on Obama’s reaction to the latest terrorist attack against Jews in Israel:

> **After a Palestinian terror attack that killed [five] in Israel, President Barack Obama is calling for *both* sides to be calm.** “Too many Israelis have died; too many Palestinians have died. At this difficult time I think it’s important for both Palestinians and Israelis to try to work together to lower tensions and reject violence,” said President Obama, according to the White House pool report.

The death toll is now 5, according to the Washington Post. How is it possible that the President would do the equivalent of urging a woman who has been raped and her rapist to not rape each other any more? Well, there are no more elections, so the faked support for our allies is really coming off. Hamas has not claimed responsibility, but Palestinians are celebrating the attack.

Obama wasn’t done, though. He had something brilliant to say about the recent beheading of an American by Islamic State.

Breitbart reports:

> Returning from his trip to Asia, President Obama issued a statement reacting to the beheading of U.S. aid worker Peter Kassig by Islamic State (ISIS/ISIL) terrorists.
>
> Kassig, a convert to Islam, took the name Abdul-Rahman and was captured and held hostage by members of ISIS a year ago.
>
> **“ISIL’s actions represent no faith, least of all the Muslim faith which Abdul-Rahman adopted as his own,” Obama wrote.**

The actions of “Islamic State” don’t represent the Islamic faith. David Wood begs to differ, and explains the 10 most essential verses for understanding ISIS / Islamic State.

Is Obama aware of these verses? Or are his comments just more “you can keep your doctor”, “you can keep your health plan” rhetoric?

**Republicans react**

Meanwhile, Indian-American governor Bobby Jindal had his own opinion of the terrorist attack on a synagogue.

He said:

> Louisiana governor Bobby Jindal, a possible 2016 Republican presidential candidate, will soon release this statement responding to the terror attack in Jerusalem.
>
> “Our hearts and prayers are with the victims and their families after this evil attack on a place of worship,” the statement reads.
>
> **“An attack on a synagogue shows that there are no bounds for terrorists. These are people depraved of any humanity in their hearts, and they must not only be stopped, they must be exterminated.**
>
> “Unfortunately, Israel is no stranger to these types of attacks. That’s why we must always stand with our close friend and ally, condemn the act of terror and defend their right to defend themselves.

That’s quite different than what Obama said, isn’t it? And that’s the difference between the two parties right there.

# What is the unborn? A look at the scientific evidence

**Wintery Knight** · 19 November 2014 · Archived copy · Original

This is from National Right to Life.

Excerpt:

> Before deciding how we ought to treat the unborn—a moral question—we must first be clear about what the unborn is. This is a scientific question, and it is answered with clarity by the science of human embryology.
>
> The facts of reproduction are straightforward. Upon completion of the fertilization process, sperm and egg have ceased to exist (this is why "fertilized egg" is an inaccurate term); what exists is a single cell with 46 chromosomes (23 from each parent) that is called a zygote. The coming into existence of the zygote is the point of conception—the beginning of the life of a new human organism. The terms zygote, embryo and fetus all refer to developmental stages in the life of a human being.
>
> Four features of the unborn (i.e., the human zygote, embryo or fetus) are relevant to his or her status as a human being. First, the unborn is living. She meets all the biological criteria for life: metabolism, cellular reproduction and reaction to stimuli. Moreover, she is clearly growing, and dead things (of course) don't grow.
>
> Second, the unborn is human. She possesses a human genetic signature that proves this beyond any doubt. She is also the offspring of human parents, and we know that humans can only beget humans (they cannot beget dogs or cats, for instance). The unborn may not seem to "look" human (at least in her earlier stages), but in fact she looks exactly like a human at that level of human development. Living things do not become something different as they grow and mature; rather, they develop the way that they do precisely because of the kind of being they already are.
>
> Third, the unborn is genetically and functionally distinct from (though dependent on and resting inside of) the pregnant woman. Her growth and maturation is internally directed, and her DNA is unique and different from that of any other cell in the woman's body. She develops her own arms, legs, brain, central nervous system, etc. To say that a fetus is a part of the pregnant woman's body is to say that the woman has four arms and four legs, and that about half of pregnant women have penises.
>
> Fourth, the unborn is a whole or complete (though immature) organism. That is, she is not a mere part of another living thing, but is her own organism—an entity whose parts work together in a self-integrated fashion to bring the whole to maturity. Her genetic information is fully present at conception, determining to a large extent her physical characteristics (including sex, eye color, skin color, bone structure, etc.); she needs only a suitable environment and nutrition to develop herself through the different stages of human life.
>
> Thus, the unborn is a distinct, living and whole human organism—a full-fledged member of the species Homo sapiens, like you and me, only at a much earlier stage in her development. She is a human being.

That's what they assert in the introduction. The rest of the article cites textbooks, scientists and even a Senate Judiciary report to substantiate the claims, then refutes common objections. Not many pro-abortion scholars are going to contest the full humanity of the unborn, but it's still nice to review the science. In case this is your first time looking at this, might want to save it for later. Also, if you want a good introductory book on the case for the pro-life view, there's none better than Scott Klusendorf's "The Case for Life".

# The importance of Christian men setting an example of benevolent authority

**Wintery Knight** · 19 November 2014 · Archived copy · Original

I think that children are more likely to accept theism if they have a father who is able to lead them in a loving, caring way. And I also think that children who grow up with an authoritiarian or absent or defective father are more likely to reject theism. The father needs to be strong. The father needs to be good. Otherwise, it's harder for the kids to believe in God.

Let's start proving this with a lecture from psychologist Paul Vitz:

Here's an article by Paul Copan (related to the lecture) which points out how father presence/absence and father quality affects belief and disbelief in God.

Excerpt:

> *Seventh, the attempt to psychologize believers applies more readily to the hardened atheist.*It is interesting that while atheists and skeptics often psychoanalyze the religious believer, they regularly fail to psychoanalyze *their own* rejection of God. Why are believers subject to such scrutiny and not atheists? Remember *another* feature of Freud's psychoanalysis — namely, an underlying resentment that desires to kill the father figure.
>
> Why presume atheism is the rational, psychologically sound, and default position while theism is somehow psychologically deficient? New York University psychology professor Paul Vitz turns the tables on such thinking. He essentially says, "Let's look into the lives of leading atheists and skeptics in the past. What do they have in common?" The result is interesting: *virtually all of these leading figures lacked a positive fatherly role model — or had no father at all.*[11]
>
> ### Let's look at some of them.
>
> - *Voltaire*(1694–1778): This biting critic of religion, though not an atheist, strongly rejected his father and rejected his birth name of Francois-Marie Arouet.
> - *David Hume*(1711–76): The father of this Scottish skeptic died when Hume was only 2 years old. Hume's biographers mention no relatives or family friends who could have served as father figures.
> - *Baron d'Holbach*(1723–89): This French atheist became an orphan at age 13 and lived with his uncle.
> - *Ludwig Feuerbach* (1804–72): At age 13, his father left his family and took up living with another woman in a different town.
> - Karl Marx(1818–83): Marx's father, a Jew, converted to being a Lutheran under pressure — not out of any religious conviction. Marx, therefore, did not respect his father.
> - *Friedrich Nietzsche*(1844–1900): He was 4 when he lost his father.
> - *Sigmund Freud*(1856–1939): His father, Jacob, was a great disappointment to him; his father was passive and weak. Freud also mentioned that his father was a sexual pervert and that his children suffered for it.
> - *Bertrand Russell*(1872–1970): His father died when he was 4.
> - *Albert Camus*(1913–60): His father died when he was 1 year old, and in his autobiographical novel The First Man, his father is the central figure preoccupation of his work.
> - *Jean-Paul Sartre*(1905–80): The famous existentialist's father died before he was born.[12]
> - *Madeleine Murray-O'Hair* (1919–95): She hated her father and even tried to kill him with a butcher knife.
>
> We could throw in a few more prominent contemporary atheists not mentioned by Vitz with similar childhood challenges:

> - *Daniel Dennett* (1942–): His father died when he was 5 years of age and had little influence on Dennett.[13]
> - *Christopher Hitchens* (1949–): His father ("the Commander") was a good man, according to Hitchens, but he and Hitchens "didn't hold much converse." Once having "a respectful distance," their relationship took on a "definite coolness" with an "occasional thaw." Hitchens adds: "I am rather barren of paternal recollections."[14]
> - *Richard Dawkins* (1941–): Though encouraged by his parents to study science, he mentions being molested as a child — no insignificant event, though Dawkins dismisses it as merely embarrassing.[15]
>
> Moreover, Vitz's study notes how many prominent *theists* in the past — such as Blaise Pascal, G.K. Chesterton, Karl Barth, and Dietrich Bonhoeffer — have had in common a loving, caring father in their lives.[16]

Not only is there that anecdotal evidence of a psychological explanation for atheism, but there is also statistical evidence.

Excerpt:

> In 1994 the Swiss carried out an extra survey that the researchers for our masters in Europe (I write from England) were happy to record. The question was asked to determine whether a person's religion carried through to the next generation, and if so, why, or if not, why not. The result is dynamite. There is one critical factor. It is overwhelming, and it is this: It is the religious practice of the father of the family that, above all, determines the future attendance at or absence from church of the children.
>
> If both father and mother attend regularly, 33 percent of their children will end up as regular churchgoers, and 41 percent will end up attending irregularly. Only a quarter of their children will end up not practicing at all. If the father is irregular and mother regular, only 3 percent of the children will subsequently become regulars themselves, while a further 59 percent will become irregulars. Thirty-eight percent will be lost.
>
> If the father is non-practicing and mother regular, only 2 percent of children will become regular worshippers, and 37 percent will attend irregularly. Over 60 percent of their children will be lost completely to the church.
>
> Let us look at the figures the other way round. What happens if the father is regular but the mother irregular or non-practicing? Extraordinarily, the percentage of children becoming regular goes*up*from 33 percent to 38 percent with the irregular mother and to 44 percent with the non-practicing, as if loyalty to father's commitment grows in proportion to mother's laxity, indifference, or hostility.
>
> […]In short, if a father does not go to church, no matter how faithful his wife's devotions, only one child in 50 will become a regular worshipper. If a father does go regularly, regardless of the practice of the mother, between two-thirds and three-quarters of their children will become churchgoers (regular and irregular). If a father goes but irregularly to church, regardless of his wife's devotion, between a half and two-thirds of their offspring will find themselves coming to church regularly or occasionally.
>
> A non-practicing mother with a regular father will see a minimum of two-thirds of her children ending up at church. In contrast, a non-practicing father with a regular mother will see two-thirds of his children never darken the church door. If his wife is similarly negligent that figure rises to 80 percent!
>
> The results are shocking, but they should not be surprising. They are about as politically incorrect as it is possible to be; but they simply confirm what psychologists, criminologists, educationalists, and traditional Christians know. You cannot buck the biology of the created order. Father's influence, from the determination of a child's sex by the implantation of his seed to the funerary rites surrounding his passing, is out of all proportion to his allotted, and severely diminished role, in Western liberal society.

So, I think we can make a case that anyone who doesn't have a benevolent, involved father is going to have a more difficult time believing that moral boundaries set by an authority are for the benefit of the person who is being bounded. They may not see the value of a relationship with someone who uses their power for to grow them

and guide them. They may view the leadership of a powerful person skeptically, because they have been disappointed by father figures in their own lives.

I think the best way for a Christian man to to lead someone who is less powerful, is to explain why they want the person to grow in a particular dimension. Why are the moral boundaries there? Why is one course of action more practical than another? Why is it worth it to give up pleasure and do hard things? The experience of trusting male leadership as a child, and seeing it work out, helps a person keep their belief in God. In my own case, I trusted my Dad on things like saving and investing, studying computer science instead of English, living at home instead of going away to college, and many other things, and because I have seen that leadership produce dividends, it's much easier for me to accept that I can be a disciple of Jesus and trust him when things don't go my way. I am used to not getting my way right now, but having it work out well later. I have experienced it with my Dad.

I also think, however, that we need to be cautious about letting children roll over us – because then they will get the idea that God is their cosmic butler, and that's not going to stand up to the rigors of life. We can't let them take advantage of us, they have to understand that being led means that they are going somewhere – that life isn't all about them and their feelings.

# Oxford University shuts down public debate on abortion

**Wintery Knight** · 20 November 2014 · Archived copy · Original

Eagle eggs are protected, unborn babies are not
Journalist Tim Stanley writes about his ordeal in the UK Telegraph.

Excerpt:

> An attempt to hold a reasonable debate about abortion in Oxford was called off after students threatened to disrupt it. Tim Stanley, one of the debaters, writes that the authoritarian Left has become everything it claims to hate.
>
> I would've thought that the one place in Britain where you could agree to disagree amicably would be Oxford University. But I was wrong. For instance, I've discovered that you're only allowed to debate abortion there if a) you're a woman and b) you're all for it. Any other approach to the subject is liable to attract a mob…
>
> A few months ago I accepted an invitation by the Oxford Students for Life to debate Brendan O'Neill on the subject "This House believes Britain's Abortion Culture Hurts Us All". The setting was Christ Church College and around 60 people signed up to attend on Facebook. To be clear: this wasn't a pro-life demo and the subject wasn't whether or not women should have the right to choose abortion. Even though I was speaking for the proposition, my speech would've begun with noting that the motion has nothing to do with abortion rights per se and was simply a consideration of how having effective abortion on demand affects wider society. Brendan, speaking for the opposition, would've doubtless done a fine job and probably run rings round me. It was a fair and free debate that I half expected to lose.
>
> But someone was outraged that we dared to discuss this issue at all. A protest group of around 300 people called "What the f**k is 'Abortion Culture'?" appeared on Facebook that promised to "take along some non-destructive but oh so disruptive instruments to help demonstrate to the anti-choicers just what we think of their 'debate'." We were guilty of promoting "really sh*tty anti-choice rhetoric and probs some cissexism." The foul language indicates how sophisticated the protesters were, while the accusation of cissexism had me reaching for my online urban dictionary. Was I being called a sissy by homophobic feminists? Mais non. Apparently a "cis" is someone who identifies with the same gender that they were born with. So that's a thing now.

> The university's students' union also issued a statement that took aim at Brendan and me for being so offensively attached to our God-given genitals: "The Women's Campaign (WomCam) condemn SFL for holding this debate. It is absurd to think we should be listening to two cisgender men debate about what people with uteruses should be doing with their bodies." Next, the Christ Church Junior Common Room (posh talk for "the committee that run the students' bar") passed a motion asking their college to decline to room the debate. Eventually, the college caved-in on the grounds that, "there was insufficient time between today and tomorrow to address some concerns they had about the meeting". The pro-life society tried to find an alternative venue but everyone else said "no". I believe that two colleges agreed only to later rescind their invitations. I was sitting in Paddington Station (in a duffel coat and hat!) ready to jump on a train to Oxford at 4.40pm when I was told that the debate was finally, totally called off.

So what do we learn from this?

We learn that feminists on the left are opposed to free speech. Once they decide something, they don't want to have to consider alternatives or hear evidence contrary to what they feel is right *for them.* It doesn't matter what is morally right or respectful of the rights of others – the selfish desire for happiness is absolute, and to help with personal responsibility. And if free speech has to go in order to prevent anyone from harassing them with pesky facts, then so much the worse for free speech.

One thing is for sure, the pro-abortion position is not adopted because of logic or evidence. Being pro-abortion is non-cognitive. It cannot be defended rationally, but survives only by mob threats and raw power. If this were not so, then the feminists would have let the debate go through and their side would have won it on the merits. But they knew they would lose a fair debate, and that's why they shut the debate down. And yet I'm sure that they would call themselves pro-diversity and open-minded.

# Human Rights Campaign co-founder Terry Bean arrested for sex crime with 15-year-old

**Wintery Knight** · 20 November 2014 · Archived copy · Original

Gay activist Terry Bean and Barack Obama

Here is his biography from his web site:

> Terry Bean is a native Oregonian, successful real estate developer, and President and CEO of Bean Investment Real Estate, a private company that trades and invests in commercial real estate as well as large residential complexes. Along with these badges of honor, Terry Bean is often first recognized as a pioneer in the national civil rights movement, promoting full equality for the gay, lesbian, bisexual, transgendered, queer/questioning communities. (GLBTQ)
>
> Terry Bean is so well regarded as an activist that Oregon Governor Ted Kulongoski declared August 23, 2008, to be "Terry Bean Equality Day" in recognition for the work he has done on LGBT rights causes since the 1970's.
>
> A pioneer in the movement, Terry Bean, started advocating politically for gay rights in the early 1970′s in Eugene, Oregon. Early successes resulted in the passing of a city gay rights ordinance, which, while was later overturned by voters, set the framework for grassroot organizations and strategies which quickly followed—establishing a pattern of victories which have continued well into the new millennium.
>
> In 1979, Bean helped to organize the National March on Washington for Lesbian and Gay Rights, the first such highly visible effort to empower a minority while educating a majority.
>
> **After the march on Washington, Terry Bean turned his focus to the national level co-founding the Gay Rights National Lobby and the Human Rights Campaign Fund. These groups merged to become today's Human Rights Campaign – HRC.**

The Human Rights Campaign is the nation's largest gay rights organization.

Here is the first story from KOIN 6 News:

> A founder of the country's leading gay rights organization was arrested Wednesday on charges related to an incident with a 15-year-old boy last year.
>
> The Portland Police Bureau's Sex Crimes Unit took Terrence Bean into custody at his home in Southwest Portland following a Lane County Grand Jury indictment.
>
> Bean, 66, was on the ground floor of the Human Rights Campaign, according to terrybeanpolitics.com, and

> is listed as an HRC board member and Portland's sole representation in the group's leadership on hrc.org.

And the follow-up story from Oregon Live:

> The former boyfriend of Terrence P. Bean was arrested early Thursday on sex abuse charges stemming from the same alleged 2013 encounter with a 15-year-old boy at a hotel in Eugene.
>
> Kiah Loy Lawson, 25, was arrested at 1:15 a.m. at the Portland Police Bureau's Central Precinct and booked into the Multnomah County Detention Center shortly after 2 a.m.
>
> He's accused of third-degree sodomy and third-degree sexual abuse.
>
> Lawson is expected to be transferred later Thursday to Lane County, where he was indicted, according to jail officials. His bail was set at $50,000.
>
> Detective Jeff Myers from the Portland's Sex Crimes Unit made the arrest, hours after police took Lawson's ex-boyfriend, Portland developer Terrence Patrick Bean, into custody Wednesday morning.
>
> Bean, 66, a prominent gay rights activist and major Democratic Party fundraiser, was arrested at his home in Southwest Portland and booked into the Multnomah County Detention Center at 10:12 a.m. Wednesday.
>
> The indictment charges Bean with two counts of third-degree sodomy, a felony, and one count of third-degree sex abuse, a misdemeanor, police said.
>
> […]Both Bean and Lawson are accused of having a sexual encounter with the same 15-year-old boy in a hotel in Eugene last year. They had arranged the encounter with the teen after meeting him via a website, investigators allege.
>
> "The investigation began in Portland, but the criminal episode occurred in Lane County," said police spokesman Sgt. Pete Simpson.
>
> **Bean has been one of the state's biggest Democratic donors and an influential figure in gay rights circles in the state. He helped found two major national political groups, the Human Rights Campaign and the Gay and Lesbian Victory Fund, and has been a major contributor for several Democratic presidential candidates, including Barack Obama. He's also a close friend of former Gov. Barbara Roberts.**

The Human Rights Campaign promotes the idea that gay marriage is "equal" to heterosexual marriage. And a lot of big companies are very friendly with the Human Rights Campaign.

**Companies that support the Human Rights Campaign**

I found a list of companies on the Human Rights Campaign web site that are also strongly oppose traditional marriage.

Platinum Partners:

- American Airlines
- Citi
- Microsoft
- Nationwide Insurance
- VPI Pet Insurance

Gold Partners:

- Bank of America
- Deloitte

- Ernst & Young LLP
- Lexus
- Mitchell Gold + Bob Williams
- Prudential

Silver Partners:

- Beaulieu Vineyard
- BP
- Caesars Entertainment
- Chevron
- Google
- MGM Mirage
- Nike

Bronze Partners:

- Chase
- Cox Enterprises
- Cunard
- Dell
- Goldman Sachs
- IBM
- Macy's Inc.
- MetLife
- Morgan Stanley
- Orbitz
- Paul Hastings
- PwC
- Replacements, Ltd.
- Shell
- Starbucks
- Toronto-Dominion (TD) Bank
- Tylenol PM

And of course prominent Democrats support them too – like Barack Obama:

Obama speaks to the Human Rights Campaign

And Hillary Clinton:

Hillary Clinton and the Human Rights Campaign

UPDATE: Life News says he is also pro-abortion:

> A nationally-known pro-abortion activist has been arrested on charges of raping a 15-year-old boy. Terrance Patrick Bean is the founder of Human Rights Campaign, a group that pushes other political issues but also takes a steadfastly pro-abortion position.
>
> Human Rights Campaign, in addition to advancing abortion, has also lobbied Congress to end all federal funding for abstinence education, and hailed one piece of legislation that cut off fundingbecause it “would end abstinence-only-until-marriage programs once and for all.” Bean is also a prominent supporter of pro-abortion President Barack Obama.

# Should Christianity be open and inclusive to those who practice idolatry?

**Wintery Knight** · 20 November 2014 · Archived copy · Original

Why, oh why, did I not write this parody of gay activist Matthew Vines. It's entitled "The Case for Idolatry". It's a parody of Matthew Vines' case for compatibility between Christianity and the gay lifestyle.

Excerpt:

> For as long as I can remember, I've wanted to worship idols. It's not that my parents raised me that way, because they didn't; I was brought up in a loving, secure, Christian home. But from childhood until today, my heart has been drawn to idolatry. In fact, if I'm honest, one of the defining features of my identity has been my desire to put something else – popularity, money, influence, sex, success – in place of God.
>
> **That's just who I am**.
>
> For many years, I was taught that idolatry was sinful. As a good Christian, I fought the desire to commit idolatry, and repented when I got it wrong. But the desire to worship idols never went away.
>
> *I wanted it to, but it didn't.*
>
> So it has been such a blessing to discover that **worshipping one God, and him alone, isn't for everyone**. There are thousands of Christians out there who have found faithful, loving ways of expressing worship both to God and to idols, without compromising either their faith or their view of Scripture. In recent years, I have finally summoned the courage to admit that I am one of them. Let me give you a few reasons why I believe that idolatry and Christianity are compatible.
>
> I start with **my own story**, and the stories of many others like me. I am an evangelical, and I have a very high view of the Bible – I am currently studying for a PhD in biblical studies at King's College London, which will be my third theology degree – as well as knowing both the ancient languages and the state of scholarly research. Yet, after much prayerful study, I have discovered the liberating truth that it is possible to be an idolatrous Christian. That, at least, is evidence that *you can be an evangelical and an idolater*.
>
> Not only that, but a number of evangelical writers have been challenging the monolatrous narrative in a series of scholarly books. A number of these provide a powerful case for listening to the diversity of the ancient witnesses in their original contexts, and call for a **Christlike approach of humility, openness and inclusion towards our idolatrous brothers and sisters**.
>
> Some, on hearing this, will of course want to rush straight to the "clobber passages" in Paul's letters (which we will consider in a moment), in a bid to secure the fundamentalist ramparts and shut down future dialogue. But as we consider the scriptural material, two things stand out. Firstly, **the vast majority of references to idols and idolatry in the Bible come in the Old Testament** – the same Old Testament that tells us we can't eat shellfish or gather sticks on Saturdays. When advocates of monolatry eat bacon sandwiches and drive cars at the weekend, they indicate that we should move beyond Old Testament commandments in the new covenant, and rightly so.
>
> Secondly, and even more significantly, we need to read the whole Bible with reference to the approach of Jesus. To be a Christian is to be a Jesus-person: one whose life is based on his priorities, not on the priorities of subsequent theologians. And when we look at Jesus, we notice that he welcomed everyone who came to him, including those people that the (one-God worshipping) religious leaders rejected – and that ***Jesus said absolutely nothing about idols in any of the four Gospels***.

Skip forward a bit:

> We should also remember that, as we have discovered more about the human brain, we have found out all sorts of things about idolatry that the biblical writers simply did not know. The prophets and apostles knew nothing of cortexes and neurons, and had no idea that some people are pre-wired to commit idolatry, so they never talked about it. But as we have learned more about genetics, neural pathways, hormones and so on, we have come to realise that some tendencies – alcoholism, for example – scientifically result from the way we are made, and therefore cannot be the basis for moral disapproval or condemnation. *To disregard the findings of science on this point is like continuing to insist that the world is flat.*
>
> With all of these preliminary ideas in place, we can finally turn to Paul, who has sadly been used as a judgmental battering ram by monolaters for centuries. When we do, what immediately strikes us is that in the ultimate "clobber passage", namely Romans 1, the problem isn't really idol-worship at all! The problem, as Paul puts it, is not that people worship idols, but that they "exchanged the glory of the immortal God for images" (1:23). *Paul isn't talking about people who are idolatrous by nature*. He is talking about people who were naturally worshippers of Israel's God, and exchanged it for the worship of idols. What else could the word "exchange" here possibly mean?
>
> Not only that, but none of his references apply to idolatry as we know it today: putting something above God in our affections. Paul, as a Hellenistic Roman citizen, simply would not have had a category for that kind of thing. In his world, idolatry meant physically bowing down to tribal or household deities – statues and images made of bronze or wood or stone – and as such, the worship of power or money or sex or popularity had nothing to do with his prohibitions.

Read the whole thing. You might recognize these arguments from Matthew Vines' debate with Michael Brown about whether you can be a practicing gay person and a Christian at the same time. I I summarized the debate in this post.

I wrote this in reaction to the debate:

> Even heterosexuals who have not married are called upon to embrace lifelong celibacy. I am in my 30s and am a virgin because I have not married. I wouldn't seek to reinrepret the Bible to allow premarital sex just because what I am doing is difficult. I would rather just do what the Bible says than reinterpret it to suit me. And it's just as hard for me to be chaste as it would be for him to be. In short, it's a character issue. He takes his right to recreational sex as non-negotiable, and reinterprets the Bible to suit. I take the Bible as non-negotiable, and comply with it regardless of whether it seems to make me less happy. With respect to the purposes of God for me in this world, my happiness is expendable. If I don't find someone to marry, I'm going to be "afflicted" with the lifelong celibacy that Vines seems to think is torture, but let me tell you – God is happy with the contributions I am making for him, and if I have to be chaste through my whole life, I am 100% fine with that. I serve the King. And not the reverse.

So back to the parody. Apparently, Matthew Vines is saying that he doesn't really use arguments like the ones above, so thankfully Samuel James has gone through Vines' book and listed out exact quotes where he uses the arguments in the parody. This is worth a read as well – it's really first class work, because a lot of people who think Christianity is supposed to be about us being happy and fulfilled buy into these reinterpretations of the Bible. We need to be ready with an answer.

# Released e-mails: Obama administration asked CBS News to block Sharyl Attkisson

**Wintery Knight** · 21 November 2014 · Archived copy · Original

Ex-CBS News reporter Sharyl Attkisson

This is being reported by Pajamas Media. (H/T ECM)

Excerpt: (links removed)

> Judicial Watch reports that the Obama administration has turned over about 42,000 pages of documents related to the Fast and Furious scandal. The administration was forced to turn the documents over to Judicial Watch in a Freedom of Information Act lawsuit. Judicial Watch is posting them on its web site. The administration turned them over on November 18, 2014.
>
> One of the documents provides smoking gun proof that the Obama White House and the Eric Holder Justice Department colluded to get CBS News to block reporter Sharyl Attkisson. Attkisson was one of the few mainstream media reporters who paid any attention to the deadly gun-running scandal.
>
> In an email dated October 4, 2011, Attorney General Holder's top press aide, Tracy Schmaler, called Attkisson "out of control." Schmaler told White House Deputy Press Secretary Eric Schultz that he intended to call CBS news anchor Bob Schieffer to get the network to stop Attkisson.
>
> Schultz replied, "Good. Her piece was really bad for the AG."
>
> Schultz also told Schmaler that he was working with reporter Susan Davis, then at the *National Journal*, to target Rep. Darrel Issa (R-CA). Issa led the House investigation into Fast and Furious. Davis now works at *USA Today*. In the email chain, Schultz tells Schmaler that he would provide Davis with "leaks."
>
> Davis wrote a critical piece on Issa a few weeks later.
>
> Attkisson was later subjected to hacking of her computer by people who remain unknown, but who likely belong to a government agency. She and CBS parted ways earlier in 2014, and Attkisson has since said that the network blocked her reports from airing.

Can anybody remember when journalists actually thought that their job was to report news, not to be allies of the Democrat party? I mean, other than Sharyl Attkisson, are there any actual reporters left who report the news honestly? I never watch anything on TV except Bret Baier on Special Report. At least on Fox News you get different points of view, like Charles Krauthammer vs Ron Fournier, or Stephen Hayes vs Juan Williams.

# The biggest driver of income inequality is single motherhood

**Wintery Knight** · 21 November 2014 · Archived copy · Original

Welfare and out-of-wedlock births

Indian economist Aparna Mathur, whose work I've featured here before, writes about it in Forbes magazine.

Excerpt:

> The fabric of our society is changing. In 1980, approximately 78 percent of families with children were headed by married parents. In 2012, married parents headed only 66 percent of families with children. In a new report, Bradford Wilcox and Robert Lerman explore the role of family structure with new data and analysis, and document how this retreat from marriage is not simply a social and cultural phenomenon. It has important economic implications for, amongst others, men's labor force participation rates, children's high school dropout rates and teen pregnancy rates. Since these factors are highly correlated with economic opportunity and the ability to move up the income ladder, this suggests that income inequality and economic mobility across generations are critically influenced by people's decisions and attitudes towards marriage. Understanding the role of family structure is therefore key to understanding the big economic challenges of our time.
>
> […]Wilcox and Lerman document how the shift away from marriage and traditional family structures has had important consequences for family incomes, and has been correlated with rising family-income inequality and declines in men's labor force participation rates. Using data from the Current Population Survey, the authors find that between 1980 and 2012, median family income rose 30 percent for married parent families, For unmarried parents, family incomes rose only 14 percent.
>
> These differential patterns of changes in family income have exacerbated family-income inequality. Since unmarried parent families generally expand the ranks of low-income families, while high-income, high-education adults increasingly marry partners from similar socioeconomic backgrounds, inequality trends are worsened. Comparing the 90th percentile families to the 10th percentile families in 2012, the top 10 percent had incomes that were more than 11 times higher than the bottom 10 percent. However, if we restrict the sample to married families with children, the ratio drops to nearly 7, suggesting that within married families, income inequality is less stark. The authors estimate that approximately 32 percent of the growth in family-income inequality between 1979 and 2012 is associated with changes in family structure. Other research, studying the period 1968-2000, finds that the changing family structure, accounted for 11 percent of the rise widening of the income gap between the bottom and top deciles.
>
> Another interesting observation relates to the trends in employment participation by men. The Wilcox-Lerman

> study finds that for married fathers, employment and participation rates have remained consistently higher than for married men with no children and unmarried men with no children. The authors speculate that between 1980 and 2008, about 51 percent of the decline in men's employment rates can be associated with the retreat from marriage.

And why is single motherhood so ascendant today? Well, part of it is the loss of morality caused by secularism. If there is no God, then there is no way we ought to be, so let's just do whatever makes us feel good, and pass the bill to the taxpayers. That only works, though, if we elect politicians who want taxpayers who are responsible to pay for the ones who are irresponsible.

So have we done that? Yes – Robert Rector explains in The Daily Signal.

He writes:

> It is no accident that the collapse of marriage in America largely began with the War on Poverty and the proliferation of means-tested welfare programs that it fostered.
>
> When the War on Poverty began, only a single welfare program—Aid to Families with Dependent Children—assisted single parents.
>
> Today, dozens of programs provide benefits to families with children, including the Earned Income Tax Credit, Temporary Assistance for Needy Families, the Women, Infants and Children food program, Supplemental Security Income, food stamps, child nutrition programs, public housing and Section 8 housing, and Medicaid.
>
> Although married couples with children can also receive aid through these programs, the overwhelming majority of assistance to families with children goes to single-parent households.
>
> The burgeoning welfare state has promoted single parenthood in two ways. First, means-tested welfare programs such as those described above financially enable single parenthood. It is difficult for single mothers with a high school degree or less to support children without the aid of another parent.
>
> Means-tested welfare programs substantially reduce this difficulty by providing extensive support to single parents. Welfare thereby reduces the financial need for marriage. Since the beginning of the War on Poverty, less-educated mothers have increasingly become married to the welfare state and to the U.S. taxpayer rather than to the fathers of their children.
>
> As means-tested benefits expanded, welfare began to serve as a substitute for a husband in the home, and low-income marriage began to disappear. As husbands left the home, the need for more welfare to support single mothers increased. The War on Poverty created a destructive feedback loop: Welfare promoted the decline of marriage, which generated a need for more welfare.
>
> A second major problem is that the means-tested welfare system actively penalizes low-income parents who do marry. All means-tested welfare programs are designed so that a family's benefits are reduced as earnings rise. In practice, this means that, if a low-income single mother marries an employed father, her welfare benefits will generally be substantially reduced. The mother can maximize welfare by remaining unmarried and keeping the father's income "off the books."
>
> For example, a single mother with two children who earns $15,000 per year would generally receive around $5,200 per year of food stamp benefits. However, if she marries a father with the same earnings level, her food stamps would be cut to zero.

So you see, the thing the left complains about the most is actually the thing they do the most to cause. They are all about taxpayer-funded welfare programs and growing government to make more and more people dependent. They are causing the income inequality and then complaining about what they cause.

# Pro-life family wins case to avoid paying Obamacare surcharge on health insurance

**Wintery Knight** · 22 November 2014 · Archived copy · Original

Scheming Unborn Baby scheming about becoming an ADF lawyer

Great news from Life News.

Excerpt:

> A pro-life leader and his family who lost their health plan due to Obamacare filed suit in federal court this year. The family was suing because they were being forced on to the state's health insurance exchange, which only offers plans that require them to pay for other people's abortions.
>
> Barth and Abbie Bracy had insurance through a private insurer, but Obamacare forced the insurer to cancel the policy effective later this year. Forced on to the Obamacare exchange, the Bracys were left only with plans that include a mandatory surcharge used to fund the elective abortions of others. Ironically, Barth Bracy is executive director of The Rhode Island State Right to Life Committee and has warned people of exactly the problems his family is now facing.
>
> The lawsuit also challenged secrecy clauses within Obamacare which forbid Americans from being told prior to enrollment whether the plans they would purchase on an exchange will include abortion coverage. The clauses also forbid Americans from being told how much of the premium is a federally mandated abortion surcharge that pays for other people's elective abortions.
>
> Now, their attorneys, Alliance Defending Freedom, have informed LifeNews that the Bracy family won't be forced to pay Obamacare's abortion surcharge.
>
> **Alliance Defending Freedom attorneys voluntarily dismissed their lawsuit against federal and state officials Wednesday after the addition of Obamacare plan options that, for the first time in Connecticut, will not require participants to pay for others' elective abortions.** Despite the Connecticut change, many American families are still being forced to pay hidden abortion surcharges.

> “Americans should not have to pay a special fee for other people’s abortions in order to take care of their own family’s health,” said ADF Senior Counsel Casey Mattox. “The Bracy family has experienced first-hand the kind of deception that was used to pass and that continues to pervade this law. While we are pleased that Connecticut families will now have a choice to avoid paying this abortion surcharge, it is a shame that other families won’t have that choice, and that most Americans don’t even know that they must pay this secret fee.”
>
> **Federal law forbids taxpayer subsidies for elective abortions; however, the Affordable Care Act requires every exchange plan that includes abortion to collect a separate fee that is used exclusively to pay for abortions. The ACA further forbids disclosure of the abortion surcharge to customers.**

So it’s not just this family that won the case – it’s the whole state!!! I think this is just amazingly awesome. We need more people like this to take on the government, and thank God the ADF is there to defend them. We need more Christian lawyers who are willing to take cases like this.

# American Atheists PR Director announces he wants to be a woman

**Wintery Knight** · 22 November 2014 · Archived copy · Original

Story from the Christian Post.

Excerpt:

> Dave Muscato, the public relations director for American Atheists, has announced that he'll be transitioning into a transgender woman in the near future, and has chosen the name Danielle as a new identity.
>
> "I consider my gender identity to be personal and, despite my passion for PR, don't intend to do much in the way of interviews about my personal gender identity if I can help it. I fully support intersectionality and working together with LGBTQ activists on mutual goals, but I'm first and foremost an atheist activist, and that hasn't changed," Muscato wrote in a blog post on Monday for The Friendly Atheist.
>
> "There are many other people who are significantly more educated about trans activism than I am and who are already doing great work in that area. I support them and obviously have an interest in their success, but it's not my area of expertise. Exposing the harms that religion causes and making the world a better place for atheists will always be my passion."
>
> Muscato noted that she's (formerly he) grateful for the full support of American Atheists President David Silverman and Managing Director Amanda Knief, as well as other co-workers.
>
> Muscato added that gender identity and gender expression don't always go hand-in-hand.
>
> "While I have identified internally as a woman for a long time, for now, I will be presenting more-or-less as a man; that is, I will continue to wear mostly traditional men's clothing, speak in my natural lower voice, and so on," the American Atheists public relations director wrote.
>
> "Transitioning is a slow, painful, and expensive process and can take many months to several years. As I begin to take bigger steps to change my appearance, I will also begin dressing differently and changing other aspects of my gender expression.
>
> American Atheists, one of the largest secular organizations in the U.S., launched the world's first ever TV channel dedicated exclusively to atheism earlier this year.
>
> "Atheist TV," as the channel is called, is shown through Internet-streaming service Roku 24 hours a day, seven days a week, and has partnered with other notable atheist groups, such as the Richard Dawkins Foundation.
>
> "There's a glut of religious TV programming out there, from televangelists to Christmas specials," Muscato told New York Daily News in May. "But there's no atheist channel. We wanted to fill that void. … We'll have shows about philosophy, science, history — a critical examination of the facts."

His new biography on the American Atheists page says he is "a former Christian praise & worship musician". As if I wasn't suspicious of them enough already! Ha ha.

So I think the take-away lesson here is that although atheists like to portray themselves are being motivated by reason, it's not generally the truth, in my experience.

After all, we live in a created universe that is fine-tuned for complex embodied life. Those are the facts. We have evidence for intelligent causes at the origin of life and in the Cambrian explosion. More facts. Our galaxy, solar system and planet support intelligent life, even though most possible galaxies, solar systems and planets do not have what it takes to support life – and that's an understatement. Facts again. So when a person claims to be an atheist after being presented with these facts, it's not reason that is causing them to stay an atheist. It's something else. And it's not reason that causes them to spend so much time and effort trying to get rid of God, and objective moral values and duties. It's something else.

# Tim McGrew debates Peter Boghossian on the definition of faith

**Wintery Knight** · 22 November 2014 · Archived copy · Original

I have tried very hard to avoid writing about Peter Boghossian because I kept hoping that someone would speak to him and set him straight before he went too far.

Basically, when you listen to the debate below, you'll find that Boghossian redefines the word faith so that it basically means "stupidity", and then he tries to get people of faith to accept that they are stupid according to his new definition of faith. The new definition is not found in any dictionary, and it's not used commonly, either.

Anyway, here are the details:

> This Week on Unbelievable : Peter Boghossian vs Tim McGrew – debate on 'A Manual For Creating Atheists"
>
> Peter Boghossian teaches philosophy and is the author of 'A Manual for Creating Atheists'. He believes that faith is a 'false epistemology' (way of knowing things) and even describes it as a 'virus of the mind'. Tim McGrew is a Christian philosophy professor specialising in epistemology. He contests Boghossian's definition of faith and debates the merits of his recent book. To cast your vote on the definition of faith visit www.facebook.com/unbelievablejb.

The MP3 file is here.

Topics: (I reserve the right to satirize Boghossian in this. Listen to the audio if you want his exact words)

- PB: My book tries to avoid the "obfuscations" of reputable, credentialed Christian scholars and discusses faith at my intellectual level
- PB: The goal of the book is to help people abandon the dictionary definition of the word "faith" and accept the definition I invented
- TM: Defining the word "faith" in the wrong way is not the right way to start an authentic, respectful conversation
- TM: Faith does not mean "pretending to know things you don't know" – that is not a standard definition
- TM: the only people who accept your definition of faith are you and the people who follow you online
- TM: your whole book is predicated on on a wrong definition of faith
- PB: that is my definition of faith based on my experience of talking to lots of people
- TM: He says this is how billions of people define faith – but not in my experience, maybe satirists like Ambrose Bierce and Mark Twain do
- TM: Your definition of faith is not in the Oxford English Dictionary and that definition is based on common usage of the word faith
- TM: The New Testament definition of faith "pistis" means trust
- PB: There are 50-100 people who use the term that way, and only in academia
- TM: How about "The Good Atheist" who interviewed you? He is not an academic or a theist, but he didn't accept your definition
- PB: You are "extraordinarily isolated" from the real definition of faith
- TM: Faith is not belief without evidence, it is trust based on at least some evidence
- PB: Christian leaders use the word according my definition, I won't name any or quote any, though
- JB: So you are basically saying that Christians are lying when they express their faith, since they know what they are saying isn't true but they say it anyway
- PB: What percentage of Christians use the word faith to mean "belief without evidence"

- TM: Well below 1%. It may be the case that their evidence is not very good, but they do rest their beliefs on evidence
- TM: Faith is trusting, holding to, and acting on what one has good reasons to believe is true in the face of difficulties
- PB: That's not what people mean by faith, they mean my definition
- JB: What do you mean when you say that faith is a "virus of the mind", and a "mental illness"? School programs to remove faith?
- PB: Think about how atheists feel when they are told they will go Hell
- PB: Christians are hurting people, so that means they have a mental disorder that needs to be cured in a systematic way
- PB: Faith is an epistemic virus that hijacks the reasoning process

At that point I quit summarizing, because I didn't think he was worth listening to any more.

He is clearly not aware of how even basic Christian apologetics books that are bestsellers cover evidences like the Big Bang, the cosmic fine-tuning, the origin of life, the Cambrian explosion, galactic habitability, stellar habitability, New Testament reliability, historical Jesus, philosophical arguments for theism, and so on. This is the bottom-shelf of Christian apologetics, widely read by rank-and-file Christians, but Boghossian seems to be completely unaware of it. He needs to get out more and talk to people outside of radical atheist circles. Maybe he needs to pick up a serious book like "Debating Christian Theism" and read it before he opens his mouth on topics he knows nothing about.

But that's not all. As, I explained before, the concept of faith presented in the Bible agrees with what Dr. McGrew said – faith is trust based on evidence. That is the Biblical view.

And finally, this:

John 10:37-38: [NASB]

37 If I do not do the works of My Father, do not believe Me;

38 but if I do them, though you do not believe Me, believe the works, so that you may know and understand that the Father is in Me, and I in the Father."

The words of Jesus – he is saying: believe me because of the evidence I provide from miracles that you can see with your own eyes. Period. End of discussion.

So Boghossian's view of faith is nowhere except in his own mind. Not in the apologetics literature. Not in the writings of any reputable Christian scholar. Not in the Bible. Not in the words of Jesus. It's enough to make me think that this talk about "mental disorders" and "viruses of the mind" is just projection.

**Vote in the poll**

Please vote in this poll:

Thank goodness we have debates like this so that we can find out where Christians really come down on faith.

# Why does God allow so much natural evil from earthquakes?

**Wintery Knight** · 23 November 2014 · Archived copy · Original

My friend Eric Chabot of Ratio Christi shared this video with me, which features chemist Fazale Rana.

The video runs under 4 minutes:

Basically, there was an atheist who challenged the idea that nature is designed because there are things in nature which cause suffering, like earthquakes and volcanoes.

Now the first thing to note is that atheists commonly think that God's job is to make humans happy. If he doesn't make humans feel happy – regardless of their knowledge of him and relationship with him – then he is a big failure. Many atheists think that, it is one of the most common reasons why people become atheists. But of course anyone who reads the Bible and reads the story of Jesus knows that the purpose of life on God's view is for humans to know him and to be disciples of a *suffering* Messiah who sacrifices himself in order to obey God the Father. So that's the first thing to say – purpose of life *not* happiness, but knowledge of God and being a disciple of Jesus. This may involve all kinds of suffering, and that's to be expected.

Second, there is a response to the problem of evil based on the necessity of natural laws. The argument goes that you can't have genuine morality without a predictable, knowable system of natural laws.

But I want to talk about something different in this post. In the video, Dr. Rana thinks that many of the things that cause suffering in the natural world are actually necessary for life to exist at all. He provides the example of plate tectonics in his video above, and I want to take that one and add to it the example of heavy element production and the stellar lifecycle. These are both from a book called "Rare Earth", which is written by two non-Christians – Peter Ward and Donald Brownlee, but I'll link to web sites to make the case.

**Plate tectonics.**

Here's an article from Reasons to Believe by Dr. David Rogstad, who has a PhD in physics from Caltech – the top school for experimental science. The article not only goes over the basic plate tectonics to carbonate-silicate cycle connection, but it adds a newer discovery to boot.

Excerpt:

> Earthquakes are a byproduct of plate tectonics, a theory in geology developed in recent years for explaining motions near the surface of the Earth. One of the benefits from plate tectonics is that Earth maintains the right levels of carbon dioxide ($CO_2$) in the atmosphere to compensate for the Sun's increasing luminosity. This is accomplished by what is called the carbonate-silicate cycle. $CO_2$ is removed from the atmosphere through weathering. The weathered products are eventually drawn into the Earth's interior via plate tectonics. Processes inside the Earth's interior release the $CO_2$ back into the atmosphere via volcanoes. While all aspects of this mechanism are not yet fully understood, it has been instrumental in providing a stable environment for life on the Earth for billions of years.
>
> New research provides yet another component that appears fine-tuned for life. In a letter in the September 27, 2007 issue of Nature together with a corresponding news release from the University of Bonn, Arno Rohrbach and his colleagues have discussed another mechanism similar to the carbonate-silicate cycle. It also depends on plate tectonics but, in this case, the mechanism controls the amount of oxygen on the surface of the Earth.
>
> Oxygen becomes bound up in various oxides which are then drawn into the Earth's interior, where various processes result in its being incorporated into an exotic mineral called majorite. The results reported in this letter established that majorite functions as a kind of "reservoir" for oxygen, and when the majorite ascends nearer to the surface of the Earth it breaks down and releases its oxygen. Some of this oxygen also binds with hydrogen released from the interior of the Earth to form water. The authors have referred to the whole process

> as an “oxygen elevator.”
>
> They go on to say that “without the ‘oxygen elevator’ in its mantle the Earth would probably be a barren planet hostile to life. According to our findings, planets below a certain size hardly have any chance of forming a stable atmosphere with a high water content.”
>
> This research confirms the existence of one more finely tuned mechanism that depends on plate tectonics and contributes to an environment that can support life. It also gives humans one more reason to be appreciative rather than dismayed when we experience an earthquake that breaks some precious possessions beyond repair.

Astronomer Dr. Hugh Ross who has a PhD in Astronomy from the University of Toronto and did a 5-year post-doctoral work at Caltech, adds to this with another discovery.

Excerpt:

> In the December 2007 issue of *Astrobiology* Stanford University geophysicists Norman H. Sleep and Mark D. Zoback note that the higher tectonic activity during Earth’s early history could have played a key role in cycling critically important nutrients and energy sources for life. The production of numerous small faults in the brittle primordial crust released trapped nutrients. Such faults could also release pockets of methane gas and molecular hydrogen. The methane and hydrogen could then provide crucial energy sources for nonphotosynthetic life. Finally, the production of faults could bring water to otherwise arid habitats, such as rocks far below Earth’s surface.
>
> Faulting, generated by active and widespread tectonics, allowed a youthful Earth to support diverse and abundant life. This enhanced diversity and abundance of life quickly transformed Earth’s surface into an environment safe for advanced life. Also, the buildup of biodeposits for the support of human civilization occurred more rapidly due to active tectonics.
>
> The more rapid preparation of Earth for humanity is critical. Without such rapid preparation, humans could not come upon the terrestrial scene before the Sun’s increasing luminosity would make their presence impossible (due to excessive heat).

So that’s the science behind earthquakes. So that’s a brief look at why we need plate tectonics for life, and we just have to buck up and take the earthquakes with it. It’s not God’s job to give us happiness and health. That’s not his plan. People who complain about earthquakes have to show how God could get the life-permitting effects of earthquakes without wrecking his ability to succeed in his plan to make people know him and follow him. But how can an atheist do that? They can’t. I think that people just need to realize that humans are not in charge here and we have to live with that. We have to accept that we didn’t make the universe, and we don’t get to decide what purpose it has. God decides.

On to star formation.

**Star formation**

Atheists often complain that the universe is too big or too old (which is actually the same thing, since the more time passes, the more it expands). The fact of the matter is that life appeared the earliest it could appear – we needed the universe to be a certain age before it could support life.

Dr. Hugh Ross explains in this article.

Excerpt:

> The second parameter of the universe to be measured was its age. For many decades astronomers and others have wondered why, given God exists, He would wait so many billions of years to make life. Why did He not do it right away? The answer is that, given the laws and constants of physics God chose to create, it takes about

> ten to twelve billion years just to fuse enough heavy elements in the nuclear furnaces of several generations of giant stars to make life chemistry possible.
>
> Life could not happen any earlier in the universe than it did on Earth. Nor could it happen much later. As the universe ages, stars like the sun located in the right part of the galaxy for life (see chapter 15) and in a stable nuclear burning phase become increasingly rare. If the universe were just a few billion years older, such stars would no longer exist.

The Rare Earth book explains the details on p. 40-4:

> The trick for getting from helium to the generation of planets, and ultimately to life, was the formation of carbon, the key element for the success of life and for the production of heavy elements in stars. Carbon could not form in the early moments following the Big Bang, because the density of the expanding mass was too low for the necessary collisions to occur. Carbon formation had to await the creation of giant red stars, whose dense interiors are massive enough to allow such collisions. Because stars become red giants only in the last 10% of their lifetimes (when they have used up much of the hydrogen in their cores), there was no carbon in the Universe for hundreds of millions to several billion years after the Big Bang—and hence no life as we know it for that interval of time.
>
> […]The sequence of element production in the Big Bang and in stars provided not only the elements necessary for the formation of Earth and the other terrestrial planets but also all of the elements critical for life—those actually needed to form living organisms and their habitats.

> […]The processes that occurred during the billions of years of Earth's "prehistory" when its elements were produced are generally well understood. Elements are produced within stars; some are released back into space and are recycled into and out of generations of new stars. When the sun and its planets formed, they were just a random sampling of this generated and reprocessed material. Nevertheless, it is believed that the "cosmic abundance" mix of the chemical elements—the elemental composition of the sun—is representative of the building material of most stars and planets, with the major variation being the ratio of hydrogen to heavy elements.
>
> […]Many stars are similar in composition, but there is variation, mainly in the abundance of the heavier Earth-forming elements relative to hydrogen and helium. The sun is in fact somewhat peculiar in that it contains about 25% more heavy elements than typical nearby stars of similar mass. In extremely old stars, the abundance of heavy elements, may be as low as a thousandth of that in the sun. Abundance of heavy elements is roughly correlated with age. As time passed, the heavy-element content of the Universe as a whole increased, so newly formed stars are on the average more "enriched" in heavy elements than older ones.
>
> […]The matter produced in the Big Bang was enriched in heavier elements by cycling in and out of stars. Like biological entities, stars form, evolve, and die. In the process of their death, stars ultimately become compact objects such as white dwarfs, neutron stars, or even black holes. On their evolutionary paths to these ends, they eject matter back into space, where it is recycled and further enriched in heavy elements. New stars rise from the ashes of the old. This is why we say that each of the individual atoms in Earth and in all of its creatures—including us—has occupied the interior of at least a few different stars.

What he's saying is that heavy elements are created gradually because of the star formation lifecycle. The first generation of stars are metal-poor. The next generation of stars is better. And so on until we get to stars that can support life by providing a steady, stable amount of energy – as well as other benefits like planets with an atmosphere.  Our planet is 4.5 billion years old, and the universe is about 14 billion years old. Simple life appears about 4 billion years ago on Earth. That means we got life practically immediately, given that we had to develop the heavy elements needed to make a life-supporting star, a life-supporting planet and our physical bodies.

# Southern Baptist conference hosts Roman Catholic scholar to speak on the defense of marriage

**Wintery Knight** · 23 November 2014 · Archived copy · Original

Roman Catholic marriage defender Sherif Giris speaks to about 1500 Southern Baptists at the 2014 ERLC National Conference on "The Gospel, Homosexuality, and the Future of Marriage." This is a very good introduction to the defense of marriage.

Topics:

- his experience doing formal debates on the definition of marriage in the most liberal universities
- the gay marriage side has no argument for redefining marriage it's all emotions
- on their view, what makes a marriage is a strong emotional bond
- however their view does not rationally ground any of traditional marriage norms
- it does not rationally ground the norm of marriage being permanent
- it does not rationally ground the norm of marriage being sexually exclusive
- it does not rationally ground the norm of marriage being for only two people
- it does not rationally ground the norm of marriage involving sexual activity
- it does not rationally ground the norm of marriage involving a connection to family life
- if we redefine marriage to mean "emotional bond" all these features are not essential
- the community of marriage involves cooperation: common actions towards a common end in a context of commitment
- marriage unites two people at all levels
- it unites them sexually for purpose: not for feelings, but for reproduction
- the sexual act in marriage is oriented to generating family life, which requires commitment
- family life leads naturally into the norms of permanence and exclusivity
- the redefined view of marriage as emotional bonding is opposed to all of this
- we can see the priorities of the redefiners in their support for no-fault divorce
- they we acting on their view of making marriage about emotional fulfillment
- they pushed by saying "how would no-fault divorce affect your marriage?"
- no-fault divorce was the first marriage redefinition and it undermined permanence
- it affected the entire community – a generation of kids raised without father
- it causes a host of problems to kids, crime, lower test scores, earlier sexual activity, etc.
- this is why marriage matters – to give children what they need
- defending marriage as part of the Christian life
- we have to understand the motives of the marriage redefiners and addressing their needs

I think it's a good point to bring up no-fault divorce to show us how people on the secular left who want a more adult-friendly definition of marriage do their redefining at the expense of children. If this life is the only one you have, and there is no design for how humans ought to be, then it makes a lot of sense to maximize your own freedom and view your children as competitors against your happiness. Or, maybe you lie to yourself and say that fatherlessness and instability doesn't really hurt children, because "children are resilient".

The capacity for humans to deceive themselves when it comes to having freedom to "be happy" knows no bounds. It falls to us as Christians, then, to speak out for children – born and unborn. We are the only ones who still believe that in a conflict between adult selfishness and a child's rights, that the child's rights should win out. Children are not

commodities, and there are more important things than our own happiness to consider. There are more important things than appearing “nice” to our peers to consider.

# Who is paying for Obama's executive order amnesty vote buying scheme?

**Wintery Knight** · 24 November 2014 · Archived copy · Original

The Daily Caller reports.

Excerpt:

> Illegal immigrants will receive huge payments from American taxpayers under rules now being imposed by President Barack Obama's unilateral amnesty.
>
> The illegals will get work-permits and Social Security cards, and will be required to pay taxes, according to Cecilia Munoz, the former immigration lobbyist who is now a top Obama aide.
>
> That means they're part of the tax system, she said, when she was asked if the illegals would get annual payments under the Earned Income Tax Credit program.
>
> "They are subject to our tax law," she said, carefully.
>
> Most households of illegals have very low income, and pay little in taxes. For example, in 2011, roughly 22 percent of immigrant households — both legal and illegal — were classified as living in poverty. In contrast, only 13 percent of American households were in poverty.
>
> However, once illegal immigrants are enrolled in the tax system, they would be entitled to EITC payments.
>
> The payments may be huge, and will rise each year.
>
> According to the Internal Revenue Service, two parents with three or more children would receive up to $6,143 in 2014 if they earn less than $46,997.
>
> A family with two kids, and an income of $20,000, would receive $14,590 in taxpayer funds this year alone.
>
> Parents who earn less than the threshold would get $3,305 if they have one child, and $5,460 if they have two children.
>
> The EITC program is already poorly monitored and may be subject to large amounts of fraud, according to critics.

Who is Cecilia Munoz? She used to work for "La Raza" for 20 years. La Raza means "The Race" in Spanish. They are a pro-amnesty group.

You would think that the Democrats would use their own money to bribe people to vote Democrat, but they would rather use yours. That's what Obama was talking about when he talked about how society is better when he spreads the wealth around. You didn't need that money you earned for anything, did you? Obama needs to spread it around to people who haven't worked for it.

It all sounds so compassionate until somebody loses their job or can't afford to provide for their own families with money they earned.

# Woman invents hunky man character for her book, then leaves her husband for him

**Wintery Knight** · 24 November 2014 · Archived copy · Original

My good friend Dina sent me this article about a very crazy, irrational woman who does not value marriage at all.

Excerpt:

> Her steamy, bestselling novels and strong male characters have seduced hundreds of thousands of female readers worldwide.
>
> But Jodi Ellen Malpas has revealed she has split from her own Mr Right – because he no longer lives up to the fantasy she created.
>
> The 34-year-old, whose This Man trilogy has sold more than 500,000 copies, has left her husband of ten years after 'falling in love' with one of her characters.
>
> **Ms Malpas, from Northampton, says: 'All my fictional men are strong, successful, sophisticated and enigmatic. I guess it's hard for any living, breathing man to live up to such a fantasy.**
>
> **'In This Man I created Jesse Ward, whose forceful personality was appealing to me. There is no denying I fell in love with him.**
>
> **'After all, I created him and I made him the way he is for a reason. Every woman needs some fantasy lover to spice up the dull reality of her real life. I wanted to create my perfect love story.**
>
> 'But the success of my books and the popularity of my male character led to the breakdown of my marriage. Sadly it was not solid enough to withstand the changes success has brought to my life.'
>
> The mother of two, whom many believe is the new E. L. James, the housewife who wrote the Fifty Shades Of Grey trilogy, became a self-publishing sensation last year, swiftly rising to the top of the New York Times Best Seller List.
>
> The This Man trilogy explores the love affair between young interior designer Ava O'Shea and playboy Jesse Ward. The second part of her new trilogy, One Night, has just been published by Orion.
>
> **'I was 23 when Aaron and I got married, so we were both very young,' she says. 'I didn't really know who I was. I got on with being a wife and mother.**
>
> **'But over time I started to feel that something was missing – my normal everyday life had become a routine. I was bored. I guess that is what couples mean when they say they've grown apart. Aaron couldn't understand why I wanted to write my fiction and I couldn't understand why he didn't understand.'**
>
> **The couple have two children, Alfie, 14, and Patrick, ten.** But although they divorced in August last year, Ms Malpas says their relationship remains amicable. She is currently single and insists that she has no time to get involved in a relationship.
>
> **'My children and my writing are enough for the moment,' she adds. 'In any case, I suspect some men might be a little intimidated by my independence and my success.'**
>
> **And she insists she has no regrets. 'It's been crazy, but I'm loving the stronger more liberated me,' she says.**

They are "her" children. Not her husband's and hers. And they don't need a father – because children don't have needs distinct from her own needs. Her husband doesn't have needs distinct from her own needs.

In her own mind, men are intimidated by her success. But that's not true – they are intimidated because she is

insane and irrational and self-centered. They are intimidated because she divorced her husband of 10 years (with children) for a *fictional character!!!!!* She doesn't have any genuine love for a man – only for *herself*. And her husband must have been a dafty for marrying her. What a terrible thing to inflict on your own children by marrying a woman who was only ever interested in herself – her needs, her adventures, her thrills. Men, when you hear a woman who does not take steps toward marrying and building a family together, run away. Run away before she divorces you and destroys your children with her selfishness.

Good Lord. What have women come to under the influence of feminism? The feministy ones seem to place no value on what a married couple can do together. They place no value on the needs of children. Everything is about getting their own fulfillment through worldy "success" and experiences; traveling, feeling good and taking pointless risks. When I think of the men that these feministy women seem to really want (at least when they are in their teens, 20s and 30s) it really scares me. I used to think that most young, unmarried women were sensible and thought that being a wife and mother was a good way to make a difference. Now so many of them are influenced by feminism and they seem to be avoiding it in favor of making lots of money. As if that were an end in itself.

And remember – LOTS OF WOMEN are buying books like hers, and Fifty Shades of Gray and Eat. Pray, Love and so on. What is so boring about marriage that women no longer find it fulfilling? I go to work every day and damned if I think that is more fulfilling that loving a wife and fathering children. I don't think any man would think that. We work because that's how we relate to our wives and children, by providing for them and leading them. And work is not meant to be fun or fulfilling. It's WORK.

# New study: Saturn's orbit keeps Earth in the circumstellar habitable zone

**Wintery Knight** · 24 November 2014 · Archived copy · Original

Circumstellar Habitable Zone

What do you need in order to have a planet that supports complex life? First, you need liquid water at the surface of the planet. But there is only a narrow range of temperatures that can support liquid water. It turns out that the size of the star that your planet orbits around has a lot to do with whether you get liquid water or not.

A heavy, metal-rich star allows you to have a habitable planet far enough from the star so the planet can support liquid water on the planet's surface while still being able to spin on its axis. The zone where a planet can have liquid water at the surface is called the circumstellar habitable zone (CHZ). A metal-rich star like our Sun is very massive, which moves the habitable zone out further away from the star.

If our star were smaller, we would have to orbit much closer to the star in order to have liquid water at the surface. Unfortunately, if you go too close to the star, then your planet becomes tidally locked, like the moon is tidally locked to Earth. Tidally locked planets are inhospitable to life. So we need a star massive enough to give us a nice wide habitable zone far away from the Sun itself.

But even with the right size star, which we have in our solar sytem, we still have CHZ problems. Just because a planet starts off in the circumstellar habitable zone, it doesn't mean that it will stay there.

Jay Richards tweeted about this new article from the New Scientist, which talks about that very problem.

Excerpt: (links removed)

> Earth's comfortable temperatures may be thanks to Saturn's good behaviour. If the ringed giant's orbit had been slightly different, Earth's orbit could have been wildly elongated, like that of a long-period comet.
>
> Our solar system is a tidy sort of place: planetary orbits here tend to be circular and lie in the same plane, unlike the highly eccentric orbits of many exoplanets. Elke Pilat-Lohinger of the University of Vienna, Austria, was interested in the idea that the combined influence of Jupiter and Saturn – the solar system's heavyweights – could have shaped other planets' orbits. She used computer models to study how changing the orbits of these two giant planets might affect the Earth.
>
> Earth's orbit is so nearly circular that its distance from the sun only varies between 147 and 152 million kilometres, or around 2 per cent about the average. Moving Saturn's orbit just 10 percent closer in would disrupt that by creating a resonance – essentially a periodic tug – that would stretch out the Earth's orbit by tens of millions of kilometres. That would result in the Earth spending part of each year outside the habitable zone, the ring around the sun where temperatures are right for liquid water.

> Tilting Saturn's orbit would also stretch out Earth's orbit. According to a simple model that did not include other inner planets, the greater the tilt, the more the elongation increased. Adding Venus and Mars to the model stabilised the orbits of all three planets, but the elongation nonetheless rose as Saturn's orbit got more tilted. Pilat-Lohinger says a 20-degree tilt would bring the innermost part of Earth's orbit closer to the sun than Venus.

So the evidence for a out solar system being fine-tuned for life keeps piling up. It's just another factor that has to be just right so that complex, embodied life could exist here. All of these factors need to be just right, not just the orbits of any other massive planets. And you need at least one massive planet to attract comets and other such unwelcome intruders away from the life-permitting planets.

Here's a good clip explaining the circumstellar habitable zone:

The factor I blogged about today is just one of the things you need in order to get a planet that supports life.

Here are a few of the more well-known ones:

- a solar system with a single massive Sun than can serve as a long-lived, stable source of energy
- a terrestrial planet (non-gaseous)
- the planet must be the right distance from the sun in order to preserve liquid water at the surface – if it's too close, the water is burnt off in a runaway greenhouse effect, if it's too far, the water is permanently frozen in a runaway glaciation
- the solar system must be placed at the right place in the galaxy – not too near dangerous radiation, but close enough to other stars to be able to absorb heavy elements after neighboring stars die
- a moon of sufficient mass to stabilize the tilt of the planet's rotation
- plate tectonics
- an oxygen-rich atmosphere
- a sweeper planet to deflect comets, etc.
- planetary neighbors must have non-eccentric orbits

Here is a study that I wrote about recently about galactic habitable zones.

# Where is the outrage in the black community for black-on-black crimes?

**Wintery Knight** · 25 November 2014 · Archived copy · Original

Walter Williams

A recent editorial by George Mason University professor of economics Walter Williams.

Excerpt:

> Each year, roughly 7,000 blacks are murdered. Ninety-four percent of the time, the murderer is another black person.
>
> According to the Bureau of Justice Statistics, between 1976 and 2011, there were 279,384 black murder victims. Using the 94-percent figure means that 262,621 were murdered by other blacks.
>
> Though blacks are 13 percent of the nation's population, they account for more than 50 percent of homicide victims. Nationally, the black homicide victimization rate is six times that of whites, and in some cities, it's 22 times that of whites.
>
> Coupled with being most of the nation's homicide victims, blacks are most of the victims of violent personal crimes, such as assault and robbery.
>
> The magnitude of this tragic mayhem can be viewed in another light. According to a Tuskegee Institute study, between 1882 and 1968, 3,446 blacks were lynched at the hands of whites. Black fatalities during the Korean War (3,075), Vietnam War (7,243) and all wars since 1980 (8,197) come to 18,515, a number that pales in comparison with black loss of life at home.
>
> It's a tragic commentary to be able to say that young black males have a greater chance of reaching maturity on the battlefields of Iraq and Afghanistan than on the streets of Philadelphia, Chicago, Detroit, Oakland, Newark and other cities.

This is not even to mention abortion, which disproportionately affects blacks. Yet it is overwhelmingly supported by blacks who vote more than 90% Democrat. Maybe we should be more focused on black-on-black crime and black genocide, since these are bigger problems.

# What's stopping young adults from getting married?

**Wintery Knight** · 25 November 2014 · Archived copy · Original

Before we get to the study, I wanted to share something that a Christian male friend shared with me about yesterday's post on the crazy feminist mommy porn author.

He writes:

> I saw your post about the woman who "fell in love" with her fantasy character she created. I'm a victim of this.
>
> My ex-wife is a succeeding indie author. She jets off and hangs with NYT best-selling authors, rubs elbows with a lot of fantasy romance and erotica authors. She reads, oh, roughly 200 +/- smut books per year.
>
> This area is the flip side of the porn coin, and it's not getting the attention it should. If I told my story and part of the reason for the marriage destruction, it would be an "easy sell" to those who understand that women who fantasize about these fictional characters (even the images on the covers) are doing the exact thing men are doing when they fantasize over airbrushed skin images and other skin porn.
>
> Many will argue it's not the same thing, but that is preposterous. Husbands are competing with fantasy novel cover art and fantasy characters. It's every bit the same as wives competing with unreal images or even real ones where they compete with younger, more fit, kinkier, etc., etc.
>
> Men get cheated on all the time. Through this stuff. My ex developed an online romance through it all. Exchanged erotic pictures, emails, texts, Skype, on and on and on.
>
> I discovered travel plans, fake email accounts, it was awful.

This is the third time that I have been sent divorce stories like this by conservative, Christian male apologists on Facebook.

The first time, the wife hit a certain age then just went nuts and started working out a ton and trying to look younger and younger. Then as she got success as a personal trainer and attention for all the photos she posted, she just divorced her husband outright to focus on her business and more glamorous photos. And they had children. The second time, the wife just went nuts into new age beliefs and yoga and divorced her husband, and they had children too. So we are talking real destructive craziness here.

This is why I put so much emphasis on building up a woman first by leading her to learn apologetics, conservative politics and economics, and so on. If she is not willing to learn and grow in things that are good for her and that help her to be a better wife and mother, then you know that her heart is not in the difficult realities of married life and the roles of wife and mother. She will be one of these women who wants to be happy and thinks that happiness means getting rid of family obligations and responsibilities to her man and her kids. Men should ensure that their prospective mates reject the Disney princess perception that relationships should be all about them and their needs – living happily ever after with no hard work or effort. Helping a woman to think logically and argue using evidence is one way to insulate her from the foolish, emotion-driven culture that threatens marriage.

Anyway, with that said, here is the new article from Family Studies.

Here's the introduction:

> In interviews we conducted with working-class young adults, my wife and I were surprised by the strength of their desires to have a long-lasting marriage and stable family life. But many of them were far from realizing those aspirations. Why? The wide-ranging challenges that frustrate their aspirations, which we must understand in order to find effective solutions, fall into four rough categories: family-of-origin, philosophical, psychological, and financial.

> […]*Conflicted about marriage.* This crisis of trust, in turn, informs young adults' conflicted thinking about marriage. As Amber and I described in a previous post, their experiences of family fragmentation sharpen their desire to get and stay married, on the one hand, but on the other hand it also shakes their confidence in the durability of marriage. As a result, many young adults find themselves in tenuous cohabiting relationships, wanting to say "I do" eventually but too uncertain to do so now.
>
> […]*The fixed love mindset.* As Amber discussed here, the philosophy of love that young adults inherit from cultural scripts, like Hollywood chick flicks, works against their own aspirations for committed, permanent love. Instead of a "growth mindset" about love that focuses on working through possible differences, these stories about love transmit a "fixed mindset" that focuses on immediate and perpetual compatibility—the absence of which probably indicates that a couple is no longer meant for each other. **Young adults with a fixed mindset about love tend to say things like "love is effortless," or, as one separated spouse put it, "I love him, but I'm not in love with him. I love him as a friend, as the father, but I don't feel that connection as I used to."**
>
> […]*Extreme individualism*. Despite the common challenges that confront working-class young adults, the idea that "my relationship is no one else's business" prevents them from thinking about marriage and family life as a public issue that demands our common efforts.
>
> For instance, Anthony knows first-hand the painful effects of divorce—his parents divorced when he was ten—and he speaks eloquently about how divorce imposed burdens on him and his other friends from divorced families. So what does he believe we can do about the rising number of children raised in fragmented families?
>
> "I don't think there's a thing we can do about it," Anthony told us. "And that's kind of the American way—this is a free country, and free this and free that. **But it's your life, and not too many people care about other people's lives. As long as it's not theirs, they don't care."** The result of that attitude, however, is loneliness and helplessness in the face of an urgent social problem.

One of the questions I sometimes discuss with my male friends is "what is the female equivalent of pornography"? It has to be something that teaches women to have unrealistic expectations of men. My answer is that it is this culture that praises irrationality, thrill-seeking, travel and emotionalism over planning, morality and hard work. Many women today seem to really believe that men are there to provide them with fun, thrills and dreams, instead of with long-term achievements that take planning, sacrifice, problem-solving and hard work. The mommy-porn novels that so many women find attractive just feeds these marriage-destroying delusions. There is even a Christian version of the emotional craziness where women are urged to follow their hearts, and somehow, God will make their bad choices and risky plans work out.

As the story above from my friend shows, mommy porn is also an affair-creator and a marriage-killer. About 70% of divorces are initiated by women, and lesbian couples have the highest rates of relationship breakdown. Feministy women need to be taught (hopefully by their fathers) that entering into a relationship means an opportunity to commit to serve the other person self-sacrificially in order to build something that lasts – it's not about getting your own way and feeling good. Many women today seem to enjoy choosing the wrong men in their teens and 20s, and then when the right man comes along later, they want to back away from the demands of a serious relationship with him and go on their merry way.

This is why I tell everyone to stay away from premarital sex and cohabitation – it has a huge impact on a person's willingness to commit. Many women today seem to think that they can choose any man based on superficial criteria (he is fun and handsome and funny) and then make him commit by giving him sex. WRONG. You have to choose the right man by carefully evaluating him for marriage-related responsibilities. A man who can do husband tasks, (e.g. – providing, loving over the long-term, teaching others to defend their faith), is a man who is capable of marriage commitment. The experience of investing in the wrong men and then failing ruins a woman's ability to trust and commit. They mentally and emotionally check out of subsequent relationships and start looking for excuses to get away from commitment. It creates an attitude of wanting to sabotage the relationship. They focus

on scanning for the exits instead of on investing, communicating and problem solving.

UPDATE: The friend who wrote me had this in response to the post:

> I carried her physically after her surgery, disciplined her children effectively, managed academics (got one through high school who wouldn't have made it without me), was at her side for weeks praying for her son who nearly died in an accident, supported her in her accounting career and her writing, served all of her physical needs (yeah, THAT way!), sacrificed rural life and property for the castle she wanted . . .
>
> You get the idea. None of it mattered. What mattered in the end was her chasing a dream.
>
> I'm left with the castle I don't want or need, and kids I love have been spirited off to a new life.
>
> Sad.

# New study: how the hummingbird performs stunning feats of aerobatics

**Wintery Knight** · 25 November 2014 · Archived copy · Original

Hummingbird in flight

New study reported by Science Daily.

Excerpt:

> The sight of a tiny hummingbird hovering in front of a flower and then darting to another with lightning speed amazes and delights. But it also leaves watchers with a persistent question: How do they do it?
>
> Now, the most detailed, three-dimensional aerodynamic simulation of hummingbird flight conducted to date has definitively demonstrated that the hummingbird achieves its nimble aerobatic abilities through a unique set of aerodynamic forces that are more closely aligned to those found in flying insects than to other birds.
>
> The new supercomputer simulation was produced by a pair of mechanical engineers at Vanderbilt University who teamed up with a biologist at the University of North Carolina at Chapel Hill. It is described in the article "Three-dimensional flow and lift characteristics of a hovering ruby-throated hummingbird" published this fall in the *Journal of the Royal Society Interface*.
>
> For some time researchers have been aware of the similarities between hummingbird and insect flight, but some experts have supported an alternate model which proposed that hummingbird's wings have aerodynamic properties similar to helicopter blades. However, the new realistic simulation demonstrates that the tiny birds make use of unsteady airflow mechanisms, generating invisible vortices of air that produce the lift they need to hover and flit from flower to flower.
>
> You might think that if the hummingbird simply beats its wings fast enough and hard enough it can push enough air downward to keep its small body afloat. But, according to the simulation, lift production is much trickier than that.
>
> For example, as the bird pulls its wings forward and down, tiny vortices form over the leading and trailing edges and then merge into a single large vortex, forming a low-pressure area that provides lift. In addition, the tiny birds further enhance the amount of lift they produce by pitching up their wings (rotate them along the long axis) as they flap.
>
> Hummingbirds perform another neat aerodynamic trick — one that sets them apart from their larger feathered relatives. They not only generate positive lift on the downstroke, but they also generate lift on the upstroke by inverting their wings. As the leading edge begins moving backwards, the wing beneath it rotates around so the

> top of the wing becomes the bottom and bottom becomes the top. This allows the wing to form a leading edge vortex as it moves backward generating positive lift.
>
> According to the simulation, the downstroke produces most of the thrust but that is only because the hummingbird puts more energy into it. The upstroke produces only 30 percent as much lift but it takes only 30 percent as much energy, making the upstroke equally as aerodynamically efficient as the more powerful downstroke.
>
> Large birds, by contrast, generate almost all of their lift on the downstroke. They pull in their wings toward their bodies to reduce the amount of negative lift they produce while flapping upward.

Awesome design in nature!

So the question I have from reading the article is this. Do birds and flying insects have a recent common ancestor? I don't have too many friends who can answer this for me, but I asked one of them and they both said there is no recent common ancestor for hummingbirds and flying insects. So this looks like another example of convergence – common design in two animals that don't share a recent common ancestor.

# Conservative professor Mike Adams on the decline of Campus Crusade

**Wintery Knight** · 26 November 2014 · Archived copy · Original

Famous conservative professor Mike Adams is annoyed with Campus Crusade, let's see why.

He wrote his first article to complain that campus clubs like Crusade don't take stands on obvious moral issues like abortion.

He wrote:

> Nearly half of the abortions in this country are performed on college-age women. According to Students for Life of America, 70% of all abortion-providing and abortion-referring facilities are located within five miles of a college campus. Given those staggering numbers, it would seem that campus ministries would be positioning themselves to do something about the problem. But most are doing nothing at all. If you don't believe me, take the time to go to the Campus Crusade website and do a search for the word "abortion." See what your search reveals.
>
> So why are campus ministries largely silent on such a profound moral issue? Recently, I had a chance to ask a Campus Crusade director that very question. His response was that Campus Crusade is not "a politically-based organization." That explanation is inadequate. In fact, it is demonstrably false.
>
> Several years ago, a good friend of mine named Dave Sterrett gave a pro-life speech to a Campus Crusade chapter at a state university in North Texas. He was invited to speak by a student. During the middle of his speech, he was arguing that the unborn are fully human and have souls by quoting from the Gospel of Luke. His talk was clearly Biblical and not political in nature.
>
> Nonetheless, when the Campus Crusade director arrived, he rudely shut the speech down.
>
> The Campus Crusade director told Dave to come out in the hall after he shut down his talk. The Crusade leader then began to yell at Dave and told him, "I don't know what your deal is talking about this issue. Get your books and get out of here." He went even further calling the headquarters of Crusade, which then demanded an apology from Sterrett.
>
> Shortly after I wrote about the incident, several members of Campus Crusade contacted me – but not to apologize for their mistreatment of Dave. They emailed to admonish me for writing about the incident – even though I did not call out the university or the chapter director by name. The fallout from the incident was revealing. It shows how far some campus ministries will go to avoid controversy – and that they often consider themselves to be above reproach.
>
> The original incident was also revealing. The censored speech was not political so the problem cannot be that Campus Crusade is not a "politically-based" organization. The speech was morally and Biblically based. Does the rejection of the speech mean that Campus Crusade is not a "morally-based" organization? Or does it mean they are not a "Biblically-based" organization?
>
> Of course it doesn't. **The incident merely shows that Campus Crusade has become a "comfort-based" organization. In other words, an over-riding priority is avoiding topics that might make people feel uncomfortable.**

Now apparently the Crusade people are annoyed with him, and they are complaining – probably not by saying that they are going to be more bold about pushing for apologetics and Christian worldview, but probably by calling him mean and confrontational and conservative.

Here is the second article. He writes:

Dear Kaitlin:

> First of all, I would like to thank you for joining my Facebook fan page and for weighing in on my recent article "The Campus Crusade for Comfort." It is understandable that you would wish to defend your organization, which I criticized rather bluntly in my article. However, your accusation that my article was "un-Christ-like" and was written in a spirit that undermines "Christian unity" requires a response. Since you chose to proffer your criticism in a public forum, I'll respond by using my weekly column.

Looks like I was right about how the Crusade leader would respond – like a feelings-based leftist. Adams then talks about how Campus Crusade abstained from praise hymns and prayers at an event in order to get government funding for it, and then writes this, which is even worse:

> Subsequently, at the very school where Campus Crusade traded its religious freedom for student government funding, there was a lawsuit over a campus speech code. One of the plaintiffs was a fine Christian woman who fought to overturn a speech code that was being used to suppress conservative speech and which also posed a grave threat to religious organizations.
>
> After she sued, homosexual groups erupted in anger – falsely claiming that she was defending "hate speech" by opposing the speech code. They defamed her, physically threatened her, and verbally abused her –all in the name of tolerance and diversity.
>
> This time, Campus Crusade did not remain neutral. They weighed in. But, unbelievably, they weighed in *against* the Christian woman and *in favor* of those defending the speech codes. Later, Campus Crusade changed its name to appear more tolerant and less "offensive." Clearly, they had placed "inoffensiveness" above religious freedom on their list of priorities.
>
> Right after these unfortunate events unfolded I became embroiled in my own First Amendment lawsuit. In part, because I stood in unity with Christians and defended them against illegal policies, I was denied a promotion at my school.
>
> With the support of numerous Christian organizations, I eventually won the seven-year legal battle. Two Christian legal firms paid my legal bills and countless other Christian ministry and policy groups publicly backed me. But one Christian organization remained conspicuously silent. Of course, I am speaking of your organization, the Crusade formerly named after Christ.
>
> For seven long years I heard not a single word of public support from a single member of Campus Crusade. When I won the case, I was deluged with calls and emails and handwritten letters from Christian leaders all across America.
>
> But I heard not a word from Campus Crusade for months in the wake of the verdict.
>
> Then, in mid-July, the final terms of my settlement were reached. It was reported in the local news that I would get a raise and a check for back pay while may attorneys would get a sum of $615,000. On August 1, 2014, I received the check from the State of North Carolina. On August 2, just 24 hours later, one of the local directors for Campus Crusade wrote me the following:
>
> "Hey Mike. I hope your summer is going well. Would you be interested in having coffee with me next week so I could talk to you about joining my ministry support team?"
>
> After I received that audacious email, I searched through my archives and read every single email correspondence I had received from that director over the course of seven years. There was no offer of prayer support in any of those emails. Nor was there any mention of the legal ordeal I was going through. He simply ignored the suit until the terms of the settlement became public.
>
> In other words, your ministry and its leaders were never interested in unity. They never offered support in public or even in private. They only sought to profit financially from those who win battles Campus Crusade

> chooses to avoid.

The reason I am linking to this is because I experienced this kind of behavior from IVCF and Campus Crusade as an undergraduate and later as a graduate student. They opposed the introduction of apologetics at every point, and they were both anxious to appease the forces of political correctness. It was depressing. They were far more interested in getting people to show up than taking any sort of bold stand that might make some people uncomfortable. I think there are some IVCF and Crusade groups that may do a decent job. But if I were a student today, I'd head straight for the College Republicans and Ratio Christi if I wanted to get anything useful done. This blog was born out partly out of the anger I felt dealing with the liberal postmodern feminist leadership in those campus clubs when I was a student in college.

# The drowning stranger illustration challenges atheistic morality

**Wintery Knight** · 26 November 2014 · Archived copy · Original

This is by Matt from Well Spent Journey blog.

Excerpt:

> Here's a thought experiment.
>
> ———
>
> *Imagine that you're a healthy, athletic, 20-year-old male. It's the morning after a thunderstorm, and you're standing on the banks of a flooded, violently churning river.*
>
> *You notice an object floating downstream.*
>
> *As it moves closer, you suddenly realize that this object is a person. The head breaks the surface, and you see a panic-stricken elderly woman gasping for air. You've never met her before, but vaguely recognize her as an impoverished widow from a neighboring village.*
>
> *You look around for help, but there's no one in sight. You have only seconds to decide whether or not to jump in after her – recognizing that doing so will put your own life in significant peril.*
>
> ———
>
> Is it **rational** for you to risk your life to save this stranger? Is it **morally good** to do so?
>
> For the Christian, both of these questions can be answered with an emphatic **"yes"**.
>
> The Christian is called to emulate the example set forth by Jesus, who not only risked, but sacrificed his life for the sake of others. The Christian believes that the soul is eternal, and that one's existence doesn't come to an abrupt end with death. Additionally, he can point to the examples of countless Christian martyrs who have willingly sacrificed their own lives.
>
> For the secular humanist, the answers to these questions are much more subjective. When I previously asked 23 self-identifying atheists, *"Is it rational for you to risk your life to save a stranger?"* only 4 of them responded with an unqualified *"yes"*.
>
> Biologically speaking, the young man in our scenario has nothing to gain by jumping after the drowning woman. Since she's poor and elderly, there are no conceivable financial or reproductive advantages involved. Evolutionary biologists often speak of "benefit to the tribe" as a motivation for self-sacrifice…yet the young man's community would certainly place greater practical value on his life than that of a widow from a neighboring village.
>
> Secular humanists argue that people are capable of making ethical decisions without any deity to serve as Moral Lawgiver. On a day-to-day basis, this is undeniably true. We all have non-religious friends and neighbors who live extremely moral and admirable lives.
>
> In the scenario above, however, secular ethics break down. The secular humanist might recognize, intuitively, that diving into the river is a **morally good** action. But he has no rational basis for saying so. The young man's decision is between empathy for a stranger (on the one hand) and utilitarian self-interest & community-interest (on the other).
>
> In the end, there can be no **binding moral imperatives** in the absence of a Moral Lawgiver. If the young man decides to sit back and watch the woman drown, the secular humanist cannot criticize him. He's only acting rationally.

When I read this, I was of one of the questions from one of my earliest posts, where I list a dozen interview questions to ask atheists. His question is very much like one of my questions. You may like the others in my list, as

well.

It seems to me that on atheism, the only answer you can give for why you would do the right thing is “because it makes me happy”. And as we see with abortion – 56 million unborn children dead – it very often *doesn't* make atheists happy to save someone else’s life. Not if it means any infringement on their own happiness. Every time an atheist votes Democrat, they are voting to declare that people who get in their way should not be saved. And atheists (the “nones”, anyway) are one of the largest Democrat voting blocs. According to the 2012 Secular Census, 97% of secularists deny that unborn children have a right to life. And the 2013 Gallup poll found that “nones”, people with no religion, are most likely to be pro-abortion. (Note that “nones” are not necessarily atheists, they may have some beliefs, but they are not observant). It’s not rational to inconvenience yourself to save others on atheism. You have one life to live, be happy, survival of the fittest.

Atheists like to help themselves to a lot of beliefs  that can only be grounded in a robust theistic worldview. Rationally-grounded morality is just one of those things. And I want to say to you that this is not morally neutral, or a simple failure of the intellect. It’s not just a failure to be intelligent. It’s not just simple ingratitude towards God. It’s the deliberate self-deception they engage in in order to preserve their autonomy to seek pleasure apart from any notion of objective moral values and duties. It’s very transparent if you know how to question them.

Atheists like to cash out their rejection of God as some sort of rational, cognitive process, but they typically choose atheism as a result of having their desires for pleasure or peer-approval thwarted, or maybe in university when they don’t want professors to think they are ignorant. It’s not a rational worldview, it’s just easier. Easier to pose as a “smart” person. Easier to indulge in sexual desires at college. Easier to put powerful amoral people at ease, by not judging them for their destructive views on social issues. Easier to not judge others, so that you won’t be judged yourself. Easier to speculate about untestable multiverses and unobservable aliens seeding the Earth with life, so that you don’t have to think about the judgement that comes after the self-delusion. It’s a worldview of speculate, speculate, speculate. Speculations are the way that they keep God away so they can do what they want, call that moral and feel good about themselves in the here and now. The goal is to get one more day where they can do as they please apart from God, and they’ll believe anything they have to believe in order to do that.

# New study: gamma ray bursts make life impossible in 90% of galaxies

**Wintery Knight** · 26 November 2014 · Archived copy · Original

Galactic Habitable Zone

When you argue for theism from science, you typically use arguments like these:

- the origin of the universe from nothing (the Big Bang)
- the fine-tuning of cosmic constants and quantities
- the origin of the first living cell
- the sudden origin of animal phyla in the Cambrian explosion
- the fine-tuning of the galaxy for complex, embodied mind
- the fine-tuning of the solar system for complex, embodied mind
- the fine-tuning of the planet (and moon)  for complex, embodied mind

This is a peer-reviewed article from Science, one of the most prestigious peer-reviewed journals. It speaks to the fine-tuning of the galaxy for life.

The article says:

> Of the estimated 100 billion galaxies in the observable universe, only one in 10 can support complex life like that on Earth, a pair of astrophysicists argues. Everywhere else, stellar explosions known as gamma ray bursts would regularly wipe out any life forms more elaborate than microbes. The detonations also kept the universe lifeless for billions of years after the big bang, the researchers say.
>
> […]Astrophysicists once thought gamma ray bursts would be most common in regions of galaxies where stars are forming rapidly from gas clouds. But recent data show that the picture is more complex: Long bursts occur mainly in star-forming regions with relatively low levels of elements heavier than hydrogen and helium—low in “metallicity,” in astronomers’ jargon.
>
> Using the average metallicity and the rough distribution of stars in our Milky Way galaxy, Piran and Jimenez estimate the rates for long and short bursts across the galaxy. They find that the more-energetic long bursts are the real killers and that the chance Earth has been exposed to a lethal blast in the past billion years is about 50%. Some astrophysicists have suggested a gamma ray burst may have caused the Ordovician extinction, a global cataclysm about 450 million years ago that wiped out 80% of Earth’s species, Piran notes.

> The researchers then estimate how badly a planet would get fried in different parts of the galaxy. The sheer density of stars in the middle of the galaxy ensures that planets within about 6500 light-years of the galactic center have a greater than 95% chance of having suffered a lethal gamma ray blast in the last billion years, they find. Generally, they conclude, life is possible only in the outer regions of large galaxies. (Our own solar system is about 27,000 light-years from the center.)
>
> Things are even bleaker in other galaxies, the researchers report. Compared with the Milky Way, most galaxies are small and low in metallicity. As a result, 90% of them should have too many long gamma ray bursts to sustain life, they argue. What's more, for about 5 billion years after the big bang, all galaxies were like that, so long gamma ray bursts would have made life impossible anywhere.
>
> But are 90% of the galaxies barren? That may be going too far, Thomas says. The radiation exposures Piran and Jimenez talk about would do great damage, but they likely wouldn't snuff out every microbe, he contends. "Completely wiping out life?" he says. "Maybe not." But Piran says the real issue is the existence of life with the potential for intelligence. "It's almost certain that bacteria and lower forms of life could survive such an event," he acknowledges. "But [for more complex life] it would be like hitting a reset button. You'd have to start over from scratch."
>
> The analysis could have practical implications for the search for life on other planets, Piran says. For decades, scientists with the SETI Institute in Mountain View, California, have used radio telescopes to search for signals from intelligent life on planets around distant stars. But SETI researchers are looking mostly toward the center of the Milky Way, where the stars are more abundant, Piran says. That's precisely where gamma ray bursts may make intelligent life impossible, he says: "We are saying maybe you should look in the exact opposite direction."

You need to be able to pick up enough heavy elements from surrounding supernovae to make a metal-rich star, but you have to be far enough away from other stars to avoid getting blasted with gamma rays. The metal-rich star is needed to be able to support the circumstellar habitable zone, which is the zone where liquid water exists on the planet's surface.

It's important to understand that this factor in the study just a few of the things you need in order to get a planet that supports life. The more factors you add, the more unexpected complex, embodied life of any kind becomes.

Here are a few of the more well-known ones:

- a solar system with a single massive Sun than can serve as a long-lived, stable source of energy
- a terrestrial planet (non-gaseous)
- the planet must be the right distance from the sun in order to preserve liquid water at the surface – if it's too close, the water is burnt off in a runaway greenhouse effect, if it's too far, the water is permanently frozen in a runaway glaciation
- the solar system must be placed at the right place in the galaxy – not too near dangerous radiation, but close enough to other stars to be able to absorb heavy elements after neighboring stars die
- a moon of sufficient mass to stabilize the tilt of the planet's rotation
- plate tectonics
- an oxygen-rich atmosphere
- a sweeper planet to deflect comets, etc.
- planetary neighbors must have non-eccentric orbits

There's a good video on the galactic habitable zone for you to watch right here:

It takes a lot to make just one planet that can support complex, embodied life of any kind.

# George Washington’s 1789 Thanksgiving Day proclamation

**Wintery Knight** · 27 November 2014 · Archived copy · Original

To help us be thankful, here is a famous Thanksgiving day proclamation.

Here it is:

> PRESIDENTIAL THANKSGIVING PROCLAMATIONS
>
> 1789-1815 : George Washington, John Adams, James Madison
>
> THANKSGIVING DAY 1789
>
> BY THE PRESIDENT OF THE UNITED STATES OF AMERICA – A PROCLAMATION
>
> Whereas it is the duty of all Nations to acknowledge the providence of almighty God, to obey his will, to be grateful for his benefits, and humbly to implore his protection and favor – and Whereas both Houses of Congress have by their joint Committee requested me “to recommend to the People of the United States a day of public thanksgiving and prayer to be observed by acknowledging with grateful hearts the many signal favors of Almighty God, especially by affording them an opportunity peaceably to establish a form of government for their safety and happiness.”
>
> Now therefore I do recommend and assign Thursday the 26th day of November next to be devoted by the People of these States to the service of that great and glorious Being, who is the beneficent Author of all the good that was, that is, or that will be – That we may then all unite in rendering unto him our sincere and humble thanks – for his kind care and protection of the People of this country previous to their becoming a Nation – for the signal and manifold mercies, and the favorable interpositions of his providence, which we experienced in the course and conclusion of the late war –for the great degree of tranquillity, union, and plenty, which we have since enjoyed – for the peaceable and rational manner in which we have been enabled to establish constitutions of government for our safety and happiness, and particularly the national One now lately instituted, for the civil and religious liberty with which we are blessed, and the means we have of acquiring and diffusing useful knowledge; and in general for all the great and various favors which he hath been pleased to confer upon us.
>
> And also that we may then unite in most humbly offering our prayers and supplications to the great Lord and Ruler of Nations and beseech him to pardon our national and other transgressions – to enable us all, whether in public or private stations, to perform our several and relative duties properly and punctually – to render our national government a blessing to all the People, by constantly being a government of wise, just, and constitutional laws, discreetly and faithfully executed and obeyed – to protect and guide all Sovereigns and Nations (especially such as have shewn kindness unto us) and to bless them with good government, peace, and concord – To promote the knowledge and practice of true religion and virtue, and the increase of science among them and Us – and generally to grant unto all mankind such a degree of temporal prosperity as he alone knows to be best.
>
> Given under my hand at the City of New York the third day of October in the year of our Lord 1789.
>
> (signed) G. Washington

That’s from George Washington.

Happy Thanksgiving Day!

# New study: invisible shield above the Earth protects us from electron threat

**Wintery Knight** · 27 November 2014 · Archived copy · Original

Science Daily reports on a new paper published in the prestigious peer-reviewed journal Nature.

Excerpt:

> A team led by the University of Colorado Boulder has discovered an invisible shield some 7,200 miles above Earth that blocks so-called "killer electrons," which whip around the planet at near-light speed and have been known to threaten astronauts, fry satellites and degrade space systems during intense solar storms.
>
> The barrier to the particle motion was discovered in the Van Allen radiation belts, two doughnut-shaped rings above Earth that are filled with high-energy electrons and protons, said Distinguished Professor Daniel Baker, director of CU-Boulder's Laboratory for Atmospheric and Space Physics (LASP). Held in place by Earth's magnetic field, the Van Allen radiation belts periodically swell and shrink in response to incoming energy disturbances from the sun.
>
> As the first significant discovery of the space age, the Van Allen radiation belts were detected in 1958 by Professor James Van Allen and his team at the University of Iowa and were found to be composed of an inner and outer belt extending up to 25,000 miles above Earth's surface. In 2013, Baker — who received his doctorate under Van Allen — led a team that used the twin Van Allen Probes launched by NASA in 2012 to discover a third, transient "storage ring" between the inner and outer Van Allen radiation belts that seems to come and go with the intensity of space weather.
>
> The latest mystery revolves around an "extremely sharp" boundary at the inner edge of the outer belt at roughly 7,200 miles in altitude that appears to block the ultrafast electrons from breeching the shield and moving deeper towards Earth's atmosphere.
>
> "It's almost like theses electrons are running into a glass wall in space," said Baker, the study's lead author. "Somewhat like the shields created by force fields on Star Trek that were used to repel alien weapons, we are seeing an invisible shield blocking these electrons. It's an extremely puzzling phenomenon."
>
> A paper on the subject was published in the Nov. 27 issue of *Nature*.

Something for us to be thankful for on Thanksgiving Day.

# White House threatens veto of bipartisan small businesses tax cut bill

**Wintery Knight** · 28 November 2014 · Archived copy · Original

It's actually for research and experimentation, and small businesses.

Investors Business Daily reports on the story.

Excerpt:

> The White House move this week to torpedo a deal between House Republicans and Senate Democrats to extend dozens of expiring tax breaks suggests that the executive action legalizing 5 million unauthorized immigrants may have been no fluke: Compromise appears to be near the bottom of President Obama's agenda for his last two years in office.
>
> Despite — or perhaps because of — the Republican wave election that capsized Democrats' Senate majority, Obama is tugging his party further left, which could make it harder for the GOP to govern effectively. A shift away from the center might seem counterintuitive, but it's consistent with the Democrats' post-mortem election analysis that put the blame on the party's failure to focus enough on its economic agenda.
>
> The White House's veto threat, which apparently surprised dealmakers, was "really pretty stunning" considering that soon-to-be-demoted Majority Leader Harry Reid was its quarterback, said Chris Krueger, political analyst at Guggenheim Partners' Washington Research Group.
>
> In blowing apart the deal, estimated to cost $440 billion over 10 years, the White House lined up behind liberal Massachusetts Sen. Elizabeth Warren, who attacked it as "a massive handout to big corporations" that asks "working families to pick up the tab."
>
> The Obama administration used the same justification in explaining its threat to veto the bill if it reached the president's desk: "It would provide permanent tax breaks to help well-connected corporations while neglecting working families."
>
> The centerpiece of the deal is a $160 billion provision to make permanent and expand a research and experimentation tax credit, an idea that the administration has supported. The next two biggest pieces, both about $73 billion over 10 years, would make permanent the American Opportunity tuition tax credit and an allowance for small businesses to write off capital investments permanently.
>
> Individuals would be able permanently to deduct sales taxes instead of income taxes, important for residents of states like Florida and Texas, at a cost of $34 billion. Controversial wind production taxes would be extended but phased out over two years, costing $20 billion.
>
> Other smaller pieces include extending a financial-crisis related provision to shield the value of written-down mortgage principal from taxation; making permanent an expanded deduction for users of mass transit; and making permanent tax-free charitable contributions from tax-protected retirement accounts.

That last point about being able to give away your retirement plan tax-free is huge for me, because that's what I planned to do with my 401K when I retire, since it doesn't look like I am going to ever get married. If that tax break on charitable deductions from retirement accounts is ever revoked, it would be bad news for the apologists and Christian scholars I donate to. But it's in keeping with the leftist idea that individuals like me are only good for earning money, but it takes a big secular government to know how to spend it. They have other plans for my money, like free abortions, IVF and sex changes. Yay, big government!

# Do parents have a plan to raise self-sufficient, practical children?

**Wintery Knight** · 28 November 2014 · Archived copy · Original

Let's look at this Huffington Post article about parenting. (H/T Amy)

Introduction:

> When a college freshman received a C- on her first test, she literally had a meltdown in class. Sobbing, she texted her mother who called back, demanding to talk to the professor *immediately* (he, of course, declined). Another mother accompanied her child on a job interview, then wondered why he didn't get the job.
>
> A major employer reported that during a job interview, a potential employee told him that she would have his job within 18 months. It didn't even cross her mind that he had worked 20 years to achieve his goal.
>
> […][W]hy have parents shifted from teaching self-reliance to becoming hovering helicopter parents who want to protect their children at all costs?
>
> "I think it began in the fall of 1982, when seven people died after taking extra-strength Tylenol laced with poison after it left the factory," he says. Halloween was just around the corner, and parents began checking every item in the loot bags. Homemade brownies and cookies (usually the most coveted items) hit the garbage; unwrapped candy followed close behind.
>
> That led to an obsession with their children's safety in every aspect of their lives. Instead of letting them go outside to play, parents filled their kid's spare time with organized activities, did their homework for them, resolved their conflicts at school with both friends and teachers, and handed out trophies for just showing up.
>
> "These well-intentioned messages of 'you're special' have come back to haunt us," Elmore says. "We are consumed with protecting them instead of preparing them for the future. We haven't let them fall, fail and fear. The problem is that if they don't take risks early on like climbing the monkey bars and possibly falling off, they are fearful of every new endeavor at age 29."
>
> Psychologists and psychiatrists are seeing more and more young people having a quarter-life crisis and more cases of clinical depression. The reason? Young people tell them it's because they haven't yet made their first million or found the perfect mate.
>
> Teachers, coaches and executives complain that Gen Y kids have short attention spans and rely on external, instead of internal motivation.

More:

> - **We've told our kids to dream big – and now any small act seems insignificant. In the great scheme of things, kids can't instantly change the world. They have to take small, first steps – which seem like no progress at all to them. Nothing short of instant fame is good enough. "It's time we tell them that doing great things starts with accomplishing small goals," he says.**

> - **We've told our kids that they are special – for no reason, even though they didn't display excellent character or skill, and now they demand special treatment. The problem is that kids assumed they didn't have to do anything special in order to *be* special.**

I have frequently heard from Christian women who I have courted who hear my marriage plan that children should not be directed in any way toward doing hard things, studying STEM fields and getting good jobs. Although these women are not successful themselves, they are very concerned that I will make my children feel bad by steering

them towards fields that are hard, but will make the kids successful. Children have to have good self-esteem, they insist. They have to be allowed to study ballet or art history in college, if they feel like it, otherwise they will rebel and become atheists. Two of the women who told me this had double-digit student loan balances and were still living at home in their 30s.

So you have a man like me, who has a BS, MS, a gapless resume and savings, being lectured by an unsuccessful woman on how to make our children successful by following her plan, which is the opposite of my plan. Why is this an attractive value proposition to a man? Kids cost over $150,000 each, and at least in my case, I expect that I would be the one paying for it because I seem to be the only one with savings as opposed to debts. But there is no humility from single Christian women, in my experience. They want me to earn the money, but they want to make the decisions. And they think that their way will work, even when it hasn't worked in their own lives.

I just want to point out to those women who are single that "well, I wouldn't marry you" is not an answer to these concerns. It's not an answer to a life lived on emotions and impracticality. It's not an answer to kids raised to do nothing except what makes them feel good. The question is, how do we make successful kids? Do we let men lead, focusing on responsibility, obligation, incremental improvements and practicality? I want a wife who will be a chief of staff to implement *my plan*. Not someone who doesn't value and respect my decision making in areas where I am proven to know what I am doing. If all I am getting in this deal is rebellion, then I can just not marry at all and instead use the money for apologetics funding. I am not paying over $150,000 per child (not counting tuition) to have ineffective and uninfluential kids. And it alarms me how easily my concerns are dismissed in favor of a woman's emotions (sometimes decorated with God-language) during courting, when we know that good parenting is sorely needed today.

# Mother gives up her own life to save her unborn child

**Wintery Knight** · 29 November 2014 · Archived copy · Original

Totally awesome story from the Daily Signal.

Excerpt:

> In a selfless act, a mother from Aurora, Colo., made a decision during childbirth that put the life of her unborn baby son before her own. That decision ultimately ended her life while saving her seven-pound, four-ounce "miracle."
>
> "How do I explain to him that his mom is gone giving birth to him?" the woman's husband, Wes Bugal, asked in an interview with NBC 9 News in Aurora. "I think about that all the time. How do I explain when he asks where's Mommy?"
>
> Karisa Bugal died Nov. 4, hours after giving birth the day before to the couple's second child, a son named Declan. She had developed a rare complication called amniotic fluid embolism, which causes protective fluids around a baby to escape into the mother's body, resulting in a breakdown of her organs.

> After medical staff informed Bugal of the danger the embolism posed, she had two options: undergo surgery that could save her life but endanger Declan, whose heart rate had begun to dip, or get a Caesarean section to save her unborn baby's life but put her own at risk.
>
> Bugal chose the second option, a decision that a few hours later resulted in her death.
>
> Friends set up a fundraiser page to help Wes Bugal raise the couple's two children. In just one day, the site surpassed its goal of $20,000.

What a loss for the husband, though. Devastating.

# Jennifer Roback Morse lectures on sex and sexuality at Harvard University

**Wintery Knight** · 29 November 2014 · Archived copy · Original

Dr. Jennifer Roback Morse

Dr. Morse delivers a talk based on her book "Smart Sex" at Harvard University.

The MP3 file is here. (21 Mb)

Topics:

- the hook-up culture and its effects on men and women
- cohabitation and its effect on marriage stability
- balancing marriage, family and career
- single motherhood by choice and IVF
- donor-conceived children
- modern sex: a sterile, recreation activity
- the real purposes of sex: procreation and spousal unity
- the hormone oxytocin: when it is secreted and what it does
- the hormone vassopressin: when it is secreted and what it does
- the sexual revolution and the commoditization of sex
- the consumer view of sex vs the organic view of sex
- fatherlessness and multi-partner fertility
- how the "sex-without-relationship" view harms children

52 minutes of lecture, 33 minutes of Q&A from the Harvard students. The Q&A is worth listening to – the first question is from a gay student, and Dr. Morse pulls a William Lane Craig to defeat her objection. It was awesome! I never get tired of listening to her talk, and especially on the topics of marriage and family.

# Since Obamacare passed, record number of Americans delaying treatment

**Wintery Knight** · 30 November 2014 · Archived copy · Original

Story from the Daily Caller.

Excerpt:

> One in three Americans has put off seeking medical treatment in 2014 due to high costs, according to Gallup — the highest percentage since Gallup began asking the question in 2001.
>
> Thirty-three percent of Americans have delayed medical treatment for themselves or their families because of the costs they'd have to pay, according to the survey. Obamacare, of course, had promised that it would help make health care more affordable for everyone, but the number of people who can't afford a trip to the doctor has actually risen three points since 2013, before most Obamacare provisions took effect.
>
> **The hardest-hit: the middle-class. Americans with an annual household income of between $30,000 and $75,000 began delaying medical care over costs more in 2014, up to 38 percent in 2014 from 33 percent last year; among households that earn above $75,000, 28 percent delayed care this year, compared to just 17 percent last year.**
>
> **The lowest-income section, some of whom can take part in Medicaid and who are more likely to qualify for significant premium and cost-sharing subsidies on an Obamacare exchange, are less likely to delay care this year. Now, 35 percent of those who earn under $30,000 a year are putting off seeking medical care, down from 43 percent last year.**
>
> It's a remarkable shift: after Obamacare's redistribution of wealth, the middle class is actually delaying medical care due to high costs at a higher rate than the poorest section of the country, which is highly subsidized by taxpayers.
>
> The growing problem could have serious consequences for the middle-class. Twice as many people (22 percent) have delayed treatment for serious illnesses than than for smaller problems (11 percent).
>
> Part of the problem is an ongoing shift towards higher deductibles and out-of-pocket costs, while health insurance premiums continue to rise all the same. The trend, which existed to some extent before Obamacare, increased in intensity with the onset of the health-care law.

When Obama talked about spreading the wealth around, people in the middle class thought that they would be the recipients of the spreading. But that's not true – the wealth is coming from you, not going to you. It was never designed to reduced the *costs* of health care, it was designed to equalize life outcomes regardless of personal choices, by redistributing wealth.

# Jacqueline C. Rivers: we need to fix the black out-of-wedlock birth rate

**Wintery Knight** · 30 November 2014 · Archived copy · Original

Here is her article from the Public Discourse.

Excerpt:

> Despite the determined pursuit of marital unions by freed people, enduring patterns of non-normative male-female relationships had been created by the devastating experience of slavery. These bore bitter fruit in the 25-percent out-of-wedlock birthrate that prompted the Moynihan Report in 1965. The Moynihan Report was an examination of the pathologies created by the explosion of father-absent households among the black poor in the United States. Though the report recommended the creation of programs that would promote healthy families among impoverished blacks, it elicited an outpouring of outrage at the assertion that stable marriages were necessary for the flourishing of the black community. As a result, little action was taken to rectify these problems. Fifty years later, the out-of-wedlock birthrate among blacks in the United States has soared to over 70 percent, a level at which it has stood for roughly a decade. The material, moral, and spiritual consequences are precisely what Moynihan predicted they would be: devastating for the community.

And:

> Black children have suffered the most as a result of the decline of marriage in the black community. The deleterious effects of being raised in single-headed households have been well-documented. Children growing up in female-headed households experience higher rates of poverty. These children underperform in school: they earn lower scores on verbal and math achievement tests and lower grades in their courses. They have more behavioral problems, and higher rates of chronic health and psychiatric disorders. Adolescents and young adults raised without stable families experience elevated risks of teenage childbearing, dropping out of high school, being incarcerated, and being idle (being neither employed nor in school). Yet, even in the midst of this disarray, men and women still long for marriage. Research shows that though marriage has declined among poor women from different racial backgrounds, they, no less than affluent women, desire to be married even as they bear children out of wedlock.

Now, of course she is wrong to blame the out-of-wedlock birth rate increase on “slavery”. It’s was actually caused by the Democrats’ “Great Society” welfare programs, which rewarded people with money if they had children out of wedlock.

Here are the numbers:

Black marriage rates from 1970

So it's just political correctness to blame "slavery" for something that was clearly caused by feminism (you don't need a man to raise a child) and the introduction of massive welfare programs that pay women to have babies out of wedlock. The rest of what she says is accurate though.

If you pay poorer people *of any race* to have babies out of wedlock, they will do it. To stop them from doing it we should be paying poor people to finish high school, stay out of jail, and get married before having children. We should be paying for success, not failure. But then the Democrats would lose a lot of votes from those who are 100% OK with dependency on government. In a very real sense, Democrats cannot urge women to get married, because they would be undermining one of their largest voting blocs: single mothers.

# Amnesty executive action: illegal immigrants will get Social Security and Medicare

**Wintery Knight** · 1 December 2014 · Archived copy · Original

Washington Examiner reports.

Excerpt:

> A new clash over retirement benefits has come to a head following President Obama's decision to unilaterally protect up to 5 million illegal immigrants from deportation.
>
> The White House now acknowledges that many of the illegal immigrants spared from deportation under Obama's sweeping executive action will become eligible for Social Security and Medicare benefits once they reach retirement age.
>
> […]However, Obama was less eager to wade into the debate about what to do with newly protected immigrants now paying into Social Security. He didn't address the matter while outlining his immigration plan in a prime-time address to the nation, but White House aides later confirmed GOP suspicions about how Obama's unilateral move would affect retirement benefits.
>
> Analysts said that Republicans would use the admission to argue the president is misleading the public about the details of his immigration action.
>
> "It is a bit of surprise," said Michael Tanner, a senior fellow at the Cato Institute who focuses on entitlement programs. "For a long time, there was an argument made by the administration that [undocumented immigrants] would not be eligible for such benefits. It does seem to be a contradiction."

Indeed. But that's not all.

Fox News reports.

Excerpt:

> Businesses reportedly will have a $3,000-per-employee incentive to hire illegal immigrants over native-born workers under President Obama's sweeping action on illegal immigration.
>
> Because of a kink in ObamaCare, businesses will not face a penalty for not providing illegal immigrants health care, The Washington Times reports. Illegal immigrants are ineligible for public benefits such as buying insurance on ObamaCare's health exchanges.
>
> Congressional aides condemned the loophole saying it puts illegal immigrants ahead of Americans in the job hunt.
>
> "If it is true that the president's actions give employers a $3,000 incentive to hire those who came here illegally, he has added insult to injury," Rep. Lamar Smith, Texas Republican told The Washington Times. "The president's actions would have just moved those who came here illegally to the front of the line, ahead of unemployed and underemployed Americans."

When stories like this come out, I think back to the elections, when many young Americans who were in college and voting for Obama because he was so cool will have to get the bill for this. Right now, we don't have to raise taxes to pay for any of this, because Pelosi/Reid/Obama keep adding the spending to the national debt. Pelosi/Reid took over the House and Senate in 2007 when the debt was 8.5 trillion. Since 2007, we've added over NINE TRILLION dollars to the national debt – more than doubling it. It's the young people who keep voting for this massive spending and waste, and thankfully, it's the young people who will be most impacted by it. There is a price to pay for voting stupidly.

# Do Christians have a higher divorce rate than atheists?

**Wintery Knight** · 1 December 2014 · Archived copy · Original

I'm traveling today, so I thought I would re-post this USA Today article from 2011 about that.

Excerpt:

> It's been proclaimed from pulpits and blogs for years — Christians divorce as much as everyone else in America.
>
> But some scholars and family activists are questioning the oft-cited statistics, saying Christians who attend church regularly are more likely to remain wed.
>
> "It's a useful myth," said Bradley Wright, a University of Connecticut sociologist who recently wrote "Christians Are Hate-Filled Hypocrites … and Other Lies You've Been Told."
>
> "Because if a pastor wants to preach about how Christians should take their marriages more seriously, he or she can trot out this statistic to get them to listen to him or her."
>
> The various findings on religion and divorce hinge on what kind of Christians are being discussed.
>
> Wright combed through the General Social Survey, a vast demographic study conducted by the National Opinion Research Center at the University of Chicago, and found that Christians, like adherents of other religions, have a divorce rate of about 42%. The rate among religiously unaffiliated Americans is 50%.
>
> When Wright examined the statistics on evangelicals, he found worship attendance has a big influence on the numbers. Six in 10 evangelicals who never attend had been divorced or separated, compared to just 38% of weekly attendees.
>
> […]Brad Wilcox, director of the National Marriage Project at the University of Virginia, agrees there's been some confusion.
>
> "You do hear, both in Christian and non-Christian circles, that Christians are no different from anyone else when it comes to divorce and that is not true if you are focusing on Christians who are regular church attendees," he said.
>
> **Wilcox's analysis of the National Survey of Families and Households has found that Americans who attend religious services several times a month were about 35% less likely to divorce than those with no religious affiliation.**
>
> Nominal conservative Protestants, on the other hand, were 20% more likely to divorce than the religiously unaffiliated.
>
> "There's something about being a nominal 'Christian' that is linked to a lot of negative outcomes when it comes to family life," Wilcox said.

Here's a quote from an Oklahoma State University study that confirms the Wright and Wilcox conclusions:

> History of Divorce and Religious Involvement
>
> Those who say they are more religious are less likely, not more, to have already experienced divorce. Likewise, those who report more frequent attendance at religious services were significantly less likely to have been divorced. This pattern of findings held using various analytic techniques that test which variables differentiate persons who have been divorced from persons who have not been divorced, while controlling for other variables that might affect the interpretation of the data, such as age, age of first marriage, income, and gender. When both the global rating of religiousness and the item assessing frequency of attendance at religious services are entered into the same analysis, the attendance item remains significantly associated with divorce history but the global religiousness item does not. This suggests that a key aspect of how religious faith

> affects marital relationships may be through involvement with a community of faith.

So, please do bookmark this information for the next time you hear an atheist make this argument. Obviously, you can't expect people who are not serious about their religion to be bound by the moral duties imposed by that religion. People who attend church regularly are probably more serious about their religion, and also probably more informed about what their holy book says. If their holy book is the Bible, then there are few options for divorce.

An article from Focus on the Family by Amy Tracy explains when divorce is allowed according to the Bible.

> God is very clear, however, that He hates divorce (Malachi 2:16). He also says, "So they are no longer two, but one. Therefore what God has joined together, let man not separate" (Matthew 19:6). According to the New Testament, there are two justifications for divorce: infidelity (Matthew 5:32) and desertion (1 Corinthians 7:15).

So divorce is not something a Bible believing Christian can do for frivolous reasons, unless he wants to be in rebellion against God.

**The future of marriage in the church**

In my own case, I learned about chastity and sobriety and courting *outside* the church, and in my case that means that I am still a virgin, that I don't drink more than a beer a year, and that when I like a girl, I court her. I do think that people in the church are generally more moral than people outside the church, but that's more because of convention rather than conviction. I don't think it's going to last, in other words – it's more like a hangover. Church is not the place where reasons and evidence are given that help people to resist peer pressure when they enter hostile environments, like the university. And often, parents are too busy working to understand the issues and communicate them to their children.

I've never been in a church where they explained the hormones that are released during sex that cause you to bond to the person you're having sex with. You would have to look in books or listen to lectures in order to understand the problem with having sex with someone you are not committed to – how it causes you to hold back your emotions for fear of a break-up. The church doesn't have much to say about the social effects of single motherhood by choice or the effects of gay parenting on children. Nor do they have any positive vision to offer men about how they can serve God by marrying carefully.

Christians who participate in a church community will adopt some of these values, especially if they stay clear of popular culture, the university, etc. Especially if they don't work in a very secular environment, like a high-tech company or in Hollywood. But unless Christian communities get serious about grounding their values in evidence, I wouldn't expect this situation to go on, and you can already see young people falling away from church in record numbers when they get to university as a result of this refusal to engage. We're doing well *now*, but we should move to secure our gains.

# The kalam cosmological argument defended in a peer-reviewed science journal

**Wintery Knight** · 1 December 2014 · Archived copy · Original

Here's the peer-reviewed article. It appears in a scientific journal focused on astrophysics.

Here's the abstract:

> Both cosmology and philosophy trace their roots to the wonder felt by the ancient Greeks as they contemplated the universe. The ultimate question remains why the universe exists rather than nothing. This question led Leibniz to postulate the existence of a metaphysically necessary being, which he identified as God. Leibniz's critics, however, disputed this identification, claiming that the space-time universe itself may be the metaphysically necessary being. The discovery during this century that the universe began to exist, however, calls into question the universe's status as metaphysically necessary, since any necessary being must be eternal in its existence. Although various cosmogonic models claiming to avert the beginning of the universe predicted by the standard model have been and continue to be offered, no model involving an eternal universe has proved as plausible as the standard model. Unless we are to assert that the universe simply sprang into being uncaused out of nothing, we are thus led to Leibniz's conclusion. Several objections to inferring a supernatural cause of the origin of the universe are considered and found to be unsound.

The whole text of the article is posted online here.

Here's an excerpt in which the author, Dr. William Lane Craig, explains the Big Bang cosmology:

> The monumental significance of the Friedman-Lemaitre model lay in its historization of the universe. As one commentator has remarked, up to this time the idea of the expansion of the universe "was absolutely beyond comprehension. Throughout all of human history the universe was regarded as fixed and immutable and the idea that it might actually be changing was inconceivable."{8} But if the Friedman-Lemaitre model were correct, the universe could no longer be adequately treated as a static entity existing, in effect, timelessly. Rather the universe has a history, and time will not be matter of indifference for our investigation of the cosmos. In 1929 Edwin Hubble's measurements of the red-shift in the optical spectra of light from distant galaxies,{9} which was taken to indicate a universal recessional motion of the light sources in the line of sight, provided a dramatic verification of the Friedman-Lemaitre model. Incredibly, what Hubble had discovered was the isotropic expansion of the universe predicted by Friedman and Lemaitre. It marked a veritable turning point in the history of science. "Of all the great predictions that science has ever made over the centuries," exclaims John Wheeler, "was there ever one greater than this, to predict, and predict correctly, and predict against all expectation a phenomenon so fantastic as the expansion of the universe?"{10}
>
> As a GTR-based theory, the Friedman-Lemaitre model does not describe the expansion of the material content of the universe into a pre-existing, empty, Newtonian space, but rather the expansion of space itself. This has the astonishing implication that as one reverses the expansion and extrapolates back in time, space-time curvature becomes progressively greater until one finally arrives at a singular state at which space-time curvature becomes infinite. This state therefore constitutes an edge or boundary to space-time itself. P. C. W. Davies comments,
>
> > An initial cosmological singularity . . . forms a past temporal extremity to the universe. We cannot continue physical reasoning, or even the concept of spacetime, through such an extremity. . . . On this view the big bang represents the creation event; the creation not only of all the matter and energy in the universe, but also of spacetime itself.{11}

> The popular expression "Big Bang," originally a derisive term coined by Fred Hoyle to characterize the beginning of the universe predicted by the Friedman-Lemaitre model, is thus potentially misleading, since the expansion cannot be visualized from the outside (there being no "outside," just as there is no "before" with respect to the Big Bang).{12}
>
> The standard Big Bang model thus describes a universe which is not eternal in the past, but which came into being a finite time ago. Moreover,–and this deserves underscoring–the origin it posits is an absolute origin *ex nihilo*. For not only all matter and energy, but space and time themselves come into being at the initial cosmological singularity. As Barrow and Tipler emphasize, "At this singularity, space and time came into existence; literally nothing existed before the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo.*"{13}
>
> […]On such a model the universe originates *ex nihilo* in the sense that at the initial singularity it is true that *There is no earlier space-time point* or it is false that *Something existed prior to the singularity.*

Every theist should be able to understand and defend this argument. It is a scientific refutation of materialism, and it is supported by six lines of scientific evidence – all of which emerged as science has progressed.

Scientific evidence:

1. Einstein's theory of general relativity (GTR)
2. the red-shifting of light from distant galaxies implies an expanding universe
3. the cosmic background radiation (which also disproves the oscillating model of the universe)
4. the second law of thermodynamics applied to star formation theory
5. hydrogen-helium abundance predictions
6. radioactive element abundance predictions

Those are the scientific discoveries that have led us to the beginning of the universe, which support's Dr. Craig's argument.

Here's a re-cap of the three main evidences for the Big Bang cosmology from Caltech. (Numbers 2, 3 and 5 from the list above)

Excerpt:

> Until the early 1900s, most people had assumed that the universe was fixed in size. New possibilities opened up in 1915, when Einstein formulated his famous general relativity theory that describes the nature of space, time, and gravity. This theory allows for expansion or contraction of the fabric of space. In 1917, astronomer Willem de Sitter applied this theory to the entire universe and boldly went on to show that the universe could be expanding. Aleksandr Friedmann, a mathematician, reached the same conclusion in a more general way in 1922, as did Georges Lemaître, a cosmologist and a Jesuit, in 1927. This step was revolutionary since the accepted view at the time was that the universe was static in size. Tracing back this expanding universe, Lemaître imagined all matter initially contained in a tiny universe and then exploding. These thoughts introduced amazing new possibilities for the universe, but were independent of observation at that time.
>
> **Why Do We Think the Big Bang Happened?**
>
> Three main observational results over the past century led astronomers to become certain that the universe began with the big bang. First, they found out that the universe is expanding—meaning that the separations between galaxies are becoming larger and larger. This led them to deduce that everything used to be extremely close together before some kind of explosion. Second, the big bang perfectly explains the abundance of helium and other nuclei like deuterium (an isotope of hydrogen) in the universe. A hot, dense, and expanding environment at the beginning could produce these nuclei in the abundance we observe today. Third,

> astronomers could actually observe the cosmic background radiation—the afterglow of the explosion—from every direction in the universe. This last evidence so conclusively confirmed the theory of the universe's beginning that Stephen Hawking said, "It is the discovery of the century, if not of all time."

The article goes into detail about each of these three evidences.

This is the kind of evidence I expect all Christian theists to be using when discussing the question of whether God exists. Scientific evidence. When talking to non-Christians, we first need to show that we understand science, because science is a reliable and respected way of getting knowledge about the universe. Non-Christians do not accept the Bible, but they do accept science, so we begin evangelism with science. Science (experimental, testable, repeatable science) should set limits on what anyone can believe – including non-Christians, who might otherwise not be inclined to listen to Bible verses and theology.

**The Big Bang is not compatible with atheism**

According to the Secular Humanist Manifesto, atheism is committed to an eternally existing universe, (See the first item: "Religious humanists regard the universe as self-existing and not created."). If something non-material brought all existing matter into being, that would be a supernatural cause, and atheists deny that anything supernatural exists. The standard Big Bang theory requires that all the matter in the universe come into being *out of nothing.* This falsifies eternal models of the universe, which are *required* by the atheistic worldview.

You should definitely print out both articles and get familiar with the arguments and the evidence. I have tried this argument out on atheists, and the response I usually get is that scientific discoveries will soon emerge that falsifies all of these six scientific discoveries. That sounds more like faith than reason to me. And we have to make it clear to others who are still deciding that there is a conflict between science and religion. Just not the one they're expecting. Let's make our decisions about what to believe based on what science is telling us today. Let's hold accountable people who want to have a worldview that is based on speculations.

# Will the Social Security and Medicare programs be there for young Americans?

**Wintery Knight** · 2 December 2014 · Archived copy · Original

Of course not, and the voting in Democrats that they seem to like to do is making it worse.

Here's an article from the Daily Signal to tell about it.

Chart first:

Social Security insolvent in 2024

And now the story:

> Social Security's trustees projected in 1983 that the recently enacted Social Security reforms would keep the program active for at least the next 75 years, through 2058. However, according to research by Rachel Greszler, a senior policy analyst, and James M. Roberts, research fellow for economic freedom and growth at The Heritage Foundation, that approach date has accelerated.
>
> "If the trend since 1983 continues, the program will become insolvent in 2024—34 years earlier than originally projected," Roberts writes.

Now you might think that the way Democrats appeal to younger voters, that they are taking care of this problem for them.

Well, here's an article from Investors Business Daily.

Excerpt:

> The White House recently conceded that President Obama's executive order effectively legalizing an estimated 5 million undocumented immigrants means that newly legalized workers will contribute to Social Security and Medicare and be eligible for benefits.
>
> Does the president have any idea how much money his action could cost the country — i.e., taxpayers?
>
> […]The Social Security and Medicare Trust Fund trustees estimate the two program's combined long-term

> unfunded liabilities — the estimated amount the government will have to pay in benefits above what it expects to receive — at about $49 trillion. Obama's amnesty action greatly exacerbates the problem, because retirees get back far more than they pay in.
>
> […]Because the U.S. pays hundreds of thousands of dollars in retirement benefits, on average, for each new retiree, whether part of Obama's amnesty program or not, the president has just vastly worsened the long-term financial condition of the country's two primary retirement safety nets.
>
> But Obama's newly legalized workers will impose even heavier losses than Steuerle's examples.
>
> Most workers pay into the programs for their working careers, between 40 and 50 years. But millions of Obama's newly legalized are working-age adults with children, so many could be in their 40s or older.
>
> Thus they could pay FICA taxes for the next, say, 15 or 20 years — less than half the average American worker — and be eligible for the full array of Social Security and Medicare benefits.
>
> In addition, most will be lower-income workers. The U.S. Bureau of Labor Statistics estimates that foreign-born, full-time workers earn about 80% of native-born Americans ($33,500 vs. $41,900).
>
> Social Security is a social insurance program and is structured to provide disproportionately more benefits for lower-income workers. Medicare pays the same regardless of how much a worker pays in.
>
> To be sure, these new workers' entry will likely help the trust funds initially, because most will be paying in rather than taking out.
>
> **Under current rules, workers must pay FICA taxes for 40 quarters (10 years total) before being fully eligible for the programs. But within a few decades the oldest will start retiring.**
>
> **Given the demographic unknowns, estimating the amnesty's financial cost to our retirement programs — and so to U.S. taxpayers — can only be approximate.**
>
> **But using a basic simulation model, we believe the government will receive about $500 billion in payroll tax revenue (including Part B and drug premiums), and expect it to pay out some $2 trillion in benefits over several decades.**

Yeah, so they are actually making it worse. But hey, at least we have redefined marriage, right?

As if that were not enough, there's this lovely story from CNS News.

Excerpt:

> The Daily Treasury Statement that was released Wednesday afternoon as Americans were preparing to celebrate Thanksgiving revealed that the U.S. Treasury has been forced to issue $1,040,965,000,000 in new debt since fiscal 2015 started just eight weeks ago in order to raise the money to pay off Treasury securities that were maturing and to cover new deficit spending by the government.
>
> The only way the Treasury could handle the $942,103,000,000 in old debt that matured during the period plus finance the new deficit spending the government engaged in was to roll over the old debt into new debt and issue enough additional new debt to cover the new deficit spending.
>
> This mode of financing the federal government resembles what the Securities and Exchange Commission calls a Ponzi scheme. "A Ponzi scheme," **says the Securities and Exchange Commission**, "is an investment fraud that involves the payment of purported returns to existing investors from funds contributed by new investors," says the Securities and Exchange Commission.
>
> "With little or no legitimate earnings, the schemes require a consistent flow of money from new investors to continue," explains the SEC. "Ponzi schemes tend to collapse when it becomes difficult to recruit new investors or when a large number of investors ask to cash out."

Now you might ask yourself – are young people aware of these things? Of course not. What they learn in university is how to escape their repressive religious backgrounds by experimenting with risky, irresponsible sexual behavior. They are not aware of the situation, and when they vote, they vote like they were picking candidates on American Idol. I guess I can understand why young people act stupidly. They are concerned with what the culture tells them to be concerned about, and that's legal baby-killing, redefining marriage to separate kids from their mom or dad, police shooting people who commit crimes, a nonexistent gender pay gap and global warming. What is appalling to me is when their parents vote Democrat… which is basically voting to have a higher standard of living for themselves, then passing the bill onto to their kids. It's especially amazing when married women do this to their own kids. What are they thinking?

# J. P. Moreland explains the meaning of happiness in the Christian worldview

**Wintery Knight** · 2 December 2014 · Archived copy · Original

From happiness expert and Christian philosopher J.P. Moreland.

Excerpt:

> According to ancient thought, happiness is a life well lived, a life that manifests wisdom, kindness and goodness. For the ancients, the happy life — the life we should dream about — is a life of virtue and character. Not only did Plato, Aristotle, the Church Fathers and medieval theologians embrace this definition, but Moses, Solomon and (most importantly) Jesus did, too. Sadly their understanding is widely displaced by the contemporary understanding of happiness defined as pleasure and satisfaction, a subjective emotional state associated with fleeting, egocentric feelings.
>
> Consider the differences:

| **Contemporary Understanding** | **Classical Understanding** |
|---|---|
| Happiness is: | Happiness is: |
| **1.** Pleasure and satisfaction | **1.** Virtue and character |
| **2.** An intense feeling | **2.** A settled tone |
| **3.** Dependent on external circumstances | **3.** Depends on internal state; springs from within |
| **4.** Transitory and fleeting | **4.** Fixed and stable |
| **5.** Addictive and enslaving | **5.** Empowering and liberating |
| **6.** Irrelevant to one's identity, doesn't color the rest of life and creates false/empty self | **6.** Integrated with one's identity, colors rest of life and creates true/fulfilled self |
| **7.** Achieved by self-absorbed narcissism; success produces a celebrity | **7.** Achieved by self-denying apprenticeship to Jesus; success produces a hero |

> How can we be certain Jesus is inviting us to a classical understanding of happiness in Matthew 16:24-26? He isn't talking about going to heaven rather than hell, nor is He telling his followers how to avoid premature death. Where Matthew writes, "what will a man be profited, if he gains the whole world, and forfeits *his soul*" (emphasis added), Luke clarifies Jesus' teaching by replacing "his soul" with the word "himself" (Luke 9:25). The issue is finding one's self vs. losing one's self. More specifically, to find one's self is to find out how life *ought* to look like and learn to live that way; it's to become like Jesus, with character that manifests the fruit of the Spirit and the radical nature of Kingdom living; it's to find out God's purposes for one's life and to fulfill those purposes in a Christ-honoring way.

I like that "success produces a hero". Who doesn't want to be a hero? I certainly do.

In one of his lectures, Dr. Moreland says, and I quote: "Happiness is the freedom to do what we ought to do". That's right. When a person is free to comply with God's design for human flourishing, then he/she is happy. My biggest source of unhappiness is the feeling that I cannot be who I want to be as a Christian. It's getting even worse when I think about how the government is now using force to prevent me from spending what I earn the way I want, and saying what I want about the issues of the day, regardless of who is offended. I am becoming increasingly thankful for the time I spend with other dedicated Christians. That's when I can be myself and not worry about what anyone is going to think of me. This is no small source of happiness.

# How common is it for a star to support complex, embodied life?

**Wintery Knight** · 2 December 2014 · Archived copy · Original

Circumstellar Habitable Zone

I blogged a while back about the need for a star to be massive, in order to push out the habitable zone far enough that the planet in the zone does not get tidally locked, killing the planet's ability to support life. Recently, I blogged about another factor that's needed – large planets further out which catch comets for us have to have a circular orbit, or they will pull us out of the habitable zone.

That's two factors. But here's an article from Evolution News that talks about liquid water and tidal locking, but it has even more factors that need to be fine-tuned for habitability.

Excerpt:

> Stars with masses of 0.1-0.5 solar mass make up 75 percent of the stars in our Milky Way galaxy.[6] These represent the red dwarfs, the M class. But these stars have low effective temperatures, and thus emit their peak radiation at longer wavelengths (red and near-infrared).[7] They can have stable continuously habitable zones over long time scales, up to 10 billion years, barring other disruptions. It is also easier to detect terrestrial sized planets around them.[8] But a serious problem with red dwarf stars in the K and M classes is their energetic flares and coronal mass ejection events. Potentially habitable planets need to orbit these stars closer, to be in these stars' habitable zones. Yet the exposure to their stellar winds and more frequent and energetic flares becomes a serious issue for habitability. Because of these stars' smaller mass, ejections get released with more violence.[9] Any planet's atmosphere would be subject to this ionizing radiation, and likely expose any surface life to much more damaging radiation.[10] The loss of atmospheres in these conditions is likely, but the timescales are dependent on several factors including the planet's mass, the extent of its atmosphere, the distance from the parent star, and the strength of the planet's magnetic field.[11] To protect its atmosphere for a long period, like billions of years, a planet with more mass and thus higher gravity could hold on to the gases better. But this larger planet would then hold on to lighter gases, like hydrogen and helium, and prevent an atmosphere similar to Earth's from forming.[12] Another consequence is that the increased surface pressure would prevent water from being in the liquid phase.[13]

So again, you need to have a huge, massive star in order to hold the planet in orbit over LONG distances. If it's a short distance, you not only have the tidal-locking problem, but you also have this solar activity problem (flares, coronal ejections).

But wait! There's more:

> Another stellar parameter for advanced life has to do with UV (ultra-violet) radiation. The life-support star

> must provide just enough UV radiation, but not too much. UV radiation's negative effects on DNA are well known, and any life support body must be able to sustain an atmosphere to shield them. Yet the energy from UV radiation is also needed for biochemical reactions. So life needs enough UV radiant to allow chemical reactions, but not so much as to destroy complex carbon molecules like DNA. Just this flux requirement alone requires the host star have a minimum stellar mass of 0.6 solar masses, and a maximum mass of 1.9 solar masses.[14]

So the ultra-violet radiation that is emitted has to be finely-tuned. (I'm guessing this assumes some sort of chemical origin-of-life scenario)

Still more:

> Another requirement for habitable planets is a strong magnetic field to prevent their atmosphere from being lost to the solar winds. Planets orbiting a red dwarf star are also more affected by the star's tidal effects, slowing the planet's rotation rate. It is thought that strong magnetic fields are generated in part by the planet's rotation.[15] If the planet is tidally braked, then any potential for a significant magnetic field is likely to be seriously degraded. This will lead to loss of water and other gases from the planet's atmosphere to the stellar winds.[16] We see this in our solar system, where both Mercury and Venus, which orbit closer to the Sun than Earth, have very slow rotation rates, and very modest magnetic fields. Mercury has very little water, and surprisingly, neither does Venus. Even though Venus has a very dense atmosphere, it is very dry. This is due to UV radiation splitting the water molecules when they get high in the atmosphere, and then the hydrogen is lost to space, primarily, again, by solar wind.[17]

You have to hold on to your umbrella (atmosphere), or you get hit with dangerous rain (solar winds).

So a few more factors there, and remember, this is just the tip of the iceberg when it comes to circumstellar habitability constraints.

# New study: stronger net neutrality laws are a tax on Internet use

**Wintery Knight** · 3 December 2014 · Archived copy · Original

The leftist Washington Post reports on a new study which counts the cost of the Obama administration's proposed "net neutrality" policies.

Excerpt:

> [A] new study suggests that strong controls on Internet providers might force Americans to pay more for their Internet, anyway.
>
> Internet service providers would be subject to more than $15 billion a year in new fees if the Federal Communications Commission decides to start regulating them with Title II of the Communications Act — the same tool the agency uses to police telephone service, according to Hal Singer and Robert Litan, two economists who support less-aggressive net neutrality rules. And those charges, they say, would inevitably be passed along to you.
>
> Regulating broadband under Title II would allow federal, state and local governments to collect the same fees from ISPs that they already levy on phone companies. Among these are a "universal service" fee that was established decades ago to help ensure everyone in the country had access to telephone service.
>
> In a paper published by the Progressive Policy Institute, Singer and Litan argue that these and other charges stemming from various state and local rules could add $84 or more to a U.S. household's yearly Internet bill.
>
> "Although the state and federal governments collect these fees from broadband providers," Singer and Litan write, "history shows — and economic models of competitive markets predict — that the fees are passed along to customers, just as they are now on telecommunication services. So consumers' Internet bills will soon have all those random charges tacked on at the end, much like they see on their phone bills."
>
> The study is the latest effort by opponents of strong net neutrality rules to describe the potential economic fallout of regulating ISPs under Title II. Last month, telecom lobbyists argued to the FCC that aggressive regulation would slow down the pace of industry investment in network upgrades, to the tune of $45 billion over the next five years.

And there is this from the Heartland Institute, a free-market think tank:

> On June 17, FCC Chairman Julius Genachowski pushed through a 3-2 vote along party lines to begin his agency's process of reclassifying broadband Internet access under a more restrictive regulatory regime known as Title II. Once the Internet is reclassified as a telecommunications service rather than an information service under Title I, the FCC will have seized the power necessary to micromanage the vibrant medium we take for granted.
>
> Numerous studies have found FCC enforcement of net neutrality rules would harm the digital economy and consumers. The research on net neutrality points out regulation would stifle innovation and impose costs that would be passed on to consumers. Study after study finds net neutrality is an attempt to fix a "market failure" that doesn't exist.
>
> A recent study from New York University concluded net neutrality would cost Americans 500,000 jobs and $62 billion over the next five years. The international market research firm Frost & Sullivan found net neutrality regulations would likely pass on to the consumer up to $55 per month in additional costs. These and other studies show a hands-off approach to Internet regulation maximizes social and economic welfare.

The rest of the Heartland post links to studies that discuss the impact to the economy and to consumers of these net neutrality laws.

# Sociologist George Yancey examines bias against Bible-believing Christians

**Wintery Knight** · 3 December 2014 · Archived copy · Original

So Many Christians, So Few Lions

There are three posts in the series, and I think these are all worth reading.

Let's see the introduction to the series from the first post.

> Over the next three blog entries, I am going to discuss the content of my latest book –So Many Christians, So Few Lions – Christianophobia in the United States. Actually the book has not come out yet, but will officially come out later this month. Obviously the focus of the book will be the nature of anti-Christian attitudes in the United States. In this first entry, I look at the contours of a basic level of animosity towards conservative Christians in the United States. My next entry will qualitatively explore the nature of Christianophobic attitudes. In my final entry I will consider the implications of this work, as well as other research and social events, for what it means about this type of anti-religious bigotry. For the balance of these blog entries, I will define Christianophobia as unreasonable hatred or fear of Christians.

The first post is here.

Here's a snippet that explains which segment of our society is opposed to Christians who take the Bible seriously:

> In another research project that I am currently working on, we asked college teachers how they would define a fundamentalist and how they would see a fundamentalist as different from other Protestants. Beyond basic stereotypical descriptions, these individuals tended to label fundamentalists as those who believed the Bible to be the literal word of God. According to the 2012 ANES, about a third of Americans have such a belief. If the respondents in the ANES use a similar definition of fundamentalism then the animosity exhibited by them is not directed at an extreme Christian fringe but against a substantial portion of the population.
>
> What is as important as the extent of this animosity is who tends to possess this animosity. Those who listed

> Christian fundamentalists a standard deviation below the mean of the other groups are 79.4 percent white, 47.6 percent with a bachelor degree, 64.5 percent make at least $50,000 a year and 29.2 percent make at least $100,000 a year. All of these numbers are significantly higher than the percentages in the population without this animosity. Thus, those with anti-Christian hostility are whiter, better educated and wealthier than others in our society. These are majority group qualities indicating that those with anti-Christian animosity have more per-capita social power than the average person.
>
> Remember that we not only explored animosity towards conservative Christians but also animosity towards other social groups. I found that those with relative hostility towards atheists are older, non-white, undereducated, political conservatives. Those with relative hostility towards Muslims tend to be older, nonblack political conservative males. Those with relative hostility towards Mormons are younger, non-whites political progressives. This provides some complexity to this discussion of potential religious bias and bigotry. For example, there appear to be just as many people with anti-Muslim hostility as there are with hostility towards conservative Christians. However those with potential Islamophobia do not seem to have a great deal of per-capita political power, unlike those with potential Christianophobia.

The second post is here.

Here's a snippet that discusses whether the group identified in post one *dehumanize* Christians:

> Several researchers and social thinkers have written about dehumanization. But the best conceptualization of dehumanization comes from Nick Haslem. He identified two types of dehumanization: animalistic and mechanical. A cursory reading of the answers from the respondents indicates that animalistic dehumanization fits their responses better than mechanical dehumanization. He identified five qualities of animalistic dehumanization – lack of culture instead of civility, coarseness instead of refinement, amorality instead of moral sensibility, irrationality instead of logic and childlikeness instead of maturity.
>
> I do not have the space to explore all five of these qualities within the answers of my respondents (I did such an exploration in the book). But I will look at the last characteristic which is the notion that Christians are childlike instead of mature. Indeed my respondents tended to paint a picture of Christians being immature individuals led by powerful, manipulative leaders.
>
> The leaders are deceptive and power hungry individuals who invoke "God" in a political sense to rally their supporters…They play to people's emotions, daily. (Female, aged 26-35 with Bachelor degree)

> Their movement's leaders are the worst type of manipulative authoritarian scum and their millions of followers are sad, weak people who are all too willing to give up their self-respect and liberty for a fantasy. (Male, aged 26-35 with Bachelor degree)
>
> In this way the respondents take away the agency of Christians by suggesting that they are weak individuals unable to resist the desires of evil leaders. Rather the respondents support an image of Christians as being children misled by bad parents.
>
> This type of stereotyping fits quite well with some of the insults that my respondents used in describing Christians. For example, some variation of the term "brainwash" came up 137 times, from 125 respondents. Almost every time the term was used, it was to note the inability of Christians to think for themselves. For example, a female, aged 56-65 with a bachelor degree wrote, "I believe that this group is in general poorly educated and often brainwashed to the point of seeing no perspective but their own. Many allow themselves to become tools of charismatic, self serving leaders because they have been deprived of the education and tools to ever think otherwise." This respondent, like many other respondents, have a stereotype of Christians reflecting them as unthinking imbeciles. It is a dehumanizing stereotype creating an image of Christians as not having full human capacities.

> Beyond the notion of brainwashing, 66 of our respondents use the terms sheep and 5 of our respondents used the term lemmings to describe Christians as well.

> […]These numbers seem low considering that I have a sample of almost three thousand respondents; however, it should be noted that these comments comparing Christians to animals are unprompted. (It is also instructive to consider which terms were not used at all. For example, ape or gorilla was not used by any of the respondents to describe conservative Christians.) Closed ended questions providing respondents with the opportunity to characterize conservative Christians in animalistic terms would likely garner a nontrivial level of support. The comments about Christians as passive animals, combined with the relative willingness of the respondents to use the term brainwashed, occur often enough to provide some confidence that characterizations of Christians as unthinking passive followers are accepted within subcultures with high levels of Christianophobic animosity. If there is any doubt that there is an animalistic element to the type of dehumanizing occurring among my respondents, the use of these animals clearly indicates that Christians are not always seen as human.

The third post is here.

Here's a snippet showing how this bias against Christians manifests itself:

> It is well established that academics tend to be more politically progressive and secular than the general population. It is obvious that they are highly educated. So academia theoretically should be a place where we would find a higher than normal level of Christianophobia. This Christianophobia may manifest in discrimination against conservative Christians. A few years ago I conducted research suggesting that this is the case. I found that academics were willing to discriminate against a prospective candidate for an academic position if they found out that the candidate is a conservative Protestant. In fact, they were more willing to discriminate against conservative Protestants than against any other social group included in my survey. Their willingness to discriminate against those Protestants was even more powerful than their willingness to discriminate against political conservatives. Religious intolerance trumps potential political intolerance among academics.
>
> Of course simply because academics state that they are open to discriminating against conservative Protestants does not mean that they actually engage in such discrimination. A survey is not sufficient evidence. However, Rothman and Lichter conducted research documenting that academics with socially conservative beliefs tend to be located in lower status occupational positions even after controlling for demographic variables and their level of productivity. If conservative Protestants are more likely to have socially conservative beliefs than other academics, a reasonable belief, then this research suggests systematic evidence that there are occupational disadvantages in academia to having conservative Christian beliefs. Since academics have a willingness to discriminate against those Christians, this disadvantage cannot merely be due to their inability to do science, as the common stereotype of Christians seems to imply, but discrimination from academics who may be motivated by Christianophobia is likely an important factor.

Buy the book if you find this a useful tool for your own discussions.

# Republicans join Democrats in cutting pay and benefits of military personnel

**Wintery Knight** · 4 December 2014 · Archived copy · Original

That audio above is from the Hugh Hewitt radio show (he is a centrist, but on this issue, he's pissed off).

The details were reported in the Military Times. (H/T The Federalist Papers)

Excerpt:

> All of the pay and benefits trims were backed by the Pentagon and White House in an effort to slow the growth of personnel costs. The housing cuts and pharmacy co-pays were the final sticking points for lawmakers, with a compromise reached after nearly a month of behind-the-scenes fights.
>
> The lower pay raise will be the most obvious hit for troops, who would be in line for a 1.8 percent raise based on anticipated private-sector wage growth.
>
> For an E-3 with three years of service, the lower raise is a loss of about $195 a year. For an E-7 with 10 years, it comes out to $356. For an O-5 with 12 years of service, it's $667 in annual salary.
>
> Pentagon planners noted that move alone will save them about $3.8 billion over the next five years. Opponents argued that it creates a new wage gap between troops and their civilian counterparts, giving them less disposable income.
>
> In addition, lawmakers approved trimming back the housing allowances paid to troops who live off base. The Pentagon initially sought to reduce the tax-free housing benefit by 5 percent by reducing the 100 percent of troops' estimated housing costs that are covered now down to an average of 95 percent — in effect making troops pay 5 percent of their housing with out-of-pocket cash.

I am a Republican, and I support Republicans. But this vote really has me shaking my head. If Republicans stand for anything, it's for a strong military to deter aggression. We should not cut pay and benefits for the military at a time where we lavish Social Security and Medicare on illegal immigrants. That is *wrong*. Why can't they just delay this till next year and then pass a real bill that solves whatever problems they are trying to solve but without taking money from the military? Makes me sick.

# Lydia McGrew: we need an army of tentmaking Christians

**Wintery Knight** · 4 December 2014 · Archived copy · Original

Lydia McGrew has a post up at What's Wrong With the World blog that is just excellent.

Excerpt:

> Apologetics is wonderful and incredibly important. It's a wonderful thing that a revival of specifically evidentialist apologetics is happening in the United States and even, to some extent, in the Anglophone world at large.
>
> Unfortunately, this revival of interest in apologetics and in being Christian philosophers is coming at a very bad time, economically. Even if you are a genius, your chances in 2013 and following of getting a stable job by the route of going to graduate school in philosophy (or almost any area of the humanities) are pretty darned slim. If you're not a genius, fuhgetaboutit. Nor were there ever all that many jobs in philosophy. It was always an iffy proposition, but it's much worse now than it was even twenty years ago.
>
> As for starting ministries, a poor economy makes it extremely hard to do that, too, because people don't have as much disposable income to donate. Moreover, even in a more robust economy, if all the eager young apologists were to flock to start apologetics and/or campus ministries, they would be competing among themselves for a finite number of available dollars from donors. So that's not the best idea either.
>
> Let me speak very bluntly here: In my opinion, God doesn't need a whole raft of impractical idealists out there getting themselves into debt or half starving (or really starving) with no idea of how in the world they are ever going to support even themselves, much less a family, out at the other end of their education. That just burdens the church with a large number of able-bodied but needy Christians who are in a seemingly unending stage of transition, "getting an education for the kingdom" or "hoping to do work for the kingdom" without a viable plan in mind or any fiscal light at the end of the tunnel.
>
> Instead, I believe that we need an army of tentmakers. If you have a job or a marketable skill, for heaven's sake (literally), don't quit that job and join the ranks of starving students. Keep your day job, but enrich your mind and prepare yourself to answer people's questions about Christianity by studying on your own time. If you have entrepreneurial abilities and the capital, start a business. That will support not only yourself but others you employ, and if successful, you will have more money to give to Christian ministries.
>
> But even if you aren't the entrepreneurial type or don't have that opportunity, at least make sure (to the extent that one can in today's world) that you can pay the rent and put food on your own table as well as supporting whatever number of additional people you plan to take on. (In other words, if you are a guy who would like to get married and have children, bear that in mind.) This will inevitably mean spending time at all that distasteful stuff like networking and making a resume. Bookish types don't enjoy that stuff, because it seems bogus, but it can't be helped. It will undoubtedly mean, for most people, not being full-time students beyond the undergraduate level, especially not in the humanities, not trying to become full-time academics as a life work, and not going into full-time ministry, even if you would ideally like to do one or more of those three things.
>
> In the end, if we can have this army of tentmakers, there will be (Lord willing) money to allow some people to work in full-time ministry. But it's going to be quite a small proportion of those who are interested or would ideally like to do so.
>
> […]Inevitably, the course of action I am suggesting will mean a bifurcation for many between their day job and what they are most passionately interested in. So be it. Indeed, so it has ever been in the world. What proportion of people at any moment in human history have been blessed enough to spend most of their time working on what they are most passionately interested in? The question answers itself. So I think that bifurcation has to be accepted by a great many people and that doing so will lead to what I might call a healthier "Christian economy" among committed Christians than what we could otherwise end up with.

So let's see her advice in bullet-point form:

- The job market for philosophers is very bad
- A bad economy means less support money is available
- It's important to have a plan to fund your ministry
- Leverage your full-time job to fund your ministry

I often find that when I talk to Christians, there is this sort of hyper-spiritualized way of deciding what to do, and I've written about this in one of my favorite posts. Hyper-spiritual Christians read the Bible, which is good, but then they don't tend to also look at practical things like economics, science and public policy when making their decisions. The Bible doesn't say much about what to study or what job to get, but there is an example of Paul working at tent-making in order to fund his ministry. So there is precedent for the idea of learning a trade and working to earn enough money to support our families, our ministry and even other people's ministries. I think we have an obligation to take the Bible seriously when it tells us what we can do to please God, but coming up with a plan to please God most effectively is our job. We have to make the plans to serve God. Our plans must be within the bounds of Biblical morality, but they should also reflect our knowledge of how the world really works, too. We'll be more successful with a good plan and some hard work.

Be sure and listen to the podcast by J. Warner Wallace on this issue, and read my comments too (same post).

# New paper from Michael Licona on historical methods and miracle claims

**Wintery Knight** · 4 December 2014 · Archived copy · Original

I hope that all my readers know who Michael Licona is!

The PDF of his new paper is here. It published in the Journal for the Study of the Historical Jesus.

Here's the abstract:

> Most biblical scholars and historians hold that the investigation of a miracle report lies outside of the rights of historians acting within their professional capacity. In this essay, I challenge this position and argue to the contrary. A definition of history should not a prioriexclude the possibility of investigating miracle claims, since doing so may restrict historians to an inaccurate assessment of the past. Professional historians outside of the community of biblical scholars acknowledge the frequent absence of a consensus; this largely results from conflicting horizons among historians. If this is the present state among professionals engaged in the study of non-religious history, it will be even more so with historians of Jesus. Finally, even if some historians cannot bring themselves to grant divine causation, they, in principle, can render a verdict on the event itself without rendering a verdict on its cause.

Here's a bit that I found interesting:

> It is clear that the horizon of atheist New Testament scholar Gerd Lüdemann is a driving force behind his historical conclusions when he a priori rules out the historicity of the ascension of Jesus reported in Acts 1.9–11 'because there is no such heaven to which Jesus may have been carried'.14 Ontological naturalism similarly guides James Tabor. He writes:
>
> Women do not get pregnant without a male—ever. So Jesus had a human father… Dead bodies don't rise… So, if the tomb was empty the historical conclusion is simple—Jesus' body was moved by someone and likely reburied in another location.15
>
> Not so obvious is Geza Vermes in his 2008 volume The Resurrection: History and Myth.16 With hardly a comment, Vermes simply dismisses both 'the out-ofh-and rejection of the inveterate skeptic' and the hypothesis that Jesus rose from the dead since it can only be made from 'the blind faith of the fundamentalist believer'.17

I thought these were interesting because Ludemann gives you the post-mortem "visions" of Jesus, and Vermes gives you the empty tomb – yet both are naturalists. Notwithstanding that, it's pretty clear that these guys are not open to miracles *a priori,* and yet they probably think they are good historians, and able to get at the truth. Even though they rule out some explanations before even looking at the evidence.

So what would you call a detective who ruled out some causes of death but not others, before looking at the evidence?

More:

> Second, methodological naturalism may handicap historians, preventing them in some cases from providing a fuller and more accurate account of the past. Molecular biologist Michael Behe provides a relevant challenge to this approach in his discipline. He writes:
>
> Imagine a room in which a body lies crushed, flat as a pancake. A dozen detectives crawl around, examining the floor with magnifying glasses for any clues to the identity of the perpetrator. In the middle of the room, next to the body, stands a large, grey elephant. The detectives carefully avoid bumping into the pachyderm's

> legs as they crawl, and never even glance at it. Over time the detectives get frustrated with their lack of progress but resolutely press on, looking even more closely at the floor. You see, textbooks say detectives must 'get their man', so they never consider elephants.19
>
> **In context, Behe is contending that when scientists limit their considerations exclusively to unguided natural causes they will forever keep themselves from discovering the actual cause if a Designer of some sort was responsible. A similar admonition may be issued to historians who a priori exclude a non-human agent as the cause behind a past event. Those who do so could actually be placing themselves in a position where they cannot appraise history accurately.**20

The rest of the paper discusses two options for historians who want to resolve this problem.

So, I'm impressed that Mike Licona reads Mike Behe (that quote is from "Darwin's Black Box"). Pretty cool. You should download the PDF just for the footnotes, to see what else he is reading that you might want to read too. What I like to see is lots of science and lots of debates and lots of different points of view. He reads across disciplines, he reads people who disagree with him. We one-dollar apologists all need to be like that.

Back to his paper. I see this presupposition of naturalism come up in debates on the historical Jesus, where the naturalist will just assume naturalism and then proceed to do history – even at a time where we have so many scientific arguments to undermine naturalism. It's a bad philosophical view, and we shouldn't let it influence how we do history.

If you run into these historians who are slaves to naturalism, it might be worth it to make them defend it. You ask them – do you believe in naturalism? If they say yes, ask them for scientific evidence for naturalism. And when they finish not giving you any, then you can go on a long monologue on the origin of the universe, the fine-tuning, the origin of life, the Cambrian explosion, the habitability (galactic and stellar), and so on. Then tell them to stop bring their blind religious faith into their historical investigations.

# Should young Americans feel confident about their economic prospects?

**Wintery Knight** · 5 December 2014 · Archived copy · Original

Wages of Young Americans (Source: The Atlantic)
Graph: Young People's Wages Have Fallen Across Industries Between 2007 and 2013.

Young Americans are taking longer to graduate and graduating with more debt, but that's not all – they aren't find jobs, and the jobs they do find typically don't allow them to pay back their loans.

Here's an article from The Atlantic, which leans left.

Excerpt:

> American families are grappling with stagnant wage growth, as the costs of health care, education, and housing continue to climb. But for many of America's younger workers, "stagnant" wages shouldn't sound so bad. In fact, they might sound like a massive raise.
>
> Since the Great Recession struck in 2007, the median wage for people between the ages of 25 and 34, adjusted for inflation, has fallen in every major industry except for health care.
> These numbers come from an analysis of the Census Current Population Surveyby Konrad Mugglestone, an economist with Young Invincibles.
>
> In retail, wholesale, leisure, and hospitality—which together employ more than one quarter of this age group—real wages have fallen more than 10 percent since 2007. To be clear, this doesn't mean that most of this cohort are seeing their pay slashed, year after year. Instead it suggests that wage growth is failing to keep up with inflation, and that, as twentysomethings pass into their thirties, they are earning less than their older peers did before the recession.
>
> The picture isn't much better for the youngest group of workers between 18 and 24. Besides health care, the industries employing the vast majority of part-time students and recent graduates are also watching wages fall behind inflation. (40 percent of this group is enrolled in college.)

It's not just that – the Democrats are doing a pretty good job of wrecking other parts of the economy, from energy development to health care to entitlement programs to college tuition, which rises higher as government throws more money into the system. They are doing everything they can to wreck the economy with higher taxes and burdensome regulations.

As a result of our headlong rush towards socialism, the U.S. economy has now fallen to number 2 in the world, *behind China.*

Look:

> We're no longer No. 1. Today, we're No. 2. Yes, it's official. The Chinese economy just overtook the United States economy to become the largest in the world. For the first time since Ulysses S. Grant was president, America is not the leading economic power on the planet.
>
> It just happened — and almost nobody noticed.
>
> The International Monetary Fund recently released the latest numbers for the world economy. And when you measure national economic output in "real" terms of goods and services, China will this year produce $17.6 trillion — compared with $17.4 trillion for the U.S.A.
>
> As recently as 2000, we produced nearly three times as much as the Chinese.
>
> To put the numbers slightly differently, China now accounts for 16.5% of the global economy when measured in real purchasing-power terms, compared with 16.3% for the U.S.
>
> This latest economic earthquake follows the development last year when China surpassed the U.S. for the first time in terms of global trade.

So things are bad for young people, and it's going to get worse.

It's important to check what major you are studying to make sure you get a return on your investment, and don't be scared to study something you hate if it means that you can make your career work. Your education and career choices are not about fulfillment and thrills. You have to make hard choices in order to make ends meet so that you have freedom to do the things you ought to do, especially if you want to get married and start a family. Those marriage and family plans start the day you step into high school, in my opinion.

UPDATE: 17.7% Teen Unemployment in America – Still Above Rate of 6 Years Ago and Labor Force Participation Remains at 36-Year Low.

# New study: enzymes cannot easily evolve to perform other functions

**Wintery Knight** · 5 December 2014 · Archived copy · Original

Can atheism explain the origin of life?
This is from Evolution News.

Excerpt:

> I am pleased to announce the publication of a new paper from Biologic Institute, a research organization devoted to investigating the limits of unguided evolution and advancing the development of a new paradigm for biology based on intelligent design. This paper, "Enzyme Families — Shared Evolutionary History or Shared Design? A Study of the GABA-Aminotransferase Family," is the closing chapter of our long-term study of bacterial enzymes to determine if they can be coopted to new functions. The answer to this question is important for the evolution debate. If enzymes can't be recruited to genuinely new functions by unguided means, no matter how similar they are, the evolutionary story is false.
>
> Published in the journal *BIO-Complexity*, the work was done by Marci Reeves, Doug Axe, and myself [Ann Gauger].
>
> In a previous paper we described the difficulty of coopting the enzyme Kbl to perform the function of BioF. The two enzymes are very similar in structure (see below) but have different reaction chemistries and different functions in the cell. We wanted to know if a mutated Kbl could replace missing BioF function. After changing nearly every amino acid in Kbl's active site (where its chemistry is carried out) to look like BioF, Kbl never was able to make the switch to BioF's function.
>
> In this paper we expanded the story to include *nine* of the most closely related enzymes to BioF, including one that is supposed to be able to carry out both BioF's and Kbl's chemistry. Using random mutagenesis we tested every single-base mutation in those nine genes. None of them was within one mutation of cooption. We went on to test for cooption the two most likely enzymes by generating two-base combinations of mutations. After

> testing 70 percent of all possible two-base mutations for each enzyme, or about 40 million cells each, that also failed.
>
> What does this mean? In an evolutionary scenario, to get an enzyme to switch functions the first step is to make a spare copy that can be mutated without destroying a function the cell needs. Second, the cell has to overproduce the mutating enzyme, because any newly emerging enzyme will be very bad at the job at first. To compensate there will need to be lots of enzyme around. Third, there is the problem of finding the right combination of mutations by random search.
>
> **Taken together, since we found no enzyme that was within one mutation of cooption, the total number of mutations needed is at least four: one for duplication, one for over-production, and two or more single base changes. The waiting time required to achieve four mutations is *$10^{15}$ years*. That's longer than the age of the universe.** The real waiting time is likely to be much greater, since the two most likely candidate enzymes failed to be coopted by double mutations.

Read the rest of the post, they deal with criticisms to the paper.

Here is one Darwinist's view of this enzyme proble, which they mention in a follow-up post.

Look: (links removed)

> Monday we published a paper in the journal *BIO-Complexity* demonstrating that enzymes can't evolve genuinely new functions by unguided means. We argue that design by a very sophisticated intelligent agent is the best explanation for their origin. I want to take some time to lay out our argument against Darwinian evolution and for intelligent design. It's important, because it reveals the logical fallacy in most evolutionary thinking.
>
> Just to give an example of the thinking of ID critics, here is a passage from one of the references in our paper (Kherhonsky et al. (2006) Enzyme promiscuity: Evolutionary and mechanistic aspects.*Current Opinion in Chemical Biology* 10:498-508):
>
> An oft-forgotten essence of Darwinian processes is that they occur gradually, while maintaining organism fitness throughout. Consequently, a reasonable assumption is that, ever since the emergence of the primordial living forms, very little novelty has evolved at the molecular level. Rather, existing genes were modified, or tinkered with', to generate new protein structures and functions that are related to those of their ancestors. Unlike 'out of the blue' scenarios advocated by the 'intelligent design' school, 'tinkering' scenarios depend on the availability of evolutionary starting points. The hypothesis that the broad specificity, or promiscuous functions, of existing enzymes provide these starting points was first formalized by Jensen in a review that has inspired many. Jensen proposed that, in contrast to modern enzymes, primitive enzymes possessed very broad specificities. This catalytic versatility enabled fewer enzymes to perform the multitude of functions that was necessary to maintain ancestral organisms. Duplication of genes and divergence led to specialized genes and increased metabolic efficiency. Since Jensen, the structures of >30,000 proteins, and the sequences of hundreds of thousands, have taught us that these processes led to the creation of enzyme families and superfamilies. The vestiges of these divergence processes are the scaffold and active site architecture shared by all family members [6].
>
> To summarize, the key points of that evolutionary argument are:
>
> 1. Evolution is true. That is, enzymes have evolved new functions by a process of random mutation and natural selection.
> 2. Modern enzymes can't evolve genuinely new functions by random mutation and natural selection but can only tinker with existing functions.
> 3. Therefore, ancient enzymes *must have* been different, capable of carrying out a broad range of enzyme activities.

> 4. Those enzymes underwent duplication and diverged from one another, becoming specialized.
> 5. How do we know this happened? Because we now see a broad array of specialized enzymes. Evolution is the explanation.
>
> This begs the question of whether evolution is true. It is a circular argument unsubstantiated by the evidence and unfalsifiable. No one can know what ancient enzymes actually looked like, and whether they really had such broad catalytic specificities.

That's insufferable badness.

It's not enough for Darwinists to take the age of the universe and then assert that anything can happen in that time. The time from the cooling of the Earth to the appearance of first life is on the order of millions of years. There just isn't time to generate these organic components by chance.

# Dennis Prager: does the Bible say do not kill or do not murder?

**Wintery Knight** · 5 December 2014 · Archived copy · Original

I am hoping that a lady I am friends with who really likes the King James Bible will not read this post… but, here goes.

Dennis Prager's column on the sixth commandment.

Excerpt:

> Here is the text of commandment six — explaining why the King James translation is wrong:
>
> You would think that of all the Ten Commandments the one that needs the least explaining is the sixth, because it seems so clear. It is the one that the King James Bible, the most widely used English translation of the Bible, translates as, "Thou shall not kill."
>
> Yet, the truth is the quite the opposite. This is probably the least well understood of the Ten Commandments. The reason is that the Hebrew original does not say, "Do not kill." It says, "Do not murder." Both Hebrew and English have two words for taking a life — one is "kill" (harag, in Hebrew) and the other is "murder" (ratzach in Hebrew).
>
> The difference between the two is enormous. Kill means:
>
> 1. Taking any life — whether of a human being or an animal.
> 2. Taking a human life deliberately or by accident.
> 3. Taking a human life legally or illegally, morally or immorally.
>
> On the other hand, murder can only mean one thing: The illegal or immoral taking of a human life. That's why we say, "I killed a mosquito," not, "I murdered a mosquito." And that's why we would say that "the worker was accidentally killed," not that "the worker was accidentally murdered."
>
> So why did the King James translation of the Bible use the word "kill" rather than "murder"? Because 400 years ago, when the translation was made, "kill" was synonymous with "murder." As a result, some people don't realize that English has changed since 1610 and therefore think that the Ten Commandments prohibits all killing.
>
> But, of course, it doesn't. If the Ten Commandments forbade killing, we would all have to be vegetarians, as killing animals would be prohibited. And we would all have to be pacifists — since we could not kill even in self-defense.
>
> However, you don't have to know how the English language has evolved to understand that the Ten Commandments could not have prohibited all killing.
>
> A correct understanding of the commandment against murder is crucial because, while virtually every modern translation correctly translates the commandment as "Do not murder," many people cite the King James translation to justify two positions that have no biblical basis: opposition to capital punishment and pacifism.The very same part of the Bible that contains the Ten Commandments — the Five Books of Moses, the Torah as it is known by Jews — commands the death penalty for murder, allows killing in war, prescribes animal sacrifice and allows eating meat.
>
> Regarding capital punishment and the Bible, as I note in my Prager University course on capital punishment, the only law that appears in each one of the Five Books of Moses is that murderers be put to death. Opponents of the death penalty are free to hold the view that all murderers should be allowed to live. But they are not free to cite the Bible to support their view.
>
> Yet, many do. And they always cite the Commandment, "Do not kill." But that, as should now be abundantly clear, is not what the commandment says, and it is therefore an invalid argument.

Read the rest (it's the same as the video).

This is related to his new video series for Prager University on the Ten Commandments. You can watch them all here. There's one for each commandment, and an introduction. Prager University always does a nice job on these videos, and they are a nice, quick way to find out exactly what traditionally-minded people really believe, and why. Most kids in college will never even hear the other side to what their liberal professors say.

# Does the Bible say that you should forgive someone who does not repent?

**Wintery Knight** · 6 December 2014 · Archived copy · Original

Kevin Lewis, a professor of Theology and Law at the conservative Biola University, was asked this question:

> Recently, I was reading Dr. Kenneth Bailey's "Jesus Through Middle Eastern Eyes" (IVP press 2008). When commenting on Matthew 6:12-13, he writes,
>
> "It is a common human assumption that the violator of the rights of others must ask for forgiveness before the wronged party can be expected to accept the apology and grant forgiveness…But Jesus here asks the person wronged to forgive the one responsible for the wrongdoing when when there is no confession of guilt… There is a voice from the cross that echoes across history to all saying 'Father forgive them for they know not what they do.' Neither Pilate nor the high priest nor the centurion offered any apology to Jesus, yet he prayed for divine forgiveness…(p.125)"

And here's his response in full, copied with permission from his Facebook note:

> Regarding Bailey's comments on Matthew 6:12, he errs by not considering the theological context of this statement and fails to consider any implied biblical conditions for forgiveness inherent in the statement. The text simply does not mean what he says it means. He is reading too much into the statement.
> Bailey states, "Jesus here asks the person wronged to forgive the one responsible for the wrongdoing when there is no confession of guilt…"
>
> Bailey errs. Here, Jesus is giving a model for prayer commensurate with the way His Kingdom works. Jesus teaches them to pray: "Forgive us our debts, as we also have forgiven our debtors." This is a statement of the objective, "forgiveness," without a discussion of any express or implied conditions to accomplish the objective. It is also a statement of the proper attitude of the Christian, that is, that we must have a demeanor of being willing to forgive, just as God was willing to forgive us. Bailey's assertion that there is no "confession of guilt" or repentance is merely an unwarranted assumption.
>
> Moreover, the use of "as" (Grk. hos) in the passage introduces a comparison between the way we forgive and the way God forgives. This comparative phraseology is employed elsewhere on the subject of forgiveness. For example, Ephesians 4:32 states that we should be "forgiving each other just as God in Christ also has forgiven" us. Here, the comparative "just as" (Grk. kathos) is employed and indicates our forgiveness is to be just like God's forgiveness of us, which flows from a loving disposition. So in the same manner that God forgives, we must forgive. We are to be "imitators of God" (Eph. 5:1). See also Matthew 5:48 and Luke 6:36 for exhortations to imitate God.
>
> To ascertain whether the Scriptures describe any conditions for forgiveness, one must search elsewhere in the Scriptures for comment. This is the nature of systematic theology. We need to examine what the entire Bible says on a given topic, such as forgiveness. And the Bible contains ample support for the notion that there are conditions for forgiveness.
>
> First, regarding God and His forgiveness, it is undisputed in orthodox Christian theology that God does not forgive everyone. The doctrine of Hell is a sufficient proof of the lack of universal forgiveness by God.
>
> Next, it is clear that God does not forgive without repentance. This doctrine is taught in a number of texts. For example, in Luke 13:3 Jesus says, "unless you repent, you will all likewise perish." In Mark 1:15 John the Baptist commands that we must "repent and believe the Gospel." The connection between repentance and forgiveness of sins (i.e. "salvation") is seen throughout the Scriptures. For example, in Acts 2:38 repentance is directly connected as a condition for the remission of sins. For additional examples of this connection see

Matthew 11:20-24; Luke 24:45-49; Acts 3:19; 8:22; 17:30-31; Romans 2:4-5; II Corinthians 7:10; II Tim. 2:25-26.

So since we are to be imitators of God and forgive in the same way God forgives, we would expect the Scriptures to be consistent, stating that the condition of repentance is required to be fulfilled before believers are required to forgive each other's sins. It does.

Jesus stated in Luke 17:3, "If your brother sins, rebuke him; and if he repents, forgive him." Here, the meaning is clear. The word "if" (Grk. ean) introduces the condition for a rebuke and for granting forgiveness. If (subjunctive) a person sins, we must (imperative) rebuke him, and if (subjunctive) he repents, we must (imperative) forgive him. This is as clear a statement as you will find on the subject. Forgiveness is conditioned upon repentance—and this is one of the same criteria that God requires before He forgives sin.

This principle of permitting believers to withhold forgiveness unless the condition of repentance is satisfied is also explicitly seen in Matthew 18:15-17. Compared with the Luke 17:3 text above, the situation is the same. If a brother sins, reprove him; if he listens to you, you have won your brother. Here, the word "reprove" is used rather than "rebuke" and the word "listen" is employed rather than "repent," but the meaning is virtually identical to Luke 17:3. What we see in Matthew 18 is an escalation of the issue and the result if the person fails to repent (i.e. "listen"). If the person fails to repent, we are to shun him in all appropriate ways (v. 17).

These passages in Luke and Matthew give us the connection between sin, rebuke, repentance and forgiveness. Other biblical texts that merely mention "forgiveness" as a concept or an objective do not necessarily proffer every aspect of the doctrine of forgiveness. As such, they must be read in light of the clear conditions expressed in other passages.

Finally, I would make the case that it is harmful to a person to forgive him without requiring repentance. As seen above, the Bible is clear that sin requires a rebuke. Ignoring sin teaches sinners that sin does not bring consequences. This is harmful to their souls. Continuing to have the benefit of a righteous relationship with another and yet remain in sin against that person results in fostering a habituation of sinful inclinations in their soul, which God says brings about suffering and death.

Moreover, since the ultimate purpose of forgiveness is reconciliation, it is meaningless and harmful to forgive when no reconciliation may be had with the sinner. We cannot "walk together" in a biblical manner in righteous peace when the unrepentant sinner walks in unrighteousness. Necessarily, there is a conflict and a want of shalom. Their soul is headed in a different direction than the believer's soul; they are walking away from God and we cannot have fellowship with darkness. God has no intimate fellowship with unrepentant people, and that is the model for Christians as well (See Matt. 18).

Regarding personal anger issues commonly raised by Christian psychologists, these types of psychologists unbiblically make unconditional forgiveness a part of therapy. By contrast, however, if a counselee will not forgive after the offending party has truly repented, the counselee sins, and this kind of unforgiveness may be one of the causes of his or her problems. But this is a separate issue from universal and unconditional forgiveness raised above.

Human beings in the image of God may be angry in appropriate ways (Eph.4:26, 31). There is a time to love and a time to hate (Ecclesiastes 3:8). The notion that Christians cannot ever hate, be angry, or lack forgiveness is an unbiblical concept. God Himself is eternally angry with sin, but He is certainly not a psychological basket case. He loves, hates, and is angry in appropriate ways. Our task as believers is to imitate this. Be angry with and hate sin appropriately (Rom. 12:9) and love what good appropriately. For example, righteous anger can evolve beyond the biblical limits to become malice, slander, and bitterness while, to give another example, an appropriate love of food can evolve beyond the biblical limits into gluttony.

Psychological problems arise from many issues other than lack of forgiveness. For example, a lack of trust in God that He has a particular instance of evil under His sovereign control can cause undue anxiety in one's life. Also, if a counselee's self worth is grounded in the shifting sand of how others treat him (i.e., badly) rather

> than being grounded in the fact that he is a divine image bearer and inherently valuable no matter how badly anyone treats him, he will likely fall into anxiety, depression, and other sorts of psychological maladies. Changing the biblical doctrine of forgiveness will not truly help a counselee. It only makes it worse.
>
> Soli Deo Gloria

I agree with Kevin, and I think it is a helpful tool for people to insist on seeing some sort of repentance and restitution from someone who wrongs you before you trust them again. If they are not even sorry for what they've done, and they refuse to explain why what they did is wrong, then they can't be forgiven, and you can't trust them again.

I think this is the key passage – Luke 17:3-4:

Luke 17:3-4:

3 Be on your guard! If your brother sins, rebuke him; and if he repents, forgive him.

4 And if he sins against you seven times a day, and returns to you seven times, saying, 'I repent,' forgive him."

That's Jesus speaking, there.

Also, I was having a debate with someone who disagrees with all this, and while debating with her, I thought of another example.

Luke 18:9-14:

9 And He also told this parable to some people who trusted in themselves that they were righteous, and viewed others with contempt:

10 "Two men went up into the temple to pray, one a Pharisee and the other a tax collector.

11 The Pharisee stood and was praying this to himself: 'God, I thank You that I am not like other people: swindlers, unjust, adulterers, or even like this tax collector.

12 I fast twice a week; I pay tithes of all that I get.'

13 But the tax collector,standing some distance away, was even unwilling to lift up his eyes to heaven, but was beating his breast, saying, 'God, be merciful to me, the sinner!'

14 I tell you, this man went to his house justified rather than the other; for everyone who exalts himself will be humbled, but he who humbles himself will be exalted."

So again, no forgiveness without repentance.

Forgiveness is what happens when someone who is sinned against treats the sinner as if he had never sinned. It is not on the balance sheet. It is not brought to mind. It is not held against them in the future. The forgiver trusts the sinner again as if the previous sin had never happened.

In divine (vertical) forgiveness, there is no forgiveness without repentance. There are Bible verses above to show that.

My argument is twofold. First, there is a clear teaching of Jesus explaining the sequence of sin and forgiveness. Repentance precedes forgiveness, between humans (Luke 17:3). The verses cited by the forgive without repentance crowd don't show the mechanics of how to forgive, they are making the point that if you want God to forgive you, you should forgive others. The parable in Luke 18:9-14 affirms this again – repentance always precedes forgiveness.

Second, we have an obligation to imitate God, and that means imitating the way he forgives those who sin against him. When I raise that with the unconditional forgiveness crowd, they want to insist that there is a difference, that the word "forgive" means different things. I'm not convinced.

Finally, I do think that forgiving someone is obligatory if they sincerely repent, and even if they screw up again and again. So long as the repentance is sincere, (like if there is restitution and a genuine effort to show an understanding how the sin affected the wronged party in writing), then forgiveness should be automatic. Depending on how bad the sin is, there maybe be more to do than just say "I'm sorry". If the repentance is genuine, then I think the person who is sinned against must forgive, if they expect to be forgiven by God for the things they repent of.

Alan E. Kurschner adds one final point about the unconditional forgiveness view. He argues that there is serious textual doubt about the originality of Luke 23:34a, a text used by the pro-unconditional-forgiveness crowd.He has a journal article coming out on it, but a synopsis of his argument is here.

He also wrote this in a comment on this blog:

> Second, on Matt 6:15, this is what I have to say. Notice the then-clause: "neither will your Father forgive your sins." This would require universalism on the Father's part according to the unconditional interpretation given the first half: "But if you do not forgive others their sins." Since everyone has wronged the Father is the Father required to forgive everyone even if they are not seeking forgiveness?

So I think the case for the forgiveness being conditional on repentance is pretty strong, especially when serious harm has been caused.

# How to apologize effectively: responsibility, restitution, repentance

**Wintery Knight** · 6 December 2014 · Archived copy · Original

I guess everyone already knows about Gary Chapman and his 5 Love Languages. But have you heard of his 5 Love Languages of apologies?

I want to focus on two of them that I think are important, because I don't want people to think that just saying "I'm sorry" is good enough.

Here they are (straight out of his book):

***Apology Language #3: Making Restitution***

In the public arena, our emphasis upon restitution is based upon our sense of justice. The one who commits the crime should pay for the wrongdoing. In contrast, in the private sphere of family and other close relationships, our desire for restitution is almost always based upon our need for love. After being hurt deeply, we need the reassurance that the person who hurt us still loves us.

"How could they love me and do that?" is the question that lingers in our minds. The words "I'm sorry; I was wrong" may not be enough.

For some people, restitution is their primary apology language. For them the statement, "It is not right for me to have treated you that way," must be followed with "What can I do to show you that I still care about you?" Without this effort at restitution, this person will question the sincerity of the apology. They will continue to feel unloved even though you may have said, "I am sorry; I was wrong." They wait for the reassurance that you genuinely love them.

The question, then, is how do we make restitution in the most effective way? Since the heart of restitution is reassuring the spouse or family member that you genuinely love him or her, it is essential to express restitution in the love language of the other person.

[…]If restitution is the primary apology language of an individual, then this becomes the most important part of the apology. "I'm sorry; I was wrong" will never be taken as sincere if these words are not accompanied by a sincere effort at restitution. They wait for the assurance that you still genuinely love them. Without your effort to make amends, the apology will not have the desired results of forgiveness.

***Apology Language #4: Genuinely Repenting***

The word repentance means "to turn around" or "to change one's mind." In the context of an apology, it means that an individual realizes that his or her present behavior is destructive. The person regrets the pain he or she is causing the other person, and he chooses to change his behavior.

Without genuine repentance, the other languages of apology may fall on deaf ears. What people who've been hurt want to know is, "Do you intend to change, or will this happen again next week?"

How then do we speak the language of repentance?

> - **It begins with an expression of intent to change.** When we share our intention to change with the person we have offended, we are communicating to them what is going on inside of us. They get a glimpse of our heart—and this often is the language that convinces them we mean what we say.
> - **The second step down the road of repentance is developing a plan for implementing change.**Often apologies fail to be successful in restoring the relationship because there is no plan for making positive change.
> - **The third step down the road of repentance is implementing the plan.** Following through with the plan

> gives evidence to the offended party that your apology was sincere.

Most people do not expect perfection after an apology, but they do expect to see effort.

Thus, expressing your desire to change and coming up with a plan is an extremely important part of an apology to this person. Inviting the offended person to help you come up with a plan for change is perhaps the best way to effectively show repentance.

Here are some practical tips that I recommend to someone who has done something morally wrong and who wants to apologize.

**To fix the problem you need more than talk**

To me, the only thing that needs an apology is breaking a moral rule – you can't beat someone up for just making a mistake. Whenever someone breaks a moral rule with me, like disrespecting me or being selfish, then I pick out a book for them to read and ask them to read it and then write something about how what they learned in the book applies to what they did to me. I don't pick very long books! But I do this for a very important reason.

The very important reason is that I don't trust people who just agree with me. I don't trust people's words. If someone is really sorry about something, then I want them to read something that describes the moral rule that they broke, and to be willing to listen to the feelings of the person they harmed by breaking that rule. That goes a long way in my mind.

# What happens to your children when they arrive at university?

**Wintery Knight** · 7 December 2014 · Archived copy · Original

This Philadelphia Inquirer editorial is from famous ethics professor Robert P. George.

He writes:

> When many of the flower children and new-left activists of the ’60s became professors and university administrators in the ’70s and ’80s, they did not entirely overthrow the idea of liberal-arts education. Many proclaimed themselves its loyal partisans.Now, it is true that many think it their mission to create soldiers in the battle for “social change” – aspiring ACLU lawyers, Planned Parenthood volunteers, and “community organizers.” But others resist the idea that learning should be instrumentalized. They profess allegiance to the idea that the point of liberal education is to enrich and even liberate the student-learner. That’s what is supposed to be “liberal” about liberal-arts learning – it is supposed to convey the knowledge and impart the intellectual skills and habits of mind that are liberating.Still, there is a chasm between the idea of liberal-arts education as classically conceived, and the conception promoted by some (mercifully, not all) in positions of influence in academic departments today. Many of today’s academic humanists and social scientists have a different view of what students need liberation *from*.In their view (what I will call the revisionist conception), it is liberation from traditional social constraints and moral norms – beliefs, principles, and structures by which earlier generations of Americans and people in the West generally had been taught to govern themselves for the sake of personal virtue and the common good. For them, it has become a dogma that these traditional norms and structures are irrational – “hang ups” that stifle our personalities by impeding desire-fulfillment.
>
> **Liberal-arts learning is thus seen as a way to undermine whatever is left of the old norms and structures.** Teaching and scholarship are meant either (1) to expose the texts and traditions once regarded as the intellectual treasures of our civilization – the Bible, Plato, Augustine, Dante, Aquinas, Chaucer, Shakespeare, Austen, Locke, Gibbon, the authors of *The Federalist*, etc. – as mere propaganda propping up unjust (racist, sexist, classist, homophobic) social orders, or still worse (2) to show how they can be “reappropriated” to subvert allegedly unjust contemporary social orders.
>
> **Beyond this, liberal-arts learning is meant to enable students to become “authentic” – true to themselves – which means, to these liberal-arts revisionists, acting on one’s feelings and desires. For the self is understood precisely as a bundle of feelings and desires, to be acted on without regard to supposedly outmoded moral and social norms.**
>
> **On the revisionist conception of personal authenticity, whatever impedes one from doing what one most wants (unless what one happens to want would be politically incorrect) is a mere hang-up. So religious convictions and traditional moral ideals are to be transcended for the sake of the free and full development of one’s personality – for example, by acting on sexual desires that one might have been “repressing.”**

This is something I often encounter when dealing with college kids, especially with women who went to college and fell under the influence of feminism. Even if they come back to the faith later and want to get serious about it, there is a lingering effect of their indoctrination in college that causes them to doubt the traditional virtues and prefer to make decisions on the basis of feelings. They really, really believe in being true to their feelings, and deciding what to do on the basis of these feelings, rather then thinking about virtues like stewardship, or moral obligations in general. We are not good at loving other people, and focusing on ourselves above all does not help us to do that.

# Jupiter deflects comets and asteroids that might otherwise hit Earth

**Wintery Knight** · 7 December 2014 · Archived copy · Original

Circumstellar Habitable Zone

This is an older article from Astrobiology magazine, but it shows how important Jupiter is for habitability.

Excerpt:

> To a biologist, the ingredients needed to form life include water, heat and organic chemicals. But some in the astrophysics and astronomy community argue that life, at least advanced life, may require an additional component: a Jupiter-sized planet in the solar neighborhood.
>
> "A long-period Jupiter may be a prerequisite for advanced life," said Dr. Alan Boss, a researcher in planetary formation. Boss, who works at the Carnegie Institution of Washington, is a member of the NASA Astrobiology Institute (NAI).
>
> In our own solar system, Jupiter, with its enormous gravitational field, plays an important protective role. By deflecting comets and asteroids that might otherwise hit Earth, Jupiter has helped to create a more stable environment for life to evolve here. It's generally believed that a massive impact was responsible 65 million years ago for wiping out dinosaurs on Earth. If not for Jupiter, it's possible that many other such impacts would have occurred throughout Earth's history, preventing advanced life from ever gaining a foothold.
>
> Jupiter is significant not only for its size but also for its location in our solar system, far from the Sun. Because it orbits at slightly more than 5 AU (astronomical units the distance between the Earth and the Sun is 1 AU), there is plenty of room in the inner part of our Solar System to accommodate a range of smaller planets.
>
> Within the inner solar system there exists a region, known as the habitable zone, where liquid water, and therefore life, can potentially exist on a planet's surface. Without liquid water, life as we know it is not possible. The habitable zone around our Sun stretches roughly from the orbit of Venus to the orbit of Mars. Venus is generally believed to be too hot to support life. Earth, it appears, is just right. And the jury is still out on Mars.
>
> Understanding the role that Jupiter plays in our own Solar System helps astronomers focus their search for habitable planets around other stars. "If," Boss explains, "a Jupiter-mass planet on a stable, circular orbit [around another star at] around 4 to 5 AU was found, without any evidence for other gas giant planets with shorter period orbits, such a discovery would be like a neon light in the cosmos pointed toward that star, saying 'Look here!'. That star would be a prime target for looking for a habitable, Earth-like planet."

Previously, I blogged about how the circular orbit of Saturn and the mass of our star also play a role in making our

planet habitable.

People who are not curious about science sort of take these blessings for granted and push away the God who is responsible for the clever life-permitting design of our habitat. In contrast, theists are curious and excited about what science tells us about the Creator. Theists care about science, but naturalists have to sort of keep experimental science at arm's length – away from the presuppositions and assumptions that allow them to have autonomy to live life without respect, accountability and gratitude. Naturalists take refuge in the relief provided by speculative science and science fiction. They like to listen to their leaders speculate about speculative theories, and willingly buy up books by snarky speculators who think that nothing is really something (Krauss), or who think that the cosmic fine-tuning is not real (Stenger), or who think that silicon-based life is a viable scenario (Rosenberg), etc. But theists prefer actual science. Truth matters to us, and we willingly adjust our behavior to fit the scientific facts.

UPDATE: Rebuttal to me here at The Secular Outpost.

# Should we “automatically believe rape claims” even if they are proven false?

**Wintery Knight** · 8 December 2014 · Archived copy · Original

There was a story about an alleged gang rape published in the Rolling Stone, which is an ultra-left wing magazine, which came under scrutiny from left-wing news sources like The New Republic and The Washington Post because it was not fact-checked and disagreed with known facts.

Yahoo News reports:

> Rolling Stone has clarified its apology over a story that had reported a female student was gang-raped at a University of Virginia fraternity, telling readers the mistakes were the magazine’s fault, not the alleged victim’s.
>
> […]The magazine said that it shouldn’t have agreed to Jackie’s request not to contact the alleged assailants to get their side of the story, out of sensitivity to her. “These mistakes are on Rolling Stone, not on Jackie,” wrote the magazine’s managing editor, Will Dana. “We apologize to anyone who was affected by the story and we will continue to investigate the events of that evening.” The decision not to contact the alleged rapists prompted criticism from other news organizations.
>
> […]The allegations rocked the campus and elevated the issue of sexual assault, leading to protests, a suspension of fraternity activities and an emergency Board of Visitors meeting.
>
> Dana’s updated message added some details calling into question the magazine’s original story. He noted that Phi Kappa Psi has denied the assault, and said it didn’t host an event on the night Jackie alleged she was raped. And Dana said that Jackie is now unsure that the man who allegedly lured her into a room to be gang-raped by seven men, identified as “Drew,” was a member of Phi Kappa Psi.
>
> “According to the Washington Post, ‘Drew’ actually belongs to a different fraternity and when contacted by the paper, he denied knowing Jackie,” Dana wrote in the new note. “Jackie told Rolling Stone that after she was assaulted, she ran into ‘Drew’ at a UVA pool where they both worked as lifeguards. In its statement, the Phi Psi says none of its members worked at the pool in the fall of 2012.” Dana also cited the Post’s account of several of Jackie’s friends doubting her “narrative,” although Jackie told the Post she stood by the account she gave to Rolling Stone.

False rape charges actually occur quite frequently – remember the Duke University rape hoax or the Lehigh University rape hoax or the Hofstra University rape hoax? The left-wing media loves to cover them because it makes men look bad, and makes women think that they need to vote for bigger government in order to protect them from dangerous men.

But what’s been fascinating is the reaction of feminists on the left to the Rolling Stone’s apology. Do they care about fact-checking rape charges, or do they think that all rape charges are “automatically” true?

Here’s a story from the Washington Post with the title “No matter what Jackie said, we should automatically believe rape claims”. (archived here, H/T Mackenzie)

Tweet by the author captured: (H/T The Right Scoop)

Zerlina Maxwell "automatically believe rape claims"

She later changed the title of the article, but the URL still contains the word "automatically". Automatically – believe the charge before checking the facts.

She writes:

> Many people (not least UVA administrators) will be tempted to see this as a reminder that officials, reporters, and the general public should hear both sides of the story and collect all the evidence before coming to a conclusion in rape cases. This is what we mean in America when we say someone is "innocent until proven guilty." After all, look what happened to the Duke lacrosse players.
>
> In important ways, this is wrong. We should believe, as a matter of default, what an accuser says. Ultimately, the costs of wrongly disbelieving a survivor far outweigh the costs of calling someone a rapist. Even if Jackie fabricated her account, UVA should have taken her word for it during the period while they endeavored to prove or disprove the accusation.

The author's bio:

> Zerlina Maxwell is a political analyst, speaker, lawyer, and writer. She typically writes about national politics and cultural issues including domestic violence, sexual assault, and gender inequality.

This is how people on the left form their beliefs in college. They listen to what professors tell them, and insult anyone who questions what they believe by calling them names like "racist", "sexist", "homophobe" or "Islamophobe". This is a college education – at least in non-STEM fields. People pay money to be indoctrinated like this. Lots of money.

Well, maybe this is just a lone outlier, though. One bad feminist who doesn't care about truth.

Nope! Here's famous feminist Jessica Valenti, tweeting this:

Jessica Valenti: fake but accurate

Here's another from Julia Horowitz, reported by Newsbusters: (links removed)

> In a *Politico* magazine article on the UVA rape accusation debacle, in which the accuser's allegations have unraveled, Julia Horowitz, an assistant managing editor at the college paper The Daily Cavalier, claimed **"to let fact checking define the narrative would be a huge mistake."**
>
> [I]t is becoming increasingly clear that the story that blew the lid off campus sexual assault has some major, major holes. Ultimately, though, from where I sit in Charlottesville, to let fact checking define the narrative would be a huge mistake….
>
> It is no accident that the article came out, and it became apparent almost immediately that there were very tangible things we needed to discuss.
>
> Yes, the story was sensational. But even the most sensational story, it seems, can contain frightening elements of truth.
>
> Of course! Facts can be so, well, inconvenient. Viva the "narrative." We're with the Alice in Wonderland Queen: "sentence first — verdict afterwards."

And another one named Melissa McEwan tweeted this:

> I can't state this more emphatically: If Jackie's story is partially or wholly untrue, it doesn't validate the reasons for disbelieving her.
>
> — Melissa McEwan (@Shakestweetz) December 5, 2014

Something false can be true if a feminist says it's true.
and this:

> "Discrepancies" is all it takes to convince most of the world Jackie is a liar. Welcome to the rape culture.
>
> — Melissa McEwan (@Shakestweetz) December 5, 2014

If you insist on fact-based inquiries, you are a rapist.
…before deleting her Twitter account once her craziness was discovered.

**Mainstream media**

Meanwhile in the mainstream media, the Rolling Stone apology was not news, even though the unretracted story was news:

> When the now-retracted article by the *Rolling Stone* magazine was published on November 19 about a brutal gang rape of a first-year student at the Phi Kappa Psi fraternity house at the University of Virginia (UVA), the major broadcast networks rushed to the story and devoted multiple segments to both the article and reaction on the school's campus.
>
> […]The "big three" of ABC, CBS and NBC offered coverage on their evening newscasts over the course of November 23 and 24, with ABC's *World News Tonight* and *NBC Nightly News* covering it on the 23rd. The following night, an additional report was filed by ABC and NBC each to go along with the first from the *CBS Evening News with Scott Pelley*. On those two evenings alone, the total network coverage was 11 minutes and 14 seconds.
>
> While the three programs combined for just under 8 minutes of thorough coverage on Friday night, that does little to excuse their inability to investigate the story independently or even check the facts of the *Rolling Stone* piece on their own.
>
> […]On *NBC Nightly News*, anchor Brian Williams was the sole anchor to admit that his program had filed stories based off of the very article that he and NBC's Kristen Welker would now report had major **"discrepancies."**

> Still, the networks had pitfalls in their coverage of the retraction. As suggested two sentences prior, ABC and CBS failed to join with NBC in not admitting to having previously blindly covered this subject.
>
> Also, CBS and NBC fell short in only interviewing students who, respectively, suggested pieces like this are why victims hesitate coming forward and dismissed the fact that the story is now in severe doubt because the issue of sexual assault is **"still a problem"** on college campuses **"even if it's not real."**

Now, I thought that people who go to journalism school did nothing but learn how to discover the truth about a story. I thought that it was like police detective work – interviewing witnesses, checking facts, corroborating testimony, digging through records. How wrong I was. But I think I'll be right about something else – I think a lot of people who read the original story will believe it based on intuitions and emotions, even now after significant portions of the story conflict with known facts. They'll believe it because that's what they've been brainwashed in non-STEM programs to believe. They've become incapable of critical thinking, incapable of updating their views according to evidence and incapable of respectful dialog with those who disagree with them.

# Survey of U.S. military personnel shows steep drop in morale from 2009 to 2014

**Wintery Knight** · 8 December 2014 · Archived copy · Original

Military morale from 2009-2014 (Source: Military Times)
Story from the Military Times.

Excerpt:

> According to the Military Times survey, active-duty troops reported a stunning drop in how they rated their overall quality of life: Just 56 percent call it good or excellent, down from 91 percent in 2009. The survey, conducted in July and August, found that 73 percent of troops would recommend a military career to others, down from 85 percent in 2009. And troops reported a significant decline in their desire to re-enlist, with 63 percent citing an intention to do so, compared with 72 percent a few years ago.
>
> […]Survey data show that service members are also feeling pain in their own wallets. Congress this year capped the military pay raise at 1 percent, rather than the 1.8 percent that would have kept pace with average annual growth in private-sector wages. It was the first military pay raise since 1999 that did not at least keep pace with private-sector wages, and it was also the lowest annual military pay raise in 40 years.
>
> To save money, the Pentagon had sought to roll back the tax-free housing benefit provided to troops by, in effect, making troops pay 5 percent of their housing with out-of-pocket cash. The new deal on Capitol Hill will result in next year's housing allowance covering 99 percent of estimated costs and troops themselves covering the 1 percent shortfall. Service members are unlikely to see an outright reduction in their housing allowance unless they change duty stations, but rates for troops moving into new areas will be set slightly lower when compared to projected housing costs.
>
> Several services also have cut pay for special duty assignments — such as recruiters, divers, drill sergeants and others — while promotions in some fields slow as competition for jobs during a drawdown heats up. And of course, those troops who have frequently collected hazardous duty and deployment pay over the last decade may now have fewer opportunities to do so.
>
> In 2009, 87 percent of active-duty troops who participated in Military Times' survey rated their pay and

> allowances “good” or “excellent.” This year, the figure was just 44 percent. When asked how quality of life might change over the next several years, 70 percent of respondents predicted it would decline further.
>
> A Navy fire controlman chief with 10 deployments said budget fears are contributing to a feeling of distrust and abandonment. “If sailors are worried about not getting paid, how am I supposed to do my job?” he said. “I’m not an effective warfighter if I don’t have the backing of my government at home.”
>
> A pervasive sense of pessimism about the post-9/11 wars may also contribute to the overall feeling of dissatisfaction among troops and a feeling of detachment from the decision-makers who sent them to those fights. Of those surveyed, 52 percent said they had become more pessimistic about the war in Afghanistan in recent years. Nearly 60 percent felt the war in Iraq was somewhat unsuccessful or not at all successful.
>
> […]Troops today are pocketing far smaller annual pay raises. The 2014 bump of just 1 percent was the smallest in the 41-year history of the all-volunteer force. That compares with 3.9 percent in 2009 — and 6.9 percent in 2002. Congress may well vote to authorize just another 1 percent in 2015. In the best-case scenario, that might go to 1.8 percent.
>
> On top of that, the once-vast pool of cash that flowed directly into service members’ pockets in the form of combat pays and re-enlistment bonuses has dried up. In 2014, troops received $3.8 billion in special pays and incentive pays, down from $6.1 billion, adjusted for inflation, in 2003, according to VisualDoD, a company that tracks Pentagon spending. For 2015, that budget is expected to fall to $3.5 billion.

Now we were in both Aghanistan and Iraq in 2009, at the beginning of the survey period, and morale was very high. What changed in 2009? Soldiers who are deployed want to win a war – they don’t want to be stuck in limbo. They don’t want a leader who views winning a war as an excessive use of force.

UPDATE: Defense policy expert Max Boot has an article explaining why he thinks morale is dropping at Commentary magazine.

# The connection between our moon, plate tectonics and habitability

**Wintery Knight** · 8 December 2014 · Archived copy · Original

I found an interview with Peter Ward (atheist) and Donald Brownlee (agnostic) discussing astrobiology in Forbes magazine. They were asked about how important plate tectonics are for a planet to be able to support complex life.

Excerpt:

> **Astrobiologists often cite the sheer numbers of stars and galaxies as evidence that complex life elsewhere must surely have evolved somewhere. But is probability enough?**
>
> Without a moon, we don't have any idea of how commonly a planet could have the long-term stability needed for complex life. Until we "get" that, going to the sheer numbers argument is useless. Without that moon-forming collision, we wouldn't have plate tectonics. Without plate tectonics, we might have microbes but we'd never get to animals.
>
> **What about the rarity of earth's crustal dichotomy of oceans and continents?**
>
> If you can't make granite, you're not going to have continents. But granite formation is a consequence of our moon-forming collision. That scrambled the entire density of our crust. Mars doesn't have granite; all it's got is this volcanic basalt. To build granite you need a planetary subduction [or plate tectonic] process.
>
> **In triggering complex life, how important were plate tectonics' role in the continual recycling of earth's atmosphere?**
>
> It's this recycling that allows for a very rich planetary atmosphere with an extended life. Photosynthesis gets you oxygen, but how do you get enough photosynthesis to get oxygen at 10 to 20 percent? You've got to have a shoreline next to a rich sea with rocks eroding into it in order to provide the nitrogen and phosphates for [plant] photosynthesis.

This article from Astrobiology explains more about the importance of plate tectonics.

Excerpt:

> Plate tectonics is the process of continents on the Earth drifting and colliding, rock grinding and scraping, mountain ranges being formed, and earthquakes tearing land apart. It makes our world dynamic and ever-changing. But should it factor into our search for life elsewhere in the universe?
>
> Tilman Spohn believes so. As director of the German Space Research Centre Institute of Planetary Research, and chairman of ESA's scientific advisory committee, he studies worlds beyond our Earth. When looking into the relationship between habitability and plate tectonics, some fascinating possibilities emerged.
>
> It is thought that the best places to search for life in the Universe are on planets situated in "habitable zones" around other stars. These are orbital paths where the temperature is suitable for liquid water; not so close to the star that it boils away, and not so far that it freezes. Spohn believes that this view may be outdated. He elaborates, "you could have habitats outside those, for instance in the oceans beneath ice covers on the Galilean satellites, like Europa. But not every icy satellite would be habitable. Take Ganymede, where the ocean is trapped between two layers of ice. You are missing a fresh supply of nutrition and energy."
>
> So planets and moons that lie beyond habitable zones could host life, so long as the habitat, such as an ocean, is not isolated. It needs access to the key ingredients of life, including hydrogen, oxygen, nitrogen, phosphorous and sulphur. These elements support the basic chemistry of life as we know it, and the material, Spohn argues, must be regularly replenished. Nature's method of achieving this on the Earth appears to be plate tectonics.
>
> Spohn found that the further he delved into the issue, the more important plate tectonics seemed to be for life. For example, it is believed that life developed by moving from the ocean to the kind of strong and stable rock

> formations that are the result of tectonic action. Plate tectonics is also involved in the generation of a magnetic field by convection of Earth's partially molten core. This magnetic field protects life on Earth by deflecting the solar wind. Not only would an unimpeded solar wind erode our planet's atmosphere, but it also carries highly energetic particles that could damage DNA.
>
> Another factor is the recycling of carbon, which is needed to stabilize the temperature here on Earth. Spohn explains, "plate tectonics is known to recycle carbon that is washed out of the atmosphere and digested by bacteria in the soil into the interior of the planet from where it can be outcast through volcanic activity. Now, if you have a planet without plate tectonics, you may have parts of this cycle, but it is broken because you do not have the recycling link."
>
> It has also been speculated that the lack of tectonic action on Venus contributed to its runaway greenhouse effect, which resulted in the immense temperatures it has today.

Most planets don't have a moon as massive as ours is, and the collision that formed the moon is very fine-tuned for life. This is just one of the many factors that needs to be present in order to have a planet that supports complex, carbon-based life.

# Democrat leak of counter-terrorism secrets endangers Americans and alienates our allies

**Wintery Knight** · 9 December 2014 · Archived copy · Original

First off, let's get the facts on the report that the Democrats want to release to the public, and to our enemies, today.

This article from the left-leaning McClatchy DC has most of the facts.

It says:

> U.S. forces and diplomatic missions overseas braced on Monday for the release of the public version of a long-awaited Senate Intelligence Committee report into the CIA's use of torture after a U.S. intelligence community warning of a "heightened potential" for a "violent response," U.S. officials said.
>
> The report's roughly 500-page executive summary, which the White House said would be unveiled on Tuesday, excoriates the CIA, concluding that it didn't gain significant intelligence or the cooperation of detainees by using the harsh interrogation methods, had wrongly subjected some people to the procedures and misled the White House and Congress about the results.
>
> **The Democrat-led committee**'s conclusions, which were obtained in April by McClatchy, are being fiercely disputed by current and former CIA officials, former President George W. Bush and senior officials of his administration, and some lawmakers, mostly Republicans. They contend that the program produced valuable information that disrupted terror plots and led to the capture of key al Qaida operatives.
>
> […]The committee voted in December 2012 to approve a final draft of a 6,300-page classified version of the report and an executive summary, findings and conclusions for release to the public. **But the release was delayed by an uproar over CIA monitoring of the committee staff's computers and a battle over administration demands to black out information that it contended could reveal the identities of undercover CIA officers and anger foreign governments.**

So this is the issue – will CIA personnel be compromised? Will CIA techniques be compromised? Will America's allies in national security be compromised? Will Americans die because our enemies are able to use this information to their advantage?

Let's find out some more about the report:

> Minority Republicans on the Senate Intelligence Committee and the CIA were expected to release separate rebuttals rejecting the findings shortly after the report is made public.
>
> […]The investigation has been marred by an unprecedented breakdown in relations between the committee and the CIA over the agency's monitoring of computers used by the Democratic staff to review the more than 6 million pages of emails, cables and other top-secret documents on which the report is based.
>
> The CIA accused the Democratic staffers of removing without authorization highly classified documents from a top-secret agency reading room in Northern Virginia. The Justice Department declined to open criminal investigations into either matter, and – according to the Huffington Post – the Senate Sergeant at Arms Office, the chamber's law enforcement agency, dropped an investigation looking into the alleged classified document removal allegation.

Let me be clear about this. Enhanced interrogation techniques were used on the mastermind of the 9/11 attack in order to prevent a similar 9/11-style attack on Los Angeles.

These are the facts:

> The Central Intelligence Agency told CNSNews.com today that it stands by the assertion made in a May 30, 2005 Justice Department memo that the use of "enhanced techniques" of interrogation on al Qaeda leader Khalid Sheik Mohammed (KSM) — including the use of waterboarding — caused KSM to reveal information that allowed the U.S. government to thwart a planned attack on Los Angeles.
>
> Before he was waterboarded, when KSM was asked about planned attacks on the United States, he ominously told his CIA interrogators, "Soon, you will know."
>
> According to the previously classified May 30, 2005 Justice Department memo that was released by President Barack Obama last week, the thwarted attack — which KSM called the "Second Wave"– planned " 'to use East Asian operatives to crash a hijacked airliner into' a building in Los Angeles."
>
> KSM was the mastermind of the first "hijacked-airliner" attacks on the United States, which struck the World Trade Center in New York and the Pentagon in Northern Virginia on Sept. 11, 2001.
>
> **After KSM was captured by the United States, he was not initially cooperative with CIA interrogators. Nor was another top al Qaeda leader named Zubaydah. KSM, Zubaydah, and a third terrorist named Nashiri were the only three persons ever subjected to waterboarding by the CIA. (Additional terrorist detainees were subjected to other "enhanced techniques" that included slapping, sleep deprivation, dietary limitations, and temporary confinement to small spaces — but not to water-boarding.)**

Everyone who opposes enhanced interrogation techniques – be it the ACLU, libertarians, leftists, etc. – were *all in favor of thousands of American civilians dying in another 9/11-style attack.* Obama was in favor of that attack. Holder was in favor of that attack. Feinstein was in favor of that attack. That's what it means for Democrats to coddle terrorists in order to sound moral by embracing evil as if it were good – *it means Americans die*. Democrats would rather that Americans die than that we poured water on men who planned terrorist attacks.

Here is an editorial that appeared in the leftist Washington Post by Jose Rodriguez, a 31-year veteran of the CIA who knows something about how enhanced interrogation techniques were used.

He writes about the Democrat's report:

> The report's leaked conclusion,which has been reported on widely, that the interrogation program brought no intelligence value is an egregious falsehood; it's a dishonest attempt to rewrite history. I'm bemused that the Senate could devote so many resources to studying the interrogation program and yet never once speak to any of the key people involved in it, including the guy who ran it (that would be me).
>
> According to news accounts of the report, Feinstein and her supporters will say that the CIA violated American principles and hid the ugly truth from Congress, the White House and the public. When the report comes out, I expect that few of the critics who will echo Feinstein's charges will have read it — and far fewer will read or understand the minority response and the CIA's rebuttal.
>
> The interrogation program was authorized by the highest levels of the U.S. government, judged legal by the Justice Department and proved effective by any reasonable standard. The leaders of the Senate and House Intelligence Committees and of both parties in Congress were briefed on the program more than 40 times between 2002 and 2009. But Rep. Nancy Pelosi (D-Calif.) tried to deny that she was told in 2002 that detainees had been waterboarded. That is simply not true. I was among those who briefed her.
>
> There's great hypocrisy in politicians' criticism of the CIA's interrogation program. In the wake of the Sept. 11, 2001, attacks, lawmakers urged us to do everything possible to prevent another attack on our soil. Members of Congress and the administration were nearly unanimous in their desire that the CIA do all that it could to debilitate and destroy al-Qaeda. The CIA got the necessary approvals to do so and kept Congress briefed throughout. But as our successes grew, some lawmakers' recollections shrank in regard to the support they once offered.

> […]On May 26, 2002, Feinstein was quoted in the New York Times saying that the attacks of 9/11 were a real awakening and that it would no longer be "business as usual." The attacks, she said, let us know "that the threat is profound" and "that we have to do some things that historically we have not wanted to do to protect ourselves."
>
> […]**If Feinstein, Rockefeller and other politicians were saying such things in print and on national TV, imagine what they were saying to us in private. We did what we were asked to do, we did what we were assured was legal, and we know our actions were effective. Our reward, a decade later, is to hear some of these same politicians expressing outrage for what was done and, even worse, mischaracterizing the actions taken and understating the successes achieved.**
>
> **I'm confident that my former CIA colleagues who are still on the job will do what is necessary to protect the nation from new Islamic State and continuing al-Qaeda threats. But in the back of their minds will be the nagging thought that, as they carry out legal, authorized and necessary actions, they may be only a few years away from being criticized and second-guessed by the people who today are urging them onward to the "gates of hell."**

His previous Washington Post editorial is here.

So, how about you? Would you like to work for the CIA right now? Would you like to protect America from attacks like the Los Angeles attack, and then have your government come after you as a scapegoat, because it might help them to win an election? That's what's happening to current employees of the CIA who did their best to protect us – more than the corrupt community organizer and his gangster attorney general ever did.

I don't know if I need to keep saying this, but waterboarding is a standard part of SERE training. We do it to all our pilots to train them in the event that they are captured.

# San Jose State University kicks Ratio Christi club off its campus

**Wintery Knight** · 9 December 2014 · Archived copy · Original

Story from the Ratio Christi blog.

Here's the story:

> On Wednesday, October 8, 2014, the Ratio Christi chapter at San Jose State University (SJSU) received a letter from the university stating that the club had been "de-recognized." In the letter, school officials explained their actions to be in compliance with a new California State University Executive Order regarding how an organization selects its officers.
>
> Ratio Christi, like many other campus Christian organizations, requires that chapter officers adhere to the Christian faith and biblical beliefs. This means that non-Christians, or Christians who do not feel it is necessary to follow New Testament principles as a guide for their daily lives, are not eligible for officer positions in the group. The State of California now deems this as "discriminatory," and punishable by de-recognition.
>
> "Colleges and universities should be encouraging student leadership, not stifling it," said Ratio Christi President Rick Schenker. "All college students, including religious students, should have the right to form groups around shared beliefs and choose leaders who reflect those beliefs without being shut down and kicked off campus. Imagine the College Democrats being required to have a Republican student leader, or the local chapter of PETA being required to have a meat-eating leader. The results of the Cal State policy are simply ridiculous."
>
> Disturbingly, this has already happened to all twenty-three of InterVarsity Christian Fellowship's chapters on California campuses in September and at Vanderbilt University in 2012.
>
> In their letter to the SJSU Ratio Christi chapter, school officials explained the consequences of being "de-recognized," a list that ranged from not being eligible for student funding and financial services to not being allowed to participate in student organization fairs, ceremonies, or training.

This is the Ratio Christi chapter that is run by Jane Pantig, who was mentioned here in a previous blog post.

The troubling thing about these rules is that it is also a violation of fundamental human rights, as this USA Today editorial explains:

> In the massive California State University system, as at some other universities, new anti-discrimination rules for student groups mean it can no longer be required that the president of the Christian student fellowship is Christian, or that the head of the Muslim association is Muslim, or that the officers of any group buy into the interests and commitments of that group.
>
> Student clubs that refuse to accept the new rules will find themselves on the sidelineswhen it comes to meeting space, recruitment opportunities and other valuable perks that go with being an officially recognized group.
>
> Such is the fate that has befallen InterVarsity Christian Fellowship, a national campus ministry that finds itself "derecognized" in the 450,000-student Cal State system for insisting that student leaders of its campus chapters affirm the basic tenets of evangelical belief.
>
> […]InterVarsity estimates the cost of operations could rise by many thousands of dollars annually on some of the Cal State campuses. This is part of the reason why InterVarsity is continuing to pray and plead for relief from the new policy.
>
> University officials and state lawmakers should reconsider, and not merely for the sake of InterVarsity. In addition to the freedom from discrimination, there are other relevant freedoms to factor: freedom of religion, freedom of association and our freedom to exercise common sense.

Loss of club status typically means 1) having to pay to reserve rooms, which is thousands of dollars per year, 2) losing access to student fairs, which means less recruitment, and 3) no official standing when speaking to faculty, students or administrators of the university.

I guess I would advise Christians who are not involved in politics to get more informed and involved. California is a Democrat-run state from top to bottom. It sounds nice to pious ears to say that we should be focused on the gospel and praise hymns, but if you ignore politics, politics will come after you. And that's why every Christian should have a broad, comprehensive worldview that takes into account the Bible and integrates it with areas outside the Bible, like economics. The alternative is to feel pious and yet vote for a political party that makes the practice of Christianity illegal, and believe me, I know many people who call themselves Christians who do exactly that. And they are proud of it. I once had a hygienist working on my teeth who claimed to be a Christian and yet she was constantly bashing Republicans. She had the discipline to learn how to clean my teeth, but not to develop a comprehensive Christian worldview.

The good news I have about this story is that these de-recognition attacks can be defeated, if you get a lawyer from a good organization like the Alliance Defending Freedom.

Look at this story from September 2014:

> At the University of North Carolina at Chapel Hill a Christian fraternity, Alpha Iota Omega (AIO), was stripped of its recognition after UNC administrator Jonathan Curtis declared that the fraternity was required to add an unconstitutional "nondiscrimination" clause to its student group constitution. AIO objected to the "nondiscrimination" clause because it would have forbidden the group from considering religion when determining "membership and participation" in the group. FIRE wrote to the university on AIO's behalf outlining the group's rights to freedom of association and religious liberty but the university was unmoved. FIRE teamed up with the Alliance Defense Fund and filed suit, and eventually AIO was granted the right not to enact the nondiscrimination clause.

But again, we have to have Christians getting serious about getting married and raising children who will go on to get the law degrees we need to fight these battles. I think a lot of Christians think that marriage is more like ziplining, surfing or skydiving than work, though. They want it to be free and easy and emotion-driven. But there's a cost to this approach. We don't have the influence in society to defend ourselves when the secular leftists come after us. We are paying them to do this to us, through taxes.

# Is silicon-based life a possible alternative for carbon-based life?

**Wintery Knight** · 9 December 2014 · Archived copy · Original

In a recent debate, atheist philosopher Alex Rosenberg responded to the cosmic fine-tuning argument presented by William Lane Craig by asserting that complex life could be other than it is. He specifically mentioned silicon-based life.

Let's see what scientists think of his speculation, using this article from Scientific American.

Excerpt:

> Group IV of the Periodic Table of the Elements contains carbon (C), silicon (Si) and several heavy metals. Carbon, of course, is the building block of life as we know it. So is it possible that a planet exists in some other solar system where silicon substitutes for carbon? Several science fiction stories feature silicon-based life-forms–sentient crystals, gruesome golden grains of sand and even a creature whose spoor or scat was bricks of silica left behind. The novellas are good reading, but there are a few problems with the chemistry.
>
> Indeed, carbon and silicon share many characteristics. Each has a so-called valence of four–meaning that individual atoms make four bonds with other elements in forming chemical compounds. Each element bonds to oxygen. Each forms long chains, called polymers, in which it alternates with oxygen. In the simplest case, carbon yields a polymer called poly-acetal, a plastic used in synthetic fibers and equipment. Silicon yields polymeric silicones, which we use to waterproof cloth or lubricate metal and plastic parts.
>
> But when carbon oxidizes–or unites with oxygen say, during burning–it becomes the gas carbon dioxide; silicon oxidizes to the solid silicon dioxide, called silica. The fact that silicon oxidizes to a solid is one basic reason as to why it cannot support life. Silica, **or sand** is a solid because silicon likes oxygen all too well, and the silicon dioxide forms a lattice in which one silicon atom is surrounded by four oxygen atoms. Silicate compounds that have $SiO_4^{-4}$ units also exist in such minerals as feldspars, micas, zeolites or talcs. And these solid systems pose disposal problems for a living system.

So, first of all, it makes SAND. Second of all, it is so attracted to oxygen that it can't easily join to make any other polymers that could be used in the chemistry of the minimal functions of a living system.

More:

> Also consider that a life-form needs some way to collect, store and utilize energy. The energy must come from the environment. Once absorbed or ingested, the energy must be released exactly where and when it is needed. Otherwise, all of the energy might liberate its heat at once, incinerating the life-form. In a carbon-based world, the basic storage element is a carbohydrate having the formula $C_x(HOH)_y$. This carbohydrate oxidizes to water and carbon dioxide, which are then exchanged with the air; the carbons are connected by single bonds into a chain, a process called catenation. A carbon-based life-form "burns" this fuel in controlled steps using speed regulators called enzymes.
>
> These large, complicated molecules do their job with great precision only because they have a property called "handedness." When any one enzyme "mates" with compounds it is helping to react, the two molecular shapes fit together like a lock and key, or a shake of hands. In fact, many carbon-based molecules take advantage of right and left-hand forms. For instance, nature chose the same stable six-carbon carbohydrate to store energy both in our livers (in the form of the polymer called glycogen) and in trees (in the form of the polymer cellulose).
>
> Glycogen and cellulose differ mainly in the handedness of a single carbon atom, which forms when the carbohydrate polymerizes, or forms a chain. Cellulose has the most stable form of the two possibilities; glycogen is the next most stable. Because humans don't have enzymes to break cellulose down into its basic

> carbohydrate, we cannot utilize it as food. But many lower life-forms, such as bacteria, can.
>
> In short, handedness is the characteristic that provides a variety of biomolecules with their ability to recognize and regulate sundry biological processes. And silicon doesn't form many compounds having handedness. Thus, it would be difficult for a silicon-based life-form to achieve all of the wonderful regulating and recognition functions that carbon-based enzymes perform for us.

The troubling thing I find about atheists is that they seem to be under the impression that an alternative speculative explanation is a refutation of an argument that is based in evidence.

So it goes like this:

- origin of the universe? I can speculate about a naturalistic alternative cosmology which is falsified by observations
- cosmic fine-tuning? I can speculate about an untestable multiverse
- origin of life? I can speculate about unobservable aliens who seeded the Earth with life
- Cambrian explosion? I can speculate about intermediary fossils that have not yet been discovered
- habitability? I can speculate that habitable planets exist just outside the boundary of the observable universe
- resurrection of Jesus? I can speculate that Jesus had an unknown, identical twin brother who showed up when he died and took his place

I think that if we are going to make a worldview, we should ground it in the evidence we have today. We should not have faith in speculative theories that we heard about on *Star Trek*. Seriously.

# New study: minimum wage hikes hurt low-skill workers during last recession

**Wintery Knight** · 10 December 2014 · Archived copy · Original

The American Enterprise Institute reports. (H/T Jay Richards tweet)

Higher unemployment:

> A new NBER working paper from Jeffrey Clemens and Michael Wither of the University of California, San Diego, suggests that the 30% increase in the average effective minimum wage over the late 2000s "reduced the national employment-to-population ratio — the share of adults with any kind of job — by 0.7 percentage point" between December 2006 and December 2012.
>
> That works out to 14% of the total working-age decline during that period. Clemens and Wither basically looked at what happened to workers in states that were affected by federal minimum wage hikes versus what happened in states that weren't. They also adjusted for the differing state-level impact of the Great Recession.

Low-skill workers hurt the most:

> Now what's particularly interesting in what Clemens and Wither found is that the minimum wage hikes made it harder for low-income workers to climb the ladder. From "The Minimum Wage and the Great Recession: Evidence of Effects on the Employment and Income Trajectories of Low-Skilled Workers":
>
> … **we find that binding minimum wage increases had significant, negative effects on the employment and income growth of targeted workers.** Lost income reflects contributions from employment declines, increased probabilities of working without pay (i.e., an "internship" effect), and lost wage growth associated with reductions in experience accumulation….
>
> **We also present evidence of the minimum wage's effects on low-skilled workers' economic mobility.** We find that binding minimum wage increases significantly reduced the likelihood that low-skilled workers rose to what we characterize as lower middle class earnings. This curtailment of transitions into lower middle class earnings began to emerge roughly one year following initial declines in low wage employment. Reductions in upward mobility thus appear to follow reductions in access to opportunities for accumulating work experience.
>
> But this paper is one of several recently that have outlined the negative employment effect of minimum wage hikes. In "More on Recent Evidence on the Effects of Minimum Wages in the United States," researchers David Neumark, J.M. Ian Salas, William Wascher conclude "the best evidence still points to job loss from minimum wages for very low-skilled workers – in particular, for teens."
>
> And the nonpartisan Congressional Budget Office find that a $10.10 federal minimum wage option would reduce total employment by about 500,000 workers, or 0.3 percent" in 2016.

So that's 3 studies from 3 different sources, that all agree that raising the minimum wage will definitely cost jobs. The real minimum wage is, of course, zero. That's what you get paid when your employer can't afford to pay you what government tells them to pay you.

# A response to Judith Jarvis Thompson's violinist argument for abortion rights

**Wintery Knight** · 10 December 2014 · Archived copy · Original

Amy posted this on the Stand to Reason blog, and it got a ton of comments.

Excerpt:

> The "Violinist" argument for keeping abortion legal is an illustration created by Judith Jarvis Thompson for the purpose of clarifying our moral intuitions about abortion by considering a parallel situation. The Violinist story goes like this (see the full, original story here): A woman wakes up to find she's been attached without her consent to a famous violinist who needs the help of her kidneys for the next nine months in order to live. If the woman detaches herself from him, he will die.
>
> According to Thompson, since it's clear that the woman ought not be forced by law to remain attached to this man (though he is a person with rights), in the same way, the law ought not force a woman to remain attached to an unborn child who is similarly using her body to live (though he is a person with rights).
>
> In response to this bodily rights argument, Stephen Wagner, Josh Brahm, and Timothy Brahm (along with others—see acknowledgments) have developed a new illustration that more closely parallels the situation of a pregnant woman (including those who are pregnant by rape), which they call "The Cabin in the Blizzard." From Stephen Wagner's paper, "De Facto Guardian and Abortion":
>
> Imagine that a woman named Mary wakes up in a strange cabin. Having gone to sleep in her suburban home the night before, she starts to scream frantically. She goes to the window and sees snow piled high. It appears she is snowed in. On the desk by the window, she finds a note that says,
>
> "You will be here for six weeks.
> You are safe, and your child is, too.
> There is plenty of food and water."
>
> Since she just gave birth a week ago, she instinctively begins tearing through each room of the cabin looking for her infant son. She finds an infant in a second room, but it is not her infant. It is a girl who appears to be about one week old, just like her son. Mary begins to scream.
>
> Pulling herself together, she goes to the kitchen area of the cabin and finds a huge store of food and a ready source of water. The baby begins to cry, and she rightly assesses that the baby is hungry. Mary sees a three-month supply of formula on the counter in the kitchen area.
>
> Now imagine that the police show up at the cabin six weeks later, and Mary emerges from the cabin. After determining she is in good health, albeit a good bit frazzled, one policeman says, "We've been investigating this situation for some time. The Behavioral Psychologists from the nearby University of Lake Wobegon are responsible. We'll bring them to justice. We're so glad you're okay. Is there anyone else in the cabin?"
>
> Mary said quietly, "There was."
>
> "There was?" The police hurry past her to the cabin. They search the cabin and find the infant formula unopened on the counter. They find the infant dead on a bed. The coroner confirms that the infant died from starvation.
>
> We can see that Mary was wrong for not feeding the baby in this situation, regardless of the fact that she did not consent to these demands being placed on her. As Wagner points out, our moral intuition tells us her obligation to feed the child exists even if her only option is to use her own body to breastfeed that child, causing her great discomfort.

Another problem with the violinist argument is that it neglects the fact that the baby is there *as a result of the*

*woman's own decision to have sex without being ready for a baby.* In the violinist example, the woman is a helpless victim of some group of music lovers. But in a real pregnancy, the woman had to have made a decision that resulted in the baby being born, (except in the case of rape).

Triablogue explains it thus:

> Thompson seems to make a distinction between consent to pregnancy and consent to sex (as Beckwith and others point out). But it seems that pregnancy is the designed result of sex, even though it may not be the desired result. It would seem that our sex organs have the purpose of being ordered towards procreation. Applying this to the violinist then: What if I engaged in an activity, say, spelunking, that regularly created rare kidney diseases in violinists? Say that every time I dropped 50 ft into the cave, a violinist was almost sure to develop the disease that only I had the blood type to correct or fix. If I did so, should I not be hooked up to him, voluntarily or not? Say that there was protection, some kind of spelunking helmet. Say that it was not 100% effective. If my helmet ripped, should I be attached to the violinist? Or say I tried to "pull up" before I hit 50 ft. Unfortunately, it felt so good to decend that I pulled up a little too late and my right foot passed the 50 ft mark. Should I be attached to the violinist? I don't see why not. Indeed, say that the statistical evidence was that the first two people that ever spelunked together would eventually cause 6 billion violinists to come down with rare kidney diseases, I dare say the Society of Music Lovers, and almost everyone else for that matter, would call for *abstaining from spelunking* unless you agreed to take care of the violinists until they got better. This seems fatal to Thompson's argument.

It's very helpful illustration for dealing with pro-abortion people who admit that unborn children are human persons, but who still think that women should have a right to terminate their pregnancy.

# Astronomer Guillermo Gonzalez lectures on intelligent design and habitability

**Wintery Knight** · 10 December 2014 · Archived copy · Original

The 5 video clips that make up the full lecture.

The playlist for all 5 clips is here.

**About the speaker**

> Guillermo Gonzalez is an Associate Professor of Physics at Grove City College. He received his Ph.D. in Astronomy in 1993 from the University of Washington. He has done post-doctoral work at the University of Texas, Austin and at the University of Washington and has received fellowships, grants and awards from such institutions as NASA, the University of Washington, the Templeton Foundation, Sigma Xi (scientific research society) and the National Science Foundation.

Learn more about the speaker here.

**The lecture**

Here's part 1 of 5:

And the rest are here:

- Part 2 of 5
- Part 3 of 5
- Part 4 of 5
- Part 5 of 5

**Topics:**

- What is the Copernican Principle?
- Is the Earth's suitability for hosting life rare in the universe?
- Does the Earth have to be the center of the universe to be special?
- How similar to the Earth does a planet have to be to support life?
- What is the definition of life?
- What are the three minimal requirements for life of any kind?
- Requirement 1: A molecule that can store information (carbon)
- Requirement 2: A medium in which chemicals can interact (liquid water)
- Requirement 3: A diverse set of chemical elements
- What is the best environment for life to exist?
- Our place in the solar system: the circumstellar habitable zone
- Our place in the galaxy: the galactic habitable zones
- Our time in the universe's history: the cosmic habitable age
- Other habitability requirements (e.g. – metal-rich star, massive moon, etc.)
- The orchestration needed to create a habitable planet
- How different factors depend on one another through time
- How tweaking one factor can adversely affect other factors
- How many possible places are there in the universe where life could emerge?

- Given these probabilistic resources, should we expect that there is life elsewhere?
- How to calculate probabilities using the “Product Rule”
- Can we infer that there is a Designer just because life is rare? Or do we need more?

The corelation between habitability and measurability.

- Are the habitable places in the universe also the best places to do science?
- Do the factors that make Earth habitable also make it good for doing science?
- Some places and times in the history of the universe are more habitable than others
- Those exact places and times also allow us to make scientific discoveries
- Observing solar eclipses and structure of our star, the Sun
- Observing stars and galaxies
- Observing the cosmic microwave background radiation
- Observing the acceleration of the universe caused by dark matter and energy
- Observing the abundances of light elements like helium of hydrogen
- These observations support the big bang and fine-tuning arguments for God’s existence
- It is exactly like placing observatories on the tops of mountains
- There are observers existing in the best places to observe things
- This is EXACTLY how the universe has been *designed for making scientific discoveries*

This lecture was delivered by Guillermo Gonzalez in 2007 at the University of California at Davis.

# Three UVA students who knew “Jackie” challenge Rolling Stone rape story

**Wintery Knight** · 11 December 2014 · Archived copy · Original

This is from the leftist Washington Post, of all places.

Excerpt:

> It was 1 a.m. on a Saturday when the call came. A friend, a University of Virginia freshman who earlier said she had a date that evening with a handsome junior from her chemistry class, was in hysterics. Something bad had happened.
>
> Arriving at her side, three students —“Randall,” “Andy” and “Cindy,” as they were identified in an explosive Rolling Stone account — told The Washington Post that they found their friend in tears. Jackie appeared traumatized, saying her date ended horrifically, with the older student parking his car at his fraternity, asking her to come inside and then forcing her to perform oral sex on five men.
>
> In their first interviews about the events of that September 2012 night, the three friends separately told The Post that their recollections of the encounter diverge from how Rolling Stone portrayed the incident in a storyabout Jackie’s alleged gang rape at a U-Va. fraternity. The interviews also provide a richer account of Jackie’s interactions immediately after the alleged attack and suggest that the friends are skeptical of her account.
>
> The scene with her friends was pivotal in the article, as it alleged that the friends were callously apathetic about a beaten, bloodied, injured classmate reporting a brutal gang rape at the Phi Kappa Psi fraternity. The account alleged that the students worried about the effect it might have on their social status and how it might reflect on Jackie during the rest of her collegiate career and that they suggested not reporting it. It set up the article’s theme: That U-Va. has a culture that is indifferent to rape.
>
> “It didn’t happen that way at all,” Andy said.
>
> Instead, the friends remember being shocked. Although they did not notice any blood or visible injuries, they said they immediately urged Jackie to speak to police and insisted that they find her help. Instead, they said, Jackie declined and asked to be taken back to her dorm room. They went with her — two said they spent the night — seeking to comfort Jackie in what appeared to be a moment of extreme turmoil.
>
> […]They said there are mounting inconsistencies with the original narrative in the magazine. The students also expressed suspicions about Jackie’s allegations from that night. They said the name she provided as that of her date did not match anyone at the university, and U-Va. officials confirmed to The Post that no one by that name has attended the school.
>
> Also, photographs that were texted to one of the friends showing her date that night were actually pictures depicting one of Jackie’s high school classmates in Northern Virginia. That man, now a junior at a university in another state, confirmed that the photographs were of him and said he barely knew Jackie and hasn’t been to Charlottesville for at least six years.
>
> The friends said they were never contacted or interviewed by the pop culture magazine’s reporters or editors. Although vilified in the article as coldly indifferent to Jackie’s ordeal, the students said they cared deeply about their friend’s well-being and safety.
>
> […]They also said Jackie’s description of what happened to her that night differs from what she told Rolling Stone. In addition, information Jackie gave the three friends about one of her attackers, called “Drew” in the magazine’s article, differ significantly from details she later told The Post, Rolling Stone and friends from sexual assault awareness groups on campus. The three said Jackie did not specifically identify a fraternity that night.

> […]The article's writer, Sabrina Rubin Erdely, did not respond to requests for comment this week.
>
> Rolling Stone also declined to comment, citing an internal review of the story.

The leftist site Slate has an article by well-known radical feminist Hanna Rosin, who analyzes the Washington Post article.

She writes:

> The *Washington Post* has an update on *Rolling Stone*'s UVA story that strongly implies, without outright saying so, that the gang rape at the center of Sabrina Rubin Erdely's article might be fabricated. *Post* reporter T. Rees Shapiro spoke at length with the three friends who met up with Jackie, the student who says she was raped, on the night in question. In the *Rolling Stone* story this scene was crucial. Erdely described Jackie as standing mute in her bloody dress, the Phi Kappa Psi house where the alleged rape happened looming in the background, as her friends callously debated whether they should take her to the hospital and risk ruining their social reputations. This set up the larger theme of a university culture and social scene indifferent even to the most brutalized victims of rape.
>
> Earlier, those friends told the *Post* that Jackie told them she'd been forced to have oral sex—a much different story than what Jackie told *Rolling Stone*. This new *Post* article adds some details that make the entire account seem more suspicious. Jackie had told her friends—referred to by the pseudonyms "Cindy," "Andy," and "Randall" in the original story and in the *Post*'s follow-ups—that she had a date on Sept. 28, 2012, with a handsome junior in her chemistry class. (In the version she told to *Rolling Stone*, that date was with someone she'd met at her lifeguarding job.) But in the *Post* story, the friends imply that this junior might not exist and may have been invented by Jackie to make Randall jealous.
>
> When the friends first heard about this junior, they were intrigued and asked Jackie for his number. They started exchanging text messages with him, and he described Jackie as a "super smart hot" freshman. He complained, though, that she liked a "nerd 1st yr"— meaning Randall—who is "smart and funny and worth it." Jackie's friends could never find this junior in the UVA database nor on social media. She provided her friends with a picture of him, but the *Post* has since learned that the guy in the picture is a high school classmate of Jackie's who does not go to the University of Virginia and was in another state participating in an athletic tournament on the night of the alleged rape. (More recently, Jackie gave her friends the name of a different guy. The *Post* also contacted him, and he said he'd never met Jackie.)
>
> […]Jackie has now given her friends two different names for the man she was with that night. Neither of them was in fact with her, ever dated her, or even knew her all that well. She appears to have invented a suitor, complete with fake text messages and a fake photo, which suggests a capacity for somewhat elaborate deception. Jackie, though, has not recanted her story. Her attorney would not answer questions for the *Post*'s story on Wednesday and has told reporters to stop contacting Jackie.
>
> Here's the most disturbing journalistic detail to emerge from the *Post*'s reporting: In the *Rolling Stone* story, Erdely says that she contacted Randall, but he declined to be interviewed, "citing his loyalty to his own frat." Randall told the *Post* he was never contacted by Erdely and would have been happy to be interviewed.

A web site called GotNews is claiming to have identified the Jackie from the story, and the Jackie they identified was a student activist in high school. That woman's Pinterest page sported a lot of radical feminist "rape culture" memes. Also, the author of the Rolling Stone piece is a well-known feminist activist and she has in the past confessed to "shopping around" for victims in order to further her feminist agenda. That link takes you to a Youtube video where she explains her feminist agenda in her own words. This is what students learn as gospel in college, though. Our laws and our culture are built around this Sabrina / Rolling Stone view of men.

# Jay Richards: eight common myths about wealth, poverty and the free market

**Wintery Knight** · 11 December 2014 · Archived copy · Original

Have you read Jay Richards' book "Money, Greed and God?" Because if you haven't, he's written a series of articles that summarize the main points of the book.

The index post is here.

Here are the posts in the series:

- Part 1: The Eight Most Common Myths about Wealth, Poverty, and Free Enterprise
- Part 2: Can't We Build A Just Society?
- Part 3: The Piety Myth
- Part 4: The Myth of the Zero Sum Game
- Part 5: Is Wealth Created or Transferred?
- Part 6: Is Free Enterprise Based on Greed?
- Part 7: Hasn't Christianity Always Opposed Free Enterprise?
- Part 8: Does Free Enterprise Lead to An Ugly Consumerist Culture?
- Part 9: Will We Use Up All Our Resources?
- Part 10: Are Markets An Example of Providence?

Parts 4 and 5 are my favorites. It's so hard to choose one to excerpt, but I must. I will choose… Part 4.

Here's the problem:

> **Myth #3: The Zero Sum Game Myth – believing that trade requires a winner and a loser.**
>
> One reason people believe this myth is because they misunderstand how economic value is determined. Economic thinkers with views as diverse as Adam Smith and Karl Marx believed economic value was determined by the labor theory of value. This theory stipulates that the cost to produce an object determines its economic value.
>
> According to this theory, if you build a house that costs you $500,000 to build, that house is worth $500,000. But what if no one can or wants to buy the house? Then what is it worth?
>
> Medieval church scholars put forth a very different theory, one derived from human nature: economic value is in the eye of the beholder. The economic value of an object is determined by how much someone is willing to give up to get that object. This is the subjective theory of value.

And here's an example of how to avoid the problem:

> How you determine economic value affects whether you view free enterprise as a zero-sum game, or a win-win game in which both participants benefit.
>
> Let's return to the example of the $500,000 house. As the developer of the house, you hire workers to build the house. You then sell it for more than $500,000. According to the labor theory of value, you have taken more than the good is actually worth. You've exploited the buyer and your workers by taking this surplus value. You win, they lose.
>
> Yet this situation looks different according to the subjective theory of value. Here, everybody wins. You market and sell the house for more than it cost to produce, but not more than customers will freely pay. The buyer is not forced to pay a cost he doesn't agree to. You are rewarded for your entrepreneurial effort. Your

> workers benefit, because you paid them the wages they agreed to when you hired them.
>
> This illustration brings up a couple important points about free enterprise that are often overlooked:
>
> **1. Free exchange is a win-win game**.
>
> In win-win games, some players may end up better off than others, but everyone ends up better off than they were at the beginning. As the developer, you might make more than your workers. Yet the workers determined they would be better off by freely exchanging their labor for wages, than if they didn't have the job at all.
>
> A free market doesn't guarantee that everyone wins in every competition. Rather, it allows many more win-win encounters than any other alternative.
>
> **2. The game is win-win because of rules set-up beforehand.**
>
> A free market is *not* a free-for-all in which everybody can do what they want. Any exchange must be free on both sides. Rule of law, contracts, and property rights are needed to ensure exchanges are conducted rightly. As the developer of the house, you'd be held accountable if you broke your contract and failed to pay workers what you promised.
>
> An exchange that is free on both sides, in which no one is forced or tricked into participating, is a win-win game.

On this view, what you really need to fear as a consumer is government intervention that restricts your choices in the marketplace.

**Economists agree on the benefits of free trade**

Who could possibly disagree with free trade? Well, many people on the left do. They favor imposing restrictions on free trade. For example, people on the left favor making those who import goods pay tariffs, which makes it harder to trade with other nations. People on the left want to pass rent control laws to block landlords and tenants from trading more freely. People on the left want to pass minimum wage laws that block employers and workers from trading wages for labor more freely. But economists generally don't agree with any of restrictions on free trade. In fact, *even across the ideological spectrum*, the majority of economists view free trade as a wealth creating policy, and restrictions on free trade as a wealth destroying policy.

Harvard economist Greg Mankiw explains what most professional economists agree on.

Excerpt:

> Here is the list, together with the percentage of economists who agree:
>
> 1. **A ceiling on rents reduces the quantity and quality of housing available. (93%)**
> 2. **Tariffs and import quotas usually reduce general economic welfare. (93%)**
> 3. Flexible and floating exchange rates offer an effective international monetary arrangement. (90%)
> 4. Fiscal policy (e.g., tax cut and/or government expenditure increase) has a significant stimulative impact on a less than fully employed economy. (90%)
> 5. The United States should not restrict employers from outsourcing work to foreign countries. (90%)
> 6. The United States should eliminate agricultural subsidies. (85%)
> 7. Local and state governments should eliminate subsidies to professional sports franchises. (85%)
> 8. If the federal budget is to be balanced, it should be done over the business cycle rather than yearly. (85%)
> 9. The gap between Social Security funds and expenditures will become unsustainably large within the next fifty years if current policies remain unchanged. (85%)
> 10. Cash payments increase the welfare of recipients to a greater degree than do transfers-in-kind of equal cash value. (84%)

> 11. A large federal budget deficit has an adverse effect on the economy. (83%)
> 12. **A minimum wage increases unemployment among young and unskilled workers. (79%)**
> 13. The government should restructure the welfare system along the lines of a “negative income tax.” (79%)
> 14. Effluent taxes and marketable pollution permits represent a better approach to pollution control than imposition of pollution ceilings. (78%)

Now when you are talking to a Democrat, you are talking to someone who disagrees with most or all of those common sense economic policies. For example, Obama’s backers in the labor movement inevitably endorse higher import tariffs, which discourage free trade between countries. No economist supports these tariffs on imports, because history has shown (e.g. – Smoot-Hawley Act) that tariffs destroy economic growth and reduce wealth creation. And that’s what I mean when I talk about economic illiteracy – I mean ignoring what we know from economics and our past experience with bad policies.

Democrat economic policies don’t work because they are making policies that are based on economic myths. We know that these myths are myths because of economics is a mathematical science, and because we have tried good and bad policies in different times and places. We have calculations and we have experience to know what works and what doesn’t work. If you want to help the poor, you have to respect what economists know about how wealth is created. The solution is not to “spread the wealth around”, it’s to encourage people to create more wealth by inventing things that people freely choose to buy.

# William Lane Craig on the unexpected applicability of mathematics to nature

**Wintery Knight** · 11 December 2014 · Archived copy · Original

You might remember that Dr. Craig used a new argument in his debate with Lawrence Krauss in Melbourne, Australia.

My notes on the debate record it thus:

> The unreasonable effectiveness of mathematics:
>
> - The underlying structure of nature is mathematical – mathematics is *applicable* to nature
> - Mathematical objects can either be abstract objects or useful fiction
> - Either way, there is no reason to expect that nature should be linked to abstract objects or fictions
> - But a divine mind that wants humans to understand nature is a better explanation for what we see

And now Dr. Craig has expanded on it in the Q&A section of his Reasonable Faith web site.

The question:

> Dear Dr Craig
>
> Firstly can I thank you for all your work. My faith in Christ has been enormously strengthened through studying your work in apologetics in particular and I have grown in confidence in my Christian witness.
>
> My question relates to numbers and mathematics as a whole. On the Defenders podcast you state that as God is the only self-existent, necessary being, numbers and mathematical objects, whilst being useful, don't actually exist as these too would exist necessarily and independently of God. If this is the case, how can it be that mathematics is so easily applied to the natural world? Surely if mathematics only existed in our minds, we would expect to see no correlation between it and how the physical world actually is?
>
> Michael
>
> United Kingdom

Excerpt from the answer:

> As philosopher of mathematics Mary Leng points out, for the non-theistic realist, the fact that physical reality behaves in line with the dictates of acausal mathematical entities existing beyond space and time is "a happy coincidence" (*Mathematics and Reality* [Oxford: Oxford University Press, 2010], p. 239). Think about it: If, *per impossibile*, all the abstract objects in the mathematical realm were to disappear overnight, there would be no effect on the physical world. This is simply to reiterate that abstract objects are causally inert. The idea that realism somehow accounts for the applicability of mathematics "is actually very counterintuitive," muses Mark Balaguer, a philosopher of mathematics. "The idea here is that in order to believe that the physical world has the nature that empirical science assigns to it, I have to believe that there are causally inert mathematical objects, existing outside of spacetime," an idea which is inherently implausible (*Platonism and Anti-Platonism in Mathematics* [New York: Oxford University Press, 1998], p. 136).
>
> By contrast, the theistic realist can argue that God has fashioned the world on the structure of the mathematical objects. This is essentially what Plato believed. The world has mathematical structure as a result.

This argument was also made by mechanical engineering professor Walter Bradley in a lecture he gave on scientific evidence for an intelligent designer. You can read an essay that covers some of the material in that lecture at

Leadership University.

Excerpt:

> The physical universe is surprising in the simple mathematical form it assumes. All the basic laws of physics and fundamental relationships can be described on one side of one sheet of paper because they are so few in number and so simple in form (see table 1.1).
>
> […]It has been widely recognized for some time that nature assumes a form that is elegantly described by a relatively small number of simple, mathematical relationships, as previously noted in table 1.1. None of the various proposals presented later in this chapter to explain the complexity of the universe address this issue. Albert Einstein in a letter to a friend expressed his amazement that the universe takes such a form (Einstein 1956), saying:
>
> You find it strange that I consider the comprehensibility of the world to the degree that we may speak of such comprehensibility as a miracle or an eternal mystery. Well, a priori one should expect a chaotic world which cannot be in any way grasped through thought. . . . The kind of order created, for example, by Newton's theory of gravity is of quite a different kind. Even if the axioms of the theory are posited by a human being, the success of such an enterprise presupposes an order in the objective world of a high degree which one has no a priori right to expect. That is the "miracle" which grows increasingly persuasive with the increasing development of knowledge.
>
> Alexander Polykov (1986), one of the top physicists in Russia, commenting on the mathematical character of the universe, said: "We know that nature is described by the best of all possible mathematics because God created it." Paul Davies, an astrophysicist from England, says, "The equations of physics have in them incredible simplicity, elegance and beauty. That in itself is sufficient to prove to me that there must be a God who is responsible for these laws and responsible for the universe" (Davies 1984). Successful development of a unified field theory in the future would only add to this remarkable situation, further reducing the number of equations required to describe nature, indicating even further unity and integration in the natural phenomena than have been observed to date.

The whole paper that started this off is called "The Unreasonable Effectiveness of Mathematics", and it is a must read for advanced Christian apologists. You can read the whole thing here.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature

# Public schools telling 13-year-olds they can have sex and choose their own gender

**Wintery Knight** · 12 December 2014 · Archived copy · Original

Hillary Clinton and Planned Parenthood

Yes, Planned Parenthood is involved. Fox News reports.

Excerpt:

> Students at one northern California high school are learning more than just the birds and the bees.
>
> Along with local area groups, some parents are irate that their children's sex ed class at Acalanes High School in Lafayette is being taught by employees of Planned Parenthood without their prior knowledge. They are also fuming over the methods and materials being used, including a checklist that asks students if they are "ready for sex" and another worksheet that describes how to give and obtain consent, as well as a diagram that uses a "genderbread" person for lessons in gender identity.
>
> "[Parents] are very concerned," Brad Dacus, president of the Pacific Justice Institute, a non-profit legal organization that is assisting the concerned parents, told FoxNews.com. "Planned Parenthood is not exactly the best when it comes to putting young people first.
>
> "They get more grants from the promiscuity of children," he added. "The material they have provided was material that mirrored their agenda."
>
> It was the parents of ninth-graders at Acalanes that started raising questions after their children told them one instructor threw a model of female reproductive organs at one student and that many felt the sessions were pressuring them to have sex.
>
> "Some of the kids were distracted because it was divergent from what they were taught at home," Dacus said.
>
> **Acalanes Union School District officials told the institute the class was not taught by teachers but rather the staff from a local Planned Parenthood in nearby Walnut Creek.**
>
> Included in the materials provided to students were documents and worksheets that included a checklist entitled, "Sex Check! Are You Ready For Sex?" in which the 13 and 14-year-old students are asked questions such as if they have water–based lubricants and condoms and if they could handle a possible infection or pregnancy. Another worksheet reads like a how-to on obtaining consent from a possible sexual partner and offers possible statements like "Do you want to go back to my place?" and "Is it OK if I take my pants off?"
>
> Students at Acalanes High School in Northern California were given this gender identity chart in a sex ed class conducted by the local Planned Parenthood chapter.

> They were also taught about gender identity with the “Genderbread Person,” a play on the name of the holiday cookie, to teach them on how to identify themselves as either, “agender,” “bigender,” and “two spirit” to name a few.
>
> […]Officials for the Planned Parenthood’s Northern California region did not respond to requests for comment.

In the last fiscal year, Planned Parenthood got $540.6 million of taxpayer money. And now we know what they did with it. If you approve of this, then vote Democrat. If you don’t, then don’t.

# Authors of 1 in 5 rape study explain how their work is being misrepresented

**Wintery Knight** · 12 December 2014 · Archived copy · Original

Earlier this week I found an amazing piece on the campus rape hysteria authored by Emily Yoffe on posted at the leftist Slate, of all places.

The whole article is worth the read, but there is one part that is very interesting. She spoke to the people who did that 1 in 5 study that everyone (including Obama) has been talking about, and found out some pretty interesting things.

Look:

> One campus rape is one too many. But the severe new policies championed by the White House, the Department of Education, and members of Congress are responding to the idea that colleges are in the grips of an epidemic—and the studies suggesting this epidemic don't hold up to scrutiny. Bad policy is being made on the back of problematic research, and will continue to be unless we bring some healthy skepticism to the hard work of putting a number on the prevalence of campus rape.

> It is exceedingly difficult to get a numerical handle on a crime that is usually committed in private and the victims of which—all the studies agree—frequently decline to report. A further complication is that because researchers are asking about intimate subjects, there is no consensus on the best way to phrase sensitive questions in order to get the most accurate answers. A 2008 National Institute of Justice paper on campus sexual assault explained some of the challenges: "Unfortunately, researchers have been unable to determine the precise incidence of sexual assault on American campuses because the incidence found depends on how the questions are worded and the context of the survey." Take the National Crime Victimization Survey, the nationally representative sample conducted by the federal government to find rates of reported and unreported crime. For the years 1995 to 2011, as the University of Colorado Denver's Rennison explained to me, it found that an estimated 0.8 percent of noncollege females age 18-24 revealed that they were victims of threatened, attempted, or completed rape/sexual assault. Of the college females that age during that same time period, approximately 0.6 percent reported they experienced such attempted or completed crime.

> That finding diverges wildly from the notion that one in five women college women will be sexually assaulted by the time they graduate. That's the number most often used to suggest there is overwhelming sexual violence on America's college campuses. It comes from a 2007 study funded by the National Institute of Justice, called the Campus Sexual Assault Study, or CSA. (I cited it last year in a story on campus drinking and sexual assault.) The study asked 5,466 female college students at two public universities, one in the Midwest and one in the South, to answer an online survey about their experiences with sexual assault. The survey defined sexual assault as everything from nonconsensual sexual intercourse to such unwanted activities as "forced kissing," "fondling," and "rubbing up against you in a sexual way, even if it is over your clothes."
>
> There are approximately 12 million female college students in the U.S. (There are about 9 million males.) I asked the lead author of the study, Christopher Krebs, whether the CSA represents the experience of those millions of female students. His answer was unequivocal: "We don't think one in five is a nationally representative statistic." It couldn't be, he said, because his team sampled only two schools. "In no way does that make our results nationally representative," Krebs said. And yet President Obama used this number to make the case for his sweeping changes in national policy.

So the actual number using reliable studies is less than 1%. And yet, we have so many people on the left telling us it's 20 or 25 percent, in order to get their legislation passed. Just think about that for a minute. Our President stood up there and told us it was 20% but it's actually less than 1%. And he does the same thing with the women's pay gap, which he says is 23%, when the actual number when you correct for factors like pregnancies, type of work, number of hours worked, degree required, etc. is near zero.

UPDATE: Commenter Mathetes points me to this Department of Justice study which came up with the number 1 in 52.6, which is less than 2% for rape AND sexual assault together.

# Did the early church invent the divinity of Jesus over a long period of time?

**Wintery Knight** · 12 December 2014 · Archived copy · Original

How early is the doctrine of the divinity of Jesus?

When I answer this question, I only want to use the earliest, most reliable sources – so I can defend them *on historical grounds* using the standard rules of historiography.

The 4 sources that I would use are as follows:

- The early creed in 1 Corinthians 15:3-8, and 1 Corinthians 1
- A passage in Philippians 2
- Two passages from Mark, the earliest gospel
- A passage from Q, which is an early source of Matthew and Luke

So let's see the passages.

**1 Corinthians**

I've written before about the early creed in 1 Corinthians 15:3-8, which skeptical scholars date to 1-3 years after the death of Jesus, for a variety of reasons I covered in the previous post. Here's the creed which definitely makes Jesus out to be more than an ordinary man. Ordinary men don't get resurrection bodies after they die.

Here's the passage: (1 Cor 15:3-8)

[3]For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

[4]that he was buried, that he was raised on the third day according to the Scriptures,

[5]and that he appeared to Peter, and then to the Twelve.

[6]After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep.

[7]Then he appeared to James, then to all the apostles,

[8]and last of all he appeared to me also, as to one abnormally born.

Additionally, 1 Corinthians 1:21-25 talks about Jesus being "the power of God and the wisdom of God". Paul is identifying Jesus with the divine.

[21]For since in the wisdom of God the world through its wisdom did not know him, God was pleased through the foolishness of what was preached to save those who believe.

[22]Jews demand miraculous signs and Greeks look for wisdom,

[23]but we preach Christ crucified: a stumbling block to Jews and foolishness to Gentiles,

[24]but to those whom God has called, both Jews and Greeks, Christ the power of God and the wisdom of God.

[25]For the foolishness of God is wiser than man's wisdom, and the weakness of God is stronger than man's strength.

But it gets even stronger! You all probably already know that the most important passages in the Old Testament for Jews is the famous "Shema", which is found in Deuteronomy 6:4-9. The Shema is a strong statement of Jewish monotheism.

Here's the passage:

[4] Hear, O Israel: The LORD our God, the LORD is one.

[5] Love the LORD your God with all your heart and with all your soul and with all your strength.

[6] These commandments that I give you today are to be upon your hearts.

[7] Impress them on your children. Talk about them when you sit at home and when you walk along the road, when you lie down and when you get up.

[8] Tie them as symbols on your hands and bind them on your foreheads.

[9] Write them on the doorframes of your houses and on your gates.

So how does Paul fit Jesus in with this strong statement of Jewish monotheism?

Paul alludes to the Shema in 1 Corinthians 8:4-6.

[4]So then, about eating food sacrificed to idols: We know that an idol is nothing at all in the world and that there is no God but one.

[5]For even if there are so-called gods, whether in heaven or on earth (as indeed there are many "gods" and many "lords"),

[6]yet for us there is but one God, the Father, from whom all things came and for whom we live; and there is but one Lord, Jesus Christ, through whom all things came and through whom we live.

Holy mackerel! How did that get in there? Paul is splitting the roles of God in the the Shema and identifying Jesus in one of the divine roles! Jesus is not an ordinary man. That passage "through whom all things came" foreshadows John identifying Jesus as "the Word of God", which "became flesh and dwelt among us". Holy snark – did you guys know that was all in here so early?

The date for 1 Corinthians is 55 AD. It should be noted that skeptical scholars like James Crossley accept these passages, and you can check it out in the debate audio yourself.

**Philippians**

Check out Philippians 2:5-11.

[5]Your attitude should be the same as that of Christ Jesus:

[6]Who, being in very nature God, did not consider equality with God something to be grasped,

[7]but made himself nothing, taking the very nature of a servant, being made in human likeness.

[8]And being found in appearance as a man, he humbled himself and became obedient to death— even death on a cross!

[9]Therefore God exalted him to the highest place and gave him the name that is above every name,

[10]that at the name of Jesus every knee should bow, in heaven and on earth and under the earth,

[11]and every tongue confess that Jesus Christ is Lord, to the glory of God the Father.

The date for Philippians is 60-61 AD. Still within the lifetime of the eyewitnesses, and written by an eyewitness who was in contact with the other eyewitnesses, like Peter and James, whom Paul spoke with numerous times on his journeys to Jerusalem.

**Mark's gospel**

Mark's gospel is the earliest and atheists like James Crossley date it to less than 40 AD, which is 10 years after the

death of Jesus at most. When you read the gospel of Mark, you are getting the earliest and best information available about the historical Jesus, along with Paul's epistles. So what does Mark say about Jesus? Is Jesus just a man, or is he something more?

Check out Mark 12:1-9:

[1]He then began to speak to them in parables: "A man planted a vineyard. He put a wall around it, dug a pit for the winepress and built a watchtower. Then he rented the vineyard to some farmers and went away on a journey.

[2]At harvest time he sent a servant to the tenants to collect from them some of the fruit of the vineyard.

[3]But they seized him, beat him and sent him away empty-handed.

[4]Then he sent another servant to them; they struck this man on the head and treated him shamefully.

[5]He sent still another, and that one they killed. He sent many others; some of them they beat, others they killed.

[6]"He had one left to send, a son, whom he loved. He sent him last of all, saying, 'They will respect my son.'

[7]"But the tenants said to one another, 'This is the heir. Come, let's kill him, and the inheritance will be ours.'

[8]So they took him and killed him, and threw him out of the vineyard.

[9]"What then will the owner of the vineyard do? He will come and kill those tenants and give the vineyard to others.

And Mark 13:32, talking about the date of the final judgment.

[32]"No one knows about that day or hour, not even the angels in heaven, nor the Son, but only the Father.

And again, this passage is establishing a hierarchy such that Jesus is being exalted above all men and the angels, too. And the passage is embarrassing to the early church, because it makes Jesus look ignorant of something, so they would not have made this passage up. Jesus is not an ordinary man, he is *above* the angels – God's *unique* Son.

**The "Q" source for Matthew and Luke**

Here's Matthew 11:27, which is echoed in Luke 10:22:

[27]"All things have been committed to me by my Father. No one knows the Son except the Father, and no one knows the Father except the Son and those to whom the Son chooses to reveal him.

[22]"All things have been committed to me by my Father. No one knows who the Son is except the Father, and no one knows who the Father is except the Son and those to whom the Son chooses to reveal him."

Since this passage is in both of Matthew and Luke, but not in Mark, scholars believe that it is in the earlier "Q" source used by both Matthew and Luke. Q predates both Matthew and Luke, and so it is also fairly early (maybe 67-68), although not as early as Mark and Paul. Bill Craig writes that this passage is also embarrassing because it says that *no one* knows Jesus.

# Bible study: responsibilities and obligations in Philippians 1-4

**Wintery Knight** · 13 December 2014 · Archived copy · Original

Here are some parts of Philippians that speak to an issue that I think is a problem today for many Christians – self-centeredness. I have three parts of Philippians to present below on that topic.

1) The importance of fellowship – preparing to work together with other Christians towards some end:

Phil 1:3-11:

> [3] I thank my God in all my remembrance of you, [4] always offering prayer with joy in my every prayer for you all, [5] in view of your participation in the gospel from the first day until now. [6] *For I am* confident of this very thing, that He who began a good work in you will perfect it until the day of Christ Jesus. [7] For it is only right for me to feel this way about you all, because I have you in my heart, since both in my imprisonment and in the defense and confirmation of the gospel, you all are partakers of grace with me. [8] For God is my witness, how I long for you all with the affection of Christ Jesus. [9] And this I pray, that your love may abound still more and more in real knowledge and all discernment, [10] so that you may approve the things that are excellent, in order to be sincere and blameless until the day of Christ; [11] having been filled with the fruit of righteousness which *comes* through Jesus Christ, to the glory and praise of God.

Some Christians find it difficult to "participate in the gospel" with anyone because they feel uncomfortable with responsibilities, expectations or obligations to others. In my experience, people who shun responsibilities, obligations and expectations can improve this by taking Paul's advice – grow in real knowledge and all discernment. In my experience, I have found that people who shy away from responsibilities, expectations and obligations do so because they are afraid of failing. They are proud and don't want to look bad if they fail to perform something that they are expected to perform. Christians should not shy away from growing though, because growing is what helps us to be better partners in the gospel. We should try to read hard things, study hard things, and take the hardest jobs we can do – so that we build up our tolerance for responsibilities, obligations and expectations. People who do hard jobs like computer programming or nursing know that that you always struggle to learn difficult things and there is always the risk of looking incompetent. But we accept the risk of looking stupid and being judged and this builds a level of comfort with responsibilities, obligations and expectations. That comfort level with responsibilities, obligations and expectations that you get from doing hard things can only help you be a better partner in the gospel.

2) The importance of not being self-centered, but instead being focused on the needs of others:

Phil 2:1-8:

> 2 Therefore if there is any encouragement in Christ, if there is any consolation of love, if there is any fellowship of the Spirit, if any affection and compassion,[2] make my joy complete by being of the same mind, maintaining the same love, united in spirit, intent on one purpose. [3] Do nothing from selfishness or empty conceit, but with humility of mind regard one another as more important than yourselves; [4] do not *merely* look out for your own personal interests, but also for the interests of others. [5] Have this attitude in yourselves which was also in Christ Jesus, [6] who, although He existed in the form of God, did not regard equality with God a thing to be grasped, [7] but emptied Himself, taking the form of a bond-servant, *and* being made in the likeness of men. [8] Being found in appearance as a man, He humbled Himself by becoming obedient to the point of death, even death on a cross.

And Phil 2:19-23:

> [19] But I hope in the Lord Jesus to send Timothy to you shortly, so that I also may be encouraged when I learn of

> your condition. [20] For I have no one *else* of kindred spirit who will genuinely be concerned for your welfare.
> [21] For they all seek after their own interests, not those of Christ Jesus. [22] But you know of his proven worth, that he served with me in the furtherance of the gospel like a child *serving* his father.

Nothing very complicated here, it's important to look out for the interests of others and to be concerned about their welfare. I think it's a good idea to be practical about this, and instead of just expressing opinions like "I care", try to find out what needs to be done and do it. The important thing is that it's good to be focused on other people, and not on ourselves, and to think of the interests of others, not our own interests. That point about looking out for other people's interests is said twice, once in each passage from chapter 2 I quoted above.

3) People who are doing good work for the Lord have needs:

Phil 4:10-18:

> [10] But I rejoiced in the Lord greatly, that now at last you have revived your concern for me; indeed, you were concerned *before*, but you lacked opportunity. [11] Not that I speak from want, for I have learned to be content in whatever circumstances I am. [12] I know how to get along with humble means, and I also know how to live in prosperity; in any and every circumstance I have learned the secret of being filled and going hungry, both of having abundance and suffering need. [13] I can do all things through Him who strengthens me.[14] Nevertheless, you have done well to share *with me* in my affliction.
>
> [15] You yourselves also know, Philippians, that at the first preaching of the gospel, after I left Macedonia, no church shared with me in the matter of giving and receiving but you alone; [16] for even in Thessalonica you sent *a gift* more than once for my needs. [17] Not that I seek the gift itself, but I seek for the profit which increases to your account. [18] But I have received everything in full and have an abundance; I am amply supplied, having received from Epaphroditus what you have sent, a fragrant aroma, an acceptable sacrifice, well-pleasing to God.

I think if you are friends with a person and they are working on some task or other for the gospel, then it's a good idea to be sensitive to their needs, and be open to caring for those needs. Your goal should not be to make excuses for why you don't have to do anything to help them. In my case, finances are not a problem, so I don't have that need. I use money to supply the needs of people that I partner with in the gospel, though. Instead, I have other needs that people can help with – for example, after a stressful day of work, I am always looking for people to play games with me. Some of my friends show an interest in that, and others don't. The good things that I do for God are not free, and it matters a lot to me whether those who know me want to listen to me and then take responsibility for making sure that I keep functioning and doing the things that I do for God. We have to have an eye out to maintain people who are doing good things for God – not just take it for granted that it will continue. Sometimes, it is not just sending money (gifts), it can be other love languages like touch, service, quality time and words of encouragement. But tuning away from the needs of others is not good for us.

# New study: another biological Big Bang, this time for bird development

**Wintery Knight** · 13 December 2014 · Archived copy · Original

Hummingbird in flight

Story from Evolution News about a new study exploring the genomes of birds.

Excerpt:

> The evidence for intelligent design just keeps getting stronger. It's long been known that the Cambrian explosion isn't the only explosion of organisms in the fossil record. There's also something of a fish explosion, an angiosperm explosion, and a mammal explosion. Paleontologists have even cited a "bird explosion," with major bird groups appearing in a short time period. Frank Gill's 2007 textbook *Ornithology* observes the "explosive evolution" of major living bird groups, and a paper in *Trends in Ecology and Evolution*titled "Evolutionary Explosions and the Phylogenetic Fuse" explains:
>
> > A literal reading of the fossil record indicates that the early Cambrian (c. 545 million years ago) and early Tertiary (c. 65 million years ago) were characterized by enormously accelerated periods of morphological evolution marking the appearance of the animal phyla, and modern bird and placental mammal orders, respectively.
>
> Now, a massive genetic study published in *Science* has confirmed the fossil evidence that birds arose explosively. According to an article titled, "Rapid bird evolution after the age of dinosaurs unprecedented":
>
> > His research helped confirm that some of the first lineages of modern birds appeared about 100 million years ago but that almost all of the modern groups of birds diversified in a small window of less than 10 million years, just after the dinosaurs were wiped out by an asteroid.
>
> Another news article calls it a "'Big Bang' of bird evolution" and one of the technical papers uses the same language:
>
> > Paleobiological and molecular evidence suggests that such "big bang" radiations occurred for neoavian birds (e.g., songbirds, parrots, pigeons, and others) and placental mammals, representing 95% of extant avian and mammalian species, after the Cretaceous to Paleogene (K-Pg) mass extinction event about 66 million years ago (Ma).

> The article further cites “an explosive diversification within Neoaves.” So both fossil and genetic evidence suggests diverse organisms arose in an “explosion” or “big bang” that lasted “less than 10 million years.”

I am excited to hear about this! Birds are my most favorite creatures in the whole world!

One of the other papers they looked at in the post found large numbers of species appearing within a 1-3 million year window.

The data from these genome studies also conflicts with the phylogenies that are different from phylogenies built from body plans.

Look:

> [T]his molecular study has separated many groups previously thought to be closely related by morphological studies, as is made very clear from Figure 1 of the paper. Bird relations are thus quickly becoming a classic case of conflict between molecule-based and morphology-based trees. As *Nature* notes, in this study “the tree of life for birds has been redrawn by geneticists.” They simply appeal to convergent evolution (or other mechanisms) to explain away these non-tree-like patterns.

It’s not a tree – it’s a *lawn.*

# Good news: Venezuelan President complains that fracking is “flooding” oil markets

**Wintery Knight** · 14 December 2014 · Archived copy · Original

Gas prices vs domestic oil production
(Click for larger image. Source)

Why are gas prices so low all of a sudden?

Well, let’s ask the communist President of Venezuela:

> The broadcast networks may not want to give credit to hydraulic fracturing for increasing U.S. oil production and lowering global oil prices, but at least one angry world leader did just that.
>
> Venezuelan President Nicolas Maduro complained that fracking in the U.S. has “flooded” the world market and contributed to lower oil prices, a connection that broadcast networks’ evening news reports barely made recently.
>
> “The oil they’re taking from (shale deposits) and the gas. They’ve flooded the international market to batter the Russian economy …, Iran and to hurt us, Venezuela,” Maduro said in a broadcast on VTV, a state-run TV channel in Venezuela, according to Fox News Latino.
>
> Fracking has been one cause of increased oil production in the U.S. That increased production helped lower oil prices by more than 30 percent since September 29. The decline in oil prices since June has severely impacted Venezuela, since oil exports were a major source of government income. “Some estimates put the break-even price for Venezuela to balance its budget at around $121 a barrel,” CNBC reported on December 7. That’s more than double current oil prices. Oil closed at $59.15-per-barrel on December 11.
>
> As of January 2014, Venezuela’s state-run oil company brought in 96 percent of foreign earnings, according to The Economist. Maduro announced on December 2 that the government would cut spending by 20 percent.
>
> […]Venezuela was experiencing particular difficulties. That economy was on the verge of collapsing, CNBC said on Dec. 1. If low oil prices continued, Venezuela may face a “game over” situation and “barbarity and people looting.”

Do you know who else is hurt by this? Russia. I sure hope they don’t do anything aggressive to their neighbors while their economy feels the pinch of lower gas prices.

It's a good thing when villains shake their fists at us, but it's a better thing when consumers pay less for gas:

> Thanks in part to the widespread use of technologies like hydraulic fracturing and horizontal drilling, global oil prices plummeted in 2014. Energy experts even predicted the U.S. could be the top oil producer in the next several years.
>
> […]Fracking and other advanced technologies helped the U.S. nearly double its average daily output of oil, from 5 million barrels in 2008 to an expected 9.42 million barrels in 2015. The huge supply increase was one factor sending crude oil prices down. Crude fell by more than 32 percent, from $93 to $63 just since Sept. 29. This already drove gas prices down to a national average of $2.66 for regular on Dec. 9, according to AAA.
>
> This is great news for consumers and businesses which could save as much as $1.3 trillion worldwide because of lower oil prices, according to Julian Jessop, chief global economist at Capital Economics in London. Here in the U.S., Americans could save $230 billion if prices remain low for the next year, The Washington Post said on Dec. 1.

The only bad side to this story is that fracking is an expensive way of drilling, so as the price of oil drops, energy companies will be scaling back fracking until it becomes profitable again.

I think this story is important, because it helps to explain what the people who oppose the Keystone XL pipeline are concerned about. They know that there are two results to allowing that pipeline to be built. First, a hell of a lot of jobs will be created, reducing dependency on government. Second, the price of gas at the pump will go down further. That's what the environmentalists (and their Democrat allies in Washington) are seeking to avoid. They want more government dependency, and higher gas prices.

# Lots of candidates for Boehner replacement in list of Cromnibus NO-votes

**Wintery Knight** · 14 December 2014 · Archived copy · Original

Here's the list of people who voted against the CRomnibus trillion-dollar spending bill that Obama supports.

1. Wittman, R. (R-VA)
2. Williams, R. (R-TX)
3. Webster, D. (R-FL)
4. Weber, R. (R-TX)
5. Stutzman, M. (R-IN)
6. Smith, L. (R-TX)
7. Smith, C. (R-NJ)
8. Sensenbrenner, F. (R-WI)
9. Scott, A. (R-GA)
10. **Schweikert, D. (R-AZ)**
11. Sanford, M. (R-SC)
12. **Salmon, M. (R-AZ)**
13. Rohrabacher, D. (R-CA)
14. Rogers, M. (R-AL)
15. Posey, B. (R-FL)
16. **Pompeo, M. (R-KS)**
17. Poe, T. (R-TX)
18. Perry, S. (R-PA)
19. Olson, P. (R-TX)
20. Neugebauer, R. (R-TX)
21. Mulvaney, M. (R-SC)
22. Miller, J. (R-FL)
23. Meadows, M. (R-NC)
24. McKinley, D. (R-WV)
25. **McClintock, T. (R-CA)**
26. McAllister, V. (R-LA)
27. Massie, T. (R-KY)
28. **Marchant, K. (R-TX)**
29. Lummis, C. (R-WY)
30. Lankford, J. (R-OK)
31. Lamborn, D. (R-CO)
32. LaMalfa, D. (R-CA)
33. Labrador, R. (R-ID)
34. **King, S. (R-IA)**
35. **Jordan, J. (R-OH)**
36. Jones, W. (R-NC)

37. Johnson, S. (R-TX)
38. Hurt, R. (R-VA)
39. **Huelskamp, T. (R-KS)**
40. Griffith, H. (R-VA)
41. **Gowdy, T. (R-SC)**
42. **Gosar, P. (R-AZ)**
43. **Gohmert, L. (R-TX)**
44. Garrett, S. (R-NJ)
45. **Franks, T. (R-AZ)**
46. Flores, B. (R-TX)
47. Fleming, J. (R-LA)
48. Farenthold, B. (R-TX)
49. Duncan, J. (R-TN)
50. **Duncan, J. (R-SC)**
51. DesJarlais, S. (R-TN)
52. **DeSantis, R. (R-FL)**
53. Crawford, R. (R-AR)
54. Cotton, T. (R-AR)
55. Conaway, K. (R-TX)
56. **Clawson, C. (R-FL)**
57. Rice, T. (R-SC)
58. Burgess, M. (R-TX)
59. **Broun, P. (R-GA)**
60. Brooks, M. (R-AL)
61. **Bridenstine, J. (R-OK)**
62. **Brat, D. (R-VA)**
63. Blackburn, M. (R-TN)
64. Bentivolio, K. (R-MI)
65. Barton, J. (R-TX)
66. Bachmann, M. (R-MN)
67. **Amash, J. (R-MI)**

The names in bold are the ones I'd like to see named as Speaker of the House instead of John Boehner. He has to go, along with Mitch McConnell. It's just too much now. They won the election in 2014 and now it's time to do what they were elected to do. If they can't do that, then put in someone as Speaker who can.

A couple of stories on this from Breitbart.

First one:

> Representative Louie Gohmert (R-TX) said that conservatives in the House heard "not one word" from House GOP leadership on compromises to make changes to the cromnibus in order to get conservatives to vote for it even though "we were willing to work with them to compromise" on Thursday's "Hannity" on the Fox News Channel.
> "There was no encouragement to conservatives. The Speaker and Majority Leader, these folks knew there's

> money for abortion, money for the EPA to hurt states like Texas, Arizona. There's just all kinds of money in there for things we don't support. and, Sean, you and I know some of us had gone to our leadership and said, 'look, we can do this very easily. Let's do it together with conservatives. That's the bulk of our conference, don't make them take a wrong vote. Let's fund everything for two months. Let us have a vote on defunding Obama's amnesty, and we'll even agree that the Senate can take it out if they take the hard vote to do that and let it go from there to the president.' **We were willing to work with them to compromise, and not one word, as you know, the calls went to the white house when in a time that the speaker needed votes he turned to somebody that he really identifies with, the president and liberal Democrats and got them to help him pass this vote**" he stated.

Gohmert is one of my favorite congressmen – I hear him all the time on the FRC's Washington Weekly podcast.

Second one:

> Immediately following the House of Representatives' passage of the so-called CR/omnibus spending bill, Reps. Michele Bachmann (R-MN) and Steve King (R-IA) reacted to the vote.
> Bachmann told host Sean Hannity a decision had been made months ago on amnesty, despite efforts to use this bill to take on President Barack Obama's executive amnesty effort.
>
> "I think the reason why they did it is because the political establishment made a decision months ago this they were going to get amnesty," she said. "And they were going to pay for amnesty. The executive amnesty is what they didn't like — President Obama doing it alone. But they wanted amnesty. Let's not mince words. Both Republican and Democrats, the leadership, the establishment, wanted to have amnesty"
>
> Later in the segment, Hannity turned his attention to King and asked if House Speaker John Boehner made a deal with Obama directly.
>
> "Yes," King replied. "I think no good ideas outside of that deal were going to be considered unless we could have succeeded on taking the rule down. And at that point we would have had a new ball game. And I think we had a chance, but we failed by a vote to take the rule down."

Who knew that when we elected so many Republicans to the House and Senate that Boehner would actually be taking over as Democrat leader in the House from Nancy Pelosi? Maybe next time there we can pick a Republican Speaker of the House.

I'm not saying we shouldn't elect Republicans, I'm saying that we need to primary Republicans who vote for garbage like this so that we get the right men and women for the job. We can start with the 67 we have and keep those, and find as many replacements as possible for the others.

# New study: complication rate for chemical abortions is 5.2%

**Wintery Knight** · 15 December 2014 · Archived copy · Original

Story from Life News.

Excerpt:

> The UCSF study, "Incidence of Emergency Department Visits and Complications After Abortion," is based on a recent study of California Medicaid recipients. It appeared in the December 8, 2014, edition of the journal *Obstetrics & Gynecology*.
>
> California is one of the states that pays for the abortions of women enrolled in Medicaid. The study looked at the billing data from 50,273 Medi-Cal patients who had 54,911 abortions in 2009-2010.
>
> […]Nearly 8% (or between one in 12 and one in 13) of women showed up at the clinic or a local Emergency Room (ER) seeking some service within six weeks of their abortions. Some of those were eliminated from further study because billing records appeared to show that they came in for some service unrelated to the abortion. (These were not specified, but this could be something like smashing a finger in the car door, coming down with the flu, etc.)
>
> But even pulling these out and other "complications not validated," one is left with a substantial number of women dealing with medical problems resulting from their "safe" abortions.
>
> On the billing records of those women returning to the clinic or going to the ER, they found women hemorrhaging, dealing with infections, uterine perforations – the sort of problems we're supposed to think were relics of the early days following the Roe v. Wade decision when abortionists were just learning their craft.
>
> A surprising number of these were related to the new chemical or "medication" abortion method that was supposed to offer women a safer alternative to surgical abortion.
>
> **There were nearly four times as many surgical abortions (34,755 first trimester, 8,837 2nd trimester or later) tracked by the study as there were chemical abortions. (11,319). Yet there were more identified complications associated with the chemical method (588) than they were for the surgical ones (438 for first trimester, 130 for 2nd or later) combined.**
>
> **The complication rate for chemical abortions was 5.2%, versus complication rates of 1.3% for first trimester suction aspiration abortions and 1.5% for second trimester or later methods. This would make chemical abortions four times riskier than early surgical ones and more than three times less safe than a second or third trimester procedure.**
>
> This is hardly the "advance" or "improvement" that women were promised when the government was asked to approve RU-486 more than a decade ago.

I didn't really want to take Life News' word for this, so I looked up the study.

They're right:

> RESULTS: A total of 54,911 abortions among 50,273 fee-for-service Medi-Cal beneficiaries were identified. Among all abortions, 1 of 16 (6.4%, n=3,531) was followed by an ED visit within 6 weeks but only 1 of 115 (0.87%, n=478) resulted in an ED visit for an abortion-related complication. Approximately 1 of 5,491 (0.03%, n=15) involved ambulance transfers to EDs on the day of the abortion. The major complication rate was 0.23% (n=126, 1/436): 0.31% (n=35) for medication abortion, 0.16% (n=57) for first-trimester aspiration abortion, and 0.41% (n=34) for second-trimester or later procedures. The total abortion-related complication rate including all sources of care including EDs and the original abortion facility was 2.1% (n=1,156): 5.2%

> (n=588) for medication abortion, 1.3% (n=438) for first-trimester aspiration abortion, and 1.5% (n=130) for second-trimester or later procedures.

In other posts, I talked about the other risks associated with abortion.

# What happens if you ask 13 gay-owned bakeries to bake a pro-marriage cake?

**Wintery Knight** · 15 December 2014 · Archived copy · Original

Since Christian bakers are being forced by courts to bake cakes for gay weddings, wouldn't it neat to see if gay bakeries will bake pro-marriage cakes for Christians?

Well, this blogger did just that:

> Christian bakeries that refuse to make pro-homosexual marriage cakes are getting sued, they get fined, they get death threats, and they lose their businesses.
>
> So Shoebat.com called some 13 prominent bakers who are pro-gay and requested that they make a pro-traditional marriage cake with the words "Gay marriage is wrong" placed on the cake. Each one denied us service, and even used deviant insults and obscenities against us. One baker even said that she would make me a cookie with a large phallus on it. We recorded all of this in a video that will stun the American people as to how militant and intolerant the homosexual agenda is.
>
> If anyone who objects saying that our request for the cake was hateful, this is exactly the type of thing the homosexual activists do to Christian bakeries when they use the state to coerce them to make a cake with an explicitly anti traditional marriage slogans on it.

Here are the videos – WARNING: some have very vulgar language.

Video 1 of 2:

Video 2 of 2:

The videos contain very vulgar language, which is a stark contrast to the apologetic and humble language Christians employ when responding to the wedding-related requests gay activists. We don't seek to offend, but they are totally OK with offending us.

I'll just link to a few of previous stories on how gay activists forced Christian-owned businesses to service their gay marriages – *through the courts.*

# The meaning of marriage: a lecture at Google by Tim Keller

**Wintery Knight** · 15 December 2014 · Archived copy · Original

*Disclaimer: I have reservations about Tim Keller. I consider him to be too liberal for my tastes, especially on scientific (intelligent design) and political/economic issues. However, I think he did a good job explaining marriage in the lecture below.*

Here's the the video:

Details:

> Timothy Keller visits Google's New York, NY office to discuss his book "The Meaning of Marriage." This event took place on November 14, 2011, as part of the Authors@Google series.
>
> Timothy J. Keller is an American author, speaker, preacher, and the founding pastor of Redeemer Presbyterian Church in New York City. He is the author of several books, including "The Reason for God: Belief in an Age of Skepticism."
>
> "The Meaning of Marriage" touches on topics that all readers can relate to, starting with the role of marriage in our culture, its history and the pessimism that is often associated with it. The Kellers also discuss the feelings of and acts of love, romantic relationships, gender roles, singleness, and the role of sex in a marriage.

I saw a lot of things in his lecture that echo my own views. One point where we agree is on not just looking for traits and virtues in the other person, but in seeing how they handle conflict and solve problems with you. You have to give the other person things to do and see if they make progress and work cooperatively with you. Wes, who linked me the lecture, introduced the link by saying that this is the way that Christians should explain marriage to non-Christians. I agree, and I've added the book to my cart.

Here's an article entitled "You Never Marry the Right Person", that discusses one of the points in the lecture.

Excerpt:

> In generations past, there was far less talk about "compatibility" and finding the ideal soul-mate. Today we are looking for someone who accepts us as we are *and* fulfills our desires, and this creates an unrealistic set of expectations that frustrates both the searchers and the searched for.
>
> […]The Bible explains why the quest for compatibility seems to be so impossible. As a pastor I have spoken to thousands of couples, some working on marriage-seeking, some working on marriage-sustaining and some working on marriage-saving. I've heard them say over and over, "Love shouldn't be this hard, it should come naturally." In response I always say something like: "Why believe that? Would someone who wants to play professional baseball say, 'It shouldn't be so hard to hit a fastball'? Would someone who wants to write the greatest American novel of her generation say, 'It shouldn't be hard to create believable characters and compelling narrative'?" The understandable retort is: "But this is not baseball or literature. This is love. Love should just come naturally if two people are compatible, if they are truly soul-mates. "
>
> The Christian answer to this is that no two people are compatible. Duke University Ethics professor Stanley Hauerwas has famously made this point:
>
> Destructive to marriage is the self-fulfillment ethic that assumes marriage and the family are primarily institutions of personal fulfillment, necessary for us to become "whole" and happy. The assumption is that there is someone just right for us to marry and that if we look closely enough we will find the right person. This moral assumption overlooks a crucial aspect to marriage. It fails to appreciate the fact that we always marry the wrong person.We never know whom we marry; we just think we do. Or even if we first marry the right person, just give it a while and he or she will change. For marriage, being [the enormous thing it is]

> means we are not the same person after we have entered it. The primary challenge of marriage is learning how to love and care for the stranger to whom you find yourself married.
>
> Hauerwas gives us the first reason that no two people are compatible for marriage, namely, that marriage profoundly changes us. But there is another reason. Any two people who enter into marriage are spiritually broken by sin, which among other things means to be self-centered—living life*incurvatus in se*. As author Denis de Rougemont said, "Why should neurotic, selfish, immature people suddenly become angels when they fall in love … ?" That is why a good marriage is more painfully hard to achieve than athletic or artistic prowess. Raw, natural talent does not enable you to play baseball as a pro or write great literature without enduring discipline and enormous work. Why would it be easy to live lovingly and well with another human being in light of what is profoundly wrong within our human nature? Indeed, many people who have mastered athletics and art have failed miserably at marriage. So the biblical doctrine of sin explains why marriage—more than anything else that is good and important in this fallen world—is so painful and hard.

When you are courting, don't worry about appearances and feelings and passion so much, because that is all subject to change over time, and those things won't help you with the real challenges you'll face in a marriage. Worry about whether they are the kind of person who can make commitments and love other people self-sacrificially – even if they are unlovable. In the long run, their ability to read and understand issues, to care for others and serve them, to keep promises, to be respectful and supportive, to argue respectfully and reasonably, and to solve problems constructively, will all be far more important than appearances and feelings and passion.

And let me be clear again: give them things to do that challenge them during the courtship and see how they handle being given responsibilities – giving a person hard things to do is a much better way to test a person than recreational nights out with recreational drinking, recreational dancing and recreational sex. Marriage means commitment and hard work, not recreation. And that's what you should test for – the ability to work hard at the relationship and to keep promises and commitments and to communicate reasonably and to work through difficulties fairly. The most dangerous thing you want to avoid is self-centeredness. You don't want someone who is primarily interested in minimizing your feelings, and then getting her friends to agree with her that this is legitimate for whatever reasons. You want a person who has had a hard enough life that responsibilities and obligations are natural to her, and who doesn't try to wiggle out of self-sacrificial acts of love when she doesn't feel like doing it.

# Four leftist women commit a hate crime against a Muslim conservative

**Wintery Knight** · 16 December 2014 · Archived copy · Original

The story is a bit complicated. Basically, a Muslim conservative wrote a satire of all the grievance-mongering at his university. Not only did the liberal campus newspaper go after him, but 4 leftist women also vandalized his dorm room.

First, let's see some of what he wrote:

> It was one of the coldest days of this winter past, and I was hurrying along the Diag to class. The blistering cold did not turn my eyes from all the white privilege falling around my. All those white snowflakes falling thick upon the autumn leaves, burying their colors. Majoring in womyn's studies, I've learned that oppression comes in many forms. Sometimes we fail to notice it because it's just everywhere – just like that white snow.
>
> As I walked, I slipped on a patch of wet leaves lining the steps of the Hatcher, and I fell forward headfirst onto the steps of the library. If it hadn't been for the left hand that I thrust out right before my fall, I would have ended up just another statistic in the war on colored people. As it were, a white cis-gendered hetero upper-class man came down the steps just as I was falling. He looked at me with that white man's burden face that I see too often on this racialized campus.
>
> "Cold, isn't it?"
>
> Behind his words I sensed a patronizing sneer, as if he expected me to be a spokespersyn for my whole race. He offered his hand to help me up, and I thought to myself how this might be a manifestation of the patriarchy patronizing me. I doubt he would've said those violent words had I been white, but he would take any opportunity to patronize a colored m@n or womyn. People on this campus always box others in based on race. Triggered, I waved his hand aside and got up of my own accord.
>
> He was taken aback. Suddenly I felt I was taking back some of that lost agency that colonialism had robbed my people of. I felt like Aamir Khan in Lagaan. That's right, that white man wasn't about to tax me. I didn't even want to be that white. I turned on my heels and showed him my back.
>
> He shouted after me, "I was just trying to do the right thing!"
>
> The right thing… The right thing… I became so aware at that moment of the left hand that I had thrust out before falling, and suddenly my humanity was reduced to my handydnyss. The words rang in my eardrums, and my blood throbbed. This was the microaggression that broke the gender-neutral camel's back. But unlike other microaggressions, this one triggered a shift in my worldview. All this while, I had been obsessed only with the color on this campus. All of a sudden, though, that became a side issue. All those race-based microaggressions now seemed trivial. I had, I realized, forgotten to think intersectionally.
>
> The biggest obstacle to equality today is our barbaric attitude toward people of left-handydnyss. It's a tragedy that I, a member of the left-handed community, had little to no idea of the atrocious persecution that we are dealt every day by institutions that are deeply embedded in society. So deeply embedded, and so ever-present, that we don't even notice them.

He wrote that satire in the conservative student newspaper, but he was also employed with main campus newspaper.

Here's what the campus newspaper did:

> After his column was published last week, Mahmood tells The College Fix: "I received a call from the editorial editor [of the Daily] telling me that I had created a 'hostile environment' among the editorial staff and that someone had felt threatened because of what I had written … The issue had been taken to the editor

> in chief who procured a bylaw by which I was given an ultimatum to leave the Review or leave the Daily within a week. I was not allowed to know the name of the offended individuals." He added the newspaper's leaders are "forcing me to write a letter of apology as a condition for staying on theDaily" and suspended his regular column in the Daily.
>
> Mahmood has written for both the Review and the Daily concurrently for this fall semester, but after this controversial column was published the Daily's editors decided "Mr. Mahmood's involvement with the Michigan Review presents a conflict of interest. Our bylaws say that once a determination is made that a conflict of interest exists, the person in question will have one week to resign from either the Dailyor the organization causing the conflict of interest," according to a statement from the Daily to The College Fix.

And then came the hate crime (video captured above):

> Security camera footage obtained Sunday by The College Fix shows a group of females changing into hoodies and other baggy clothing and proceeding to vandalize a conservative student's apartment doorway.
>
> Angry messages scribbled on papers posted around student Omar Mahmood's doorway labeled him a "d*ck" and "scum" and included an image of the devil, as well as eggs, gum and hot dogs.
>
> The camera footage was taken inside Mahmood's apartment complex, which is just outside the campus property. Mahmood is known at the school as one who holds conservative and libertarian beliefs. The 21-year-old junior, who is double majoring in comparative literature and evolutionary anthropology, has written against the campus' progressive social justice movements.
>
> On Friday, The College Fix reported on the contents of the vandalism, which included papers stating: "You scum embarrass us," "you self-righteous d*ck," "you have no soul," "everyone hates you you violent pr*ck," and other derogatory messages.
>
> The vandalism occurred at approximately 1:43 a.m. Friday and was discovered later that morning.
>
> On Friday night, Mahmood filed a police report, and said he was advised to file a personal protection order against the women once they are identified. He also has an appointment scheduled with university officials on Tuesday for further investigation.
>
> The video shows three women throwing on large hoodies and other baggy clothing that might mask their appearance while on the eleventh floor. Then they go to the sixth floor where they put the fliers and other paraphernalia on and around his doorway before taking pictures of their act and scurrying out.
>
> […]On a printout of "Do the Left Thing," the vandals wrote: "Shut the f*ck up."

That's the level of fascism that you get if you an out conservative on a university campus today. And that's why I use an alias, because these people graduate and they work alongside you, waiting for you to offend them so they can come after you. Just ask Brendan Eich.

UPDATE: Scott sent me this story from the The College Fix. It has photos from the hate crime. Viewer discretion is advised.

UPDATE: This is from The College Fix today:

> Now Mahmood's conversations with *The College Fix* and other outlets have drawn a sharp rebuke from the *Daily* in the form of an editor's note about the situation, intended to "combat the inaccuracies that have been perpetuated about our publication":
>
> **The way in which the author satirically mocked the experiences of fellow *Daily* contributors and minority communities on campus in his *Review* column violated our values and integrity as a publication.** His actions created a conflict of interest regarding his employment with both the*Daily* and the *Review*.

That's enough to get you fired, because this is how people on the left *really are.*

# Should Christians be committed to small government conservatism?

**Wintery Knight** · 16 December 2014 · Archived copy · Original

I found a paper (PDF) on the University of Washington web site that makes the case for why Christians ought to care about more than just social issues.

Here's the abstract:

> What accounts for cross-national variation in religiosity as measured by church attendance and non-religious rates? Examining answers from both secularization theory and the religious economy perspective, we assert that cross-national variation in religious participation is a function of government welfare spending and provide a theory that links macro-sociological outcomes with individual rationality. Churches historically have provided social welfare. As governments gradually assume many of these welfare functions, individuals with elastic preferences for spiritual goods will reduce their level of participation since the desired welfare goods can be obtained from secular sources. Cross-national data on welfare spending and religious participation show a strong negative relationship between these two variables after controlling for other aspects of modernization.

Here's the conclusion:

> It is quite apparent that there is a strong statistical relationship between state social welfare spending and religious participation and religiosity. Countries with higher levels of per capita welfare have a proclivity for less religious participation and tend to have higher percentages of non-religious individuals. People living in countries with high social welfare spending per capita even have less of a tendency to take comfort in religion, perhaps knowing that the state is there to help them in times of crisis.34 As laid out in the theory above, there is likely a substitution effect for some individuals between state-provided services and religious services. Religion will still be there to serve the spiritual needs of people seeking answers to the philosophic mysteries of life, but those who value those spiritual goods less than the tangible welfare benefits churches provide will be less likely to participate in religious services once secular substitutes become available. Given that religious practice and values are often passed down from generation to generation, the weakening of practice in one generation will likely translate into weaker practice in subsequent generations. Does this mean that secularization theory is correct in its prediction that religion will gradually fade away? Doubtful. Realizing that there is still a yearning among many people to understand the mysteries of life, religion is not likely to dissipate at any time soon. Government simply cannot offer credible substitutes for these less tangible, supernatural goods. The explosion in spirituality once religion was made legal in former Soviet bloc countries lends credence to this assertion (Greeley 1994). As religious markets become more deregulated in various parts of the world, it is likely that new religious movements will take advantage of increased liberty and discover ways to expand.
>
> Perhaps one of the most important lessons from the findings above is that the religiosity of a society is not simply determined by sociological factors. Government policy can play an important role in shaping the religiosity of a nation. Policies aimed at regulating the activities of religious organizations — from tax laws to zoning regulations — have important effects on the firms that supply religious goods and services. Many of these policies are designed consciously to promote or inhibit religious practice. Alternatively, welfare policy has been shown here to unintentionally affect the demand for religious services, likely over the course of generations. And, finally, since an extensive welfare state is considered by many to be a hallmark of modernized societies, the microfoundational analysis presented above provides a way of incorporating a component part of the secularization thesis (which relies heavily on notions of modernization) into the religious economy perspective.

Have you ever heard a sermon that addresses the size of government and individual liberty and prosperity? I haven't. You'd have to be reading Wayne Grudem or Jay Richards to find that. The typical church you attend either praises big government or says nothing about it. After all, we can keep making withdrawals on the liberties we have *right now* without ever worrying about having to make any deposits, right? Everything will be fine, and it's easier not to have to think about what's down the road to serfdom, so long as the scenery is nice for us right now. Religion is primarily about comfort, not truth. Right?

The funny thing is that when I talk to most Christians about this, especially non-Americans, they simply don't have the knowledge of economics to understand how big government affects liberty, prosperity and security. There is no one reading F.A. Hayek and Thomas Sowell in Europe, and there are not that many people reading them here at home either.

# What's the best book a woman can read to prepare herself for marriage?

**Wintery Knight** · 16 December 2014 · Archived copy · Original

A good marriage is more than fun and feelings – it takes planning and work

I found a great lecture by Sue Bohlin, who works at Probe Ministries. The lecture is about the book "The Proper Care and Feeding of Husbands" by Dr. Laura Schlessinger. I recommend this book more highly than any other book to Christian women. It really does a lot to give young women a different perspective on men and marriage. Don't be thrown off by the funny title, it's really good.

The MP3 file is here. (48 minutes)

Here is a blog post that Sue wrote that captures most of the material in the lecture.

Here's the introduction:

> Talk show host Dr. Laura Schlessinger has written a book that is improving thousands of marriages: *The Proper Care and Feeding of Husbands.* We need this book because millions of wives either don't know how to love their husbands wisely and well, or they're too self-centered to see it as important. Dr. Laura credits this dismal condition to forty years of feminist philosophy, "with its condemnation of just about everything male as evil, stupid, and oppressive, and the denigration of female and male roles in families." While the women's movement certainly had a hand to play in the disintegration of relationships and the family, I believe the core cause is our sinful self-centeredness, just as the Bible says.
>
> Which is why we need help, and God instructs older women to train younger women to love their husband and children, to be self-controlled and pure, to be busy at home, to be kind, and to be subject to their husbands, so that no one will malign the word of God. *The Proper Care and Feeding of Husbands* is a great resource for learning these important values and skills.

And here's the first part I thought was most important:

> A listener to Dr. Laura's radio show named Edgar wrote, "There are a few things that men want so bad they would do anything for it. I think a good number of men want respect more than love. They like to feel they

> have some power. I nearly cry when you tell a woman caller to respect her husband. There is so much selfishness in the world—in marriages. Prosperity has allowed women to be so independent, and thus so selfish. I always feel as though I come last—my feelings come last, my needs come last."
>
> *"A good number of men want respect more than love."* God knew this when He made us. His commands to husbands and wives in Ephesians 5:33 reflects each one's deepest needs: "Each one of you also must love his wife as he loves himself, and the wife must respect her husband." Dr. Emerson Eggerichs of LoveandRespect.com points out that this verse commands a husband to love his wife. Why? She needs love like she needs air to breathe. This same verse commands a wife to respect her husband. Why? He needs respect like he needs air to breathe.
>
> - Respect means treating someone in a way that builds him up and doesn't tear him down, never denigrating or attacking.
> - Respect means always treating the other person with the dignity they deserve as a person made in the image of God.
> - Respect means grasping that a man's needs and wants are every bit as valid and important as a woman's needs and wants.
> - Respect means not venting to others, *especially* the children. One woman wrote to Dr. Laura, "No emotional outlet is worth damaging my husband's reputation."
>
> There are three A's that men long for from their wives: attention, affection, and affirmation. Respect involves paying attention to what they do simply because they're the ones doing it.

Yes, respect is very important to men, but the thing is, a woman can't respect every man equally. She should choose a man who does things that are respectable. Then respecting him will be easy. Sometimes, women overestimate how easy men are to change after marriage. It's better to just pick one who does all the important things instead of thinking that you can pick a good-looking one and make him do the important stuff like be faithful to you, hold a steady job, save money, argue without getting angry, etc. later. Men don't change much, so pick one who does things that you respect and then give him respect.

And this part also seemed important to me:

> A man named Roy wrote to Dr. Laura with some good advice for wives: "If you can't accentuate the positive, at least acknowledge it. The world is full of messages to men that there are standards we don't meet. There is always another man who is more handsome, more virile, or more athletic than we are. None of that matters if the most important person in our life looks up to us, accepts us as we are, and loves us even though we aren't perfect. . . . All I know is that the husband who has a wife who supports him and praises him for the positive things he does is the envy of all the other men who have to live with criticism, sarcasm, and constant reminders of their failures."
>
> Men desperately want and need the support of their wives. This is reflected in what God reveals in His Word when He says, "It is not good for man to be alone. I will make a helper suitable for him." And through the apostle Paul, God instructs wives to relate to their husbands in a way that meets this need when He says, "Wives, submit to your husbands as to the Lord."
>
> Submission is basically giving support with a willing, cooperative heart.
>
> A wife's submission includes knowing her gifts and strengths, and using them to serve her husband and family.
>
> Service has a bad name, but both husbands and wives are called to serve God first and then each other; husbands are called to sacrificially love and serve their wives with Jesus as their pattern.
>
> So what does support look like?
>
> - Believing in him. Telling him, "You have what it takes." Being his #1 fan.

> - Cultivating a cooperative heart.
> - Being generous and openhearted—willing to use your gifts and strengths to help him succeed.
> - Understanding the importance of making him look good: never saying anything negative in public.
> - Creating a home that's a safe haven from the world.
> - Having a warm heart with a positive, cheerful demeanor. Women set the temperature of the home; we are thermostats, not thermometers, of the family. (On the other hand, Proverbs says "A quarrelsome wife is like a constant dripping on a rainy day; restraining her is like restraining the wind or grasping oil with the hand.")
> - Being interested in him and his life.
> - Showing thoughtfulness. What does he like? Do it.
> - And though by no means exhaustive, it also means being a person of faithfulness and integrity. That means keeping your promises and being dependable. As Proverbs 31 puts it, "Her husband has full confidence in her and lacks nothing of value."

Support and encouragement is SO important to a man. A man can continue to function fine if the whole world opposes him, but not if the woman he loves doesn't support him. When a man falls in love, a woman has to realize the enormous power she has over him, and be careful not to hurt him. Men are vulnerable to the woman they choose. Although they look pretty tough on the outside, they can easily be hurt by insults or discouragement.

**Parting thoughts**

So, this lecture and the book are good, but young women should also seek out the advice of older Christian women who have been married successfully for some time. Read Titus 2:3-4 – the Bible encourages older women to mentor younger women! This is really important because we are in a time where young women are often pulled by the culture in many wrong directions, and they need help from people who know what they are doing.

One last point – I actually bought the audio version of the Dr. Laura book and noticed that it was just over two hours long. It turns out that the audio version is *abridged* – it is not as complete as the actual book. I noticed that Sue was quoting from the book passages that I had not heard in the audio recording. So, if you want the full content, get the book, not the audio recording.

# Should we use waterboarding to stop terrorist attacks against schools in Pakistan?

**Wintery Knight** · 17 December 2014 · Archived copy · Original

Map of the Middle East

Let's use a real example to assess whether harsh interrogation techniques are ever justified.

The Wall Street Journal:

> Taliban gunmen stormed a military-run school in northwestern Pakistan and killed at least 141 people, methodically shooting schoolchildren in the head and setting fire to some victims in a horrifying 9-hour rampage.
>
> Shahrukh, a 17-year-old survivor of Tuesday's attack in Peshawar, said many students were assembled in the school auditorium when the gunmen burst in and started spraying bullets. He was shot in both legs and fell to the ground.
>
> "I saw them set one of our teachers on fire in front of me," he said.
>
> The scale and level of brutality in the massacre marked a grim milestone in Pakistan's seven-year battle against Islamist insurgents. Of the 141 killed, 132 were schoolchildren. Fifteen bodies of students were burned so badly they couldn't be immediately identified when they were brought to the city's Combined Military Hospital, security officials said.
>
> Amir Ameen, 18 years old, said he and 11 other students were taking an exam when two gunmen entered their classroom. They shot students one by one, mostly in the head, he said from his bed at Peshawar's Lady Reading Hospital.
>
> The attackers shouted "Allahu akbar" or "God is great" over and over as they shot each student, Mr. Ameen said. They spoke Pashto—the language of Pakistan's Pashtun ethnic majority in northwest Pakistan and southern Afghanistan.
>
> […]"The dead children we transported were shot in the head and in the face, some in the eye, as if the gun was close to them," he said. "The children who were injured had gunshot wounds on the back of their legs and arms. They were in shock, but told us they were hit as they ran away from the attackers."
>
> […]"They have attacked funerals and mosques, for them there is no limit. They are operating outside human values," said Mehmood Shah, a retired security official in Peshawar. "They want to terrorize the population into

> submission."

So that's an example of a terrorist attack. This is 100% OK with people on the left, including self-proclaimed "Christians" who think that coddling terrorists is much better than saving innocent children from terrorists. They consider themselves moral – that's why we need to see what they celebrate by opposing tough interrogation techniques.

One quick note: Barack Obama failed to blame the Taliban for the attack. It's just workplace violence. Fort Hood was workplace violence. The attack on the Parliament was senseless violence. It's never Islamic terrorism, because that would insult the terrorists and make them feel bad about what they did.

Now let's have a defense of enhanced interrogation techniques with that example in mind.

This is also from the Wall Street Journal.

Bret Stephens writes:

> I am not sorry Khalid Sheikh Mohammed, the operational mastermind of 9/11, was waterboarded 183 times. KSM also murdered Wall Street Journal reporter Danny Pearl in 2002. He boasted about it: "I decapitated with my blessed right hand the head of the American Jew," he said after his capture.
>
> I am sorry KSM remains alive nearly 12 years after his capture. He has been let off far too lightly. As for his waterboarding, it never would have happened if he had been truthful with his captors. It stopped as soon as he became cooperative. As far as I'm concerned, he waterboarded himself.
>
> […]I am not sorry Osama bin Laden died by an American bullet. John Brennan , the CIA director, delivered a master class in rhetorical obfuscation masquerading as epistemology when he waffled last week about the quality of intelligence yielded by the interrogations of KSM and other high-value detainees. But several former directors and deputy directors of the CIA have all attested to the link between KSM's interrogation and the identification of bin Laden's courier.
>
> I am sorry that the Feinstein Report, which failed to interview those directors and thus has the credibility of a Rolling Stone article, seeks to deny this. Maybe Sabrina Rubin Erdely, author of the discredited University of Virginia gang-rape story and a pro at failing to interview key witnesses, will find a new career in Sen. Feinstein's office.
>
> […]I am sorry that Mr. Cheney, and every other supporter of enhanced interrogation techniques, has to defend the practices as if they were torture. They are not. Waterboarding is part of the military's standard course in Survival, Evasion, Resistance and Escape, or SERE. Tens of thousands of U.S. servicemen have gone through it. To describe this as "torture" is to strip the word of its meaning.

In my previous post on this, I wrote about how waterboarding KSM also prevented a 9/11-style attack on Los Angeles.

Economist Thomas Sowell reminds us of the consequences of attacking the CIA, the military and the police.

He writes:

> One of the most obscene acts of the Obama administration, when it first took office, was to launch a criminal investigation of CIA agents who had used harsh interrogation methods against captured terrorists in the wake of the devastating September 11, 2001 aerial attacks on the World Trade Center and the Pentagon.
>
> Right after those terrorist attacks, when there were desperate fears of what might be coming next, these CIA agents were trying to spare fellow Americans another attack that could take thousands more lives, or perhaps millions more. To turn on these agents, years later, after they did what they were urged to do, as a patriotic duty in a time of crisis, is both a betrayal of those who acted in the past and a disincentive to those in the future

> who are charged with safeguarding the nation.
>
> […]The ease with which politicians are willing to pull the rug out from under people whose job is to safeguard our lives — whether they are CIA agents, the police or the military — is not only a betrayal of those people but a danger to us all.
>
> People who are constantly denouncing the police, including with demonstrable lies, may think they are showing solidarity with people in the ghettos. But, when police hesitate to go beyond "kinder and gentler" policing, that leaves decent people in black communities at the mercy of hoodlums and thugs who have no mercy.
>
> When conscientious young people, of any race, who would like to help maintain peace and order see that being a policeman means having race hustlers constantly whipping up mob hostility against you — and having opportunistic politicians and the media joining the race hustlers — those young people may well decide that some other line of work would be better for them.
>
> High crime areas need not only the most, but the best, police they can get. Taking cheap shots at cops is not the way to get the people who are needed.
>
> **When people who volunteer to put their lives on the line in the military to defend this country, at home and abroad, see their buddies killed on the battlefield, and sometimes themselves come back minus an arm or a leg, or with severe physical and mental damage that they may never get over — and then see some headstrong politician in the White House throw away everything they fought for, and see enemy forces take back places for which Americans shed their blood, that can be galling to them and a deterrent to others who might otherwise take their place in the future.**
>
> **If we cannot see beyond the moment today, we will pay dearly tomorrow and in many more tomorrows.**

How about you? Would you be tough on a terrorist in order to prevent an attack like the one on the Pakistan school? Toughness deters future aggression. Or would you rather let the children die? I don't have any trouble assessing these alternatives.

# New study: bird origins poses a convergence challenge to common ancestry

**Wintery Knight** · 17 December 2014 · Archived copy · Original

Male cockatiel preens his wife's crest

We have to start this post with the definition of convergence in biology.

> In evolutionary biology, convergent evolution is the process whereby organisms not closely related (not monophyletic), independently evolve similar traits as a result of having to adapt to similar environments or ecological niches.
>
> It is the opposite of divergent evolution, where related species evolve different traits.
>
> On a molecular level, this can happen due to random mutation unrelated to adaptive changes; see long branch attraction. In cultural evolution, convergent evolution is the development of similar cultural adaptations to similar environmental conditions by different peoples with different ancestral cultures. An example of convergent evolution is the similar nature of the flight/wings of insects, birds, pterosaurs, and bats.
>
> All four serve the same function and are similar in structure, but each evolved independently.

And now, this new article on convergence in birds and humans, from Evolution News.

They write:

> Everyone is familiar with the striking ability of certain birds (such as parrots) to vocalize speech, much as humans do. Well, according to the new papers published in *Science* that I wrote about earlier, confirming that birds arose explosively, those vocalization abilities are the result of "convergent evolution" at both the morphological and genetic levels.
>
> *Nature News* reports, "The authors also conclude that vocal learning may have evolved independently in the ancestors of parrots, hummingbirds and songbirds." But this is about more than just birds. According to a *Science Daily* article about the technical papers, the genetic "convergent evolution" extends to birds *and humans*:
>
> > "We've known for many years that the singing behavior of birds is similar to speech in humans — not identical, but similar — and that the brain circuitry is similar, too," said Jarvis, an associate professor of neurobiology at the Duke University Medical School and an investigator at the Howard Hughes Medical Institute. "But we didn't know whether or not those features were the same because the genes were also

> the same."Now scientists do know, and the answer is yes — birds and humans use essentially the same genes to speak.
>
> After a massive international effort to sequence and compare the entire genomes of 48 species of birds representing every major order of the bird family tree, Jarvis and his colleagues found that vocal learning evolved twice or maybe three times among songbirds, parrots and hummingbirds.
>
> Even more striking is that the set of genes involved in each of those song innovations is remarkably similar to the genes involved in human speaking ability.

If you're already thinking "This isn't 'convergent evolution,' it's common design," you haven't seen the best part yet. *Science Daily* goes on:

> One of the Dec. 12 papers in *Science* found there is a consistent set of just over 50 genes that show higher or lower activity in the brains of vocal learning birds and humans. These changes were not found in the brains of birds that do not have vocal learning and of non-human primates that do not speak, according to this Duke team, which was led by Jarvis; Andreas Pfenning, a graduate of the PhD program in computational biology and bioinformatics (CBB); and Alexander Hartemink, professor of computer science, statistical science and biology."This means that vocal learning birds and humans are more similar to each other for these genes in song and speech brain areas than other birds and primates are to them," Jarvis said.
>
> These genes are involved in forming new connections between neurons of the motor cortex and neurons that control the muscles that produce sound.

The *Science* paper puts it this way:

> More than 50 genes contributed to their convergent specialization and were enriched in motor control and neural connectivity functions. These patterns were not found in vocal nonlearners, but songbird RA was similar to layer 5 of primate motor cortex for another set of genes, supporting previous hypotheses about the similarity of these cell types between bird and mammal brains.(Pfenning et al., "Convergent transcriptional specializations in the brains of humans and song-learning birds," *Science*, Vol. 346: 1256846-1 – 1256846-13 (December 12, 2014). )

So certain birds and humans use the same genes for vocalization — but those genetic abilities are absent in non-human primates and birds without vocal learning? If not derived from a common ancestor, as they clearly were not, how did the genes get there? This kind of extreme convergent genetic evolution points strongly to intelligent design.

The rest of the article talks about the conclusions of the study authors – they think it's a huge problem – and it is.

I hope you're all beginning to see why I *love* birds so much. I just *adore* them. In fact, I am excited about them right now, and will probably appear silly by gushing about how great they are. Fortunately, my editorette is not hear to stop me!

Birds are *not* just a living disproof of naturalistic evolution. They are also loveable *and* adorable. (Especially parrots, of course) If you guys are considering a pet, go out and get yourself a cockatiel, if it's your first bird, or a green-cheek conure, if you've had birds before. Just remember that they live 20-25 years, so you have to be ready to face responsibilities, expectations and obligations if you make a commitment like that. And you know what? That is totally awesome, to have someone to care about. It's good stewardship to care for animals. And if you can't commit to a parrot of your own over the long haul, then put out an additional bird feeder this winter, and vote against wind power. Wind power kills birds, and I hate it.

Also, that bird in the Evolution News post is an Indian ringneck parrot. And they are awesome!!!!

# Marquette University suspends professor for defending student who opposes gay marriage

**Wintery Knight** · 18 December 2014 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

Here's the back story from Fox News.

Excerpt:

> Students who oppose gay marriage are homophobic, according to an audio recording of a Marquette University instructor who went on to say that gay right issues cannot be discussed in class because it might offend homosexuals.
>
> I reached out to the 20-year-old student at the center of this outrageous episode and the story he tells should serve as a warning to anyone who thinks religious schools are safe havens for open discourse.
>
> The story was first reported on a blog run by a Marquette University professor and was picked up by the good folks over at The College Fix.
>
> The young man, who asked not to be identified, explained what happened when his ethics instructor, Cheryl Abbate, led a conversation in "Theory of Ethics" class about applying philosophical theories to modern political controversies. There were a list of issues on the board – gay rights, gun rights, and the death penalty.
>
> "We had a discussion on all of them – except gay rights," the student told me. "She erased that line from the board and said, 'We all agree on this.'"
>
> Well, as it so happened – the student did not agree with instructor Abbate.
>
> So after class he approached the instructor and told her he thought they should have discussed the issue of gay rights. He also recorded their conversation — without her permission.

I'll cut to the bottom line of that conversation:

> "Are you saying if I don't agree with gays not being allowed to get married that I'm homophobic?" the student asked.
>
> "I'm saying it would come off as a homophobic comment in this class," the teacher replied.
>
> **[…]"You can have whatever opinions you want but I will tell you right now – in this class homophobic**

> **comments, racist comments, sexist comments will not be tolerated," she said. 'If you don't like it, you are more than free to drop this class."**
>
> So the student dropped the class.

That was reported in November, here's the latest from the Washington Times about a professor who blogged about the incident.

Excerpt:

> Marquette University professor John McAdams has been suspended from teaching and banned from campus after blogging about another professor who supposedly shut down opposing views to gay marriage in her ethics class.
>
> In November, Mr. McAdams, who runs the Marquette Warrior blog, wrote a post critical of a philosophy instructor, Cheryl Abbate. Ms. Abbate reportedly told a student in her class that his views against pro-gay policies weren't welcome in the classroom setting because he could offend students who are gay.
>
> Mr. McAdams accused Ms. Abbate of stifling the student's free speech rights that professors have a duty to protect.
>
> On Tuesday he received a letter from Dean Richard Holz saying the Marquette Warrior is under investigation and he is suspended from all faculty activities indefinitely.

You can read the professor's response on his blog.

And let this be a reminder to you not to study anything where these leftist ideology-only professors are teaching. The woman who told the student to agree with her or drop the class was speaking in a mandatory philosophy class. That's why I keep cautioning people against non-STEM fields. This is where the leftists congregate because non-STEM fields like English are insulated from reality. STEM areas are too difficult for people like Cheryl Abatte to infiltrate, because STEM fields require work and the work is bounded by reality. If you choose a STEM program, you can keep your own worldview, learn practical real-world skills, and get a real job doing real work afterwards. Computer science, petroleum engineering, nursing – or go to a vocational school.

# Does foreign policy matter? Obama's appeasement policy comes with a cost

**Wintery Knight** · 18 December 2014 · Archived copy · Original

Obama shakes hands with communist dictator Castro

Just a quick rundown of the foreign policy news that just ruined my day.

Investors Business Daily:

> Just as its patron Venezuela hit the rocks, Cuba got a last-minute rescue from none other than President Obama, who announced a Santa Claus-like package of wish-list goodies for the Castro brothers. Why?
>
> In many ways, President Obama's announced plan to normalize relations with Cuba, lift the embargo, extend trade credits and remove Cuba from the state sponsors of terror list is about on par with the rest of his foreign policy.
>
> It was done by executive order without consulting Congress, just like last month's decision to temporarily legalize 5 million illegal immigrants.
>
> It was justified by a claim the U.S. embargo was "not working," comparable to Obama's claim the U.S. immigration system is "broken." In reality, the problem in both cases is that of a halfhearted willingness to enforce the law, rendering it full of holes.
>
> **As for the hostage swap in the bargain, that of U.S. Agency for International Development subcontractor Alan Gross and another U.S. agent for three professional Cuban intelligence officers linked to the murder of U.S. citizens in the 1996 Brothers to the Rescue shootdown, it was a deal that gave far more than it got, just like the hostage swap with the Taliban of U.S. army deserter Bowe Bergdahl for five terrorists.**
>
> […]One is the strange timing of the announcement, coming just as Venezuela and other nations ruled by petrotyrants are on the verge of collapse.
>
> Venezuela has played sugar daddy to Cuba for years, shipping 100,000 barrels of free oil to the communist state. It can no longer afford to. Rather than use that as leverage, Obama rescued Cuba despite its repressive human rights record. That's one odd bailout.
>
> And the bailout won't be free for U.S. taxpayers.
>
> Obama administration officials have said they are moving swiftly to extend trade credits to Cuba so the $483 million in American goods Cuba now pays for in cash can expand further, thanks to taxpayer-supported U.S.

> ExImBank trade credits.
>
> **In effect, we've handed the odious Castro brothers Uncle Sam's credit card. Given that the Castroites have defaulted on all of their trading partners since 1961, to the tune of at least $70 billion, it's assumed the Castros, having no sustainable economic model, will eventually default on us too.**

Washington Post:

> IN RECENT months, the outlook for the Castro regime in Cuba was growing steadily darker. The modest reforms it adopted in recent years to improve abysmal economic conditions had stalled, due to the regime's refusal to allow Cubans greater freedoms. Worse, the acceleratingeconomic collapse of Venezuela meant that the huge subsidies that have kept the Castros afloat for the past decade were in peril. A growing number of Cubans were demanding basic human rights, such as freedom of speech and assembly.
>
> On Wednesday, the Castros suddenly obtained a comprehensive bailout — from the Obama administration. President Obama granted the regimeeverything on its wish list that was within his power to grant; a full lifting of the trade embargo requires congressional action. Full diplomatic relations will be established, Cuba's place on the list of terrorism sponsors reviewed and restrictions lifted on U.S. investment and most travel to Cuba. **That liberalization will provide Havana with a fresh source of desperately needed hard currency and eliminate U.S. leverage for political reforms.**
>
> […]No wonder Yoani Sánchez, Cuba's leading dissident blogger, concluded Wednesday that "Castroism has won" and predicted that for weeks Cubans will have to endure proclamations by the government that it is the "winner of its ultimate battle."
>
> […]Mr. Obama says normalizing relations will allow the United States to be more effective in promoting political change in Cuba. That is contrary to U.S. experience with Communist regimes such as Vietnam, where normalization has led to no improvements on human rights in two decades. Moreover, nothing in Mr. Obama's record of lukewarm and inconstant support for democratic change across the globe can give Ms. Sánchez and her fellow freedom fighters confidence in this promise.
>
> The Vietnam outcome is what the Castros are counting on: a flood of U.S. tourists and business investment that will allow the regime to maintain its totalitarian system indefinitely. **Mr. Obama may claim that he has dismantled a 50-year-old failed policy; what he has really done is give a 50-year-old failed regime a new lease on life.**

We lost our diplomatic leverage by propping up a communist regime.

But maybe communism is working well for the middle class and the poor in Cuba? Is it?

City Journal:

> Marxists have ruled Cuba for more than a half-century now. Fidel Castro, Argentine guerrilla Che Guevara, and their 26th of July Movement forced Fulgencio Batista from power in 1959 and replaced his standard-issue authoritarian regime with a Communist one. The revolutionaries promised liberal democracy, but Castro secured absolute power and flattened the country with a Marxist-Leninist battering ram. The objectives were total equality and the abolition of money; the methods were total surveillance and political prisons. The state slogan, then and now, is "socialism or death."
>
> […]Cuba has a *maximum* wage—$20 a month for almost every job in the country. (Professionals such as doctors and lawyers can make a whopping $10 extra a month.) Sure, Cubans get "free" health care and education, but as Cuban exile and Yale historian Carlos Eire says, "All slave owners need to keep their slaves healthy and ensure that they have the skills to perform their tasks."
>
> […]The police expend extraordinary manpower ensuring that everyone required to live miserably at the

> bottom actually does live miserably at the bottom. Dissident blogger and author Yoani Sánchez describes the harassment sarcastically in her book *Havana Real*: “Buses are stopped in the middle of the street and bags inspected to see if we are carrying some cheese, a lobster, or some dangerous shrimp hidden among our personal belongings.” Perhaps the saddest symptom of Cuba’s state-enforced poverty is the prostitution epidemic—a problem the government officially denies and even forbids foreign journalists based in Havana to mention. Some Cuban prostitutes are professionals, but many are average women—wives, girlfriends, sisters, mothers—who solicit johns once or twice a year for a little extra money to make ends meet.
>
> […]Citizens who take public transportation to work—which includes almost everyone, since Cuba hardly has any cars—must wait in lines for up to two hours each way to get on a bus. And commuters must pay for their ride out of their $20 a month. At least commuter buses are cheap. By contrast, a one-way ticket to the other side of the island costs several months’ pay; a round-trip costs almost an annual salary.
>
> […]As for the free health care, patients have to bring their own medicine, their own bedsheets, and even their own iodine to the hospital. Most of these items are available only on the illegal black market, moreover, and must be paid for in hard currency—and sometimes they’re not available at all. Cuba has sent so many doctors abroad—especially to Venezuela, in exchange for oil—that the island is now facing a personnel shortage.
>
> […][A]lmost everyone in Havana lives in a Detroit-style wreck, with caved-in roofs, peeling paint, and doors hanging on their hinges at odd angles.
>
> […]Even things as simple as cooking oil and soap are black-market goods. Individuals who, by some illegal means or another, manage to acquire such desirables will stand on street corners and whisper “cooking oil” or “sugar” to passersby, and then sell the product on the sly out of their living room. If they’re caught, both sellers and buyers will be arrested, of course, but the authorities can’t put the entire country in jail. “Everyone cheats,” says Eire. “One must in order to survive.

When Barack Obama uses American taxpayer money to prop up communism, he keeps this system going. The only solution is for the people to revolt against communism, but when he hands money to the government, they buy more guns and keep the people down in poverty and squalor while the rich communist elites rule over them. It’s evil.

Meanwhile, North Korea is able to attack our private industry without even a peep from cowardly Obama and his retreat from Iraq now allows Islamic State terrorists to execute 150 captured women, many of them pregnant, who refused to become “wives” to the terrorists. Any husbands they had would have been shot right in front of them. There is only one way to do something about these problems in the world and that’s with a strong U.S. military, strong sanctions and tough negotiations. Obama has failed these victims in every way because of his approval of the evildoers and his rejection of our democratic allies. We need to have more confidence in the goodness of American power and the American way of life.

# “Five ways you are destroying your husband and killing your marriage” goes viral

**Wintery Knight** · 18 December 2014 · Archived copy · Original

This article by Katelyn Carmen appeared on the Mormon web site “Family Share”. Katelyn’s husband must be the luckiest husband in the world, judging by this article. It’s up to EIGHT MILLION views, so a lot of people are reading it – hopefully a lot of wives, not just frustrated husbands.

Here is her intro:

> When I got married, I was amazed at the instant, overwhelming sense of responsibility I felt to love and care for my husband. Suddenly, a huge part of someone else’s well-being and happiness was largely affected by my choices and actions.
>
> Women, we need to be careful about how we are caring for our husbands and marriages. Don’t let the small stuff ruin the things that will bring you the greatest happiness in life.
>
> Here are just a few ways you might be unknowingly destroying your husband and killing your marriage…

The list:

1. Living outside of what you can afford
2. Constant negativity
3. Putting everything else first
4. Withholding physical affection
5. Not speaking his language

I’ll focus on the details of one that I think is important:

> 3. Putting everything else first
>
> When your children, mom, best friends, talents, or career in front of your husband, you send a clear message to him that he is unimportant. Imagine having that message sent to you every day for many years. What would that do to your self esteem?
>
> Put your husband first.
>
> Although it sometimes seems counter-intuitive and counterproductive, I think you’d be amazed to find that it’s often the key to the greatest happiness in marriage. So many couples get divorced these days, because they neglect to care and love one another and put each other first.
>
> If you choose to put each other first, you will find a lot of joy.

As a man, I have tested women for this, and wow… you get quite a range of responses. Some of them are amazing at sensing your needs, preparing themselves to take action and then taking action. On my Facebook page, there is an entire photo album dedicated to the flowers I have sent to this one woman who is particularly awesome at sensing the needs of men and delivering affection, approval and attention to them. Even just contractors who come to do work in her building get the royal treatment. And she is a director who manages *dozens* of other people. She is the most accomplished woman I know personally, and has graduate degrees, a gapless resume, and a fabulous career with TONS of money saved. And she is great at apologetics.

I really would recommend to young women that they try very hard to study something difficult in school that they don’t like. STEM degrees are the best choices, especially ones that pay. Whatever you do, DON’T STUDY ENGLISH. You don’t want the student loan debts for doing basically nothing, and it won’t build your character.

Choose computer science, nursing, engineering, economics or business administration. Or go to trade school and learn a useful trade, like dental hygienist. Pick a career that requires you to wrestle with real responsibilities, obligations and the expectations of others. That will mature you and prepare you to do things you don't feel like doing, so that you can handle the needs of children and your husband. Marriage is hard work.

# William Lane Craig: churches should focus on apologetics to attract more men

**Wintery Knight** · 19 December 2014 · Archived copy · Original

I saw that Triablogue quoted this passage from William Lane Craig's April 2013 newsletter, which made me very excited and happy.

Here it is:

> One overwhelming impression of these engagements is the way in which the intellectual defense of Christian faith attracts men. Both at Texas A&M and again at Miami every single student who got up to ask a question was a guy! I wondered if the girls are just shy. But then I remembered a lengthy clip Jan and I watched of cast members of Downton Abbey doing a Q&A with an audience in New York. Almost every person who came to the microphone at that event was a woman! It wasn't until late into the evening that a man finally asked a question, which was remarked by all the cast members. Why the difference between that session and the ones I experienced?—simply because the Downton Abbey program is highly relational, which is more appealing to women, whereas my talks were principally intellectually oriented, which is more appealing to men.
>
> Churches have difficulty attracting men, and the church is becoming increasingly feminized. I believe that apologetics is a key to attracting large numbers of men (as well as women) to church and to Christ. By presenting rational arguments and historical evidences for the truth of the Gospel, by appealing to the mind as well as the heart, we can bring a great influx of men into the Kingdom. I'm so pleased that the church in Canada seems to be awakening to this challenge! I'm convinced that we have the opportunity to revolutionize Western Christianity by reclaiming our intellectual heritage.

I could tell you many, many stories of what it was like for me being shut down by churches who were overly sensitive to the desires of women. In college, I and the other male students had *every attempt* to bring in scholars to lecture or debate *shut down* by female leadership. Every single week it was prayer walks, testimonies, hymn sings… over and over. Eventually, the more manly Christians just quit going. Later on, I witnessed apologetics being shut down in the church from the top down and from the bottom up, as well.

I remember one week an excited male friend invited me to his church because his male pastor was giving sermons using Hugh Ross and Gerald Shroeder books. He was trying to tie in the existence of God to cosmology. Well, I showed up the next Sunday to hear, and was disappointed. I could tell that the pastor wanted to go back to that subject, but he never really did. Later on, we found out that a female parishioner had complained that too much science and evidence had ruined her experience of feeling good and being comforted.

I could go on and on and on telling stories like this. To this day, I cannot stand being in a church unless that church has organized things like apologetic training classes, public lectures, public debates or public conferences. But that's the minority of churches. The fact is that churches are attended far more by women than by men, and pastors are catering to women more than men. Not only will apologetics not be mentioned, but elements of feminism will creep into doctrine (egalitarianism) and all political issues will be avoided. Church has become a place to have good feelings, and it is far divorced from anything like evidence or politics which might be viewed as judgmental and divisive.

Commenters on Triablogue think that Dr. Craig will draw flak for his comment, but he's not going to draw flak from mature Christians. What he said is correct. Mature Christians are right behind him on this point. Christian men who have tried to act to defend God's reputation in public know that there is something wrong in the churches. And eventually, men just tune out of church because we know that there is nothing there for us. If women want men to come back to church, then they have to change the church away from what it is now.

# Was Stalin an atheist? Is atheism or communism responsible for mass murders?

**Wintery Knight** · 19 December 2014 · Archived copy · Original

Let's take a look at what Josef Stalin did during his rule of Russia in the 1920s and 1930s.

The Library of Congress offers this in their "Soviet Archives exhibit":

> The Soviet Union was the first state to have as an ideological objective the elimination of religion. Toward that end, the Communist regime confiscated church property, ridiculed religion, harassed believers, and propagated atheism in the schools. Actions toward particular religions, however, were determined by State interests, and most organized religions were never outlawed.
>
> The main target of the anti-religious campaign in the 1920s and 1930s was the Russian Orthodox Church, which had the largest number of faithful. Nearly all of its clergy, and many of its believers, were shot or sent to labor camps. Theological schools were closed, and church publications were prohibited. By 1939 only about 500 of over 50,000 churches remained open.

Let's see more from a peer-reviewed journal article authored by Crispin Paine of the University College, London:

> Atheist propaganda and the struggle against religion began immediately after the Bolsheviks seized power in 1917. While social change would, under Marxist theory, bring religion to disappear, Leninists argued that the Party should actively help to eradicate religion as a vital step in creating 'New Soviet Man'. The energy with which the Party struggled against religion, though, varied considerably from time to time and from place to place, as did its hostility to particular faith groups. The 1920s saw the closure of innumerable churches and synagogues (and to a lesser extent mosques) and the active persecution of clergy and harassment of believers. From 1930, though, Stalin introduced a less aggressive approach, and wartime support for the government earned for the Russian Orthodox Church, at least, a level of toleration which lasted until Stalin's death. Under Khrushchev antireligious efforts resumed, if spasmodically, and they lasted until the end of the Soviet Union.

An article from the pro-communism Marxist.com web site says this about Stalin:

> During the ultra-left period of forcible collectivisation and the Five Year Plan in Four an attempt was made to liquidate the Church and its influence by government decree. Starting in 1929 churches were forcibly closed and priests arrested and exiled all over the Soviet Union. The celebrated Shrine of the Iberian Virgin in Moscow – esteemed by believers to be the "holiest" in all Russia was demolished – Stalin and his Government were not afraid of strengthening religious fanaticism by wounding the feelings of believers as Lenin and Trotsky had been! Religion, they believed, could be liquidated, like the kulak, by a stroke of the pen. The Society of Militant Atheists, under Stalin's orders, issued on May 15th 1932, the "Five Year Plan of Atheism" – by May 1st 1937, such as the "Plan", "not a single house of prayer shall remain in the territory of the USSR, and the very concept of God must be banished from the Soviet Union as a survival of the Middle Ages and an instrument for the oppression of the working masses."!

Now, if all you read were atheist web sites, you'd think that Stalin loved religion and wasn't opposed to Christianity at all. An atheist I know told me that Stalin was a Christian because that's what he was as a child at one point. Funny sort of way to carry out your Christian faith, isn't it? If you read atheist web sites, you'd expect Stalin to have had the career of a William Lane Craig or a J.P. Moreland. And yet in the fever swamp of atheist web sites, this is what they tell themselves. They believe it because they want to believe it. They have to believe it, in order to keep God at bay.

Now, if you were going to pick a hero of the Christian faith, you'd probably pick a real fundamentalist like William Wilberforce, who freed the slaves – because of his evangelical Christian convictions. Wilberforce took Christianity seriously – he believed every verse of the Bible, he tried to convert people to his faith, and he pushed his faith on others by passing laws. He was the worst nightmare of atheism – a politically active Evangelical Christian.

But who is a great atheist who was politically active? When I think of a great atheist, someone who really did the most to oppose the "lie" of God's existence, I think of Josef Stalin. So what kind of morality can we expect from someone who takes the message of Richard Dawkins and Dan Barker seriously and has the political power to really do something about it?

**The Ukraine Famine**

Take a look at this UK Daily Mail article about a great achievement of the atheist Josef Stalin, which occurred in 1932-1933.

Excerpt:

> Now, 75 years after one of the great forgotten crimes of modern times, Stalin's man-made famine of 1932/3, the former Soviet republic of Ukraine is asking the world to classify it as a genocide.
>
> The Ukrainians call it the Holodomor – the Hunger.
>
> Millions starved as Soviet troops and secret policemen raided their villages, stole the harvest and all the food in villagers' homes.
>
> They dropped dead in the streets, lay dying and rotting in their houses, and some women became so desperate for food that they ate their own children.
>
> If they managed to fend off starvation, they were deported and shot in their hundreds of thousands.
>
> So terrible was the famine that Igor Yukhnovsky, director of the Institute of National Memory, the Ukrainian institution researching the Holodomor, believes **as many as nine million may have died.**
>
> […]Between four and five million died in Ukraine, a million died in Kazakhstan and another million in the north Caucasus and the Volga.
>
> By 1933, 5.7 million households – somewhere between ten million and 15 million people – had vanished. They had been deported, shot or died of starvation.

This is what follows when you believe that the universe is an accident, that there is no objective good and evil, that human beings are just animals, that no God will hold us accountable, and that human beings are not made in the image of God for the purpose of freely choosing to come into a relationship with him. The Ukrainian famine is an action that came from a man whose worldview was *passionate atheism.*

**Atheism today**

You might think that today's atheists are much different than Josef Stalin, but understand that according to a recent survey of atheists conducted by atheists, 97% of atheists are pro-abortion. How many people have been killed by abortion? 56 million in the United States alone. Atheists in a society like ours, founded on Judeo-Christian values, are obviously going to live a lot better than Stalin. For one thing, they don't have the power that Stalin had to eradicate theism, although you can see Stalinism in the anti-Christian activities of groups like the Freedom From Religion Foundation. But take away the Judeo-Christian foundations of this society, and what would you see atheists doing?

Remember the words of Richard Dawkins:

> The total amount of suffering per year in the natural world is beyond all decent contemplation. During the minute that it takes me to compose this sentence, thousands of animals are being eaten alive, many others are

> running for their lives, whimpering with fear, others are slowly being devoured from within by rasping parasites, thousands of all kinds are dying of starvation, thirst, and disease. It must be so. If there ever is a time of plenty, this very fact will automatically lead to an increase in the population until the natural state of starvation and misery is restored. In a universe of electrons and selfish genes, blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, nor any justice. **The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil, no good, nothing but pitiless indifference.**
>
> ("God's Utility Function," *Scientific American*, November, 1995, p. 85)

Now, having said that, I readily admit that many atheists adopt Judeo-Christian values if their society is saturated with them, but they are acting better than their worldview requires. They are acting *inconsistently* with what atheism really teaches. It's good for us that they do, but for how long?

# Paul Helm debates William Lane Craig on Calvinism and Molinism on Unbelievable

**Wintery Knight** · 19 December 2014 · Archived copy · Original

I listened to this excellent discussion between Dr. William Lane Craig and Oxford University Calvinist philosopher Dr. Paul Helm. I think this is a useful discussion in general because atheists often bring up problems with Calvinism as objections to Christianity in general, such as:

- If God exists, then he controls everything and I don't have free will
- If God knows the future, then I don't have free will
- If God controls everything, then I am not responsible for my sinning
- If God has to choose me to be saved, then I am not responsible for my damnation

Details:

> If God ordains the future, can humans have free will? Are people predestined for salvation? And what does the Bible say on the matter? William Lane Craig is a Christian philosopher and leading proponent of Molinism, a view of divine sovereignty that seeks to reconcile God's fore-ordination with human free will. Paul Helm is a leading Calvin Scholar. He defends the view that God predestines the future, limiting human freedom.

> For Paul Helm: http://paulhelmsdeep.blogspot.co.uk/

I was surprised because my Calvinist friend Dina thought that Dr. Helm won this debate, but I thought that Dr. Craig won. So without further ado, here is the snark-free summary of the discussion. I also sent the summary to Dina to make sure that it was reasonably fair and accurate. She said it was biased, but she was predestined to say that. Anyway, there's a commentary on the debate over at Michael's Theology blog. And Calvinist Remington has a podcast review in parts. Part 1 is here.

**Summary:**

JB: Has Lewis had any impact on your apologetics?

Craig: Not as a scholar, but more as a model of a scholar who leaves a legacy through his published work

JB: How did you become interested in Calvinism?

Helm: Starting from childhood, and lately writing more on Calvinism from a philosophical point of view

JB: How do you view God's sovereignty?

Helm: Strong view of divine sovereignty, God is sovereign over all events, but that doesn't mean that they are determined by him

JB: What is Calvin's legacy?

Helm: He amplified an existing concept of predestination, and wrote on many other topics

JB: What is Molinism?

Craig: Molina affirms divine sovereignty as Paul Helm does, but he also affirms libertarian free will

Craig: Every event that occurs happens by God's will or by God's permission

JB: What about open theism?

Craig: Paul and I both oppose open theism

JB: How does Molinism reconcile human free will and divine sovereignty

Craig: God has knowledge of what would happen under any set of circumstances

Craig: God has knowledge of everything that COULD happen, and he has knowledge of everything that WILL happen

Craig: God knows what each person freely choose to do in any set of circumstances and he can place people in times and places where he is able to achieve his ends without violating creaturely freedom and creaturely responsibility

JB: How does this apply to the issue of salvation?

Craig: The circumstances in which God puts a person includes God leading people to him and he foreknows who will respond to his leading

Craig: God has ordered the world in such a way that he foreknows the exact people who will free respond to his leading if he puts them in certain circumstances

JB: Does God want to save the maximum of people?

Craig: My own view is that God does order the world in such a way that the maximum number of people will respond to God's drawing them to himself

JB: Is the Molinist view gaining ground?

Craig: Yes, Calvinists and open theists are both moving towards it, and Molinism is the dominant view among philosophical theologians

JB: Why has Molinism not convinced you?

Helm: It's an unnecessary theory, God's natural knowledge and free knowledge covers what middle knowledge covers

Helm: Calvinism has a stronger view of sin, such that God has to act unilaterally and irrestibly to save them

JB: Are creatures free on your view?

Helm: My view of free will is weaker than Craig's view of free will

Craig: For the Calvinist, grace is irresistible, but for the Molinist, grace is effective when it is met with a response from the creature

Craig: The Bible affirms the strong view of free will, when it says that in certain circumstances people can freely choose to do other than they do

Helm: But if a person is in circumstances X and they are free, then why don't they choose something that isn't what God can foresee

Craig: In identical circumstances, a person has the freedom to choose, and God doesn't determine what they choose, he just foreknows what they choose

Helm: How can God foreknow what people will freely do if people have this strong view of freedom that allows them to do anything? God would not know what people can freely do if they really are free

Craig: God has knowledge of what his creatures would freely do in any set of circumstances, he has knowledge of

subjunctive statements

Craig: The Scripture is filled with statements that show that God has this knowledge of what people would do in other circumstances (e.g. – 2 Cor 2:8)

Helm: I am not denying that the Bible is full of subjunctive statements, but if humans have real libertarian free will, then God cannot know what they will do

Craig: I think God does preordain everything, Molinism has a strong sense of divine sovereignty BUT the foreordaining is done with the knowledge of what humans would do in any circumstances, so that what God ordains achieves his ends, but without violating creaturely free will

Craig: I take at face value the passages of the Bible where it says that God wants all persons to be saved

Craig: When the Bible says that God wants ALL persons to be saved (2 Pet 3:9), the Bible means that God wants ALL persons to be saved

Craig: So either universalism is true OR there is something that stops all from being saved outside of God

Craig: the something that prevents all from being saved is creaturely free will

Helm: Most people don't have the opportunity to hear the gospel, so God doesn't want all to be saved

Helm: People can still be responsible for what God "fore-ordains"

JB: Can a person really be responsible for wickedness if they didn't freely choose it?

Helm: Even though God is the only one who can act unilaterally to make save people, the people who act wickedly are still responsible

Craig: Molinism provides an answer to the problem of why not all people have heard the gospel, because by using middle knowledge he is able to know who would respond to the gospel if they heard it and he places those people in the times and places where they will hear it

Craig: That solution means that NO ONE is lost because they have not heard the gospel

Craig: There is Biblical support for (Acts 17:27) God choosing the times and places where people will live SO THAT they will be led by him and be able to respond to his leading

JB: Is God the author of sin, on Calvinism?

Craig: If Calvinists define providence to mean causal determinism, then he is the cause of every effect including human actions, and he is the one who causes people to sin

Craig: This view (determinism) impugns the character of God

Helm: I don't think that sovereignty requires determinism

Helm: God has mysterious resources – which I cannot specify – that reconcile his sovereignty with human responsibility for wickedness

JB: But if God is the cause of people doing wrong things, then how can they be responsible for it?

Helm: Well, humans do cause their own actions

Craig: Helm is right to say that God has resources to reconcile God's sovereignty with free will and human responsibility, and that resource is not an unknown mystery, it's middle knowledge

Craig: I can affirm everything in the Westminster Confession except for the one clause where they expressly repudiate middle knowledge as the mechanism for reconciling divine sovereignty and free will

Helm: Well, Calvinists have a strong view of sin so that humans cannot respond to God's leading

Craig: Yes, and that's why humans need prevenient grace in order to respond to him

Craig: God has to take the initiative and draw people to himself or they cannot be saved, but that grace is resistible, and that's what the Bible teaches (Acts 7:51), so humans are still responsible if they resist God

Helm: My view of grace is that it is monergistic and irrestible, it is a unilateral action on the part of God, like pulling someone out of an icy pond which they can't get out of

JB: If humans freely choose to respond to God's drawing and leading, does that diminish grace?

Helm: Many are called but few are chosen

Craig: Molinism does not require synergism – which is the idea that humans are partly responsible for their salvation

Craig: In Eph 2:8, Scripture is clear that faith opposite to works, and responding to God's drawing is not meritorious

JB: So receiving a gift is not meritorious?

Craig: It's the passive acceptance of what someone else has done for you

Helm: But doesn't this mean that you can lose your salvation, because you can accept and resist the gift of salvation?

Craig: That's a separate question that Christians can differ on, but if the Holy Spirit indwells a person and seals them, then that would argue for the view that salvation cannot be revoked

JB: Doesn't Romans 8 teach Calvinism pretty clearly?

Helm: This is called the "golden chain", and it does support Calvinism

Craig: Actually, this text is no problem for Molinists because the first link in the chain is foreknowledge, which, if it incorporates middle knowledge, is no problem for Molinists

Craig: What God is electing in Romans 8 is a specific group of people that he knows in advance of creating the universe will freely respond to his drawing them to him

Craig: In Acts 4:27-28, it is talking about God's foreknowledge, which involves and incorporates knowledge of what any individual would freely choose if placed in those circumstances

JB: If God actualizes a set plan with set circumstances for everyone, isn't that very similar to Calvinism?

Craig: Yes! It's a strong statement of divine sovereignty

Helm: Foreknowledge doesn't mean that God knows what people would do, it's just refering to God "knowing his own mind" about what he wants to do

JB: How do you respond to the fairness of God unilaterally and specifically choosing some people for salvation and choosing other people for damnation (because he refuses to act unilaterally for them)?

Helm: God ordinarily bypasses other people in the Bible, like when he chooses the Jews as his chosen people

Craig: The problem with that is that the Bible clearly teaches that God has a genuine will that all will be saved and he makes a genuine offer of salvation to all people

Craig: Also, just being a Jew and a member of the chosen people doesn't mean you were saved, because some Jews rebelled against God

Craig: And there were also people outside of the Jewish people who were righteous and in a relationship with God, like Job

Helm: “the fabric of our faith” depends on God’s choice and his not-choice, it is fundamental to the Bible and to God’s character, and choosing them “effectively” (irrestibly and unilaterally)

Helm: The idea of God considering “possible worlds”, some of which are feasible and not feasible, with conflicts between the wills of free creatures in different circumstances, and then actualizing one world that achieve these ends is very messy

Craig: Some worlds may not feasible for God to create, for example a world in which everyone is saved – it is logically possible, but may not be feasible

Craig: God will not exercise any divine coercion to force people to go to Heaven against their own will

Helm: If God chooses a world because it is feasible, then he doesn’t love me directly, he is choosing a world, not individuals

Craig: Well, when God actualizes a world, he specifically knows which individuals will be saved within that world, but without disrespecting free will

Craig: The world isn’t primary, the individuals are primary

Helm: I think that middle knowledge can he included in God’s natural knowledge and free knowledge

Craig: The knowledge of what people would do in different circumstances is based on the freedom of the individuals

JB: Make your conclusions!

Craig: Molinism is a Biblical model for reconciling divine sovereignty with human freedom

Helm: It is intellectually mystifying to introduce this strong view of human freedom and it is not Biblical

# Bible study: the importance of truth in religion

**Wintery Knight** · 20 December 2014 · Archived copy · Original

*A special Christian lady I know has a birthday today, so I am posting a Bible study post especially for her. Happy birthday, Princess M!*

Here's an interesting passage of the Bible. What do you all think the practical value of this passage is?

[1] In the second year of his reign, Nebuchadnezzar had dreams; his mind was troubled and he could not sleep.

[2] So the king summoned the magicians, enchanters, sorcerers and astrologers to tell him what he had dreamed. When they came in and stood before the king,

[3] he said to them, "I have had a dream that troubles me and I want to know what it means."

[4] Then the astrologers answered the king, "May the king live forever! Tell your servants the dream, and we will interpret it."

[5] The king replied to the astrologers, "This is what I have firmly decided: If you do not tell me what my dream was and interpret it, I will have you cut into pieces and your houses turned into piles of rubble.

[6] But if you tell me the dream and explain it, you will receive from me gifts and rewards and great honor. So tell me the dream and interpret it for me."

[7] Once more they replied, "Let the king tell his servants the dream, and we will interpret it."

[8] Then the king answered, "I am certain that you are trying to gain time, because you realize that this is what I have firmly decided:

[9] If you do not tell me the dream, there is only one penalty for you. You have conspired to tell me misleading and wicked things, hoping the situation will change. So then, tell me the dream, and I will know that you can interpret it for me."

[10] The astrologers answered the king, "There is no one on earth who can do what the king asks! No king, however great and mighty, has ever asked such a thing of any magician or enchanter or astrologer.

[11] What the king asks is too difficult. No one can reveal it to the king except the gods, and they do not live among humans."

[12] This made the king so angry and furious that he ordered the execution of all the wise men of Babylon.

[13] So the decree was issued to put the wise men to death, and men were sent to look for Daniel and his friends to put them to death.

[14] When Arioch, the commander of the king's guard, had gone out to put to death the wise men of Babylon, Daniel spoke to him with wisdom and tact.

[15] He asked the king's officer, "Why did the king issue such a harsh decree?" Arioch then explained the matter to Daniel.

[16] At this, Daniel went in to the king and asked for time, so that he might interpret the dream for him.

[17] Then Daniel returned to his house and explained the matter to his friends Hananiah, Mishael and Azariah.

[18] He urged them to plead for mercy from the God of heaven concerning this mystery, so that he and his friends might not be executed with the rest of the wise men of Babylon.

[19] During the night the mystery was revealed to Daniel in a vision. Then Daniel praised the God of heaven

[20] and said:

“Praise be to the name of God for ever and ever;
wisdom and power are his.

[21] He changes times and seasons;
he deposes kings and raises up others.
He gives wisdom to the wise
and knowledge to the discerning.

[22] He reveals deep and hidden things;
he knows what lies in darkness,
and light dwells with him.

[23] I thank and praise you, God of my ancestors:
You have given me wisdom and power,
you have made known to me what we asked of you,
you have made known to us the dream of the king.”

[24]Then Daniel went to Arioch, whom the king had appointed to execute the wise men of Babylon, and said to him, “Do not execute the wise men of Babylon. Take me to the king, and I will interpret his dream for him.”

[25] Arioch took Daniel to the king at once and said, “I have found a man among the exiles from Judah who can tell the king what his dream means.”

[26] The king asked Daniel (also called Belteshazzar), “Are you able to tell me what I saw in my dream and interpret it?”

[27] Daniel replied, “No wise man, enchanter, magician or diviner can explain to the king the mystery he has asked about,

[28] but there is a God in heaven who reveals mysteries. He has shown King Nebuchadnezzar what will happen in days to come. Your dream and the visions that passed through your mind as you were lying in bed are these:

[29] “As Your Majesty was lying there, your mind turned to things to come, and the revealer of mysteries showed you what is going to happen.

[30] As for me, this mystery has been revealed to me, not because I have greater wisdom than anyone else alive, but so that Your Majesty may know the interpretation and that you may understand what went through your mind.

This passage is interesting to me because it shows the kind of attitude that God answers. The King in this passage was tired of hearing man-made stories from his servants – stories that were undoubtedly influenced by the servants desire to survive the King’s wrath. The servants would only have told the King things that were vague and happy, so that they could never be proved wrong or found to be judgmental or offensive. But the King was tired of that. He wanted someone with authority to tell him the truth about the way the world was.

In the rest of the chapter, Daniel interprets the dream, and concludes by saying this: “The great God has shown the king what will take place in the future. The dream is true and its interpretation is trustworthy.”. The King replies: “Surely your God is the God of gods and the Lord of kings and a revealer of mysteries, for you were able to reveal this mystery.”

I think it is is going to be difficult for Christians living today to be able to tell people their dreams like that. But what we can do is talk about God’s miracles as revealed by science and history. We can study astrophysics, biochemistry and history and we can explain what God did in creating and fine-tuning the universe for life, in sequencing amino acids into functioning proteins, in creating brand new body plans in the Cambrian explosion, in raising Jesus from the dead as a matter of historical record, and so on. We have to show how great God is to people

who do not even think he exists, and without assuming that they believe in the Bible.

There are still people out there like the King who are looking for someone who can speak to them with authority. All it takes from us is a little studying, and we can be like Daniel, too. But we have to know what God has done from science and history, and speak with authority about how we can know that God has acted *supernaturally*. Authority to speak comes from having knowledge about what we are talking about, and knowledge comes from studying and debating with people we disagree with. Nebuchadnezzar was not a believer in the God of Israel, but he was still interested in truth. That won't always be the case, but it is the case for some people.

# Did leftist hate speech get two cops killed in New York?

**Wintery Knight** · 21 December 2014 · Archived copy · Original

Here's the news story from WPIX.

Excerpt:

> In a horrific targeted shooting that has stunned the city, two police officers sitting in their car in Brooklyn were shot and killed execution-style Saturday afternoon by a killer who had a "strong bias" against police.
>
> "They were quite simply assassinated, targeted for their uniforms, and for the responsibility they embraced to keep the people of this city safe," Police Commissioner Bill Bratton said at a news conference on the deaths of Officers Wenjian Liu and Rafael Ramos.
>
> They were murdered at about 2:47 p.m.  outside 98 Tompkins Ave., both in full uniform while sitting in their patrol car. Ramos was in the drivers seat and Liu was in the front seat beside him.
>
> According to Bratton, the killer, Ismaaiyl Brinsley, 28, assumed a shooting stance and fired his weapon several times through front passenger window. They never had the chance to draw their weapons; indeed, they may never had seen their assailant.
>
> […]**Brinsley was posting disturbing information on Instagram, Bratton said, which had a strong anti-police bias.**
>
> **"I'm Putting Wings On Pigs Today. They Take 1 Of Ours…Let's Take 2 of Theirs," Brinsley wrote in one of his Instagram postings. He posted more disturbing messages as he headed north to New York City.**

My headline for this post is meant to pose a serious question. I am often told by leftists that opposition to things like abortion, gay marriage, radical Islam, etc. is dangerous because someone reading it will get angry and commit an act of violence. This is why we have government-run censorship panels to charge people who utter "hate speech" which could expose people to violence.

Does this ever happen on the right? I am not familiar with any case where conservative speech has incited violence. Conversely, leftist hate speech often incites violence. Consider the case where Southern Povery Law Center publishes a map with the Family Research Council building, and calls them a "hate" group. That map is then picked up by a gay activist who then picks up a gun and storms the building in an act of (literal) domestic terrorism. It seems to me that we need to be considering what is and is not hate speech when we have actual violence being committed.

Well, this time we have two dead cops, murdered execution-style. So how about the speech of the leftist race hustlers? Shouldn't the government-run censorship panels investigate them for hate speech that *actually did* incite violence? Instead of focusing on speech that merely disagrees with other people, we should look at crimes like this one and ask ourselves – whose speech incited this crime?

In a related video, we can see that the police are certainly unhappy with the way that socialist leftist New York mayor Bill de Blasio spoke negatively about the NYPD:

I wonder if de Blasio understands why they did that?

If we really were to get serious about blocking the leftist hate speech that causes violence, we would probably have to regulate most mainstream media news networks – definitely MSNBC. And most universities, too.

UPDATE: Answering Muslims has discovered that the shooter cited a passage from the Quran prior to the shooting.

# Vermont governor cancels single-payer health care because of costs

**Wintery Knight** · 22 December 2014 · Archived copy · Original

Reported by the Daily Signal:

> Gov. Peter Shumlin announced this week he has called off his plans for single-payer health care in Vermont for 2015, saying "now is not the right time."
>
> **At an unannounced news conference, Shumlin said he received the final modeling for financing single-payer health care on Tuesday and concluded the taxes required to fund a publicly financed system were simply unaffordable.**
>
> "As we completed the financing modeling in the last several days, it became clear that the risk of economic shock is too high at this time to offer a plan I can responsibly support for passage in the legislature," Shumlin said.
>
> "It was clear to me that the taxes required to replace health-care premiums with a publicly financed plan that would best serve Vermont are, in a word, enormous."
>
> The surprise announcement, which came nearly two weeks ahead of schedule, included details that Green Mountain Care's new-revenues requirement had ballooned to $2.6 billion — up from prior high estimates of $2.2 billion. The overall cost for Green Mountain Care's operations and coverage is estimated at $4.3 billion.
>
> **According to Shumlin's financing plan, paying for Green Mountain Care would require a new 11.5 percent payroll tax on all Vermont businesses plus a new sliding-scale income tax of up to 9.5 percent, based on income level and family size.**
>
> Under Shumlin's plan, a family of four with $100,000 of income or more would pay the full 9.5 percent tax. The maximum income tax for any single household would be capped at $27,500.
>
> **At the news conference, Shumlin called single-payer "the greatest disappointment of my political life so far," and he explained why he abandoned his signature policy initiative of the past four years.**

Recall that single-payer health care is the holy grail of the left. It is a massive opportunity for vote-buying because it involves mandatory taxation for "health care" which is then doled out to patients as the government sees fit. Money from people who don't use or need health care (e.g. – young, single men) is taken by mandatory taxation and then used to buy votes of people by making things like contraceptives, breast enlargements, sex changes, IVF, etc. into "health care".

Canada has a single-payer system. How much does this system cost the average Canadian taxpayer?

CTV News reports on a study published by the Fraser Institute.

It says:

> A typical Canadian family with two parents and two kids will pay up to $11,786 for public health care insurance this year, according to a new study from the conservative think tank Fraser Institute.
>
> Using data from Statistics Canada and the Canadian Institute for Health Information, the Fraser Institute study estimated the amount of taxes Canadian families will pay for public health insurance this year. The study also looked at how much the cost of public health insurance has increased over the last decade.
>
> According to the study, Canadian families will pay on average between $3,592 to $11,786 for public health insurance in 2014, depending on the size of their family. For the purposes of their research, the study authors looked at six different family types.

> The study found that over the last 10 years, the cost of public health care insurance for the average Canadian family has increased:
>
> - 1.5 times faster than average income
> - 1.3 times as fast as the cost of housing
> - 1.6 times as fast as clothing costs
> - More than three times as fast as the cost of food

Not only are the costs higher, but the quality is lower when measuring patient outcomes.

We should avoid this system at all costs. Free-market health care is better than government-run health care at keeping costs down. The more we reduce government control of health care, increase competition among health care providers and improve consumer choice, the lower the costs will be.

# Frequent denial of sex breaks the marriage covenant as much as adultery

**Wintery Knight** · 22 December 2014 · Archived copy · Original

Let's start this post by quoting a passage from the Bible.

1 Corinthians 7:1-5:

1 Now concerning the things about which you wrote, it is good for a man not to touch a woman.

[2] But because of immoralities, each man is to have his own wife, and each woman is to have her own husband.

[3] The husband must fulfill his duty to his wife, and likewise also the wife to her husband.

[4] The wife does not have authority over her own body, but the husband *does*; and likewise also the husband does not have authority over his own body, but the wife *does*.

[5] Stop depriving one another, except by agreement for a time, so that you may devote yourselves to prayer, and come together again so that Satan will not tempt you because of your lack of self-control.

So with that in mind, I want to turn to a well-known Jewish talk show host named Dennis Prager, who is much loved and listened to by Christians. Dennis Prager features a lot of discussions about male-female relationships on his show, particularly during the male-female hour. In this two part series on male sexuality, he explains why women should not deprive their husbands of sex without a good reason.

Part 1 is here.

Excerpt:

> It is an axiom of contemporary marital life that if a wife is not in the mood, she need not have sex with her husband. Here are some arguments why a woman who loves her husband might want to rethink this axiom.
>
> First, women need to recognize how a man understands a wife's refusal to have sex with him: A husband knows that his wife loves him first and foremost by her willingness to give her body to him. This is rarely the case for women. Few women know their husband loves them because he gives her his body (the idea sounds almost funny). This is, therefore, usually a revelation to a woman. Many women think men's natures are similar to theirs, and this is so different from a woman's nature, that few women know this about men unless told about it.
>
> This is a major reason many husbands clam up. A man whose wife frequently denies him sex will first be hurt, then sad, then angry, then quiet. And most men will never tell their wives why they have become quiet and distant. They are afraid to tell their wives. They are often made to feel ashamed of their male sexual nature, and they are humiliated (indeed emasculated) by feeling that they are reduced to having to beg for sex.
>
> When first told this about men, women generally react in one or more of five ways…

He then explains the 5 ways that women respond to this.

Here's one:

> 1. You have to be kidding. That certainly isn't my way of knowing if he loves me. There have to be deeper ways than sex for me to show my husband that I love him.

I think that this is a common mistake that liberal women make because they think that men are just hairy women. But men are not women, we are different and sex means something different to men than it does to women. In the past, *most* women understood how men are different than women, but younger women have been taught that there

are no differences between the sexes. To think any different is “sexism”.

Here’s another from the list:

> 4. You have it backwards. If he truly loved me, he wouldn’t expect sex when I’m not in the mood.

Again, this is the common mistake that many younger women today make in thinking that love is a one-way street – flowing from men and children to the woman. If men and children DON’T do what the woman wants, or if they make demands on her, then they don’t “love” her and she is justified in ignoring them.

Liberal women have been taught to believe that they are always victims or some group of oppressors, such as men and children or corporations. It makes them rebel against having to do anything for anyone else, because they don’t want to be “oppressed”. That makes them unable to accept that relationships are give-and-take, Once a commitment to love another person permanently has been made, then each person has responsibilities to provide for the needs of the other.

I actually had a conversation with a Christian woman once who said that women should not be obligated to do things that they didn’t feel like doing. I asked her if men were obligated to go to work when they didn’t feel like going. She said yes, and acted as though I were crazy for asking. I just laughed, because she didn’t even see the inconsistency. The truth is that men often don’t feel like working, but they get up and go to work anyway, whether they like it or not (in most cases). Similarly, a women should feel obligated to have sex with her husband, even if she is not in a perfect mood for it (in most cases). Sometimes, a man stays home from work, and it’s OK. And sometimes a woman says no to sex, and it’s OK. But it’s not OK to stop doing it for months and months with no good reason.

Part 2 is here.

Excerpt:

> Here are eight reasons for a woman not to allow not being in the mood for sex to determine whether she denies her husband sex.

He then explains the eight reasons.

Here’s one of them:

> 7. Many contemporary women have an almost exclusively romantic notion of sex: It should always be mutually desired and equally satisfying or one should not engage in it. Therefore, if a couple engages in sexual relations when he wants it and she does not, the act is “dehumanizing” and “mechanical.” Now, ideally, every time a husband and wife have sex, they would equally desire it and equally enjoy it. But, given the different sexual natures of men and women, this cannot always be the case. If it is romance a woman seeks — and she has every reason to seek it — it would help her to realize how much more romantic her husband and her marriage are likely to be if he is not regularly denied sex, even of the non-romantic variety.

Women have to engage their husbands if they expect their husbands to engage in the marriage as a husband and father. Men can’t do their protector, provider and spiritual leader roles forever unless their needs are met at some point. Performance of these male duties is not free. Wives have to love their husbands in the way that men expect to be loved. That’s what they vowed to do in the wedding, isn’t it?

At the end of the article, Prager makes a general point about women that I think needs to be emphasized over and over and over:

> That solution is for a wife who loves her husband — if she doesn’t love him, mood is not the problem — to be

> guided by her mind, not her mood, in deciding whether to deny her husband sex.

This problem of sex-withholding is so widespread, that it really makes me (although I am a virgin) wonder what women think that marriage is about anyway. When a woman vows to love her husband, what do they think that word really means? Why do women think that men marry? What do men want that marriage provides for them? Which of those needs are the women's responsibility to provide for? I think these are questions that men should ask women. I think women should be prepared to answer them. Men should expect that women be reading books on men and marriage, and that she has relationships with men where she is giving support, respect, affirmation, affection and approval. You can learn a lot about a woman by how she treats her father, for example.

Unfortunately, many men today haven't thought through what they need from wives in a marriage. They spend their young years chasing women who are fun and sexually permissive. Every husband I asked about what they need has told me that respect, affirmation, affection and regular sex are more important than appearance and fun. Pre-marital sex, having fun, getting drunk, and going out, etc. are not the right foundation for marriage – which requires mutual self-sacrifice in order to work.

Another point: I have a friend who is very concerned that men are breaking sexual rules, but he seems oblivious to 1 Corinthians 7:1-5. I asked him privately what he thought about sex-withholding, and whether this might cause husbands to turn to pornography and even affairs, and I mentioned 1 Corinthians 7:1-5. He said: "no, it's not something I take much interest in". I was tempted to ask him if the Bible was something that he does not take much interest in.

I think he misreads 1 Corinthians 7:1-5 so that it could only be used to condemn *men*. If that were his view, then it actually worries me if well-meaning men are actually undermining marriage, by teaching women that they have no responsibilities to keep the marriage going, and helping them to feel like victims when their marriages fall apart. Sometimes even people who claim to be pro-marriage can undermine marriage practically-speaking, because of their unBiblical belief that women are "naturally good" and should not have any responsibilities in a marriage.

I thought this attitude was so interesting in view of what I read in the Proper Care and Feeding of Husbands. In that book, Dr. Laura urges women to be sensitive to their husbands' different male natures in order to avoid them looking at pornography and having affairs. Withholding sex from a man is the equivalent of a man withholding *conversation* to a woman. Sex is how a man feels loved! What's remarkable is how female callers on her show are shocked that men react badly to being deprived of sex.

I do think that some men will look at porn and cheat regardless of what their wife does sexually, but then it again falls to the woman to choose a man who has demonstrated that he has self-control – i.e., a virgin who has remained chaste with her throughout the courtship and protected her from doing sexual things outside of the covenant context. Chastity is hard, but it is how a man loves his wife self-sacrificially, before he even meets her. It should be a trait much sought after *and respected* by women. Basically, women need to be led by their minds, not by their feelings, when choosing a husband.

A man has to get up and go to work every day for his family, regardless of whether he feels like it or not. In fact, the many decisions he has made before getting married are also made not because they make him happy, but because he needs to be responsible to his future wife and children. The decision to study science? Loving obligation. The decision to go to grad school in science? Loving obligation. The decision to work in a demanding, risky career? Loving obligation. The decision to save money and eat instant oatmeal for dinner? Loving obligation. Men don't do these things because we enjoy them. We do it because we love our wives and children self-sacrificially, *before we ever even meet them*. I think that women need to do the same.

# George Ellis and Joe Silk attack untestable cosmological theories in Nature

**Wintery Knight** · 22 December 2014 · Archived copy · Original

I found this Evolution News post about it, thanks to a J. Warner Wallace tweet. The article they linked is by two well-known cosmologists.

EN writes:

> Here's what George Ellis and Joe Silk say in *Nature* ("Scientific Method: Defend the Integrity of Physics"):
>
> > This year, debates in physics circles took **a worrying turn**. Faced with difficulties in applying fundamental theories to the observed Universe, some researchers **called for a change in how theoretical physics is done**. They began to argue — explicitly — that if a theory is **sufficiently elegant and explanatory**, it **need not be tested experimentally**, breaking with centuries of philosophical tradition of defining scientific knowledge as **empirical**. We disagree. As the philosopher of science Karl Popper argued: **a theory must be falsifiable to be scientific**. (Emphasis added.)
>
> In particular, they chide the string theorists, multiverse advocates, inflation theorists, and purveyors of the "many worlds" interpretation of quantum mechanics.

Their concern is that the requirement for testability is being relaxed for junky theories.

> Whether Ellis and Silk's definitions of science and the scientific method are adequate is beside the point (the definition of science is a vexed question, testability is vague, and falsifiability has its flaws). What worries them is something else:
>
> > The issue of **testability** has been lurking for a decade. **String theory** and **multiverse theory** have been criticized in popular books and articles, including some by one of us (G.E.). In March, theorist Paul Steinhardt wrote in this journal that the theory of **inflationary cosmology** is no longer scientific because it is **so flexible that it can accommodate any observational result.** Theorist and philosopher Richard Dawid and cosmologist Sean Carroll have countered those criticisms **with a philosophical case to weaken the testability requirement for fundamental physics**.

Interesting that Sean Carroll, a naturalist who proposes naturalistic alternatives to the standard (theism-friendly) cosmology model (creation out of nothing), wants to weaken the testability requirement. Why do you think that is? Well, if we go by which model is testable, rather than which model is acceptable to that old-time naturalistic religion, then then the standard model (creation out of nothing) wins. That's because we have experimental evidence for the standard model, (light element abundances, cosmic microwave background radiation, second law of thermodynamics, etc.) Carroll's model is falsified by observations (e.g. – humans exist, not Boltzmann brains), and that's why why he weakens the criterion of testability. If testability is what makes science, then he's really just engaged in creative writing.

And about the multiverse in particular:

> Look what they say about multiverse theory:
>
> > The multiverse is motivated by **a puzzle**: why **fundamental constants of nature**, such as the fine-structure constant that characterizes the strength of electromagnetic interactions between particles

> > and the cosmological constant associated with the acceleration of the expansion of the Universe, **have values that lie in the small range that allows life to exist.** Multiverse theory claims that there are billions of unobservable sister universes out there in which all possible values of these constants can occur. So somewhere there will be a bio-friendly universe like ours, **however improbable** that is.
>
> That sounds like a lead-up to *The Privileged Planet*, or to *Privileged Species*. Ellis and Silk go on to describe how one of the constants, the cosmological constant, is 120 orders of magnitude off from the predicted theoretical value. So are they ready to consider scientific theories that embrace this evidence, like intelligent design? No, but one thing they do know: multiverse theory is not scientific.
>
> > Billions of universes — and of galaxies and copies of each of us — accumulate with **no possibility of communication** between them **or of testing their reality**. But if a duplicate self exists in every multiverse domain and there are infinitely many, **which is the real 'me' that I experience now?** Is any version of oneself preferred over any other? **How could 'I' ever know what the 'true' nature of reality is if one self favours the multiverse and another does not?**
>
> That's a logical statement, not an observational one. By this, we see that they are not against using logical inference to eliminate unworthy theories. Isn't that what Meyer does in his books, using "inference to the best explanation"? Isn't that what Dembski does to eliminate the chance hypothesis?
>
> In the end, Ellis and Silk never explain cosmic fine-tuning. They just preach that science needs to stick to the old-time religion: respect for observable, testable evidence.

The article by Ellis and Silk takes a lot of shots at fundamentalist religion, but at least we fundamentalists are OK with following *testable* science wherever it goes. Unlike naturalists.

# One of the murdered NYPD police officers was a chaplain-in-training

**Wintery Knight** · 23 December 2014 · Archived copy · Original

The rhetoric of the leftist mob

Consider this story from the Christian Post about Officer Ramos.

Excerpt:

> Officer Rafael Ramos was passionate about serving God and saw his work as a police officer as a form of ministry; he would have been commissioned as a lay chaplain this past Saturday, the day he was killed.
>
> Ramos was shot and killed execution style along with his partner, Wenjian Liu, on Saturday by a lone gunmen who took his own life inside a New York City subway station after committing the double murder.
>
> Rev. Marcos Miranda, the president of the New York State Chaplain Task Force where Ramos was studying to be certified as a chaplain, remembers the officer as kind man.
>
> "It was an honor to have him (Officer Ramos)," Miranda told The Christian Post. "He had just taken the 10-week course and was a faithful member of his local church, Christ Tabernacle. He was due to graduate this past Saturday, where we graduated 144 chaplains. Ramos would have been a lay leader and been endorsed by his denomination."
>
> "I will remember his kindness the most — even the kindness in his eyes — in our talks, he asked what I thought of him being a police officer, and I said it was an honorable job. He said he thought it was ministry because he was helping those in need. He never thought he could be a chaplain, he saw himself doing this type of ministry after he retired from the NYPD. He was very excited about that possibility," Miranda added.
>
> Miranda is not the only person to remember Ramos' faith and passion for the Lord.
>
> "My cousin had a couple of priorities in his life," Ramos' cousin, Ronnie, told The Wall Street Journal on Sunday. "One was God, because he was a God-loving man. I wish I could be half the man my cousin was. He was sweet. He didn't deserve to die."
>
> […]Ramos turned 40 this month and was due to graduate from a community-crisis chaplaincy program, which was incredibly important to the father of two.
>
> Ramos' 13-year-old son, Jaden, posted a heartfelt message about his father on Facebook, which has since gone viral.
>
> "He was the best father I could ask for," Jaden wrote. "It's horrible that someone gets shot dead just for being a police officer. Everyone says they hate cops but they are the people that they call for help. I will always love

> you and I will never forget you. RIP Dad."

Why did these two minority men, one Hispanic, one Asian, get shot?

Famous black economist Thomas Sowell has the answer in his latest column.

He writes:

> Mayor de Blasio has made anti-police comments with Al Sharpton seated at his side. **This is the same Al Sharpton with a trail of slime going back more than a quarter of a century, during which he has whipped up mobs and fomented race hatred from the days of the Tawana Brawley "rape" hoax of 1987 to the Duke University "rape" hoax of 2006 and the Ferguson riots of 2014.**
>
> **Make no mistake about it. There is political mileage to be made siding with demagogues like Al Sharpton who, as demagogue in chief, has been invited to the White House dozens of times by its commander in chief.**
>
> Many in the media and among the intelligentsia cherish the romantic tale of an "us" against "them" struggle of beleaguered ghetto blacks defending themselves against the aggression of white policemen. The gullible include both whites who don't know what they're talking about and blacks who don't know what they're talking about, either, because they never grew up in a ghetto. Among the latter are the president and his attorney general.
>
> Such people readily buy the story that ghetto social problems today — from children being raised without a father to runaway murder rates — are "a legacy of slavery," even though such social problems were nowhere near as severe in the first half of the 20th century as they became in the second half.
>
> You would be hard-pressed to name just five examples from the first half of the 20th century of the kinds of ghetto riots that have raged in more than 100 cities during the second half. Such riots are a legacy of the social degeneracy of our times.
>
> Calling this social degeneracy "a legacy of slavery" is not just an excuse for those who engage in it, it is an excuse for the ideology of the intelligentsia behind the social policies that promoted this degeneracy.
>
> **Let those who have laid a guilt trip on people in our times, for evils done by other people in past centuries, at least face their own responsibility for the evil consequences of their own notions and policies. If they won't do it, then the rest of us need to stop listening gullibly to what they are saying.**

I wonder if the leftist leaders who demonized the police feel sorry for what they did now. I know that they want to claim now that they never meant things to go this far, but things did go this far. And I think that there is a direct connection between the rhetoric of the leftist leaders and the deaths of these police officers. Maybe instead of complaining about the police, they should complain about how subsidizing single motherhood with welfare and repealing welfare reform causes fatherlessness, and how fatherlessness causes young men to commit crimes. But they can't do that, because that's where their votes come from – government dependency.

# Two reasons to avoid premarital sex: trust issues and contact with exes

**Wintery Knight** · 23 December 2014 · Archived copy · Original

This is from Family Studies blog. (H/T Brad Wilcox)

Excerpt:.

> My own research with working-class young adults leads me to believe that they have basically made peace with sexual permissiveness—at least outside of marriage—even as they retain some ambivalence about it. They tend to move in quickly with new romantic partners, even as they worry that people rush too quickly into relationships. From survey data, we know that people without a college education have more lifetime sexual partners than those with a college education, and that most of them see no problem with premarital sex.
>
> But there is one problem: easy access to sex with multiple partners can make for complicated relationships. As sexual partners accumulate, so does the potential for distrust. As one man whose ex-girlfriend had cheated on him explained, "It's gonna take a lot more time for me to ever trust somebody again like that. I let her in quick, and now it's never gonna happen again." One divorced man said simply, "Everyone has to watch their ass all the time." There is the feeling that no one is safe—even in marriage. As another young man claimed, "Nowadays, even though you got a ring on your finger, people tend to look past that."
>
> So people describe keeping vigilant watch over their partners' cell phones, policing for messages from exes. They live an all but married lifestyle, yet they say that they are hesitant to make the commitment of marriage. Why? Part of the reason is that they don't trust their partner, or themselves, to remain in the marriage. In one survey, 42.5 percent of low-income, unmarried respondents cited "worry that the marriage would end in divorce" as a reason they might not be pursuing marriage, and 23.5 percent cited "questions about whether your partner is trustworthy." As one young man that I interviewed said after learning that his fiancée was cheating on him, "I don't trust nobody."
>
> **That distrust is at least partly the legacy of the libertarian sexual ethic, which assumes that sexual activity outside of marriage is typically okay so long as people are mutually consenting to the acts. And that distrust is why I have a hard time believing—as Noah Smith does—that sexual permissiveness will somehow evolve into more stable marriages for the working class. (Indeed, having more sexual partners prior to marriage is linked to greater odds of divorce, as Nicholas Wolfinger and W. Bradford Wilcox recently documented.) There is no invisible hand that will transform James and Jessica's distrust and cynicism, which stems in part from their multiple past sexual relationships, into trust and an enduring marriage. What the working class needs—what we all need—to achieve our shared aspirations for lifelong love and a stable family is social permission to date without immediately having sex.**
>
> That's important because today young people often assume that withholding sex is a sign of distrust. As James said, if you begin a relationship and don't have sex, "they automatically assume that you're cheating." But sliding into sex often translates into sliding into a relationship—and children—without first building trust and discerning for character and compatibility. And that slide often contributes to the erosion of trust in the opposite sex and in lifelong love. We must confront that reality if we're serious about empowering working young adults to achieve trusting relationships.

"Withholding sex" makes it sound bad. You don't have sex or even do sexual things before marriage because you are trying to prove to your partner that you have self-control enough that when you are married, he/she need not be concerned that you are OK with sex outside of a lifelong commitment. You restrain yourself in order to prove to the other person that you have what it takes in order to be trusted, and the other person does the same to you. It's

not that you are trying to reduce the amount of “fun” you are having, it’s that you are auditioning for a role, and this is what the other person needs to see from you during the courtship – chastity. It’s even better if your exes can produce letters of reference. I always produce letters of references from my exes and they tell the woman “you have nothing to worry about, he may push you for many, many things as he leads you, but sex isn’t one of those things”. I am very demanding about women learning and growing – just not demanding about sex. Sex is for marriage.

Usually, when a girl I court has sexual experience, it’s because she had a period when she was not a Christian. This is fine with me (it’s something that requires adjustments and some extra work). You might think because I am so demanding and judgmental, that this is an immediate disqualifier, but it’s not. What I like to do is try to lead the woman to learn apologetics, conservative ideas, how marriage works, etc. Usually what happens is that she compares me to her ex-boyfriends who were not Christians and thinks “wow! those guys had no plan for me beyond making me fulfill their sexual needs”. Which is what you can expect from a non-Christian man – they have no interest in introducing you to the Boss, and telling you what the Boss requires. That’s one of the pluses of being courted by a Christian man – we put the woman’s service to God first. We don’t push her into sex, because we find other ways for her to show that she loves us other than sex. There are a BILLION ways for a woman to show that she loves you and is interested in you without pushing her for anything sexual.

It does have a strong effect on a woman when she sees me putting my needs second, and trying to get her to learn stuff that is helpful to the Boss. I think when a woman experiences that, it’s difficult for them to go back to non-Christian men. At least, that’s my experience. The more you teach a woman about how a marriage actually runs, and what a man actually does in a marriage, the less she tends to like guys who have not prepared for marriage. Well, at least a good woman will connect the dots and adjust what kind of man she is interested in. Men are designed to be protectors, providers and moral/spiritual leaders. Although it’s tempting for a woman to go for men who don’t make demands and don’t make judgments, in the long run, it’s not good for a marriage project. It would be like stepping on a football field and preferring to talk to the guy who doesn’t take winning too seriously. He’s fun to talk to, not very demanding, but it’s not going anywhere. I think women who choose men who don’t lead or judge on purpose may feel more comfortable, but a goal-directed, demanding relationship is actually more stable.

# Can a person believe in God and evolution at the same time?

**Wintery Knight** · 23 December 2014 · Archived copy · Original

Was Mount Rushmore designed?

Here's a post on Evolution News that explains what theistic evolution is:

> Three geologists stand at the foot of Mt. Rushmore. The first geologist says, "This mountain depicts perfectly the faces of four U.S. Presidents, it must be the work of a master sculptor." The second says, "You are a geologist, you should know that all mountains were created by natural forces, such as volcanoes and plate movements, the details were then sculpted by erosion from water and wind. How could you possibly think this was the work of an intelligent sculptor? Only a person completely ignorant of geophysics could think those faces were designed."
>
> The third geologist says to himself, "I don't want to be seen as ignorant, but the faces in this mountain sure do look like they were designed." So he thinks a moment and says to the second geologist, "Of course you are right, these faces were sculpted by natural forces such as erosion. Only an ignorant person would think they were designed." Then he turns to the first and says, "But what a magnificent result, there obviously must have been a master sculptor standing by and watching."

The third geologist is a theistic evolutionist. Someone who thinks that God did nothing detectable by science in the whole history of the universe, but who also loves to talk about their religious experience and what hymns they like to sing in church. Synonyms for this definition of theistic evolution are "supernaturalist naturalism" and "theistic atheism". I like the latter, myself. Theistic atheism. Atheism at work for my colleagues on Monday, and theism in the church for my pastor on Sundays.

Now if you call yourself a theistic evolutionist, but you think that intelligent design is *detectable in nature by non-theists doing ordinary science with ordinary scientific methods*, then you are not a theistic evolutionist according to this definition. This post is not describing you.

You can listen to a debate on theistic evolution between Michael Behe and theistic evolutionist Keith Fox right here to decide if theistic evolution is *true.* A summary is provided for those who prefer to read instead of listen.

# New study: high levels of generosity to spouse makes a happier marriage

**Wintery Knight** · 24 December 2014 · Archived copy · Original

This is from the ultra-leftist New York Times, of all places. (H/T Brad Wilcox)

Excerpt:

> Researchers from the University of Virginia's National Marriage Project recently studied the role of generosity in the marriages of 2,870 men and women. Generosity was defined as "the virtue of giving good things to one's spouse freely and abundantly" — like simply making them coffee in the morning — and researchers quizzed men and women on how often they behaved generously toward their partners. How often did they express affection? How willing were they to forgive?
>
> The responses went right to the core of their unions. Men and women with the highest scores on the generosity scale were far more likely to report that they were "very happy" in their marriages. The benefits of generosity were particularly pronounced among couples with children. Among the parents who posted above-average scores for marital generosity, about 50 percent reported being "very happy" together. Among those with lower generosity scores, only about 14 percent claimed to be "very happy," according to the latest "State of Our Unions" report from the National Marriage Project.

And at the bottom of the article, this:

> Top three predictors of a happy marriage among parents:
>
> 1. Sexual Intimacy.
> 2. Commitment.
> 3. Generosity.
>
> Portion of 18- to 46-year-olds with below-average sexual satisfaction who are "very happy" in their marriages:
>
> - Husbands: 7 percent.
> - Wives: 6 percent.

Probably the best way to find out where to be generous with a person is to learn their love language.

But some needs are generic to all women, for example – financial security. It never hurts for a man to start with studying something hard in school, getting a good job, and saving money. At the very least, women tend to be concerned about security, and money definitely helps you as a man to be generous in supplying for her needs there. If another need is just encouragement, moral leadership or spiritual leadership, then there are ways of building up a supply of that so that you can be generous there as well.

I wanted to write something about a woman I know who I love to be generous with, she is my favorite woman in the whole world. Over the last few years, she has invested a lot into my life, which is not hard, since I just need her to be feminine to me, and to recognize the things I do as a man for God. She adopts my goals as her goals, and prepares herself by reading tough books, then goes out into the world and makes a difference using what she's learned. She does the real work of teaching apologetics, and doing public speaking on issues we care about. That's respect – when a woman listens to your cares and concerns, then acts on them effectively and independently. So, I try very hard to be generous to her, because I've never found another one like her.

Since we are far apart, one of the ways I care for her is by listening to her day and where she struggles and then buying her things that will make her life easier. She was struggling to lift a heavy vacuum up the stairs – so I bought

her a new corded hand vacuum. She was cleaning the snow and ice off her car with her gloves – so I bought her a new ice scraper. She hates to do ironing and it takes her forever – so I bought her a new steam generator iron. She struggles to chop up vegetables with her hurt hand – so I bought her a new food processor. She uses a wok pot more than any pot, and hers was literally *rusting* – so I bought her a new Circulon non-stick wok. And so on. I listen to where she is stuck or struggling, and then I solve the problem. Sometimes I get her gifts that are less practical, and more indulgent, like handbags, a sparkly watch, or things for her cat (cat tunnel, catnip balls).

I just wanted to say this to husbands who do have good wives who recognize them for being good earners, good savers, good at Christian apologetics, good at protecting their children from lies, good at being self-controlled and faithful, etc. If your wife recognizes you and is generous in giving you affirmation, approval and affection, then giving her thoughtful gifts to solve her problems is a good way to be generous back. Try to think about what her day is like, and where she is struggling, and then buy her something that will help her. Every time she uses it, she will think of you – her hero! Don't wait to be asked, just do it. Solve the problem!

Important disclaimer: I don't recommend doing this with any radical feminist man-blamers – that would be suicide. Chivalry is wonderful, but you have to pick your target carefully.

# FDA now allowing gay men to donate blood

**Wintery Knight** · 24 December 2014 · Archived copy · Original

This is from the Weekly Standard.

Excerpt:

> The FDA will seek to change the ban on gay men's blood, so long as the donor hasn't had sexual contact in the last year.
>
> "The U.S. Food and Drug Administration is a science-based regulatory agency that works to protect and promote the public health. In this role, it is our responsibility to regulate the blood supply and to help ensure its continued safety for the patients who receive these life-saving products," announces FDA commissioner Margaret A. Hamburg.
>
> > Over the past several years, in collaboration with other government agencies, the FDA has carefully examined and considered the available scientific evidence relevant to its blood donor deferral policy for men who have sex with men, including the results of several recently completed scientific studies and recent epidemiologic data. Following this review, and taking into account the recommendations of advisory committees to the U.S. Department of Health and Human Services (HHS) and the FDA, the agency will take the necessary steps to recommend a change to the blood donor deferral period for men who have sex with men from indefinite deferral to one year since the last sexual contact.
> >
> > This recommended change is consistent with the recommendation of an independent expert advisory panel the HHS Advisory Committee on Blood and Tissue Safety and Availability, and will better align the deferral period with that of other men and women at increased risk for HIV infection. Additionally, in collaboration with the NIH's National Heart Lung and Blood Institute (NHLBI), the FDA has already taken steps to implement a national blood surveillance system that will help the agency monitor the effect of a policy change and further help to ensure the continued safety of the blood supply.

Here's a story from the CBC about how the blood supply became tainted in Canada. (H/T Patriactionary)

Why is this a problem? Well, gay men are at a much higher risk for HIV, and other sexually-transmitted infections. The CDC released this report about the elevated risks posed by this lifestyle.

The write:

> Sixty-two percent of American men who know they are HIV positive continue to have unprotected anal sex, according to data released last week by the federal Centers for Disease Control.
>
> This data, which was published Friday, came from the federal government's National HIV Behavioral Surveillance System.
>
> The percentage of self-aware HIV-positive men who engage in unprotected anal sex has been increasing, according to the CDC. In 2005, 55 percent did so. In 2008, 57 percent did so. And, in 2011, 62 percent did so.
>
> "Unprotected anal sex is a high-risk practice for HIV infection, with receptive anal sex having the highest risk," said the CDC report. "Unprotected anal sex also places MSM at risk for other sexually transmitted infections such as syphilis, chlamydia, and gonorrhea. Although condoms can reduce the risk for HIV transmission, they do not eliminate risk and often are not used consistently. Some MSM attempt to decrease their HIV risk by engaging in unprotected sex only with partners perceived to have the same HIV status as their own. However, this practice is risky, especially for HIV-negative MSM, because MSM with HIV might not know or disclose that they are infected and men's assumptions about the HIV status of their partners can be

> wrong."

And in another report:

> Teens and young adults now account for more than a quarter of the new cases of HIV identified in the United States annually, and a clear majority of those cases involve young gay or bisexual men, the federal government said in a major new survey Tuesday.
>
> Of the nearly 48,000 new HIV cases identified in the United States in 2010, the latest year for which complete data are available, more than 12,000 involved teens and young adults, the Centers for Disease Control (CDC) found in its latest report.
>
> About 72 percent of these new HIV cases in younger adults occurred in young men who are gay or bisexual, according to the CDC report.
>
> […]According to the CDC figures, black youths accounted for the largest share of new HIV cases, with Hispanic youths and white youths accounting for about 20 percent each.
>
> About 1.1 million people are estimated to be living with HIV in the United States. Some 47,129 new HIV cases were identified in 2010.
>
> The CDC's new report, "Vital Signs: HIV Infection, Testing, Risk Behaviors Among Youths, United States," estimated that youths aged 13 to 24 accounted for 12,200, or 26 percent, of new HIV infections in 2010.

But, this is what we get when we elect a government that is more in service to ideas of "equality", "diversity" and "non-discrimination" than common sense. It would be nice to think that the only people who will suffer from this decision are Democrats, but that's not the way it works.Everyone suffers when we elect people who are led by emotional ideology (the vision of the anointed, as Thomas Sowell calls it) instead of reason and evidence. We get to be the test subjects of their little experiments.

# Is the story of the woman being stoned for adultery in John 7-8 authentic?

**Wintery Knight** · 24 December 2014 · Archived copy · Original

Here's the leading conservative New Testament scholar Daniel Wallace to explain.

Excerpt:

> One hundred and forty years ago, conservative biblical scholar and Dean of Canterbury, Henry Alford, advocated a new translation to replace the King James Bible. One of his reasons was the inferior textual basis of the KJV. Alford argued that "a translator of Holy Scripture must be…ready to sacrifice the choicest text, and the plainest proof of doctrine, if the words are not those of what he is constrained in his conscience to receive as God's testimony." He was speaking about the Trinitarian formula found in the KJV rendering of 1 John 5:7–8. Twenty years later, two Cambridge scholars came to the firm conclusion that John 7:53–8:11 also was not part of the original text of scripture. But Westcott and Hort's view has not had nearly the impact that Alford's did.
>
> For a long time, biblical scholars have recognized the poor textual credentials of the story of the woman caught in adultery (John 7:53–8:11). The evidence against its authenticity is overwhelming: The earliest manuscripts with substantial portions of John's Gospel (P66 and P75) lack these verses. They skip from John 7:52to 8:12. The oldest large codices of the Bible also lack these verses: codex Sinaiticus and Vaticanus, both from the fourth century, are normally considered to be the most important biblical manuscripts of the NT extant today. Neither of them has these verses. Codex Alexandrinus, from the fifth century, lacks several leaves in the middle of John. But because of the consistency of the letter size, width of lines, and lines per page, the evidence is conclusive that this manuscript also lacked the *pericope adulterae*. Codex Ephraemi Rescriptus, also from the fifth century, apparently lacked these verses as well (it is similar to Alexandrinus in that some leaves are missing). **The earliest extant manuscript to have these verses is codex Bezae, an eccentric text once in the possession of Theodore Beza. He gave this manuscript to the University of Cambridge in 1581 as a gift, telling the school that he was confident that the scholars there would be able to figure out its significance.** He washed his hands of the document. Bezae is indeed the most eccentric NT manuscript extant today, yet it is the chief representative of the Western text-type (the text-form that became dominant in Rome and the Latin West).
>
> **When P66, P75, Sinaiticus, and Vaticanus agree, their combined testimony is overwhelmingly strong that a particular reading is not authentic. But it is not only the early Greek manuscripts that lack this text. The great majority of Greek manuscripts through the first eight centuries lack this pericope. And except for Bezae (or codex D), virtually all of the most important Greek witnesses through the first eight centuries do not have the verses. Of the three most important early versions of the New Testament (Coptic, Latin, Syriac), two of them lack the story in their earliest and best witnesses. The Latin alone has the story in its best early witnesses.**
>
> Even patristic writers seemed to overlook this text. Bruce Metzger, arguably the greatest textual critic of the twentieth century, argued that "No Greek Church Father prior to Euthymius Zigabenus (twelfth century) comments on the passage, and Euthymius declares that the accurate copies of the Gospel do not contain it" (*Textual Commentary*, 2nd ed., *loc. cit.*).
>
> It is an important point to note that although the story of the woman caught in adultery is found in most of our printed Bibles today, the evidence suggests that the majority of Bibles during the first eight centuries of the Christian faith did not contain the story. Externally, most scholars would say that the evidence for it not being an authentic part of John's Gospel is rock solid.
>
> But textual criticism is not based on external evidence alone; there is also the internal evidence to consider.

> This is comprised of two parts: *intrinsic evidence* has to do with what an author is likely to have written;*transcriptional evidence* has to do with how and why a scribe would have changed the text.
>
> Intrinsically, the vocabulary, syntax, and style look far more like Luke than they do John. There is almost nothing in these twelve verses that has a Johannine flavor. And transcriptionally, scribes were almost always prone to add material rather than omit it—especially a big block of text such as this, rich in its description of Jesus' mercy. One of the remarkable things about this passage, in fact, is that it is found in multiple locations. Most manuscripts that have it place it in its now traditional location: between John 7:52 and 8:12. But an entire family of manuscripts has the passage at the end of Luke 21, while another family places it at the end of John's Gospel. Other manuscripts place it at the end of Luke or in various places in John 7.
>
> The *pericope adulterae* has all the earmarks of a pericope that was looking for a home. It took up permanent residence, in the ninth century, in the middle of the fourth gospel.

Wallace teaches at the ultra-conservative fundamentalist Dallas Theological Seminary, and is the foremost evangelical manuscript expert in the world.

Why is this important? I think it is important because this story is very prominent for a great many Christians, especially Christian women, who use this to justify a variety of positions that are inconsistent with the rest of the Bible. These Christians *do not like the idea of anyone being judged* and so they are naturally inclined to blow this disputed passage into an entire theology that repudiates making moral judgments on such things as capital punishment. In fact, in another post, I was accused of being the equivalent of one of the people who wanted to stone the woman taken for adultery because I oppose fornication and single motherhood. That's how far this has gone, where some Christians, especially Christian feminists, have leveraged this passage to redefine the Bible so that women are no longer responsible to the Bible's moral rules and can never be blamed for acting irresponsibly.

# What is the meaning and significance of Christmas for Christians?

**Wintery Knight** · 25 December 2014 · Archived copy · Original

It's the time of year when we explain what Christianity is about.

**God exists**

Basically, we know from a variety of scientific arguments that the universe was created and fine-tuned for life by an intelligent agent that existed causally prior to the beginning of the universe, because this agent brought the universe into being. Our purpose as humans is to enter into a two-way loving relationship with this Creator/Designer of the universe. This is the only way that we can ultimately be happy and fulfilled.

**We avoid God**

Now, when you look at human experience, none of us is interested in finding out about the character of this Creator/Designer, because we are afraid that if we find out too much about him then we will have our freedom to do as we please constrained by the demands of a relationship with an all-powerful, all-good being. Just knowing that such a person exists and has a character distinct from our own is enough to cause us to flee from him so that we can stay autonomous from the obligations of the moral law that he expects us to follow.

Christians believe that this universal desire to avoid an all-powerful, all-good God who will judge us is a result of bad behaviors inherited by us from the very first rebellion against God by our ancestors. Ever since that rebellion, the capability for relating to God has been lost, because we no longer have the ability to stop our rebellion against God. Christians call the first rebellion of our ancestors "The Fall of Man".

What does this rebellion look like for us today? Well, we want to do whatever we want, in order to be happy, and to ignore God's demands. We want to have happy feelings, including security, community and being morally good, all without a relationship with God. We want to acquire and rearrange matter for our selfish ends without acknowledging and honoring the Creator/Designer of that matter. And, of course, we would like other people to affirm, voluntarily or involuntarily, that our rebellion against God is really the height of moral goodness.

Additionally, some people imagine that God, if he exists at all, must desire our happiness. And of course when their needs are not met by this invented God, then they become even more bitter at God, and eventually decide that God could not really exist since their selfish needs are not being met by him. It never seems to occur to us humans that

some pain and suffering may be permitted by God in order to turn our attention away from pleasure and security in this life, and back towards a relationship with him.

This is the mess we find ourselves in. This propensity for turning away from God and trying to pursue selfish happiness and security apart from a relationship with God is what the Bible calls "sin". Every single one of us deserves severe punishment for refusing to pursue a genuine two-way love relationship with the God who is there. That is the mess we are in before Jesus appears to address this problem.

**Jesus saves the day**

I cannot say much about *how* Jesus solves the problem of rebellion against God, because that is really the story of Easter, and today we are dealing with the story of Christmas. But I can say that the solution to the problem requires that God step into history to communicate with his creatures and to perform actions in order to be reconciled with them. That is the message of Christmas: God is stepping into history to do something to end our rebellion. Easter is the story of *what he does*.

This is talked about in the Bible in John 1, for example.

John 1:1-5:

[1]In the beginning was the Word, and the Word was with God, and the Word was God.

[2]He was with God in the beginning.

[3]Through him all things were made; without him nothing was made that has been made.

[4]In him was life, and that life was the light of men.

[5]The light shines in the darkness, but the darkness has not understood it.

You can substitute the word "Word" there for *Logos*, which really means *logic* or *reason* or *wisdom.* This is a person with a divine nature, identified with the eternal being of God, who exists causally prior to the creation of the universe, who is going to take on an additional human nature, including a human body. (Christians believe that there is one divine "what" being and three divine "who" persons). Software engineers, you can think of Jesus having two natures as multiple inheritance in C++.

And it continues in John 1:10-14:

[10]He was in the world, and though the world was made through him, the world did not recognize him.

[11]He came to that which was his own, but his own did not receive him.

[12]Yet to all who received him, to those who believed in his name, he gave the right to become children of God—

[13]children born not of natural descent, nor of human decision or a husband's will, but born of God.

[14]The Word became flesh and made his dwelling among us. We have seen his glory, the glory of the One and Only, who came from the Father, full of grace and truth.

Here the word grace doesn't mean like a graceful ballet dancer. It means an instance of mercy received from a superior. A person (a "who") identified with the divine being (a "what") has decided to make us a top-down offer of mercy.

The same message of God stepping into history is found in the Christmas carols that people sing at Christmas.

**Christmas carols**

Here's the best one, "O, Holy Night", and it says:

O holy night! The stars are brightly shining.
It is the night of the dear Savior's birth.

Long lay the world in sin and error pining,
Till He appeared and the soul felt its worth.

When we were in rebellion, we had lost our most valuable capacity – the capacity of being in a direct relationship with God. And if the newborn baby Jesus can accomplish his mission (and he did), then we are going to regain that capacity for a direct relationship with God.

Now look at "Hark! The Herald Angels Sing", which one of my favorites:

Hark! The herald angels sing,
"Glory to the newborn King!
Peace on earth and mercy mild,
God and sinners reconciled."

Basically, as I often say, there are only two kinds of people in the world. There are people who are willing to respond to the offer of a relationship with God, with all the little sacrifices and compromises that a relationship entails, and then there are people who are not willing to respond. For the people who are willing to respond, the appearance of Jesus is the best thing that could possibly happen, because now we are finally going to have a chance to deal directly with God, face-to-face, to find out what he is like, and change ourselves to be more like him, with his help.

And that is why people celebrate Christmas. It's the anniversary of the birth of Jesus. It is the story of God stepping into history to be reconciled with his rebellious creatures. It's the story of the divine *Logos* subjecting himself to the life of a creature in order to rescue us from our sinful, self-destructive rebellion. This love for undeserving creatures is above and beyond the call of duty. We didn't love him, but instead he loved us first, and he loved us enough to come down here and suffer with us so that we could be reconciled with God.

MERRY CHRISTMAS!

# Is the Bible's definition of faith opposed to logic and evidence?

**Wintery Knight** · 25 December 2014 · Archived copy · Original

Probably the biggest misconception that I encounter when defending the faith is the mistaken notion of what faith is. Today we are going to get to the bottom of what the Bible says faith is, once and for all. This post will be useful to Christians and atheists, alike.

**What is faith according to the Bible?**

I am going to reference this article from apologist Greg Koukl of Stand to Reason in my explanation.

Koukl cites three Biblical examples to support the idea that faith is not blind leap-of-faith wishing, but is based on evidence.

1. Moses went out into the wilderness and he had that first encounter with the burning bush, and God gave him the directive to go back to Egypt and let his people go. Moses said, Yeah, right. What's going to happen when they say, why should we believe you, Moses?God said, See that staff? Throw it down.Moses threw it down and it turned into a serpent.God said, See that serpent? Pick it up.And he picked it up and it turned back into a staff.God said, Now you take that and do that before the Jewish people and you do that before Pharaoh. And you do this number with the hail, and the frogs, and turning the Nile River into blood. You put the sun out. You do a bunch of other tricks to get their attention.And then comes this phrase: "So that they might know that there is a God in Israel."
2. [I]n Mark 2 you see Jesus preaching in a house, and you know the story where they take the roof off and let the paralytic down through the roof. Jesus said, "Your sins are forgiven." And people get bugged because how can anyone forgive sins but God alone?Jesus understood what they were thinking and He said this: What's harder to say, your sins are forgiven, or to rise, take up your pallet and go home?Now, I'll tell you what would be harder for me to say : Arise, take up your pallet and go home. I can walk into any Bible study and say your sins are forgiven and nobody is going to know if I know what I am talking about or not. But if I lay hands on somebody in a wheelchair and I say, Take up your wheelchair and go home, and they sit there, I look pretty dumb because everyone knows nothing happened.But Jesus adds this. He says, "In order that you may know that the Son of Man has the power and authority to forgive sins, I say to you, arise, take up your pallet and go home." And he got up and he got out. Notice the phrase "In order that you may know". Same message, right?
3. Move over to the Book of Acts. First sermon after Pentecost. Peter was up in front of this massive crowd. He was talking about the resurrection to which he was an eyewitness. He talked about fulfilled prophecy. He talked about the miraculous tongues and the miraculous manifestation of being able to speak in a language you don't know. Do you think this is physical evidence to those people? I think so. Pretty powerful.Peter tells them, These men are not drunk as it seems, but rather this is a fulfillment of prophecy. David spoke of this. Jesus got out of the grave, and we saw him, and we proclaim this to you.Do you know how he ends his sermon? It's really great. Acts 2:36. I've been a Christian 20 years and I didn't see this until about a year ago. This is for all of those who think that if you can know it for sure, you can't exercise faith in it. Here is what Peter said. Acts 2:36, "Therefore let all the house of Israel know for certain that God has made him both Lord and Christ, Messiah, this Jesus whom you crucified." There it is again. "Know for certain."

**What is faith according to Bible-based theologians?**

I am going to reference this article from theologian C. Michael Patton of Parchment and Pen in my explanation.

Patton explains that according to Reformation (conservative, Bible-based) theologians, faith has 3 parts:

1. **notitia –** This is the basic informational foundation of our faith. It is best expressed by the word content. Faith, according to the Reformers must have content. You cannot have faith in nothing. There must be some referential propositional truth to which the faith points. The proposition "Christ rose from the grave," for

example, is a necessary information base that Christians must have.

2. **assensus –** This is the assent or confidence that we have that the *notitia* is correct… This involves evidence which leads to the conviction of the truthfulness of the proposition… This involves intellectual assent and persuasion based upon critical thought… *assensus*… says, "I am persuaded to believe that Christ rose from the grave."
3. **fiducia –** This is the "resting" in the information based upon a conviction of its truthfulness. *Fiducia* is best expressed by the English word "trust."… Fiducia is the personal subjective act of the will to take the final step. It is important to note that while *fiducia* goes beyond or transcends the intellect, it is built upon its foundation.

So, Biblical faith is really trust. Trust(3) can only occur *after* intellectual assent(2), based on evidence and thought. Intellectual assent(2) can only occur *after* the propositional information(1) is known.

The church today accepts 1 and 3, but denies 2. I call this "fideism" or "blind faith". Ironically, activist atheists, (the New Atheists), also believe that faith is blind. The postmodern "emergent church" denies 1 and 2. A person could accept 1 and 2 but deny 3 by not re-prioritizing their life based on what they know to be true.

**How do beliefs form, according to Christian philosophers?**

I am going to reference a portion of chapter 3 of J.P. Moreland's "Love Your God With All Your Mind" (i.e. – LYGWYM).

J.P. Moreland explains how beliefs form and how you can change them.

1. Today, people are inclined to think that the sincerity and fervency of one's beliefs are more important than the content… Nothing could be further from the truth… As far as reality is concerned, what matters is not whether I like a belief or how sincere I am in believing it but whether or not the belief is true. I am responsible for what I believe and, I might add, for what I refuse to believe because the content of what I do or do not believe makes a tremendous difference to what I become and how I act.
2. A belief's strength is the degree to which you are convinced the belief is true. As you gain ,evidence and support for a belief, its strength grows for you… The more certain you are of a belief… the more you rely on it as a basis for action.

But the most important point of the article is that *your beliefs are not under the control of your will.*

> …Scripture holds us responsible for our beliefs since it commands us to embrace certain beliefs and warns us of the consequences of accepting other beliefs. On the other hand, experience teaches us that we cannot choose or change our beliefs by direct effort.
>
> For example, if someone offered you $10,000 to believe right now that a pink elephant was sitting next to you, you could not really choose to believe this… If I want to change my beliefs about something, I can embark on a course of study in which I choose to think regularly about certain things, read certain pieces of evidence and argument, and try to find problems with evidence raised against the belief in question.
>
> …by choosing to undertake a course of study… I can put myself in a position to undergo a change in… my beliefs… And… my character and behavior… will be transformed by these belief changes.

I think definition of faith is important, because atheists seemed to want to substitute their own definition of faith as blind belief for this Biblical definition, but there is no evidence for their view that faith is belief without evidence. I think this might be another case of projection by atheists. Blind faith is how they arrive at their views, so they are trying to push it onto us. But the Bible is clearly opposed to it.

# Is the definition of atheism “a lack of belief in God”?

**Wintery Knight** · 25 December 2014 · Archived copy · Original

First, let’s see check with the Stanford University Encyclopedia of Philosophy.

Excerpt:

> ‘Atheism’ means the negation of theism, the denial of the existence of God.

Stanford University is one of the top 5 universities in the United States, so that’s a solid definition. To be an atheist is to be a person who makes the claim that, as a matter of FACT, there is no intelligent agent who created the universe. Atheists think that there is no God, and theists think that there is a God. Both claims are objective claims about the way the world is out there, and so both sides must furnish forth arguments and evidence as to how they are able to *know* what they are each claiming.

Philosopher William Lane Craig has some thoughts on atheism, atheists and lacking belief in God in this reply to a questioner.

Question:

> In my discussions with atheists, they are using the term that they “lack belief in God”. They claim that this is different from not believing in God or from saying that God does not exist. I’m not sure how to respond to this. It seems to me that its a silly word-play and is logically the same as saying that you do not believe in God. What would be a good response to this?
> Thank you for your time,
>
> Steven

And here is Dr. Craig’s full response:

> Your atheist friends are right that there is an important logical difference between believing that there is no God and not believing that there is a God. Compare my saying, “I believe that there is no gold on Mars” with my saying “I do not believe that there is gold on Mars.” If I have no opinion on the matter, then I do not believe that there is gold on Mars, and I do not believe that there is no gold on Mars. There’s a difference between saying, “I do not believe (p)” and “I believe (not-p).” Logically where you place the negation makes a world of difference.
>
> But where your atheist friends err is in claiming that atheism involves only not believing that there is a God rather than believing that there is no God.
>
> There’s a history behind this. Certain atheists in the mid-twentieth century were promoting the so-called “presumption of atheism.” At face value, this would appear to be the claim that in the absence of evidence for the existence of God, we should presume that God does not exist. Atheism is a sort of default position, and the theist bears a special burden of proof with regard to his belief that God exists.
>
> So understood, such an alleged presumption is clearly mistaken. **For the assertion that “There is no God” is just as much a claim to knowledge as is the assertion that “There is a God.” Therefore, the former assertion requires justification just as the latter does. It is the agnostic who makes no knowledge claim at all with respect to God’s existence. He confesses that he doesn’t know whether there is a God or whether there is no God.**
>
> But when you look more closely at how protagonists of the presumption of atheism used the term “atheist,” you discover that they were defining the word in a non-standard way, synonymous with “non-theist.” So understood the term would encompass agnostics and traditional atheists, along with those who think the

> question meaningless (verificationists). As Antony Flew confesses,
>
> the word 'atheist' has in the present context *to be construed in an unusual way*. Nowadays it is normally taken to mean someone who explicitly denies the existence . . . of God . . . But here it has to be understood not positively but negatively, with the originally Greek prefix 'a-' being read in this same way in 'atheist' as it customarily is in . . . words as 'amoral' . . . . In this interpretation an atheist becomes not someone who positively asserts the non-existence of God, but someone who is simply not a theist. (*A Companion to Philosophy of Religion,* ed. Philip Quinn and Charles Taliaferro [Oxford: Blackwell, 1997], s.v. "The Presumption of Atheism," by Antony Flew)
>
> **Such a re-definition of the word "atheist" trivializes the claim of the presumption of atheism, for on this definition, atheism ceases to be a view. It is merely a psychological state which is shared by people who hold various views or no view at all. On this re-definition, even babies, who hold no opinion at all on the matter, count as atheists! In fact, our cat Muff counts as an atheist on this definition, since she has (to my knowledge) no belief in God.**
>
> **One would still require justification in order to know either that God exists or that He does not exist, which is the question we're really interested in.**
>
> So why, you might wonder, would atheists be anxious to so trivialize their position? Here I agree with you that a deceptive game is being played by many atheists. If atheism is taken to be a view, namely the view that there is no God, then atheists must shoulder their share of the burden of proof to support this view. But many atheists admit freely that they cannot sustain such a burden of proof. So they try to shirk their epistemic responsibility by re-defining atheism so that it is no longer a view but just a psychological condition which as such makes no assertions. They are really closet agnostics who want to claim the mantle of atheism without shouldering its responsibilities.
>
> This is disingenuous and still leaves us asking, "So is there a God or not?"

So there you have it. We are interested in what both sides *know* and *what reasons and evidence they have to justify their claim to know.* We are interested in talking to people who make claims *about objective reality*, not about themselves, and who then go on to give reasons and evidence to support their claims *about objective reality*. There are atheists out there that do make an objective claim that God does not exist, and then support that claim with arguments and evidence. Those are good atheists, and we should engage in rational conversations with them. But clearly there are some atheists who are not like that. How should we deal with these "subjective atheists"?

**Dealing with subjective atheists**

How should theists respond to people who just want to talk about their psychological state? Well, my advice is to avoid them. They are approaching religion irrationally and non-cognitively – like the person who enters a physics class and says "I lack a belief in the gravitational force!". When you engage in serious discussions with people about God's existence, you only care about what people know and what they can show to be true. We don't care about a person's psychology.

**Dealing with persistent subjective atheists**

What happens when you explain all of that to a subjective atheist who continues to insist that you listen to them repeat over and over "I lack a belief in God, I lack a belief in God"? What if you tell them to make the claim that God does not exist, and then support it with arguments and evidence, but instead they keep leaving comments on your blog telling you again and again about their subjective state of mind: "I lack a belief in cupcakes! I lack a belief in icebergs!" What if they keep e-mailing you and threatening to expose you on Twitter for refusing to listen to them, or denounce you via skywriting: "Wintery Knight won't listen to me! I lack a belief in crickets!". I think at this point you have to give up and stop talking to such a person.

And that's why I moderate and filter comments on this blog. There are uneducated people out there with access to

the Internet who want attention, but I am not obligated to give it to them. And neither are you. We are not obligated to listen to abusive people who don't *know* what they are talking about. I do post comments from objective atheists who make *factual* claims about the objective world, and who support those claims with *arguments and evidence*. I am not obligated to post comments from people who refuse to make objective claims or who refuse to support objective claims with arguments and evidence. And I'm not obligated to engage in discussions with them, either.

# Reasonable Faith podcast: the real consequences of atheism

**Wintery Knight** · 25 December 2014 · Archived copy · Original

If you love to listen to the Please Convince Me podcast, as I do, then you know that in a recent episode, J. Warner Wallace mentioned a blog post on an atheistic blog that clearly delineated the implications of an atheistic worldview. He promised he was going to write about it and link to the post, and he has now done so.

The latest episode of Reasonable Faith discusses the post mentioned in the episode.

Details:

> An atheist blogger gets brutally honest about his view and tells other atheists to quit fooling themselves!

The MP3 file is here on the Reasonable Faith web site. (23 minutes)

Kevin Harris (KH) and William Lane Craig: (WLC) discuss this post on the Wintery Knight blog.

Summary:

- KH: New Atheists always try to portray themselves as having meaningful lives, and good without God
- WLC: Exactly, they would say you don't nee God to do positive things, so God makes no difference
- KH: but what happens when an atheist explains the real consequences of atheism?

KH then reads a quote by an atheist blogger:

> "[To] all my Atheist friends.
>
> Let us stop sugar coating it. I know, it's hard to come out and be blunt with the friendly Theists who frequent sites like this. However in your efforts to "play nice" and "be civil" you actually do them a great disservice.
>
> We are Atheists. We believe that the Universe is a great uncaused, random accident. All life in the Universe past and future are the results of random chance acting on itself. While we acknowledge concepts like morality, politeness, civility seem to exist, we know they do not. Our highly evolved brains imagine that these things have a cause or a use, and they have in the past, they've allowed life to continue on this planet for a short blip of time. But make no mistake: all our dreams, loves, opinions, and desires are figments of our primordial imagination. They are fleeting electrical signals that fire across our synapses for a moment in time. They served some purpose in the past. They got us here. That's it. All human achievement and plans for the future are the result of some ancient, evolved brain and accompanying chemical reactions that once served a survival purpose. Ex: I'll marry and nurture children because my genes demand reproduction, I'll create because creativity served a survival advantage to my ancient ape ancestors, I'll build cities and laws because this allowed my ape grandfather time and peace to reproduce and protect his genes. My only directive is to obey my genes. Eat, sleep, reproduce, die. That is our bible.
>
> We deride the Theists for having created myths and holy books. We imagine ourselves superior. But we too imagine there are reasons to obey laws, be polite, protect the weak etc. Rubbish. We are nurturing a new religion, one where we imagine that such conventions have any basis in reality. Have they allowed life to exist? Absolutely. But who cares? Outside of my greedy little gene's need to reproduce, there is nothing in my world that stops me from killing you and reproducing with your wife. Only the fear that I might be incarcerated and thus be deprived of the opportunity to do the same with the next guy's wife stops me. Some of my Atheist friends have fooled themselves into acting like the general population. They live in suburban homes, drive Toyota Camrys, attend school plays. But underneath they know the truth. They are a bag of DNA whose only purpose is to make more of themselves. So be nice if you want. Be involved, have polite conversations, be a model citizen. Just be aware that while technically an Atheist, you are an inferior one. You're just a little bit

> less evolved, that's all. When you are ready to join me, let me know, I'll be reproducing with your wife.
>
> I know it's not PC to speak so bluntly about the ramifications of our beliefs, but in our discussions with Theists we sometimes tip toe around what we really know to be factual. Maybe it's time we Atheists were a little more truthful and let the chips fall where they may. At least that's what my genes are telling me to say."

Back to the summary:

- WLC: this quote explains that on naturalism, moral values and duties are just the by products of biological evolution
- WLC: he is deriding other atheists who put on a civil facade, and that the superior atheist is the one who acts openly like an atheist
- KH: he wants atheists to stop acting like Christians (being outwardly nice)
- WLC: there is no evidence for atheism presented in the quote, so why should he think that morality and meaning are illusory
- WLC: he is saying that morality is not real because our beliefs form by Darwinian evolution
- WLC: even if those beliefs formed that way, that doesn't mean that our moral judgments are not true (genetic fallacy)
- KH: the moral judgments are only false if naturalism is true, and he didn't defend that
- WLC: if objective moral values and duties exist, then naturalism is false

KH quotes Richard Dawkins:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music.

More:

- WLC: yes, that's his view, but what reason is there to accept the naturalism that requires all that?
- KH: yet he pushes various moral judgments
- WLC: yes, in his book, he pushes a bunch of moral judgments in his book, all of which are invalid on naturalism?
- KH: he wants humans to choose to show pity, even though nature is pitiless
- WLC: he thinks that these altruistic behaviors can emerge because humans are sociable beings
- WLC: but this "herd morality" is just an evolved convention, there are not objective moral truths

KH quotes Will Provine:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

More:

- WLC: it's his naturalism that is causing him to say that, theistic evolution is compatible with morality
- WLC: naturalism is what conflicts with objective morality, science doesn't invalidate objective morality

- KH: atheists deny objective meaning, but atheists can invent subjective meanings and purposes
- WLC: yes, but these invented subjective meanings and purposes are illusory
- WLC: I don't think that anyone can live happily by think

KH quotes Michael Ruse:

> "The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological adaptation no less than are hands and feet and teeth. Considered as a rationally justifiable set of claims about an objective something, ethics is illusory. I appreciate when someone says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory."

- WLC: again, science is neutral against morality, it's the philosophy of naturalism that is inconsistent with objective morality
- KH: just because theists and atheists get along, it's still important to remind atheists of the consequences of their view
- WLC: I do that in my work on the absurdity of life without God, and in the moral argument for God's existence
- WLC: I love it when they say things like this, because it supports the first premise in Craig's moral argument
- KH: even if the evidence were 50-50, why would atheists lean towards the meaningless view
- WLC: yes, if the evidence is 50-50, then people ought to prefer life, significance and moral value
- KH: you're not saying that people ought to the believe that in theism because it's more palatable to us
- WLC: right, I am saying that naturalism should be rejected on the evidence, including our experience of moral values

# Pro-life governor John Kasich passes laws to promote adoption

**Wintery Knight** · 26 December 2014 · Archived copy · Original

I'm Scheming Unborn Baby, and I approve this decision

Story from Life News.

Excerpt:

> On Friday, Governor Kasich signed Ohio Right to Life's adoption reform legislation, S.B. 250, following historic bipartisan majority votes from the Senate, 29-1, and the House of Representatives, 81-4. This adoption reform will eliminate unnecessary costs, protect birth parents and adoptive families, prevent fraud and minimize the bureaucracy in the Ohio adoption process.
>
> The following is a statement from Mike Gonidakis, president of Ohio Right to Life:
>
> At present, middle-class and low-income Ohio families are essentially unable to adopt due to the accumulation of expenses during the adoption process. The adoption reform legislation targets these expenses by increasing the current $1,500 tax credit up to $10,000.
>
> Thanks to an increased tax credit and a shortened adoption decree challenge period, Ohioans will now partake in a more simplified, affordable process that remains compassionate and supportive to birth parents.

John Kasich is definitely in the top rank of governors, along with Scott Walker, Mike Pence, Rick Perry and Bobby Jindal. Each of these governors has signed into law policies that were helpful to unborn children.

Wisconsin governor Scott Walker signed an ultrasound bill that reduced the number of abortions:

> Last year, abortions in Wisconsin dropped 4.4 percent and they declined 7.4 percent the year before. Now, Wisconsin Right to Life informs LifeNews abortions int he Badger State are down another 16 percent.
>
> "Last week, Wisconsin abortion providers stated under oath that abortions have decreased from 6,927 in 2012 to roughly 5,800 in 2013," stated Barbara L. Lyons, Executive Director of Wisconsin Right to Life. "This is

> another sharp decline of approximately 16%, continuing Wisconsin's record as having some of the lowest abortion numbers in the country."
>
> […]The abortion drop comes after pro-life Governor Scott Walker signed multiple pro-life bills into law.
>
> In 2012, Walker added to his pro-life list of accomplishments today by signing bills the pro-life movement supported, including measures to stop abortion funding in Obamacare and webcam abortions.
>
> Last year, Walker signed Senate Bill 206 (Sonya's Law) into law. This important new law requires that women seeking abortions in Wisconsin be given the opportunity to see their unborn children through ultrasound.

Texas governor Rick Perry signed a ban on late-term abortions, and a law that closed abortion clinics:

> Texas Governor Rick Perry signed a pro-life bill into law July 19 banning abortion after 20 weeks of pregnancy and requiring abortionists to have admitting privileges at hospitals close to their abortuaries. The immediate result was Planned Parenthood's decision to shutter three of its clinics even as pro-abortion activists vowed to work to overturn the law — and as at least one abortionist reportedly indicated he would defy the law.
>
> […]The Associated Press reported that in addition to the ban on abortions after 20 weeks of pregnancy, the law "restricts abortions to surgical centers and requires doctors who work at abortion clinics to have hospital admitting privileges. Only five of the 42 abortion clinics in Texas … currently meet those new requirements. Clinics will have a year to either upgrade their facilities or shut down after the law takes effect in October."
>
> Immediately after Perry signed the bill into law, Planned Parenthood threw in the towel on three of its abortion facilities, closing their doors rather than shelling out money for the requisite upgrades.

Lousiana governor Bobby Jindal signed pro-life bills to close abortion clinics:

> Louisiana Gov. Bobby Jindal today signed pro-life bills that could close three of the state's five abortion clinics. Jindal has been a staunchly pro-life governor and he is putting into law more pieces of pro-life legislation that has, under his administration, made Louisiana one of the most pro-life states in the nation.
>
> The Louisiana state legislature sent to Jindal HB 388, the Unsafe Abortion Protection Act, that the Planned Parenthood abortion business says could close three of the five abortion clinics in the state.
>
> "This bill will give women the health and safety protections they deserve," Jindal said.
>
> When the state of Texas clamped down on abortion clinics that could not follow basic health and safety standards and failed to ensure abortion practitioners had admitting privileges at local hospitals in cases where women are injured in botched abortions, abortion clinics closed down because they couldn't comply. As many as 20 Texas abortion clinics have closed or stopping doing abortions.
>
> Now, Louisiana is following suit.

Indiana governor Mike Pence signed a bill to stop insurance coverage of abortions:

> Americans United for Life President and CEO Dr. Charmaine Yoest commended Indiana Governor Mike Pence and leading pro-life legislators for enacting a measure that protects Hoosiers from forced funding of abortion-related services via their health insurance plans.
>
> This week Governor Pence signed into law HB 1123, sponsored by Rep. Jeff Thompson, which is based on AUL model legislation.
>
> The bill prohibits "accident and sickness insurance policies" from covering abortion in most circumstances except through a separate rider. This law makes Indiana the ninth state to prohibit private insurance plans operating within their states from covering most abortions.

Republican governors do more than just balance the books and grow the economy. You will never see Democrat governors signing bills to help unborn children like this.

In case you're wondering, Scott Walker is my pick for President in 2016, but I'll take any of the governors in this post. At least we know they can marshal pro-life bills into pro-life laws.

# Eric Metaxas: does science make the case for or against God?

**Wintery Knight** · 26 December 2014 · Archived copy · Original

This is from famous writer Eric Metaxas, writing in the Wall Street Journal, of all places. He talks about whether recent discoveries have made the world look more created/designed, or more eternal/undesigned.

In the beginning, there was the naturalism, and the naturalism said that habitable planets are common:

> In 1966 Time magazine ran a cover story asking: Is God Dead? Many have accepted the cultural narrative that he's obsolete—that as science progresses, there is less need for a "God" to explain the universe.
>
> […]The same year Time featured the now-famous headline, the astronomer Carl Sagan announced that there were two important criteria for a planet to support life: The right kind of star, and a planet the right distance from that star. Given the roughly octillion—1 followed by 24 zeros—planets in the universe, there should have been about septillion—1 followed by 21 zeros—planets capable of supporting life.

Then the science happened:

> As our knowledge of the universe increased, it became clear that there were far more factors necessary for life than Sagan supposed. His two parameters grew to 10 and then 20 and then 50, and so the number of potentially life-supporting planets decreased accordingly. The number dropped to a few thousand planets and kept on plummeting.
>
> Even SETI proponents acknowledged the problem. Peter Schenkel wrote in a 2006 piece for Skeptical Inquirer magazine: "In light of new findings and insights, it seems appropriate to put excessive euphoria to rest . . . . We should quietly admit that the early estimates . . . may no longer be tenable."
>
> As factors continued to be discovered, the number of possible planets hit zero, and kept going. In other words, the odds turned against any planet in the universe supporting life, including this one. Probability said that even we shouldn't be here.
>
> Today there are more than 200 known parameters necessary for a planet to support life—every single one of which must be perfectly met, or the whole thing falls apart. Without a massive planet like Jupiter nearby, whose gravity will draw away asteroids, a thousand times as many would hit Earth's surface. The odds against life in the universe are simply astonishing.

And again, naturalism confounded by a stream of discoveries of cosmic fine-tuning:

> The fine-tuning necessary for life to exist on a planet is nothing compared with the fine-tuning required for the universe to exist at all. For example, astrophysicists now know that the values of the four fundamental forces—gravity, the electromagnetic force, and the "strong" and "weak" nuclear forces—were determined less than one millionth of a second after the big bang. Alter any one value and the universe could not exist. For instance, if the ratio between the nuclear strong force and the electromagnetic force had been off by the tiniest fraction of the tiniest fraction—by even one part in 100,000,000,000,000,000—then no stars could have ever formed at all. Feel free to gulp.
>
> Multiply that single parameter by all the other necessary conditions, and the odds against the universe existing are so heart-stoppingly astronomical that the notion that it all "just happened" defies common sense. It would be like tossing a coin and having it come up heads 10 quintillion times in a row. Really?
>
> Fred Hoyle, the astronomer who coined the term "big bang," said that his atheism was "greatly shaken" at these developments. He later wrote that "a common-sense interpretation of the facts suggests that a super-intellect has monkeyed with the physics, as well as with chemistry and biology . . . . The numbers one calculates from

> the facts seem to me so overwhelming as to put this conclusion almost beyond question."
>
> Theoretical physicist Paul Davies has said that "the appearance of design is overwhelming" and Oxford professor Dr. John Lennox has said "the more we get to know about our universe, the more the hypothesis that there is a Creator . . . gains in credibility as the best explanation of why we are here."
>
> The greatest miracle of all time, without any close seconds, is the universe. It is the miracle of all miracles, one that ineluctably points with the combined brightness of every star to something—or Someone—beyond itself.

My pastor reads the Wall Street Journal. I am pretty sure this is going to be in his Sunday sermon. It's the #1 editorial on the Wall Street Journal right now, so he can't miss it.

You know, as these scientific arguments become more and more mainstream, it really makes me wonder if there is anything more to atheism than some sort of traumatic childhood experience of wounded narcissism. The child experiences some desire for something, and expects God to meet that need. The need is not met. The child, now enraged that it is 1) not God and 2) not in control of God, rejects God. Or maybe it's just the desire to not be punished for acting immorally. Or to appear "smart" to a crowd of peers. Whatever it is that causes people to believe in atheism, it sure isn't science. If we are going strictly on the science, then the answer is God. But if the question of God's existence is about feelings, then the answer is no God. It really is that simple.

# Archaeologists discover entrance to Herod's palace near Bethlehem

**Wintery Knight** · 26 December 2014 · Archived copy · Original

Herod's palace

Baptist Press reports on the story.

Full text:

> Israeli archeologists have uncovered an impressive entrance to Herod's palace at Herodium. Located only three miles southeast of Bethlehem, Herodium played an important part in the events surrounding the early life of Christ.
>
> The December announcement by Hebrew University archeologists Roi Porat, Yakov Kalman and Rachel Chachy dovetails well with the seasonal interest in the nativity accounts of Luke and Matthew in the New Testament.
>
> While both Luke and Matthew wrote that King Herod governed Judea during the era of Jesus' birth at Bethlehem (Luke 1:5, Matthew 2:1), they included nothing concerning Herod's massive palace/fortress complex at nearby Herodium.
>
> Herodium, like Herod's other isolated palace/fortress complexes at Masada and Machaerus, was built on a mountain. To enhance its impressive scale, Herod artificially extended the height of the hill to make it the tallest mountain in the Judean desert.
>
> While the site included the usual Herodian luxuries such as a palace, bathhouse, theatre and garden, Herodium was essentially a fortress, a place where Herod could find refuge if his people revolted.
>
> Herod's fear of a Jewish revolt led him to establish many fortresses in both urban centers (he maintained two in Jerusalem itself) and in isolated rural areas away from the urban centers.
>
> A small community close to the fortress housed the construction teams and, later, the garrison soldiers and palace servants. The servants who waited on the king indeed worked in an impressive palace.
>
> The newly uncovered entranceway apparently was still being constructed near the time of the monarch's death.
>
> As shown in one of the photographs, the entryway included three levels of arches in a 65-foot corridor that was 19 feet across and 65 feet in height leading to the palace's courtyard. Curiously enough, the nearly completed entrance was abruptly stopped and backfilled around the time of Herod's death. The archeologists speculated that the now-aging Herod instead sought to convert the entire palace into a memorial mound for his upcoming burial at the site.

> Indeed, Herod's plans for Herodium unfolded as Jesus was born and as He spent His early life in nearby Bethlehem. When the magi arrived in Jerusalem and announced they had come to worship the "king of the Jews," Herod sent them to Bethlehem after learning the location of the Messiah's birthplace from the chief priests and learned scholars. The monarch hoped to ascertain from the magi which of the town's small children was the designated royal candidate. Then Herod hoped to execute the child (Matthew 2:1-8, 2:16).
>
> When the magi failed to return with this information, Herod ordered his soldiers into Bethlehem to murder all children age 2 and under. Warned to flee to Egypt, the holy family escaped Herod's plans, but an undisclosed number of children were killed by Herod's soldiers. Although never stated in the biblical account, the soldiers who carried out the old king's infamous order were either stationed in Jerusalem (seven miles from Bethlehem) or in the closer post at Herodium. In fact, Herodium overlooked Bethlehem and could have functioned as a convenient headquarters for Herod's deadly operation.
>
> While the holy family resided in Egypt, another Herodium connection to the early life of Christ took place. After a long and terribly painful illness, Herod died. His surviving eldest son (Herod had murdered his three oldest sons), Archelaus, then buried him in Herodium at a pre-selected tomb and gave his father an elaborate funeral at the site and spared no expense, according to the Jewish historian Josephus (Jewish War, 1,673).
>
> Israeli archeologist Ehud Netzer claimed to have found Herod's tomb and damaged sarcophagus (stone coffin) in 2007 at Herodium, but in 2013 and 2014 other archeologists have raised doubts about the tomb and the sarcophagus. Israeli archeologists Joseph Patrich and Benjamin Arubas largely based their doubts on the modest tomb site and the unimpressive sarcophagus. They believe that the mega-maniacal Herod would have commissioned a larger tomb and a more elaborate sarcophagus.
>
> With Herod now buried in Herodium and with Archelaus eventually ruling over much of his father's former kingdom as an "ethnarch" ("ruler of the people"), the New Testament noted the change in political leadership (Matthew 2:19-22). The change prompted Joseph to consider a move back to Judea (perhaps back to Bethlehem itself where the family had lived for about two years), but his misgivings about a Judea under the rule of an already unpopular Archelaus and a warning in a dream led him to reconsider. The decision was a wise one. A return to Bethlehem in the "shadow of Herodium" and the nearby royal city of Jerusalem placed the holy family at potential risk.
>
> Instead, Joseph took his family back to Nazareth in Galilee (Matthew 2:22-23). Galilee was governed by Herod Antipas, the younger brother of Archelaus. At the time, this Herodian ruler, with the title of "tetrarch" ("ruler over a fourth"), was regarded as a milder alternative to the volatile Archelaus. Located far away from the recent unpleasant associations connected to Herodium and the slaughter of the children in Bethlehem, Joseph and Mary would raise Jesus in the peaceful surroundings of Nazareth.
>
> The recent archeological find in Herodium and the continuing dispute concerning Herod's tomb and sarcophagus calls attention to the background story of the early life of Christ as detailed in the Gospel of Matthew. Perhaps some further archeological discoveries at Herodium will uncover additional information about the familiar nativity narrative.

I liked this article on Baptist Press so much, I pasted it here in full – because of the links between history and the Bible. It's also reported in secular news sources like NBC News and the UK Telegraph.

When I read stories like this, it really makes me question people who think that the New Testament books were not intended to be history. I think the default view has to be that the authors intended to write history, and then we do the work to see which parts pass historical tests – i.e. – how early, how many sources, how many eyewitnesses, etc. And, do we have archaeological evidence to corroborate the narrative.

# After legalizing marijuana, Colorado sees higher number of “daily” users

**Wintery Knight** · 27 December 2014 · Archived copy · Original

Lee Strobel tweeted this story from the Denver Post.

Excerpt:

> As marijuana legalization took hold in Colorado, the estimated percentage of regular cannabis users in the state jumped to the second-highest level in the country, according to new federal data.
>
> When asked, roughly one out of every eight Colorado residents over the age of 12 reported using marijuana in the previous month. Only Rhode Island topped Colorado in the percentage of residents who reported using marijuana as frequently.
>
> The results come from the National Survey on Drug Use and Health and represent the average of estimates gathered in 2012 and 2013.
>
> […]State-specific data from the survey are averaged over two-year periods to compensate for relatively small sample sizes.
>
> For the 2011-12 period, 10.4 percent of Coloradans 12 and older reported using marijuana in the month prior to being surveyed. That placed Colorado seventh in the country for monthly marijuana use.
>
> Monthly use in Colorado jumped to 12.7 percent — a 22 percent increase — in the 2012-13 data. The result means the survey estimates about 530,000 people in Colorado use marijuana at least once a month.
>
> Nationally, monthly marijuana use by people 12 and older nudged upward by about 4 percent to 7.4 percent. In Washington state — which, like Colorado, in 2012 legalized marijuana use and limited possession for adults — monthly marijuana use rose by about 20 percent to 12.3 percent.
>
> Kleiman said researchers will get a better idea about marijuana use in Colorado once they are able to zoom in on data showing how many people use marijuana daily. A study commissioned by Colorado’s Marijuana Enforcement Division this year found that people who use marijuana almost every day account for about 22 percent of cannabis users in Colorado but consume nearly 67 percent of the marijuana used. Other studies have warned about a possible uptick in heavy marijuana use.
>
> “The fraction of people who are monthly users who are in fact daily users has gone way, way up,” Kleiman said.
>
> Monthly marijuana use increased across all age groups in Colorado, according to the new survey numbers. The number of people who reported using marijuana in the past year also increased in Colorado in the 2012-13 data, but the state ranked only sixth nationally in the measurement. Measurements for alcohol consumption and illicit drug use increased, as well.

What will be interesting will be to see how this increased usage affects tax revenues and the crime rate. I think when more people use mind-altering drugs, it is going to harm their ability to get and keep jobs, which affects tax revenue. And when people are addicted to something, they are more inclined to take a risk on committing a crime to get the money to pay for their next fix. Should be interesting to learn from Colorado’s little experiment.

# Alexander Vilenkin: “All the evidence we have says that the universe had a beginning”

**Wintery Knight** · 27 December 2014 · Archived copy · Original

I’ve decided to explain why physicists believe that there was a creation event in this post. That is to say, I’ve decided to let famous cosmologist Alexander Vilenkin do it.

From Uncommon Descent.

Excerpt:

> Did the cosmos have a beginning? The Big Bang theory seems to suggest it did, but in recent decades, cosmologists have concocted elaborate theories – for example, an eternally inflating universe or a cyclic universe – which claim to avoid the need for a beginning of the cosmos. Now it appears that the universe really had a beginning after all, even if it wasn’t necessarily the Big Bang.
>
> At a meeting of scientists – titled “State of the Universe” – convened last week at Cambridge University to honor Stephen Hawking’s 70th birthday, cosmologist Alexander Vilenkin of Tufts University in Boston presented evidence that the universe is not eternal after all, leaving scientists at a loss to explain how the cosmos got started without a supernatural creator. The meeting was reported in *New Scientist* magazine (Why physicists can’t avoid a creation event, 11 January 2012).
>
> […]In his presentation, Professor Vilenkin discussed three theories which claim to avoid the need for a beginning of the cosmos.

The three theories are chaotic inflationary model, the oscillating model and quantum gravity model. Regular readers will know that those have all been addressed in William Lane Craig’s peer-reviewed paper that evaluates alternatives to the standard Big Bang cosmology.

But let’s see what Vilenkin said.

More:

> One popular theory is eternal inflation. Most readers will be familiar with the theory of *inflation*, which says that the universe increased in volume by a factor of at least 10^78 in its very early stages (from 10^−36 seconds after the Big Bang to sometime between 10^−33 and 10^−32 seconds), before settling into the slower rate of expansion that we see today. The theory of *eternal inflation* goes further, and holds that the universe is constantly giving birth to smaller “bubble” universes within an ever-expanding multiverse. Each bubble universe undergoes its own initial period of inflation. In some versions of the theory, the bubbles go both backwards and forwards in time, allowing the possibility of an infinite past. Trouble is, the value of one particular cosmic parameter rules out that possibility:
>
> > But in 2003, a team including Vilenkin and Guth considered what eternal inflation would mean for the Hubble constant, which describes mathematically the expansion of the universe. They found that the equations didn’t work (Physical Review Letters, DOI: 10.1103/physrevlett.90.151301). “You can’t construct a space-time with this property,” says Vilenkin. It turns out that the constant has a lower limit that prevents inflation in both time directions. “It can’t possibly be eternal in the past,” says Vilenkin. “There must be some kind of boundary.”
>
> A second option explored by Vilenkin was that of a cyclic universe, where the universe goes through an infinite series of big bangs and crunches, with no specific beginning. It was even claimed that a cyclic universe could explain the low observed value of the cosmological constant. But as Vilenkin found, there’s a problem if you

> look at the *disorder* in the universe:
>
> > Disorder increases with time. So following each cycle, the universe must get more and more disordered. But if there has already been an infinite number of cycles, the universe we inhabit now should be in a state of maximum disorder. Such a universe would be uniformly lukewarm and featureless, and definitely lacking such complicated beings as stars, planets and physicists – nothing like the one we see around us.
> >
> > One way around that is to propose that the universe just gets bigger with every cycle. Then the amount of disorder per volume doesn't increase, so needn't reach the maximum. But Vilenkin found that this scenario falls prey to the same mathematical argument as eternal inflation: if your universe keeps getting bigger, it must have started somewhere.
>
> However, Vilenkin's options were not exhausted yet. There was another possibility: that the universe had sprung from an eternal cosmic egg:
>
> > Vilenkin's final strike is an attack on a third, lesser-known proposal that the cosmos existed eternally in a static state called the cosmic egg. This finally "cracked" to create the big bang, leading to the expanding universe we see today. Late last year Vilenkin and graduate student Audrey Mithani showed that the egg could not have existed forever after all, as quantum instabilities would force it to collapse after a finite amount of time (arxiv.org/abs/1110.4096). If it cracked instead, leading to the big bang, then this must have happened before it collapsed – and therefore also after a finite amount of time.
> >
> > "This is also not a good candidate for a beginningless universe," Vilenkin concludes.
>
> So at the end of the day, what is Vilenkin's verdict?
>
> > "All the evidence we have says that the universe had a beginning."

This is consistent with the Borde-Guth-Vilenkin Theorem, which I blogged about before, and which William Lane Craig leveraged to his advantage in his debate with Peter Millican.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, can be eternal into the past. Even speculative alternative cosmologies do not escape the need for a beginning.

**Conclusion**

If the universe came into being out of nothing, which seems to be the case from science, then the universe has a cause. Things do not pop into being, uncaused, out of nothing. The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

# How pro-life apologetics helps strengthen your evangelism

**Wintery Knight** · 28 December 2014 · Archived copy · Original

From Scott Klusendorf's Life Training Institute.

Excerpt:

> Beyond the obvious obligation we have as thinking human beings to clarify the status, and defend the value, of innocent, unborn human life, engaging in the pro-life project is also a way to make the case for the truth of Christianity in general. It stands to reason that if the scientific, philosophical, and moral arguments we offer in defense of the humanity of the unborn also happen to align exactly with the biblical notion of what it means to be a human being made "in the image of God," then the Bible might also have something to say about other things of importance.
>
> This is a point Scott makes repeatedly but it was recently driven home in a very concrete way by, of all people, a hard core atheist in the most recent issue of ***Salvo*** magazine. A secular skeptic, law school professor, renowned blogger, and mocker of deluded "Godiots," the "Raving Atheist" attended a blogger party where he serendipitously sat next to a Catholic blogger named Benjamin. As the "Raving Atheist" explains:

> At one point the conversation turned to abortion, and I asked Benjamin's opinion of the practice. I was stunned. Here was a kind, affable, and cogently reasonable human being who nonetheless believed that abortion was murder. To the limited extent I had previously considered the issue, I believed abortion to be completely acceptable, the mere disposal of a lump of cells, perhaps akin to clipping fingernails.

> This unsettling exchange spurred me to further investigate the issue on Benjamin's blog. I noticed that pro-choice Christians did not employ scientific or rational arguments but relied on a confused set of "spiritual" platitudes. More significantly, the pro-choice atheistic blogosphere also fell short in its analysis of abortion. ***The supposedly "reality-based" community either dismissed abortion as a "religious issue" or paradoxically claimed that pro-life principles were contrary to religious doctrine. Having formerly equated atheism with reason, I was slowly growing uncertain of the value of godlessness in the search for truth.***

> Though the "Raving Atheist" continued to rave, there was now a stone in his God-rejecting shoe, placed there by a reasoned defense of the pro-life view. He couldn't disconnect himself from it and later admitted that the "selfless dedication [of pro-life advocates] to their cause moved [him] deeply." Later, he met a woman named Ashli whose work in pregnancy care drew him to further consider the pro-life position. Soon thereafter, the "Raving Atheist" became, in part, a pro-life blogsite …

Click here to read the astonishing conclusion. Then come back here.

Back? Ok, so what did we learn from this? Well, the moral of this story is that it is *very* important for Christians to have a good understanding of moral issues like abortion and same-sex marriage so that they can talk about these issues based on what they know. When someone can stake out a *moral* position on these kinds of issues, using science and history and other hard evidence – *not just the Bible* – then it helps non-Christians to take us seriously *as thinkers*.

Unless we demonstrate the ability to reason out there in the real world – outside the church – then we are not going to be viewed as authoritative on any subject – *especially* on spiritual subjects. We really need to study up on other issues, and show that we care about the unborn (abortion issue) and children (same-sex marriage issue). We have to show that there is more to us than just doing what feels good. We have to show that we are smart and that we are

willing to be unpopular in order to do the right thing. That we didn't just inherit these views from our parents, or from our culture. That we have actually thought things through more than just reading the Bible, and that it makes a difference in how we view the world, and in how we live. We don't want people to continue in their perception that Christians are just people who play follow-the-leader – we want to show them how we have worked through these issues on our own.

Ignorance is never a good idea when you are trying to do good – and you can't know what is really good just by your feelings and intuitions. If you want to do good, you need to be 1) convincing and 2) effective. And that takes study. Don't choose policies based on what makes you feel good and what sounds good to others. Push for *effective* policies – what actually *does* good – and then have your arguments and evidence ready to convince people, using evidence from authorities *that they accept as non-Christians*. If you have the will to study a little, you can be passionate *and* convincing. Non-Christians respect passion and knowledge. They don't respect fideism and mysticism.

Scott Klusendorf is the author of the best introductory book on pro-life apologetics, entitled "The Case for Life".

# Which types of relationships have the highest rates of divorce?

**Wintery Knight** · 28 December 2014 · Archived copy · Original

A quiz for you, from Ruth Blog.

Question:

> Same sex couples have had the legal right to form domestic partnerships in several European countries. Denmark was the first to introduce registered partnerships, in 1989. Norway was second, in 1993, then Sweden in 1995. Data from 2 of these landmark countries, Norway and Sweden, as well as California, have been studied enough to answer this question:
>
> What types of unions have the highest rates of divorce?
>
> - Opposite sex married couples: men and women are so different, it is a wonder they ever stay married.
> - Male unions: men are naturally less committed, and less monogamous, so their partnerships don't endure.
> - Female unions: women get so emotionally distraught over things. A union of two women, without any male counter-balancing their roller-coaster, is very unstable.
>
> Hint: the answer is the same in all three countries!

And here's the answer:

> Female unions seem to have the highest divorce rates, followed by male unions, followed by opposite sex unions.
>
> "For Sweden, the divorce risk for partnerships of men is 50% higher than the risk for heterosexual marriages, and that the divorce risk for female partnerships is nearly double that for men."
>
> "For Norway, divorce risks are 77% higher in lesbian partnerships than in those of gay men." (The Norwegian data did not include a comparison with opposite sex couples.)
>
> In California, the data is collected a little differently. The study looks at couples who describe themselves as partners, whether same sex or opposite sex. The study asks the question, how likely is it that these couples live in the same household five years later. Male couples were only 30% as likely, while female couples were less that 25% as likely, as heterosexual married couples, to be residing in the same household for five years.
>
> The only contradictory data I have found to this pattern is from the Netherlands. In the Dutch data, same sex couples have a 3.15 times greater dissolution rate than opposite sex cohabiting couples, and a 3.15 x 3.66 or 11.5 times greater dissolution rate than opposite married couples. But, female couples seem to be more stable than male couples.

And not all married heterosexual couples are equally stable.

Consider this USA Today article from 2011 about that.

Excerpt:

> It's been proclaimed from pulpits and blogs for years — Christians divorce as much as everyone else in America.
>
> But some scholars and family activists are questioning the oft-cited statistics, saying Christians who attend church regularly are more likely to remain wed.
>
> "It's a useful myth," said Bradley Wright, a University of Connecticut sociologist who recently wrote "Christians Are Hate-Filled Hypocrites … and Other Lies You've Been Told."

> "Because if a pastor wants to preach about how Christians should take their marriages more seriously, he or she can trot out this statistic to get them to listen to him or her."
>
> The various findings on religion and divorce hinge on what kind of Christians are being discussed.
>
> Wright combed through the General Social Survey, a vast demographic study conducted by the National Opinion Research Center at the University of Chicago, and found that Christians, like adherents of other religions, have a divorce rate of about 42%. The rate among religiously unaffiliated Americans is 50%.
>
> When Wright examined the statistics on evangelicals, he found worship attendance has a big influence on the numbers. Six in 10 evangelicals who never attend had been divorced or separated, compared to just 38% of weekly attendees.
>
> […]Brad Wilcox, director of the National Marriage Project at the University of Virginia, agrees there's been some confusion.
>
> "You do hear, both in Christian and non-Christian circles, that Christians are no different from anyone else when it comes to divorce and that is not true if you are focusing on Christians who are regular church attendees," he said.
>
> **Wilcox's analysis of the National Survey of Families and Households has found that Americans who attend religious services several times a month were about 35% less likely to divorce than those with no religious affiliation.**
>
> Nominal conservative Protestants, on the other hand, were 20% more likely to divorce than the religiously unaffiliated.
>
> "There's something about being a nominal 'Christian' that is linked to a lot of negative outcomes when it comes to family life," Wilcox said.

Here's a quote from an Oklahoma State University study that confirms the Wright and Wilcox conclusions:

> History of Divorce and Religious Involvement
>
> Those who say they are more religious are less likely, not more, to have already experienced divorce. Likewise, those who report more frequent attendance at religious services were significantly less likely to have been divorced. This pattern of findings held using various analytic techniques that test which variables differentiate persons who have been divorced from persons who have not been divorced, while controlling for other variables that might affect the interpretation of the data, such as age, age of first marriage, income, and gender. When both the global rating of religiousness and the item assessing fiequency of attendance at religious services are entered into the same analysis, the attendance item remains significantly associated with divorce history but the global religiousness item does not. This suggests that a key aspect of how religious faith affects marital relationships may be through involvement with a community of faith.

Basically, the more your worldview grounds self-sacrifice over self-centeredness, the more stable it's going to be.

# Kurt Eichenwald: wilful ignorance of New Testament scholarship so severe, it's a sin

**Wintery Knight** · 29 December 2014 · Archived copy · Original

Dan Wallace is the best-known evangelical expert in New Testament manuscripts. He wrote a strong response to a non-scholarly article from a journalist, which appeared in the far-left Newsweek.

Intro:

> Every year, at Christmas and Easter, several major magazines, television programs, news agencies, and publishing houses love to rattle the faith of Christians by proclaiming loudly and obnoxiously that there are contradictions in the Bible, that Jesus was not conceived by a virgin, that he did not rise from the dead, *ad infinitum*, *ad nauseum*. The day before Christmas eve (23 December 2014), Newsweek published a lengthy article by Kurt Eichenwald entitled, "The Bible: So Misunderstood It's a Sin." Although the author claims that he is not promoting any particular theology, this wears thin. Eichenwald makes so many outrageous claims, based on a rather slender list of named scholars (three, to be exact), that one has to wonder how this ever passed any editorial review.

Best snip:

> ***Error 1: Gross Exaggerations that Misrepresent the Data***
>
> I will address just one issue here—the notion that the original Bible is unknowable. Eichenwald claims:
>
> "No television preacher has ever read the Bible. Neither has any evangelical politician. Neither has the pope. Neither have I. And neither have you. At best, we've all read a bad translation—a translation of translations of translations of hand-copied copies of copies of copies of copies, and on and on, hundreds of times."
>
> So, none of us today has read anything except a bad translation that has been altered hundreds of times before it got to us? Although Eichenwald enlists Bart Ehrman as one of the three scholars he names in the essay, he has seriously overstated Ehrman's argument. At one point, it is true, Ehrman says in *Misquoting Jesus*, "Not only do we not have the originals, we don't have the first copies of the originals. We don't even have copies of the copies of the originals, or copies of the copies of the copies of the originals." Here he is speaking of *Greek* copies of *Greek* manuscripts. Nothing is said about translations. At many points he admits that the vast majority of the changes to the text of the New Testament were rather minor over the many centuries of handwritten copying. And in the appendix to the paperback edition of his book Ehrman says, "Essential Christian beliefs are not affected by textual variants in the manuscript tradition of the New Testament." But Eichenwald makes it sound as though all translations current today are bad and that we can't possibly recover the wording of the original text. The reality is that we are getting closer and closer to the text of the original New Testament as more and more manuscripts are being discovered and catalogued.
>
> But let's examine a bit more the actual statement that Eichenwald makes. We are all reading "at best," he declares, a "bad translation—a translation of translations of translations of hand-copied copies of copies of copies of copies, and on and on, hundreds of times." This is rhetorical flair run amok so badly that it gives hyperbole a bad name. A "translation of translations of translations" would mean, at a minimum, that we are dealing with a translation that is at least three *languages* removed from the original. But the first translation is at best a translation of a fourth generation copy in the original language. Now, I'm ignoring completely his last line—"and on and on, hundreds of times"—a line that is completely devoid of any resemblance to reality. Is it really true that we only have access to third generation translations from fourth generation Greek manuscripts? Hardly.
>
> Although we know of some translations, especially the later ones, that were based on translations in other

> languages of the Greek text (thus, a translation of a translation of the Greek), this is not at all what scholars utilize today to duplicate as faithfully as possible the original wording. No, we have Greek manuscripts—thousands of them, some reaching as far back as the second century. And we have very ancient translations*directly* from the Greek that give us a good sense of the Greek text that would have been available in those regions where that early version was used. These include Latin, Syriac, and Coptic especially. Altogether, we have *at least* 20,000 handwritten manuscripts in Greek, Latin, Syriac, Coptic and other ancient languages that help us to determine the wording of the original. Almost 6000 of these manuscripts are in Greek alone. And we have more than one million quotations of the New Testament by church fathers. There is absolutely nothing in the Greco-Roman world that comes even remotely close to this wealth of data. The New Testament has more manuscripts that are within a century or two of the original than anything else from the Greco-Roman world too. If we have to be skeptical about what the original New Testament said, that skepticism, on average, should be multiplied one thousand times for other Greco-Roman literature.
>
> What of the differences among these witnesses? To be sure, there are more variants for the New Testament than for any other piece of ancient literature, but that's because there are more manuscripts for the New Testament than for any other piece of ancient literature. Consider the King James Version compared to virtually any modern New Testament translation: There are about 5000 differences in the underlying Greek text between these two. The vast majority of the differences cannot even be translated. The KJV is based on significantly later manuscripts, yet not a single cardinal doctrine of the Christian faith is affected by the different variants.
>
> The title of Eichenwald's section that deals with manuscript transmission is "Playing Telephone with the Word of God." The implication is that the transmission of the Bible is very much like the telephone game—a parlor game every American knows. It involves a brief narrative that someone whispers to the next person in line who then whispers this to the next person, and so on for several people. Then, the last person recites out loud what he or she heard and everyone has a good laugh for how garbled the story got. But the transmission of scripture is not at all like the telephone game. First, the goal of the telephone game is to see how *badly* the story can get misrepresented, while the goal of New Testament copying was by and large to produce very careful, accurate copies of the original. Second, in the telephone game there is only one line of transmission, while with the New Testament there are multiple lines of transmission. Third, one is oral, recited once in another's ear, while the other is written, copied by a faithful scribe who then would check his or her work or have someone else do it. Fourth, in the telephone game only the wording of the last person in the line can be checked, while for the New Testament textual critics have access to many of the earlier texts, some going back very close to the time of the autographs. Fifth, even the ancient scribes had access to earlier texts, and would often check their work against a manuscript that was many generations older than their immediate ancestor. The average papyrus manuscript would last for a century or more. Thus, even a late second-century scribe could have potentially examined the original document he or she was copying. If telephone were played the way New Testament transmission occurred, it would make for a ridiculously boring parlor game!
>
> One of the most remarkable pieces of illogical reasoning in Eichenwald's essay is his discussion of corruption in the manuscripts. Every single instance he raises *presupposes* that he knows what the original text said, for he speaks about what text had been corrupted *in each instance*! And more than once he contradicts his opening gambit by speaking authoritatively about what the original text actually said. In short, Eichenwald's opening paragraph takes exaggeration to new heights. If his goal is to shame conservative Christians for holding views that have no basis in reality, perhaps he should take some time to look in the mirror.

If I were going to give people any advice about investigating religious truth claims, it would be this – for goodness' sake, look to formal academic debates featuring scholars like Dan Wallace, Michael Licona, William Lane Craig, Stephen C. Meyer, Michael Behe, etc. and their opponents. You will get a lot more out of a formal academic debate with fixed-length speeches than you will get from any left-wing sermon written by a journalist in magazines like Time or Newsweek.

If you want to hear a good debate between Bart Ehrman and Peter Williams, then click here for my summary and a link to the audio from Apologetics 315.

UPDATE: Mathetes points me to another response from noted New Testament scholar Michael Krueger at the Canon Fodder blog.

# Great grandmother florist is the latest victim of the gay inquisition

**Wintery Knight** · 29 December 2014 · Archived copy · Original

This is from the Daily Signal.

Excerpt:

> A florist in Washington state is being sued for adhering to her Christian beliefs in declining to make flower arrangements for one couple's wedding.
>
> **Before the lawsuit, Barronelle Stutzman, owner of Arlene's Flowers in Richland, Wash., had employed workers who identify as homosexual and sold floral arrangements to gay and lesbian customers.**
>
> **One such customer turned out to be one of the men who would sue her for not being willing to be hired for their same-sex wedding.**
>
> Unlike businesses that face similar lawsuits for refusing to provide specific wedding-related services to gay and lesbian couples on religious grounds—among them bakers in Oregon and farmers in New York—Stutzman is being sued in both a professional and personal capacity.
>
> When Washington state legalized same-sex marriage in 2012, she decided that as a matter of conscience she could not participate in or further same-sex ceremonies by using her creative skills in connection with them.
>
> So when two men, Robert Ingersoll and Curt Freed, asked her to design flower arrangements for their wedding, Stutzman politely declined and referred them to other vendors in the area. Ingersoll had been a valued customer, she says, so it was difficult.
>
> **The state's attorney general said Stutzman's decision to stand by her Christian faith was in direct conflict with a state law ensuring freedom from discrimination.**
>
> The measure prohibits places of public accommodation–which officials say include Arlene's Flowers–from discriminating on grounds of race, creed, sexual orientation, physical disability and so forth.
>
> […]Stutzman is represented by Kristen Waggoner, a lawyer at Alliance Defending Freedom, an organization dedicated to defending religious liberty.
>
> […]Waggoner says it is unprecedented for the Washington attorney general's office to sue a family business owner in a personal capacity unless that owner has committed acts of fraud or misrepresentation.
>
> "They're trying to set an example of her and punish her," says Waggoner, noting the suit has the potential to cripple Stutzman's livelihood. "She's not wealthy, so common sense would tell you that it's going to hurt pretty bad."

So I guess my problem with this is that gay people can go to any other florist and get the flowers they want. But instead of doing that, they prefer to force their morality on this woman. This woman doesn't think that same-sex marriage is something to be celebrated. But the gay rights activists think that she needs to be forced by the power of the state to celebrate gay marriage. How would gay marriage affect you? Well, you will be prosecuted by the state and have your wealth confiscated. This case should be talked about in every church in the land next Sunday. But then I guess people would complain that that they were being too political and not providing them with feelings of comfort and happiness.

# Ryan Bell's year of atheism testimony shows need for apologetics

**Wintery Knight** · 29 December 2014 · Archived copy · Original

*// This is being re-posted because Bell has now completed his year living as an atheist, and has come out as an atheist, surprising no one.*

Are you interested in knowing how to avoid losing your Christian faith? Well, an episode of the Unbelievable show will give you some clues.

But before we go to the podcast, I want to recap some reasons why people think that God exists.

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds

In addition to these arguments for theism, Christians should be able to make a minimal facts case for the resurrection, one that leverages the early creed in 1 Corinthians 15:3-7. And some sort of case for the belief that Jesus was divine using only the earliest sources.

In addition to those positive evidences, there would be informed defenses to other questions like the problem of evil, the problem of suffering, religious pluralism, the hiddenness of God, materialist conceptions of mind, consciousness and neuroscience, the justice of eternal damnation,sovereignty and free will, the doctrine of the Incarnation, the doctrine of the Trinity, and so on.

I listed these out so that you can see how many of these positive arguments and defenses that he wrestles with in his deconversion testimony.

**The podcast**

Details:

> Ryan J Bell is a former pastor who has decided to try being an atheist for a year. He explains why and interacts with New Zealand apologist Matt Flannagan.

The MP3 file is here. (We only care about the first 45 minutes)

Matt Flanagan and Justin Brierley do a great job in this debate getting the real issues on the table, although you have to wait until about 20 minutes in. Quick note about Bell. He has a BA in Pastoral Ministry, an MDiv, and a doctorate in Missional Organization. Now I have a suspicion of people with a background like that – my view is that they are more likely to be impractical and/or insulated from real life.

I also noticed that his politics are liberal, and that he is featured on the web site of GLAAD, a gay rights

organization, for supporting gay marriage. Why do people support same-sex marriage? I think the most common reason is because they care more about the needs of adults than they care about the needs of children for a mother and a father. That's where this guy is coming from – he is a people-pleaser, not someone who promotes the needs of children over the needs of adults.

**Summary:**

At the start of the podcast, we learn that Bell was in the Seventh Day Adventist church, which is strongly invested in young-Earth creationism. Depending on how strict his young Earth view was, this closes off many of the best arguments for theism from science, such as the cosmological argument, the cosmic fine-tuning argument, the stellar habitability argument, the galactic habitability argument, the Cambrian explosion argument, and even the origin of life argument (to a degree). These are the arguments that make theism *non-negotiable*.

When he started his journey to atheism, he says that he was reading a book called "Religion Without God" by Ronald Dworkin.I was curious to see what view of faith was embraced by this book. Would it be the Biblical view of faith, trust based on evidence? Or the atheist view of faith, belief without evidence? I found an excerpt from the book in the New York Times, which said this:

> In the special case of value, however, faith means something more, because our convictions about value are emotional commitments as well and, whatever tests of coherence and internal support they survive, they must feel right in an emotional way as well. They must have a grip on one's whole personality. Theologians often say that religious faith is a sui generis experience of conviction. Rudolf Otto, in his markedly influential book, *The Idea of the Holy*, called the experience "numinous" and said it was a kind of "faith-knowledge." I mean to suggest that convictions of value are also complex, sui generis, emotional experiences. As we will see… when scientists confront the unimaginable vastness of space and the astounding complexity of atomic particles they have an emotional reaction that matches Otto's description surprisingly well. Indeed many of them use the very term "numinous" to describe what they feel. They find the universe awe-inspiring and deserving of a kind of emotional response that at least borders on trembling.

The excerpt quotes William James, who reduces religion to non-rational emotional experiences. I don't know about you, but I don't think that view of faith is Biblical at all. Biblical faith is rooted in evidence. So clearly, what is important to this Dworkin is not objective evidence, it's feelings. And this is what Bell was reading. He was not reading academic books like "Debating Christian Theism" to get the best arguments pro-and-con. He was looking for something that "resonated" with his feelings.

His journey was prompted by a female Episcopal priest friend who was asked by an atheist "what difference does religion make in my life?". So, the framework of his investigation is set by a question that is not focused on truth, but is instead focused on emotions and life enhancement. Now Christianity might be a real stinker of a worldview for life enhancement, and the Bible warns us not to expect a bed of roses in this life. Christianity is not engineered to make you feel good or to make people like you, especially people like female Episcopal priests and GLAAD.

When talking about atheism, he is not concerned with whether atheism is logically consistent or consistent with objective evidence. He is concerned by whether atheists can have the experience of being moral without God. He sees an atheist who has moral preferences and seems like a good person by our arbitrary social standards, and he finds that as "valid" as religion. He is judging worldviews by whether people have their needs met, not by truth.

He says that as a pastor, his method of evangelizing atheists was to encourage them to "try on faith" "go through the motions" "participate in social justice outreach events", etc. His goal was that they would "step into the stream of the Christian narrative and discover that it held value and meaning to them, and find that they actually believed it". So his method of recommending Christianity to others has nothing to do with logic, evidence or truth. He is offering Christianity as life enhancement – not knowledge but a "narrative" – a story. If it makes you feel good, and it makes people like you, then you can "believe" it. He says that he was "a Christian by practice, a Christian by

tradition". Not a Christian by truth. Not a Christian by knowledge. He just picked a flavor of ice cream that tasted right to him, one that pleased his parents, friends and community. And now he has new friends and a new community, and he wants to please them and feel good about himself in this new situation.

He says that the Christian worldview is "a way of approaching reality" and "creating meaning" and "identifying meaning in the experiences we have". And he says that there are "other ways of experiencing meaning". He talks a lot about his correspondence with people and reading atheists, but nothing about reading Christian scholars who deal with evidence, like William Lane Craig, Stephen C. Meyer or Mike Licona.

Literal, literal quote: (23:35) "Well I think the only access we have to the question of God's existence or not is how we feel. I mean there's no falsifiable data that says God either exists or doesn't exist. It's all within the realm of our personal experience". "If living as though God exists makes you happy and comforts you, then by all means, go for it". This attitude is so popular in our churches today, and where does it end? In atheism. I had a fundamentalist woman telling me just last night how this feelings mysticism approach was the right approach to faith, and that the head knowledge approach was bad and offensive.

I'm going to cut off my summary there, but the podcast goes on for 45 minutes. Matt Flannagan is brilliant, and went far beyond what I wanted to say to this guy, but in such a winsome way. I recommend listening to the whole thing, and be clear where this fideistic nonsense ends – in atheism.

**My thoughts**

This podcast is a great warning against two views: 1) faith is belief without evidence and 2) religion not about truth, but about life enhancement. Three other related stories might also help: the story of Dan Barker, the story of Nathan Pratt and the story of Katy Perry. I think the Christian life requires a commitment to truth above all. If you think that you can get by as a Christian relying on hymn singing, church attending, mysticism and emotional experiences, you have another thing coming. This is a different time and a different place than 50 years ago, when that sort of naivete and emotionalism might have been safe. Now we have many challenges – some intellectual and some not. To stand in this environment, it's going to take a little more than piety and emotions.

People today are very much looking for religion to meet their needs. And this is not just in terms of internal feelings, but also peer approval and mystical coincidences. They expect God to give them happy feelings. They expect God to give them peer approval. They expect God to make every crazy unBiblical, unwise selfish plan they invent "work out" by miracle. They feel very constrained by planning and moral boundaries, believing in a "God of love" who is primarily concerned with their desires and feelings, not with rules and duties. Nothing in the Bible supports the idea that a relationship with God is for the purpose of making us feel happy and comfortable. When people realize that they will be happier in this life without having to care what God thinks, they will drop their faith, and there are plenty of non-Christians to cheer them on when they do it.

I would say to all of you reading that if the opinions of others causes you to stumble then meditate on the following passage: 1 Cor 4:1-4 too. There is only one person's opinion that matters, ultimately.

# Why is it so hard to get married these days?

**Wintery Knight** · 30 December 2014 · Archived copy · Original

Marriage and family

A long, long time ago when I was in my "read one or two books about everything important" phase, I remember coming to marriage and picking out two books to read on that. The first was the Judith Wallerstein study on "The Unexpected Legacy of Divorce", which talked about children's experience of divorce over the 25-year period following their parent's decision to divorce. The second was F. Carolyn Graglia's book "Domestic Tranquility".

I found an essay about the latter book that seems to be either the introduction or chapter one. I just thought I would share it here to clear up why people are not getting married as much as they used.

Let's see how it happened:

> Since the late 1960s, feminists have very successfully waged war against the traditional family, in which husbands are the principal breadwinners and wives are primarily homemakers. This war's immediate purpose has been to undermine the homemaker's position within both her family and society in order to drive her into the work force. Its long-term goal is to create a society in which women behave as much like men as possible, devoting as much time and energy to the pursuit of a career as men do, so that women will eventually hold equal political and economic power with men. This book examines feminism's successful onslaught against the traditional family, considers the possible ramifications of that success, and defends a woman's choice to be a homemaker. Feminists have used a variety of methods to achieve their goal. **They have promoted a sexual revolution that encouraged women to mimic male sexual promiscuity. They have supported the enactment of no-fault divorce laws that have undermined housewives' social and economic security. And they obtained the application of affirmative action requirements to women as a class, gaining educational and job preferences for women and undermining the ability of men who are victimized by this discrimination to function as family breadwinners.**

Sexual promiscuity, no-fault divorce laws and affirmative action laws that discriminate against male providers, were the goals of *radical feminists*. There may have been some men who went along with these things, but the main force behind it was radical feminism.

We continue:

> Certainly, feminism is not alone responsible for our families' sufferings. As Charles Murray details in *Losing Ground*,[1] **President Lyndon Johnson's Great Society programs, for example, have often hurt families, particularly black families**, and these programs were supported by a large constituency beyond the women's movement. What distinguishes the women's movement, however, is the fact that, despite the pro-family

> motives it sometimes ascribes to itself, it has actively sought the traditional family's destruction. **In its avowed aims and the programs it promotes, the movement has adopted Kate Millett's goal, set forth in her Sexual Politics, in which she endorses Friedrich Engels's conclusion that "the family, as that term is presently understood, must go"; "a kind fate," she remarks, in "view of the institution's history.[2] This goal has never changed: feminists view traditional nuclear families as inconsistent with feminism's commitment to women's independence and sexual freedom.[3]**

To counter radical feminism, women should be reading books that offer a serious, scholarly defense to feminism (e.g. – Christina Hoff Sommers, Carrie Lukas, F. Carolyn Graglia, etc.). You can tell whether a woman is a feminist based on how brittle she is with the idea that women have certain roles like wife and mother. Another good indicator is whether she is comfortable with the idea that relationships require each person to have certain responsibilities and obligations to the other that *override* their desire for happiness. Everyone in a relationship has responsibilities and obligations to the other person. For example, with few exceptions, a man ought to get up and go to work to support his family, just as the woman, with few exceptions, should try to keep thin and be available for her husband sexually. Feelings and desires should not override responsibilities and obligations in a relationship.

More:

> Emerging as a revitalized movement in the 1960s, feminism reflected women's social discontent, which had arisen in response to the decline of the male breadwinner ethic and to the perception — heralded in Philip Wylie's 1940s castigation of the evil "mom"[4] — that Western society does not value highly the roles of wife and mother. Women's dissatisfactions, nevertheless, have often been aggravated rather than alleviated by the feminist reaction. **To mitigate their discontent, feminists argued, women should pattern their lives after men's, engaging in casual sexual intercourse on the same terms as sexually predatory males and making the same career commitments as men. In pursuit of these objectives, feminists have fought unceasingly for the ready availability of legal abortion and consistently derogated both motherhood and the worth of fulltime homemakers.**
>
> […]Contemporary feminism has been remarkably successful in bringing about the institutionalization in our society of the two beliefs underlying its offensive: denial of the social worth of traditional homemakers and rejection of traditional sexual morality. The consequences have been pernicious and enduring. General societal assent to these beliefs has profoundly distorted men's perceptions of their relationships with and obligations to women, women's perceptions of their own needs, and the way in which women make decisions about their lives.

Read the rest, it's a good introduction to the book.

So how have men responded to the sexual revolution and no-fault divorce? Well, most non-Christian men are going to take the free sex that's being offered to them, and back away from a life-long commitment to protect and provide. Even a number of "Christian" men are now finding it easy to work premarital sex into their relationships, something that would have been unthinkable to Bible-believers of earlier generations. Also, a woman who has a lot of premarital sexual experience is a red flag to most men – they worry that she will not be able to be faithful to them since she is already accustomed to recreational sex rather than married sex within a covenant. Premarital sex generally makes women less trusting, less vulnerable and less capable at being lovable to a man using non-sexual (feminine) abilities. Research shows that the more premarital sex partners a woman has, the more unstable her marriage becomes. This is also true for men, but the effect is slightly less for men. It's definitely something that has to be worked through, because it's a risk factor for relationship instability.

If you ask any man today about what is holding him up from getting married, the first thing he will tell you is no-fault divorce laws. Whereas women may shy away from marriage because they are worried about being unhappy or losing their freedom, men have a much, much more pressing danger in mind – the danger of having your entire life

savings wiped out in an instant. And that's not to mention the prospect of only being able to see your kids for a few hours every month if you don't get joint custody – which is the vast majority of cases (about 90%).

# Conservative Republicans plan to vote against John Boehner for Speaker

**Wintery Knight** · 30 December 2014 · Archived copy · Original

This is from the New York Post. The event occurred on December 23rd.

> Bah, humbug!
>
> A passenger was tossed off a plane at La Guardia Airport on Tuesday after flipping out — because airline workers wished him a merry Christmas.
>
> The man was waiting to board American Airlines Flight 1140 to Dallas when a cheerful gate agent began welcoming everyone with the Yuletide greeting while checking boarding passes.
>
> The grumpy passenger, who appeared to be traveling alone, barked at the woman, “You shouldn’t say that because not everyone celebrates Christmas.”
>
> The agent replied, “Well, what should I say then?”
>
> “Don’t say, ‘Merry Christmas!’ ” the man shouted before brushing past her.
>
> Once on the plane, he was warmly greeted by a flight attendant who also wished him a “merry Christmas.” That was the last straw.
>
> “Don’t say, ‘Merry Christmas!’ ” the man raged before lecturing the attendants and the pilot about their faux pas.
>
> The crew tried to calm the unidentified man, but he refused to back down and continued hectoring them.
>
> He was escorted off the plane as other fliers burst into cheers and applause.
>
> American Airlines did not return a request for comment.

Where did this attitude of “being offended” come from? I wish they had released more details about who the man was so we could all learn what worldview causes people to start screaming and shouting in public like that. It really makes me wonder if these people who value diversity know what that word really means. It means letting people be who they are in public, and not getting angry at them for expressing their different views and feelings.

# National debt up more than $10 trillion since Pelosi/Reid budgets of 2007

**Wintery Knight** · 30 December 2014 · Archived copy · Original

This post is from Red State.

Excerpt:

> Despite his promises to cut the deficit in half by the end of his "first" term, Obama racked up the largest deficits in U.S. history:
>
> - FY2009: The federal budget deficit was $1.413 trillion, the highest in U.S. history. ("Monthly Budget Review: November 2011," Congressional Budget Office, 11/7/11)
> - FY2011: The federal budget deficit was $1.299 trillion, the second highest in U.S. history. ("Monthly Budget Review: November 2011," Congressional Budget Office, 11/7/11)
> - FY2010: The federal budget deficit was $1.294 trillion, the third highest in U.S. history. ("Monthly Budget Review: November 2011," Congressional Budget Office, 11/7/11)
> - FY2012 The federal budget deficit was $1.090 trillion, the fourth highest in U.S. history. ("An Analysis of the President's 2013 Budget," Congressional Budget Office, 10/5/12)
>
> You shouldn't be shocked by Obama's failure to reduce the deficit in half by the end of his first term in office. He did warn us there would be "trillion-dollar deficits for years to come."
>
> **Interest expense on the national debt is what sinks countries. The zero interest rate environment we have today masks the problem. When we return to normal interest rates, say 6%, our interest expense will jump to approximately to 25% of tax receipts. We have recently seen what happens to countries with debt problems similar to ours. Spain, Portugal, Greece, and Argentina all brought to their knees by excessive debt.**

Heritage Foundation economist Stephen Moore:

> **Here is the biggest worry about an $18 trillion debt: What happens if/when interest rates start to drift back upward? Answer: This is the economic equivalent of the nuclear option.**
>
> **Each 1-percentage-point rise in interest rates causes the U.S. deficit to rise by more than $1 trillion over ten years. So a 300-basis-point rise in rates — nothing more than a return to normalcy — would mean about $5 trillion in federal deficits.**
>
> If that happens, the debt-servicing costs grow astronomically and interest payments would become the biggest expense item in the budget. We start to pay more and more taxes just to finance past borrowing. This is what happened in Detroit; look at how that turned out.
>
> Maybe this debt bubble won't burst. Let's pray that it doesn't. If it does, the 2008–09 real-estate crash could look like a picnic by comparison.
>
> […]Oh, and we're still borrowing half a trillion a year, so the debt will likely hit $20 trillion sometime before 2018. Have a nice day.

In 2007, when Nancy Pelosi and Harry Reid took over the spending, the national debt was only 8.5 trillion!

I am really hoping that interest rates will go up. Not only would it help me personally to get a predictable return on my investments, but I would like the people who voted for the Democrats to perceive (when it blows up) that lowering interest rates and borrowing trillions of dollars was not the right way to achieve real economic growth. The

economy looks better if you throw 10 trillion dollars of borrowed money at it, but it's not sustainable. In fact, it seems as if the left is always trying to wreck the economy with one bubble or another. It's not just reducing mortgage lending requirements to create a housing bubble, it's reducing student loans requirements to create a higher education bubble, and it's reducing interest rates to create a debt bubble. It's almost as if they were trying to destroy the economy.

# Christianity expanding rapidly in communist China

**Wintery Knight** · 31 December 2014 · Archived copy · Original

Jay Richards tweeted this story from Breitbart News.

Excerpt:

> Though the Chinese Communist Party is the largest explicitly atheist organization in the world, with 85 million official members, it is now overshadowed by an estimated 100 millionChristians in China. It is no wonder Beijing is nervous and authorities are cracking down on Christian groups.
>
> Christianity is growing so fast in China that some predict that it will be the most Christian nation in the world in only another 15 years. By far, the greatest growth is coming outside the official state-sanctioned churches, which are rightly considered subservient to the Communist Party. Numbers are increasing, rather, in unofficial Protestant "house churches" and in the underground Catholic church.
>
> "By my calculations China is destined to become the largest Christian country in the world very soon," said Fenggang Yang, a professor of sociology at Purdue University and author of Religion in China: Survival and Revival under Communist Rule.
>
> […]According to the annual report of the human rights group China Aid, persecution of Christians worsened dramatically in 2013, in line with a constant trend of deteriorating religious freedom over the past eight years. Most recently, the oppression of Christians has especially targeted Protestant groups, leaving most Catholics alone, which many feel reflects Beijing's strategic goal of reestablishing diplomatic relations with the Vatican. According to reports, hundreds of Protestant churches in the eastern province of Zhejiang have been targeted for demolition in the past year.
>
> Unrecognized Christian groups have been subject to crackdowns for years, but observers say the atmosphere is getting worse as their numbers increase and the governing Communist Party takes a more nationalist tone under President Xi Jinping.
>
> Particularly hard hit has been a Beijing Christian group called Shouwang. "Things have got worse this year because the police started to detain us. I was detained for a week," said Zhao Sheng, 54, musical organizer for the group's Christmas service.
>
> "But Christmas is still a happy time. No matter what happens, God is with us," he added with a smile.

I think this story is a nice reminder for us that it can be the case that God's permitting of evil can be be justified if it helps more people to know him. Now, of course this seems unfair to narcissistic atheists who think that God, if he existed, ought to be their cosmic butler. But for people who take God as they find him, it's not a surprise that God can permit evil things to happen in order accomplish purposes of leading more people into a free love relationship with him. After all, look what happened to Jesus! Christians aren't surprised by evil and suffering – on the contrary, we expect it. We know that the purpose of life is not for God to make his human pets happy, but for God to draw us toward him and allow us to freely respond to his saving initiative.

# Technological advances make the Keystone XL pipeline safer than alternatives

**Wintery Knight** · 31 December 2014 · Archived copy · Original

My Dad loves to read Fox News, and he sent me this article about the technology behind the Keystone XL pipeline. We got into a good discussion on this article, too. My Dad used to be a big believer in big government, but now he only cares about what problems the private sector can solve.

The article says:

> The Obama administration continues to block the controversial Keystone XL pipeline that would transport nearly 35 million gallons of oil a day from Canada to the U.S., citing environmental concerns as the reason. But according to pipeline advocates, it would use the latest technology and best safety features to prevent spills.
>
> Advanced steel is part of it. The current part of the Keystone pipeline that already exists uses 2,638 miles of hardened steel built to "withstand impact from a 65-ton excavator with 3.5-inch teeth," according to TransCanada, the company behind the Keystone pipeline.
>
> The steel is also coated with alloys to prevent it from wearing out.
>
> "They use all kinds of methodologies to reduce friction. Corrosion inhibition is pretty sexy stuff in this business," Eric Smith, associate director of Tulane University's Energy Institute, told FoxNews.com
>
> Pumping stations are another critical part. All along the pipeline, pumps move the oil using centrifugal force: a motor spins and forces oil to the edges of the pump, which causes more oil to rush forward to take the place of the oil pulled to the edges.
>
> Each pump has 6,500 horsepower – meaning that the pump exerts an amount of power roughly equivalent to that of 6,500 horses. Total pumping power on the existing pipeline is nearly half a million horsepower, according to TransCanada.
>
> Another critical technology is leak detection systems. The existing Keystone pipeline, for instance, has sensors that collect data from 20,000 different points along the pipeline.
>
> If a leak occurs anywhere along the pipeline, the pressure in the pipeline changes, and TransCanada notes that such changes travel through the pipeline at the speed of sound and so can be detected nearly instantly.
>
> The company adds that the pipeline has "fail-safe" mechanisms that automatically reduce oil pressure in the pipeline to safe levels.
>
> TransCanada also has airplanes monitor the pipeline from the sky, using both the eyes of human pilots and a "Laser Spectroscopy Unit" that shoots a laser near the pipeline and then analyzes the reaction of whatever material is hit by the laser beam. TransCanada says this is "capable of identifying tiny methane leaks at patrol altitudes."
>
> The human pilots also catch things. TransCanada reports that one of its pilots once noticed that a circus in Kansas had tethered an elephant to a pipeline stake, which posed a potential threat.
>
> All the layers of security help, say experts.
>
> "It's a belt-and-suspenders kind of approach. You just don't want even minute leaks," Smith said, adding that pipelines are the safest way of moving oil across land.

Pipelines are actually much safer than transporting the oil by train, which is the method favored by environmentalist opponents to Keystone XL:

> According to a 2006 study by Environmental Research Consulting using Department of Transportation data,

> pipelines have spilled far less than trucks or railroads per ton of oil transported.
>
> Critics of President Obama's delay of the Keystone XL construction say the holdup actually makes everyone less safe, as oil producers instead rely on comparatively dangerous railroads for transportation. From 2008 to 2013, the amount of oil transported by rail skyrocketed from 9,500 carloads in 2008 to 41 times that – 407,642 – in 2013.

My big point to my Dad about this is how the private sector responds to the desires of customers on their own, developing solutions for the people who they expect to buy their products. The government spends 2 billion on the Obamacare web site, and forces people to use it. They can never develop anything people actually want to buy. Government just taxes, regulates and restricts the businesses who seek to solve problems for customers.

It's the private sector businesses who are the real heroes to customers – making the things that we want and need and competing with other businesses to sell the most quality at the lowest price. They even find solutions to our concerns about the environment, if we let them, because that is part of pleasing the customer, too. If we had to wait on public school teachers, politicians, Hollywood clowns and academics to innovate, we would be waiting a long time indeed. I stand with private sector business, and the free-market system in general.

UPDATE: Holy snouts. For the first time in 6 years I am actually proud of Obama for doing something:

> The Obama administration has opened a new front in the global battle for oil market share, effectively clearing the way for the shipment of as much as a million barrels per day of ultra-light U.S. crude to the rest of the world.
>
> The Department of Commerce on Tuesday ended a year-long silence on a contentious, four-decade ban on oil exports, saying it had begun approving a backlog of requests to sell processed light oil abroad. It also issued a long-awaited document outlining exactly what kinds of oil other would-be exporters can ship.
>
> The administration's first serious effort to clarify an issue that has caused confusion and consternation in energy markets for more than a year will likely please domestic oil drillers, foreign trade partners and some Republicans who have urged Obama to loosen the export ban, which they see as an outdated holdover from the 1970s Arab oil embargo.
>
> The latest measures were wrapped in regulatory jargon and couched by some as a basic clarification of existing rules, but analysts said the message was unambiguous: a green light for any company willing and able to process their light condensate crude through a distillation tower, a simple piece of oilfield kit.
>
> "In practice this long-awaited move can open up the floodgates to substantial increases in exports by end 2015," Ed Morse, global head of commodities research at Citigroup in New York said in a research note.
>
> […]By opening the door to U.S. crude exports, the administration is offering a bit of relief to some domestic drillers that have said that they are forced to sell their shale oil at a discount of as much as $15 a barrel versus global markets as fast-rising domestic supplies overwhelm local demand.

Let's hope Obama signs the Keystone XL pipeline in the new year, too. That will help people so much and hurt our enemies, Russia, Venezuela and Iran. There are ways to fight wars without firing a shot, and this is how you do it – he looks like Ronald Reagan, now. Well done, Barack Obama! Finally!

# Michael Strauss lectures on scientific evidence for a Creator at UT Dallas

**Wintery Knight** · 31 December 2014 · Archived copy · Original

**The lecture: (from 2013)**

Note: there is a period of 19 minutes of Q&A at the end of the lecture.

**About the speaker:**

His full biography is here. (I removed his links from my excerpt text below)

Excerpt:

> I had an interest in science and theology, so in 1977 I chose to go to Biola University where I could study both subjects in detail. I thoroughly enjoyed college and participated in intramural sports, was elected to student government, served as a resident assistant, competed in forensics, and studied a lot. As I neared college graduation my dual interest continued so I applied to seminary and to graduate school. After graduating *summa cum laude* from Biola, I decided to pursue a graduate degree in physics at UCLA.
>
> During my first few years of graduate school, I developed an increased interest in quantum mechanics and subatomic physics and decided to do research in a field that dealt with these subjects. I joined a High Energy Physics experimental group doing research at the Stanford Linear Accelerator Center (SLAC) and moved to the San Francisco Bay Area to actively participate in research at SLAC. I graduated in 1988 with my Ph.D in High Energy Physics (a.k.a. Elementary Particle Physics). If you would like to know more about High Energy Physics, the Particle Data Group at Lawrence Berkeley Laboratory has a very nice interactive adventure that teaches you all about the subject. My research advisor was professor Charles Buchanan and my disertation was titled "A Study of Lambda Polarization and Phi Spin Alignment in Electron-Positron Annihilation at 29 GeV as a Probe of Color Field Behavior."
>
> After graduation, I accepted a post-doctoral research position with the University of Massachusetts at Amherst. I continued to do research at SLAC where I joined the SLD experiment. My research interests centered on the SLD silicon pixel vertex detector. I wrote most of the offline software for this device, and did physics analysis which used the vertex detector, including tagging *b* quark events for flavor specific QCD (Quantum Chromodynamics) analysis. In the seven years I was employed by UMASS, I only spent 3 days on the Amherst campus. The rest of the time was spent in California.
>
> […]In August 1995, I accepted a job as an Assistant Professor of Physics at the University of Oklahoma (OU) in Norman, Oklahoma. The University of Oklahoma has a vibrant high energy physics research group involved in experiments at the Fermi National Accelerator Center (Fermilab), and CERN. I joined the DØ experiment at Fermilab where I continue to do research in elementary particle physics. As a member of the DØ collaboration I have made contributions to the testing of silicon sensors for the upgraded vertex detector, to the track finding algorithms, to a measurement of the photon production cross section which probes the gluon content of protons, and to other QCD measurements. I am currently studying properties of *B* mesons that contain a *b*-quark, the production cross section of jets coming from quarks and gluons, and other QCD analyses. At CERN, I am a collaborator on the ATLAS detector.
>
> I received tenure in 2001 and was promoted to the rank of Professor in the summer of 2010. Most of the time at OU I have taught introductory physics classes to physics majors, engineers, and life science majors. In these classes I have used a number of interactive techniques to facilitate student participation and learning. I have been privileged to win a few awards for my teaching. In 1999, the Associated Students selected me as the Outstanding Professor in the College of Arts and Science, and in 2000 I was awarded the BP AMOCO Foundation Good Teaching Award. In 2002, I was given the Regents Award for Superior Teaching. I received

> the Carlisle Mabrey and Lurine Mabrey Presidential Professorship in 2006 which is given to “faculty members who excel in all their professional activities and who relate those activities to the students they teach and mentor.”

He seems to have done a fine job of integrating his faith with a solid career in physics research.

**Summary:**

- It used to be true that most of the great scientists were believers in God
- But now science has advanced and we have better instruments – is it still true?
- Today, many people believe that science has shows that the universe and Earth are not special
- We used to believe that the Earth was the center of the universe, and Darwin showed we are not designed
- The problem with this view is that it is based on old science, not modern science
- Three topics: origin of the universe, fine-tuning of the universe, the Rare Earth hypothesis

Experimental evidence for the origin of the universe:

- #1: Hubble discovered that the universe expands because of redshifting of light from distant galaxies
- #2: Measurements of the cosmic microwave background radiation show the universe had a beginnning
- #3: Measurements of the light element (hydrogen and helium) abundances confirm an origin of the universe
- The best explanation for an absolute origin of space, time, matter and energy is a supernatural cause

Experimental evidence for the design of the universe:

- #1: The amount of matter: a bit less = no stars and galaxies, a bit more = universe recollapses
- #2: The strong force: a bit more = only hydrogen, a bit more = little or no hydrogen
- #3: Carbon resonance level: a bit higher = no carbon, a bit lower = no carbon

Experimental evidence for galactic, stellar and planetary habitability:

- #1: Galaxy: produces high number of heavy elements and low radiation
- #2: Star: long stable lifetime, burns bright, bachelor star, third generation star (10 billion years must elapsed),
- #3: Planet: mass of planet, stable orbit, liquid water, tectonic activity, tilt, moon

Naturalistic explanations:

- Humans evolve to the point where they reach back in time and create finely-tuned universe
- Eternally existing multiverse

Hawking and Mlodinow response to Rare Earth:

- There are lots of planets so one must support life
- Odds of a planet that supports life are low even with 10^22 planets

Hawking and Mlodinow proposal of M-theory multiverse:

- There is no experimental evidence for M-theory being true
- M-theory is not testable now and is not likely to be testable in the future
- But science is about making testable predictions, not about blind speculation

Hawking and Mlodinow no-boundary proposal:

- This theory requires the laws of physics to exist prior to the universe

- But where do you get laws of physics before there is any physical world?
- There is no experimental evidence for no-boundary proposal
- All the evidence we have now (redshift, CMBR, H-He abundances) is for Big Bang

What science has revealed provide abundant evidence for a transcendent Creator and Designer

# Dennis Prager: which sin is the worst sin?

**Wintery Knight** · 1 January 2015 · Archived copy · Original

My friend Drew suggested this post to me to blog about, and I was able to find the Prager University video that goes with it. Drew really liked the video, as well.

Excerpt:

> The worst sin is committing evil in God's name.
>
> How do we know?
>
> From the third of the Ten Commandments. This is the only one of the ten that states that God will not forgive a person who violates the commandment.
>
> What does this commandment say?
>
> It is most commonly translated as, "Do not take the name of the Lord thy God in vain. For the Lord will not hold guiltless" — meaning "will not forgive" — whoever takes His name in vain."
>
> Because of this translation, most people understandably think that the commandment forbids saying God's name for no good reason. So, something like, "God, did I have a rough day at work today!" violates the third commandment.
>
> But that interpretation presents a real problem. It would mean that whereas God could forgive the violation of any of the other commandments — dishonoring one's parents, stealing, adultery or even committing murder — He would never forgive someone who said, "God, did I have a rough day at work today!"
>
> Let's be honest: That would render God and the Ten Commandments morally incomprehensible.
>
> As it happens, however, the commandment is not the problem. The problem is the translation. The Hebrew original doesn't say "Do not take;" it says "Do not carry." The Hebrew literally reads, "Do not carry the name of the Lord thy God in vain."
>
> This is reflected in one of the most widely used new translations of the Bible, the New International Version, or NIV, which uses the word "misuse" rather than the word "take:"
>
> "You shall not misuse the name of the Lord your God."
>
> This is much closer to the original's intent.
>
> What does it mean to "carry" or to "misuse" God's name? It means committing evil in God's name.
>
> And that God will not forgive.
>
> Why not?
>
> When an irreligious person commits evil, it doesn't bring God and religion into disrepute. But when a religious person commits evil in God's name he destroys the greatest hope for goodness on earth — belief in a God who demands goodness, and who morally judges people.
>
> The Nazis and Communists were horrifically cruel mass murderers. But their evils only sullied their own names, not the name of God. But when religious people commit evil, especially in God's name, they are not only committing evil, they are doing terrible damage to the name of God.

Now, I don't agree with Dennis on his ranking this sin as the worst. I would put this one lower, and say that rebellion against God is the worst sin. That's what I would say intellectually speaking. Emotionally speaking, I think that attacking people for their allegiance to God is the worst sin, like when people go after Christians for trying to take the Bible seriously in sexual matters, for example.

Dennis is Jewish, so he believes that religions should be judged based on whether they produce good or not, rather

than whether they are true or not. I try to listen to Dennis' radio show as often as I can, and although he does like to discuss what we can know about God from science and history, he doesn't think that getting the right answers to theological questions is as important as doing the right actions. I think that might be why he chose this one as the worst, because actions are more important to him. I agree with him that it is certainly very bad to invoke God in a way that makes God look bad.

# What is the purpose of capital punishment? Does it deter crime?

**Wintery Knight** · 1 January 2015 · Archived copy · Original

I have a key that will unlock a puzzling mystery

Why do some people support the death penalty? Because research conducted by multiple teams of scholars at multiple universities have shown that the death penalty deters crime.

Excerpt:

> "Science does really draw a conclusion. It did. There is no question about it," said Naci Mocan, an economics professor at the University of Colorado at Denver. "The conclusion is there is a deterrent effect."
>
> A 2003 study he co-authored, and a 2006 study that re-examined the data, found that each execution results in five fewer homicides, and commuting a death sentence means five more homicides. "The results are robust, they don't really go away," he said. "I oppose the death penalty. But my results show that the death penalty (deters) — what am I going to do, hide them?"
>
> Statistical studies like his are among a dozen papers since 2001 that capital punishment has deterrent effects. They all explore the same basic theory — if the cost of something (be it the purchase of an apple or the act of killing someone) becomes too high, people will change their behavior (forego apples or shy from murder).

And specifically:

> • Each execution deters an average of 18 murders, according to a 2003 nationwide study by professors at Emory University. (Other studies have estimated the deterred murders per execution at three, five and 14).
>
> • The Illinois moratorium on executions in 2000 led to 150 additional homicides over four years following, according to a 2006 study by professors at the University of Houston.
>
> • Speeding up executions would strengthen the deterrent effect. For every 2.75 years cut from time spent on death row, one murder would be prevented, according to a 2004 study by an Emory University professor.

In case anyone is wondering what sort of crimes are deterred by the death penalty, you can read this graphic description of a recent death-penalty crime.

**What sort of crimes are eligible for the death penalty?**

Here's an example of a death-penalty eligible crime from the Hartford Courant. (WARNING: graphic!)

Excerpt:

> A Superior Court jury today sentenced Steven Hayes to death for the murders of Jennifer Hawke-Petit and her daughters, Hayley and Michaela, during a seven-hour home invasion, robbery and arson at their Cheshire home in July 2007.
>
> Outside the courthouse after the verdicts, Hawke-Petit's father, the Rev. Richard Hawke, said "There are some people who do not deserve to live in God's world."
>
> Asked what he had in his heart, Dr. William Petit Jr. struggled with his answer. "….Probably many of you have kids," he said, pausing to choke back tears. "Michaela was an 11-year-old little girl…tortured and killed in her own bedroom, surrounded by her stuffed animals…."
>
> Petit then talked about his daughter Hayley's bright future and her strength and the children that his wife, Jennifer, helped.
>
> "So, I was really thinking of the tremendous loss" during the verdict, Petit said, adding that he was pleased with it, but "mostly I was sad for the loss we have all suffered."
>
> Asked if he thought there'd be closure now, Petit said, "There's never closure. There's a hole…. with jagged edges…that may smooth out with time, but the hole in your heart and the hole in your soul" remains.
>
> "This isn't about revenge," Petit said. "Vengeance belongs to the Lord. This is about justice."
>
> […]The jury sentenced Hayes to death on six counts: killing Hawke-Petit and Michaela and Hayley in the course of a single action; killing a child under the age of 16; killing Hawke-Petit in the course of a kidnapping; killing Hayley in the course of a kidnapping; killing Michaela in the course of a kidnapping; and killing Hawke-Petit in the course of a sexual assault.
>
> […]Hayes, 47, of Winsted, was convicted Oct. 5 of breaking into the Petit home, beating Petit, tying up and torturing the family as Hayes and another man ransacked the home for cash and valuables and tortured the family for seven hours. Testimony during Hayes' trial showed that at one point in the break-in, Hayes forced Hawke-Petit to go to the bank to withdraw money. During that time, according to testimony, Komisarjevsky sexually assaulted Michaela Petit, 11.
>
> When Hawke-Petit and Hayes returned from the bank, Hayes raped and strangled Hawke-Petit. The house was doused with gasoline and set on fire as the intruders fled, testimony showed. Hayley, 17, and Michaela died of smoke inhalation.
>
> […]Prosecutors used the words of Hayes' younger brother Matthew to counter testimony that home-invasion crime was an aberration in Hayes otherwise troubled but basically nonviolent life.
>
> Matthew Hayes portrayed his brother as a conniving, sadistic, violent thief who saw Matthew take countless beatings from his brutal father for Steven Hayes' misdeeds. At one point, Steven Hayes held a gun to Matthew's head, according to the statement, which was given to state police after the home invasion.
>
> Examples of Hayes' sadistic behavior toward his brother included hooking Matthew to the garage door by his belt and raising the door up and down, and holding Matthew's hand to a red-hot burner. Matthew said his brother's life of crime was not a result of bad parenting or poor childhood. He said Hayes never learned to take responsibility for his actions.

Sometimes, I think that we have stopped judging others *because* we do not want to be judged *ourselves*. We hope that by not judging anyone, that we will somehow escape being judged by anyone – especially by God himself. The opposition to punishing the guilty is, I think, really just a way of expressing our desire to do away with the idea that we will finally face judgment.We seem to be able to ignore the victim's needs and act as if the criminal is the victim. We act as if deterring a crime with punishment has no impact on the decision making of people who are

considering whether to commit the crime. But crime isn't some random action – criminals do consider what will happen to them if they are caught. We send potential killers a message by being willing to punish the ones we catch. But if we treat them like victims, then others watching are not going to be deterred from committing crimes.

# Cold Case Christianity: best posts, podcasts and videos of 2014

**Wintery Knight** · 1 January 2015 · Archived copy · Original

This assault rifle is pretty cool, but apologetics is even cooler

J. Warner Wallace has posted the top 10 blog posts, podcasts and videos for 2014.

Blog posts:

> **10. 10 Important Questions for the Jehovah's Witness Worldview**
> There are a number of philosophical and theological questions exposing the internal contradictions of the Jehovah's Witness worldview.
>
> **9. How the Book of Abraham Exposes the False Nature of Mormonism**
> By taking an evidential approach to Christian and Mormon scripture, I confirmed the veracity of Christianity and guarded myself from the falsity of Mormonism
>
> **8. Ten Principles When Considering Alleged Bible Contradictions**
> If we objectively examine the Scriptures with these principles in mind, we'll grow in our understanding of the Bible and better resolve the difficulties
>
> **7. Is Jesus Simply a Retelling of the Horus Mythology?**
> Is Jesus simply a retelling of the Horus myth? How similar is Horus to Jesus upon close examination? Do these similarities invalidate the historicity of Jesus?
>
> **6. Why Are Young Christians Leaving the Church? It's Simple Math**
> Why Are Young Christians Leaving the Church? Three powerful forces are driving the current departure of young Christians from the Church.
>
> **5. The Inevitable Consequence of An Atheistic Worldview**
> What are the inevitable consequences of an atheistic worldview? A summary from an honest (if not politically correct) comment from an atheist.
>
> **4. Investigating the Evidence for Mormonism In Six Steps**
> Given the evidence, there is more than enough reason to conclude Joseph Smith was a fraud and the Book of Mormon is a work of fiction.
>
> **3. Is the Bible True? The Cumulative Case for the Reliability of the Gospels (Free Bible Insert)**
> Is the Bible true? The case for the reliability of the Gospels is strong and substantive.
>
> **2. The Difference Between "Natural Talents" and "Spiritual Gifts"**

Natural talents are the result of our genetic inheritance and the training in our family environment. Spiritual gifts are given to us by the Spirit of God once we are saved.

**1. Is There Any Evidence for Jesus Outside the Bible?**
The ancient non-Christian interpretations (and critical commentaries) of the Gospel accounts serve to strengthen the core claims of the New Testament.

And the podcasts:

**10. Is the Christian Faith Evidentially Reasonable?**
J. Warner makes a case for the reasonable nature of the Christian Worldview. Does Christianity require blind faith? Are we to accept the claims of Christianity *without* evidence or even *in spite* of the evidence? Or are we called, as Christians, to place our trust in Jesus *because* of the evidence? Jim also examines the way Jesus responded to those who had doubts.

**9. The Problem with the Problem of Evil**
J. Warner talks about the challenge we face, as Christian Case Makers, when trying to respond to the problem of evil. If God is all-powerful and all-loving, why is there so much evil in the world? Jim talks about the need for a cumulative response and explains why the problem of evil may be a bigger problem for atheists than for Christians.

**8. The Case for Christian Case Making**
J. Warner makes a case for an evidential, reasoned, case-making form of Christian belief. Using the New Testament gospels and letters as a guide, Jim articulates the foundation for a reasonable faith in Jesus and our common calling as Christians to a life of case-making.

**7. Are the Gospels Eyewitness Accounts?**
J. Warner makes a case for the eyewitness status of the New Testament Gospel accounts. Is it appropriate to evaluate these accounts as eyewitness statements? Were they intended to be read in this manner? Jim provides several reasons to accept the accounts as eyewitness testimony.

**6. Four Ways to Strengthen Your Kids Faith**
J. Warner reviews the statistics related to young people leaving the church and then offers four simple ways parents can help make sure their kids stay in the Christian faith. Jim also discusses the simple math behind the problem and illustrates the challenges facing young Christians.

**5. Did Jesus Claim to Be God?**
J. Warner examines the statements of Jesus to see if He ever claimed to be God. While skeptics may acknowledge Jesus' existence and even the value of His teaching, any assessment of Jesus' instruction must account for his obvious claims of Deity. Jim looks at the cumulative case and assembles the evidence from the Gospels to demonstrate Jesus' claims to Deity.

**4. What (and When) Were the Earliest Claims About Jesus?**
J. Warner examines the history related to the eyewitness observations of Jesus. How early are the eyewitness accounts and what precisely was being said about Jesus *prior* to the creation of these written documents?

**3. Four Lies the Culture Tells About the Truth**
J. Warner examines four popular misconceptions and misstatements about the nature of objective truth, tolerance and our over-reliance on science. If there are no objective truths (or they can't be known) there is little reason to examine the truth about God. We need to get to the truth about truth before we can ever know the truth about anything else.

**2. Conversations with Atheists: Four Observations**
J. Warner provides four observations from his youth ministry trips to UC Berkeley. These simple observations may help you improve the quality of your discussions with non-believers and help you better understand the

> underlying issues in some of these conversations. J. Warner also answers viewer email related to the disagreements between Christian denominations and the need for personal research.
>
> **1. Is Jesus a Copycat Savior?**
> In this inaugural Cold-Case Christianity video broadcast / podcast, J. Warner re-examines an atheist objection related to the historicity of Jesus. Is Jesus merely a copycat of prior mythologies like Mithras, Osiris or Horus? How can we, as Christians, respond to such claims? Jim provides a five point response to this common atheist claim.

And the videos:

> **10. The Case for Truth**
> In this video, J. Warner Wallace teaches high school and college students at Summit Worldview Conference in Manitou Springs, CO. What is the nature of truth? What is the difference between objective and subjective truth and why does it matter? J. Warner talks about three lies related to truth and offers a proper definition of truth for his students.
>
> **9. When Do We Have Enough Evidence to Know Christianity Is True?**
> J. Warner Wallace was interviewed by Bobby Conway and discussed the role of evidence in determining truth claims. When we can be certain we have sufficient evidence to believe something is true?
>
> **8. The Apostle John's Chain of Custody**
> J. Warner Wallace provides a detective's perspective related to the New Testament and the Christian Life as he talks with Rob Melnichuk of "It's Your Call"
>
> **7. Making a Case for the Resurrection of Jesus**
> J. Warner Wallace was interviewed on 100 Huntley Street and talked about the case for Easter by examining the Resurrection of Jesus through abductive reasoning.
>
> **6. Laura Ingraham Interview with J. Warner Wallace**
> Laura Ingraham interviews J. Warner Wallace about his book, Cold Case Christianity
>
> **5. Why Some Skeptics Deny the Credibility of the Gospels**
> J. Warner Wallace provides a detective's perspective related to the New Testament and the Christian Life as he talks with Rob Melnichuk of "It's Your Call"
>
> **4. Were the Gospel Authors Really Present?**
> J. Warner Wallace spoke at the University of Kentucky Christian Student Fellowship in November 2014 about the reliability of the New Testament. In this portion of the talk, J. Warner examines the dating of the Gospels.
>
> **3. The Difference Between Objective and Subjective Truth**
> What is the difference between "Objective Truth" and "Subjective Truth"? How can mastery of the distinction between these two definitions help us to think clearly before we begin to examine the case for the Christian Worldview? (from J. Warner's talk at Calvary Chapel Bangor)
>
> **2. Why Does Every Christian Need Abductive Reasoning?**
> J. Warner Wallace was interviewed by Bobby Conway and discussed the importance of Abductive Reasoning and its application to the Resurrection of Jesus.
>
> **1. Did Jesus Think Jesus Was God?**
> J. Warner Wallace, was interviewed by Bobby Conway and discussed the Deity of Jesus. Did Jesus make claims about His nature as God? Did He intend for others to believe He was God?

If you see one you think is interesting – well, they are all interesting – then click through and take a look. He produces so much material and it's fun to listen to a guy who solves murder mysteries and shoot guns at criminals.

# Should you execute a plan that requires God's intervention to work?

**Wintery Knight** · 1 January 2015 · Archived copy · Original

I have a fictional story that I'm going to use to make a point.

Here it is:

> A terrible storm came into a town and local officials sent out an emergency warning that the riverbanks would soon overflow and flood the nearby homes. They ordered everyone in the town to evacuate immediately.
>
> A faithful Christian woman heard the warning and decided to stay, saying to herself, "I will trust God and if I am in danger, then God will send a divine miracle to save me."
>
> Her neighbor came by her house and said to her, "I'm leaving and there is room for you in my car, please come with me!" But the woman declined his offer. "I have faith that God will save me."
>
> As the woman stood on her porch watching the water rise up the steps, a man in a canoe paddled by and called to her, "Hurry and come into my canoe, the waters are rising quickly!" But the woman again said, "No thanks, God will save me."
>
> The floodwaters rose higher pouring water into her living room and the woman had to retreat to the second floor. A police motorboat came by and the policeman saw her at the window. "I will come up and rescue you!" he shouted. But the woman refused, waving him off saying, "Use your time to save someone else! I have faith that God will save me!"
>
> The flood waters rose higher and higher and the woman had to climb up to her rooftop.
>
> A helicopter spotted her and dropped a rope ladder. A rescue officer came down the ladder and he pleaded with the woman, "Grab my hand and I will pull you up!" But the woman STILL refused, folding her arms tightly to her body. "No thank you! God will save me!"
>
> Shortly after, the house broke up and the floodwaters swept the woman away and she drowned.
>
> When in Heaven, the woman stood before God and asked, "I put all of my faith in You. Why didn't You come and save me?"
>
> And He said, "Daughter, I sent you a warning. I sent you a car. I sent you a canoe. I sent you a motorboat. I sent you a helicopter. What more were you looking for?"

I think the lesson from this made-up story is that it's good to not make plans that are risky and reckless, and therefore unlikely to work. If your plan requires God to do anything in order for it to work, you better get a new plan. I think instead you should do everything you can to make your plan work, and then pray about it for your own peace of mind, and for a blessing that God will use it and bless it to produce a great result.

Look at this passage from the Bible.

Matthew 4:5-7:

[5] Then the devil took Him into the holy city and had Him stand on the pinnacle of the temple,

[6] and said to Him, "If You are the Son of God, throw Yourself down; for it is written,

'He will command His angels concerning You';

and

'On *their* hands they will bear You up,
So that You will not strike Your foot against a stone.'"

[7] Jesus said to him, “On the other hand, it is written, ‘You shall not put the Lord your God to the test.’”

When you are deciding how your life is going to count, don’t try to hit a home run on the first at bat. Don’t try to swing for a knockout punch in the first round. Make a plan that is cautious and will bear fruit in time. Don’t make a plan that will only work if a miracle occurs, that would be putting God to the test. God is not honored by lousy plans that fail and make people of faith look foolish. We have to appear as if we know what we are doing, and it is easier to love and lead others if we have our own life in order, first. For example, you can’t share with others if you don’t have your own financial house in order.

Now I’ve actually done stupid things that were unlikely to work myself a few times, and they obviously did not work. But I have found a good way to avoid doing this. If you surround yourself with good advisors, then they will tell you not to do stupid things, or they will tell you how to do something else that achieves the same result. It’s good to have advisors and good to let them know what you are planning to do so they can tell you not to do it.

# New study: raising minimum wage hurts young, minority workers most

**Wintery Knight** · 2 January 2015 · Archived copy · Original

This report is from the libertarian Cato Institute.

Except:

> A new working paper from the National Bureau of Economic Research finds that significant minimum wage increases can hurt the very people they are intended to help. Authors Jeffrey Clemens and Michael Wither find that significant minimum wage increases can negatively affect employment, average income, and the economic mobility of low-skilled workers. The authors find that significant "minimum wage increases reduced the employment, average income, and income growth of low-skilled workers over short and medium-run time horizons." Most troublingly, these low-skilled workers saw "significant declines in economic mobility," as these workers were 5 percentage points less likely to reach lower middle-class earnings in the medium-term. The authors provide a possible explanation: the minimum wage increases reduced these workers' "short-run access to opportunities for accumulating experience and developing skills." Many of the people affected by minimum wage increases are on one of the first rungs of the economic ladder, low on marketable skills and experience. Working in these entry level jobs will eventually allow them to move up the economic ladder. By making it harder for these low-skilled workers to get on the first rung of the ladder, minimum wage increases could actually lower their chances of reaching the middle class.
>
> Most of the debate over a minimum wage increase centers on the effects of an increase on aggregate employment, or the total number of jobs and hours worked that would be lost. A consensus remains elusive, but the Congressional Budget Office recently weighed in, estimating that a three year phase in of a $10.10 federal minimum wage option would reduce total employment by about 500,000 workers by the time it was fully implemented. Taken with the findings of the Clemens and Wither study, not only can minimum wage increases have negative effects for the economy as a whole, they can also harm the economic prospects of low-skilled workers at the individual level.

With that in mind, I have some bad news for everyone who likes the idea of young people of color finding work.

The Daily Signal explains: (H/T Dad)

> At the stroke of midnight today, 19 states increased their minimum wage. Residents of three more and the nation's capital can expect hikes later on this year.
>
> […]Federal legislation was met with resistance. though. Republicans argued raising the minimum wage would cause an increase in prices for consumers and low-wage workers likely would face layoffs as companies grappled with the higher costs associated with hiked wages.
>
> Some of those concerns were validated last month by a University of California, San Diego, study. For three years, researchers followed low-income workers residing in states that saw wage hikes and those that did not. The study found that minimum wage hikes had negative impacts on employment, income and income growth.
>
> […]"Minimum wage supporters have good intentions, but those good intentions cannot repeal the law of unintended consequences," James Sherk, an expert in labor economics at The Heritage Foundation, told The Daily Signal. He added:
>
> > Minimum-wage increases reduce the total earnings of low-wage workers — the higher pay for some workers gets completely offset by the nonexistent pay of those no longer employed.

> In its study, UCSD researchers found that after minimum-wage increases, the national employment-to-population ratio decreased by 0.7 percent points between December 2006 and December 2012.
>
> In addition, the study found that minimum-wage increases hindered low-skilled workers' ability to rise to lower-middle -lass earnings.

So we need to be really careful about setting economic policy based on emotions. Things that sound nice, which we feel will help the poor, actually hurt the poor. We have to have evidence-driven public policy, not feelings-driven public policy. People's lives are depending on it.

# Is the vastness of the universe evidence against God's existence?

**Wintery Knight** · 2 January 2015 · Archived copy · Original

Physicist Hugh Ross writes about it in Salvo Magazine.

First a quick blurb about Hugh Ross:

> Hugh Ross launched his career at age seven when he went to the library to find out why stars are hot. Physics and astronomy captured his curiosity and never let go. At age seventeen he became the youngest person ever to serve as director of observations for Vancouver's Royal Astronomical Society. With the help of a provincial scholarship and a National Research Council (NRC) of Canada fellowship, he completed his undergraduate degree in physics (University of British Columbia) and graduate degrees in astronomy (University of Toronto). The NRC also sent him to the United States for postdoctoral studies. At Caltech he researched quasi-stellar objects, or "quasars," some of the most distant and ancient objects in the universe.

Now back to the topic "Is the vastness of the universe incompatible with God's existence?"

Here's Ross' introduction:

> Scientists seem more difficult to please than the golden-haired girl of fairy-tale fame. While Goldilocks troubled herself over the just-right porridge, chair, and bed, astronomers appear preoccupied with the size of the universe.
>
> In the days before telescopes, when an observer could count a few thousand stars in the night sky, many considered the universe too small and unimpressive to be the work of an almighty, all-knowing Creator. Only an infinite cosmos, they said, would befit an infinite deity. But then, others argued, an infinite cosmos might eliminate the need for a Creator.
>
> Thanks to the Hubble space telescope, scientists now see that the universe contains roughly 200 billion large- and medium-sized galaxies and about a hundred times as many dwarf galaxies. The stars in those galaxies add up to about fifty billion trillion, and they comprise a mere one percent of the mass of the observable universe.
>
> Because of the travel time of light, the universe humans can observe is really the universe of the past. What researchers know about the expansion and geometry of the universe informs us that the universe of today is at least several hundred times more enormous than the universe we can see. The universe is trillions of trillions of times larger and more spectacular than what the earliest astronomers presumed!
>
> And yet, this new knowledge of the vastness of the universe has led to new complaints. In his book, *God: The Failed Hypothesis,* Victor Stenger says, "If God created the universe as a special place for humanity, he seems to have wasted an awfully large amount of space." Stephen Hawking, in the best-selling science book of all time, *A Brief History of Time,* shares Stenger's view: "Our solar system certainly is a prerequisite for our existence. . . . But there does not seem to be any need for all these other galaxies." So now the universe is too big to befit the all-wise, all-powerful God of the Bible.

I like how he quotes an atheist physicist to get the challenge right. No sense in caricaturing the claim of your opponent.

I formalized Stenger's argument like this:

1. If all things in the universe are done the way that Victor Stenger likes them, then there is a God.
2. It is not the case that all things in the universe were done the way Victor Stenger likes them.
3. Therefore, there is no God.

I would deny premise 1, there, since there is no reason to believe that's it's true.

Anyway, let's see what Hugh Ross says:

> The hot big bang model (now firmly established by observations) tells us that at the moment of cosmic creation, the universe was infinitely or near-infinitely hot and compressed, and all the ordinary matter existed in the form of hydrogen. As the universe expanded, it cooled. The rate at which the universe expanded and cooled depended in large part on its mass—the greater the mass, the slower the expansion and cooling rate. The slower the expansion and cooling rate, the more time the universe would spend in the temperature range (13–150 million degrees Centigrade) at which nuclear fusion can occur.
>
> Because of its mass, the universe spent about twenty seconds in the nuclear fusion temperature range when it was between three and four minutes old. As a result, 24.77 percent of the universe's hydrogen (by mass) fused into helium. Thus, when stars began to form—about 380,000 years later—they started off composed of about 75 percent hydrogen, 25 percent helium, and trace amounts of deuterium, lithium, and beryllium.
>
> **In the nuclear furnaces of the stars themselves, more hydrogen fused into helium, and, in addition to the extra helium, all the rest of the elements that appear in the periodic table were synthesized (created). The capacity of stellar nuclear furnaces to produce an abundance of elements heavier than helium (all but two of the elements) depended critically on how much of the universe's initial hydrogen was fused into helium and heavier elements during the first several minutes after the cosmic creation event. How much fusion of the universe's primordial hydrogen actually occurred at this time depended, in turn, on the universe's mass or mass density.**
>
> **If the universe's mass (or cosmic mass density) had been even the slightest bit less than a hundred times the fifty billion trillion stars occupying the observable universe, nuclear fusion during the first several minutes of its existence would have proceeded less efficiently. Thus, the cosmos would have been forever incapable of generating elements heavier than helium—elements such as carbon, nitrogen, oxygen, phosphorus, sodium, and potassium—all of which are essential for any conceivable kind of physical life.**
>
> On the other hand, if the universe's mass had been even the slightest bit greater, nuclear fusion during the first several minutes after its beginning would have been too productive, and *all* the hydrogen in the universe eventually would have been fused (after just two generations of stars) into elements as heavy as iron or heavier. Again, all the most life-essential elements, including hydrogen itself, would have ceased to exist.

Basically, your body is made up of heavier elements, and if the universe was not as massive as it is (and as old as it is), then there would not be enough heavy elements to make you, or to make massive stars like our Sun which burn steady for long periods of time. We need the heavy elements and we need the steady source of heat. And while we are waiting on these heavy elements, the universe is expanding.

Dr. Ross has another reason why God would use vast space and long periods of time, and if you want to read that, you can click here. I think that it's important for us all to get used to the idea that we all need to understand science apologetics. God put these evidences into the universe for us to discover and use.

# Eight predictions for 2015

**Wintery Knight** · 2 January 2015 · Archived copy · Original

These are from The Federalist.

The list:

1. The oil stimulus
2. The EPA's war on energy
3. The Supreme Court gets another shot at ObamaCare
4. Republicans will have just enough power to fight over it
5. Will anyone challenge Hillary?
6. A police rebellion
7. Russia will be in trouble and will be trouble
8. Did anybody tell the enemy the war is over?

Here's the one I want to highlight, because it's the one that concerns me most, at least until we get a Republican President:

> 7) Russia will be in trouble and will be trouble.
>
> One of the most enjoyable consequences of the oil price collapse is seeing how it takes the wind out of the sails of a whole collection of evil regimes.

> Oil is the dictators' best friend. It is a steady source of revenue that can be maintained and controlled by the government, often with the help of foreign subcontractors, even when government controls, corruption, and cronyism have crushed the rest of the economy. So a collapse in the price of oil is a disaster for the bad guys.
>
> Nobody is getting hit worse than the regime in Venezuela, which is now on the verge of defaulting on its debt. Since Venezuela has been a big economic sponsor of the regime in Cuba, you can see how a Venezuelan collapse will affect Cuba—and may well be the reason the Castros are seeking a lifeline from President Obama.
>
> But the big geopolitical implications will come from the impact of the oil collapse on Russia. For years, the conventional wisdom has been that Europe is dependent on buying Russian oil and gas; now we're about to see to what extent Russia is dependent on selling its oil and gas to Europe.
>
> The downside is, as Megan McArdle puts it, "Russia's Problems Are Everyone's Problems." "[T]he world is about to experience a major financial crisis in a country that seems to deal with its internal troubles by slicing off bits of neighboring countries." Like its leader, Vladimir Putin, Russia is a country with a Napoleon complex: the smaller and weaker it gets, the more belligerent it becomes, as a form of overcompensation.
>
> But shirtless macho posturing only gets you so far when you don't have the cash to back it up. There is some speculation that a financial crisis could lead to defections in Russia's "near abroad," its ring of former Soviet republics and fellow kleptocracies. Then there's the fact that Putin's aggression has permanently alienated Ukraine, which is now taking steps toward joining NATO. Meanwhile, the Baltic states are increasing their defense budgets. One hopes that other European nations will follow, at a time when Russia is not in a position to match their spending.

> I think Russia is weak enough that Putin would slink away with his tail between his legs, if we had an

> American leader with the guts to call his bluff. But that's not going to happen, so in 2015, look for a volatile mix of greater belligerence and diminished capability.

When I hear about the collapse of the Russian currency, it makes me worry that we could a lot of scary scenarios as Putin tries to hold his state together.

# With government subsidies, Planned Parenthood did 327,653 abortions in 2013

**Wintery Knight** · 3 January 2015 · Archived copy · Original

This is from Life News.

Excerpt:

> The abortion giant Planned Parenthood has released its 2013 annual report and the new numbers indicate it did more abortions than the year before — killing 327,653 babies in abortions while taking in millions in taxpayer funds.
>
> Planned Parenthood Federation of America has released its 2013-2014 Annual Report and Jim Sedlak, vice president of American Life League, broke down the numbers.The report indicates Planned Parenthood did 327,653 abortions in 2013, an increase over the 327,166 abortions it did in 2012.
>
> While it remains America's biggest abortion corporation, the "nonprofit" continued to make money — bringing in $305.4 million last year and $305.3 million this year. Planned Parenthood continued to receive over a half-billion dollars in taxpayer money, as it took in $540 million in 2012 and $528 million in 2013.
>
> "Despite this lack of increase in its primary business, Planned Parenthood continued to receive over a half-billion dollars in taxpayer money," Sedlak said. "It has such a tremendous publicity machine that it convinced corporate and private donors to increase donations by more than $75 million (from $315.4 million to $391.8 million)."
>
> "The increased donations, plus an increase of $28 million in "other operating revenue" and the reduction in costs from closing clinics, led to a near-record $127.1 million in profits for the largest abortion chain in the nation. This was the second highest reported annual profit in Planned Parenthood's history," he explained to LifeNews.
>
> […]After reviewing the report, SBA List President Marjorie Dannenfelser told LifeNews:
>
> "The abortion rate may be declining across America, but not in Planned Parenthood clinics. Their latest annual report is fresh evidence that Planned Parenthood remains an abortion-centered, profit-driven business. In 2013, Planned Parenthood upped the number of abortions they performed to 327,653. Meanwhile, their already limited cancer screenings, prenatal services, adoption referrals – and even contraception services – continue to drop. Planned Parenthood claims to be an altruistic health care provider for women and girls but their bottom line is all about abortion."

Republicans have attempted to cut off some funding for Planned Parenthood in red states, but as long as we have a Democrat President, the federal subsidies will remain in place. Something to think about in 2016.

# Obama administration to push for more government control in 2015

**Wintery Knight** · 3 January 2015 · Archived copy · Original

Here's a rundown on some of the planned regulations, courtesy of Fox News. (H/T Dad)

Excerpt:

> The Obama administration is trying to get fossil-fuel fired power plants to reduce carbon dioxide emissions by 30 percent from 2005 levels by 2030.
>
> The EPA proposed the rules last year and is set to finalize them by summer 2015.
>
> […]Among them is a controversial EPA proposal to expand regulatory power over streams and wetlands. The agency, set to finalize the rule in April, estimates it could impose costs of between $162 million to $278 million per year…
>
> […][D]etractors claim it is an opening for the EPA to claim authority over countless waterways, including streams that only show up during heavy rainfall. Critics warn this could create more red tape for property owners and businesses if they happen to have even small streams on their land.
>
> Rep. Lamar Smith, R-Texas, chairman of the House Science, Space, and Technology Committee, has called it an effort to "control a huge amount of private property across the country."
>
> In another EPA initiative, the agency is looking to October to finalize sweeping ozone regulations.
>
> In proposing the limits on smog-forming pollution linked to asthma and respiratory illness in November, EPA Administrator Gina McCarthy argued that the public health benefits far outweigh the costs and that most of the U.S. can meet the tougher standards without doing anything new.
>
> "We need to be smart — as we always have — in trying to find the best benefits in a way that will continue to grow the economy," McCarthy said. Of reducing ozone, she added: "We've done it before, and we're on track to do it again."
>
> But business groups panned the proposal as unnecessary and the costliest in history, warning it could jeopardize a resurgence in American manufacturing.
>
> […]The rules are estimated to cost industry anywhere between $3.9 billion and $15 billion by 2025. That price tag would exceed that of any previous environmental regulation in the U.S. Environmental groups are pushing for stricter limits still.
>
> On other fronts, the Federal Communications Commission could move in a matter of months to propose new "net neutrality" rules. Obama weighed in on that debate late last year, urging the FCC to regulate the Internet like other utilities.
>
> The White House is calling for an "explicit ban" on deals between broadband Internet providers and online services like Netflix, Amazon or YouTube to move their content faster, a potential new source of revenue for cable companies.
>
> […]Meanwhile, the National Labor Relations Board has issued new rules for so-called "ambush" union elections — speeding up elections and requiring employers to give unions contact information for workers. The rules take effect in April.

These regulations will have nasty effects on job-creating companies and that will work its way down to consumers, who will have to eat the costs. But at least the social engineers will feel really good about themselves, and without having to do the hard work of creating products and services that people will actually pay their own money for of their own free choice.

The very funny thing about this is how unionized blue-collar Democrats complain that they cannot compete with

countries abroad, then vote in the very people that make them uncompetitive. You can bet that leaders in other low-cost countries do not pass laws to make them less competitive. And that's why everything is manufactured abroad. Democrat voters bring these problems on themselves by electing socialists who hamstring American industry.

# Washington D.C. city council repeals protections for religious schools

**Wintery Knight** · 4 January 2015 · Archived copy · Original

From the Washington Times.

Excerpt:

> The D.C. Council has stripped religious schools of legal protection against certain discrimination lawsuits, voting unanimously to repeal an exemption that had been in place for decades.
>
> Under city rules, it is an “unlawful discriminatory practice” for a school to limit any use of facilities, services, or programs to someone based on “sexual orientation, gender identity or expression.”
>
> However, an amendment inserted by Congress in a federal appropriations bill 25 years ago offered an exemption for religiously affiliated schools or schools “closely associated with the tenets of a religious organization,” allowing them to restrict funds, facilities and endorsements based on their religious convictions regarding homosexuality.
>
> This provision, dubbed the “Armstrong Amendment,” came after Georgetown University refused to recognize a pro-gay student group, explained Michael Scott of the D.C. Catholic Conference.
>
> Sen. William Armstrong authored the exemption, called the Nation’s Capital Religious Liberty and Academic Freedom Act, which allowed religiously affiliated schools in D.C. to withhold funds, facilities and approval from people and groups “that are organized for, or engaged in, promoting, encouraging, or condoning any homosexual act, lifestyle, orientation, or belief.”
>
> But that exemption is now gone, thanks to a Dec. 2 vote by the council to overturn that provision. The council voted “unanimously without comment or changes” to pass the Human Rights Amendment of 2014, which included the repeal of the code, Mr. Scott explained.

Washington, D.C. is one of the most Democrat-dominated cities in the United States. So if you are wondering who pushes through an anti-Christian agenda like this one, it’s no mystery.

# Indiana legislators working on mandatory civics exam for high schoolers

**Wintery Knight** · 4 January 2015 · Archived copy · Original

Indiana is one of my favorite states, and here is some great news about Indiana.

Excerpt:

> Hoosier lawmakers have joined a growing number of states that want your kid to take another exam. To graduate high school, students would have to pass an exam similar to the naturalization test required for immigrants to become U.S. citizens.
>
> Still a work in progress, the bill will come up for debate during the upcoming legislative session and is being championed by Indiana Senate Education Chairman Dennis Kruse, a Republican of Auburn.
>
> Kruse told The Daily Signal that he's eager to see Indiana students rise to the same standard as individuals applying for American citizenship.
>
> "I don't know why our own young people—who are born citizens here, who go through our regular school system—shouldn't know the same information," Kruse said.

This is interesting:

> The naturalization exam administered by U.S. Citizenship and Immigration Services requires a candidate to verbally answer 6 of 10 questions concerning American history and government. On average, 91 percent of candidates passon their first try.
>
> The test requires citizenship candidates to answer basic questions like "What is the supreme law of the land?" and "What is the name of the president of the United States now?"
>
> Hoosier high-school students would take a similar exam but with a few important differences. Required to answer 60 percent correctly, students would take a written, multiple choice, 100-question test.

So many people are focused on elections that they don't know how to do anything about the culture. Well, I think this policy is going to have a good effect on the culture. If people can understand more about why the United States is organized the way it is, then maybe they will not be in such a hurry to undo it so we can be more like France (or even Greece, judging from the debt). Even making a requirement to teach basic economics and business administration would be good insulation for children against the fact-free, math-free world of leftism.

By the way, according to a report (PDF) by the Center for Education Reform web site, Indiana is number one for school choice in the USA:

> The Hoosier State leads the country, with a universal voucher program open to all students across the state and no limit on the number of vouchers that can be awarded. The state has taken a varied approach to income-eligibility requirements, with the lowest-in-the-nation threshold for typical students, only increasing that threshold for special needs and failing-school students. The state is the second-worst in the country on infringing on private school autonomy, mandating such things as course content and insisting on allowing government observation of classes. With just a bit of reform in these two areas, Indiana would come close to reaching the maximum score possible.

Ohio and Wisconsin are right behind Indiana. Three of my favorite states.

# Conservative Louie Gohmert to challenge moderate John Boehner for House Speaker

**Wintery Knight** · 5 January 2015 · Archived copy · Original

The Daily Signal reports:

> In announcing his bid today for speaker of the House of Representative, Rep. Louie Gohmert promised to be the engine of change that conservatives have been calling for in their rebellion against the establishment wing of the Republican Party.
>
> "It is time for a change; it really is time for a change," Gohmert said on "Fox & Friends" while announcing his campaign to unseat incumbent Speaker John Boehner.
>
> Gohmert, R-Texas, criticized Boehner, R-Ohio, for a "number of years of broken promises," and specifically challenged the speaker's decision to pass the "CRomnibus" spending bill in December without blocking President Obama's executive actions on immigration.
>
> If elected speaker, Gohmert said he will "fight amnesty tooth and nail."
>
> He said his agenda would also include defunding Obamacare and having "positive solutions that will return power back to the people."
>
> House members are set to vote for their next speaker on Tuesday.

Gohmert is *definitely* one of the conservative members of the House of Representatives. I hear him all the time on the Family Research Council podcasts. He is not just a fiscal conservative, he is a social conservative, as well. I would take him as Speaker over Boehner in a heartbeat. Let's hope and pray that Gohmert is the new Speaker.

# Christian pastor who experiences same-sex attraction marries a woman

**Wintery Knight** · 5 January 2015 · Archived copy · Original

Clay Jones tweeted this story from the ultra-leftist National Public Radio, of all places.

Excerpt:

> Allan Edwards is the pastor of Kiski Valley Presbyterian Church in western Pennsylvania, a congregation of the Presbyterian Church in America. He's attracted to men, but considers acting on that attraction a sin. Accordingly, Edwards has chosen not to act on it.
>
> "I think we all have part of our desires that we choose not to act on, right?" he says. "So for me, it's not just that the religion was important to me, but communion with a God who loves me, who accepts me right where I am."
>
> Where he is now is married. He and his wife, Leanne Edwards, are joyfully expecting a baby in July.

This was the part I thought was interesting:

> Allan first met Leeanne when they both worked as teenagers at a Christian summer camp. "I always joke with her that she was one of the cool kids and I was a raging fundamentalist nerd," he says.
>
> They didn't click at the time, but in 2006 they both applied for the camp director job, and Leeanne got it. When she was ready to leave the position, he took her to lunch to scope out the job.
>
> "We got off talking about the job and started talking about our experience of the last couple years," Allan recalls. "I don't want to be gushy or romantic, but I just melted inside, and thought, this is someone who understands graciousness. This is someone who understands acceptance, and this is someone I want to spend as much time with as possible."
>
> He was drawn to her heart and soul, he explains. "Out of that was birthed our intimate relationship."
>
> Leeanne says she knew Allan struggled against a sexual attraction to men. "I wondered if he was going to be able to put something like that behind him, or if it was going to be something that would affect our relationship," she says.
>
> But they way they see it, people in any marriage must work to resist attractions from outside the relationship, whether from the same or the opposite gender.
>
> "There's always going to be situations where a partner is sexually attracted to someone else and isn't necessarily dealing with sexual attraction with their partner," Leeanne says.

There are a couple of things that I wish I could change about me. I would like to be more involved in my church, I'd like to have a daily quiet time, I'd like to do Bible study more. But usually these things get short shrift because I am so busy trying to earn and save money and have an apologetics ministry. It's nice, though, when a woman responds to a "fixer-upper" man with acceptance and understanding.

The things I want to work on don't seem to have stopped me from making an impact as a Christian. I never had a "falling away" period where I went wild in college, got drunk and cohabitated with atheists. Whatever I've been doing for the 25 years I've been a Christian was obviously enough to keep my faith intact, be a good steward of my resources, and make a difference by mentoring others and blogging. In today's culture, it's probably better to be more practical, and focus less on things that are devotional, like A. W. Tozer and praise hymns.

Another thing occurred to me while I was reading this story. I thought – what good evangelists they will make,

because they both have this ability to look past imperfections and listen to people and then work with them. If you really want to change a person and grow them, then you can't just stand back and draw a line in the sand and explain why you get to be lazy and not do something with them that will work to grow them. All the people I have ever mentored had something about them that I didn't think was perfect – but I didn't take it as an excuse to not engage with them, and to do whatever would work to give them a shove in the right direction. And the results speak for themselves! Sometimes Christians who grow up thinking that "the Bible says you have to do it" is enough get lazy though, when confronted with *real people who are not perfect.* And they will say anything to avoid having to do work that helps others grow. They just want to make the judgment and be done with the person. Thank goodness the pastor in this story had friends who didn't dismiss him out of hand because he was not perfect.

# How to prepare your kids for the pressure to be “cool”

**Wintery Knight** · 5 January 2015 · Archived copy · Original

This is a post from Pastor Matt Rawlings’ blog.

Excerpt:

> […]When any eighteen year old walks on to a secular university (or even many so-called “Christian” ones) they immediately feel pressure. When a “cool professor” emerges trashing everything the eighteen year old has been taught by his or her parents to hold dear, the pressure intensifies. If the eighteen year old dares to speak up, the professor will often ridicule the poor kid like a seasoned stand-up comic dealing with a heckler. The other eighteen year old kids raised in Christian homes will see (or hear about it) and will feel even more pressure to conform.

Here is his recommendation:

> We need to continue to train our kids in apologetics but we also need to prepare them spiritually for the battle they will face on college campuses. They need to know how to engage the spiritual disciplines of prayer, fasting, etc. They also need to be connected with a community that will have their back. I would not advise anyone to attend a secular university without making sure there is a strong Christian campus presence. For example, I live in the Buckeye state and many of the young people I know want to attend Ohio State University (excuse me, The Ohio State University). I always remind them to check out strong nearby churches like Xenos and groups like Ratio Christi led by the fearless Eric Chabot.
>
> Everybody wants to be liked and everyone has a desire to fit in. The pressure to be accepted is even stronger when a person is younger. We need to train our young people to be apologists but we also need to recognize basic human nature including our ability to justify our behavior such as ignoring their training in order to sit at the cool kids’ table. We need to train and prayerfully prepare. Let’s get to work.

Pastor Matt had a quote from an article by Paul Vitz in his post, and I found the article. It’s on Leadership University, which is the web site that got me through college with my faith intact.

Here’s a bit of it:

> I am not going into this to bore you with parts of my life story, but to note that through reflection on my own experience it is now clear to me that my reasons for becoming and for remaining an atheist-skeptic from about age 18 to 38 were superficial, irrational, and largely without intellectual or moral integrity. Furthermore, I am convinced that my motives were, and still are, commonplace today among intellectuals, especially social scientists.
>
> […]An important influence on me in my youth was a significant social unease. I was somewhat embarrassed to be from the Midwest, for it seemed terribly dull, narrow, and provincial. There was certainly nothing romantic or impressive about being from Cincinnati, Ohio and from a vague mixed German-English-Swiss background. Terribly middle class. Further, besides escape from a dull, and according to me unworthy, socially embarrassing past, I wanted to take part in, in fact to be comfortable in, the new, exciting, even glamorous, secular world into which I was moving. I am sure that similar motives have strongly influenced the lives of countless upwardly mobile young people in the last two centuries. Consider Voltaire, who moved into the glittery, aristocratic, sophisticated world of Paris, and who always felt embarrassed about his provincial and nonaristocratic origin; or the Jewish ghettos that so many assimilating Jews have fled, or the latest young arrival in New York, embarrassed about his fundamentalist parents. This kind of socialization pressure has pushed many away from belief in God and all that this belief is associated with for them.

> I remember a small seminar in graduate school where almost every member there at some time expressed this kind of embarrassment and response to the pressures of socialization into "modern life." One student was trying to escape his Southern Baptist background, another a small town Mormon environment, a third was trying to get out of a very Jewish Brooklyn ghetto, and the fourth was me.
>
> […]Another major reason for my wanting to become an atheist was that I desired to be accepted by the powerful and influential scientists in the field of psychology. In particular, I wanted to be accepted by my professors in graduate school. As a graduate student I was thoroughly socialized by the specific "culture" of academic research psychology. My professors at Stanford, however much they might disagree on psychological theory, were, as far as I could tell, united in only two things-their intense personal career ambition and their rejection of religion. As the psalmist says, ". . . The man greedy for gain curses and renounces the Lord. In the pride of his countenance the wicked does not seek him; all his thoughts are, 'There is no God'" (Psalm 10:3-4).
>
> In this environment, just as I had learned how to dress like a college student by putting on the right clothes, I also learned to "think" like a proper psychologist by putting on the right-that is, atheistic-ideas and attitudes.

I blogged about Paul Vitz before. If you have not seen his lecture on the Psychology of Atheism, you really should watch it.

Natasha Crain at Christian Mom Thoughts had some practical advice for dealing with this, and in a minute I'll give you my advice, because this peer-pressure thing was *never* a problem for me.

Excerpt:

> […]I do believe there are things we can do to help *lessen our kids' concern* about coolness:
>
> - **Make sure they have Christian friends.** No, not just the kids they interact with each Sunday at church. Please don't assume your kids' "church friends" are a primary influence just because they rub elbows each week (and don't assume that church friends are truly *Christian* friends). Look at who they spend time with on their own. Meaningful peer relationships with other believers make a big difference.
> - **Give them perspective.** By and large, the most well-grounded Christian kids I've encountered have been heavily involved in service. When kids have built houses in Mexico, served their local homeless, or come to the aid of disaster victims, they are more likely to have a level-headed perspective on why the perceived "coolness" of their beliefs doesn't matter. Faith becomes a living, breathing part of their identity.
> - **Be a family that is comfortable living counter-culturally.** In the book *Revolutionary Parenting*, George Barna analyzed years of research data to determine what common factors exist in the child-rearing efforts of parents whose children remained strong in their faith into their adult years (he calls these kids "spiritual champions"). One major finding was this: *"Parents are more likely to raise spiritual champions if they accept the fact that from day one their parenting efforts will stray from the norm and will put them at odds with parents who are pursuing a more conventional approach."* When kids are raised in a home where they become comfortable living differently than the world around them, they are prepared to carry that confidence into adulthood.
> - **Give them Christian heros and role models.** Our kids need to know that the world is filled with amazing people who love the Lord: athletes, scientists, missionaries, actors, writers, government leaders, business owners…the list goes on. Wherever your child's interests lie, introduce them to Christian role models in that area and the stories of how they're making a difference for God's kingdom.

Now my turn. Peer-pressure wasn't a problem for me growing up. We were poor, so we had much more immediate problems! But I had an answer to the problem of being different from the other kids – I was going to grow up faster than they did and be more mature by *out-earning* them. I always tried to be working at least one job, and I worked

summers too – kept it up through high school and my undergraduate degree. That was my plan. So that's my recommendation to young people. Get yourself the best job you can get as young as you can. Never let a summer go by when you are not working to earn money.

I also recommend listening to this Veritas Forum lecture called "Giants in the Land", by the famous professor of mechanical engineering, Dr. Walter Bradley. My favorite lecture of all time. When you are young and it occurs to you that you are not like other people, it's a wonderful thing to have the words of Dr. Bradley in your mind. Here is my favorite part- he says: "Sometimes we protect our reputation too hard. And what we really need is to get our reputation absolutely destroyed so we don't worry about it any more… On the other side of a very ruined reputation is real freedom… to do what God wants you to do… It's the ripping the reputation off that's a little hard, right? But once it's gone, it's gone.  And then you have real freedom."

I value my freedom and I know that caring what people think of me takes my freedom away! I really recommend that young people read or watch the French "Cyrano de Bergerac" (1990) (or the older black-and-white version) to learn the value of being who you are. If you are being good, you don't have to care what people think of you – although you may need an alias now, since people on the secular left have gotten so intolerant. You can be yourself and be a hero. And that's something. That's a lot!

# As Christianity declines in Europe, churches are put up for sale

**Wintery Knight** · 6 January 2015 · Archived copy · Original

This sad story is from the Wall Street Journal.

Excerpt:

> Two dozen scruffy skateboarders launched perilous jumps in a soaring old church building here on a recent night, watched over by a mosaic likeness of Jesus and a solemn array of stone saints.
>
> This is the Arnhem Skate Hall, an uneasy reincarnation of the Church of St. Joseph, which once rang with the prayers of nearly 1,000 worshipers.
>
> It is one of hundreds of churches, closed or threatened by plunging membership, that pose a question for communities, and even governments, across Western Europe: What to do with once-holy, now-empty buildings that increasingly mark the countryside from Britain to Denmark?
>
> […]The closing of Europe's churches reflects the rapid weakening of the faith in Europe, a phenomenon that is painful to both worshipers and others who see religion as a unifying factor in a disparate society.
>
> […]The Church of England closes about 20 churches a year. Roughly 200 Danish churches have been deemed nonviable or underused. The Roman Catholic Church in Germany has shut about 515 churches in the past decade.
>
> But it is in the Netherlands where the trend appears to be most advanced. The country's Roman Catholic leaders estimate that two-thirds of their 1,600 churches will be out of commission in a decade, and 700 of Holland's Protestant churches are expected to close within four years.
>
> […]As communities struggle to reinvent their old churches, some solutions are less dignified than others. In Holland, one ex-church has become a supermarket, another is a florist, a third is a bookstore and a fourth is a gym. In Arnhem, a fashionable store called Humanoid occupies a church building dating to 1889, with racks of stylish women's clothing arrayed under stained-glass windows.
>
> In Bristol, England, the former St. Paul's church has become the Circomedia circus training school. Operators say the high ceilings are perfect for aerial equipment like trapezes.
>
> In Edinburgh, Scotland, a Lutheran church has become a Frankenstein-themed bar, featuring bubbling test tubes, lasers and a life-size Frankenstein's monster descending from the ceiling at midnight.
>
> Jason MacDonald, a supervisor at the pub, says he has never heard complaints about the reuse. "It's for one simple reason: There are hundreds and hundreds of old churches and no one to go to them," Mr. MacDonald said. "If they weren't repurposed, they would just lie empty."
>
> Many churches, especially smaller ones, are becoming homes, and that has spawned an entire industry to connect would-be buyers with old churches.
>
> The churches of England and Scotland list available properties online, with descriptions worthy of a realty firm. St. John's church in Bacup, England, for example, is said to feature "a lofty nave as well as basement rooms with stone-vaulted ceilings," and can be had for about $160,000.

There are many reasons why Christianity has declined in Europe, but surely the widespread embrace of left-wing economic policies – even by evangelical Christians – is one of the largest.

Here's a fairly recent paper (PDF) that explains it:

> What accounts for cross-national variation in religiosity as measured by church attendance and non-religious rates? Examining answers from both secularization theory and the religious economy perspective, we assert

> that cross-national variation in religious participation is a function of government welfare spending and provide a theory that links macro-sociological outcomes with individual rationality. Churches historically have provided social welfare. As governments gradually assume many of these welfare functions, individuals with elastic preferences for spiritual goods will reduce their level of participation since the desired welfare goods can be obtained from secular sources. Cross-national data on welfare spending and religious participation show a strong negative relationship between these two variables after controlling for other aspects of modernization.

I have many friends in the UK who classify themselves as evangelical Christians. They almost all embrace moderate to leftist economics, and they complain to me about why the church is in decline, why there is no interest in apologetics, why they can't find Christian girlfriends, why they can't get speaking engagements. The answer is, of course, that by majoring only in theology and apologetics, they have crafted the rope that their secular allies in government are using to hang them. Leftism is embraced by European Christians in part because they don't want to be like those dastardly Americans with their free enterprise system and their rule of law and their private property and their law-abiding gun ownership.

It just goes to show you why Christianity suffers when we focus on piety at the expense of practicality. Too much A. W. Tozer, not enough F.A. Hayek. I doubt my well-meaning UK Christian friends – who are *so proud* of their laughable NHS health care – even know who F.A. Hayek is. To think that Lady Thatcher ones brandished "The Constitution of Liberty" by F.A. Hayek and declared "this is what we believe!". But ordinary UK Christians do not believe what she believes, and now they must reap what they sowed with their knee-jerk rejection of the free enterprise system. Ignorance of economics killed Christianity in Europe, and pious, risk-averse Christians were willing participants in the murder.

# New study: children who grow up with single parents more likely to see domestic violence

**Wintery Knight** · 6 January 2015 · Archived copy · Original

Domestic violence least likely in married homes
This is from Family Studies. (H/T Brad Wilcox)

Excerpt:

> In the 2011-2012 National Survey of Children's Health, conducted by the U.S. National Center for Health Statistics, parents of 95,677 children aged 17 and under were asked whether their child had ever seen or heard "any parents, guardians, or any other adults in the home slap, hit, kick, punch, or beat each other up." Among children living with both married biological parents, the rate of exposure to family violence was relatively low: for every 1,000 children in intact families, 19 had witnessed one or more violent struggles between parents or other household members. By comparison, among children living with a divorced or separated mother, the rate of witnessing domestic violence was seven times higher: 144 children per 1,000 had had one or more such experiences. (See Figure 1.) **These comparisons are adjusted for differences across groups in the age, sex, and race/ethnicity of the child, family income and poverty status, and the parent's education level.**
>
> One might suppose that women who had never married would be less likely to get into violent arguments with the fathers of their children than separated or divorced mothers. Yet the rate of witnessing domestic violence among children living with never-married mothers was also elevated. It was 116 per 1,000, six times higher than the rate for children in intact families. (Some of these fights involved subsequent partners or boyfriends of the mother, rather than the father of the child.) Even children living with both biological parents who were cohabiting—rather than married—had more than double the risk of domestic violence exposure as those with married birth parents: 45 out of 1,000 of these children had witnessed family fights that became physical. Note also that a child's family structure was a better predictor of witnessing family violence than was her parents' education, family income, poverty status, or race.
>
> Experiencing family violence is stressful for children, undercuts their respect and admiration for parents who engage in abusive behavior, and is associated with increased rates of emotional and behavioral problems at home and in school. For example, among children of never-married mothers who had witnessed family violence, 58 percent had conduct or academic problems at school requiring parental contact. The rate of school behavior problems for those who had not been exposed to family fights was significantly lower, though still fairly high (36 percent). Likewise, among children of divorced or separated mothers, nearly half of those exposed to family violence—48 percent—had had conduct or academic problems at school. Even among the

> small number of children in intact families who had witnessed family violence, just over half—51 percent—presented problems at school. This was twice the rate of school problems among students from intact families who had not witnessed domestic violence. (See Figure 2.) **These figures are also adjusted for differences across groups in age, sex, and race/ethnicity of children, family income and poverty, and parent education levels.** Children experiencing domestic violence were also more likely to have repeated a grade in school and to have received psychological counseling for emotional or behavioral problems. This was true in intact as well as disrupted families.

A good book to read on this topic is Theodore Dalrymple's "Life at the Bottom", which offered this memorable anecdote about about how and why women choose men who abuse them.

Introduction:

> The disastrous pattern of human relationships that exists in the underclass is also becoming common higher up the social scale. With increasing frequency I am consulted by nurses, who for the most part come from and were themselves traditionally members of (at least after Florence Nightingale) the respectable lower middle class, who have illegitimate children by men who first abuse and then abandon them. This abuse and later abandonment is usually all too predictable from the man's previous history and character; but the nurses who have been treated in this way say they refrained from making a judgment about him because it is wrong to make judgments. But if they do not make a judgment about the man with whom they are going to live and by whom they are going to have a child, about what are they ever going to make a judgment?
>
> "It just didn't work out," they say, the "it" in question being the relationship that they conceive of having an existence independent of the two people who form it, and that exerts an influence on their on their lives rather like an astral projection. Life is fate.

Chapter one:

> All the more surprising is it to me, therefore, that the nurses perceive things differently. They do not see a man's violence in his face, his gestures, his deportment, and his bodily adornments, even though they have the same experience of the patients as I. They hear the same stories, they see the same signs, but they do not make the same judgments. What's more, they seem never to learn; for experience—like chance, in the famous dictum of Louis Pasteur—favors only the mind prepared. And when I guess at a glance that a man is an inveterate wife beater (I use the term "wife" loosely), they are appalled at the harshness of my judgment, even when it proves right once more.
>
> This is not a matter of merely theoretical interest to the nurses, for many of them in their private lives have themselves been the compliant victims of violent men. For example, the lover of one of the senior nurses, an attractive and lively young woman, recently held her at gunpoint and threatened her with death, after having repeatedly blacked her eye during the previous months. I met him once when he came looking for her in the hospital: he was just the kind of ferocious young egotist to whom I would give a wide berth in the broadest daylight.
>
> Why are the nurses so reluctant to come to the most inescapable of conclusions? Their training tells them, quite rightly, that it is their duty to care for everyone without regard for personal merit or deserts; but for them, there is no difference between suspending judgment for certain restricted purposes and making no judgment at all in any circumstances whatsoever. It is as if they were more afraid of passing an adverse verdict on someone than of getting a punch in the face—a likely enough consequence, incidentally, of their failure of discernment. Since it is scarcely possible to recognize a wife beater *without* inwardly condemning him, it is safer not to recognize him as one in the first place.
>
> This failure of recognition is almost universal among my violently abused women patients, but its function for

> them is somewhat different from what it is for the nurses. The nurses need to retain a certain positive regard for their patients in order to do their job. But for the abused women, the failure to perceive in advance the violence of their chosen men serves to absolve them of all responsibility for whatever happens thereafter, allowing them to think of themselves as victims alone rather than the victims and accomplices they are. Moreover, it licenses them to obey their impulses and whims, allowing them to suppose that sexual attractiveness is the measure of all things and that prudence in the selection of a male companion is neither possible nor desirable.
>
> Often, their imprudence would be laughable, were it not tragic: many times in my ward I've watched liaisons form between an abused female patient and an abusing male patient within half an hour of their striking up an acquaintance. By now, I can often predict the formation of such a liaison—and predict that it will as certainly end in violence as that the sun will rise tomorrow.
>
> At first, of course, my female patients deny that the violence of their men was foreseeable. But when I ask them whether they think I would have recognized it in advance, the great majority—nine out of ten—reply, yes, of course. And when asked *how* they think I would have done so, they enumerate precisely the factors that would have led me to that conclusion. So their blindness is willful.

The blindness is wilful, because the emotions cannot be corrected by evidence. And everything in the culture affirms women in this craziness, even after they fail over and over again with men – cohabitating with the bad ones for years, and then turning away from the good ones. They *freely* choose the wrong men, and *freely* pass by the good ones. And almost no one tells them that it's *entirely their fault*. Everyone just tells them "follow your heart". This emotional craziness causes harm to innocent children, and it needs to stop. We have to stop the man-blaming and hold women accountable for making decisions with their emotions and then expecting craziness to "work out".

You can read the Dalrymple book online for free in this post.

# Are libertarians right to say that lifting sanctions on evil regimes leads to liberalizing reforms?

**Wintery Knight** · 6 January 2015 · Archived copy · Original

Has liberalizing relations with China caused their government to introduce pro-liberty reforms? Libertarians like Rand Paul who cheered Obama's appeasement of Cuba think that it has, but what are the facts?

This is a news article from the ultra-leftist UK Guardian.

Excerpt:

> China's drift towards a new authoritarianism under the unsmiling leadership of Xi Jinping has found new expression in a series of alarming year's-end moves to curb personal freedoms and free speech. The country's implacable president and Communist party chief is forcefully driving China towards economic and geopolitical superpower status. But the social cost is mounting steadily.
>
> With the ruthless crackdown on dissent in Hong Kong still fresh in the memory, Xi's latest anti-democratic coup came in the form of expanded action to block Gmail, Google's email service, presumably because it gave users a degree of autonomy that Xi and his unelected party cadres find threatening. China already regularly blocks foreign websites such as Facebook and YouTube. Google pulled most of its business out of China in 2011 after a row over censorship.
>
> Aspects of Xi's policy of "autocracy with Chinese characteristics" are familiar to the country's academic community, which is under renewed pressure to toe the party line. Instructions issued by the president after a higher education conference on Monday included the demand that universities do more to promote Marxist doctrine and Communist party ideological guidance, the Xinhua news agency reported.
>
> "Enhancing [party] leadership and party-building in the higher learning institutions is a fundamental guarantee for running socialist universities with Chinese features well," Xi was quoted as saying.
>
> Political indoctrination is already a routine feature of university life for Chinese students, while their teachers are subject to monitoring to ensure political correctness. In an echo of the Stalinist era in the Soviet Union, this year reporters from state-controlled media were ordered to attend university lectures and detect and denounce teachers whose ideas might be considered "scornful of China" or pro-western.

Christians are hit especially hard:

> China's estimated 60-70 million Christians have not escaped persecution during the Christmas period, according to reports from Beijing suggesting their plight has worsened under the new leadership. Members of Shouwang, a Beijing Christian group, told Agence France-Presse that several pastors had been under house arrest since they tried to arrange Easter services in a public square in 2011.
>
> Most Chinese Christians shun state-run churches and worship in "house churches" beyond government control. But official tolerance of such independent activity is waning, judging by a crackdown on 400 churches in eastern Zhejiang province, some of which were reportedly demolished.
>
> Offering an insight into paranoid party thinking, an official recently told Beijing worshippers to "resolutely resist the use of Christianity by foreigners to infiltrate China". Crosses have been torn down at many churches and at a nursing home. The authorities have made an issue out of Christmas lights, which are increasingly popular in Chinese cities, saying they may pose a safety hazard.

The ultra-leftist New York Times had more to say. (H/T Dennis Prager)

Excerpt:

> They pounce on bloggers who dare mock their beloved Chairman Mao. They scour the nation's classrooms and newspapers for strains of Western-inspired liberal heresies. And they have taken down professors, journalists and others deemed disloyal to Communist Party orthodoxy.
>
> China's Maoist ideologues are resurgent after languishing in the political desert, buoyed by President Xi Jinping's traditionalist tilt and emboldened by internal party decrees that have declared open season on Chinese academics, artists and party cadres seen as insufficiently red.
>
> Ideological vigilantes have played a pivotal role in the downfall of Wang Congsheng, a law professor in Beijing who was detained and then suspended from teaching after posting online criticisms of the party. Another target was Wang Yaofeng, a newspaper columnist who voiced support for the recent pro-democracy protests in Hong Kong and then found himself without a job.
>
> "Since Xi came to power, the pressure and control over freethinkers has become really tight," said Qiao Mu, a Beijing journalism professor who was demoted this fall, in part for publicly espousing multiparty elections and free speech. "More and more of my friends and colleagues are experiencing fear and harassment."
>
> Two years into a sweeping offensive against dissent, Mr. Xi has been intensifying his focus on perceived ideological opponents, sending ripples through universities, publishing houses and the news media and emboldening hard-liners who have hailed him as a worthy successor to Mao Zedong.
>
> […]Mr. Xi's recent orders and the accompanying surge of pressure on political foes further dispelled initial suspicions that his ideological hardening was a feint to establish his credibility with traditionalists as he settled into power. Instead, his continuing campaign against Western-inspired ideas has emboldened traditional party leftists.

This is why libertarians like Rand Paul can never be the Republican candidate for President. Foreign policy is one of the main responsibilities of the President. When it comes to choosing our leaders, we have to choose someone who sees what has and has not worked in the past. Trade is not a solution to reining in strong anti-Western nations, something else (maybe like Reagan in the Cold War?) is needed to deal with evil regimes. We made a mistake throwing Cuba a lifeline just as we had them on the ropes. We have to look at the world and ask what comes after stage one of foreign policy decisions – for all parties. The trouble with libertarians is that they don't apply the economic way of thinking to foreign policy.

# On day one: House Republicans introduce bill to ban abortions after 20 weeks

**Wintery Knight** · 7 January 2015 · Archived copy · Original

Life News has some great news for pro-lifers.

Excerpt:

> Pro-life members of Congress today introduced legislation in the House of Representatives that bans abortions from after 20-weeks of pregnancy up to the day of birth.
>
> With Republicans controlling both the House and Senate, there is a guarantee that the important pro-life legislation will finally receive a vote in both chambers of Congress. In 2013, the House approved the bill on a 228-196 vote with 6 Democrats voting for the bill and 6 Republicans voting against it. President Barack Obama has issued a veto threat against that bill and Senate Democrats refused to bring it up for a vote.
>
> Congressman Trent Franks of Arizona, along with Representative Marsha Blackburn of Tennessee, are the lead sponsors of the bill.
>
> In a statement, Franks told LifeNews: "More than 18,000 'very late term' abortions are performed every year on perfectly healthy unborn babies in America. These are innocent and defenseless children who can not only feel pain, but who can survive outside of the womb in most cases, and who are torturously killed without even basic anesthesia. Many of them cry and scream as they die, but because it is amniotic fluid going over their vocal cords instead of air, we don't hear them."
>
> "Late term Abortion in America has its defenders, but no true or principled defense. The Pain Capable Unborn Child Protection Act seeks to afford basic protection to mothers and their unborn babies entering the sixth month of gestation," he said. "Throughout America's history, the hearts of the American people have been moved with compassion when they discover a theretofore hidden class of victims, once they grasp both the humanity of the victims and the inhumanity of what is being done to them. America is on the cusp of another such realization."
>
> "**We have a moral obligation to end dangerous late-term abortions in order to protect women and these precious babies from criminals like Kermit Gosnell and others who prey on the most vulnerable in our society**," Blackburn said. "The United States is one of the few remaining countries in the world that allows abortion after 20 weeks. That is why today we renew our efforts to protect the lives of babies and their mothers with the introduction of the Pain-Capable Unborn Child Protection Act. Rep. Franks and I have been a good team moving this legislation through the House as we continue to lead the fight to ensure the unborn are provided the same protections that all human life deserves."
>
> […]A November 2014 poll from Quinnipiac found that 60 percent of Americans support legislation limiting abortions after 20 weeks, including 56 percent of Independents and 46 percent of Democrats.

The rest of the article is worth reading, because it summarizes the research showing that unborn children can feel pain much earlier than 20 weeks. The science is on the side of the pro-lifers here, but that's no great surprise.

Pretty much any Democrat in the House, Senate or White House is in favor of late-term abortions. Heck, Obama even voted several times for aborting *newborns* when he was a state senator in Illinois. Expect to see every Democrat in the House and Senate vote against this, and then Obama will veto it. But it will be nice for the American people to see where everyone stands on abortion. I have Democrat friends who think Obama is pro-life.

Why is this bill happening? Because there are lots more pro-life Republicans in the House and Senate.

Life News explains:

> The Congress that convenes in January will have at least 21 pro-life women, breaking a high of 18 following the 2010 elections.
>
> In 2010, there were no pro-life women in the Senate. In the next Congress, Iowa Senator-elect **Joni Ernst** will become the third pro-life woman to serve, joining Kelly Ayotte (R., N.H.) and Deb Fischer (R., Neb.).
>
> […]In the House, four women of diverse backgrounds will be joining the ranks:
>
> 1. **Elise Stefanik** (NY-21) becomes the youngest woman ever elected to Congress at age 30.
> 2. **Mia Love** (UT-04) becomes the first ever black Republican woman to serve in Congress.
> 3. **Barbara Comstock** (VA-10) won by an incredible 17 points in a swing district despite aggressive (and ineffective) attacks on her pro-life record.
> 4. **Mimi Walters** (CA-45) will provide an important pro-life female voice from California.
> 5. **Martha McSally**, the first woman fighter pilot ever to fly in combat, won her race in Arizona's second district

If you want to protect the unborn, you vote Republican.

# Is building the Keystone XL pipeline safe for the environment?

**Wintery Knight** · 7 January 2015 · Archived copy · Original

The Daily Signal reports that Obama intends to veto the Keystone XL pipeline.

Excerpt:

> The White House said today that President Obama would veto the Keystone XL pipeline bill, which is supported by more than 60 U.S. senators.
>
> "If this bill passes this Congress, the president wouldn't sign it," White House spokesman Josh Earnest said in a press conference.
>
> The project, which would transport more than 800,000 barrels of oil per day from Canada to the Gulf Coast, is the first order of business in the new 114th Congress.
>
> […]TransCanada's Keystone XL oil pipeline – proposed to run from Alberta, Canada, to the Gulf Coast of Texas — has been one of the biggest bones of contention between the Obama administration and lawmakers in both parties.
>
> The southern leg of the pipeline, spanning from Oklahoma to Texas, already has been completed. The U.S. government has yet to approve the northern leg, which would run from Alberta to Nebraska.
>
> Sixty-seven senate votes would be needed to overturn a veto by President Obama.

Daily Signal also posted 7 reasons why the Keystone XL pipeline should built.

Here are three of them: (links removed)

- **Safest mode of getting oil and gas to Americans.** Many in the United States live near a pipeline without even knowing about it. America has more than 500,000 miles of crude oil, petroleum and natural gas pipelines and another 2 million miles of natural gas distribution pipelines. When it comes to accidents, injuries or fatalities, pipelines are the safest mode of transporting oil and gas.
- **Environmentally safe.** It was Albert Einstein who said the definition of insanity was "doing the same thing over and over again and expecting different results." The State Department must be teetering on the edge of insanity, because after multiple environmental reviews concluding that Keystone XL poses minimal environmental risk to soil, wetlands, water resources, vegetation, fish, and wildlife, we're still without a pipeline.
- **Negligible climate impact**. In a speech last June, Obama said the climate effects of Keystone XL would have an impact on the administration's ultimate decision. These effects, however, would be minimal. The State Department's final environmental impact statement concludes that the Canadian oil is coming out of the ground whether Keystone XL is built or not, so the difference in greenhouse gas emissions is miniscule.

I think most people understand that the pipeline will create jobs and lower energy prices, but we are worried about the environmental impact. We shouldn't be worried, the tests have been down and it's a green-light. The only reason not to built it is politics.

# A closer look at the journey to atheism of Nathan Pratt

**Wintery Knight** · 7 January 2015 · Archived copy · Original

I found a deconversion testimony by an atheist on Prayson Daniel's blog, and I thought it might be useful to take a look at it.

But first, I want to recap some reasons why people think that God exists.

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature

In addition to these arguments for theism, Christians would make be some sort of minimal facts case for the resurrection, one that leverages the early creed in 1 Corinthians 15:3-7. And some sort of case for the early belief that Jesus was divine.

In addition to those positive evidences, there would be informed defenses to other questions like the problem of evil, the problem of suffering, religious pluralism, the hiddenness of God, materialist conceptions of mind, consciousness and neuroscience, the justice of eternal damnation, sovereignty and free will, the doctrine of the Incarnation, the doctrine of the Trinity, and so on.

I listed these out so that you can see how many of these positive arguments and defenses that he wrestles with in his deconversion testimony, which is linked below.

So here is the deconversion testimony.

And here are some revealing snippets, under headings.

**Legalist upbringing**

" Being baptists things were pretty legalistic growing up."

**Anti-intellectual parents**

His parents tell him: "This is the bible and its truth can't be debated. It is what it is."

**Piety rather than apologetics**

"Most of my young life I was "that" religious kid. You know him. He's awkward looking with coke bottle glasses and horrendous hair and triple hand me down clothes. I told random kids on the bus that I would pray for them and would be mocked in return."

**Peer disapproval**

"I told random kids on the bus that I would pray for them and would be mocked in return. One time I even got

jumped while fishing and once they started punching me I didn't even fight back, "turn the other cheek" was being said in my mind over and over. I got the crap kicked out of me and several months of ridicule at school over getting such a beating.

I think the most embarrassing time for me was in 8th grade science class when one kid started calling me a "bible beater" while the teacher was out of the room. He then got the entire class to mock and laugh at me. It wasn't fun. In fact, it sucked."

**Deconversion prior to serious study of the evidence**

"I think it was around 9th grade that my apathy for religion and god really started to set it. Being honest with myself I didn't want to be the kid that got mocked anymore."

**Ineffective church leadership**

"We'd laugh at our peers that were so moved by the message told by the church leaders… Everything I was seeing my peers do could easily be chalked up to a group or mob mentality. A psychological effect of emotions."

I agree with him about this one, the church generally does nothing to form a Christian worldview, even though they have years and years to do it. And they are quite proud of this "focus on the gospel", even as kids drop Christianity as soon as they hear intellectual objections to it in college.

**Self-focus / autonomy**

"The fact that our purpose of living was the blow smoke up the skirt of a god that will damn us to hell."

**Theological determinism**

"The thought that a god with a plan can't/won't/doesn't listen to your prayers because if your prayer isn't in line with his plan then it goes unheard or unanswered."

**Bible difficulties**

"God set up Adam and Eve for failure in the Garden of Eden. If he really didn't want us to "fall from grace" then the tree never would have been there. He would've stopped the serpent from deceiving Adam and Eve. He would've equipped Adam and Eve with the knowledge of deceit so they could recognize when they're being lied to."

**God's job is to make us happy and healthy**

"God would have either have had a direct hand in creating hell or allowing satan to create it with his knowledge. God created the rules by which people go to hell. He damns billions of people there. Is that love? Is that moral? Is that just?"

**Accuracate knowledge of God's character and historical actions are less important than "being good"**

"Anne Frank, a Jew, is in hell because she didn't recognize Jesus as the Son of God, but Ted Bundy, a serial rapist and murderer, is in heaven because he accepted Jesus into his heart before dying on death row. Is that fair? Is that love? Is that moral? Is that just?"

**Emotional problem of evil**

His brother was killed in a motorcycle accident, and his view is that it's God's job to keep everyone alive and happy. So this guy is reading the story of Jesus and he is saying something like this to himself when he reads the Bible, "see, the founder of Christianity has all his needs met by God and he is happy all the time, and everyone likes him and he never, ever has anything bad happen to him that isn't his fault". The problem of evil is one of the most responded-to problems in Christian apologetics. He didn't cite anyone who has responded to it.

**Ignorance of how the Bible defines faith**

"Faith is believing in something without evidence."

So he doesn't even know what the definition of faith is, according to the Biblical use of the term, where faith is trusting in something you know to be true because of the evidence, e.g. – because of the resurrection, say. That was Jesus' model of getting people to have faith in him, but apparently you can attend church and come up with a different, postmodern notion of what the word means. A definition that is pleasing to all the people in church who are there for emotional comfort, and not for truth and knowledge. His definition of faith is more like the atheist definition of faith, like they say "I have faith in the multiverse" or "I have faith in aliens seeding the Earth with life" or "I have faith that God has no morally sufficient reason for permitting this instance of apparently gratuitous evil". Atheists project their own irrational epistemology onto Christians.

**Unfamiliarity with Christian scholarship**

"After I realized that my friends and church leaders had no good responses to anything I was saying I started searching for good apologist books on the internet. A good book about a good reason for belief. I can't effectively relay my shock at turning up nothing worth the paper it was printed on."

**The purpose of life is to feel happy**

"I'd heard through a friend that an old acquaintance from our youth group was now an agnostic… His reply was straight forward in that he'd realized that he'd gained nothing from trying to understand, follow and love god. Since it was bringing nothing positive to his life he left it behind. He shared that we're all trained as kids in church that we have a god shaped hole in our hearts, but that it wasn't true. Here he was, 11 years after leaving christianity, at the happiest and most content point of his life. He told me it was okay to doubt."

**Reads simplistic books by atheists**

"That book that would ultimately be one of the most revolutionary books in my life was "50 Reasons People Give for Believing in a God.""

This book is a caricature of the reasons why people believe in God. I searched for the names of top Christian apologists, and there were none. No William Lane Craig, Hugh Ross, Gary Habermas, Michael Licona, Stephen C. Meyer, Mike Behe, etc. I took a look at the 50 arguments. They were generally re-phrasings of this "I'm stupid, so I'll believe Christianity because it makes me happy".

I clicked on the few that I thought might cite Christian scholars, but no Christian scholars were cited. For the chapter on "fine-tuning", the author cited Ray Comfort. And his banana argument. In a chapter on fine-tuning. The chapter on intelligent design did not cite a single scholar, pro or con. ID was not even defined.

**My conclusion**

Well, I'll leave the rest of his post to you. I did a quick search on the author's blog for "William Lane Craig", just to see, and found nothing. Then I did a search for "intelligent design", and found nothing. Then I did a search for "minimal facts" and found nothing. His post on his journey to atheism is here. And let this testimony be a lesson to you parents and church leaders not to fail other Christians the way this guy's parents and church leaders failed him. You should read the comments on his post, as well.

# Arthur Brooks: Europe's core problems are demographic, not economic

**Wintery Knight** · 8 January 2015 · Archived copy · Original

AEI President Arthur C. Brooks writes about Europe's most pressing problem in the far-left New York Times, of all places.

He writes:

> According to the United States Census Bureau's International Database, nearly one in five Western Europeans was 65 years old or older in 2014. This is hard enough to endure, given the countries' early retirement ages and pay-as-you-go pension systems. But by 2030, this will have risen to one in four. If history is any guide, aging electorates will direct larger and larger portions of gross domestic product to retirement benefits — and invest less in opportunity for future generations.
>
> Next, look at fertility. According to the Organization for Economic Cooperation and Development, the last time the countries of the European Union were reproducing at replacement levels (that is, slightly more than two children per woman) was the mid-1970s. In 2014, the average number of children per woman was about 1.6. That's up a hair from the nadir in 2001, but has been falling again for more than half a decade. Imagine a world where many people have no sisters, brothers, cousins, aunts or uncles. That's where Europe is heading in the coming decades. On the bright side, at least there will be fewer Christmas presents to buy.
>
> There are some exceptions. France has risen to exactly two children per woman in 2012, from 1.95 in 1980, an increase largely attributed to a system of government payments to parents, not a change in the culture of family life. Is there anything more dystopian than the notion that population decline can be slowed only when states bribe their citizens to reproduce?
>
> Finally, consider employment. Last September, the United States' labor force participation rate — the percentage of adults who are either working or looking for work — reached a 36-year low of just 62.7 percent.
>
> Yet as bad as that is, the United States looks decent compared with most of Europe. Our friends across the Atlantic like to say that we live to work, while they work to live. That might be compelling if more of them were actually working. According to the most recent data available from the World Bank, the labor force participation rate in the European Union in 2013 was 57.5 percent. In France it was 55.9 percent. In Italy, just 49.1 percent.
>
> […]It is true that good monetary and fiscal policies are important. But the deeper problems in Europe will not be solved by the European Central Bank. No matter what the money supply and public spending levels, a country or continent will be in decline if it rejects the culture of family, turns its back on work, and closes itself to strivers from the outside.

Either people keep their own money and run their own lives, or bureaucrats take their money and make the decisions about social programs. In America, we used to prefer the former, but Europe has been preferring the latter for decades. Would I get married and have kids in a society run by European bureaucrats? Do I want secular leftist public schools to tell my children what to believe? It doesn't sound very exciting to me. And I'll bet it doesn't sound very exciting to a lot of men in Europe. Men don't want to be taxed, so that they can be replaced by the state's social programs. We want to chart our own course, and guide our own families. But that's not OK with people who want to replace men with government social programs.

# Can you disagree with homosexuality using your own name and not be fired?

**Wintery Knight** · 8 January 2015 · Archived copy · Original

From the Daily Caller.

Excerpt:

> A fire chief in Atlanta has officially been fired on Tuesday by Atlanta Mayor Kasim Reed for self-publishing a book, in which he argued that homosexuality was immoral, GA Voice reports.
>
> The initial review period which began at the end of fire chief Kelvin Cochran's November suspension is now over. Cochran's termination finally came in on Tuesday, and gay advocacy groups moved quickly to reiterate their support of the mayor and condemnation of Cochran.
>
> […]Back in November, Reed placed Cochran on suspension without pay and forced him into sensitivity training after it was discovered that Cochran had argued that homosexuality is immoral.
>
> […]Former fire captain and lesbian Cindy Thompson sent a tip to the magazine GA Voice after hearing about the book from other fire fighters. Thompson then went directly to speak to Reed's LGBT liaison, which set the scandal in motion.
>
> After further attention from GA Voice, the Reed administration issued a statement saying they were unaware of Cochran's work before it hit the printing presses.
> "The Reed administration was not notified of the book before it was published. The Reed administration will not tolerate discrimination of any kind…The Reed administration is currently conducting a review of the facts surrounding the book. If disciplinary action is recommended as a result of the investigation, we will take decisive action to prevent any inappropriate behavior from occurring in the future," said spokesperson Anne Torres for Mayor Reed in late November, according to GA Voice.
>
> Reed made sure to tell the press that Cochran's views expressed in a 2013 book neither represented him nor the city. Some gay groups stated at the time that Cochran's punishment wasn't nearly harsh enough. "He will be back in charge and I am sure telling his staff anti-LGBT stuff…The Mayor should fire him!" Glen Paul Freedman, chair of Georgia Equality's board of directors, said.
>
> During his tenure as mayor, Reed moved away from past views and openly embraced gay marriage in 2012 after years of advocating for LGBT policies.
>
> "It is well known that I have gone through a good bit of reflection on this issue, but listening to the stories of so many people that I know and care about has strengthened my belief that marriage is a fundamental right for everyone. Loving couples, regardless of their sexual orientation, should have the right to marry whomever they want," Reed said in a 2012 statement.

There's a reason why I blog under an alias.

Notice how the lesbian thought that the best response to someone who disagreed with her views on morality was to have him fired. Yet, the gay rights movement is regularly referred to as tolerant, diverse and non-discriminatory. Well, I would never fire a person just because they expressed a belief in same-sex marriage. I don't think it's nice to go after a person's job because they don't agree with me on the definition of marriage. I'm a tolerant person – I allow people to keep their jobs even if they don't celebrate every moral view that I believe in. That makes me different from gay activists, apparently.

# Should young people vote for Democrats?

**Wintery Knight** · 8 January 2015 · Archived copy · Original

Jennifer Kabbany describes what young people got from their vote for Democrats over at the College Fix.

She writes:

> Young America's Foundation released its annual "Youth Misery Index" findings today, and the news is not good for young people – the index has hit an all-time record high.
>
> The foundation calculates the index by adding youth unemployment, student loan debt, and national debt (per capita) figures, and it found "young people are experiencing hardships like never before under the Obama administration, and this generation is especially suffering the consequences of this administration's leftist policies."
>
> **For 2014, youth unemployment sat at 18.1 percent, student loan debt came in at $30,000, and national debt per capita was the highest ever at $58,437. The foundation tallied that all up for a Youth Misery Index of 106.5. That's far above the 2013 figure of 98.6, when the foundation added 16.3, which represented youth unemployment, with 29.4 – the average 4-year college loan debt – and 52.9, each person's national debt burden.**
>
> "The government is largely responsible for all three problems, and we've found a statistically significant relationship between government expenditures and the Youth Misery Index," the foundation states. "Each indicator can be tied to government actions."
>
> While the index has steadily grown over the decades, under Obama the figure has shot up dramatically.
>
> In 2012 it was 95.1, and the year before that 90.6. When Obama first took office in 2009, it was 83.5. When President George Bush left office in 2008 – the index was 69.3. When the figure debuted in 1993, it came in at 53.1.
>
> "Young people will be stuck paying for government debt they had no part in creating, and they'll have to do it with less discretionary income than ever before because of record high levels of student loan debt," the foundation stated.

If interest rates go up, it will get even worse. Interest on loans will make it harder for them to buy houses and cars. Their students loans will cost more. And the government will have to dedicate a lot more money to making payments on the national debt – leaving less money for other expenditures. Taxes might have to go up to pay for the payments on the debt. Whether they raised income, sales or property taxes, it's bad news for young people trying to get on with their lives.

# Has MIT physicist Jeremy England solved the origin of life problem?

**Wintery Knight** · 8 January 2015 · Archived copy · Original

Casey Luskin assesses a sensational article that was originally published in the radically leftist Salon.

He writes:

> In the law there's a saying, "When the facts are on your side, pound the facts. When the facts aren't on your side, pound the table." Some popular science writers have apparently embraced that maxim while declaring that Massachusetts Institute of Technology physicist Jeremy England may have solved the origin of life.
>
> At Salon, Paul Rosenberg recently asserted that England's work shows "God is on the ropes" and threatens "to undo everything the wacky right holds dear." Claiming England "has creationists and the Christian right terrified," Rosenberg must be borrowing rhetorical excesses from Chris Mooney, who likewise wrongly alleged last year in Mother Jones that science "has creationists terrified."
>
> So what exactly are England's momentous ideas? Business Insider reviewed his theories last month, explaining they are based upon thermodynamic principles that cause matter to "gradually restructure itself in order to dissipate increasingly more energy."

The problem of the origin of life is essentially the problem of sequencing amino acids into proteins. Can you sequence amino acids into proteins by shining sunlight on them?

No:

> The fundamental problem with England's theories, and Rosenberg's polemics, is that sunlight and other forms of energy do not generate new genetic information, nor do they produce new types of biological machines.
>
> It's one thing to observe that energy keeps a machine running; it's quite another to claim energy produced the machine in the first place. You could shine light on random Scrabble tiles or disassembled computer components for billions of years, and you'll never produce a Shakespearean Sonnet or a functional computer. No wonder Harvard biophysicist Eugene Shakhnovich called England's proposals "extremely speculative, especially as applied to life phenomena."
>
> […]Dr. England's work, interesting though it may be, does not provide that insight. Sunlight—or any known form of energy—does not produce the genetic information life needs to build its complex machinery. In our experience, only one cause generates new language-based information or machine-like structures: intelligence.
>
> Dr. England shouldn't be faulted if materialists are co-opting his work into an overstated crusade against God and conservative politics. But naturalistic accounts of life's origins remain as elusive as they have ever been.

Somebody posted this Salon article on my Facebook page and I deleted it because I thought it must be a hoax or something. After all, it was Salon. I mean, not even atheists are stupid enough to think that you can sequence amino acids into protein by shining light on them, are they? Do they think that you can shine sunlight on a keyboard and get a computer program? I didn't even think this article needed an answer, it's so ridiculous.

Seriously – when you are talking about creating the first living cell, you are talking about getting a whole bunch of sequences of amino acids right in one shot. It's an information problem, not a thermodynamics problem. Why would anyone believe that changes in energy levels could explain the creation of information in the first living cell?

# Young Texan earns $140,000 a year, with a two-year degree and hard work

**Wintery Knight** · 9 January 2015 · Archived copy · Original

I love this story from the Wall Street Journal. I'm linking to the free version on Yahoo News, though!

Excerpt:

> Justin Friend 's parents have doctoral degrees and have worked as university lecturers and researchers. So Mr. Friend might have been expected to head for a university after graduating from high school in Bryan, Texas, five years ago.
>
> Instead, he attended Texas State Technical College in Waco, and received a two-year degree in welding. In 2013, his first full year as a welder, his income was about $130,000, more than triple the average annual wages for welders in the U.S. In 2014, Mr. Friend's income rose to about $140,000.
>
> […]The risks of a mismatch between costly university degrees and job opportunities have become clearer in recent years. Anthony Carnevale, director of the Center on Education and the Workforce at Georgetown University, said nearly a third of people aged 22 through 26 with a Bachelor of Arts degree either don't have a job or are working at one that doesn't require a university degree. The numbers are similar for young people with vocational degrees, but those lower-cost degrees don't typically lead to heavy debts.
>
> Student loan debt outstanding in the U.S. totaled $1.13 trillion as of Sept. 30, up by $100 billion from a year earlier, according to the Federal Reserve Bank of New York. (Mr. Friend has no debts.)
>
> […]Mr. Friend, who is single, typically works 72 hours a week, usually including at least one day of the weekend, often on an overnight shift. His base pay is more than $25 an hour, up from about $22 when he started in 2012. He gets overtime after 40 hours a week. Pay is doubled on Sundays and tripled on holidays. He receives health insurance, a 401k retirement plan and paid vacation.
>
> With little free time, expenses are low. He rents a one-bedroom apartment for $1,080 a month in a building with a pool and gym. To stay in shape for mountain-climbing trips, he sometimes runs up and down steps wearing a weighted backpack.
>
> He showed an early inclination to make things. "At three years old, he was using a screwdriver and a hacksaw skillfully," said Dr. Vaughan, his mother. Later, dyslexia made writing and math a struggle for him.
>
> In junior high school, he took a course in welding. Within a few years, he was earning money repairing fences and doing other welding jobs for neighbors.
>
> A documentary on World War II stirred Mr. Friend's interest in pulse jet engines, which were used by Germany to propel bombs. He and his father, Ted Friend, a professor of animal science at Texas A&M, together built such an engine. "We used a leaf blower to start it," pumping in air needed to ignite the engine, the younger Mr. Friend said. "It ran on propane." When he attached the engine to a golf cart, he said, the vehicle proved difficult to steer after reaching 30 miles an hour.
>
> "Mom didn't like it," he said. "She thought I was going to blow myself up." One of his goals is to put a jet engine on a motorcycle, he says, adding: "I'd try to make it as safe as I could."
>
> On a recent day, while country music played on a colleague's radio, Mr. Friend used gas tungsten arc welding techniques to attach two steel parts destined for an oil apparatus. Wearing a T-shirt and Wrangler jeans, he hunched over work requiring the precision of a jewelry maker. After welding, he buffed the part with a wire brush. Colleagues would later X-ray the part to make sure the weld was flawless.
>
> The long hours mean "it's hard to have a life," Mr. Friend said. Eventually, he said he may pursue an advanced degree in metallurgy and research welding materials and techniques. For now, he's building up his savings.

He's debt-free, and probably didn't even need student loans for this program. You couldn't say that about most college students these days – and the ones in non-STEM fields will never be able to pay their loans back. What causes people to go into programs that don't produce a return on investment? I think I know why. I think that many Americans have the idea that life should be about personal fulfillment, and not about doing things that don't feel right to them. Hard work doesn't "feel" right to many young Americans. They want work to make them famous, and to make them happy. Well, work isn't supposed to be like that. Work is about making money, and very often the most difficult degrees and jobs are the least fame-making, and the least happiness-inducing. This guy is a *welder*! It's not glamorous.

I would advise my younger readers, especially my male readers, to take a page out of this welder's handbook. Make a plan to avoid debt, and stick to it.

# Why are Christians allowed to eat shellfish but not allowed to have sex before marriage?

**Wintery Knight** · 9 January 2015 · Archived copy · Original

Here's a wonderful article from Peter Saunders.

The challenge:

> An argument frequently advanced by those attempting to defend homosexual practice is that Christians 'cherry pick' the commands in the Bible – that is, they chose to emphasise some commands while ignoring others.
>
> The Old Testament may forbid homosexual acts (Leviticus 18:2; 20:13) but it also forbids eating seafood without fins and scales (Leviticus 11:9-12; Deuteronomy 14:9, 10).
>
> So how can Christians then justify upholding laws on sexual morality whilst at the same time ignoring the food laws from the very same books of the Bible? Why may they eat shellfish but not be allowed to have sex outside marriage? Isn't this inconsistent and hypocritical?

The solution is that God enters into "covenants" with his people, and the terms of those covenants change.

Especially dietary laws:

> The answer to this question lies in an understanding of biblical covenants.
>
> A covenant is a binding solemn agreement made between two parties. It generally leaves each with obligations. But it holds only between the parties involved.
>
> There are a number of biblical covenants: Noahic, Abrahamic, Sinaitic (Old), Davidic and New.
>
> Under the Noahic covenant, which God made with all living human beings (Genesis 9:8-17), people were able to eat anything:
>
> *'Everything that lives and moves about will be food for you. Just as I gave you the green plants, I now give you everything' (Genesis 9:3).*
>
> But under the Sinaitic (Old) Covenant, which God made with the nation of Israel, people were able to eat certain foods, but not others.

Jesus clearly created a new covenant with his followers, where the dietary laws are lifted:

> Jesus said that he had come to fulfil the 'Law and the Prophets' (Matthew 5:17; Luke 24:44). He would establish this new covenant with new laws, with himself as high priest based on his own sacrificial death on the cross.
>
> This new covenant would completely deal with sin (Hebrews 10:1-18) and protect all those who put their faith in him from God's wrath and judgement…
>
> *[…]'In the same way, after the supper (Jesus) took the cup, saying, "This cup is the **new covenant** in my blood, which is poured out for you"' (Luke 22:20). '…we have been made holy through the sacrifice of the body of Jesus Christ once for all' (Hebrews 10:10)*
>
> People would come under the protection of this new covenant, not by virtue of belonging to the nation of Israel, but through faith in Christ. In fact the function of the Old Testament Law (Sinaitic covenant) was to point to Christ as its fulfilment.
>
> […]So what then did Christ say about foods? He pronounced all foods clean for his followers to eat:
>
> *' "Don't you see that nothing that enters a person from the outside can defile them? For it doesn't go into their*

> *heart but into their stomach, and then out of the body." (In saying this, Jesus declared all foods clean.) He went on: "What comes out of a person is what defiles them. For it is from within, out of a person's heart, that evil thoughts come—sexual immorality, theft, murder, adultery, greed, malice, deceit, lewdness, envy, slander, arrogance and folly. All these evils come from inside and defile a person." (Mark 7:18-23)*
>
> Jesus was making that point that under the new covenant God required purity of the heart. Internal thoughts and attitudes were as important as external actions.

Food is OK for Christians, but sexual immorality – which includes premarital sex and adultery – are NOT OK for Christians.

I think sometimes when you are talking to people whose motivation is just to get rid of any objective moral law entirely, they tend to ask questions without really wanting a good answer. This is especially true when it comes to the morality of sex. They ask the question not to get an answer, but to justify getting rid of the moral rules governing sexuality. The answers are there for people who are willing to respect God in their decision-making to find. The answers are not found only by people who have a reason to not want to find them.

# The downside of the soul mate / fairy tale view of relationships

**Wintery Knight** · 9 January 2015 · Archived copy · Original

Do relationships take effort to build?
Astonishing article from the leftist Huffington Post, of all places. (links removed)

Excerpt:

> As millennial women, we were groomed for a white knight fantasy. From childhood favorites such as *Snow White* to adult rom-com staples such as *How to Lose a Guy in Ten Days* or *Sleepless in Seattle*, the media perpetuates a romantic storyline in which compatibility and lasting romance is something effortless, built on chance, sustained by good looks, fun dates and electric sexual chemistry. These story lines shape our expectations for romantic happiness. It is not enough to find someone with whom we are mostly compatible, who would make a good parent, with whom we could learn and grow wrinkly; now, we expect a perfect fit and an easy, instantaneous "connection." In short, we want a soul mate. But it is this desire for a soul mate that is actually the undoing of our happy ending.
>
> A "soul mate" is defined as one who is ideally suited to us, perfectly completes us, one with whom the relationship feels easy and natural. With them, a relationship is just "meant to be"… A survey of young adults conducted by the National Marriage Project found that while 84% of young adults report finding a marriage partner "very important," a full 94% of young adults say they would like to marry a soul mate, and 73% of people ages 18 – 29 believe that there is a soul mate out there for them.

Wow. That doesn't sound like a good approach to me. My approach has always been to pick the girl who was most willing to learn new things. And then to explain to her my vision for marriage and see if I could get her to work independently on that plan before I married her. I don't favor this soul mate approach at all.

Does the "soul mate" approach work?

> We heard that those who get married later and possess a college degree have fewer divorces and more stable marriages. So we spend our twenties trying to find ourselves through travel, accumulating degrees and building a career. Marriage will be the capstone of our achievements, and nothing less than tying the knot with a soul mate will suffice. But the tragic irony is that soul mate thinking makes us increasingly likely to divorce.
> A study of 1,400 married men and women shows that people who hold soul mate orientations are 150% more likely to end up divorced than those who do not.
>
> **The widespread cultural belief in "soul mate ideology" undermines our chances at happiness because it makes us passive receivers of idyllic romantic expectations. Further, it fosters self-centeredness; one rarely longs to be a soul mate for someone *else*, which would require effort. For this reason, believing in soul mates is one of the most dis-empowering belief systems we can adopt. As millennials, we pride**

> **ourselves on actively pursuing the life we want to live, rather than simply accepting whatever hand we are dealt. We are innovative, passionate, proactive and not afraid to take risks. Yet, there is a disconnect when it comes to our desire for lasting love. Though there are prospects around us, we forgo taking the concrete steps needed to build happy compatible relationships because we do not "feel a spark." We are passively waiting on the sidelines for love to "happen," and then wonder why it is so difficult.**

I've always felt that the soul mate approach was like the evil villain in opposition to my noble plan-based approach. My approach is to pick a woman who wants to learn and work hard. Explain your marriage plan to her, and how your marriage plan serves God. My marriage plan accomplishes four goals, for example. 1) Influence the university with apologetics, 2) influence the church with apologetics, 3) provide a model of a good marriage to people in the community, including co-workers, college students and neighbors, and 4) raise effective, influential children who will have an impact for God. Now if you are a Christian woman raised in a church that affirms the soul mate / fairy tale view of marriage with this "God has a wonderful plan for your life" stuff, then a specific, non-emotional plan from a man is the last thing you want to hear about.

Their solution is for people to work at compatibility:

> Compatibility is something co-created through intentionality and conscious choice. It involves mutual sacrifice, effort and commitment for the sake of the other's benefit. A recent study found that of the couples who demonstrate above average daily generosity, 50% of them report being "very happy" in marriage; among the low generosity scores, only 14% can say the same. As studies indicate, selflessness is required to create mutual compatibility. It is not instantaneous, nor does it usually begin with true love's kiss.
>
> We both know from experience that there are some you naturally connect with and others you do not. This is not a call towards forced attraction or companionship. But, our romantic futures should not be placed in the hands of blind chance. It is time we roll up our sleeves and shift our expectations from unattainable perfection to realistic romance, one that accounts for imperfection. We must understand that work in a relationship is a necessary key to success, rather than an indication of imminent failure. We will be letting go of a tired plot line that sets us up for disappointment and embracing an active role in our own unique story.
>
> How refreshing to know that we do not have to be perfect to be lovable, and that our romantic success is not solely dependent on finding the "right" fit, but instead built through cultivating daily moments of generosity, sacrifice and conscious coupling.

So in my case, I am looking for a woman who listens to the plan, develops the skills for the plan and then independently engages in activities to achieve the goals of the plan. In the past, I have had women listen to the plan carefully, including my motivations and experiences that caused me to choose this plan. And they have been willing to read books, listen to lectures, watch debates, to gain the skills needed to make a difference. And they have even engaged independently with activities like public speaking, teaching classes, and so forth. But none of the women who had done that accepted the soul mate / fairy tale view of marriage. They all wanted to hear a good plan, learn useful skills and then get to work. Big difference.

# The story of how the Failed Atheist failed at atheism in the UK

**Wintery Knight** · 10 January 2015 · Archived copy · Original

My friend The Failed Atheist has posted his testimony on his blog. Some of the phrases might be a bit unfamiliar, because he grew up in the UK. I always thought that the UK was filled with Christians who loved England and all wanted to be knights when they grew up. I didn't grow up in the UK, but my room as a child was still filled with books on knights and chivalry. Some of them with scribbled drawings in them! I also knew about the Battle of Britain and Spitfire airplanes were pictured on my wall posters. Anyway, I digress.

Here are the first 3 paragraphs of his story:

> Within the next few months I would have been a Christian for ten years and that seems like a long time. Not only did my life go in the direction I had never expected but I'm also the sort of person I never expected I'd be. Over the last ten years I've often been asked how and why (two very different questions) I became a Christian which to most people seemed an obvious and embarrassing mistake. I suppose this shouldn't come as much of a surprise because most people post 9/11 and Dawkin's 'The God Delusion' have gone the other way.
>
> **School Nativity**
>
> I could write a lot but I will try my best to stick to what I think are the most salient points and not ramble. So, I grew up in a secular non-religious single parent family and as far as I can remember like most British children I was in the school nativity play (I was a shepherd) and was occasionally read the odd Bible story by a neighbor. Although the only one I can actually remember was the wise judgement of Solomon found in 1 Kings 3:16-28. I spent one year at a Church of England primary school and if I'm honest the only thing I can remember is that the Priest was a bit of a weirdo.
>
> **My Early Doubts**
>
> My interactions with anyone I knew who were religious amounted to the JW's stopping by to give me a copy of the Watchtower which I probably fed to the dog. I also happened to live very near to a massive Mormon temple but it was years before I even knew what a Mormon actually was and why they wore magic underwear. I remember a friend of mine in Biology class when I was about 13 asking me whether I thought there was a God, I can almost remember verbatim what I said to him, "I like the idea of there being a God but there is no evidence for one". If most people are brutally honest I reckon most people would prefer to be born in a universe where their existence mattered to the omnipotent, omniscient, omnipresent creator of the universe. The reverse being what Bertrand Russell so eloquently summarized the astronomers view of the human life to be "*...a tiny lump of impure carbon and water crawling impotently on a small and unimportant planet…*". Of course I should point out that the degree to which we prefer something to be true has no bearing on whether it is in fact true. I digress.
>
> So by 13 I was persuaded that the universe I inhabited was not created by any deity, and that evolution alone explained life's journey from the single cell organism to complex carbon based life as reflected in natures pinnacle creation the 'wise man' Homo sapiens. Most people I grew up with were either atheists or agnostics although my next door neighbors were Roman Catholics but if I'm honest I didn't have a clue what that even meant. I just remember my mate coming back one Sunday with tons of money telling me it was his 'Holy Communion'. I didn't know what that was and I didn't think to ask but I remember being jealous, I could've done with people pinning cash to my tracksuit bottoms.

His blog has an excellent list of recommended books, as well, separated into categories.

It's funny how people remember the little opinions they had when they were very young, one way or the other. I remember feeling very protective of God from the beginning, and thinking how he would not be very happy with my parents or the mean kids in school. We were always on the same side, and everyone else was on the other side.

Sometimes I wonder if Christianity is easier that way, when you don't think of your parents as God or exemplars of godliness, then when your parents fail you then think that God is a failure by extension. I remember showing my mother hard verses of the Bible as a child, (e.g. – Matt 10:34-38), and when she said they were false (she is a Muslim-raised atheist), I remember thinking "well, so much the worse for you when you meet him, then" and "well, I don't even know how I ended up in this family of insolent God-haters". I remember thinking that my real parents were probably angels and my human parents had probably stolen me from them. I was just a kid, so all this made sense to me then. I was so different than anyone in my family – I am the first Protestant and almost everyone else is Muslim or Hindu, with just a few Catholics and atheists. I'm very happy working alone, though.

# Study: brain of child neglected by mother is smaller and underdeveloped

**Wintery Knight** · 10 January 2015 · Archived copy · Original

Dina sent me this article from the UK Daily Mail.

Here is the scan:

Brain scans of 3-year old children: normal vs neglected

Excerpt:

> Both of these images are brain scans of a two three-year-old children, but the brain on the left is considerably larger, has fewer spots and less dark areas, compared to the one on the right.
>
> According to neurologists this sizeable difference has one primary cause – the way each child was treated by their mothers.
>
> The child with the larger and more fully developed brain was looked after by its mother – she was constantly responsive to her baby, reported The Sunday Telegraph.
>
> But the child with the shrunken brain was the victim of severe neglect and abuse.
>
> According to research reported by the newspaper, the brain on the right worryingly lacks some of the most fundamental areas present in the image on the left.
>
> The consequences of these deficits are pronounced – the child on the left with the larger brain will be more intelligent and more likely to develop the social ability to empathise with others.
>
> But in contrast, the child with the shrunken brain will be more likely to become addicted to drugs and involved in violent crimes, much more likely to be unemployed and to be dependent on state benefits.
>
> The child is also more likely to develop mental and other serious health problems.
>
> Professor Allan Schore, of UCLA, told The Sunday Telegraph that if a baby is not treated properly in the first two years of life, it can have a fundamental impact on development.
>
> He pointed out that the genes for several aspects of brain function, including intelligence, cannot function.

> […]The study correlates with research released earlier this year that found that children who are given love and affection from their mothers early in life are smarter with a better ability to learn.
>
> The study by child psychiatrists and neuroscientists at Washington University School of Medicine in St. Louis, found school-aged children whose mothers nurtured them early in life have brains with a larger hippocampus, a key structure important to learning, memory and response to stress.
>
> The research was the first to show that changes in this critical region of children's brain anatomy are linked to a mother's nurturing, Neurosciencenews.com reports.
>
> The research is published online in the Proceedings of the National Academy of Sciences Early Edition.
>
> Lead author Joan L. Luby, MD, professor of child psychiatry, said the study reinforces how important nurturing parents are to a child's development.

I have a very good feminist non-Christian friend who sometimes comments here. I once asked her about marriage and she said that her skills would be wasting on raising children. I explained to her my view that a mother needs to stay at home with the children, and that is more important work. I expect my future wife to read all kinds of books on child care and to give the child attention, nutrition, exercise and play so that the child will grow up to be an effective Christian. Maybe I need to be clear. I am not going to spend hundreds of thousands per child with just any woman. I need a woman who can produce influential and effective Christians who will engage in the public square. And we do not entrust that job to just anyone. Professional women who are willing to be stay-at-home moms in the first five years of each child's life.

I expect the woman I marry (if I marry) to have a college degree, and preferably a graduate degree, and a couple of years of employment. Then she has to stay home and invest in those children through the first five years at least. After that she can stay home or work as much as she thinks is beneficial to the family goals of impacting the university, the church and the public square – as well as continuing to raise those children. It's not a waste of her talent to make the next William Lane Craig, the next Marsha Blackburn, the next Doug Axe, or the next Edith Jones. Even if we only aim for those guys and get decent, hard-working Christians who make a difference using apologetics, that would still be something. The main thing is not to be scared to try to achieve something with the family – if you aim at nothing, you always hit it.

UPDATE: I am linking to a relevant post from Lindsay, a Christian mother who has a graduate degree in biology and was teaching biology before leaving her career to care for her children.

# The dangers of judging others based on physical attractiveness

**Wintery Knight** · 11 January 2015 · Archived copy · Original

UK apologist Calum Miller has a long post up at Dove Theology about people making judgments based on physical appearances.

Here's the part that really struck me:

> Quite obviously, most people put an emphasis on physical appearance. They decide who to date or be friends with at least partly on the basis of physical appearance, and by doing so they create an expectation of the opposite sex (or the same sex) looking good enough. They make comments about people looking good or looking bad. They make comments about people wearing nice or unimpressive clothes, or combinations of clothes. They spend obscene amounts on improving their appearance. They include physical criteria in their lists of what they look for in a partner. They reject people because they don't match some physical criteria. They ogle at others, sometimes making comments to their friends while doing so.
>
> Sometimes they do much of this non-verbally: they make faces to indicate disgust (or something less extreme, but of the same genus) if a suggestion of romantic or social interest is raised regarding someone who has an obvious deformity, or who is wearing something unsightly, or who is too short, or whatever else. Or they gesture to direct friends' attention towards a good-looking person, it being incredibly important that such a person be noticed and lusted after.
>
> Men and women both do this, and do so to enormous degrees. The fact that men have less resources to change how they look, or that some people go to further extremes in their shallowness, or that some people make these ratings and judgments quantitative, is not really the main problem. The main problem is these underlying attitudes and behaviours pervading society at a much deeper level. I know very few people of either sex who don't make comments about others' looks, height and clothes, and that includes champions of these recent campaigns which claim to challenge such shallowness.
>
> The fact that this image seems so farcical is a testament to the fact that this shallowness is something propagated by both sides. The fact that many women will spend their time looking at topless men in magazines while men peruse infamous lads' mags confirms this further. And really, I will controversially suggest, there is not much difference between the woman who fawns over the face and body of a male model with her friends, and the man who comments, "nice t*ts" to his. The latter may be more extreme, more sexually explicit, and more crude, but it is really the same kind of thing: an objectification of the other sex, and an instance of lust, which is an indulgence in sexual attraction and the use of another person's body for self-gratification, without the context of a marital commitment and the promise of life-long self-sacrifice and mutual giving.
>
> **And the most hard-hitting part of all of this is that Christians do all of this too, in my experience to just as significant a degree. Christians reject people on their looks, they include stringent physical criteria when looking for partners, they lust regularly and verbalise their lust to their friends, and by doing all these things they create expectations which others feel obliged to fulfill, and which make others feel inadequate and excluded when they don't fulfill them (either because they don't spend extortionate amounts of time and money doing so, or because no realistic amount of time and money would suffice to fulfill them).**

Read the rest. I am not sure if I go as far as he does in the rest of the post, but I definitely agreed with him on the paragraph in bold.

This is something that struck me very hard when I was a young man, and it was especially annoying when Christians did it. I always believed that the most important thing about a person was their character, and that this would especially be true for Christians. Imagine my surprise when I found that Christians in the church were just as likely

to judge on appearances as anyone else. There isn't much that people can do to improve their appearance, but we can do a lot to have good theology and sounds apologetics. But in the church, it seems to me that theology and apologetics are on no one's list of priorities. If our job was to preach the gospel, then it seems to me that we should be valuing skills that help us show that the gospel is true.

But there's more to say. Everyday, Christians have to decide who to evangelize, who to defend the faith to, who to disciple, and who to make friends with. It seems to me that we need to remember that every person was made to know God. So we can't be picking and choosing who to do Christianity with based on appearances. Furthermore, if you are assembling a team of Christian friends to serve as resources, we shouldn't be picking on the basis of appearance, we should be picking on the basis of interest and aptitude. If your job as a Christian is to focus on theology and apologetics, and the application of that in loving God and loving your neighbor, then you will pick a completely *different* set of friends than if your job is to be popular.

# How much affection and approval should come from God vs from a woman

**Wintery Knight** · 11 January 2015 · Archived copy · Original

Let's start with a quote from the introduction to Dr. Laura's "The Proper Care and Feeding of Husbands":

> I have never gotten a complaint from a male listener in twenty-five years on the radio over my assertion that men are very simple creatures. They agree. I have explained time and again on my radio program that men are borne of women and spend the rest of their lives yearning for a woman's acceptance and approval. Unless you've got a man with a frank mental or personality disorder (the exception, not the rule), men admittedly are putty in the hands of a woman they love. **Give him direct communication, respect, appreciation, food, and good lovin', and he'll do just about anything you wish — foolish or not.**

Out of all the men in the world, I am probably the one whose life experiences most incline him to appreciate receiving approval, attention and affection from a woman. I was stuck in daycare after 6 weeks with a relative, never had any sisters, and my mother was entirely focused on her career and making money. She remained distant or even antagonistic to everyone in our home until the day she retired from work. The shouting and abusive language stopped almost overnight, but by then it was too late for any of us kids. So I never had the affection, approval and attention from my mother that most people just take for granted.

I always felt that the Holy Grail of my childhood was to get affection from one of these apparently unattainable women. It did not help that I was colored, growing up in neighborhoods that were mostly white – that just seemed to me to make the women even more unattainable. And in my case, it could never be just any woman who would give me these things – it had to be one who had listened to my plan to serve God and who was giving me these things because of what I was doing as a Christian. And unfortunately, there are precious few Christian women who have come along to give me what any man needs from a woman *just because of who I am in Christ* – forgiven, and dedicated to serving him effectively with apologetics and charity.

Those women that do come along sometimes find that my desire for approval, affection and attention can be overwhelming at times. On the surface, I function great as a Christian. Work gets done, money gets saved, chastity and chivalry, million page views per year on the blog, and lots of donations to Christian scholars and apologetics events. But that's because everything emotional is turned off inside – it has to be, in order for me to function like this. But when a woman comes along who values what I have done, and what I am doing, that's when the vulnerability comes out. I am going to look to her for attention, affection and approval.

This New Year, my friends Blake and Dina decided that I was going to not just go to church almost every week like I am already, but that I was also going to do daily prayer, Bible reading, Psalm reading, meditation on the meaning of what I read, and praise hymns. They know I don't like taking time away from work or apologetics or blogging for any of those things, but they think I need to come back to the things I used to do, in order to be more balanced. And since they are my friends, I really cannot say no to them, because we all have the same Boss.

Dina has asked me to read a chapter out of Paul Tripp's "New Morning Mercies" every day, and here is today's very relevant devotion:

> JANUARY 11
>
> If you have been freed from needing success and acclaim to feel good about yourself, you know grace has visited you.
>
> It is an intensely human endeavor. It is the quest we all pursue. We all want to feel good about ourselves. We all want to think that we are okay. It is a fearful and anxious quest from which only grace can free you. Here's what happens to us all—we seek horizontally for the personal rest that we are to find vertically, and it never

> works. Looking to others for your inner sense of well-being is pointless. First, you will never be good enough, consistently enough, to get the regular praise of others that you are seeking. You're going to mess up. You're bound to disappoint. You will have a bad day. You'll lose your way. At some point, you'll say or do things that you shouldn't. Add to this the fact that the people around you aren't typically interested in taking on the burden of being your personal messiah. They don't want to live with the responsibility of having your identity in their hands. Looking to people for your inner self-worth never works. The peace that success gives is unreliable as well. Since you are less than perfect, whatever success you are able to achieve will soon be followed by failure of some kind. Then there is the fact that the buzz of success is short-lived. It isn't long before you're searching for the next success to keep you going. That's why the reality that Jesus has become your righteousness is so precious. His grace has forever freed us from needing to prove our righteousness and our worth. So we remind ourselves every day not to search horizontally for what we've already been given vertically. "And the effect of righteousness will be peace, and the result of righteousness, quietness and trust forever" (Isa. 32:3.7). That righteousness is found in Christ alone.
>
> For further study and encouragement: 2 Corinthians 6:3-10

What I got out of this devotion is that I should try to remember what my *primary* source of attention, affection and approval should be, and then it would be easier to treat a Christian woman's affection, attention and approval as extra – sort of like dessert after the main course.

# Islamic terrorists murder hundreds of innocent people in Nigeria

**Wintery Knight** · 12 January 2015 · Archived copy · Original

Boko Haram atttacks Sept. 2010 to Apr. 2014 (Source: BBC)

The Week reports.

Excerpt:

> The terrorist group Boko Haram has left bodies rotting in the streets after an assault on the key town of Baga on the edge of Lake Chad.
>
> Reports vary widely, but the death toll is estimated to be in the hundreds, with some reports placing it as high as 2,000.
>
> The jihadists reportedly fired indiscriminately, attacking the key fishing and commercial centre with automatic weapons, petrol bomb and explosives.
>
> "I escaped with my family in the car after seeing how Boko Haram was killing people … I saw bodies in the street. Children and women, some were crying for help," Mohamed Bukar told Reuters.
>
> A senior government official told the BBC that fleeing residents said the town was now "virtually non-existent" after buildings were set on fire, and that residents had not been given the chance to bury their dead.
>
> This comes days after a multinational task force was forced to flee its base in the town. More than 10,000 people have escaped to neighbouring Chad, sparking fears of a major humanitarian disaster. A large number of those attempting to escape reportedly drowned while trying to cross Lake Chad.
>
> The Islamist organisation is fighting to establish an Islamic state in Nigeria and the introduction of Sharia law.
>
> […]It continues to step up its attacks, taking control of large swathes of north eastern Nigeria over the past year despite President Goodluck Jonathan's vow to defeat the militants. The country's military, which is the largest in West Africa,  has also faced increasing criticism of its inability to deal with the threat.
>
> The group regularly targets civilians, raping, murdering and kidnapping thousands of people. Last year it abducted over 200 schoolgirls from the village of Chibok.
>
> The conflict has displaced over 1.5 million people and killed more than 10,000 last year. ·

NBC News reported on another recent Islamic terrorist homicide bombing.

Excerpt:

> A bomb strapped to a girl aged around 10 years old exploded in a busy marketplace in the Nigerian city of Maiduguri on Saturday, killing at least 16 people and injuring more than 20, security sources said. “The explosive devices were wrapped around her body and the girl looked no more than 10 years old,” a police source said.
>
> Maiduguri, the capital of northern Borno state, lies in the heartland of an insurgency by Islamist militant group Boko Haram, and is often hit by bomb attacks. A Nigerian security source said the bomb went off at 12:15 p.m. The girl was killed and the bodies of at least 16 victims were counted in one hospital by mid-afternoon, civilian joint task force member Zakariya Mohammed told Reuters. “Right now, there are 27 injured people in Borno Medical Hospital, while more were taken to other hospitals,” he said.
>
> About 80 miles away in the Yobe state capital Damaturu, the army subdued an Islamist militant attack on Friday evening, but not before militants had torched several buildings, a Reuters reporter in the city and witnesses said.
>
> The Boko Haram revolt is seen as the gravest security threat facing Nigeria, a country of 170 million people, and a serious challenge for President Goodluck Jonathan, who is seeking re-election in a national election set for Feb. 14.

I was thinking about what it is like for Islamic terrorists to kidnap, rape and murder unarmed civilians, and then I read this in my Sunday quiet time.

Psalm 10:

> 1 Why, O Lord, do you stand far away?
> Why do you hide yourself in times of trouble?

> 2 In arrogance the wicked hotly pursue the poor;
> let them be caught in the schemes that they have devised.
> 3 For the wicked boasts of the desires of his soul,
> and the one greedy for gain curses and renounces the Lord.
> 4 In the pride of his face the wicked does not seek him;
> all his thoughts are, “There is no God.”
> 5 His ways prosper at all times;
> your judgments are on high, out of his sight;
> as for all his foes, he puffs at them.
> 6 He says in his heart, “I shall not be moved;
> throughout all generations I shall not meet adversity.”
> 7 His mouth is filled with cursing and deceit and oppression;
> under his tongue are mischief and iniquity.
> 8 He sits in ambush in the villages;
> in hiding places he murders the innocent.
> His eyes stealthily watch for the helpless;
> 9 he lurks in ambush like a lion in his thicket;
> he lurks that he may seize the poor;
> he seizes the poor when he draws him into his net.
> 10 The helpless are crushed, sink down,
> and fall by his might.
> 11 He says in his heart, “God has forgotten,
> he has hidden his face, he will never see it.”

> [12] Arise, O Lord; O God, lift up your hand;
> forget not the afflicted.
> [13] Why does the wicked renounce God
> and say in his heart, “You will not call to account”?
> [14] But you do see, for you note mischief and vexation,
> that you may take it into your hands;
> to you the helpless commits himself;
> you have been the helper of the fatherless.
> [15] Break the arm of the wicked and evildoer;
> call his wickedness to account till you find none.
>
> [16] The Lord is king forever and ever;
> the nations perish from his land.
> [17] O Lord, you hear the desire of the afflicted;
> you will strengthen their heart; you will incline your ear
> [18] to do justice to the fatherless and the oppressed,
> so that man who is of the earth may strike terror no more.

Sometimes, we are so far from a problem that all we can do is pray. But I will say that we should probably elect a President in 2016 who doesn’t call Islamic terrorism “senseless violence” and “workplace violence”, and warn us all to keep believing that Islam is a religion of peace. All Muslims are not terrorists, but when a terrorist attack occurs, it’s almost always a Muslim.

# What happens when erotic liberty conflicts with religious liberty?

**Wintery Knight** · 12 January 2015 · Archived copy · Original

A recent episode of Al Mohler's the Briefing podcast explains the real issue behind the firing of Atlanta Fire Chief Kelvin Cochran.

The MP3 file is here.

Here is the relevant part of the transcript:

> "Mr. Cochran held his own news conference Tuesday. He said that the city's investigation found that he had not acted in a discriminatory way toward gay people, and said that he had asked for, and received, permission from the proper bureaucratic channels to write the book — an assertion [the Mayor's] office disputes."
>
> So gay advocates are cheering the mayors decision, the mayor finds himself in something of a political controversy, but the fire chief is out. He's out of a job for having written a book that was basically privately published and very narrowly distributed in which he stated something that is fundamental to evangelical moral conviction – something that basically amounts to nothing more, or least a little more, than actually quoting the Bible, quoting the Scriptures.
>
> The mayor described the book, or at least this portion of the book, as having inflammatory content. But once again, looking at the material supplied by the media, the inflammatory content is what is drawn directly from Scripture – especially from very specific biblical verses dealing with homosexuality. **So what we're looking at here is an undeniable case in which religious conviction actually got the Fire Chief of Atlanta fired; fired simply because he dared to write a book in which he stated his Christian convictions.**
>
> This raises a host of very interesting and complex, not to say troubling, questions. Can anyone now be an evangelical Christian and serve as a Fire Chief or even in the fire department? This raises the question as to whether one can believe that homosexuality is a sin without discriminating against homosexuals. **The clear implication of the Mayor's decision is that the Fire Chief is out, not because he acted in any way, in any discriminatory fashion toward any gay member of the fire department staff or anyone else for that matter, but simply because he expressed his biblical conviction that homosexuality is a sin.**
>
> Now once again, this raises a host of very interesting questions the mayor and furthermore our culture is not going to be able to avoid. Is the Bible itself now going to be defined as hate speech because by any measure the language that the Fire Chief used is drawn, if not immediately from Scripture, then with language that is tantamount to it? Can anyone who holds to a biblical understanding of sexuality, anyone who is a member of an evangelical congregation serve in this kind of political and public role? Or does that moral conviction absolutely mean, in a categorical sense, that discrimination is the obvious outcome? Or is holding the belief itself, is holding that biblical conviction itself a form of discrimination; even if no discriminatory act ever follows?
>
> […]Let's look at exactly how the mayor describe his decision as the *New York Times* reports and I quote,
>
> "Despite my respect for Chief Cochran's service, I believe his actions and decision-making undermine his ability to effectively manage a large, diverse work force. Every single employee under the fire chief's command deserves the certainty that he or she is a valued member of the team and that fairness and respect guide employment decisions."
>
> Well let's just look at that statement and imagine what the Mayor has now not only implied but openly stated by firing the chief. One can't hold that all persons are of value, one can't operate in terms of neutrality, in terms of personnel decisions, if one holds to traditional biblical Christianity. Some may argue that it isn't the problem that the chief held these positions and convictions but it's a problem that he published them, that he put them in print.

> But as the world is supposedly universally affirming the importance of freedom of expression, are we now to be told that evangelical Christians – or for that matter Orthodox Jews and traditional Catholics – simply must hold their tongue and hold their peace? Never putting their biblical convictions into print or into some form of public statement? The action in Atlanta is not only ominous, it's absolutely frightening. The religious liberty implications of the normalization of homosexuality and the legalization of same-sex marriage are massive, they are unavoidable, and they are now inevitable. And they're showing up in this case not in New York City or Seattle but in Atlanta, Georgia – right in the heart of the South, in a city that the *New York Times* acknowledges includes millions of evangelical Christians and others who would also hold to the Chief's conviction.
>
> **No matter how lavishly people may claim to believe in freedom of expression and no matter how much they may argue this isn't an issue of religious liberty, the bare facts are simply unavoidable. The Fire Chief of Atlanta has been fired. Not because he acted in any way that was discriminatory, not because any employee brought any grievance against him for acting in a discriminatory manner, but merely for having stated, for having articulated in print, his biblical convictions on issues of morality.**

I urge people who want to take a position on homosexuality and/or same-sex marriage to write under an alias. The more serious a sin is, the more people who engage in it will go to any lengths necessary in order to stop criticism of it. The invocation of "tolerance" and "diversity" on the gay left is a smokescreen. Their goal is to make everyone who disagrees with them not only agree but actually celebrate their behavior. That's one of the reasons why we need to careful about letting our natural compassion cause us to approve of homosexuality and same-sex marriage. We have our protect the right to say "it's wrong". Al Mohler has a longer article on this conflict between religious liberty and erotic liberty up today, too.

UPDATE: Today's episode of the The Briefing takes a look at the response from the mainstream media, including the response of a gay New York Times columnist. Mohler's main point is that secularists want to reduce the religious liberty to worship inside a church and private feelings. But religious liberty is more than that – it is the right to honor and respect God in every aspect of our lives, including freedom to speak our disagreement with immorality, and the right to educate our children in schools that respect OUR values – not the values that the secular left seeks to impose on us. Mohler also links to a response by pro-marriage scholar Mark Regnerus.

# Are all sins equally bad, or are some sins worse than others?

**Wintery Knight** · 12 January 2015 · Archived copy · Original

This is an article by theologian Robert Gagnon. He has twelve passages to prove his point, but I'll only quote a few below.

He writes:

> (5) **Jesus referred to "the weightier matters of the law"** (Matt 23:23) such as justice, mercy, and faith(fulness), which were more important to obey than the tithing of tiny spices, even though the latter too had to be done (Matt 23:23). These formulations imply that violations of weightier or greater commandments (like defrauding the poor of their resources for personal gain) are more severe than violations of lesser or 'lighter' commandments (like paying tithes on small foods likes spices), which Jesus stated should be done without leaving the weightier matters undone. Jesus adds the following criticism: **"Blind guides, those who strain out the gnat but who swallow the camel"** (23:24). What's the difference between a gnat and a camel if all commands and all violations are equal?
>
> (6) **Jesus famously pinpointed the two greatest commandments** (Mark 12:28-31). **He also said, "Whoever relaxes one of the least of these commandments** (of the law) and teaches the people (to do things) like this will be called least in the kingdom of heaven" (Matt 5:19). Again, to have greater and lesser commandments is to have greater and lesser violations.
>
> (7) I would submit that **Jesus' special outreach to economic exploiters (tax-collectors) and sexual sinners**, all in an effort to recover them for the very kingdom of God that he proclaimed, was not so much a reaction to their abandonment by society as an indication of the special severity of these sins and the extreme spiritual danger faced by such perpetrators. In this connection one thinks of **the story of the sinful woman** who washed Jesus' feet with her tears, wiped his feet with her hair, kissed them with her lips, and anointed them with ointment (Luke 7:36-50). Jesus explained her extraordinary act by telling a parable of two debtors: **the one whom the creditor "forgave more" would be the one who would "love him more."** The clear inference is that the sinful woman had done something worse in God's eyes. Although Jesus' Pharisaic host did not appreciate the woman coming into contact with Jesus, Jesus extolled the woman's actions: "Therefore, I tell you, her sins, which were many [or: much, great], have been forgiven, for she loved much [or: greatly]; but the one who is forgiven little, loves little" (7:47). Many Christians treat the notion of being forgiven of greater sins as a bad thing. Jesus turns the idea on its head. Think about how Christians who stress that all sins are equal could use the biblical concept of some sins being more severe than others: *Some of us may have needed more forgiveness, but I tell you that this has made us understand the Lord's grace that much better and so love the Lord that much more.*
>
> (8) Another obvious instance of prioritizing some offenses as worse than others is Jesus' characterization of "**blasphemy against the Holy Spirit**" as an "eternal sin" from which one "never has forgiveness"—in context referring to the Pharisees' attribution of Jesus' exorcisms to demonic power (Mark 3:28-30).
>
> (9) According to **John 19:11** Jesus told Pilate, "You would not have any authority against me if it had not been given to you from above. Therefore **the one who handed me over to you has *greater* sin**." The reference is either to Judas (6:71; 13:2, 26-30; 18:2-5) or to Caiaphas the High Priest (18:24, 28). "Greater sin" obviously implies the Pilate's action is a lesser sin.

Previously, I blogged about whether there are degrees of punishment in Hell, and degrees of rewards in Heaven.

# House to vote on Pain Capable Unborn Child Protection Act on January 22nd

**Wintery Knight** · 13 January 2015 · Archived copy · Original

Good news from Life News about that Trent Franks-Marsha Blackburn bill to ban abortions after 20 weeks.

Excerpt:

> Republicans in the House of Representatives will hold a vote on the anniversary of Roe v. Wade late this month on a marquee bill to ban abortions after 20 weeks of pregnancy because unborn children feel intense pain in abortions.
>
> Top Republicans and leading pro-life groups have been promoting the Pain Capable Unborn Child Protection Act that bans abortions from after 20-weeks of pregnancy up to the day of birth.
>
> […]In a statement, Franks told LifeNews: "More than 18,000 'very late term' abortions are performed every year on perfectly healthy unborn babies in America. These are innocent and defenseless children who can not only feel pain, but who can survive outside of the womb in most cases, and who are torturously killed without even basic anesthesia. Many of them cry and scream as they die, but because it is amniotic fluid going over their vocal cords instead of air, we don't hear them."
>
> […]A November 2014 poll from Quinnipiac found that 60 percent of Americans support legislation limiting abortions after 20 weeks, including 56 percent of Independents and 46 percent of Democrats.

GOP leaders plan to vote on the federal 20-week abortion ban on January 22, 2015 – the 42nd anniversary of Roe v. Wade.

Can unborn children really feel pain after 20 weeks?

Yes:

> During the hearing on the last bill, former abortion practitioner Anthony Levatino told members of the committee the gruesome details of his former abortion practice and how he became pro-life following the tragic automobile accident of his child.
>
> Another bombshell dropped during the hearing came from Dr. Maureen Condic, who is Associate Professor of Neurobiology and Adjunct Professor of Pediatrics at the University of Utah School of Medicine. She testified that the unborn child is capable of reacting to pain as early as 8-10 weeks. This is when most abortions in America take place.
>
> The bill relies on the science of fetal pain to establish a Constitutional reason for Congress to ban abortions late in pregnancy. The science behind the concept of fetal pain is fully established and Dr. Steven Zielinski, an internal medicine physician from Oregon, is one of the leading researchers into it. He first published reports in the 1980s to validate research showing evidence for it.
>
> He has testified before Congress that an unborn child could feel pain at "eight-and-a-half weeks and possibly earlier" and that a baby before birth "under the right circumstances, is capable of crying."
>
> He and his colleagues Dr. Vincent J. Collins and Thomas J. Marzen were the top researchers to point to fetal pain decades ago. Collins, before his death, was Professor of Anesthesiology at Northwestern University and the University of Illinois and author of Principles of Anesthesiology, one of the leading medical texts on the control of pain.
>
> "The functioning neurological structures necessary to suffer pain are developed early in a child's development in the womb," they wrote.

> “Functioning neurological structures necessary for pain sensation are in place as early as 8 weeks, but certainly by 13 1/2 weeks of gestation. Sensory nerves, including nociceptors, reach the skin of the fetus before the 9th week of gestation. The first detectable brain activity occurs in the thalamus between the 8th and 10th weeks. The movement of electrical impulses through the neural fibers and spinal column takes place between 8 and 9 weeks gestation. By 13 1/2 weeks, the entire sensory nervous system functions as a whole in all parts of the body,” they continued.
>
> With Zielinski and his colleagues the first to provide the scientific basis for the concept of fetal pain, Dr. Kanwaljeet Anand has provided further research to substantiate their work.

I would really like to see the House and Senate vote on this bill and send it to Obama, who will veto it. It is very important that Americans understand that electing a Democrat is not a pro-life thing to do. We need something very public that will show exactly how extreme Democrats are on the life issue.

# Man in persistent vegetative state wakes up after 12 years

**Wintery Knight** · 13 January 2015 · Archived copy · Original

This story is from the ultra-leftist National Public Radio, of all places.

Excerpt:

> It was the late ’80s, and young Martin Pistorius, growing up in South Africa, was mostly thinking about electronics. Resistors and transistors and you name it.
>
> But at age 12, his life took an unexpected turn. He came down with a strange illness. The doctors weren’t sure what it was, but their best guess was cryptococcal meningitis.
>
> He got progressively worse. Eventually he lost his ability to move by himself, his ability to make eye contact, and then, finally, his ability to speak.
>
> His parents, Rodney and Joan Pistorius, were told that he was as good as not there, a vegetable. The hospital told them to take him home and keep him comfortable until he died.
>
> But he didn’t die. “Martin just kept going, just kept going,” his mother says.
>
> His father would get up at 5 o’clock in the morning, get him dressed, load him in the car, take him to the special care center where he’d leave him.
>
> “Eight hours later, I’d pick him up, bathe him, feed him, put him in bed, set my alarm for two hours so that I’d wake up to turn him so that he didn’t get bedsores,” Rodney says.
>
> That was their lives, for 12 years.

This part was the most interesting to me:

> **Joan vividly remembers looking at Martin one day and saying: ” ‘I hope you die.’ I know that’s a horrible thing to say,” she says now. “I just wanted some sort of relief.”**
>
> **And she didn’t think her son was there to hear it.**
>
> **But he was.**
>
> “Yes, I was there, not from the very beginning, but about two years into my vegetative state, I began to wake up,” says Martin, now age 39 and living in Harlow, England.
>
> He thinks he began to wake up when he was 14 or 15 years old. “I was aware of everything, just like any normal person,” Martin says.
>
> But although he could see and understand everything, he couldn’t move his body.
>
> “Everyone was so used to me not being there that they didn’t notice when I began to be present again,” he says. “The stark reality hit me that I was going to spend the rest of my life like that — totally alone.”
>
> He was trapped, with only his thoughts for company. And they weren’t particularly nice thoughts.
>
> **“No one will ever show me tenderness. No one will ever love me.”**
>
> **And of course there was no way to escape. He thought, “You are doomed.”**
>
> […]**“You don’t really think about anything,” Martin says. “You simply exist. It’s a very dark place to find yourself because, in a sense, you are allowing yourself to vanish.”**
>
> […]**“The rest of the world felt so far away when she said those words,” Martin says.**

Eventually, Martin was able to come out of his persistent vegetative state by mental effort, over a long period of time. The NPR story has a nice picture of Martin and his wife, where he is holding her hand. So his story had a

happy ending.

# Why does God let people suffer? Why is there so much evil in the world?

**Wintery Knight** · 13 January 2015 · Archived copy · Original

I just wanted to draw your attention to this 4 page essay by Joe Manzari, which is the best darn summary of the state of the art on the problems of evil and suffering I have seen. The problem of evil is an objection to the existence of God based on the presence of evil or suffering in the world. The arguments basically infer that if God is all-good and all-powerful, then there should not *be* any evil or suffering.

There are two kinds of problem of evil.

**The Logical/Deductive Problem of Evil:**

The first kind is called "the deductive problem of evil" or "the logical problem of evil". An exampel of evil would be Saddam Hussein murdering some journalist who told the truth about him. This version of the problem of evil tries to introduce a logical contradiction between the attributes of God and the presence of evil, like this:

(1) God exists.
(2) God is omnipotent.
(3) God is omniscient.
(4) God is omni-benevolent.
(5) Evil exists.
(6) A good being always eliminates evil as far as it can.
(7) There are no limits to what an omnipotent being can do.

In order to avoid a contradiction, we need to explain how there could still be evil, since the conclusion of this argument is that there should not be any evil!So how are we going to get out of this mess? The solution is to attack premises 6 and 7.

Premise 6 is false because in order to eliminate human evil, you would have to eliminate free will. But eliminating free will is worse than allowing it, because good things like love are impossible without free will.

> It is in response to this proposition that the Free Will Theodicy of G. W. Leibniz applies. God, valuing man's freedom, decided to provide him with a will that was free to choose good over evil, rather than constraining his will, allowing him to choose only good.

Premise 7 is false because there *are* limits on what an omnipotent being can do. God *cannot* perform contradictory things, because contradictory things are impossible. God cannot make a married bachelor. Similarly, God cannot force free creatures to do his will.

> In the same manner that God cannot create a square circle, he cannot make someone freely choose to do something. Thus, if God grants people genuine freedom, then it is impossible for him to determine what they will do. All that God can do is create the circumstances in which a person can make free choices and then stand back and let them make the choices.

One last point. In order to solve the problem of natural evil for this argument, you can point out that free will requires predictable and regular natural laws in order to make free will meaningful. Natural laws mean that individuals can predict what will happen when they act, allowing for moral responsibility. More on that next time.

**Inductive/Probabilistic Problem of Evil**

There is a second version of the problem of evil, though, which is more dangerous than the first. This is the one you see being argued in debates, whereas the first version is not used because it has been defused as seen above. Here is

the second one:

(1) If God exists, gratuitous evil does not exist.
(2) Gratuitous evil exists.
(3) Therefore, God does not exist.

This argument tries to argue that while God may have some reason for allowing free will, there are other evils in the world that are not the result of human action that God has *no reason* for permitting. Theists usually like to argue that God has morally-sufficient reasons for allowing some evil in the world, in order for the character of humans to develop through suffering and endurance. But what about gratuitous evil, which doesn't have any point?

Consider the case of a fawn running in the forest, who falls and breaks his leg. Ouch! Then a forest fire starts and the poor fawn suffocates to death in the smoke. Why would God allow this poor small animal suffer like that? And notice that there is no morally sufficient reason for allowing it, because no human knows about this and so no human's character or relationship with God is impacted by it.

The solution to this problem is to deny premise 2. (You can also deny 1 if you want). The problem with premise 2 is that the atheist is claiming to know that some instance of evil really is gratuitous. But since they are making the claim *to know*, they have to be able *to show* that God's permission of that evil achieves nothing. But how do they know 2 is true?

The problem with 2 is that the atheist is not in a position to know that the permission of some evil X really doesn't achieve anything. This is because the atheist cannot look forward into the future, or see into other places, in order to know for certain that there is no morally sufficient reason for allowing God's allowing evil X to occur. But since the atheist argues based on premise 2, he must be able to show that premise 2 is more probable than not.

Manzari's article also argues why apparently gratuitous evil is less problematic for Christians in particular, because of certain Christian doctrines. He lists four doctrines that make the apparently gratuitous evil that we observe more compatible with an all-good, all-powerful God.

1. The chief purpose of life is not happiness, but the knowledge of God.
   Some of the things that we experience may wreck our feelings of contentment, but we need to remember that God may be permitting those troubles in order to remind us not to get too comfortable with life on earth, and to think ahead to the after-life. And remember, even Jesus learned endurance through suffering. His suffering was not pointless and neither is ours.
2. Mankind is in a state of rebellion against God and God's purposes.
   We humans seem to be on a dead run away from God, trying to keep our autonomy by knowing as little about him as possible. Part of knowing God is knowing what he designed us to do – to love him and to love others. And so, the less we know about God, the more we stray from his design for our lives.
3. God's purpose is not restricted to this life but spills over beyond the grave into eternity.
   Sometimes it seems as if our sufferings really are catastrophic, but when you realize that you are offered eternal life without any suffering after you die, the sufferings of this life are a lot less upsetting than they would be if this life was all we had.
4. The knowledge of God is an incommensurable good.
   This one is the biggest for me. Knowing God and knowing his actual character by studying the historical Jesus is a wonderful counterbalance for all the problems and sufferings of this life. A little bit of historical study reveals that Jesus was not spared the worst kind of suffering in his life, making it is a lot easier for us to bear with whatever God allows us to face.

In section 3, Manzari shows how you can also argue against this version of the problem by supplying evidence for God, such as from the big bang, the fine-tuning, the origin of life, the origin of free will, the origin of the first living organism, the origin of the mind, the sudden emergence of phyla in the fossil record, molecular machines, irreducible complexity, the resurrection miracle, and the objective morality argument.

The argument goes like this:

(1) If God exists, gratuitous evil does not exist.
(2) God exists.
(3) Therefore, gratuitous evil does not exist.

Just support 2 with some evidence, and you win, especially when they can't support their claim to know that gratuitous evil exists.

**The Argument for God from Evil**

In the paper, Manzari actually makes an argument for God from evil. That's right. Far from disproving God, the presence of evil (a departure from the way things out to be), actually affirms God's existence. How?

(1) If God does not exist, then objective moral values do not exist.
(2) Evil exists.
(3) Therefore, objective moral values do exist.
(4) Therefore, God exists.

That's right. If evil exists in any sense such that it is not a personal or cultural preference, then objective morality exists. If objective morality exists, then there is an objective moral lawgiver. Game over. If the atheist backtracks and says that the existence of evil is just his opinion or his cultural preference, then this standard does not apply to God, and you win again. Game over again.

So, although the problems of evil look pretty tough, they are actually easy. The toughest part of evil and suffering is the emotional problem. I could tell you stories about what I've been through… but then, that's why the arguments matter. You can hold your position under tremendous fire when you have the arguments and evidence to ground you.

# 34-year-old career feminist buys herself an engagement ring

**Wintery Knight** · 14 January 2015 · Archived copy · Original

Feminist career-girl world traveler: follow your bliss
This is from Marie Claire, a woman's magazine. (H/T Dalrock)

Excerpt:

> "I bought myself an engagement ring in Tanzania," I emailed a group of my girlfriends, mainly for effect.
>
> […][My friends] particularly love to gossip about me, the last single woman standing in our group of college friends, the only one who didn't get married last year.
>
> […]I've been the managing editor of Yahoo Travel since April, which is about how long I've been single. I love the idea of marriage. I love it so much that when I finally do it I want it to last forever. My ex-boyfriend was my best friend, but he wasn't my husband.
>
> […]Now I am single and 34. I have my dream job, one that has allowed me to travel to 12 countries in the past nine months, telling stories all over the globe. It's such a dream that some days I don't even think it's real. I'm convinced that I will wake up one morning and Richard Dawson will pop out of my closet to tell me this isn't my life at all. Rather, I've been on a Japanese reality show for the better part of a year and now is the bit where I'm locked in a house with nudists.
>
> Earlier this year I published an amazing nonfiction book about nuns called *If Nuns Ruled the World*, and in May I have a new novel coming out.
>
> Like I said, it all seems like a dream. And yet, my friends are very concerned I will end up a spinster, and that has left a large black mark on my otherwise remarkable existence.
>
> […]I'm actually a hopeless romantic… somehow I still believe in the serendipity of locking eyes with someone across a crowded airport, bumping into him in the Acropolis, or being forced to share a cab in Mumbai. I actually have no doubt that I will meet my husband somewhere on my travels.

She buys the ring, and then seeks attention:

> I immediately texted my ex-boyfriend. We talk every day. Like I said: best friend, but not my husband.
>
> "I bought a fancy ring in Tanzania."
>
> […]It's a commitment to myself and a reminder that I'm not wrong, or crazy, or flawed to wait for the right person. I saw the sun rise over Mount Kilimanjaro this morning while writing this, looking at my ring sparkle as my fingers flew across the keyboard. I'm happy to just be with me for a little bit longer.

Four points:

First thing, the fact that she bought an expensive ring from *a gift shop in Africa* ($$$) on the spur of the moment makes me question whether she has the temperament for marriage. A woman who wants to get married has to able to delay gratification and be a good steward of family resources. Husbands prefer women who are not in debt and not wasteful. It's an important way that a woman shows a man respect for studying hard things, building a good resume and saving his money before the marriage.

Second thing, many women like this one want to get married "some day". Even many Christian women. It's very important to understand that women who say they love the idea of marriage often do not love marriage as God designed it. Marriage is designed so that a woman will support her husband and care for her children. Men and children are not accessories that are acquired in order make women happy, or to make her friends envious. Marriage as designed respects the leadership-oriented nature of a man and the needs of young children. A woman who wants marriage must be prepared to accept responsibilities, obligations and expectations in the marriage.

Third thing, she texted the ex-boyfriend and asked for his approval of her impulse buy. The ex-boyfriend affirmed her by saying "Great!" – he wasn't going to tell her the truth. Women today often pick boyfriends like this who will have sex with them before marriage because she can suppress his instinct to lead on moral / spiritual issues by giving him sex. Women like men who listen and affirm them, but they are fearful of responsible men who tell them right from wrong, truth from error. That's why women today freely choose to give men premarital sex – to get the attention and acceptance of a man without having to care what a man thinks is morally right or true. Many men today would rather take the sex than tell a woman what is right and what is true – even to save her from disasters of her own making. A chaste Christian man who wants to make the marriage serve God by leading his wife and children is rejected immediately because he cannot be controlled with sex. Women have feelings that any restrictions on their pursuit of happiness is "controlling". And often they don't look to the leadership of a competent man as a positive thing, no matter how badly their own reliance on emotions, intuitions and peer-approval has failed them in the past. And of course should this immoral, deceptive man she freely chose disappoint her by being immoral and deceptive, then it's the man's fault. She is the innocent victim.

Fourth thing, when a woman says that she has a high view of marriage then delays it into her mid-thirties, don't believe her. Marriage is about the joy and challenges of bonding to someone to accomplish shared goals. It is an enterprise all on its own. With marriage, you can do things as a couple that you could never do as singles. You can model marriage to others. You can have and raise children who will know God. You can work together as partners to achieve bigger things for God. Never believe a woman who says she values marriage who then puts it off for a career. I can understand a woman saying she wants to put off marriage by serving God in some way, but not for a career.

I can't recommend that anyone marry this woman, because the risk of divorce is too high. A woman has to be able to be sensitive to the needs of those around her. She has to be accustomed to picking a good man who will lead the family, and to respect his leadership because he is the provider. People who reject the design for marriage are not ready for marriage, no matter how much they claim to be romantic and to love marriage. Seventy percent of divorces are initiated by women, most often for general unhappiness. Men – make sure you pick a woman who are focused on marriage as it really is, and not on her own happiness.

# Can we trust Democrats to take national security and foreign policy seriously?

**Wintery Knight** · 14 January 2015 · Archived copy · Original

First part of the clip is here on The Weekly Standard:

> Q I just want to go back to your statement about the extremists want to incite a religious war against Islam and they failed. There have been a lot of questions raised about why you have chosen not to associate yourself with the language that was used by the French President when he said we're at war with radical Islam, and instead you have chosen a formulation where you say you want to capture individuals who commit violence based on their warped view of Islam. Is the reason you don't want to call it "radical Islam" or use the word "war" because you're afraid of playing into the extremists' desires to incite a religious war on Islam? Is that the reason you've gone to great lengths to come up with this different formulation?
>
> MR. EARNEST: Well, Mara, there certainly — it does seem clear that these terrorists — let's call them what they are — these terrorists are individuals who would like to cloak themselves in the veil of a particular religion. But based on the fact that the religious leaders of that religion have roundly condemned their actions, those religious leaders have indicated that their actions are entirely inconsistent with Islam. I think the fact that the majority of victims of terror attacks that are carried out by al Qaeda and adherents to their particular brand of violence, that the majority of them are Muslim I think is a pretty clear indication that this is not a matter of the world being at war with Islam. The world and the United States — as we've discussed before in the context of ISIL — is at war with these individuals, these violent extremists who carry out these acts of terror and try to justify it by invoking this religion.

> Q Right. But the leader of France, your ally in this effort, has put a name on this ideology, which he calls "radical Islam." You have bent over backwards to not ever say that. There must be a reason.
>
> MR. EARNEST: I think the reason is twofold. One is I certainly wouldn't want to be in a position where I'm repeating the justification that they have cited that I think is completely illegitimate, right? That they have invoked Islam to try to justify their attacks.

Transcript for the second part of the clip is from Fox News:

> MACCALLUM: You know, every time we see this exchange, it seems like the answer is so tortured like it's so difficult to say what everybody around the world seems to feel so clearly it is and what the leaders have said in Canada and Australia and Paris where they have felt it so potently and personally. They've all said quite clearly that the battle is against Islamic extremism. Why is it so hard to say?
>
> HARF: Well, it's not hard to say, but it's not the only kind of extremism we face. I would recommend to folks looking at this administration's counterterrorism record, I would remind people that more terrorists who claim to — to do acts of violence in the name of Islam has been taken off the battlefield in this administration than under any previous one because of our counterterrorism operations and our efforts that we put in place.
>
> But that's not the only way that you counter this kind of extremism. Much of it Islamic, you're absolutely right, but some of it not. So we're gonna focus on all the different kinds of extremism with a heavy focus on people who do this in the name of Islam, we would say falsely in the name of Islam, but there are other forms of extremism.
>
> (CROSSTALK)
>
> MACCALLUM: Let me ask you this —

> HARF: — that are also important.
>
> MACCALLUM: — **tell me, what other forms of extremism are particularly troubling and compelling to you right now?**
>
> HARF: Well, look, there are people out there who want to kill other people in the name of a variety of causes. Of course, Martha, we are most focused on people doing this in the name of Islam. As we've talked about with ISIL, part of our strategy to counter this extremism is to have other moderate Muslim voices to stand up and say, they don't represent our religion. They speak for their religion more than we do certainly, and we need those voices to stand up in addition to all the other efforts we're undertaking.
>
> MACCALLUM: All right. I just think a lot of other countries probably listen to the way we're talking about this and scratch their heads and wonder why it's so hard to spit it out in a lot of these — these conversations.
>
> Mike McCaul — Chairman Mike McCaul said we — we don't see a lead agency. There's no line item in the budget. There are no metrics to measure success. I don't think we have a strategy. We don't have a common definition for what this is. And, you know, obviously he's a critic, but there are people even former administration officials who say we've been working on this for a long time but we — we're not sure whether or not we're getting anywhere.
>
> HARF: Well, I think when you hear the president who's talked about our counterterrorism operations, as has people liked John Brennan, the director of the CIA, the director of National Intelligence, they very clearly said that we have had some success against Al Qaeda core, naming specific leaders we've taken off the battlefield, against AQAP, naming specific leaders we've taken off the battlefield. But more broadly speaking, it's bigger than that.
>
> So, talking about how you counter this extremist narrative, that's a tougher challenge but it's one we're committed to certainly, and I think other countries around the world look at the U.S. and the success we have had and how aggressive we have been and they know how committed we are to it.
>
> MACCALLUM: But I think the world is looking for a leader, you know, someone in the van of Winston Churchill or FDR who says, "Look, we know what we're facing here. This is a global war. This is, you know, girls taken by Boko Haram. This is 132 students massacred in Pakistan. This is people who are going out for coffee in Australia. This is people who were come — just showing up for work in Paris."
>
> And there's a common thread here of radical Islamic extremism and until President Obama or John Kerry or someone else in their position stands up and says, "Look, we know we're facing a global threat of radical Islamic extremism. We must band together and we must fight it." That's what everybody is longing to hear, it appears, Marie. Where is that message?
>
> HARF: Well, I — I — I think all of these leaders have made very clear the serious threats we face. If you look at the president's speech at West Point, if you look at the things Secretary Kerry has said. It's not as easy as — as defining at the way you just did. We have to look at each threat individually. All of those threats you just mentioned are from different groups and different places.

We voted for left-wing ideologues and they are going to get us killed because they are afraid to offend our enemies. God help us all.

# Fertility and pregnancy: how long can a woman wait before having a baby?

**Wintery Knight** · 14 January 2015 · Archived copy · Original

This is from Aeon magazine. The author writes for several ultra-leftist publications, including the New York Times, the Los Angeles Times, Salon and Slate.

She writes:

> **Many studies show that women are not only woefully ignorant when it comes to fertility, conception and the efficacy of assisted reproductive technologies (ART) – but they overestimate their knowledge about the subject. For instance, a 2011 study in *Fertility and Sterility* surveyed 3,345 childless women in Canada between the ages of 20 and 50; despite the fact that the women initially assessed their own fertility knowledge as high, the researchers found only half of them answered six of the 16 questions correctly. 72.9 per cent of women thought that: 'For women over 30, overall health and fitness level is a better indicator of fertility than age.' (False.) And 90.9 per cent felt that: 'Prior to menopause, assisted reproductive technologies (such as IVF) can help most women to have a baby using their own eggs.' (Also false.) Many falsely believed that by *not* smoking and *not* being obese they could improve their fertility, rather than the fact that those factors simply negatively affect fertility.**
>
> Fertility fog infects cultures and nations worldwide, even those that place more of a premium on reproduction than we do in the West. A global study published for World Fertility Awareness Month in 2006 surveyed 17,500 people (most of childbearing age) from 10 countries in Europe, Africa, the Middle East and South America, revealing very poor knowledge about fertility and the biology of reproduction. Take Israel, a country that puts such a premium on children that they offer free IVF to citizens up to age 45 for their first two children. **According to a 2011 study in *Human Reproduction*, which surveyed 410 undergraduate students, most overestimated a women's chances of spontaneous pregnancy in all age groups, but particularly after receiving IVF beyond age 40. Only 11 per cent of the students knew that genetic motherhood is unlikely to be achieved from the mid-40s onward, unless using oocytes or egg cells frozen in advance. 'This can be explained by technological "hype" and favourable media coverage of very late pregnancies,' the authors concluded.**
>
> […]For a woman over 42, there's only a 3.9 per cent chance that a live birth will result from an IVF cycle using her own, fresh eggs, according to the American Society of Reproductive Medicine (ASRM). A woman over 44 has just a 1.8 per cent chance of a live birth under the same scenario, according to the US National Center for Chronic Disease Prevention and Health Promotion. Women using fresh donor eggs have about a 56.6 per cent chance of success per round for all ages.
>
> Indeed, according to research from the Fertility Authority in New York, 51 per cent of women aged between 35 and 40 wait a year or more before consulting a specialist, in hopes of conceiving naturally first. 'It's ironic, considering that the wait of two years will coincide with diminished fertility,' the group says.
>
> […]**'No one talks about fertility,' said [reproductive endocrinologist Janelle Luk, medical director of Neway Fertility in New York City], who does not believe women are really open to hearing about it. 'I don't think women know that there's a limit: the message is equal, equal, equal. Women say: "We want to go to college, we want to work on our careers, we want to be equal to men." But our biological clock is not.'**
>
> […]**Another way women might even out the fertility playing field is by focussing on the so-called male biological clock.** But is there one? Although there have been recent news stories about how advanced age in men (over 40 or 50) increases time to conception and the incidence of autism and schizophrenia, the absolute risk is negligible. 'When you look at the numbers, you have to separate what the absolute risk and the increased

> risk is,' said Natan Bar-Chama, director of male reproductive medicine and surgery at Mount Sinai Medical Center in New York. 'The absolute risk is still really very small.'

I think if I ever have a daughter, I will be sure to urge her to be skeptical of her emotions and intuitions, to learn how to assess probabilities, to disregard exceptional cases when making plans, to resist the feminism in the culture, to get wisdom from older married women with children instead of young unmarried childless women, to accept that she is not so special that laws and rules don't apply to her, and to accept that the universe is not malleable according to her needs and desires. I hope my wife will see the value of reining our daughter in before the catastrophes like infertility happen.

Where does the organized opposition to educating young women about fertility facts come from?

> 'We feel that women should be able to talk to their ob/gyn about fertility,' said Sandra Carson, ACOG's vice president for education. **'We certainly want to remind women gently that, as they get older, fertility is compromised, but we don't want to do it in such a way that they feel that it might interfere with their career plans or make them nervous about losing their fertility.'** In other words, there are no guidelines for talking to a woman about her fertility unless she herself brings it up.
>
> All this talk of 'gentle' reminders and 'appropriate' counselling has a history – a political one. Back in 2001, the ASRM devoted a six-figure sum to a fertility awareness campaign, whose goal was to show the effects of age, obesity, smoking and sexually transmitted diseases on fertility. **Surprisingly, the US National Organization for Women (NOW) came out against it. 'Certainly women are well aware of the so-called biological clock. And I don't think that we need any more pressure to have kids,' said Kim Gandy, then president of NOW. In a 2002 op-ed in *USA Today*, she wrote that NOW 'commended' doctors for 'attempting' to educate women about their health, but thought they were going about it the wrong way by making women feel 'anxious about their bodies and guilty about their choices'.**

We don't want women to feel bad, so it's best to let them follow their hearts. *That view is not helpful to women!* If we want to help women, we must tell them the truth, and take the consequences.

All this talk about fertility could be accompanied by a discussion of the hard fact that a woman's attractiveness will decline as she ages. This is a troubling lesson that countless women have had to learn the hard way. When you are young, you stand a much better chance of finding a successful male with good values and who is willing to commit to marriage and parenting. Many women will testify that, as you get older, this convenience deteriorates quickly. The good men will be claimed by the responsible women who don't waste their youthful years seeking thrills. Men who are contemplating marriage value a woman's appearance, fertility, vulnerability and submissiveness to his leadership. Women need to be careful not to embark on a course that will reduce their ability in any of these areas that are important to men, e.g. – careerism, premarital promiscuity, etc.

# House Republicans vote to undo Obama's executive order amnesty

**Wintery Knight** · 15 January 2015 · Archived copy · Original

Don't look now, but Republicans have decided to do something about Obama's plan to import a new generation of believers in big government dependency.

The Daily Signal reports:

> The GOP-led House voted today to undo major portions of President Obama's immigration policy, including his recent executive actions and an earlier program that allowed immigrants who entered the country illegally as children—a group known as Dreamers—to stay.
>
> In voting 236-191 to pass a bill funding the Department of Homeland Security through the end of September, the House approved five amendments that revoke four years of Obama's immigration policies, such as his November directive to defer deportation for up to 5 million immigrants living in the country illegally and granting them work permits.
>
> […]In blocking Obama's immigration policies, the House also voted for an amendment that forces immigration officials to treat immigrants convicted of offenses involving domestic violence, sexual abuse, child molestation or child exploitation as top enforcement priorities.
>
> In addition, the House plan restores the "Secure Communities" enforcement program that Obama ended with his executive actions, while also forcing state and local officials to comply with so-called ICE detainers, in which Immigration and Customs Enforcement asks local law enforcement agencies to keep immigrants in custody, even if they would "otherwise be released."

The Weekly Standard had the reaction from Democrats:

> "If Republicans were to get their way, these individuals, including DREAMers who came to America through no fault of their own, would either be pushed back into the shadows, free of any accountability, or deported at great expense to taxpayers and at the expense of a concentrated effort to deport criminals. This vote is bad policy. It's essentially a vote for amnesty. It's also bad politics.

It's "a vote for amnesty" to *undo amnesty?* OK.

I wonder if the recent string of terrorist attacks has anything to do with this push to restore the border security that eroded under Obama?

# Pro-life couple decides to allow extra embryos from IVF to be adopted

**Wintery Knight** · 15 January 2015 · Archived copy · Original

This story is from Life News.

Excerpt:

> One of the problems with in vitro fertilization is that unused or unwanted embryos are often discarded or destroyed. Unfortunately in 2011, a study in the journal of the American Society for Reproductive Medicine revealed that 19% of unused embryos are discarded and 3% are donated for scientific research.
>
> However, thankfully, there are many people advocating for "embryo adoptions," which is the implanting of unwanted or unused embryos in an adoptive mothers' womb. Although this doesn't remove all the ethical concerns with artificially creating human beings, it does provide an alternative to discarding embryos and destroying lives.
>
> […]When Becky and Chris Henderson decided to use in vitro to start their family, they decided to keep their 11 unused embryos on ice because they believed life began at conception. Now another family has been blessed by the Henderson's unused embryos.

They link to this story from the Christian Post for more:

> Two couples have been blessed by one couple's decision to donate their unused embryos and adopt them out to other couples in need.
>
> "We have been blessed with three when we didn't think we'd have one, so, what kind of awesome thing is it to bless another couple and let them experience the same kind of joy we did?" Becky Henderson told USA Today.
>
> Henderson and husband Chris gave birth to twins via in vitro fertilization and then had a "miracle baby" five years later. After the twins were born, the couple still had 11 embryos frozen; they decided to keep them on ice until they could come to a decision about what they wanted to do. They both believe that life begins at conception, so they decided to place the embryos up for adoption. Eventually, they found Kelli and Dan Gassman, who were looking to have a family of their own.
>
> The four decided to have an "open adoption" and after the Gassmans welcomed son Trevor and, two years later, daughter Aubrey, they still remain close. They share pictures of the children, who are biologically related.
>
> "It was kind of like a joining of hearts," Gassman said.
>
> "Having an open adoption with communication helps you get over the fears and the doubts," Becky said. "The what-ifs? It helps get beyond that."
>
> Now that the Gassmans have their own children, they have returned the remaining unused embryos to the Hendersons. The Hendersons have found another family to help and will continue to do so until all of the embryos are used.

One of the reasons why I blogged about infertility yesterday is because I wanted to people to plan to marry early and about using IVF. The trouble with IVF, as the Life News article notes, is that there are often leftover embryos. Most people, as they noted, just discard the extra embryos, but this is wrong. Each embryo is a distinct genetic code for a male or female human being. Each one is a boy or a girl. Each one has a right to life equal to any able-bodied adult. You and I were all embryos when we were started off. So in order to avoid having to make tough decisions

with these extra embryos, I recommend that people plan to marry earlier and have children normally.

# Can relationships succeed independently from the efforts of the people involved?

**Wintery Knight** · 15 January 2015 · Archived copy · Original

A few days ago, I blogged about the soul mate / fairy tale view of marriage, which I think is the dominant view of marriage among young people today. This view of marriage basically says that there is a person in the world out there who will match up so perfectly with each one of us that we will have to expend no effort and perform no actions and take responsibility for nothing in order for the relationship to work.

I've decided to link to this recent article by Matt Walsh which is on that same topic.

He writes:

> The disease is the fanciful, unrealistic, fictionalized perceptions that both males and females harbor about marriage.
>
> For example, think of the glamorization of the "mysterious" and "damaged" guy from the "wrong side of the tracks." Hollywood makes him seem alluring and sexy, but forgets to mention that most of the time, in the real world, that dude probably has herpes, a coke habit, and a criminal record.
>
> Still, that bit of propaganda is nothing compared to the underlying misconception that so many of us carry around consciously or subconsciously, because we've seen it on TV and in the movies, and read it in books a million times since childhood: namely, that there is just *one* person out there for us. Our soul mate. Our Mr. or Mrs. Right. The person we are "meant to be with."

Matt thinks this view of relationships is not realistic:

> I didn't marry my wife because she's The One, *she's The One because I married her*. Until we were married, she was one, I was one, and we were both one of many. I didn't marry The One, I married *this* one, and the two of us *became* one. I didn't marry her because I was "meant to be with her," I married her because that was my choice, and it was her choice, and the Sacrament of marriage is that choice. I married her because I love her — I chose to love her — and I chose to live the rest of my life in service to her. We were not following a script, we chose to write our own, and it's a story that contains more love and happiness than any romantic fable ever conjured up by Hollywood.
>
> Indeed, marriage is a decision, not the inevitable result of unseen forces outside of our control. When we got married, the pastor asked us if we had "come here freely." If I had said, "well, not really, you see destiny drew us together," that would have brought the evening to an abrupt and unpleasant end. Marriage has to be a free choice or it is not a marriage. That's a beautiful thing, really.
>
> God gave us Free Will. It is His greatest gift to us because without it, nothing is possible. Love is not possible without Will. If we cannot choose to love, then we cannot love. God did not program us like robots to be compatible with only one other machine. He created us as individuals, endowed with the incredible, unprecedented power to choose. And with that choice, we are to go out and find a partner, and make that partner our soul mate.
>
> That's what we do. We *make* our spouses into our soul mates by marrying them. We don't simply recognize that they are soul mates and then just sort of symbolically consecrate that recognition through what would then be an effectively meaningless marriage sacrament. Instead, we find another unique, dynamic, wholly individualized human being, and we make the monumental, supernatural decision to bind ourselves to them for eternity.
>
> **It's a bold and risky move, no matter how you look at it. It's important to recognize this, not so that you can run away like a petrified little puppy and never tie the knot with anyone, but so that you can go into**

> **marriage knowing, at least to some extent, what you're really doing. This person wasn't made for you. It wasn't "designed" to be. There will be some parts of your relationship that are incongruous and conflicting. It won't all click together like a set of Legos, as you might expect if you think this coupling was fated in the stars.**
>
> **It's funny that people get divorced and often cite "irreconcilable differences." Well what did they think was going to happen? Did they think *every* difference would be reconcilable? Did they think every bit of contention between them could be perfectly and permanently solved?**

Finally, regarding his own marriage:

> There were literally millions of things that either of us could have done. An innumerable multitude of possible outcomes, but this was *our* outcome because we *chose* it. Not because we were destined or predetermined, not because it was "meant to happen," but because we chose it. That, to me, is much more romantic than getting pulled along by fate until the two of us inevitably collide and all that was written in our horoscopes passively comes to unavoidable fruition.
>
> **We are the protagonists of our love story, not the spectators.**

I think that when problems arise between two people who are largely compatible, the right thing to do is to engage and solve the problems. Yes, work isn't required in pop culture notions of romance, but those things don't reflect the real world anyway. In the real world, actions to solve a problem count for more than words that avoid the problem. Engineering principles and self-sacrificial attitude are infinitely more useful in a relationship than all the pop culture descriptions of ideal men and ideal women and ideal relationships combined. Why would you believe a bunch of promiscuous, self-centered, materialistic Hollywood people anyway?

# New study: Politifact fact-checker is biased against Republicans

**Wintery Knight** · 16 January 2015 · Archived copy · Original

How accurate is the fact-checking site Politifact, a project of the Tampa Bay Times newspaper?

The Weekly Standard reports on a recent study from George Mason University.

Excerpt:

> The Center for Media and Public Affairs (CMPA) at George Mason University is out with a new study on media fact checkers, and unsurprisingly, their results suggest that PolitiFact has it out for Republicans. Dylan Byers at *Politico* summarized CMPA's findings:
>
> > The fact-checking organization PolitiFact has found Republicans to be less trustworthy than Democrats, according to a new study.
> >
> > Fifty-two percent of Republican claims reviewed by the Tampa Bay Times fact-checking operation were rated "mostly false," "false" or "pants on fire," versus just 24 percent of Democratic statements, according to George Mason University's Center for Media and Public Affairs. By the same token, 54 percent of Democratic statements were rated as "mostly true" or "true," compared to just 18 percent of Republican statements.
> >
> > The CMPA looked at 100 statements — 46 by Democrats, 54 by Republicans — that were fact-checked by PolitiFact between January 20 and May 22.
>
> […]This is also not the first academic study that concluded PolitiFact might be putting their thumb on the scale when it comes to selecting and evaluating political statements. Last year, during the height of campaign season, the CMPA tallied up PolitiFact ratings. That study also showed PolitiFact tends to be much harder on Republicans:
>
> > The study examined 98 election-related statements by the presidential candidates, their surrogates, and campaign ads fact-checked by PolitiFact.com from June 1 to September 11. Major findings:
> >
> > PolitiFact checked the assertions of Democrats slightly more often than those of Republicans (54% vs. 46% of all statements).
> >
> > However, PolitiFact rated Democratic statements as "mostly true" or "entirely true" about twice as often as Republican statements — 42% true ratings for Democrats vs. 20% for Republicans.
> >
> > Conversely, statements by Republicans were rated as entirely false about twice as often as Democratic statements – 29% false ratings for GOP statements vs. 15% false ratings for Democrats. (This includes categories labeled "false" and "pants on fire.")
>
> Further, the University of Minnesota School of Public Affairs looked at over than 500 PolitiFact stories from January 2010 through January 2011. Their conclusion:
>
> > Current and former Republican officeholders have been assigned substantially harsher grades by the news organization than their Democratic counterparts. In total, 74 of the 98 statements by political figures judged 'false' or 'pants on fire' over the last 13 months were given to Republicans, or 76 percent, compared to just 22 statements for Democrats (22 percent).

In other words, they are cherry-picking statements that are false for Republicans and true for Democrats. But maybe that's just because Republicans lie more than Democrats right before an election? Maybe, just before an

election, Republicans suddenly start to lie uncontrollably while Democrats suddenly start to tell the truth all the time?

Let's take a look at one famous case and see.

This is from Avik Roy, health care policy expert at Forbes magazine.

**2008 PolitiFact before the election: 'We rate his statement True'**

Roy writes: (links removed)

> On October 9, 2008, Angie Drobnic Holan of PolitiFact published an article using the site's "Truth-O-Meter" to evaluate this claim: "Under Barack Obama's health care proposal, 'if you've got a health care plan that you like, you can keep it.'" The article assures us in its headline that "Obama's plan expands [the] existing system," and continues that "Obama is accurately describing his health care plan here…It remains to be seen whether Obama's plan will actually be able to achieve the cost savings it promises for the health care system. But people who want to keep their current insurance should be able to do that under Obama's plan. His description of his plan is accurate, and we rate his statement True."
>
> The 2008 Obama plan, among other things, sought to transform the individual insurance market; it proposed to bar insurers from charging different premiums to the healthy and the sick, and to require them to offer plans to all comers, regardless of prior health status. According to PolitiFact, however, there was no need to worry that these provisions would be disruptive to existing health plans.
>
> As per PolitiFact's usual M.O., Holan didn't seek out any skeptical health-policy experts to suss out the veracity of Senator Obama's signature claim. Instead, its sources included Jonathan Cohn, a passionate Obamacare supporter at *The New Republic*, and various interviews and statements of Mr. Obama. Holan simply took the "keep your plan" promise at face value, dismissing as dishonest anyone who dared suggest that Obama's claim would be impossible to keep. "His opponents have attacked his plan as 'government-run' health care," she wrote, the scare-quotes around "government-run" being visible to all.
>
> PolitiFact's pronouncements about Obamacare were widely repeated by pro-Obama reporters and pundits, and had a meaningful impact on the outcome of the election. Indeed, in 2009, PolitiFact won the Pulitzer Prize for its coverage of the 2008 campaign.

Here's the screen capture from 2008:

Politifact caught with its pants on fire

**2013 PolitiFact after the election: 'We rate his statement Pants On Fire'**

Roy writes: (links removed)

> On December 12, [2013] the self-appointed guardians of truth and justice at PolitiFact named President

> Obama's infamous promise—that "if you like your health care plan, you can keep it"—its 2013 "Lie of the Year."
>
> […]So that brings us back to the fall of 2013. As Obamacare's battle station became operational, and tens of millions of health plans became illegal, PolitiFact was caught with its flaming pants down. Louis Jacobson rapped Valerie Jarrett for tweeting that "nothing in Obamacare forces people out of their health plans"—a claim Jacobson rated as "False," even though PolitiFact had rated it as "True" and "Half True" before.
>
> On November 4, Jacobson rated as "Pants on Fire" the President's new claim that "what we said was, you can keep [your plan] if it hasn't changed since the law passed." Both pieces were edited by Angie Drobnic Holan, who had initially granted PolitiFact's seal of approval to Senator Obama's 2008 promise. Holan delivered the *coup de grâce*, declaring as PolitiFact's "Lie of the Year" the "keep your plan" promise.
>
> "The promise was impossible to keep," says Holan in her December piece. Now she tells us! But none of the key facts that made that promise "impossible" in 2008 had changed by 2013. The President's plan had always required major disruption of the health insurance market; the Obamacare bill contained the key elements of that plan; the Obamacare law did as well. The only thing that had changed was the actual first-hand accounts of millions of Americans who were losing their plans now that Obamacare was live.

And the screen capture from 2013:

The article:

**Lie of the Year: 'If you like your health care plan, you can keep it'**

By Angie Drobnic Holan
Published on Thursday, December 12th, 2013 at 4:44 p.m.

It was a catchy political pitch and a chance to calm nerves about his dramatic and complicated plan to bring historic change to America's health insurance system.

"If you like your health care plan, you can keep it," President Barack Obama said -- many times -- of his landmark new law.

But the promise was impossible to keep.

So this fall, as cancellation letters were going out to approximately 4 million Americans, the public realized Obama's breezy assurances were wrong.

Related rulings:

"What we said was, you can keep (your plan) if it hasn't changed since the law passed."
Barack Obama, Monday, November 4th, 2013.
Ruling: Pants on Fire! | Details

"FACT: Nothing in #Obamacare forces people out of their health plans."
Valerie Jarrett, Monday, October 28th, 2013.

Politifact says: we were just kidding! Kidding!
So when Politifact rates a statement by a Democrat as true, what they really mean is that it's pants-on-fire-false, but it's election time so they don't say that.

The Tampa Bay Times. Politifact. It's a catchy name, isn't? It's telling us the Facts about Politics. I suppose the same people who think that Politifact is a reliable fact checker also believe that the Affordable Care Act would lower premiums by $2500, as Obama said. It actually raised them $3000 in objective reality, though. But it says Affordable Care Act in the name, so missing the target by $5500 must be "affordable".

I think this case demonstrates how people on the political left allow their emotions to overturn objective reality. You can keep your doctor. You can keep your health plan. Benghazi was caused by a Youtube video. The e-mails and e-mail backups of all the IRS employees were lost. The Department of Justice did not target Associated Press journalists. The assault weapons were not gun-walked to Mexican drug cartels. *They will believe anything that makes them feel superior and noble, even pinned down by the heavy weight of countervailing facts.*

# Is Fox News biased? Two peer-reviewed studies shed light on news media bias

**Wintery Knight** · 16 January 2015 · Archived copy · Original

Let's take a look at peer-reviewed academic studies of media bias and see whether Fox News is biased.

Here's a UCLA study on media bias.

Excerpt:

> Of the 20 major media outlets studied, 18 scored left of center, with CBS' "Evening News," The New York Times and the Los Angeles Times ranking second, third and fourth most liberal behind the news pages of The Wall Street Journal.
>
> Only Fox News' "Special Report With Brit Hume" and The Washington Times scored right of the average U.S. voter.
>
> The most centrist outlet proved to be the "NewsHour With Jim Lehrer." CNN's "NewsNight With Aaron Brown" and ABC's "Good Morning America" were a close second and third.
>
> "Our estimates for these outlets, we feel, give particular credibility to our efforts, as three of the four moderators for the 2004 presidential and vice-presidential debates came from these three news outlets — Jim Lehrer, Charlie Gibson and Gwen Ifill," Groseclose said. "If these newscasters weren't centrist, staffers for one of the campaign teams would have objected and insisted on other moderators."
>
> The fourth most centrist outlet was "Special Report With Brit Hume" on Fox News, which often is cited by liberals as an egregious example of a right-wing outlet. While this news program proved to be right of center, the study found ABC's "World News Tonight" and NBC's "Nightly News" to be left of center. All three outlets were approximately equidistant from the center, the report found.
>
> "If viewers spent an equal amount of time watching Fox's 'Special Report' as ABC's 'World News' and NBC's 'Nightly News,' then they would receive a nearly perfectly balanced version of the news," said Milyo, an associate professor of economics and public affairs at the University of Missouri at Columbia."

Here's a Harvard University study on media bias.

Excerpt:

> The programming studied on Fox News offered a somewhat more positive picture… of Republicans and more negative one of Democrats compared with other media outlets. Fox News stories about a Republican candidate were most likely to be neutral (47%), with the remainder more positive than negative (32% vs. 21% negative). The bulk of that positive coverage went to Giuliani (44% positive), while McCain still suffered from unflattering coverage (20% positive vs. 35% negative).
>
> When it came to Democratic candidates, the picture was more negative. Again, neutral stories had a slight edge (39%), followed by 37% negative and 24% positive. And, in marked contrast from the rest of the media, coverage of Obama was twice as negative as positive: 32% negative vs. 16% positive and 52% neutral.
>
> But any sense here that the news channel was uniformly positive about Republicans or negative about Democrats is not manifest in the data."

From the Washington Examiner, a study of the political contributions made by the mainstream media.

Excerpt:

> Senior executives, on-air personalities, producers, reporters, editors, writers and other self-identifying employees of ABC, CBS and NBC contributed more than $1 million to Democratic candidates and campaign committees in 2008, according to an analysis by *The Examiner* of data compiled by the Center for Responsive Politics.
>
> The Democratic total of $1,020,816 was given by 1,160 employees of the three major broadcast television networks, with an average contribution of $880.
>
> By contrast, only 193 of the employees contributed to Republican candidates and campaign committees, for a total of $142,863. The average Republican contribution was $744.
>
> […]The data on contributions by broadcast network employees was compiled by CRP at the request of *The Examiner* and included all 2008 contributions by individuals who identified their employer as one of the three networks or subsidiaries. The data does not include contributions by employees of the three networks who did not identify their employer.
>
> The CRP is the organization behind OpenSecrets.org, the web site that for more than a decade has put campaign finance data within reach of anybody with an Internet connection.
>
> President Obama received 710 such contributions worth a total of $461,898, for an average contribution of $651 from the network employees. Republican presidential nominee Sen. John McCain received only 39 contributions totaling $26,926, for an average donation of $709.

And more from a study done by the radically leftist MSNBC.

Excerpt:

> MSNBC.com identified 143 journalists who made political contributions from 2004 through the start of the 2008 campaign, according to the public records of the Federal Election Commission. Most of the newsroom checkbooks leaned to the left: 125 journalists gave to Democrats and liberal causes. Only 16 gave to Republicans. Two gave to both parties.
>
> The donors include CNN's Guy Raz, now covering the Pentagon for NPR, who gave to Kerry the same month he was embedded with U.S. troops in Iraq; New Yorker war correspondent George Packer; a producer for Bill O'Reilly at Fox; MSNBC TV host Joe Scarborough; political writers at Vanity Fair; the editor of The Wall Street Journal's weekend edition; local TV anchors in Washington, Minneapolis, Memphis and Wichita; the ethics columnist at The New York Times; and even MTV's former presidential campaign correspondent.

Those are the facts.

**So what?**

Now consider this column from Brent Bozell, which explains the difference media bias makes to political intelligence.

Excerpt:

> **A 2008 survey by the Pew Research Center asked media consumers three questions: which party was in control of Congress (Democrats), who was the secretary of state (Condi Rice) and who was the prime minister of Britain (Gordon Brown).**
>
> **Let's document how the viewers of "Hannity & Colmes" were better informed than Stewart's "Daily Show" gigglers on basic political facts. Hannity viewers beat Stewart's on the Democratic majority (84 percent to 65 percent correct answers), Condi Rice (a dramatic 73 percent to 48 percent gap) and Gordon Brown (49 percent to 36). Overall, as a percentage getting all three questions right, Hannity won 42-30.**

Just keep that in mind when you are watching the mainstream media news shows. A very good site to bookmark and read is Newsbusters, which documents mainstream media bias daily.

# What do the adult children of gay couples think about same-sex marriage?

**Wintery Knight** · 16 January 2015 · Archived copy · Original

This is from Life Site News.

Excerpt: (links removed)

> Katy Faust, Dawn Stefanowicz, B.N. Klein, and Robert Oscar Lopez, who were all raised by homosexual parents, each submitted briefs to the 5th Circuit opposing the legalization of same-sex "marriage." Recounting childhood memories of households made deeply dysfunctional by their parents' sexual appetites and the radical subculture that went along with their "gay" identities, all four argued that redefining marriage to include homosexual couples will likely lead to the exploitation and abuse of countless children for political and personal gain.
>
> "I grew up with a parent and her partner[s] in an atmosphere in which gay ideology was used as a tool of repression, retribution and abuse," wrote B.N. Klein of her lesbian mother and her series of live-in lovers. "I have seen that children in gay households often become props to be publically [sic] displayed to prove that gay families are just like heterosexual ones."
>
> […]While Klein classified her upbringing as abusive, Robert Oscar Lopez told the court that his own childhood upbringing by his mother and her longtime partner represented the "best possible conditions for a child raised by a same-sex couple." Even so, Lopez testified that the lack of a father figure in his life, combined with the influence of the radical gay culture in which he was raised, gave rise to a devastating confusion about his own sexuality and ultimately led to his becoming a homosexual prostitute in his teen years in order to fulfill his craving for acceptance and love from older men.
>
> […]Katy Faust also testified that children of homosexuals are intimidated into silence by gay activists who threaten them with public shaming, job interference, and worse for daring to speak out against same-sex "marriage."
>
> "Some adult children with gay parents shy away from making their thoughts about marriage public because we do not want to jeopardize our relationships with those to whom our hearts are tethered," Faust wrote. "Unfortunately, many gay-marriage lobbyists have made gay marriage the sole badge of loyalty to our LGBT family and friends."
>
> […]Dawn Stefanowicz echoed the sentiments of the other three, in a frank and graphic testimony of her childhood with a promiscuous homosexual father who later died of AIDS.
>
> […]"As children, we are not allowed to express our disagreement, pain and confusion," wrote Stefanowicz. "Most adult children from gay households do not feel safe or free to publicly express their stories and life-long challenges; they fear losing professional licenses, not obtaining employment in their chosen field, being cut off from some family members or losing whatever relationship they have with their gay parent(s). Some gay parents have threatened to leave no inheritance, if the children don't accept their parent's partner *du jour*."

Read the whole thing.

That's just four people, but I want to see a real study.

The Public Discourse reports on a recent study out of Canada.

Excerpt:

> A new academic study based on the Canadian census suggests that a married mom and dad matter for children. Children of same-sex coupled households do not fare as well.

> There is a new and significant piece of evidence in the social science debate about gay parenting and the unique contributions that mothers and fathers make to their children's flourishing. A study published last week in the journal *Review of the Economics of the Household*—analyzing data from a very large, population-based sample—reveals that the children of gay and lesbian couples are only about 65 percent as likely to have graduated from high school as the children of married, opposite-sex couples. And gender matters, too: girls are more apt to struggle than boys, with daughters of gay parents displaying dramatically low graduation rates.
>
> Unlike US-based studies, this one evaluates a 20 percent sample of the Canadian census, where same-sex couples have had access to all taxation and government benefits since 1997 and to marriage since 2005.
>
> While in the US Census same-sex households have to be guessed at based on the gender and number of self-reported heads-of-household, young adults in the Canadian census were asked, "Are you the child of a male or female same-sex married or common law couple?" While study author and economist Douglas Allen noted that very many children in Canada who live with a gay or lesbian parent are actually living with a single mother—a finding consonant with that detected in the 2012 New Family Structures Study—he was able to isolate and analyze hundreds of children living with a gay or lesbian *couple* (either married or in a "common law" relationship akin to cohabitation).
>
> So the study is able to compare—side by side—the young-adult children of same-sex couples and opposite-sex couples, as well as children growing up in single-parent homes and other types of households. Three key findings stood out to Allen:
>
> children of married opposite-sex families have a high graduation rate compared to the others; children of lesbian families have a very low graduation rate compared to the others; and the other four types [common law, gay, single mother, single father] are similar to each other and lie in between the married/lesbian extremes.
>
> Employing regression models and series of control variables, Allen concludes that the substandard performance *cannot* be attributed to lower school attendance or the more modest education of gay or lesbian parents. Indeed, same-sex parents were characterized by higher levels of education, and their children were more likely to be enrolled in school than even those of married, opposite-sex couples. And yet their children are notably more likely to lag in finishing their own schooling.

With a little digging, I found the abstract of the study.

The author of the study is a professor of economics at Simon Fraser University in British Columbia. His PhD in economics is from the University of Washington.

A previous study had shown that gay relationships typically have far more instability (they last for more shorter times). That's not good for children either. Another study featured in the Atlantic talked about how gay relationships have much higher rates of domestic violence. That's not good for children either. So we have three reasons to think that redefining "marriage" would not be good for children.

# Does premarital sex increase the chances of divorce?

**Wintery Knight** · 17 January 2015 · Archived copy · Original

I've posted before about how premarital sex wrecks the stability of marriages by making divorce more likely. And I wanted to begin this post by showing that this is not a controversial point in the research.

Here another good study on relationship tempo and relationship quality.

Abstract:

> *Rapid sexual involvement may have adverse long-term implications for relationship quality. This study examined the tempo of sexual intimacy and subsequent relationship quality in a sample of married and cohabiting men and women. Data come from the Marital and Relationship Survey, which provides information on nearly 600 low- to moderate-income couples living with minor children. Over one third of respondents became sexually involved within the first month of the relationship. Bivariate results suggested that delaying sexual involvement was associated with higher relationship quality across several dimensions. The multivariate results indicated that the speed of entry into sexual relationships was negatively associated with marital quality, but only among women. The association between relationship tempo and relationship quality was largely driven by cohabitation. Cohabiting may result in poorer quality relationship because rapid sexual involvement early in the romantic relationship is associated with entrance into shared living.*

The authors are from Cornell University and University of Wisconsin – Madison. Hardly bastions of conservatism! This is not complicated, this is black and white.

Here's another recent study that shows that if a woman has more than her husband as a premarital sex partner, her risk of divorce increases.

His findings:

> Using nationally representative data from the 1995 National Survey of Family Growth, I estimate the association between intimate premarital relationships (premarital sex and premarital cohabitation) and subsequent marital dissolution. I extend previous research by considering relationship histories pertaining to both premarital sex and premarital cohabitation. I find that premarital sex or premarital cohabitation that is limited to a woman's husband is not associated with an elevated risk of marital disruption. **However, women who have more than one intimate premarital relationship have an increased risk of marital dissolution.**

Here's another study that makes it even more clear.

Findings:

> Data from the 1988 US National Survey of Family Growth (NSFG) were utilized to assess the impact of premarital sexual activity on subsequent marital stability. **Among white NSFG subjects first married in 1965-85, virgin brides were significantly less to have become separated or divorced (25%) than women who had not been virgins at marriage (35%).**
>
> **[…]The lower risk of divorce on the part of white women with no premarital sexual experience persisted even after numerous intervening and background variables were controlled.**

This study supports what the Bible says about chastity and premarital sex:

> 1 Cor. 7:8-9:
>
> 8 To the unmarried and the widows I say that it is good for them to stay single as I am.

> 9 But if they cannot exercise self-control, they should marry. For it is better to marry than to burn with passion.
>
> The idea of "burning" here has to do with sexual desire. Here Paul tells all unmarried people that if they cannot control their sexual desires, they need to get married. Why? Because Paul assumes that one cannot fulfill this sexual desire outside of the marital bed. While Paul would love for them to remain single (1 Cor. 7:7), he believes that sex outside of marriage is a destructive sin and *cannot* be used as a gratifying release of our sexual passions.

Now despite studies supporting the Biblical prohibition on premarital sex, Christians are actually embracing it. Why is that? Well, church pastors are very, very set in the idea that the Bible is *assumed* to be inerrant in church, and they feel that supporting what the Bible says with actual evidence is "putting evidence at the same level as the Bible". That's their approach – don't confirm the Bible with evidence, just tell people to *assume* that the Bible is true, and tell them to believe it, in the face of mounting culture pressure, secular policies and a resurgence of atheism.

**What about "The Bible Says"?**

Take a look at this review by a pious pastor of a recent apologetics book, if you don't believe me.

Excerpt:

> *Cold-Case Christianity* places far too much emphasis on the role of extrabiblical sources. No doubt there is a legitimate role for biblical archaeology and extrabiblical writing from antiquity. Christianity is, after all, a faith firmly rooted in human history. But there is a grave danger when truth is suspended because of an apparent lack of corroboration from extrabiblical sources. And Wallace, I'm afraid, wanders too close to this dark side of apologetics.
>
> All of chapter 12, for instance, is devoted to proving the Gospels have external corroborative evidence—"evidence that are independent of the Gospel documents yet verify the claims of the text" (183). Wallace then addresses the historicity of the pool of Bethesda and makes another worrying statement: "For many years, there was no evidence for such a place outside of John's Gospel. Because Christianity makes historical claims, archaeology ought to be a tool we can use to see *if these claims are, in fact, true*" (201-202, emphasis added).
>
> In other words, Wallace seems to suggest we cannot affirm the truth of the Gospel accounts without the stamp of approval from archaeology and other extrabiblical sources. Such reasoning is dangerous, not least because it cannot affirm the inerrancy of the Bible. But also, it places the final court of appeal in the realm of extrabiblical sources rather than of God's all-sufficient, all-powerful Word.

So does the approach of Bible-thumping church pastors work? Are young people really convinced by proclamations and assertions, piously expressed?

**Majority of Christians embrace premarital sex**

Consider this article that Dina tweeted from the Christian Post.

Excerpt:

> [A] new Christian Mingle study suggests that it is increasingly commonplace for Christians to sleep together outside of a marital context.
>
> In a survey of 716 Christians released in January, only 11 percent said they save sex exclusively for marriage. Instead, 60 percent said they would be willing to have sex without any strings attached, while 23 percent said they would have to be "in love." Five percent said they would wait to get engaged.

> This data supports a 2011 Relevant Magazine poll that revealed that 80 percent of "young, unmarried Christians have had sex" and that "two-thirds have been sexually active in the last year."
>
> While the findings of a 2012 National Association of Evangelicals (NAE) and Grey Matter Research poll did not show outcomes as high as the two previous polls, according to its research, 44 percent of unmarried evangelicals between ages 18-29 said that they had sex, including 25 percent who said they had had sex in the last three months.

You know, if just invoking the Bible piously, and asserting that it's without error, were enough, then that's what you'd see people like William Lane Craig doing in debates at the top universities when he faces off against atheists. But he doesn't do that. Dr. Craig appeals to evidence outside the Bible in order to explain why the Bible ought to be respected when we make our decisions. There is no such thing as pious fideism when you are in front of a crowd of students at a major secular university. Young people, no matter how "nice" they behave in church, are not going to behave like Christians outside of church.

When the kids get to college, they are going to face a tsunami of propaganda from the pro-sexual-immmorality crowd. (WARNING: that link describes what happens during "Sex Week" on college campuses. Reader discretion is advised!) They need to be able to explain their views using something other Bible verse memorization, or they are going to fall away under peer pressure and shaming by secular leftist professors. And they need to have that information BEFORE they get inundated with alcohol and peer pressure.

By the way, another great book on the topic of premarital sex is "Hooked: New Science on How Casual Sex is Affecting Our Children" by Joe S. McIlhaney Jr., M.D. and Freda McKissic Bush, M.D. Again – look at the research and be persuaded, and be persuasive with others. Don't try to use appeals to piety when evidence works better.

# Courage under fire: Ronald Speirs and Easy Company at the Battle of Foy

**Wintery Knight** · 17 January 2015 · Archived copy · Original

I try to occasionally post something that shows a particularly brave action from some time and place in military history. For example, I previously wrote about Medal of Honor winner Michael Murphy in 2011. Last year, his story was told more widely in the movie "Lone Survivor", which I recommend to everyone. Today I want to highlight another hero: Ronald Speirs.

It is January 1945 and the famous "Screaming Eagles", the 101st Airborne division, are about to turn the tide of the Battle of the Bulge in Bastogne.

Let's read about the Battle of Foy courtesy of a scenario description from the wargame "Flames of War". (Note: LMG = light machine gun, in this case, a .30 caliber machine gun)

Excerpt:

> E or 'Easy' Company, 2nd Battalion, 506th Parachute Infantry Regiment, 101st Airborne Division, like the rest of the division, was ordered on to the attack on 9 January 1945 as part of a general offensive to drive back the Germans from Bastogne. In the following days the 506th Regiment, along with the 501st Parachute Infantry Regiment, cleared the forests around the town of Foy and pushed the Germans out. Their next objective was to take Foy to allow the 11th Armored Division to attack from Foy across the fields northeast towards Noville.
>
> […]At 0900 hours on 13 January Easy Company attacked along the western edge of Foy, along the road. The new year had brought heavy snow and the it blanketed the ground and had reduced temperatures to well below zero. 2nd Battalion commander, Captain Dick Winters, had two section of LMGs deployed on the edge of the woods facing Foy to give Easy Company covering fire while they crossed the 250 yards of open field between the forest and Foy's buildings. There were just a few scattered trees and haystacks to give cover. As Easy Company advance the covering fire did its job, limiting the fire on the paratroopers to sporadic rifle shots. The approach on Foy made good pace under the cover of the LMG fire, but about 75 yards out from the edge of the village the skirmish line halted and the paratroopers hunkered down in the snow. Captain Winters stared in disbelief, wondering what was going on.
>
> Lieutenant Dike, who was commanding Easy Company, had been overwhelmed with indecision. It became obvious to Winters that Dike didn't know what he was doing, or had had a failure of confidence. His immediate impulse was to take command himself, but he noticed Lieutenant Ronald Speirs, a capable platoon commander from D Company, standing nearby. Winters ordered Speirs to take command of Easy Company and get the attack moving again. What Speirs did next amazed many of the paratroopers who witnessed it.
>
> **On receiving his orders from Winters, Speirs immediately ran at full speed down to where Dike and his HQ had taken cover behind a haystack and told Dike his orders, 'I'm here to take over'. After quickly being told of the situation by the NCOs he ran off towards Foy. The men of Easy Company immediately followed. On reaching the outskirt buildings of Foy, Speirs immediately sought to link up with I Company of 3rd Battalion who, despite only having 25 men, were supporting the attack from the other flank of Foy. He set off running again, through the German lines, to find I Company's commander. After consulting with its commander, Captain Gene Brown, he turned around and dashed back through Foy and the surprised Germans. Through all this the enemy fired on him with machine-guns, rifles and guns, but not a single shot hit its mark.**

Now with all that said, watch the two clips below, and pay close attention the faces of the men under Lieutenant Dike, and then later under Lieutenant Speirs. Pay close attention to how Speirs' courage inspires the men under him to also be courageous. Especially First Sergeant Lipton, who later risks his own life to draw fire from a German

sniper so that Shifty Powers can prevent any other troops from being killed by the sniper.

The two clips are from "Band of Brothers", the episode entitled "The Breaking Point". There is some coarse language, but no sexual language in it. Really, if you are squeamish, do not watch it. However, if you can handle it, then buy the whole DVD set. It will inspire you, and help you to do things that you didn't think were possible. If you really want to understand the men of E Company, you can read a book by Stephen E. Ambrose called *Band of Brothers: E Company, 506th Regiment, 101st Airborne from Normandy to Hitler's Eagle's Nest* (New York, 1992).

**Low resolution clip, includes briefing at the beginning**

This video is lower resolution, but show Winters reflecting on how Lipton had asked him not to let Dike lead the attack the night before, and also Winters carefully explaining to Dike that the American attack has to *keep moving* or they will get pinned down by machine guns and zeroed-in by mortars and destroyed.

I like that one because it shows the briefing, but the next clip is in 720HD.

**High resolution clip, does not include briefing**

This is a higher resolution version that is only 8.5 minutes long, but doesn't have the briefing.

If you listen closely when Speirs explains what everyone is going to do, you can here one of the NCOs say "thank God" as he pats the other on the back.

**Leadership**

To be a good military leader, you have to know many things. A knowledge of strategy and tactics, a knowledge of military history, the ability to see the battlefield, knowledge of your opponent, knowledge of weapons, and so on. But surely the greatest of these is courage. As Von Clausewitz says in his famous book "On War", "War is the province of danger, and therefore courage above all things is the first quality of a warrior." Nothing inspires troops like a commander who is willing to take on the same risks that he asks his troops to take.

Take a look at this article from the Ivey School of Business journal, which talks about the characteristics of Canadian generals in Afghanistan.

Excerpt:

**A leader must be in front of subordinates**. This takes courage. Leadership from the front encapsulates the adage, *never ask a subordinate to do something that you, the leader, wouldn't do*. In Afghanistan, the leader must not only be in front, but he or she must *be seen* to be in front. Subordinates seek this reassurance from their leaders at all levels. Though they may be tentative, leaders must demonstrate character and moral strength. Their credibility is inextricably dependent on their ability to do so.. During his frequent visits to Afghanistan, former Chief of Defence Staff (CDS), General Rick Hillier, made a point of visiting troops that were situated in some of the most IED-laden areas of the Canadian sector. Through his demonstrated courage, he inspired leaders of all levels. "If the CDS goes there, so can I" was the resulting mindset. The current CDS, General Walt Natynczyk, has successfully continued this practice.

[…]All leaders need courage. It is the lynchpin of effective leadership. No one respects a wimp who will buy in to any idea no matter how inane it might be. Courage is having the strength of character to persist and hold on to ideas in the face of opposition. Here, I'm not restricting my treatment of courage as it relates to fear. It's also about strength of character and devotion to causes and ideas.

As Christians, we have a leader who led by example. We all need to learn to not be so concerned with looking out for ourselves and our happiness first, but to instead be willing to take risks and sacrifice ourselves to do the right thing. We Christians should all be courageous, because we are led by a courageous leader.

That doesn't necessarily mean going halfway across the world, it can mean reaching out to someone right there next to you who needs your help and support. Maybe that person has been running on an empty tank for a long time, but

still trying to do the right thing. You never know when the opportunity to do something amazing will arise, but you won't take it if you keep thinking of how you might get hurt. You have to reconcile yourself that you are not here to avoid every possible kind of suffering. It doesn't mean that you take unnecessary risks, but it does mean *not letting fear stop you from doing the right thing*.

Now get out there and take that attack on in.

# A simple case for the pro-life position by Scott Klusendorf

**Wintery Knight** · 18 January 2015 · Archived copy · Original

Are you able to make a basic case for the pro-life view?

Here's a short 38-lecture by Scott Klusendorf, president of the Life Training Institute.

This is a long treatment that talks about the challenge of moral relativism and the case for the pro-life view. He does show a clip of abortion in the video to the audience.

There's also a 35-minute audio recording of Scott on the LTI web site. (H/T Apologetics 315) You can put that on your podcast player and listen to it. Listen to it a lot and soon you'll sound like Scott.

Scott also has an article posted on the LTI web site for those who don't have time for the video or the audio.

In the article makes three points:

1. **Clarify the issue**
2. **Defend your pro-life position with science and philosophy**
3. **Challenge your listeners to be intellectually honest**

Here's the second point:

> Scientifically, we know that from the earliest stages of development, the unborn are distinct, living, and whole human beings. Leading embryology books confirm this.[2] For example, Keith L. Moore & T.V.N. Persaud write, "A zygote is the beginning of a new human being. Human development begins at fertilization, the process during which a male gamete or sperm … unites with a female gamete or oocyte … to form a single cell called a zygote. This highly specialized, totipotent cell marks the beginning of each of us as a unique individual."[3] Prior to his abortion advocacy, former Planned Parenthood President Dr. Alan Guttmacher was perplexed that anyone, much less a medical doctor, would question this. "This all seems so simple and evident that it is difficult to picture a time when it wasn't part of the common knowledge," he wrote in his book *Life in the Making*.[4]
>
> Philosophically, we can say that embryos are less developed than newborns (or, for that matter, toddlers) but this difference is not morally significant in the way abortion advocates need it to be. Consider the claim that the immediate capacity for self-awareness bestows value on human beings. Notice that this is not an argument, but an arbitrary assertion. Why is some development needed? And why is this particular degree of development (i.e., higher brain function) decisive rather than another? These are questions that abortion advocates do not adequately address.
>
> As Stephen Schwarz points out, there is no morally significant difference between the embryo that you once were and the adult that you are today. Differences of size, level of development, environment, and degree of dependency are not relevant such that we can say that you had no rights as an embryo but you do have rights today. Think of the acronym **SLED** as a helpful reminder of these non-essential differences:[5]
>
> **S**ize: True, embryos are smaller than newborns and adults, but why is that relevant? Do we really want to say that large people are more human than small ones? Men are generally larger than women, but that doesn't mean that they deserve more rights. Size doesn't equal value.
>
> **L**evel of development: True, embryos and fetuses are less developed than the adults they'll one day become. But again, why is this relevant? Four year-old girls are less developed than 14 year-old ones. Should older children have more rights than their younger siblings? Some people say that self-awareness makes one human. But if that is true, newborns do not qualify as valuable human beings. Six-week old infants lack the immediate capacity for performing human mental functions, as do the reversibly comatose, the sleeping, and those with

> Alzheimer's Disease.
>
> **E**nvironment: Where you are has no bearing on who you are. Does your value change when you cross the street or roll over in bed? If not, how can a journey of eight inches down the birth-canal suddenly change the essential nature of the unborn from non-human to human? If the unborn are not already human, merely changing their location can't make them valuable.
>
> **D**egree of Dependency: If viability makes us human, then all those who depend on insulin or kidney medication are not valuable and we may kill them. Conjoined twins who share blood type and bodily systems also have no right to life.
>
> In short, it's far more reasonable to argue that although humans differ immensely with respect to talents, accomplishments, and degrees of development, they are nonetheless equal because they share a common human nature.

That's the core of the basic pro-life case right there. There's also a good interview of Mr. Klusendorf that I blogged about.

**Advanced Objections**

You can learn more by reading basic pro-life apologetics… from Francis Beckwith. You might recognize Frank Beckwith as the author of "Defending Life: A Moral and Legal Case Against Abortion Choice". He wrote that book for Cambridge University Press, a top academic press. But before Cambridge University Press, Beckwith wrote easy-to-understand essays for the Christian Research Journal.

Here are four essays that answer common arguments in favor of legalized abortion.

- Part I. The Appeal to Pity
- Part II. Arguments from Pity, Tolerance, and Ad Hominem
- Part III. Is The Unborn Human Less Than Human?
- Part IV. When Does a Human Become a Person?

Here's an excerpt from Part II:

Excerpt:

> A woman who becomes pregnant due to an act of either rape or incest is the victim of a horribly violent and morally reprehensible crime. Although pregnancy as a result of either rape or incest is extremely rare, **[1]** there is no getting around the fact that pregnancy does occur in some instances.
>
> […]Despite its forceful appeal to our sympathies, there are several problems with this argument. First, it is not relevant to the case for abortion on demand, the position defended by the popular pro-choice movement. This position states that a woman has a **right** to have an abortion for **any** reason she prefers during the entire nine months of pregnancy, whether it be for gender-selection, convenience, or rape. **[3]** To argue for abortion on demand from the hard cases of rape and incest is like trying to argue for the elimination of traffic laws from the fact that one might have to violate some of them in rare circumstances, such as when one's spouse or child needs to be rushed to the hospital. Proving an exception does not establish a general rule.
>
> […]Fourth, this argument begs the question by assuming that the unborn is not fully human. For if the unborn is fully human, then we must weigh the relieving of the woman's mental suffering against the right-to-life of an innocent human being. **And homicide of another is never justified to relieve one of emotional distress**. Although such a judgment is indeed anguishing, we must not forget that the same innocent unborn entity that the career-oriented woman will abort in order to avoid interference with a job promotion is biologically and morally indistinguishable from the unborn entity that results from an act of rape or incest. And since abortion for career advancement cannot be justified if the unborn entity is fully human, abortion cannot be justified in

> the cases of rape and incest. In both cases abortion results in the death of an innocent human life. As Dr. Bernard Nathanson has written, “The unwanted pregnancy flows biologically from the sexual act, but not morally from it.” **[5]**Hence, this argument, like the ones we have already covered in this series, is successful only if the unborn are not fully human.

Scott Klusendorf wrote the The Case for Life, which is the best book for beginners on the pro-life view. For those looking for advanced resources, Francis Beckwith, a professor at Baylor University, published the book Defending Life, with Cambridge University Press, 2007.

I found a very polished hour-long talk by Scott on Youtube. That talk was delivered to students and faculty at Furman University.

Finally, if you want to see Scott Klusendorf in a debate with a former ACLU executive, you can see it right here.

My friend Papa Georgio sent me a post that features THREE talks by Scott Klusendorf. (H/T Religio-Political Talk)

# Two kinds of people who have tried to shame me away from Christianity

**Wintery Knight** · 18 January 2015 · Archived copy · Original

I recently had two interesting encounters last week, first with a secular Jewish leftist man and second with a New Age prosperity gospel feminist Christian woman. I wasn't going to say anything about them, except that my pastor was talking this morning about how people often fall away because of the shame and scorn that is heaped on them by non-Christians. So now I'm going to say something.

So let me start with the texts he used:

2 Tim 4:1-5:

1 I charge you in the presence of God and of Christ Jesus, who is to judge the living and the dead, and by his appearing and his kingdom:

[2] preach the word; be ready in season and out of season; reprove, rebuke, and exhort, with complete patience and teaching.

[3] For the time is coming when people will not endure sound teaching, but having itching ears they will accumulate for themselves teachers to suit their own passions,

[4] and will turn away from listening to the truth and wander off into myths.

[5] As for you, always be sober-minded, endure suffering, do the work of an evangelist, fulfill your ministry.

And 1 Peter 3:15-16:

[15] but in your hearts honor Christ the Lord as holy, always being prepared to make a defense to anyone who asks you for a reason for the hope that is in you; yet do it with gentleness and respect,

[16] having a good conscience, so that, when you are slandered, those who revile your good behavior in Christ may be put to shame.

Now a quick word about those. I think the real point he was trying to make – and this is what he spoke about eloquently and passionately – is that if you have orthodox theological beliefs in this day and age then you are going to be shamed, humiliated and reviled by people. And I would go further than he did and say that it is not just having an orthodox view of who Jesus is that annoys them (e.g. – deity, exclusivity of salvation, morality, etc.). No, their disapproval spreads on into politics, especially abortion and gay marriage – basically any kind of rules around sexuality. That's what's really bugging these people, I think.

So let's talk about the two people.

**The man who thinks that conservative Christians are stupid**

The first kind of person who tried to shame me for being a Christian is the person who thinks that Christianity is stupid. This kind of person invokes things that he hears in secular leftist pop culture as if it is common knowledge that theism generally, and Christianity in particular, is false. He's watched a documentary on the Discovery channel which said that the eternally oscillating cosmology was true. Or maybe he watched a documentary on the History Channel that said that Jesus never presented himself as God stepping into history. He presents these things that he reads in the New York Times, or sees on MSNBC or hears on NPR with the authority that Ben Carson might take when explaining modern medicine to a witch doctor.

I don't want to get into the details of what happened. Suffice to say that my interlocutor invoked a popular-level authority against me, which I promptly discredited, and then I responded with peer-reviewed studies published by scholars from two prominent universities. He ignored the studies and demanded to know whether I would accept

his caricatured, simplistic view of what people who disagree with him believe.

This not the first time he has done this to me, either – it is standard practice apparently, for people on the secular left.

It goes like this:

- Me: here are two arguments against naturalistic evolution, the origin of life and the Cambrian explosion.
- Him: but you don't believe in a young-Earth do you? I mean, you believe in evolution don't you?
- Me: let's talk about how proteins and DNA is sequenced, and the sudden origin of Cambrian body plans
- Him: (shouting) Do you believe in evolution? Do you believe in evolution?

And this:

- Me: there hasn't been any global warming for 18 years, and temperatures were warmer in the Medieval Warming Period
- Him: but you don't deny climate change, do you? everyone on NPR agrees that climate change is real
- Me: let's talk about the last 18 years of no warming, and the temperatures during the Medieval Warming Period
- Him: (shouting) Do you believe in climate change? Do you believe in climate change?

He asks these questions so he can either label me as a nut, without having to weigh the evidence I'm presenting, or have me agree with him, without having to weigh the evidence I'm presenting. It's all about ignoring the evidence, so he can get back to his busy, busy practical life – and get back to feeling smug about being smarter than others. I think a lot of men are like this – they don't want to waste their valuable time studying, they just want to jump to the right conclusion, then get back to doing whatever they want – like watching sports on ESPN, or working out, etc.

So how do you respond to a man who gets his entire worldview from the culture, but never deals with peer-reviewed evidence? Well, I think you just defeat his arguments with evidence and then present your own (peer-reviewed) evidence, and then leave it at that. Men like this one have this invincible impression that all the smart people agree with them. Carl Sagan proved that the universe oscillated eternally, Bart Ehrman proved that the "huge" number of manuscript variants discredited the reliability of the Bible, Sam Harris disproved the moral argument with utilitarianism, etc. Their heads are filled with conclusions from discredited arguments, but they are *certain* that *all* the smart people agree with them. The most important thing about these men is that they have never seen a fair academic debate between two sides. They cannot name a single scholar who disagrees with them. They cannot formulate an argument against their own view without caricaturing the argument, e.g. – intelligent design is identical to young Earth creationism, opposition to gay marriage is "homophobia". And they are careful to surround themselves ONLY with opinions that reinforce the imagined intellectual superiority of their views.

**The woman who thinks Christianity is life-enhancement**

This one is especially difficult when you are a young man, especially if you are rejected by your mother, and especially if you are rejected by your mother for your Christian faith. You find yourself sitting in church or youth group, hoping for the approval and affection of the Christian women for your sound theology and effective apologetics. Little do you know that many Christian women understand Christianity entirely in self-centered, subjective terms. Many women see Christianity as life-enhancement, designed to produce happy feelings. God is their cosmic butler whose main responsibility is to meet their needs and make their plans work out. Many women have learned to water down every part of Christianity that offends their family and friends, or puts the brakes on their plan to be happy in this life.

I have met Christian women in churches and campus clubs who were communists, Darwinists, pro-abortion, pro-gay-marriage, universalists, and pretty much every other kind of secular leftist ideology that is dominant in our culture. When probed, their reason for holding to these views is *always a mix* of emotions, intuitions, family-approval or peer-approval. It's like this subset of Christian women has no independent ability to drive at the truth

for themselves through study, but instead they merely adopt whatever feels good from whatever is on offer in their social or cultural environment – like going to a buffet. When they change locations, (e.g. – going off to college), they gravitate to a new set of pleasurable beliefs which earn them peer-acceptance and peer-approval. But the common thread is that they disapprove of any attempt to defend the truth of Christianity objectively with apologetics, and they disapprove of defending (with evidence) the Bible's teachings if it goes against their feelings and/or against family/peer approval.

So how to respond to women who understand Christianity as life enhancement instead of as responsibilities, obligations and expectations?

First thing, be careful that you don't attend a feminized church where the pastor in preaching and picking hymns that give you the idea that God is your cosmic butler. Second, read the Bible very carefully, and understand that with respect to God's purposes for you in this world, your happiness is expendable. You cannot be looking to attractive Christian women that you happen to meet in church to support you, as many of them have long-since sold out to the culture. They are not interested in learning *evidential* apologetics to defend God's reputation, or in defending the unborn, or in defending natural marriage, or in defending the free enterprise system that supports family autonomy from the state, etc. Those things are hard and unpopular, especially for those women who were raised to think that Christianity is about life enhancement and peer-approval.

In my case, the woman who tried to shame me has a Bible verse on her Facebook cover photo, and "likes" the Bible on Facebook, and her favorite preacher is Joel Osteen. She's very beautiful, athletic and attractive. But you cannot be seeking approval and affection from women like that – you must make the choice to do without it. And most important of all, you must accept that beautiful, athletic attractive women can be fundamentally unserious about Christianity. This is "working as designed", as we say in the software engineering business. Nothing that most pastors say to women during church is going to fix this problem, because most pastors don't see this as a problem. Pastors mostly think that women are naturally good, and that they don't need to know apologetics or integrate with faith with politics, economics, etc.

Here's 1 Cor 4:1-5 to make the point:

1 This is how one should regard us, as servants of Christ and stewards of the mysteries of God.

[2] Moreover, it is required of stewards that they be found faithful.

[3] But with me it is a very small thing that I should be judged by you or by any human court. In fact, I do not even judge myself.

[4] For I am not aware of anything against myself, but I am not thereby acquitted. It is the Lord who judges me.

[5] Therefore do not pronounce judgment before the time, before the Lord comes, who will bring to light the things now hidden in darkness and will disclose the purposes of the heart. Then each one will receive his commendation from God.

And 2 Tim 2:4:

[4] No soldier gets entangled in civilian pursuits, since his aim is to please the one who enlisted him.

Or, since I like Ronald Speirs so much:

This is the situation in which we find ourselves, so get used to it. And believe me, I have to deal with this, too. So I have all the sympathy in the world for you. Resign yourself to the fact that no one is going to approve of you for being faithful to the gospel of Jesus Christ; not secular men, not Christian women. There is no cavalry coming to rescue you.

# Christian magistrate punished for saying children need a mother and a father

**Wintery Knight** · 19 January 2015 · Archived copy · Original

Dina tweeted this article from the UK Daily Mail.

Excerpt:

> A Christian magistrate has been disciplined **by a Tory Cabinet Minister** for expressing the belief that children should be raised by both a mother and a father.
>
> **Richard Page told colleagues behind closed doors during an adoption case that he thought it would be better for a child to be brought up in a traditional family rather than by a gay couple.**
>
> He was shocked a week later when he found he had been reported to the judges' watchdog for alleged prejudice, and was suspended from sitting on family court cases.
>
> Mr Page, an experienced NHS manager, has now been **found guilty of serious misconduct** by Lord Chancellor Chris Grayling – who previously spoke in support of a Christian couple who turned away a gay couple from their B&B.
>
> He has also been **ordered to go on an equality course** before he is allowed back in the courtroom.
>
> The married 68-year-old was told he had broken the oath sworn by all Justices of the Peace (JPs) as well as Labour's controversial Equality Act, by being guided by his religious views and discriminating against the same-sex adoptive parents.
>
> Last night, critics said the case was another example of how people who hold traditional Christian views feel they have no freedom of speech and find it difficult to hold public office in modern Britain.
>
> Mr Page told The Mail on Sunday: 'There is tremendous pressure to keep quiet and go along with what is seen to be politically correct.
>
> 'Everyone else seems to be allowed to stand up for their beliefs except for Christians.' Mr Page was called on to consider an adoption order at a family court last July.
>
> As a lay judge he is not required to be legally qualified and is meant to 'bring a broad experience of life to the bench' in making decisions. Because of the controversial secretive nature of such hearings, The Mail on Sunday cannot publish details of the case.
>
> […]**'I think there is something about a man, a woman and a baby, that it's natural and therefore the others are not. That is the comment that I made,' he said.**
>
> **'Therefore, since my task as a magistrate is to do the best for the child, my feeling was, quite reasonably, that a man and a woman would be better.'**

I found it shocking that a Tory (Conservative Party) Cabinet minister would discipline this man, although I know that the Conservative Party in the UK is pro-same-sex marriage.

What is interesting is Grayling's change of mind on conscience vs gay rights:

> 2010 As Shadow Home Secretary:
>
> He backs Christian couple's right to ban gay couple from their B&B (he subsequently lost his job)
>
> 'I think we need to allow people to have their own consciences. If you look at the case of "Should a Christian hotel owner have the right to exclude a gay couple from their hotel?"… I took the view that if it's a question of somebody who's doing a B&B in their own home, that individual should have the right to decide who does and who doesn't come into their own home

> December 2014 as Lord Chancellor:
>
> He disciplines Christian JP who suggested a man and a woman would be better parents for child than gay couple
>
> ‘The Lord Chancellor and Lord Chief Justice have Issued Mr Richard Page JP, a Magistrate assigned to the Central Kent Bench with a reprimand. Mr Page, whilst sitting in the Family Court, was found to have been influenced by his religious beliefs and not by the evidence.
>
> ‘The Lord Chancellor and Lord Chief Justice considered that this amounted to serious misconduct and that Mr Page should have recused himself from the matter.’
>
> […]**As Shadow Home Secretary in 2010, Mr Grayling had backed a Christian couple’s right to turn away a gay couple from their B&B – and as a result of the furore initially missed out on a Cabinet post after the Election.**

Wow. So this Anglican Christian initially used to support Christians doing what their consciences dictate, then after losing his job over it, he changed his mind, and now thinks the secular state should decide.I guess to me, being someone who is not in charge of other people and not very important, the most important thing to do with my life is to do whatever God approves of. At the end of the day, only his opinion matters.

I think what shocks me the most is the fact that Mr. Page was disciplined for just stating common sense about what children need. I wonder which parent the Conservative Party MP thinks a child can do without? Is it a mother? No, we have evidence showing that the mother is vital to boys and girls. Is it the father? I think everyone is well aware now what fatherlessness does to a child – be it a boy or a girl. So here is a Christian man trying to put himself in the place of this child and asking himself – what does a child need? A child needs a mother and father. Apparently, this is some sort of crime to say in the UK.

# How reliable is NASA's pronouncement of 2014 as the warmest year on record?

**Wintery Knight** · 19 January 2015 · Archived copy · Original

The Federalist throws ice water on global warming alarmism. (H/T Blake)

Excerpt:

> If 2014 is supposed to be "hotter" than previous years, it's important to ask: by how much?
>
> You can spend a long time searching through press reports to get an actual *number* on this—which is a scandal unto itself. Just saying one year was "hotter" or "the hottest" is a vague qualitative description. It isn't science. Science runs on numbers. You haven't said anything that is scientifically meaningful until you state *how much* warmer this year was compared to previous years—and until you give the margin of error of that measurement.
>
> The original NASA press release did not give those figures—and most press reports just ran with it anyway. This in itself says a lot. When it comes to global warming, "journalism" has come to mean: "copying press releases from government agencies."
>
> But a few folks decided to do some actual journalism, and Britain's *Daily Mail* reports that
>
> > the NASA press release failed to mention…that the alleged 'record' amounted to an increase over 2010, the previous 'warmest year', of just two-hundredths of a degree—or 0.02C. The margin of error is said by scientists to be approximately 0.1C—several times as much.
>
> Pause for a moment to digest that. The margin of error was plus or minus one tenth of a degree. The difference supposedly being measured here is two *hundredths* of a degree—five times smaller than the margin of error. The *Daily Mail* continues:
>
> > As a result, GISS's director Gavin Schmidt has now admitted NASA thinks the likelihood that 2014 was the warmest year since 1880 is just 38 per cent. However, when asked by this newspaper whether he regretted that the news release did not mention this, he did not respond.
>
> This is not exactly a high point in the employment of the scientific method.
>
> **If we take into account this margin of error, the most we can say is that 2014 was, so far as we know, just as warm as 2005 and 2010.** There is no significant difference between these years. And that gives the lie to claims of runaway global warming.

I got curious about whether Judith Curry had written anything recent about this story, and she has.

She writes:

> Berkeley Earth has published a nice analysis of their 2014 data [link]. Summary of their main findings:
>
> *1. The global surface temperature average for 2014 was nominally the warmest since the global instrumental record began in 1850; however, within the margin of'error, it's tied with 2005 and 2010 and so we can't be certain it set a new record.*
>
> *2. For the land, 2014 was nominally the 4th warmest year since 1753*
>
> *3. For the sea, 2014 was the warmest year on record since 1850*
>
> *4. For the contiguous United States, 2014 ranked nominally as the 38th warmest year on record since 1850.*
>
> Some other statements of interest:

> ***Several European countries set all time records for high annual average temperature, as did the continent of Europe as a whole***
>
> ***The margin of uncertainty we achieved was remarkably small (0.05C with 95% confidence).This was achieved, in part, by the inclusion of data from over 30,000 temperature stations, and by the use of optimized statistical methods. Even so, the highest year could not be distinguished. That is, of course, an indication that the Earth's average temperature for the last decade has changed very little.***
>
> Meanwhile, the 'warmest year' is noticeably missing in the satellite data sets of lower atmospheric temperatures. Roy Spencer reports that 2014 was third warmest year since 1979, but just barely.

Interesting that temperature sensors in European countries reported higher temperatures.

Dr. Curry is Professor and former Chair of the School of Earth and Atmospheric Sciences at the Georgia Institute of Technology. She has previously testified to Congress as an expert on climate change.

Roy Spencer does not think that land-based measurements of temperature are as reliable as satellite-based measurements. Do the satellite-based measurements confirm what NASA said?

He writes:

> Most thermometers measure temperature where people live, and people tend to build stuff that warms the local environment around the thermometer.
>
> Called the urban heat island (UHI) effect, most of the warming occurs long before the thermometer site actually becomes "urban". For instance, if you compare neighboring thermometers around the world, and also compare their population densities (as a rough indication of UHI influence), it can be easily demonstrated that substantial average UHI warming occurs even at low population densities, about ~1 deg. F at only 10 persons per sq. km!
>
> This effect, which has been studied and published for many decades, has not been adequately addressed in the global temperature datasets, partly because there is no good way to apply it to individual thermometer sites.
>
> […]For a "record" temperature to be statistically significant, it has to rise above its level of measurement error, of which there are many for thermometers: relating to changes in location, instrumentation, measurement times of day, inadequate coverage of the Earth, etc. Oh…and that pesky urban heat island effect.
>
> A couple *hundredths* of a degree warmer than a previous year (which 2014 will likely be) should be considered a "tie", not a record.
>
> […]Our satellite estimates of global temperature, which have much more complete geographic coverage than thermometers, reveal that 2014 won't be even close to a record warm year.
>
> In fact, the satellite and thermometer technologies seem to be diverging in what they are telling us in recent years, with the thermometers continuing to warm, and the satellite temperatures essentially flat-lining.

Here's the graph:

UAH Global Temperature up to 2014, as measured by satellites

It records the temperatures from satellites, which cannot be tampered with as easily as temperature sensors that are placed in urban areas. What we have here is a plateau, and not the hockey stick that was predicted by the global warming alarmists.

# Finally: more details on alleged first-century fragment of Mark's gospel emerge

**Wintery Knight** · 19 January 2015 · Archived copy · Original

Here's the latest on it from Live Science.

Excerpt:

> A text that may be the oldest copy of a gospel known to exist — a fragment of the Gospel of Mark that was written during the first century, before the year 90 — is set to be published.
>
> At present, the oldest surviving copies of the gospel texts date to the second century (the years 101 to 200).
>
> This first-century gospel fragment was written on a sheet of papyrus that was later reused to create a mask that was worn by a mummy. Although the mummies of Egyptian pharaohs wore masks made of gold, ordinary people had to settle for masks made out of papyrus (or linen), paint and glue. Given how expensive papyrus was, people often had to reuse sheets that already had writing on them.
>
> In recent years scientists have developed a technique that allows the glue of mummy masks to be undone without harming the ink on the paper. The text on the sheets can then be read.
>
> The first-century gospel is one of hundreds of new texts that a team of about three-dozen scientists and scholars is working to uncover, and analyze, by using this technique of ungluing the masks, said Craig Evans, a professor of New Testament studies at Acadia Divinity College in Wolfville, Nova Scotia.
>
> "We're recovering ancient documents from the first, second and third centuries. Not just Christian documents, not just biblical documents, but classical Greek texts, business papers, various mundane papers, personal letters," Evans told Live Science. The documents include philosophical texts and copies of stories by the Greek poet Homer.
>
> The business and personal letters sometimes have dates on them, he said. When the glue was dissolved, the researchers dated the first-century gospel in part by analyzing the other documents found in the same mask.
>
> […]The technique is bringing many new texts to light, Evans noted. "From a single mask, it's not strange to recover a couple dozen or even more" new texts, he told Live Science. "We're going to end up with many hundreds of papyri when the work is done, if not thousands."
>
> […]Evans says that the text was dated through a combination of carbon-14 dating, studying the handwriting on the fragment and studying the other documents found along with the gospel. These considerations led the researchers to conclude that the fragment was written before the year 90. With the nondisclosure agreement in place, Evans said that he can't say much more about the text's date until the papyrus is published.
>
> […]Evans said that the research team will publish the first volume of texts obtained through the mummy masks and cartonnage later this year. It will include the gospel fragment that the researchers believe dates back to the first century.
>
> The team originally hoped the volume would be published in 2013 or 2014, but the date had to be moved back to 2015. Evans said he is uncertain why the book's publication was delayed, but the team has made use of the extra time to conduct further studies into the first-century gospel. "The benefit of the delay is that when it comes out, there will be additional information about it and other related texts."

The previous earliest-ever fragments are P52 and P104.

Evangelical Textual Criticism explains:

> A lot has happened since then in the study of Greek palaeography and with the increase in readily available

> collections of digital images and refined classification one would assume that the experts are able to form an even more informed opinion now than they were in the 1930s. A 2012 article by Orsini and Clarysse provides exactly this re-evaluation. Their method is solid and responsible, both scholars have a tremendous track record, and in general I don't find much to disagree with, even though in some of the finer distinctions Orsini and Clarysse make I cannot always follow them. Their evaluation of the date is not far off from what Roberts came up with in giving the range 125-175 for P52. So is P52 still the earliest fragment of the New Testament?
>
> Possibly, but looking through the results presented by Orsini and Clarysse there is another candidate, P104, an interesting fragment of Matthew 21, published in 1997. This papyrus receives a date 100-200. Some particular scripts are easier to pin down than others and that is why P104 has a span of a century, whilst P52 only half a century. So we have P52 and P104 both dated by a range that has its median in the centre of the second century (it may be earlier, it may be later).
>
> So what is the oldest manuscript? Well, there are two candidates, P52 of John 18, and P104 of Matthew 21; the former oldest manuscript has become part of a double act (two times 52 is 104).

P52 has John 18:31–33 and John 18:37–38 on it.

It will be interesting to see how scholars respond to this new fragment of Mark.

# Clint Eastwood's "American Sniper" shows why America goes to war

**Wintery Knight** · 20 January 2015 · Archived copy · Original

Chris Kyle, Navy SEAL

John Nolte explains why so many people are going to see it.

He writes:

> "American Sniper" opens during the worst days of Fallujah in Iraq. Kyle (Bradley Cooper) is the eye in the sky watching his fellow warriors through a sniper scope and protecting them when necessary with the kind of precision shooting that will quickly make him a legend (and target).
>
> Through a door, an Iraqi woman emerges with a boy who can't be older than 10. They walk towards a group of Marines. She hands the boy a large grenade. Kyle has been told by his superiors that what happens next is his call.
>
> Before Kyle can make what seems like an impossible choice ("I've never seen such evil," Kyle says later), Eastwood and his screenwriter Jason Hall take us back in time with one of the best flashback sequences you'll ever see. The economy is brilliant, and in just a few minutes we see what made Chris Kyle Chris Kyle: His Christian father's strict but loving moral code, his days as a rodeo rider, his romance with Taya (a terrific Sienna Miller) — the woman who will become his faithful wife, and why two pre-9/11 terrorist attacks on American embassies led Kyle to become a Navy SEAL at the ripe old age of 30.
>
> The rest of the story, which is every bit as compelling (this might be the best-paced film Eastwood has ever made), centers on Kyle's harrowing four tours of duty and his troubled home life. This is a man deeply in love with his country ("I'd die for this country. America is the greatest country in the world.") and his young family. He can only be truly faithful to one. "God, country, family," are the man's priorities.
>
> "American Sniper" is refreshingly told only from Kyle's point of view. He reminds a doubting comrade that we're fighting these "evil f*****g savages" (terrorists) in Iraq so we don't have to fight them in San Diego. And Eastwood doesn't flinch from showing these evil f*****g savages for the evil f*****g savages they are. You won't soon forget watching terrorist mastermind Zarqawi's chief enforcer, a monster nicknamed The Butcher, slowly torture and murder a young boy with a power drill.
>
> War is ugly and it's not pretty watching our guys kick in doors. But there are bad guys behind those doors, and no matter how bad those guys might be, Eastwood makes sure the audience knows Americans don't carry power drills or take lives out of any motive other than self-defense.

> There is nothing even close to moral equivalence in “America Sniper,” only the truth: that there is no equivalence between the barbarians who target the innocent and the American heroes who target those who target the innocent.
>
> […]The Big Emotional Question that drives much of “American Sniper” is whether or not, after it’s all over, Kyle still believes in who he is and what he’s done. The film’s best moment comes when that question is answered, when we learn just what is that is tearing Kyle up inside. “I will stand before my Creator and justify every shot,” he tells a military therapist.
>
> You see, it’s not Iraq or Bush or the military or the mission or even those 160 confirmed kills. What’s eating Kyle alive is that he didn’t do more — didn’t save more United States Marines.

This movie made $90 million on its opening weekend. Why aren’t there more movies like this made in Hollywood?

I’m a big fan of war movies – have been since I was a kid. I like war movies that tell the stories of famous battles a lot, but my favorites are movies that show why we have to fight, and the fundamental goodness of fighting evil on the battlefield, when we are threatened by enemies who cannot be dealt with any other way. My favorite war movies are the ones where there are clear-cut villains, like the German Nazis or the Japanese Imperialists or the North Korean communists. I think Islamic extremists belong in there. Why are people so cautious about celebrating our armed forces for confronting evil as clear-cut as any we have had to face in the past?

I really don’t know what’s gone wrong with this country when we celebrate artists, musicians, actors and athletes more than people in the military, the police and the clandestine services. When I was a young man, I would spend hours making and building model jet fighters and drawing pictures of all kinds of military vehicles. Model jet fighters hung from my ceiling. I had maps of all the allied advances during World War 2 on my wall. I read books like this one, which tells the story of every man who won the medal of honor in World War 2. And when I got older, I read military history and military biographies. For me, the idea of stopping a violent evil person has always been a *good thing*.

You can read more about Chris Kyle on military.com.

# Canadian court rules that pro-life students can't show images of abortion on campus

**Wintery Knight** · 20 January 2015 · Archived copy · Original

Map of Canada

This is from Life Site News.

Excerpt:

> In a stunning reversal of recent rulings in nearby provinces, British Columbia Chief Justice Christopher Hinkson has ruled that Canadian Charter of Rights and Freedoms does not apply to pro-life students seeking space on the University of Victoria campus to demonstrate.
>
> Former U Vic student Cameron Cote and the B.C. Civil Liberties Association had petitioned for a declaration that the university administration had breached the Youth Protecting Youth pro-life club's Charter rights when, in early 2013, it refused permission to display pictures of aborted and healthy babies.
>
> But the Charter only applies to government bodies and Hinkson ruled that the university, though funded mostly by taxpayers, and incorporated by the provincial government, which also appoints a majority of its directors, was acting privately when it decided to deny YPY use of its property. So even though the decision was based on the content of YPY's pro-life message, the Charter protection of free speech and assembly does not apply.
>
> The university is funded by taxpayer dollars – it's not private. But, any port in a storm for this judge.

More:

> [T]he University of Victoria, by simply refusing YPY space to air its views, was acting as a private landlord, ruled Hinkson. But what Hinkson isn't getting, said John Carpay, head of the Calgary-based Justice Centre for Constitutional Freedom, is that universities respect freedom of speech, and alternately impose censorship, very selectively.
>
> **"Universities censor pro-life students for showing graphic pictures of aborted babies," said Carpay. "But universities allow Falun Gong supporters showing graphic pictures of members tortured by the Chinese government. They also allow those promoting use of seat belts to show graphic images of people with their heads halfway through windshields."**
>
> "Free expression is a cornerstone of democracy," Carpay added. "But a lot of people seem to believe they have

> a right not be offended, and this outweighs free speech."
>
> […]YPY's battle with the U Vic student society goes back at least to 1999, when the pro-life club won a human rights discrimination ruling. In 2010, a second human rights complaint against the society was settled out of court in the club's favor.
>
> In all these cases pro-abortion students complained that they felt "harassed" by YPY's posters, pamphlets, or pictures. The student society then suspended the group's club status, resulting in the removal of the privilege to use university property for its activities.
>
> **As well, pro-abortion protesters have stolen YPY displays, covered others in cat feces, and pelted members' belongings with smoke bombs and stink bombs with no response from the university administration. "They've created a culture of bullying. They can get away with treating pro-life students badly," said Anastasia Pearse, western co-ordinator of the National Campus Life Network.**

I'm not sure what secular leftists are learning in college, but it sure isn't the ability to separate fair process from political correctness. If anyone disagrees with a secular leftists, then the rules don't apply and anything can be done to stop us from exercises the same rights that everyone else gets. It's not fair, and I fear that we need to just be more serious about whether what we are doing is going to reverse this problem of not having any influence. I recommend that each one of us not be content with a normal life. In order to fix these problems, we need to aim to have an influence.

# A liberal feminist comedian, her beliefs about God and how she formed them

**Wintery Knight** · 20 January 2015 · Archived copy · Original

Consider this article written by a liberal ex-Catholic woman whose 7-year-old daughter is an atheist.

First the biography of the author:

> **Carolyn Castiglia** is a New York-based comedian/writer wowing audiences with her stand-up and freestyle rap. You may recognize her hip-hop alter ego Miss CKC from Comedy Central, VH1 and MTV2. Carolyn's web vids have been nominated for an ECNY Award and featured in two issues of *EW* magazine. She's appeared in *TONY*, *The NY Post*, *The Idiot's Guide to Jokes* and *Life & Style*. You can find Carolyn's writing elsewhere online at MarieClaire.com and The Huffington Post.

Look at what she wrote:

> I was raised Catholic, and like most people my age who were raised Catholic, I no longer attend church on Sundays. We're "recovering Catholics." That's what so many of us call ourselves. We're still disgusted with the Church for the way it covered up the sex abuse perpetrated against my generation and roll our eyes at the Church's stance on things like abortion, gay marriage and women's rights.
>
> […]I learned a lot about being a Good Person from the things I heard in church… I wanted to be a Good Person, not just because only Good People go to Heaven. I just liked the idea. The meek shall inherit the Earth. It sounded right. Somehow all this sh*t I'm swallowing now, it's gonna pay off later.
>
> I'm pretty much agnostic now (sometimes believing more strongly, other times thinking the concept of God is kind of a joke), but I value the way the idea of God has gotten me through the rough patches. And that has been the payoff. Somehow this notion that there is a giant man in the sky with long hair and a big robe who will hug you from heaven if you need it and carry you on the beach when you've had one too many wine coolers to walk without falling down and getting sand all up in your bikini has been very comforting to me. The image of Jesus but as God but totally as a bro (a homeboy, if you will), there's something righteous about it, if you know what I mean.
>
> But the way I imagine God has changed over the years — He's gone from being a person, a man, to being more of a Thing, a notion. Goodness. The Oneness of the Universe. With something female in there. The energy that keeps the whole thing afloat. God as I know it now when I know it is kind of a cocktail made from a shot of Buddhism, a shot of feminist activism and a splash of ginger ale (because that, my friends, is something you can always count on).

Now the Christians who are reading this will be cringing because we know that these beliefs are not taken out of the Bible. She seems to be speaking more about her opinions rather than what is true. She doesn't seem to be focused on finding truth, but more on being a "good person" and having God as a crutch to pull out if she falls down while pursuing her own plan.

She's wrong that "good people" go to Heaven. Only people who accept Jesus as their leader (Lord) and accept his death as a sacrifice for their rebellion against God (Savior) are resurrected to eternal life. If she is a relativist, then I guess what she means by being a "good person" is that she thinks of herself as good and that the people around her think of her as good. However, the main purpose of Christianity is not to be a good person, or to have people like you or to be happy and comforted.  The main goal of Christian living is to puzzle about the truth about God's existence and character, and then to re-prioritize your life based on who Jesus is and what Jesus has done for us. So the focus in Christianity is on truth, and that's what her church should have taught her from a young age. And we

are the ones who must read the Bible, we must not rely on someone else to do it for us.

But there is more to her story – her child has been affected by her problematic views of Christianity and God.

She writes:

> My daughter, on the other hand, at the ripe old age of 7, is convinced that there is no God. Not even a god. Yup, my kid's an atheist. And she pretty much has been since she was 5.
>
> It's not for lack of exposure to God or god or even gods and spirituality, because she has attended Church and church and a UU "church" and it has made no impact. We've prayed together. I talk about God sometimes, in a good way. When I asked her recently why she doesn't believe in God she told me, succinctly, "Because I know too much about science!"

Is it a good idea to take scientific advice from a 7-year-old child? I think that we should instead prefer to learn from scholars who research and debate issues in science and religion, and then teach the child based on what we have learned. This is why it was so important to emphasize *how people arrive at true beliefs* in the church. If she had done the work herself to arrive at true beliefs, then she would know what to say to her child's presumptuousness.

More:

> The other night over dinner my daughter looked up at me and said, "Who created the Earth?" And I said, "Well, some people believe that God created the Earth, and some people believe that nature is a creation unto itself." My daughter replied, "I think nature is a creation unto itself." I said, "You know, you're pretty staunch about the fact that there is no God." And she told me, "Well, I don't think he exists. If he does, he's a ghost, and that's weird. I just don't believe it. You know, there are Universes beyond our Universe. Once you get outside the Milky Way galaxy, there's a lot more stuff out there."
>
> Wow. When I was 7 I didn't know there was a world outside my town.

So the universe created itself? How could it create itself? It would have to have existed in order to do anything, including create. So it would have to have existed… *before it began to exist.* That's a contradiction, and so it cannot be true. Funny how kids decide whether God exists or not without knowing what they are talking about. It's the parents' job to be able to guide the discussion, not just sit there.

She continues:

> Oh sure, my mother thinks raising a child without religion is dangerous. "I understand you don't think she needs God now, Carolyn. But you gotta give her religion so it's there for her when she needs it later." When the shit hits the fan, when everything falls apart. When you realize there is no one but God you can trust.

See, here is where she needs someone to point out that it's not God's job to help you through crises or make you happy. No one who reads the Bible thinks that God is our cosmic butler. We know from reading the Bible that he has purposes that are different from our purpose to be happy.

# Iowa senator Joni Ernst responds to Obama's State of the Union speech

**Wintery Knight** · 21 January 2015 · Archived copy · Original

Iowa senator Joni Ernst

Here's the video of the speech:

Transcript from The Weekly Standard.

> Good evening.
>
> I'm Joni Ernst. As a mother, a soldier, and a newly elected senator from the great State of Iowa, I am proud to speak with you tonight.
>
> A few moments ago, we heard the President lay out his vision for the year to come. Even if we may not always agree, it's important to hear different points of view in this great country. We appreciate the President sharing his.
>
> Tonight though, rather than respond to a speech, I'd like to talk about your priorities. I'd like to have a conversation about the new Republican Congress you just elected, and how we plan to make Washington focus on your concerns again.
>
> We heard the message you sent in November — loud and clear. And now we're getting to work to change the direction Washington has been taking our country.
>
> The new Republican Congress also understands how difficult these past six years have been. For many of us, the sting of the economy and the frustration with Washington's dysfunction, weren't things we had to read about. We felt them every day.
>
> We felt them in Red Oak — the little town in southwestern Iowa where I grew up, and am still proud to call home today.
>
> As a young girl, I plowed the fields of our family farm. I worked construction with my dad. To save for

college, I worked the morning biscuit line at Hardees.

We were raised to live simply, not to waste. It was a lesson my mother taught me every rainy morning.

You see, growing up, I had only one good pair of shoes. So on rainy school days, my mom would slip plastic bread bags over them to keep them dry.

But I was never embarrassed. Because the school bus would be filled with rows and rows of young Iowans with bread bags slipped over their feet.

Our parents may not have had much, but they worked hard for what they did have.

These days though, many families feel like they're working harder and harder, with less and less to show for it.

Not just in Red Oak, but across the country.

We see our neighbors agonize over stagnant wages and lost jobs. We see the hurt caused by canceled healthcare plans and higher monthly insurance bills. We see too many moms and dads put their own dreams on hold while growing more fearful about the kind of future they'll be able to leave to their children.

Americans have been hurting, but when we demanded solutions, too often Washington responded with the same stale mindset that led to failed policies like Obamacare. It's a mindset that gave us political talking points, not serious solutions.

That's why the new Republican majority you elected started by reforming Congress to make it function again. And now, we're working hard to pass the kind of serious job-creation ideas you deserve.

One you've probably heard about is the Keystone jobs bill. President Obama has been delaying this bipartisan infrastructure project for years, even though many members of his party, unions, and a strong majority of Americans support it. The President's own State Department has said Keystone's construction could support thousands of jobs and pump billions into our economy, and do it with minimal environmental impact.

We worked with Democrats to pass this bill through the House. We're doing the same now in the Senate.

President Obama will soon have a decision to make: will he sign the bill, or block good American jobs?

There's a lot we can achieve if we work together.

Let's tear down trade barriers in places like Europe and the Pacific. Let's sell more of what we make and grow in America over there so we can boost manufacturing, wages, and jobs right here, at home.

Let's simplify America's outdated and loophole-ridden tax code. Republicans think tax filing should be easier for you, not just the well-connected. So let's iron out loopholes to lower rates — and create jobs, not pay for more government spending.

The President has already expressed some support for these kinds of ideas. We're calling on him now to cooperate to pass them.

You'll see a lot of serious work in this new Congress.

Some of it will occur where I stand tonight, in the Armed Services Committee room. This is where I'll join committee colleagues — Republicans and Democrats — to discuss ways to support our exceptional military and its mission. This is where we'll debate strategies to confront terrorism and the threats posed by Al Qaeda, ISIL, and those radicalized by them.

We know threats like these can't just be wished away. We've been reminded of terrorism's reach both at home and abroad; most recently in France and Nigeria, but also in places like Canada and Australia. Our hearts go out to all the innocent victims of terrorism and their loved ones. We can only imagine the depth of their grief.

For two decades, I've proudly worn our nation's uniform: today, as a Lt. Colonel in the Iowa Army National Guard. While deployed overseas with some of America's finest men and women, I've seen just how dangerous these kinds of threats can be.

The forces of violence and oppression don't care about the innocent. We need a comprehensive plan to defeat

> them.
>
> We must also honor America's veterans. These men and women have sacrificed so much in defense of our freedoms, and our way of life. They deserve nothing less than the benefits they were promised and a quality of care we can be all be proud of.
>
> These are important issues the new Congress plans to address.
>
> We'll also keep fighting to repeal and replace a health care law that's hurt so many hardworking families.
>
> We'll work to correct executive overreach.
>
> We'll propose ideas that aim to cut wasteful spending and balance the budget — with meaningful reforms, not higher taxes like the President has proposed.
>
> We'll advance solutions to prevent the kind of cyberattacks we've seen recently.
>
> We'll work to confront Iran's nuclear ambitions.
>
> And we'll defend life, because protecting our most vulnerable is an important measure of any society.
>
> Congress is back to work on your behalf, ready to make Washington focus on your concerns again.
>
> We know America faces big challenges. But history has shown there's nothing our nation, and our people, can't accomplish.
>
> Just look at my parents and grandparents.
>
> They had very little to call their own except the sweat on their brow and the dirt on their hands. But they worked, they sacrificed, and they dreamed big dreams for their children and grandchildren.
>
> And because they did, an ordinary Iowan like me has had some truly extraordinary opportunities because they showed me that you don't need to come from wealth or privilege to make a difference. You just need the freedom to dream big, and a whole lot of hard work.
>
> The new Republican Congress you elected is working to make Washington understand that too. And with a little cooperation from the President, we can get Washington working again.
>
> Thank you for allowing me to speak with you tonight.
>
> May God bless this great country of ours, the brave Americans serving in uniform on our behalf, and you, the hardworking men and women who make the United States of America the greatest nation the world has ever known.

You can find out more about Joni Ernst in this article from Yahoo News.

# Obama issues veto threat against Pain Capable Unborn Child Protection Act

**Wintery Knight** · 21 January 2015 · Archived copy · Original

The Daily Signal reports:

> The White House announced today President Obama would veto the Pain-Capable Unborn Child Protection Act if it came to his desk.
>
> The bill, which is scheduled for a vote in the House Thursday, would ban elective abortions after twenty weeks–or five months of pregnancy.
>
> That's a policy that has huge public support.
>
> According to a November Quinnipiac poll, *60 percent* of Americans back banning abortion, except in cases of rape or incest reported to the authorities, after 20 weeks. There's virtually no gender divide: 59 percent of women support the ban. Furthermore, the age breakdown shows widespread support for the ban by:
>
> - 57 percent of 18-29 year olds
> - 61 percent of 30-49 year olds
> - 63 percent of 50-64 year olds
> - 58 percent of 65+ American voters
>
> In this divided age, there's little that unites Americans in such large numbers as this ban does.
>
> Most of the world already has such a ban. Only six other countries besides the United States allow elective abortions after 20 weeks, including China and North Korea.
>
> By the time a pregnancy is 20 weeks along, the unborn child is hearing, has fingernails and toenails, and a beating heart.
>
> The child is also close to being potentially able to survive outside the womb. In 2011, 21-one-week-old Frieda Mangold was born in Germany.
>
> She made it.
>
> Little Frieda faced huge obstacles: she weighed just over a pound when born. Sadly, her twin brother didn't survive. But Frieda's birth shows how incredibly developed these 20-week-old babies are, even at this early stage.

Why will Obama veto this bill? Because he is radical on the abortion issue.

First, he supports late-term abortions, as reported by the Weekly Standard.

Excerpt:

> The Washington Post reports that President Obama is running his reelection campaign as a "culture warrior," trying to cast his opponents as extremists on such issues as abortion in the case of rape and requiring religious institutions to pay for contraception. But could Obama's own extremism on abortion come back to bite him?
>
> During a 2003 press conference, Barack Obama indicated that he thought abortion should be legal in all situations, even late in pregnancy:
>
> OBAMA: "I am pro-choice."
>
> REPORTER: "In all situations including the late term thing?"
>
> OBAMA: "I am pro-choice. I believe that women make responsible choices and they know better than

> anybody the tragedy of a difficult pregnancy and I don't think that it's the government's role to meddle in that choice."
>
> In another interview, Obama said: "I voted no on the late-term abortion ban, not because I don't recognize that these are painful issues but because I trust women to make these decisions."

And second, on abortions where the baby is born alive(infanticide):

> When Obama opposed a bill to stop infanticide as a member of the Illinois legislature, he said he did so because it reportedly contained language that would have contravened the Roe v. Wade decision. However, documents uncovered during the 2008 election show Obama has misrepresented his position.
>
> Obama, as a member of the Illinois Senate, opposed a state version of the federal Born-Alive Infants Protection Act, a measure that would make sure babies who survive abortions are given proper medical care.
>
> It also protected babies who were "aborted" through a purposeful premature birth and left to die afterwards.
>
> On the federal level, pro-abortion groups withdrew their opposition to the bill after a section was added making sure it did not affect the status of legal abortions in the United States. Ultimately, the bill was approved on a unanimous voice vote with even leading pro-abortion lawmakers like Hillary Clinton and John Kerry backing it.

And finally, Obama very likely supports sex-selection abortions.

Excerpt:

> President Barack Obama appears to oppose the ban on sex-selection abortions that the House of Representatives debated yesterday and will be voting on today.
>
> ABC News White House correspondent Jake Tapper posted a new report indicating President Obama opposes the bill to prohibit performing or coercing abortions to eliminate unborn babies of an undesired sex. Tapper raised the question at Wednesday's White House press briefing, but did not receive a respond to his question about Obama's position.
>
> […]White House deputy press secretary Jamie Smith told him in a statement: "The Administration opposes gender discrimination in all forms, but the end result of this legislation would be to subject doctors to criminal prosecution if they fail to determine the motivations behind a very personal and private decision. The government should not intrude in medical decisions or private family matters in this way."
>
> National Right to Life legislative director Douglas Johnson was upset to learn Obama opposes the common-sense bill, telling LifeNews: "It is appalling, but not surprising, that President Obama now stands with the pro-abortion political committees and his Hollywood donors, rather than with the coerced women, and their unborn daughters, who are victimized in sex-selection abortions."

The Democrat Party also supports sex-selection abortions. Their view is that the mere fact that an unborn child is female is sufficient reason to kill that child. Is that pro-women? What could be more discriminatory and anti-women than that?

I still know Christians who think that Obama is pro-life and pro-natural marriage. I hope that stories like this will wake them up to the fact that he is actually a radical leftist on social issues. Just because a person is handsome and can read a teleprompter, it doesn't mean that he is pro-life and pro-marriage.

# Three reasons why you should be aggressive about giving grace to others

**Wintery Knight** · 21 January 2015 · Archived copy · Original

I'm still reading the devotional book (Paul Tripp's "New Morning Mercies") that Dina asked me to read. I will be reading it all year. I find that about one devotion a week is useful, the rest are fluff. However, because she is willing to keep asking me how I am doing with it, and also listen to me complain and criticize, I am keeping up with it.

I wanted to blog about the January 19th devotion.

Here is the text:

> JANUARY 19
>
> If you look into the mirror of God's Word and see someone in need of grace, why would you be impatient with others who share that need?
>
> Maybe one of the biggest sins in our relationships with one another is the sin of forgetting. I wish I could say that this is not my problem, but it is. It is so easy to forget how profound your need of grace is, and it is equally easy to forget the amazing grace that has been freely showered upon you. And when you forget the grace that you've been given, it becomes very easy to respond to the people around you with nongrace.
>
> It is very clear that grace toward others isn't best born out of duty. Pretend with me that I plop down on the couch next to my dear wife, Luella, and say these words: "You know, Luella, I have come to the realization that it's my duty to be gracious to you. So I'll tell you what I'm going to do. I'm going to give you grace, not because I really want to, but because I guess it's what I have to do." Do you think that Luella would be encouraged by that statement for a moment? I think not. A joyful life of grace toward others grows best in the soil of gratitude. When I really reflect on who I am, when I take time to consider the grace that I couldn't have earned, achieved, or deserved but which has been lavished on me, and when I remember that that grace came at the cost of the life of another, then I am joyfully motivated to give that grace to others.
>
> For the believer, harsh, critical, impatient, and irritated responses to others are always connected to forgetting or denying who we are and what we have been given in Jesus. It is very clear that no one gives grace better than a person who is deeply convinced of his own need of it and who is cogently aware of the grace he has been, and is being, given.
>
> Because we forget so quickly, because we fall into believing that we are deserving, and because we tend to think that we're more righteous and capable than we actually are, we all need to be given grace right at the very moment when we are called to be a tool of grace in the life of another. The God of grace is working his grace into everyone in the room. First John 4:19 really is true: "We love because he first loved us." Now, that's worth remembering.
>
> For further study and encouragement: Ephesians 3:14-21

I don't want to get grace confused with forgiveness. I wrote about forgiveness before. Grace is more broad than that. If you "borrow" my roadster and wrap it around a tree, and you are really sorry and offer to pay for the repairs, then I forgive you. Grace is not just about forgiveness. Grace can just be you being kind and supportive when we play StarCraft 2, even though I am terrible at it. Grace is unmerited favor. I may be terrible at StarCraft 2, but you just keep playing with me and encouraging me until I get better at it (Thanks, Blake!). Grace can also mean just giving you nice things that are extra and unexpected, like sending a Kindle e-book to a friend for his birthday (Happy birthday, Wessel!)

So, here's my three points about the devotion above:

First, the basis for us giving grace to others is because we have received grace ourselves. It really has nothing to do

with how we feel about the person, or whether they deserve it. Grace is *unmerited* favor, so it's just something you do to give people some extra care or some extra tolerance. You can look in Matthew 18:23-35 to see how much God wants us to treat other people the way he treats us. He forgives us, we forgive our neighbor. He gives us grace, we give grace to our neighbor. It's not good if we take the benefits from God and then do not show that we appreciate it by treating our neighbor the same way as God treats us. Think about the Lord's Prayer: "forgive us our trespasses, as we forgive those who trespass against us".

Second, we should be *happy* that we get the opportunity to give other people grace, because we are imitating God when we do that. In fact, we should be aggressive about seeking out opportunities to do this. What is the point of being a follower of Jesus if you never get to experience what Jesus does by imitating him? We have to share in the same joys and sorrows by doing the same things. I never really like a woman until I see her trying to do actions that are helping to achieve goals that I think are important. I can explain to her what apologetics is and buy her books. But the real joy comes from seeing her read and study and then take action – speaking in public (Dina) or teaching in church (Mary) or organizing an apologetics event (Tracy). I think God is happy in the same way if we try to imitate him as a way of *respecting* what he has done for us.

Third, we must not underestimate how much grace a person needs by judging how much we needed. Some people need more grace to grow as a Christian than we needed ourselves. So long as a person is moving in the right direction and following Jesus, we should give her as much grace as we can – but still being good stewards of our time and resources. The key is – so long as she is growing in the right direction, and not rebelling. The simple fact is that we are not in a position to know how far any person can go, and God gives us so few people to care for anyway. Why not splurge and give lots of grace to the people we are assigned to care for, even if it's much more than we needed ourselves? That is the whole point of it – to do more than is expected.

# James White debates Adnan Rashid on trustworthiness of the Bible vs Quran

**Wintery Knight** · 21 January 2015 · Archived copy · Original

It's on Justin Brierley's Unbelievable radio show, from the UK!

The show starts with introductions by each speaker, then the debate begins.

James White's opening address:

The Bible:

- most Christians have a naive view of how holy books come to us from antiquity
- the Bible and Koran were written and transmitted in two different ways
- the Koran was written down and spread in a controlled way
- the Bible was written in an uncontrolled way
- Christianity was illegal until 313, so early Christians were persecuted
- the Bible had to be copied and spread illegally by individuals
- people risked their lives to copy *pieces* of the text
- the good part of this is that there are *tons* of manuscripts
- the manuscripts are *earlier* than the Church councils that define the Canon
- a persecuted minority would not have been able to conspire to change the text
- there are tons of minor variants from misspellings and typos in the manuscripts

The Koran:

- the Hadith (writings that post-date the Koran) record how the Koran was written
- the authorities worried that many fragments and manuscripts would cause disputes
- the authorities got together and created an approved version to distribute
- all the other Koranic materials (fragments and manuscripts) *were burnt*
- this happened soon after the death of Mohammed
- there are fewer variants with this centralized, top-down approach

Adnan Rashid's opening speech:

The Bible:

- the Bible we have today is not infallible, was not transmitted infallibly
- none of the 4 gospels are written by eyewitnesses
- there are around 400,000 variants in the manuscripts (cites Ehrman)
- the huge number of variants touches on virtually every line of text
- the manuscripts have differences – which manuscript is the inspired one?
- editors are needed to adjudicate between all of the variants (cites Metzger)
- editors have to rely on probabilities in order to choose the text itself

The Koran:

- the text of the Koran was selected by Mohammed's immediate successor
- the purpose of this selection was to unify the Arab tribes on one text

- rejected fragments and manuscripts were burned
- no coercion was used to get the bad manuscripts burned

James White's rebuttal:

- 99% of the variants are technicalities of the Greek language
- only 1500-2000 variants change the meaning of the text
- there are many variants is because there are many manuscripts
- more manuscripts makes it harder for any authority to change the text
- the editors don't hide the variants – that why everyone knows about them
- the photographs of the fragments and manuscripts are available, not burnt

Adnan Rashid's rebuttal:

- we are in the process of photographing our fragments and manuscripts
- what the photographs show is that the Koran has no shocking variants
- Metzger is clear that editors are deciding the text based on probabilities

Crosstalk about Metzger:

- James: editors decide the *main reading* and the rest goes in *footnotes*
- James: Metzger doesn't think that this makes the Bible unreliable
- Adnan: prove it

Crosstalk about the Koran:

- James: The Koran has variants too and manuscript issues
- James: Mohammed appointed Ibn Masoud as the authority on the Koran
- Adnan: actually Mohammed pointed out four authorities, not just one
- Adnan: we don't have manuscript problems or variant problems as bad as yours

Crosstalk about the crucifixion of Jesus:

- James: the crucifixion is denied in Surah 4:157
- James: the Koran is written 600 years after the cruficixion
- James: the Koran is written hundreds of miles from the crucifixion site
- James: non-Christians like Ehrman and Crossan do not deny the crucifixion
- James: for 600 years after, history is unanimous that the crucifixion happened
- Adnan: the gospel of Thomas doesn't mention the crucifixion
- Adnan:  Thomas predates Mark and is contemporaneous with Q
- James: Thomas contains NO HISTORY – just sayings of Jesus
- James: Thomas is not written by eyewitnesses to the events
- James: Thomas is written in Coptic, originated in Syria, in the 2nd century
- James: Thomas reflects gnostic theology, not Christian theology
- Adnan: if the Koran says that the crucifixion didn't happen, then it didn't
- James: Adnan believes one person 600 years later instead of the eyewitnesses
- Adnan: Paul invented the crucifixion out of nothing
- Adnan: The gospels are just theology, not history, written to confirm Paul

- Adnan: some scholars say Thomas isn't gnostic
- Adnan: some scholars say Thomas is early
- Adnan: Metzger says Thomas was rejected because it was non-Christian
- James: I agree that it was rejected for theology because it's gnostic

# Obama proposes new tax on stay-at-home moms in SOTU speech

**Wintery Knight** · 22 January 2015 · Archived copy · Original

Brad Wilcox writes in the Wall Street Journal about the new tax on stay-at-home mothers that Obama proposed in his State of the Union speech.

He writes:

> Guess which kind of family was left out in the cold by President Obama as he unveiled his plan to help middle-class families in his State of the Union address? The traditional two-parent family with a single breadwinner.
>
> The president pitched his plan as part of an agenda in which "everyone gets their fair shot, everyone does their fair share, and everyone plays by the same set of rules" in part by "lowering the taxes of working families and putting thousands of dollars back into their pockets each year." But by design or omission, his plan does virtually nothing for married families with a parent at home, usually the mother.
>
> The president's plan would triple the existing child-care tax credit to $3,000 for two-earner families with children under 5 and a combined income of less than $120,000, and it would establish a new $500 credit for families in which both spouses work. The plan would provide tax relief—which would no doubt help with the cost of child care, commuting, etc.—to middle-class families with both parents in the workforce. **But families who choose to have a parent at home would see none of this tax relief.**

Terry Jeffries explains in CNS News why Obama would want to penalize stay-at-home moms.

He writes:

> The perversely logical corollary to Obama's desire to structure the tax code to the disadvantage of stay-at-home mothers is his desire to use tax dollars to replace working fathers with the government itself.
>
> As this column has noted before, in each of the last six years on record — 2008 through 2013 — at least 40 percent of the babies born in the United States were born to unmarried mothers. By contrast, in 1940, only 3.8 percent of the babies were born to unmarried mothers.
>
> According to the Department of Health and Human Services' annual report on "Welfare Indicators and Risk Factors" it is a fact that "historically a high proportion of welfare recipients first became parents outside of marriage."
>
> In 2013, according to the Census Bureau, there were 105,862,000 full-time year-round workers in the United States — including 16,685,000 full-time government workers. These full-time workers were outnumbered by the 109,631,000 whom the Census Bureau says were getting benefits from means-tested federal programs — n.b. welfare — as of the fourth quarter of 2012.
>
> Every American family that pays its own way — and takes care of its own children whether with one or two incomes — must subsidize the 109,631,000 on welfare.
>
> Perhaps if we started rolling back the welfare state — and reduced the burden of government on all families that rely on themselves and not the government — more mothers would choose to stay home even if that meant Obama and his ideological heirs would discriminate against them in the tax code.

So if you make it impossible for a woman to stay home, then she goes to work. If she goes to work, she pays taxes to the government. The government turns around and distributes that money to people who will vote for them in exchange for the money – like single mothers on welfare. The more money they make, the more money they have to buy votes with. And they get the votes of all the child care workers, too – because if mothers stayed home, they

wouldn't have jobs. Only the parents and the children suffer, as the children get torn away from their parents to be raised by strangers. Often, child care workers are unionized, and work based on government specifications. Parents lose the ability to care for their own children and watch over them, teaching them their beliefs and values. Instead, the values of these strangers are given to them. Instead of a mother's love, they get fed and handled by strangers.

I guess we shouldn't be surprised that the party that aborts unborn children treats born children like this. It amazes me that people who claim to be pro-marriage and pro-family keep voting for politicians who want to raise taxes, forces women to leave their children in the hands of strangers in order to make ends meet.

# Is Obama's portrait of the state of the world realistic or delusional?

**Wintery Knight** · 22 January 2015 · Archived copy · Original

CNS News compares Obama's words to reality.

Excerpt:

> President Obama is "living in a dream world" if he believes the U.S. is "stopping ISIL's advance" in Iraq and Syria, says former Ambassador to the U.N. John Bolton.
>
> In his State of the Union address Tuesday night, Obama said: "In Iraq and Syria, American leadership — including our military power — is stopping ISIL's advance. Instead of getting dragged into another ground war in the Middle East, we are leading a broad coalition, including Arab nations, to degrade and ultimately destroy this terrorist group. We're also supporting a moderate opposition in Syria that can help us in this effort, and assisting people everywhere who stand up to the bankrupt ideology of violent extremism."
>
> […]"I think the ISIS threat is growing," Bolton continued. "They have consolidated control over the territory. They have seized, going back a year now, a year since they took Fallujah, seven months since they took Mosul. And they see weakness on the American side. They think it's winning support among colleagues in the region."
>
> Bolton disagreed with Obama's assertion that the U.S.-led coalition is stopping ISIL's advance with air strikes.
>
> "No," he said. "The president is living in a dream world. The fact is, we have no effective way of containing ISIS."
>
> Bolton said terrorist groups in North Africa, the Middle East, and as far away as Afghanistan and Pakistan are beginning to declare loyalty to ISIS.
>
> "I think moderate Arab regimes in the region, the king of Jordan, the oil-producing monarchies of the Iranians Peninsula, are in fear of what ISIS will do. The president's notion that we have got opportunities is belied by the continued Iranian progress towards a deliverable nuclear weapons capability. The Middle East is descending into chaos and we are watching."
>
> Rep. Tom Cotton (R-Ark.) told MSNBC on Wednesday morning that Obama "is living in a make-believe world when it comes to our national security."
>
> Cotton, like Bolton, disagrees that the U.S.-led coalition is stopping ISIS/ISIL's advance: "That's simply not the case," Cotton told "Morning Joe." "We may have arrested their progress somewhat in Iraq, but you don't win the war on defense — you win on offense."
>
> Cotton also mentioned Yemen, cited by Obama just four months ago as an example of a successful counter-terrorism strategy. But Yemen's government is now dealing with an apparently successful coup attempt.

Powerline blog describes a few more crises Obama failed to speak about accurately. We have problems with Iran continuing their progress towards nuclear weapons. Russia has occupied Crimea and continues to attack targets in Ukraine using *regular Russian troops.* In Yemen, Shia rebels are attempting a coup against the president, and the U.S. Navy is heading there to evacuate the U.S. embassy if necessary.

Meanwhile, Obama assures us that the real threat we should be worried about is global warming.

CNS News again:

> Not radical Muslim terrorism, not an unsecured border, not an ever-growing federal debt that now exceeds $18 trillion, not the fact that 109 million live in households on federal welfare programs. These are not the greatest threats facing us today.
>
> "No challenge–no challenge–poses a greater threat to future generations than climate change," President

> Obama declared in his State of the Union Address on Tuesday night.

That's the top priority of the Democrat party.

# New study: another example of convergence, this time for geomagnetic navigation

**Wintery Knight** · 22 January 2015 · Archived copy · Original

We have to start this post with the definition of convergence in biology.

> In evolutionary biology, convergent evolution is the process whereby organisms not closely related (not monophyletic), independently evolve similar traits as a result of having to adapt to similar environments or ecological niches.
>
> It is the opposite of divergent evolution, where related species evolve different traits.
>
> On a molecular level, this can happen due to random mutation unrelated to adaptive changes; see long branch attraction. In cultural evolution, convergent evolution is the development of similar cultural adaptations to similar environmental conditions by different peoples with different ancestral cultures. An example of convergent evolution is the similar nature of the flight/wings of insects, birds, pterosaurs, and bats.
>
> All four serve the same function and are similar in structure, but each evolved independently.

And now, Evolution News has a story about a new discovery.

Turtles have the ability to navigate by sensing magnetic isolines:

> *Science* Magazine gives a brief review of the findings:

> Much like shifting sand, **magnetic fields slide slightly over time**, and their strength also increases as one moves away from the equator, akin to latitude.**This property gives each stretch of coast a unique geographic marker**, known as an isoline. The team found that **in years when these magnetic isolines moved apart, the turtle nests spread out over a larger area — by 1 or 2 kilometers**. Conversely, when isolines converged, the nests squeezed into a smaller patch of beach, suggesting the **turtles follow shifting magnetic tracks to their favorite nests**. The findings also argue that **a magnetic address is imprinted on loggerhead turtles at birth** to point the way home.

But so do salmon, and other birds, fishes and mammals:

> Remarkably, salmon show this same ability. Brothers and Lohman write:
>
> > In a previous study, the migratory route of **salmon** approaching their natal river was **shown to vary with subtle changes** in the Earth's field. Whereas the endpoint of the salmon spawning migration was presumably the same regardless of route, **our findings demonstrate for the first time** a **relationship between changes in Earth's magnetic field and the locations where long-distance migrants return** to reproduce.
>
> Joining the contenders for this skill set are more unrelated animal types:
>
> > … our results provide the strongest evidence to date that **sea turtles find their nesting areas at least in part** by **navigating to unique magnetic signatures** along the coast. In addition, our results are consistent with the hypothesis that turtles accomplish natal homing **largely on the basis of magnetic navigation** and **geomagnetic imprinting**. These findings, in combination with recent studies on Pacific **salmon**, suggest that **similar mechanisms** might underlie natal homing in **diverse long-distance migrants such as fishes, birds, and mammals**.

> So here we have a highly-precise navigational ability, able to cue on very faint properties in the earth's magnetic field, then on olfaction, and possibly on "other supplemental local cues" to find home across thousands of miles. The sensory "instruments" involved are integrated so that they are able to coordinate their functions for the same goal. Furthermore, the baby turtles, with their tiny brains, must have the ability to memorize the natal signatures of odors and magnetic field properties at birth, then recall those memories years later as large adults. (Sea turtles return about every two years to lay eggs.)
>
> That would be a conundrum enough to explain by unguided processes like natural selection. But then, adding to the difficulty for Darwinism, similar abilities are found in distantly related animals like fish, birds, and mammals. Even if a Darwinian could show a possible line of descent from fish to mammal, the abilities involved would have been lost and regained multiple times, because not all fish, birds, and mammals use magnetic navigation. Given the complexities of the sensory systems involved, this would represent a case of "convergent evolution" on steroids. If the origin of this capability in one type of animal is highly implausible by mutation and selection, how about four times or more?
>
> A design perspective, by contrast, would expect that unrelated animals on a common planet would share similar capabilities for their needs. The earth's magnetic field is global. It isn't surprising that very different animals would be designed to use that feature of the earth.

How can it be that animals that have no recent common ancestor can have evolved this remarkable ability independently? The best explanation of this convergence is common design, not common descent.

# Republicans Renee Ellmers and Jackie Walorski derail vote on 20-week abortion ban

**Wintery Knight** · 23 January 2015 · Archived copy · Original

I'm afraid I have some bad news to report.

This is from the Federalist.

Excerpt:

> Evidently, Republicans don't feel competent enough to make a case against infanticide. Why else would the GOP pull its 20-week abortion limit bill?

> […]A Quinnipiac poll found that 60 percent of women support limiting abortions to the first 20 weeks of pregnancy. A CBS News poll found that 60 percent of Americans thought abortion "should not be permitted" or available only under "stricter limits." A CNN Poll found that 58 percent of Americans believe abortion should legal only in a "few circumstances" or "always illegal."
>
> Yet the GOP caves on a bill that would prohibit most abortions after 20 weeks and promises instead to pass another worthless ban on taxpayer funded abortions—which we all know can be ignored by hiring an accountant.

> Polls change. Polls don't make you right. I know. But today is the 42nd anniversary of *Roe v. Wade*. And while the media continues to treat every Obama non-starter and crowd-pleaser as genuine policy idea, the 20-week abortion ban was predictably framed as another divisive play by zealous conservatives. *Controversial*. Republican leadership helpfully confirmed this perception by abandoning the only bill their party has come up with in years that widely supported.
>
> […][T]he most mystifying aspect of the GOP's retreat on the 20-week ban is that the 20-week ban is not new. Most of these same Republicans voted on the same legislation before the midterm elections, including some of the same representatives that reportedly withdrew their support for the bill. Nearly every GOP candidate running in the midterms publicly backed the idea, even in high-profile races where Democrats made abortion *the* central issue of their campaign.
>
> Yet, at the same time, Obama continues to support unrestricted abortion on demand for any reason at any time by anyone. There is no one to moderate his position. No one to make him veto a bill. No one to ask him about it. The president has no compunctions about supporting infanticide…
>
> […]This is about politics. Tragically incompetent politics. Even though a veto was imminent, you have to wonder: If the party representing the pro-life position, a party with a ~~sizable~~ historic majority, can't pull together a vote on an issue as unambiguous and risk-free as this one, what are the chances if it coming to a consensus and offering compelling arguments on issues like health care or tax reform? Very little, I imagine.

Before anyone goes crazy and starts to talk about not voting for Republican candidates in general elections, I want to point out that the vast majority of Republicans in the House would have voted for this bill. The opposition to the vote was led by a few Republican women – women who were known to be moderates.

The Federalist reports on that, too:

> Two of the representatives who caused the biggest stink about the bill were Rep. Renee Ellmers of North

> Carolina and Jackie Walorski of Indiana. Last week, Ellmers said she didn't think it was a good idea to vote on the legislation so early in the session (an argument that makes no sense, but let's put that aside). Yesterday the women pulled their sponsorship of the bill over what they said were concerns over the rape reporting requirement. And yet here are both women speaking in favor of this exact same legislation two years ago…

Renee Ellmers, from North Carolina:

Jackie Walorski, from Indiana:

The rest of the article discusses what a blunder this was for the GOP.

But their conclusion is important:

> Newsflash to the geniuses in her policy shop: there are few issues the Republicans can have with as much support, much less as much passionate support. If you're cowering in fear on popular stuff, what are you going to do when the going gets tough?

What are they going to do on Keystone XL? What are they going to do on Obamacare? Are they going to fight the tough battles when they retreat on the easy ones?

So what's the answer? I think that the answer is that the grassroots have to do the following:

1. Never give money to Republican groups, but only to individual candidates who have pro-life achievements.
2. Find out who the candidates are in the primaries and vote for the most conservative one. You can always vote for the moderate Republican in the general election, should it come to that.
3. Call your elected representatives in Washington and let them know how you feel about these moderate Republican women.

It's *generally* not a good idea to vote for a third party or a Democrat in an election, that would be worse than voting for a moderate… except in the case of these two ring leaders. I think we can send a message to the GOP by voting for a third party or voting Democrat just for these two. That way, the rest of them will learn not to do what they did. I don't recommend doing this for trivial things, but for a ban on abortions after 20 weeks? I think some retaliation is in order, for the ring leaders. Ellmers is garbage anyway, and needs to go. Her betrayal is a surprise to no one.

**Ellmers won her primary**

Of course, we should first try to defeat these RINOs in the Republican primaries, where the Republican candidate for the general election is selected.

Ellmers won her last primary because her opponent had no money:

> According to his most recent filing with the Federal Election Commission, Roche had raised only $23,000 through the middle of April, less than three weeks before election day. Ellmers, meanwhile, had raised nearly $1 million over the election cycle and had $424,000 in cash on hand.
>
> In other words, Ellmers had over 18 times as much cash on hand as Roche had raised over the course of the entire race.
>
> Ellmers has also had the backing of the GOP establishment in North Carolina and well-funded national pro-amnesty organizations ranging from Facebook's Mark Zuckerberg via his political advocacy shop FWD.us to ImmigrationWorksUSA, a business group pushing amnesty.
>
> […]Tea Party Patriots, which is led by national coordinator Jenny Beth Martin, has already faced some criticism for where its resources have been focused. Ingraham hosted Martin on her program last week, and asked why she hasn't spent any of the $2 million Tea Party Patriots spent on polling, fundraising and consulting

> fees on candidates like Roche or House Majority Leader Eric Cantor's primary challenger Dave Brat.
>
> "If you could knock off Cantor and you can knock off Ellmers, that sends shockwaves through the establishment that you seem so committed to upending, and yet you haven't done the research?" Ingraham pressed Martin. "It's a little late in the game to be doing the research. What's the hold up?"
>
> But Martin's group is hardly the only one where this issue–which is not necessarily because of nefarious motives, but more likely because of political inexperience and a pack mentality in the conservative political action committee world where one group goes into a race all others follow–has arisen. Because of actions from various conservative groups like the Senate Conservatives Fund (SCF), Madison Project, FreedomWorks and more–which are focused on races like Matt Bevin's unlikely-to-succeed challenge to Mitch McConnell or Milton Wolf's lagging bid against Pat Roberts–candidates like Roche either go unnoticed, underfunded or ignored.

We actually did knock off Cantor – this actually works. But it works better when pro-lifers start to think about *all* the issues, not just abortion, and start to primary candidates who are liberal on *any issue*, not just on abortion.

# Yemen rebels eject pro-Western government, Russian troops seize Donetsk airport

**Wintery Knight** · 23 January 2015 · Archived copy · Original

Everything is fine! Obama said what a great job he was doing during his State of the Union speech, right?

Middle East Map

Let's start with Yemen and the Associated Press:

> Yemen's U.S.-backed president quit Thursday under pressure from rebels holding him captive in his home, severely complicating American efforts to combat al-Qaida's powerful local franchise and raising fears that the Arab world's poorest country will fracture into mini-states.
>
> Presidential officials said Abed Rabbo Mansour Hadi submitted his resignation to parliament rather than make further concessions to Shiite rebels, known as Houthis, who control the capital and are widely believed to be backed by Iran.
>
> The prime minister and his cabinet also stepped down, making a thinly veiled reference to the Houthis' push at gunpoint for a greater share of power. Houthis deployed their fighters around parliament, which is due to discuss the situation on Sunday.
>
> Yemeni law dictates that the parliament speaker – Yahia al-Rai, a close ally of former autocratic ruler Ali Abdullah Saleh – will now assume the presidency. Saleh still wields considerable power and is widely believed to be allied with the Houthis.
>
> There were conflicting reports suggesting that authorities in Aden, the capital of southern region of Yemen, would no longer submit to the central government's authority. Even before the Houthis' recent ascendance, a powerful movement in southern Yemen was demanding autonomy or a return to the full independence the region enjoyed before 1990. Southerners outrightly reject rule by the Houthis, whose power base is in the north. The Houthis are Zaydis, a Shiite minority that makes up about a third of Yemen's population.

This BBC article explains more about why this is bad news for the United States. Maybe they will try to blame this one on a Youtube video, again?

Oh, but there is more good news. Thanks to Obama's fabulous leadership in foreign policy, the Russians have seized control of a Ukrainian airport.

Map of Ukraine

The Wall Street Journal explains:

> Shelling killed at least eight people at a bus stop in Donetsk on Thursday, hours after government forces withdrew from the ruins of the city's airport following months of relentless bombardment.
>
> With government forces in apparent retreat in several spots, the North Atlantic Treaty Organization offered indirect backing for the Ukrainian government's claims of a fresh influx of Russian troops into eastern Ukraine.
>
> A military spokesman in Kiev said 10 government troops also had been killed in the prior 24 hours—one of the highest single-day totals in weeks.
>
> Separatist forces captured 16 wounded soldiers during the battle overnight at Donetsk airport—then brought the captives to the site of the bus-stop shelling, where they were forced to kneel before a crowd of outraged locals.
>
> […]Earlier this week, Ukraine's President Petro Poroshenko said Russia had sent more than 1,000 troops across the border to fight alongside the separatists, putting the total on Ukrainian territory at 9,000.
>
> […]On Wednesday, NATO Secretary-General Jens Stoltenberg had reported "an increase in Russian equipment inside eastern Ukraine," such as tanks, artillery, armored vehicles and advanced air-defense systems.
>
> With fighting intensifying along the so-called line of contact, Gen. Breedlove said the Russia-backed forces have shown "a renewed capability now to bring pressure on the Ukrainian forces," gaining ground "in several places."
>
> While the airport, about 10 kilometers (6 miles) northwest of the city, is in ruins, the government's withdrawal from the main terminal was a significant blow, at least to morale, after months of dogged resistance.
>
> "Last night we took a decision to leave the terminal and pull back to new lines," military spokesman Vladislav Seleznyov said. He said the terminal had been damaged to such an extent that it could no longer be defended, but that fighting around the airport was continuing.
>
> Another spokesman, Col. Andriy Lysenko, said some buildings were still standing and being defended, such as the remnants of the airport tower and fire station.

Remember when Obama ridiculed Romney for thinking that Russia was a threat to world peace? Obama said to

Romney “The 1980s Are Now Calling to Ask for Their Foreign Policy Back”. I think that was a mistake.

# Five current scientific problems with Darwinian evolution

**Wintery Knight** · 23 January 2015 · Archived copy · Original

This is from the Intelligent Design FAQ at the Discovery Institute. (H/T Justin Taylor tweet)

Here are the 5 points:

1. Genetics: Mutations cause harm and do not build complexity.
2. Biochemistry: Unguided and random processes cannot produce cellular complexity.
3. Paleontology: The fossil record lacks intermediate fossils.
4. Taxonomy: Biologists have failed to construct Darwin's "Tree of Life."
5. Chemistry: The chemical origin of life remains an unsolved mystery.

Let's look at the first one:

> Mutations cause harm and do not build complexity.
>
> Darwinian evolution relies on random mutations that are selected by a blind, unguided process of natural selection that has no goals. Such a random and undirected process tends to harm organisms and does not improve them or build complexity. As National Academy of Sciences biologist Lynn Margulis has said, "new mutations don't create new species; they create offspring that are impaired." Similarly, past president of the French Academy of Sciences, Pierre-Paul Grasse, contended that "[m]utations have a very limited 'constructive capacity'" because "[n]o matter how numerous they may be, mutations do not produce any kind of evolution."

It's a nice little overview, and all the sections are short like that – it's just an introduction to each area.

There are lot more questions answered in the FAQ. It's a good resource.

# Ryan T. Anderson lectures on marriage and why it matters

**Wintery Knight** · 24 January 2015 · Archived copy · Original

About the speaker:

> Ryan T. Anderson researches and writes about marriage and religious liberty as the William E. Simon Fellow at The Heritage Foundation. He also focuses on justice and moral principles in economic thought, health care and education, and has expertise in bioethics and natural law theory.
>
> Anderson, who joined the leading Washington think tank's DeVos Center for Religion and Civil Society in 2012, also is the editor of *Public Discourse*, the online journal of the Witherspoon Institute of Princeton, N.J.
>
> Anderson's recent work at Heritage focuses on the constitutional questions surrounding same-sex "marriage." He is the co-author with Princeton's Robert P. George and Sherif Girgis of the acclaimed book "What Is Marriage? Man and Woman: A Defense" (Encounter Books, December 2012).

The lecture starts at 7:20 in. The lecture ends at 49:35. There are 32 minutes of Q&A.

Introduction:

- When talking about marriage in public, we should talk about philosophy, sociology and public policy
- Gay marriage proponents need to be pressed to define what marriage is, on their view
- Every definition of marriage is going to include some relationships, and exclude others
- It's meaningless to portray one side as nice and the other mean
- Typically, marriage redefiners view marriage as a more intense emotional relationship
- Marriage redefiners should be challenged in three ways:
- 1) Does the redefined version of marriage have a public policy reason to prefer only two people?
- 2) Does the redefined version of marriage have a reason to prefer permanence?
- 3) Does the redefined version of marriage have a reason to prefer sexual exclusivity?
- Also, if marriage is just about romance, then why is the state getting involved in recognizing it?
- The talk: 1) What marriage is, 2) Why marriage matters, 3) What are the consequences of redefining marriage?

What marriage is:

- Marriage unites spouses – hearts, minds and bodies
- Marriage unites spouses to perform a good: creating a human being and raising that human being
- Marriage is a commitment: permanent and exclusive
- Male and female natures are distinct and complementary

The public purpose of marriage:

- to attach men and women to each other
- to attach mothers and fathers to their children
- there is no such thing as parenting, there is only mothering and fathering
- the evidence shows that children benefit from mothering and fathering
- boys who grow up without fathers are more likely to commit crimes
- girls who grow up without fathers are more likely to have sex earlier
- Children benefit from having a mother and a father
- can't say that fathers are essential for children if we support gay marriage, which makes fathers optional

- without marriage: child poverty increases, crime increases, social mobility decreases, welfare spending increases
- when government encourages marriage, then government has less do to – stays smaller, spends less
- if we promote marriage as an idea, we are not excluding gay relationships or even partner benefits
- finally, gay marriage has shown itself to be hostile to religious liberty

Consequences redefining marriage:

- it undermines the norm in public like that kids deserve a mom and a dad – moms and dads are interchangeable
- it changes the institution of marriage away from the needs of children, and towards the needs of adults
- it undermines the norm of permanence
- we learned what happens when marriage is redefined before: with no-fault divorce
- no-fault divorce: after this became law, divorce rates doubled – the law changed society
- gay marriage would teach society that mothers and fathers are optional when raising children
- if marriage is what people with intense feelings do, then how can you rationally limit marriage to only two people?
- if marriage is what people with intense feelings do, then if other people cause intense feelings, there's no fidelity
- if marriage is what people with intense feelings do, then if the feelings go away, there is no permanence
- the public policy consequences to undermining the norms of exclusivity and permanence = fatherless children and fragmented families
- a final consequences is the decline and elimination of religious liberty – e.g. – adoption agencies closing, businesses being sued

We're doing very well on abortion, but we need to get better at knowing how to discuss marriage. If you're looking for something short to read, click here. If you want to read a long paper that his book is based on.

# New book “Counting to God” discusses seven arguments against atheism from science

**Wintery Knight** · 24 January 2015 · Archived copy · Original

Evolution News has a summary of the book – they recommend it.

Excerpt:

> A lot of books — many of them very good — have been written about the debate over intelligent design. But rarely does one come along that combines a compelling story of the author’s personal journey to faith with a well-written, comprehensive, easy-to-read presentation of the scientific evidence. Lee Strobel’s 2004 *Case for a Creator* comes to mind, but that is now ten years old and it’s never too soon for an update. As a result, I’m pleased to recommend an outstanding new book: *Counting to God: A Personal Journey through Science to Belief*, by Douglas Ell.
>
> Doug Ell is an attorney in Washington, D.C., with an undergraduate degree in math and physics from MIT, and a master’s degree from the University of Maryland in theoretical math. You’ll have to read the book to learn Doug’s entire story. He was born into a religious home, but by the time he started college, he had drifted away from his upbringing, which he came to see as outdated superstition. As an undergraduate student, he embraced scientism — the view that scientific investigation is the only means of discovering real truth. Sometime later, however, Doug was introduced to the scientific theory of intelligent design, and everything began to change.
>
> *Counting to God* tells Doug’s story, but it also recounts key lines of evidence that support the theory of intelligent design and challenge materialist explanations of cosmic and biological origins. Ell presents what he calls the “seven wonders” of science of the new millennium:
>
> - The universe had a beginning, and a first cause, some 14 billion years ago.
> - The universe is finely tuned for life.
> - The complexity of life could not arise through unguided processes.
> - DNA contains information and biological machines.
> - New species appear suddenly in the fossil record.
> - Earth is a special planet, uniquely suited to life.
> - Quantum physics points to a reality outside of space and time.
>
> Ell surveys the evidence in each of these areas, discussing other intriguing topics along the way, including the multiverse, junk DNA, irreducible complexity, orphan genes, and near-death experiences.

I think we’ve discussed all seven of those arguments on this blog before, depending on what he means by them.

The hardcover is a lot more expensive than the Kindle edition, but I felt that this was one book I wanted to put on my desk. So I took a chance and ordered it. I hope it’s as good as this review says it is!

UPDATE: The woman I am mentoring and I have both read the book, and we both liked it a lot and agree it’s a good introduction to the scientific arguments. I bought a copy for my friend Dina, as well, so we’ll get an opinion from her soon, since she is a reading machine.

# New study: couples that delay sexual activity experience higher quality relationships

**Wintery Knight** · 25 January 2015 · Archived copy · Original

Relationship stability, quality, communication, satisfaction
From Family Studies, news about TWO new studies.

Excerpt: (links removed)

> [T]wo recently published studies call into question the validity of testing sexual chemistry early in dating.
>
> My colleagues and I published the first study a few years ago in the American Psychological Association's *Journal of Family Psychology*. This study involved a national sample of 2,035 married individuals who participated in the popular online couple assessment survey called "RELATE." **We found that the longer a dating couple waits to have sex, the better their relationship is after marriage. In fact, couples who wait until marriage to have sex report higher relationship satisfaction (20% higher), better communication patterns (12% better), less consideration of divorce (22% lower), and better sexual quality (15% better) than those who started having sex early in their dating (see Figure 2). For couples in between—those that became sexually involved later in their dating, but prior to marriage—the benefits were about half as strong.**
>
> […]These patterns were statistically significant even when controlling for a variety of other variables such as respondents' number of prior sexual partners, education levels, religiosity, and relationship length.
>
> **The second study, by Sharon Sassler and her colleagues at Cornell University, also found that rapid sexual involvement has adverse long-term implications for relationship quality.** Using data from the Marital and Relationship Survey, which provides information on nearly 600 low- to moderate-income couples living with minor children, their study examined the tempo of sexual intimacy and subsequent relationship quality in a sample of married and cohabiting men and women. Their analyses also suggest that delaying sexual involvement is associated with higher relationship quality across several dimensions.
>
> They discovered that the negative association between sexual timing and relationship quality is largely driven by a link between early sex and cohabitation. Specifically, sexual involvement early in a romantic relationship is associated with an increased likelihood of moving more quickly into living together, which in turn is associated with lower relationship quality. This finding supports Norval Glenn's hypothesis that sexual involvement may lead to unhealthy emotional entanglements that make ending a bad relationship difficult. As Sassler and her colleagues concluded, "Adequate time is required for romantic relationships to develop in a healthy way. In contrast, relationships that move too quickly, without adequate discussion of the goals and long-term desires of each partner, may be insufficiently committed and therefore result in relationship distress, especially if one partner is more committed than the other" (p. 710).

The rest of the post talks about two reasons why this works: improved partner selection and prioritizing

communication and commitment. Improved partner selection occurs because you haven't committed too much too soon (sexually) and you have time to let things play out to see if you really fit with the other person. And if you take sex off the table, then you have to use other means in order to build emotional intimacy – communication, service, support, etc.

That's two studies, and there's a third. Dina sent me this article from the UK Daily Mail about a new study showing the importance of chastity for relationship quality and stability.

Excerpt:

> New couples who jump into bed together on the first date do not last as long in relationships as those who wait a new study has revealed.
>
> Using a sample of almost 11,000 unmarried people, Brigham Young University discovered a direct correlation between the length and strength of a partnership and the amount of time they took to have first have sex.
>
> **The study showed that those who waited to initiate sexual intimacy were found to have longer and more positive outcomes in their relationships while those who couldn't help themselves reported that their dalliances struggled to last more than two years.**
>
> 'Results suggested that waiting to initiate sexual intimacy in unmarried relationships was generally associated with positive outcomes,' said the report authored published by the U.S. National Library of Medicine National Institutes of Health.
>
> 'This effect was strongly moderated by relationship length, with individuals who reported early sexual initiation reporting increasingly lower outcomes in relationships of longer than two years.'
>
> The study examined four sexual-timing patterns: Having sex prior to dating, initiating sex on the first date or shortly after, having sex after a few weeks of dating, and sexual abstinence.
>
> Each one of these fields yielded different results in relationship satisfaction, stability and communication in dating situations.

Here's another recent study that shows that if a woman has more than her husband as a premarital sex partner, her risk of divorce increases.

His findings:

> Using nationally representative data from the 1995 National Survey of Family Growth, I estimate the association between intimate premarital relationships (premarital sex and premarital cohabitation) and subsequent marital dissolution. I extend previous research by considering relationship histories pertaining to both premarital sex and premarital cohabitation. I find that premarital sex or premarital cohabitation that is limited to a woman's husband is not associated with an elevated risk of marital disruption.**However, women who have more than one intimate premarital relationship have an increased risk of marital dissolution.**

Here's another study that makes it even more clear.

Findings:

> Data from the 1988 US National Survey of Family Growth (NSFG) were utilized to assess the impact of premarital sexual activity on subsequent marital stability. **Among white NSFG subjects first married in 1965-85, virgin brides were significantly less to have become separated or divorced (25%) than women who had not been virgins at marriage (35%).**
>
> **[…]The lower risk of divorce on the part of white women with no premarital sexual experience persisted even after numerous intervening and background variables were controlled.**

This study supports what the Bible says about chastity and premarital sex:

> 1 Cor. 7:8-9:
>
> 8 To the unmarried and the widows I say that it is good for them to stay single as I am.
>
> 9 But if they cannot exercise self-control, they should marry. For it is better to marry than to burn with passion.
>
> The idea of "burning" here has to do with sexual desire. Here Paul tells all unmarried people that if they cannot control their sexual desires, they need to get married. Why? Because Paul assumes that one cannot fulfill this sexual desire outside of the marital bed. While Paul would love for them to remain single (1 Cor. 7:7), he believes that sex outside of marriage is a destructive sin and *cannot* be used as a gratifying release of our sexual passions.

If you're going to talk to a young person about sex, it's a good idea to use these studies to explain what you lose by having sex too early in the relationship. Although they may respond with anecdotes to refute studies, studies are important because they represent LOTS of data points, not just one or two cherry-picked cases. My view on all this is the Bible's view – no sex before marriage. But when talking to people about this issue, I find it useful to have evidence ready in order to be convincing in every way possible.

# Wisconsin governor Scott Walker draws standing ovations at Freedom Summit in Iowa

**Wintery Knight** · 25 January 2015 · Archived copy · Original

This story is from The Hill.

Excerpt:

> Wisconsin Gov. Scott Walker (R) delivered a fiery speech in Iowa on Saturday, wowing the conservative crowd with a passionate argument for small government and his own lengthy resume.
>
> The Wisconsin governor, in rolled-up shirtsleeves, paced the stage as he blasted big government and touted a long list of conservative reforms he's pushed through in blue Wisconsin.
>
> The governor also showed a rhetorical flourish that's largely been absent from his previous campaigns, drawing the crowd to its feet multiple times.
>
> "There's a reason we take a day off to celebrate the 4th of July and not the 15th of April," he said, almost yelling as his voice grew hoarse. "Because in America we value our independence from the government, not our dependence on it."
>
> Walker's speech had something for every element of the activist crowd. The governor touted his three victories over Democrats and recall win as well as his state-level education reforms. Each new policy he helped pass drew cheers: Voter ID laws, education reforms, tax cuts and defunding Planned Parenthood.
>
> The biggest question for Walker as he ramps up for a race is whether he has the fire in the belly and political skills to stand onstage against the other candidates. And in his first major Iowa address, he may have done a lot to dispel notions that he lacks charisma.
>
> When he said he won reelection as Milwaukee County Executive in an area where President Obama won by a two-to-one margin, some in the audience gasped.
>
> "If you get the job done the voters will actually stand up with you," he said before contrasting his record with Washington's deadlock.
>
> The preacher's son also showed a personal side — and spoke in religious terms to thank Iowans who prayed for him as he faced death threats during his fight against the public sector unions, including one that promised to gut his wife "like a deer."
>
> Walker made sure to establish his Iowa roots — saying he'd lived there until third grade until his father got a job as a minister in Wisconsin — before promising to return "many more times in the future."

More from a different article from The Hill:

> Scott Walker's stock is soaring after a triumphant return to Iowa.
>
> The Wisconsin Republican governor delivered a pitch-perfect speech to a room packed with influential Hawkeye State conservatives on Saturday, walking them through his robust resume and ideology with a passion that surprised many.
>
> Activists say Walker came out on top after 10 hours of candidate speeches.
>
> "It was a clear Walker victory. He had expectations coming in here, he was on everyone's shortlist and he had to meet those expectations and I thought he far exceeded them," said former Iowa Republican Party political director Craig Robinson. "I thought his speech was just perfect, and I thought his delivery was perfect. The delivery really surprised me."
>
> Walker held his own against Ted Cruz, the event's other star. While the Texas senator always turns in

> commanding performances with conservative crowds, the governor next door helped himself the most by making a strong first impression with many Iowa activists who simply knew him from his showdown with the unions.
>
> He offered something for almost every type of conservative, rolling through his record of both social and fiscal accomplishments, drawing big applause by knocking "radical Islamic terrorists" and touting legislation he backed to relax gun control laws and cut taxes.
>
> He spoke about his faith in a natural way, and in one sentence managed to mention that he was both the son of a pastor and had Iowa roots (Walker spent his early years in the state before his dad moved to a church in Wisconsin).
>
> Most importantly, he did it all with a folksy yet fiery delivery that had observers gushing and brought the crowd to their feet.
>
> **The biggest question surrounding Walker heading into the weekend is whether his charisma could stack up against the other White House contenders. It was a worry Walker shared — one Republican who talked to him backstage said the governor expressed concern that people would view him as "bland." But as the strode onstage with his shirt sleeves rolled up and paced about the floor, those worries vanished.**
>
> "Walker found a way to talk about himself, talk about the country and talk about Iowa in perfect proportionality, and he did so with a style that was very easy and engaging," said Republican pollster Frank Luntz. "He connected to these people — you could see it."
>
> […]But Walker made a big splash in his first Iowa appearance of 2015, stealing the spotlight from his likely foes.
>
> "That's the first time I've ever heard him live and he was tremendous. It was a great speech," said Sam Clovis, a conservative kingmaker and the GOP's 2014 nominee for state treasurer. "That was something special."

Since we are ramping up to the 2016 election, I took some time to list out my 6 favorite candidates for the GOP nomination.

Here they are:

1. Wisconsin governor Scott Walker
2. Louisiana governor Bobby Jindal
3. Texas governor Rick Perry
4. New Mexico governor Susana Martinez
5. Indiana governor Mike Pence
6. Texas senator Ted Cruz

Five out of six candidates are governors, because I really think we need to prefer people who have executive branch experience – experience at building consensus with Democrats in order to get sensible bills passed that will help middle class Americans. I would like to see Ben Carson run, but I think he would make a better HHS secretary than President. Ohio governor John Kasich is a good choice, but he doesn't have the same accomplishments that the governors in my list have. Walker is my first choice because he took on the public sector unions and won.

There are also some people I don't think should be President. I like Marco Rubio, but his support for amnesty disqualifies him as a candidate. Jeb Bush is disqualified because he is too supportive of amnesty and Common Core. Mitt Romney's record is too supportive of abortion and gay rights. Romney also supports global warming alarmism. I think Romney is a better Democrat than he is a Republican. Rand Paul is only good on fiscal issues. On social issues Paul is a moderate. And foreign policy, Paul is a Democrat. Chris Christie is really a conservative Democrat.

If you want to learn more about Scott Walker, I recommend Walker's new book. I actually got the audio version, and it's read by governor Walker himself.

# Greek socialist party that originally caused financial meltdown wins election

**Wintery Knight** · 26 January 2015 · Archived copy · Original

Map of Europe

Well, this is certainly going to be interesting…

Fox News reports:

> Greece voted Sunday in an early general election that could alter the course of the country's struggle with crippling debts, with a radical left party poised to win by promising to rewrite the terms of its international bailout.

> The Syriza party led by Alexis Tsipras has remained firmly ahead of conservative Prime Minister Antonis Samaras' New Democracy party in opinion polls throughout the election campaign, which was called two years ahead of schedule.
>
> But those polls also have shown that a significant portion of voters remained undecided until the last minute, and suggest that Syriza might struggle to win enough parliamentary seats to form a government on its own.
>
> […]**Syriza has promised to renegotiate the country's 240 billion euro ($270 billion) international bailout deal. It has pledged to reverse many of the reforms that international creditors demanded in exchange for keeping Greece financially afloat since 2010.**
>
> **The anti-bailout rhetoric has renewed doubts over Greece's ability to emerge from its financial crisis that has seen a quarter of its economy wiped out, sent unemployment soaring and undermined the euro, the currency shared by 19 European countries.**
>
> **Greece's creditors insist the country must abide by previous commitments to continue receiving support, and investors and markets alike have been spooked by the anti-bailout rhetoric. Greece could face bankruptcy if a solution is not found, although speculation of a "Grexit" — Greece leaving the**

> **euro — and a potential collapse of the currency has been far less fraught than during the last general election in 2012.**
>
> Samaras' campaign focused on the improving economy, which grew for the first time in six years in the third quarter of 2014. He has promised to reduce taxes if re-elected and has warned of the potentially dire consequences of reneging on bailout conditions. Opponents accused him of using fear tactics.
>
> Syriza's promises to end Greece's era of crushing austerity have attracted many voters infuriated by the deterioration in their standard of living and ever-increasing tax bills.
>
> […]Greece's next government faces a series of formidable tasks, the most pressing of which is concluding negotiations with bailout inspectors to release a 7.2 billion euro ($8.1 billion) loan installment originally due late last year.

I'm sure that the socialists will know how to run the economy, after all, they did such a good job last time there were in control.

The plan is for them to beg for debt forgiveness, ramp up government spending and raise the minimum wage.

The Wall Street Journal explains:

> European economic orthodoxy, led by Germany, has fought Greece's debt crisis with painful austerity—public-spending cuts and tax hikes—and other strict reforms. Syriza's rise is the most potent challenge yet to that orthodoxy.
>
> If Syriza wins, it could embolden left-wing parties in other countries, especially Spain, where political tensions also are boiling. It could even result in a rift with Germany that ruptures the euro.
>
> The economic plan advanced by Mr. Lapavitsas and other professors aligned with Syriza is rooted in the core principles of debt forgiveness and higher government spending, which Germany has rejected.
>
> […]It has honed its focus since then, and Mr. Lapavitsas describes the party's platform as "a Keynesian program with redistribution attached, with some Marxist view of the world."
>
> […]In the tradition of John Maynard Keynes, Syriza advocates public spending to reignite economic growth. Greece can afford to spend more if some of its debt is forgiven by other countries.
>
> **Nikolaos Chountis, a Syriza candidate in Athens, ticks off the party's spending priorities: food and electricity subsidies for impoverished households, a pension boost for the poorest retirees, a hike in the minimum wage and tax cuts for low earners.**
>
> […]The party's first message to Europe would be "let's get rid of the [austerity agreement]," Mr. Stathakis says.

Let's get rid of the austerity agreement? That's the only reason why they are getting the bailouts now.

Look how cavalierly the socialists talk about going back on their agreement.

Associated Press:

> The prospect of an anti-bailout government coming to power in Greece has sent jitters through the financial world, reviving fears of a Greek bankruptcy that could reverberate across the eurozone.
>
> "The verdict of the Greek people ends, beyond any doubt, the vicious circle of austerity in our country," Tsipras told a crowd of rapturous flag-waving supporters.
>
> He won on promises to demand debt forgiveness and renegotiate the terms of Greece's 240 billion euro ($270 billion) bailout, which has kept the debt-ridden country afloat since mid-2010.
>
> To qualify for the cash, Greece has had to impose deep and bitterly resented cuts in public spending, wages and pensions, along with public sector layoffs and repeated tax increases.

> **Its progress in reforms is reviewed by inspectors from the International Monetary Fund, European Commission and European Central Bank, collectively known as the troika, before each installment of bailout funds can be released.**
>
> **Tsipras pronounced the troika and its regular debt inspections "a thing of the past."**

Now if you break the deal, you would think that the bailing out would stop. And then the Greek people will understand what it means to elect the same socialists that ruined their economy when they won in 2009. I am not entirely sure that these people have any plan for economic growth, other than "you give me bailouts, I don't pay you back". They needed leftist professors to come up with that one. They certainly couldn't find any economists in the private sector who would believe such nonsense.

# Obama threatens to veto No Taxpayer Funding for Abortion Act

**Wintery Knight** · 26 January 2015 · Archived copy · Original

Life News reports:

> Yesterday, the House passed legislation that will put in place a complete ban on taxpayer funding of abortions that ensures abortions are not directly funded in any federal governmental program or department. The president says he will veto it.
>
> The legislation combines several policies that must be enacted every year in Congressional battles and puts them into law where they will not be in jeopardy of being overturned every time Congress changes hands from pro-life lawmakers to those who support abortions.
>
> The House voted 242-179 for the bill with 239 Republicans and three Democrats voting to ban taxpayer funding of abortions under HR7 while 178 Democrats and one Republican voted against it.
>
> Despite strong support for the bill and expected passage in the Senate, as well as strong public opinion , pro-abortion President Barack Obama says he will veto the legislation.
>
> "I am deeply committed to protecting this core constitutional right, and I believe that efforts like H.R. 7, the bill the House considered today, would intrude on women's reproductive freedom and access to health care and unnecessarily restrict the private insurance choices that consumers have today," Obama said in a statement objecting to the bill.
>
> But, according to a Marist poll released today, 68 percent of Americans oppose using taxpayer dollars to fund abortion.
>
> The bill has been around a few years but has only been approved in the House thanks to a pro-abortion Senate. The House voted 227-188 for the bill in 2014 and, on May 4, 2011, the House passed HR 3, the No Taxpayer Funding for Abortion Act, on a 251-175 vote with Republicans voting 235-0 for the bill and Democrats voting 175-16 against it.
>
> Now that Republicans have taken over the Senate from pro-abortion Democrats, the bill is finally expected to receive a vote in the upper chamber.
>
> […]A majority of Americans object to the use of taxpayer money for funding abortion, according to numerous polls — including a survey CNN conducted in early April showing Americans oppose public funding of abortion by a margin of 61% to 35%.
>
> **The bill will also mitigate concerns about abortion funding in the various loopholes in the Obamacare national health care bill that various pro-life organizations warned about during debate on the law. The legislation did not contain language banning funding of abortions in its provisions and the No Taxpayer Funding for Abortion Act would fix that problem.**

So, if you are a pro-lifer, and you don't want to subsidize the murder of unborn children, then maybe you should not vote for Democrats like Obama. Abortion is the biggest moral issue of our generation. It's very important to understand that if we allow the people who are irresponsible with sex to face the costs of their sexual lifestyle, then they will adjust their decision-making. The more the government takes over health care and reduces or eliminates the costs of immoral behavior for people, the more immoral behavior there will be.

The best thing we can do to discourage immorality is to let people bear the costs of their lifestyle choices themselves. That can include contraceptives, sexually transmitted disease treatment, abortion costs, single mother welfare, sex changes, and so on. One of the reasons why we have such a growth in immoral behavior is because generous Christians and conservatives keep falling for the plea for "compassion" made by big government leftists. Well, we have to decide now that we are not going to pay people to be immoral. That money has to come from

somewhere, you know. And the more you pay people to do something, the more they do it.

There is some good news though – the Republicans are going to try again to get a vote on that ban on abortions after 20 weeks.

# Cold Case Christianity: is Mark's gospel linked to the eyewitness Peter

**Wintery Knight** · 26 January 2015 · Archived copy · Original

I listened to a dynamite podcast on the weekend by J. Warner Wallace. I like his longer-form, less polished podcasts better than the newer, slicker 30-minute ones. This time, the podcast had heavy metal intro / ending music and it was an hour and a half long!

The M4A file is here.

Details:

> In this blast from the past, J. Warner examines the Gospel of Mark for signs of Peter's influence. Papias, the early church bishop, claimed Mark's Gospel was written as he sat at the feet of Peter in Rome. According to Papias, Mark scribed Peter's sermons and created the narrative we now have in our Bible. In this audio podcast, J. Warner applies Forensic Statement Analysis to Mark's text to see if Peter's fingerprints are present.

You can also read a post on some of what is in the podcast, if you don't want to listen to the podcast.

Here is the part I thought was most interesting:

> **The Omissions of the Gospel Are Consistent With Peter's Influence**
>
> There are many details in the Gospel of Mark consistent with Peter's special input and influence, including omissions related to events involving Peter. How can Mark be a memoir of Peter if, in fact, the book contains so many omissions of events involving Peter specifically? It's important to evaluate the entire catalogue of omissions pertaining to Peter to understand the answer here. The vast majority of these omissions involve incidents in which Peter did or said something rash or embarrassing. It's not surprising these details were omitted by the author who wanted to protect Peter's standing in the Christian community. Mark was quite discreet in his retelling of the narrative (other Gospel writers who were present at the time do, however, provide details of Peters 'indiscretions' in their own accounts). Here are some examples of Petrine Omissions grounded in an effort to minimize embarrassment to Peter (see Cold-Case Christianity for a more detailed explanation of the events summarized here):
>
> Peter's shame at the "Miraculous Catch"
> *(Mark 1:16-120 compared to Luke 5:1-11)*
>
> Peter's foolish statement at the crowded healing
> *(Mark 5:21-34 compared to Luke 8:42-48)*
>
> Peter's lack of understanding related to the parable
> *(Mark 7:14-19 compared to Matthew 15:10-18 and Acts 10:9-16)*
>
> Peter's lack of faith on the lake
> *(Mark 6:45 compared to Matthew 14:22-33)*
>
> Peter's rash statement to Jesus
> *(Mark 8:31-33 compared to Matthew 16:21-23)*
>
> Peter's statement related to money
> *(Mark 10:23-31 compared to Matthew 19:23-30)*
>
> Jesus' prediction of Peter's denial
> *(Mark 14:27-31 compared to Luke 22:31-34 and John 13:34-38)*
>
> Peter's behavior at the foot-washing

> *(Mark 14:22-26 compared to John 13:2-9)*
>
> Peter's denial and Jesus' direct stare
> *(Mark 14:66-72 compared to Luke 22:54-62)*
>
> There are a number of places in the Gospel of Mark where details related specifically to the words and actions of Peter have been omitted in what appears to be an effort to protect Peter from embarrassment. This doesn't mean Peter failed to talk about these things. He may very well have included them in his sermons and teachings. But Mark, his scribe and close friend, simply chose to omit these details related to Peter, either at Peter's request or on his own initiative.

Mark doesn't want to annoy his source, Peter, by calling him out for being foolish at times.

This is highly recommended. There's another blog post from Cold Case Christianity here, on the same topic.

# New study: using birth control pill for 5+ years doubles risk of brain cancer

**Wintery Knight** · 27 January 2015 · Archived copy · Original

This is from the ultra-leftist Time magazine, of all places.

Excerpt:

> Dr. David Gaist, a neurologist at Odense University Hospital and the University of Southern Denmark, and his colleagues found that women taking hormonal contraceptives — those containing estrogen, progestin or a combination of both — showed higher rates of a rare brain tumor known as glioma. Their results, published Thursday in the *British Journal of Clinical Pharmacology*, raise questions about the connection between oral contraceptives and brain cancer, but shouldn't yet be interpreted as a reason to stop taking birth control, says Gaist.
>
> Using data from Denmark's national registries of health records, cancer cases and prescriptions, Gaist zeroed in on the women aged 15 years to 49 years diagnosed with glioma, and then analyzed whether they were prescribed contraceptives and for how long. **Overall, women who had used hormonal contraceptives at any point in their lives showed a 50% higher risk of developing the brain tumors compared to those who had not used them. And women who used the birth control for more than five years nearly doubled their risk of the cancer.**

Let's take a look at some previous studies on the effects of contraceptives.

From the Times of India.

Excerpt:

> Women who take oral contraceptives regularly are at a higher risk of developing breast cancer compared to others, shows a study by AIIMS doctors. Breast cancer risk was found to be 9.5 times more in women with a history of consuming such pills. Early menstruation cycle, late marriage and lower duration of breastfeeding were the other major factors responsible for the disease among Indians, according to the study published in the latest issue of the Indian Journal of Cancer.

> The study was conducted on 640 women, of which 320 were breast cancer patients. "We found long-term use of oral contraceptive pills (OCP) higher among those suffering from breast cancer-11.9%-compared to healthy individuals-1.2%," said Dr Umesh Kapil, a professor at the public health nutrition unit, AIIMS. He said breast cancer is caused by repeated exposure of breast cells to circulating ovarian hormones, and long-term use of OCPs, which contain estrogen and progesterone, may be increasing this risk by causing hormonal imbalance.

> The study mostly had women who used OCPs for birth control. Emergency contraceptives, popularly called morning-after pills, were not included.

This is not the first study, nor even the second study, to confirm this link.

**Birth control pills**

Many studies showed that taking birth control pills caused an increased risk of breast cancer.

Study 1: (March 2003)

> RESULTS: Among the youngest age group (<35 years, n = 545), significant predictors of risk included African-American race (RR = 2.66: 95% CI 1.4-4.9) and **recent use of oral contraceptives** (RR = 2.26; 95% CI 1.4-3.6). Although these relationships were strongest for estrogen receptor-negative (ER-) tumors (RRs of 3.30 for race and 3.56 for recent oral contraceptive use), these associations were also apparent for young women with ER+ tumors. Delayed childbearing was a risk factor for ER+ tumors among the older premenopausal women (Ptrend < 0.01), but not for women <35 years in whom early childbearing was associated with an increased risk, reflecting a short-term increase in risk immediately following a birth.

Study 2: (October 2008)

> **Oral contraceptive use ≥1 year was associated with a 2.5-fold increased risk for triple-negative breast cancer** (95% confidence interval, 1.4-4.3) and no significantly increased risk for non-triple-negative breast cancer ($P_{heterogeneity}$ = 0.008). Furthermore, the risk among oral contraceptive users conferred by longer oral contraceptive duration and by more recent use was significantly greater for triple-negative breast cancer than non-triple-negative breast cancer ($P_{heterogeneity}$ = 0.02 and 0.01, respectively).

When people talk about a war on women, maybe they should be thinking about this practice of promoting behaviors to women that make them sick. And eventually, we all have to pay for the increased costs of health care when we encourage people to do things that make them sick. We should not be promoting birth control to young women in order to enable them to have recreational sex. It's not worth the harm it causes them. When you add in the psychological damage and the risk of abortion if the contraception fails, it really is not the right thing to tell a young woman.

# Is belief in the Jesus of the Bible needed in order to be rightly related to God?

**Wintery Knight** · 27 January 2015 · Archived copy · Original

Here's a good introductory lecture on the topic by Chad Gross, who blogs at Truthbomb Apologetics.

You can see the footnotes for his article on his blog.

For those who don't want to watch the video, here's a good thought from J. Warner Wallace at Please Convince Me.

Excerpt:

> A "just" God does justice, which means to punish or reward appropriately. In the Western tradition, we punish people for the actions they commit, but the extent of punishment is dependent also on the person's mental state, and a person's mental state is reflective of his or her beliefs. Premeditated murder is worse than manslaughter, and is punished more severely, and a hate crime is a sentencing enhancement that adds more punishment to the underlying crime. In both examples, a person's beliefs are at play: the premeditated murderer has reflected on his choices and wants the victim dead; a hate crime reflects a belief that the rights of a member of the protected group are especially unworthy of respect. So, considering a person's beliefs may well be relevant, especially if those beliefs have motivated the criminal behavior.
>
> But the challenger's mistake is even more fundamental. He is wrong to assert that people are condemned for not accepting the gospel. Christians believe that people are condemned for their sinful behavior – the "wages of sin is death" – not for what they fail to do. The quoted challenge is like saying that the sick man died of "not going to the doctor." No, the person died of a specific condition – perhaps cancer or a heart attack – which a doctor might have been able to cure. So too with eternal punishment. No one is condemned for refusing to believe in Jesus. While Jesus can – and does – provide salvation for those who seek it, there is nothing unjust about not providing salvation to those who refuse to seek it. After all, we don't normally feel obliged to help someone who has not asked for, and does not want, our assistance. So too the Creator has the right to withhold a gift – i.e. eternity spent in His presence – from those who would trample on the gift, and on the gift-giver.
>
> The quoted assertion also demonstrates an unspoken belief that we can impress God with our "kind" or "generous" behavior. This fails to grasp what God is – a perfect being. We cannot impress Him. What we do right we should do. We don't drag people into court and reward them for not committing crimes. This is expected of them. They can't commit a murder and then claim that punishment is unfair, because they had been kind and generous in the past. When a person gets his mind around the idea of what perfection entails, trying to impress a perfect Creator with our "basic goodness" no longer seems like such a good option.

If you want to hear a debate featuring exclusivists versus pluralists, I've got a podcast and a summary of a good debate on this issue between Chris Sinkinson and John Hick. You can't find a more prominent pluralist than John Hick, except for maybe Paul Knitter, who is featured in a debate with Harold Netland in the new "Debating Christian Theism" book that is just out with Oxford University Press.

# Obama said Obamacare would not add to the deficit, CBO says it adds $1.35 trillion

**Wintery Knight** · 28 January 2015 · Archived copy · Original

In the video above, Obama promised the American people that his health care plan would not add one dime to the deficit. And the low-information voters who voted for him believed him. Just like they believed that they could keep their doctor, that they could keep their health care plan, that Obamacare would lower the costs of health care, that Benghazi was caused by a YouTube video, and so on.

So how much did Obamacare add to the deficit?

The UK Daily Mail has the latest numbers from the Congressional Budget Office.

Truth:

> It will cost the federal government – taxpayers, that is – $50,000 for every person who gets health insurance under the Obamacare law, the Congressional Budget Office revealed on Monday.
>
> The number comes from figures buried in a 15-page section of the nonpartisan organization's new ten-year budget outlook.
>
> The best-case scenario described by the CBO would result in 'between 24 million and 27 million' fewer Americans being uninsured in 2025, compared to the year before the Affordable Care Act took effect.
>
> Pulling that off will cost Uncle Sam about $1.35 trillion – or $50,000 per head.
>
> The numbers are daunting: It will take $1.993 trillion, a number that looks like $1,993,000,000,000, to provide insurance subsidies to poor and middle-class Americans, and to pay for a massive expansion of Medicaid and CHIP (Children's Health Insurance Program) costs.
>
> Offsetting that massive outlay will be $643 billion in new taxes, penalties and fees related to the Obamacare law.
>
> That revenue includes quickly escalating penalties – or 'taxes,' as the U.S. Supreme Court described them – on people who resist Washington's command to buy medical insurance.
>
> It also includes income from a controversial medical device tax, which some Republicans predict will be eliminated in the next two years.
>
> If they're right, Obamacare's per-person cost would be even higher.

Did Obama know that he was lying when he said that his health care plan would not add one dime to the deficit?

Well, his buddy Gruber, the architect of Obamacare, certainly did:

But we should not be surprised, either by the low intelligence levels of Democrat voters or by the lies of Democrat politicians. After all, they want single payer health care – look what Harry Reid says:

> "What we've done with Obamacare is have a step in the right direction, but we're far from having something that's going to work forever," Reid said.
>
> When then asked by panelist Steve Sebelius whether he meant ultimately the country would have to have a health care system that abandoned insurance as the means of accessing it, Reid said: "Yes, yes. Absolutely, yes."

And they know – from looking up North to Canada – that single-payer health care will necessarily involve *massive* increases in taxes.

CTV News describes a recent study on the costs of single-payer health care in Canada:

> A typical Canadian family with two parents and two kids will pay up to $11,786 for public health care insurance this year, according to a new study from the conservative think tank Fraser Institute.
>
> Using data from Statistics Canada and the Canadian Institute for Health Information, the Fraser Institute study estimated the amount of taxes Canadian families will pay for public health insurance this year.

What do you get for $11,786?

You get to be on a waiting list for a primary care physician, and you get to wait months for treatment. You can pay taxes your whole life, and then wait behind people who want *sex changes* – people who have never paid a dime into the system. And sometimes, you *die* while waiting for treatment. That's "fairness" and "equality". And that's where the Democrats want to take us.

Remember when Obama said that we could keep our health care plans and our doctors?:

Democrats voters looked at this man, and they just *knew* – without any studies or any evidence – that he was telling the truth.

But the Congressional Budget Office says that TEN MILLION people will lose their employer health plans under Obama by 2021.

Look:

> The Congressional Budget Office now says ObamaCare will push 10 million off employer-based coverage, a tenfold increase from its initial projection. The "keep your plan" lie just gets bigger and bigger.
>
> The latest CBO report is supposed to be a big win for the Obama administration because the projected costs are 20% below what the CBO first projected in 2010.
>
> But the CBO report also shows that ObamaCare will be far more disruptive to the employer-based insurance market, while being far less effective at cutting the ranks of the uninsured, than promised.
>
> Thanks to ObamaCare, the CBO now expects that 10 million workers will lose their employer-based coverage by 2021.

This is in addition to the FOUR MILLION who already lost their health care plans in 2013.

# If you want some good news, look to Republican governors

**Wintery Knight** · 28 January 2015 · Archived copy · Original

Let's start with the leftist Milwaukee Journal-Sentinel – no fan of Wisconsin governor Scott Walker.

Wisconsin Governor Scott Walker

They write:

> For the first time Thursday, Walker committed to drug testing recipients of BadgerCare Plus health coverage and also pledged free treatment and job training for those testing positive for drugs.
>
> But the governor offered no details on how the state would cover the costs of that or the testing or whether he expected it to cost the state money overall, as a similar program did in Florida, or save tax dollars. The budget, he said in a statement, would also drop to four years from five the limit on how long a recipient could be in the Wisconsin Works, or W-2, program, the replacement in this state for traditional welfare.
>
> "We know employers in Wisconsin have jobs available, but they don't have enough qualified employees to fill those positions," Walker said. "With this budget, we are addressing some of the barriers keeping people from achieving true freedom and prosperity and the independence that comes with having a good job and doing it well."
>
> The governor said the drug-testing proposal would apply only to able-bodied adults, not the elderly or children, and would include transitional jobs initiatives. Walker wants to test all FoodShare and BadgerCare applicants but limit the drug testing for unemployment benefits to certain applicants.
>
> The idea expands on another requirement passed by Walker and Republicans in 2013 to make able-bodied FoodShare recipients receive job training.

Michigan Republican governor Rick Snyder has the same idea, and his bill was signed into law last month.

The Daily Signal reports on the latest effort by South Carolina Republican governor Nikki Haley to cut income taxes.

South Carolina Governor Nikki Haley

They write:

> The governor of South Carolina has proposed lowering the state's income tax rate from 7 percent to 5 percent, accompanied by a 10 cent hike in the state's gas tax.
>
> In her annual State of the State address on Wednesday, Gov. Nikki Haley, R-S.C., said the state's income tax puts it at a competitive "disadvantage."
>
> "In order to keep the ball rolling in our economy, we must bring down our income tax," Haley said.
>
> She acknowledged that despite her desire to cut the income tax rate, South Carolina needs to invest in its infrastructure. Greenville Online reports that the South Carolina Department of Transportation "has rated almost half the state's primary and secondary roads in poor condition."
>
> Haley proposed doing "three things at once that will be a win-win-win for South Carolina."
>
> The first would be lowering the income tax over the next decade, which amounts to a 30 percent reduction. The lower 5 percent rate would take South Carolina's nationwide income tax ranking from 38th to 13th.
>
> While the income tax rate would go down, the gas tax would increase by 10 cents over the next three years. Haley said that the revenue generated from this tax will go "entirely toward improving our roads."

I have no problem with raising consumption taxes in exchange for cutting business and/or income taxes.

And here's leftist ABC News discussing Kansas governor Sam Brownback latest proposal.

Kansas Governor Sam Brownback

They write:

> Notable among them is a first-of-its-kind measure being drafted in Kansas, with the backing of the National

> Right to Life Committee, which would ban doctors from using forceps, tongs or other medical implements to dismember a living fetus in the womb to complete an abortion.
>
> Proponents have titled the bill the Unborn Child Protection from Dismemberment Abortion Act and say it targets a procedure used in about 8 percent of abortions in Kansas.
>
> "Dismemberment abortion kills a baby by tearing her apart limb from limb," said National Right to Life's director of state legislation, Mary Spaulding Balch, who hopes the Kansas bill will be emulated in other states.
>
> Planned Parenthood of Kansas and Mid-Missouri has vowed to fight the bill "every step of the way."

That article has a few more pro-life measures being pushed by Republicans in other states, although Democrat governors are threatening to veto them.

The American Enterprise Institute talks about the job creation juggernaut created by Republican governor Rick Perry in Texas.

Texas Governor Rick Perry

They write:

> The Texas Workforce Commission released state employment data today for the month of December, and job growth in the Lone Star State continues to lead, and in fact carry the nation's improving labor market as the chart above shows. Here are some highlights of the December employment report for Texas:
>
> 1. Texas ended the year with the state's largest ever year-over-year payroll gain with the eye-popping addition of 457,900 new jobs between December 2013 and December 2014. That's more than 1,700 new payroll jobs that were added every business day last year in the Lone Star State, and 220 new jobs every business hour or almost 4 new jobs added every minute!
>
> 2. In just the last month of December, which marked the 51st consecutive month of employment growth, Texas added 45,700 new payroll jobs, which was more than 2,000 jobs every business day, almost 260 jobs every hour, and more than 4 new jobs every minute! The strong job growth in December brought the state's jobless rate down to 4.6%, the lowest Texas unemployment rate since May 2008.
>
> […]It's a pretty impressive story of how job creation in just one state – Texas – has made such a significant contribution to the 1.169 million net increase in total US employment (+1,444,290 Texas jobs minus the 275,290 non-Texas job loss) in the seven year period between the start of the Great Recession in December 2007 and December 2014. The other 49 states and the District of Columbia together employ about 275,000 fewer Americans than at the start of the recession seven years ago, while the Lone Star State has added more than 1.25 million payroll jobs and more than 190,000 non-payroll jobs (primarily self-employed and farm workers).

So, what have we learned? We learned that if you like more job creation, fewer abortions, lower taxes and drug-testing welfare recipients, then you are a Republican. I'll be doing posts like these regularly until the 2016 election, so that everyone understands what Republicans actually get done.

# What did early church fathers think about abortion and infanticide?

**Wintery Knight** · 28 January 2015 · Archived copy · Original

Unborn baby scheming about early church traditions
This is from Birds of the Air. (H/T Neil Simpson)

Summary:

> Recently I came across a reading of the Didache. "The *what*?" you may ask. The Didache is a book written somewhere in the first or second century. For a long time it was up for consideration as Scripture. It was believed to be the Teaching of the Twelve Apostles. Eventually it was agreed that the book was an excellent book, but not inspired Scripture. So I was pleased to be able to download this admirable book containing good teachings from the early Church fathers.
>
> The book seemed to be largely a lot of quotes from Scripture. You'll learn the basic rules of Christianity — "First, you shall love God who made you; second, love your neighbor as yourself." You'll learn that "grave sins" are forbidden, like adultery, murder, fornication, and so on. (They specifically include pederasty in the list.) There are instructions regarding teachers, prophets, Christian assembly, and so on. Lots of the normal, good stuff. But, since this was written sometime prior to 200 AD, I was somewhat surprised at this instruction: "You shall not murder a child by abortion" (Didache, Ch 2).

I got curious about what babies look like when they are just a few weeks old, so I went looking for pictures of them.

This post from Life News has ten excellent pictures of life inside the womb.

Here's my favorite from 10 weeks:

Unborn Baby – 10 weeks old
This is a first trimester baby!

I decided to go hunting to see what is developed at this time, and found this list:

> - From this week until birth, the developing organism is called a fetus.
> - The fetus is now the size of a small strawberry.
> - The feet are 2mm long (one tenth of an inch).
> - The neck is beginning to take shape.
> - The body muscles are almost developed. Baby has begun movement.
> - While still too small for you to feel, your little one is wriggling and shifting.
> - The jaws are in place. The mouth cavity and the nose are joined.
> - The ears and nose can now be seen clearly.
> - Fingerprints are already evident in the skin.
> - Nipples and hair follicles begin to form.
>
> The unborn baby is now called a fetus. Though the fetus is constantly moving, you will not be able to actually feel fetal movement for several more weeks. All of the organs, muscles, and nerves are in place and beginning to function. As the hands and feet develop fingers and toes, they have lost their paddle like look. The touch pads on the fingers form and already have fingerprints.
>
> During this week of pregnancy the crown to rump length of the fetus is 0.9 inch to 1.2 inches (22 to 30mm), weight 0.07 ounce (2gm). They are now on the way to forming their testicles or ovaries, getting ready for the next generation. Until the ninth week of fetus development, the fetal reproductive apparatus is the same one for the both sexes. The head is still large and curves into chest.
>
> Each week your uterus grows larger with the baby growing inside it. You may begin to see your waistline growing thicker by this time. A pelvic exam will detect that your uterus has grown from it's normal, size of your fist, to a little bigger than a grapefruit.

Fascinating!

# Alliance Defending Freedom wins HHS mandate case: Democrats forced to pay $570,000

**Wintery Knight** · 29 January 2015 · Archived copy · Original

Life News has some good news for us.

They write:

> The bill is coming due, literally, for the Obama administration over its attempts to force companies to comply with the HHS mandate, that compels them to pay for drugs for their employees that can cause abortions.
>
> The pro-life legal group ADF obtained a settlement in federal court Friday that requires the Obama administration to pay an agreed-upon amount of $570,000 to ADF and allied attorneys who won a lawsuit at the U.S. Supreme Court against the abortion-pill mandate in *Conestoga Wood Specialties v. Burwell.*
>
> Conestoga Wood is one of the companies that challenged the abortion mandate in court and the high court eventually sided with them and Hobby Lobby, the most prominent firm taking on the Obama mandate.
>
> "The government does a serious disservice to taxpayers when it pursues unjust laws that force many of them to defend their constitutionally protected freedoms," Alliance Defending Freedom Senior Legal Counsel **Matt Bowman** told LifeNews.com. "While this case is finally over, many others remain. We hope the administration will stop defending its indefensible abortion-pill mandate and end its waste of taxpayer dollars on a fruitless quest to force people to give up their freedom to live and work according to their beliefs."
>
> Alliance Defending Freedom attorneys represent Conestoga Wood Specialties and the Hahn family, Mennonite cabinetmakers in Pennsylvania who appealed to the nation's high court after a divided federal appellate court ruled against them. The Supreme Court eventually sided with the company.
>
> "The cost of religious freedom for the Hahn family and many other job creators across the country who face this mandate is severe," added Senior Legal Counsel Matt Bowman. "A family should not face massive fines and lawsuits just because they want to earn a living consistent with their faith."
>
> The mandate could have cost the family nearly $3 million per month in fines if it doesn't agree to live contrary to its Christian convictions. It forces employers, regardless of their religious or moral convictions, to provide insurance coverage for abortion-inducing drugs, sterilization, and contraception under threat of heavy penalties by the Internal Revenue Service and other federal agencies if the mandate's requirements aren't met.
>
> Conestoga Wood Specialties owners Norman Hahn, Elizabeth Hahn, Norman Lemar Hahn, Anthony H. Hahn, and Kevin Hahn desire to run their company, a wholesale manufacturer of custom wood cabinet parts, in a manner that reflects their Christian beliefs, including their belief that God requires respect for the sanctity of human life.

I try not to think about whose money this is… in a fair world, it would come right out of Obama's bank accounts.

I took a quick look to see if there were any ADF podcasts on this case, and I didn't find any.

# New study: new climate change model finds IPCC model predictions too hot

**Wintery Knight** · 29 January 2015 · Archived copy · Original

Here is a report on a new study on global warming, from Phys.org.

They write:

> A major peer-reviewed climate physics paper in the first issue (January 2015: vol. 60 no. 1) of the prestigious *Science Bulletin* (formerly *Chinese Science Bulletin*), the journal of the Chinese Academy of Sciences, exposes elementary but serious errors in the general-circulation models relied on by the UN's climate panel, the IPCC. The errors were the reason for concern about Man's effect on climate. Without them, there is no climate crisis.
>
> The IPCC has long predicted that doubling the CO2 in the air might eventually warm the Earth by 3.3 °C. However, the new, simple model presented in the *Science Bulletin*predicts no more than 1 °C warming instead – and possibly much less. The model, developed over eight years, is so easy to use that a high-school math teacher or undergrad student can get credible results in minutes running it on a pocket scientific calculator.
>
> **The paper, Why models run hot: results from an irreducibly simple climate model, by Christopher Monckton of Brenchley, Willie Soon, David Legates and Matt Briggs, survived three rounds of tough peer review in which two of the reviewers had at first opposed the paper on the ground that it questioned the IPCC's predictions.**
>
> When the paper's four authors first tested the finished model's global-warming predictions against those of the complex computer models and against observed real-world temperature change, their simple model was closer to the measured rate of global warming than all the projections of the complex "general-circulation" models:
>
> Next, the four researchers applied the model to studying why the official models concur in over-predicting global warming. In 1990, the UN's climate panel predicted with "substantial confidence" that the world would warm at twice the rate that has been observed since.
>
> […]The measured, real-world rate of global warming over the past 25 years, equivalent to less than 1.4° C per century, is about half the IPCC's central prediction in 1990.
>
> […]The new, simple climate model helps to expose the errors in the complex models the IPCC and governments rely upon. Those errors caused the over-predictions on which concern about Man's influence on the climate was needlessly built.

So what are the specific errors in the IPCC model?

These:

> Among the errors of the complex climate models that the simple model exposes are the following –
>
> **The assumption that "temperature feedbacks" would double or triple direct manmade greenhouse warming is the largest error made by the complex climate models. Feedbacks may well reduce warming, not amplify it.**
>
> The Bode system-gain equation models mutual amplification of feedbacks in electronic circuits, but, when complex models erroneously apply it to the climate on the IPCC's false assumption of strongly net-amplifying feedbacks, it greatly over-predicts global warming. They are using the wrong equation.
>
> Modellers have failed to cut their central estimate of global warming in line with a new, lower feedback estimate from the IPCC. They still predict 3.3 °C of warming per CO2 doubling, when on this ground alone they should only be predicting 2.2 °C – about half from direct warming and half from amplifying feedbacks.

> Though the complex models say there is 0.6 °C manmade warming "in the pipeline" even if we stop emitting greenhouse gases, the simple model – confirmed by almost two decades without any significant global warming – shows there is no committed but unrealized manmade warming still to come. There is no scientific justification for the IPCC's extreme RCP 8.5 global warming scenario that predicts up to 12 °C global warming as a result of our industrial emissions of greenhouse gases.
>
> Once errors like these are corrected, the most likely global warming in response to a doubling of CO2 concentration is not 3.3 °C but 1 °C or less. Even if all available fossil fuels were burned, less than 2.2 °C warming would result.

Conclusion:

> Dr Willie Soon, an eminent solar physicist at the Harvard-Smithsonian Center for Astrophysics, said: "Our work suggests that Man's influence on climate may have been much overstated. The role of the Sun has been undervalued. Our model helps to present a more balanced view."

I think it's a credit to the scientific enterprise that they grilled this paper with peer-review, and then allowed it to stand, even though if it becomes widely-known and accepted, it will dry up their grant money. They rely on a crisis in order to obtain research money, and what this new, simpler model shows is that there is no crisis. It's bad for the scientists' wallets, but good for science as a whole. Respect++.

# William Lane Craig explains the doctrine of penal substitutionary atonement

**Wintery Knight** · 29 January 2015 · Archived copy · Original

Probably one of the most common questions that you hear from people who don't fully understand Christianity is this question: "why did Jesus have to die?". The answer that most Christians seem to hold to is that 1) humans are rebelling against God, 2) Humans deserve punishment for their rebellion, 3) Humans cannot escape the punishment for their rebellion on their own, 4) Jesus was punished in the place of the rebellious humans, 5) Those who accept this sacrifice are forgiven for their rebelling.

**Are humans rebellious?**

Some people think that humans are not really rebellious at all, but it's actually easy to see. You can see it just by looking at how people spend their time. Some of us have no time for God at all, and instead try to fill our lives with material possessions and experiences in order to have happy feelings. Some of us embrace just the parts of God that make us feel happy, like church and singing and feelings of comfort, while avoiding the hard parts of that vertical relationship; reading, thinking and disagreeing with people who don't believe the truth about God. And so on.

This condition of being in rebellion is universal, and all of us are guilty of breaking the law at some point. All of us deserve to be separated from God's goodness and love. Even if we wanted to stop rebelling, we would not be able to make up for the times where we do rebel by being good at other times, any more than we could get out of a speeding ticket by appealing to the times when we drove at the speed limit, (something that I never do, in any case).

This is not to say that all sinners are punished equally – the degree of punishment is proportional to the sins a person commits. However, the standard is perfection. And worse than that, the most important moral obligation is a *vertical* moral obligation. You can't satisfy the demands of the moral law just by making your neighbor happy, while treating God like a pariah. The first commandment is to love God, the second is to love your neighbor. Even loving your neighbor requires you to tell your neighbor the truth – not just to make them feel good. The *vertical* relationship is more important than the *horizontal* one, and we've all screwed up the vertical relationship. We all don't want God to be there, telling us what's best for us, interfering with our fun. We don't want to relate to a loving God if it means having to care what he thinks about anything that we are doing.

**Who is going to pay for our rebellion?**

The Christian answer to the problem of our rebellion is that Jesus takes the punishment we deserve in our place.

However, I've noticed that on some atheist blogs, they don't like the idea that someone else can take our punishment for us to exonerate us for crimes that we've committed. So I'll quote from this post by the great William Lane Craig, to respond to that objection.

Excerpt:

> The central problem of the Penal Theory is, as you point out, understanding how punishing a person other than the perpetrator of the wrong can meet the demands of justice. Indeed, we might even say that it would be wrong to punish some innocent person for the crimes I commit!
>
> It seems to me, however, that in other aspects of human life we do recognize this practice. I remember once sharing the Gospel with a businessman. When I explained that Christ had died to pay the penalty for our sins, he responded, "Oh, yes, that's imputation." I was stunned, as I never expected this theological concept to be familiar to this non-Christian businessman. When I asked him how he came to be familiar with this idea, he replied, "Oh, we use imputation all the time in the insurance business." He explained to me that certain sorts of insurance policy are written so that, for example, if someone else drives my car and gets in an accident, the responsibility is imputed to me rather than to the driver. Even though the driver behaved recklessly, I am the

> one held liable; it is just as if I had done it.
>
> Now this is parallel to substitutionary atonement. Normally I would be liable for the misdeeds I have done. But through my faith in Christ, I am, as it were, covered by his divine insurance policy, whereby he assumes the liability for my actions. My sin is imputed to him, and he pays its penalty. The demands of justice are fulfilled, just as they are in mundane affairs in which someone pays the penalty for something imputed to him. This is as literal a transaction as those that transpire regularly in the insurance industry.

So, it turns out that the doctrine of substitionary atonement is not as mysterious or as objectionable as everyone seems to think it is.

# Republicans legislators pushing good bills forward and blocking bad bills

**Wintery Knight** · 30 January 2015 · Archived copy · Original

What kinds of bills do Republicans pass? Let's take a look at a couple.

The first story is about North Dakota Republican Senator John Hoeven, and it's from the Washington Times.

North Dakota Senator John Hoeven (right)
Excerpt:

> Senators approved the Keystone XL pipeline in a momentous vote Thursday as nine Democrats bucked their party leaders and joined Republicans in backing the long-stalled project, setting up an eventual showdown with President Obama, who has vowed a veto.
>
> The vote marks the first major accomplishment for the Senate Republican majority, who carefully selected the pipeline to put at the top of the agenda in hopes of preparing Democrats for even bigger tests with Mr. Obama.
>
> "This took a bipartisan effort to get done. That's what the people want," said Sen. John Hoeven, the North Dakota Republican who sponsored the legislation.
>
> The 62-36 vote is a high-water mark for the pipeline, which had never before cleared the Senate on a binding vote, and just two months ago fell to a Democratic filibuster.
>
> The bill still must be combined with a House version that passed the chamber this month before it heads to Mr. Obama.

This is a bill that creates jobs, lowers the price of gas, makes us less dependent on foreign sources of oil and it doesn't harm the environment.

Having a job is good because when you earn your own success, you are usually happier than you would be receiving money from the government. Lower gas prices are good, because you can spend the money you safe on useful things, like date night with your wife, or maybe a gift for your mom or dad. Making us less dependent on foreign oil is good, because some of these nations we buy oil from don't like us very much, and that's putting it nicely. We really should not be buying oil from Venezuela, for example. And finally, it's a good idea to conserve nature as it is, because we all like animals, trees, flowers, etc., and we should keep it all clean. A pipeline is safer for moving oil than using trains – fewer environmental disasters.

Next story is about Texas senator Ted Cruz, and it's from the Daily Signal.

Texas Senator Ted Cruz
Excerpt:

> Sen. Ted Cruz wants to protect taxpayers from political targeting by the Internal Revenue Service. The Texas Republican introduced legislation yesterday making it crime to engage in such behavior as questions still linger about the full extent of the IRS scandal.
>
> This is not the first time Cruz has offered this type of legislation. In February 2014, he introduced amendments to the STOP Identity Theft Act. Those measures, however, were defeated by Democrats and did not make it out of the Senate Judiciary Committee.
>
> "Free speech is not a partisan issue. The IRS has no business meddling with the First Amendment rights of Americans," Cruz said during last year's debate.
>
> With a new Republican Senate majority, Cruz is hopeful that this time the language will pass independently as a bill. In a press release, Cruz blasted the lack of action by President Obama and his administration in response to the IRS scandal.
>
> "In May 2013, President Obama declared the IRS's illegal targeting of conservative groups 'intolerable and inexcusable,' yet to this date no one has been held accountable for it," Cruz said in a statement.
>
> Cruz's bill would make it a crime for any IRS employee to willfully target anyone based solely on political beliefs. Any employee found in violation would be subject to a fine, up to 10 years in prison, or both.
>
> "This is a well thought out amendment to the IRS code to try and deter and punish the type of naked political targeting engaged in by Lois Lerner and other IRS employees," said Hans von Spakovsky, manager of the election law reform initiative and senior legal fellow at The Heritage Foundation.

I think it's a good idea for government not to be used as a weapon to punish people who want less government and more freedom. Don't you?

Last one is about Republican Congressman Steve King of Iowa, as reported by Doug Ross.

Iowa Congressman Steve King
Excerpt:

> "We're extremely pleased that Congressman King has introduced the National Right to Work Act, intensifying a growing debate about labor law and worker freedom in our country. This legislation would enshrine the common-sense principle – already enforced in nearly half of U.S. states – that no worker should be compelled to join or pay dues to a union just to get or keep a job.
>
> "In an age of legislative overreach, this is one of the shortest bills ever introduced. A National Right to Work Act does not add a single word to federal law. It simply removes language in the National Labor Relations Act that gives union officials the power to extract dues from nonunion workers as a condition of employment.
>
> "Voluntary association is a quintessential American ideal and the case for Right to Work has always rested on the principles of employee freedom, but passage of a National Right to Work law will also pay economic dividends. Studies demonstrate that workers in Right to Work states enjoy greater private sector job growth and higher disposable incomes than their counterparts in states without Right to Work protections.
>
> "The Right to Work principle is also popular with the public. Polls consistently show that 80 percent of Americans and union members support the principle of voluntary unionism.
>
> "A National Right to Work Act enshrines worker freedom while providing significant economic benefits for workers. The National Right to Work Committee is mobilizing its 2.8 million members to call on their Congressperson to support the National Right to Work Act."

Evidence shows that right-to-work states are more attractive to job creators, which results in lower unemployment in states that adopt right-to-work.

Meanwhile, in Virginia, Republican legislators blocked three pro-abortion bills.

If you missed my recent post on four good things that Republican governors are doing, I recommend reading that as well.

# Bobby Jindal and Mike Lee on school choice / education reform

**Wintery Knight** · 30 January 2015 · Archived copy · Original

Louisiana Governor Bobby Jindal

This is an editorial from the Washington Examiner, authored by school choice champion Bobby Jindal.

What is school choice?

> On the most basic level, school choice represents the freedom to choose — empowering parents to select the best educational options for their sons and daughters. That could be a charter school, a private school, a religious school, home schooling, or even online learning. Governments should provide parents with the personalized and individualized tools they need to help their children excel academically.
>
> That freedom to choose in turn will provide children with the freedom to succeed. With the right educational environment, teachers and academic training; students from all locations, income brackets and demographic groups will have better tools to compete in the global economy. We need to develop the talents of every American — no matter where he or she is from, and no matter the color of his or her skin — to maximize our country's potential.
>
> School choice also serves another important purpose — freeing low-income children from failing schools. No child should see his God-given talents go to waste because he is stuck in a failing school — and no parent should face the disempowerment that comes from knowing her son or daughter remains trapped in a poor school, and she lacks the financial means to move that child elsewhere. We can do better — and, by allowing parents dissatisfied with their school to move with their feet, school choice gives both high-performing and low-performing schools more incentive and motivation to improve their offerings.
>
> Finally, school choice provides parents with freedom from the status quo — an educational-industrial complex that thinks bureaucrats, not parents, can best make decisions about the lives and futures of America's children. It's about pushing back when the then-head of Louisiana's largest teachers' union said low-income parents had "no clue" how to choose the right school for their children. And it's even about standing up to the Attorney General of the United States, when the Department of Justice asked a court to block Louisiana's school scholarship program on civil rights grounds — even though 90 percent of the program's participants come from racial minority groups.

I don't like people who talk conservative but govern liberal. I want to see the achievements.

The numbers:

> For here in Louisiana, we've put those principles to practice. Since we removed the cap on charters in 2009, we've authorized almost 200 charter schools throughout the state — that's 70,000 kids who now have a choice about where they go to school. This last year, our Recovery School District became the nation's first school district with 100 percent charter school enrollment. And the results are dramatic: The graduation rate in New Orleans has increased from 54.4 percent before Hurricane Katrina in 2004 to 72.8 percent; the percentage of New Orleans students scoring basic and above has increased from 35 percent to 63 percent; and the percentage of failing schools in New Orleans has dropped from 67 percent in 2005 to 17 percent.
>
> We expanded our school choice scholarship program, which was initially confined to New Orleans, statewide. Parental satisfaction with the statewide scholarship program stands at a whopping 91.9 percent. We went even further though and created a dollar for dollar rebate for donations used to fund nonpublic school scholarships low-income students through our "school tuition organizations." Between 2008 and 2013, the percentage of students in the scholarship program who are proficient in third grade English language arts has grown by 20 percentage points and in math by 28 percentage points. Again and again, we've proven that giving more choice to parents is not only vital, but it gets results.
>
> We also expanded access to online and dual enrollment courses for students across the state. This year, we've had over 19,000 students take advantage of our Course Choice program enrolling in advanced placement courses and career and technical courses that they otherwise wouldn't have access to.

He's in my top 2 for the 2016 presidential race, along with Scott Walker.

I'd like to see school choice enacted at the federal level, and fortunately, Utah Senator Mike Lee has the same idea.

Utah Senator Mike Lee

The Daily Signal reports:

> I recently introduced in the Senate a bill that would empower the people most acutely committed to the quality of our education system: America's moms and dads. My colleague on the other side of the Capitol, Rep. Luke Messer, R-Ind., has introduced a companion bill in the House.
>
> By giving parents more power to invest in their child's education and to choose what school best meets their needs, the Enhancing Educational Opportunities for All Act takes an important step toward restoring accountability to our public education system—something that has been missing for far too long.
>
> Under our current system—which has remained essentially unchanged since President Lyndon B. Johnson signed the 1965 Elementary and Secondary Education Act—most parents are powerless to influence the quality

> of their child's education.
>
> What occurs in public school classrooms around the country—what teachers teach and how they teach it—is the result of a long, convoluted, bureaucratic chain of command that zigzags its way from Washington to local school districts, but never includes parents.
>
> First, Congress passes legislation authorizing federal bureaucrats to establish rules, regulations, and standards with which states must comply in order to receive federal education funds.
>
> Next, state officials refine—or in some cases distort—these Washington directives, writing narrower rules for their school districts, which then establish the specific policies for individual schools.
>
> At no point in this decision-making process are parents consulted.
>
> Instead, they are left with a "take it or leave it" choice: either accept the education offered at the local public school—no matter how bad it may be—or buy a better alternative, by moving closer to a better school or paying private school tuition.
>
> For America's most affluent families, this is no big deal—they can afford private schools and so have the power to choose the school that is best for their children. For everyone else, it precludes parents from making choices about their children's education.
>
> So our bill would expand school choice to all parents, regardless of socio-economic status or zip code, by allowing federal "Title I" K-12 support funds to follow low-income students to any public or private school of their choice.
>
> It would also remove the contribution limits on Coverdell education savings accounts and allow "529" account funds to cover K-12 education expenses.
>
> Our bill would give working parents more opportunities to invest in a variety of learning services and products outside the classroom, such as tutoring, online courses and textbooks.
>
> The problem facing our public school system today is not about a lack of money—we have nearly tripled our investments in elementary and secondary students since 1970. The problem is dysfunctional government policy—however well intentioned—and a lack of accountability.
>
> And that's exactly what we should expect when Washington bureaucrats have more control than parents over a child's education. We have a moral and economic obligation to flip this equation and put parents back in the driver's seat.
>
> For when we tolerate a system in which the quality of a child's education depends on her parents' zip code, we fail to live up to the ideals at the heart of American exceptionalism.
>
> And when millions of children learn from a young age not to dream big, but to surrender to the hopelessness of low expectations, we will live in a society where upward mobility is no longer rule but the exception.
>
> We can and we must do better.

If a school is failing – and they often are, especially in poorer areas – then shouldn't parents have the ability to send their kids to a better school? When I want to buy something online, I know I can always do better by comparing prices and reviews. Competition between suppliers drives prices down, and raises quality up. The customer is king in the free market. It can work in education, too.

# American Sniper thrills audiences – in Baghdad, Iraq!

**Wintery Knight** · 30 January 2015 · Archived copy · Original

Chris Kyle, Navy SEAL

This is a very funny story from the Washington Times.

Excerpt:

> Clint Eastwood's "American Sniper" has wowed American audiences, but for one short week it also thrilled crowds in Baghdad.
>
> Iraq's upscale Mansour Mall played the film for one week before the controversy surrounding the film prompted management to end showings.
>
> **"Some people watching were just concentrating, but others were screaming '[expletive], shoot him! He has an IED, don't wait for permission!'" said moviegoer Gaith Mohammed, the Global Post reported Wednesday. "I love watching war movies because especially now they give me the strength to face [the Islamic State]."**
>
> […]Mr. Mohammed, asked by the newspaper if he agreed with some Western reviews that labeled the movie racist, replied, **"No, why? The sniper was killing terrorists, the only thing that bothered me was when he said he didn't know anything about the Koran!"**
>
> A government ministry employee told the Post he didn't enjoy the film, taking umbrage with the first scene and what he considered the movie's overall anti-Muslim overtones.
>
> "The sniper, he has a chance to hit the child and his mother in their foot or anywhere without killing them, but he didn't because he's bloodthirsty like all the American troops," said Wael, who declined to give his last name, the newspaper reported. **Wael added that he had seen the film three times.**
>
> "American Sniper," which stars Bradley Cooper, has made $257 million worldwide in two weeks of release. The film, which has garnered six Oscar nominations, including Best Picture, was made on a budget of $58 million.

Hilarious that Iraqis are less consumed by race than leftists on an American university campus.

I do have a point to make about this. I wonder if people realize that the reason why so many Muslim countries don't like us is because they are forming their impressions from anti-morality made by immoral Hollywood secular leftists? If you put out a decent movie that looks realistic and shows Americans taking care of evildoers, people in other countries are going to like us a lot more.

If you haven’t seen American Sniper, what are you waiting for? Go see it!

# Cold Case Christianity podcast on the lack of authenticity in the church

**Wintery Knight** · 31 January 2015 · Archived copy · Original

On Saturday, I got a chance to listen to the latest episode of the Cold Case Christianity podcast, and the whole thing was solid. This is one you definitely do not want to miss. I wanted to summarize the first topic of three because it's something that's been coming up a lot lately, but topics 2 and 3 are worth listening to, as well.

You can grab the MP3 file here.

Topic #1: Why are young people leaving church?

- problem: not convinced Christianity is true
- problem: apparent conflict with science
- problem: unanswered questions
- problem: difficulties inside the church
- problem: the church's (correct) position on same-sex marriage

Jim's claim: if people do not think that the Bible is accurate and divinely inspired, then they are going to be tempted to pick and choose what to believe and what not to believe

Jim reads a blog post from a young lady who attends church, and here are *her* top problems with the church:

1. you can't ask questions
2. you can't voice your doubts
3. you can't explain your struggles
4. you can't confess your sins
5. you can't confide your fears

And she wants the leadership to be real and open about these things as well.

Wallace says that there here are two main problems that teens run into at college:

1. intellectual skepticism
2. selfish desires, especially in sexual areas

It's aggravated by the hostile university setting (skeptical professors), and a culture of drinking and sex.

The university culture is offering you a worldview that makes your selfish desires more permissible and normal. Unless people have a compelling reason not to reject that, they won't reject it. It's the path of least resistance to conform to the expectations of your peers and professors. Our aim should be to provide young people with evidence before they face the skepticism in college.

Another major problem facing young people is the Christian position on homosexuality and gay marriage. Christian teachings on sexuality in general are viewed with suspicion, and these things are not discussed or debated in the church. One way to respond to this is to defend the reliability of Scripture. (Note: I think another way to respond is to give *secular reasons* for what the Bible teaches, and to help young people link their decisions about sexuality with their larger life plan).

Topic 2 was about objective vs cultural moral standards, and topic 3 was about whether different denominations differ in essentials or in peripheral issues.

**My thoughts on topic #1**

If you are dealing with young people, it might be a good idea to not gloss over these problems and keep everything at the surface level. Talk to them about what a Christian life should look like and the struggles you had trying to live it out. Talk to them about their plans, and how different decisions are going to affect those plans. Talk to them about their grades. Talk to them about their future profession. Talk to them about apologetics. Talk to them about politics and economics, so they know how to vote for their futures. Basically, they should have the idea that you are interested in whether Christianity is true or not, and that you are interested in them make some sort of plan to serve God and making the decisions they need to get there. You should tell young people your plan and how you are funding it and working on it, in order to prod them to make their own plan.

So if the problem is perceived lack of authenticity, then the solution is to talk to young people like grown ups and give them insight. This is my plan to serve God. This is my plan for my marriage. This is why I think Christianity is true. This is what I want my kids to end up like. This is what I want my wife to do. This is how I intend to fund all this. These are the laws/public policies that help/hurt my plan. These are the problems and struggles I've had implementing my plan. Here is an area where my sinfulness is really messing up my plan. When I talk to other Christians, we talk about these issues relevant to my plan.

Speaking frankly about what you are trying to do and the challenges you are facing trying to do it that helps young people to get serious about their beliefs. Don't reduce the whole religion to rituals and feelings – it's a mistake.

# Atheist Christopher Hitchens' case against the existence of God

**Wintery Knight** · 31 January 2015 · Archived copy · Original

I thought that I would go over an opening statement from a previous debate featuring Christopher Hitchens to find out what atheists are like in debates. I used his opening speech from his debate with Frank Turek. The audio from that debate is here, at Brian Auten's Apologetics 315 site.

Now the important thing to remember about a generic debate on whether GOD EXISTS is that there should be no mention of any particular God, such as the Christian God, and no mention of the history of any particular religion. All arguments that assume specific theological or moral doctrines or specific religious history are *irrelevant* to a debate on generic theism.

The question being debated is: does a God who created and designed the universe, who has all the traditional properties of God, such as omniscience, omnipotence, omni-benevolence, etc. exist? That is the question being debated in a "Does God Exist?" debate.

**Frank Turek's case for theism:**

Frank Turek made 4 *relevant* arguments for theism, each of which *alone* would support his conclusion, that God exists:

- the origin of time, space, matter and energy out of nothing
- the fine-tuning of the physical constants to support the minimum requirements for life of any kind
- the origin of the biological information in the first self-replicating organism
- objective, prescriptive moral rules need to be grounded by the designer of the universe

And he also listed 4 features of the universe that are more consistent with theism than atheism (= materialism).

- non-material minds that allow rationality that would be impossible on materialism/determinism
- the mathematical structure of the universe and its intelligibility to the scientific method
- free will, which is required for moral responsibility and moral choices, requires a non-material mind/soul
- our first person experience of consciousness is best explained by a non-material mind/soul

**Hitchens' case against theism**

To counter, Hitchens has to argue against God using arguments in one of two forms:

1. The concept of God is logically self-contradictory
2. An *objective* feature of the world is inconsistent with the attributes of God

The claim that God does not exist is a claim to know something about God, namely, that he does not exist. This claim requires the speaker to bear a burden of proof. In a debate on "Does God Exist?", Hitchens must *deny* that God exists. Let me be clear: Hitchens must defeat the arguments for the claim that God exists, and then defend the claim that God does not exist, and support that claim using arguments and evidence.

Hitchens makes 2 basic claims:

- There are no good reasons to believe that theism is true
- There are good reasons to believe atheism is true

So far so good. But what are his good reasons for atheism?

1. I personally don't like Christianity, therefore God doesn't exist
   – Premise: I personally don't like Catholicism getting rid of limbo

– Premise: I personally don't like Hell
– Premise: I personally don't like some episodes in church history
– Conclusion: God doesn't exist

2. The plurality of religions means that no religious claims can be correct, therefore God doesn't exist
   – Premise: There are lots of religions
   – Premise: The religions all disagree in their truth claims about the external world
   – Conclusion: No religion's claims can be correct, therefore God doesn't exist
3. I believe in one less God than you, therefore God doesn't exist
   – Premise: You disbelieve in every God I do, except one
   – Conclusion: God doesn't exist
4. Religious people are stupid and evil, therefore God doesn't exist
   – Premise: Religious people are ignorant
   – Premise: Religious people are fearful
   – Premise: Religious people are servile
   – Premise: Religious people are masochistic
   – Conclusion: God doesn't exist
5. Evolution explains how life progressed from single cell to today's bio-diversity, therefore God doesn't exist
   – Premise: Modern theists like Turek believe in Paley's argument, and argued it in this debate
   – Premise: Paley's argument was refuted by evolution
   – Conclusion: God doesn't exist
6. God wouldn't have made the universe this way, therefore God doesn't exist
   – Premise: If God exists, then he would have made the universe my way
   – Premise: The heat death of the universe wasn't done my way
   – Premise: The extinction of species wasn't done my way
   – Premise: The size of the universe wasn't done my way
   – Premise: The amount of open space wasn't done my way
   – Premise: The large number of stars wasn't done my way
   – Premise: The age of the universe wasn't done my way
   – Conclusion: God doesn't exist
7. Religion makes people do things that I don't like, therefore God doesn't exist
   – Premise: Some religions do suicide bombing
   – Premise: Some religions do child abuse
   – Premise: Some religions do genital mutilation
   – Conclusion: God doesn't exist
8. If you speak a sentence, I can repeat the same words as you said, therefore God doesn't exist
   – Premise: Anything that you say is good, I can say is good too
   – Premise: Anything that you say is bad, I can say is bad too
   – Conclusion: God doesn't exist
9. Atheists are morally superior to religious people, therefore God doesn't exist
   – Premise: I act in a way that is consistent with my personal, arbitrary moral preferences
   – Premise: You don't act in a way that is consistent with my personal, arbitrary moral preferences
   – Conclusion: God doesn't exist
10. If I believe in God, I would have to submit to an authority
    – Premise: If I believe in God, then I can't do whatever I want
    – Premise: But I want to do whatever I want
    – Conclusion: God doesn't exist
11. I don't like certain Christian doctrines, therefore arguments for God from science fail and therefore God doesn't

exist
– Premise: I don't like the atonement
– Premise: I don't like the virgin birth
– Premise: I don't like the incarnation
– Premise: I don't like original sin
– Premise: I don't like the resurrection
– Conclusion: Arguments that are built on recent discoveries from the progress of science like the big bang, fine-tuning, origin of life, etc. are incorrect, and therefore God doesn't exist

General comments about Hitchens' case:

- The form of *all* of these arguments is *logically invalid*. The conclusions do not follow from the premises using the laws of logic, such as modus ponens and modus tollens.
- Hitchens cannot complain about morality because he has no foundation for objective moral facts. What he is really expressing is that he personally does not like such-and-such a state of affairs, based on his own arbitrary personal preferences, and the arbitrary social customs that evolved in the place and time that he finds himself in. On atheism, "morality" is just describing what people do – either individually or as groups living in different times and places. There is no objective right and wrong, and no objective way we ought to be. All statements are *subjective.* They describe what the speaker personally likes and dislikes. Just like taste in foods or taste in dress – which varies by individually, and is influenced by time and place ARBITRARILY.

Specific comments about each argument:

- Argument 1 tries to disprove God by arguing from Hitchens' personal preferences about specific Christian doctrines. Christian doctrines are irrelevant to a debate about generic theism. And there is no reason why God should be bound by the personal, subjective preferences of one man. In fact, the concept of God entails that his unchanging nature is the standard of good and evil. So, this argument doesn't disprove God, it's just a statement of personal, subjective preference.
- Argument 2: Just because there are different truth claims made by different groups, doesn't mean no one is correct. Mormons believe that matter existed eternally, and Jews believe it was created out of nothing. The big bang theory shows that the Mormons are wrong and the Jews are right.
- Argument 3: First of all, the debate is a about a generic Creator and Designer, not any particular religious conception of God. So the argument is irrelevant. Moreover, Christians reject Zeus, for example, because Zeus is supposed to exist in time and space, and therefore could not be the cause of the beginning of time and space.
- Argument 4: This is just the ad hominem fallacy. Hitchens is attacking the character of the theist, but that doesn't show theism is false.
- Argument 5: This argument can be granted for the sake of argument, even though it's debatable. The point is that it is irrelevant, since it doesn't refute any of Turek's actual scientific arguments like the big bang, the fine-tuning of the physical constants, the origin of information in the simplest living cell.
- Argument 6: Again, there is no reason to think that God should be bound by Hitchens' personal opinion of how God should operate.
- Argument 7: This is the ad hominem fallacy again. The good behavior of religious believers is not a premise in any of Turek's FOUR arguments for theism. Therefore, Hitchens' point is irrelevant to the debate.
- Argument 8: The fact that the atheist can parrot moral claims is not the issue. Being able to speak English words is not what grounds objective, prescriptive morality. The issue is the ontology of moral rules, the requirement of free will in order to have moral responsibility and moral choices, ultimate significance of moral actions, and the rationality of self-sacrificial moral actions.
- Argument 9: This is just the ad hominem fallacy again.
- Argument 10: This is not argument so much as it reveals that the real reason Hitchens is an atheist is emotional.

One might even say infantile.

- Argument 11: Again, these specific Christian doctrines are irrelevant to a debate about generic theism. And Hitchen's subjective, personal preferences about Christian doctrine certainly do not undermine the objective scientific support for the premises in Turek's 3 scientific arguments.

So Frank Turek talked about facts in the external world, and Christopher Hitchens mistakenly thought that his opinions and preferences about what he would do if he were God were interesting to us. They might be interesting to his psychiatrist, but they are not interesting to us.

# Republicans propose expansion of 529 college savings plans

**Wintery Knight** · 1 February 2015 · Archived copy · Original

I guess by now everyone has heard about Obama's plan to eliminate college savings plans.

The left-leaning New York Times reported on it:

> President Obama is proposing a radical change to the 529 college savings plans held by millions of families, which would require those who use them to rethink their approach to college savings.
>
> As part of his plan to simplify the tax code and help the middle class, one of the 529 plan's most attractive benefits would be eliminated: Money could no longer be withdrawn tax-free. (The new rules would apply only to new contributions.)
>
> The accounts, many of which are run by the states, allow people to make contributions that grow tax-free. The money can be withdrawn without the paying of capital gains taxes as long as the proceeds are used for education expenses. Many states provide state income tax deductions for contributions as well.

The proposal has now been withdrawn after a huge uproar. The real question is, why would he propose such a stupid thing?

First, it's important to understand that government raises the cost of higher education with subsidies, which the Democrats favor:

> A new study by Dennis Epple, Richard Romano, Sinan Sarpca and Holger Sieg for the National Bureau of Economic Research suggests that the impact of these aid programs is clearly different from what federal policy makers intended. "We show that private colleges game the federal financial aid system," they conclude. Every dollar in new financial aid to students leads to about 40 cents less spent by the colleges on institutional financial aid — so students benefit far less than federal policy makers intended.
>
> In 1987, Secretary of Education William Bennett argued that more federal aid leads to higher tuitions, enabling schools to increase spending. This seems broadly consistent with the latest research results. The net attendance impact of these federal programs, according to the study for NBER, is "modest." In short, these programs haven't substantially spurred student access to colleges, all the while burdening taxpayers and student borrowers.
>
> The ballooning federal aid increases schools' spending. The researchers don't analyze changes in university spending, but an examination of other evidence suggests that money isn't going primarily into improving instruction. Colleges have gone on a building spree (financed in part by amassing large debt — more than $220 billion at schools whose bonds are rated by Moody's alone), and pay and perquisites for top university administrators has risen sharply.

The Democrats already want higher education to be out of reach – that's why they keep increasing subsidies. So, eliminating college savings plans is in line with this goal of putting higher education out of reach. It's another way to cause people to have fewer children, something that Democrats are very passionate about. After all, if you can't pay for higher education for four kids, you'll only have two. Democrats have this terrible fear of over-population, and it drives a lot of their policies, including abortion.

But that's not all – there's another reason to stop people from saving for college.

Second, it stops people from saving their own money:

> Megan McArdle suggests, quite reasonably, that this is a desperate move by those who need to finance ever

> bigger government and are simply going where the money is: the vast American middle class. You can understand why the champions of big government would be slavering over the very thing that defines the middle class, its savings. As she points out, 529s are not the first target. There have already been trial balloons about raiding 401(k)s and IRAs. The truly committed leftist looks upon our private savings as a vast reserve of capital unfairly withheld from its proper function of servicing the needs of the state.

> I think that's the real explanation. This is not so much a rational calculation about how to finance the behemoth state. This is an admission by a man who has no more election campaigns to run, and therefore no pragmatic constraints, about his real outlook and real preferences. A president who just a few weeks ago hailed the triumph of a supposed "middle-class economics" is revealing his hatred and contempt for the middle class.

Republicans would like to see people saving more and more money so that they are less and less dependent on the government. This is because the more independent you are, the more fre you are – and Republicans are for personal liberty.

This is GOP Congressman Lynn Jenkins:

Kansas Congresswoman Lynn Jenkins

Here is her Republican response to Obama's proposal to eliminate 529s:

> Good morning. I'm Lynn Jenkins, Congresswoman from the Second District of Kansas and Vice-Chair of the House Republican Conference.
>
> This is the time of year when high school seniors are putting the final touches on their college applications. That means it's also the time when families are preparing to start paying for that education — whether it's a 4-year college, community college, or a technical school. *(Scroll down for video of these remarks.)*
>
> As a parent with two children in college, I know this can be one of the most rewarding, and at the same time challenging, aspects of being a parent — particularly at a time when costs are going up while wages stay about the same. All told, Americans now owe more than $1 trillion in student loan debt.
>
> And so in the new Congress, Republicans are working to lower costs for middle-class families and empower folks with bottom-up solutions that help prepare you for the future.
>
> That's why, this week, I introduced a bipartisan plan to expand popular 529 college savings accounts.
>
> As you know, these 529 plans were created to help middle-class families save and plan for college. Many parents open them not long after their children are born. And ever since Congress allowed folks to withdraw from these accounts tax-free for college expenses, 1 million account holders have turned into 12 million.

> Unfortunately, instead of expanding 529s, the president recently proposed raising taxes on college savings. If implemented his scheme would have turned back the clock on middle-class families, and taken money from your savings to pay for more government. This would have discouraged families from using 529s, meaning less savings, more debt, and more government dependence.

This proposal increases middle-class independence from the government, and makes people more free to work, earn, save and chart their own course. It's different from the Democrat proposals which increase dependence on government and reduces liberty.

# With Romney out, Scott Walker leads Iowa poll with 16%, Bush at 9%

**Wintery Knight** · 1 February 2015 · Archived copy · Original

## Walker tops big potential GOP field

Scott Walker edges Rand Paul for bragging rights among a list of 16 potential candidates in a new Iowa Poll of likely Republican caucusgoers.

**Which one of the following Republican candidates would be your first choice for president? And who would your second choice be?**

| | FIRST CHOICE WITH ROMNEY | FIRST CHOICE ROMNEY REALLOCATED* | SECOND CHOICE | FIRST OR SECOND CHOICE COMBINED |
|---|---|---|---|---|
| Scott Walker | 15% | 16% | 10% | 25% |
| Rand Paul | 14% | 15% | 8% | 23% |
| Mitt Romney | 13% | n/a | 10% | 23% |
| Mike Huckabee | 10% | 13% | 7% | 17% |
| Ben Carson | 9% | 10% | 10% | 19% |
| Jeb Bush | 8% | 9% | 7% | 15% |
| Ted Cruz | 5% | 6% | 6% | 11% |
| Chris Christie | 4% | 6% | 3% | 7% |
| Rick Santorum | 4% | 5% | 6% | 10% |
| Marco Rubio | 3% | 4% | 8% | 11% |
| Rick Perry | 3% | 3% | 5% | 8% |
| Bobby Jindal | 2% | 2% | 2% | 4% |
| Carly Fiorina | 1% | 1% | 1% | 2% |
| John Kasich | 1% | 1% | 1% | 2% |
| Donald Trump | 1% | 1% | 1% | 2% |
| Mike Pence | 0% | 0% | 0% | 0% |

GOP primary Iowa poll from 2/1/15

A Des Moines Register poll from Iowa came out today, showing Scott Walker in the lead, and the lead increases if Romney is out.

Here are the details:

> Presidential stage newcomer Scott Walker, the conservative reform pit bull who inspired death threats from the left, has become the one to watch in the race for the Republican nomination a year out from the Iowa caucuses.
>
> At 15 percentage points, he leads a big, tightly packed field of potential contenders in a new Des Moines Register/Bloomberg Politics Iowa Poll of likely Republican caucusgoers. The caucuses are scheduled for Feb. 1, 2016.
>
> The Wisconsin governor is also the No. 2 most popular choice for likely caucusgoers who want an establishment candidate, and he's the No. 2 for those who want an anti-establishment candidate, the poll shows.
>
> "He's in a sweet spot," pollster J. Ann Selzer said. "People who don't want an ultra-conservative think he's OK. People who don't want a moderate think he's OK."
>
> […]The day after polling wrapped up, Romney announced he's out of the competition. When the numbers in this poll are shuffled — by giving Romney's votes to the contenders his supporters named as their second-choice pick — the five others in the top tier gain support.
>
> […]Walker's support has jumped 11 points since the last Iowa Poll. In October, only 4 percent of likely caucusgoers named Walker as their first choice for president.
>
> […]At the same time, the favorability rating for Walker has climbed 11 percentage points; Carson, 9; Huckabee, 7; Cruz, 6; Santorum, 5; and Paul, 5, the new poll shows.

> "The candidates perceived as more conservative are not only leading but are gaining," GOP strategist Vin Weber, a former Minnesota congressman, noted after looking over the results.

Walker and Carson have the lowest "unfavorable" ratings:

**Huckabee leads in favorability**

**Now, I'm going to mention some people talked about as possible candidates for the Republican nomination for president. For each, please tell me if your feelings are very favorable, mostly favorable, mostly unfavorable, or very unfavorable. If you don't know enough about the person to answer, just say so.**

| | FAVORABLE | UNFAVORABLE | NOT SURE |
|---|---|---|---|
| Mike Huckabee, former governor of Arkansas | 66% | 28% | 6% |
| Rand Paul, U.S. senator from Kentucky | 64% | 25% | 11% |
| Rick Perry, former governor of Texas | 64% | 26% | 10% |
| Scott Walker, governor of Wisconsin | 60% | 12% | 28% |
| Ted Cruz, U.S. senator from Texas | 58% | 21% | 21% |
| Marco Rubio, U.S. senator from Florida | 57% | 20% | 23% |
| Rick Santorum, former U.S. senator from Pennsylvania | 57% | 30% | 13% |
| Mitt Romney, former governor of Massachusetts and former Republican nominee for president | 57% | 40% | 3% |
| Ben Carson, retired neurosurgeon from Maryland | 50% | 12% | 38% |
| Jeb Bush, former governor of Florida | 46% | 43% | 11% |
| Bobby Jindal, governor of Louisiana | 39% | 20% | 41% |
| Chris Christie, governor of New Jersey | 36% | 54% | 10% |

GOP primary Favorability

This is good news for Walker, but it's disturbing to me that Huckabee (big government tax-and-spend moderate) and Paul (Peter Pan isolationist pot-legalizer) are that high up in the poll. Ben Carson is looking good, though. I like that the leftist establishment candidates (Bush, Christie and Romney) all had high unfavorable ratings. That's a good sign.

Walker was on ABC's This Week show:

> Wisconsin Gov. Scott Walker (R) has not officially announced that he will run for president in 2016, but he is feeling very confident about his chances.
>
> Martha Raddatz, host of ABC's "This Week," asked Walker on Sunday morning whether there is a 99 percent chance he'll run.
>
> "I don't know that I'd take the odds," Walker responded. "I'll just tell you one thing. After three elections for governor in four years in a state that hasn't gone Republican since 1984 for president, I wouldn't bet against me on anything."
>
> A new Bloomberg/Des Moines Register poll shows Walker as the favorite among possible GOP presidential candidates. The governor was the first choice of 15 percent of respondents, just edging out Kentucky Sen. Rand Paul.
>
> Walker said he believes he could defeat likely Democratic nominee Hillary Clinton because she represents an earlier era in Washington, D.C., politics for which most Americans are not nostalgic.
>
> "People want new, fresh leadership with big, bold ideas, and the courage to act on it," Walker said. "And if we're going to take on a name from the past, which is likely to be former Secretary of State Hillary Clinton, I think for the party we need a name from the future."

Looking good. Again, we have to have a candidate who is competent enough on fiscal issues, and has the results, if we hope to get around the media's tendency to go after social conservatives. My list right now is this:

1. Scott Walker
2. Bobby Jindal
3. Rick Perry
4. Susan Martinez
5. Ted Cruz

Pence is off my list after a couple of recent big government missteps (state media and Medicaid expansion).

# Woman reflects on her bio-parents' divorce and growing up in two-lesbian home

**Wintery Knight** · 2 February 2015 · Archived copy · Original

The Public Discourse posted a really interesting letter from a woman whose biological parents divorced, and then she grew up with her mother and her mother's lesbian partner. She addresses this post to Justice Kennedy, the swing vote on the Supreme Court.

She writes:

> Children are the reason government has any stake in this discussion at all. Congress was spot on in 1996 when it passed the Defense of Marriage Act, stating:
>
> At bottom, civil society has an interest in maintaining and protecting the institution of heterosexual marriage because it has a deep and abiding interest in encouraging responsible procreation and child-rearing. Simply put, government has an interest in marriage because it has an interest in children.
>
> There is no difference between the value and worth of heterosexual and homosexual persons. We all deserve equal protection and opportunity in academe, housing, employment, and medical care, because we are all humans created in the image of God.
>
> However, when it comes to procreation and child-rearing, same-sex couples and opposite-sex couples are wholly unequal and should be treated differently for the sake of the children.
>
> When two adults who cannot procreate want to raise children together, where do those babies come from? Each child is conceived by a mother and a father to whom that child has a natural right. When a child is placed in a same-sex-headed household, she will miss out on at least one critical parental relationship and a vital dual-gender influence. The nature of the adults' union guarantees this. **Whether by adoption, divorce, or third-party reproduction, the adults in this scenario satisfy their heart's desires, while the child bears the most significant cost: missing out on one or more of her biological parents.**
>
> Making policy that intentionally deprives children of their fundamental rights is something that we should not endorse, incentivize, or promote.

What about children who grow up with two gay adults? Aren't they supportive of their gay guardians?

She writes:

> I identify with the instinct of those children to be protective of their gay parent. In fact, I've done it myself. I remember how many times I repeated my speech: "I'm so happy that my parents got divorced so that I could know all of you wonderful women." I quaffed the praise and savored the accolades. The women in my mother's circle swooned at my maturity, my worldliness. I said it over and over, and with every refrain my performance improved. It was what all the adults in my life wanted to hear. I could have been the public service announcement for gay parenting.
>
> I cringe when I think of it now, because it was a lie. My parents' divorce has been the most traumatic event in my thirty-eight years of life. While I did love my mother's partner and friends, I would have traded every one of them to have my mom and my dad loving me under the same roof. This should come as no surprise to anyone who is willing to remove the politically correct lens that we all seem to have over our eyes.
>
> Kids want their mother and father to love them, and to love each other. I have no bitterness toward either of my parents. On the contrary, I am grateful for a close relationship with them both and for the role they play in my children's lives. But loving my parents and looking critically at the impact of family breakdown are not mutually exclusive.

> Now that I am a parent, I see clearly the beautiful differences my husband and I bring to our family. I see the wholeness and health that my children receive because they have both of their parents living with and loving them. I see how important the role of their father is and how irreplaceable I am as their mother. We play complementary roles in their lives, and neither of us is disposable. In fact, we are both critical. It's almost as if Mother Nature got this whole reproduction thing exactly right.

So in same-sex marriages, either the father or the mother will be missing. I think that children can be a big responsibility, and they are challenging to the happiness of adults. The way that natural marriage solves this problem is by making both parents invested in the children *biologically*. That's what causes mothers and fathers to keep trying and to not quit. They are biologically invested in their children. They are not accessories, they are little clones of their moms and dads.

Regardless of what Hollywood celebrities may tell us, studies show that fatherlessness is a disaster, and motherlessness is a disaster. And of course, studies show that same-sex parenting does not produce the positive outcomes for children that natural marriage does. There's a conflict between children's rights and adult's rights in the same-sex marriage debate, just like their is in the no-fault divorce debate – and we need to side with the children in both cases.

# Fighter pilot discusses apologetics and Christian living in new book “One of the Few”

**Wintery Knight** · 2 February 2015 · Archived copy · Original

“One of the Few” by Jason B. Ladd

Here is the blurb for his new book:

> Author, Marine, and Iraq War veteran Jason B. Ladd has just launched a pre-order campaign for his new book One of the Few: A Marine Fighter Pilot’s Reconnaissance of the Christian Worldview. He has until March 22 to reach his goal or it’s back to the drawing board. Read about him and the book below, and then check out his pre-order campaign at
>
> http://publishizer.com/one-of-the-few

The link above has the table of contents and chapter summaries.

From the back cover:

> “Unsatisfied with his secular worldview, Marine fighter pilot Jason B. Ladd shares the struggles he faced during his search for truth and a reasonable defense of the Christian faith.
>
> His mission began with a realization: though ready to defend his country, he was unprepared for his most important missions as a husband and father. Drawing from his military experience, Ladd warn seekers about spiritual apathy and teaches Christians tactics for withstanding spiritual attacks. Birthed from a legacy of service, One of the Few speaks from the spirit of a man reborn—with the soul of a Marine, the mind of a fighter, the heart of a father, and a commitment to the Son. Join him as he uses fighter pilot fundamentals to embark on the greatest mission of all: the pursuit of truth.”
>
> Jason B. Ladd is a Christian apologist, F/A-18 Weapons and Tactics Instructor, and Iraq War veteran. He received his Bachelor of Arts degree in Peace, War, and Defense from the University of North Carolina at Chapel Hill in 2001. Jason writes articles for FIGHTER FAITH, a website he founded to help others lead with conviction, embrace parenthood with joy, and develop a worldview capable of answering life’s biggest questions. He and his wife, Karalyn, are the parents of six children.

Here’s the aircraft that Jason flies:

F/A-18 Hornet configured for strike mission

I actually met Jason at a recent SES National Apologetics conference, and it was great fun talking to him. He has a real interest in Christian apologetics and he sees how important it is for Christians to have a defensible worldview.

If you want to see a sample of Jason's writing, check out this post on his blog.

This is interesting:

> Christianity is more than a belief system. It is a away of life. The principles derived from Scripture inform the head and guide the heart. The Christian worldview is one of the few where philosophy corresponds to the human experience with coherence and consistency.
>
> But inevitably, events will occur which threaten to shake the foundations of our world. We lavish God with praise when his blessing fall upon us, but when tragedy strikes, praises turn into questions.
>
> Why does there have to be suffering?
>
> This is one of the most important question you can ask, and it's the topic of a recent book by Ravi Zacharias and Vince Vitale titled "Why Suffering? Finding Meaning and Comfort When Life Doesn't Make Sense".
>
> Abiding by a spiritual code means following a perpetual pattern of study and application. Once a search for truth yields the fruit of discovery, a growing hunger for more knowledge can threaten this balance.
>
> The study of Christian apologetics is about the desire to give answers for anyone with questions. It's about deepening your understanding of why you believe what you believe.
>
> Just as a scientist must leave the lab and work in the field, the apologist must recognize when to stop studying and start applying what he or she has learned.
>
> **This happened to me recently. Life threw a curveball, and the questions started coming. It was the moment for which all previous studying, thinking, praying, and contemplating was intended: to help someone cope through a time of suffering.**
>
> Zacharias writes:
>
> "At least as important as the question of why there is suffering is the question of how we will face the pain"1
>
> **The question is not just how we will face the pain, but whether we can help others through their own pain.**

I've always understood my Christian faith augmented by my study of military history and military biography. Before I started meeting lots of Christian apologists on the Internet, I thought I was the only person who viewed living out a Christian life in strategic ways, where you make decisions about what you invest in and study with a view of knowing enough about what is true to render yourself impervious to the slings and arrows that life can

throw your way. It's interesting to see how people who are trained for actual war-fighting like Jason talks about his faith and how he built it up with apologetics. So you learn apologetics first to take care of yourself, and you make other moves to protect yourself from the things that take away people's faith.

In my case, I play defense by saving money in case something happens to my health or my job. I try not attempt things that I can't complete, and I have a pool of resources and a network of friends to support me. Once you have this foundation, you can then turn outward and build up other Christians – protecting them from challenges to their faith and unexpected losses and suffering. Supporting them, encouraging them and connecting them to other Christians to make them more resilient.

It's really fascinating to be a Christian and take this tactical view of your life. You find yourself constantly reading and studying and earning and saving so that you are able to withstand threats and protect others from threats. It's a very practical view of the Christian life, it's not passive. I find that most often it's those with a career in law enforcement (e.g. – J. Warner Wallace) and the military (e.g. – Jason Ladd) who take this tactical approach to their faith.

# Study: non-family daycare linked to anti-social behavior in children

**Wintery Knight** · 2 February 2015 · Archived copy · Original

From the UK Telegraph.

Excerpt:

> Academics at Oxford University discovered that exposure to some forms of early education contributed to bad behaviour and could be linked to emotional problems.

> The study, based on an analysis of infants from almost 1,000 families, showed that the strongest influence on children came from within the home itself.
>
> Children raised in poor families with high levels of parental stress or mental health problems were most at risk of developing emotional problems by the time they started school, it emerged.
>
> The research also uncovered trends relating to children who were in formal child care — away from their parents.

> The disclosure will revive debate over the best way to raise children amid a surge in the number of under-fives enrolled in nurseries and with childminders in the past 20 years. Figures from the Department for Education show that 441,000 children under five are in day nurseries while another 272,000 are being looked after by childminders.
>
> […]In the Oxford study, researchers recruited 991 families with children aged three months. Mothers had an average age of 30.
>
> Researchers assessed children at the age of four through questionnaires about their behaviour and emotions completed by teachers and parents. They also observed care provided by mothers and observed non-parental care for at least 90 minutes for those children placed in formal childcare settings.
>
> The report, published in the journal Child: Care, Health and Development, said that "children who spent more time in group care, mainly nursery care, were more likely to have behavioural problems, particularly hyperactivity".
>
> The study, led by Prof Alan Stein, of Oxford's Department of Child and Adolescent Psychiatry, found that "spending more time in day care centres, over the total period was a predictor of total problem scores".
>
> "Children who spent more time in day care centres were more likely to be hyperactive," it said. "Children receiving more care by childminders were more likely to have peer problems."
>
> The authors added: "The findings in relation to childminding suggest that it might be out of home care rather than group care that raises the risk of behavioural difficulties."
>
> The researchers also tracked other forms of early years care and found benefits to different approaches.
>
> They found that children who spent more time in pre-school playgroups – normally for a few hours a day, rather than a full-time nursery – had fewer problems.
>
> More time with a nanny in parents' own home predicted higher levels of "pro-social behaviour", showing willingness to help others, it emerged.
>
> The study said: "These findings suggest that interventions to enhance children's emotional and behavioural development might best focus on supporting families and augmenting the quality of care in the home."

A study like this will be useful when debating people with open minds, but hardcore feminists and socialists, who want women to work in order to fund bigger government, will not be moved. Because for them, it's not about evidence. It's about ideology. That's why we have to be careful about letting people like that get elected.

# Obama says that 99.9% of Muslims worldwide reject radical Islam, is he right?

**Wintery Knight** · 3 February 2015 · Archived copy · Original

That video is from The Weekly Standard, here's the text:

> President Obama told CNN's Fareed Zakaria that 99.9 percent of Muslims reject radical Islam. He made the comments in response to a question about the White House avoiding using the phrase "Islamic terrorists."
>
> "You know, I think that the way to understand this is there is an element growing out of Muslim communities in certain parts of the world that have perverted the religion, have embraced a nihilistic, violent, almost medieval interpretation of Islam, and they're doing damage in a lot of countries around the world," said Obama.
>
> "But it is absolutely true that I reject a notion that somehow that creates a religious war because the overwhelming majority of Muslims reject that interpretation of Islam. They don't even recognize it as being Islam, and I think that for us to be successful in fighting this scourge, it's very important for us to align ourselves with the 99.9 percent of Muslims who are looking for the same thing we're looking for–order, peace, prosperity."

Now, let's take a look at apostasy and blasphemy laws in Muslim countries, with some help from the left-leaning Pew Research.

They write:

> In 10 of 20 countries where there are adequate samples for analysis, at least half of Muslims who favor making sharia the law of the land also favor stoning unfaithful spouses.
>
> Some of the highest support for stoning is found in South Asia and the Middle East-North Africa region. In Pakistan (89%) and Afghanistan (85%), more than eight-in-ten Muslims who want Islamic law as their country's official law say adulterers should be stoned, while nearly as many say the same in the Palestinian territories (84%) and Egypt (81%). A majority also support stoning as a penalty for the unfaithful in Jordan (67%), Iraq (58%). However, support is significantly lower in Lebanon (46%) and Tunisia (44%), where less than half of those who support sharia as the official law of the land believe that adulterers should be stoned.
>
> In Southeast Asia, six-in-ten Muslims in Malaysia consider stoning an appropriate penalty for adultery. About half hold this view in Thailand (51%) and Indonesia (48%).
>
> Muslims in Central Asia as well as Southern and Eastern Europe are generally less likely to support stoning adulterers. Among those who favor Islamic law as the official law of the land, only in Tajikistan do about half (51%) support this form of punishment. Elsewhere in the two regions, fewer than four-in-ten favor this type of punishment, including roughly a quarter or fewer across the countries surveyed in Southern and Eastern Europe.

And:

> Compared with attitudes toward applying sharia in the domestic or criminal spheres, Muslims in the countries surveyed are significantly less supportive of the death penalty for converts. Nevertheless, in six of the 20 countries where there are adequate samples for analysis, at least half of those who favor making Islamic law the official law also support executing apostates.
>
> Taking the life of those who abandon Islam is most widely supported in Egypt (86%) and Jordan (82%). Roughly two-thirds who want sharia to be the law of the land also back this penalty in the Palestinian territories

> (66%). In the other countries surveyed in the Middle East-North Africa region, fewer than half take this view.
>
> In the South Asian countries of Afghanistan and Pakistan, strong majorities of those who favor making Islamic law the official law of the land also approve of executing apostates (79% and 76%, respectively). However, in Bangladesh far fewer (44%) share this view.
>
> A majority of Malaysian Muslims (62%) who want to see sharia as their country's official law also support taking the lives of those who convert to other faiths. But fewer take this position in neighboring Thailand (27%) and Indonesia (18%).
>
> In Central Asia as well as Southern and Eastern Europe, only in Tajikistan (22%) do more than a fifth of Muslims who want sharia as the official law of the land also condone the execution of apostates. Support for killing converts to other faiths falls below one-in-ten in Albania (8%) and Kazakhstan (4%).

Now there is one little problem with this Pew Research data that causes them to understate the real numbers who favor adultery-stonings and apostasy-killings.

Andrew McCarthy explains in National Review:

> But what is striking is that the depressing state of affairs is manifest despite Pew's best efforts to make things seem better than they are. Principally, the survey is about Muslim views about sharia, Islam's legal system and framework for society. It is intimated that Pew's study is exhaustive, involving interviews with 38,000 Muslims across 39 countries. But, as my friend Andy Bostom pointed out to me this morning, guess which countries are not included in the survey? That would be Saudi Arabia, Iran and Sudan — perhaps the three most sharia compliant countries in the world, home cumulatively to nearly 150 million Muslims.
>
> […]In point of fact, sharia *is* the law of Saudi Arabia and Iran. These countries profess themselves as reflections of the true Islam (Saudi Arabia from the Sunni perspective, Iran from the Shiite) in which no law but sharia is necessary and no departures from sharia are permissible. Sudan (a Sunni Muslim country) is already close to the Saudis and Iranians in this regard and is sure to be more so when it finally adopts a new constitution (which it has been threatening to do for several years).

Iran has about 87 million people, Sudan has about 42 million people, and Saudi Arabia has about 31 million people. These are strict Islamic countries and they were left out of the survey.

So, what are we to make of Obama's comments now? Are Democrats like Barack Obama, John Kerry and Hillary Clinton accurate enough in their beliefs about the world that we should have confidence in their foreign policy? If they really believe these obvious false assertions, and they are making decisions based on these delusions, then how much does that set back the causes of freedom and democracy in the world? It seems to me that the first rule of protecting the good and fighting against evil is to be able to identify which is which.

# William Lane Craig's secret weapon is his amazing wife Jan

**Wintery Knight** · 3 February 2015 · Archived copy · Original

I want to draw your attention to a talk on "Vision in Life" given by Dr. William Lane Craig. Dr. Craig is the ablest defender of the Christian faith operating today. He has done formal academic debates with all of the best known atheists on major university campuses in front of *thousands* of university students.

It turns out that he owes a lot of his success to his amazing wife Jan.

The MP3 file is here. (32 minutes)

This talk was Dr. Craig's chapel address to Biola University students.

About 11 minutes into the talk, Bill describes what happened after he finished his Bachelor's degree at Wheaton:

> And so I joined the staff of Campus Crusade for Christ for 2 years, and was assigned to Northern Illinois University. And that was where I met my wife Jan. She was a graduate of the University of North Dakota where she had come to faith in Christ. And she had a similar vision for her life of evangelism and discipleship.
>
> And as we worked at NIU together, she with gals and I with the guys, leading students to Christ and discipling them to walk with the Lord, we fell in love. And we decided that we would be more effective if we joined forces and became a team.

So their reason for getting together was because they thought that they would be more effective in evangelism and discipleship if they worked as a team.

It is at this point in the talk where Bill begins to explain just how Jan molded him into the lean, mean debating machine that travels the world striking terror into the hearts of atheists.

Bill's first story about Jan occurs early after their marriage while he is working on his first Masters degree at Trinity:

> And it was also at that time that I began to see what an invaluable asset the Lord had given me in Jan. I remember I came home from classes one day, and found her at the kitchen table with all the catalogs and schedules and papers spread out in front of her and she said, "look! I've figured out how you can get two Masters degrees at the same time that it would normally take to get one! All you have to do is take overloads every semester, go to all full-time summer school and do all these other things, and you can do two MAs in the time it takes to do one!"
>
> And I thought, whoa! Are you sure you really want to make the commitment it takes to do this kind of thing? And she said, "Yeah! Go for it!" And it was then I began to see that God had given me a very special woman who was my supporter – my cheerleader – and who really believed in me. And as long as she believed in me, that gave me the confidence to dream bigger dreams, and to take on challenges that I had never thought of before.

In an article on his web site, he talks about how Jan encouraged him to do his first Ph.D:

> As graduation from Trinity neared, Jan and I were sitting one evening at the supper table in our little campus apartment, talking about what to do after graduation. Neither of us had any clear leading or inclination of what we should do next.
>
> So Jan said to me, "Well, if money were no object, what would you really like to do next?"
>
> I replied, "If money were no object, what I'd really like to do is go to England and do a doctorate under John Hick."

> "Who's he?" she asked.
>
> "Oh, he's this famous British philosopher who's written extensively on arguments for the existence of God," I explained. "If I could study with him, I could develop a cosmological argument for God's existence."
>
> But it hardly seemed a realistic idea.
>
> The next evening at supper Jan handed me a slip of paper with John Hick's address on it. "I went to the library today and found out that he's at the University of Birmingham in England," she said. "Why don't you write him a letter and ask him if you can do a doctoral thesis under him on the cosmological argument?"
>
> What a woman! So I did, and to our amazement and delight Professor Hick wrote back saying he'd be very pleased to supervise my doctoral work on that subject. So it was an open door!

And in the same article, he explains how Jan encouraged him to get his second Ph.D:

> As Jan and I neared the completion of my doctoral studies in Birmingham, our future path was again unclear to us. I had sent out a number of applications for teaching positions in philosophy at American universities but had received no bites. We didn't know what to do.
>
> I remember it like yesterday. We were sitting at the supper table in our little house outside Birmingham, and Jan suddenly said to me, "Well, if money were no object, what would you really *like* to do next?"
>
> I laughed because I remembered how the Lord had used her question to guide us in the past. I had no trouble answering the question. "If money were no object, what I'd really like to do is go to Germany and study under Wolfhart Pannenberg."
>
> "Who's he?"
>
> "Oh, he's this famous German theologian who's defended the resurrection of Christ historically," I explained. "If I could study with him, I could develop a historical apologetic for the resurrection of Jesus."
>
> Our conversation drifted to other subjects, but Jan later told me that my remark had just lit a fire under her. The next day while I was at the university, she slipped away to the library and began to research grants-in-aid for study at German universities. Most of the leads proved to be defunct or otherwise inapplicable to our situation. But there were two grants she found that were possibilities. You can imagine how surprised I was when she sprung them on me!

Both of these Ph.D experiences are also described in the talk. And the talk concludes as follows:

> **I am so thankful to be married to a woman who is tremendously resourceful, tremendously talented and energetic, who could have pursued an independent career in any number of areas, but instead, she has chose to wed her aspirations to mine, and to make it her goal to make me the most effective person I can be, for Christ. And she has been like my right arm in ministry over these many years. And it is a tremendous privilege to be a team with a person like that.**
>
> **And you young men, I would encourage you, if you marry, to find a gal who shares your vision, not some independent vision, but who is interested in aligning herself with you, and pursuing together a common vision and goal that will draw you [together], so that you will avoid the growing separateness that so often creeps into marriages.**

And now you know the rest of Bill's story. *The person you marry will have an enormous influence on the impact you will have for Christ and his Kingdom.* It is up to you to decide whether that influence is going to be positive or negative, by deciding if you will marry, and if you do marry, by deciding whom you will marry.

I have a popular post that has a lot of questions to ask a woman to make sure that she has the knowledge required to be a wife and mother, but I think in the context of this talk, I should highlight a few other questions that are more

about her personality instead of her knowledge.

- Does she think that the purpose of the relationship is to serve God or to serve herself?
- Does she enjoy taking on the helper role, or does she ignore the man's need for help?
- Is she able provide alternatives when decisions have to be made?
- Is she comfortable letting a man lead by letting him making decisions?
- Is she good at being calm, persuasive and reasonable during disagreements?
- Is she able to control her emotions, and separate facts from feelings?
- Does she respect what her man has been able to achieve in the normal male roles? (Provider, etc.)
- Is she the man's "cheerleader"? Does she praise and encourage him privately and publicly?
- Does she see her man as an engine for serving God? Does she have a plan to help him perform better?
- Does she show her man that she is interested in teaching and mentoring others to grow?
- Does she take an interest in growing her man spiritually? (Men are often more practical than spiritual)

You may also be interested in this talk given by William Lane Craig, entitled "Healthy Relationships" (National Faculty Leadership Conf. 2008) (audio here) In that talk, he offers advice to Christians who want to have a marriage that is consistent with their Christian faith.

# William Lane Craig discusses reason and faith with university students

**Wintery Knight** · 3 February 2015 · Archived copy · Original

This is an interview of Dr. William Lane Craig before college students at the University of Central Florida. (95 minutes)

You can get an MP3 of the lecture here. (33 MB)

Questions from the interviewer: (40 minutes)

- What started you on his journey of studying faith and reason?
- How would you define the word “faith”?
- Are faith and reason compatible? How are they related?
- How can reasonable faith help us to avoid the two extremes of superstition and nihilism?
- Who makes the best arguments against the Christian faith?
- Why are angry atheists like Dawkins and Hitchens more well known than better-informed academic atheists?
- Does the Bible require Christians to give the unbeliever reasons for their faith?
- How does faith spur Christians to think carefully about the big questions in life?
- Should the American church prod churchgoers to develop their minds so they can engage the secular culture?
- When talking about Christianity intellectually, is there a risk of neglecting the experience of being a Christian?
- Which Christian apologist has shaped your thinking the most?
- Which Christian philosopher has shaped your thinking the most?
- Does the confidence that comes from apologetics undermine humility and reverence?
- If you had to sketch out a 5 minute case for Christianity, what would you present?
- Can non-Christians use their reason to arrive at truth?
- Are there cases where atheists must affirm irrational things in order to remain atheists?
- Can the universe have existed eternal, so that there is no need to explain who created it?
- Even if you persuade someone that Christianity is true, does that mean they will live it out?

There is also a long period of questions, many of them hostile, from the audience of students (55 minutes).

- Haven’t you said nasty things about some atheists? Aren’t you a meany?
- What do you make of the presuppositional approach to apologetics?
- Can a person stop being a Christian because of the chances that happen to them as they age?
- Why did God wait so long after humans appeared to reveal himself to people through Jesus?
- Can a person be saved by faith without have any intellectual assent to truth?
- How do you find time for regular things like marriage when you have to study and speak so much?
- How would you respond to Zeitgeist and parallels to Christianity in Greek/Roman mythology?
- Do Christians have to assume that the Bible is inerrant and inspired in order to evangelize?
- If the universe has a beginning, then why doesn’t God have a beginning?
- Can you name some philosophical resources on abstract objects, Platonism and nominalism?
- How can you know that Christianity more right than other religions?
- Should we respond to the problem of evil by saying that our moral notions are different from God’s?
- Define the A and B theories of time. Explain how they relate to the kalam cosmological argument.

- How can Christians claim that their view is true in the face of so many world religions?
- What is the role of emotions in Christian belief and thought?
- Can evolution be reconciled with Christian beliefs and the Bible?
- When witnessing person-to-person, should you balance apologetics with personal testimony?
- Is there a good analogy for the trinity that can help people to understand it? [Note: HE HAS ONE!]
- How can Christians reconcile God's omniscience, God's sovereignty and human free will?

This is a nice introductory lecture that is sure to get Christians to become interested in apologetics. As you watch or listen to it, imagine what the world would be like if *every* Christian could answer the questions of skeptical college students and professors like Dr. Craig. What would non-Christians think about Christianity if *every* Christian had studied these issues like Dr. Craig? Why aren't we making an effort to study these things *so that* we can answer these questions?

It is really fun to see him fielding the questions from the skeptical university students. My favorite question was from the physics student who sounds really foreign, (at 1:19:00), then you realize that he is a Christian. I do think that Dr. Craig went a little far in accommodating evolution, but I put that down to the venue, and not wanting to get into a peripheral issue. I'm also surprised that no one asked him why God allows humans to suffer and commit acts of evil.

If you are looking for a good basic book on apologetics, then I would choose "Is God Just a Human Invention?" by Sean McDowell and Jonathan Morrow.

**Who is William Lane Craig?**

About William Lane Craig:

> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology in La Mirada, California.
>
> Dr. Craig pursued his undergraduate studies at Wheaton College (B.A. 1971) and graduate studies at Trinity Evangelical Divinity School (M.A. 1974; M.A. 1975), the University of Birmingham (England) (Ph.D. 1977), and the University of Munich (Germany) (D.Theol. 1984). From 1980-86 he taught Philosophy of Religion at Trinity… In 1987 they moved to Brussels, Belgium, where Dr. Craig pursued research at the University of Louvain until assuming his position at Talbot in 1994.
>
> He has authored or edited over thirty books, including *The Kalam Cosmological Argument*; *Assessing the New Testament Evidence for the Historicity of the Resurrection of Jesus*; *Divine Foreknowledge and Human Freedom*; *Theism, Atheism and Big Bang Cosmology*; and *God, Time and Eternity*, as well as over a hundred articles in professional journals of philosophy and theology, including *The Journal of Philosophy*, *New Testament Studies*, *Journal for the Study of the New Testament*, *American Philosophical Quarterly*, *Philosophical Studies*, *Philosophy*, and *British Journal for Philosophy of Science*.

Craig's CV is here.

Craig's list of publications is here.

William Lane Craig is, without a doubt, the top living defender of Christianity. He has debated all of the most famous atheists, including Christopher Hitchens, Sam Harris, etc. as well as academic atheists like Quentin Smith, Peter Millican, etc. if you search this blog, you'll find many debates posted here, sometimes even with snarky summaries.

# San Francisco book store closes after minimum wage increase

**Wintery Knight** · 4 February 2015 · Archived copy · Original

Important story from the most leftist city in America.

ABC News:

> Independent bookstores have faced tough times for quite a while. In San Francisco, neighborhood businesses have been passionately protected, so it's hard to believe that an initiative passed by voters to raise the minimum wage is driving a Mission District bookstore out of business.
>
> San Francisco's minimum wage is currently $11.05 an hour. By July of 2018, the minimum wage in San Francisco will be $15 an hour. That increase is forcing Borderlands Bookstore to write its last chapter now.
>
> […]Borderlands was turning a small profit, about $3,000 last year. Then voters approved a hike in the minimum wage, a gradual rise from $10.75 up to $15 an hour.
>
> "And by 2018 we'll be losing about $25,000 a year," he said.
>
> It's an unexpected plot twist for loyal customers.
>
> **"You know, I voted for the measure as well, the minimum wage measure," customer Edward Vallecillo said. "It's not something that I thought would affect certain specific small businesses. I feel sad."**
>
> Though it's caught a lot of people off guard, one group that wasn't completely surprised was the Board of Supervisors. In fact, they say they debated this very topic before sending the minimum wage to the voters.
>
> "I know that bookstores are in a tough position, and this did come up in the discussions on minimum wage," San Francisco supervisor Scott Wiener said.
>
> Wiener knows a lot of merchants will pass the wage increases on to their customers, but not bookstores.
>
> "I can't increase the prices of my products because books, unlike many other things, have a price printed on them,"
>
> Wiener says it's the will of the voters. **Seventy-seven percent of them voted for this latest wage hike.**

Unexpected!

Let's review the facts on minimum wage, and then I can make fun of one of my friends in my conclusion.

Abstract from new National Bureau of Economic Research study:

> We estimate the minimum wage's effects on low-skilled workers' employment and income trajectories. Our approach exploits two dimensions of the data we analyze. First, we compare workers in states that were bound by recent increases in the federal minimum wage to workers in states that were not. Second, we use 12 months of baseline data to divide low-skilled workers into a "target" group, whose baseline wage rates were directly affected, and a "within-state control" group with slightly higher baseline wage rates. **Over three subsequent years, we find that binding minimum wage increases had significant, negative effects on the employment and income growth of targeted workers**. Lost income reflects contributions from employment declines, increased probabilities of working without pay (i.e., an "internship" effect), and lost wage growth associated with reductions in experience accumulation. Methodologically, we show that our approach identifies targeted workers more precisely than the demographic and industrial proxies used regularly in the literature. Additionally, because we identify targeted workers on a population-wide basis, our approach is relatively well suited for extrapolating to estimates of the minimum wage's effects on aggregate employment. Over the late 2000s, the average effective minimum wage rose by 30 percent across the United States. **We estimate that these minimum wage increases reduced the national employment-to-population ratio by 0.7 percentage**

> **point.**

That comes out to 1.4 million workers.

Harvard economist Greg Mankiw explains the top 14 views that a majority professional economists agree on, and here's #12:

> 12. A minimum wage increases unemployment among young and unskilled workers. (79%)

OK, now the funny part.

I know someone who is a fairly committed Christian. He is also an unemployed graduate student. He doesn't understand anything about politics or economics. He is also single, and looking for a girlfriend. He messages me periodically about new girls he is interested in, and he asks me "is she pretty?". He asks that for each new girl. I try to tell him that there is more to women than just appearances, but this guy looked at my list of courting questions on Christian worldview and he thought it was a joke. Appearance is everything – he wants Barbie with a Bible.

He asked me what I thought of this one lady he liked. I went on her Facebook page, and I found out that she was in favor of minimum wage hikes. So I messaged her and linked her to some peer-reviewed studies by economists showing that minimum wage hikes hurt young, minority workers most – they can't get an entry-level job to start themselves off. And she said, and I quote: "oh, that appeal to authority doesn't work on me at all xD". She is in high school, but wants to study *philosophy*. I hope she doesn't borrow money for that, but I think that she probably will.

She writes:

> it has barely effected (sic) price ranges at all for corporations who've been required to raise the wage. the fact is, corporations have never been trustworthy with voluntarily treating their workers well. our best years were ones where banks and corporations were very heavily regulated.

No evidence was provided for that statement, of course. The money comes from… magic beans! Or something.

I think my friend just likes attention from women, and that they like that he doesn't ask them hard questions, or tell them when they are wrong about anything. He's a good student, but I wouldn't take his advice on anything real-world until he grows up. But I think his tendency to affirm anything a woman says to him will make him very popular with a certain subset of women.

# School chaplain fired for disagreeing with homosexuality

**Wintery Knight** · 4 February 2015 · Archived copy · Original

This is from ABC News Australia.

They write:

> A Hobart school chaplain has been sacked for re-posting a comment on Facebook that described homosexuality as "not normal".
>
> Troy Williams was employed by the Scripture Union, Tasmania's main provider of school chaplaincy services which appoints and trains state and private school chaplains.
>
> Mr Williams was stood down from his role at the Hobart College over the post, which also makes the claim that "no-one is born gay".
>
> Mr Williams issued an apology after his Facebook post drew widespread condemnation earlier this month.
>
> He told the ABC: "I've made a mistake and learnt from it. I'm deeply sorry for any offence I've caused. I was very careless in posting that image for discussion. I will work with my employers to ensure there is no repeat."
>
> Following a meeting with the Kingborough Council general manager this morning, Mr Williams was also stood down from his role as a youth outreach worker there.
>
> The council said it acted based on comments he made on a post by a Melbourne-based blogger who used sarcasm to defend Mr Williams.

Here's the comment:

> "Please pray with me that this may become another opportunity for the Gospel to go out. I will probably be fired … for encouraging young people in that they have a choice in who they are and that they shouldn't be bullied by someone telling their lot is predetermined (by someone other than God)."

Factually speaking, he is of course correct that homosexuality is not generically determined – that is what studies show. But he still had to recant in order to get his job back.

Was the tolerant, compassionate left appalled by this infringement of the man's free speech?

Not so much:

> Gay rights activist Rodney Croome welcomed Mr Williams' dismissal.
>
> "If this fellow had been running around saying that blue-eyed or left-handed people are flawed and should be changed, he'd be out on his ear," he said.
>
> "And it's right that he's out on his ear over his comments about same-sex attracted young people too, given the immense damage those comments would cause to those young people when he should, in fact, be supporting them as a chaplain."
>
> Mr Croome said more needed to be done.
>
> "Kingborough Council and Scripture Union need to assure the public that this will never happen again by overhauling all their policies and their training to make sure that all their youth workers and their chaplains – anyone who comes in contact with young people – discharge their responsibilities in a professional way and do not perpetuate prejudice and stereotype," he said.

This story shows why it is *so important* for Christians to go for STEM degrees in college, to save their money, and

to write under an alias. It is a different world today, and you have to be ready when you get called on the carpet by the other team. I don't condemn this chaplain for recanting. I might be tempted to do the same, even though I am prepared for it. But I do think it serves as a warning for those who think that God is waiting to save us when we have to stand up for what we believe. Don't expect him to save you. The world is *not* a Disney movie, and Christians are *not* Disney princesses. Do not follow your heart. Do not listen to people who urge you to follow your heart. Especially when you and your advisors have made poor decisions in the past.

Your ability to be who you are in Christ is partially dependent on your ability to survive a financial crisis. Your ability to be who you are in Christ is partially dependent on your debt / savings balance. What you study in school matters. What jobs you take matters. How fast you pay off your debts matters. How well you save your money matters. Your ability to protect yourself, your family, and your friends in the face of challenges to your faith like this one is directly proportional to your past life decisions. If you are guided by your feelings in your decision-making, you are exposing yourself to dangers that could lead to apostasy. That is not a popular message, but it is a true one. The Bible gives no evidence that our lives will be free of confrontation and judgment.

Consider Luke 14:25-30:

[25] Now great crowds accompanied him, and he turned and said to them,

[26] "If anyone comes to me and does not hate his own father and mother and wife and children and brothers and sisters, yes, and even his own life, he cannot be my disciple.

[27] Whoever does not bear his own cross and come after me cannot be my disciple.

[28] For which of you, desiring to build a tower, does not first sit down and count the cost, whether he has enough to complete it?

[29] Otherwise, when he has laid a foundation and is not able to finish, all who see it begin to mock him,

[30] saying, 'This man began to build and was not able to finish.'

Here is a trustworthy saying from outside the Bible:

> "Si vis pacem, para bellum"
>
> — Publius Flavius Vegetius Renatus

That translates to "Let him who desires peace prepare for war."

Make sure you keep up with what is happening in the world to Christians. Make sure you have lots of money ready to lawyer up when it's your turn to go down fighting. You might even find that your opponents will pick on a weaker target if you can afford to defend yourself. That's why the Human Rights Commissions went after a penniless and obscure pastor, but not a well-connected lawyer and journalist. And if you are strong enough, you can even protect that weaker target out of your strength. Make sure you having something to share with others when they are in distress.

I'm really not sure why Christians have been taught to think that recklessness is a virtue, while prudence is not. But they're wrong.

# Scott Klusendorf defends the pro-life view on the Unbelievable radio show

**Wintery Knight** · 4 February 2015 · Archived copy · Original

Here are the details:

> The abortion debate reared its head again this summer after controversial tweets by Richard Dawkins made the news.
>
> Justin hosts a discussion between Mara Clarke of the Abortion Support Network and Scott Klusendorf of the Life Training Instititute. Mara believes women need to be decide whether to terminate a pregnancy, but Scott says that all depends on whether we are dealing with a human life in the womb.
>
> MP3 of this show: http://cdnapi.kaltura.com/p/618072/sp/61807200/playManifest/entryId/1_ggc953xi/flavorId/1_vto2eisb/protocol/http/format/url/a.mp3?clientTag=feed:1_jlj47tkv

My snarky paraphrase of the debate (not exact):

- Speaker introductions
- Klusendorf: no justification for abortion is necessary if the unborn are not human
- Klusendorf: we need to address the issue "what is the unborn?" Are the unborn human?
- Klusendorf: SLED: size, level of development, environment, degree of dependency
- Klusendorf: None of these things affect the value of a human being
- Klusendorf: Even if we don't KNOW whether the unborn is human
- Mara: I'm not going to debate when life begins
- Mara: Women know when life begins by feelings
- Mara: The moral decision is "whether I can take care of this child?"
- Brierley: When is an unborn being human?
- Mara: I refuse to debate that – the real question is whether women want their babies or not
- Mara: Forced pregnancy is not OK
- Brierley: Could your justification for abortion (not wanting to care for a child) work through all 9 months?
- Mara: Late term abortions are rare, so I don't have to answer that question
- Mara: Abortion should be OK through all 9 months of pregnancy because women cannot be restricted
- Mara: Some women are poor, they need to be able to kill expensive babies at any time
- Klusendorf: although she says she won't debate the unborn, she does take a position
- Klusendorf: she assumes the unborn is not human, because she says that insufficient funds is justification for abortion
- Klusendorf: no one argues that you can kill a two year old because they cost money, because she thinks they are human
- Klusendorf: she is begging the question by assuming the unborn are not human, but that is the issue we must resolve
- Klusendorf: I am pro-choice on many other things, e.g. women choosing their own husbands, religion, etc.
- Klusendorf: Some choices are wrong – Mara might be right, but she needs to make the case for the unborn not being human
- Brierley: What is your reason for thinking that an unborn child is different from a 2-year old?

- Mara: An unborn child is not the same as a 2-year old, in my personal opinion
- Mara: I am not a debater, so I don't have to provide reasoning for my assertion, I just feel it
- Mara: Not everybody agrees with Scott, they don't have to have a rational argument, they just need to feel differently
- Mara: From my experience, when a woman doesn't want to be pregnant, then she should be able to not be pregnant
- Mara: Women shouldn't be punished with a baby that she doesn't want, even if she chooses to have recreational sex
- Brierley: What do you think of women who think the unborn is human and do it anyway?
- Klusendorf: It's interesting that they never kill their toddlers for those reasons
- Klusendorf: I layed out scientific and philosophical reasons for the humanity of the unborn
- Klusendorf: Her response was "but some people disagree with you"
- Klusendorf: People disagreed about whether slavery was wrong, or whether women should be able to vote
- Klusendorf: that doesn't mean there is no right answer – the right answer depends on the arguments
- Klusendorf: if absence of agreement makes a view false, then it makes HER pro-choice view false as well
- Klusendorf: she did make an argument for the unborn child having no rights because of the location
- Klusendorf: she needs to explain to us why location matters – what about location confers value
- Mara: I'm not going to let Scott frame my debate for me!!!
- Mara: women get pregnant and they don't want their babies! should we put them in jail!!!!
- Klusendorf: I didn't just give my opinion, I had science and philosophy, the issue is "what is the unborn?"
- Mara: philosophical and scientific debates are unimportant, I am an expert in real women's lives
- Klusendorf: Which women? Women in the womb or only those outside the womb?
- Mara: Only those outside the womb
- Klusendorf: Only those outside the womb?
- Mara: Women living outside the womb have a right to kill women inside the womb – women have bodily autonomy
- Klusendorf: then does a pregnant woman with nausea have a right to take a drug for it that will harm her unborn child?
- Mara: Unborn children are only valuable if they are wanted, unborn children only deserve protection if they are wanted
- Mara: There are restrictions on abortion – you can't get an abortion through all nine months in the US
- Mara: There is a 24-week limit in the UK as well
- Klusendorf: There are no restrictions on abortion that conflict with "a woman's health" because Supreme Court said
- Mara: where are these late term abortion clinics?
- Klusendorf: (he names two)
- Mara: that's not enough!!! we need more! where is there one in Pennsylvania?
- Klusendorf: well, there used to be Gosnell's clinic in Pennsylvania, and you could even get an infanticide there….
- Brierley: What about Dawkins' view that it is moral to abort Down's Syndrome babies?
- Klusendorf: he is ignoring the scientific case and philosophical case for the pro-life
- Klusendorf: the pro-life view is a true basis for human equality

What I wanted Scott to ask was whether sex-selection abortions were OK with her. Since her reasoning is "if it's

unwanted, it has no rights", then that would mean sex-selection abortions are just fine. That's what a UK abortion expert recently argued. And I also posted recently about how sex-selection abortions are not prosecuted in the UK. If you're looking for a war on women, there it is.

# Not just #1 in Iowa: Scott Walker leads in latest New Hampshire GOP primary poll

**Wintery Knight** · 5 February 2015 · Archived copy · Original

Wisconsin Governor Scott Walker

Here's the story from the Washington Times.

They write:

> Wisconsin Gov. Scott Walker leads a host of potential 2016 GOPpresidential contenders in a new poll in the early presidential state of New Hampshire out Wednesday.
>
> Mr. Walker leads the NH1 automated poll, conducted Feb. 2-3, with 21.2 percent of the vote, followed by former Florida Gov. Jeb Bush at 14.4 percent, Sen. Rand Paul of Kentucky at 8.3 percent, and retired neurosurgeon Ben Carson at 8.2 percent.
>
> Mr. Walker managed to ride a well-received performance at last month's "Iowa Freedom Summit" into a place atop a recent Bloomberg Politics/Des Moines Register poll in the Hawkeye State among like caucus-goers there. He is scheduled to attend a GOP event in New Hampshire next month.
>
> A NH1 "pulse poll" taken two weeks ago, prior to 2012 GOP presidential nominee Mitt Romney's announcement that he would not run for president in 2016, had Mr. Romney well ahead at 29 percent, with Mr. Bush at 11 percent and Mr. Walker at 8 percent.
>
> In the poll out Wednesday, which was conducted by REACH Communications, New Jersey Gov. Chris Christie was next at 7 percent, followed by former Arkansas Gov. Mike Huckabee at 6.8 percent and Sen. Marco Rubio of Florida at 5.4 percent.
>
> Next was Sen. Ted Cruz of Texas at 3.3 percent, former Texas Gov. Rick Perry at 2.7 percent, former New York Gov. George Pataki at 2.2 percent, and former Hewlett-Packard CEO Carly Fiorina at 1.7 percent.
>
> Among the names left out of the survey were former Sen. Rick Santorum of Pennsylvania and Louisiana Gov. Bobby Jindal, who are also weighing presidential bids.
>
> About 19 percent of the 1,012 voters were undecided or wanted someone else.
>
> The poll included registered Republicans and undeclared voters that lean Republican and are likely to vote in the 2016 GOP primary, and has a margin of error of plus or minus 3.08 points.

Just a quick flashback to the Iowa poll I blogged about before:

> Presidential stage newcomer Scott Walker, the conservative reform pit bull who inspired death threats from the left, has become the one to watch in the race for the Republican nomination a year out from the Iowa caucuses.
>
> At 15 percentage points, he leads a big, tightly packed field of potential contenders in a new Des Moines Register/Bloomberg Politics Iowa Poll of likely Republican caucusgoers. The caucuses are scheduled for Feb. 1, 2016.
>
> The Wisconsin governor is also the No. 2 most popular choice for likely caucusgoers who want an establishment candidate, and he's the No. 2 for those who want an anti-establishment candidate, the poll shows.
>
> […]The day after polling wrapped up, Romney announced he's out of the competition. When the numbers in this poll are shuffled — by giving Romney's votes to the contenders his supporters named as their second-choice pick — the five others in the top tier gain support.
>
> […]Walker's support has jumped 11 points since the last Iowa Poll. In October, only 4 percent of likely caucusgoers named Walker as their first choice for president.
>
> […]At the same time, the favorability rating for Walker has climbed 11 percentage points; Carson, 9; Huckabee, 7; Cruz, 6; Santorum, 5; and Paul, 5, the new poll shows.

And this is also interesting – the Drudge Report also started a GOP primary poll. With 450,000 votes counted, Walker leads with 44%, and Cruz is second with 13%.

I like winning. I don't see how you can take a regular Joe like Scott Walker and lose to a rich, entitled Democrat elite like Hillary. Trust me on this, we need to nominate a regular person who has a record of smashing deficits without raising taxes. That's the winning message. People will vote for the economy and jobs first. And they will also happen to get a President who passed socially conservative laws as governor of Wisconsin. We run on real fiscal achievements, and we get the social conservatism for free.

If you want to learn more about Scott Walker, I recommend Walker's new book. I actually got the audio version, and it's read by Governor Walker himself.

# Scott Walker's new budget: tax cuts, spending cuts, school choice, smaller government

**Wintery Knight** · 5 February 2015 · Archived copy · Original

Wisconsin Governor Scott Walker

Scott Walker announces some of the items in his new Wisconsin budget.

The Daily Signal reports:

> Gov. Scott Walker unveiled his proposal for Wisconsin's state budget on Tuesday night, and he did not shy away from offering bold ideas.
>
> The second-term Republican governor has proposed a budget for 2015-17 that would cut property taxes again, eliminate the cap on the state's school choice program, and reform government by merging agencies.
>
> Walker's budget would also spin off the public University of Wisconsin System as a separate state entity and require those receiving government benefits to take a drug test.

Tax cuts, expanding school choice, smaller government.

Here are the details on the school choice expansion:

> The governor also talked about expanding the state's school choice program.
>
> "I am excited to announce our plans to lift the cap on vouchers so more families … can have the choice to find the best school for their children," Walker said. "Every child deserves the chance to succeed."
>
> If passed by the GOP-led legislature, all students living under 185 percent of the federal poverty level and currently attending a public school would have access to a voucher to attend a private school.
>
> This expansion is on top of school choice programs already in place in the cities of Milwaukee and Racine.
>
> Walker's budget also expands public school choice in the form of independent charter schools. Wisconsin currently authorizes these schools in the city of Milwaukee, but nowhere else in the state. Independent charter schools are public schools, but do not operate under the auspice of the local school board or teachers' union.
>
> The governor has proposed a statewide board, which would authorize new charter schools statewide. In Milwaukee, the independent charter schools have repeatedly outperformed their traditional public school peers.

Oh no! What will the leftist public schools do when parents can choose not to give them money? WHO CARES!

And welfare reform:

> Walker also introduced a plan recently that would build on his previous entitlement reforms.
>
> "Our budget expands the requirement for able-bodied adults to be enrolled in an employment and training program in order to receive food stamps," Walker announced. "Now, some might claim that we're making it harder to get government assistance. We're not. We're making it easier to get a job."

He is mean. Mean to lazy people!

The leftist New York Times reports that the streamlining of government will result in 400 public sector positions (some of which are vacant) being eliminated.

The article also reminds us why conservatives love Scott Walker:

> Mr. Walker came to national prominence in 2011 largely because of his first statewide budget proposal, which relied on cuts to collective bargaining rights and increased health and pension costs for most public workers to help solve an expected budget gap.

That got rid of the massive $3.6 billion deficit he inherited from his Democrat predecessor.

But there is more. What do you think the deepest, darkest place is in the United States? I think it's the university.

The NYT article continues:

> Mr. Walker's proposal calls for cutting about $300 million, or 13 percent, in state funds from the University of Wisconsin System, which includes 13 four-year universities and enrolls some 180,000 students. Mr. Walker's plan would also take the unusual step of removing the university system from direct state control to a "quasi-governmental" authority that could act autonomously on issues of personnel, procurement, capital projects and tuition.
>
> As word spread in recent days that proposed cuts were coming, some in the university system expressed deep concern, likening the focus on the universities to Mr. Walker's earlier clashes with public-sector labor unions. At the University of Wisconsin-Madison, the Faculty Senate this week condemned the proposal. Students said they intended to organize opposition.

He went after the leftist public sector unions, and now the bloated leftist public universities. He is so mean to them! Oh well. (Fake cry)

Just ask yourself – what if the guy we chose as the Republican candidate for president actually knew what he was doing? Wouldn't that be interesting? What if our candidate for President could do more than just play golf and read a teleprompter? What if our candidate for President could actually tell the truth instead of saying "let me be clear", then lying, then saying "period" after the lie?

When the Green Bay Packers play NFL MVP Aaron Rodgers at quarterback, the Green Bay fans understand that he actually knows how to play football – and he is actually good at it, based on past experiences playing football. What if we chose a candidate who could actually do the job? And talk about past experiences doing the job? Wouldn't that be something? Picking Scott Walker to be president would be like picking William Lane Craig to debate in favor of Christianity.

# What criteria do historians use to get to the minimal facts about the historical Jesus?

**Wintery Knight** · 5 February 2015 · Archived copy · Original

Have you ever heard Gary Habermas, Michael Licona or William Lane Craig defend the resurrection of Jesus as the best explanation for the "minimal facts" about Jesus? The lists of minimal facts that they use are typically agreed to by their opponents during the debates.

For example, in his debate with Bart Ehrman, Craig was able to quote Ehrman's own writings where he agreed that all four facts were probably true.

Excerpt:

> Now in his early published work Dr. Ehrman expressed skepticism about these facts. He insisted that we cannot really affirm these facts.
>
> […]Dr. Ehrman has himself come to re-think his position on these issues. Inconsistencies in the details notwithstanding, he now recognizes that we have "solid traditions," not only for Jesus' burial, but also for the women's discovery of the empty tomb, and therefore, he says, we can conclude with "some certainty" that Jesus was in fact buried by Joseph of Arimathea in a tomb and that three days later the tomb was found empty.
>
> When I discovered that Professor Ehrman had reversed himself on this question, my admiration for his honesty and scholarly objectivity shot up. Very few scholars, once they've gone into print on an issue, have the courage to re-think that issue and admit that they were wrong. Dr. Ehrman's reversal of his opinion on these matters is testimony, not merely to the force of the evidence for these four facts, but also to his determination to follow the evidence wherever it leads. What this means is that my first contention is not an issue of disagreement in tonight's debate.

So what are the criteria that historians use to derive a list of minimal facts about Jesus?

Dr. Craig explains them in this article.

Excerpt:

> The other way, more influential in contemporary New Testament scholarship, is to establish specific facts about Jesus without assuming the general reliability of the Gospels. The key here are the so-called "Criteria of Authenticity" which enable us to establish specific sayings or events in Jesus' life as historical. Scholars involved in the quest of the historical Jesus have enunciated a number of these critieria for detecting historically authentic features of Jesus, such as dissimilarity to Christian teaching, multiple attestation, linguistic semitisms, traces of Palestinian milieu, retention of embarrassing material, coherence with other authentic material, and so forth.
>
> It is somewhat misleading to call these "criteria," for they aim at stating sufficient, not necessary, conditions of historicity. This is easy to see: suppose a saying is multiply attested and dissimilar but not embarrassing. If embarrassment were a necessary condition of authenticity, then the saying would have to be deemed inauthentic, which is wrong-headed, since its multiple attestation and dissimilarity are sufficient for authenticity. Of course, the criteria are defeasible, meaning that they are not infallible guides to authenticity. They might be better called "Indications of Authenticity" or "Signs of Credibility."
>
> In point of fact, what the criteria really amount to are statements about the effect of certain types of evidence upon the probability of various sayings or events in Jesus' life. For some saying or event S and evidence of a certain type E, the criteria would state that, all things being equal, the probability of S given E is greater than

> the probability of S on our background knowledge alone. So, for example, all else being equal, the probability of some event or saying is greater given its multiple attestation than it would have been without it.
>
> What are some of the factors that might serve the role of E in increasing the probability of some saying or event S? The following are some of the most important:
>
> (1) Historical congruence: S fits in with known historical facts concerning the context in which S is said to have occurred.
>
> (2) Independent, early attestation: S appears in multiple sources which are near to the time at which S is alleged to have occurred and which depend neither upon each other nor a common source.
>
> (3) Embarrassment: S is awkward or counter-productive for the persons who serve as the source of information for S.
>
> (4) Dissimilarity: S is unlike antecedent Jewish thought-forms and/or unlike subsequent Christian thought-forms.
>
> (5) Semitisms: traces in the narrative of Aramaic or Hebrew linguistic forms.
>
> (6) Coherence: S is consistent with already established facts about Jesus.
>
> For a good discussion of these factors see Robert Stein, "The 'Criteria' for Authenticity," in *Gospel Perspectives I*, ed. R. T. France and David Wenham (Sheffield, England: JSOT Press, 1980), pp. 225-63.
>
> Notice that these "criteria" do not presuppose the general reliability of the Gospels. Rather they focus on a particular saying or event and give evidence for thinking that specific element of Jesus' life to be historical, regardless of the general reliability of the document in which the particular saying or event is reported. These same "criteria" are thus applicable to reports of Jesus found in the apocryphal Gospels, or rabbinical writings, or even the Qur'an. Of course, if the Gospels can be shown to be generally reliable documents, so much the better! But the "criteria" do not depend on any such presupposition. They serve to help spot historical kernels even in the midst of historical chaff. Thus we need not concern ourselves with defending the Gospels' every claim attributed to Jesus in the gospels; the question will be whether we can establish enough about Jesus to make faith in him reasonable.

And you can see Dr. Craig using these criteria to defend minimal facts in his debates. For example, in his debate with Ehrman, he alludes to the criteria when making his case for the empty tomb.

Here, he uses multiple attestation and the criteria of embarrassment:

> Among the reasons which have led most scholars to this conclusion are the following:
>
> 1. The empty tomb is also multiply attested by independent, early sources.
>
> Mark's source didn't end with the burial, but with the story of the empty tomb, which is tied to the burial story verbally and grammatically. Moreover, Matthew and John have independent sources about the empty tomb; it's also mentioned in the sermons in the Acts of the Apostles (2.29; 13.36); and it's implied by Paul in his first letter to the Corinthian church (I Cor. 15.4). Thus, we have again multiple, early, independent attestation of the fact of the empty tomb.
>
> 2. The tomb was discovered empty by women.
>
> In patriarchal Jewish society the testimony of women was not highly regarded. In fact, the Jewish historian Josephus says that women weren't even permitted to serve as witnesses in a Jewish court of law. Now in light of this fact, how remarkable it is that it is women who are the discoverers of Jesus' empty tomb. Any later legendary account would certainly have made male disciples like Peter and John discover the empty tomb. The fact that it is women, rather than men, who are the discoverers of the empty tomb is best explained by the fact that they were the chief witnesses to the fact of the empty tomb, and the Gospel writers faithfully record what, for them, was an awkward and embarrassing fact.

There are actually a few more reasons for believing in the empty tomb that he doesn't go into in the debate, but you can find them in his written work. For example, in his essay on Gerd Ludemann's "vision" hypothesis. That essay covers the reasons for all four of his minimal facts.

So, if you are going to talk about the resurrection with a skeptic, you don't want to invoke the Bible as some sort of inerrant/inspired Holy Book.

Try this approach instead:

1. Explain the criteria that historians use to get their lists of minimal facts
2. Explain your list of minimal facts
3. Defend your list of minimal facts using the criteria
4. Cite skeptics who admit to each of your minimal facts, to show that they are widely accepted
5. List some parts of the Bible that don't pass the criteria (e.g. – guard at the tomb, Matthew earthquake)
6. Explain why those parts don't pass the criteria, and explain that they are not part of your case
7. Challenge your opponent to either deny some or all the facts, or propose a naturalistic alternative that explains the facts better than the resurrection
8. Don't let your opponent attack any of your minimal facts by attacking other parts of the Bible (e.g. – the number of angels being one or two, etc.)

And just keep in mind that there is no good case for the resurrection that does not make heavy use of the early creed in 1 Corinthians 15:3-8. You have to use that – it's the law.

Back to the minimal facts criteria. The best essay on the minimal facts criteria that I've read is the one by Robert H. Stein in "Contending with Christianity's Critics". It's a good short essay that goes over all the historical criteria that are used to derive the short list of facts from which we infer the conclusion "God raised Jesus from the dead". That whole book is really very, very good.

# Obama responds to Islamic State terrorism by saying Christians are just as bad

**Wintery Knight** · 6 February 2015 · Archived copy · Original

In the past I blogged about four myths about the Crusades, but for our purposes, the most important is that the Crusades at least *started out* as defensive reactions to the conquest of Western lands by Islam.

Anyway, here's a reaction to Obama's moral equivalence from Investors Business Daily.

First, what Obama did:

> In remarks at a prayer meeting Thursday, President Obama implied Christianity, just like Islam, is filled with people who "hijack religion for their own murderous ends." This is the progressive disease of moral equivalence at its worst.
>
> In recent days and weeks, the world has watched grimly as the horrific barbarity of fundamentalist Islam has been put on full display.
>
> With routine beheadings, crucifixions, tortures, mass killings of civilians, burying children alive, and, most recently, burning a prisoner alive and filming his death agony to the approving yells of onlookers, it's clear something is horribly wrong within Islam.
>
> And yet, apart from rather routine denunciations of the savagery, Obama used his appearance at a National Prayer Breakfast to upbraid Christians for their sins.
>
> "Unless we get on our high horse and think this is unique to some other place, remember that during the Crusades and the Inquisition, people committed terrible deeds in the name of Christ," Obama said. "In our home country, slavery and Jim Crow all too often was justified in the name of Christ."

They write:

> The remarks aren't merely insulting. They betray a deep ignorance of Western Judeo-Christian culture and its history.
>
> No one claims Christians haven't done terrible things, some in the name of religion. But this is a straw-man argument.
>
> Obama, for instance, talks of the Crusades. But far from being about conquest, the Crusades were a counter-reaction to the Muslim jihad that swept Christian lands in the Mideast, North Africa, Spain and Balkans.
>
> Nothing less than Western civilization was at stake. Not much has changed today.
>
> According to Open Doors USA's World Watch List for 2015, "Approximately 100 million Christians are persecuted worldwide, making them one of the most persecuted religious groups in the world."
>
> And who are the persecutors? "Islamic extremism is the main source of persecution in 40 of the 50 countries" that make up Open Doors USA's watch list, the report says.
>
> Meanwhile, how are Muslims in the West treated? With visas, welfare, legal protection, even special speech codes to protect their religious sensibilities, along with copious apologies by people such as Obama. Even terrorists at Gitmo are given Halal meals, prayer mats and Qurans.
>
> Obama's done this before. In a speech in Cairo in 2009, he also suggested the Christian West had much to answer for.
>
> In point of fact, the West's Judeo-Christian heritage has led to tolerance, justice, women's rights and the abolition of slavery.
>
> Neither slavery nor Jim Crow laws were "justified" by the U.S. Christian mainstream. Indeed, as history shows,

> Christians were the driving force behind the anti-slavery movement in the U.S. But slavery is still found in the Muslim Mideast and Africa.
>
> Terrorist murderers won't be appeased by Obama's cringe-worthy remarks. They'll be encouraged. As such, they aren't merely wrong — they're dangerous.

I've noticed this "reasoning" that Obama is employing before when discussing social issues with feminists. I produce facts showing that children are least likely to be abused when they grow up with their own parents in a married home. And they say that there exists some child who was abused by his married parents. As if the existence of one counterexample negates the probabilities or the relative frequencies in different situations. What Obama is really saying is this "because you defended yourself from Muslim conquerors 900 years ago, that justifies kidnapping underage girls into sex slavery after you murder their parents in front of them". Should we have elected a President who is incapable of basic reasoning about history and about ethics? Well, we did.

# Gallup CEO: The real unemployment rate is much higher than 5.6%

**Wintery Knight** · 6 February 2015 · Archived copy · Original

This is a striking column from Jim Clifton, CEO of the Gallup polling company. His claim about the real unemployment rate is going to come as no surprise to most of my regular readers, who are used to me pushing labor force participation as the real measure of unemployment. Still, it's nice to get some confirmation from high places.

He writes:

> Here's something that many Americans — including some of the smartest and most educated among us — don't know: The official unemployment rate, as reported by the U.S. Department of Labor, is extremely misleading.
>
> Right now, we're hearing much celebrating from the media, the White House and Wall Street about how unemployment is "down" to 5.6%. The cheerleading for this number is deafening. The media loves a comeback story, the White House wants to score political points and Wall Street would like you to stay in the market.
>
> None of them will tell you this: If you, a family member or anyone is unemployed and has subsequently given up on finding a job — if you are so hopelessly out of work that you've stopped looking over the past four weeks — the Department of Labor doesn't count you as unemployed. That's right. While you are as unemployed as one can possibly be, and tragically may never find work again, you are *not* counted in the figure we see relentlessly in the news — currently 5.6%. Right now, as many as 30 million Americans are either out of work or severely underemployed. Trust me, the vast majority of them aren't throwing parties to toast "falling" unemployment.
>
> There's another reason why the official rate is misleading. Say you're an out-of-work engineer or healthcare worker or construction worker or retail manager: If you perform a minimum of one hour of work in a week and are paid at least $20 — maybe someone pays you to mow their lawn — you're not officially counted as unemployed in the much-reported 5.6%. Few Americans know this.
>
> Yet another figure of importance that doesn't get much press: those working part time but wanting full-time work. If you have a degree in chemistry or math and are working 10 hours part time because it is all you can find — in other words, you are severely underemployed — the government doesn't count you in the 5.6%. Few Americans know this.
>
> There's no other way to say this. The official unemployment rate, which cruelly overlooks the suffering of the long-term and often permanently unemployed as well as the depressingly underemployed, amounts to a Big Lie.
>
> […]Gallup defines a good job as 30+ hours per week for an organization that provides a regular paycheck. Right now, the U.S. is delivering at a staggeringly low rate of 44%, which is the number of full-time jobs as a percent of the adult population, 18 years and older. We need that to be 50% and a bare minimum of 10 million new, good jobs to replenish America's middle class.

Why does anyone think that higher taxes, massive government spending, huge deficits, and 18 trillion national debt would encourage job creators to create more jobs? Only a Democrat voter could believe that making things *worse* for job creators would actually result in more jobs. And maybe it does – just in some other country, when the companies here tire of high taxes and burdensome regulations and ship their jobs overseas.

Here is the labor force participation graph:

Labor Force Participation 2014

That's where unemployment really stands – this is what Democrats like Barack Obama, Nancy Pelosi and Harry Reid deliver. The Republicans lost control of the House and Senate in January 2007, and George W. Bush was a good President, but a lousy at vetoing socialist bills passed by Pelosi and Reid. Every dip in the labor force participation from 2008 on should be blamed on Democrats. They were in the driver's seat, they crashed the car.

# Correcting four myths about the history of the Crusades

**Wintery Knight** · 6 February 2015 · Archived copy · Original

Crusader

Here is an interesting article from First Principles Journal.

Intro:

> The verdict seems unanimous. From presidential speeches to role-playing games, the crusades are depicted as a deplorably violent episode in which thuggish Westerners trundled off, unprovoked, to murder and pillage peace-loving, sophisticated Muslims, laying down patterns of outrageous oppression that would be repeated throughout subsequent history. In many corners of the Western world today, this view is too commonplace and apparently obvious even to be challenged.
>
> But unanimity is not a guarantee of accuracy. What everyone "knows" about the crusades may not, in fact, be true. From the many popular notions about the crusades, let us pick four and see if they bear close examination.

The four myths:

- Myth #1: The crusades represented an unprovoked attack by Western Christians on the Muslim world.
- Myth #2: Western Christians went on crusade because their greed led them to plunder Muslims in order to get rich.
- Myth #3: Crusaders were a cynical lot who did not really believe their own religious propaganda; rather, they had ulterior, materialistic motives.
- Myth #4: The crusades taught Muslims to hate and attack Christians.

Here's the most obvious thing you should know. The Crusades were *defensive* actions:

> In a.d. 632, Egypt, Palestine, Syria, Asia Minor, North Africa, Spain, France, Italy, and the islands of Sicily, Sardinia, and Corsica were all Christian territories. Inside the boundaries of the Roman Empire, which was still fully functional in the eastern Mediterranean, orthodox Christianity was the official, and overwhelmingly majority, religion. Outside those boundaries were other large Christian communities—not necessarily orthodox and Catholic, but still Christian. Most of the Christian population of Persia, for example, was Nestorian. Certainly there were many Christian communities in Arabia.

> By a.d. 732, a century later, Christians had lost Egypt, Palestine, Syria, North Africa, Spain, most of Asia Minor, and southern France. Italy and her associated islands were under threat, and the islands would come under Muslim rule in the next century. The Christian communities of Arabia were entirely destroyed in or shortly after 633, when Jews and Christians alike were expelled from the peninsula.[6] Those in Persia were under severe pressure. Two-thirds of the formerly Roman Christian world was now ruled by Muslims.
>
> What had happened? Most people actually know the answer, if pressed—though for some reason they do not usually connect the answer with the crusades. The answer is the rise of Islam. Every one of the listed regions was taken, within the space of a hundred years, from Christian control by violence, in the course of military campaigns deliberately designed to expand Muslim territory at the expense of Islam's neighbors. Nor did this conclude Islam's program of conquest. The attacks continued, punctuated from time to time by Christian attempts to push back. Charlemagne blocked the Muslim advance in far western Europe in about a.d. 800, but Islamic forces simply shifted their focus and began to island-hop across from North Africa toward Italy and the French coast, attacking the Italian mainland by 837. A confused struggle for control of southern and central Italy continued for the rest of the ninth century and into the tenth. In the hundred years between 850 and 950, Benedictine monks were driven out of ancient monasteries, the Papal States were overrun, and Muslim pirate bases were established along the coast of northern Italy and southern France, from which attacks on the deep inland were launched. Desperate to protect victimized Christians, popes became involved in the tenth and early eleventh centuries in directing the defense of the territory around them.
